rrata to

pelure,

The copy filmed here has been reproduced thanks to the generosity of:

> Seminary of Quebec Library

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol - (meaning "CON-TINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

> Séminaire de Québec Bibliothèque

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commencant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole -- signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthoda.

skilineO Hagi

HE Study of Geography has a peculiar Claim to the Attention of Mankind in general, and cannot be too earnestly recommended to all Ranks of People. This pleasing, useful, and delightful Science, displays to our View, in the most entertaining and prostable Manner, a general Knowledge of the World. A good Work of this Kind, exhibits to Persons of every Capacity and Situation in Life, an authentic Account of whatever is worthy of Notice, in the various Countries of the Universe. It not only surnishes a Description, but also an Historical and Political Representation of all the several Provinces, Districts, and Subdivisions of every Country; together with a clear, natural, and methodical Detail of the Customs, Manners, Dresses, Ceremonies, and present State of the Inhabitants; the most remarkable Events that have transpired, from the earliest Period to the present Time, and the Consequences that have attended them: Also an accurate and impartial History and Survey of their Laws, Government, Maxims of Policy, Forces, Revenue, Trade and Commerce, and a great Variety of other important and interesting Particulars, some of which are enumerated in our Title Page.

The Public in general are so thoroughly convinced of the Utility of this Subject, that it might possibly be thought Impertinent to dwell long on the Recommendation of it.

The Pleasure, as well as Profit, attending the Perusal of Books of this Sort, has made them more universally Read than any other Branch of polite Literature; and the Study of Geography has now become one of the most fashionable Pursuits of the present Age, for both Sexes. In short, this is a Subject in which every Man is materially interested; for, as a celebrated Author justly observes, "There is not a Son or a Daughter of Adam, but has some Concern in Geography."

However, amidst the Variety of Publications on this Subject, which have made their Appearance from Time to Time, it has been Matter of great Astonishment to many, that no one has been written on an improved Plan of general information, containing all the recent Discoveries, and which may be suitable to such as wish to gain a perfect Knowledge of Men and Things in every Part of Europe, Asia, Africa, and America. This has been, most certainly, a general Complaint throughout this Country; but, without pointing out the Errora and Absurdities of other Writers, we now offer to the Public A NEW AND UNIVERSAL SYSTEM of GEOGRAPHY, being a complete History and Description of the Whole World, upon such an improved and extensive Plan, as has been long wished for.

Our Readers will have no Reason to complain that they have been caught by an inviting Title Page, or that they have received less than they promised themselves, from the Perusal of this new and improved Performance. We acknowledge that we have promised much, but we likewise considently affert that our Performances will not be sound inadequate to our Proposals.—The most ample Fortune of the richest Man, and the longest Life of the most laborious.

Traveller.

Y PREFACE

Traveller, attended with all that Success which his most sequine Expectations could hope for, would be insufficient to make him acquainted with the twentieth Part of what will be found in the New Work, which is calculated for general instruction and Amusiment.

The Public will at once perceive, that this Work would not up fibby be dominicated in lefs than Eighty Numbers, confidering the mentiony copiculated of the Whole, and to have, extended it further would have been entirely unaccounty, and only a making to fibe the Printer, and Others concerned in the external Execution of it, as the first to Confideration of at extraordinary large and elegant Size in which the White is present, to have executedly emitted the tedious Errors of other Writers, particularly long and injudicious poetical Quotations from Authors, who never were allowed by People of any Differentent, to have aimed at Authenticity in their funcied local Descriptions. So that this Works is not only the Chapest of the Kind, but also the most Complete and Elegant in every Respect whatever. We shall, therefore, submit the Whole to the Patronage and Protection of the unprejudiced, disinterested, and differenting Public, who will, no doubt, generously give the Preference according to Merit.

That Turn for Reading which now so universally prevails throughout these Kingdons, is certainly very Laudable, and cannot but be attended with very great Advantages. It is impossible that vacant Hours can be better filled up, than in the Perusal of well-chosen Books, and a very little Resection will shew, that next to the Sacred Scriptures, nothing can have a greater Claim to our general Notice, than the Work which we now offer to the Public.

We shall begin with a New History and Description of Asia, that Quarter of the Globe, which on many Accounts demands our earliest Regard. Africa will make the second Part of our Work, and, attending to the regular Order of Things, we shall next come to the European Countries, whose Inhabitants, becoming more Bold in the Spirit of Enterprize, than those of the other two Parts of the Globe, discovered the south grand Division of the World, namely, America, with a more complete History and Description (including the present, as well as antient State) of which than is to be found in any similar Performance, we shall conclude this New System of Geography—a Work, sounded on the most respectable. Authorities, comprizing all the late Discoveries made in every Part, of the Globe, by the most celebrated Navigators, and ingenious Travellers; and arranged with the greatest Accuracy and Care, being the Results of unwearied Assiduity and Study, for several Years and the matter travellers and the Results of unwearied Assiduity and Study, for several Years and the matter travellers and the Results of unwearied Assiduity and Study, for several Years and the several results and the

THE NEW AND UNIVERSAL

SYSTEM of GEOGRAPH

ING A COMPLETE

HISTORY and DESCRIPTION

THE WHOLE WORLD.

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF

CONCERNING ASIA IN GENERAL.

THOUGH it is natural for the inhabitants of that quarter of the globe in which we live, from an innate fondnefs, to give the preference to Europe, neverthele's Afia is efteemed to be, in all respecta, the most confiderable part of the world, and is intitled to the first rank, on account of its many fingular advantages above the rest. For instance, in a few particulars; in Afia, the Creator of the Universe planted the delightful garden of Eden, wherein he placed the first parents of mankind, from whom the whole race of human beings descended. Afia, whose countries are insteadilethed by the rising sun, became the nursery of the world after the general deluge; and from thence the descendants of Noah dispersed their various colonies into all other parts of the habitable globe. In Afia, God made choice of that fertile spot Canaan, wherein he placed his favourite and antient people the Jews. Here, HOUGH it is natural for the inhabitants of that placed his favourite and antient people the Jews. Here, placed his favourite and antient people the Jews. Here, also, the great and flupendous work of our redemption, was accomplified by his divine Son; and from hence his disciples and followers diffused the light of his glorious gosfrel amongst, the furrounding nations. Here, likewife, were founded the first christian churches; the first councils were held; the first bishopricks erected, and the christian faith miraculously founded, promulgated, and watered with the blood of a glorious army of martyrs. In short, in Asia the first keindeus were reared, the first cities built, and the first kindowns and monarchies frounded, at time when the first kingdoms and monarchies founded, at a time w the other parts of the world were the haunts of wild beafts, or but very thinly, if at all, inhabited.

Befides the above mentioned advantages, Afia furpaffes the other parts of the world in the extent of its territory, the richnels of its foil, the ferenity of its air, the delicious richnels of its foil, the ferenity of its air, the delicious flavour of its fraits, the falutary quality of its drugs, and the fragrancy and balfamic nature of its plants, fpices, gums, &c. the value, beauty, variety, and quantity of its gens; finenefs of its filks, cottons, &c. the richnels of its metals, befides various other excellencies; all which peculiar advantages, rendered it fo charming and delightful an abode, that it was for a long feries of years the refidence and feat of that it was for a long feries of years the refidence and feat of the greated monarchies in the world. But fince the Turks, who are enemies to all politenels and the fine arts, have policified a confiderable part of it; much of its ancient fplendor las been entirely loft; the most fruitful and delightful fpot in all Afa, refembles a wild, uncultivated defert, and fince that time, is only remarkable for the rich commodities it affords, but is full vified and reforted to by merchants of other nations, on that account. Such parts of chants of other nations, on that account. Such parts of this country as have escaped the barbarism of the Turks,

No. 1.

are ftill in a flourithing flate, notwithflanding the inhabi-tants are juftly cenfu of for their indolence, effeminacy, and luaury; fo that this advantage may be rather aferibed to the richness of the foil, than to the induftry of the inha-

bisants.

Hiftorians in general, Impace the effeminery of the natives of this country, chiefly to the warmth of the effermate, heightened by custom and education; confequently it is lefs prevalent, the neather they are fituated to the north; thence the fouthern countries do not produce such robust natives as the northern ones; from which it is inferred, that those Asiatics who live nearly in our latitude, are, in this respect, not much inferior to us, and that the northern Turks and Tartars, particularly, are very strong and coursgeous. We must, however, observe, that they who live in the more southern regions of Asia, experience the deficiency of robustness in their bodies, to be in a great measure supplied to them by the vivacity of their mind, and their lingenuity in various kinds of workmanship, which our most expert mechanics have in vain endeavoured to imitate.

We will not pretend to determine, whether the reflection

measure supplied to them by the vivacity of their mind, and their lingenuity in various kinds of workmanship, which our most expert mechanics have in vain endeavoured to imitate. We will not pretend to detarmine, whether the reflection which is commonly east on all the Asiatic nations, that they are naturally forded admirers of monarchy, be altogether just; since their princes have always kept them in such abject slavery and subjection, that they never had the least opportunity of displaying their love of liberty, which we may suppose to be as congenial with them, as with the rest of mankind. It must, however, be consessed, that many of those people, when the Dutch first came among them, could not conceive how it was possible for any nations to live under any other than a despotic government (which is the only one established throughout that vast. country or how that people could subsift under a republican one. A stupid kind of religion now prevails in Asia, a great part is being over-run with Mahometanism, particularly Turky, Arabia, part of India, and Tartary; they profess the same in Persa, and the empire of the great Mogul, but are of the sect of Hali, which, in some respects, differs from that of, the Turks, though both of them acknowledge Mahomet for their lawgiver, and the alcoran for their divine rule of faith and practice. In China, Japan, Siam, &c. they are, for the most extravaguatives in their worship of them, as we shall have occasions these hereafter; but must observe here, that their multiplicity of idols, and supersitious cerumonics attending the worships.

of them, are only regarded by the populace, for they are chiefly calculated by the priefts, who are confiderable gainers; and whatever countenance sereby confiderable gainers I and whatever countenance, sen of feperior talents and wildons may feets to give them a network apparature, they are of the philotophica term I mind not to despite them in their hearts. There are, riddes, feveral feets of the antient Perfess, or followers of se givest Zatrouffers, dispended all over Indianate Alle, which kines reduce the constitution of Drive, and are filled free orthoppers, because they pay she is addresser to it undes to give the constitution. These are avowed enemies aware frecise and ideal return the constitution of the contract in the contract to the contract of its pay their pay their addresser for it undestructure frecise of ideal return invarior, termine for which the symbol of that element. I here are avowed elements to every forcies of idolatry, imagery, temples, &to, which they consider as unworthy the forceme Being, who, they affirm, rigither care, nor ought to be represented by images, nor orghined in rempless. Their fects, among when are included the brahmant or brachmin, are reckoned the are included the brandars of brachmins, are recomed the most confiderable, and are also very humane and benevo-lent, lead a contemplative life, feed only upon vegetables, and are so far from killing any living creatures for their use, or even nozious ones in their own defence, that they even provide hospitals for such as are detayed through age, accident, or any other infirmity; and bestow a peculiar degree of attention and one of degrees to provide a such as a contemple and one of degrees to provide a such as a contemple and one of degrees to provide a such as a such a of attention and care on domestic animals.

Asia, as we before observed, was celebrated for being the favoured quarter of the world, where the christian religion was firth planted, from whence it fpread with fuch amazing rapidity and fuccase, that even in the apostolic age, it had seached as far as India, if not beyond, and was almost universally received, and professed. But as the degeneracy of those converts produced that denunciation secorded by St. John, Rev. ii. 5. the churches of Afia Minor were abandoned to perfecution, and at length almost utterly destroyed by the irruption of the northern barbarians, Saracens, Tartars, and Turks; and although the pure light of the gospel could never be tetally extinguished by them, but great numbers of christians in different parts of Asia, continued to adhere to it; yet they have always been kept under fuch abject subjection by the tyratny of the ruling powers, and are fo to this day, that their prefent fituation, as they have neither compassion nor coleration granted them, may justly be deemed a state of misery and oppression.

The continent of Asia is situated between twenty five and one hundred and forty-eight degrees of east longitude, from London, and between the equator and seventy-two gress north latitude; exclusive of the islands which lie to a fouth. It is about four thouland feven hundred and sty spiles in length, from the Dardanelles on the west, to the fourns. It is arount round to Dardanelles on the west, to the eastern thore of Tartary; and about four thousand three hundred and eighty miles in breadth, from the most fourthern part of Malacca, to the most northern cape of Nova Zembla. It is bounded by the frozen ocean on the Moya Zembla. north; and is separated from Africa on the west, by the Red north; and is lepasted from Africa on the welt, by the Ked Sea; and from Europa by the Levant, the Archipelago, the Hellefpont, Propontis, Bofphorus, the Black Sea, the siver Don, and a line drawn from it to the river Tobal, and from thence to the Oby, which falls into the Frozen Ocean; on the east, it is bounded by the Pacific Ocean, and on the north, by the Indian Ocean.

The most considerable monarchies or sovereignties of

Affa, at prefent known to us, amount to forty-we; four of these are skiled intire compires; namely, Persa, Great Mogul, China and Japan; also Turky and Muscovy, which are part of two more, whose most considerable shares

Afia comprehends thirty-three kingdoms, twenty-fix of which are on Terra Firma, and the other feven are infula-enes. Of the former fort are, 1. Yemen: 2. Sartaeh, in Arabia; 3. Nizapor; 4. Golconda; 5. Bifangar; 6. Ca-licut; 7. Cochin, in the peninfula of India, on this fide of the Ganges; 8. Siam; 9. Camboya; 10. Ava, alias Fequ; 51. Acham; 12. Aracham; 13. Tonquin; 14. Co-chinchina; 15. Jaos in the peninfula, on the other fide the Ganges; 16. Barantola, alias Laffa; 17. Neekbat; 18. Cogua, alias Great Thibet; 19. Nanyu; 20. Little Thibet; 21. Kalghar; 22. Corea; 23. Samarend; Amberg 21. August 22. Cores; 23. Samareand; 24. Becha, in Great Tartary; 25. Mingrelia; 26. Imeretia, in Georgia.—The feven infular ones are, 1. In the Maldivia ifles; 2. Candi, in the ifle of Ceylon; 3. Achem, 4. Materan; 5. Borneo, in the iflands of those names in the Sound; 6. Macaffer; and 7. Ternate, in the Molucca

In addition to the above-mentioned fovereignties, we may section three established here by the Europeans, as follow; 1. Of the Spaniards, in the Philippine islands; 2. Of the Pottuguese, in Goa, and other coasts of India; 2. Of the Dutch, in Batavia, Java, Ceylon, and other isles and coasts. All a the English settlements at Bombay, Fort St. George, &c. and the Danith at Malabar, the coaffer of Coromandel, &c. There are alfo fome independent, or vagrant nations, who have no fettled abode; the most considerable of these (who live in bords, independent of each other) are the tribes called Berigebres, Bedwins, and fome others in Arabia, and the Calmuc or Kalmac in Tartary;

other in Arions, and the camue or same in Talanty, these move their tents from place to place, as occasions offers, be fancy propagation.

Motivalisticating the great number of different tongues and dialest poken in this valents and variety of nations, we can, with truth affirm, that Afia has, by far, the fewert of any other part of the world; this is chiefly the lewest of any other part of the world; this is chiefly owing to the very externive empires comprised in it, each of which, strives to introduce an uniformity of language among the subjects of it. The principal ones are, the Perfian, Arabic, Tartarian, Chinese, Japanele, Malayan, and Malabarian. The European languages, via the Portuguese, Spanith, English, and Dutch; the Greek and Latin among the christians, and the Hebrew among the Lews, are only used-by these foreigners who have introduced them foot their own convenience, and are little known to the naives.

As As a green with the famile from the course to the polary

As Afia extends itself quite from the equator to the polar circle, and even beyond, confequently the climates must be fo various, that a minute detail of them, and their peculiar products, would, in this place, be tedious, and lead us inher too great a length, fince the foils must naturally vary, according so their different fituations. We shall, therefore, only fay at prefeat, till we come to deferibe each part in a more particular manner, that Afia comprehends all the temperate, the larger half of the torrid, and great part of the frigid zone; so that it enjoys no less than twenty-four climates; yet, upon the whole, the country is rich and fruitful, and fome parts of it exceedingly so, if we except some parts of Arabia and Tartary, and some of the more northern tracts.

In order to avoid as much as possible the scrupulous niceties, and, in fome eafes, the miltakes and errors of other geographers, we shall, in our division of this great part of the world, consider it with respect to the different dominions it is at present subject to; namely,

Perfia.

II. China, which is divided into north and fouth.

III. India, comprehending, 1. The peninfula of India beyond use Ganges, containing Cochinchina, Tonquin, beyond the Ganges, containing Cochinenns, I orduri, Pegu, and Siam, the last of which, is subdivided into Martaban, Siam, and Malacca. 2. The peninsula on this side the Ganges, containing the Decan, Golconca, Bisnagar, and Malabar.

IV. Hindottan, or the empire of the Great Mogul, as, it is meantable that the library of the Company as.

it is generally, shough improperly, called in Europe, the title not being assumed by the emperor there. In this great empire, are many petty kingdoms, lately erected into free flates, or fallen under the juridiction of the English East India Company.

V. Great Tartary, Siberia, Samojedia, and Afiatic

VI. Turky in Afia, which is divided into eastern and western; the eastern contains Diarbeck, Turcomania, and Georgia. The western comprehends Arabia, Palestine, Syris, and Anatolia.

VII. The Affatic islands are divided into four classes:

t. The island, or empire of Japan; 2. The islands of the eastern ocean; viz. the Marian or Ladrone islands, Formofa, and the Philippine iflands: 3. Those in the Indian ocean, which are the Molucca's, namely, Tydore, &c. and the Spice iflands; viz. Banda, Amboyna, Ceram, Ternate, Timor, Gilolo, &c. Celebes, Borneo, Java, Sumatra, Ceylon, the Maldiviz islands, &c.. 4. On the coasts of Asia, and in the Mediterranean, as Cyprus, Rhodes, Lefbos, or Mytelene, Chios or Scio, Samos, Coos, and fome-

others of lefs note, with the new discoveries.

These last divisions not coming into any of the former classes, must be spoken of in separate articles.

It is not unlikely that some may object here, that Tartary is not under one government; that India, beyond the Ganges, is independent of the Great Mogul, as Arabia is of the Turks; and that Georgia, Mingrelia, &c. are fubject partly to the Turks, and partly to the Perfians, and confequently that each of these should be divided into its respective parts. But, in this introductory part of our work, we think it more eligible to avoid clogging our readers' memory with too many diffinctions, which will be more properly introduced, when we treat of each parti-cular part. However, a clear idea of the continent and islands, &c. of this quarter of the globe, may be obtained from the several following tables;

abil due I to Will or to

Containing a description of the name, boundaries and extent, fituation, populaces, air, elimate, the four, rivers, celebrated islands, and their produce, of the ampire of Persia, both with rispect to its antient and profund state.

T is highly probable that Persia derives its name either from the province of Persia, now called Fars, or from Persipolis, which was anciently the capital city of this province, and the sea of its monarchs, when Alexander the Great conquered Darius, and subdued the whole country. Some classic writers deduce its name from Penseus, the fon iter and Danae; while others take it from l'aras, a horfeman, because the Persian troops served on horseback, and were famous for their skill in horsemanship.

horfeman, because the Persian troops ferved on horseback, and were famous for their skill in horfemanship.

Though the boundaries of this empire will be better understood from the description of its respective provinces, yet some geographers assume them to be as follows; via. India, or the dominions of the Mogul, towards the east; the ocean, or Persian gulf, or Bossora; towards the fouth, the Turkish empire towards the west; and Circassia, the Caspian sea, and the river Oxuu (which divides it from the country of the Usbeck Tartar) towards the north. We must allow that this description would be tolerably just, were the bounds of the Mogul's dominions on the saft, and those of the Turkish empire on the west, once settled. As several provinces of India lie to the westward of Indus, and some of the Turkish provinces extend to the castward of the river Tigris; consequently those writers must err, who make the river Indus the eastern boundary, and the Tigris the western; to which we may also subject to the king of Persia.

The most southern to the south of the gulf of Bossora, is subject to the king of Persia.

The most southern part of Persia lying in twenty-sive degrees north latitude, and the most hortbern part in forty-sive degrees, it may be justly reckoned to be twelve hundred miles in extent, from north to south; and as the western part of it lies in forty-sive degrees of longitude, and the most hortbern part of the least of the least of Leaston, and the most cast of the secondary of the rest of the extent of the secondary of the rest of the extent of the secondary of the rest of the extent of the

western part of it lies in forty-five degrees of longitude, calculating from the meridian of London, and the most eastern part in fixty-feven, the length and breacht is nearly equal; and the form of the country would be almost figure, were it not for the Caspian fea, which divides the east parts of Persia from the north-west. They are

north-east parts of Persa from the north-west. They are certainly egregiously mistaken, who extend it thirteen degrees beyond our most accurate accounts; for by that means, they make it to contain thirty-five degrees of longitude, and the length greatly to exceed the breadth. The Persain provisions may all be comprehended in twelve districts, in the following order; Chorasat, Sableothan, Sigistan, Makeran, Kermah, Fars, Chusstan, Curdeshan, Sigistan, Makeran, Kermah, Fars, Chusstan, Irac-Agem, Ghilan, Aderbeitzen, and Shirvan... We shall shew the different names by which they were antiently, and are now called; and that the reader may not remain in any doubt concerning them, we shall take care (where other witers name, two on more, in the bounds of one of these districts) generally to mention them beth.

We shall describe the whole of this extensive empire, in the most circumstantial manner, and arrange the several provinces as follow : q .cd ??

Cof Christ.

4

I. Chorafan (in which Efterabad of Kheman may be included, though fome reckon them diffind provinces) is beauded, towards the east, by part of India: on the north well, by the river Oxus, which divides it from Ufbeck. Tentrary, on the fruth, by the province of Sableofan, on the well, by Ghilar and Irac-Agem; and by the Cafpian, fea ass that south well. The chief towars are Herat, Metchid or Thus, Nizabour, Efterabad, Aria, Maron, Indion, and Zarchas. This province contains part of the antient Badale.

Badding.

II... Sableuftan (in which Gaur and Candaltor may be comprehended) is bounded, towards the north, by Chorafan; towards the eaft, by the province of Cabul, in India; towards the fouth, by the province of Sigiftan and, towards the west, by the province of Irac-Agem.
Gazna, Bust, Eccksabath, and Candahor, are the chief towns.

towns.

III. Sigiftan i which is bounded, on the north, by Sableustani towards the east, by the province of Multari, in Isdia i on the feath, by the province of Makeran and, towards the west, by part of the province of Keenan. Sigistan, Kobin, and Maltich, are the chief towns. This

Sigistan, Kobin, and Maltich, are the chief towns. This province is faid to be the antient Drasgians.

IV. Makeran; which is bounded, on the north, by Sigistan; towards the east, by the provinces of Buckor and Tata, in India; towards the fouth, by the ocean a and towards the west, by the province of Kerman. Makeran, Passir, and Gest, are its chief towns. This province is supposed to be the antient Gedfossia.

V. Kerman; which is bounded, towards the east, by the provinces of Sigistar and Makeran; towards the footh, by the ocean; towards the west, by the province

the provinces of Sigislaw and Makeran; towards the fouth, by the ocean; towards the west; by the province of Fars; and, towards the north, by a defert in the province of Irac-Agem. The chief towns are Kerman, Chabis, Salem, Tubaran, Jaques, and Darabegerd, which was the antient Passagard.

VI. Fars, or Farsistan; which is bounded, towards the east, by Kerman; towards the fouth; by the gulf of Persia, called Bosson; towards the west, by the province of Chussistan; and towards the north, by the province of Irac-Agem. The chief towns- are the following s. Schiess which lies in the latitude of twenty-ning de-

1. Schiras, which lies in the latitude of twenty-nine de-1. Schless, which lies in the latitude of twenty-nine degrees, fifty minutes, about thirty in les fouth-well from ferfepolis, whose magnificentruins excite the admiration of travellers, but of this we shall have occasion to speak hereafter. 2. Lar; about a hundred miles southward of Schiras, Gombson, or Bander Abassi, in twenty-seven degrees thirty inhusets north. 3. Ormus; which stands on a small island of the same name, in the gulf of Persia, opposite to Gombron, and about six miles from it. 4. Bander Congo; which also stands on the Persian gulf, about thirty miles well of Gombron. It may not be improver to take notice here, of a small territory belonging about thirty falles well of Combron. It may not be improper to take notice here, of a final territory belonging to the kingdom of Peria, which lies on the Arabian fibere, on the other fide of the gulf; the chief towns of it are Cateria and Eleasif, from whence this fea fonctimes takes the name of the province of Fars, may be conprehended the diftrics of Lar and Ormes.

VII. Chuffitan which is bounded, on the east, by the provinces of Fars and Irac-Agem on the fouth, by the guif of Parisa; on the west, by the territory of Boston; when the state of Boston was the state of Boston when the state of Boston was the state of Boston when the state of Boston was the state of Bos

and, on the north, by the province of Curdestan. The chief towns are, 1. Suffer, or Schourter, supposed to be the fanton. Shushan, where Analuerus made that magnificent festival, mentioned in feriprure, on his matriage, with Esthet. 2. Elmais; and 3. Banderick, now a small town on the sea coast. This province was called a seans

by the antients.

VIII. Curdeftan; which is bounded, on the east, by frac-Agem; on the fouth, by Chushitan; on the west, by Turkish Curdeftan; and, on the worth, by Aderbeitzen.

Armova and Commebud are the chief rowns in it. This

Affine was the Affyria of the antients the western part of it belongs to Turky, and the eastern to Persia.

IX. Irac, or Erack-Agent; which is bounded, on the north, by Aderbeitzen and Ghilan (antiently called Hyrcania) on the east, by the province of Chorasan; on the fouth, by Chusistan and Faissistan; and, on the west, by Curdeftan. The chief towns in this province are, t. Ifpa-han, the metropolis of the kingdom, in thirty-two degrees forty minutes nurth latitude, and the fiftieth degree of lonforty minutes nurth latitude, and the fiftieth degree of longitude, reckoning from the meridian of London. 2. Cafbin, or Caiwin (where the antient Arfatia frood) In thirty-four degrees thirty minutes. 3. Com, fituate in thirty-four degrees thirty minutes. 4. Sava, almost exactly between Cafbin and Com. 5. Hamadan, about a hundred miles north-west of Com. 6. Casham, about feventy miles north of Isphan. 7. Yefd, about one hundred and five miles to the eastward of Isphan. Irac-Agem was the antient Parthia, and is now reckoned the principal province of the empire, being very extensive, almost in the centre of the Persan dominions, and the province where the capital city stands. the capital city flands

X. Ghilan, or Kylan, (in which Masanderan, or Ta-brillan, may be comprehended) which is bounded, on the north, by the Hyrcanian or Cafpian feat on the eath, by the province of Chorafan, or Bactria; on the fouth, by the province of Choratan, or Bactria; on the routh, by the province of line-Agem, or Parthia; and, on the weft, by Aderbeitzen. Its clief towns are, i. Refcod. 2. Ghilan, fituate in thirty-eight degrees north latitude, and two hundred miles earl of Tauris. 3. Mazanderan, one hundred miles further east. 4. Asherol, within two miles of the Caspian sea. 5. Tabristan; and, 6. Ferabat. This province (as we hinted above) was antiently called Hyrcania.

XI. Aderbeitzen, or Adirbajon; which is bounded, on the north, by the province of Shiryan, on the east, by

XI. Aderbeitzen, or Adirbajon; which is bounded, on the north, by the province of Shirvan; on the eaft, by Ghilan and part of the Cafpian fea; on the fouth, by Irac-Agem and Curdeffan; and, on the weft, by the river Aras, or Araxis, which feparates it from part of Georgia. The following are its chief towns.

1. Tauris, or Tabris, fuppofed to be the animal Eebatana, formerly the royal refidence of the Median and Perfan monarchs, and effected little inferior to Babylon, either for its antiquity or magnificence: it lies in thirty-eight degrees odd minutes of north latitude, and is about four hundred miles north-west of figalan, 2. Adevil, or Ardebil, flands about thirty miles eaft of Tauris. 3. Sultania, which is fix days journey to the fouth-eaft of Tauris, in thitty-fix degrees thirty minutes north latitude. This province is the fouthern part of the antient Media.

XII. Shirvan, or Schirwan i which is bounded, on the north, by Circaffia, and the Muscovite dominions; on the eaft, by the Caspian sea; towards the fouth, by Aderbeit-zen; and towards the west, by Turkith Armenia and Georgia The chief towns in this province, are, i. Der-bent, or Debirean, which signifies an iron gare; it is a very throng pass between the mountains and the Caspian fea, in forty-two degrees north latitude. 2. Schamachie, which is fituate about fifty miles to the fouth of Derbent. 3. Bakn; this town fometimes gives name to the Caspian lea, and stands a little to the southward of Schamachic. 4. Tafflis, or Cala, the capital of eastern Georgia; it it ands in forty-four degrees of north latitude, and forty-eight degrees of longitude, reckoning from the meridian of London. 5. Erivan, or Irvan, lies in forty degrees odd minutes, upon the river Sargi, near the borders of Armenia. 6. Gangea lies between Erivan and Schamachie. 7. Nackfivan, or Naziwan, is fituate twenty-one leagues fouth of Erican. This was antiently the capital of an Armenian van. This was antiently the capital of an Armenian province, and the natives affirm, from an antient tradition, province, and the natives aftirm, from an antient tradition, that Noah built the city, when he first came out of the ark: the word "nacksivan" signifying a station for ships. 8. Tarku, which is the capital of Dagistan. 9. Old Julpha, which is, at present, a heap of ruins; the Armenian inhabitants having been transplanted to signahan, near which city they have a considerable town, and are become the greatest merchants in the Persan dominions; and as they have their agents and factors in almost every place through—No. 1. No. I.

out Europe and Afia, they may with propriety be eftermed the greatest traders in the whole world. As the kingdom of Perfa reaches from the twenty-fifth to the forty-fifth degree of latitude, the longest day in the fouth is thirteen houts and an half; and, in the north, above fifteen hours is fo that it is very natural to fuppore, that, in fuch a vaft extent of country, the air and feafons greatly differ, which we find they really do. Their water, in the middle of the kingdom, begins in November, and continues till March, with fevere frofts and fnow, the latter continues this hazer, with rever from and mow, the latter of which falls in great quantities on their mountains, but not fo much in the plaint. From March till May, the wind is commonly high; and from that time till September, they enjoy a calm ferene atmosphere, without fo much as a cloud in the heavens; and though it be pretry hot in the day time, the refreshing breezes, which blow constantly in the morning and evening, and at night, make the fun-mer tolerably pleafant, especially as the nights are nearly ten hours long. The air is very pure; and the flars thine with fuch lufter, that one person may know another very well by their light; and people in general, find it much more convenient and agreeable to travel in the night, than

In the day time.

There are feldom any hurricanes or tempers in the middle of Perfia, and very little thunder or lighning; nor have they many earthquakes, and the sir is so extremely dry in the fine feature, that there is not the leaft mofiture found on any thing that is laid abroad all night, or even on the grafi; and they have very little tain in the winter featon. It is a common obfervation among foreigners, who have travelled to the heart of Perfia, that those who are healthful on their arrival thither, continue for and that those who are fick, feldous recover; which is a manifest indication of the fallubrity of the alr and climate, and further process from the halo complexion of the positive. further appears from the hale complexion of the natives, who are firong and robust, and generally enjoy a confiant feries of health.

In the fouthern part of Persia, the air is very unhealthful in the fpring and fall, particularly about Gombron; the European factors never pais a year without a dangerous the European factors never pais a year without a dangerous fit of illnefs, which frequently proves fatal to them. As this event is always expected to happen, two of them commonly agree, that if one die, the fortune of the deceafed that devolve to the furvivor. This is no great prejudice to the relations; for if a man leaves private truftees, or makes the company his executors, the heir of the deceafed will, in either of those cases, meet with great difficulties in recovering the effects of the testator. The months of June, July, and August, are pretty healthy, but so very loot, that both natives and foreigners get upon the mountains at that time. The hot winds, which come from the eastward over a long tract of sandy deferts, well nigh fusfocate them; and sometimes a pestilential blast strikes the traveller dead in an inflant. It feldom rains here in any part of the year; and the water they save when it does, is part of the year; and the water they fave when it does, is very unwholfome. It has been commonly remarked, that the countries near the tropies are much hoster than those under the line; which is accounted for, from the fun's remaining longer near the tropies, than the equator; and the days being of a greater length in fummer near the tropics, than under the line; which are certainly very fub-fiantial reasons. But a great deal must be attributed to the nature of the foil, and the situation of the country, where the winds blow over large, fandy, and feorehing de-ferts; and especially between the mountains, which reflect the heat from one fide to the other; and there are no refreshing breezes or showers to cool the air, as there generally are near the line; so that it is no wonder that those countries are much hotter than any that are under the equator, as those near the Persian gulf certainly are. The most probable reason, therefore, that the antients never discovered any country in the southern latitude, is, they found it so excessively hot about the tropics, that they imagined, if they should proceed much farther south, the heat would have been intolerable; and it feems to have been a received opinion among them, that part of the torrid zone was not habitable. But we find, on the contrary, that in many countries, which the autients were acquainted with, the heats were greater than those under

It feems very incredible that all countries in the fouthern latitude were uninhabited till within tome hundred years path, especially in Africa, where no seas intervened to prevent discoveries; but it appears no less strange, on the other hand, if people had travelled into the southern parts of Africa, that none should ever return from those parts, to, give the antients an account of these countries, and inform

outh, by Boflora

them, at least, that they were capable of being inha-

It is a received opinion among philosophers, that the wind is nothing elfe but the air put in motion, and the air unif receive a great addition of heat from the ressection of the burning sands; this, therefore, being the case, it is not more surprizing that the wind should blow warm at noon day, when it has passed over a parched country for several hundred miles, than that those which come from the sea, or from some frozen climate, should prove cool. We shall not dispute that some people may have been surfaceated by these hot winds, as travellers inform us; but do not remember to have heard one instance of it from those persons who have been several years in India, where the hot winds likewise blow annually in May and June. It is certain that the chilling cold winds that happen in the night, sometimes after an excessive hot day, have been very statal to Europeans, who have imprudently lain exposed in the open air. There have been also instances of people losing the use of their limbs, and some of them their lives, by a sudden pestilential blass, as well at fea, as on shore.

About forty years ago a gentleman, who held a confiderable poft in India, under the Eaft India Company, had the use of his limbs taken away in the following manner; a company of six or seven persons, of which number he was one, were drinking a glass of wine on board, when two of them were fuddenly struck dead, and the others sized-with a kind of dead pally; and, for his part, he had not the least feeling in his limbs; but when he was carried on thore, the Indian physician ordered him to be stretched out in the scorehing sand at noon, for several days successively, placing an umbrella over his head only, and two or three servants were ordered to rub and pinch his slesh in every part, for some hours; and though he was so very bad, that when one of them stood upon his breast, he did not feel him at first, yet, by chasting and rubbing him with oils in the fun, and bathing and puching of him in this manner, for several days, his seeing at length returned, and the use of which, he was in a great measure deprived off.

With respect to the temperature of the air in the north part of the Persian dominions, we shall here remark, that the provinces of Georgia, Shirvan, and Aderbeitzen, are very warm and dry in summer; but in winter they are subject to violent tempests, and to as severe frosts for fix months, as any country on the continent, in the same latitude; but as this part of Persia is very mountainous, there is frequently a great difference between the air on the north and south side of the mountains; and, after travelling a few miles, people imagine themselves to be in a different climate; but how cold soever the mountains on the north may be, they are extremely healthful. The inhabitants of the slat country of Ghilan and Mazanderan (which lies upon the Caspian sea, and was the antient Hyrcania, in the summer retire into the mountains, all the water they have being soul and corrupted in the hot season; and it is said that here, and in Chorasan, earthquakes are very common. This part of the country is also very damp, full of shinking morasses, and unhealthful.

Though Persia exceeds most other countries in the world in a transcriptors in the there.

Though Perfia exceeds noth other countries in the world in extent, yet there are ever few navigable rivers in it, there not being one in the heart of the country, that will carry a boat of any burden; and, in fome parts, people may travel feveral days journey together, without meeting with any water. The river Oxus, it is true, which divides Perfia from Ufbeck Tartary, is a large fiream: but as none of the branches of it arife in the Perfian documions, it is of little use to them. There are, however, several small rivolets which fall from the mountains, and are conveyed by subtervaneous channels, or otherwise, to their principal cities. The rivers Kur and Aras, antiently called Cyrus and Araxes, which rise in the mountains of Arast, and run through Georgia, Shirvan, and Aderbeitzen, and having joined their streams, fall into the Caspian sea, are much the most considerable rivers in the Perfian dominions.

As the government in Perfia have the care of the conveyance and distribution of the waters, they have appointed a great officer in every province, who has the charge of it. And as there is a great feareity of this ufeful article in this country, fo there is no place where they are more careful of it, or have more ingenious contrivances to convey it to their cities, and into their corn fields and gardens. For the more copious and general fupply of water, the Perfians also turn their little rivulets and springs to such parts of the country where it is most wanted; and they dig very deep and broad wells, out of which they draw the water with oxen, in

great leathern buckets, which they afterwards empty into cilterns, and let it out for the fervice of the country, as there is occasion. Subterraneous aqueducts are also provided, through which the water is conveyed to the diffance of near thirty leagues. These are arched with brick, and are two fathoms high; at the diffance of every twenty paces, there are large holes like wells, made for the conveyance of carrying on the arch, without working under ground too far, and for the more easy repairing them. The river and spring water is distributed to different quarters of the town alternately, as occasion requires, when every person opens the canal or refervoir in his garden to receive it; and for this benefit every garden pays a yearly sum to the government, particularly about lipahan; and as it is very easy for any person to turn his neighbour's water into his own channel, that fraud is very severely punished. As the spring water is not found so proper for the grounds, they therefore pay a higher rate for river water.

Two feas, besides the occan, belong to Persa; namely, the Caspian sea, and the gulf of Bossora, or Persa, one on the north. and the other on the found west.

Two feas, besides the ocean, belong to Persia; namely, the Caspian sea, and the gulf of Bossor, or Persia, one on the north, and the other on the fouth west. The Caspian sea is about a hundred leagues in length, from north to south, and ninety leagues in breadth, and has near a hundred rivers running into it, of which the chief is the Wolga, at the mouth of which stands Astracan, but this sea has no communication with any other; and though so many rivers sall into it, the way by which it discharges its redundance of waters is not known, for they neither ebb nor slow, but are always of the same height. It is navigated chiefly by the Muscovites, who live on the north side of it; and the lact Czar was cutting a channel between the Wolga and the Don, or Tanais, whereby that monarch proposed to open a communication between the Euxine and Caspian seas; but this project is faid to be at present sufferenced. As to the Persians, they seldom apply themselves to navigation, and have sew vessels upon this sea; but they are not eltogether so negligent of the gulf of Bossora, upon accourt of the pearl fishery there, which, besides a prostructure of the suffer of the suffand of Baharem.

Ormus is the most famous of the rest of the islands in when he was the antennation of the pearl of the substantial seas in the season.

Ormus is the most famous of the rest of the islands in the bay; it is fituate at the entrance of the gulf of Boslora, and is about thirty miles in circumference. While the Portugues were possessed in the trade of Persia, and had built one of the most elegant cities in Asia upon it. There is now only an indifferent castle upon the island, which the Persians keep possession of, in order to prevent other nations from insulting them, as the Portuguese did formerly, the trade being removed to Gombron, from which it is about two leagues distant. The island isself never produced any thing but salt, which grows in a folid crast, two inches deep, upon the furface of the ground; and the hills, at a distance, appear as if they were covered with show. The Portuguese fetched most of the water they used from the continent; for there is not drop of water

used from the continent; for there is nother drop of water upon the island but what is preserved in cisterns.

The king of Persia, by the affishance of the ships belonging to the English East India company, reduced this island, about one hundred years ago, to his obedience; and expelled the Portuguese; for which service the Persians allowed the company great advantages in trade, and half the customs of Gombron for fifty years fuccessively, amounting, it is said, to forty thousand pounds per annum; but these customs were afterwards taken from the company, who were allowed three or four thousand pounds a year, as an acknowledgment of their service at Ormus. The English were deprived of their share of the customs, under pretence that they did not afterwards protect the Persian trade against the Portuguese and Arabs, as they had stipulated to do; but the sum of three thousand pounds and upwards per annum, was paid till the civil war commenced. Several islands are dispersed over this sea; the one called Kismish, and the other Lareca; the former of which is said to yield abundance of wheat, and to be as fruitful as Ormus is barren.

erect their dy laid out, freet, no-thing thing being feen but a dead wall with a great gate in the middle, and perhaps a skreen or slight erection within the gate, to prevent their being overlooked. By their sondness for privacy and retirement, they differ greatly from the Europeans, who generally expose their seast as much as possible to the view of the public, and seem to intimate, that they can enjoy no pleasure in the finst palaces, but what results from the admiration of the speciators that pass by the gates. The Persians also differ from us, in that they have seldom more than one sloor, which is disposed in this manner: In the front of the house stands the virando, being a large please are closifer, one larger where these six experience as consider one larger. this manner: In the front of the house stands the virando, being a large piazza or cloisser, open before, where they sit and conduct their ordinary affairs. Beyond this is a large hall eighteen or twenty feet high, which is used at great entertainments, or any foletim occasions. On the farther side of the house is another virando, or piazza, with a bason or fountain of water before it; beyond which runs a walk of fine trees, as there slikewise does from the front of the street to the house. At each corner of the hall is a parlour or lodging-room, serving indifferently for both those purposes: between these parlours, on the sides, there are doors out of an hall into an open square place as large as the rooms at the corners; there are also several doors out of the hall into the virando or piazza, before and behind the house; so that in the hot season they can set open in the great hall nine or ten doors at once; and they will the houle; so that in the hot leason they can let open in the great hall nine or ten doors at once; and they will have the benefit of the air, if there be any flirring. There is a handsome bason in some palaces, and a sountain playing in the middle of the hall, which adds still more to the cooliers of the place. The walls of the houses are of a considerable thickness, and sometimes built of burnt bricks, but more commonly of bricks dried in the sun. The roof of the great hall is arched, and five or fix feet higher than the other rooms about it. The roofs of the buildings on each fide of the hall are flat; and there is a pair of flairs up to the top, where the Persians walk in the cool of the day: they fontetimes lie there all night on a mattras, as there is a wall or balustrades all round the top of the as there is a wall or baluftrades all round the top of the building. The kitchens and other offices are at a diffance on the right or left, and it is observable, that all their rooms, except the hall, flamid feparate, and there is no pafage out of one into another, except from the hall. In-flead of a chimney, they usually have a round liole about four or five feet broad, and a foot and a half deep in the middle of the room, in which a charcoal fire is made, and the place covered with a thick board, or table, about a foot high. To close that no findle can extent. Our threather than the contract of th sue piace covered with a thick board, or table, about a foot high, fo clofe that no fmoke can get out. Over that table a large carpet is thrown, under which they put their legs in cold weather, and fit round, there being a passage for the fmoke by pipes which are laid under the floor. The doors of the house as were and fully the floor. of the house are narrow, and seldom turn upon hinges as ours do; but at the top and bottom of the door there is a round piece left, which is let into the frame above and below, on which they turn; and the very bolts are frequently made of wood.

Their furnises confils only in carpets spread on the floor, with cushions and pillows to lean on; and at night there is a mattrass brought to seep on, and a quilt or two to cover them, but sheets are seldom used. Their servants lie about in any passage on mats, and take up very little

The floors of the rooms are either paved or made of a hard cement, on which they lay a coarle cloth, and a carpet over it. The fides of some of their rooms are lined with fine tiles, not nulike the Dutch tiles, about a yard high, and the rest of the wall painted or hung with pictures. From the above description, the reader may form a tolerable idea of a Persian house. Those of the inserior class of people cannot be expected to be like those already described in every particular; but they endeayour to imitate their fuperiors as nearly as they can. The paleces of the princes feem to be built much after the same manner, only they are more lofty and magnificent.

We proceed now to describe some of their principal towns, the sirst of which is Ispahan, or, as it is commonly pronounced, Spahawn. It is situated in thirty-two degrees forty minutes north latitude, and the fiftieth degree of longitude, reckoning from the meridian of London. It stands in a fine plain, almost furrounded with mountains, which lie about two or three leagues from it; and the form is pretty nearly oval. The river Senderhout runs by it at about a mile diflance; but their are feveral channels and pipes above the town, which convey the water from it into canals and basons, for the service of the court and city. The town is without walls, and about ten or twelve miles in circumference. Those who extend it ten leagues, take in the town of Julpha, and several others, for which we see no manner of reason; for Julpha lies a mile from Ispahan, and on the other side the river, and can no more be reckehed a part of the city, than Chessea may a part of Westminster. Were we to take in all the villages within the weekly bills, the circumference of all London would very probably be little less than some travellers reckon Ispahan. There were formerly twelve gates to the town, but four of them are now closed up, the others are always open. With respect to the walls mentioned by some gentlemen, it is probable there was formerly a mudwall; but a merchant who came not many years ago from thence assiming that there is no part of it visible at present. There is indeed an old casse without artillery, run to ruin, which is no better fortised than the town.

Most of the streets of Ispahan are narrow and crooked, and as sew of them are paved, they are either exceeding

Moft of the firects of Ifpahan are narrow and crooked, and as few of them are paved, they are either exceeding dirty or dufty; and the paffage is rendered very unpleafant by the number of people of fashion who ride through them with great trains of fervants, notwithstanding there are no coaches or carts. There are, however, feveral very fine squares in the town, particularly Meydan, or the royal square, of which we shall now give some description.

Two of the palace gates over into this square, which let

Two of the palace gates open into this square, which is one third of a mile in length, and above half as much in breadth. On the fide of it are buildings resembling the breadth. On the fide of it are buildings refembling the Exchange in the Strand at London, with shops on both sides, where every trade has a distinct quarter assigned; there is also a second story, where the mechanics have their working slitons. There seems to be little difference between these exchanges and ours; except that those at Ispahan have no windows, but great openings at proper distances to admit the light, and people ride through them as along the streets. There is a market for horses and cattle in the middle of the square, and all manner of goods and catables are exposed to sale; though the great Shah and catables are exposed to sale: though the great Shah Abbas, who build this square, designed it for manly exercises, particularly those of horsemanship, and handling the bow and lance, at which no people are more fielibil than the Persans. There is a fine row of trees planted, and a handsone bason of water, on that side of the square next the palace; and some great brass gates, which were taken from the Portuguese, serve to make a sine shew. A great mosque stands at the south end of the square, and another on the cast side, over-against the great gate of the palace Several streets in Ispahan are covered and arched over,

which makes them pretty dark, and this feems to be pe-culiar to the Persian towns. In the Indies, it is true, the tradefinen have little piazzas before their houses, where they expose their goods to sale, but then there are wide streets before them; though in some places there is no

they expose their goods to fale, but then there are wide firects before them; though in some places there is no other street than the eovered ways through which people ride. Another peculiarity among them is, that their houses and shops are never in the same place, so that it is very common for a tradefiman to go half a mile in the morning to the hazar or market-place, where his shop is, and at night they look up their valuable goods in chests and counters, and the meaner fort they leave packed up, sometimes in the open square; for it seldom happens that any thing is lost, so careful are the watch appointed to guard their market places; or so very little given to thieving are the people in this part of the world; and no doubt the speedy and exemplary punishments insticted upon pilsters, is one great means to deter them from it.

Foreign merchants lodge their goods in the public caravansers about the city; which serve them also instead of inns, for lodging and diet; but these is this difference between an inn and caravansers, that people find their own bedding and cookery in the caravansers whereas we have not that trouble in our inns. Two things, however, render a caravanser a presentable to an inn; one is, that a person is not subject to the extortions of an inn-keeper, but buys his provision at the best hand; and the other is, that let the merchants occupy never so many rooms, he shall not be dithurbed in them; pays only a small sum for his warehouse or lodgings, and pays nothing upon the road. In I spahan there are one thousand sive hundred public caravaniferas, which have been built by charitable people, for the use of strangers; most of them are built after one model, and differ only in the dimensions. There is a handsome portal at the entrance, on each fide of after one model, and differ only in the dimensions. There after one model, and differ only in the dimensions. There is a handsome portal at the entrance, on each fide of which are shops, from whence, you enter into a square, about which there is a cloister; or piazza, and within are lodging rooms, and warehouses for goods; there are also conveniencies and stabling for horses, and other beasts, on the outside, or they may be brought into the square, and sastened there, as is frequently done on the road, where there is danger of robbers. there is danger of robbers.

There are no taverns at Ispahan, wine being prohibited by the Mahometan religion; nevertheles some of the Persians drink pretty plentically of it in private. There are, however, very handsome cosses-houses in the principal parts of the town, where people meet and converts of politics, though they have no printed papers in them. In these are to the met with, fome amorements peculiar to the country, as the harangues of their poets, listorians, and

country, as the narrangues of their poets, innormals, and spriefts, who frequently, by their orations, collect a great number of people about them, and expect, for their infractions, fome gratuity from their audience.

The palace, with the buildings and gardens belonging to it, occupy above a league in circumference. One of the gates which comes up to the royal meydan or square, is called Alicapi, and the other Doulet Cuna; over one of them is agallety, where the Sophi uded to fit and fee mar-tial exercise performed on horseback. No part of the palace where the court resides, comes up to the royal quare; but within the principal gate there is a hall, or court on the left hand, where the Vizir and other Judges, administer justice on certain days; and on the right hand are rooms where offenders are allowed to take fanduary. are 100ms where oftenders are allowed to take fandtuary. From hence to the hall, where the King usually gives audience, is a handforne walk: it is a long room, well painted and gilded, and supported by forty pillars; it is divided into three parts, one a flep higher than the other, on which the great officers stand, according to their rank. There are no hereditary nobility in Perlia. On the third affent is the roval throne, raifed about a footback and as facilities. ascent is the royal throne, raised about a foot and an half accent is the royal throne, raifed about a foot and an half above the floor, and about eight feet fquare, on which is foread a rich carpet; the King fits crois-legged here upon folemn occasions; having a brocade cuthion under him, and another at his back. No perfon is permitted to enter the other apartments of the palace, particularly the haram, or women's apartment, none but ennech's entering them; fo that they cannot be exactly deferibed, but we underfland in general that they are composed of feweral pleafure, honder ao mat they cannot be exactly deteriode; but we understand in general, that they are composed of several pleafure-houses dispersed about the gardens, nearly resembling the houses first described; their great beauty consists in the sine walks, fountains, and cascades about them. The ladies hunt and take their pleasure with the Prince, in a large park walled is, which is becomed the above mentioned gradual. in, which is beyond the above mentioned gardens.

There are upwards of an hundred and fifty Mahometan

mosques, or temples, in this city, which are covered with domes or cupolas, and, appearing through the trees that are planted almost all over the town in the streets and that are planted almost all over the town in the streets and gardens, afford a noble prospect; but the common buildings are so low, that they are hardly discerned by a person who views the town on the outside. Christians are prohibited from entering their mosques, or even coming within their courts under severe penalties, so that our readers cannot expect a minute description of them.

The great mosque in Ispahan, called by way of eminence the King's, or because it was built by one of their Kings, has been viewed by travellers in difguise, who in form us, that there is a gate which leads to this mosque, covered with filver plates; through this you proceed to a court with a piazza or cloifter on each fide of it, where the priefts lodge who belong to the mosque. Opposite to the great gate ate three large doors, which open into it: the five illes, of which the mosque is composed, are beautified with gold and azure: in the middle is the cupola, supported, by four great fquare pillars: the illes on the fide are lower than that in the middle, and borne up by thick columns of free flone; two great windows towards the top columns of free itone; two great windows towards the top of the middle life gives light to the whole modque: on the left hand, towards the middle, flands a kind of pulpit, with a flight of flone fleps to go up to it: there are no feats, or pews, as in Chriftian places of worthip, nor any kind of imagery or pictures. The bricks and tiles on the outfide of the building are painted with various colours after the Perfian manner, and the floor of the mofque is covered with carpets, all perfons putting off their floors as they enter it.

The outfide of the mosque at the fouth fide of the royal meydan is stone, and the form round, it is divided into ise: the walls are lined fifteen feet high with white po-lished marble, and in the middle of the square before the mosque is a large bason where they wash themselves before enter the temple. The mosques have most of them cupola's with fleeples or towers, whither the Molla's go up to fummon the people to their devotions, but make no ufe of bells for that purpole. Another fubject of the traveller's admiration, is, the nu-

merous bagnios, called hummums, in this city. Some of these are square buildings, but most of them globular: the tops are covered with tiles painted blue; and the stone of which they are built is ufurlly white, and well polished. The infides are divided into many cells, or chambers, some for ideastine, and others for sweating: the floors are laid with black and white marble. As the Persians effects bathing to be extremely healthful, and an effectual remedy for colds or aches, and many other diftempers, they therefore repeat it almost every day.

The Charbag, which is a walk above a hundred yards wide, near Ispahau, is greatly admired by foreigners; it extends a mile in length, from the city to the river Zenderhoud; double rows of trees are planted on each fide of it.

houd; double rows of trees are planted on each fide of it, and in the middle runs a canal, not continued upon a level, but at every furlong distance the water falls into a large bason, and forms a cascade; the sides of the canal and basen are lined with hewn stone, broad enough for feveral men to walk abreast upon them. On each fide of this walk are the royal gardens, and those of the grandees, with pleasture-house at finall distances. These, when viewed together, afford a very agreeable prospect to the speciator. At the end of this walk is a bridge, over the river Zeniderhoud, which leads to the town of Julpha; there are also two other bridges, one on the right, and the other to the less, by which the neighbouring villages have a communication with the city, though they are distant about a mile from it. level, but at every furlong diffance the water falls into a about a mile from it.

The architecture of thefe bridges is extremely remarkable, for on both fides, both above and below, are arched paffages, through which people ride and walk, from one end of the bridge to the other; as in the covered fireets of the city, and at little diffances, there are openings to receive the light. The arches of these bridges are not very bith, the bridge are not very high, there being no veffels to pass under them; for this river is not navigable, any more than the rest in Persia. At the latter end of the summer the channel is exceeding narrow and fhallow, infomuch that there is not water enough for the gardens belonging to the city; to supply the want of ir, they have abundance of wells about lipahan, which contain very good water for all uses. But is the fpring, on the melting of the flows on the mountains, it

makes a pretty good appearance, being almost as broad as the Thames at London.

the Thames at London.

The town of Julpha flands on the fouth fide of the river Zenderhoud: it is inhabited by a colony of Armenians, which were transplanted hither by the great Shah Abbas. This town is about two miles in length, and not much lefs in breadth, being for the most part better built, and the frects wider than those of Ispahan, but the trees that are planted in the streets, and the large gardens they have near their houses, give it more the appearance of a country village than a town. Georgians, and several other Christians, inhabit here, as well as Amenians; and there are some convents of Europeans, but no Mahometans. This colony has slourished prodigiously since its first settlement here by Shah Abbas; they being now the most confiderable merchants in the world; and we neet with them in almost merchants in the world; and we neet with them in almost all countries of Asia and Europe. The king at first pro-vided them with stocks to trade with, and partock of their profits, fo that they were little better than the king's factors; but they now only pay a yearly tax to the government. They enjoy a privilege above all other Christians, being allowed to purchase estates.

The factors belonging to the East India company have a handsome house in Ispahan, the model of which is the same with the house first described; but since the civil wars broke out, the usurpers have so harassed and oppressed them, that the company have ordered their servants to retire from thence: they have also withdrawn most of their fervants from Gombron, and made Boffora (at the bottom of the gulf of the fame name) their principal factory on that fide. The city of Boffora stands on the Tigris, two days journey below Bagdat, and the territory is governed by its own prince, but tributary to the Grand

Seignior.
Schiras, or Sheraz, according to the modern pronunciation, lies about two hundred miles to the fouthward or Ifpalian: it is fituate in twenty-nine degrees fifty minutes of north latitude, and is ufually reckoned the fecond city of the kingdom, and is the capital of the province of Fars, or the antient Perfia: fome deduce the name from Cyrus or the antient Perfia: some deduce the mane from Cyrus the Great, there being a tradition that he was buried there; others fay it is derived from "fherab," which in the Perfian tongue fignifies a grape, because that fruit abounds in this place; and others from the word "fheer," which fignifies milk. The town is feated in a pleafant fertile valley, about twenty miles in length, and fix in breadth: it has a rivulet running through it, which in the fpring appears like a large river, and fometimes increases to such a torrent,

There are no walls about this place, which contains only about four thousand houses: the compass of it is reckoned to be about seven miles, but much the greatest part of this space is gardens. It is ob-fervable, that the Persians let most of their buildings run revious, that the remains the most of their buildings this ruin; every generation choofing to build new houses, rather than occupy those of their ancestors. There is no place where the Mahometan supersistion prevails more than here, there being a mosque or temple almost to every twenty houses; the dones of which, being covered with blue varnished tiles, make a pretty appearance among the trees: here is also a college, where the liberal arts are findied.

Schiras is most remarkable for the fine gardens and vine-Schras is moit remarkable for the mof partents and vine-yards about it. The fiteets are for the moft part narrow and dufty; but there are fome broad ones with canals, and hafons faced with ftone. The cyprefs-trees with which their walks are chiefly compofed, are the talleft and largeft of any whatever, and grow in a pyramidal form; inter-mixed with these are several broad spreading trees, and all manner of fruits, as pomegranates, oranges, lemons; cherries, pears, apricots, dates, &c. These are not planted against walls, as with us, but stand in the alleys, and someagaint walls, as with us, our tradu in the afters, and other times are dispoted irregularly, as in a wilderness. They have also abundance of sweet flowers of various colours, but not planted in that regular order as in the gardens of Europe. Their vincyards and wines are preferable to any Europe. Their vineyards and wines are preferable to an in Persia; and the canals, cascades, fountains, and pleasure houses in their gardens, are not at all inferior to those of houtes in their gardens, are not at all interior to those of Ifpahan. The king's garden here is no less than two thoufand paces square, and surrounded with a wall sources feet high; but the gardens as well as the buildings of Schiras have been much neglected of late years.

The noblest ruins of an antient palace, or temple, that any country can boast of, are now to be seen thirty miles to the north east of Schiras; even Rome itself, it is said, has

nothing comparable to these venerable remains of antiquity. The place is at prefent called Chilmanar, or Forty Pillars. According to ione, it was built upon a mountain of dark-coloured marble, and the steps hewn out of the folid rock; but others, who have viewed it more narrowly fince, obferve, that the steps are composed of large stones, sifteen or fixteen feet in length, and of such a thickness, that fix or seven steps are cut out of one stone; the whole being so skillfully joined by art, that they appear to be but one

The ruins of this once magnificent palace or temple are feated at the north-east end of that spacious plain where Persepoles once stood, and are generally held to be part of the palace of Darius, who was conquered by Alexander the Macedonian monarch. The front of this palace flood towards the west, and was about sive hundred paces in length, the whole occupying near threescore acres of ground. The ascent to it is by ninety-five sleps, thirty see in length, and twenty inches broad, but not above three inches deep, so that a horse may easily go up or down them. The slair-case divides as you ascend; one branch winds to the right, and the other to the left, each having a well on one fide, and a marble ballufter on the other; both of the branches afterwards turn again, and end at a fquare landing-place, from whence is an entrance into a portico of white marble twenty feet wide; on which are carved in hafs-relieve two beafts as large as elephants; but their bo-dies refemble those of horses, and they have the feet and tails of oxen. Ten feet farther stand two-fluted columns of whitith flone, about fixty feet high, befides their capitals and bases, and as thick as three men can fathom: a little faither fland two other pilafters, carved like the first, except that the beafts on these latter have wings, and men's heads. Beyond this portal, or hall, is another fuch double flair-crife, leading to the upper rooms, twenty-five feet broad, but incomparably more beautiful than the former; for on the walls of it a kind of triumph is carved in bafsrelieve, confifting of a numerous train of people in diffinct companies, fome of them carrying banners, and others offerings, and after all comes a chariot drawn by feveral hotfes, with a little altar upon it, from whence the fire feems to afcend. On the other fide are carved wild beafts fighting, and, among others a lion and a hull are cut with great exactness, the stone of which is so hard, that the nicell and most curious part of the workmanship is still in

fine prefervation.

There is a figure prec on the top of the fecond flair-cafe, which has been furrounded with columns, feventeen of which only are now flanding, but there are an hundred pedellals: fome of those that are left are fixty, and others No. 2.

feventy feet high, and twelve of them near three fathom in compass; they are of red and white marble fluted. Antiquaries suppose that these supported the temple of the sun. Near those columns, on the same sloor, is a place fifty feet square, inclosed with walls fix or seven feet thick, of a much finer marble than any hitherto mentioned, and so wonderfully carved, that it would take up several days to view all the figures: which way so sever, a man turns aimfelf in this second floor, there appear figures cu sin bass and half-relieve. In one place, are men fighting with lions; in another, a man holding a unicorn by the horn; in a third, are the figures of giants; and in a sourth, a prince is represented giving audience to his people or to ambassadors; belides a multitude of other scenes. Here are likewise abundance of inscriptions, in lasting characters, many wife abundance of inferiptions, in laking characters, many of which have been transcribed, and brought into Europe, but fearcely any of them are understood at this day by the learned, any more than they are by the people of the

WAY

Gombron is a town and port the most resorted to of any in the Persian dominions. The English East India company have had a factory here for upwards of three hundred years: they have a just claim to half the customs of this place, by virtue of the before-mentioned treaty, in confiplace, by virtue or the before-mentioned treaty, in cong-deration of their having affifted shah Abbas in the reduc-tion of Ormus; but of late years they have received the an-mual fum of one thousand tomans, or three thousand three hundred and thirty-three pounds, fix shillings and eight pence in lieu of it. After the conquest of that island, Gombron received the name of Bandar-Abassii, or the port of Abbas (Bander fignifying a port) that prince having transferred the trade bither. Gombron is fituate in twenty feven degrees thirty minutes north latitude, and distant about three hundred iniles from Schiras. It is about three about three numers and thands on a level ground clofe to the fea; the country at most every way rising infensibly for fome miles, without any confiderable hill, except towards the north: near this town is the narrowest part of the Persian gulf, or Bossora. The coast of Arabia lies opposite to it, at about ten leagues distance, but does not feem to be further scripe then from Dougt to Calife. it, at about ten leagues diffance, but does not feem to be farther acrofs than from Dover to Calais. Befides the natives, it is inhabited by English, Dutch, Portuguefe, Arabs, Jews, Armenians, Banians, and feveral other nations, of which the two last mentioned are much the greatest merchants. Towards the land it has a wall, which is in a ruineus condition; and towards the fea there are three a runneus condition; and towards the sea there are three sinall forts, mounting five guns each, and a platform of eight. There is a callle mounted with thirty-five guns, for the security of the road. The people here have the same humour as in other parts of Persia, in letting the houses of their ancestors drop, and erecting new ones for themselves; for they have adopted the superfictious opinion, that if the person who inhabited the house before was deemed unknown the same properties that like it. deemed unhappy, they are apprehensive that the like ill fortune will attend the person who next occupies it; so that the houses in many of the streets are tumbling down, and others going to decay. Their best houses are built of stone brought from the illands of Kishmee, or Larrak, but they are for the most part built of bricks hardened in the sun. They consist sometimes of two stories, and have a wooden contrivance on the top of the house, to force the wind down into the lower rooms. These machines are about ten feet high, and at a distance look like towers. The houses belonging to the English and Dutch East India companies are as well built as most in the town.

Tauris is the next town of note. It is called by the Turks and Persians Tabriz, and was the metropolis of Media. It is situate in thirty-eight degrees odd minutes, north latitude, and is supposed to be the antient Eebatana. Some of the antients were of opinion that it was sounded to the control of the antients were of opinion that it was founded to control of the antients were of opinion that it was founded to control of the antients were of opinion that it was founded to control of the antients were of opinion that it was founded to control of the antients were of opinion that it was founded to control of the con by Semiramis, who with incredible labour brought the by Semiramis, who with incredible labour brought the water thither from the mountain Orontes, a branch of. Taurus; but a celebrated Jewish writer assures us, that it was built, or at least a royal pelace in it, by the prophet Daniel. It was best known formerly by the name of Ecbatana, and was then in its greatest splendor. The ancients observe, that it was fitteen miles in circumference, and had walls seventy cubits high and sifty broad, with many noble palaces; but there is now little or nothing remaining either of the walls or palaces. However, Tauris maining either of the walls or palaces. However, Tauris is fill a confiderable town, being about five miles in circuit, populous, and a place of very great trade; but it is not near fo well peopled as some late accounts have made it. The inhabitants, including men, women, and chil-dren, do not exceed fourfcore thousand, though their number has been exaggerated beyond all credibility; for during the late civil war neither the prince or usurper have been

able to lawy an army of fosts thousand men, notwithlanding the next-witers have lately found in this size two hundred thousand men capable of bearing arms. Here are fewent rable messlans, or squares, one of them almost equal to the rayla merdan of lipahan: they have also their educated freets, or exchanges, where abundance of rich merchandide is exposed to fals; and their mosques and legulos resimble their in other ciries, of which we have made mendant before.

The city of Tauris, like most others in Peria, stands in a plaint ferrounded by mountains, from whence there falls a small freems, which runs through the middle of it; but, on the medicing of the frows, it is increased to a mighty torrent. This eit; has often changed its master, having been fometimes possessed by the Periass; but as the citizens feem chiefly inclined to the Periass; the Turks have several times burnt and plundered it without mercy, but the great Shah Abbas, powards of a hundred years ago, drove the Turks out of this part of Peria, from which time Tauris remained in the peaceable possessed, from which time Tauris remained in the peaceable possessed from the Perias till a sew years ago, when the Turks again seprized it, exercising their usual cruelities on the misforable inhabitants. The caravans usually travel in four and twenty days to and from Ispahan to Tauris, which lies about four hundred miles to the northward of the other.

We have already observed, that Taffils is the capital city of Georgia, but subject to the Persians, and inhabited chiefly by Christians; infomuch that there is not one Machathether mosque in the place, except that of the castle, though there are no less than sourteen Christian churchea. It is fruste in sourteen degrees of north latitude, on the liver Kur, or Cyrus, at the foot of a mountain: it is not of very large extent, but elegandy built. On the south side, on the declivity of the mountain, stands the castle, which was once a piece of strength, but is hardly tenable as present, and therefore liable to be seized by the next invader, whether Turk or Muscovite, if they are not already possessed, whether Turk or Muscovite, if they are not already possessed, built in sorm of a crost. The other churches belong partly to the Georgians, and partly to the Armenians. The e, as well as the other public structures, are built of stone, such as their bears, caravansers, bagnice, &c.

SECT. HI.

Containing a further account of the Perfant, with respect to their disposition and mental qualities, dress, stature, shope, and come lexion, together which their dies, liquers, public and private diversons, rural sports, and ceremonies, salutations, gaming, Uc. also of their travelling, carriages, roads, and retinue.

IT is universally allowed, that the Persians are in general melowed with bright parts, have abundance of viva-eity, are fond of glory, and furpass their neighbours of Indie in point of courage, infonuch that the Great Mogul prefers them to the greatest posts both in his court and army; and as they were observed to be of all men the snot civil and obliging, they retain the same disposition to this day; especially rowards foreigners, who cannot bet admires their hospitality and behevolence. They are far from being guilty of that brutish behaviour which is so common among the Turks; they are, however, most justly and universally charged with vanity and profuseness in their apparel, equipages, and number of fervants. Voluptaousiness in eating and drinking does not appear to be their diftinguishing vice, at least the Europeans are much more addicted to it; for the greatest part of their food is rice, fruit and gardensess: they have not any great variety of sitch, neither have they many ways of drossing it: pilo seems to be the standing dish, even among those of the best quality. And as for strong liquors, though they drink them now and then by stealth, yet drankenness is very far from being common among them; every man may retire from an entertainment without ceremony, when he thinks proper, without a breach of good menners; no person being urged to take more liquor than he sinds convenient and agreeable to hinself.

It is univerfally allowed, that the Perfians have a genius well adapted to poetry, informeth that a poet is introduced at every fellival or entertainment, and is defired to oblige the company with his compositions; and these persons are frequently found with a crowd about them in costec-houses, and other places of public refort. Though the Perfians are by some people charged with being very covetous, this must certainly be understood with respecting the acquisition of riches; for as to keeping and hoarding up money, they are generally absolved from it. They only get that they may ipend; and when they have furnished themselves with an equipage, house and gardans, fultable to their mind; they chuse rather to lay out their money in building caravansers, mosques, and on other public occasions, than let it lie by thems; so that some travellers observe, that no people in the world take less thought for to-morrow. A man, for inflance, who has lately come to the possession of eight or ten thousand pounds, will in a few weeks lay it out in purchasing wives and saves, clothing and farniture, without considering where he shall meet with a supply in future, and in two or three roonths afterwards he will dispose of them again for substitutions.

and in two or three months afterwards he will dispose of them again for substitution.

The Fersians have a great command of their passions: they are not easily provoked to anger or resentment; and when they are, it never proceeds to a duel, and very seldom to blows. When angry, they generally call each other Jews or Christians, and their quarrels commonly terminate in ill language, which is sometimes intermixed with hearty curses. Few Europeon nations are in general more polite, they being of a very engaging address and most obliging behaviour: they are also meek, peaceable, modest, grateful, generous, enemies to fraud, and courteous and affable to Christians as well as others; are moreover fair and punctual in their bargains, and treat foreigners with great humanity.

The fixture, shape, limbs, and features of the Persans are agreeable and well proportioned. In Georgia, and the northern provinces, they have an admirable complexion; to wards the fouth, they incline to the olive: but the great men having had their wives and conculines chiefly from Georgia and Circassis for an hundred years past, the breed is very much mended in the southern provinces. Their eyes and hair are generally black, and they wear only one cock on the crown of their heads, like other Mahometans, by which they expest Mahomet will lift them us to paradise. The king, great officers of site, and soldiers, wear only long whiskers on the upper sip, which, joined to a tust of hair on the upper part of their checks, grow to a very enormous size, infomuch that some of them, it is fails, are near half a soot long. The common people clip their beards pretty short; but none of the Persans suffer any hair to grow upon their bodies. Their mollah's and religious people wear their beards long, only clipping them into form.

The large turbants, which the Persans wear over their heads, are some of them white, and others striped with red or other colours, and the great men have flowers of gold and silver woven or worked in the cloth. They have affor a seull cap under their turbant, and all together does not weigh less than seven or eight pounds, sometimes a great deal more. They wear a kind of thirt of coloured silk or callico, generally blue, next to their kinas which they seld-dom wash white while it is fit to wear: this shirt has an open bosona, but neither neck nor wristbands, and is made close to the ann: they have also a pair of breeches, or rather drawers, close before, reaching half down their legs. Their stockings are made of woollen cloth, but not at all shaped to the leg: over the shirt they wear a waistcoat, and upon these a coat with sleeves, and buttons and loops before, ried with a safis, this is wide at bottom; and hangs like a bell a little below their knees. Befides this, they put on another coat frequently without seeves, the uppermost coat being shortest; over all these they have another loofs coat, lined with furz. Instead of shoes, they have pecked slippers turned up at the toos, and made of Turkey kather, which are neither tied nor buckled; and when they ride, they have boots of yellow leather; their bridles, saddles, and housings are immoderately sine; and almost covered with gold: the housing is so large, that it almost hides the hides to the housing is so large, that it almost hides the hides as the wear a broad sword and crice or paniard; the latter of which, it is faid, the ladies also wear.

The dress of the women nearly resembles the men's, ex-

The dress of the women nearly retembles the men's, exepet that they neither wear turbants on their heads, nor
fashes about their waists; and their coats, or vests, reach
almost to their heels. When they go into the streets
(which women of quality seldom do) they are covered from
head to foot with a white vail. The girls wear a stiffened
cap upon their heads, turned up like a hunting cap, with a
heron's setather in it, their hair being made up in tresses,
and falling down their backs to a very great length: the
quality have pearls and jewels interwoven with their fair.
The married women comb their hair back, and, having
bound it about with a broad ribbon, or rich tiara set with

jewels, which looks like a coroner, let the test of their he fall gracefully down their shoulders a which is a very becoming drefs. Both men and women have a great marrings and bracelets on their arms and fingers; but neith of them wear gloves.

coming dress. Both men and women have a pure their of them wear gloves.

Black hair is in greatest ofteem, being the most common, and the thickest and broadest eye-brows are thought the sinett; the women will dyr their eye-brows, if they are not black, and it is very customerry with them to paint their faces: they also rub their hands and feet with an orange coloured pominum. Some have feathers fet upsight in their tiars; and others have a fixing of pearls, or precious stones fathened to it, which hangs down between their eye-brows: they likewise wear jewels in their ears, and rows of pearls fall down their teniples as low as the seek; and in some provinces, which are on the confines of ladia, they wear jewels in their nostrils, which have a very difagreeable appearance to Europeans for as they hang down to the mouth, it makes them look as if they had hair lips; but the ladies of sphane never wear note-jewels. Their necktaces fall upon the boson, and have always a little golden box hanging to them, which is filled with fragrant and reviving persumes: these necklases are either gold er pearls.

Drefs is no inconsiderable article in Persa; for the dother of both men and women consist of the schoft flowered and brocycle silks; and people of mean fortuses endeanean even with the quality, and will have the clothes

end and broaded fills; and people of men fortunes en-deavour to v.o. vith the quality, and will have fine clothes; though they tood. The purchase of an ordinary turbant, it is faid, amounts to ten pounds, and they fre-quently coft twice as much; and they must also have a variety of them, left, as the proverb is, they flouid be known by their clothes. Their fallies also are breeaded, and coft from twenty to an hundred crowns; and over this and cott from twenty to an inudred crowns; and over the they have frequently another of canel's hair, which cotts nearly the faite furn, on account of its curious weekmanfaip. Those who wear fables, which they are very eager to obtain, feldom pay lefs than a hundred pounds for a close-bodied coat; all this, with the rich furniture and equipage they have when they ride out (which they do almost every day, if they go but a very little way) must amount to a very large sum; and it is justly observed, that this keeps them exceedingly poor. However, as there are in no country more handfome and comely men, finer horses, or richer equipages to be feen, the Persians are allowed to make as splendid a figure as any people in the world: though poverty may prey upon them at home, they are generally loaded with gold and jewels when they go abroad: as they enjoy almost continually a clear fun shine, and a bright element, a more than ordinary lustre is east on their persons, and their elegant drefs appears to the greatest advantage. Our European merchants, in order to preserve their credit, and conduct their affairs successfully, are under a necessity of conforming to these expenditure. they have frequently another of camel's hair, which cofts fully, are under a necessity of conforming to these expen-five customs at lipahan; and the accustoming themselves so fo much expensive gaity might prove of ill consequence to them when they return to Europe, were it not that they usually acquire fortones in this country, sufficient to support

usually acquire fortones in this country, numerent to topport an equipage in their own.

We now proceed to give fome account of the food and liquors of the Persians. They commonly drink a diffice coffee early in the morning; and go to dinner about eleven o'clock, when they eat melons, fruit, weetmeats, cheefecurd, or milk; but their principal meal is in the evening, when a dish of pilo is always ferved up; this confists of boiled rice well buttered and feasioned, with a fowl, a piece boiled rice well buttered and feafoned, with a fowl, a piece of mutton, or kid, accompanying it: they have an excelnut way of boiling their rice all over the coaft: the water
is quite dried away by the time the rice is enough; after
which, they feafon it with fpices, and mix faffron or turmerick with it, giving it a yellow, or what other colour they pleafe: but, as we have already observed, there
is very little variety either in their food, or the manner of
dreffing it. If they have a large injurit it is planted infleady dreffing it. If they have a large joint, it is baked, inftead of being roafted; but their usual way is, to cut their fiesh into small flices, and spitting, or skewering them together, roaft them over a charcoal fire: and, whether they boil or soaft, it is always done to rags; as the phrafe is, or it would be impossible to pull the mest to pieces with their hands, as they do; using neither knives nor forks. Pork is never earn here, nor vesi; neither do they ear hares, or other animals prohibited to the Jews; and beef is eaten but feldom: they do not deal much in venifon, fish, or wild fowl: they deel only plain diffue, being firangers to hathes, ragouts, and other compounds; and feldom have any other fauce than a flice of lemon, or fome pickles. They east their bread, which is made in thin cakes, the mionant it is baked; but eat much more rick. They use no beaten paper; only the whole fort; and not much falt in their feasoning, nor is there any brought to table; their meat is rever falled before it is drefted, as with us. They generally kill their mean and fowls the fame day they use them; and set by nothing till the fient, to be saten cold; and if any meat is left, they give it to the pose. It hay fit down trofs-legged at their meals; having a cloth spread upon the carpet: then some person, who has the provision before him, distributes rice and seth to the company. They use no soons, exceet for some said livenide. provision region aim, curriouse rice and sell to the com-pany. They use no spoons, except for some and liquide; but take up their rice by handfule, like the people in India. They feldom fit above half an hour at their meals: before which they wash, making use of their handkerchless to wipe on, instead of a towel.

which on, inflead of a towel.

The common people of lipahan feldom dreft their food at home: but when they have thut up their those in the evening, go away to the cooks, of which there are green numbers in that city, and buy allo for their familier.

The cooks have kettles, or coppers fixed in brick-work in their filese and floves; over which they dreft most of their meat, feldom making any afe of chimnies.

To the commendation of the Perfiams, we may observe; that they are fo far from flutting their doors at their meals, that they invite every one to cut with them, who happens to come to their house at that time: they remember to this day, and instate, the hospitality of Abraham;

ber to this day, and imitate, the hospitality of Abraham; observing, that If he had not been of that communicative disposition, he had probably missed the honour of entere-

disposition, he had proposely maining three angels

When any of the Perfants are disposed to make an enwhen any of the Perfants are disposed to make an ening the morntertainment, it is generally in the evening; and though a fupper, the guests usually comeat nine or ten in the morn-ing, and fond the whole day at the place to which they are invited. They discourse, inseks, cas sweetmeats, and are invited. I ney discourie; insexe, car iweetnests, and pass away the time with a variety of amusements; fornetimes they are entertained with heroic poems, repeated in honour of their prince; fornetimes finging-women are introduced, who fing, dance and play, and exhibit a thousand antic tricks to divert the company; and if any of the guests are disposed to withdraw with any of those dancing girls, they are shewn into a private room; and when they return not the least notice is taken of it. When surthey return stot the leaft notice is taken of it. When supper is served up, the son, or some relation of the master of
the house takes the management of the feest upon him,
said helps the guests to their meat; they generally provide
a variety of therbet on these occasions. It is the employment of great numbers of people about spahan, to collect
vast quantities of ice together in the winter season, and
keep it in repositories under ground all the summer, when
they sell it to great advantage; for the usual drink of the
Persians is nothing but fair water, which they drink with
loce.

We have already observed, that wine is made in several provinces of Perfia; but it is chiefly used by the Armenians and other Christians. The officers of the army will indeed fometimes indulge themselves with this liquor, and other people drink it as they pretend for their health; but that people drink it as they pretend for their health; but that is feldom done: the greatest part of it is fent to the neighbouring countries, ordrank by those Christians who are dispersed throughout the Persan dominions. Those who abstain from wine for conscience sake, because it is prohibited by law, exhilerate their spritts with opium, bang, poppy-seed, and other intoxicating ingredients; it being almost universally allowed, that they cannot softain the cares and inquietudes of life, without an expedient of this nature.

The Persans, like other eastern nations, take pills of opium, which some of them gradually increase to such a sofe, as would destroy half a dozen Europeans. In an hour after they have taken the pill, it begins to operate, and a multitude of romantic scenes present themselves to their

a multitude of romantic feenes prefent themselves to their a muratude or romantic teenes prefet themfelves to their imagination: they laugh and fings, and repeat abundance of humorous exprefiions, like men intoxicated with wine, but after the effect of it is gone off, they find their fipirits exhausted, and grow pensive and melancholy till they renew the dofe: some, we are told, have made it so necessary to the them that they cannot like without. fary to them, that they cannot live without it. A decoc-tion of poppy-feeds is fold in most cities of Persia; and in these houses you will see people acting and talking as ridi-cuously as men usually do when they are drunk. Surely, if there was any reason for prohibiting the use of wine, it must have been, in order to prevent people's playing the fool, and destroying their healths, which we perceive can be as effectually done by an opiate: but as long as they keep to the letter of the lew, and abstrain from wine, it matters not how much they disorder themselves, fince they think they never shall be accountable for that.

The young gentlemen of Perfit in general, as well as that province unhabited by the defeendants of the antidat y "(The young gentlemen of Perfid in general, as well) as that province inhabited by the defected at a committee the province of the artists. Parthiams, endeavour with great diligence, to necomptife themselves in the use of the bow and horizonanthip; which are exercises that the Perfians are extremely fond of at this day. Their greater kings have bondefeended to come into the grey and the greater kings have bondefeended to come into the grey and diriguality the desire and activity of their shiplests, and diriguality themselves, and activity of their shiplests, and diriguality themselves, contended for the prize. They begin with teaching the young pupil to bend the bow, first a weaker, and then a stronger: he is afterwards study to the offerwards, backwards, showed to shoot at a mark, and to deliver their arrows steadily wishout haking. The arrows for these exercises have blues from heads a but those for ferrice are shaped like the point of a spear. They next teach the pupil to mount a horse with dexterity, to have a good seat, gallow with a loofe rein, shop short, and surn swiftly to the right or lest, upon the least signal, without being disordered in their fieldle. They are also taught to play at a game almost like bandy on horselack: every gentleman has a flort but in his hand; and a ball being thrown amongst them, they ride after it, and shoping almost to the ground, strike it in a full career; and he who trikes it oftenest before it comes to the end of the mall, with the mineral themselves. finites it oftenest before it comes to the end of the mall, wins the prize. They are likewise taught to manage the wins the prize. I hely are newwice august to manage the fabre op: hock-fword, and to throw the lance: the ftaff they throw by way of exercife is without iron, and about five feet-long, and with these they engage on horseback; and though there be no spear at the end, they frequently

when they have gone through their exercises, they are permitted to shoot for the prize in the royal neydan, before the king and court. In this square is erected a high pole, like the mast of a ship, and upon it is set a cup, sometimes of mastly gold, especially it the king and great fometimes of maffy gold, especially if the king and great officers lefign to shoot at it, as they frequently did, till of late. Those who contend for the prize, ride full gallop with their bows and arrows in their hands; and when they are got a little beyond the pole, without stopping or surning their horses, they bend themselves backward either to the right; or left, and let fly their arrows at the cup, and he who brings it down gains abundance of homour. As the Persian troops are thus confiantly are \$16.4.

cup, and he who brings it down gains abundance of honour. As the Persan troops are thue comfantly practiced in shooting backwards, they may possibly take their aim better this way than any other: it is therefore no wonder that the Persan troops have been as much dreaded when they retreat as when they charge.

The rural sports and manner of hunting, or rather coursing, of the Persans, seems as remarkable as their martial exercises. Their greyhounds very much resemble those of the Irish; but the stags and antelopes they hunt, are so very seet, that the dogs cannot come up with them without the affishance of their hawks: of these they have various kinds brought from Circassia, Muscovy, and the various kinds brought from Circaffia, Muscovy, and the northern part of the empire: these hawks are taught not only to fly at partridges, qualis, rabbits, hares, &c. but sven at deer and wild beatls, and, in order to train them up even at deer and while beatts, and, in order to train them up to it, they take the fkin of one of these beatts, and having fluffed it, faften a piece of flesh on the head of it, with which they feed the hawk, drawing the fluffed fkin along upon wheels at the fame time, to use them to fix them-felves on the head while it moves. When they have used the young hawk to this for fome time, they carry him to the sport with an old staunch hawk that is used to the game: the dogs being let go, the hawks are foon after thrown off, who faften upon the nofe of the deer, and friking their talons into his fieth, keep beating their wings about his head, so that he cannot fee his way; which give the dogs an opportunity to come up and feize him: the gentlemen usually carry a little kettle-drum at their faddle bow to call off their hawks; fome of them, it is faid, have formerly been taught to fly at men. The governor of bow to call off their hawks; some of them, it is lad, have formerly been taught to fly at men. The governor of Tauris used to divert himself, with this sport, not sparing his friends sometimes: and one day letting his hawks fly at a gentleman, they tore his face and eyes in such a manner that he died of it; but the king being informed of it, resented it so far, that he was hurned out of his office.

When a grand hunt is ordered by the king, at which the great omrahs are present, the country-people for ten or fifteen miles round, are ordered to drive all the wild beasts and game into a certain place, which is surrounded with

and game into a certain place, which is furrounded with firong nets and fences; and when they have thus inclosed them, every one of the company shoots at which he pleases, and they make a terrible saughter of them; there are often

feveral hundreds killed at one of these hunting-matches; but they usually stay till the man of the bost quality in the stell comes up and discharges an arrow, after which overy one discharges as fall as he can, there being generally a strange variety of deers; antelopes, wild hogs, wolves, forces, bares, dee: mil driven together in a crowd. They frequently being up the leopards and panthers to hune the game, or eather starping it; for they croep from one cover to another, still they can jump upon their prey, as a cat does upon a meetic, but never run after it in a continued course. As for hunords, and hunting by the scent, they know nothing of it; and indeed their country see to be too dry for this kind of sport, if they had dogs which were fis for it.

The Persians are not much addicted to garring, and some of the most stray.

The hundred the most scruppleus look upon the games of charice to be unlawful; however, some of them play at cards, dies, tables, chess, and other games not in use among us. The king and people of quality also some times divert themselves with the sights of wild beafts, as is practifed in ladia. The common people also amuse themselves with jugglers, tumblers, and tope-dancers subtas their tricks nearly resemble those practifed in Europe, it is neddles to take up our readers time with a reshearsal of them.

hearfal of them.

In Perfia, they usually falute each other by bowing the body a little, and clapping the right hand to their breast; but they never für their cap or turbant; they bow their faces three times to the ground when they approach the king, the viceroys of provinces, and other great men. They expect from Europeans, the fame reverence they fine we men of quality in their own country; and if they are not clothed in the Perfian drefs, they look for the motion of their hat; was a token of refeed?

their hats, as a token of respect.

The Persians do not fail to visit each other, and people of condition always expect the compliments of their dependents, on occasions of mourning or rejuding. They are introduced into a large ball, where coffee and tobacco are fet before them, with which they amufe themselves till the the before them, with which they amuse themselves till the great man appears; as soon as they see him, every man rises up, and stands in his place; he bows to them, and every one bowsmuch lower to him again as he passe by and after he has taken his feat, he makes a sign to the company to fit. If the master of the house be already in his hall, the visitor comes in softly, and, sepping to the next vacuut place, stands gravely with his feet close together, and his hands acrost, till the master of the house beckons to him to sit down. But if a person receives a visit from his superior, he rise as soon as he sees him, and meets him half way; and sometimes receives him at the gate, if he has notice of his coming; and, in short, the respect shewn is generally proportionable to the quality of the person, as it is with us; but they differ in this, that they place those on the left hand for whom they have the greatest respect. They have frequently stools brought for Europeans, who visit them, to sit upon, but the Persians themselves fit cross legged.

The people in this country travel upon camels, horses, mules, or asses, as they have no wheel-carriages. The women, who are always concealed as much as possible, are put into a fquare wooden machine, one of which they hang on each fide of a carnel; they are about three feet. deep, and jul large enough for one to fit down in and over-head are three or four hoops, like those which support the tilt of a waggon, with a cloth thrown over them.

Their affer, it foems, are much larger and simbles them. Their affer, it forms, are much larger and nimber than ones, and will trot ten miles at a pretty good rate; but they are very obflinate and unruly, and frequently throw their riders.

A common method of travelling it, Perfia, is with the caravan, confifting of four or five hundred came's, befides other beafts; and there is no place where they travel with greater fecurity and lefs expence, there being cara-vanferas at proper diffances, where they have their lodg-ing gratis, and purchase provision at the best hand, and though the roads are frequently sleep and mountainous, yet such care is taken in laying bridges and causeways, and to level and enlarge the ways, that a traveller feldom with any difficulties but what are eafily furmounted.

Here are no general polis; but if a person has lettera to send, be dispatches a sharir or sootman with them on purpose, who will travel a thousand miles in eighteen or wenty days: fome families make this their only employment; and breed their children up to it, practifing them to run from their infancy. These persons carry with them a bottle of water, and a little bag of provisions, which serves them thirty or forty hours; they generally

their retinue.

Before a man can be admitted one of the king's footmen, he must give a very extraordinary proof that he neither wants heels nor breath; for he must run from the great gate of the palace, called Aly Capi, to a place a league and a half from the city, twelve times in one day, and every time bring an arrow along with him, which is delivered to him by those who stand at the end of the race, they have now the whole covered and this to arrow. to show he has run the whole course; and this he performs between sun rife and sun set, in thirteen or sourteen

between fun rife and fun fet, in thirteen or fourteen hours at moft, being no lefs than one hundred and eight miles. This honour is always bestowed upon fome favourite fervant of the king.

On the day of trial, the elephants and horsemen are drawn up in the royal square, with the musse, drams and trumpets founding, as it it was some festival; all the great men make presents to the shair (some of whom have obtained above a thousand pounds on such an occasion), and several of them ride the course with him, to ingratiate themselves with the Prince; and the populace attend him, every time he reaums, with their shouts and acclamations. The Chams and Viceroys, who admit of a shatir into their service, make him run the same number of miles, and they are carested, and presented by all their dependents in they are careffed, and presented by all their dependents in the same manner as the King's shatirs are, though, we may well suppose, not to the faine amount.

SECT. IV.

Containing a relation of the civil war in Persia, which ter-minated in the deposing of Sultan Hossein by Mahmood, who usurped the sovereignty.

SHAH Sultan Hossein, the late Sophi, succeeded his fa-ther Sultan Solyman. This Prince chose to pass his time in an indolent and inactive manner among his women in the haram, leaving the administration of the government intirely to his ministers, who promoted and displaced whom they thought fit; oppreffing the subjects with taxes and impositions, though in a time of prosound peace, and and importance, floogs in a time of protoud peace, and fetting every thing to fale; fo that a general corruption forcad it felf through the whole magistracy, and justice was as often bought and fold as any other commodity; the public buildings were neglected; and even the ordinary exercises of the young nobility and gentry, which used to be performed in the royal prefence, were difused; hunting and all rural sports were laid aside; and so universal was the all rural sports were laid asset; and so universal was the degeneracy, that while one part of the people, following the example of their Prince, spent their whole time in the harams with their women, others were employed in devouring and preying upon their fellow-subjects.

The famous Mereweys was one of the persons, among others, who were discarded for notosfering a bribe, or pre-

fent, as it is called in Persa, suitable to the expediation of the ministry. This gentleman was a Tartar by descent, or at least commanded sour or sive hundred men on the utmost bounds of the Persian empire towards Usbeck Tartary, where the Persians live in hords, or clans, as the Tartars do on the other fide of the river Oaus, moving from place to place with their ten's, as they can find provision for their cattle. Mereweys, understanding that he was removed only to make room for another who had procured to himself a preference by presents, ap-plied to all his friends; and raised such a sum, as in a short time caused him to be reinstated in his command. He was however, so impoverished by this last present, that he found himself in very uneasy circumstances; and taking advantage of the supineness of the government, and his diffance from the court, he determined to feize on the neighbouring province of Candahor, and fet up for himfelf, Accordingly, he communicated his defign to his friends Accordingly, he communicated his defign to his triends the Tartars, who promiled to affemble their troops, and affift in the enterprize; but the city of Candahor being a frontier towards India, and a confiderable body of troops quartered thereabouts, he was in doubt whether he should be able to carry the place hy force; whereupon he had recourse to the following stratagem: When he received his firman or commission for reinstating him in his community are presented as for that he had received a commission. mand, he pretended also that he had received a commisfion to fucceed the Governor of Candahor in that province, and accordingly marched that way with his troops. When he came within a mile or two of the town, he fent to the Governor, to apprife him of his pretended committion;

well knowing that the Governor, at was usual in such cases, would come out to meet him; which he accordingly did. After some compliments between them, Merewey; who had posted his men so as to prevent the Governor retreating into the town, fell upon his guards, and cut them to pieces; after which, before the city could be informed of what had happened, he manuled toward to Candshor, and had the gates immediately opened to him. Mereweys had no farther views at this time, than the eresting the province of Candshor, which had formerly belonged to India, into an independent state; but this he could not expect to accomplish, without forming some powerful alliances; in order, therefore, to protect himself against the forces of the Persians, which he had reason to expect would be suddenly brought down against him, he dispatched an Omrah to the Mogul's court, to give advice of his success, and to propose an alliance against Persa. difpatched an Omrah to the Mogul'a court, to give advice of his fuccefs, and to propose an alliance against Persa, the antient enemy of India. This intelligence was joy-fully received by the Mogul, who began now to entertain hopes of recovering the province of Candahor, and refloring it to this dominions, which would be no hard matter to effect, if he could make Mereweys dependent on him. He therefore offered him what number of troops he thought the claim of the demand for his fumorit, giving him the title of fit to demand for his support, giving him the title of Prince of Candahor, which he then aspired to 1 and more-over sent him all imaginable assurances of his assection

Advice being received at the Perfian court, of the furprize of Candahor by Mereweys, the ministry detached a body of four or five thousand horse to endeavour to reduce him; but Mereweys (being joined by the Ufbeck Tar-tars, and fome others, who daily flocked to him in hopes tars, and fome others, who daily flocked to him in nopes of meeting with abundance of rich plunder in Perfia) did not thut himfelf up in Candahor, but attacked the Perfians in their march, and defeated them. This fucces induced him to extend his views, and he feemed now to aim at a revolution: to this end he dispatched his emissaries into all the provinces, and even to fighahan itfelf, who exactly the last of the perfect which and independent in defeater that the last of the perfect which and independent in the perfect which and independent in the perfect which are found in the perfect which and independent in the perfect which and independent in the perfect which are found complained foudly of the personal vices and indolence of the Sophi, who, he infinuated was unworthy to govern the true believers, and remonstrated against the male-admicorruptions and

nistration of public affairs, through oppressive conduct of the ministers.

opprefive conduct of the miniters.

The late transactic as threw the minitry into the utmost consternation: but they had, by their past behaviour rendered themselves so obnoxious to the resentment of the Chams and Omrahs, that they knew not whom to conside in. Should they order them, with their troops, to assemble and make head against this formidable rebel, they were under apprehensions he would receive additional strength by their joining him; or that they would at least expose their administration, if not demand their heads as an atonement for their crimes. If on the other hand, they fuffered him to march forward without opposition, they knew the con-fequence would prove no lefa fatal. They therefore dif-patched another general, whose sidelity, and skill in milita-ry assains, they had a great opinion of, to watch the motions of Mereweys, and awe the country at leaft, that they should not go over to him, or supply him with provisions: but this detatchment succeeded no better than the former, being

in confequence of these two engagements, Mereways furnished his followers with arms and accountements, who were at first little better than a defenceless rabble. He began also now to talk of advancing to the capital of Ispalian; but as there was a vast extent of country between Candahor and Ispahan, and his troops did not yet amount to more than eight or ten thousand horse, he thought proper, first of all, to threngthen himself with an alliance with the or an, to trengenen minier with an aliance with the Grand Seignior, and put the city of Candahor into a condition to refift any attempt that might be made upon it in his ablence. His negotiations at the Porte fucceeded to his heart's defire; and the Baffa of Bagdat was immediately ordered to affemble an army, and march to the frontiers of Persia. Mereweys now began to throw off all disguises, and style himself Protector of the kingdom of Persia, and to prepare for his march to Ispahan; but in the midst of all his projects, and while he was grafping at the whole world in his imagination, death put a period to his views. This event had probably difcouraged his adherents, and proved fatal to the cause, had he not left a son behind him equal,

if not superior to himself, in every respect.

Mahamood, the son and successor of Mereweys, being conscious of the great reputation his father had gained by the surprise of Candahor, and the victories he had obtained, thought fit to conceal his death, and to transact all affairs in his father's name, till his own reputation should be

mech .

letters em on en or em-Rifing carry ifions,

serally leave established. Accordingly, all things went on as if Mereweys had been still alive t the preparations for marching to Ispinan were continued, new alliances were cultivated, and new forces raised. Nor did the Turks and Muscovites neglect to improve these distractions in Persa to their own advantage. The Muscovites surprised Derbent and Tarku, which lay next to them on the west side of the Cafring for and disparation are not distraction are not distractions.

Tarku, which lay next to them on the well fide of the Caipian fea; and afterwards extended their arms into Ghilan, all along the fouth coaft of the fame fea. The Turk, on the other hand, took policifion of Hamadan, and feveral other frontier places finding little or no opposition. The Perfian ministry were now terribly alarmed, not knowing what measures to pursue; and, to add to their missfortunes, the treasury was intirely exhausted. They came, however, at length to the refolution, to let the frontien this for themselves and to affemble as enumy of alext.

termine, however, at length to the resonation, to see the rent-tities thift for themfelves, and to affemble an army of eight or ten thousand horse in the neighbourhood of Hpalan, to oppose the Usurper, of whom they received repeated ad-vices, that he was in full march for that capital.

The King, when he understood that the Usurper's army,

The King, when he understood that the Usurper's army, under the command of Mahamood, was approaching his cipital city, and that the people were in general discontented with the administration, proposed to his Omrahs to refign his crown, and set his eldest fon upon the throne. This was generally approved of: but the poor young gentleman, who had never been out of the seraglio, and was sufficiently terrified with the representation the cumen's availed of the strength and nower of the Usurper, declined

fufficiently terrified with the representation the cunwels made of the strength and power of the Usurper, declined the offer, being apprehensive that he was only set up to be made a facrifice to the rage of a powerful enemy.

Sultan Thamas, or Thomas, the King's second son, was not a nogether of so pussilianimous a spirit; but was contented to succeed his father in the throne, and put himself at the head of the army, which encamped in that sine walk called the Char Bag, between Ispalian and Julpha or Zulpha. Here the army continued some time, and an engagement between the Royal troops and the Usurcer was daily ment between the Royal troops and the Ufurper was daily expected. Shah Thomas, in the mean time, endeavourto discover how the great men and officers flood affected to his caufe; and, among others, he fent to the English factory, reminding them of the privileges they had enjoyed in Persia under his ancestors, and let them know, that he expected all the affishance they could give; and in short, things bore so favourable an aspect, that it was expected he would have driven the Ufurper from the neighbourhood of Ifpahan; when news was brought one morning, that Shah Thomas, with some few of his friends, had left the army the night before, and had sted, nobody knew whiwhereupon the officers of the Royal army, as well as the citizens, thought of nothing elfe but making their peace with the Uurper, and inviting him into the town, which he foon after teek polletino of, making the old King and the whole court his pissoners. This Mahamood affected with fo finall a force as fix or feven thousand horfe.

ed with fo finall a force as its or feven thouland house.

Mahamood, finding an empty treafury, and being under a necessity of raising more forces for the support of his usurepation, conflicated the goods of all those who were not in his interest; he allo cut off the heads of the prime minister and his adherents, who for several years had been seecing the people, whereby he replenished his coffers, at the fame time that he gained the applause of the people, who feldom consider the justice of the cause on these occasions, but never fail to reloice when they see their oppur sorts unnithnever fail to rejoice when they fee their oppresses punished. The Usurper, having fent the King under a guard to Candahor, took possession of the Royal palace; money was extorted from the foreign merchants, especially the English,

infomuch that the factory was in a manner ruined Sultan Thomas, with his few friends, having quitted If-pahan, took the road of Tauris, where he affembled a body of horfe, and made a thew of opposing the Turk, which drew over many of the Persians to his interest; but the Turks were fo much superior to him, that he could do little towards ftopping the progress of their arms; and the towns, being for the most part without walls or garrifons, became an easy prey to the Grand Seignior's forces, who foon afterwards took Tauris, and put the inhabitants to the

SECT. V.

Of the Persian home trade, mechanic arts, and manufactures; also of their foreign trade, navigation, pearl-sisteries, English trade in Persia, preight of goods from Gombron to Surat, price of goods at Gombron, port duties, weights, and coins.

HEAD or warden is appointed by the government to prefide over every trade, who is to fee that the rules

and orders relating to the profession are duly observed. When any person intends to set up a trade, he goes to the warden, and registers his name and place of abode 1 and no enquiry is made who was his master, or whether he understands the business, or not, nor is thete any reftraint laid upon them, that they shall not eneroseh upon anyother profession; thus, for instance, the braziers are at liberty to make silver vession, as they frequently do, without being in danger of a prosecution from the silver-finishs. Every trade almost is bound to work for the King, whenever he requires it t and those who are exempted, pay a nanual tax. trade almost is bound to work for the King, whenever he requires it; and those who are compled, pay on annual tax to the government. Tradefinen do not take apprentices for a term of years; but hire their fervants, and allow them wages from the first day they entertain them.

It is observed, that their carpenters are but very indifferent artists; and the reason thereof may be, that there is not much timber in Persa, and but very little is used in their buildings. Joiners and turners are more agreed.

not much timber in Peria, and but very little is used in their buildings. Joiners and turners are more expert in their profession, and they lay on their lacker very nicely. The braziers and tin-men work well with their hammers, files, and turning inftruments. They have neither iron, brais, nor pewier in their kitchen furniture; most of the vessels and implements used in their kitchens being made of

vence and impressions to the copper timed.

The broad-fword blades, made by their armourers, are very good, and they damafk them as well as any European.

The barrels of their fire-arms are not amifu; they make the breech. them very strong, and as thick at the muzzle as the breech. Their stocks are but ill-contrived, being thin and light at the butt end, and not fit to clap to a man's shoulder; as for locks to their guns, or any locks that have fprings, they do not pretend to make them, any more than they do watches or clocks, which they either purchafe abroad, or employ European workmen to make for them. Kives, rafors, feillars, and fome other cutlery ware, they make very wells scillars, and fome other cutiery ware, they make very well; and little feel mirrors, which they use instead of looking-glasses: these are almost all convex; and the air is so persectly dry, that they seldom rust, or grow dull. They do not understand the art of making looking-glasses, but have them from Europe: they have, however, a manufacture of glasse, which serves for windows and bottles. The use of the bow being what the Persans greatly value themselves upon, there are no where better bows made than among them: the chief materials are most and horn, with singue. em : the chief materials are wood and horn, with finews bound about them: their quivers are of leather, embroidered or worked with filk. The bow-string is of twifted filk, of the bigness of a goofe-quill. Their bows are painted of the bigness of a goose-quill. Their ho and varnished, and made as fine as possible.

The Persians are as well versed in embroidery as in any at whatever, especially the gold and filver embroidery, either on cloth, filk, or leather: they cover their saddles and housings almost with embroidery, and the stitching of the leather by far exceeds any thing done in Europe. Their faddles are made after the Morocco model, the strrups of which are very short; they have a kind of breast-plate to them. Persons of quality have gold about their furniture where we use brass. where we use brais.

What is called in Europe Turky leather, from its coming through that country, is usually made in Perfis. The thagreen also comes from thence, which we are told is made of the fkin of an afe's rump. Tanners use falt and galls in-flead of bark, and dress their coarse fkins with lime.

Earthen-ware is snother manufacture the Perfians excel in; it is much beyond any thing of this kind made by the Dutch; fome affirm, that it is almost equal to china-ware. It is chiefly made at Schiras, Metaed, Yeld, and Kerman. Mending of glafa and earthern-ware is a particular trade in Persia: they will drill holes through them, and fasten the pieces together so, that a broken bowl or plate will hold liquids as well as before it was broke.

pids as well as before it was proce.

Gold wire-drawers and thread-twifters may also be rankamong their most ingenious artists. They will draw a ed among their most ingenious artists. They will draw a piece, weighing a dram, to the length of three hundred Perfan ells (five and thirty inches making an ell.)

Their lapidaries, we are affored by a person who was a jeweller, understand the grinding of fost stones, and can cut them pretty well.

Their dying is preferred to any thing of that kind in Eu-pe. This is rather afcribed to the dryness and clearness of the air (which gives a liveliness to the colours, and fixes them) than to the skill of the artist,

Taylors work is done very neatly by the Perfians; the men's cloaths, which are made of the richest flowered and brocaded fiks, are fitted exactly to their bodies without the least wrinkle; and their fewing is incomparably beyond that of our workmen; as the fine materials they work on require it should. They work slowers also upon their car-

ans; the ered and thout the y beyond work on their carpets, cushions, and window-curtains so very nicely, that they look as if they were painted. Their barbers are no less excellent in their way; for they will shave the head almost at half a dozen strokes, and have so light a hand that a person can scarce seel them. They use only cold water, and hold no beson under your chin, as with us; but have their water in a cup about the bigness of a lattle china dish. After they have shaved a man, they cut the nails of his seet and hands with a little iron instrument like a bodkin, sharp at the end; then they stretch his arms, and rub and chase his sight; which, in these hot countries, is an operation very pleasing as well to the Europeans sa the natives.

Their goldsmiths are in general very unskilfed and aukward workmen; what they person best, is in the filligreen way: they also make stone rings, and gagrave pretty well, but do not understand enamelling. Any work which requires springs, such as watches, dec. they are totally unacquainted with.

quirted with.

The principal manufacture of the country are filks; fuch as taffaties, tabbies, fattins, and filk mixed with cotton or estacl or goat's hair, brocades, and gold tiffue. There are an hundred forts of the fitigle brocade: the double are called duroy, or two faces, because both fides are equally good; they are the richest that are to be met with any where. The gold velvet, which is wrought in Persa, is admirable. All their rich stuffs have this good property, that they are very durable; the gold or filver does not wear off or tarnish, while the work lasts, but keeps its colour and brightness. The finest looms for these study are at Ispahan, Cashan, and Yessel those for carpets are chiefly made in the province of Keriban What are usually called Turky carpets, are indeed Persan; but obtained that usume from being brought to us by way of Turky. The camel-hair studys are made in Carmania; it is exceeding fost and smooth: but the stuffs they make with it are not strong. Camlets and silk m carmana; it is exceeding toft and finooth; but the fluffs they make with it are not firong. Camleta and filk and worlfed druggets are made in the fame province, Gostshair fluffs are made in Hyreania, and near the gulf of Berfora. There is fome callico cloth made in Perfia, and they know how to paint and flain it; but the Indian callicoes are far preferable.

are far preferable.

In Perfia, the profession of a merchant is reckoned very honourable; and the rather, as there is no hereditary nobility, which devolves from father to son. With respect to those in great posts, their honours and profits terminate with the office; and their lives and fortunes are in perpetual hazard, especially under a weak or cruel Prince. The trader negard, especially under a weak or crue, rivine. In exact feeting me independent than any other subject; and, not-withstanding the government is despote, they are usually encouraged, because they man in a considerable sevenue to the crown; and we may add, the greatest ministers do not think the business of a murchant degrading to them: even the King himself has had his factors and agents in the neighbouring king down, and exported filks; brocades, carpets, and other rich goods; and his agents at the Mogul's court, and elsewhere, when their business was chiefly traffick, have frequently had the character of Ambassadors conferred upon

Brokers and flock-jobbers, who are a very cunning and fubile class of people, generally carry on the trade in Perfix. After they have talked over and fettled the matter at the feller's After they have talked over and tettled the matter at the feller's house (for there is no exchange for the rendezvous of merchants) they agree about the price upon their fingers, putting their hands under a cloth; the fingers' end, it feems, flauds for one, the bent finger for five, and the first for ten, the hand open for a hundred, and, if thut, a thousand; and it is impossible for a by-stander to getter any thing from the circumstances, because they retain so even a countenance all the while they are transacting the affair.

The Armenian Christians, and Banians of India, have by far the greatest there of the trade, notwithstanding the

by far the greatest share of the trade, notwithstanding the Mahometans are the governing part of the country. The Mahometan Persians trade from one province of their own country to another, and to India not a little; but the Armenians manage the whole European trade: one reason menians manage the whole European trade: one reason whereof is, that the Mahometans do not care to go into Christian countries, because they cannot there observe the authors their religion preferibes; for their law, it ferms, forbids them to eat felt killed or dressed by a man of a different religion, or to drink out of the same cup with him; and even prohibits the touching of persons in some circumstances, whom they look upon to be polluted. Another thing, which is a disadvantage to their trade, is, that heading any money at interest is unlawful. ther tring, which is a disastrating to their trace, it, that the taking up money at intereft is unlawful, though they are at liberty to make what advantages they can in buying and felling. But the bufferes of trade never entered into the thoughts of their lawgiver, he lived in a part of the country where they dealt chiefly in herds of cattle, and he

did not foreste the advantages his disciples might make by foreign trade and merchandras. The government, therefore, find shemselves under a necessity of protecting and encouraging their Christian subjects, as they value their foreign trade, and the revenue it brings in 1 and Christians, it is observed, hive much easier and happier under the Persian government, than in many Christian countries, where the people are of different sects and persussions; and, as a consequence of this, the Christians of Persia, especially towards Georgia, are a very considerable body; the Christians also are the only fort of people who inhabit the great town of Julpha near Ispahan.

Silk, both raw and wrought, is the staple commodity of Persian great quantities of this are exported to India, Turky, and Muscovy; and the English and Dutch formerly took a great deal off their hands, but little or none at present. They supply India with abundance of fine horses, at a very great rate, forty or sifty pounds being but an osdinary price for an horse there. They export also camels hair, goats wool, leather, wines, distilled waters, dried and preserved fruits, pistachio nuts, dates, &c.

We cannot learn that there is any considerable quantity of pearls to be met with in Persia at present, though the country was once famous for them. There was, it is true, one of the finch pearl fisheries in the world in the gulf of Persia some few years ago; but the Persians have left the dominition of that see, and of all the islands in it, except

Perfia fome few years ago; but the Perfians have left the dominion of that fea, and of all the islands in it, except Ormus, and that was vigoroully attacked by the Arabs, who

conquered the reft.

About the year 1718, the Perfisns made an attempt to ecover these islands, and, in order thereto, procured the Viceroy of Gos to affift them with four men of war, but vicetoy of Goa to affift them with four men of war; but the Persian general, it seems, was bribed by the Arabs, and had nearly betrayed the Persouves ships into their hands; and shough he failed in that, yet never providing any land-forces to affist in that expedition, the Arabs remain in possession of the peal-shifteries. The Portugues squadron, however, came to an engagement with the Arabian steet, and it proved one of the most obthinate encounters that has been feen in that part of the world; one of the Arabian ships was sunk; and those of the Portugues squadron; showever, that they were glad to retire to their ports, and appeared no more in that sea. Some of the Arabian men of war are very large, carrying no lefs, than sourfeore guns; and they are said to have ships of the greatest force of any nation on the other fide the cape of Good Hope.

The English East India company trading to Persa had before the civil war, two considerable factories in that kingdom, one at I spahan, and the other at Gombron in the mouth of the gulf of Persia or Bosson, and a retinue of no lefs than thirty or forty sevents, natives of the country; their house sevents and the purch was clerantly with after the mouth of the purch was clerantly whit after the mouth of the Persia or Bosson and a retinue of no lefs than thirty or forty sevents, natives of the country; their house was clerantly whit after the mouth of the Persia or house some and the part of the Persia or house of the Persia or the part of the country; their house was clerantly whit after the mouth of the Persia or the part of the country; their house was clerantly whit after the mouth of the Persia or the part of the country; their house was clerantly whit after the mouth of the Persia or the part of the country; their house was clerantly whit after the mouth of the Persia or the part of the pa

time three or low Engine ractors, and a returner or no less than thirty or forty fervants, natives of the country t their house was elegantly built, after the model of the Persian palaces, and stood in the middle of a garden. Their horses, servants, and equipage, when they went abroad, were equal to an Omrah's: their furniture shone with gold, or rather to an Omrah's: their furniture flione with gold, or rather was covered with it. The flate of the Gombron agent was not altogether fo grand; but his advantages were equal, as will appear hereafter; but before we give an account of the privileges of the fervants of the English company, it will be necessary to treat of their trade which has very much dwindled of late years.

English cloth is almost the only commodity the company carry to Persia, nor does this turn to any great account, the Turky company being able to lopply that part of the country, where it is chiefly vended, at a much cheaper rate. In return for cloth, the company being back wood.

of the country, where it is chiefly vended, at a much cheaper rate. In return for cloth, the company bring back wool, as it is commonly called, which is the fost down that grows under the hair next the skin, and is chiefly used by hatters: the company bring away every year about a thouland bags of this, each bag weighing a hundred weight; and if they do not meet with a sufficient return in this, they take the balance in abasses and chequeens, or else in gold bars, of which great advantage is to be made; and as they have not sufficient freight of their own, they take in freight of the Armenians. Banjans, and Moors, and other prints. of the Armenians, Banians, and Moors, and other private traders, when they return to Surat, and generally a

great number of passengers for that country,

The Persians have not a ship in the gulf, or indeed any
where else, but freight all their goods for India in English or Dutch veffele, and the captains and officers were formerly guilty of great extortions: for they would make a merchant pay a confiderable fum for a place on the dock to fleep on; the room between two guns they let out at

thirty or forty rupees (valued at two shillings and fix-pence each), and the males would have two or three hundred rupees each for their cabbin, which are but just big enough for two or three people to fit in; but the company have taken that matter under their confideration, and regulated the price to the satisfaction of the merchants; and, in purfuance to their directions, the chief and council sways agree with the commanders before-hand, for full sways necessary the content requires. The great cabbin, in a ship of four hundred tons, is usually let for a thousand rupees, which, being occupied by twenty or thirty mera imp of four hundred tons, is usually let for a thousand supees, which, being occupied by twenty or thirty merchants, is not thought much, and is indeed a trifle compared to what used to be extorted from them; even the long boat itself used to be farmed out, formerly. The fearching the passengers little parcels on their going ashore, was another thing that used to disoblige them highly; and which the Dutch, who were considerable gainers by transporting these merchants and their effects; never concerned themselves about, which made them better effects. cerned themselves about , which made them better affected

We cannot forbear reflecting here on the infolence of fome of our fea-officers, even towards gentlemen of their own nation, who happen to be paffengers on board them; and as for a Moor or Banian merchant they respect them no

ore than dogs.

Nothing furely can be more barbarous than the usage of these people to the poor lasears, or Indian failors, who assist in bringing their ships home, when they have lost their English sailors by sickness or desertion. One of the captains beat and abused the lascars unmercifully; and when they represented to him, that this treatment would not pass unpunished in the next world, however it might. not pais unpunished in the next world, however it might. In this, he would laugh at them; and by way of jest, when one of these poor fellows died, ordered a letter to be written, and put into his mouth, directed to some of his friends, who had gone before him, wherein he endeavoured to them his wit, but in such a strain, as made all men abhor him. Another great hardship these lascars are liable to, is, that when they have brought an Indian ship to England, care is not always taken to fend them back again to their own country; but they are feen, through extreme necessity, begging about the streets; and as they come from a hot climate, many of them probably perish in the winter feason. Such practices as these are dispraceful to any nation, and give more cause to Indians to brand us with the epithet of favages, than we can have to give them that appellation.

The gains made by the English East India company, in carrying the effects of the Armenians, Moors, Banisns, Rec. from Gombron in the gulph of Perfia to Surat in India, is one great branch of the company's profit; and they rarely fend a ship from Gombron to Surat, but she is an deeply laden as, the can swim, full of passengers, and she has a vast quantity of treasure on board, sometimes to the value of two or three hundred thousand pounds; insomuch that the English ships going from Persia to India in October and November annually, are supposed to be the richest vessels in that part of the world.

The orders and regulations the East India company made, in relation to this voyage, about the beginning of the present century, were as follows; viz. "That as often as any ship of ours is let to freight to or from Persia, our council on the place take care an agreement be made before them (of which they are to be judges) that it be reasonable what the Espatians shall be allowed for the passage and ac-commodation of such Armenians, Persans, or other pasfengers; and to that end they are to fend a proper person on board each ship, to see their accommodations be as they That when the paffengers return, the faid council enquire whether the captain has complied with his agree-ment; and if he has failed in any part, they must take care fuch paffengers have justice done them; and that the council on the place from whence the ship proceeds, advise those, who reside where she is consigned unto, with the terms of fuch agreement. If, when this is done, the cap-tains shall treat those passengers unreasonably, or will not do them that justice which the council shall award, let the council protest against such commanders for their injustice and failure; and therein specify the damage the company fullains by the lofs of freight, occasioned by such discouragements to the freighters, or their vakeels or fervants; or the hazard that may in probability happen thereon; and the council have then fo far done their part; and we shall upon notice which must be sent us from time to time, do the reft. Although we must farther put you in mind, that you have, by charter-party, liberty to displace commanders when just reason offers; and if their oppressions

ate fevere; we know no better reaton to displace them, than the caring such a growing evil."

The weights used by the company are maunds only, and these differ according to the nature of the commodities to

be delivered by them.

All bargains at Gombron are made for shahees, and the All bargains at Gombron are made for thahees, and the company keep their accounts in them, reckoning them worth four-pence each, though that coin is rarely met with, but in its flead coa's and inamooda's are current every where: A borfes, canuels, houfes, &ce, are generally fold by the toman, which is two hundred shahees, or fifty abasses, and they usually reckon their estates that way; such a one is worth formany tomans, they say, as we reckon pounds is worth to many tomans, they fay, as we reckon pounds in England. The shabee, in the company's accounts, is reckoned worth four-pence English money.

The company do not at all interfere in the trade between Persia and India: this they leave entirely to their factors and fervants, and to such country ships and private traders as put themselves under their protection, and are content with paying the port duties. For the better regulation of this trade, orders are hung up in the confultation of Gombron.

SECT. VI.

Giving a description of the country in general, and the quality of the fail, also of their husbandry and gardening; includ-ing grain, fruit, treet, slowers, plants, drugs, tec. also an account of their animals and minerals.

DERSIA abounds with mountains, but has very few rivers: fome of the mountains are supposed to be the highest on the face of the earth. Mount Taurus, which frequently receives different names, as it branches itself out into different provinces, runs through the country from west to east. The lostiest of these mountains are Ararat in Armenia, the five mountains which separate Media from Hyra cania, and Parthia or Irac. Those which divide Fars or Perfis from Carmania are exceeding high, the most famous of which is called mount Jarron; but they are generally dry barren rocks, without trees or herbage upon them, except those of Ghilan or Hyrcania, and the mountains of Curdestan, which are covered with woods, and very fruitful where they are manured. There are vast fandy deserts several days journey over in this kingdom, where there is fcarce a drop of water to be found; and the land in general upon the frontiers lies uncultivated, to discourage their enemies from invading them; for there is not the least subsistence to be met with for several miles, in travelling into the kingdom either from Turky or Indie. There are, however, fome fruitful plains and vallies, in which their principal cities stand, which yield plenty of grain and herbage: and no country is more fruitful than the provinces which lie upon the Caspian sea, as we have already observed. But Hyreania is very unhealthful in summer time, which some apprehend proceeds from the multitude of snakes and insects which lie rotting upon the ground when the waters are dried up, as well as from the foulness of the water itself, which at that time of the year is fo thick and muddy that it is unfit for ufe.

Though there is not a tenth part of Perfia cultivated, at prefent, yet when greater care was formerly taken to turn the waters into those vallies which now produce neither grass nor grain, these were extremely fruitful. In some provinces there are hundreds of fine aqueducts choaked up and buried in the ruins; so that it is not so much a desect

in the foil, as the want of people, or at leaft of hufbandmen and tillage, which renders Perfia fo barren. The foil in fome parts is a hard gravel, and in others a ftiff whitish clay almost as lard as a stone; but either of them are fruitful when well watered, and will bear often two crops, and fometimes three in the space of a year. If we give credit to antient authors, there was not a more plentiful country in the world than Perfia; the reason of this alteration some ascribe to the different dispositions of the people who have inhabited it. The antient Petsians. the fire-worshippers, it is faid, were obliged by the precepts of their religion, to cultivate the ground, and it was by. them accounted a meritorious act to plant a tree, to bring the water into a field, and make a harren fpot of earth produce grafs or grain : while the Mahometans feem to have no genius for improvements, or even to preferve what their anceflors have built or planted, but let every thing run to ruin: however, one reason of this neglest may be, that the property of the people is not fecure to them; fo that it is no wonder they have but little inclination to make imprevements, when they can have no certainty of icaping any adth his or to occ for ill like we are an occ for ill like we are an occ for ill like we are are setting in in

vantage from them; and as estate very revely remains in a fittilly for three generations.

Near great name they impose their grounds with the dung and hir of the firects they carry out; but at a greater diffance they throw their fields into, little level, squares, which they bank about, and then turn the water into them, letting it fland in the field all night; a which having looked it, the water is let out the next morning, and the fun finining with almost perpendicular rays upon the most earth, renders it fit for the production of any fort of grain-er plants. When the ground is light, they plew with two or three oven or boffalces; but in Ghilan, and other countries, where they meet with a fill felay, and the plough being very large, it is as much as eight or sett oven can do to draw them.

ing very leige, it is as much as eight or tan open can opto draw them.

The principal, and also in the only kinds of grains produced in Pertia, are rice, wheat, and berley; they have no oats, and very little yee. Their featons are not the fame in the north as in the fouth: hat when they are fowing in one part of the country, they are resping in another, and in Ome places it is not more than three months between the feed-time and the baryeth. Their land never tiet fallow, but is fown every year at least, it is fo meliorated and enriched by being flowed, and the heat of the fun sherwards working on the mud, that it is never out of heart as ours is; and though we have not fo warm a fun, yet if we were to overflow fome of our grounds as they do, it would be a valt improvement, especially where dung and other manure is wanting. Rice must be confiantly tupplied with water fill the harvest, but the lands is only flowed before the fowing, to render it profisic fee other kind of grain.

Most of the roots and fallids we have in England, grow in great plenty in the kitchen gard as in Persia they have

ing, to render It prollife far other kind of grain.

Most of the roots and fallads we have in England, grow. In great plenty in the kitchen gate as in Persa: they have no left than twenty several forts of melohs, during the season they say, which is above over months; the common people make them their covatant food: those which come so maturity first in the spring, are round and small: those that are ripe in the latter part of the season are the best and largest; fome of them weigh eight ur ten pounds, and are as sweet as figer: at the tables of persons of quality they have them all the year round, there being a way to preserve them under ground till the season returns. The best melons grow in Chorasan and Tartary, and they are carried as far as Ispahan for the King's use, and as presents to their freinds. Cucumbers are another fruit much esten by the common people; one fort of them has scarcely any seeds in it, is eaten without paring or dressing, and is not reckoned unwholesome. Some persons will eat eight or ten pounds of melons at a meal, without being sick.

They have several kinds of grapes in Persa, some of which are so large, that a single grape is a mouthful. The vine at Ispahan is made of kilmith's, a little round grape, and without any stones that can be perceived; but the best will be a see made at Schiras. They keep their grapes all the

and without any flones that can be perceived; but the best
wiles are made at Schiras. They keep their grapes all the
winter here; and let them hang a confiderable time on the vines, wrapped up in linen bags; the air is so dry, that they can for a very long time preserve all kinds of fruit without

foolling.

The most delicious food in this country are dates; thele are no where fo good as in Petfia: the pulp which incloses the stone is a claumy substance as sweet as honey: they are haid on heaps when they are ripe, and malting they candy, or preserve themselves without sugar. Foreigners are advised to est moderately of them, because they heat the blood, and occasion ulcers in those who are not used to them, and fometimes weaken the sight, but are observed to have no ill effects upon the natives. The tree does not bear them till it is fiften years old. It is slender, but very tall, and like other palms, has no branches but on the top, and the fruit grows in clusters of thirty or forty pounds weight.

weight.

Moft of the fruits esten to Europe may be had in Perfia, and would be there in smach greater perfection, if they knew any thing of gardening; but they understand neither grafting, nor inneculating, or managing dwaff trees; all their trees grow to a great height, and are loaded with wood. Their nectarines and peaches weigh fiateen or eighteen ounces a piece; there is an apricot red within, which is called the egg of the fun; these are dried and exported in great quantities; they are boiled in water, which is thickened by the juice of the fruit, and makes a perfect sprop without sugar. They have several kinds of excellent apricots, which are in season one after the other. in feafon one after the oth

In the north part of Perfis, apples and pears chiefly grow: they have also pomegranates of several kinds, also oranges, quinces, and prunes: they have such a great variety of fruits, that above fity different texts have been from at an

entertainment, fonce of which grew at the diffiction of these hundred leagues.

Olives grow in Hyrania, mar the Caspian feet but they neither know how to preferve them, or extract the oils. They have also plantations of fugure and tobacco. Pitter chio nuts are almost peculiar to Kenfia, and are transported all over the world. Here are likewise small muts, filtereds,

and almonds.

The cyprels, palm, and mulberry, are among other trees in their gardens. There are large plantations of the latter for their filk-worms; these trees they do not suffer to grow up to a great fize, because the leaves are best when the shoots are young: therefore they grub up the trees which is on a great estem as any in Persa, is the schine: the body of this tree is very large, and ordinarily forty or fifty feet high, and straight as the mast of a ship, having no branches but on the head of it; the bark is of a higher tree, and the wood server and the wood server them to make doors, rafe

the tree which is in as great efterm as any in Perfa. is the feithat: the body of this tree is very large, and ordinarily forty or fifty feet high, and straight as the mast of a ship, having no branches but on the head of it; the bark is of a bright grey, and the wood ferves them to make doors, rafters, and for other uses in boilding:

The trees that are most common in Perfia, are the plane tree, the willow, the fir, and the cornel tree. The Perfianaming the that the plane tree is a preservative against the plane tree is a preservative against the plane and other contagious distempers; and observe, that the plague has never raged in Ispahan fince this tree was planted in their streets and gardens. The tree also which bears the gall nat is very common in many parts of Perfa; and there are trees which yield gum, mastic, and frankingense; that which produces frankingense very much resembles a pear tree, and is found chiefly in Carmania.

There are trees in Perfa which produce manna of several sorts: the best manna has a yellowish cast, a large coarse grain, and comes from Chorasan or Bactria; there is another fort called taniculik, because the tree it dreps from is so named, and is seund in large quantities in the previous of Susiana; and there is a third fort gathered about Ispahan, which falls from a tree much like the tamerilk, but larger. The leaves of this tree drop liquid poanns in summer-time, which the natives take to be the sweat of the tree cogaled upon the 1-as?: it has as sweet a taste as other manna. In the morning the ground under the tree is perfectly fat and greafy with the droppings from it. The corton tree is common all over Perss; and they have another little tree which yields a kind of filken down used for quilting and stuffing of pillows. There is also splant called hannah, that bears a feed which they bear, to powder, and could upon the industry when the same and a

withtanding which great part of this seemingly barren, foil, were it watered and cultivated, it would be as frultful as the other, as it antiently was, when a more induftrious people posselsed the country.

Flowers are found in great variety in some of the provinces. The south part of Persa has the sewest, the excessive heart being there as destructive to them as severe cold. But the fields of Hyreania are beautisted and enriched with whole groves of orange trees, jestamins, and all the flowers we have in Europe. Masenderan, which is the east part of the country, is one continued parterie from September to April, and at that time is covered with slowers; and though this be their winter sason, it is nevertheless the best time for froits; in the other mouths the least is excessive, and the air so undesthied, but the natives find themselves onder the necessity of retiring to the inhuminants. In Media the fields produce tuling, maintainers, and rannoculuses; about spahan and some other towns jonguis grow wild; they have also dasfodis, liles, violets, and pinks in their feason, and some persantal flowers; but they have the greated quantity of silies and rofes. They expert

ort abundance of fole water to other countries. In the espect abundance of 1616 water to other countries. In the fpring there is plenty of yellow and red gilly-flowers; and another red flower, which retimbles a clove; of a beautiful fearlet colour; every fprig bears thirty of these flowers, which form a flite head as hage as a tennis ball. Their roles are white, yellow, and red; and others, white on one fide, and yellow on the other; but, notwithstanding all this great variety of beautiful flowers, their gardenia are not chipparable to those of Europe. Flowers are very little regarded by them; fo that they are often intermixed with ffull trees and sofe buffles, without any order. No borders, or knots of flowers, are too be feen in their gardens, but large walks planted with trees; fountaint, canals, catcades, and pleasure houses, are all that must be expected in their finest gardens; which being fo common, the Perfame take no pleasure in walking in them, any more than they do in the fields, but place themselves in fome above, or furnmer house, as foon as they come into them, regardless of that exquisite variety that every foreigner is regardless of that exquisite variety that every foreigner is

enamoured with.

This country affords great plenty of physical drugs, as caffix, fenns, antimony, nax vomica, gum armoniae, gal-banum, fal armoniae, and kind of rhubarb, with which they purge their carde: the best rhoberb comes from China, or rather from eastern Tartary, which lies to the northward of it. Perfan poppies are in great effect, from the quantity of juice they yield, and the strength of it: they grow four feet high in some places, and have white leaves. They draw the juice from them in Juhe, what they are ripe, by making little incisions in the head of the poppy and a thick liquor codes from them, which is gathered before functile. It is faid to have such an effect on the people who are employed in this work, that they look as if they had been buried and taken up again, and their limbs trendble as if they had the pail(y. The liquor which is extracted from the poppies, in a little time grows thick, and it made up into pills: the Persans give it the name of afour, and we call it oplum. The Persan bakers strew poppy feed on their bread, which inclines those who eat it, to steep; and the cating it is not reckoned, unwholsome after their meals; the common people cat the feed almost at any time. or rather from eastern Tartary, which lies to the north-

any time.

Safficio grows plentifolly in Persia, and assafcetida is to be flad amost every where, which is admired by the natives of this country as well as India, and frequently eaten with their food? that which foins is the most offensive of all fents, is by them electroned a most refreshing persume, and at least equal to suoss. Assafcetida is a 'liquor which distills from the plant called hiltor; it thickens after it is drawn, and grows at hard as gum: there is the white, and the black kinds of it, of which the white is reckoned the belt to eat. The finell of, this drug is so very strong, that is any goods in a ship lientear it, the smell is communicated to them, how close soever they are wrapped up, and it is sr any goods in a thip lie near it, the smell is communicated to them, how close foever they are wrapped up, and it is almost impossible to clear them of it; nay, it effects the colour of them to such a degree, that some rich stuffs of gold and fifter (the latter of which are turned perfectly black) have been tarnished with it, not with standing they were inclosed in cotton, and covered with, leveral folds of star cloth.

In the fands of Chorafan or the antient Bactria, mum-In the faudi of Chorafan or the antient Badria, munify it frequently found. This is human fleft embalmed, which has lain feweral aget in dry earth. Some of the bodies, it is faud are to little altered, that the features may be plainly diffinguithed. Before this common mummy, there is a precious gum which diffilis from a rock, to which the Perfians give the name of munimy. This is faid to perform mirraculous cures; and is reckoned to be for valuable, that the Governors of the provinces where it is found, fend it to court under their, feals, and the King engroffer most of its. most of it,

The bezoat frome of Pertia has feveral thin coats over it;

it is found in, the bodies of goats and other animals; it is in much fligher effecting than the Indian bezoar, soveral kinds of beaths, birds, fifther, and intects, are found in Peria. Among their cattle, the moft ferviceable are camels, Itories, mules, affer, oxen, and buffaloes; but he camels in the hand of buffalo, with reads all the models. are camels, lioties, mules, affes, oxen, and buffaloes; but the camel, for a beaft of burden, much excels all the reft, whether we confider the weight he carries, the diffatch he makes, og the little change in kerping him. Of these camels there are leveral kinds: i long of them have two bunches uppon their backs, and others but one; and there is a third fort, engendered between a dromedary or camel with two bunches, and a female with one, which are effected much the best, and are fold for twenty or thirty pounds a piece, for they are feldom tired, and will carry nine, hundred or one thouland weight. Those which travel

between the Perffan gult and I planan, are of a much lefs between the Reffin gulf and I fallism, are of a much lefs fize, and do not carry above five or fix hundred weight; yet these are aspool as serviceable as the others, for they are much swifer, and will gallop like a horse, whereas the others feldom exceed a soor pate; these swife rands are kept by the King and great inch; they serve the swormen from place to place, and carry their baggage; they are smally adortice with embroidered feldins, and silver bells about their necks; aftring of \$7.7 feven of them are tied together when they travel, and poverned by one man; they do hells the bridles not halter to hold them in, nor whits to dive them; but they are governed by the divertied together when they travel, and soverned by one manithey ofe neither bridles not halter to hold them in, nor whips to drive them? but they are governed by the driver's voice, who fings or plays to them as they travel? It is in vain to beat the fifthey title, they will go never the better for it. When they are to take up, their burden, the driver touches their kmees, whereupon they lie down on their bellies till they are loaded, groaning, however, and giving fights of uneasmess, under a fense of the fatigue they are about to undergo. They let them grase by the road fide, with their burdens on their beaks, on wicea and thilks, and fometimes they feed them with balls compounded of bairty-meal and chaff made up, mito a patie, with which they often mit the totton feed, but he is the leaf feeder of any beats, confidering his bulk. It is very happy sito that the camels will live without water two, or three days together, there being fearcely any to be met with in those deferts the caravans are forced to past. They shed all their half very fpring; and are perfectly naked. These creatures are very targe and tractable, except when the lulling fit is upon them, which last thirty or forty days, and then they are very jurnely. Which nakes their divires increase their burdens at that time to keep their field under. When once the male lias covered the lemale, he grows sluggisth, and does not care to stire out of the stable. They copulate as other sour source and the sexual source of the out of the stable. They copulate as other source are said and an extra source of the winder they are very jurnely. Which nakes their divires increase their burdens at that time to keep their stell under. When once the male lias covered the lemale. They copulate as other source to stire out of the stable. They copulate as other, source and the second of the stable. They copulate as other, source to stire out of the stable. They copulate as other, source and stable source of the stable, and out of source of the stable source of the stable so

Oxen, buffalots, affes, and mules, aro used indifferently for carrying of paffengers or burdens; and their land being plowed by buffaloes and oxen, their beafts are, very seldom killed for food. The affes of Perfia are, much larger and fwifter than ours, and will perform a journey very well. But the fineft beafts are their horses; liefe are beautiful creatures, and no where better managed than in Perfia. They lave fine foreheads, and are exactly well proportioned, light and fireightly, but only fit for the faddle, or at least not used for any other purpose. They are never gelt, and wear their tails at the full length; but though they are lovely creatures to look on, they are neighter to gert, and wear their tains at the full length; but model they are lovely creatures to look on, they are neither, to fwift as the Arabian hories, nor, fo hardy, as thuft of, Tartary; and the King has always a flable of the Arabian breed. Hories are very dear to Perfus, fone of them being fold for two or three hundred pounds, and feldom for lefa to the fifth of the first pounds of the fifth of the first pounds of them to had the fifth of the first pounds of them to had the fifth of the first pounds of them to had the fifth of the first pounds of them to had the fifth of the first pounds of them to had the fifth of the first pounds of the fi than fifty. The felling fuch number of them, to India and Turky contributes more to enhance the price, than and I way contributes more to enhance the price, than the fearcity of them. Their nules carry very well, and fonte of them are valued at thirty or forty pounds a piece: found affes, are not valued at much lefs, after they have, been taught to poce. The ordinary food for hories is barley and chopf firaw; they have no mangers in their, stables, but give their horses their corn in bags, as our hackneybut give their horfes their corn in bags, as our hackney-coachmen do. In the faring they gutgreen grass for their horfes, but never make any into hay to be caten dry; sometimes they feed their horfes with balls made of barley-meal, as in India. Inflead of litter, their own dung is dried and beaten to powder, and haid a foot deep for them to lie on; and, if any of it be wetted, it is dried in the furt the next day. Their horfes hoofs are much founder and harder, than ours; and, they are; thou with thin plates, as the oxen are allow, on account of their travelling over the frony mountains. In wanter, shey dauch their horfes with a yellow herb called hamals, and founce-times anoint their hodies with it as high as the breaft, to keep out the cold; but it feems rather to be by way of ornament. nament.

Large stables of horses belonging to the King, are dif-perfed throughout the kingdom, for the public service. A horfe is feldom denied to any man who demands one, if he will keep him, but fucil perious are accountable to the government for them when they shall, be, called out; but they have the liberty of riding them in the mean time, These troopers hories are sometimes quartered upon peo-ple against their consent, who would gladly be oxcused from the trouble and charge of keeping them; and if any, horse dies in their hands, oath must be made that he

was well treated, and die not die for want of corn or looking afters. Their hories are subject to many distempers: fometimes their legs swell, and a humour rises on the breast, which it is said proceeds from eating too much barley; in this case, they clap a hot iron to the swelling, or lance it, and keep the fore open, by running a yellow twing through it; but for lame or distempered hories, a hot iron applied to the part is the most general remedy.

There are great pleasty of sheep and goats in Persia; the natives seldom eat any other meat. Their sheep are large, and remarkable for their sat tails, which weigh eight or ten, and, according to some, above twenty pounds weight. In some parts of Persia also they have more horns than ours: some of their sheep have fix or seven horns, some projecting strait from their sortheads, so that when the rame engage, where is generally a great deal of blood, spilt, in the battle. The Persian goats are not only valuable for their fields, but the sine wool they yield, of which great quantities are exported from Carmania annually. As the Mahometans, who are the governing part of the country, have an aversion to hogs, their Christian subjects do not chideavour to, encrease the breed of that animal, unless towards Georgia and Amenia; where the Christians are numerous; so that it is no wonder, there are fearcely any to be met with.

There are not many wild beasts either in the middle or

merous; so that it is nowonder, there are scarcely any to be met, with.

There are not many wild beasts either in the middle or southern part of Persia, there being no cover for them. They have some deer and antelopes, which are much of the same nature, except that they are spotted, and have siner limbs: In Hyrcania and Curdeslan, the woody parts of the country, wild beasts abound, such as sions, tygers, leopards, wild hogs, jackalls, &c. In Media and Armenia there are abundance of deer, wild-goats, hares, and rabbits; and there are some, but not many, found on the mountains in almost every part of the country.

In the heart of Persia which is very dry, they are not much troubled with insects, unless it be with swagms of locusts, which sometimes visit them; they say fisch numbers, that they appear like a cloud, and persetly obscure the sun; and deltroy the fruits of the earth, wherever they settle; but there are certain birds which generally visit

the full, and centry the finite of the earth, wherever they fettle; but there are certain birds which generally visit the country about the fame time, and prevent the ruin of the hubbandman, by earing up, the locusts. There are great numbers of ferpents, toads, scorpions, and other venomous reptiles, in that part of the country which lies upon the Caspian or Hyrcanian sea; but many, which lies upon the Capian or Hyrcanian fea; but many, of them die in funmer time for want of water, and infect the air, rendering that part of the country very unwhealthful at that time. The feorpions are of an immoderate fize; and their fluing is mortal if proper remedies be not immediately applied; and a perfon thing by one of them is in such torture, that he becomes raving mad for forme time: Musketoes, or gnats, are very troublesome in the slat county near the Caspian sea. And there is a white sly in Persia, no bigger than a slea, which makes no posses, who figure is like the price of a pin. There are

white dy in Peria, no bigger than a flea, which makes no neife, whose sting is like the prick of a pin. There are allot the millepedes, almost like a caterpillar (the Persans call them liesar-pai, or a thousand feet); their bite is as permicious as the sting of a scorpion.

Tame and wild sowh, such as geefe, hens, ducks, particious as the sting of a scorpion control of the sting of a scorpion.

Tame and wild sowh, such as geefe, hens, ducks, particious as the sting of the same plenty and variety in Peria as in Europe; but more of them in the north than in the south part of the country. Turkeys have been imported to lipahan, but they do not thrive there. They take all imaginable, care to encrease and propogate the breed of pigeous on account of their dung, with which they raise their melons. Their, dove-houses are five times as large as ours, of a round figure, and handare five times as large as ours, of a round figure, and hand-fomely built of brick; it is faid there are not less than three hundred of them in the city of Ispahan only. three fundred of them in the city of Ifpahan only. The dung is ufusily fold for four-pence the bifty, or twelve pounds weight; and the government, it feems, lays a tax, upon it. I heir partridges are reckoned the largeft and best taited that are any where to be met with. The pelican, which the Persians call tacob, or the draw-water, is as remarkable as any of their fowls, for the body of it is said to be as large as a sheep, and his head is at the same time extremely small; but it has a large bill of sixteen or eighteen inches long, as big as a man's arm, and under the bill there is a large hag, which, travellers tell us, will hold a pail of, water: they build their nests in the deterts for their security, where there is neither water nor inhabitants; and figurity, where there is neither water nor inhabitants; and figurently go two days journey for water for their young. ones; but they bring enough, in the above-mentioned re-ceptacle to last a confiderable time. In the province of Chorafan there is another extraordinary bird, which has fuch an appetite towards the water of a certain fpring in that country, and so much fagacity in discovering it, that they will follow any person that carries it in a bottle several hundreds of miles. We shall pass over in silence many extravagant and improbable stories related by travellers of this bird.

No country, in the world abounds more than Persia with eagles, hawks, falcons, and other birds of prey, nor are, they any where better instructed to take their prey. The King has eight hundred or a thousand of them; and no man of the lead diffinction is without his hawks and

no man of the leaft diffinction is without his bawks and falconers. The Perfians breed up their very crows to fly at the game. We have already taken notice of the dexterity of their hawks in flying at birds and beafts, &c. under the article of rural sports; to which we refer the reader. The same kind of singing-birds are to be found in Rensia as with us, such as the linnet, chassinch, nightingule, lark, &c. some birds are also taughteto speak; but we cannot learn that there are parrots or perroquets on this side India. There are, however, several particoloured birds to be seen in Persia, with a plumage of blue, green, and yellow, beautifully mixed. There are such numbers of sparrows here, that they are very troublesome to the husbandmen; who are forced to place their servants in the fields all day long, to keep them from their corn, when the harvest approaches. harvest approaches.

harvest approaches.

There are fearcely any fish to be met with in the heart of Persa, the few rivulets they have hardly supply the country, with water for necessary uses, and in the summer they are for the most part dried up: even the river Zenderhoud, to which the government at a prodigious expence, have joined other streams for the supply of the city of Ispahan, is persectly lost in the sandy delerts about twenty leagues from thence, and it is more than probable there is not one stream, that rises in the middle of the kingdom, which ever reaches the sea in the summer; though in the spring, when the strong metals are only the same state of the same streams. the fea in the funmer; though in the fpring, when the fnow melts on the mountains, they may make a confiderable appearance. Some writers affirm, indeed, but without the least colour of proof, that the river Zenderhoud though it dispares about twenty leagues from Ifpahan, rifes again in Carmania, and falls into the ocean. There is great plenty of fea fifth in the Persian gus and the Cafpian fea; the rivers Kur and Arras also, rhich fall into the Cafpian fea, are well stocked with river fish; but as the Cafpian fea, are well stocked with river fish; but as the city, they are consequently deprived of that delicacy.

Among the many vast mountains in Persia, we may reasonably suppose that there may be some mines of gold and filver; but it seems there are none open, neither have they any account that ever any were wrought, unless their lead mines may be denominated filvers, which yield an incensible quantity of that metal, as all lead mass of

confiderable quantity of that metal, as all lead mes do, but not near enough to countervail the charge of extracting it. They have, however, good mines of iron, fleel, copper, and lead: the iron and fleel mines are in Hyrcania, Meand lead: the iron and iteel mines are in Hyrcania, Media, and the provinces of Irac and Chorafan; their, fleel is fo full of fulphur, that if the filings are thrown into the fire, they will give a report like gun powder: it has a fine delicate grain, but it is as brittle as glafs; and the Persian artificers, who do not understand how to give it a due; temper, cannot for that reason make wheels or fprings, or any minute pieces of workmanthip. Most of their cope, per-mines are near Seris in the mountains of Mazenderan; they mix it with Swedich and Isana copper, and the prothey mix it with Swedith and Japan copper, and the pro-portion is one part foreign to twenty of their own metal. The greatest quantity of filver is found in their lead mines.

most of which are near the city of Yesd.

In the mountain Damaverd, which divides Hyrcania from the province of Irac, sulphur and saltpetre are dug. Antimony is found in Carmania, but it is a bastard fort. Antimony is found in Carmania, but it is a ballard loft. Emery is had near Niris: they have no vitrol nor mere-cury; and their tin is imported from abroad. There are two kinds of falt in Perfia, the one upon the furface of the ground, and the other dug out of the rock: the falt is ohard infome parts of Carmania, that the poor people make-use of it instead of some to build their cottages with. There

are plains of ten or twee leagues over, quite covered with falt, as others are with fulphur and alum.

The Persian marble is either white, black, or red, and fome veined with white and red: it is dug near Hamadan, and in Susiana: some of it will break into large slakes or. and in Sufana: fome of it will break into large fakes or-tables, like flate; but the best comes from Tauris, which is almost as transparent as crystal: this kind is white mixed with green. In the country about Tauris allo is found the mineral azure; but this is not so good as that which comes from Tarary, as it lose is scolour by degrees. In the provinces of Fars and Shirvan there is found abund-ance of bole armoniac, and a marle which the country casions.

Those mines in Persia, where the toquois stones are found, are the most valuable; there is one of them at Nissapour, in the province of Chorasan, and autother in a mountain between the province of litae and Hyrcailia: there has of late years been a third discovered, but the stones are not so sine and lively as those in the old mines: All that come out of the old rock are preferred for the King; and when he has taken those he likes best, he orders the rest to be fold to the merchants, or others who chuse to witchies them.

purchase them.

There was form, by the fineth pearl-fithery in the world in the gulf of Peria. We are told by a judicious and curfiess traveller, that it did not produce less than the value of a million of lives one year with another, and that he himself faw a pearl taken our of it that weighed fifty grains, and was perfectly round; but the largest that were usually niet with in that sea did not weigh above terr or twelve, grains; all above that weight the fishermen were obliged, under the severest penalties; to lay by for the King. But whether the pearl banks are now exhausted, or, in the late indolent reigns, the people are become as inactive as their governors; or, lastly, whether it is that the Arabs, having made themselves masters of this sea, and most of the islands in it, the fishermen are interrupted in their business; and the pearl-fishery seems wholly to be disused at present; and there are as sew pearls to be met with in Peria as in any other place.

other place.

We are informed, that there were two feafons for fishing; the first in March and April, and the other in Auand it september; though a writer of credit mentions only one; hamely, from the latter end of June till the end of September; and there were formerly to be feen, near the Mand of Baharen, two or three thouland fifting boats, in mand of Baharen, two or three thouland fifting-boats, in every one of which was a diver. They fift for the pearls in the following manner; the boats are brought to an an-chor in five fathout water, and then the diver strips him-felf naked; and having fixed a piece of horn, like a pair of spectacles to his nofe, which prevents any water getting in that way, and tied a stone to one of his seet, that he may fink to the bottom in an inflant, he takes a net or a balket with him, and defeends to the bottom; there being a rope faftened under his arms; and another to the balket. Having flipped the cord which faltened the frone to his foot, he prefently falls to gathering up the oysters, or nacres, and puts them into his basket; and, having remained under water as long as he can, makes a fign to the people in the boat to draw him up, and afterwards they pull up the bal-ket: in the mean time the diver ufually refreshes himself with a pipe of tobacco, and then goes down to the bottom as before; and thus he works from eight in the morning till eleven, and then goes to dinner; about twelve he be-gins to dive again, and continues it till three in the after-noon. It is faid these divers will remain under water near half a quarter of an hour at a time. Towards evening they carry their oyfters on shore, where they lay them on heaps; and when they begin to dry, the oysters open of themselves, and they fearch diligently for the pearls, which the Banians and Armenians are ready to take off their hands, and, by forting and retailing them out to others, they get a very con-fiderable profit.

SECT. VII.

Of the language, characters, writing, arithmetic, learning, music, history, chronology, astronomy and astrology, philosophy, arts, &c. of the Persians.

FOUR languages are spoken in Persia, namely, r. The Arabic. 2. The Torkish. 3. The Persian. And, A. language which the Gaurs or Guebres, the posterity of the antient Persians who worship the fire, speak: their language and characters are peculiar to themselves, and can-not be the same with those of the antient Persians, insimuch as they understand none of the inscriptions remaining at as they uncertaind indue or the interptions remaining at Perfepolis, neither are the characters of the prefent Gaurs any thing like those at Perfepolis. The Arabic is the learned language; and in this the Alcoran and other books of divinity, as well as their books of morality, physic, and philosophy, are written. The Turkish language is usually oken at court, and in the provinces adjoining to Turky

They generally speak the Persian tongue at Schiras, the capital city of Fais, or the antient Persia.

The Persian larguage is intitlely modern, of the same date with their religion, and, besides those words which are peculiar to it there are a great number of words of other nations, which have list their turns conquested Persia, introduced into it; as those of the Turks, Tartas, and Acabs. There are also as inconceivable number of European words withe sit, as High Dutch; English, and French; but it is faid, there are those of the English than any other. Some of our English travellers give us instances of this, as broder for brother, &c. They take some of their words from the Greek and Latin, but they borrow intore from the Arabic. Greek and Latin, but they borrow into from the Arabic than all the reft; informach that a perion is reckoned to be half infrieded in Arabic, who has a period knowledge of

They have heither grammar nor fymax in the Perfact language, but make ofe of the Arabic rules. They have twenty-eight letters in their alphabet, and fome recket twenty-nine; but they are all comonants except alif, which is their first letter, and has the found of our a; the letters is their first letter, and has the found of our a; the letters you and ye are also, in some instances, used as vowels, and give a sound to their other letters. They have not stops, comma, or paragraphs in their books; but, like our lawyers, when they enter upon a new clause, begin with a great letter, or an item. If they make any points, it is for young people who are lawring to read; or for thola who defire it, and will pay well for the trouble.

The Persans make their paper of filk rag and contour; it is extremely thin and smooth, and will bear but on one side, it is one for white and strong a ours, for in any re-

ie is extremely thin and smooth, and will bear but on one fide; it is not so white and strong as over; flor in any refect comparable to it. Their rink is made of galls and vitried, and the rind of pomegranetr, with burnt rice powdered, which being made up into a cate, they difficult in gum-water. Instead of goose-quills, they make their pens of a reed something larger than a guill. The characters are Arabic whatever may be the language they write in.

The Mahometans consider paper as a facred thing; they esteem it a very ill action for a man to burn or tear paper and much more to put it to any vile uses, for, fay they, the name of God, or some of his faints, may be written upon it, and it would be impious to prophane it in such a manner. On the other hand they mentain, that is not written upon, it ought not so the port to any common use.

written upon, it ought not to the pot to any common use, fince it is defigned for writing matters upon it which concern religion, the laws divine and human, and fuch other venerable purpoles.

The art of printing is not yet introduced among the Perfians; their books are therefore all manufcripts. They

Perfians, their books are therefore all manuferipts. They excel in writing, which is reckoned among the liberal arts. They write eight feveral hands: that which they call nefky, and is the hand the Alcoran is written in, is in most effects. They fland or fit gracefully, holding the paper in their hands, and write with all imaginable cafe, not withflanding they have no table to lay their paper on us we have, and exceed the best of our clerks in the dispatch they make. They do not write as we do, from the left hand to the right; but from the right to the left, as the Arabs do maitter do they write in a flexible line. In the inc. Arabs do; neither do they write in a streight line, but the lines are convex, or bending like a bow, and the margin is on the right hand. They will write over a book as big as the bible in a fair character, for aboutten pounds, provided the paper be found them; whereas we could not the paper be found inclin; whereas we could be book of that quantity transferibed for fifty pound. They have a kind of fhort hand in Perfa, in which they are the letters of the alphabet; and the fame letters, differently pointed, will have different fignifications. They have a vast number of clerks in all their great towns, but there is hardly a livelihood for half of them. They ordinarily write from morning till night for five-pence or fix-pence

The Persians make use of figures in their arithmetic, as we do; and their addition, subtraction, multiplication, and division, differ but little from ours; but they go no higher; and with respect to the rule of three, they are intirely ig-

norant of it.

It is universally allowed, that learning flourished most in the east in the first ages; the Persian Magi, in particular, from their extraordinary skill in astronomy and other sciences, were thought to entertain a commerce with infernal ipirita, fo that a magician and a conjurer became terms of the fame import; but notwithstanding their superiority to other nations in this respect in antient times, we find that at prefent the sciences are not arrived to that perfection in Perfix as in Europe. They understand neither the celestial nor terrestrial globes. They have, however, an astrolabe, can name the figns of the zodisc, and are not

unacquainted with the other stars. Some years ago, when an European brought a pair of globes with him to Ispahan, they were even surprized at their own ignorance.

Next to judicial astrology, which they have great faith in, the sciences most in esteem at present are, astronomy, geometry, arithmetic, natural and moral philosophy, physic, and the study of the law. They seem to have a more than exclusive seems. fic, and the fludy of the law. They feem to have a more than ordinary paffion for poetry; noth of their beth pieces being written in verfe. Their poets are very nice as to the shime, but fomething negligent in their numbers. Their fatire is 'chiefly levelled againft the Turks, who certainly give them feope enough; for, compared to the Perfians, they are a very brutish and barbarous nation.

The antient philolophers in the east were ill poets, according to the Perfians; and their wise lessons were delivered in verfe, to render them the more amiable and venerable, and that the people might the more readily retain

able, and that the people might the more readily retain them in their memories. The subject of their poems at this day, also, is generally some piece of morality or phi-

The Persians excel more in poetry than in any other branch of literature, as they feem to have a genius pecu-liarly adapted to it. Their invention is fruitful and lively, their manner (weet, their temper amorous, and their lan-guage has a foftness proper for verse: one who did not un-derstand a word of Persian, would be delighted to hear their verse recited, the very tone and cadence are so affecting. They mix verse with all the profe they write, and even in common conversation; imagining that verse gives a force and lustre to their finest thoughts, and impresses them on

the memory.

The method taken by the antients to preferve the memory of their great actions, was, to make them the fubject of their fongs, and fing them in their affemblies, and at their fettivals, as is the cuttom of Perfis at this day, and we may add in most of the eastern kingdoms; herein the Grecians, and most nations in Europe imitated the Asiaties. There are more volumes of excellent poetry to be found in Perfia, than in any other country; one of them, particularly, is the history of their Kines, and contains fiver for thousand. the history of their Kings, and contains fixty-fix thousand verses : the thoughts are noble and elevated, their expressiverfes: the thoughts are noble and elevated, their exprefinons foft, and their terms always the most proper that can be devised: their allusions are delicate, and all their figures abound with hyperbole. There is one poem, among others, called the story of the patriarch Joseph and Potiphar's wife, which raises all the passions to the highest pitch. Love is sometimes the subject of their poems, as well as morality and history: but nothing immodest, or substreaments and security of any kind is given the subject to the subject of their poems. that countenances obscenity of any kind, is ever the subject

of their verie.

of their verte.

The Persian music next demands our notice. They sing and play by rule, though to an European ear, they feem to make but very indifferent harmony. Singing in parts is not practiced among them, but they sing after each other, and generally to some stringed instrument like the lute or viol: their men sing better than the women; but many of them do not practice singing, it being, wall a chapted upon as segurided upon as segurided. 22 well as dancing, looked upon as a fcandalous exercise in Persia. People of rank will not suffer their children to Perna. People of rank will not tuner their children to learn either the one or the other; but it is left almost in-tirely to the common wenches and profitutes, as it is all ever the east. It is reckoned indecent in people of any reputation to fing; and the attempting it in company would render a man contemptible. The Persians call their fundamental calls in intrasting that they derive their properties. would render a man contemptible. The Persians call their singing-women Caine, intimating that they derive their skill from the daughters of Cain, who they pretend were the first inventers of singing and music in Asia. They have a great number both of string and wind instruments of music; some-resemble in shape our hautboys and stues, others the viol, harp, virginals, kettle drum, and trumpet; the latter of which is the most disagreeable and monstrous instrument for fize and found, that can be met with: it is commonly feven or eight feet long, and proportionably wide at the great end, and as much as a man can hold up: thefe and their drums nearly drown all other founds; though as we have observed, the lefter inftruments have no great har-mony in them. Their music, as it is called, ferves chiefly inflead of clocks, to let people know the time of day or night, founding conflantly at certain hours, for they have no bells. When the King or any great man goes out of his palace, you have always notice of it by these drums and parace, you have always notice of it by these drums and trumpets, which are placed over the palace-gate, or in some balcony or gallery, and are sounded upon such occasions, being heard at a great distance. Musse and dancing girls are in some places appointed to go before a great man when he travels, and constitute part of his equipage.

The strings of their instruments are never made of gat,

the rouching of any thing belonging to a dead animal, efpecially the entrails, being accounted a pollution; they make
them, therefore, of twifted filk, or brais wire. The playing
upon a muical inframent ferms to be prohibited by their
religion; for which reason their ecclesiastics and devotees
will not be present at entertalments where they are used;
so that we need not wonder that the science is not arrived at
greater perfection in Persia. Except some of the King's,
their music is hardly worth the hearing; it being chiefly
performed by a ragged strolling rabble, for a livelihood,
cither upon festivals, the circumcising of a child, or other
joyful occasions.

either upon festivals, the circumcising of a child, or other joyful occasions.

The people of the east look upon astrology as the key to stuurity, and they have an insatiable curiosity for prying into things to come. The Persians term astrology the revelation of the stars; and astronomy is studied in Persia purely for the sake of it. This seems to be the principal end of their studies; and they look upon a person to be to the last degree stupid and ignorant, who speaks slightly of this science, falsely so called. The astrologers of Persia, at least the most celebrated, are all natives of the province of Chorasan, or Bastria, and of the town of Genabed. The King never entertains an astrologer who is not of that town. The reason that the astrologers here have more skill in their art than elsewhere, is, we are told, because the air is drier and juter, by which means they have a better opportunity of observing the motions and aspect of the stars, If we consider the number of astrologers that are in Persia, the rank they hold, and the large pensions they receive from If we connect the number of autologies may are in rema, the rank they hold, and the large penfions they receive from the crown, we may eafily account for the confidence the people put in them: they receive from the government no lefs than four hundred thouland pounds per annum. To the post of chief attrologer to his Majedy there is annexed a merican of the wheelffood pounds per annum, and to the the polt of chief altrologer to his Majetty there is annexed a pension of ten thousand pounds per annum, and to the second astrologer sive thousand pounds per annum, and to the rest according to their skill. They receive also in presents annually from the King, one year with another, two hundred thousand pounds; and yet they are sometimes arbitrarily punished and put to death, according to the caprice of the Prince, for the most trivial of offeners, and even for actions the most innocent in themselves; of which we shall give as insance. which we thall give an inflance.

which we shall give an instance.

In the reign of Sephy, on a day when the King and all the great men were assembled to see some criminals of state cut in pieces, and the chief of the astrologers was there among the rest; the King, viewing artentively the countenances of his courtiers, observed, that the principal astrologer shut his eyes at every stroke of the sabre, as not able to behold so horried a sughter: the King therefore the counterpart of the sabre was called to the Governor of a receiver whether the control of the sabre sabre. as not able to emoid to normal altaugner: the king there-upon called to the Governor of a province who fat near him, and commanded him to put out the eyes of that dog who fat at his left hand, fince he did not use them. It is evident that the flars had never revealed every part of the aftrologer's defining to him; for this cruel order was exe-

cuted upon him in an instant.

cuted upon him in an inflant.

A certain number of aftrologers are conflantly retained in waiting at the Royal palace, and fome of the chief of them about the King's perion, except when he is in the haram with his women, who advertife him of the lucky or unlucky moments. Every one of them carries an astrolable hanging at his girdle, in a little neat case, not bigger than the hollow of one's hand; they are consulted to the contract of the contractions of the contract when the contract was a strong to the contract when the contract was a strong to the contract when the contract was a strong to the contract was a strong bigger than the hollow of one's hand; they are confulted not only in affairs of importance, but frequently upon the leaft tritles: for inflance, If his Maiefly shall go abroad? If the an auspicious hour to enter the haram? If it be a proper time to eat, or to give zudience? &c. When these questions are asked, the astrologer immediately takes out nis astrolate, observes the situation of the stars, and, by the affissance of his tables, makes his astrological conclusions, to which intire and implicit faith is always given.

Ecliples of the fun and moon, are in general pretty juftly calculated by the Perfan aftronomers, who often forefel the very noment wherein those luminaries will be obscured; though there have been instances of their mistaking half an hour, especially in ecliples of the sun. But they differ from us in nothing more than in the calculation of the vermal equinox; there being sometimes an hour's difference between them and the Europeans. Comets, they apprehend, always portend some great calamity; but generally suppose their malign insuences are directed against some other kingdom, rather than their own. They had neither celestial globes, or charts, or telescopes, for observing the constellations, till the Europeans imported them; they have since indeed endoavoured to imitate the celestial globes; having had before only some representations of the constellations in a book called, The plans Eclipses of the fun and moon, are in general pretty

of Abdal Rahmen. It is observable, however, that the figures were nearly the same as on our globes; the longitudes and latitudes of the stars are also marked, but a little different from ours. They generally make forty-eight confiellations; and the names of them, for the most part, conficilations; and the names of them, for the most part, are the same we give them: but some of them are different. The only instruments they use in any of their operations are the astrolabe and Jacob's staff; and as with these alone they take the elevation of the pole, it cannot be suppose that their latitudes are very exast. Their astrolabes are very curiously made, being chiefly the workmanship of the mathematicians themselves.

Takumi is the name given to the Persian almanae, which contains the ephemerides of the ensuing year. It contains properly a mixture of astromony and judicial astrology, giving an account of the consumstions.

altrology, giving an account of the conjunctions, oppo-fitions, alpects, longitudes, latitudes, and the whole dispo-fition of the heavens. It also contains prognostics on the most remarkable events, as war, famine, plenty, diseases, and other occurrences in human life; with the lucky or unlucky times for transacting all manner of affairs, whether of importance, or not; directing the people to regu-late their conduct accordingly. The feltivals also are marked as in our almanac; but whereas we divide the year into four feafons, they make only two, fummer and winter. Though there aregreat numbers of these almanac-makers, and though they frequently disagree even in their aftrono-mical calculations as well as their aftrology, they are ne-vertheles looked upon as infallible. Their prognoftica-tions are generally taken from the moon, believing that this sublunary world, as it is termed, is much more in-fluenced by this planet that by the sun. These astrologers, like other oracles, generally deliver themselves in dubious like other oracles, generally deliver themielves in dubious and equivocal expressions, which may bear half a dozen meanings; and if their predictions prove true in any sense, or but in part, they are sure to meet with applause, though they should fail in some instances. They seem to regard the earth-more than the heavens, and to be governed by probable circumstances, rather than the constellations, in the predictions they make; and their predictions on that account frequently prove true. For inflance, their almanaes are always published in the spring, when the winter is passed, and, according to the weather they have had, it is no difficult matter to foretel whether they shall have good or bad crops in the fummer, especially in a climate where the weather does not vary as in Europe; and from the same premisses they will be able to pass a tolerable judg-ment on the health or fickness of the ensuing seasons.

As the astrologers are always about the court, and have fo great a share in the administration of affairs, and are in fuch credit with all the world, they may be supposed to make very shrewd guesses in relation to politics. They cannot but observe the humours and disposition of the Prince and his favourites; the likelihood there is that one will be restored, and another disgraced. Nay, they very well know what an influence they have in these cases, insomuch that there very rarely happens a confiderable altera-tion in the state, but it is brought about, and indeed is the

effect of fome prediction of their own.

There are several kinds of diviniation in use among the Perfians; for they do not only believe that the stars reveal, and are indeed the cause of every accident and moral action; but also, that God is pleased to let them know their fate by lots, by the throw of a die, or even by toffing up a piece of money; when these are done with due folemnity, and a religious seriousness. The astrologers are also professors of the art of divination, though the Mahometan priests come in for a share by this gainful trade; and for this purpose the very alcoran, their most sacred writings, are prosiituted. When the priest is applied to, he makes a preparation fuitable to the quality of the person who confults the oracle. He purifies himself by bathing, puts on a clean robe, and, having repeated certain prayers, he takes the alcoran in his hand, and opens it at a venture; and if the place he casts his eye upon contains a positive command, the prediction is favourable, and the person may undertake the thing; but if it contains a negative, the contrary, and he ought to lay afide the defign. The greatest Doctors, from a regard to their learning and fanctity, are the most sought after on these occasions.

There are offices for the diviners and astrologers in all

the great towns of Persia, where they tell fortunes, and in-terpret dreams. Besides other methods, they have also a folio book, containing about fifty pictures, fome represent-ing the figns of the zodiac, and others their prophets and faints; from this they pretend to give the interpretation of dreams, and discover all that is demanded of them.

Another part of the Persian superstition confists in charms of amulets. These amulets have certain inseriptions on and amulets. and anulets. I hele amules have certain inferiptions on paper, and formetines on precious stones, and these inferiptions they wear in little bags about them: they contain some passages of the alcoran, or fosteness of their faints or prophets, applicable to the disease one-chaintment complained of. They depend also much on the diviners and astrologers with refrect to the observance of days and times: and the astrologers, when the King is on a journey, will sometimes make him rife at midnight, and begin his march in the worst weather that can happen, and oerhase march in the worst weather that can happen, and perhaps out of the high-road, to avoid the unfortunate hour, or his evil fare.

fever: this

The Persians reduce their philosophy under three heads; namely, physics, metaphysics, and logic. Their great master is Aristotle, whom they have translated into Arabic, Till very lately, they did not believe there were Antipodes: but are of another opinion fince the Europeans have visited them. The philosophy of Pythagoras, which prevails in India, is here taught by a fect of Mahometans, called Sefy's. These understand the alcoran, and all its precepts; and, whatever regards external worthip in religion, in a spiritual fense; and though they practise corporal purifications with the ether Mahometans, they do not look upon them as essential to their religion, which occasions the rest of their church to hate them mortally. They prothe reft of their church to hate them mortally. They pro-fefs love to all the world, and to hate no man. They confider all men as proceeding from one common father, and people of different fects and perfuafions as all fervants of the fame mafter; they teach that the joys of Paradife confift in an intimate knowledge of, and a strict union with, God; and that hell confists in a regret for being feparated from him. Ethics, or moral philotophy, feems to be more cultivated than any other in Persia. Those who profess it, shew a persect resignation under all missfortunes, and speak of death, and even suffer it with great evenness of temper. Most moral virtues, particularly patience, forti-tude, and temperance, feem to be deeply impressed on them.

Little can be faid of the geography of the Persians, as they had neither terrestrial globes, maps, or planisheres, till the Europeans introduced them. They thought there was a small part of the earth habitable; and compared it to an orange swimming in a vessel of water, the greatest part whereof remains under water.

History is but little cultivated in Persia. They are so far from knowing any thing of the history of Europe, or any distant country, that they are ignorant of that of their nearest neighbours; nor has the history of their own nation any thing of certainty in it, till the establishment of the Mahometan religion amongst them. Their histories, before that time, are but so many legends, without the least appearance of truth. They pretend that the world was created feveral thousand years before Adam; and that is was first inhabited by damons and spirits, who, rebelling against God, were thrown into hell, and that God introduced Adam and his posterity in their room.

The Persians begin their year at the vernal equinox. They complete their years by the number of moons, reckoning twelve moons to a year, or three hundred and fifty-three days, so that their solar computation exceeds their lunar at leaft twelve days in the year. Their epoch begins with the hegira, or flight of Mahomet, which was in the month of July, fix hundred and twenty-two years after the birth of Christ. And as the Jews computed their time by jubiless, the Christians by indictions, the Romans by Juftras, and the Greeks by olympials; the Persians also, in fome cases, account by a revolution of four years.

Their week begins on the Saturday; fo that the feventh day, which is their fabbath, falls on a Friday : they call it adine, or tzemeh, that is the day when they affemble for religious worship. Upon the nuries, or new-year's-day, the great men wait on the King to with him a happy new year, every one making him a valuable prefent, as do the

Chans who prefide over diffant governments.

They divide the day into four equal parts, and the night into as many: and they have a hollow brazen veffel with a little hole in it, which they fer upon the water, and is filled in about the space of three hours, and, when it finks, the

watch is expired: of which notice is given by the public drums and trumpets in all great towns.

The Perfians call a physician hakaym, or the preserver of life. There is not a country in the east where physicians are in greater effecm, or that produces a greater variety of medicines and physical drugs: it is a common faying in Persia, that the astrologers and physicians devour the country. The King always entertains vast numbers

charms hefe inof their antment diviners days and journey egin his perhaps hour, or

he preserver here physis a greater a common ians devour ft numbers

in his pay, who are not less chargeable to him than his estrologers; but there is an eternal variance between them: for when the physician has prescribed and prepared the medicine, the patient must wait till the astrologer affigna the lucky moment to take it; and if it has not the wished-for effect; the astrologer imputes it to the ignorance of the physician, who, on the other hand, tells his patient, that the reason it had no better success; was, because there was a mistake made in the calculation of the astrologer. The diefase is shielfy judged of by feeling the pulse, or considering the patient's urine, by which the physicians learn the distemper without seeing them; which feems necessary in Persa in relation to the semale sex, who are never feen on any occasion whatever; and when a physician desires to field woman's pulse, they give him her hand covered with crape or fine linen, having all the while a curtain between them. They feldom bleed in Persa, but give emultions and other potions in a sever, which is the most ordinary distemper in the country, and of these sour or five pints sometimes in a morning; but they never give clyster, which some think proceeds from an excess of modesty, or sather from a prohibition resulting from their religion.

That the patient may not be dispirited, the physiciane tell him, with the greatest assurance, if he is at death's door, that there is no manner of danger, and that they will restore him in a few days. In their preferiptions, they always sollow Galen, whom the Persans call Galenous. The other great maters in physic are Hermes Trismegistus and Avicenna, or Abousina, as they call him, the most celebrated physician and philosopher of Asia in his time.

In furgery the Persians are very ignorant: their barbers are the only furgeons, and few of them understand any thing more than blood-letting. There is not a physician in Persia that ever saw a body diffected; but they have the less occasion for surgeons, because the air is 6 good, that green wounds almost heal of themselves, and they are exempt from many of those maladies which arise from a cor-

empt from many of those maladies which arise from a corruption and sux of humours among us.

The Persian physicians are both druggiste and apothecaries; and have their shops, and servants to make up their
medicines. The physician demands nothing for his advice, but only for his medicines, where the patient comes
to the house; it is, however, usual to make him a present.
When the physician visits the patient, he has about two
guineas for the first, and one for every succeeding visit;
notwithslanding there are multitudes of physicians in Persia, the country in general is very healthful, except near the
fea-coast, and this is thought to proceed either from the
dryness of the air, the temperance of the people, or the dryness of the air, the temperance of the people, or the ferenity of their minds.

Though the neighbouring kingdoms of Turky and India are feldom free from the plague, yet it very feldom vifits Perfia. They are equally strangers to the stone, sciatica, head-ach, and tooth-ach; and though it is true, many of them have the venereal disease, yet it is not attended with those pernicious effects there, as in Europe: there are not those blotches and breakings out which are found upon those who have that diftemper amongst us. They eat, drink, and bathe together, when they are affected with it; nor is any body ashamed of having contracted it, but they fpeak of it as of any other ordinary diffemper; frequent bathing is thought to be of great fervice to the Perfians under that diforder, though it may communicate it to

The falling-fickness, apoplexy, confumptions, and imall-pox, are feareely known amongst them: but the diseases the Persians are most subject to, are severs. St. Ancales the Perlians are most subject to, are revers, St. Anthony's fire, pleurity, colic, dyfenteries and dropties. Near the gulf of Perlia they are troubled with a finall worm of a prodigious length, which breeds in their legs: they are drawn out by twifting them round a slick; but if they happen to hreak in the operation, it is of very bad confequence to the patient. Near the Caspian lea, the common distemper is the yellow jaundice; and travellers observe, that the people in general in Hyrcania have a yellowith fickly countenance.

A fever is very foon removed by the Persan physicians, but then they frequently throw the patient into a dropfy. Whatever may be the first disease with which the patient is attacked, the swelling of his legs generally succeeds, and it is frequently a great while before this is removed; it very often carries them to their graves, a dropfy being more statal in Persa than any other distemper. In the colic, and feveral other diforders, they use burning and cauterizing : this is their fall remedy, where the person is afflicted with wind. In a dysentery, they give sour milk, boiled with sice till it is dry. For the hæunorrhoids, they apply the

oil of napths. They never fuffer the fick person to change his linen or his clothes while the illness lasts, or to eat bread or fissi: boiled rice, or a kind of gruel made of it; is almost the only diet of a fick man; but in almost all distempers, the most general remedy in Persia is the

1 18 20

The baths in Perfa confift of three rooms, the light into which is communicated from little round quarties of glafs in the arched roof: the first is a great room, with wooden benches round about it; here they put off their clothes, and drefs themselves for the bath. The second, which most commonly is square, is fix feet diameter, and has a kind of copper three or four feet square fet in the shoor, covered with a flat copper-plate, which heats the water and the bagnio, the fire being underneath on the cutilde. In the third room is the place for bathing. In the morning before day a forwant goes up to the terrace on the top of the house, and sounds a shell or horn, to give notice that the bath is ready.

When any person, comes to bathe, he undresses himself in the first room, and ties a cloth about his middle, which reaches down to his knees; then he enters into the flove, The baths in Perfia confift of three rooms, the light

in the first room, and ties a cloth about his middle, which reaches down to his knees; then he enters into the stove, whitter a few moments after a fervant comes, and pours a quantity of water on his shoulders, rubbing him from head to stoot in so rough a manner, that those who are not used to it think he is about to slay them: he afterwards shaves the person's face and head, if he desires it, cuts the nails of his singers and toes, handles his body, squeeze and rubs it, and stretches every singer and limb, as if he was about to dislocate them; and this takes up about a quarter of an hour. After the person has been thus stretched and squeezed, he goes and olunges himself into the bath, and. fqueezed, he goes and plunges himfelf into the bath, and, being wiped with a clean linen cloth when he comes out, he returns into the first room, and puts on his own clothes again. The time limited for the men's bathing is from twilight in the morning till four in the afternoon, and the

romen go from that time till midnight.

When it is the women's turn to bathe, all the male fer-

vants of the bagnio withdraw, and are succeeded by girls.
The ladies are never so finely dreffed as when they come The ladies are never fo finely dressed as when they come to bathe; this is the only opportunity they have of vying with each other in the article of clothes, and their perfumes and essence are enough to stifle a person who is not used to hem. In the bath called Collatin, at Ifpahan, ten persons may bathe at once: but if you go to those large baths the latter part of the day, the surface of the water will then be perfectly thickened with a greafy matter which swims on the top of it, and proceeds from the instirm bodies of those who wash in it, and appears very nauseous. But the Persans who are used to it, when they plunge themselves over head and ears into the water, as they are obliged to do when they would cleanse themselves from any legal pollutions, only strike away the thick scom with their hands, and then throw themselves in: and it is surprising that the Persans are so healthy as their florid countenances that the Persians are so healthy as their florid countenances demonstrate they are, when we consider that all forts of people, the infirm and the healthful, the infected and found, bathe together in the same water.

Persons of distinction have bagnio's in their own houses,

and those of a lower rank have them adjoining to their houses, the use whereof they reserve to themselves at certain times, but let them out to others, upon condition only of providing the necessary vessels and other implements for

or providing the necessary vestels and other implements for bathing, and keeping up a conflant fire in the place.

With respect to their painting, the Persians do not, any more than the Chinese, endeavour to imitate nature, but seem to delight in mis-shapen and monstrous figures; nor do they know any thing of perspective. The Europeans far exceed them, both in the liberal and mechanic arts. One reason why they apply themselves no more to painting and engraving, probably is, because their religion discourages them; their precise Doctors prohibit the representation of every created animal. A Mahometan would not perform his devotions where there was a picture in the room, for the world. There are not in Peria, at prefent, either statuaries or founders, or any embossed work made. They draw their pictures commonly with a fide face, fearcely ever with a full vifage; and when they do, they fucceed very ill, for they do not know how to give the shades; even the figures of animals are aukwardly done. Their flowers are pretty well; and they have the advantage of us in the liveliness of their colours, which are hardened and polished by the dryness of the air.

polifiled by the dryness or the air.

It may not be amifs to enquire into the education of the Perfians, and of their fehools and colleges erected for that purpose. There are abundance of schools in every town, where, besides the Persian, the Arabic is taught. The

alcoran (which is looked upon as the flandard of good lan-guage, both for grammar and rhetoric), and their other facred writings, are all in this language. Perfons of con-dition chufe to have private tutors for their children, be-fore they foul them to the public (shools

fore they fend them to the public schools.

There are a great number of schools in every town in There are a great number of fehools in every town in Persia, and the expense of learning is very small. Their schools are called Mekkeb, which signifies an entrance; this being, they say, the gate, by which lads enter into the sciences. They are taught here the Persian and Arabian languages, with writing and accompts; which when they are strived at some persection in, they are removed to some college, or Medress as they call them, where their description and the grinciples of their relation are transfer. to lone college, or Medrels as they call them, where their doctrine and the principles of their teligion are taught. Their colleges are all endowed, and fome of them very rich; the largest have fifty or fixty apartments, and to each of them belong two chambers. In the best colleges, every scholar has about two shillings a day allowed him, which he lays out as he thinks sit; for they do not common together as with us. In some colleges the students have not getner as with us. In some colleges the itudents have not more than a penny a day; and yet intereft is made to get admitted into these, on account of having a lodging gratis, and other casual advantages. Many, whose principal defign seems to be to indulge in ease and idleness, get into them without any design to study, who live to old age in those houses, and have their wives and children with them.

We shall not be surprized to find that there are abundance of colleges in the great towns and villages of Perfis, when we confider that these people lay out great sums of money in public foundations. They usually, first of a way build a caravansers for the lodging of travellers gratis, as build a caravaniera for the longing of traveliers gratis, at-terwards a bagnio, a coffee-houfe, a baxar or market-place, and they also purchase a garden: these they les out, and apply the revenues ariling from them towards building and endowing a college The founder and his heirs have the appointment of the head and governors of the society; and if the founder's estate happens to be forfeited to the crown,

the King has the nomination.

In Ifpahan, there are forty-feven colleges, most of them of Royal foundation, or which have devolved to the crown. There are professors who teach the sciences in every colnom the scholars make an annual allowance for their trouble; but as there are feveral who read lectures their trouble; but as there are feveral who read lectures gratis, the scholars frequently refort to these, and forsake their proper tutors. Those students who are men of parts and learning, may have a handsome salary in any great man's house, for instructing his children, who are always educated in their own houses. The head of the house admits or excludes whom he sees sit, and pays the students their pensions monthly, so that they shew him abundance

of respect.

Belides their colleges, there are in every town those who teach the liberal arts gratis; and these are frequently great officers who have been discarded, or have voluntarily retired from court. These frequently furnish their disciples with books and paper, and entertain them at their own ex-pence certain days in the week, and fometimes clothe their pupils, and give them money: by which acts they endeayour to recover their reputation with the people : for nothing so much raises the reputation of a gentleman in Perfia as the instructing great number of scholars at their own charge, and the being patrons of learning and learned men. There are no public difputations or lectures in Persia, as in Europe; but when the scholars have made some progress in the sciences, they begin to dispute with their re-

SECT. VIII.

Of therife and establishment of the present Royal family in Per-ja, the prerogative and abjults sway of the Persan ma-narcht, ministers, government, and succession of the crown, textiles with a continuation of the Persan bissory, to the prefent time.

IT is a received opinion among the Persians, e. occially by their clergy, that none but prophets, their substitutes or successors, have a right to dominion. They observe, that God has in all ages governed his people by prophets, who directed both the spiritual and temporal affairs; as Abraham, Moses, Samuel, David, Solomon, and lastly Mahomet, to whom, as they affert, succeeded Haly and the truckle sugars. the twelve Imams.

In order to give some account of the rise and establishment of the present Royal family, we must observe, that Tamerlane having defeated Bajazet, and marching through

Perfia with great numbers of Turkish and Persian cap-tives, Chick Aidor, a doctor of law in great reputation for his fauctity among the Mahometans, obtained of him the release of most of his prisoners, which this increased the form of the Chick; informed, that when Tamerland release of most of his prisoners, which still increased the fame of the Chick; insonuch that when Tamerlane marched sway, the Chick entertained thoughts of assuming the sovereign power. The better to accomplish his defign, he gave our, that he was lineally descended from Haly, the son-in-law and only legal fuecessor of Mahomet; and took upon him the title of Calif, which signifies Priest as well as Prince. Issued Sess, or Sophi, followed his father's steps, and, being successful in several battles, established himself in the government; and is reckoned the first King of the present dynasty or samily. To Issued Sophi succeeded Shah Thomas, who, being a cruel Prince, was deposed, and succeeded by his brother Mahomet Codahuidi, who was a weak man, and samous for nothing but being the father of the great Shah Abbas, who reigned about an hundred years ago. This prince enlarged the about an hundred years ago. This prince enlarged the empire on every fide. He took the province of Candahor from the Great Megul, conquered the kingdom of Lar and Ormus, and drove the Turks almost out of Armenia and Georgia. He encouraged all arts and feiences; and as he found the Persians were not at all inclined to foreign trade, he transplanted the Armenians of Julpha to Ispahan, and made them his factors and merchants in every part of Europe and Afia, where there was any traffic; and as he observed the pilgrimages to Mecca carried great quantities of treasure out of his dominions, he went himlest a pilgrimage to the tomb of linanrezez, which is fituated in Persia, in hopes his subjects would carry their pious almost thither, and the money might circulate in his own country: he was also severe against those who were guilty of the least fraud, that he ordered a cook to he roasted alive, and a baker to be baked in his own oven, for keeping of falle weights. But with all his virtues, Shah Abbas has been generally charged with cruelty, especially towards his son Sophi Mirza, a Prince of great expectations, and the darl-

ing of the people.
Sefi Mirza, by being bred up among the foldiery, and frequently commanding them in the most hazardous enterprizes, became extremely respected in the army. Whether he was really concerned in any confpiracy with the generals to depose his father, does not appear; but the King was so apprehensive of it, that he did not think himself fecure while his fon lived. Some writers tell us, that Shah Abbas having rendered himself odious to the principal Chams by his repeated cruelties, they made an offer of advancing Sch Mirza to the throne; which the father being made acquainted with, commanded a nobleman, who attended him, to bring him his fon's head: but he excused himself, another courtier, named Bebut Bey, undertook to do it, and, surprising Sefi Mirza as he came out of the bagnio, attended only by one page, acquainted him it was his father's pleasure he should die, and immediately feized the unfortunate Prince, and threw him upon the floor, who, lifted up his eyes to heaven, cried out, "Good God I what have I done to merit this difgrace? Cuife on the traitor who was the occasion of it: but finee it is God's will, his and the King's be done," The words were fearce ended, when Bebut stabbed him twice with a poniard, and, cutting off his head carried it to his father. This tragical event the people were no fooner acquainted with, than they affembled at the palace gates, and it had well nigh occasioned a general infurrection.

The mother of Sefi Mirza upbraided the King with his crucity and tyranny, and, in the transport of her passion, sew in his face, all which his Majesty took very patiently, and with tears in his eyes demanded of her, "What the would have had him do, when he was informed there was a conspiracy against his life : besides, it was now past redrefs: that none had a greater thare of grief than himfelf, and of two evils he had chosen what he then esteemed the least; though if his fon was alive again, he would run any hazard, rather than take the fame measures." And indeed he discovered all the figns of grief imaginable: he covered his face and would not see the light for several days; he mortified himself by fasting, and mourned a whole year; and in the place where his son was killed, he built a fanctuary, endowed it with large revenues; and, to revenge himself on the Persian lords, who had instilled these sears and jealousies of his son into his head, he ordered them to be invited to a feast, and to mix posson with their wine, and saw every one of them expire before his sace. The King commanded Bebut Bey, who had murdered the young Prince fo readily and officiously, to cut off the head of his own fon: and when he brought it to his Majesty in

Shah Abbas, having reigned about forty years, died anno 1628, minting his grandion Shah Sefi, or Sophi, the fon of firza, his fuecestry, who was at that time not fifteen years of age. The administration continued in the same hands Shah Abbas had left it in for some time: but Shah Sefi was no some come to man's estate, than he began to call the principal ministers to a severe account, and cut off the head of Ali Kouli Chan, viceroy of Persa, who had deferved well of his country, and contributed as much as any

head of Ali Kouli Chan, viceroy of Perfia, who had deferved well of his country, and contributed as much as any general, to the conquelfs that were made in the late reign: he alfo fent for the heads of his three fons, and of feven other great lords of the court. His reign was violent and tyrannical; and he drank to that excefs, that in one of his debanches he killed the Queen, for which he was under the deeperf concern when he grew cool, and prohibited the drinking of wine in any part of his dominions; but in a year's time he fell again into the fame courfes, which put a period to his life, after he had reigned fourteen years, and was succeeded by his fon Shah Abbas II. being then about twelve years of age.

twelve years of age.

This Prince was greatly respected for his btavery, and hospitality to strangers, especially Christians; but so addicted to his father's vice of drunkenness, that he ordered three of his women to be burnt because they refused to drink as long as he did. According to some, he died of an inflammation caused by hard drinking; while others affirm, that he was carried off by the venereal disease, after

he had reigned one and twenty years.

Shah Sefi, the fecond, succeeded his father. grandees, apprehending that this Prince had been dead, were about to advance his younger brother Hamzel Mirza to the throne, till they were undeceived by an old eunuch, who affured them that Shah Sefi was alive. This Prince changed his name, and took that of Solyman: it is ob that in his reign the kingdom was afflicted with war, famine and epidemical differupers; but his government was much milder than that of his immediate predeceffors; he died on that that it is not not shall be the control of July 1694, and was fucceeded by his fon Shall sultan Hoffein, whom his father expressly enjoined, not to put in practice that cruel custom of putting out the eyes of his brothers; but whether he obeyed his commands is uncertain, it being difficult to know what is done in the feraglio. tain, it being difficult to know what is done in the teragilo. We have before related, that this Prince, after a long and indolent reign, was deposed by Mahamood the son of Mereweys: who being affassinated by Esdriff, one of his officers, who succeeded him, Shah Thomas, the young Sultan, invited Kouli Khan or Shah Nadir, to join his forces; which he consenting to, Esdriff was defeated, and put to a cruel death. Kouli khan afterwards defeated the Turks; elated which succeeding and designed to the annire he denoted and by his fucces, and afpiring to the empire, he deposed and afterwards murdered Shah Thomas.

As there are several remarkable and well authenticated

circumftances, of more recent date, relative to this Ufurper Kouli Khan, we shall here introduce a particular account of him. He was born at Chalat, in 1687, which principality he was heir to. Being offended at his uncle's treatment of him, he repaired to Chorasan, and entered as a private foldier in the Persian army in 1712, and was in 1719 promoted to the rank of colonel. The Governor of Chorasan afterwards gave him the command of the Persian troops in that province; with which he defeated the Ufbeck Tartars. Being afterwards difgusted at the conduct of the Governor, who contrary to his promise, had promoted a young nobleman to the rank of general in preference to him, he upbraided the Governor in scurrilous terms, who ordering him to be bastinadoed, he afterwards fled to the mountains, where he headed a band of robbers, with which he ravaged the country, and plundered the caravans. His uncle having obtained his pardon for these outrages, he repaired to Chalat, where he soon afterwards murdered his uncle, and possessed the place which had been deemed impregnable. Becoming exceedingly formidable by the addition of fix thousand bold and hardy troops, he attacked and took the city of Nechabar by stratagem. In 1728, he was appointed commander in chief of the Shah's forces, and receiving the distinguishing title of Tachmas, or Thomas Kouli Khan. After the murder of Shah Thomas, he declared Abbas Mirza, an infant fix months old, and the fon of the late monarch, emperor, but referved the power and riches of the empire in his own hands. He afterwards marched against the Turks, drove them before him, and belieged Bagdat; but was defeated No. 3.

in a most bloody battle, on the 18th of July 1733, by Topal Ofman, at the head of one hundred thouland men it is army confisting of feventy thousand, but he afterwards defeated the 1 rks in two battles, in the last of which they lost forty thousand man, with all their camp, and the brave Topal Ofman was among the fain. He afterwards marched to Schiras, where he crushed a powerful rebellion; and in 1734, gained great advantages over the Turks and Tartars, reducing the open country of Georgia and Armenia. In 1734, gained great advantages over the Turkin army at Arps Kavi; and in 1736, the young Shah Abbas dying, he was elected emperor by the Persan chiefs and nobles. After his accession to the strone, Nodic Shah became a most defpoint tyriant, destroying the Royal family, putting many of the nobility to death, and seized their estates, into the Turks and Russians, and reduced the revolted Agians to obedience. After these exploits, he defeated the armies of the Great Mogul, whom he took prironer, possession of the foord, and plundered the empire of its riches to the amount of eighty-feven millions sive hundred thousand pounds sterling. Among other valuables was the imperial throne, intirely set with jewels: he also took three hundred elephants, ten thousand hories, the same number of camels, and a great quantity and variety of cannon and warlike stores. These immense treasures he deposited in warlike stores. camels, and a great quantity and variety of cannon and warlike stores. These immense treasures he deposited in his principality of Chalat, putting them under the care of his principality of Chaiat, putting their distributions: he next twelve thousand Georgians, who were Christians: he next made the Utbeck Tartars tributary to Persia. He quelled made the Ulbeck, I array throughy to Fequa. He quelled feveral infurrections in the year 1741. In 1742, his eldeft fon attempting to murder him, was afterwards brought pitioner to his father, who ordered his eyes to be put out. He exer-cifed the most flocking cruelties, in all his expeditions: friends and enemies, armed and unarmed, were alike the objects of his barbarity: he demolithed whole cities and towns, laid wafte tertile provinces, plundered people of all ranks, and murdered feveral millions of the Perfians, and people of other countries. In 1744, he defeated and took priloner a pretended Prince whom the Turks had fet up againft him; but, to the furprise of every one, permitted him to ecape punishment, though he beheaded two hundred and eighty-two of his followers. He defeated the Turks in 1745, and in 1746 and 1747, was engaged in sup-pressing rebellions, and intestine commotions. After this time he was judged to be in a state of infanity; his actions being for the most part absurd and unaccountable; and though a gleam of humanity would at certain times appear for a moment, yet avarice and the most detestable cruelty generally marked his conduct. As this cruel and blood-thirsty tyrant seemed to outdo in barbarity the most inhuman monsters of antiquity, he was at length become insupportable; and that on the second of July 1747, five of his principal officers affaffinated and slew him in his chamber, but not before he struck off the head of one with his sabre, and wounded another. The people were over-joyed on hearing of his death, put to death his blind son, his grandson, and even his women, that none of such a detellable flock might be found to fucceed him, and prove the fcourge of mankind.

We have inferted this account for the general farisfaction of our readers, as many of the historical and geographical books published of late years tend to disappoint the expec-tations of the public, by describing this country with re-spect to its state before the time of Kouli Khan, omitting to give its true modern description; treating of cities that are merely ideal, and provinces that are at prefent totally deferted and uncultivated; of millions that have been deftroyed, and magnificent ftructures demolified and laid in ruins. Since the above-mentioned tyrant afcended the throne, that unfortunate country has remained in the most difordered condition; and whatever revolutions may have fince happened, they have not come to hand, fufficiently authenticated for us to communicate to the public. to proceed; no Prince in the world is more absolute than the Persian monarch; he has the lives and estates of his-fubjects intirely at his disposal; his orders are implicitly obeyed, be they never so unjust, or given at times when he is fo little mafter of his reason, that he knows not what he fays or does. Nothing can fave the greatest subject, when he is determined to deprive him of his life or estate, neither zeal for his perfon, prefent, or past services, will in the least avail. If he is disposed to ruin them, it is done by a word of his mouth, or by a fign, and executed in an inflant, without any form of law, or evidence of the fact: the common people, who are at a diflance from the court, have greatly the advantage of the quality in this

refpect. There are very feldom inflances of any opprecfion or fevere judgments executed upon these; but they feem to only as much fecurity as in any country in the world; and perhaps the magnitunes are the more inclined to govern equisibly, in regard they are feulfille that nothing can fercen them from the refermment of their Sovereign, if they are found to have abled countries to their Sovereign,

can forces them from the referment of their Sovereign, if they are found to have acted contrary to law or equity.

The King's orders are obeyed out of conficience by the people, who believe that his commands ought to be executed against the very laws of nature: fo that if the fon be commanded to be his father's executioner, of the Father the fon's, it must be compiled with. But if any thing is enjoined to be done in prejudice of their religion, they are not obliged to obey him, but ought to fuffer any thing rather than violate the law of God.

The King having commanded a prime minister in

The King having commanded a prime minister in the Persian court todrink with him, he excused himfelf, the selling the King that he had been a prigrinage to Mecca, and could not drink without violating the have of their religion. To which the King answered, Thomands have gone in pilgrimage to Mecca, and yet drink wine: drink, therefore, when your Bovereign commands you. But this gentleman fill refusing, the King abused him in the groffest manner, made the fervants throw the wine in his sace, and down his bosom, and pour it into his mouth by force. Then he threatened him with immediate death, to which he answered, The King had a right to his life, but notto his religion; and he choic rather to die than drink. And though his Majestly did not think fit to put his threats into execution, he turned him out of his employment: however, he was afterwards restored with abundance of honour, and the King seemed to value him the more ever afterwards for his recolution.

It is recorded by an historian of eredit, that Shah Sefi, without any provocation, ordered that one of the greatest officers of the crown should have he ears cut off in his presence by his own son, which was immediately executed. Then he commanded the son to cut off his father's nose, which he also executed. Whereupon the old gentleman, finding himself thus abused by his own son, and hy order of the King, whom he had not offended, said to the cruel Prince, Ah, Sir, after this, I ought not to live any longer, cause mo therefore to be put to death: which he had no great trouble in obtaining; but that it might not seem a favour, he added to the cruelty of the order, by appointing his own son to be his immediate executioner, bidding him cut off his father's head, and he floudd have his whole estate: which was readily complied with by this unnatural

Another proof of the tyranny of the Perfian government, is, the cuttom of executing the Governors of pro-vinces, and great officers of flate, without giving them an opportunity of making their defence, or being informed of the crime they are charged with. It is usual for the King, two or three times in a year, to fend every Governor the calaat, or Royal veft; and thefe are fent by such persons as the court intends a favour to; for the Cham, or Governor, to whom they are fent, always makes a confiderable present to the messenger. When he comes within two or three miles of the place where the Governor resides, the messenger sends him word to come and receive the calast; but, instead of a fine coat, the Governor is sometimes prefented with a halter, and is dispatched without any farther ceremony. This makes the Governors very watchful over their conduct; and they are always under difinal apprehensions when they hear the calaat is arrived, knowing how common it is to have their best actions misrepresented to the Prince. The Persians say in desence of this practice, that the court feldom proceeds with that feverity, but in extraordinary cafes, where the fact is notorious, and there in extraordinary cases, where the race is notonically relief in danger of a rebellion, if they should cite the person accused to answer; that if the otherwise, they always give cases tunies of answering the charge. The King him an opportunity of answering the charge. The King looks upon thoseabout the court as slaves he has purchased, and dooms them to be punished or put to death as he sees fit, not thinking himself obliged to observe those formalities

There is no privy council of flate in Perfia, as in the European governments; but the Kingash as he is advifed by the prime minister and great officers: that which most perplexes the minister, is, the cabals that are carried on by the women in the haram: the resolutions that are formed here frequently thwart their best laid schemes; and the ministers do not only run the risque of having their counsels rejected, but they very often turn to their own destruction, if they are not fuitable to the interest or inclination of the most favourite ladies.

With respect to the succession of the crown of Persia, we must observe that it is hereditary in the male branches, but the semales are excluded; but the son of a daughter may inherit, though his mother could not. What seems most particular in their laws of succession in Persia is, that a blind man shall not inherit; and as those males who proceed from the female brancher are as capable of succeeding as those who derive themselves from the nudes, that cruel policy of puting out the eyes of all that are allied to the crown is executed upon every male of the Royal family, whether they proceed from sons or daughters. As there are no common executioners in Persia, the orders for putting out the eyes of the Royal infants are executed by any one the King happens to pitch upon; and they are not content with doing it by a hot iron held to them as formerly, but the very eye balls are scoped clean out with the point of a knile or dagger, according as the person is provided who is fent on the business; but who not being used to such operations, the poor children are put to inexpessible torture, and sometimes lost their lives, under their hands.

The Perfians feem to excuse this barbarous custom of putting out the eyes of the Royal infants, by telling us, that it prevents all disputes about the fuccession, and a great deal of blood shed; and that they are more merciful, thas the Turks, who destroy every branch of the Royal smily. On the other hand, the Persians permit them to live, give them wives, and suffer them to enjoy all the pleasures that blind men are capable of in the haram. But how melancholy must it be for these miserable Princes to ressed, that all the males which proceed from them will be served in the same manner themselves have been, and have their eye-balls torn out of their heads!

SECT. IX.

Giving an account of the pompous title of the Persian monarch, the arms he assumes, Ge, assis of the Princes of the blood, prime minister, great officers of state, generals, ecclesiastical officers, civil magistrates, Ge.

THE usual title of the King of Perfia is Shah, or Pafha, the disposer of kingdoms, which is the highest title known in Afha, and equivalent to that of Emperor in Europe. He is also filied Sultan, Khan, Caun, or Cham. One of their kings, in his letters, sliled himself, videorious Lord of the world, the most valiant Prince descended from Cheik Sephy, Mousia and Haslein. His subjects, in their addresses, callhim, the most renowned of all men living, the source of power, majety, and glory, equal to the sun, substitute of, heaven, object of all men's vows, &c. &c. With these, or such titles, all petitions and representations to the throne abound: but when they speak to the King, they usually style him the Lieutenant of God, or the Prince by whom God dispenses his grace and favour to men. The Princes of the blood Royal are called Mirza, &c. signifying the fou of a Prince. The arms of the King of Persia are a lion couchant booking at the sun as it rises over him back.

The Persians, like the Romans, prefer all men indif-

The Persians, like the Romans, preser all men indisferently to posts in the state and army: the gown-men sometimes command as generals, and soldiers sit as judges in the courts of justice, and the same person has been prime minister and high priest. Regard is seldom paid to a person's birth and fortune in his promotion; but the King dispose of places as he apprehends his sobjects qualified for them. They enjoy their post during life, and sometimes their children after them, where they have behaved well.

The commission of a great man, intended to be invested in an office, is sent to him written on a roll of paper two or three seet long, in a fine large character, mixed with gold and colours, and put into a purse made of gold brocade; and with it is sent the calant, or rich habit which the King always gives to those he designs to honour The new officer innucliately goes to count clothed in the Royal habit, and, when the King appears in public, he prostrates himself three times before him with his face to the ground, after which he rises up and takes his place in the presence-chamber, or room of state, according to his rank. When a person is disgraced, it is done by sending for his commission, or the seal of his office, as the case is, and sometimes he is ordered to consign himself to his honos till his Majesty's pleasure is sarther known. If a great man is apprehended for any crime, they take all his samily and enar relations into custody, and consiscate their goods and estates, if found guilty; otherwise, the owners have them restored.

The Atamadoelet, Grand Vizir, or Vizir Azem, is the first minister in the kingdom. No business of consequence in the state is transacted but by the direction of this minister, nor any grant or ast of state of the King's held to be valid till counter-sealed by him. The prime minister in Persia, if it be thought site of cischarge him, is usually permitted to retire and end his days in peace with his fannity; whereas, on the other hand, the Grand Vizirs in Torky fellom die a natural death.

The Divan Beghis or Hey is the second post in the government: his office is usually compared to that of Lord Chief Justice or Lord Chancallor; but they are supposed to centue in the same person in Persia. The word Beg or Bey signifies Lord, and that of Divan a conicil or court to whom the administration of Justice is committed.

The Generals are of the third rank: in time of war, a Generalistimo is appointed. The next place is possessed the office by the General of the courtchis, which are a body of thirty thousand horse of Turkith or Tartar original. The third place among the foldiery is the General of the contrast, or royal saves, as they are called; and the last, the Maller of the ordinance.

The Vasquavish, or Secretary of state, occupies the next

of the ordinance.

The Vacanavith, or Secretary of flute, occupies the next
pot. This officer registers the public acts, and has the
care of the records; he also appoints a deputy in every privince of the empire, who transfirms all affairs of confequence to him, to be laid before the ministry.

The Mirab, or lord of the water, is the last great officer.
Every province has its particular Mirab, who takes care to
distribute the waters of the rivers and aqueducts in such
consistion, that severy part of the country may have an

proportion, that every part of the country may have an aqual share. These are the principal officers of state in

The officers of the houshold are, the Nazir, who seems to be both Lord Treaturer and Steward; and all ambelfadors and foreigners transact their affairs with this gentleman: but there is a comptroller, and feveral other officers which are a check upon him, as he is on the Prime Minister, and those two have a very great influence in the court of Perfia.

The Ichicagali Balla commands all that attend in the outward palace; as the masters of the ceremonies, porters, uthers, and the guards themselves. When the King goes out, this Lord marches before him with a great staff covered with gold and precious stones. He always stands ready to obey his Majeity's orders, and see them executed; but never fits before the King, as several other officers of in-

The next office is the Mafter of the horfe. All the ftuds and ftables of the horfes in the kingdom are under this government, and that of a great number of officers who are fusbordinate to him.

are fubordinate to him.

The great huntinan is the fourth officer of the King's houlhold: he had not left than a thousand huntimen and followers under him. They carry to the chase, when the King hunts, lions, ounces, panthers, and dogs, who are all bred to follow the game.

The principal physician and chief astrologer, which are posts of great honour and profit, take place after the great hunting.

great huntiman.

The high chamberlain is always a white eunuch, and has as great an influence on affairs as any officer about the court. He ferves the king at table on his knees, takes his meat, declies and undreffer him, has the overlight of the wardrobe, and the government of all the eunuclis in the

The chief ecclefiastical officers are, the Grand Pontiff or High Priest, the Antient of the law, the Cadi, and the Musti. The Grand Pontiff is usually styled the Sedre in Persa: they also give him the title of Prince of their religious rights, Head of the true church, substitute of Mahounet, and licutenant of the twelve Imans or Caliphis who fucceeded

their patriarch Haly.

The supreme judge in the ecclessatical courts is the Sedre, who takes place in all public assemblies next to the Atamadoulet or Prime Minister. The second ecclessatical judge is the Antient of the law, whom the Persians style Cheik Baan; his jurisdiction is little inferior to the Sedre's. The Cadi is the third eccletiaftical judge in Persia: he takes cog-Cad is the third eccleration judge in Peria; he takes cog-nifiance of the fame cauties with the two former; but his au-thority is confined to fome particular town or diftrict. The Muffi is the fourth officer, who has not the fame authority here as in Turky; i for he cannot control or reverfe the proceedings of inferior courts. The other dignitaries and

scelefaftical officers have no manner of jurifdiction, and are kept pretty nucli in fuhjection to the temporal power, upon account of those pretentions they make to the fupreme authority, and other principles they maintain, not very conflictent with the power of the crown.

The Chams, in their respective provinces, live in as much ftate as their Sovereign, having exactly the fame kind of officers as are in the King's court, with the fame titles, there being fearce any other difference but in their numbers and pensions. They have their posts for life; and, if they behave well, their childrent after them.

There are three officers in every province put in by the government, who are independent of the Cham; namely, the Janitchin his licutenant, the Vizir or Receiver General of the King's revenues, who hath also the management of the India belonging to the crown, and the government of all places where the crown lands lie; and, thirdly, the Vacansvith, or Secretary, whose business it is to take an account of all transactions of moment in the province, and count of all transactions of moment in the province, and transmit them to court.

There are other officers, which are independent on the Cham, namely, the Governors of cities and caftles, who are called Daroga; these are put in directly by the King, and have their licutements and vacanavish also independent and have their lieutenants and vacanavith also independent of them; and the same person, who is Governor of the city, is never made Governor of the fort that belongs to it. There are also in every town the Cadi or Civil Judge; the Mayor or head officer among the trading people, and the Provost or Sherist; and every particular trade has a warden or master. There is an officer also not unlike our constable, who has a watch, and is concerned in keeping the case is the also triving in every great town. peace in the night-time in every great town.

peace in the night-time in every great town.

Capital punishments are very rare in Persia, and the sentence is in most cases passed by the King himself. The Governor of every town is the chief judge in criminal and civil cases too, if he pleases to interpose a und may institute any pains on offenders short of death. The usual punishment is a fine, which always goes to the King, or rather to the Governor of the province, who generally brings the crown indebted to him in his accounts.

The Vizirs and receivers of the King's revenues usually obtain their places by virtue of the presents they make to the enunchs or savourites at court, and by engaging to increase the revenue of the province beyond what it has ever been before; and they generally keep their word, at least

create the revenue of the province beyond what it has ever been before; and they generally keep their word, at least to their patrons and friends that promoted them, and to the enriching themselves. Complaints indeed are fre-quently carried to court against them; but by the artifices of the ministers concerned in the booty, it is a long time before they get access to the King. When the complaint is from a large country, there are usually several hundreds of the perform agraticed come in with it so the calcuof the perfons aggreed come up with it to the palace-gate through which the King usually goes out, and there with lamentable cries, rending their clothes, and throwing dutt into the air, they demand justice. If they come to desire an abatement of their rents or taxes on account of the drought or unfeasonable weather, as they frequently do, they carry with them withered branches of trees, or such as have their leaves devoured by locusts; whereupon the King fends to be informed of the occasion; and the people presenting their petition in writing, some great officer is appointed to examine their bufinefs.

appointed to examine their buinters.
Whenever his Majeity orders a Governor's head to he cut off, the order is dispatched by the Prime Minister under the King's feal, and sent by such a person as the King thinks fit. When the messenger arrives at the place, he goes to the house of the Lieutenant, Governor, or some other great officer, and shews him the King's order, and that the execution is appointed to be done in his presence: where upon he takes him with him to the house of the person proscribed, and producing his order, he falls men the upon he takes him with him to the houle of the person proferibed, and, producing his order, he falls upon the unfortunate man, and cuts him to pieces with his fabre, crying out only when he falls upon him, "by the King's command." Whenever a minister is difgraced, though the government do not proceed capitally against him, yet his whole estate is conflictated, and he experiences a most terrible reverse of fortune in a moment, being deprived of his reach, his slaves, and semanticage of his wives and his his goods, his flaves, and fometimes of his wives and chil-

Notwithslanding places in the Persian court are so pre-catious, and frequently hazardous, no people in the world purfue preferment with a keener appetite: they come to court morning and evening, although for the most part they cannot hope to come into the King's prefence; be-cause he is frequently for several days successively with the ladies in the haram.

SECT. X.

Tremizz of the Perfian laws, causts of justice, proceedings in criminal cases, and punishment of offenders.

THE chief law-book reforted to by the Perfians in the alcoran: if they do not find the decision clear there, they have recourse to the book called, The fayings and acts of Mahomet, and afterwards to the fayings and acts of the Imans; and they have yet another book called cheraiet, which is a collection of judgments both civil and criminal, but they are couched in such obscure and equivocal terms, that the judges in their interpretations make them speak what language they please. There seems indeed but little occasion to enssity these books at all; for the King, the Governors of provinces, and Vizirs, frequently sit in judgment, and determine arbitrarily without regard to the alco-ano c any other law-books.

ment, and determine arbitrarily without regard to the alcomor any other law-books.

Though the spiritual and temporal courts differ very
much in their determinations, yet there never are any disputes between them: for the temporal courts, having the
government on their side, are never opposed by the spiritual; and besides, each of them has, for the most part, a
diffined branch of business assigned it. The ecclessational
courts take cognisance chiefly of deeds and contracts, marriages and divorces, succession of estates, and other higgour matters. The temporal courts are employed either
about criminal causes, or such as are plain and obvious,
about which there is not much room for dispute; and if
there be any intricacy in the affair, they generally require
the opinion of some of the learned doctors of their law.

A man is at liberty at any time to claim his right, even the party's own deed will not swall him where he can thew any force or fraud, or that he was imposed upon. Where there are no witnesses, an oath is tendered to the person who denies the charge; and he is sworn upon the alcoran with great folenmity. Then the Judge fends for the alcoran, which being brought him in a linen cloth, himself and all the court rise out of respect to the facred book; then the Judge, taking it in both his hands, revenently killes it, and touches it with his foreshead; and, having opened the book, offers it to the person who is to swear, who killes it in the same reverent manner the Judge has done, and, putting his hand upon it open, swears to speak the whole truth. When a person of a different religion is to swear, the oath is administered agreeable to the mode observed in their respective countries. Every magistrate hears causes in his own hall, or some convenient room in his garden, as there are no tribunals or courts erected at the public charge; he has no other affelfors or affistants but a clerk or secretary, who is a man of law.

Writings and conveyances ought legally to be fealed and executed before a magistrate, and attested by him; and it is a common thing, after the Judge has attested a writing by putting his feat to it, for the parties to defire all perfous who happen to be about the court to add their feals; for that there are fometimes three or fourfcore feals to one deed: but they do not fight them as with us. There are neither notaries, clerks, or registers in Persia to record any kind of contracts except marriage contracts, which are registered before the Cadi, but the parties usually keep authentic copies and counter-parts by way of caution.

As there are no public prisons in Persia, so there are no

As there are no public prisons in Perfia, so there are no theriss or gaolers who have the custody of prisoners; but every magistrate who has the cognisance of these offences, confines the prisoner in some part of his own house till he is brought to his trial, which is usually in twenty-sour hours after he is taken, and sentence is no sooner passed than it is executed: so that there is very little occasion for a common gaol, and the Judges servants perform the office both of gaolers and executioners.

The proceedings in the criminal courts are much the fame as in the civil. The party aggreeved exhibits his perition to the magifitate, who orders a fervant to apprehend the offender, and bring him before him; and when he has been examined, fontetimes the fame day, or at fartheft the next, he is ordered to prepare for his trial. Criminals of flate have the carean or three-cornered yoke put about their necks, to which the right hand is faftened; and the King ufually fits in perfon in judgment on fuch offenders, at which time he is always clothed in red. I umults and diforders are severely punished in Persa, which is one reafon they very rarely happen; and unurder and house-breaking are scarcely ever heard of.

If a person is so unfortunate as to kill another, and the sact be proved before the Judges, the offender is not pu-

niffed by the court, but delivered up to the relations of the deceafed, to put him to death in such manner as they see sit. On such an occasion as this, all th. relations and friends of the deceased as simple, and with loud cries demand that, according to ancient custom, they may have the blood of him who has murdered their kinsman; which the magistrate feldom fails to promise them; but sometimes the murderer, by presents to the Judge, and offers of large suns to the relations of the deceased, procures a pardon. If the relations will be fatisfied with nothing left than this blood, the Judge says to them, "I deliver to you the murderer according to law, make yourselves fastisfaction with his blood for the blood that he hath spilt; but remember that God is merciful." The Judge's servants hereupon are ordered to observe the directions of the prosecutors, and guard him to the place they defire; and they follow the criminal with a thousand curies, beating and abusing him all the way he goes. When he is come to the place appointed, he is delivered up to the relations, who fometimes inslict the most cruel tortures thay can invent oy the miserable wretch; and even the women, it is faid, who scarcely ever appear abroad on any other occasion, will come and inbrue their hands in the offender's blood.

for minerable weren't a motern in women, it is laid, who fearcely ever appear abroad on any other oceasion, will cunne and irnbrue their hands in the offender's blood.

Ordmary erimes are ufually punished by fines, where the parties are men of substance, but where they are not, they give them a certain number of blows with a cudgel on the foles of their feet, not under thirty, and not exceeding three hundred. Their feet are swollen with the blows and turn black, and sometimes the nails of their toes come off. Pick-pockets and little pistering rogues are marked with a hot iron in the forehead, and house-breakers have their right-hand cut off. The fame punishment is insided on those who counterfeit or debase the coin, for the first effence; but for the second, their bellies are ripped open. This is the usual punishment for capital offences: and they execute it after this manner: The criminal's feet are tied to a camel, and his head hanging down to the ground, his belly is ripped open, for that all his bowels come out, and hang over his head; he is dragged in this manner through the principal streets of the town, an officer marching before him, and with a loud voice informing the people of the nature of his crime. He is afterwards hanged up by the heels upon some tree, and it is sometimes several hours before he expires.

They have other kinds of punishments for capital crimes, as impaling, letting them up to the chin in the earth, cutting off the hands and feet, and leaving the crimins in this condition till he dies. They fometimes precipitate the malefactor from a high tower, by which he is dashed to pieces: this punishment is commonly inflicted on women who have committed capital crimes. They fometimes use tortues to procure a confession, and positions of the feld with red-shot pineers: but the most ordinary way of examining offenders, is, while they are beating the foles of their feet, called the bastinado.

There is no part of the world where people travel with greater fecurity than in Perfia. But if a perion happens to be robbed, the rabdars, or guards of the road, are immediately dispersed all over the country, give notice of it from one guard to another, and the country is raised upon them in an instant; and as there are very few woods to conceal themselves in, and large deserts to cross before the robber can dispose of his booty, it is ten to one but he is apprehended. When complaint is made to any Governor of a robbery, he sends for the rabdars, nearest to the place where the robbery was committed, and requires them to make satisfaction, on pain of forfeiting the securities they have given for their places; for they all give bond to make fatisfaction for such robberies as are committed in their limits; but if they are not able to do it, he orders them to be bassinadoed, and the money to be levied on the neighbouring villages; and sometimes as much more as there is occasion for, which goes into his own or his officers pockets. Besides this, the party robbed is obliged to make the Governor a handsome present, on the returning him his money or essential to the second of the product the thief.

SECT. XI.

Giving an account of the haram, or the apartment of the wemen belonging to the King of Persia, in the Royal palace of Ispahan, their treatment in general, the guards, Gc.

THERE are feveral diffinet buildings in the royal haram, which have no communication with each other. The following are the ranks of women who refide

in the royal ion with each en who refide there ;

there; namely, r. The princesses who are born in the place, whom they call Beguns, as they do the princesses of the blood Royal in the Mogal's court. 2. Those by whom the King has any children, or who are his mistresses, these have the title of Canum, which is equivalent to that of Cham or Chan among the men. The third and lowest rank, whom the King has never taken to his embraces, and many of whom he hardly knows, have the title of Katun, or ladies only. All the rest have the common appellation of slaves, and are employed in fervile offices.

When a King dies, those ladies he has conversed with as wives are thut up in a quarter by themselves, from whence they are not permitted to thir out as long as they live, except the mother of the succeeding Prince, who has generally a mighty insurence on affairs, and almost fovereign authority, within the limits of this palace.

A great variety of beauties are confined in the King of Persa's haram t for the Chans and Governors are continually fending up a fresh supply of young virgins from all

A great variety of beauties are confined in the King of Perfia's haram t for the Chana and Governors are continually fending up a fresh supply of young virgins from all parts of the empire. If they have intelligence of a woman of singular beauty in any family, they immediately demand her; and it is 'aid, their parents are not very averse from parting with their daughters, but rather proud they have an opportunity of obliging their Prince; especially since it may be a means of raising the whole family; for whenever a young lady enters the feraglio, a pension is settled on her nearest relation. If she become a considert or mistress to his Majetty, it is increased; and if he have children by her, the leldom fails to procure the advancement of all her relations. There are the daughters of the Governors of provinces, and the greatest lords of the court, in the haram but there are many more Georgians and Circassian virgins of meaner birth, who generally captivate the young monarch's heart, as they are said to excel all the rest in beauty. The unnatural and cruel practices in the haram are said to be very shocking. While the King is without children, every once of his misters is nond of having them, as they are in hopes their issue will succeed to the crown, or which their happiness very much depends; but when they find the King has several children already, they do all they can to prevent their being with child, or to procure abortion when it.

vent their being with child, or to procure abortion when it happens; for, except the first happy woman that has a child, the reft, after they have any, are confined to an apartment, the reft, after they have any, are confined to an apartment, where they live in perpetual apprehensions of shaving their children murdered or deprived of fight at least, upon berbarous maxims of state, which seldom sails to be executed sooner or later, either in the reign of the present King or that of his fuccessor. Hence the ladies of the haram principally aim at being martied to some great man; which they sometimes accomplish by infinuating themselves into the good graces of the King's mother, the mother of his eldest son, or the King himself. The women of the haram are also sometimes married to clear the palace and lessen the spence, when they grow too numerous: but they seldom send them out of the haram who have been with child by the King; which is one reason that they are not very sond of his favours.

the King; which is one reason that they are not very some of his favours.

The guards of the haram confift of three bodies; namely, 1. The white eunuchs, who guard the outward gate; thefe never come within fight of the women, left it flowled excite fome amorous inclinations in them. 2. The black eunuchs; these come properly from the coast of Malabar in India; their flation is in the second court; and the an India: their manon is in the second court; are the eldeft and most deformed of these are picked out to attend the ladies, and carry messages backwards and forwards; ahe rest are employed either in the gardens, Litchens, or other places remote from the women's apartments. The third and innermost guard, it is said, is composed of women who are commenced by former authorised marton that men who are commended by some antiquated matron that men who are commended by fome antiquated matron that receives orders from the Prince himself, and, by the enunchs which attend, conveys his Majefty's commands to the guards without. The women of the haram are all lodged in separate chambers, or two in a chamber at most, and then they put an old woman and a young one together. Those ladies who delight the King most with their finging, their dancing, or their wit, are fure to become the envy of the reft.

envy of the rest.

The King is never formally married to any of his mistreffes, but takes which of the ladies in the haram he fees fit to his bed, without any manner of ceremony. The mistresses he is intimate with are but a small number: the others indeed fing, and dance, and play before him, and contribute to his pleafures in another manner; but from the diffractions he meets with from a variety of conforts, he generally fixes upon some one who may properly enough be flyled the queen of the haram.

The ladies in the haram pass their lives in idleness and No. 3.

Jurury, loiting almost the whole day on carpets, with their little slaves ruibing and chasing them, which is the most common amusement in the east. They fometimes take opiate, or smoke their country tobacco, which is so mild, that it may be taken from morning till night without disturbing their heads. Their food is dressed by their slaves, wito also make and wash their clothes. The ladles never visit out of the palace, but they are visited by their slaves, wito also make and wash their clothes. The ladles never visit out of the palace, but they are visited by their relations. Other ladies of the greatest quality in Persa scarce ever go abroad but upon some extraordinary occasions, as to a wedding, a lying-in, or upon some sessions. They take with them their semale slaves and enunchis, and the husband visitly least feven or eight hours. They take with them their semale slaves and enunchis, and the husband visitly least severante and sunuchis, and the husband visitly slad severante and sunuchis of his own to observe their conduct till their return.

The King's ladies seldom fet out from the haram but in the night: a troop of horse usually marches a hundred paces before them, and another troop in the rear, crying out. Courouc, courouc, by which every man understands he is to retire to a proper disance: the aunucha with their bettoons also on horseback march between the guards and the women; and if any man is sound in the way, or within the limits prohibited, he certainly lose his life. If they march through a city, the men of the freet they march through, and those adjusting, are all obliged to leave their house and siy to some other part of the town, as those of the villages in the country are for a league together on the right and left of the road through which they are to march; and a detachment at disagoons is usually fent half a day before to drive them way. They fire their muskets at little intervals as they narch, to give notice of their approach, and all men that lear it if yas sfat as possibly they can; a and it is faid. The lawe been frequent inflances of people being killed by the cunuchs who have not been fo wife, or tather so fortunate, as to ge, out of the way in time? for it aman should be fast astem, or dangerously ill, he is liable to be killed. We are took, that in the reign of Abbas II. One of the secondary with the march, also he had put the tents, being roomy with the march, also he had put the tents hold in the secondary with the march, also he had put the tents hold in the secondary with the march, also he had put the tents hold in the secondary with the march, also he had put the tents hold in the secondary with the fellow happening to oversleep himself, and being found there by the cunuchs, they wrapped him up in the carpet he lay on, and buried him alice.

There are a vast number of sunuchs dispersed through

he lay on, and buried him alive.

There are a vaft number of enunchs disperied through the whole kingdom of Persia, especially in the King's palaces, and those of the quality, where they have almost every thing of value intrusted to their care, and in a manner conduct the affairs of their masters. The women never thir abroad without them, either on a visit, or even to the bath: but they are not permitted to interrupt their privacy in their chambers. The enunchs also teach the children of the family to read and write, and instruct them in the principles of their religion, till it is thought fit to put them into the hands of the learned; and even then the enunchs have the care of the young gentlemen, not fuffer. eunuchs have the care of the young gentlemen, not fuffer-ing them to be at any time out of their fight; and the ling's children, who nevet ftir out of the haram till they ome to the throne, have no other mafters. Some few of shele eunuchs are verfed in the liberal and mechanic arts ; and it is happy where the Prince who fucceeds falls into the bands of one of them, for otherwife he comes as a

mere novice to the throne.

nere novice to the throne.

In Perfia, an enunch between eight and fixteen years of age is fold for a hundred pounds at leaft; and formetimes for two hundred, according to their capacities: they chufe to buy them young, becaule of breeding them up to their hands, and shey feldom change their mafters while they live. The King does not entertain left than three or four thousand enunchs of one fort or other: men of the first rank have usually half a dozen; and those of inferior quality, two or three in their houses. They are generally very diligent in their respective employments, and faithful to their masters. Their whole define and study seems to be, to procure the effects and confidence of their lord, which their prudent management feldom fails to obtain. But with all these good qualities, it is said, they are found to be revengeful, deccitful, and unmerciful, and that it is very rare to find a man of true courage among them.

SECT. XII.

Of the power and natural strength of the kingdem of Persia; its situation with respect to the circumjacent countries, and the Persian manner of engaging their enemies;

PERSIA is not a despicable kingdom, if we consider its vast extent, situation, or the condition of its neighbours. As to its situation; it is defended on every side either by seas, deserts, or losty mountains, which render the approach to it extremely difficult; and with respect to their neighbours, they have none except the Tark, that they need have any apprehension of. The Tartars on the morth are divided into abundance of little distinct principalities, or hords, and only make incursions in small bodies, but will seldom stand a pixthed battle. The Indians are a contemptible enemy, whom the Persans have always beaten; and the Turks have been so taken up with their wars with the Christians, that they have not been at leisure wars with the Christiana, that they have not been at leifure at turn their arms against Persia for many years. The wars between Persia and Turky ended with the taking of Babylon, or Bagdat, by the Turks: Persia has enjoyed a profound peace on that side ever fince. This town was constantly the bone of contention between these two mighty powers; but the Perfians finding great difficulties both in taking and keeping this place, were at length contented to

Taking and keeping tais place, were a renger control give it up.

The Persian forces consist of the troops of the state, and the King's troops. Those of the state are entertained by the Governors of the respective provinces, and paid out of certain lands appropriated for that purpose, and are divided into militia and regular troops. The regular troops are called courtchis: they were originally of Turcomanis, or Tartary; a flout haroy race of people who lived in sents. These are the foldiers which are properly called cooselbashes, or red heads, so flitted when they came to the affiliance of Chick Sefi, the first Prince of the late Royal family; for which fervice he allowed them the ho-Koyal family; by which fervice he allowed them the no-nour of wearing red cape or turbans of a particular form, like that he wore himself. They held the first rank in the kingdom till the reign of Abbas the Great, who endea-voured to diminish and suppress them, on account of the unreasonable influence he observed they had in all affairs of state, deposing and setting up what Princes they thought st, like the Turkish janisaries.

The nusqueteers, or troops of the crown, confit of

The mulqueteers, or troops of the crown, confit of twelve thouland men: though they march on horfeback, they fight on foot. These used to be opposed to the Turkith jamifaries, and were of great fervice 'in engagements. The other body confists of ten thouland horfe: these ware called coulses and like the mulgaries. these were called coulars, and, like the musqueteers, car-sied fire-arms, instead of bows and arrows. They are stell and well-made; and the King has a particular confi-dence in their courage and fidelity. They were called coulars, or flaves, to fignify their particular attachment to their Sovereign; the term flave in Perfia, as well as in India, being an honourable title, and preferable to that of subject; nay, we are told by a French author, that Coulam Shah, or King's flave, is equal to that of Marquis in France, because all that have that denomination are fure to be preferred to some post, if they behave well.

There are two other small bodies, the one antient, called

There are two other small bodies, the one antient, called sophies or sephies, instituted for a goard to the King's person by Chiek Sefi. They are not above two hundred men, and wear the Sophi's cap on their heads, and for their arms have a fabre, a poniard, and an ax, which they carry on their shoulders. The second body are called the ziezairi, or the fix hundred, who are all of the fize of granadiers, and shouly young fellows. The King sinds all the troops with horses arms and accountements, but every troops with horfes, arms, and accountements, but every man provides himfelf with clothes according to his fancy: the foldiery have no particular livery, any more than the fervants of the King's household, or cf any great man.

Confidering the extent of the kingdom, the Perfan ar-nies were never large; Abbra the Great had never more than one hundred and twenty thousand men in his fer-vice at once; but the foldiers have fince that time been fo ill paid, that many of them have entered into foreign fer-vice, or applied themselves to other employments; so that at this time it is supposed that all the troops in that vast kingdom do not amount to upwards of forty thousand

The discipline of the Persian troops is very unlike that of the Europeans, who excel them as much in the art of war as the Macedonians did the Perfians. Not being encumbered with artillery or baggage, they make prodigious fwift marches, and frequently fall upon the enemy in his campor quarters with incredible fury, when he least sufpects such a visit. At other times they will cut off his provisions, and turn their waters from their usual course; and having sufficiently harrassed them in a long march through a desert country, will fall upon him when he is through a defert country, will fall upon him when he is fatigued and dispirited. When an enemy makes head against them, they will sty till they have drawn him into some disadvantageous ground, and then return to the

charge again. They never throw up any intrenchments about their camps, which are commonly defended by fomo mountain, or difficult pafts, but they intrench in feget, and usually take a place by undermining it, at which they are amazingly skilful. As they do not trouble themselves with within 1995. are amazingly issitut. As they do not trouble tremietves with artillery, so neither have they any waggons or futtlers, their camp being supplied by the country-people with provisions, which chiefly confits of rice and fruit.

The constant method of the Persians is, when they are apprehensive of an invasion, to cause all the people to withdraw from the frontiers, and destroy the country in

fuch a manner, that the enemy shall find nothing to subsift on, not leaving fo much as a blade of grafs or a tree upon the ground.

The Persian colours are made of rich filk; for a device, they have fome passage of the alcoran, or part of their confession of faith; and sometimes a lion, with the sun rising
over his back, wrought in them. The great standardbearer, whom they call Alemdar Bassa, is one of their
principal military officers. The pay of the foldiers does
not pas through the officers hands; but every man recives is of the formers. ceives it of the farmers of fuch lands as are appropriated to that purpose: the officers pay is very good, the General of the musqueteers, and the General of the coulars, have

of the mulgueteers, and the General of the coulars, have each of them upwards of three thouland pounds a year. The Perfiana are excellent markfmen, as well with their five-arms as with their hows and arrows.

They usually, in time of peace, keep a body of fix or feven thouland men in Chaldes towards Babylon, to prevent the incursions of the roving Arabs. The Governor of Armenia has about five thouland men under his command, and the Governor of Georgia a like number. In Chorasan, the antient Bactria, they have usually eight thousand men, to bridle the Usbeck Tartars; and another such body in the province of Candahor towards India; and these troops, being the out-guards of the empire, and almost in constant action, are esteemed pretty good; but the rest who are cantoned in the inland country, they have enjoyed so long a peace, that they have not the air of have enjoyed fo long a peace, that they have not the air of

foldiers.

Though the Persians have a sea-coast of three hundred leagues to the southward, and the Caspian sea on the north, they have notwithstanding no naval forces, or any ships or vessels whatever.». They formerly built some vessels on the Caspian sea, to protect them against the Cossaks; but they have none there or any where else at present. The Muscovites generally transport the Persian merchandize in their own vessels to Astream, and have the navigation of this sea postty much to themselves, which has facilitated this fea pretty much to themfelves, which has facilitated their conquests on that side; and it may be difficult for the Persians to remove them, if they fortify the coast, and can be constantly supplied and supported by sea from Muscovy.

SECT. XIII.

Of the revenues of the crown of Persia; the different tenures of lands; also of the lands belonging to the King, the church, private persons, and unoccupied lands, Gc.

WE shall, in the first place, consider the several te-WE shall, in the first place, consider the several tenures, by which the lands are held, and what kind of property the subject hath in his estate. The lands in occupation are of four kinds; viz. First, The lands of state. Second, The king's demessic lands. Third, The lands of the church. And lastly, Those belonging to private men. The lands of the state are much the greatest part of those which are cultivated, and are in possible of the second of the greatest part of the Governors of the provinces, who take their own falaries out of them, and assign the rest for the payment of the officers and troops they maintain. The demessie lands are the King's particular estate, for the payment of the officers of his household, the troops he maintains, and other purposes. The church lands are the donation of their princes, or private men, and are accounted facered, being never taxed or considerated. The lands of private men are holden of the crown for the term of ninetynine years, paying an inconsiderable annual rent; at the nine years, paying an inconfiderable annual rent; af the expiration of the term, it may be renewed for the fame number of years, on advaucing one year's income. The unoccupied lands are let by the King's officers to perforts who chuse to build on them, or convert them into gardens or plowed fields, on the fame terms as those last mentioned. The King's officers exact a third part of the annual produce of the lands let to husbandmen; but the rent is sometimes lessened, according to the particular agreements of the parties, or an abatement made when any great destruction is made by hail, drought, locusts, grafshoppers, or other in-fects; and, if any dispute arise, upon an appeal to court

appeal to court, orders orders are given to make fuch allowance as the nature of the cafe requires. The King has like wife athird part of the husbandman's eattle, and, a still greater share of the fruit. He has also, the seventh sleece, and the seventh of the breed of the cattle in those lands which are not appropriated to his use, which is a great addition to his revenue; for the shepherds of Persin, like the antient patriarels, possess the sevenue and should be supposed to the sevenue and should be sevenue, for the shepherds of Persin, like the antient patriarels, possess the sevenue should be sevenue, the sevenue should be sevenue, the should be sevenue, the sevenue should be sevenue, the sevenue should be sevenue, the sevenue should be sevenu

officer called Ichomban Bafhi, or chief of the fhepherds, refiding in every province, who takes the feventh of the cattle for the King's ufe, viz. of fheep, affes, mules, camels and goats: the King is also intitled to every third colt; and to a third part of the filk and cotton.

The King of Perfia has the fole property of minerals and precious stones, and two per cent. of all the money. The money raifed by the waters is another confiderable part of the revenue. A tribute of a ducat per head, is also paid to the crown by all people who are not of the religion of the country, whether natives or foreigners: and a tax of ten-pence is imposed on every shop of the working trades, and twenty-pence on the others.

ten-pence is imposed on every shop of the working trades, and twenty-pence on the others.

As the Persana have no considerable port except Gombron, consequently their customs and port-duties do not amount to much. The merchandizer carried into or one of Persa, by land, pay only a small sum for a camel'a load, and proportionably for every mule or ox.

The casual part of the revenue exceeds all the rest, it considers in what exists from the confiderate states, and the

confifts in what arifes from the confifcated estates, and the presents which are made by the great Lords, Governors of provinces, &c. and particularly those which are made on now-year's-day. They prefent the King with wrought filks, horfes, affes, beautiful boys and girls, gold, filver, precious stones, perfumes, and every thing rich and curious, and which may ferve for use, ornament, or plea-

Several handicraft trades, fuch as carpenters, maions, and fome others, pay no duties to the crown; but these are obliged to work for the King when he requires it, without any pay: whatever buildings or palaces the king erects or repairs, he has only the materials to find. The maintenance of ambaffadors, and the providing them with car-

riages, is done also at the charge of the country they pass through, and costs the King nothing. When the King has a mind to reward a person for any fignal piece of service, this is also done at the expence of ingual piece of fervice, this is also done at the expence of another: he sends him perhaps to one of the Chans, or great courtiers, with the calast or Royal vest; for which the Chan usually makes the messenger a present of ten times the value, or more, according to the post he is in. The King sometimes expresses the value, or which is most commonly exceeded, as the person the paid; which is most commonly exceeded, as the person

values the Prince's favour.

The revenue of Perfia, one year with another, amounts to upwards of four millions sterling of our money; which considering that their troops are most of them paid out of the lands of the state, which are not reckoned into this account, is very confiderable; but at the folendor and mag-nificence of the Persan court is much beyond any thing we have feen in Europe, possibly very little of it may re-main in the treasury at the year's end.

We shall here take notice of the seals under which acts

of state are passed in Persia: they have sive seals which are used in five several branches of business: one is used in all such affairs as concern the demessie lands. A second for commissions, letters patents, &c. The third only in military affairs. The fourth about the revenue. And the fifth in things relating to the household. There are no arms engraven upon them; but on one of them there are the names of the twelve Imans or Patriarcha, on the others a ferap of the alcoran, or fome pioue expression, thewing their dependence on God and his prophet Mahomet. The form of one of the seals is round, two others are square, and the other two of an irregular form. The largest are of the fize of a crown piece, and the others about half that bignets. They are made of turquoifes, rubies, emeralds, or fome other precious stones. The principal feal the King always wears about his neck.

SECT. XIV.

Of the religion of the Perfians.

MAHOMETANISM is the Perfian religion, as ex-plained and interpreted by Haly, the nephew and

fon-in-law of Mahomet, and one of his fuces the empire, and, according to the interpretations of the eleven Imans, the fucceffors and defoundants of Haly in a

eleven Imans, the successors and descendants of Haly in a right line.

The Persians and Torks differ as much about the interpretation of the alcoran, as they do about the successor of Mahomet; the Persians hold that the comments made by Haly and his successors the Imans, oughr only to be regarded; while the Torks adhere to those of Abubeker, Omar and Osman, and these in many points are directly opposite to the other. The Persian sect, or the followers of Haly, are called Chia 1 and the Turks, who rely on Abubeker, Sunni, Neither of these sects will believe that those of the other can be savel; but hate one another to a greater degree than they do Christians or Pagans, and feldom speak of one another but with imprecations and curses.

The Mahometan call their religion Islam, which figni-fies submission to the commands of God; but the ordinary appellation, which they give themselves is that of Mussel-

appellation which they give themfelves is that of Muffelmoon, which we pronounce Muffelman, and fignifies the
being of the number of the faithful. In the beginning of
Mahometifm, the disciples of that religion were more cruel
and fanguinary than they are at this day, affording no
quarter to those who did not make a profession of their
faith in these words, namely, "There is no other God
but God, and Mahomet is his prophet."

They have two articles of faith, and five of practice.
That there is no other God but God. 2. That Malomet was fent from God. 3. That they ought to obferve their corporal purifications. 4. That they pray to
God at the appointed times. 5. That they give alms to
the poor. 6. That they fast all the month of Ramezan.
7. That they go so proper they can be so the poor. 6. That they fast all the month of Ramezan.
7. That they go so proper the proper that they can be so faith, viz. 8. That Haly is the vicar of God. On these
eight heads, therefore, 1 shall collect what the Persians hold
mpst material.

The Persians hold, that good works are neither the cause nor the means of falvation; but that our good works are only a fign we are intended for happiness, and a mark of God's favour towards the performers of them; and, on the contrary, that wicked acts are a fign of eternal reprobation. They also maintain, that all fouls were created long before the world was made; and many of their doctors believe the world was made; and many or meir doctors occure the metempsychosis, or transmigration of souls; especially in relation to the fouls of the prophets, saints, and good men. The generality of them are of opinion that the creation was begun upon the first day of the week, as the Christians do, and that then God created the earth in the form we see it, with mountains and valleys. That the fecond day he created the trees, plants, flowers and her-bage. On the third minerals, light and darkness. On Wednesday the rivers, cattle, fish and fowl. On Thursday the heavens, with the fun, moon, flars and angels.
And that on Friday he created man, male and female.
They believe that both good and evil angels were made
of the fubiliance of light or fire: that they are composed of

foul and body, and that their arial bodies may be fo con-denfed as to become visible. That the first time the evil angels disobeyed God, the good angels sought with them, angers disobeyed God, the good angers rought with them, and brought them captives to heaven, where God pardoned them: but God afterwards creating man, and commanding all the angels to worship him, the evil angels, through pride, rebelled again; whereupon God curfed them, and precipitated them from heaven into that place which their despair and fury has made a hell of."

As to what we call original fin, they will not allow it to be a fin in our first parents. They maintain that that act was only a deviating from perfection, or leaving the better for that which was not to good; and they found their opinion upon that supposition, that the prophets were impercable and free from sin, being sanctified from their mother's wombs, and they esteem Adam a prophet of the highest rank.

As to the day of judgment, they believe that there is a private judgment passed on every grown person soon after death. That in the mean time the souls of the faithful are filled with joy and comfort, while the wicked, on the contrary, fuffer the cruelest pangs of remorfe. They say, the foul wanders from place to place till the body is interred; and that after it has undergone the first examination in the fepulchre, it enters into a fine erial body prepared for it, where it continues till the general refurection, when it will be reunited to its former body: for the foul, fay they, can never act but by the mediation of fome body: and they will by no means have it remain in a state of infensibility

更多

It the last day. But the Persiane, it forms, are not all of ne mind, either as to the plays where departed fouls shall sensine, or their happiness or milery during this interval : or they have a middle state for those who have done neither nor hurt, as infants and fools; thefe, they fay, foffer or pleasure nor pain, as they have deserved neither ne nor the other.

They also believe, that in the refurrection the soul shall be reanized to the very same body it parted with: but they say our bodies shall not be changed in any material point, they will neither be transparent nor arisl; they will not, indeed, be crooked or deformed, or subject to old age ar infamilies, or aroabled with excrements, &c. but, say, they, if you deprive the body of all its sensea and avery thing that is material, with what propriety can you call it the same body? After the last judgment, they hold, that all men must pass over a certain bridge no, wider than a resort edge; that unbelievers and the wicked will installity fall in their passage into hell, everalstingly sormented; but the faithful shall he fo gaided and supported, that they shall pass through the bridge switch that a bird slies through the air, and enter, into heaven. Some believe that none can be faved but those who believe in Mahomet; others, that good mea of every religion may They slio believe, that in the refurrection the fe Some believe that none can be faved but those who believe in Mahomet; others, that good me a of every religion may be faved; and a third fort allow falvation to all those who have been disciples of true prophets, a. he Jews and Christians they acknowledge were; others believe that only atheists will be damned; and they fay, that God will call to his afficiance in judgment, Mahomet, Haly, and the Imans, his lawful fucctions; and all other true prophets, who will every one intercede for their respective disciples.

The Persians differ among themselves with respect to the i. The Persans differ among thereselves with respect to the beatific vision: the general opinion is, that God will not be visible, even to the happy, who will only behold a bright ravishing light, such a one as the imagination cannot at present enough even the their doctors hold, that there will be degrees of rewards and punishments, according as men have deserved; and as the alcoran makes seven heavens for the belfest, according to the virtue titley have attained to, so some of their doctors and seven hells for the wicked. Many of their doctors also take the promises and threatenings in the alcoran, relating to another life, in the wicked. Many of their doctors also take the promites and threatenings in the alcoran, relating to another life, in a spiritual and allegorical sense; and that the happiness of heaven consists in being employed about such objects as are proper for the soul, as in the knowledge of sciences, and in the sublime operations of the understanding; and after the body, it shall be furnished with pleasures suitable to its nature, and receive as much faitifultion is it is capable of, out not by meat and drinks, and ferfible enjoyments, as in this world. That hell also confists in a cruel regret and despair for the less of paradile; and that the body will be afflicted with the most violent pains. If you demand of them whether they do not think that the beatific vision will thousand times more ravishing and delightful than all be a thousand times more ravishing and delightful than all the pleasures of sense: they answer, there can be no fuch wision, because there must be some proportion between the power and the object; and that there is no proportion between a finite created being and an infinite, and consequently man can never see God. If you ask them how they can suppose that in Paradise, where it is agreed on all hande that immortality reigns, we should be taken up with corporal things, which endure but for a sime, and perish in the enjoyment: they boldly rell us, that those things are made made to sipply any necessities of nature. But for aleast not made to supply any necessities of nature, but for plea-fure; and that all those pleasures we enjoy in this life, we shall enjoy in a much higher degree in heaven; for this world, they hold, is but a type of heaven, and all that we see came from thence, although it be extremely degenerated

from the original.

If it be objected to them, that if we est and drink in heaven we shall be subject to some necessities which follow eating and drinking: they answer, that those delicious meats shall evaporate in a perfumed sweat by the pores: and though it be generally faid that the Mahometan women are excluded heaven, this is only to be understood of the wo-men of this world, who will not be in the same heaven with the men, but in another place will enjoy equal pleafures : that there will be also other celestial women created for the faithful, far excelling any they have feen below. As to the duration of the world after the last day, the greatest part of the Persan doctors hold that it will not be dissolv-

ed, but changed and purified; and shall afterwards be the habitation of blessed souls to all eternity. As to the prophet Mahomet they seech, that God sent him into the world unlearned and ignorant in every

fejence, to be his Ambafilder to all people, as well Arabs as Barbarians: and that this Ambafilder has eleogated all other religions, except in fuch points as have been efablished and ratified by him afreth. That shis unlessmed prophet was divinely conflicted Lord of all markind, and that God has made the belief and profession of all those things which the prophet taught and commanded necessary to falvation.

The Performance of the chain and commanded necessary to falvation.

that God has made the belief and profession of all those things which the prophet taught and commanded necessary to favation.

The Persans pretend that their prophet was bred up in such ignorance that he did not know a lotter; and this they make a great evidence of the divinity of his mission. They say also, that he was poor and friendless; and appear won-derfully surprized when they hear us say, that their legislator established his seligion by the sword. And as our Saviour is faid not, to have preached till he was two and thirty years of age, they say, their prophet did not beging to preach against the worship of idols till he was forty years old. They tell us that God having intended from all eternity to send their prophet Malsomet into the world, he gave notice of it by all the prophets which preceded him: but that the Cirrilians on one hand have applied to Jesus Christ, and the lews to their Messia, those things which were foretold of him, and which could not agree which my but Malsomet: and that they had suppressed and alternateval other passages which treat of hims; and this the Malsometane in general smally believe. As so the common people, they admire that any one can deny Malsomet to be a prophet; but much snow that he should be thought an importor. We, say they to the Christians, acknowledge your prophet and hanour him, and aww his mission, why then will you not acknowledge ours? and persuade themselves, that this can only proceed from pure malice: which is thought to be the occasion they so much detest and abnor thele of our religion.

The third article of the Persan enced is, ' that Haly is the Vicar or Licustenant of God;' and indeed they exalt him sometimes above Malsonest himself, and make him almost equal with God.

The Persans never speak with that detestation of any thing as they do of Abubeker, Omar, and Osana, who were the rivals of Malsomet in power, and whom the Turks believe to have been the true successor of the prepare : however, the Turks do not equally abbor Haly, but acknowledge lai

people of another religion to live amongst them; for they look upon themselves to be defiled by the touch of a perlook upon themselves to be defiled by the touch of a person of another religion, or by any thing that such a one has touched, and by consequence they will take no feed dressed by one of another persuasion, or even drink out of the cup that he has used. Notwithslanding the drinking wine is fo expressly forbidden by their law, and their commentators are so very severe against the præstice of it, several of them, and particularly the men of the sword, will drink pretty freely of it; and when they are asked by a Christian how they do to dispense with this precept; they answer, in the same manner as you dispense with drankensels and wenching, which is no less forbidden Christians. The bigotted Persians lay a much greater stress upon the ceremonial part of their law than the moral; their wallings and purisseations must be observed, whatever is less undone; having that maxim of their prophets frequently

ceresionial part of their law that the union, having that ings and purifications mut be observed, whatever is left undone; having that maxim of their prophets frequently in their mouths, "that religion is founded in purity, that one half of religion confils in keeping one's felf undefiled."
They fearce perform any act of devotion without wathing; their prayers are vain and criminal which are offered up with unwashed hands; and it is the highest profanation to touch the alcoran in such a state of uncleanness; which the states that there is frequently written on the coyer to touch the sectors in figure 1 and 1 written on the cover of the secorat and other books of devotion, these words, viz. "Touch not this book with impure hands." Their viz. "Touch not this book with impure hands." Their corporeal purifications are called teharet, which fignifies all manner of purifications on account of religion, whether done with water or earth; for when they cannot meet with water, as in the deferts fometimes, then they are allowed to fcour themselves with earth : and as they are obliged to pray five times a day, so they are obliged to clean themselves as often, unless they are fure they have not polluted themselves between one prayer and another.

Those things which, in the opinion of the Persian doc-

tors, render a man unclean, are fummed up together as follows: viz. The urine of any animal, the blood of any

OR

animal but infects, except what remains in the fieth after it is dreffed for food; the femen coitus of any animal; a dog and a hog are reckoned impure creatures, and all infidels; though many of the Perfians except Jews and Chritians, and do not look upon their touch as impure, because they allow their religions to be of divine infitution: mead and beer are also reckoned impure, as being intoxicating inquors; but opium, because it is not liquid, is eftermed pure, though it intoxicates no lefs than wine. And lastly, the touch of any, dead animal, as well as a dead corps, defites a man: but washing, it feems, will purify things inanimate that have been polluted, as if a dog have drunk out of a vessel, or licked a dish, if it be foured first with fand, and washed afterwards twice with water, it becomes clean again; but some of their doctors have such out of ought to be washed seven times: if blood or urins happen to be spilled on any clothes or furniture, they must be well washed and sounced, at least the places soiled, before they can be used; the easting out of gold and, filver plate, is said to desite the meat, but if the meat be taken out of a gold plate and put into a china dish it is not unclean. And notwithstanding gold and silver utensils are prohibited, the King and court and other grandees of the kingdom use them frequently, which their doctors tell us they atone for by their alms: but great men in most countries seem to act as if they were superior both to the religion and laws of the kingdom where they live.

The officers in Persia declare the times of prayer from a tarrace, and not from the tops of high towers or feeples, as other Mahometans do. On common days there is not

The officers in Perfia deciare the times or prayer from a terrace, and not from the tops of high towers or fleeples, as other Mahometans do. On common days there is not more than one or two of these criers employed, but upon festivals there are sometimes ten or a dozen of them, particularly on Fridays, their fabbath, and in Lent; and it is not to be conceived how their voices are heard, for they is not to be conceived now their voices are heard, for they rend their throats with all their might. When the people hear these criers call to prayers, every one rises up and goes to his prayers, not to the mosque or temple, for they are not called thither, but in their houses, or wherever they think fit: however, there are eight things said to be requisite to the contraction of the contrac think fit: however, there are eight things faid to be requi-fite towards praying acceptably, namely, application of the mind or attention, the affection of the heart, faith, mo-defly, reverence, hope; and two outward qualifications, viz. purity of body, and of every thing one touches, or is furrounded by, and proper gettures, as turning their faces towards Mecca, the motion of their hands, the prof-trating their bodies to the earth, &c.. They divide their, prayers into two kinds, 1. Those which they are indispen-fibly obliged to offer up, and, 2. Those which are advise-able or expedient, in order to arrive at a greater degree of perfection, which are termed by fome prayers of superproperfection, which are termed by fome prayers of Inperero-gation: however, thefe are not different forms, but only a repetition of the other. Every man is obliged to pray five times a day. zeckoning from twelve at noon to twelve when it is do day, for the Mahometans begin their day at noon, as our mariners do. The first hour of prayer is exactly when the sun is in the meridian. The second is in the evening, viz. from the time the sun is forty-five degrees above the horizon, till half the disk appears. The third, when it is so dark one cannot distinguish colours. The when it is to are one cannot change in colours. I he fourth prayer is to be made on lying down to fleep, for which no fixed time is limited. And the fifth in the morning, which may be performed at any time between the difappearing of the flars and noon.

Though the Perfans are not at this time ignorant of

the dilappearing of the itars and noon.

Though the Perfians are not at this time ignorant of the nature of eclipfes, yet they full main and use certain prayers at such times, as if they full thought they portended found freasful calamity, or at least that it is a mark of God's displeasure, to be deprived of the light of the sun or moon. They pray every man for himself, either in the temple or a private house, as they please; maintaining, that no person ought to read the alcoran or prayers in the temple to the congregation, but an Iman (a patriarch or prophet), or one lineally descended from him. They look upon it in general as an act of piety to commemorate their deceased friends at certain times, and some of them are of opinion that God will increase the happiness, or lessent their deceased friends at certain times, and some of them are of opinion that God will increase the happiness, or these them is the sum of the sum

No. 4.

lodged gratic; in making bridges, canfeways, eithern arreceptocles of water, molegue, colleges, and bagaic, but they have no hofpitals for the fick, as in Europe.

The dervifes and faquirs in Mahometan can be a kind of begging friars, who extort the parties of the from them almost by force, looking upon themselves to be much holier, and in many respects superior to those they demand an almo of; they travel in fuch large companies, that it is hardly safe for people in villages to deny write they ask, and they may be faid rather to levy a tribute, than to live upon charity. The alms which are ascertained by their religion are a kind of tythes of companies, money, merchandic, etc. though they do not amount to near a tenth, and are only taken of the nest profits after all the rent and charges deducted; and these are not given to the prieft, but applied to plow and charitable uses, like the other, from whence they have received the fame denomination of alma: the elery live upon the glebe or revenues with which their churches are endowed, and what they get by the education of children; but they collect the tythes and have the distribution of them.

The tythes are applied to the maintenance of the Management.

them.

The tythes are applied to the maintenance of the Mahometan faquirs, or begging friars, to the redeeming flaves hardly used by their masters: for the relief of indovent debtors; and for the relief of strangers who happen to be in distress in their country. The reli are employed in public buildings, in erecting temples, caravanieras, colleges, &c. There is also the quantity of seven or eight pounda of rice, er other grain, or fruits, annually paid for every head, the day after their great fast or Ramezan, which is applied to the fame uses the tythes are applied: their saints and devotees, who set up for an extraordinary piety, pay several other sums to the use of the poor, besides those expressy commanded by law, and of spoils that are taken in war a sinth or double tythe is paid for the above purposes.

The Persian religion does not expresly command any other fast than that for the month of Ramezan, unless upon forme extraordinary occasion, as by way of penance, or to avert any calamity, or the like: but the disciples of this religion, are advised to perform many other falts, which their zealots do not fail to comply with: this word Ramezan is the name of the ninth month of the year, and their Lent is so called, because the fast is observed from the their Lent is fo called, because the fast is observed from the beginning to the end of it: when this moon first appears which is usually in the evening immediately after tun it is proclaimed by the holy criers in great numbers, the terraces of their mosfeuse, who publish it as a not furprising piece of news, and fing certain hymns on use furprising piece of news, and fing certain hymns on use furprising piece of news, and fing certain hymns on the streets, and firen the terraces of the begnies the horns found to give notice that the backs are ready: for they begin their fasts, as all other acts of devotion, with washing and purifying themselves, which is ordinarily done at the bath; the end of the fasts is folemulated in much the same many if as the beginning; the criers give notice of the manuer as the beginning; the criers give notice of the fucceeding moon from the mosques, the people testify their joy by their acclamations, the found of musical instru-

The disciples of the Persian religion are required to make The disciples of the Persian religion are required to make a pilgrimage once in their life-time to Mecca: this is the town in Arabia where their false prophet Mahomet was born: the principle end of the pilgrimage to Mecca is to visit the kabba or chapel of the patriarch Abraham, and perform certain acts of devotion, in the courts that furround it, and not on accorded. If Mecca being the birth-place of Mahomet, much we cause his term is there, the state of the property of th or that is at Medina, above the hundred miles to the north for that is at Medina, above we hundred miles to the north of Mecca. The principal things the pilgrims perform, when they come to the town, are the holowing; namely, The going in procefion feven times and Abraham's chapel; the kiffing a black flone there, we which more hereafter; the fpending a certain portion of time at mount Arafat; the facrificiage a fheep upon mount Menah in remembrance of Abraham's going to facrifice his fon; the drinking of the water of the well Zemzen; the taking feven turns between the little hills of Safa and Merva; and the throwing flones over their heads in the valley of Methe throwing stones over their heads in the valley of Menah, all which, it is said, they do in initiation of the patriarch Abraham, and which God has enjoined them as an indispensible duty, particularly that of the factifice. The way the pilgrims go at present is by Bossor or Boara, seated near-the bottom of the Persian gulph: they were forced to a thousand insults in this passage the Arabian prince through whose territories they passed, extorting money from them almost every day, on one pre-extorting money from them almost every day, on one pre-

and the like.

tence or other, and they had the less mercy on them on account of their burns, hereties: whereupon the court of Parsia for some time furbad the pilgrims to go by land to Mecca, ordering them to fail round Arabia into the Red.

Mecca, ordering them to fail round Arabia into the Redfee, as the pilgrims of India: whereupon the Arabian
princes, finding their revenues much leffered, fent Ampaffadors to the Perfan court to affare them that all abufes
flouid be inguisted, and the pilgrims might have a free
paffago sideout these exorbitant exactions.

If any need notes in Perfan who has not gone in pilgrimage to Mec. and er in perfon or by proxy, the Cadi or
Civil Magitta, te, esses on fo much of his fortune, as the
charges of the pilgrimage would have amounted to, for the
good of his foul, and this he employs in feuding one to
Mecca for him; but this is to be underflood of men of
fubffance, for the inferior fort of two persons are not abilized to fubiliance, for the inferior fort of people and not obliged to

go in pilgrimage.

The canwar of pilgrims fets out from Bozca on a certain The cauwar, of pilgrims fets out from Bozca on a certain day, in order to be at Mecca at the time the law requires, and is conveyed thither by the Arabs, who keeps them in the deferts forty or firly days, though the journey might rafily be performed in twenty; they are guided by the flars in their palfage, and for that reafon, as well as on accouns of the heats, they travel in the night time, and as the air is dry and pure, the flars afford them light eneugh: there are no inns or caravanferas in this defert, but the pilgrims live in tents, as they do also till they have performed their devotions at the kabba; in the day time they jitch their tents near some well by the Arabs canno, where they laws.

the state of the s on the first day of the month 2 with, they put off all their clothes, and perform the purchastions required in a great-bash or recorptacle of water after which they wear no other clothing but a linear cloth about their middles, and another about their thouseless, indinating thereby, that they are dead to the world, having no regard to their ornaments, or relish for any thing but heavenly things.

Their remedial religious fettivals are, that in commensation of Abraham's fectificing his fon, and that of the

moration of Abraham's facrificing his fon, and that of the martyrdom of the two Imans, Hoffein and Haffein. This latter festival is celebrated in memory of their patriarch Hollein, who, having loft a battle, retreated with his troken troops into a defert near Babylon, called Kerbele, where, having been purfued fourteen days, he fell at leagth into the hands of his enemies, and died fighting valiantly, having first received several wounds. It con-ainues the first ten days of the month Maliaram, during which time there are no trumpets, or musical infruments, founded at the usual hours; and those who observe it arially, neither fliave their head or face, or go to the bag-nin. They will never begin a journey, or undertake any thing of confequence at this time; many of them rend their, clother, paint their fkirts black, and appear with forrowful dejected looks, as in a time of public mourning: you will fee from moroing till night, in all the freets, parties of the mob, fome almost naked, others stained with blood, and others in armour from head to foot, with naked fwords in their hands; fome appear faint, and ready to swords in their liands; some appear faint, and ready to perish, with their tongues hanging out of their mouths, and all the signs of despair and anguish, crying with all their might as they pass by, Hossen; Hassein! (Hassein was the elder brother of Hossein, who lost his life in the same war). What they endeavour chiefly to express is, the heat and thirst with which the legend relates Hossein was afflicted with in the defert, to such a segree, it is faid, that he became black, and his tongue hung out of his mouth. During this session, as a crime to refuse a new charitable; they look upon it as a crime to refuse a new charitable: they look upon it as a crime to refuse a poor man an alrus at this time. Before the houses of the great men also stand great vessels of ice and water, that none may suffer thirst, as their great sale? Hossein did; and the King every day entertains at least our thousand people, who attend the processions. The are abundance of mawho attend the processions. chines and pageants carried at this leaft, chiefly to move the compalion of the people, and excite their rage against their enemies the Turks.

We shall here take notice of some religious which are tolerated in Persia. And first, of the Gaurs, or antient Persians, generally stiled Ignicolæ, or worshippers of fire, remains, generally fitted ignicolar, or wortingpers of fire, being diffinguished thereby from all other people. They are dispersed throughout Persia, and barticularly near fipaland there is a village inhabited only by Gaurs. Many of these people, who refused to submit to the Mahometan

setlgion, fied into India, and are fettled about Surat. It is observed of the Gaurs, that they are neither of so good a complexion or make as the Mahometan Persians, which a complexion or make as the Mahometan Perfians, which is thought to proceed either from their not intermixing with the Georgians, &c. as the others do, or from their applying themelves principally to hufbandry, and laborious employments, in which they are more exposed to the weather. The men wear their hair and beards long, a floot close west, and a cap not much unlike our hast; they are all of them either lumbandmen or mechanics, never applying themselves either to the liberal arts or merchandize, and their language and chamselves are understood by none but themselves. They regard agriculture not only as a useful and innocent proteinen, but housemable and even metitorious; they hold that this was the heit buffinds them were employed in, and for which the gods thereselves have the greatest regard; the priests teach them sleep, next to the begetting of children, the manuring the givent, and planting trees, we the right, couns striptoyments they can be concerned in; and this, forme andterned blerve, is the reason that Persa was so much more men observe, is the reason that Persia was so much more fruitful under the dominion of the antient Persiaus than triutuu undee 'ne dominion of the anothe remains of an it is at prefairt; they encouraged nothing note than agriculture and hullandry, planting and gardening, and their religion taught them that these things were meterersous; while the Mahometan race look no forther tan the prefent generation, and do not so much as aim at improve-

The Gaura, who are a remain of artient Perfairs, are an innocent harmles people, and may not their own have and magnitudes, confounded by the preferr government; their religion above them to drink wing. and eat all manner of fleth, except beef; nor are they fornpulous about the drefling it, as the Mahometans and Pa-gans are, who would think themselves polluted, if one of another religion or seet was to cook their meat; they do another religion, to mingle with another people, and especially the Mahometans, but match always in their own tribe; neither a plurality of wives, or divorces, are fussered by their religion, unless the first wise has remained barren nine years, and then they are allowed to take a second, their people are increased. cond: these people are as ignorant as other rulticks a se-cond: these people are as ignorant as other rulticks usually are, and can give but a very poor account evers of their own religion or history. Their principal temple is on a mountain near the city of Yezd, and there the High-priest of, their religion resides with great numbers of his clergy, who live in a kind of convent, or feminary. The priests are employed there in much the same service the vessel vir-sing were at Rome, namely, in kenning in the second for gins were at Rome, namely, in keeping in the facred fire, that it may never be extinguished; and according to their traditions, this fire was first lighted about four thousand years ago on this mountain, by their great prophet Zoroaster, and they live in hopes of his return, and of feeing their religion and artient government triumphant again in Perfia: they differ from other Pagans, in their averfion to certain animals, for they look upon it as their duty to de-firoy all noxious vermin, and elpecially fuch as fpoil the fruits of the earth.

We shall now take some notice of the religion of the Armenians, who form a confiderable body in the Persian empire, especially if we include all those other Christians who have joined them on the account of the large priviwho have joined them on the account of the large privi-leges granted them by the Persan government. The Ar-menians were originally of the Greek communion; bur-they are said to differ of late in several particulars both from the Latin and Greek churches; they have two patriarchs of their own, who have under them many archbishops and bishops, but the archbishop of New Julpha and his suffragans, it is said, for not subject to either of them, and the Persian government, abough Mahometan, has as great an influence on the description of their patriarchs and bishops, as the Christian pr a ye in the election of bishops this part of the been indeed gable menian che 1.04 The Popish missionaries heir endeavours to procure the Arcknowledge the Pope for their head, and in force to acces, it is faid, they have prevailed but for the processity, the Armenians of Julpha are not more fer again. The Maliometans, than they are againft the Romish mission was a

Romith mileor was.

Their classes contain of patriarchs, archbishops, bishops, priests, and means of the order of St. Basil. Simply is hardly broked upon as any crime among them: the patriarch, it is mild obtains his confirmation from the government by bin or prefents. The monks are the only part of their clergy that are prohibited marriage; but a clergyman is not fuffered to fay nais, fine the first, fewer days after his marriage; and whenever he is fuffered to adminisher live under the prefent frink wine, e they fernd, if one of at; they do people, and n their own are fuffer-us remained to take a feflics ufually ers of their ple is on a High-priest his clergy, The priests facred fire. ing to their ur thousand rophet Zond of feeing ant again in aversion to duty to de-as spoil the

bishops, bi-Basil. Siong them; nks are the riage; but a leven days administer it, he is thut up in the church for five days before, and five days after, and suffered to eat nothing but rice and herbs, nor is he permitted to go home to his wife and family. They receive their orders from the hands of the bithops, and may be ordained at eighteen years of age. Both clergy and laity are obliged to keep fo many fain, that one half of the year is spent in fasting, when they abitain from all manner of sich and sish; and so austre are the lives of some of their bishops, that it is sid they scarce eat sless or simple their bishops, that it is sid they scarce eat sless or simple when the priest, with the bread and chalice in his hand, says three times, the people repeating it after him, "I conses, I believe that this is the body and blood of the Sou of God, who takes away the fine of the world; and who is not only our falvation, but the salvation of all the world."

Before their four great sessivals, of Christmas, the Annuciation of the Blessed Virgin, Ascension-day, and the feast of St. George, they fast eight days without tasting fish, siesh, eggs, butter or oil; and their devotion is for great for their national St. George, that some of them, it is said, will fast three or four days successively before that selfitival, without eating any thing. They said also every Wednesday and Friday in the year, except between Easter and Ascension-day.

When a child is baptized, the priest plurges it three times naked in a vessel of water, pronouncing nearly the same sucked in a vessel of water, pronouncing nearly the same sucked in a vessel of water, pronouncing nearly the same sucked in a vessel of water, pronouncing nearly the same sucked in a vessel of water, pronouncing nearly the same words on the occasion as are used here; he also

When a child is baptized, the prieft planges it three times naked in a veffel of water, pronouncing nearly the fame words on the occasion as are wied here; he also anoints the infant with their holy oil, first on the head, then on the mouth, the stomach, neck, hands, and feet. This anointing is held as necessary as the baptism of water, or rather is baptism itself; for on the anointing the several parts, and making a sign of the cross, they repeat the words, "I baptize thee in the name of the Father, and of the Son, and of the Holy Ghost." This oil is made of several sweet slowers and aromatical drugs, by one of their patriarchs, and as no baptism can be duly performed withpatriarchs, and as no baptism can be duly performed with-out it, they sell the oil at an excessive rate to such priests

out it, they sell the oil at an excessive rate to such priests and bishops as are subordinate to them, who also make a large profit of it on these occasions.

They usually give the child the name of the faint that shood in the calender next before the christning, or that which immediately follows; and if the ceremony happens to be performed at Christmas, or on the softwal of baptising the cross, the infant is dipped three times in the river Zenherhood, or some great water. The Armenian church keep to the old style in solemnizing their sessions, but the Protestants do; they reject the doctrines of purgatory, but believe however that the souls of the just remain in a state Protestants do; they reject the doctrines of purgatory, but believe however that the souls of the just remain in a state where they shall know neither joy nor forrow till the refurrection, but what proceeds from a resection on their past lives; and hold that the prayers of good men may be of some advantage to them. As for the wicked, they believe that they are sent immediately to hell. Extreme unction is administered by them either just before or after.

death.

The Armenians believe but one nature in Christ: they do not say however, that the human nature was swallowed up in the divine, as the first Enyydians did; nor do they believe a confusion of natures in Christ; but that the divine and human nature are united in his facred person, as the foul and body are in man, and so make but one: but the Roman catholics glory much that they agree with them in the doctrine of transubstantiation, and from thence infer, that it was once the doctrine of the universal church. The Mahonner, Dersans affit in great crowds at their great fistival of the baptillar of the cross, in memory of our Saviour's bootsim, and sometimes the King himself has appeared at 10% folumity. The Armenian bishops

our Saviour's bactim, and foractimes the King himself has appeared at the folemnity. The Armenian billhops and their clergy go in procession on these occasions to fome great reservoiry of water, with a cross carried before them; and having read prayers initiable to the occasion, and song several anthems after their manner, to the found of the country music, the bishop plunges the cross into the water several times, after which, happy is the person that is sprinkled by it; their own baptim, it is thought, can searce convey greater privileges to them.

The Armenians marry their children aftually in their infancy to prevent their being carried into the harans of the great men; for either the Persians are so just that they will not take any marry while, from him, or they are too they at useddle with a woman who has been in the possession of a prother; but though the parties are frequently carried of at other; but though the parties are frequently carried at a four or five years of age, the marriage is selected while the wedding, the portion stipulated to

be given with the bride, is feat to the husband's house, confishing of fine clothes, gold, sliver, and jewels, according to the quality of the parties. They add also usually fome fruits and sweet-meats, which are all carried in fine boxes and cabinets, attended by such music as the country affords; sometimes this is deferred till the birth of the

first child, when a rich cradle is provided, and all other necessaries proper for a new-born infant. When an Armenian dies, the person whose office it is, washes the body with confectand water taken out of the

wathes the body with confectated water taken out of the chorch, and puts on the corps a new white fluir, and other linen. Then having fewed it up in a new linen bag, it is carried to the church on a bier, without a coffin attended by the priefts and relations, with lighted tapers in their hands; and having placed it before the altar, a prieft reads the fervice appointed, and then they leave the body in the church with the candles burning about it all night. In the morning after mafe is faid, it is carried to the archbishop or bishop's gate, who fays a prayer for the repose of the deceased's soul; after which it is carried to the burying-place, the bishop and priefts singing, their prayers till it is laid in the grave; then the bishop taking up a handful of earth, throws it on the corps, saying three times, ". From earth thou cameft, and to earth thou shalt return, remain there till the coming of our Lord." Then they fill up the grave, and the relations and friends return to the house of the deceased, where they find a good dinner, and are splendidly entertained for several days successively, and are splendidly entertained for several days successively, if the relations are people of substance.

The Georgians who adhere to the discipline of the Greek

the Georgians who attact to the part not found out of their own country of Georgia (the ancient beria) which is the most northerly part of the Persan empire: as for those of them, which come to Ispahan, they go under the general name of Armenians, and communicate with them;

general name of Armenians, and communicate with them; but of the Greek and Georgian churches I shall speak more largely when I come to treat of Turky.

There is still another people in Persia, who go under the name of Christians, whose religion seems to be a compound of Christians of St. John, and Mahometism: they are called Christians of St. John, and sometimes Sabean Christians, and inhabit near the gulph of Persia, in the province of Chussian, where it is computed there are not less than twenty thousand families of them. St. John Baptist is their great faint, from whom they present to derive their twenty thousand armines of them. S. John Baphit is their great faint, from whom they pretend to derive their original, and they have a tradition that his fepulchre is at Chuffer, the capital of Chufftan, or Sufiana. They do not acknowledge Chrift to be the Son of God, but effect him to be a prophet, as the Mahometans do; and the reaching they are called Christians, is supposed to be from their great veneration for the cross, which they reverence sven to idolatry. The Persans hold that circumcision is not absolutely needing to division; but however, they do not abfolutely necessary to falvation; but however they do not omit it, if there be an opportunity of performing it accord-

ing to their rites.

The Persian mosques or temples are never consecrated; but when they are built, the people are invited to perform their devotions there, which is all the ceremony used; but their devotions there, which is an the certainty mean, our as their religion does not oblige them to pray in temples, the great men feldom come thither; and their molla's preach as frequently in the fireets and public places of relort, as in their mofques; the common people, however cliufe to perform their devotions in their temples, effectially cliuse to perform their devotions in their temples, especially on Fridays, their sabbath, and upon the great settivals when there is usually a sermon, or a good moral discourse delivered by some molla; but the people are not very attentive to these preachments, for some will be reading, others sleeping, and perhaps others smoking or eating in fermon time; every one does what he pleases so as he does not disturb the preacher; their molla's are never consecrated, but take up the office of preachers, and lay it down again as they see it: those who design for the priesthood, begin with clothing themselves in a plain modest garb, a white turbant, and a kind of casso of camblet reaching down to their heels; then they apply themselves to study white turbant, and a kind of caffoc of camblet reaching down to their heels; then they apply themfelves to fludy, and obtain the title of talebolm, or fearchers after knowledge; they alfo live abfemiously, and put on a grave pharisaical look; afterwards they go in pilgrimage to Mecea, or to the tombs of their Imans, if they can raise money enough to defray the charge, and at their return get themfelves registered in the Sedre's books, in order to obtain the control of the control o preferment when it falls, either in some convent or endowed mofique, and they are advanced higher usually accord-

Ing to their diligence or merit.

There are three principal officers in every great mosque:

1. The Montelevy, who takes care of the furniture and ornaments.

2. The Molla or Preacher.

3. The Montelevy of the furniture and ornaments.

zem, who calls the people to prayers. The clergy of Per-fia in general are not rich, receiving no dues from the peo-ple, but depending altogether upon the endowments of their houses or churches, and what they get by the infercetion of children, either as private tutors, or mafters of forme public school.

Befides the molla's, there are feveral other forts of pe ple in Perfia who pass for ecclesistics, as the mir's and the zeriffs, who are of the family of Mahomet by the male fine; and the saieds, who are the descendants of Fatima, Mhomet's daughter; the mit's have the privilege of wear-ing a green turbane, but are not so seuch honoured in Per-fia as in Turky, becase they are looked upon to be in the Turkish interest; the dervises and faquirs, which as far as I can perceive are but two names for the same profession, I can perceive are our two names for the lame prosentor, are also looked upon as religious people, but, with all their pretences to a severe, abstemious life in public, they are discovered to be prosest libertines in private.

The Jews are also dispersed throughout Persa: there are reckoned to be about twenty thousand families of them,

are reckoned to be about twenty thousand ramilies of them, a poor miserable people, many of them artificers, others of them pretend to magic, and telling of fortunes. Their women infinante themselves into the good opinion of the ladies in the serapilo's of the great, who it is said give great faith to their predictions; they also prepare love potions; and such trumpery for the filly creatures, who study all ways to gain the affection of their tyrants. The lews were formerly the usurers of the country, but since the arrival formerly the uturers of the country, but fince the arrival of the Banism of India, they have had little to do with any thing of that kind, and are forced to take up with less beneficial employments: which brings me to speak of the Pagan Indians in Persia, who have now engroffed almost all the ready money of the country. These are dispersed all over Persia, and it is computed, that there are not less than fixteen thousand of them in the city of lipahan. They are allowed the like liberty in the profession of their religion, as the Jews and Christians are. The Persians en-deavour indeed to gain proselytes, by granting rewards and privileges to those who will embrace Mahometanism; but on this country no restraint is laid on the conscience respecting matters of religion.

SECT. XV.

Of the marriages of the Persians, Uc. and of the condition of their children.

THE Perfians are allowed four legal wives, with whom they may enter into formal contract before the civil magistrate; but they have seldom more than one; for the rest of the women, who wait upon her, have in like manner the honour of their mafter's bed, and their iffue are equally legitimate: so that there is no such thing as a bastard in Persia, those born before and those after marriage having the fame privileges; nor is it any difadvantage for a fon to be born of a concubine, or even of a black flave, in regard so his inheritance.

Love is the least motive for entering into a contract with a lawful wife, as the is called, especially among the great, nor does the expect much of it, but it is the number of flaves, the clothes, the equipage, and the figure the man makes in the world, which are great inducements for the woman, or her friends, to match into any family.

The Arimenians marry their children in their infancy, nor does the expect much of it, but it is the num-

when they meet with an advantageous match: this the do for a political reason, left their daughters should be sent to the haram; but the parties do not cohabit till they arrive at a fuitable age.

The Perfian marriages are attended with the following seremonies. When both the parties have given their con-fent, and the terms fettled by the mediation of friends, proof thereof is made before the Cadi or civil magistrate, who causes the same to be regulered: but as far as I can find, the parties themselves do not appear in person before him, or go to the temple to folemnize the marriage, as with us: but the bridegroom the day before he takes home his bride, fends her a habit, ornaments and jewels fuitable to her quality; and the next day towards the evening, mounting on horseback, with the richest furniture he can procure, and attended by his friends, the music and dancing girls, he goes to fetch home his wife, who meets him part of the way mounted also on a camel or horse; but so vailed, that her face cannot be feen; fhe is also attended by her friends and relations in their gayeff equipage, with her flaves, clothes and baggage: both companies being joined they march to the hulband's houfe, with lighted torches, the drums and trumpen founding, and music playing be-fore them, the mob following with joyful acclamations, and wishes for the happiness of the new married couple. When they serive at the house, the bride is led to her apartment, where the hutband follows foon after, and this

is the first view he has of her face: the company found the remainder of the evening, and fometimes feveral days fuc-cuffively in feating and rejoicing at the bridegroom's house, but the men and women are in separate spartments; the music, dancing girls and snob are also generally well entertained, if it happen to be the wedding of a man of

These are the only wives the Persians have, according t the notion we have of a wife: but they have also a kind of wives or concubines, whom they agree with either for life for a certain time, to ferve them in the capacity of bed-fellows. These contracts also, it is said, are registered before a magistrate; and where a man parts with one of these, she must remain fingle forty days before the contracts with another, to see if she be with child; for in this tracts with amother, to tee it she be with chind; for in this case, the first man must keep her till she is brought to bed, and her children afterwards. The last kind of wives are a man's flaves, whom he takes to his bed, and disposes of as he pleases, without any ceremony: but the children of these are in as good a condition as the rest, sub-reiting according to their seniority; so that if the son of a flave be the eldest, he has an elder brother's portion.

If a woman be divorced without any fault on her part, the shall have the dowry her husband stipulated to give her, which after her death will go to her children. Divorces are very easily obtained here, especially where both parties agree to it: the usual suggestions for a woman to obtain a divorce, are that the hufband takes up too much time with his flaves and concubines, and does not afford her due be-nevolence, or elfe that the hufband is impotent; in either of which cases the magistrate will grant a divorce, and both the man and the woman are at liberty to marry elfewhere.

By the Persan law the girls are held to be of age at nine years of age, and the boys at thirteen, and no longer unyears or age, and the boys at thirteen, and no longer un-der the direction of their guardians; and where a guardian dies, the magistrate will fometimes admit them to be of age somet, upon examination. The eldest son is always guardian to the younger children, and infants have that privilege, that their estates cannot be seized for the debta of the deceased till they come of age, and are able to plead for themselves. Where a person dies intestate, there is an officer in every city and province, who takes care to secure the ethate and effects of the deceased, and see them distributed among his relations, in such proportions as the law

with respect to the funeral rites of the Persans, and their behavious towards the dying and dead, we must here observe, That when a rich man is drawing towards his laft hour, they fet up lighted lamps, or make little fires on the terrace of his house, that the people in the neighbourhood, and those that pais by, may pray for him. They also send for a molla, or priest, who puts him in mind of reviewing his past life, and repenting of his fins; to which reviewing his past tire, and repetiting of the arms arms, the dying man usually aniwers, taube, or, I repent. When he can speak no loager, they continue to read some chapters of the alcorant to him till he expires. His death is soon known by the dismal groans and lamentations of those about him: the relations immediately set up a great howl, rend their clothes, tear off their hair, beat their breafts, and act like people in the utnoff despair, especially the women, intermingling sad complaints, and uttering the most tender expressions to the dead corps, as if it was really sensible of their grief. The corps is afterwards wrapped up in a new linen cloth, or winding theet; and if it be a man of figure, there are certain passages out of the alcoran, or out of some other of their facred books, written upon it: and they tell us of one of their great ministers of flate, who was wrapped in so large a sheet, that the whole alcoran was written on it. In this condition the body is reposited in some place at a distance from the house; and if it be to be buried a great way off, it is put into a wooden coffin filled up with falt, limes and performes to preserve it; for they embalm their deal belies no otherwise in Perla, nor do they ever embowel them, as with us.

nor do they ever embowed them, as with us.

If they are buried near the place where they die, they are
carried thither directly fro. . the place where they are washed

homet, his daughter Fatima, and his twelve fucceffors: they have also fireamers of filk, and led horses, which carry the turbant and arms of the decoased: there are no between appointed on purpose for carrying the corps to the grave, but the neighbours offer their service, and is a perion of fashion meets a funetal, he will alight from this horse, and help to carry the corpse to the place of interment.

They lay the corps to the place of interment,

They lay the corps in its winding sheet without a coffia,
with the face towards Mecca; and if it be a great man, they
lay by him bis turbant, his fword, his quiver, and his
bow, and an arch is built on that side acar the grave. The
scalon of making this arch is upon the supposition that
the foul re-animates the body soon after the interment, and
is examined by certain angels, concerning his faith and

Their mourning aftaily laits forty days; it does not confift in wasning black clothes (for black they deteft, and look upon it to be the devil's colour, an infernal habit) but their mourning confifts in lamentations for the deceafed in a sorn and negligent garb, and the most lively experisions of grief sud delipsir, which they repeat two or three times a week during the time above-mentioned; after which they bathe and flave, and drefs themselves in their usual habits, and the meurining is finished: their wives are the most inconsolable, for a widow feldom marries a second time.

We shall now give a description of the mourning of the Asmenians at the graves of their deceased friends, annually, the night before the solemnization of the feltival of the holy

The Armenian women, clothed in white linen vails, and so medied up that nothing but their eyes could be different, about two or three hours before day, came to the Christian burying-place, bringing with them wood, coals, tapers, and sincenie: there they made fires by the tombs of their respective relations and friends, and placed lighted tapers upon them, continually throwing incenie on the fire, lamenting their lofs, and addressing themselves to the decasted, in the most tender and affectionate expressions: then they threw themselves on the graves, and embraced and bathed them with their tears. This was succeeded by the most disting groans and cries that can be imagined. At a little distance, the place where this was translated looked like the ruins of some town just destroyed by the stames in a dark night, there being such an intermixture of stones and fire, with the cries and lamentations of people in the utmost despair.

The men, it feems, remained at home while the women were employed in this folemaity, but fent perpetually after their wives, under pretence of enquiring how they did, possibly left the darknets of the night thould give them an opportunity of purfuing their intrigues, inflead of visiting their departed friends. There were also a multitude of prietls attending at the burying-place, to offer up prayers for those who defired it; and these being all clothed in black, as the women were in white, made an odd fort of a show. The priests were paid for the prayers they said on this occasion, some of them six-pence, others ten-pence, but aone give them more than twenty-pence. There are seldom lefs than three thousand Armenian women, who come from Julpia, to attend the graves of their deceased friends at this time, who so perfume the air with the incanse and aromatic gums they throw into the fire, that the city of liphahan is sensible of it, at more than a mile's distance. The eeremony being concluded about two hours after day-light, the common people continued to go thither most part of the day, not to-mourn, it sens, and be-wail the loss of thories and divert themselves, as usual at settivals, and on other joyful occasions.

SECT. XVI.

the antient fleuctures, rmins, fepalchres, and other memorable antiquities of the Persians.

THE palace antiently called the house of Darius, which was the residence of the Petsan monarchs, is called, by the modern initabitants of the place, Chil-mina, or the palace of Forty Pillars. It is strusted at the foot of a mountain, called the Royal mountain. It extends three thousand feet from north to south; and from east to well one thousand, nine hundred and rinety-five feet, to the mountain itself. Bur having before given a large account of this celebrated edifice, more general known by the

name Persposis, we shall omit faying any thing further of it in this place.

A great variety of rains product themselves to the endward of the above-mentioned, which conflit of windows, avenues, portals, pallages, &c.. They extend about four hundred and fifty feet from eaft to well; and about feven hundred and twenty-five from north to fouth, and three hundred from the columns and woundains. The earth is covered with the fragments of feventy-fix columns in the midth of thefe ruins. And about one hundred and eighteen feet to the fouthward of thefe is an edifice elevated above the reft of the ruins, on an hill. The front is compofed of a range of stones eight feet deep i it extends one hundred and thirteen feet from east to west but is not embellished with any ornaments,

ed with any ornaments.

There are fome fubterraneous passages pretty far to the fouthward of the last mentioned ruins: which, from a ridiculous notion that no light will burn in them, the natives will not easer, though it is supposed that imment exestions are lodged in them: but some European travellers, having ventured to enter them with lights, which were not extinguished by an invisible power, as the natives absurding imagined, perceived that these passages rerminated in a

ventured to enter them with lights, which were not extinguished by an invisible power, as the natives ablurdly imagined, perceived that these passages reminated in a small, narrow, and impessable kind of aquedust.

There are two antient sepulchres of Persan monarchanes the mountains, the fronts of which are ornamented with various figures representing men and different kinds of antimats; and a about two leagues from these sepulchrea are four other tombs refembling the others, only cut higher in the rock. This place derives its name from one Noxi Rustan, a fabulous person, who is reported to have been a potent prince of gigantic stature, that he was forty cubits high, and fived one thousand one hundred and thirteen years. The sigure of a man on horseback, which the people say, represents Rustan, he is in a Roman dress, and has also a bonner triing from a crown, with slowing hair, a long beard, and his lest hand upon the hit of his fword; but notwithstanding the report of his prodigious stature, both he and his horse are of the common size. Before him is a woman with slowing hair, wearing a crown; she is dressed like Minerva, and holds up part of her drapery with her less hand. A third sigure represents awarior with a tiar on his head, and his lest hand placed on the hit of his sword. In another compartment is an imperfess appearance of mon sighting on horseback. All these signess are carved in the rock. This tomb of Noxi Rustan is supposed to have been erected by Darius Hytlaspes, as it corresponds with the rock.

At two hundred par to hence, on the western side of the mountain, are two rables out in the rock. That to the left represents two men on horse-back, one of whom grasps a circle, of which the other has quitted the hold, some imagine that the sist is Alexander, and the other Darlus, who by this action resigns to him the empire.

Near the city of Seamachie, at a place called Pyrmaras, are the tombs of Seid Ibrahim and Tribabba his tutor, both which are visited by a great number of pilgtims, who perform their devotions there; and near the city of Ardobil is the fepulchre of Shah Sefi, which is visited with great, point by the Perfians on Whitim-monday. This tomb is three feet in height, nine in length, and four in breadth, made of white marble, and coveted with crimfon velvet; a great variety and filver lamps hang down from the ro of of it, and on each fide are two very large candle-ficks of maffly gold, with wax candles in them. There is alfo a fpacious arched gallery finely gilt, which is used as a library, containing a great number of manuferipts in the Perfian, Arabic, and Turkith tongues, fiome written on parchment and others on paper, all fuperbly bound, beautifully painted, and elegantly covered with plates of gold and filver. There are also above four hundred porcelain, vessels, many of them capable of containing ten gallons, in various niches on the sides of the library. There is near this spot, another temb creded to the memory of Seid Tzeibrail, who was only a peasant, but the father of Sohah Sefi. This tomb is fix feet high, of an oval form, raised ten sleps, adorned with glass of several colours, and surrounded with iron grates: the roof is of azure gilt, and in the midst of it there is a large tower of blue and green stones; the sloor is covered with rich tapeltry; and round them all the results or chambers for the education of chiladien. The gold and sliver lamps hang about it, in which there are lights every night. The tombs of many six shah Sefi's family are contained in a small chapel on this.

CHAP. IL

THE NEW HISTORY AND DESCRIPTION OF THE EMPIRE OF

H

SECT. ..

reating of the boundaries, his time, previous, great wall, iffands, rivers, canals, intend navigation, and face of the country.

THIS opulent and extensive empire, which appears to be a world within itself, and which includes Chinese Tarrary, is bounded by the dominions of Russia, on the north; by the Pacific Ocean on the east; by the Indian and Chinese sea, on the south; and by the kingdome of Tonquin, Tartarian Thibet, Russian Tartary, and part of Indottan and India beyond the Ganges, on the west. It lies between ninety-five and one hundred and thirty-five degrees of eastern longitude, and between twent, one and at nes between ninety-five and one hundred and thirty-five degrees of eastern longitude, and between tweaty-one and fifty-five degrees of north latitude; being about one thou-find eight brunted milles in langth, and one thousand five hundred in brundth. It takes its name from a Chinefe word, which fignifies central; as the natives, supposing the world to be flat, fancied it was fituate exactly in the middle.

This country is divided into fixteen provinces; viz.

9. Shan-fi, fan Pe-ke-li. 2. Kyang-han,
3. Kyang-fi,
4. Fo-kyen,
5. Che-ky-ang,
6. Hu-quang, 11. Se-chuen, 12. Quan-tong, 13. Quang-fi, 14. Yun-nan, 15. Quew-chew; 7. Ho-nan, 8. Shang-tong,

The northern, called the Tartarian provinces, are fe-parated from proper China by a wall of brick and stone still almost entire, one thousand sive hundred miles in length, being carried over mountains and vallies from Mongal Tartary in the west, to the Kang sea in the east. This wall was built by the Chinese to prevent the incursions of the northern Tartara, but is not of much use at present, since China and those Tartarian provinces have been united

the northern Tatara, but is not of much use at present, fince China and those Tartarian provinces have been united ander one prince.

Pe-king, Shan-si, and Shen-si, are the next three provinces which lie within the grat wall. The three provinces of Shang-tong, Nan-kin, and Che-ky-ang, lie apon the eastern coatt of the Chinese fea: Ho-nan, Huquang, and Kyang-si, are midland provinces; Fo-kyen, Quan-tong or Canton, and Quang-si, upon the south-east, are maritime provinces; and Se-chuen. Chew-chew, and Yun-nan, are situate in the south-west, and adjoin to Tonquin and western Tartary.

Those islands in China, which are the most extensive, ste, Formosa, near the west of Fo-kyen; Ay-nan, south-west of Canton; Macao, a small island in the mout of Canton river, inhabited by the Portuguese; and the Prilippia.

The chief rivers are, 1. Yamour, which divides chinese from Russian Tartary, on the west.

The chief rivers are, 1. Yamour, which divides chinese from Russian Tartary, on the west.

"Those internative, and, running castward through the kingdom: of China, falls into the Kang sea. 4. Kiam, which also rises in western Tartary, and, running castward, discharges itself into the gulf of Nan-kin.

"Ensides these rivers, spacious canals are cut through the count of them.

Essides these rivers, spacious canals are cut through the count of them

Ecfides these rivers, spacious canals are cut through the country; and so many of them, that a traveller may go to every town almost by water. Over these canals are mag-

nificent bridges, whole arches are of marble, and so high, that vessels may pess through them with their maste standing; but the most remarkable is the string bridge, built between two meastains on the river Wang-ho.

Their towns stands so thick upon their rivers and canals, that a traveller is no sconer passed through one town, but he comes in sight of sanother; and whenever there is a town on shere, there is another of boats upon the water, informuch that it is said, almost as many people live upon the water, sucon the land. water as upon the land.

namy of the Chinefe ate born, live and die in them, and keep their hogs and poultry on board. Befides thefe veffels, there are rafts or floats of timber perpetually going up and down their rivers and canals, upon which there are but, little hats or cabbins, and here the people live till they have dipoled of their timber. Thus great quantities are conveyed upwards of a thoufand miles, from the fouthern provinces almost to Pecking.

Though the provinces of Yun-nan, Quew-chew, Sechuen, and Fo-kyen, are mountainous, yet China in general is a flat country. Che-ky-ang, indeed, the eaftern part whereof is a plain, fruifful country, hath high mountains towards the west. The country of Quang-tong and Quang-si, which are admired for their fertility near the fea-coaft, are encumbered with rocks and barren mountains at a diffance from the flore. The provinces of Kyang-fi, Shan-fi, and Shen-fi, have more mountains than valleys.

SEC.T. 11.

Treats of the principal terons, palaces, templer, cities, and number of people, in China.

THE Chinese towns are usually built in one form, that is square, where the ground will admit of it; and the principal gates open towards the four cardinal points, east, west, north, and fouth; and spacious streets, crossing each other, rua the whole length of the town. We shall here mention the chief towns of every province, and give a particular description of those which have been thought best descripting tha notice of travellers.

Niuche is the capital of the province of the same name. Pitchee is the capital of Corea, and Chin-yan of Lea-tonge. These are situated without the wall.

The capital of the province of Pe-king, and of the whole

There are fituated without the wall.

The capital of the province of Pe-king, and of the whole enapire, is of the fame name. It is fituate in one hundred and cleven degrees of eastern longitude (making London the first meridian) and in fortw degrees of north latitude. It flands in a fruitful plain, not far fouth of the great wall. The town confishs of two cities joined together, one called the Tattar city, and the other the Chinefe city; for when the Tattar conquered this country, about one jundend and

the Tattar city, and the other the Chinefe city; for when the Tartara conquered this country, about one hundred and the Tartara conquered this country, about one hundred and the years ago, they drove out the Chinefe, but gave them are to build another city contiguous to the old town, who was then pretty near the form of a fquare, but fince addition of the other, makes an irregular figure. These cities are twenty miles in circumference, besides the suburbs: the whole contains two millions of people. The emperor's palace, including the parks and gardens, is near four miles round, and stands in the middle of the Tartar city.

Pe-king is ferrounded with a wall and ditch; the principal fireers are one hundred and twenty feet broad, and three miles in length. Every tradefman fets up a board before his shop painted and gilded, on which are written the names of the goods he fells; and, being adorned with colours and freamers on the top, make a very gay eppearance. The walls of the Tartar or royal city are above feventy feet high, and perfectly cover the town, for the houses are very low, being built no higher than the ground

floor, because Pe-king has fuffered much by earthquakes, !!

floor, because Pe-king has fuffered much by earthquakes, which are frequent here.

The gase of this city are fill higher than the walls, and have a fort of equal height built before them: the arch of each gate is built with marble, but the walls are of brick; they have no outworks beyond the walls, but there are fquare sowers in them at proper diffances from each other.

The firetes of Pe-king are perpetually crowded, though a woman is feldon feen in them, the reason whereof may be that all provisions are brought thitther by land carriage, no river or canal coming within three miles of the city, which occasions the sire? I to be filled with carts, camels, horfes, and other beafts of burthen, with their drivers, infomuch that it is difficult passing the gates in a morning or evening. The artificers or handierast traders also contribute to increase the esoud, as they work in the house of those that employ them, and are perpetually looking out for business. The magistrates also have their guards when they appear abroad, and all people of distinction a numerous attendance, which makes the town appear fall more populous and thronged. dance, which and thronged.

and thronged.

The emperor's palace is three miles in circumference; and confilts of nine wast courts, in the farthest of which she resides. This apartment is supported by large marble pillars, the roof covered with gilded thining tiles, which look slike gold. It is assented with supported by large marble steps the rooms, adorned with carvings and paintings, make a very grand appearance, and three or four thousand mandarins or great officers are always attending when the Prince gives audience on public occasions.

The chief mandarins have very magnificent palaces, which take up a great extent of ground, as they have but one stoor; they consist of several open courts, in which the buildings are not contiguous; they are so fond of privacy, that they have no windows towards the street; and will not suffer their neighbours to have any, that can look in upon them; and within the gate is always a skreen, to prevent a stranger's looking in: the furniture of their houses conthem; and within the gate is always a likreen, to prevent a franger's looking in: the furniture of their houses con-lifts of pictures, japan cabinets, chairs, tables, and var-nished skreens, and their beds are exceeding sine. In sum-mer their curtains are silk, finely wrought, or the sinest gause to defend them against the gnats; in winter their curtains are of thick coasse silk, and their counterpanes of the same. They have no sather-beds, but lie upon quilts or mattreffes.

This great city is guarded both day and night by foldiers, who patrole the fireets with their fwords; they also earry whips in their hands, with which they lash without distinction all persons concerned in any riot or outrage, to the disturbance of public tranquility; there is, besides, in this city, a garrison of flaty thousand men, to preserve good order, and prevent irregularities. No clubs, balls, or other nocturnal meetings are permitted here. In the principal streets they found the five watches of the night on a drum of an extraordinary fize, or elfe on a large bell, a drum of an extraordinary fize, or elle on a large bell, fuppofed to be site largeft in the world, except the great bell of Moscow. This great bell of Pe-king was cast near four hundred years ago, and weighs twenty thousand pounds; but the Chinese bells afford a very dull found, having only wooden clappers: A watch consists of two hours;

Nan-kin, the capital of the province of that name, and heretofore of the whole empire, is called the fouth court, as Pe-king is the north court, situate in one hundred and eighteen degrees of eafarm longitude, and thirtners of the strength of the province and the strength of the

as re-king is the north court, ituam in one hundred and eighteen degrees of eaftern longitude, and thirty-two degrees of north latitude. It is ftill more populous than Peking, flanding on the river Kiam, which is here three miles broad, and forms a very commodious port, Here filk, and all other Chinese manufactures, may be purchased at the best hand. Besides the river, there are abundance of navigable canals, which bring the merchandize of every province thither.

PORCELANE TOWER

Before the gates of this, and almost every other great town, are two magnificent towers erected, and near them a pagod, or idol temple, dedicated to the genius, or guardian angel of the place. Triumphal arches also are erected to the of the place. I running a school and are elected to the honour of such great men as have been esteemed ornaments to their country. Temples also are erected to the memory of Consucius, the philosopher, and other benefactors. The granded of of lithe Chinese buildings, is the porcelain tower, which stands before one of the gates of Nan-kin, being above two lundred feet high, of an octangular figure, containing sine stories, each story benching in, and decreasing in breadth, as it increases in height, forming a kind of pyramid; it is faced with porcelain, or china-ware, from whence it has its name; above the eighth flory is a cupola, which rifes thirty feet higher than the tower, with a gilded ball over it; this tower has flood upwards of three

hunders years, and is effected the most elegant building

The capitel of Quan-tong is Canton, fituate in the fouth of Chira, near the mouth of the tive: Ta, and is the most famous temple of Paulin-Shi, in which are ten thousand imager.

The capitel of Quan-tong is Canton, fituate in the fouth of Chira, near the mouth of the tive: Ta, and is the most reforted to by foreign merchants of any part of Chira, it is almost the only town the Europeans trade to at prefent, and confequently is immensely hich; it is said to exceed all the cities of Afia in the number of pageds or ided temples, palaces, or poblic buildings, and there are in it not, fewer than thirteen magnificent triumpal arrives. The firects are paved, but narrow ; the shops saide a fine shews and those tradesmen, who deal in the laws kind of goods, ofually shand in the same question of the town. Their windows, in summer, are of cane, to let the air through; but in winter, of oyster-shells, scraped till they are transparent, which however give but a seeble light. They have charcoal fires in the middle of their rooms in winter. The walls of their rooms, instead of hangings, are covered with thin white fires in the middle of their rooms in winter. The walls of their rooms, inflead of hangings, are covered with thin white paper. There is a market held almost in every street, for all manner of provisions. Frogs are esteemed the most delicious food, and bear a much greater price than any other meat, though they are of a blacklish hue. Viper broth was in reputation here long before it was in London. Here is the remarkable water-castite, which is 6 much admired by travellers. We may here remark, respecting the diet and dress of the people of this empire, that the Tattara and Chinese, by their intermarriages are become in a manner the same people: they are not to be distinguished either by their stature or featores, any more than by their habits, in which the government requires both nations to be onliin which the government requires both nations to be unl-

The town of Macao is fituate on a fmall island at the mouth of the river Ta, or Canton. The Portuguese took possession of the island in their first voyage to China, and had a vast trade here; but were at length forced to submit to the dominion of the Chinese: however they are peritted to govern their own people by the laws and sufforms of Portugal. The Romish missionaries, when they are persecuted and driven out of China, usually settire to this

Fu-chew is the capital of the province of Fo-kyen.

Amoy, or Emoui, is a port-town in the province of Fo-kyen, Amoy, or Emoui, is a port-town in the province of Fo-kyen, opposite the island of Formosa. The English had a factory here; but were obliged, by the unfair dealings of the Chinese, to discontinue their voyages thither. Nimpo, which is another large city in the province of Che-ky-ang, has a commodious harbour, and a very great foreign trade, especially with Japan, from which it is different but time due (si)!

tant but two days fail.

Nan-yang is a city on the river Kiam. Tong-chew, a city one hundred and eighty mile north-west of Canton: Kiew, Hew-kew-hien, a city on the river Kiam: Shawchaw, a city one hundred miles north of Canton.

The town of Chusan is situated on an island near the coast of Che-ky-ang and Nan-kin, north-east of Nimpo, where the English once had a factory; but not finding the advantage in trade they expected, retired to Canton, which;

advantage in trade they expected, retired to Canton, which; as we before observed, engrosses most of the European trade; The rest of the cheef towns of the several provinces are Tay-ven, capital of the province of Shan-si; Sin-gan, capital of Shen-si; Koy-Ong, capital of Hon-an; Hang-chew, capital of Che-ky-ang; Nau-chang; capital of Kyang-si; Vu-chang, on the river Kiam, capital of Huquang; Ching-try, capital of Se-choen; Quew-yang; capital of Quew-chew; Yun-nan, capital of Yun-nan; Quew-lin, capital of Quang-si. In the whole, it is computed, there are one hundred and aftry capital effice; one thousand three hundred and twelve of the second class; two thousand three hundred and fifty capital cities; clafa; two thousand three hundred and fifty-feven fortified towns; ten millions of families, and upwards of fifty tined towns; ten intimons or amines, and upwards or nity millions of people. Some compute there are fifty-eight millions of people in China, which, it is faid, may be easily known by the poll-tax; every man being obliged to hang a little table over his door, specifying the number of south he has in, his house, the truth of which is from time to time examined by an officer appointed for that purpose.

SECT: III.

Of the perfens, habits, and genius of the people of China.

HE Chinese men are not very handsome in their perfons; their flature is rather low; nor are their complex= ions to be admired, especially in the southern provinces of the empire, which lie near the tropic, where the heat of the sun must necessarily make them taway; but in the morthern provinces, both their flueure and complexion ere much mended. They have flat broad faces, black hair, little dark eyes, thort nofes, and thin beards; pulling more ferving only whitters and forme long hairs on the benommentation. The mail on the little finger of their left hand, is fulfered to grow a great length beyond the finger, and feraped and polithed with abundance of care; by people of condition, this being looked upon as one of the diffinguishing marks of a gentleman in this part of the world.

world. The Chinase were mighty proud of the hair of their heads, and used to tie it up as our women do in a roll; but the Tartar sovereigns have compelled them to shave sheir heads, leaving only one lock on the middle of the crown, over which they wear a cap shaped like a bell, which does not come so low as their cars, and therefore ahey earry a fan is their hands to ferean them from the sun. The Chinese who left their country on the Tartar conquest, and sied to the neighbouring islands, still wear their shair.

wear their hair.

The men wear a veft, with full long fleeves, which come down to their fingers ends. Over the veft they wear a look coat, fhorter than the veft, with fhort fleeves; and when they vist, or receive company, they have a gown thrown over all; they wear also fhirts and breeches, or rather trowzers, which reach down half way of their legs, thefe are made of fattin quilted; they wear also fisk boots, or bufkins quilted, an inch thick, and over the foot put on a flipper, with a thick fole, for the boots have no fole: men of fathion are never feen without their boots, in coatpany, either at home or abroad. But though the Chinese men are thus cloathed, when they are in company, the natives of the fouthern provinces throw off their caps, gowns, veft, &c. when they are with their families, or intimate friends in private, and wear nothing but a thin pair of drawers; and the common people, mechanics and labourers, go about the fireets with only a pair of drawers

labourers, go about the fireets with only a pair or unaweson, and are exceeding tawny.

Great coats are worn by the Chinefe in rainy weather, which are covered with a kind of green oil-fkin; and they have boots made of good ftrong leagher, when they ride out. At their girdles, they hang their pouch of tobacco, their pipe which is brafs, their handkerchiefs, and the little ehop-flicks they eat with, and their knife, for they have no other pocket. In winter people of diffinction wear rich furs, lamb-fkins, or quilted cotton. Their feynmetars, or broad fwords, are worn on the left thigh with the point bending forward.

Officers of flate and magifirates, have fome animal embroidered on their cloaths, either in gold or filver, which

Officers of state and magistrates, have some animal embroidered on their cloaths, either in gold or filver, which expresses the nature and dignity of their reipechive offices. The military men chuse lions, dragons, or tygers; and the civil magistrates, birds: which may not be improperly stiled their arms, as they distinguish the several degrees of honour they have been advanced to, though these are disused when they are out of place; honours not being hereditary in China.

ditary in China.

The women, who are kept at home and not exposed to the fun, are fair enough; and, except that they have little eyes and short noses, may vie with our European beauties. Their features are in other respects tolerably engaging. Their principal beauty is thought to lie in their little feet. As soon as a girl is born, her feet are bound up so hard, that they cannot grow to their natural fize; which makes them walk a little aukwardly, the foot of a grown woman not being higger than that of a child of three years of age. They wear embroidered filk shoes, in shape much like our womens, except that they are turned up at the toes, and that the heels are round and of an equal bigness from top to bottom: these they make themselves, and are very proud of shewing their sine feet when they have an opportunity.

The ladies usually dress in their hair, part of which is made up in a roll, and fastened with a bodkin; the rest is divided into two locks, which fall gracefully upon thencek. In the porthern provinces they wear a fort of caul of thin filk over their hair; and in cold weather, in Pe-king, they wrap a kind of cornet, or black lood, about it. They wear, as the men do, a long vest of fattin, red, blue, or green; the elder women chuse black or purple; over this, they have a loose gown with wide fleeves, so long, that they would reach the ground, if they were not held up.

they would reach the ground, if they were not held up.

The Chinese youth, being bred up under a strict diseipline, and taught to pay the profoundest reverence to their parents and superiors, they soon get the command of their passions, or at least, find means to conceal them. When they have an interest to manage, no people know better

helv to infinuate themselves into the good opinion of those they deal with, or improve an opportunity when is effert; nor will they decline the north insertious undersking, where they have any rain in view. Throngs of people are perpetually in motion upon their rivers, on their coasts, and upon the roads; trade and commerce feemed be the foul of that people, and the spring of all their actions; nor do they much feraple imposing on shole they deal with, of which many of them are fo far from being assumed, that they will laugh at the man they have bubbled. A foreigner goes in great danger of being cheated if he truits to his own judgment, and if he employs a Chinese sactor, as is usual, both sixtor and merchant will sometimes combine together to deceive the stranger.

firanger.

They continually apply themfelves to difcover the inclinations, humours and tempers of those they have any commerce with; and keep up a fair correspondence even with their greatest enemies. However, there do not want instances of fair dealing, and open generous usage, and a fidelity not to be corrupted.

There are no duels arroungst them; all their revenge is fecretly managed, and they can not only dissemble their malice, but seem patient even to infessibility, till they have a favourable opportunity to strike home. Their great men are engaged in a perpetual pursuit of places and great posts, and earry on their designs by bribes and presents, as in other courts: yet as the laws prohibit these practices, and refer all so the merit of the candidate; the most substant designing amongst them ever put on the greatest appearance of modelty and self-denial: but however the Chinese may excel in cunning, it is observed, that their courage is not extraordinary.

SECT. IV.

Of the diet, liquors, ceremonies at table, falutes, vifits, &c. of the Chinafe.

THE Chinese are far from being nice or iupersitious in their diet; they do not only eat all kinds of stefs, fish and soul as the Europeans do, but horse stefs, fogs, or scarce any sort of vermin resused; but rice, roots, pulse and garden-stass are the common food. Broth and soups they have also made either of stefs or sish, which they mix with their rice. Salt and pepper are never brought to table, the meat being scassoned in the dressing. They can their stefs, and broiled; but it is cut into little square pieces like dice before it comes to table. They use neither cloth, napkins, knives, spoons or forks; but two little round sticks of chony, or other wood, sometimes tipped with silver at the ends, with which they take up their meat very dexterously; and for their rice and broth they hold the cup to their mouths and lade it in with their little sticks. They use high chairs and tables, contrary to all the people of the east besides, who sit cross legged upon the floor. Every person almost has a little acquered table to himself at an entertainment, on which is set and some times the side and since in little china dishes or saucers, and some

Their principal liquor is tea; they feldom, if ever, drink cold water; possibly their water is not wholesome till it is boiled, and settled, for it is very foul, especially that of all the rivers, which carries with it a blue or yellow sline; and the original cause of their drinking tea probably was to refine the water, and make it more palatable. They have strong liquors also, particularly hockshue, which is brown beer made of wheat, and famshue, as they call all spirits, but have no wine, though the counterparts.

try abounds in fine grapes.

They are exceedingly ceremonious at entertainments; every one handles his little chop-flicks, and carries the meat to his mouth when the reft of the company do. They drink affo all at once; taking the cup in both hands, they first carry it as high as their heads, and then drink without speaking a word. There stands a man to keep time, that one may not eat or drink before another; to hegin first, or make another wait, is reckoned extremely rude. When a fresh dish appears, they souish their little-flicks again, and having taken two or three mouthfuls, the master of the erremonies makes a sign for them to lay down their arms, which they do exactly in the same order they took them up. Then the squor is prefented them, of which they sip a little, but no man drinks more than he cares for; if he makes the motion it is sufficient:

thus they fit filent at table three or four hours, till the matter gives the fign to rife. Then they walk ir o the garden, and at their return find a defart prepared, c mifting of dried fruits and fweetmeats, which they ear with their tea, and a fet of players are brought in to act a contedly for their diversion.

These ceremonies required at their entertainments are efteemed very ridiculous and troublesome by strangers; but they are looked upon in another light by the natives; they observe they are part of the constitution, and contribute towards civilizing their people; that those outward condescentions and obliging expressions, required of all forts of people, in high or low life, tend to promote peace and good order in the state, as well as in every neighbourhood; that the prohibiting course and source. ous language prevents a great many quarrels, and as for oaths and oblean "Fourfe, thele are never heard of amongs the Chinea." They falute one another by laying the right hand on the breat, and bowing a little; and the right hand on the breatt, and bowing a little; and when they approach a prince, or great man, they kneel upon one knee, till they are bid to rife; but it would be an affront, it feams, to falute a great man as he paffer along the firects, unless the person has particular business with him; but the people stand up when such a one passe by, sixing their eyes upon the ground, and with their arms

acrofs.

When a gentleman defigns to vifit another, he fends a fervant to meet him with a note, intimating his intention; and being informed he is at home, he fets out, and is received according to his quality. If the perfon he goes to vifit is much above him, the perfon vifited does not fit out of his chair; if they are equal, he receives his guest at the hall-door; and if the vifitor be much his charged with the decrease him when the charged in the half-door. superior, he goes out into the street to meet him, where they embrace each other with a great deal of feeming affection, and a fet of fhort compliments part, which are preferibed them; the one knows what he is to fay, and the other what he is to answer, and they stop at every door, the other what he is to answer, and they so a tevery door, where their bows and cringes are repeated; one says, "Pray walk," and the other answers, "It must not be;" which being repeated three or four times, the stranger suffers himself to be overcome, and goes on to the next door. If there be more guests than one, when they come into the room where they are to be entertained, the next dispute is who shall fit uppermost; and after a great deal of cringing, every one takes the place which belongs to him, according to the post or employment he has in the government; they are obliged to sit upright, with their eyes sixed upon the ground, their hands stretched out on their knees, and their feet even; they are to look grave eyes lived upon the ground, their hands firetched out on their knees, and their feet even: they are to look grave and composed, and must not be too talkative; and fometimes there is not a word spoken more than the compliments prescribed. When they do speak, it is with all the submission imaginable, and never in first or see and person; for instance, instead of saying, "I am obligate by you for the savour you have done me," they will say, "The favour my lord has done me, who am so much beneath him, has hid his tervant under the hisbest obligation." And has laid his lervant under the highest obligations." And instead of faying, "I present you with this curiosity which my country produces," they will fay, "Permit the servant to offer his lord this curiosity which his poor country affects. Again, whatever comes from his lordthip's nohoras." Again, whatever comes from his lordhip's no-ble province is well wrought, or extraordinary fine. And never fay, "I" or "you;" but "your fervan:" or "your feholar" did fuch a thing, and, the doctor or my lord faid this or that; and not, you lid, or you did it; this would be reckoned the height of incivility, and a manner of fpeaking only to be used to flaves.

Tea is the usual liquor drunk upon a visit; and much ceremony there is used in taking the dish, carrying it to one's mouth, and fetting is down, or returning it to the fervant; and then they take leave, much the faine cringes are repeated as when the buefts arrive. Ambaic ors are allowed mafters of the ceremonies to infirudt them forty

allowed maffery of the ceremonies to infired them forty days before they are admitted to their audience, that they may commit no blunders, and many of the Chinefe will be offended with ftrangers if they omit to cringe and fawn, according to the rules preferibed them.

The Chinefe are fo far from putting off their caps when they falute one another, that it is reckoned very indecent to appear before their betters bareheaded all upon this account, in center they are the country, the count, in conformity to the cuffer ili country, the ita appear-Tette

have played away their effaces, wiver, and children; which they will fometimes hazard upon a card, or a fingle that of a die.

SECT. V.

Gives a description of the highways, travelling, and carriages of the Chinese.

HIGHWAYS are thrown up from one end of the kingdom to the other, though more people travel by water on their canals, than by land; and their grand canals are faced with stone, the veffels being drawn by the

canals are faced with stone, the vessels being drawn by the strength of men.

Their highways are considerably raised over vallies and low grounds; and they cut passages through mountains and rocks, that travellers may the more easily pass them. Their roads are above twenty yards wide; and at proper distances they have little wooden buildings, thirty feet high, called mercuries, erected upon them, to direct the traveller; they are not unlike their triumphal arches, and stand at about a mile and a half distance from each other; over them are written in large characters the names of the nano at about a mic and a nair dinance from each other; over them are written in large characters the name of the towns whither the roads lead, and their diffances, which are exactly measured at the charge of the public. The country milita keep guard here, and have a guard-houfe, for the fecurity and protection of travellers, and forward all expresses and dispatches that are sent to or from count. an expresse and dipatches that are tent to or from court. The guards examine people that go armed, and, if they cannot produce a pass, detain them. Such care is taken, that a robbery is seldom heard of: another reason there are so sew robberies, may be, that all people are employed; for it may be said with a great degree of certainty, that there is not an idle land to be found from one end of the empire to the other.

empire to the other.

Their roads are conflantly kept in good repair; which is stributed to the Emperor's annually vifiting the different provinces; and whether he goes, or not, it is given out that he defigns to make a progrefs through fome part of his dominions; and if he finds the roads bad, the governors and magistrates of the places through which he passes are in danger of losing their heads. It is, however, very inconvenient travelling by land in a dry season, the foil being light and beaten to powder by constant trampling and the numerous carriages, informuch that they travel all day through clouds of dust; which is one reason why many people chuse, in summer-time, to go by water,

The Chinese have horse, mules, and camels to ride on, but they chiefly travel in litters carried on men's shoulders, or by mules. Some gentlement ravel in vehicles which they denominate chariots, with two wheels, not unlike

or by nules. Some gentlemen travel in vehicles which they denominate chariots, with two wheels, not unlike poli-chaifes. Their travelling-chairs are made of cane, but have no windows, only the upper part of the front is open; the chairman carry the poles on their fhoulders, and not in their hands as with us. The Tartars ufually ride on horfeback both in towns and upon the roads; their faddles are made like thofe in Turky, and, like the Turks, they are the travel that their hards a brooff as high sy the they ride very short, with their knees almost as high as the top of the fadule; and when they engage an enemy, they rife up and fland on their flirrups, to give the greater force to the firoke they make.

Goods are frequently earried by porters on their backs; the roads are full of them; the boats are drawn by men almost naked, both driven hard and used almost as barba-

roully as beafts of burden are in this part of the world.

Upon all the roads are houses for the entertainment of Upon all the roads are houtes for the entertainment of the governors and officers, going to and returning from their posts, where they live at the public expence, and have horses and carriages provided for them at every stage: and here all other travellers may have the same conveniencies, that can procute an order for it, which is not difficult to obtain; and if they have not such an order, may be accomplished. commodated with every thing they want at a reasonable price. A book of the roads is published by authority, wherein the distances of towns are ascertained, and the stages proper to rest at; and the men that carry chairs or litters, it is said, will travel five miles in an hour.

SECT. VI.

Contains an account of the nature of the foil, its preduce; their hufbundry, plants, animals, mines, Gc.

S Cluna, like other countries of a large extent, con-S Claina, like other countries of a large extent, con-fifts of hills and vallies, we must therefore maturally spectro meet with a great variety of foils, grain, fruit, plants, and animals. The mould or vegetable Carth is exceeding light and porous in most provinces, so that a single ox or buffalo will draw the plough, and in some places the ploughs are drawn by men. The mountainous provinces of Shan-si, Ho-nan, Quan-tong, and Fo-kyen indeed are not very fit for tillage, but they are covered with excellent timber. In the provinces of Pe-king, Shan-sing, and Fo-kyen, wheat and barley thrive well; and in Hu-quang, Nan-kin, and Che-ky-ang, which are low countries, and frequently shooded, they have great might yet the state of the state of

well; and in ru-quang, wan-kin, and che-sy-ang, water are low constries, and frequently flooded, they have great plenty of rice.

When they have cleared a field of weeds, that is intended for rice, they turn the water into it, and reduce it to a perfect hotch-pot; and having fown the rice firl in heds, where it comes up too theds to yield nuch, they randplant it into their fields, when it is grown fix or eight inches high, and supply the fields with water, in which it grows till the tree is almost ripe; a fare which the water being dried up in the fair season, after which the water being dried up in the fair season, they cut and thresh it out, usually in the fields where it grows, and in several provinces have two crops in a year. The rice is more like oats than my other grain; the straw hard and folid, of which whists are made; and we frequently find some grains of rice lest in the straw. There needs no dung to render the land fruntful which is fown with rice; the water supplies the place of dung, as well as rain; but for wheat and barley, they use all manner of compost, and frequently burn the turs, the assessment of compost, and frequently burn the turs, the assessment of compost, and frequently burn the turs, the assessment of compost, and frequently burn the turs, the assessment of compost, and frequently burn the turs, the assessment of compost, and frequently burn the turs, the assessment of compost, and frequently burn the turs, the assessment of compost, and frequently burn the turs, the assessment of compost, and frequently burn the turs, the assessment of compost, and frequently burn the turs, the assessment of compost, and frequently burn the turs, the assessment of compost, and frequently burn the turs, the assessment of compost of the composition of the c ditches; they do not lofe an inch of ground that will produce corn.

This country, extending from the tropic of Cancer to the latitude of fifty degrees and upwards, has all the fruits proper to hot and cold climates, and forme plants that are not found in any other part of the world. They have most of the fruits that are known in Europe, as peaches, apricots, figs, grapes, apples, pears, walnuts, chefouts, and olives, but make no oil of the laft; there are also cocoas, mangoes, guavas, plantains, ananas or pine apples, which they have brought from India, they have likewife pomegranates, metons, oranges, lemons, citrons, limes, and other rates, merons, oranges, temons, cirrons, times, and other tropical fruits; and from hence the Portuguefe transplanted those fine sweet oranges, called China oranges, which come to as great a perfection in Portugal as in China. There is a great variety of sweet oranges, befides those imported by the Portugues; some of them are prescribed to skek people, being roafied in the embers; others are squeezed flat, and converted into a west sweet meas. ed flat, and converted into a wet fweet-meat, of which jars are frequently brought to Fugland

have also some fruit which do not grow in Europe, They have also some fruit which do not grow in Europe, particularly the fruit light to in great efteem among the Chinese, and is peculiar to the country. It is a kind of plum of the five of a large walnut, the meat is fost and waterish, and has a most delicious slavour, and has a long stone; this fruit being dried turns black and wrinkled like a prune: they preferve them all the year to eat with their tes, to which it gives a sharpness much more agreeable than

fugar.
The largest fruit that grows in China, is the jaka, which has within it a great many yellow nuts, that afford a deli-cious kernel. This fruit grows to the body of the tree,

There are trees in the province of Quang-fi, which in-flead of pith, have a fost polp, of which they make flour

flead of pith, have a fort poip, of which they make how of a pretty good tafte.

The varnith-tree, whose leaf and bark resemble the oth, feldom grows more than fifteen feet high. When it is about a foot in compass, they make incisions round it with a pruning-k nife, and hang vessels underneath them in the evening, and find a considerable quantity of the liquor in them the next morning; but the people who draw the var-nish, or work in it, are forced to cover themselves from head to foot, or they endanger their healths, if not their lives. This varnish preserves the wood, besides giving a beauty to cabinets.

An oil is also drawn from another tree almost like varnish, which has not those ill effects which the former has : this is fometimes called lack, from whence things washed in it are called lacquered ware; but the words lack and var-nish are most commonly mixed together, and used indis-

ferently for each other.

China is remarkable for a fort of white wax, not made by bees but gathered from trees, which they have in fuch abundance, that it ferves the whole empire It is found which in the province of Hu-quang and Shang-tong; it is produced by an infect not bigger than a flea, which has a fting to sharp that it pierces the bark and even the body of the trees. The country people gather the eggs of this infed in the fyring, from whence proceed worms, which they place at the foot of the trees that are proper for them 1 they ereep up and dispose themselves through all the branches, and penetrating to the very pith, convert, their nourishment into wax as white as frow, which they work out of the hole they have made; It hangs convealed in drops about the tree, and the people gather is and make It into cakes for the market. Their tellow, which to mode due of the cates head of plants. Neither cloves, nutmegs, mace, or cinnamon, grow in China.

There is another fruit peculiar to them called touyers, or dragon's eye, it is exactly round, yellowith when it is ripe, full of julies, and very cool and inoffensive. Of all their trees, their folkers tree is the most remarkable; it is of the height of a cherry-tree, the leaf theped like a heart, and of a larely red, the fruit is encloted in a rind divided into three fegments, which open when it is ripe, and differed tree white kernels as hig as a fmall nut; these trees being planted in a frait line chequer-wife, this mixture of white and red nakes them look like a parterre of flower-pots at a diffence; but what this tree is most valued for is the kernel, which has all the qualities of tallow, both in finell, colour, and confidency, and they make their cauldes of its but the wick balase.

qualities of tallow, both in finell, colour, and confifeency, and they make their caudies of it; but the wick being made of a small dry flick instead of cotton, they cannot possibly burn so clear as ours, and create a very offensive

HNESE

They have also a tree like the walnut-tree peculiar to this country, which bears a feed about as big as a pea, much like pepper, and which the inhabitants use indead of it. Their kitchen gardens abound in all manner of herbs and fallads, room, peas, and beans, and a variety of other

No fountains are to be met with in any part of China,

No fountains are to be met with in any part of China, except in the Emperor's gardens.

Tea or tcha, is a plant peculiar to this country: is usually grows at the foot of some mountain, and tho best upon a stony soil; the root resembles that of a peach-tree, and its slower that of white wild reses. The tree is of all fizes; from two feet to an hundred in height, and some of them are so thick, that two men cannot grasp them, according to the Chines herbal. But though there may be seen very high and large trees, as thorns will sometimes rise to a great height; it is accounted but a buth or shrub, and grows about as high as a rose-tree generally. It is planted upon little hills, each plant about three feet distance from another, and does not commonly grow wild. A judicious traveller tells us, he saw this plant in the province of Fo-kyen, where it grew upon the side of a little hill, and the plant was not above five, or fix feet high; that several stakes an inch thick a-piece were joined tothat feveral stalks an inch thick a-piece were joined to-gether, and dividing at the top into teveral little branches, formed a kind of cluster like our myrtle: that the trunk feemed dry, but bore green branches and leaves; the leaves are narrow, ending in a point, and were an inch, or inch and half long, and indented; that the oldest were white and brittle, and tafted bitter; the young ones were fost, smooth, redith and transparent, and pretty sweet to the

The three forts of tea commonly brought to Europe, are all from the same plant, and only the featons of the year when it is gathered, the different manner of curing it. nd the foil makes the difference. Bohea or volij, fo called from some mountains in the province of Fo-kyen, where it grows, is the very first bud gathered in the beginning of March, and dried in the shade: the imperial ginning of March, and dried in the linade; the imperator bing tea is the feeood growth in April; and fingle or common green tea the laft, in May and June, which are both dried in little pans over the fire. The tea firtub is an ever-green, and is in the flower from October, to lanuary. The feed is ripe in September and October, to lanuary for one fresh and full feed there are a hundred naught. Its feed veffels are tricapfular, each capfula containing one mut or feed; but though there be the veftiges of feveral, only one comes to perfection. It may be necessary to observe further, that we are assured the bohea is cured by laying the leaves on hot copper plates, and the other is dried in the open air, and both the green and bohes have fome in-gredient mined with them, which may contribute to pro-duce the ill effects complained of; for though all tea be naturally green, yet that colour is heightened by fome in-gredient, and the bohea is changed yellow by another in-gredient; but how or with what drugs this is done, the Chinese have hitherto concealed from us. We shall only. add, that this shrub does not grow either in the coldest o

the hottest parts of the country, but between twenty-five and thirty degrees of north latitude, and more in the province of Kyang-fi than any other; and though this plant will grow almost in any climate, it degenerates, and is good for little if it be transplanted and carried to any country, though lying under the same parallel.

Ginleng, or man-plant, (to called, because the tops dis-

or value in any climate, it degenerates, and is good for little if it be transplanted and carried to any country, though lying under the time parallel.

Ginfeng, or man-plant (fo called, because the sees disvides into two branches; retembling a state thingh); in the lates, and formations the most in bolling water. The natives aferibe the virtie of creay where simple to this plant; but it is fo fearer, and consignently clear, that none but the court, and people of condition, can afford so purches; i. A fingle dift is enough to drait; at a time a more would produce ill effects. This is gathered in Tax.ry, and the provintes the desire, and it is gathered in Tax.ry, and the provintes the define amon at the natives call it the plant which dispense in mentality, backes other pompous names.

The weeping-willow two is much admired by the Chinese, who plant it, but the fides of all their canals and rivers, and near mort of the sense in their gardens; they deem its finds the most posting of any, and their pattern posts mention it with secallar refield.

The iron-true is afto a fastive of this country; its wood is fo extremely hard and survive, while anchors are formed of it, which the Chinese assume that anchors are formed of it, which the Chinese assume that the very agreeable cating; it grows in marring grounds, is used in buildings, and the tubes of it are often converted into water-pipes. The herb of a theirsfurd years also grows in China. This, the natives present, saver also grows in China. This, the natives present, saver dies; and they have a flower called internal, names, caused, which spens like a rofe; and it is of a surple colour, freaked not, white, and yellow, which grows upon a flurub in their gardens but this country deer not paduce a great variety. Of flowers.

but this country deer not produce a great variety of flowers.

Some of the Cainele superors have not thoughs hufbandry below their care. Their bifuries relate, that the Emperor Ven held the plough himself; and that his Empres planted mulberry-trees, bred filk worms, and closthed her family with the filk they produced; and they have a verify fellival at the remal equinor, when the governors of towns and provinces, march in proceeding, with the infruments of husbandry carried before them. The Emperor Hisen, it is related, applied himself to the ploughing and fowing the ground three years successive y, and fere persons skilled in husbandry, to the most sidiant provinces to teach the people how to improve their grounds; and many books have been wrote, by their princes, on the subject of tillage.

Their animals are, camels, horses, exen, sheep, hogs, some few elephants, and all manner of wild beafts. Their best horses are brought from Chinses Tartary; those in the south of China are a small breed, not fit for draught, or to

HINESE melhod of taking WIL

fome few elegiants, and all manner of wild beats. Their best horses are brought from Chines of Tartary: those in the fouth of China are a small breed, not sit for draught, or to carry burthens. The black hogs, with bellies that touch the ground, come from this country. Their sheep are like those of Turky, having great tails that weigh several pounds. Here are elso rabbits and hares in great numbers. They have all manner of poultry, and hatch their eggs in ovens, heated with horse-dung, as in Fgypt; and here is an odoriferous sing, which produces walk.

They abound also in sea and river fish; and besides the common way of taking fish in nets in their rivers and canals, they make use of a large sowl, or cormorant, which shands perched on the side of a boat, and when the make gives the fignal, the bird takes his slight, and looks out for game, and having seized a sish, brings it to his master: some siy great numbers of these brids at once, and they will divide a river, or lake, amongst them, and return to their masters with the sish they have taken; and if the sish are large; they will help one another to bring it to the boat, after which they asks their slight again in search of more: having strings about their necks, which prevent their swallowing any, till their master leaves off, and then they are suffered to prey for themselves. Beddes the sish we have, there are some forts we want, particularly the gold and sliver sish; which gentlemen keep in basons in their gardens. They are not much larger than a man's singer: the male is of a sine red to the middle, and the rest, with the tail, of bright yellow or gold colour; the sense is a single of a silver white; the tail of either gathered thick like a nosegay: but these need no surther description, as some of them have been brought alive, and are now to be seen in England.

The Chimete have mines of copper, lead and iron; seen in England.

The Chinese have mines of copper, lead and iron;

and a mineral called retenag, which has the refeath of tin; and if it fall there are gold mines. It is cer gold is more elentiful in Chine than in any other com which is the reason that private merchants, when have made their fortunes by trading in facilities which in called the continuous properties. A the a

SECT. VII.

ning on account of the manufatheres and traffic, fill, percelane or china mars, We. of the Chinase.

Containing an account of the manufactures and traffic, fills, percelains, or china cares, Sec. of the Chinage.

This chief manufactures of China are, fills, porcelain or china-ware, and cabinet work. The Chinage fills is reckoned the fineft in the world. That which the natives elemen the beft is produced in the provinces of Nan-kin and Che-ky-ane; but foreigners fet a great value on that of Cannen. Greet quantities of raw fills are imported from thence at prefent, as the duties (which were layedy fo high that they amounted to a prohibition) have been reduced by act of parliament. Wrought either are also imported from China by the English End Indiacompany but these are exported again, being prohibited to be worn have. Both plain and flowered fills are brought over, but the figures are not raifed, confiding only of different colours and thades : the principal figure is unfaulty a dragon, being the imperial arms which Fo-hi, the founder of the empire, gave, it is faid, four thoutand years ago. They work another dragon in their filks, called mam, with four claves, which every one is pegnitude to wear.

They have also manufactures of relvet, crapes, druggers, forges, and sammies; but they make no cloth, though they have exceeding good wool. In the northern provinces they fet a great value upon English cloth, of which the drain and it was dearer than filk in China; but fince for many other European nations have traded to ladia, the demand for the English cloth has greatly decreased.

There is a very great manufacture of cotton linen in this country, and another fort of linen made of a plant colled lo, which grows the bigness of a man's finger, and is found nowhere else. When it is dry, they bind it up in fleaves, and water it like flax or hence. The fifth the ping good and light. The common people usually wear coarso him find in the winter; and people of condition line their velts and goons with the fables or for-fains in cool weather: they only turn up their fleeves, or border their velts with ermines, which are ver

ed, they form their vessels, and experts their to the sam anoming and evening; but take them in when the sam have hot, or it will warp them. Thus they slot where we well by degrees, and paint them as they find the sarth proper to receive it. They sife wish over this capa-with a fort of the armish made of the same manusche propers to receive it. They sife wish over this capa-with a fort of the armish made of the same manusche propers in secondard of, which gives them a particular leilyre. After this they sheet within a fund out in the particular leilyre. After this they sheet within a same and the same and the same and the same and addition of the same and the same and the same and the same and patients or being this nest were to perfection; but leis a great militake to think it takes up a hundred years, as some have separated may, it is evident that it is not many months about; for we fend them the patterns of several vessels from Europe, which they imitate, and return us the linds we proposed in a very short time. The voyages which formerly took up nine months, is now accompilited in about five.

Their chima-ware is of three different fore; and is difficultished by the different colour; the first is yellow, and though this is coarser than either of the other, yet it being the imperial colour, is always used in the Emperor's court, and is not allowed to other people. The second fort is grey, with abundance of small irregular lines in it crossing one another; these are the most beautiful, but wery rarely brought to Europe. The last said most common fort is white, painted with slowers, treas, and birds, of a paire slue, which our merchants principally buy up. I his ware is valued according to its stieness, its whiteress, the since where we it is thiness. The minesses is not to be udged of by the caverage where it is thiness. The finences is not to be udged of by the caverage war of the source of the porcelain will be tullied by a blush water which flowers from the colour. Their showers, it is observed, are feldom

tures they fend us. tures they fend us.

The process of painting the porcelain is somewhat tedious, and employs a great number of hands; it is the buffiness of one to make the coloured circle near the edge; another traces the flowers, which are painted by a third; a fourth is employed in the formation of birds and other animals; a fifth forms rivers, rocks, &c. and a firth is engaged in the figures of nien and women. Though they acquit themselves tolerably well in drawing flowers, and in the figures of the nient flower than the first flower than the control of animal come states institutions. Yet their representation of animal come states institutions.

acquit themselves tolerably well in drawing flowers, and in some other imitations, yet their representation of animals are for the most part very aukwardly executed; which must be either the effect of ignorance in the rules of symmetry and proportion, or must proceed from an affectation of the grotesque.

They dip a pencil into the varnish, when they paint in gold or filver, and draw the slowers and birds they design, and, letting it lie till it begins to dry, they hay on thin reaf gold and filver, or pin-dust. Ispan being the country we first received the fine cabinets from, we give this name to the lacquered ware we import from China and Tenquin; and perhaps it is all denominated Japan ware, because the Japance are the greatest masters in this art.

Paper in China is made of the inward bark or the bamboo, or large hollow knotted cane, which they beet, and

l'aper in China is made of the inward bark or the bamboo, or large hollow knotted cane, which they beat, and
make their sheets ten or twelve feet long; it is mighty
thin and smooth, and washed over with a fort of varnish,
to pevent the ink's sinking; but it is not so latting as the
paper of Europe; for being made of the bark of a tree, the
worm is apt to take it; and this is the reason they have no
antient manuscripts in China; their libraries consist only
of copies of authentic originals; being forced to transcribe
or reprint their hooks in the space of a few years.

The Chinase ink is composed of hamplac extracted
from several materials; but the best is made of hog's greate
burnt in a lamp; they mix a fort of oil and perfumes with
it, which gives it an agreeable sheel!, having made it into
a paste, they form it into little long square thicks with a
mold, and dry them; when they write they rub this sheels

clo col bris this car gile zen pri wis age his pas fro wo fur

In an Resident Reside

la a tittle water, and it will make a flinning black ink, which never spreads beyond the stroke of the pen of pencil, though the paper is 60 since that if formetimes sinks through, and disgraces the seriting.

The applies of sink in allesemed a very reputable employment in China; and is even maked among the liberal ere; from its wilkly, to the sciences, we may resolubly suppose. In the city of Boain whose, sumous for the finest, the ink-makers have several sinall apartments lighted up both day and night with lamps, where they manusisture this passing article.

The Chinese carry on a very extensive trade with supposers, most of the stations of Eutope importing the produce of their country; that they never nake any long sorvings the produce of their country; that they never nake any long sorvings the produce of their country; that they never nake any long sorvings the their scenary that they never nake any long sorvings the their scenars than the poole will the nations of least the Chinese trade in their own bottoms, and no people are more industrious, or will run greater beard to have a suppose the suppose of the strong trade in their country, it is macher, by their canals, every province being supplied, by water-carriage, such the marchandize of those that is the most distant from them, The proofs they make of the silte, chinese water, and other produce the finese articles, shoy for what price they passe upon them, and receive chiefly filver in return; and yet so cautious they are, that they will use suffici the nations that being them all this swelth to context have nature.

Canson is this only pair we trade with, and there we are adoption for the section of the silt requires; and, no say the return, it is only their grace distance from Europe, and the vert extent of the Chinese dominions, that some chinese them in the possibility of the ladian requires; and only a suppose and the vert extent of the Chinese dominions of them. The supercess them in the possibility of the passing the country. If China lay as mer

prefects, than to advance large forms for if they are never fo large, they will be forgot, if their memories are not fre-quently refreshed. An even temper and mild language, it is observed, are qualifications very necessary for our su-percargoes; they will do well to imitate the Chinese in these settless; who are greater proficients in the art of dis-ferences.

ibele acticles, who are greater proficients in the act of disfirmulation.

Very little le gained by any merchandize first to China,
she profit arises by the goods imported from China; and
there is the greatest care in the world required in the fupercarge to prevent his being imposed on. If he does not
view the goods with als imaginable cantion, and extanine
their weights and measures, he most expect to be cheated
and at last they have for many tricks, that it focus necefary to weight he goods in English scales after thems. Where
men have trusted to shely package, they have been as such
deceived as in their weights. They have found chefts,
boxes, and canisters, is exactly countsressed and marked,
that they have not doubted of their being their own, when
they have been changed for others, filled with damaged
goods, in the room of those they brought with them.

Our merchants, befieles thina-wares, tea, filled, and lecquered
ware, bring hame quicksflore, copper, examphire, fens, pictures; for, boran, lapus haull, gallingal and stanney, and,
notwinitismeling the orportation of gold is published; their
governors thems was taken sure, by it. Pieces of
uncoined filver are taken away by weight, inflead of money.
When payments are made in plate, such as diffies, bowls,
tankards, bassons, ce, they will cut a piece oue of them,
and try the sineness of the filver.

Goods

Goods carried to China, befides plate and bullion, are cloth, perpetuanas, cambet, red, black, blue and vinet colours, which do little more than pay the duties, and bring the prime coth. Lead turns to the beft account of any thing fent thither by the company. A private trader may carry coral in branches, amberbeads, horse-pistols with gilt barrels, sword-blades of about fourteen shillings a dosen; clocks and watches that look well, but are of a small price, and any new toy, which if he can carry on shore, without paying the duy, he may make a better voyage than with all filver; otherwise his charges will exceed his profit. These small articles last mentioned, the company do not concern themselves in a bot permit the officers and private men to try, their fortunes with them. We must observe here, that the watches some years ago emported from England to these parts, being of such indifferent workmanship, our rivals the French have in a great measure undersuned us in that branch of trade.

In the last century, the charters for monopolizing the

fure undermined us in that branch of trade.

In the laft century, the charters for monatoral grievance, and in the reign of Charles II, feveral eloquent speches were made in parliament against monopolizers in general, and this of the India trade in particular, but without the defired effect. It was however, expected at the Revolution, that this trade would have been laid open. But the company, by their powerful interest among fome leading men in the state, procured an act of parliament for an exclusive trader, which was farther fectored to them by the wast frame of money they advanced for the fervice of sec. exclusive trade; which was farther fectored to them by the vash fame of money they advanced for the fervice of government; and the immense quantity of wealth that has accrued to the company of late years from their trade and policifions in various parts of the Indies, together with the emoloment arising from it by long and otherwise, has most strongly cemented their former good understanding, and established their commerce on an immoveable basis.

Of the Chinese arts and sciences, language, learning, method

THE reason that the Chinese fall thort of the Europeans in the speculative sciences does not of the Europeans in the speculative sciences, does not proceed from any defect in their capacities or intellects (for they are ecknowledged by all to be a very ingenious people) but from their fluation, being feparated to far from the reft of the learned world, and converling with none but people fo much inferior to themfelves, it is rather to be admired they have made fuch great advances in arts, and fciences, than that they have gone no further, confidering they have had no advantage by travelling, or any foreign affiftance; their knowledge being very defective when the Europeans first came amongs?

Their knowledge of physic is but trifling; which is not to be surprised at, since they are ignorant of natural philofophy, physics, and anatomy, which are the foundation of it; but pretend to mighty skill in pulses, and will pro-nounce what distemper the patient is afficted with, how it, but pretend to mighty field in pulet, and will pronounce what diffeneper the patient is affilled with, how
long it will laft, and whether it be like to prove fatal, after
they have dely confidered the pulet. They are not always to be reliced on, the Jefuits observe, but their skill in
this particular is wonderfal, though they can much easier
resolve what the distemper is, than affign a remedy for it.
They have no apothecaries, but every physician prepares
his own medicines, which are generally made up in pills,
but seldom purge, nordo they ever let blood or give a clyster; they imagine that diseases generally proceed from a
malignant corrupt wind, which they endeavour to dissipate
by applying red horneedles or irons like huttons to that
parts and thus they torment and cauterize their patients
upon the slightest indisposition. And some diseases, especially that called the mordechin, which is a violent cholic
and vomiting, occassoned by indigestion, in cured by applying a red hot iron plate to the soles of the feet; but
nothing is more frequently prescribed than cordials, which
are extracted from herbs and toos. They abound in simples, which have their different virtues. Their frequent
drinking of tea is said to preserve them from the sciatica, as
well as the goot and slone, with which they are neverafficted; The root ginseng, which has been mentioned
among their plants, is efteened one of their best cordials. among their plants, is efteemed one of their best cordials : among user plants, is exteemed one or their best cordials: and the root called pao china is an excellent fudorific, and purges the humours and corrupted blood. Every man is permitted to practife physic in China; no degrees or qualifications are required but a good affurance, so that their physicians are generally no better than those preemders to physic which disgrace this country.

They have long diligently applied themfelres to aftronomy, and made above four hundred othervations, as wellof eclipfes and somets as conjondtions: however, in this
they were not exact, but have regulated many things finch
the jefults came among it they, and fedfered them to reform their calendare but however the Cinnele may have
failed in the multamatics, they are perfect, aftrologue,
there being little more requitite to render one mafter of
thet science, than the being an expert jugler, and knowing
how to lie artfully, in which the Chinnele are faid to excel.
There are, it feems, presenders there as well as three, who
by the there so make yellow the state of the science,
the lucky and unlucky days for marrying, andertaking
journeys, voyages, or any bufinels of confequence. The
Chinnele divide their day into twelve pasts, whereas we
make twenty four; and begin their day from the hour of
twelve in the night. They had no clocks or watches till
the Europeans carried them thither; but they had fundials, which were divided into four parts, each part containing twenty four fabdivisions, which added to the four larger
divisions made the whole to confift of one hundred parts.
But they have of late regulated their dials, and reckon
their time almost as we do.

The months in their almanaes are lunar, and in thefe

But they have of late regulated their dials, and reckon their time slmoft as we do.

The months in their almanaes are lunar, and in thefe are specified the times when the sun enters into every sign, together with the equinoses, solitices, the courses of the planets, and their places in the celliptic, their popolitions, conjunctions and neighbourhood to some remarkable sized stars; but before the missionaries taught them, their tables of celliptes were very incorrect. The people imagined, when there happened an eclipse of the sun, that there should a great dragon in the heavens, ready to devour him a not herefore beat upon their brazen, pans and drams. stood a great dragon in the fleavens, ready to devour him; and therefore beat upon their brazen pans and drums, to drive him away; and fill it is faid, the magiltrates and great officers at Pe-king, when the fun is celipfed, fall upont their knees, and looking towards the fun beg the dragon to have companition on them, and not deprive them of the bearneficial influence of this glorious luminary.

Inflead of letters, the Chinnie ufe characters, which companies a lead of thorthand where me word familias a word.

pose a kind of thore hand, where one word fignifies a word pole a kind of thorthand, where one word figurifies a word or a fentence; and though they have a different dislect in different provinces, so that the people do not understand each other, yet the characters in writing are understood by every one, as a figure of 3 os 6 is understood in every country in Europe. There are note than twenty thoughnd of these characters; and he is elsemed a very learned man that is master of fiscen thousand. Indeed great part of their lives is taken up in acquiring their, own language, which is thought to be one reason of their not being better proficients in the science; I but there are feldom more than two of three hundred of them understood by the

common people.

The method of printing in China is very different from that practiced in Europe. The earther of a book in this country first gets it fairly transcribed; then the engraver glues each leaf upon a fortooth board, and cuts through the written paper; to that the character perfectly refembles the written paper; fo that the claracter perfectly relembles the original copy, nor is there any difference between the print; and written hand. Hence the boards ufed in printing a book of an ordinary fire would fill a large room: whereas we fet a fleet with the twenty-four letters, and having made, an impreffion, diffribute the letters, and fet another these, with them; but then their way of printing has this advantage of our, that they can leave as many impreffions as they pleafe; there is no occasion to fet the prefi again, and, there can be very little occasion for a corrector; for the there can be very little occasion to let the press again, and, there can be very little occasion for a corrector, for the author having, his copy fairly transcribed, the engraver fpreads the leaves on a board, and cuts through the paper, and, confequently, the copy perfectly relembles the

manufeript.

Where men fland candidates for preferment, they are required to have such learning as the country affords. Money will not do alone, where a person is perfectly unqua-lified to execute the office he defires , though where two are lified to execute the office he defires; though where two are equally qualified, a prefent, judiciously applied, will have it weight. When a young fellow has made himfelf, in forme measure, master of the language, and been examined by the magistrate of the place where he resides, he is admitted a student in forme college. For a fecond degree, he passer an examination before the chief magistrate of the province. On taking a third degree, he is examined by the Emperor's commissary. And the last degree is taken at the capital city of Pe-king, their travelling charges being borne by the government. Here the Emperor frequently examines the candidate in person, for the dignity of the prince is not thought any reason for exempting him from a learned education; and, consequently, he is generally qualitate to N

judge of the merit of swether. When the decreas, as they are ternard, have paffed this examination, gartands of flowers or other tokens of the Engeror's favour are conferred on the stoft deferving; fonce of them have places aligned there in the Royal academy, and ufually income to the best posts in the government, as vacancies happen.

The Chinese have no hereditary nobility, or any other diffinction of quality, but what the office a man encoutes gives him; fo that, except the defectedants of Confucins, the whole kingdom is divided into magisfracy and commonlaty. There are no bafe tenares, their lands are properly their freeholds, having no superior lord but the Emperor, and he can by his own authority tax all the lands both of priests and people as he please. There being no such thing as quality or nobility, the whole nation apply themselves to trade or brushandry, and have no idle hands among them, or drones that live entirely upon the labour among them, or drenes that live entirely spon the labour ef others. One of their Emperors used to fay, that if he knew a flothful perfon in his dominions, who refused to work, he should think another of his subjects would suffer

Some writers affirm, that the Chinefe had the compafe fong before us; but if they had, they made but little use of it, never venturing out of their own narrow seas; and, m, never venturing out of their own narrow less; and, indeed, they were very indifferent mariners and filipwrights. They had no topmasts, nor did they ever go up the mainsaft to furl the fails, which confilled of matting, but let file yard down upon the deck before they took it in: and their fhips were built with flat heads and fleras, and could only fail before the wind.

They had also gua-powder and guns when the Europeans came amongst them, but hardly knew how to use them till the missionaries instructed them: and it is supposed, they were instructed in the use of the compals, as well as in making gun-powder, by the Arabina and Egyptians, who learnt these things of the Europeans, and had ablonies in the islands in the Chinese season and had applied arrived there, if they had not on the continent of

A gentleman who travelled to the East Indies in the reign a genterman was traveled to the East indies in the Feight of his late majelty George II. has given the following character of the people of China. The Chinese, says he, are a very ingenious and industrious people, as is evident from the great number of curious manufactures established athe great number of curious manufactures established among them; but though skill in the handicrast arts seems to be the most valuable qualification in this people, yet their trients are but of a second rate hind, for they are much eutdone by the Japanese in those manufactures which are common to best countries; sed they are is many instances incapable of rivalling the mechanic dexterity of the Europeans. Their principal excellency is in imitation, and they accordingly labour under that poverty of genius which constantly attends all service instators. This is conspicuous in works which require great truth and accuracy, as in clocks, watches, fire-arms, sec. for in all these, though they can copy the different parts, and can form some resemcan copy the different parts, and can form fome refem-blance of the whole, yet they never could arrive at fuch a juftness in their fabric as was necessary to produce the dejuftness in their fabric as was necessary to produce the defired effect. In statury and painting, they seem still mose descrive; their painters, though in great escent, rarely succeed in drawing or colouring human figures, or in the grouping of large compositions; and though in slowers and birds their performances are smuch more admired, yet even in these, some part of the ment may be imputed to the sative brightness and excellency of the colours, rather than to the skill of the painter, since it is very unusual to see the light and shade justly and naturally handled, or to find that ease and grace in the drawing, which are to be met with in the works of European artists: there is a stiffness and miauteness in most of the Chinese productions, which are auteness in most of the Chinese productions, which are extremely displeasing; and it may be truly afferted, that these defects in their arts are entirely owing to the pecu-Har turn of the people, amongst whom nothing great or spirited is to be met with.

This people are remarkable for their thievish disposition; an instance of which we shall here insert : foon after commodore Anfon arrived at Canton, he perceived that fome person or persons had stolen a topmast from the ships stern. A reward being offered to any one that would dis-cover where : was, the ship's mandarin thereupon informever where a way, the lithe a mandarin thereupon informed the row-modore, that fome of his attendants had found the topmast, defiring that he would fend his boat for it; whereupon Mr. Anton gave the mandario's linguist a fum of money to deliver to his master as a reward; which the linguist thinking fit to concess, Mr. Anton discovered his regivery, and the mandarin feized all that the linguist had gained in the commodore's fervice, which was near two

thousand dollars; and he was forevery bastimatord, that he was in danger of being killed. The fellow afterwards came a begging to Mr. Anson, and, being upbraided with his knavery, filed, "Chiness nam be very great rogue," but incinated his betters were as great villaise as he was. This writer precede to select, that the Chiness felling every thing by weight, they crammod the dusts and flow feel foom after he received them. And the hogs he bought, killed by the Chinese butchers, were full of water; and if they were bought alive the people gave them file to make they were bought alive the people gave them file to make they were bought alive the people gave them file to make they were bought alive the people gave them file to make they were bought alive the people gave them file to make they were wondy, with their boats, to take them up, a hog which had died a natural death being as valuable with them as a living one, living one,

8 E C T. 1X.

Treats of the Chinese monarchy, the conflictation of their govern-ment, succession of the crown, courts of justice, magistrates, hows, w.

THE monarch of this great empire rules with an abfolute fway. Among the reft of his titles, the Empeter is fisied, Son of heaven, Sole Governor of the Earth,
Great Father of his people, &c. . His throne is hereditary
unlefs he shalks fit to past by the next heis, and appoint
another to fueceed him. If he alters the fuecession, tho
act must be ratified by his great council, canfilling of the
princes of the blood and great officers of flate, who fometimes take upon them to expect his designs, and attempt
to fet afide these whom he deemed to be his next heirs. If
he cannot neveral with them to expect with his he he did he cannot prevail with them to agree with him, he difplaces them till he gets a majority that will comply with him; but this, it feems, is fuch a defperate experiment, that he feldom proceeds to fuch extreams. Norwithfunding the Emperor and most of the Tartars,

in the grand council, were ready to allow the Christians a toleration, yet there being a majority against it, the n tion was dropped: and as there are boards or councils for every branch of business, the prince seldom acts arbitra-rily, but refers all matters to the decision of the courts to rily, but refers all matters to the decision of the court to which they respectively belong; neither does he apply the sevenue to any particular use, until his orders are ratified by the commissioners of his treasury. His forces are not feat on any especition, wishout the concurrence of a council of war: but notwithshanding it is related of these Emperors, that they are indefatigable in business, they are forces and the concept of the council of of the co furrounded, like other eastern monarchs, it appears, by crouds of ladies, and feldom thew themselves to the people above once a week; perhaps they retire, that they may be more at leifure to confider the complaints of their subjects. And he has attendants or agents in every court to overfee the proceedings of the judges and officers, of whom, it is faid, the greatest princes stand in awe.

Governors of provinces or towns are obliged to fend faithful accounts of their administration to court, and a faithful accounts of their administration to court, and a misrepresentation, it is faid, would be saral; but they are fo destrous in blinding the eyes of those whose business it is to be a check upon them, that their administration is very feldom disapproved; and indeed, sudefit the prince is a superior genius to his ministers, and can penetrate into their dark schemes, the best laws and regulations that can be made will be evaded, and they are evaded with a witaness in China. Every thing is carried by bribery. They may have good laws, but they are fearce ever put in execution; the magistrates, as well as people, act in open definance of them, a circulation of bribery runs through every court.

Large fums of money are frequently extorted from the governors of provinces by the great officers and prefidents of the superior courts; and those governors no less oppress and flecce the governors of the towns in their provinces, who are obliged to do the like by their inferiors, in order to make up the funst required of them; d whoever complains, runs the hazard of being ruined: a general connivance prevails among the officers. The Emperor, proba-bly, is the only perion that is not acquainted with their extortions.

Some of the children of viceroys and great men are always kept about the court, on pretence of giving them a good education, and this indeed, is one very good reason; but it is supposed they have a better, namely, the securing the fidelity of their parents.

There

There are courts of justice in every province, resembling those in the capital; but no sentence of death is executed till the case is reported to the Emperor, and he ratifies it.

No lew is more religiously observed among the Chinese than that of submission to purents. If a stater complains his son is disobedient, there needs no surther evidence to put him to death; if a man should deride or strike a parent, the whole neighbourhood is immediately alarmed, and rise to bring the eriminal to justice; he is sentenced to be cut in pieces, and asterwards burnt, his houses and lands destroyed, and to remain so to deter others from committing the like crime. The sovereign himself is under a neactify of giving obedience to this law. It is related, that one of their Emperor's having banished his mother for some gallantries she liad been guilty of, the people news left petitioning him, till they bad compelled hims to recal her. They would not dessift, though he had cassed several of them to be beheaded for their insolent advice; so tenacious are the people of this tenet of their law.

The Chinese punish treason and rebellion with the greatest rigiour; the criminal being condemned to be cut in pieces, the executioner ties him to a stake, and first seasons.

The Chinefe punish treason and rebellion with the greatest rigour; the criminal being condemned to be cut in piecea, the executioner ties him to a stake, and first season his forchead, letting the skin hang over his eyes; for a very wife reason, as some pretend, namely, that he may not see how barbarously he is mangled; and having cut and tormented the offender till he is weary, what remains of him is torn in pieces by the mob: and where the crime is very great, the children of the offender suffer with him. They punish munder by death, which is institled different ways: the mestier fort are beheaded, as being deemed the most ignominious punishment: and perions of quality are strangled, which of all deaths is looked upon to be the most seproachful with us.

Thest or adultery are not punished to death, unless some great violence is done to the party, but by the bassinado; or the offender has a thick board hung about his neck, and exposed every day, the crime being written on the board.

As no criminal is executed but by the Emperor's express order, malessators are consumed in prisons: the prisons in the great cities are so large, that they consist of several streets with market places. In Canton alone, it is faid, there are not less than fisteen thousand prisoners. The offenders are allowed to work in the day time for their livings; the Chinese not being much given to acks of charity, and the Emperor's allowance is but mean.

A very common punishment among the Chinese is the actinado, or several blows of a codigit on the buttocks as

A very common punishment among the Chinese is the bastinado, or several blows of a cudgel on the buttocks as battimaco, or leveral now of a cudget on the buttocks as they lie on their faces on the ground, from which the man-darins are not exempt, nor is it reckoned very fcandalous among them. The offender, if he be able, after this dif-cipline falls down before the magistrate and thanks him for this kind correction, though one blow is almost enough to lame him, if the executioner be not bribed, which it is faid he frequently is. It is a common thing for men to let themselves out to be bastinadeed in the room of the criminal; which, if true, discovers no small weakness or corruption in their magistrates, thus to defeat the intent of the law

In China, courtezans are allowed by public authority, and are under the regulation of the fame officers who take care of the temples and the Emperor's facrifices.

They have no lawyers or advocates, but every man ma-nages his own cause: for we are told, that the plaintiff having drawn up his case or plaint in paper, in such a form as custom requires, comes to the tribunal; and havform as cultom requires, comes to the tribunal; and having best on a drum at the fccond gate, falls on his knees,
raifing his hands as high as his head; after which he delivert his paper to an officer, who carries it to the mandarin.
If the full appear to be frivolous and vexatious he is severely
bastimadoed; but otherwise it is given to the proper officers to examine, who having made their report, it is either confirmed or altered by the judge But these writers are not pleased to inform us, whether the defendant be summoned to answer, or in what manner he makes his defence, which is such an omission as can hardly be forgiven: but as it is impossible to determine justly in any cause withbut as it is impossible to determine justify in any cause with-out hearing both fides, we must conclude that no man is forejudged without being permitted to offer what he has to say in his defence, among so politic a people as the Chinese are represented to be. There is a liberty of appeal, it seems, to the superior tribunals, or a man may pass by the inferior courts and bring his cause before the higher judicatures at first, if he apprehends justice will not be done him at

The laws of China are fo plain, and their policy fuch, that the Emperor may dispatch all the business relating to the empire by applying himself to it but two hours in a day; this to any one who confiders the multitude of pide-ple under his government, and sonfequently the prest va-riety of buffnets hers, much be fooled on its impossible, neither a few hours or a whole day tall be sufficient to read over the petitions only that may be supposed to be prestire-ed birth in this vast empire. He must certainly be informa-ed of the purport of thest by his officers, and determine as they are pleased to represent facts to him. Thus it is in all kingdoms in Europe, and cannot be otherwise in China, which is much larger than any of them. The most that can be expected of a prince whose dominions are not ex-ceeding small, is to make choice of able ministers, and to preserve his people from notorious eppressions; as for read-ing all petitions, and determining of all causes which teime, by appeal to the superior courts himself, the Jesuits may as well tell us he works miracles, which they themselves also pretent to in that part of the world, and they will be equally believed.

pretend to in that part of the world, and they will be equally believed.

When the Emperor of China, attended by a multitude of the great officers in their robes, the prince of the blood, and tributary kings, who fall profitne on their face before him, gives audience to ambaffadors in a large room of flate, supported by four rows of varnished pillars, where the throne is placed, and the roof is covered with shining yellow tiles. The throne is about three or four feet high, in the fashion of an altar, and covered with fables, on which the Emperor sits cross-legged, after the mainer of the Tartars.

When the Czarish ambassador had his audience of leave, the Emperor was feeted on his throne, and a legal delieve.

Emperor fits crofs-legged, after the mainer of the Tartars. When the Cariff ambaffador had his audience of leave, the Emperor was feated on his throhe, and a braid salled aloud to the lords of the court to fland up said bow to the earth; which they did three times; find in the mean time the drutas beat, the bells rung, and the mufit played; and the ambaffador being brought within eighteen feet of the throne, was placed between two Tartar princes, while ha made his compliments to the Emperor. As he returned, he observed the Emperor's guards flood in the fourth court, clothed in red callico, with figures as big as a crownremated upon them; and that they had little caps with yellow feathers, being the Emperor's colour, and were armed with feynitars and lances. The ambaffador was conducted in one of the Emperor's chariots drawn by an elephant, from the palace to his apartment.

The Emperors of the prefent Tartar family flew thems felves to the people about four times a month; whereas

felves to the people about four times a month; whereas those of the Chinese race seldom appeared in public.

The Emperor visits the frontiers of Tartary almost

The Emperor visits the frontiers of larrary aimost every year, at which times thirty or forty Tartar princes attend to do him homage. He commonly rides post when he visits the provinces, with a few of his officers; guards being planted along the road for his fecurity. But the Emperor never appears in that fpl-indor, we are told, as when he goes to facrifice in the ido! temples. Upon this occafion there marches first four and twenty trumpets with golden coronets, and as many drums; then twenty-four men with gilded truncheons, after vinew come one hun-dred foldiers with fine halberts; after right an hundred ferdred foldiers with fine halberts; after the an hundred ferjeants at mace, who are followed by four hundred fine lanterns, and as many gilded finameaus; after these come two hundred lances, followed by four and twenty banners with the figns of the zodiac, and fifty-fix more with the confiellations painted upon them; then four and twenty magnificent umbrellos, with a cupboard of gold plate borne by the officers of the court; after these the Empetor follows on horseback gloriously dressed, his housen and furniture covered with gold and precious stones, and he is shaded with gilded umbrellos held over his stead by the pages of honour; he is followed by the princes of the blood, vieweroys, and ministers of state in their robes; after whont come five hundred young gentlemen, attended by a thou-fand footmen dressed in carriation fish, and worked with stars of gold and fisher; after them is carried an open chair, fand footmen drelled in carsation filk, and worked with flars of gold and filver: after them is carried an open chair, like a triumphal chairot, by thirty-fix men, and affocher follows it carried by a hundred and twenty men, so large, that it would ferve for an apartment: after these come two chariots drawn by elephants, and two more by horses, each chair and chariot having a guard of fifty men; and the procession is closed by two thousand mandarins, and as many officers of the army richly drest.

The Emperors of China do not in genral live in that spiender and luxury to which other castern monarchs are found and uxury to which other castern monarchs are found and uxury to which other castern monarchs are found and uxury to which other castern monarchs are frugality at their tables, and a well-regulated eccentry in all their public expences. They divide with their amisters the cares of government, ried laying the whole truled on their shoulders, while they indulge themselves in case and pleasure; they are indeed obliged, by the laws of their country,

country, to take a confiderable share of the trouble uport themselves, and to read and answer petitions and remonfrances. The freeestity of fusite in him tends to make him wife and intelligent, and renders him the idol of his people i he does not posses, the authority as a conqueror or a legislature, but as a father, as a parent he reigns, governs, rewards, and punsities. His two fovereigns councils size, i. The extra-council, composed of the princes of the blood royal; and, a. The council in ordinary, which consists of those princes, and several ministers, who jointy investigate matters of state, and make report to the Emperor of their proceedings.

The revenue of the Emperor is immens, amounting to upwards of twenty-one millions per annum; and his army consists of sever hundred and seventy thousand men. He has an unlimited power to declare war, proclaim peace, or conclude treaties. How the Chinese pay their civil list and we millions of soldiers (computed to be the whole number of towns in the empire) with about twenty millions of money, is not easy to determine.

The public revenues are not farmed, nor do they pass through the hands of several under-receivers; but the chief magnitrates of each city regulate and collect the levies, and remit them to the treasurer-general of the province, who transmit the surplus to Pe-king, after the respective governors, officers and foldiers of the province, have received their pay, and defrayed other necessary copper and silver with the chiefest to the Chinese money, copper and silver

their pay, and defrayed other necessary enarges or governa-ment.

With respect to the Chinese money, copper and silver are their only current metals, as there is no gold coin in the kingdom: that metal passes in trade as a commodity, and even silver is not coined, but cut in pieces for particu-lar payments; and in that case it is estimated by its weight alone, and not by any mark or device stamped by royal au-thority: tiley pay capital sums in ingots or bars of silver. Most trading people carry with them a balance. This ba-lance resembles the fillihards, and will give the precise weight of the minutest thims. to the thousement payment of an ounce. of the minutest thing, to the thousandth part of an ounce. Their fact is much about the length of ours. Their cop-per money is the only fort that is stamped with any character or inscription; but they do not impress it with the head or image of the Emperor.

SECT. X.

Treats of the roligion, temples, and superstition of the Chi-nese; also of the progress of the Christian religion in China.

is remarked by writers of undoubted credit, that of I sil idolaters upon the face of the earth, the Chinese have fallen into the fewest absurdaties; for that being fully convinced of the being of God from the works of creation, they have ever adored and worshipped the deity as the one supreme God, the King of heaven and earth, o rather that supreme Gos, the Aing or neaven and earth, or rather that eternal mind which they imagine arimates both heaven and earth. Though there are feveral inferior derities which they worthip, as the first inventors of arts, mountains, rivers, oc. yet they never facrificed to vice, or worthipped such impure deities as the Egyptians, Greciams, and Romans

A 001 10

Religion in China is divided into three fects: first, the followers of Lao-kium, who lived, as they fay, above five faundred years before Christ. He taught that God was corporeal, and had many subordinate deities under his government; his disciples study magic, and pretend to make that drink which will give men immortality. The second are the sest of the seamed, who are the disciples of the so are the feet of the fearned, who are the diciples of the for nuch celebrated Confucius, who left many admirable pre-depts of morality, and inftructed the people in philosophy. He speaks of God as a most pure and perfect principle, the fountain and efferice of all beings; and though we are told he prohibited idolatry, he has temples and images erected to him, and is worthipped with the profoundest advaration, as appears from the Pope's decree against the Jesuits for allowing in their converts this idolatrous worthip. There has third feet much more numerous them since of the solid of the much work numerous them since of these of the state of the solid of the much work numerous them since of these of the solid of the much work numerous them since of the solid of the solid of the much work numerous them since of the solid of t is a third fect much more numerous than either of the former, who worship the idol Fo, or Foe, whom they file, the only god of the world. This idol was imported from India about thirty two years after the death of our Saviour. his prieffs, the bonzes, teach feveral moral precepts; and that there is a flate of rewards and punishments after this life. They also inculcate into their followers, that it is Inte. I ney and incurcate into their followers, that it is not lawful to kill any living creature, or to drink wine; and do not forget to infiruct them how much it is their duty and interest to entertain and nourish their priests, and to build them temples and monasteries, and perform the the their fouls shall animate fome vermin or beast of

We are told of one whom the borzes had prevailed on to believe that his foul flould go into one of the Emperor's post-horses, and that they had advised him to eat little, and endure it patiently, and God might be induced the next repont-nores, and tax tuey and advised in the sat inter, and endure it patiently, and God night be induced the next remove to let him possess from person of quality; but the man was under such horror at the apprehension of being a post-him but little fatisfaction. He could not sleep day or night, but hearing that the Christians did not undergo those changes, and were men as well in the other world as here, he sent for the father to baptize him, who assures that he died a very good Christian. The doctrine of Confocius is the religion of the Emperor, the princes of the blood, and all people of learning and diffinction in the empire.

The bonzes, who are the priests of that seet who worship the idol Fo, undergo the severest penances, by which they imagine they merit much, and cen apply their merits to whom they please. In their temples is an image of immortality, representing a six man, fitting cross-legged another called the image of pleasure, twenty seet high; and between them another image thirty seet high, with a crown on his head; basses which they have a great number of

between them snother image thirty feet high, with a crown on his head; befides which, they have a great number of little images in their houses, which they worship as well as Confucius and their ancestors. The fun, moon, and stars,

are also the objects of their adoration.

A living man, whom they flyle, the Great Lama, is wor-fhipped by the Tartars; his priests are from him called lamas: he is also called, the eternal sather; and is never feen by day-light, but in his temple by the light of lamps he fits in a tailed floor, dreffed in the robes of a fovereign prime; and those that approach him fall profitate on the ground, kissing his feet; and his disciples believe that he lives for ever. The Tartar princes do not think them-felves fettled on their thrones until they have obtained his lives for ever. bleffing; and the Emperor of China goes annually into Tartary to adore him: however, the Emperor, on a poli-tical account, pays an equal regard to the priefls of botts religions. He honours Confucios, and facrifices in the Chinese temples; and the missionaries pretend, that it was only reasons of state that prevented his professing the Christian religion; though at other times they are pleased to confess that he declared he could not believe, much less

It is a received opinion among the great men in China, and even fome of their Emperors, that it is pollible for men to obtain immortality even on earth. Innunerable books have been written on this fubject; nor can the daily inflances of mortality, even among those who have the greatest opinion of the prescription which is to effect this change, and preserve them from all corruption and decay, convince them of the folly and abfordity of their opinion.

One of their Emperor's, who was confident he had purchased the immortal draught, was cured of the whimly by one of his favourites in the following manner: The Emperor having a cup of this water of life before him, and declaiming upon the virtues and excellency of it, while he turned his back, the favourite had the aflurance to drink off part of it; whereupon the Emperor in a rage threatened him with immediate death: to which the wife minister ca non with immediate death; to which the wife minister calmly replied, Do you fuppofe you can deprive me of his now I have drink of the immostal cup? If you can, what have you lost? If you cannot, I am become equally immostal with you. This thort way of reasoning, it feems, reduced that prince to his fenses, when all other temperature formulate he in C. Out. arguments feemed to be ineffectual.

"Mahometanism has obtained a great locing in China, fome of the Tartar tribes on the frontiers being of that religion, and there was reason to imagine that the Emperor of China was a Mahometan. There are also great num-

bers of Jews in China.

Without the gates of every city almost there is an idol temple, and others on the fides of highways far from towns, where travellers are hospitably entertained; and near every temple is a tower erected to the memory of fome faint or hero, filled with images, and lamps that burn continually. To every temple belongs a foriety of priests, who offer si-quor, rice and other provisions to the genii of the place; of whom people come frequently to inquire what success they may expect in their undertakings. There are cloid-ters also of religious devotees, who unhergo unheard-of penances to obtain the name of faints among the people, and merit the happiness of another state.

fortune-

fortune-tellers as in their gods: they govern all their affairs by the direction of these people, and will not undertake a journey, or any business of moment, without first consulting when will be the most fortunate day or hour to begin it. These fortune-tellers also pretend to esculate nativities, and, by knowing the day of a man'e birth, will cell him what shall hereafter befall him in the world: nor toes it affect their credit; how often so ever the people are deceived; for, like their brethren on this side the globe, they fill follow the deceiver, and will not be persuaded they are imposed on.

The Christian religion was first introduced into China by the Portuguese, who about the year 1498 made feveral fettlements; and planted several colonies, on the coast of the farther India, and in the Spice Islands, and arrived at Canton, in China, in the year 1519, where they were permitted to traffic, and fix a colony on the lime island of Macao, at the mouth of the river of Canton, which the Portuguese possess at this day; but as subjects to the crown of China. Their missionaries were not permitted, however; to go over to the continent, till fonte years after Francis Kavier, from his indefatigable labours stilled the apostle of the Indies, who died in the year 1522, and was never suffered to fet his foot athore upon the continent of China. The Portuguese laboured for more than thirty years after, in vain, to get their missionaries admitted into that kingdom.

It is universally allowed by historians, who have ti taxed

in vain, to get their missionaries admitted into that kingdom.

It is universally allowed by historians, who have treated of the affairs of China, that Roger and Riccii, two Jestitts, were the first that were permitted to reside on the continent, who became very acceptable by their skill in the mathematics; but site Chinese were amazed, when they saw them produce a map of the world, to find that China was so very small a part of it. These Jestits were permitted to compose a catchism, and explain the Christian doctrings, and gained great numbers of converts among people of sigure; but at the fametine were insulted by the mob. They continued their mission, however, for seven years till a new viceroy came to Canton, and obliged them to retire to Mácao; however, they were soon after recalled, and, being joined by other missionaries, obtained leave to reside in the capital city of Pe-king, whither they carried presents for the Emperor, among which were a clock and repeating watch; but a little before they arrived at Pe-king, they were stopped by an sanuch, a commissioner of the customs, and imprisoned, on pretence that a crucisir, which they carried in a portmanteau, was a charm, which might affect the Emperor's life; however, an order soon after arrived, for bringing those foreigners up to Pe-king, where they were well received by the Emperor, and their presents accepted, and a house and misintenance were affigured them, with the liberty of making what proselytes they could; among whom, they relate, were many princes of the blood; and the converts increased so fast, that in the province of Kiang-si alone, there were ninety churches, and forty-five oratories.

The bonzes taised several prosecutions against them; but

The bonzes raised several prosecutions against them; but nothing proved more fatal to them than the opposition they met with from the dominican friars at Macao; one of this order declaring, that the Jesuis had a design to oppose the Emperor, and usurp his throne; that the places they were fettled in, between Canton and Pe-king, favoured their design; and that the Dutch steet which was then upon the coaft, was intended to protect them; that the governe; of Pe-king was in their interest, and that the Christians of Japan was ready to join them when a favourable opportunity offered.

able opportunity offered.

When the intelligence of the pretended confpiracy was brought to the viceroys and governors of the provinces, they were exceedingly alarmed: and one of the miffionaries, paffing through Canton before the forgery was discovered, was condemned to the baftinado, under which he died; but Riccii was protected by the Emperor at Pe-king, and the fifteen of the more before example the limit intelligence. and the falfity of the report being proved, he lived in that capital in peace till the year 1010, when he died, aged eighty-eight years, twenty-feven of which he had refided in Cluna; and the Emperor had such a regard for him, that he ordered a piece of ground to be set apart for building him a tomb, which was afterwards the burying place

of the Jesuits.

In the year 1617, a perfecution being raised against the Jesuits and their profelytes, they were all-obliged to retire to Macae, but there happening a war with the Tartars in the reign of the fueceeding Emperor, he recalled them, knowing they would be very useful to him in the managedment of his artillery, and they lived unmolested in the lingdom till the year 1628. Two years after the Jesuit No. 2.

Adam Shasi, reforced to the coart of Pe-king, and was highly carefied by the Emperor and his ministers, on secount of his faill in the mathematics; and the same year the dominicans and franciscans were admitted into China, where they and the Jessits boasted of having made a great number of converts; and, notwithstanding the revolution that happened in to 400, when Mun chip king of Nou-tetie made a conquest of China, the Jessits maintained their ground, and were no lefs in favour with the Emperors of the prefers Tartar race, than they were with those of the Chines.

the prefent Tariar race, that they were with those of the Chinese.

Adam Shaal was made president of the society of mathematicishs by the Emperor Xun-chi, which had been under the direction of the Mahometaus for three hundred years before. He reformed the casendar, which increased his interest at court; and the Emperor was so fensible of the service the learned Europeans were capable of doing him, that the sense for fourteen more of the missionaries to court, smong whom was father Verbick; and the Jestis infinuate, that they should have made a convert of the Emperor, if the ladies of the court had not prevented it, on his reproving that prince for entertaining one of theiri, but the more probable opinion is, that the Emperor will offended, on their advising him to part with his women that being a subject which sew princes will bear to be touched upon; however, it is said, this Emperor prossess the state of the service of the service of the services had been as a service of the services of the services of the services had sent-bed. Father Verbiest, who had ferved the successive of this Emperor in quality of mandarin, and also the state of the services he had contributed to himself and the state, the great affection he had for him, and how much sew also had a state womb, expressed his acknowledgments of the great fervices he had contributed to himself and the state, the great affection he had for him, and how much sew also his death.

When Kang-hi, the son of Kun-chi, the first Tartar Emperor, ascended the throne, Adam Shaal was madis preceptor to the young monarch, who was then but eight years of age, and the bonzes (priess of Fo) were expelled the place; whereupon they presented a petition to the regents, setting forth, that the setuits had been hanisted their country for their distatction to their matural princes, and would instillibly rais a rebellion in China: that they had introduced a multitude of foreigners into the empire, who travelled through the provinces, and made plans of their strong towns, and tha rites, they were imprisoned and laid in irons, and the Christian religion was declared to be a false and pernicious

Adam Shaal was condemned to die, and though the fentence was never executed, he died under the hard-hips he fuffered in the year 1665; twenty-five of the millionaries were hanished to Macao; but four were full millionaries were hamilied to Macao; but four were full permitted to temain at court, who some time afterwards procured an order for recalling the rest of their brethren, and procured a declaration from one of the principal tribunals; "That the Christian law had been unifigure on the state," in the condition of the state, "The Christians in the christians with the welfare of the state." The Christians "fiftent with the welfare of the flate," The Chriftians were thereupon tolerated, and put into possession, in the year 1071. Father Verbiess, as we observed before, taught the Emperor mathematics, and canses light brass cannon to be east, which gained the Emperor great advantages in his wars, by which he became so much in savour, both with prince and people, that multitudes of converts were daily made, and Verbiess wrote the Europe for more missionately, whereupon Lewis XIV. Europe for more millionaries, whereupon Lewis XIV. fent over fix Jefuits from France, athoug whom was Lo Compte, who refided in the Chinefe court many years, and wrote the beth history of that kingdom which has been published. These Jefuits arrived at Nimpo in China, in the year 1688; Verbiett being dead before their arrival, they were presented to the Eniperor soon after, who always O

kept fome of them near his person, who improved him so far in the mathematics, that he wrote a book upon that subject. Some of the viceroys in the distant provinces, however, raised a persecution against the Christians, in which they were countenanced by some tribunals, and it was as much as the Emperor could do to protect them; he advised them to be very circumspess in their conduct, and give as little offence as possible, or his appearing their protector might endanger his throne.

The missionaries having received great encouragement from the Emperor, more of them were sent over from France; and the French King, Lewis XV, settled an annual revenue of nine hundred livres a year upon twenty of them that were sent to China and India. The fathers Gerbillon and Bouret having cured the Emperor of an ague, he gave them a large sum towards building a church, which they sinished, and made it one of the sinest temples in that part of Asia.

temples in that part of Afia.

Such was the complaifance of the Jesuit missionaries to the Chinese Christians, in suffering them to retain the worship of Consucius, their ancestors, the heavens, &c. worship of Consucius, their ancestors, the heavens, &c. that they might have remained in China, and made profesyes to this day, if the Dominican and Franctican friars had not opposed this practice, and charged the Jesuis with countenancing idolatry, which created great seuds among the fathers; so that they prosecuted one another in the courts of China with great violence, representing their opponents as disaffected to the government, and several of them were imprisoned, and severely used by the Chinese magistrates. At length both parties appealed to the Pope. The Jesius represented, that unless they compiled with the Chinese in these articles, the Christians would infallibly be expelled the country; and infifted, that these compliances, when they prostrated themselves beforeths image, but only to pay their respects to him as a legislator; that the libations and ceremonies observed before the images of their parents, only expressed the veneration and affects. of their parents, only expressed the veneration and affection they had for their deceased relations; and this they procured the Emperor of China to certify to the Pope. Whereupon his Holines's, deputed the Cardinal de Tournon his vicar in China, with full authority to examine and deserting the matter. termine this matter.

The Cardinal having admonished the missionaries to lay afide their animofities and disputes, which had given great scandal to the infidels, as well as to those who had been converted to Christianity, he decreed, and commanded

all the miffionaries, especially the Jesuits,

That in their writings and fermons they should disapprove and condemn only such doctrines and customs of the Chinese as were inconfisient with the Christian faith.

That they should declare, that the offerings made by 2. I hat they indust decay, that the orienties inside by the Chinefe to heaven, the moon and other planets, to spirits and inventors of arts, were only due to God, the creator of all things; that they shouldcondemn particularly the offerings to Consucius, and the adoration of the pictures of deceased men, as inconsistent with the service of the true God, and with the declaration of the Pope, the only infallible guide of the Christians in all matters that concern religion. This decree was dated at Nan-kiu, 28th June, 1707, and figned Charles, Patriarch of Antioch, Cardinal, &c.

The Jesuits and missionaries of other orders continued to wrangle on these heads until the year 1720; during which time the lefuits were careffed at court, while the others were thrown into prisons and severely persecuted.

Atlength a deputation being sent to the Pope, to know if he would admit of no alteration in the decree of Cardinal de Tournon, Cardinal Messabarba was first fent over with the Pope's answer; but the Jesuits so managed maters, that he was not permitted to see the Emperor for some time, and could only read the answer of his Holinest to the mandarins. The following is the explanation of the

decree,
t. The missionaries may tolerate in private houses the use of tablets, containing only the name of the dead per-fon, putting on the side of it a convenient explication.

2. They may tolerate all the Chinese ceremonies to-

wards deceased persons, which are not superstitious, but merely civil.

3. They may render to Confucius a worship merely civil, adding a convenient explication; and it may be lawful to light candles, burn incense, and offer meat, by way of oblation before the tablets.

4. They may permit the reverences of genusiesion and profitation before the corrected tablets, the tombs, or the dead bodies themselves.

They may resumit tables to be set with all manner of

5. They may permit tables to be fet with all manner of

ments and fruits before the tombe of the deceafed, as a civil honour and act of piety towards them, without observing any superfittious rite.

ferring any superstitious rite.

This decree was figured, "CA. Alexandrinus & Legatus Apostolicus."

These articles having been submitted to the judgment of the mandarines, they declared, that the Emperor would be satisfied with this answer; but Suarea the Jesuit observed to them it was all a trick, for the words, "This is the feat of the foul of the deceased," were to be omitted; however, the Jesuits and mandarine being of another opinion, the answer was translated, put in writing, and carried to the Emperor.

The Legate was admitted to an audience on the 20th of Nov. 1220, and directed to appear in the same ecclessistics.

to the Emperor.

The Legate was admitted to an audience on the 20th of Nov. 1720, and directed to appear in the fame ecclefishical habit he wore in Italy, but the Emperor prefented him with his own robe at the audience, put it over his European habit, and after an entertainment, at which his Majefty gave him a glafi of wine with his own hand, he proceeded to afk the Legate feveral questions, particularly, whom those pictures represented, which the missionaries brought from Europe? He answered, They might be the pictures of the Lord Jesus, the blessed virgin, or of some faints or angels. "But why," says the Emperor, "do you put him on wings? This is what the Chinese earnot understand: it is absurd to give wings to men." The Emperor than taking up three pieces of filk off the table, one white, the second red, and the third yellow, and addressing himself to the assembly, faid, "If any one should maintain that the ted was white, and the white yellow, what would any of you think of it!" intimating, that the missionaries required them to believe inconsistencies, in their pretended explanation of the Chinese rites, as well as in the doctrines they taught. The Legate answered, Christ being ascended to heaven, had constituted the Pope and his succession his vicars on earth, to determine controversies, and that Clement II. enlightened by his Spirit, could not be deceived. The Emperor replied, "Can the Pope judge of the rites of China, which he has never had any personal knowledge of, any more than I can judge of the affairs of Europe!" The Legate answered. "He does any personal knowledge of, any more than I can judge of the affairs of Europe?" The Legate answered, "He does not pretend to be judge of the affairs of China, but of what customs and usages the Christians should be allowed to practife, and what ought to be prohibited, as inconfiftent with Christianity." The Emperor told the Legate, that he had tried to unite all the missionaries of different nations, Portuguele, French, Italians and Germans; but they were always quarrelling among themselves, and event the Jesuits could not agree together? he was surprised at their difunion, as they all professed to propagate the fame religion. And he wondered the Pope could give any credit to them, since some affirmed what the other denied: From fuch contradictory representations, how can the Pope take upon him, fays his Majethy, to judge of the affairs of China? the Legate answered, He was affished in his determinations by the Holy Spirit, who never suffered his Holines to err in religious anatters. His Majethy answered, "I love your religion much, I adore the fame God you do, and if there be any thing you do not understand in our rites, I will explain it to you," intimating again, that the Pope could be no judge of them, for want of fufficient evidence; adding, that the decrees concerning the Chinese rites, had not been made with a view to religion, but were levelled purely against the Jesuits. At another au-dience, the Emperor said, he should not suffer the Pope to determine any thing concerning the Chinese rites; that belonged to him, his viceroys and governors: and when Mellaharba defired he might remain superior of the misfionaries in China, he received no answer to that, and the Emperor confirmed the decree of the tribunal of rites,
"That no Europeans should for the future be suffered to propagate their law," which he apprehended might pro-duce fatal effects: and the Legate was foon after infulted by the mandarins in a most outrageous manner, for maintaining the authority of the Pope's bull, and declaring his determinations infallible; and feveral of the Dominican and Franciscan missionaries were sent to prison; Mesfabarba, however, obtained the release of the prisoners, and then retired to Macao, where he refided fix months, and in the year 1722 returned to Europe; about which time the Emperor Kana-hi died, and, being succeeded by Yongtchin, all the millionaries were banished to Macao in 1923, and upwards of three hundred churches were either rased to the ground, or converted, to profane uses. Some European mathematicians, who were useful to the court (namely, the Jesuits) were suffered to remain at Pe-king but the Chinele converts who refused to apostatize, and rithout obus & Le-

hich time by Yongin 1723. her rafed ome Euthe court Pe-king; itize, and return to their antient superstition, amounting to about three hundred thousand souis, were used with great rigour; one of the princes of the blood, in particular, with his family, amounting to three hundred of hoth sixes, were banished to the deferts of Tartary. Many converts were imprisoned, underwent the bastinado, and other punishments: but the Chinese had more mercy on them, than Christians in this part of the world have on one another, for sew of them were condemned to die for the religion they professed.

The Jesusta were the chief promoters of the prosecution of Cardinal Tournous, formerly the Pope's vicar in China, for they did not cease to accuse him to the Emperor, till they affected his ruin; and however the Jesusta may apologize for their conduct in this and other instance of the like nature, tappears that the late Pope lienedict confirmed the decrees

their conduct in this and other instances of the like nature, it appears that the late Pope lenedict consirmed the decrees of his predecessors against the worthip of Confucius, repreaching the general of the Jesuita with the practices of their order in China, and prohibited his fending any more missionaries thinter without his leave; from whence and feweral other circumstances, we may conclude, that the Jesuita have never been intirely expelled from China, but are suffered to make a kind of half Christians still; that is, such as worship both Popish and Chines idols; which has probably given birth to the affertion, that Christianity is relevated in China, whereas, on the contrary, we are informed, that since the above-mentioned stat period, the Christian religion hat heen to far from gaining ground there, that it is more persecuted now than ever, and that those are exposed to the most severe cruelties, who have courage enough to appear in its desence. enough to appear in its defence.

SECT. XII.

Of the Chinese marriages and diverces.

THE union of the fexes by marriage, or rather the bringing them together, is thought of fo much advantage to the state, by increasing population, that it is difgraceful for a man to live single twenty years, but these matches are very improperly termed marriages, because the consent of the parties is never asked; the parent or guardians enter into a contract, when both the boy and girl are infants in a literal sense; and when they come to years of maturity, the young gentleman sends at leady a present suitable to her quality; a splendid cavalcade is made, the bride is conveyed to the house of her spouse, and this is all the ceremony that is used on these occasions. Her spouse never sees her till the entership door; then he unlocks the chair that brings her, and is either suprixed and this is all the ceremony that is used on these occasions. Her spouse never sees her till she entershis doors; then he unlocks the chair that brings here, and is either surprised with her beauty, or shocked with the fight of something he does not like. However, he is at liberty to return her to her friends that moment, if he is content to lost the presents that have been made her, with which he may be said to have purchased his wife; for he never receives any fortune with her, besides her cloatlia. The lady has not the like option; if her hulband will keep her, the is not allowed to retreat, how much sever he proves to be her aversion, and how many wives and concubines soever he may have besides. Thus it is in all eastern nations, where a plurality of women is allowed by law. There seems, however, to be one, who may properly be faid to have her husband's heart, to whom he gives the command of all the rest; so that the lady instead of being his companion, if the is not the favourite, may more properly be styled his slave than his wife; nor are her children in a better condition than the children of hie concubines, who have all an equal title to his estate. If it be demanded, where they find semals fufficient to let every man have a number of wives, since the Chincse do not follow the practice of the Turks and Persans, by importing them from other countries? I may be considered, that as the men marry at twenty, and sale girls at twelve years of age, all the semales between whose ages are supernumeraries; besides, the poor people in most countries, who are much the majority, are forced to content themsselves with one wise apicee, and then it will be no difficulty to furnish their superiors with a variety of semales, out of those that are above twelve, and under will be no difficulty to furnish their superiors with a variety of females, out of those that are above twelve, and under twenty, notwithstanding it is admitted that there are as

many men born as women in every nation.

The friends of the parties, before every marriage, enquire of fome prieft or pretended conjuror, whether it is likely to prove a happy match, and which is the luckieft day or hour for confummation: when the man has once received his wife, he cannot turn her off, unless it be for adultery, or fome notorious crime; but in thefe cafes he

may fell her, and purchass another with the money, not-withstanding the Chines women are usually quarded with great strictness, and not suffered to see their nearest male relations; yet some husbands have given their gallants free liberty-to visit them; and there are women who have prevailed on those that have the disposal of them, to insist on the liberty of having her admirers resort to her after marriage; but this is so much abhored by the generality of the Chines, that their silve are not allowed the privileges that other children have. As to the common people they seem to be for much a thamed of living single after the ege the custom of their country requires them to marry, or they have such a strong propensity towards matrimony, that they will sometimes consent to become slaves, on condition they may have a save in a semily for a wise, when they are not in circumstances to purchase one.

The Chinese Issaies being seldom suffered to appear in company, either within doors or without, never have any concern with trade, but amuse themselves with painting or needle-work, or with birds, dogs, or other animals, as some of the sex do here.

It is customary in China to give three names to their some of the sex do here.

It is customary in China to give three names to their some of the sex do here.

A proper name: and a third when they are advanced to any preferment or employment. The daughters are called by their father's surname, even after marriage, and dittinguished only by their feniority, being called the first, second, or third daughter of their fast r.

There being a great number of eurachs in the Emperor's court, and in the smillise of the great, who have

nrit, tecond, or third daughter of their fair ...

There being a great number of eut uchs in the Emperor's court, and in the families of the great, who have not only the care of the women, but the management and direction of most of their affairs; the poor women frequently castrate their fons, in order to qualify them for preferment; which is almost as barbarous a custom as exposing them in the streets and highways; or strangling them with their num hands, as they constitute the life them. poing them in the ftreets and nigoweys, we then their own hands, as they fometimes do, if they find they are not able to maintain them; for poverty feems to them worse than death.

SECT. XIII.

Contains an account of the festivals, funerals, and tembs of the Chinese.

THEIR two principal festivals are celebrated, one in the beginning, and the other about the middle of January. The fortuner is celebrated by visiting, feating, making presents, &c. The other is called the feasits of the lanterns, when every family, both in the city or country, on the sea-coast orous her rivers, light up large painted lanterns stuck full of wax candles or small lamps which represent cavalcades, ships under fail, armies engaging, horse galloping, spectres, and other objects; these representations or figures are set in motion by persons concealed, by means of strings or pullies that cannot be perceived at a distance. Some Chinese doctors have afferted, that this seast of the lanterns originated from the hanging up lanterns in the ruins of the palace of Ki, Emperor of China, who, being an effeminate prince, erecked a losty tower adorned with guns, for one of his concubines, where living for some time in shameful case and indosence, his subjects caused him to be deposed by a neighbouring prince; and the magnificent palace being afterwards pulled down, lanterns were hung up in every part of the city to perpetuate the event. Others derive it from the following-ircumstance: A certain mandarin, who was greatly caressed by the people, having an only daughter drawned by falling into a river, he looked for her a whole night by the light of lanterns, all the inhabitants of the district following him with lanterns and torches to assist in fearching for the lady. The particular affection, which the people had for ingn of faitterns, at the inhabitants of the diffrict following him with lanterns and torches to affift in fearching for the lady. The particular affection which the people had for their mandarin, or elfe the fingularity of the adventure, fet them to work with their lainterns the fame night of the following year, and this cuftom gradually spreading, occasioned a public annual feftival to be observed in the manner above-mentioned.

above-mentioned.

At a third sellival, the Emperor himself always attends.

After the example of his ancestors, the prince goes every firing in great pomp and folemnity into a field, and plows up a few ridges of land. This is in order to encourage and animate the peasants in the business of agriculture; and the mandarine, in their respective provinces, go through

the fame ceremony.

Another feftival is also kept by the Chinese, the chief ceremony of which consists in carrying about the country a monitrous cow with gilded horns: this cow is formed of clav:

clay, and behind it walks a little child, with one foot bare, beating the cow with a sed, as if to drive her forwards. A company of comedians attend them, playing all kinds of antics. I have they proceed to the palace of the mandarin or, governor of the dilittle, where they brask the cow in picces, and take out of her bellya great number of little cows formed allo of clay, which they dilitibute to the multitude; and the ceremosy concludes with a freech in praife of agriculture, pronounced by the mandarin himfelf. Some of these cows, which are confidered as emblems of labour and induffy, are fo large and heavy, that forty of labour and indulty, are fo large and heavy, that forty men can fearcely furport them. This feltival is celebrated by country-people and labourers, who drag after them their feveral implements of hulbandry.

With respect to the funeral ceremonies of the Chinese, we must observe, that no sooner do these people come to we must observe, that no sooner do these people come to years of discretion, than they make provision for their deaths; every man surmisses his house with a cossin, among other moveables, to put him in mind of his mortality; and wealthy people inclose a piece of land for a burying-ground, where they erect a tomb, and a magnissent temple over it, to which they are brought when they die, though at never so great a distance from home; but such tombs are generally erected in solitary places, or by the highway side, at a distance from towns. None are ever buried within the walls of a city. The poor have a common burying-place, also, at some distance from the town they die in. Their cossins are made of a very lasting wood, seven or eight inches thick, which makes them appear much larger than ours; but they are of kes them appear much larger than ours; but they are of the fame form, and finely japanned without, which very much preferves the wood, and makes it the more durable, as well as beautiful. The Egyptians, as well as the Chinese, we find endeavoured to preserve their remains as long

as possible, imagining, we are told, that as long as any part of the body is left, the foul continues about it. The death of a gentleman is no fooner known to his relations, but they meet and perfume the corpfe, drefs it in the best cloarths, and, having placed the body upright in a chair, his wives, children, and friends, successively fall down before him, and lafnent their lofs. Three days after, a large room is hung in mourning, that is, with white linen; and the third day, the corple, being put in the coffin, is laid there in flate, an altar erecked before it, and an image of the deceafed placed upon the altar. The relations then attend again, bringing lighted wax-torehes and incenfe, which they burn, and profits the themfelves before the corpfe: the fons then place themfelves on one fide of the coffin closubed in white and his wise and the wise and the size of the coffin closubed in white and his wise and he wise a side of the coffin, cloathed in white, and his wives and daughters stand on the other, behind a curtain, bewailing themselves in most moving strains; the priest at the same time finging mournful hymns, fuitable to the occasion; diffies of meat are ferved up for feveral days fuccessively, and placed upon a table, and at night the priests divide the meat among them. The cossin being very thick and close, no offensive smell can be perceived. The suneral is frequently put off for feveral months, and fometimes years, a paper being fet up over the gate of the house, reciting the virtues and commendable qualities of the deceased; the fons fleeping upon mats about the coffin feveral nights, and eating no flesh, or drinking any strong liquors, or having any commerce with their wives; nor can the fon enter upon any office or employment for three years after the death of his father : and it is reckoned impious even to laugh, or take any manner of pleafure, during the time of mourning.

The friends and relations of the deceased, being invited by the fon to attend his father's corpfe to the grave, the procession begins with those that carry the images or pictures of men, women, beafts, and birds, attended with a great number of torches; trophies, triumphal chariots, pageants and tables, with diffus of meat, allo are carried hefore the corpfe. Then follow the prieffs with drums, mufic, and jingling bells, and next the coffin, under a large arched canopy, carried by twenty or thirty men, the crutches, as not able to fuffain themselves without. The women then advance in close chairs, covered with white filk, rending the air with their cries; and besides these, are other women, who are hired to make a difmal mournagrand on these occasions. Being arrived at the tomb, which may be taken for a palace, the company enter it by agrand portal, having a less gate on each fide of it, and the corple being deposited in it, an altar is erected before it, and lights lest burning on the altar; the friends of the deceased visiting the tomb at certain seasons, and proftrating themselves before it, with their faces to the ground.

They burn intende, pour out wine, and offer diffes of meat to the deceased, which they are not ignorant becomes an entertainment of the priefts when they are gone. The character of the deceased being engraved on marble, it placed before the altar. Every man also has a tablet in his house, whereon are engraved the names of his great grandfather, his grandfather and father, whom they worthip, and their great men, have temples erected to their memory, and a yearly facrifice offered to them.

Both men and women, during the first year of mourn-

Both men and women, during the first year of mourning, wear white courie linen, almost torn to rags; the forond year their cloaths are something better, and the L'ird they are allowed to wear white filk.

A widow mourns three years for the death of a hulband,

and the man one year for his wife, and one for a brother.

Great men, whose circumstances will allow it, creek temples to the memory of their ancestors, when a yearly factifice is offered. The Emperor factifices to seven of his crifice is offered. ancestors, the tributary kings to five, and a mandarin to

SECT. XIV.

Containing the history of China, from the earliest accounts, to the conquest of that empire by the Tartars.

E were, about three hundred years ago, as little acquainted with this country, as with the continent of America, or the new world. As we owe the difference, of the new world. As we we the difference of both to navigation, or the knowledge of the compals, China might with as much propriety have been denominated a new world, as America; for though it was fituate on the same continent with Europe, neither the Egyptians, Greeks, or Romans, give us the least intimation, in their histories, that there was such a country on the face of the globe. It is amazing, that when the Egyp-tians and Phoenician sleets failed as far as India, and brought home the fine spice, that they should never meet the Chinese ships, or hear of this country when they visited those very feas that border upon China: but fo it is in fact : can expect no light, therefore, from any nation but their own of what happened before the fifteenth century; and what the Chinese call their history, is little more than some short minutes, containing the names of princes that probably never had an existence; we may be assured that the first part of their pretended history is fabulous, and for the reft, by their own confession, their records have been loft or destroyed; and their paper is so subject to the worm, that it will not last many years. What they have recorded therefore of later years, are only copies of copies; three are no originals to be found.

are no originals to be found, who pretend fuch care has been taken to preferve an impartial history, as never was observed by any other people, the history of Clina, would exceed all others; for they relate, that there are a certain number of registers appointed by the government to record all material transactions, and daily to minute down the words and actions of their princes, with their respective remarks upon them; and that without consulting one another, they throw their feveral papers into an office, which is never opened while the reigning prince, or any of that family remain upon the throne; but when the crown devolves on another house, the doors are opened, the crown devolves on another houte, the doors are opened, and all these records are put in order and examined, out of which the history of the pyteceding reigns are composed, and the examples of their best princes recommended to their successors, whilst the conduct of others, is severely animadverted upon. Thus their princes, like those of Egypt, undergo a kind of formal trial after their deaths, for the instruction of their predecessors.

Our time would be employed to histle number where we to

Our time would be employed to little purpose, were we to take notice of any sacts which are said to have been transacted above four thousand years sgo, because they admit that hufbendry, and all manter of arts and feiences, were introduced within that period. If the world had continued more than one hundred thousand years, as some of their historians relate, no doubt but planting, sowing, clothing, and other useful and necessary arts, must have thousanded. much fooner; but the Chinese, however, appear some-thing wifer than many of the antient philosophers, who held that the world was made by chance

Most legislators and founders of kingdoms aving judged it necessary to derive their origin and authority from heaven, to induce their subjects to submit to their dominion; in like manner, their first monarch, Fo-hi, who is supposed to lave lived about he time of the flood,

having judged athority from to their doarch, Fo-hi, of the flood, pretended

greterided that he was sent from heaven to instruct and govern mankind. Their historica relate, that this prince taught them to use cloathing, and distinguish the fexes by their habits, and that he first invented their characters and musse; and after he had teigned one hundred and fifteeen years, was succeeded by Ching-tong; and in this they agree with facred history, that the anticar lived to a great age. The Emperor Ching-tong taught was husbandry and phy sic: Hoang-ti, his successor to have taught them astrenomy, the art of spinnings. — aving silk, navigation, and the use of wheel carriager; to the next prince, Chao-hao, they ascribe their dividing the country into provinces, and instituting civil government. And their fifth Emperor, Tchuen-hio, annexed the priesthood to the crown, and prohibited all men to offer facrifice but himself, or those he deputed. Their seventh Emperor gave his subjects the liberty of taking as many wives as they pleased, and had four himself. Their eighth Emperor Tchi acking tyrannically, was deposed by the grandees, and fucceeded by his brother Yao, who is said to have been a prince of uncommon virtue, and ever employed his authority for the good of his subjects; that he was frugal and abstemious, never affected state, and remarkable for his piety and modesty: that he made canals, drained the bogs, and cut the mountains into level squares, to make them fift or tillage; that he dishberired his son. the bogs, and cut the mountains into level squares, to make them fit for tillage; that he difinherited his fon, bemake them fit for tillage; that he diffinherited his ion, be-cause he proved a vicious prince, and transferred the king-dom to Chun, a minister of great probity, who began a new race of kings, about two thousand two hundred years before Christ; that he visited great part of his dominions once a var, te enquire into the conduct of his officers, promoted husbandry, and encouraged his people to write whatever they thought deserved centure in his administra-

Chun was succeeded by Tai-kia, who, coming very young to the throne, one of his prime ministers locked him up in his father's tomb, or rather in the palace erected over it, for three years, and then restored him to his throne. afterwards made an excellent governor, and ever respected as his father the minister who had confined him.

It was decreed by the Emperor Tai-vou, that the old people in every town, that had not any subsistence, should be maintained out of the public treasury.

Lin fin was a most luxurious prince: it is reported of him, that he commanded his ministers not to bring any matters of state before him, lest he should be disturbed in

matters of ftate before him, left he should be disturbed in his pleasures.

Tcheaou is represented as a very tyrannical prince, having a queen as cruel as himself, who was ever inventing instruments of torture, and, among the rest, had a hollow brazen pillar cast, which she compelled the object of her sury to embrace, and then heated the pillar to that degree, that the miserable wretch was roasted to death. But the people detesting the cruelties exercised in this reign, deposed the Emperor, and raised to the throne one of another family, named Vou-hang, who began a new race of monarchs, about one thousand years before the birth of Christ.

About the year 177 before Christ, in the reign of Ping-van, several of the tributary princes rebelled, and rendered themselves independent of the Emperor. From this reign, their great philosopher Consucius began his history. He was made prime minister about the year 527, and wrote the history of the civil wars, which lasted hear two hun-dred years. Consucius, not finding his advice regarded, retired from court some time before he died. This great and good philosopher was couldly effectived for his studyretired from court some time before he died. This freat and good philosopher was equally effective for his moderation and candour, as for his genius and learning. In all his actions, as well as in his discourfes, he reported precept by example. His fythen of religion was a fythem of natural law, which ought to be the ground-work of all religion, the rule of society, and standard of government. He taught, that reason was an emanstion of the Almighty; that the superme law confided in an harmony between nature and easing that the religion which was between nature and reason; that the religion which was repugnant to reason, would not come from heaven. He repignant to reason, would not come from heaven. Fre lived feventy-three years, and had a magnificent monument erected to him, near the city of Kio-few, the Chinefe entertain a high veneration for his memory, and have a chapel dedicated to him in almost every city, where oblations are presented to him after the manner of a facrifice; which honours were very contrary to the principles of Confucius, who never allowed of fuch homage and worship being paid to a creature. His works are now in fuch authority, that the Chinese appeal to them in all disputes, and his posterity are the only nobility in the kingdom, except the princes of the blood. No. 6.

During the reign of Gia-tfong, about the year of our Lord 1144, the Tartars made themselves masters of the northern provinces of China; and in the reign of Tonan-tsong, the western Tartars conquered part of China; and Chi-toong, their prince, made Pe-king the seat of his empire. He caused the great canal to be cut, which runs from Canton almost to the city of Pe-king, being one thousand miles; he also cut abundance of other canals, for the convenience of transporting metabolisms. for the convenience of transporting merchandize for

for the convenience of transporting merchandize from one province to another.

Tai-ting, who was the last Emperor of the Tartarian race, lost his crown by attempting an alteration in religion: he countenanced the Lama's, or Tartarian priests, which united the Chinese against him. Their leader was a bonze, or Chinese priest, who, about the year 1400, having driven the Tartars out of the country, mounted the throne.

In 1498, the Portuguese, having doubled the Cape of Good Hope, began a trade with China, and, possessing themselves of the island of Macao about the year 1517, monopolized the whole traffic to that country for upwards

monopolized the whole trame to that country for upwards of a century.

Several Tartan nations, having in the mean time united under the King of Niu-tche, invaded the northern provinces of China, again in the year 1640, under pretence of having been imposed upon and cheated by the Chinese merchants, for which they could obtain no redress at the court of Pe-king. The armies thereopon taking the field, several battles were sought, but none of them deciflye, until a fe nine happendur in force of the Guther. five, until a fr.nine happening in some of the southern provinces of China, occasioned an insurrection: and Lycungz, one of the chiefs of the mal-contents, marched cungz, one of the chiefs of the mal-contents, marched with a numerous army up to Pe-king, and laid fiege to that city, which was betrayed to him by the eunuchs of the court. The Emperor, and most of his family, feeing all refusince vain, chose to die, by their own hands, rather than be made prisoners by the rebels; whereupon Lycungz caused himself to be proclaimed Emperor, and then advanced against Usanguey or Ou-sang-guey, the imperial general, who receiving advice of the usurpation of Lycungs, made peace with the Tartars, who consented to join him against the Usurper. This obliged Lycungz to retire to Pe-king, and not thinking himself strong enough to defend that city against their united forces, he plundered the town, and marched into the province of Chen-si, whethe town, and marched into the province of Chen-n, whereher he was purfued by Ufanguey; but Xun-chi remaining at Pe-king in the mean while, caufed himfelf to be proclaimed Emperor in his ablence: however, upon the return of Ufanguey, after the defeat of the rebels, Xun-chi offered to divide the kingdom with him, and Ufanguey not being then in a condition to force the Tartars to abandon Pe-king, feemed to confent to the propofal, and retired to the provinces which were allotted him, where he tired to the provinces which were allotted him, where he raifed forces, and having augmented his army, required Ly-eungz to quit the kingdom, and on his refufal feveral battles were fought, in which Ufanguey was generally fucceifful, but being killed in a future engage, uent, his army dispersed, and the rest of the provinces were reduced under the dominion of Ly-cungz, the Tartar, about the year 1644; but he did not long enjoy the titrone, he died soon after the conquest, and was succeeded by his fon, an infant of fix years of age, leaving Amayan, his fon, an infant of fix years of age, leaving Amavan, his uncle, regent, till his fon should come of age: and the regent discharged his trust with that fidelity, that every thing remained in peace during the minority, and his uncle had the pleafure of delivering up the kingdom to him en-tire, both the Tartars and Chinese princes submitting to his government. Amavan did not think fit to make any alteration in the laws and customs of China: he only compelled the Chinese to cut off their hair, and take the Tartar habit, that it might not be differented how inconsiderable a people the Tartars were, when compared with the Chinele. In every thing elfe, he rather courted than oppressed the natives; he suffered many of them to retain their pots in the government, and remitted feveral species of their taxes. The Chinese seemed to be rather gainers than loses by the change. Their country was the feat of government. Tartary became a province to China, and they were exempted from the charge of maintaining armies upon the frontiers after the might. mies upon the frontiers after the union. However, the Chinese, who were most averse to the Tartar government, sted to the Philippines, Java, and other islands in the Indian seas, where they retain their hair and former habits; and the posterity of Ly-cungz remain upon the throne of China to this day.

China having acquired great additional strength by her union with Tartary, has now no enemy to dread; not were

and that he constantly applied himself to promote the happiness of his people. piness of his people.

piness of his people.

According to Du Halde, there happened a dreadful earthquake at Pe-king in this reign, in the year 1731, which demolished great part of that capital, and buried shore than one hundred thousand of the inhabitants in its ruins: But there is some reason to doubt of the truth of ruins: But there is some reason to doubt of the truth of this writer's account of this event, because feveral East-India daptains who were at China in that year, had heard notating of it: and though Canton, the part the Europeans trade to, be a thoughan miles fouth of Pecking, yet a calamity so remarkable as this must have been known by the captains of ships and merchants trading to that city.

The Chinese empire hath been successively governed by twenty-two imperial families, and hath been established three thousand nine hundred and eighty-four years, during which space, two hundred and thirty Emperors have reigned.

SECT. XV.

- Of the islands subject to China.

FORMOSA, AYNAN, and MACAO, are the principal Chinefe iflands.

THE island of Formola is situate in the Pacific ocean, between one hundred and nineteen and one hundred and twenty-two degrees of eastern longitude, and between twenty-two and twenty-five degrees of north latitude, one hundred miles eaft of the province of Fo-kyen in China; its circumference is between four and five hundred miles. It abounds in the fame kind of fruits as the fouth of China does, near which it lies, and is agreeably diverified with hills and vallies. The Spaniards fent fome colonies from the Philippines thither; but they did not think it worth their while to continue there. The Dutch afterwards attempted to bring it under their dominion, but were driven from thence by the Chinefe. The Dutch relate, that the people of this is sand were republicans; that every province, and every town in the island was an independent state, testembling those of Holland; but since they have been reduced under the dominion of China, they are governed by a Chinese viceroy. They are Pagans, and have their bonzes, that is, priests and priestesses, as on the neighbouring continent. The Dutch relate, they had many Christian proselytes; but it is probable there are no Christians there at present, or the Popish missionaries would have made them a visit from Macao, and have mentioned It abounds in the same kind of fruits as the fouth of China have made them a vifit from Macao, and have mentioned them in their travels. Their mountains, it is faid, are full of brinnftone; which makes the ifland fubject to and of orimitonic; which makes the hand tubject to earthquakes. The women here plow, fow, and manure the ground, and the men spend their time chiefly in hunting. Their houses are built with cane, and are but one flory high. Their female priests pretend to a knowledge of futurity, and are often confulted as oracles.

The next island we shall mention is Aynan, or Hay nan; it is fituate in the Chuncfe fea, between one hundred and feven and one hundred and ten degrees of east longiand feven and one liundred and ten degrees of east longitude, and between eighteen and twenty degrees of north latitude, fifty miles fouth of the continent of China; being of an oval form, and about three hundred miles in circumference. It is said to be a plentiful country, and to afford both gold and pearls; but as no travellers have given us any particular account of the reft of the produce of the island, or of its inhabitants, we may conjecture, from its fituation, that the principal grain is rice, and that coceast managers, gravats, plantains, oranges, and other cocoas, mangoes, guavas, plantains, oranges, and other tropical fruits abound in it.

Macao is fituate in one hundred and thirteen degrees of

east longitude, and twenty-three degrees of north latitude. It is a small island in the mouth of the river Canton in China. The Portuguese took possession of it in their sirst voyages to China, and have carried on a great trade there

for upwards of one hundred years; and though they are now lubject to China, they are permitted to govern their own people by the laws of Portugal, and to profess the Christian religion; when the Popilh millionaries are driven out of China, they refort to this place.

There are a great number of very finall illands; that lie between Formofa and the Philippine island. As the channels amongst them are but little known, Lord Anson advices rather to pass to the forthward or fouthward, than throught them; the Centurion ship of war passed through them between Grasson and Monmouth islands; but in getting through; the sea had a very dangerous aspect, for it rippled and soamed with all the appearance of being full of breakers; but this agitation of the sea, which had alarmed them, being occasioned only by a strong tide, they got through it very safety.

Having before barely mentioned the great Chinese wall, we shall here give a fuller description of that amazing work. It was begun about two thousand years ago, and is a master-viece of industry and genius: it is principally. rather to pass to the northward or fouthward, than through

is a master-piece of industry and genius: it is principally built of brick, and cemented with the strongest mortar, infomuch that though it has flood many centuries it fulf-continues firm. It is about five hundred leagues in lengths including is many turnings and windings, and its intermediate spaces supplied by the mountains, which reduces the real wall to about one hundred leagues. The Chinese, before the conquest, guarded this wall with a million of foldiers, but only particular parts of it are now defended from in-vaders. Its greatest elevation is about thirty feet, and its breadth is nearly fufficient for eight men to stand abreadt on it. Some parts of this wall being built on high mound-tains it consequently rise and finks with the surface of the ground; which circumstance accounts for the stupendous height given it by foine authors. When Istrand Ides; the Russian ambassador to the court of China, saw this wall, he tells us it was in as good repair as it ie had not been built twenty years.

SECT. XVI.

Containing an account of Chinese Tartary.

CHINESE Tartary extends from forty to one hundred and thirty-five degrees of eastern longitude, and lies between thirty-five and feventy-two degrees of northern latitude; having the Frozen ocean on the north; the Pacific ocean on the east; China, India, Persia, and the Caspianiea, south; and European Russia on the west: but in this chapter we shall only treat of Chinese Tartary; which is situate between one hundred and five and one hundred and thirts are degree of eastern latitude and hereas of eastern latitude. nteate between one hundred and hve and one hundred and thirty-five degrees of eaftern longitude, and between fortyone and fifty-five degrees of north latitude; being boundedby Ruffian Tartary, or Siberia, upon the north; by thePacific ocean, eaft; by the Chinefe provinces of Ly-autong and Corea on the fouth, and by Ruffian Tartary on
the weft; the river Amour and Yamour, called by the Chinefe Sagahan Ula, feparating it from Ruffian Tartary on
the north, and the giver Argun dividing it from the Ruff. the north; and the river Argun dividing it from the Ruffian dominions on the weft; and bears the general name of Niu-tehe, or Manchew Tartary; but if usually subdivided into the provinces of Keching Tartary on the east; and Tigurran and Solon Tartary on the west.

Chinese Tartary confills, for the most part, in barren mountains and defert plains: there have been some good towns in it, but most of them run to ruin after the Tartars conquered China, whither the feat of the government being removed, all the Tartars of distinction have followed the court thither, and are advanced by the fovereign to the chief posts in that empire; and by their intermarriage and commerce with the Chinese are become the same people in a manner, and look upon their original country as a province of China In the north, the people differ little from the Laplanders of Europe. They hunt fables, ermines, and other animals for their furs in winter, and fpend their time in fifthing in the funmer. The gentlemen in the fouth of Tartary make hunting of deer, and other game, rather their employment than diversion, and procure the best part of their food that vay; but their hunting differs much from ours; for they funimon all their vaffals and dependants to attend them, and furround a large tract of country, driving the game before them, until they have brought them into a very finall compais; then they shoot,

or take them with nets at pleafure.

Kirinnla is the chief town at prefent, and is fituate in forty-four degrees notful ratitude, on a mountain, the antient feat of the Manchew or Niu-telican Tartars; and here are the tombs of the ancestors of the present Emperor. The Tartars are a much mere robust and hardy people

til they have they thoot, than their Chinesan neighbours in the south, and their borses, and other cattle, are superior to thors. The Chinese troops are supplied with stories chiefly from this country; and from hence comes that valuable theth ginens, and the rhubarb root. The air of the country is excessively cold, though they lie under the same parallel as we do; as it is observed, with respect to the western continent of America, that it is as cold in the latitude of fifty, as it is with us in fixty: the same is observed of that part of Chinese Tartary, which lies in the latitude of fifty, which is occasioned by the wind blowing over a long track of frozen country in the winter.

occasioned by the wind blowing over a long tract of frozen country in the winter.

The Tartari eat all manner of meat; except hogs fielh; but delight most in the fielh of wild horses, which they huat as they do other game. Their drink is water or mare's milk. They have very little wheat or rice: oats is almost the only grain, they have, of which they make both bread and drink. Their religion is Paganisin; and, befides the Chinese idols, they worship the great Lama. These people formerly burnt their dead; but they now bury them, like the Chinese.

The western Tartara live in tents, and remove from place to place for conveniency of pasture, their herds of cattle, and what they get in hunting, being their principal substitutes. The ensemble of regular and beautiful as the towns of China; many of them lie in ruins, and are persectly defeated for warmer seats and a more fruitful country. for, as has been observed already, upon the conquest of. China their Emperor invited all the little Tartar clans to join him, and transplant their families to Pe-king, in order to establish hunself and secure his conquests; and from that day to this, all men of any spirit, who are not destitute of amhirton, have resorted to the court of China, where they have almost a certainty of meeting with preferement, and consequently their native country is abandoned and left in more wretched condition than before their union with China. They had the honour indeed of being conquerors, and fetting a prince of their nation upon the throne; but and letting a prince of their nation upon the throne; but are notwithflanding become a province to the kingdom bley conquered: they are governed by a military force, and garrifons placed in all their throng towns; the manners and cuttoms of the Chiniefe also prevail more and more among the Tartats every day. However, the Tartats that remain in their own country, and do not attend the court, must be allowed to differ from the Chinese in many respects: They are neither so effeminate or luxunious as their more fourthern maighbours and do they apply themselves to each country. They are neither so esteminate or luxurious as their more fouthern neighbours, nor do they apply themselves to traffic near so much; hunting, horfemanthip, and other manly exercises take up great part of their time. They would be ashamed to be seen in chairs or litters, like the soft Chinese, but esteen it much more glorious to be sound at the head of a troop of horse. Like other northern countries, they also allow their women all innocent liberties, and both sease converte together with freedom; and possibly it will be found a very just observation, that the bravest people have been ever the least troubled with a spirit of jealously, and kept their women under the least restrain.

and kept their women under the lent refraint.

The Tartars are not famous for arts and sciences; nor do we hear much of their laws: the will of the prince seems to be the only measure of their obedience; nor have they any books or histories among them, which give any light

into their original.

SECT. XVII.

Treats of the Chinefian Tartar kingdoms and flates.

HISTORIANS have divided the Tartars into innumerable tribes or hords, but we shall here give account of the neighbouring kingdom of Thibet,

forme account of the neighbouring and the Uflick Tartars.

The kingdom of Thibet is bounded by the Calmucks land on the north, by China on the eaft, by India on the fouth-wess, and by Usbeek Tartary on the west. This country is fituate in an excellent climate, between thirty and forty degrees of north-latitude; but is very mountainous, which probably obtructs the passage between India and Chi. u by land; and feeins to have been one rea-fon that we had no communication with the Chinese, beion that we had no communication with the Chinele, before the Portuguele found out the way to China by fea. It is certain they are a very potent people, and more dreaded by the Chinele than any other nation. They are governed by a Chan or Chan, which fignifies a fovereign prince in that part of the world; but whether they are abfolute or in ma part of the monarche, hiltory does not inform us, though the former is most probable. Part of them are Pagans, and part Mahometans. Those that border upon China have

the fame idols and bonze priofts as the Chinose have, and those are for the most part Mahometans which lie next to Mongalia and Utbeck Tartasy.

Utbeck Tartary is bounded oil the north, by the country of the Calmucks; on the east, by Thilbet; on the fouth, by India; and on the worth, by Persia and the Calpin sea. The most considerable rivers are those of the Oxus, which divides it from Persia; and the Silvin, which runs from the five the art to the northwest and discharges.

plin fea. The most considerable rivers are those of the Oxus, which divides it from Persia; and the Sistun, which runs from the So; the cent to the north-west, and discharges itself into the Caspian fea. It is a sine fruitful country, lying between thirty-five and furty-five degrees of north latitude, and carries on a brisk trade both with the eastern and western countries of Asia. The chief town was Samarcand, situate in fixty-fix degrees of eastern longitude; and forty degrees of north latitude, once the residence of the great Tamerlane, and the inetropolis of his empire.

The present capital is Bochard, stuate on the river Oxus, about fixty miles fouth-west of Samarcand, and sieguently gives name to the country. The people here, as in other Tartar countries, are divided into a great many lords on tribes, but subject to one monarch, their grand Cham. This is a polite nation; and their stautre, seatures, and complexion hot to be found fault with, especially if compared with the Calmucks, their northern neighbours. The religion of the Usbecks is Mahometanism, and their rites and customs much the same as those of their brethren in Turky. Their great leader, or great Cham, Tamerlane, was the fort of Zam, Cham or Chan, the chief of all the Mogul tribes: he first distinguished himself by repulsing the Russians, who had invaded his country, and having given them is total defeat, obliged them to student to submit to such terms as he thought fit to impose, He married the daughter of his uncle, another Cham or Chan or Chan of the Moguls, whose dominions he succeeded to onhis uncle's death: the Chinese invading his country, he was not content with repulsing them, but carried the war into their own country, and demolished part of the wall his uncle's death: the Chinese invading his country, he was not content with repulsing them, but carried the war into their own country, and demolished part of the wall they had erested for the desence of it, made himself master of the capital city of Pe-king, and the Chinese Emperor tributary to him: the same of his actions having reached the western kingdoms of Asia, they seit ambassadors to him, to implore his protection against the surious Brigacet, emperor of the Turks; whereupon he assembled most of the Tartar tribes, and being joined by a body of Rossians; it is computed his army amounted to near a million of men, with which he marched through the countries north of the Caspian sea, and then bending his march to the southward, passed mount Caucasus, continuing his march of the Cafpian fea, and then bending his march to the fouthward, passed mount Caucasus, continuing his march through Circassa and Georgia, and the countries situate between the Caspian and Euxine seas: these countries being in alliance with him, and sumissing his army with provisions in their march, and as they were Christians, looked upon Tamerlane as their deliverer from Turkish tyranny; he did not, however, rely entirely on his confederates to turnish so wast an army with provisions; but his sleet, on the Caspian sea, attended the army in their march with all manner of necessaries, insomuch that his soldiers were not suffered to alunder, or take any thing by violence with all manner of necessaries, infomuch that his soldiers were not suffered to plunder, or take any thing by violence in the countries through which they passed: if a soldier took but an apple or bowl of milk, without paying for it, he was put to death. Sebastia, in Armenia, was the first city that opposed his march, the garrison returning very insolent answers, when they were summoned to surrender; whereupon he invested the place, but did not make any attack for a week; in the mean while, the inhabitants looking mean the town to be impregnable, on a studen their ing upon the town to be impregnable, on a fudden their ing upon the town to be impregnance, on a moore their walls and towers fell down, having been undermined; and the garrifon feeing themfelves laid open to the enemy, were forced to furrender at diferetion; according to the Turkith account, Tamerlane caufed the foldiers of the garrifon to be bound hand and foot, and thrown into pits that were dug for that purpose, where they were buried alive; but though this does not suit with the character of anve; but though this does not fult with the character of this human conqueror, yet the flory ough not to be totally rejected, for it is evident many great generals have done the like on the first Invasion of a country; in order to strike a terror into their enemies; and if that was his defign he had his end, for few towns resused to turrender to him of companies to the former or the strike of the strike him afterwards at the first summons.

him afterwards at the first tummons.

When Bajezet had received advice of Tanterlane's success, he advanced towards him with an army of one million of foldiers, when a bloody battle was fought in the plains of Stella, in which the Turks were totally defeated; and Bajazet, being taken prisoner, was at first treated by Tamerlane with great humanity; but afterwards behaving with infolence, was confined by the conqueror in an iron cage, and carried with him wherever he went; but the laughty

haughty Turk, not being able to breek this ignominious kind of punishment, dashed out his brains against the bars of his moveable prison. As for Tamerlane, he foon after fobdued the greatest part of Lesse Asia, took the city of Persia in Bythinia, conquered Syria, and reduced Egypt;

after which he returned back to his own country, and died in the year of our Lord 1404. But as these transctions have a more immediate reference to Turky, we shall treat of them more largely when we come to that part of our

C H A P. III.

OF COREA. THE KINGDOM

THE kingdom of Corea, or Korea which is a large peninfula, fituate between China and Japan, and lying between the thirty-fourth and forty-third degrees of north latitude. It is about four hundred and fifty miles in length from north to fouth, and about two hundred and twenty-five in breadth from eaft to weft. It is divided into eight provinces, has two hundred cities, with many caffles and fortified places.

calles and fortified places.

In the northern parts of the kingdoms the climats is exceeding fevere; and the fnow fometimes falls in fuch quantities, that the people are forced to work a paffage under it, in order to go from one house to another, fixing a small board to their feet, to keep them from finking into the fnow. The inhabitants, in the northers part, live upon barley, having no rice, and clothe themselves in fleep-skins and coarse hempen cloth; but the southern parts produce every necessary of life. The Japanese have lacely taught them to plant and drefs tobacco, which is smoked by both sexes. They have also sliver and lead mines; all corts of earths target and wild foul horses welves and by both fexes. They have also filver and lead mines; all forts of cattle, tame and wild fowl, horses, wolves, and tygers, but no elephants; and there are many crocodiles in their rivers, the most considerable of which are Ya-lu,

and the Tu-meri.
The Coreans are in general well-shaped, of a comely aspect, friendly to strangers, but treat barbarously those aspect, friendly to strangers, but treat barbarously those who are so unfortunate as to be ship-wrecked on their coasts. They are at the same time essentiate, much given to pleafure, and of a timid disposition. People of condition dress in a purple-coloured silk gown with long and wide seeves, and a sast, they also wear fur caps and linen buskins. The common people wear cotton or hempencloth. In the country, th. houses are mean, except those belonging to people of distinction, which are handsome and spacious. Contracts for narriage are made at the age of seven or eight years; bur are prohibited to the third degree of kindred; the semi les are in that case brought up by the subscription.

dred; the femi les are in that case brought up by the fatherin-law, excep. an only daughter. A man is allowed to have feveral wives, provided he keeps only one at home; but the grandees are permitted to keep three or four at his house, one of whom acts as supreme mistress. They in general treat their wives as flaves, and divorce them pleafure. The most considerable part of the father's sub-flance devolves to his eldest son, and the rest among the

The Coreans bury their dead only in pring and autumn, and in the mean time place the corpfe in a kind of hut made. of rushes, raised upon four stakes in their courts or gar-dens. The deceased lies in a double cossin, closely cemented together, dreffed in his best apparel, with some toys lyed together, dreited in his bett apparel, with tome toys lying near him. They fer out in procedion with the body at day-break, the bearers finging all the way, keeping exact time with their fteps and voice, while the reft of the company fill the air with doleful lamentations. The graves for the common people are five or fix feet deep, but people of rank are deposited in stone vaults, as with us. After the funeral is over, they make their offerings to the decaded monthly, at the full of the moon. Children mourn with cract follows it and abdispance for their ceased monthly, at the full of the moon. Children moun three years, with great folemnity and abstinence, for their fathers, their dress, during this time of fadness, being very

They do not much concern themselves about religious worship, the whole of which consists chiefly in external exercision. But here are some of the followers of Consucius, and others who esteem the religion of Foë, there being many temples consecrated to this deity. Most of them believe the dockrine of transmigration, and a future state of rewards and punishments: they have also a great number of monks amongst them, who go bareheaded, and refrain from any connection with the female lex; neither ate they allowed to eat the flesh of any animals. are also two monasteries for religious women: one for daughters of the nobility, and the other for young women of inferior rank.

The Coreans are exceedingly ignorant of geography, fuppoling the globe to conflit only of twelve kingdoms, and extend their maps no farther than State. Their language has a fet of characters peculiar to itself; but the literati adopt the Chinefe, whole method of printing they follow. The education of their children is free from all fevein the concation of their children is free from all feverity: they implant into their tender thindra fenfe of honour: the principal part of their learning censits in the knowledge of useral philosophy, taking the great Census for their model.

Their shift and a second part of their model.

Their chief trade is with the Japanese, particularly with the islanders of Tsassima subject to Japan, who bring to their factory, at Pousan in Corea, sweet-scented wood,

alum, paper, pepper, buffaloes horns, &c. and receive cot-ton and ginfeng in exchange.

The only species of money used by the Coreans are call-ed cass, which are current no farther than the frontiers of

China: in other parts they make their payments is un-flamped wedges or ingots of filver. Though the king of Corea is no more than a vaffal to the Emperor of China, he rules with abfolute (way, keeps the Emperor of China, he rules with abfolute tway, keeps a great nimber of houfhold troops in his ferviec, which guard his palace, and attend him wherever he goes. Where his Majethy is passing; none must prefume to look at him. He is lord of all the lands in the kingdom, and bettows them on whonifoever he pleases, and for whatever term of years he thinks proper: he has a council of fate comprised of several ministers; but none may give his opinion till first asked by his Majesty, nor meddle in any state compens without his remission. It shey behave well there are cern without his permiffion. It they behave well, they are

cern without his permission.

continued in office during life.

The Coreans chufe their magistrates of cities, and governors of fortified places every third year. These are either banished, or sentenced to suffer death, if found guilty

of mal-practices.

The revenues of the crown confit principally in the rents of land granted to the people: the king has, befides, the tythe of every thing productive of profit, either by land

In Corea, the penal laws are extremely rigorous. . Rebels and traitors, together with their whole families, are cut off without the leaft mercy, and their habitations le-velled with the ground. If a wife kills her hufband, the is placed up to her thousers in the earth in fome high road, and a hatchet is placed close to her, with which every one except those of noble family, is obliged to give her a chops as he passes by her; and where a murder of this kind is committed, the magistrates of the place is suspended from the execution of their office. But though a woman is for feverely punished for murdering her hulband, yet the laws justify and protect the man who kills his wife detected in adultery; or if he gives her up to justice, she is condemned to die, but is allowed to chuse the mode of her suffering death, in which case they generally cut their own threats. It is afferted by fome writers, that husbands, especially if they are of superior quality, are punished with death for adultery. If an unmarried man be detected in criminal convertation with a married woman, they punish him by stripping him down to the waist, and leaving him only a pair of drawers on; after which, they finear his face with lime, pierce an arrow through each of his cars, and tie a kettle on his back, which is best upon as he passes through the streets, and last of all he receives the basinado. The person who kills a free-man is obliged to Kallow a quanvinegar with which the body of the murdered perfon has been washed, then the criminal is trampled under foot, and kicked on the belly till he dies. Nearly the tame punishment is inflicted for theft.

The bastinado here is generally given on the posteriors, and fometimes on the shins and soles of the sect. When on the shins, they bind the sufferer's legs to a couple of benches, the one at his feet, and the other under his hams; and in this posture they strike him on the legs with a fort

of lash, but not more than thirty strokes at a time, which they repeat two or three hours afterwards; till the whole of the fentence is executed. When an offender receives they repeat two or three nours are wards, till the whole of the fentence is executed. When an offender receives the baftinade on the foles of his feet, they compel him to fit down on the ground, and then tyling his two great toes together, fix them in a wooden frame, and thus inflict the punifilment. Women and apprentices' generally receive the ballinade on the ealwes of their legs. Perfors in a rerears to the king, or who refuse to pay their debts, are bassinaded on the short severy fifteen days till they pay the money. State criminals are tried by the graid royal council.

The military government in Cotea very much resembles the civil. Each province has a general, or chief of the failitta, with four or five colonels under him, each of whom commands a regiment; and that the King may know the exact number of soldlers he has in pay, the infectior officers are obliged to keep an accurate lift of all the men belonging to their respective corps, which they transmit at stated times to their superior officers.

Their ships of war have commonly two masts and about

Their ships of war have commonly two masts and about thirty oars, with five or six men to each oar, which, with the marines, make about three hundred men in each thip :

the marines, make about three hundred men in each thip: their ftores chiefly confult of cannon and pot-granadoes; and every province has its particular admiral, who is obliged annually to review the thips of war belonging to his province. They have always a number of filips in continifican, every city being compelled to fit out one complete filip. Cotea was originally inhabited by different people, who each had their refpective princes, law maxims, and customs; but they afterwards became one nation. The most considerable of these early natives were descended from the Tartars, and named Kau-kiu li. from the Tartars, and named Kau-kiu li.

The first king of Corea is said to have been a nephew of Gheon, Emperor of China, who, for some misse-

meanthr, feized sind threw him into fome Chinese prison) but Gheon, being afterwards dethroned by Vou-vang the founder of the thirteenth family or dynasty, the nephew, whose name was Ki its, was restored to his liberty. He retired to Corea, where he introduced the Chinese laws; retired to Corea, where he introduced the Chinefe laws; civilized his people, and conducted the public affairs with great wifdom and prudence; but at the fame time harboured the reflection that Vou. vang was an uturper, and had deprived his family of the imperial crown. This event took place in the year before Chrift 1120:

Ki-tfe' a tucceffors enjoyed the throne of Corea near nine hundred years; but Tchuang-fiang-vang, Emperor of China, at length fubdued the Coreans, and reduced the title of their klur to that of Hean, of Count, with a yer's

tittle of their king to that of Hean, or Count, with a very limited authority. A prince of the family of Ki-ten named Chun, affunded the title of King, but was foon after dethroned, and the race of Ki-te became eating at

Vey-nan, who was a native of China, then forced his way to the throne of Corea; and, in order to fecure his usurpation, courted an alliance with the Emperor of China; ufurpation, courted an alliance with the Emperor of China, and obtained the title of Vang or King but the fovereignty-did not long continue in the family of Vey nan; for his grandson was massacred, and the Chinese profiting by the confusion was massacred, and the Chinese profiting by the confusion arting from this event, conquerted Corea a second time. In process of time it was restored to its antient monarchical form of government; and the King submitted to pay a tribute to the Emperors of China. Sires that period, Corea has undergone various revolutions; being sometimes under vassassacred at other times tributary, then independent, and almost always at war with that nation. It is tributary at this time; and the King of Corea, on his accession to the throne, receives his conof Corea, on his accession to the throne, receives his con-firmation upon his knees from the Emperor of China.

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF

I

D

Α.

SECT. I.

Division of Tonquin, its fituation and boundaries, rivers, cli-mate and provinces; description of the natives, their habits, manufactures, produce of the country, animals, language, ftiences, government, &c.

EOGRAPHERS ufually divide India into two parts; namely, India beyond the Ganges, and India on this fide of it. We shall first enter upon the description of that division which lies beyond the river Ganges, because it adjoints to China, which we have hast treated of. This country comprehends, 1. The kingdom of Tonquin. 2. Cochin-China, and Chianpa. 3. Siam, including Malacca, Cambodia, and Laos. 4. Pegu and Martaban. 5. Ava, Arracan, Tipra, and Acham, exclusive of the islands; the whole lying between ninety-two and one hundred and nine degrees of castern longitude, and between one and twenty-eight degrees of north latitude.

between one and twenty-eight degrees of north latitude.

The kingdom of Tonquin, which is the first of these divisions, is bounded by China on the north and east; by the bay of Cochin-China, on the south and south-east; and hy the two fmall kingdoms of Laos and Bowes (bordering on Siam) on the west: It is fituate between one hundred and one hundred and nine degrees of eastern longitude, and between twenty-one and twenty-feven degrees of north latitude; it is about five hundred miles in length, and about four hundred in breadth. It is divided into eight provinces, viz. eath, west, north, and south provinces, Tenay, Tenhoa, Ngeam, and Cachao. There are several small islands at the extremity of it.

In failing up the river Domea, a fine level fruitful country presents itself to view; in which there are no trees, except about the villages, but an agreeable variety of rice ground and pastures. Further within land, on the north, ground and pastures. Further within land, on the north, it rises into hills. The air, in dry seasons, is generally healthful.

The fouthern part of this country lies, in the form of a

crefcent, about a spacious bay of the sea, near one hundred miles wide; the depth in the middle, is about forty-fix sathom, and there is good anchorage in every part of it. The rivers Rockbo and Domea, run into this bay, which rising in the mountains on the north-west, take their course to the south-east, and, running almost parallel, discharge themselves into the bottom of the bay, at about thirty leagues dilance from each other. The Europeanistrade with the natives, up the river Domea, which is near two miles over at the mouth; but there are so many lands at the mouth, that a slip cannot be carried over the bar without the affistance of a pilot:

In this country, the year is divided into the wet and try season, as in those places which lie between the tropies. The wet season begins in April or May, and last till the beginning of September; in which time, however, there are considerable intervals of sair weather, especially in the mornings; the three first months of this season are very unhealthy. In September the stain and which are generally moderate; and yet in that month and October

very unhealthy. In September the rain and whild are generally moderate; and yet in that month and Okober happen the Tuffoons (Typhones), which are fuch violent florms, that no fhlips venture out of the harbour during that time. The tuffoons happen fufually about the new or full mooh; it is fair, pleafant weather, and little wind twelve hours before the florm begins. The whind having blown very flercely for twelve thours from the north-eaft; and attended with thunder and lightting and heavy mins, it grows calm on a fudden; but in the space of an hour changes to the fouth-west, and blows writt equal violence from that quarter. They have the fairest weather when the sun is at the greatest distance, which is the case in most countries between the tropics. The rains are heaviest when the fun is at the greatest distance, which is the case in most countries between the tropics. The rains are heaviest when the fun is vertical, but the seasons at most always alike: sometimes tiley have not rain enough for their rice,

alike: fometimes they have not rain enough for usen vice, which commonly grows in water, or a very moift foil.

Cachao, or Kecchio, the capital city, is fituate about one hundred miles up the river Domea, in one hundred and five degrees of earl longitude, and twenty-two degrees thirty.

thirty minutes north latitude, on an elevated fituation, There are about twenty thousand houses in it, most of them low thatched

cottages, and fome few built of brick; their firects wide, but ill paved, and feveral muddy ponds, which are very offenive in the dry feafon.

In the middle of the city flands the king's palace, which, with the parks and gardens that furround it, is eight or wine miles air circuit. There is another palace meanly built, in which the chova or general refides; before it is a grand-parade for exercifing the foldiers, and a house where the train of artillery, contiting of fifty or fixty-iron guns, are lodged, and some mortars. There is also a stable of war-elephants, and another of the King's horses near the

The town of Domea is fituate about fixteen or eighteen iles up the fame river, where the Dutch thips, which trade this country, ufually lie; but the English ride three iles higher. The Dutch have a factory at Domea. miles higher.

Upon the same river, about eighty miles from the sea, stands Hean; it confists of about two thousand houses, and has a garrison of foldiers in it. The Chinese, who trade between this place and Japan, have sactors here.

for the flat country there are abundance of villages, which are furrounded with walls or banks of earth, to de-

fend them against the annual floods.

The natives of Tonquin are of a middle flature, tawny complexion, black long hair, which falls down on their fhoulders; they have black eyes, and their teeth are dyed black. They wear the nail on the little finger of the left hand as long as the finger, as the Chincie do. They are very faithful and diligent, fubmilflive to their fuperiors, and fairer dealers than the Chincie.

Their provisions are dressed and served up in an elegant tafte; and they perfume both their tables and their diffies. Their usual fare confifts of rice dressed various ways, eggs, pulse, roots, sowls, fish, buffalo, pork, beef, and frogs. They have neither table-cloths or napkins; and instead of a ney nave neither table-cioths of napkins; and initead of forks, use ivery or ebony flicks as the Chinese do, and ext nearly in the same manner. The sood of the common people is rice, dried fish, and pulse, and tea is their usual drink; but the higher classes mix arrack with their tea, and often become intoxicated with it. The grandees have halls in their houses, for the diversion of singing and dancates in the contraction of the same and account in the same contraction. halls in their houses, for the entermone or many and ing in the everyings; and every villa bath its houses of mirth and passime, where the people assemble, especially matheir softwars, and cause plays to be acted. They have feveral kinds of mufical intruments, fuch as kettle-drums, trumpets, violins, guitars, and hautboys. The actors are generally about half a dozen in number; and the dances are performed by the women, who fing at the fame time. y have likewise merry-andrews, to excite the laughter of the spectators.

The tonquarie, is a gown girt about with a fafth: the fexes are fearer diftinguishable by their drefs. People of condition wear English cloth, red, blue, or green, or else filk of their own manufacture; their caps made like the crown of a hat, of the same materials as the gown; the common people wear cotton or calicoe, the foldiers the same, but shorter, and all of them wear cotton breeches, or drawers, which reach down below their knees.

drawers, which reach down below their knees.

The common people are good mechanics; but their lords, who are owners of the lands, keep them so miserably poor, that they are frequently forced to remain idle, for want of materials to work upon. The Dutch, who marry temporary wives in this country, employ them as their factors to buy the materials; and set the poor people to work, and have their goods ready against the shipping

Silk and lacquered ware are their chief manufactures, the country produces also turpentine, lignum-aloes, fine perfumes, and wood for dying, refembling logwood.

The principal grain that grows here is rice, but they

The principal grain that grows here is rice, but they have cocoa-nuts, guavas, mangoes, plaintains, oranges, and all other tropical fruits: their foil allo produces betel and arek root, which they are extremely fond of.

There are great numbers of elephants in this kingdom, and the reft of the peninfula, allo fome horfes, oxen, buffaloes, and the fame kind of logs we meet with in China. They have fearcely any sheep or wild beafts; but plenty of fill and poultry.

They have no mines of gold or filver; but there are iron and lead mines in abundance. Silk worms are also here in such plenty, that filk is almost as cheap as cotton. Sugar canes likewife thrive well in this country; and they have a fort of tea which they call Chia bang, the leaves of which they boil; as also another kind called chia way, the heaf of which is not fit for any use; but the flower, when defed before the fire, makes a very agreeable liquor by infusion. The oranges of Tonquin are said to exceed all others for richness of slavour: here are also various kinds of flowers, and among others, very becutiful likes and jafmines, though the Tonquintes do not discover much taste for this elegant ornament of nature. They have commonly two crops of rice yearly, which being their chief food, the cultivation of it is the peasant's whole

Enakes, feorpions, and other reptiles and infects, are as troublefome here as in other hot countries; but none more fo than the ants, which march in large bodies, and devour every thing they can penetrate; they will eat through a bale of filk in a few hours time.

Torquin having been a province of China, their lan-guage is a dialect of that nation, and their characters the fame; their learning confifting chiefly in understanding these characters, they are examined what progress they have made in this study, when they stand candidates for any place, as in China. In the mathematics, astronomy, and other sciences, they equal the Chinese, and have been improved like them in these sciences, by the Popish missionaries who vifited this country from Europe.

The Sovereign or Bova; has barely the title of King : he has no share in the government. The General is vested with the regal power; he makes the King a kind of pri-foner in his own palace, but allows him to appear at cer-tain times, and reseive the homage of his subjects, and the general himself scems to adore him before the people, declaring, he takes upon him the administration government, only to cale his Sovereign of the trouble of it, and that he may enjoy his pleasures without interruption. His Majesty's servants are all appointed by the General, and have orders not to fuffer any of the rest of his subjects to come near him. The General disposes of all offices, civil and military; has a guard of two hundred elephants, befides his horfe and foot guards, and utually has a flanding array of thirty thousand men in and about the capital city, and fixty or feventy thousand men in other parts of the kingdom, particularly on the frontiers of China, which is the power they fland most in fear of. When the army marches, the generals and great officers are mounted upon elephants; a cattle or rather a great room-being fixed upon the back of this monfirous beatt, in which a dozen men may be accommodated, and dikharge their muffets or shoot their arrows. They have no naval force, only fome little coalling vessels, with which they never venture far out to sea. They have no fails, but make use of oars only.

Among a great number of fellivals celebrated by the Tonquinefe, two of them are kept with more than ordinary folemnity. The first is beld at the beginning of the nary folemnity. The first is held at the beginning of the year, which with them commences with the new moon nearest to the end of January, and sometimes three or four days somer; this seast continues about twelve days; but the first days are rather spent in lamentation than rejoicing; for then they shut up their habitation, and keep within-doors, for fear, as they pretend, of meeting with some unducky object in the "rect, which might prove to them an omen of ill fortune the ensuing year. On the following day they begin their feftivity, when booths and flages are crefted in the fireets, in which are reprefented different kinds of thows; nothing is then heard but the found of mufical influments, and the wild uproar of riot and licentiousness. The second grand sellival is kept in the fixth moon, with the same kind of mad merriment. Exclusive of these, they observe two monthly feasts, in which teligion has fome there, it being automary at these feats to facrifice to their aucestors, by oblations of provisions Another of their folemn feafts is called at their tombs. can-ja, on which their King gives his public benediction to the country, and plows two or three furrows with own hands for the encouragement of agriculture. The natives practife faiting and prayers by way of preparations, for this festival; which cultom they have undoubtedly borrowed from the Chinele; as may be feen, in our ac-

count of that people.

The officers of frate and chief magistrates in Tonquia. are generally cunuchs, who are an imperious fet of people, difficult of access, and exceedingly covetous, though they have none but themselves to make provition for ; and indeed it is a common observation, that they who have the least occasion for money, cover mest; and whatever an ennuch has feraped together, falls to the government, when he die: , he has not even the power to dispose of any part of it by will; and this is the reafon that their exterable liquor fo various utiful lilles ot discover ire. tions and oppressions are so much connived at: but to these mal-practices are imputed the extreme poverty and want of trade in the lower class of people, who have no entouragement to work, possion in until they can call their own.

The religion of the containing they can call their own.

The religion of the containing they can call their own.

The religion of the containing they can call their own.

The religion of the containing they can call their own.

The religion of the containing the clophant and the horse. The temples or pagodas are very simall, some of them but just big enough to contain the image. Their priests have cells about the temple, where they attend to offer up the prayers of the devout, who bring them their positions in writing, which the priest reads aloud before the image, while the disciple lies prostrate on the ground in a supplicating possure. People of figure seldom come to the pagoda, but perform their devotions before an image placed upon an altar in one of the courts of their own houses is some dependant reading the petition instead of a priest, while his master prostrates himself on the earth. On the paper are enumerated the several instances of the petitioner's read feeting for which he resures his thanks to heaven. while his mafter profitates himself on the earth. On the paper are enumerated the feveral inflances of the petitioner's good fortune, for which he teturns his thanks to heaven, as for riches, honours, prefervation, &c. concluding with a prayer for the continuance of them: after, which, the paper is burnt in a pan of incenfe, and then the poor neighbours and dependants are called in, and made to partake of an entertainment the malter has provided for them. Whenever they make their addrefles to heaven, the poor are fure to be relieved; the devout fupplicant looking upon this as the readieft way to obtain a favourable answer to their requests.

their requests.

The Tonquinese are as much addicted to superstition as their neighbours. They, like the Chinese, consult the astrologer, or pretended fortune-teller, whenever they are about to undertake any thing of moment, and have their lucky and unlucky days, and as every hour of the day has the name of fome animal, as the horse, or the like, the beaft that marks the hour a man is born upon, is always

carefully avoided by them.

It appears from the relation of a late traveller, that the court of Tonquin shewed no inclination to embrace Chriscourt of I oriquin flewed no inclination to embrace Christianity, but he supposed that many of the poor people had been induced to profess it, on account of the rice the missionaries distributed among them: that the fathers lived as merchants at Hean, and thought proper to conceal their mission; apprehending, probably, they were not acceptable to the court, who made no other use of them, than to learn some brauch of the mathematics.

Young people are not suffered here to marry without to oning people are not amere in the confent of their parents; and females are feldom disposed of in marriage before they are fixteen years of age. When a youth is disposed to marry, he first applies to the father of the maiden, and makes him a present. After the articles are agreed upon, the man sends to the house of the activities are agreed upon, the man sends to the house of the sends are the present as the conference of the sends are the sends of the sends are the sends of the sends are the sends of th the articles are agreed upon, the man lengs to the houle of the young woman fuch prefents as have been flipulated; and on the wedding-day the fathers of both parties, accom-panied by their friends, conduct the bride to the houle of the bridegroom, where the ceremony is performed in great hafte. They have always a feaft, which lafts for three or more days, on these occasions.

Here, as in most other Pagan countries, a plurality of women is allowed, and very little difference is made be-tween a wife taken upon contract, and a conceptible. Their

tween a wife taken upon contract, and a concubine. Their children are equally entitled to inherit, and the natives are eniders are equally entitled to liniers, and the natives are for far from being diffurbed by jealoufy, that it is faid, they will offer their women to the European merchants, or rather let them out, for they expect fome confideration for the favour. Here men are allowed to take temporary wives, as the Dutch do, to transact their affairs in their absence. And by this commerce the women fometimes raife fortunes, and afterwards become matches for the most confiderable men in the country. The men are also at liberty to divorce their wives for any trifle almost, but then they must restore the effects the was possessed of at the cannot obtain a divoice unless the husband is charged with fome very notorious crime. The punishment of a wo-man convicted of adultery, is to be thrown to an elephant bred up for fuch executions; who, taking her up with his trunk, toffes her up in the air, and when the falls, tramples her under his feet, cruthing her tu pieces with as inuch eafe, as one might kill a moth. A man may fell both wife and children here, which makes a divorce very unnecessary on the man's part; for this amounts to something more than a divorce. In a scarcity, the poor people felt their children with very little reluctance; for by this means, they frequently fave their children's fives, as well

as their own. And in this past of the world, we see people very ready to part with their children, to any one that will inatitian them, without demanding any confideration for them; and why is this more unnatural than the Tonquinese selling their children to preserve themselves?

Their funerals differ very little from those of the Chinese: we see the like processions and the like mourning, only they burn the corpse, and put the assessing an urn it they carry provisions to the tomb where the urn is deposited, which are distributed among the wiests and poor people, after they have been offered to the decasted, and the dol placed on an altar befure the corpse; over the tombs of people of condition, they cred a wooden tower four or five and twenty feet high, and the priest ascending to the top of it, makes a funeral oracion, enumerating the virtues and good qualities of the decasted; after which, he comes down and sets fire to the tower, which is soon consumed to after, being built of very flight materials; and then the people sit down to an enterrainment, which is provided for them. Fifty hogs have been derested and diffusibated at a sinural, with the greatest quantity of fruit that ever he saw together.

When the King dies, he lies in the fiver-five days as together.

When the King dies, he lies in flate fixty-five days af-ter his decease, and his table continues to be served every ter his deceate, and his table continues to be forved every day as if he was alive; the meat being diffributed every evening among the priefle and poor people. After which a very fpleudid procellion is begun towards the royal bury-place, which is about two days journey from Cachao: but they feldom reach the tombs under feventeen days. The mandarins, great officers, and magnifrates, are obliged to mourn three years for the prince, the gentry for months, and the common people three, and no diversions are allowed for three years after the funeral.

There is great emulation among the opulent, in provid-

There is great emulation among the opulent, in provid-ing coffins for themselves; in framing these coffins, they cement the boards together; but make no use of nails, lest

that should have the appearance of laying a constraint on the deceafed.

With respect to the origin of the Tonquinese, and the revolutions in their kingdom, little can be said with certainty, as they were for many ages ignorant of the art of writing. One of the first kings mentioned in their history was Ding, faid to have reigned aco years before Christ, and to have been raised to the throne by a troop of lawles robbers; but as he proved a tyraut, his subjects revolted, and murdered him. Long wars enfued; after which, Ledack have as cloud; there in whose reigned to Chinese in robbers; but as he proved a tyrant, insuffices revolted, and murdered him. Long wars enfued; after which, Leday-han was elected king, in whofe reign the Chincle invaded and over-rap the kingdom. This prince, however, defended himfelf with great bravery, and defeated them feveral times, but could not drive them out of the country. On the death of Le-day-han, Li-hal-vie was placed on the throne, who vanquished the Chinefe, and drove them out of the twisteries. of his territories. The policrity of this prince reigned peaceably for feveral generations, and the laft king of this family leaving behind him but one daughter, this princess thared the throne with a nobleman whom the apouled; but another grandee, named Ho, confpired against the queen, fubdued her hufband in battle, put both of them to death, and took possiblion of the crown; which treachery and cruelty occasioned a resolt of his fobjects, who applied to the Chinese for aid, and thereby occasioned their entrance into the kingdom with a numerous army, which drove away the tyrant, and as a reward for their fervices, possessed the government, obliging the Tonquinest to accept of a viceroy from China, who introduced the Chinese laws and cultoms, and intirely changed the torm of the conflitution.

In process of time, however, the Tonquinese, headed by Li, who was a man of a most intrepid spirit, revolted by Li, who was a man of a most interput spirit, revolted from the Chinefe; and, taking up a rms, put them all to the fword, and compelled the Emperor to confent to a dif-honourable peace. Li was then crowned King of Tonquin; and all that the Chinefe were able to obtain, was, that the Kings of Tonquin thould hold the crown in featly under the Emperors of China, and pay them a triennial tribute. This treat; was concluded about the year 1200 after Chrift, and both nations have faithfully observed the articles ever fince. When the Emperor of China sends his ambassadors to Tonquin, to collect the tribute, they behave with the utmost haughtiness; infomuch that when the King has occasion to treat with them on any matters of importance, he is obliged to wait upon them, instead of their attending on him; and a prince of Tonquin must previously obtain a confirmation from the hand of the Emperor of China, before he can afcend the throne of his an-ceffors. The defcendants of Li fat upon the throne for two conturies, after which enfued many revolutions.

About the year 1400 of the Christian sets, a simple fisherman, named Mack, usurped the erown, but was dethroned by Tring, and the usurper, who coloured his usurpation with the pretence of relocing the family of Li to the throne, and accordingly caused a young prince of that house to be erowned; but he referred to hinnself the regal power, under the name of shows, or general of the realm, only bestowing on the preme the bare title of sovereign. This usurper, Tring, had a brother-in-law, whose name was Hodying, fon of a governor of the province of Tingwa, to whom Tring lay under some particular obligations, for this governor had not only shewn great friendility to him, in affitting him in his enterprise with the troops of his province, but likewise gave him his daughter in marriage; and, besides, on his death-bed, entrusted to him the guardianthip of his only son, who was the above-mentioned Hoaving. Reflecting with great concern on the conduct of his brother-in-law and guardian, in having employed his father's forces to fet any other than himself on the thone of Tonguin, Hoaving conceived on the occasion such a spirit of resentment, that he not only resulted to do homage to the new King, but openly took up arms, made himself to the proclaimed chova at the head of his army.

These two generals governed with absolute authority, the one in Tonquin, and the other in Cochin-China, and waged war with each other as long as they lived, with nearly equal success on both sides. They transmitted the title of chova to their fuccessors, and their descendants enjoy it to this present period of time in both kingdoms. But we shall here confine ourselves to the chova of Tonquin, where indeed are at present two supreme magistrates or sovereigns, the one titular, the other real; the former has the name of bova; but in the chova are vested all the powers of government. The authority of the bova principally consists in giving the form of ratification to the decrees of the chova. The dignity of the latter is hereditary, and his eldest son succeeds him, but the fuccession of bovas is uncertain: for when a bova leaves several sons, the chova chuses which of them he pleases, and may even taife a collateral branch to the dignity. The chova keeps a great number of concubines, it not being customary for him to marry till his advanced age affords him but little hope of his having any more children; when he always espoules a princes of the royal family, who ranks above his conculines, and beers the title of mother of the kingdom. The concubine who bore the King his sirit son, takes place next to the queen, and is treated with distinguished honour.

SECT. II.

Containing a description of the stuation, boundaries, towns, produce, inhabitants, Ge. of Cochin-China.

THIS kingdom, which includes Chiampe, is fituate between one hundred and four and one hundred and ten degrees of east longitude, and between ten and seventeen degrees of north latitude; it is bounded by Tonquin, on the north; by the Indian ocean on the east and fourh; and by Laos and Cambodia, on the west, being about four hundred miles in length, and one hundred and fifty in breadth. It was originally a province of Tonquin, but has formed a dishiret kingdom for upwards of three hundred years. It is tributary to China, like Tonquin.

The Kemois mountains run the whole length of it from

The Kemois mountains run the whole length of it from north to fouth, dividing it from Cambodia; but towards the feat the country is generally level. The air of this country is not fo hot as that of Tonquin, though it lies nearer the equator, for which feveral reafons may be affigued, as the advantages of the fea breezes, of which Tonquin has not fo great a hare: Tonquin lying upon a bay where the winds have not fo free a courfe, while this countries which lie ear the tropics, as Tonquin does, are much hotter than thole that lie near the equator; for the countries which lie under either tropic have the fun over their heads near three months, whereas the fun palles fwith over the countries near the equator, and does not return thither again for near fix months; and it may add to the heat near the tropics, that the days are an hour and half lenger at the tropic than they are at the equinoctial, and the rains and cloudy weather continues longer there also than it does at the tropic.

longer there also than it does at the tropic.

This kingdom is divided into five or fix provinces, and is well-peopled. The King refides at the capital of Kehue. Along the coast are several islands subject to this

kingdom, which produce many infeful fruit trees. This country produces great plenty of rice and fugar; and they have gold and filter mines. Eagle-wood, calambac, an ordinary fort of tea, and feweral kinds of drugs grow here.

An inundation happens regularly every year in Cochin-China, about the middle of autumn, leaving behind it a kind of finne, which fertilizes the land. In this wet fea-fon, the people fail about the country in barks: and, in order to be lecure in their houfes, are obliged to creek them on piles, that the water may flow beneath them. They build their houfes chiefly with the baulboo cahe, one flory high; the window frames are cloted up with Japan paper, or thells ground transparent: the partitions of their chambers are formed of fereens, and their floors covered with matts, which ferve them for feats and beds; but the rooms of the rich are more elegantly furnished. They have no kitchens in their houfes, for fear of accidents by fire, but drefs their provisions by the river fide: they are obliged to eatinguish their fires on heaving the beat of a drum, whenever the wind blows from the fea.

ever the wind blows from the rea.

They are a temperate people, and live chiefly on rice and fifth, which they have in great plenty. Though they are but imperfectly civilized, yet they poffets that felicity which night excite the envy of more polithed fucieties: they have neither thieves nor beggars; and are remarkable for their hofpitality. Though they do not encourage pride and loxury, yet the wealthier fort entertain friends in a fumptions manner.

At public fellivals, the common people meet in the streets, where in a circle they eat their provision on matts, while tumblers and merry-andrews divert them with their antic tricks. The monarchs of Cochin-China are despotic, and very difficult of access. He gives audience at his palace, gate in a fort of state-litter, superbly gilt, and resembling a cage. No person must approach nearer to him than at the distance of eighty paces. He keeps his sera-lio at his palacewhere it is guarded by enunchs. He rides side-ways on an elephant, when he goes abroad, and is accompanied by guards; he wears a turban of the finest callice on his head, pendants of the richest brilliants in his cars, and bracelets on his arms: but his body is almost bare, having only a covering round his middle, and in his left hand he holds a spear, or rather a long javelin.

All the provinces in the kingdon, and courts of justice,

All the provinces in the kingdon, and courts of juftice, are governed by mandarins, who, it convicted of mal-administration, are fure to be punished with death. The King has the intre disposal of all the officers of state, and even the lives and fortunes of the people. Treason and rebellion are not only punished with the most dreadful tortures, but very severe penalties are likewise inslicted or all the kindred of the traitors. Other beinous offences are unnished with death, or the lofs of a limb: though it must be acknowledged, that the almost irressible inslurnce of

busined with each, be the almost irrefifible influence of money too often fereen the guilty from punishment.

Notwithflanding the Coclin-Chinese are intirely ignorant of the sciences, they are very skilful mechanics; and far surpass the Tonquinese in the manufacture of silk. They make sugar-mills and water-engines, but can make no fort of fire-arms. Their foreign trade is not very confiderable; the chief articles they export, are, silk, conton, betcl, aloes, wax, japan-wood, cassia and sugar; the chief part of which are purchased by the Chinese, who have ingroßed almost the whole of this trade to themselves.

The only money current in Cochin-China confifts of pieces of copper fitted by the Chinefe, which refemble those used by the Tonquinefe. Silver is extremely scarce with them: for a man who is possessed of eighty or a hundred piastres, is deemed wealthy.

With respect to the religion, marriages, funeral eccomonies, mourning for the dead, &c. of the Cochin-Chinefe, they are the fame as in the neighbouring kingdom of Tonquin.

SECT. III.

Containing a description of the situation and extent of the empire of Siam, the provinces it it divided into, their chief rivers, monstons, winds, tides, climate, mountains, cap tolcity, royal palace, and principal teams.

THE Malayans call this empire Tham, but the name Siam was given it by the Portuguefe, which, in the Peguan language, fignifies free, though they have not at prefent much liberty to boalt of. Under Siam we may comprehend not only Proper Siam, but Malacca, Cambodia, and Laos; for these were lastly provinces, and are great part of them yet urbutary to this kingdom; and

the name ch, in the ve not at we may ca, Cain-, and are ens : and though though the Dutch have chcrosched on the dominions of this prince, particularly in Malacca; and other remote provinces, have rebelled and thrown off their allegiance, and are now fer up for perty fovereigns, this cannot be fupposed to have extinguished the right of the lawful prince. There is this farther reason sife for treating of them together, namely, that their religion, laws and policy, persons, manners and customs, have very little to distinguish

Siam extends from the first degree of north latitude to biain extends from the first degree of north latitude to the twenty-fifth, if we reckon from the fouthernmost point of Malacca to the northernmost part of Laos; the longitude is not altogether so certain. This city of Siam here-tofore being reckoned to be in the one hundred and forty-fifth degree of longitude, and by late observations in one hundred and twenty-one, and full greater mistakes have been discovered in the fituation of China, which is now found to be the hundred later. found to be five hundred leagues nearer us than fermer accounts made it.

counts made it.

Siam including Malccea, Cambodia and Laos, is bounded by Tonquin and Cochin-China, towards the eaft, by the gulph of Siam, and the Indian fea towards the fouth, by the bay of Bengal towards the weft, and by the kingdoms of Pegu and Ava, towards the north and weft.

Siam in its full extent, is faid to refemble a crefeent, of which Proper Siam and Laos may be reckoned the body, and Malacca and Cambodia the two horns; but then Malacca, or the western horn, is much the longest, extending several degrees further southward than Cambodia, or the eastern horn.

ing feveral degrees further fouthward than Cambodia, or the eaftern horn.

There are also seven provinces in Proper or Upper Slam, which receive their names from their respective capital cities, viz. Proselouc, Sanguelouc, Lacontai, Campengpet, Cocontepina, Pechebonne and Pitchia.

Porselouc includes ten little districts or countles, Sanguelouc eight, Lacontai seven, Campengpet ten, Coconrepina five, Pechebonne two, and Pitchia seven; and befides these, there are in the Upper or Proper Siam one and twenty other districts or counties, which are not subject to the sorner, but are under the jurisdiction of the capital city and province of Siam. city and province of Siam.

There are reckoned seven provinces in Lower Siam, viz. There are reckoned leven provinces in Lower Siam, viz. Jor, Patana, Ligor, Tenefferim, Chautebonne, Petelong or Bordelonge, and Tclai. The province of lor contains feven counties or districts, Patana eight, Ligor twenty, Tenesserim twelve, Chautebonne seven, Petelong eight, and Tchai two: but geographers do not take upon them to describe the bounds of the respective provinces. We shall proceed therefore to describe the situation and extent of Cambodia and Laos, which, being inconsiderable in themselves, are included under the general name of Siam.

themselves, are included under the general name of Siam. Cambodia extends from north to fouth upwards of three hundred miles, and is about two hundred miles broad. It is fituated on the east fide of the gulf of Siam, and bound-ed on the west by Cochin-China; by the Indian ocean on the fouth; and by Laos and the Kernois mountains, on the north. Its chief town is Cambodia, situate on the river the north. Its chief town is Cambodia, fituate on the river Mecon, in about the twelfth degree of north latitude; Laweck or Ravecca is something higher up the river Mecon. The post towns of Terrana, Langor, and Caiol lie on the south-west of Cambodia. The island of Pula-Condore lies off the coast of Cambodia; it is between sour and five leagues long. The natives of this island are well-shaped, their complexion swarthy: they have strait black hair, small eyes, high noses, thin lips, and white teeth, and go almost naked. This island, as well as Cambodia, is very fertile; producing various kinds of grain, particularly rice and corn; also several other rich commodities, and precious stones; wild elephants, and boars, lions, tygers, wild cattle and bustaloes, horses and deer, are very numerous in Cambodia. They worship the same deities as the Siamese. as the Siamele.

Laos is likewife a very plentiful country; being bounded on the east by Cochin-China and Tonquin; on the weft, by Brama; on the north, by the lake Chamay; and on the fouth, by Cambodia and Siam Proper; but its boundary towards the north, is not agreed upon. It is about fifty miles in breadth from east to weft, though it is reckoned to be ten degrees in length from north to fouth: Lanjeng. It is a fovereign flate, whose king preserves an unlimited power. He confiders himself as superior to all other fovereigns; and the characteristic, by which he distinguishes himself from other princes, is from the length of his ears, which hang upon his thoulders. But to return to Siam.

The vallies which lie, at a diffunce from the fea, are ex-

- باشدد الأمال

ceffively hot, and the mountains cool; but that part of the country which lies near the coalt, is refreshed great part of the day by the sea-breezes. The annual rains also contribute to cool the air, or this part of the world would his fearcely liablesher. be fearcely liabitable:

bet fearcely liabitable:

The Menan and the Mecon are the two chief rivets in Siam; but there is a third, called the Tenaferin, which falls into the hay of Heigal, forming the ifle of Mergoy, which has a most excellent harbour. The Menan rifes in Tartary, and, running from north to fouth, paffes by the city of Siam, falling into the bay of the faine name, in thirteen degrees of north latitude. The Meon efforifes in Tartary, and running from north to fouth, through Laos and Cambodia, difeharges itself into the Indian ocean, in nine degrees of north latitude.

The periodical winds, called the monstoons, which accompany these winds, are heaviest about midsumenter. The fairest feason is in December, when the fun is at the greatest distance from them: the most stormy weather is at the histing of the monstoons, which used the state of the periodical winds, are heaviest about midsumenter. The sairest feason is in December, when the fun is at the greatest distance from them: the most stormy weather is at the shirting of the monstoons, which usually happens about the equinoxes, or within a month sooner of

weather is at the initing of the monitoons, which utually happens about the equitioxes, or within a month fooner of later, when the fhipping runs the hazard of being dathed to pieces, unleft it gets into the harbour.

The metropolis or chief city of Siam, fornethmes called Odioa, and by the natives Siyothiya, is in fourteen degrees north latitude, aild one hundred and one degrees five minutes longitude. It is fituate on the river Menan, and is three leavest in circumference, fortified with a wall and minutes longitude. It is fituate on the river Menan, and is three leagues in circumference, fortified with a wall and towers, and furrounded by feveral branches of the river Menan, which render it almost an island, except towards the east, where there is a caseley to pass out of the town by land without crossing the water: that which is properly the town does not take up above a fixth part of the ground within the walls. On the rest of it are built between two and three limited temples or pagodas, furrounded by as many convents of talapoins: also are their burylag places, with pyramids erected over them, which with their spires and the towers of the pagodas make a very agreeable prospect.

pect.

The firects are large and firalt, aid finite of tilem pixed with brick, and catals cut through them, over which are feveral high ill built bridges, which has occasioned the comparing this city to Venice. The floules are most of them built of bamboo, or over-grown cane, and fland upont pull of bamboo, or over-grown cane, and flaid upout pillars of the fame thirteen feet above the ground, the lower part underneath the house being put to its manner of use: the houses are not contiguous, nor do all the samily, if it be large, lodge under one roof, but every man's ground is paled in with bamboo; and within this inclose fure are several little tenenients erected on pillars; according to the quality of the person and the number of his dependents and shares, that saids are less than the person and the number of his dependents and shares that saids are less than the person and the number of his dependents and shares that saids are less than the person and the number of his dependents and shares that saids are less than the person and the number of his dependents and shares the person and the number of his dependants and flaves : their cattle also are kept in upper rooms, it is faid, to prevent their being earried away in the time of the inutidation: There are fome few houses in the town built by foreigners with brick; and the King has erected others of the same fort for the use of foreign ambaffadors.

The royal palace at Slam is a mile and a half in circum-ference; it is a most splendid edifice; situate on an emiference; it is a most splendid edifice; situate on an eminence, and, for its extent, resembles a city. It stands on the north side of the city of Slam, has several grand pyramids, towers, &c. and is incompassed by three walls, with large courts or spaces between the several walls. The King resides in the luntermost court, which is called the Vang, and contains spacious gardens, groves, and pieces of water; whoever passes in or out of the Vang falls down on his face before the gate. The Siamese never build above one story high; but then as you pass from one room, to another in the King's palace, both the floor and roof of every room is raised; the sirst room is the lowest, from whence you ascend by several steps to the second, and so on whence you afcend by feveral steps to the fecond, and so on to the third, &c. There are seven such rooms in the royal to the third, &c. There are feven such rooms in the royal palace, and in the houses of persons of distinction there are three shoors, in passing to every one of which we ascend by steps. The grand room where ambassadors are entertained, is open on all sides; for the beneist of the air, and the roof is supported by slender pillars; it is furrounded also by water and shady groves. There are several such rooms in the gardens of the palace, where the mandarins, or great officers attend, while they are in waiting. The hall of audience, beyond which foreigners are feldom admitted, is wainfeotted, varnished, and painted red, with pannels of looking-glass in it, and the shoot covered with rich carpets. The guards have orders to admit no man into the palace who is armed, or has drank any arrack or spirits: the officer therefore smells every man's breach. breath before he fuffers him to pass the gate. The stables for the King's elephants and horses are within the first exclusive of the palace. In a gallery at the upper end of the hall of audience the King issually thews himself to

The apartments of the King and Queen are in the innermost court of the palace, when there handstime halls. None but ladies at the provided him to be declarable, who drets and undress him, or putting on him night-cap, which he does himself, as no body must touch him facred head. His women also drefs his meat, and wait on him at table: the provision is carried in to the enunchy, and the liver it to the semales; but he king has caverable to the semales; but

the King has nevertheles a relemen of the wardrobe, to the most distinguished of whom the care of his Majesty's

den cup is committed.

Having given an account of the ... Ay and palace of Siam, we shall next proceed to deferibe the fituation of the reft of the confiderable towns of this kingdom; and, of these, Menangiang lies the most northerly of any town in Proper Siam, being situated in the twenty-second degree of north latitude, upon the river Menan. 2. Lacontai stands upon the fame river, in about the twenty-sirst degree of north latitude. 3. Profeloue is situated upon the same river, latitude twenty. 4. Campengpet about the eighteenth degree. 3. Prabat about the fiateenth, and 6. Louve about the latitude of sifteen, thirteen minutes, where the King usually resides in the hunting sesson: these all, except Louve, lie upon the same river, above the city of Siam. 7. Bancook, which lies about fifty miles below Siam, our the same river, and may be accounted the port town to Siam: here all shipping receive their permission to trade, and their discharges when they leave the country. 8. Martaban, fituated on the bay of Bengal, in about the fixteenth degree of north latitude. 9. Tenesserim, which lies Having given an account of the lay and palace of Siam, degree of north latitude. 9. Tenefferim, which lies on the fame bay, at the mouth of the river Tenefferim, in about the latitude of thirteen north. 10. Ligor, fituate on the west side of the gulf of Siam, in the eighth degree of north latitude. 11. Cantebon or Liam is fituated at the mouth of a river of the same name in the twelve degree of north latitude, on the east fide of the gulf of Siam. 2. Patane, which lies on the east fide of the peninfula of Malacca, in fix degrees thirty minutes north latitude. 13. Queda, ties upon the western side of Malacca, in about the seventh degree of north latitude. 14. The town of Malacea, which gives name to the peninfula, lies in the latitude of two degrees, thirty minutes north. It was taken from the Portuguele by the Dutch, Odlober, 1640. When it was in the possession of the crown of Portugal it was a place of great trade, and frequented more than any other town in India, except Goa, here being the rendezvous of their fhipping from China, Japan, the Spice illands, &c. They built the caffle, and fortified the town with a wall, and it had five parochial churches, a college of Jefuits, and was a bithop's fee, but the Dutch have let all the churches run to ruin, except one; and the trade is removed to Batavia: it is now only inhabited by two or three hundred families of Dutch, Moors, Portuguefe, and Chinefe, with fome Malays, who live in the luburbs, and has a garrifon of two or three hundred foldiers. This place is naturally very frong, and by its flutation, commands the freights of Malacca: the Dutch, who are mafters of it, over-awe all the little princes on those coasts, and compel them to deal with them on their own terms; they look upon themfelves to be lords of that part of the world, and almost exclude all other Eutopeans from any thare of the trade, as will be observed in treating of the trade of this country.

15. Sincapora is fituate in the first degree of north latitude, at the most foutherly cape of the continent of Asia, and gives its name to the easiern part of the . ights of Malacca. 16. Johr, which lies to the easie. 26. If Sincapora lacea. 16. Johr, which lies to the early 24. in about one degree, thirty minutes. This province it gives name to, have thrown A Jan sugiance to the King of Siam; but the Dutch hor pew, to give laws to them when they please. Cambori and orozona lie to the north of Siam.

SECT. IV.

Containing a general account of the King of Siam, his Queen, guards, annual processions, army, navy, revenues, nobility, officers of state, and ambassadors.

THE King, when he goes abroad, either rides upon an elephant very richly caparifoned, or is carried in a grand chair. He paffes through the city once a year,

with a numerous train of elephants, and bands of mufic. The people fall profitate at the fight of his Majelly, during the proceffion, and rife to gaze at him, efter he has paffed. He also once a year fliews himself on the river in a grand

The land once a year news inmets on the river in a grated balton or barge covered with a rish canopy.

The Queen is attended with great point wherever the goes, and has hee elephants and batons. She is always its a chair sitelofed with curtains, and never feen by any body

except her female attendants and eunichs.

Daughters never luherit the throne; nor does the eldeft fon of the Queen always forceed to the crown; but generally the cleen fon of the King by the first concubing that

rally the cledit fon of the King by the first concubine that beings hims a child.

The King is attended by two bodies of herse-guarde, who are matives of Laos and Meen; and a third, composed, partly of the natives of Chinese Tartary and Indosan. These horse-guards always accompany his Majetly when he goes abroad.

Every person in Siam is involted, that none may escape the personal service he owes his prince sia months in the year: they are divided first into right and left, and these podies are earth sub-liked into hands or companies, which the product are earth sub-liked into hands or companies.

bodies are again full-livided into bands or companies, which have each their nai or governor. Every commander of a bargo has also a certain number of rowers of pagayeurs under him, who are marked with a hot ton on their writts: these their nai or commander dismisses, if he thinks sit, six months at a time in every year, or by single months. The Siamese armies consist chiesty in elephants, and a

I he Samete armes consist chiefly in elephants, and a riaked half-armed infantry. When they go to war, their order of battle and manner of fighting is as follows: They draw up in three lines, each line confishing of three figurare battalions; and the general poss himself in the centre of the middle battalion, which is composed of their battle parts the first allowed the configurations. best troops: the rest of the commanding officers place themselves in the centre of their respective bodies; and where these nine battalions are thought too large, each battalion is again subdivided into lesser bodies: each battalion has fixteen male elephants in the rear, and two flie elephants to attend every one of them, without which it would be difficult to govern them. Their artillery is ear-ried in waggons drawn by oxen or buffaloes, having no carriages for it; with thele the fight begins and usually ends; if not, they draw fomething nearer and make me of their finall that in the manner already observed, but hardly ever come to a close fight; and if there is a necessity of making a fland, they are forced to place officers behind their men, and to threaten them with immediate death is

they turn their backs.

The Siamefe do not, like fome other Indians, take opium to inspire them with courage; they will run not the decade. fuch hazards, death they think is equally to be dresded whether drunk or fober; and he that drinks to raife his courage, or rather to commit a rath extravagant action, is accessary to his own death. When their body is broke into the woods, whither the other fide is feldom they fly fo hardy as to follow them; and as the armies are very nu-merous, and confequently find it difficult to fubfift, the conqueror is foon forced to retreat, and then the vanquished rally again, and perhaps return his visit. The elephants are their greatest strength; but then as they cannot be managed with bit and bridle as a horse is, when they are wounded they will often turn back upon their a fee and put the whole army into confusion; and it is al. on impossible to make them proof against wild fir they fire short guns upon their backs, about long, which carry a ball of a pound weight.

The armies of Siam, and indeed all the neighbouring countries who hold the mecungfychosis, are chiefly deformed for which countries who hold the mecungfychosis, are chiefly deformed for white forms of white forms of the state of the

firous of making flaves; and their usual method of making war, is, to invade each others dominions in different parts at the fame time, and to carry off whole villages into captivity. They are wholly incapable of carrying on fieges; but they will fornetimes flarve a place, or furprife it when they have a correspondence with the treacherous inha! itants.

As their religion inspires them with a horror of blood, they never fhoot directly at each other; but higher, and never kill their enemy, but when forced to it by necessity, or in their own defence, in order to repulse them; and those who are slain, they deem guilty of their own death.

thole who are many the paper of the paper of the King of Siam confils of but about half a dozen large thips, the crews of which are foreign-half a dozen large thing, the has about fixty finally ers; however, exclusive of these, he has about fixty small armed gallies, with only one man to an oar, which being very thort, he is obliged to row flanding, to make it touch the water. fifts of but about thich are foreigns about fixty finall oar, which being ling, to make it Tovak toyal balons, or pleafure-berges, which are very magnifi-cent. In his naval expeditions, the King only makes re-prifals on fuch of his neighbours as injure him in his

prifals on fuch of his neighbours as injure. It is revenued in the King's treasury is immensely rich. His revenues arise from cultivated lands, exports and imports, vassels, gardens, fruits, lines, confications, &c.

In Siam, nobility is constituted by the princes favour, or by opulence, and not by hirth. People of the meanest extraction are sometimes ennobled by the King, if they happen to have any particular fervices to recommend them. He gives to these a gold or filver boussette, to bold their hetel, as a mark of distinction.

The mobility consist of five degrees a hamely, 4. The Oyas, who possess the highest places, and whose golden boussette or box is much better wrought than those of the interior classes. A. The Okpras, which are considerably more numerous than the Oyas. The King's ambassadors extraordinary are chosen from the Okpras. 3. The Oklouans, which have only silver boussette, chased with settours and branches. The Okkowisand Okmunes are the fourth and fifth orders: their boussette is quite unornamented your

louans, which have only filver bouffette, chafed with feltoous and branches. The Okkowstsand Okmunes are the fourth and fifth orders: their bouffette is quite uncreamented jout of these the King chafes his judges, governore, &c.

The King of about his many lords, who are peculicity strached to his perion; these always live within the palace. Others accomployed without, to govern affairs, and preferve good order among the people.

There are eight great officers of state in Slam, viz. the Maha Ommarat, who is the next to the King in authority, and sits in his prefence; the Chakri, who regulates ahe assists of war and justice; the Ashoon, who is generalistime both by 1 and fea; the Okya-Vang, who superintends the affairs of the palace; the Okya-Vang, who superintends the affairs of the palace; the Okya-Vang, who furperintends the affairs of the palace; the Okya-Vang, who furperintends the affairs of the palace; the Okya-Vang, and treasurer. These prime officers, with the King's approbation, dipose of all other posts of the realm, and are responsible for all errors that may be committed in them. All efficers of government, residing in the capital, most daily attend in some part of the palace, except they have leave of absence, on pain of being whipped with split restauts, which make deep incisions in the body.

It is an established rule in this kingdom, that no officer presume to come into his Majesty's presence without leave, nay, the great officers are not allowed to visit one another.

It is an established rule in this kingdom, that no officer prefume to come into his Majesty's presence without leaven may, the great officers are not allowed to visit one another but at weddings and funerals; and then they are obliged to speak aloud, and in the presence of a third person, to prevent all consultations against the state; and every one is obliged to turn informer upon pain of death, if he hears any thing that may endanger the government: numbers of spies also there are, to inform the prince of what is spoken in all companies. On the other hand it is dangerous, being the bringer of ill news, or to let his Majesty know, the weakings of his government, nor date any officer tall him. weakness of his government; nor dare any officer tell him, it is impossible to execute what he commands, but they do It is impossible to execute what he commands, but they do what they can, and endeavour to excuse the miscarriages afterwards; and when there is a necessity of acquainting the King with ill news, they do it gradually, and in as fost terms as possible; for he feldom fails to punish whoever offends him, with the extremest rigour; and where it is a gradually, will fometimes order both the ininther and the party accused, to be thrown to the tygers in his presence, and infult over their dead carcasses.

At Siam, an ambaffador is regarded no otherwife than as a royal meffenger; the letter he carries has much greater honour paid it, than his perfon: the French ambaffa-dors observed, that while their King's letter and presents were carried in the body barge, with several others of the fame class to attend it, they themselves were carried up the river of Siam in ordinary vettels. The Siamete never fend ambashadors to reside at any court, but only to dispatch fome particular business, which usually relates to trade; and upon these occasions, they send three, though the first has the direction of the affair, and on his death is succreded by the fecond, and the fecond by the third.

On the arrival of a foreign ambassador at Siam, he must not let forwards towards the court, till the King is apprifed of his coming; and if he is accompanied with Siamele ambassadors, as the French were, the Siamele ambassafadors go up to court first, and acquaint his Majedy with their arrival: the foreign ambassadors are lodged and maintained at the King's charge, and are allowed to trade during their stay, but they are not suffered to enter the city, or transact any affairs till they have had their public audience, or to continue there after their audience of leave;

and therefore the evening before, the King demands if they have any thing further to propose; and at the sudience of leave, if they are fatasised. All public audience are in the metropiolis, when the court appears in all its splendor; those audiences which are given at the Louvo and other places, are accounted private addlences, where the guards and attendants are not numerous. Those amballadors who come from the neighbouring fovereigns, that are dependent an, or connected with the Emperor of Siatil, are obliged to profitate themselves before him, and advance towards him erceping upon their hands and krices. But the Europ 20 amballadors are exampted from many of the exceeding the external to open their lips till the Emperor has first spoken; and, wheat they do speak, are required to be exceeding laconic, a long lastangue being deemed an agregious infelt. Amballadors from independent affaite monarch's are also treated with some degree of respect.

SECT. V. . .

Treats of the genius and disposition, stature, complexium, shape, and deeps of the Siames , also of their ceromonies, suffer, antertainments, food, diversions, Sc.

THE people of Siam have a ready and clear conception, and their repartees in convertation are quick and finart: it is faid, they can imitate any thing at fight, and in one day become tolerable workmen. They are natorally kind and completiant, but are apt to be heighty when too much fubmifion is thewn them. They ablied drunkenness and adultery; and a fineere affection substitution of the strength of their quarrels ending in till language.

When they profess the fineerest friendship, they do it by drinking of the same cup. It is observed of them, that their minds are as calm as their heaven, which changes but their a year; and that they have the good fortune to be

twice a year, and that they have the good fortune to be born philosophers, having naturally the command of their

The Siamele are of fmall flature, but well proportioned, which is imputed to their not being fivaddled and bound up in their infancy like our children; and no other inconveniency attends the women's going without flays, but their breafts hanging down to their girdles as the women of Siam do. Their complexion are fwaithy enough, and the faces both of men and women are of the broadest, with high cheek-bones, and their foreheads foddenly constraint and the reconstruction of the broadest, with high cheek-bones, and their foreheads foddenly constraint and the property of the constraint and the const with high cheek-bones, and their foreheads foddenly cona-tract and terminate in a point as well as their chins: they have dark finall eyes, not very brifk, their jaws hollow, large mouths and thick pale lips, and their teeth dyeeb black; their nofes are fhort and round at the end, and their ears large, which they account a beauty; long nails growing an inch or two beyond their fingers ends is looked upon also as an ornament. They have thick lank hair which both men and women cut of thort that it reaches no lower than their ears, and the women make it stand up on their foreheads: the men shave their beards, and do not their foreheads : the men shave their beards, and do not leave fo much as whifkers. They bathe themfelves two or three times a day, or oftener, and never make a vifit before they have bathed; fometimes they go into the water

fore they have bathed; fometimes they go into the water as we do, but at others they have water poured on theif heads, which they will continue in hour together; they afterwards perfume their bodies, and use a sweet pomatural which makes their lips look paler than they naturally are.

A perfon of condition wears a piece of califier or fills about two ells and a half long, which reaches to his knees; this is called the pagne. He has also a mulln shirt without a collar, with a wile sleeve and no wrist-bands, and the bosom open. In whiter they wear a breadth of stuff or painted linen over their shoulders like a mantle, and wind it about their aims. The Kine of Siam wears a vest wind it about their aims. The King of Siam wears a vest of brocaded fattin with strait sleeves, which reach down to the wrift, under fuch a thirt as is described above, and it is not lawful for any subject to wear this vest, unless the King presentshim with it. Slippers are worn with pic-qued loca turned up; but slockings they are strangers to. To the generals the King sometimes presents a military vest, which is buttoned before, and teacher to the knees, the flueves whereof are wide and come no lower than the elbows: and either in war or hunting the prince and all his retinue are clothed in red. The King wears a cap in the form of a fugar-luaf, ending in a point, with a circle

or coronet of precious stones about it; and those of his officers have circles of gold, filver or vermilion gilt, to distinguish their quality, which are fastened with a say under the chin. These caps are only worn in the King's presence, or when they preside in courts of justice, and on other extraordinary occasions; but their slippers are alway: 15t off when they enter a person's house for whom they have any respect. They have hate also for travelling; but very sew people will be at the trouble of covering their heads though the sun shines with that foorching heat. The women also wraps clothorpagns about their middles, which hangs down to the calf of their legs; the men bring up the end of this cloth strait between their legs and truck it into their girdles, which makes it something resemble a pair of breeches.

The inferior people cover no more of their bodies than modelty requires, and have neither those nor hippers on their feet.

The Siamefe ladies bathe in the rivers, and fwim as the men do, but never without their pagne about them, and are much commended for their modelly, as a greater affront cannot be offered them, than the introducing in their bearing lewd fongs or obfeene conversation. Their pagnes are of fine linen, and make a great-thew: those made of embroidered filk are only went by fuch perfons as the prince prefents them to. The women wear as many rings on the three laft fingers of each hand as they can keep on, and bracelets or rings of gold, &c. upon their wrifts and ancles, with pendants in their ears fashioned like a pear.

These people are extremely ceremonious, like the Chinese. The way of salutation here, as in most Indian nations in the Salam, that is, the lifting up one or both hands to their heads, and bowing their bodies. If any one addresses another, who is much his superior, he salls down upon his sace before him. To stand upright when we actend a great man, is the highest piece of insolence: the usual posture is, sitting on their heeds, with their heads a little reclined. They have an uncommon respects for their heads and ever for their caps, when they have been authorized by their Sovereign to wear them. The cap is a badge of authority, and seldom worn but on public occasions, or when a magistrate sits in a court of justice; and as it is esteemed the rudest thing in the world to touch or stroke a man's head, so his cap is treated with uncommon respect. The servant carries ir above his head, and puts it on a cane smade for that our pose.

The principal food of the Siamefe is rice, and fift: the fea affords them good small oysters, turtles or totolie, and lobsters, and several other excellent kinds of fifth, unknown in Europe: they have also great plenty of river fish, especially eels, but they make no great account of them. Balachaun, which is made of small fish, corrupted and reduced to a mash, has been already described in Tonquin, and is in much esteem amongh them. They choose to eat dried salt-fish, though it stinks, rather than fresh; nor will they refue rats, mice, locusts, lizards, or almost any intests, any more than the Chinese. A pound of rice will serve a Siamese a whole day, which may be bought for a farthing, and with as much falt-fish as he can purchase for a farthing more he is very well fatisfied, and a pint of arrack or spirits is not worth above two-pence; so that the meaner fort of people having but little care to take for a substitute, and the conting but sings is heard in their houses of an evening. Their sauces are made only of ware, with a little spice, garlie and sweet berbs, or capi made of decayed shell-fish, the same with the nukenoun of Tonguin. Their sauces are inversater, and tea.

decayed thell-fifth, the fame with the nukensum of Tonquin. Their liquor is river-water, rain-water, and tea.

Mock-fights of elephants is one of the diversions of the Siamese. They were formerly very fond of cock-fighting, till their priests procured an order against that cruel sport, etteeming the killing those animals almost as wicked as the killing a man. Comedies are another part of their diversions, and a kind of martial dances, in which they act a battle, being armed and marked, and in their songs repeat part of the history of their country. Their grand annual sessions when the waters retire; then they said down the river several evenings successively, their barges being illuminated with painted paper-lanterus. They have another session thansgiving for the fruits of the earth after harvest, when their streets as well as their boats are illuminated, and a grand fire-work is played off on the occasion. Here are races also, not of horses but ozen; and they row races also upon their rivers, and are so hewitched by the games of chance, that they will not only play away their wives and children, but set their own persons and liberties on the east of a die; and become slaves, if they lose. The

new and full moon are for far from being feltivals, that they keep a strict fast, and will admit no manner of diversions on these days at this time it is they make their offerings to the priests in their convents, and give alms to the poor. The offerings are presented by the priest to the idol, and some time after the priests apply them to their own use.

SECT. VI.

Containing an account of the trade, manufactures and meachanic arts, weights, coins, Ge. of the Siamefe.

N O man learne any particular trade in this country; but every person acquires some knowledge of all, and they work half a year by turns for the King; when, if any of them should be sound perfectly ignorant of the business he is set about, he would undergo the bassinado a nor does any man endeavour to excel, lest the King should keep him in his service as long as he lives. The tyrannical government they live under, is another great discouragement to industry, for the King seizes on any man's money and effects whenever he pleases.

Their earpenters work is faftened together with wooden pins inflead of neils: they know how to caft metals, and cover: the blits of fwords, and chere things with gold, filever, or copper: they have not the art of tanning leather, or of making any fluffs of filk or wool, and weave only cotton cloth. Their painting is rather worfe than that of China, they being very indifferent workmen; which obliges them to give great wages to the European artifls; for as the Siamele do not affect finery in their drefs, and despife supershuous ornaments, they therefore neglect a great many mechanic arts, which the Europeans are employed in. They appear to be the honesteft and faireft dealers in the world: their weights and measures may be depended on: they are the very reverse of the Chinese.

The King is the chief surchant in this country; no

The King is the chief merchant in this country; no man may traffic with a foreigner, till the King's factora have had the refusal of all the goods; and these factors defeed fo low as to fell them by retail again. The subjects are obliged to buy all their closthing of them, which is chiefly cotton cloth. He obliges his subjects to fell him all their ivory and arrack at a certain price, which he fells again to foreigners. In his magazinus are salt-petre, lead, span-wood, gunpowder, subphar, and arms, which his Majesty monopolizes, not suffering his subjects to deal in these articles. The King also purchases skins and surs of the people at his own price, and dispose of them to foreigners; but by these practices he has ruined the trade of the country, which was formerly very geat.

Their meafuse for grain and liquors is the cocos-nut shell which are very unequal; no are their weights more certain than their measures. They have but one fort of silver coin, called a tycally, which is worth three shillings and three shalf pence; they are all of the same schion, and have the fame slamps, but some are less than others; they have the form of a cylinder, or roll bent both ends together, and have a stamp on each side, with odd characters upon it. They have no gold or copper-money; gold is reckoned among their merchastable commodities, and is twelve times the value of silver.

The fhells called coris ferve to buy little matters; they are found chiefly at the Maldive islands, to the fourth of India, and are current in all the countries thereabouts; they differ in their price as they are plentiful or fearce; but the value of them at Siam is generally eight hundred for a penny.

The principal trade of the Englith in this country is at the port of Malacca, in the policifion of the Dutch : hither the Englith fend leveral country thips yearly from the coal of Coromandel and bay of Bengal, with callicoes, flight filks, opium, &c. and make profitable returns in cates, rattans, benjamin, long pepper, fugar, fugar-candy, fapan wood, and fomerime gold may be had at a reafonable rate; but this is a trade prohibited by the Dutch, and carried on by the countivance of the governor, council, and fical.

SECT. VII.

Of the foil, husbandry, gardening, plants, anienals, minerals, and manner of travelling in Siam.

THE foil of Siam has been gradually formed by the clay and other earth which the floods with down, from the mountains; they have very little floney ground, and there is hardly a fint to be found in the country. It

is the mud which the river leaves behind which makes the fertile earth, as far as it extends: all the higher grounds are dried and burnt up by the fun, foon after the rains are over; and though their lands, form of them, are naturally fruitful, yet they are fo fubject to droughts, infects, and rfuttuit, yet they are to implice to uloughts, insects, and other inconveniencies, that they are formetimes deprived of their harvest feveral years together, and such years are generally succeeded with pession that the property of the their such that the such that the such that the fact that a garden, by

they fometimes fow wheat, and water it like a garden, by little chanels cut through the fields: they have two erops yearly, but not on the fame ground.

They efe oxen and buffaloes in plowing, and guide them with a rope run through their nofe. Their plough is plain, and without wheels: they have a finare and a ftaff to hold it by, and it is not much unlike our foot-ploughs in other respects, only instead of nails, the pieces are fastened together with thongs and pins.

The chief, grain used here is rice, which they begin to flow in the flat country, when the clood has mostlened the

fow in the flat country, when the flood has moistened the earth, and as the water increases the rice grows, and keeps its head above water till the dry feafon approaches, and the fun has exhaled all the water, and then is the time of their harvest. Sometimes it is ripe before the waters retire, and then they go in boats to reap it.

Their kitchen-gardens afford them herbs for fallads, pulse and roots, and the cucumbers and melons, which the poor people eat in the dry feafon, are esteemed very innocent food.

The only Euroscan faith along the control of its head above water till the dry feafon approaches, and

innocent food.

The only European fruits almost they have, are limes, oranges, and lemons, but they abound in plantains, bananas, mangoes, guavas, jaques, durion, tamarinds, ananas, coco nets, and fugar canes.

Here are some European slowers, as the tuberose, gillishover, and some few roses, jessamine, and amaranthus, and other natives of the country valuable for their colours and scent: but it is observed, that in the heat of the day, they do not finell near fo strong, as they do in the morning they do not finell near fo strong, as they do in the morning. they do not finell near fo ftrong, as they do in the morning and evening; and the European flowers transplanted thither do not afford near so sweet a smell there, as they

There is plenty of good timber on the hills, of which the bamboo is of great use in building; it is a hollow knotted cane, of an enormous fize, very strong and hard to cut. The cocoa nut, which grows on the low lands by the fea-fide, affords them meat, drink and oil; the body of the tree is ufeful in building boats and other veffels, and of the fibres of the bank and nut they make cordage; the leaves serve to write on, and the branches for covering for their houses. The cotton tree is very common here; it bears a fruit of the bigness of a walnut, which opens when it is ripe; with it they find the cotton; from other trees they draw lacque and other gums; they have also the sapan, and other woods, proper for dying, and some lignum aloes or aquila.

In this country are tygers, elephants, horses, oxen, buf-faloes, slicep, and goats; some hares, no rabbits, but great plenty of deer. Here are to be sound, in great abundance and variety, peacocks, doves, pigeons, partridges, finipes, parrots, sparrows, and various other birds; amongst which the noktho is a very remarkable one: it is larger than an offrich, and hath a bill near three feet in length. They have great quantities of infects and reptiles, fuch as lizards,

fnakes, fcorpions, millepedes, &c. and their white ants and gnats are extremely troublefome.

This country was antiently rich in mines; and the great number of idols and other caft-works that are found amongst them, as well as the old pits that are daily discovered here, shew that there have been more wrought than there are at present. The great quantity of gold with which their images, and the walls and rools of their temples are adorned, make it evident also that a great quantity of that metal has formerly been extracted out of their mines. A European phytician discovered to them a mine of very good iteel, also a mine of crystal, one of antimony, and another of emery, with a quarry of white marble. They have also tin and lead mines; and near Louvo there is a mountain of load flone, and another in the island of Jonfalam on the Malacca coast; but the latter foon loses its virtue. In their mountains are also found some fap-phires, diamonds, and agate; but the people have no en-

phiriss, diamones, and again to the people have no en-couragement to fearch for thele, as things of this nature are always feized by the officers for the King's use. Befides the elephant, they have the ox and buffalo to ride on; but they nic neither horfes, affes or mules: the Moors have fome carnels which are brought from other countries; they use the semale elephants chiefly for carriage; the males are trained to the war: every one is at liberty to hunt elephants, and take them to use, but not to kill them.

The chairs which the Siamese travel in, are placed on

a kind of bler, and carried by four or eight men on their fhoulders, one or two to cach pole, and others run by to be ready to relieve them: those chairs have fometimes as back and arms like our drefting chairs, and fometimes are only encompaffed with a rail or ballister about half a foot. high; they are generally open at top, and the Slamefe fit croft-legged in them. It is only ions few of the great men whom the King fuffers to ride in chairs; and the Europeans are permitted the use of palanquins, or couches, carried on men's shoulders, with a canopy over them.

SECT. VIII.

Of the language, learning, characters, history, and chrenology of the Siamese.

THE Siamese have two languages, namely, the Baly and the Siamese. In the Baly they have thirty three letters, and in the Siamese thirty-seven, all consonants; and there are a great number of wowels in both languages, for which they have particular characters, some of which are placed before the consonant and some steers. which are placed before the confonant, and fonce after, and others are placed above or underneath. Their pronunciation depends much on the accent, and, like the Chinefe,

they feem to fing when they are fpeaking.

Arithmetic is their favourite sludy, in which they use ten characters, like the Europeans, and they are pretty.

ready at accounts.

ready at accounts.

They have no orators among them; and are ignorant of printing, their books being engraved with an iron pencil. They understand nothing of phillosophy; nor do they study the laws of their country, till they are preferred to some post, when they have a copy of instructions to be observed in that office put into their hands. Their astronomy is very i uperfect, nor do they understand any thing of the true system of the world; they believe, with the Chiuese, that the eclipses are caused by some dragon, who stands that the eclipfes are caused by some dragon, who stands ready to devour the sun and moon; and make a great noise, with pans and kettles to drive him away from those planets. But as to astrology, no concern of confequence is ever en-tered upon till fome fecond-fighted astrologer is consulted. They are very ignorant of physic or anatomy: their physicians feldom let blood or prescribe emetics, but have a great opinion of fudorifics, and sometimes purge their patients, but his had. great opinion of tudorines, and iometimes purge their pa-tients: but their beft recipe feems to be conge, or water-gruel made with rice, to which diet they subally confine the patient till he recovers. If a medicine fails of produ-cing the expected fuecefs, the physician imputes it to the magic of some evil spirit, and are very dextrous in deceiva-ing their nations.

magic of some evil spirit, and are very dextrous in deceivaing their patients.

They have as little skill in music as in any other sciencesfor they neither play or sing by notes; and most of their
inftruments are very harth and ungrateful to the ear: they
beat upon little ill-sounding drums, and have a trumpet
still worse: they have some shrill hautboys, and a little ugly
violin with three strings. They have also brafs basons to
beat upon. When the King goes out, or upon other solemn occasions, all these sound together, and no doubt
make very delightful harmony.

make very delightful harmony.

We cannot depend on any history of Siam before the year 1500. It is only supposed to be the golden Chersonese of the antients: and this there seems to be but little nefe of the antients: and this there feems to be but little foundation for, because gold is not the produce of this country. It is said also, this and the neighbouring countries of the farther India were formerly tributary to China: and this is pure conjecture; for the Siames have no fuelt tradition, much left history. They have had the use of letters some time, but they do not so much as pretend to have any ancient records. When the Portuguele took the city of Malacca in the year 1511, Mahomet an Arabian was sovereign of that city, and the territory about it, independent of the King of Siam. For the Arabians, and Eagyptians had certainly driven the original inhabitants, the Malays, from this coad, as they had the natives of Sunatra, Java, Borneo, Macassar, the Moluccas, Banda, &c. from the coast of the Indian islands, and possessed themselves of the rich produce of those countries, viz. of the felves of the rich produce of those countries, viz. of the cloves of the Moluccas, the nutmegs and mace of Banda; the camphire of Borneo, the gold of Leuconia and Sumatra, and the gums, perfumes and fweet woods that were to-be found in most of these countries; and the city of Malaces was the great mart, where this merchandize was to

be metwith, when the Pottuguese made themselves maters of it. We cannot doubt of the Egyptiuns and Arabians being possessed of the the Pottuguese sound the way to India by the Cape of Good Höpe; for we find the Grand Signor, who was then sovereign of Egypt, the coast of Arabia, and the Red sea, fitting out ficets, and engaging the Pottuguese in several battles in the Indian seas, to prevent their settling themselves in India, which, he was sensible, would deprive his subjects of the rich trade they had enjoyed for many hundred years: and very probably, the Arabians traded in these species was the first trade through Arabia into Egypt, when Joseph was fold to the Ismaelite merchants, who were trading thinter with their camels in a caravan: and though the people of Siam and the adjacent countries, have no histories nor records, that give an account of this antient traffic; yet it is strange that the Phoenicians and Arabians have no histories relating to their Indian expeditions; or, if such histories have been destroyed, that there are no copies or extracts from them, except what we meet with in the scriptures.

With respect to their modern history, we are told, that the kingdom of Siam and that of Pegu have frequently been engaged in wars; that fometimes, Siam has been tributary to Pegu, and at others Pegu has been con-quered by Siam; but at prefent they are independent of each other. The Portuguese were in a manner sovereigns of Malaces and the coalts of Siam both north and south, from the year 1511 to the year 1540, when the Dutch took that city, and now remain fovereigns of it and of the feacoast, and particularly of the streights of Malacca; and by their men of war stationed here and at Batavia, can prevent all other nations trading to China, through streights of Malacca and Sunda. After the above-mentioned period, namely, in 1688, the general of the Siamefe troops being popular among the foldiers, and having the army at his devotion, quarrelled with his fovereign in or-der to dethrone him. This he effected, and deprived his mafter of life, as a royal criminal, by pounding him to death in a large iron mortar with a wooden peftle. The fecretary of state was kept confined three years with the Siamele pillory about his neck, and was never, during that time, permitted to quit his dungeon, except when he was taken out to be severely lashed, in order to make him accuse fome of the principle people of having accumulated riches by clandeftine means, that the Ufurper might have fome pretext to plunder them. This Ufurper, however, en-joyed but little fatisfaction from reigning, being continually joyed but little latislaction from reigning, being continually tortured with the flings of a guilty conficience, and fuppofing his fecurity depended on the blood of those he fuserimes; and became at length a terror to himself and all shose who were subject to his tyranny. This revolution occasioned the ruin of the factory which the French had erected at Bancock. We shall only add in this place, that in 1717 the King of Siam invaded Cambodia by land with fifty thousand men. and by sea with twenty thousand have fifty thousand men, and by sea with twenty thousand, but was unsuccessful in his attempt to subdue it.

SECT. IX.

Laws of the Siamefe, and the punishments inflicted by them for crimes.

BY the laws of Siam, an unlimited obedience to parents and governors is as strictly required as by those of China, and the aged are much reverenced here. Lying is punished, and deemed as great a crime in Siam, as perjury is in this part of the world; and theft is so much detelled, that one who is guilty of it, is at once abandoned by all his friends, none will intercede for him, or give him any affishance; and an unjust possessor of lands is punished as a robber.

any as a robber.

They do not permit any man to profecute another, either in a civil or criminal caufe, without giving fecurity to make the charge good; every man is allowed to plead his own caufe, or any of his relations may fpeak for him; but the law is not a profettion of a particular fet of men,

but the law is not a profession of a particular fet of men. Where the truth of the charge is doubtful, the justice of the profecution is tried various ways. But the profecutor and the defendant are sometimes commanded to walk over burning coals, and he that escapes by dextrous management, is held to have the right on his side. Another method is by diving into deep water; the man t'at continues longest under water is adjudged innocent.

Emetics is a third method of trial. The priest gives

each of the parties a pill, and the testimony of the person who keeps the pill in his stonach without vomiting, is believed. They throw both the plaintiff and defendant sometimes to a tyger, and he that comes off unhurt is held to be in the right; and they will frequently offer themselves to undergo this last trial, though they appear to be extremely timorous when they are to engage an enemy. These trials are in the presence of the King and magistrates. For treason and nurder criminals are thrown to an ele-

For treason and murder criminals are thrown to an elephant and trampled to death; and punishments are usually adapted to the nature of the crime. A person convicted of robbing the public has melted metals poared down his throat; they sew up the list's mouth, and for little crimes they fasten a square pillory brand about the offender's neck; some are set in the ground up to the shoulders, and every one authorised to buffet him, which is the greatest indignity a Siamese can suffer, especially to have his head buffeted by women. Persons guilty of rebellion are ripped up alive.

They allow appeals from inferior courts to the foperior; the Prefident of the tribunal at Siam can reverse a judg-ment given in any other province; and there is an appeal from him to the King; fo that where the parties are rich and able to bear the charge, there is no end of the fuit; but the poor are condemned with as little formality as they are in Europe; and where they meet with a potent adverfary, innocence is but a very flight protection: judgment of death is never executed in any of the provinces, but by the King's special commission; but the baltimado and other punishments, on which death frequently ensues, are inflicted by every governor: but one thing feems peculiar to the Siamefe, that he who unjuftly possesses himself of another's lands, is deemed no less guilty of robbery than he who robs on the high-way; and the person lawfully convicted, does not only restore the lands but forfeit the value of them, one half to the party dispossessed, and the other to the judge, as all other pains and forfeitures are divided; but then the King has half the governor's moiety, and where there is not an hereditary governor, the King has one entire half, and the party grieved the other. There is an officer of the crown in every province, who should be some check upon the governor, and report to the King what passes in the province, and particularly in the courts of justice; but it seems there is such a general connivance among the officers at each others extortions, that the people receive very little benefit from his intlitution: every officer fqueezes what he can out of his inferiors, and the nai, or commander of a band, compels those under him to do double duty who have nothing to bribe him with ; while others who present him handsomely,

are entirely excused.

Though their greatest men are sometimes punished in a very secure manner, yet as this is laid to be done only for their reformation, they are afterwards restored to their posts, and none are permitted to upbraid the delinquent with his offence, after he has suffered the law.

Officers are frequently punished for the faults of those who act under their authority; and parents and masters of families for the officers of their dependents and children.

SECT. X.

Of the marriages, funerals, and religion of the Siamefe.

THIS people, like their neighbours, difpose of their daughters in marriage, when very young. A great many preliminaries must be adjusted in Siam, before a contract of marriage is made: an aftrologer is to be confulted, and the nativities of the young couple are to be cal-culated. From this cunning man also, they are to learn, whether it is likely to prove a happy match, and whether the family they are about to marry into be rich; it not being eafy for any man, who is not a conjuror, to know this; all people that have wealth endeavouring to conceal it, left the government should borrow it. When the parties have gained the best information they can in these particulars, and are fatisfied with them, the lover is permitted to vifit his miftrefs three times, and the relations being prefent at the third, the portion is paid, and then the marriage is effermed complext, without any religious ceremony performed, and it is foon after confummated. The talapoin is prohibited to be prefent on those occasions; however, he visits the married couple, in a few days, sprinkles them with water, and repeats a prayer for their prosperity. Siamese are allowed more wives than one, but seldom make ufe of this privilege, except their great men, who take these liberties in most countries, whether their teligion or laws prohibit it or not.

They have but one wife in reality, who is so by contract; the reft are concubines purchased with their money, and may be sold again; nor can their children inherit. The fidelity of the Siamese wives is much applauded, they feidom give their husband's occasion to be jealous, and are exceeding diligent. They work and maintain the family, when the husband is in the King's service, as he is obliged to be one half of the year. Divorces are allowed, but those happen very seldom, and when they do, the man returns the wise's fortune, and the children are divided between the wife's fortune, and the children are divided between

As the women carry on all the trade, there is a necessity of allowing them greater liberties than they do in other hot countries, and they are so far from abusing their liberty, that they avoid every thing that may give any occasion for scandal. There have been instances of transgressions, however, among the Royal concubines: one of these offenders, the King ordered to be covered by a horse, and then put to death. And Loubiere relates, that another offender put to death. put to ceath. And Loudner relates, that another obtains thrown to the tygers, which refused to feize her, the King offered her a pardon, but the would not accept it, chusing rather to be torn in pieces, than return to the drudgeries of the palace, the King being present at this ter-

rible execution. When a Siance dies, the corple is immediately put into a coffin lacquered and gilded; and to prevent any flench, it is faid, they endeavour to confume the howels of the deceated with mercury, and have fometimes leaden coffins: they place the coffin upon a beditead or table, and it remains in the house till the preparations are made for the funeral, and the head of the family can attend the solemnorral, and the least of the thinly a decline to com-nity: in the mean time they burn perfumes before the corps, and fet up lighted tapers. The talapoins also range themselves round the sides of the room every night, and entertain the family with hymns and discourses suitable to the occasion; for which they are rewarded with money as the occasion; for which they are rewarded with money as well as good provision. In the mean time a figure spot of ground is enclosed with a bamboo pale near some temple; round which are hung the painted and gilded papers which the family make, representing houses, goods, animals, &c. In the middle of the square stands the funeral pile, which, besides other wood, has yellow sanders, lignum aloes, and other sweet woods in it, according to the ability of the familian the salt is the side of several as well as wend to a other tweet woods in it, according to the ability of the fa-mily; and the pile is built of earth as well as wood to a great height. The corple is always carried to the pile in the morning, with the found of feveral kinds of inftru-ments, attended by the family of the deceafed, both men and women clethed in white, and with white vails, bewailing themselves all the way, according to custom; after them follow the rest of his friends and relations, and they

them follow the rest of his friends and relations, and they choose to go in their barges by water towards the burying-place, as far at they can.

When the company arrive at the place, they take the body out of the cosin, and lay it on the pile; the talapoins of the convent sing doleful hymns a quarter of an hour, and then retire; after which, a fire-work is played. If. There are always shows and plays exhibited on this occasion, attended with a kind of sessions are forbidden to be present. The talapoin's servant sets fire to the pile about noon; which having burnt about two hours, the corpse is rather scorched than consumed; though it is usually reported to be burnt to after; this being thought it is usually reported to be burnt to ashes; this being thought to derive some honour on the deceased. The poorer sort do not burn the bodies of their deceased relations; but either do not ourn the societs of their deceased relations; soler there expece them on a scaffold in the open field, where they are devoured by birds of prey, or else inter them privately.

With respect to the religion of the Siamese, they do not

believe the foul to be a pure spirit, but that it consists of matter so subtile as to be free from touch, and that after death it retains the human figure, and the same solid and liquid substances our bodies are composed of; and that if a person die by a wound given him it may be seen in these arial bodies, with the blood slowing from it, agreeable to the notions of the antient Greeks and Romans; but though the foul be material in their opinion, they will not admit the foil be material in their opinion, ricey will not admit that it is perifiable, but that it animates some other crea-ture, and knows pain or pleasure according to its demerite, till it enter a human body again; whose circumstances they hold will be fuitable to the behaviour of the soul in its seve-ral transmigrations. They hold also, that departed souls do not only animate plants and animals, &c. fuccessively; but that there are also certain spaces beyond the visible world, where they shall be rewarded or punished; that the happy afternd far above the flars, while the miferable are doomed as far heneath; and they usually assign nine dif-ferent regions both of happiness and misery, every one dif-fering in degree, the highest and lowest being most exquisite

in their kind. And as they do not imagine that fouls pais immediately from one flate to another, but are new-born into whatever place they happen to go; to they believe they fland in need of the fame things they did in this life; and for that reafon, as the Pagans did of old, in fome places they burn their most valuable moveables, and even animals and flaves with them; their wives also in the hither India used to offer themselves to be burnt with their hufbands, in hopes to enjoy them in the other world; and it is faid, they have not wanted inflances there of the hufband burning himself with his beloved wife. But Loubiere observes, that neither the Chineseov Sidmese. or any nation beyond the Ganges, ever permitted the wife to burn herfelf with her hutband; and are so wife, that instead of real furniture and treasure, they burn there instead of real furniture and treasure, they burn there only gilded or painted paper refembling shole things; giving out that these are converted into real goods, and though the Chinese burn some goods, yet they burn much more in paper. They also maintain, that the foul resides in the blood, and therefore deem it improper to open a vein or make any incisions in the sless, to extract the blood. They pray to their departed friends, and do them all the honours they can contrive at their sunerals, especially to the manes of their ancestors, as high as their great grand-sattlers; imagining that those beyond have suffered to many transfinierations, that they can hear them no

to many transinigrations, that they can hear them no more; but the eastern nations do not address their devotions to any but those of their own family, profession, or neighbourhood; nor do they, like the superstitious Eu-ropeans, hope or fear any thing from the departed spirits

of ftrangers.

The true Indian paradife is thus deferibed: that if a foul, after feveral transmigrations, by the good works done in each new life, arrives at such a degree of merit, done in each new fire, arrives at fucil a degree of merit, that there is not, in any of the worlds, any mortal condition which is worthy of it, then they fay it enjoys the hircupan; that is, it had difappeared, and will return no more to any world, but remain in a flate of eternal impaffability and happiness.

When a person has happily merited heaven, before he is translated thither, (for fuch a soul is supposed to be inca-pable of dying any more) they attribute to him an invin-cible strength of body, and a perfect skill in all sciences, and believe he becomes a nost powerful preacher of righ-teourness to mankind: after which he disappears, or is taken out of their fight, like a spark (as their expression is) which is lost in air: and to the memory of such as these, they dedicate their temples. But the person they suppose has surpassed all men that ever lived in holiness, and whom therefore they worship with the highest devotion, is Som-mona Codom; Sommona fignifies a talapoin of the woods. Codom was his proper name; and, as has been observed already, virtue, according to them, is only to be found in the order of talapoins, and chiefly in the talapoins of the

Sommona Codom's father, the talar oin books relate, was King of Ceylon, that delicious island where the true cinnamon only grows, and is now fubject to the Dutch. Sommona Codom bestowed all his estate in charity, pulled out his eyes, and killed his wife and children, and gave them to the talapoins to feed on. They relate also, that another Sommona Codom will hereafter arife; who will alfo kill his children for the talapoins; by which charity he will arrive at the highest pitch of virtue.

he will arrive at the higheit pitch of virtue.

They believe, that Sommona Codom, before he entered into this flate of blifs, acquired a prodigious flrength of body, and had the power of working miracles; that he could enlarge his body to what fize he pleafed, and then reduce it to fo fmall a point, as perfectly to difappear.

It is further to be observed, that they do not look upon the second of the plant of the plan

their Sommona Codom as the person who first instituted their religion, or gave them the above-recited precepts 1 but that he restored and re-established them, after mankind had fv. erved from the rules originally enjoined them.

We shall now proceed to give some account of the talapoins and talapoincifes, who as well as the doctrine they profes, the people believe to be as ancient as the world itself: but they themselves are ignorant of the founder of their order.

der of their order.

Any learned perfort may become a ralapoin, on applying properly for admillion. The habit confills of four pieces of cloth; the one is the angfa, a kind of floudler belt, five or fix inches broad; they wear it on the left floudder, and button it with a fingle button on the right hip. Over this belt they have snother called the pathivon, reaching to the ground both behind and before, and leaveing the two arms, with all the right shoulder free. Over

this is the papat, which reaches low behind, as well as to the middle before, and is generally red. They gird the whole with a piece of yellow cloth called rappaked, which

completes the four pieces that compose their habit.

There are two forts of talapoins; one of the woods, and the other of cities. The education of youth is comand the other of cities. The education of youth is committed to them, and they are ferved by their scholars. These talapoins are a fort of begging friars, who live upon the alms of the people, and every one eats what he begs, or is given him, by himself, and not in a common roors. They are very hospitable to all strangers, Christians as well as others, and have lodgings for them on each fide their gate. These priests vow celibacy, and lead very austere lives; the penalty of deviating from their rules, is no less than burning, which the King takes care Fules, is no lefs than burning, which the King takes care shall be rigorously executed, to prevent too many of his subjects turning talapoins, since they pay no dwies, and contribute nothing to the defence or support of the state. They preach every new and full moon, and during the inundation, every day, from morning till evening, the preacher sitting cross-legged on a raised shoor, and is relieved when he is weary by one of his brethren; the people expersions their contributions of the coversions that is a support to the coversions that is the state of the ple expressing their assent to the reasonableness of the doctrine, and bringing their alms to the preacher, by which bounty many of them grow rich. The time of the rains is their annual fast, when they eat nothing but a lit-

the fruit in the evening.

The talapuins are obliged to watch as well as pray, especially after harvest, when they go into the fields in night-time, and return into the towns in the morning; and though others are apt to think themselves in danger of wild beaits when they are abroad in the night-time, the people are made to believe, that a tyger will not touch a

talapoin, they are so functified a generation.

The people wash the talapoins at every new and full moon; but at the times the superior always shaves himself, because no man is worthy to touch his head, and the elder always shave the younger; but when he is grown too old, a young tal poin is permitted to shave him, who alks par-don first, and declares himself unworthy of that honour.

They wath every morning, as foon as they can fee, and not fooner, for fear they should destroy fome infect. After wathing, they perform their devotions in the temple, which they fing as in choirs, their books cocoa nut leaves, on which they write or rather engrave; for they have not yet the art of printing: they fing their devotions fitting upon their heels; but both priests and people, at their going in and out of the temple, prostrate themselves three

times before their idols.

After the morning devotion, they go into the city, and flanding at the doors of the houses, they expect any thing from, their food is brought them, but they never alk for it, though there does not feem to be much occasion for these alms; for they have lands and gardens appropriated to their convents, and flaves to cultivate them, and they are exempt from taxes. The talapoins have fervants, as well as flaves, who wear a white habit, and receive the money given their master, it being a fin for the talapoin to touch inoney himself: The talapoinesses wear white, and if they are taken with a man, are delivered to their relations to chaftife; for it is against their rules for a talapoin to strike any

These talapoinesses who are nuns, live in the same convents with the talapoins; the convents are a number of fingle honfes standing upon bamboo pillars at a small disningle follows that the grant of the state from each other. Perfons who go to a convent, enter it intirely by their own choice, and are at liberty to quit it whenever they pleafe.

We'fhall only add here, under his head, that the Indians

not being prejudiced against any religion, but allowing a univerfal toleration, we may prefume that the reasonable-ness of the Christian doctrines might have induced them to embrace them, if the ambition, avarice, injuftice, and tyramy of the European nations, who have fettled there, had not contradicted the doctrines they taught, and raifed, in the Indians, an abhorrence of their perfons and practices.

SECT. XI.

Describing the kingdoms of Ava, Pegu, Arracan, Tipra, Acham, and Bontan; with their boundaries and extent, river, town, and Bon account of the inhabitants, their genius, temper, diet, food, religion, Ge.

MESE countries may be comprehended under the name of the kingdom of Ava, for the Kings of Ava and Pegu is faid to have reduced all the rest under his power.

This kingdom or empire of Ava, including the countries abovefaid, is bounded by Afem or Acham towards the north, China and Siam towards the eaft, and the country and bay of Bengal towards the weft and country and bay of Bengal towards the weft and country and bay of Bengal towards the weft and fouth; and extends, according to the best maps we have of those countries, from the latitude of fixteen to twentyfeven north, fo that the whole length from north to fouth, may be reckoned between fix and feven hundred miles, and the breadth about half as much.

The principal rivers in this country, are the Arracan, the Capoumo, the Menain, the Ava, and that of Pegu, which running from north to fouth almost the whole length of the country, and overflowing their banks annu-ally, render it no less fruitful than Bengal and Siam,

which lye on each fide of them; and the lake of Chainay is placed in our maps at the north-east part of this country. The chief towns are, Tipra, Ava, Arracan, Lactora, Prom, Mero, Pegu, and Sinian; Tipra is the capital of the kingdom or province of the fame name, and lies in the latitude of twenty-four degrees north, or thereabout. Arra-can stands near the mouth of the river of the same name, which a little lower falls into the bay of Bengal, it lies in twenty-one degrees of north latitude. Ava lies to the eastward of Arracan upon a river of the same name, which a little lower falls into the Menain; and Lactora Rands between Ava and Arracan upon the river Capoumo. Prom or Porcom, stands on the cast side of the river Menan in or roronn, itames on the eat under of the river avenan in the latitude of nineteen degrees, and Mero to the fouth-ward of it on the fame river, latitude feventeen north. Siriam lies on the west side of the river Menann, near the mouth of it, almost against Martaban. Pegu stands about eighty miles up the river of the same name, in the latitude renteen degrees some odd minutes, it is divided into the old and new city, which together make the town almost fquare; it is defended by a wall or moat, and less on every fide five gates; the court and people of condition take up that part which is called the new city, which is feparated from the other by a wall and ditch, the streets are strait, and wide enough for fifteen men to ride a breast; and they have trees planted before their houses for shade, as in many other Indian towns. In the middle of the new city stands the palace, which is fortified with walls and towers like a castle. Travellers tell us it is very magnificent; Le Blanc rices us the following description of it: in one of the courts flands the figure of a tall man, all of folid gold, with a crown on his head, enriched with rubies of a confiderable value: round this figure fland four other golden flatues. In another court is reprefented a giant, all of filver, fitting with a crown of filver on his head, fet with rich jewels; and in other courts are other rich flatnes, formed of various kinds of metal, with crowns on their heads; adorned with rubies and fapphires. The King of Ava and Pegu has several neighbouring states tributary to The King of

Pegu, which is within the tropics, is flooded when the fun is vertical; but the fline, left by the waters, gently fertilizes the low grounds. The higher land is parched with intense heat after the rains have ceased; and the natives are obliged to water their fields by the communications of finall chanels from refervoirs or cifterns.

The hills of Pegu are cloathed with fine wood, and the natives derive great advantage from the bamboos. Their fruits are oranges, lemons, citrons, figs, pomegranates, bananas, durians, mangoes, goyvas, cocoa-nuts, pine-

apples, &c.

Rice they have in great plenty, and fome wheat; also garden-stuff, which they chiefly live upon. They have also various kinds of pulle, good poultry, and variety of excellent fith.

They plough with oxen and huffaloes. horses or theep; but deer are exceedingly numerous. This country also abounds in elephants; and produces rubies, final diamonds, and other precious flones; also iron, tip, lead, falt petre, wood-oil, oil of earth, figars, &c.

The monfoons, winds and featons, are the fame here as they are in Upper Siam, to which it is contiguous: they build their houses also on posts by the river sides, like the Siamefe. And as to the genius and temper of this people, their courage and manner of making war, their labits, food, entertainments and ecremonies, their hufbandry, produce of the foil, learning, religion, &c. from all that we can collect, there is not any material difference between them and the Siamefe. What our failors most take notice of, is the complaifance of their women, who will contract with them for as long or as short a time as they please, and behave themselves in all respects like good wives while their temporary hufbands remain in the

country: hor do their friends look upon this kind of country: nor do their litenos, look upon this kind of commerce as any diffrace, but receive them kindly when they return to them again. The English from fort St. George drive a profitable trade with and Arracan, from whence they import rubies, fapphires, amethysts, and other precious stones: skins and furs also are another very considerable branch of this brade.

The Peguan temples, and the idols in them, are superb-The Peguan temples, and the idols in them, are superbly embellished. A temple near Siriam has the name of kiskiake, or god of gods: in this edifice is a large figure lying as though it were sleeping, and is pretended to have lain in this posture fix thousand years. There is another temple near Sfriam, which they call Dagun; but only the priests must enter it. The priests say this idol resembles nothing human, and refuse to describe the shape or form of it. There is in one of their temples a fiver idol, of gigantic size, which, as an oracle, answered questions, and predicted what was to happen. They have also an idol cailed trokogue, of the same stature as the former, though of different composition: this idol, they pretend, intercedes with kiakiack for the wicked, and once a week they sacrifice a hog, and three pullets to it. There pretend, intercedes with kiakiack for the wicked, and once a week they facrifice a hog, and three pullets to it. There are feveral very fingular circumfances attending their facrifices. They worship damons, in order that they may not be affilied by them. They begin their fellivals with dancing and mulie; persons of high rank attend them, cloathed in their richest apparel, and adorned with jewels; but they are often changed to doleful lamentations, and conclude with plaintive strains in praise of their ancessors. After which they recruit their spirits with mitth and good food and liquors.

anceflors. After which they recruit their spirits with mirth and good sood and liquors.

They style the Emperor of Ava the severeign of the white elephant. He is almost worshipped by his people: he calls himself the king of kings, and his subjects style him a god. He is reckoned superior to all other sovereigns, as being allied to all the planets; the san is his brother, and the moon and stars his sisters. When an ambassador and the moon and stars his sisters. When an ambassador approaches this great prince, he is attended by sound of trumpet, while heralds proclaimed aloud the honour and happiness he is about to receive. The King is at this time attended by all his ministers, and two hundred guards, some with daggers, and others with steel bowa finely polished.

This monarch hold the reins of government intirely in his own hands, and punishes with great rigour such officers, as are guilty of mal-practices. When he hears of the commission of any enormous crime, he issues his riveal mandate for such officers be tried by indees of

reyal mandate for such offence to be tried by judges of his own chusing; and if the person be convicted, he fixes the particular punishment to be inflicted, which is, the

the particular puninment to be innicted, which is, the being trampled to death by elephants, or forme other cruel mode of punishing the delinquent.

A kind of artiflocratical government prevails in every town of these dominions. When a person cannot or will not pay the debt for which he is committed to prison, the creditors may dispose of him for a slave.

In case of war, the heralds proclaim their sovereign's will with flaming torches in their slands, and the governors of provinces are obliged to raife fuch a number of nors of provinces are object to rate the a number of troops as the flate wants, in addition to the accustomed military establishment. A troop perhaps of one thousand elephants are foon feen in full march, the King being feated on his throne upon the back of one of the whitest, attended by all his nobles, and march to the field of war by the found of trumpets and other military music.

The kingdom of Arracan is bounded on the east, by Ava; on the west, by the bay and country of Bengal; and on the north by Tipra; it extends about four hundred miles in length, and contains a great number of places, many of which are uninhabited, from the great number of wild beafts that infest it.

The inhabitants of this country are diffinguished by their broad and flat forcheads, red nofes, and wide noftheir broad and nat forcheads, red notes, and wide not-tilis: they have finalleyes, but a very quick fight. The people are in general very robust. The common people generally wear a dark purple habit: but those of distinc-tion wear vestments of white cotton, with an apron be-fore them, and a kind of bag behind their backs formed in plaits. Their hair is divided into locks, each of which it had an determined with knot of fire each. The in plates. Their nair is divided into locks, each of which is tied, and ornamented with knots of fine cloth. The women are much fairer than the men, but proportionably robuft. They wear a cotton garment, which 'bound feveral times round the body, and reaches down to the ancles, they have a kind of handkerchief made of flowered their medicant of the proportional forms of the proportional feet o gauze over their necks and shoulders. The better fort wear a filk scarf on one of their arms, and decorate their No. 7.

hair with a variety of ornaments. They have glass rings in their ears, which are so large as to hang on the shoulders, and their arms and legs are ornamented with bracelets and rings of sliver, copper, ivory, &c.

Their houses are made with branches of palm-trees, or

Their houses are made with branches of palm-trees, or canes placed on pillars, and covered with leaves of the cocoa-tree, and are exceeding small; but the better fort have more spaced by their victuals without doors in earthest pots, as they have no chimnies, or any convenience for firing in their houses.

They are exceeding temperate in their diet, though they have great plenty of provisions. Their common drink is made from the leaves of a tree resembling the palm-tree, which if drank new, is very sweet, but in a few days will turn sour. They use rice instead of bread.

The country produces all kinds of fruits with various forts of grain. The climate is very healthful and pleasant in summer, but much otherwise in winter, for the inhabitants are subject to agues, from the prodigious quantity of rain that falls during that feason. Here are great numbers of buffaloes and elephants.

The King of Arracan generally resides at the capital;

or sain that arise during that featon. Frete are great numbers of buffaloes and elephants.

The King of Arracan generally refides at the capital; he is as poverful as any of his neighbours, and has twelve princes under him, whofe refidences are in the chief cities of the kingdom; and they are permitted to affurne the title of kings. The King himleft is flyled, "Emperor of Arracan, poffeffor of the white elephant, with the two caniques, rightful heir of Pager and Broma, and lord of the twelve kings, who lay the hair of their heads under the foles of his feet," &c. He is feen by his fubjects but once in five years, at which time the palace Is furrounded with buildings and feaffolds erected on the occasion. The King comes from the palace dreffed in the most fumptuous manner, feated in an elegant tent placed on the back of an elephant richly caparifoned. He is followed by his courtiers riding on elephants, whose harness and trappings are richly adorned with diamonds and other precious jewels. Then the King, with his attendants, rides through the principal freets of the city; after which, he returns to the great square before his palace, where his returns to the great square before his palace, where his subjects renew their oath of allegiance to him, and the evening is concluded with the greatest festivity by all ranks

of people.

This country abounds with temples and other facred places, which are built like fleeples, and contain many idols worthipped by them. They hold an annual feaft in commemoration of the dead, of which time they carry one of their lides in measurements. of their idols in procession, attended by a number of priests dressed in uniform, consisting of a long garment prietts drelfed in uniform, conflitting of a long garment made of yellow fattin. The idol is placed in a large heavy chariot, and fuch are the fuperfittious notions of the vulgar, that many will throw themselves under the wheels, and others will tear their siefth with iron hooks saftened to the carriage for that purpose: they take great pains to colour these hooks with their blood; and they are afterwards preferved and hung up as sacred relies in their temples.

There are three codes of priess among these them.

There are three orders of priefs among them, the highest of which is distinguished by wearing a yellow nitre; but the other two always go bare headed: they are all prohibited marrying, on pain of degradation. When any persons are ill, they send for the priefs, who pray with them, in return for which the patient offers sacrifices of soul the constitution to the priefs. of fowl, &c. according to their ability. If the patient re-covers, the cure is attributed to the prayers used by the priest, but if he dies, the priest tells the relations that their facrifices are accepted, but God designs the deceased a greater savour in the other world. The priest thinks it

charity to drown the patient if he appears incurable.

On the death of a person of diffinction, the body is burned, but the poorer fort are thrown into the river. They believe in transmigration, and therefore ornament their cossins with the figures of such animals as they think the most noble.

Every family has fome peculiar animal, by which they fwear, and whose figure they mark with a hot iron on different parts of their bedy. Their nuptial ceremonies are performed in the prefence of this animal, and, before they

eat, they always offer him part of their provisions.

The principal people that trade with the inhabitants of this kingdom are the Moors, and the commodities they purchase consist of elephants teeth, tin, lead, and timber for building. The ordinary money is shells, or small pebbles, eighty of which are valued at nine-pence, but they have a filver coin estimated at two shillings.

The capital of this kingdom, called also Arracan, is large and well fortified: it is fituated in a valley, and is fifteen nules in circumference. It is inclosed by very high stone walls, and furrounded by a ridge of steep, craggy mountains, so artificially formed as to be almost impreg-nable; besides which, there is a castle within, strongly fortified. The city is well watered by a fine river that paffes through it in different fireams, and at length forms into two chanels, which empty theinfelves into the bay of

It is estimated, that the number of inhabitants in this It is estimated, that the number of inatoriants in this city amount to one hundred and sixty thousand, exclusive of foreigners. The houses in general are small, and built of bamboos; but those of the richer fort are spacious and handsome: there are upwards of fix hundred idol temples in it, most of which are spacious buildings, elegantly ornamented. The palace is exceedingly magnificent, being decorated with the most costly embellishments. The apartments are lined with various kinds of wood that yield shared except for granters and the roofs of those below. the most agreeable fragrance; and the roofs of those belong-ing to the King are covered with plates of gold. In the centre of the palace is the grand hall, which contains a ca-nopy ornamented with wedges of folid gold, refembling fugar-loaves. Here are likewife feveral idols of the fame metal, as large as life, and adorned with diamonds and other costly jewels. In the centre of the hall is a cabinet of gold, supported by a large stool of the same metal, and overlaid with diamonds and other precious stones. This cabinet contains the two caniques, or famous pendants of rubies, by which the King preferves a fuperior authority over his vasfal princes, and which he also wears at his coro-

There are spacious stables adjoining to the palace, for the King's elephants, tygers, horfes, &c. and there is a confiderable lake with finall islands near it, inhabited chiefly This lake is fo fituated, as to be a fecurity to the inhabitants of the city, should they be reduced to the necessity of flying from the attack of an enemy; for, by cutting a bank which furrounds it, they might overflow the city, and retire to the islands adjacent.

This city has very extensive suburbs adjoining to It, and the furrounding countries are delightfully pleafant. The villages, mountains, &c. are beautifully diverified with fields of different kinds of grain, intermixed with pieces of water. Their flocks of cattle are very numerous.

In the neighbourhood is a factory belonging to the Dutch; and some of the richest commodities in Asia are to be purchased of many of the shops in the city. The Moors often obtain confiderable possessions by purchasing diamonds, rubies, and other costly jewels; and indeed they are the principal people that trade here.

There are many other cities of confiderable note in different parts of this kingdom; as also many capital towns

remarkable for traffic; the most material of which, are,
Orietan. This is one of the twelve capital cities, and
is governed by a viceroy, who assumes the title of King,
and receives a crown from the King himself. It is fituated on a branch of the river, to the fouth-west of the city of Arracan. In the neighbourhood of this city is a large mountain, on which is a fortified place for the confinement of thate prifoners, or other diffinguished criminals. There is another mountain called Pora, on the top of which is placed the principal idol, which is worshipped by the King himself on a certain day once in the year. Be-tween the cities of Arracan and Orietan is a spacious river, the banks of which are delightfully shaded with tall trees, that form as it were an harbour; the pleafure of failing under which is confiderably heightened by the multitude of peacocks that are continually moving from one tree to

Another city of confiderable note is Rama; but the paf-fage to it either by land or water being dangerous, it is little reforted to; for the mountains are infested with a great number of wild beafts, and the fudden tempests that arise

The next we shall take notice of, is Dobazi, which is a large and populous city, but chiefly remarkable for its commodious harbour, and a specious river by which great trade is carried on with the neighbouring places.

Dianga is also a large town, situated one hundred and twenty miles north of Arracan; the inhabitants are chiefly Portuguete fugitives, and they have very confiderable privileges allowed them.

Another town of great trade is Percoin or Prom, which has a very convenient harbour. It is the refidence of a governor, who exercifes the absolute authority of an eastern monarch, and keeps a grand court here.

Tipra, or Tipoura is a tributary kingdom, subject to the King of Arracan. It is bounded by the empire of Ava, and part of China, to the fouth and east; by Independent Tartary, to the north; by Arracan, to the fouth-west, and by Indostan, to the west. It is faid to require fifteen days to crofs it. Being under the tropic of Cancer, it is ex-ceedingly hot, the air is nevertheless failubrious and pure; but the water is fo had, that it occasions the throats of the

inhabitants to fwell to a prodigious fize.

The fovereign and the nobility ride upon elephants, or are carried in palanquins; but the common people, when they travel, make use of horses or oxen indiscriminately. The accommodations for strangers are bad; and the beha-

viour of the natives rude and unpolithed.

The subjects of this kingdom pay no taxes, but in lieu thereof labour annually once a week for the King, either in his mine or his filk-works, from whence alone he derives his revenues. He exports gold and filver to China in ingots, and in return receives filver, which is coined into fpecies of currency of twenty pence and twenty-two pence value each: gold is coined into afpers, which are worth about five thillings a-piece. Geographers fay, that the river Cuipoumo runs from Chiamay lake through this and feveral other kingdoms, till it difembogues itself into Ben-

gal bay.

The kingdom of Acham, Afem, or Azem, is bounded by China, in the east; Indostan on the west; Tipra on the south; and Boutan, with part of Independent Tartary,

on the north.

This country, in the reign of Aureng-zebe, was con-quered by the Moguls, who discovered it by navigating the river Lacquia, which has its fource in the lake Chianay, and discharges itself into the Ganges. The above-men-tioned celebrated lake lies in twenty-fix degrees north latitude, and is one hundred and eighteen leagues in circum-

Besides being one of the most fertile in the universe, this country is also rich in mines, which produce the noblest and most useful metals, such as gold, silver, steel, iron, lead, &c. Here is plenty of the most delicious animal food, but dog's sless is deemed the greatest dainty. They make no wine, though they have excellent grapes, which, when dried, are used in making brandy. The lakes of this country are of a faline quality, and they convert into fair the fount which rifes to their furface. Another kind of falt is extracted from the leaves of what they call Adam's fig-tree; and a ley is made, which renders their tilks admirably white.

The King exempts his subjects from all kinds of taxes to government, as he contents himself with the sole property of the valuable mines contained in his country; nor

are those mines worked by the natives, but by flaves which he purchases in the neighbouring countries.

In this country, every subject hath a house allotted him, with a large piece of ground contiguous thereto, and an elephant to carry his wives, of whom he is permitted to have four. Previous to marriage, the Aschamians inform the women minutely of what they expect them to do. The females being thus previously instructed in their duty, feldon disoblige their hulbands.

The inhabitants towards the north have good complexions, but those who dwell foutherly are rather swarthy. All have very large holes bored in their ears, from whence defeered heavy pendants of gold and filver. They wear their hair long, have a cap upon their heads, and go naked except about their middles. They adorn their arms with bracelets, which are buried with them when they die. Their gold is current in ingots, but they have pieces of filver coin of two shillings each in value. They have great plenty of gum lacque, which they export to China and Japan, to varnish cabinets, chefts, and other pieces of fur-

Kemmerouff, or Guergon, is the metropolis of this kingdom, and the refidence of the King; it lies in twentyfive degrees thirty-three minutes north latitude, and the city of Azov is the royal burial-place. When any King is buried in the grand temple, his favourite idol is buried alto; this always being of gold or filver, the vaults are

filled with immenfe treasure.

The people imagine, that the righteous have, in the other world, plenty of what they defire; but that the wicked fur-fer all the miferies of hunger and thirst. Full of this notion, and not entertaining any very high idea of the morality or piety of their monarchs, they bury with them all kinds of catables, great riches, feveral of their wives, officers, elepliants, flaves, &c. left they should fare worse in the other world than they did in this

The Chinese are supposed to have received the invention of gunpowder from the people of Afein, though they have not been ingenuous enough to acknowledge it.

The

The following places near the coast of Ava are reckoned in the Pegu dominions. 1. The island of Dola, which has a good harbour, and where twenty houses are appropriated to the purpose of saming elephants for the use of the King of Pegu. 2. Cossin is a notice island, the houses of the natives are built on frames of wood, and ascended to by ladders, on account of the futious tygers with which the country abounds. The inhabitants go from hence to Pegu in boats, in which whole families reside all the year. This country produces sigs, oranges, cocca-nuts, wild boars, parott, affes, and other animals. 2. Meden, a tolerable town, where a market is kept on the water in boats, the commodities being shaded from the scorching heat of the sun by umbrellas. 4. Negrais, a town and cape on the coast due westward from Pegu, from whence it requires about ten days to fail. The harbour is good, but a shelving bar renders its entrance disagreeable and dangerous. 5. Diamond island, near cape Segrais, is celebrated for two Pagan temples: the one called the temple of the god of the affisced;" and the other the temple of the god of the atoms of the sun." This island is low, barren, and rocky; but the chief ecclessatic of the kingdom resides here. He is greatly venerated by the people, and takes the right hand of the King; who, on his dennse, is obliged to attend his funeral with his whole court, and de-

obliged to attend ins funera, with his whole court, and defray all expences incurred thereby.

Martaban, or Martavan, is a province in the kingdom of Pegu, eight miles fouth of it, and lying in the gulf of Bengal. It is fituate in ninety-feven degrees fifty minutes eat longitude, and fifteen degrees thirty-five north latitude. It is three hundred miles long, and one hundred and fifteen broad. The capital town is of the fame name, and was a rich trading place before they funk thips at the entrance of the harbour, to choak it up, which it has effectually done. It produces corn, oranges, lemons, figs, pears, chefiuts, medicinal plants, oil of jeffamy, gold, filver, feel, iton, lead, copper, rubies, lacque, benzoin, Ke. It was formerly fo fertile, as to have annually three harvefts, and is bleffed with a pure and whole fome air; but the whole country has been ruined by the terrible wars between the kings of Pegu and Siam; the former laving been taken and killed by a people called Barmais, who conquered the whole kingdom and brought it into fubjection.

SECT. XII.

Treats of the peninfula of Malacca, the kingdoms of Cambodia and Laos, Johor, Tibet, &c.

ALACCA is a large peninfula beyond the Ganges. It is fituate between the second and eleventh degree of north latitude; and is bounded by Siam, on the north; by the ocean, on the east; and by the streights of Malacca, which separates it from Sumatra, on the south-west, being about fix hundred miles long, and two hundred broad. It is separated into several small kingdoms; namely Malacca, from which it derives its name, Johor, Patana, Sincapour, Pahan, Traugano, Pera, Queda, and Ligor. Some of these are independent states; but the King of Siam has made the others tributary to him. This country is said to have been the Aurea Chersoness of Ptolemy.

The coast of the kingdom are stat. marthy, and un-

The coasts of the kingdom are flat, marthy, and unhealthful; and the inland parts of the country consist of scarce any thing but barren hills and dreary deferts; so that it produces sew commodities for trade, except tin and elephants teeth. The common necessaries of life are produced in gardens; and small quantities of pease and rice are raised in such parts of the mountains as appear to have any tolerable soil. The natives have a supply of provisions from Sumatra; Bengal, Java, Siam, and Cambodia. Here is, however, a variety of fiuit, particularly the manjostain, which is a delicious fruit, in the shape of an apple, with a thick and red skim. Here are cocoas in abundance, and a great plenty of aloes; and as to pine-apples, those produced here are the best in the world. The raupbostan is of the size of a walnut, with a very agreeable pulp; and the durian have a very agreeable taste, though it is not pleasant to the smell. There is but little cora, and sheep and bullocks are scarce; but pork, poultry, and fish, are pretty plentiful. There are many tygers, wolves, and other wild animals in this country.

The inland inhabitants are a favage, barbarous people, who take great delight in doing mifchief to their neighbours. The natives, who are called Malays, are of a tawny complexion. The men go naked, except having a piece

of cloth round their wald. The women, who have their hair very long, and are extremely proud, wear a loofe filken garment embroidered with filver or gold. Both fexes have jewels in their ears. Notwithflanding the natural ferocity of the greater part of these people, we must in judice ack knowledge, that some of them are polished, well-bred, and humane, who diftinguish themselves by their talents, and particularly in the wie of a language, effectment the most pure, nervous, harmonious, and copious of any spoken in the East Indies; they study it with great care; and many of them by their elegant poetic compositions, do honout to its natural graces. The religion of the hatives is a mixture of Mahometanism and Paganism, and they are greatly addicted to juggling, which some mislake for conjunction. We shall now proceed to give a description of the city or town of Malacca, which is said to have been sounded upwards of two hundred years before the arrival of the Portuguse in 1,000. In the year 1,511, Alphonfo Abbuuermue

We shall now proceed to give a description of the city or town of Malacca, which is Said to have been founded upwards of two hundred years before the arrival of the Portuguese in 1500. In the year 1511, Alphonso Albuquerque subdued the city, after it had made a most vigorous desence: he plundered it of immense treasures, vast magazines, and whatever could contribute to the elegancies and conveniencies of life, and then put the prince to death. The King of Siam, however, enraged at this cruelty, being assisted by other princes equally incensed against the murderer, afterwards took the city by storm, and built churches, monasteries, a castle, and a college for the Jesuits. In 1604 the Dutch, in conjunction with the King of Johor, began to be very troublesome to the Portuguese, and, after a feries of hostilities for the space of thirty-sive years, in 1641 intrely wrested it out of their hands; which they effected in the following manner: sinding that considerable disputes thad substitute between the King of Johor and the Portuguese inhabitants, the Dutch formed a design of attacking and reducing the place. Accordingly they fitted out a formidable squadron of thips at Batavia, and entered into an alliance with the King of Johor, who attacked the city by land, while the Dutch invested it by sea; but the invaders sinding there was no possibility of reducing it, the Dutch at length by means of a considerable bribe, prevailed on the fordid governor, to save the payment of the premium. This city is built on a low level ground close to the sea-side, on the east side of the city there is a river, which at a spring tide will admit of simal vessels; and on the east side of this river shands a strong fort, between which and the town, there is a communication by a draw-bridge: this fort is built at the foot of a little steps thill, and is of a semi-circular form, like the adjacent hill: the walls are sounded on a rock, very thick, and are carried up to a considerable height; and the ower part of them is washed by the sea at e

There are between two and three hundred families of Dutch, Portuguese, Chinese and Moors, and two or three great Armenian merchants in it. The Chinese have the best shops, which are filled with the manusatures and produce of their country, and such other goods as there is any demand for there: the houses in the town are generally built with stone, and the streets are wide and strait, but not paved: the native Malays, who inhabit the suburbs, live in poor mean cottages, and are kept in great subjection by their haughty. Dutch masters; but it is observed, they fill retain a desperate sullenness in their looks; and the Malays of the neighbouring provinces have frequently revenged memselves on the Dutch, for the tyranny and oppression exercised on them, and that restraint the Hollanders put upon their trade all along the Malayan coast by the guard-ships; infomuch that it is very difficult for this people to trade with any but the Dutch.

The city of Malacca is healthful, confidering the climate, and is neither jubject to the hot winds of the coaft of Coromandel, or those chilling ones in Sumatra. It is not a place of any great trade at this day; but as the Dutch are masters of the streights of Sundy to the fouth of Sunatra, and this town gives them the command of the streights, which bear the name of Malacca, to the north, while they are in possession of this place, they have in a manner engrossed to themselves the whole trade of China and

Japan.
There are many spacious and handsome streets in this

city, which are shaded with trees on both sides; the houses shand pretty close to each other, and are built chiefly of bamboos, though some of them are of stone. The governor's house is large and commodious, and is situated in the fort, garrisoned by two hundred Europeans. The harbour is one of the best and fafest in that part of the globe, and receives vessels from most patts of the Indies. When possessing the projugues, the city was remarkably opulent, being a grand mart for precious stones and gold; and before the Dutch made Stavia the chief place of their residence. It had all the rich commodities of Pegu, Cororesidence, it had all the rich commodities of Pegu, Coro-mandel, Siam, Banda, and other countries.

The kingdom of Laos is a tich, plentiful country, but little vifited by Europeans. It is bounded on the north by China; on the eaft, by Tonquir and Cochin-China; on the fouth, by the kingdom of Cambodia; and on the weft by the kingdom of Siam. It is supposed to extend from the Chambot as the Tourne of the state of t the fifteenth to the twenty-fifth degree of north latitude.

The produce of this country is benjamin; that which grows here is effected the best in the Indies, and brings a confiderable revenue to the King, who has prohibited the exportation of it. The garden also produces a great variety of fruit, and they have excellent rice in abundance; also great plenty of wax, honey, cotton, amber, and musk. They have a great number of elephants among them, which makes ivory so little valued, that their teeth are used for making fences to their fields and gardens : beeves and buffaloes are also very numerous here; and the rivers abound with all kinds of fish, some of which are very large. Gold and filver dust is found in the rivers; and mines of Iron, tin, and lead, in feveral parts of the country; great quantities of falt are also produced here, part of which they export to foreign parts: this is formed by a white froth left on the rice-fields after harveft, which the heat of the fun hardens.

The inhabitants of Laos, who are called Langians, are affable, strictly honest, and strangers to avarice. They are well-shaped in general, and, though of an olive complexion, yet are much fairer than their neighbours; the women are very modest in their carriage. women are very modern in their carriage. I their rood principally confifts of rice, the felh of the buffalo, and feveral kinds of pulfe. They formetimes eat fowls, which they drefs with the feathers on; they kill them by firiking them on the head with a flick; the fhedding of blood being confidered as one of the greatest crimes. Their em-ployment confish principally in husbandry and fishing; but they are naturally of an indolent disposition.

As the religion, marriage-ceremonies, festivals, funerals, customs, laws, punishments, &c. of this people, bear a near refemblance to those of the Siamese; we shall therefore, for a fuller description of them, refer the reader to our account of Siam; and only add here, that the power of the fovereign is unlimited, and he is in a manner adored by his subjects. His principal officers are seven viceroys, who are governors of the seven provinces into which the kingdom is divided: he has a militia of horse and soot, who are maintained at the expense of that province to which they belong. The palace is the most diftinguished edifice in the city, extending, with the offices and other buildings, above two miles in circumference. The architecture is exceeding grand, and the apartments within are furnished in the most sumptuous manner: the basso-re-hevo's are very richly gilt. The houses of the richer sort hevo's are very richly gilt. The houses of the richer sort are built of wood, and are lofty and handsome; but those of the common people are very low and mean, and chiefly made of dirt an I clay. No persons, except the telapoins, have liberty to build their houses of brick or stone. The houses of the quality are very elegantly sumished: they line the walls with matts beautifully wrought, instead of tapeftry, and ornament them with a great variety of very

curious foliage and figures.

The kingdom of Cambodia, or Camboya, is fituated on the east fide of the gulf of Siam, being bounded, on the weft, by Cochin-China; by the Indian ocean on the fouth; and by the kingdom of Laos and the Kemois mountains, on the north. It extends from north to fouth upwards of on the north. It extends from north to fout, upwards of three hundred miles, and is about two hundred and ten miles in breadth. The spacious river Mecon runs through it, and falls by two chancls into the fea. Where it first rifes, it is called Longmu; after which, it takes the name Where it first of Mccon; and, continuing that name for a confiderable space, at length changes it to Ocbequane. This river has an annual swell, which begins in the month of June, and continues till August, when it generally rises so high, as to overflow the neighbouring countries. It runs the fame way for fix months together, owing to the foutherly winds, which drive the fands in fuch shoals, that the bar

is entirely from up, and the current is by that means driven back, till the wind shifts and removes the fands, when the current is restored.

This country produces various kinds of grain, parti-cularly rice and corn. Here are also great variety of fruitcularly rice and corn. Here are allo great variety of fruit-trees, as oranges, eitrons, mangoes, cocoas, &c. allo fo-veral kinds of wood, as the fandal, aquila, and japan, Rick-lack and lack for japanning. Rice is exceedingly plentiful and cheap, as see leith and fift; these last are the only articles allowed to be purchased without a permit from the King. A fine bullock is frequently purchased for a dollar; and the common value of rice is one shilling and fix-pence for one hundred and forty pounds weight. Poultry is very fearce; because the few that are bred, retire. Poultry is very fearce; because the few that are bred, retire, when young, to the woods, where they shift for themseleves, and the people take no pains to bring them back. Several rich commodities are also produced here, particularly gold, cambogia of a gold colour or deep yellow, in rolls, raw filk, and elephants teeth; likewife several forta of valuable drugs; affo amethyts, garrets, fappliers, cor-nelians, chryfolites, and blood-flones. Wild elephants and boare are exceedingly numerous here, particularly in the woods; also tygers and thous, wild cattle and buffaloes, many horses, and a prodigious number of deer; all of which every person has free liberty to kill for themselves. The Cambodians are in general well shaped, and the

women very handsome. The men wear a long vest, which reaches from the shoulders to the ancies, but their head and feet are bare. The women wear a thin garment, which fits quite close to the body and arms; and have a kind of petticoat that reaches from the waift to the ancles. fexes have long hair, which they display to the greatest ad-vantage. Their heads have not any covering; but their hair is dressed, and curiously decorated. Their religion is the fame as that of the Siamefe, and they worship the same deities. They believe that all animals, as well as human beings, will be hereafter rewarded or punithed. Their priets are chosen from among the laity, and are little re-ipected by the people in general; their maintenance and support depends intirely on the benevolence of the public.

In different parts of the country, they have manufacteties for making callicoes, muflins, dimities, and other cu-rious pieces, which are fuperiot in quality to those made in Holland and elsewhere. The poorer fort of people are employed in making beads, small idols, bracelets, neck-laces, &c. They also weave filk, and work curious tapef-try, with which be adding and administration. try, with which the chairs and palanquins of the quality are lined.

Cambodia is the chief city in this kingdom, worth notice; it is fituated on the river Mecon, and built on a rifing ground, in order to avoid the annual overflowings of the river: it principally confifts of one large fireet. The the river: it principally confifts of one large firet. The palace for the refidence of the fovereign is fituate about the centre of it. It is furrounded by a kind of wall, with raniparts, on which are feveral pieces of artillery, but it is a very infignificant edifice. The power of this prince is defpotic, like that of the other eaftern monarchs.

Johor is about one hundred leagues long, and eighty broad. It is the next country to the north of Malacca, and

is washed east and west by the ocean: it lies in one degree north latitude. The country, which is woody, abounds with tin, pepper, elephants teeth, gold, aguila-wood, canes, citrons, and lemons: deer, cows, wild boars, and buffaloes

are rmong the quadrupeds.

The inhabitants of this country are reported to be cruel, treacherous, lazy, and lascivious. The common people wear only a piece of fluff round their waift; the females its a fuperior degree of life wear callico garments fastened with a filken girdle: they paint their nails yellow, and the longer they are, the more genteel. The islanders live principally upon fago, fruits, roots, and poultry, but those who refide on the coat fubfift for the most part upon fish and rice brought from Cambodia, Siam, and Java. The natives, who are a mixture of Mahometans and Pagans, have priests fent to them from Surat.

Among these people there are about one thousand four hundred Chinese families, who carry on a confiderable traffic, and are distinguished for their industry.

Patana is about fixty miles long, and lier on the eaftern coast of the gulf of Siam: its port had once a considerable traffic with Coromandel, Malabar, Goa, China, Tonquin, and Cambodia: but the traders unhappily finding no testriction put upon the commission of piracies and murders, were under a necessity of withdrawing their commerce, and turning it into another course, highly beneficial to Siam, Malacca, and Batavia.

This country, abounds with grain and fruits: here are

The King has more vessels than any of the other neighbouring sovereigns, and can bring eighteen thousand troops into the field. The Chinese bring hither a variety of atticles in trade, and take considerable returns for them. The natives are remarkable for their solviety, and, though proud, are nevertheless kind and obliging.

To the south of Patana lies Pahan, on a river of the same name, in which there is much gold dust sound. People of fortune reside in the capital of Pahan, situated about one hundred and fifty miles north-east of Malacca to the first of the sixty which is but final, there is a in the firects of the city, which is but finall, there is a great number of cocoa and other trees planted, which gives it the appearance of a garden. The palace of the King of Pahan is a wooden firucture, and the other buildings in general are composed of firaw

The foot of Malacca hill is washed by the river here, and pepper is planted along its fides. The adjacent country is low, woody, and well-stored with game: aquila and calamba wood, coa... gold, camphire, nutmegs, &c. are also produced here.

Pahan is faid to be well peopled, and carries on a con-fiderable traffic: but the natives are reported to be the most arrant cheate in the world: they consist of Pagana and

Next to Pahan is fituated Trangano. This is a fine healthy country: its hills produce a greater variety of rich fruits, fuch as oranges, lemons, limes, darians, mangof-tans, mangoes, &c. and the vallies teem with fugar-canes and corn : gold and paper are likewife produced here; but

the Chinefe, who refide in this country, produce the principal part of the two laft mentioned articles.

Pera is a mountainous, woody country, famous for the
quantity of tin it produces; these bein; more found here,
than in any part of India. The capital city; which bears
the fane name, lies at the bottoin of a bay about one hundred and fifty miles north-west of Malacca. There are
fome hideous deferts in this country; abounding with elephants, tygers, and other wild animals.

The natives of this country are mere barbarians, and
very treacherous and deceifful.

Oneds is three hungest miles north of Malacca, perry he

Very treacherous and deceiful.

Queda is three hunding miles north of Malacca, near the
freight, and one hundred and forty miles from Patna: it lies
in hinety-nine degrees fifteen minutes eard longitude, and fix
legrees twenty-five minutes north latitude. The principal
town, which is of the faue name, contains about eight thoufand inhabitants, and has a good harbour. When a foreign
netchant comes here, the King pays him a vifit in perfon; not to compliment him on his arrival, but to receive
prefents from him; the prefents, however, at one made ton, not to compliment him on his arrival, but to receive prefents from him: the prefents, however, ate not made, till the vifit is repaid; and then the King honours the merchant with a leat near his royal perfon: his Majefly at the fame time chews betel, and, putting it out of his mouth on a finall golden plate, the merchant takes it with great refrect, and puts it into his own mouth: this is an established to the present of the contraction of t

lithed cuttom, and must always be strictly complied with. Some of the natives of this place are Mahometans, and others l'agans a they are in general very treacherous and crnet in their dispositions.

This country produces tin, pepper, elephants teeth, canes, and damar: they make pitch and tar of the latter, which is of excellent use for that purpose.

C H A P. V.

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF

N. S

SECT. I.

Of the name, situation, extent and boundaries, principal moun-sains, seas and rivers of Indostan, or the Mogul empires.

HIS country alone was known by the name of India to the antients, and is by the ratives called Mogul-flain, or the empire of the Great Mogul; though the moderns have given the name of India to all those countries which lie between this and China; and Columbus gave the name of India to America, imagining that the country which lay west of the Atlantic ocean, extended as far as India, or rather was a part of it; but when this was found to be a mittake, the name of East India was given to this country, and that of West India to the other

India Proper, or Indoftan, received its name from the river Indus, or from the Hindowns, the most antient in-habitants of the country, and is situate between fixty-six and ninety-two degrees of east lungitude, and between feven and forty degrees of north latitude, being bounded by Usbeck and Thibethian Tartary in the north; by Acham, Ava, and the hay of Bengal on the east; by the Indian fea on the fouth; and by the same sea and Persia on the west, being two thousand miles long and one thousand five hundred broad in the broadest place.

The chief mountains are those of Caucasus, which divide India from Ufbeck Tartary on the north; those of Naugracut, which divide India from Tartarian Thibet, and the mountains of Gate or Baligate, being a long chain of mountains which run through the middle of India from on mountains when turn image the induce of finds from north to fouth, fo high that they thop the periodical wind called the western monsoon, and the rains it brings with it for a month and more, the fair season continuing a month longer on the coast of Coromandel, or the castern coast, than it does on the Malabar or western coast.

The chief bays in the Indian feas are the bay of Bengal and that of Cambaya or Guzurat. The principal cape is that of Comorin, the most fouthern promontory of India; and the most remarkable strait is that between the fouth of India and the island of Ceylon, called Ramanakoiel.

The chief rivers of Indoftan are, 1. the Ganges, which rifing in mount Caucasus runs south-east, and dividing into several branches falls into the bay of Bengal, the most callerly brained dividing this country from the farther India. This river is in fuch efteen among the Indians, that it is worshipped as a God, and happy is the man that can procure any of its water to drink before he dies: the common paffage up this river is by the western, or Huegley branch. This river runs a course of about three thousand miles. 2. The Indus, a river as large as the Gauges, and deep enough for thips to ride in, did not the bar at the mouth prevent their entrance; it rifes in the mountains of Caucafus, and runs to the fouth-west, and falls into the Indian ocean by three chanels. 3. The Attock (the Hydafpes of the antients) which rifes in the fame mountains with the Indus, and running fouthward, almost parallel to it, unites its water with the Indus, towards the mouth, the united stream falling into the Indian sea, in the province of Tata. 4. The Jemmina, which rising in the north, runs to the southward, by the royal cities of Delly and Agra; and then, turning eaftward, falls into the Ganges at Halibas. 5. The Guenga, which rifing in the Baligate mountains, runs eaftward, difcharging itself into the hay of Bengal, or rather into the western branch of the Ganges, near its mouth. 6. The Guenga, which rifing in the Baligate mountains, runs eastward, discharging itse the beautiful description of the companies of the contraction of the contra into the bay of Bengal, or rather into the western branch of the Ganges, near its mouth. 7. Christina, which rising in the Baligate mountains, runs first to the southward, and then turning about to the east, falls into the bay of Bengal. 8. The river Tapte, which rifing in the Baligate mountains, runs well, and falls into the bay of Cambaya at Surat. There are many other finall rivers, and innumerable torrents in the time of the rains, which fall from the Baligate mountains into the feas, on the caft and well of the ligate mountains into the leas, on the calculation peninfula, but in the fair feafon most of them are dried up.

In

In the north-east division of India is contained the province of Bengal, as well as Jefust, Naugraeut, Patna, Necbol, Gor, and Rotas. The north-west division extends to the frontiers of Persia, and contains the provinces of Soret, Jesselmere, Sinda, Tatna, Buknor, Maltan, Hercan, and Cabul. These are all situated on the river Indus. The fouth-east coast, or coast of Coromandel, contains The louth-east coart, or coart or Coromanaes, contains Orixa, Golconda, the east fide of Blinagar, or the Carnatic, Madura and Tanjore, Afme, Jengapour, Cassimere, Hendowns, Lahor, Agra, Dehli Gualler, Narvar, Catiopr, Chitor, Berar, and Landish, are situated in the center divition. The fouth-west coast contains Bisnagar or the

Carnatic, Guzarat, and Decan.

The winds are periodical, and return to certain points at flated times, as in most countries within the tropics. The monfoons, out at fea, blow fia months one way and fix months another: namely, from April to October, or thereabouts, they blow from the fouth-west, and from October to April from the north-east, not exactly from those points, to April from the north-east, not exactly from those points, but varying fometimes a point or two on either fide. At the breaking up of either of these monstoons (a little before they shift) there are usually prodigious storms of wind, such as we do not experience in this part of the world once in a great many years. The shifting of the monstoons, and consequently this stormy weather, does not come exactly at the same time every year but sometimes forthight on these weeks soons and one there as forthight or these weeks soons and one there of the same that the same time every year but sometimes a fortnight or three weeks fooner, and at others a fortnight or three weeks later than the usual time, which frequently occasions the loss of shipping; for the merchants, for the sake of a trifling gain, will remain upon the coasts in hopes that the storms will keep off a little longer, till the wind grows too strong for them, and they find it impossible to bear up against it.

Besides the monsoons, there are two other different winds; i. The general trade wind. 2. The fea and land-breezes. The general trade winds, which prevail between the latitudes of thirty degrees north, and thirty degrees fouth, always blow from the eaftward to the weftward over the whole face of the globe; only on the north of the equator they blow, from the north of the east, and fouth of the equator; and fouth of the equator, from the fouth of the eaft, except within two or three degrees of the equator, and here the winds are variable, and fometimes we meet with calins near the equator; but we must except the winds upon feveral coafts, as upon the coaft of Guiney, where the wind fets generally from weft to eaft; and upon the coaft of Peru, where it fets from the fouth-weft to the north-eaft; but the conflant trade wind from eaft to weft

prevails five hundred miles from land.

The sca and land-breezes are also periodical, changing every twelve hours. The winds blow from the land in the peninfula of the India Proper from about midnight to noon next day, when that wind dies away, and a refreshing breeze blows from the sea till late in the evening: It is not more than two months in each year generally that the hot winds are very troublesome, namely, in April and May, and they do not begin to be very hot till eight or nine in the morning; for the fun rifing between the tro-pics ufually about fix, the fands are not much beated by it till two or three hours after it is up, and it is the reflection of the heat from the parched country that is the principal occasion of the hot winds; and there are several ways moderating these, as by hanging up wet cloaths against the wind, and throwing water upon the floors; the people wind, and throwing water upon the moors; the people also draw water out of their wells, which feems colder than well water here. This their slaves pour upon their heads to cool them: but the rainy season no sooner returns in June, than the air grows cool, the clouds intercept the sun, and the country is everslowed. The rainy leafon fun, and the country is overflowed. The rainy leafon usually lasts on the coast of Coromandel, being the eastern side of India, four months, namely, from June to the latter end of October. They do not always begin and end exactly at the same time, but seldom differ a month. The rains are not very violent at first, and there are frequent intervals of fair weather; they decrease again by degrees. The heaviest rains in India are in August and September, then it rains almost perpetually, infomuch that all the flat country is overflowed, and they have terrible thunder every evening. In the fair season they have lightning frequently, without thunder, but this does no hurt. After the rainy scason they have a bright, serene heaven for four or five months, when the stars shine with such a lustre, that people easily see to travel by their light. It is a rule here, and in all the countries between the tropics, that they have the fairest weather when the sun is at the greatest distance from them, and the worst weather when the fun is

This part of the country is generally healthful, and the natives live to as great an age as they do in any part of the world, which may be in part afcribed to the air, but more to the innocent food and liquors the Indians eat and drink! foreigners, it must be admitted, do not find it fo healthful, efpecially, at their first arrival there; and in some parts efpecially, at their first arrival there; and in some parts of the country, where our factories happen to lie; particularly at Bombay and Bengal. As to Bombay, it was fituated on a moras, and near the sea, where noison was the falt ouze and mud, almost points. pours, afcending from the falt ouze and mud, almost poi-loned the people that were obliged to reside there: and this was the case at Huegley, on the river Ganges; and such fituations are unhealthful every where. But Bombay has been drained, and much improved, and is not that unhealthful fituation it was formerly; and the English factory is now removed from Huegley to Fort William in Bengal; where, I am informed, the air agrees much bet-ter with our people. But it must be acknowledged, how-ever, that few foreigners arrive in India, but have a feafoning the year: those that cannot afford good liquors, often fall fiek of the bloody flux; and gentlemen that drink hard, are subject to severs. We certainly lose some men the first year; but afterwards there are as few complaints heard of, in regard to health, as there are in England. It must be owned, however, that, let people be ever fo regular and ablemious, neither the water or the air do agree with them, at their first coming on shore; fome therefore never drink water, till it has been first boiled and fettled.

SECT. II.

Describing the situation of the several provinces and chief towns of Indostan, and also the settlements belonging to the English, French, Danes, &c.

HAVING before given a concife account of the fe-veral provinces of Indoffan, by diffinguithing them into the north-eaft, north-west, south-east, and south-west divitions, we shall under this head, in order to enable our readers to form a more clear and distinct conception of them, and also of their capital cities, and the several towns belonging to them, throw this extensive empire into three grand divisions, viz. 1. Those provinces which lie north of the tropic of Cancer. 2. Those that lie under the tropic; or partly north, and partly fouth of it. And, 3. Those that lie altogether south of the tropic, in the hither peninsula. We shall begin with those that lie north

hither pennitua. We man begin with those that it does not the tropic, of which, i. Cabul, Cassimere, and Gor, or Gourite, are the most northerly, and their capitals of the same anne: fouth of these lie Haican, Attock, Pencab, Bankill, and Naugracut. The chief town of Haican is of the same Naugracut. The chief town of Atacah is of the lame name. The chief town of Atacah, allo is of the fame name. The chief town of Pencab, is Temars. The chief town of Bankith, is Beifar; and the chief town of Naugracut, is of the fame name. The provinces, fouth of those last enumerated, are Multan, Lahor, Jangapour, and Jamba; the capitals whereof are of the fame name. The provinces further fouth are, Bucker, the Hindowns country, Delly, Sambal, Mevat, and Pa-tan. The provinces fouth of the laft, are, Tata, or binda, Jeffelmer, Afmer, or Bando, Agra, Gualan, Halabas, Patna, Jefuat, and Rajapour; the capitals whereof bear the same name as the respective provinces do. The r co-vinces south of the former, are Soret, Narvar, and Rotas. The capital of Soret, is Jaganat; of Narvar, is Narvar; and the capital of Rotas is Rotas.

2. The provinces which lie under and about the tropic, are, Guzurat, or Cambaya, Chitor, Malva, and Bengal. The chief towns of Cambaya, are, Amadabad, Daman, Surat, Swalley, Barock, and Diu. The capital of Chitor is Chitor. And the chief towns in Bengal are Chatigan,

Fort William, Calicuta, Huegley, Daca, and Malaa, Ra-gamahal and Cassambazar.

3. The provinces which lie fouth of the tropic are, Candich, Bezar, and Orixa. The chief town of Can-dich is Medapour. The chief town of Bezar is Bram-The chief towns of Orixa are, Orixa, Balisore, and Pipley. The provinces fouth of the former are, 1. De-can and Vifiapour (in which I include Balagate and Ba-lana). 2. Golconda. The chief towns in Decan are, Carwar, Goa, Rajapour, Dabal, Dundee, Shoule, Bontbay, Salfette, and Baffaim. The chief towns of Balagate, are Doltabad and Auranggabad. The chief towns of Golconda, within land, are, Golconda, Bagnagar, Gain, or Conlar, Raalconda. The port towns of Golconda

will be enumerated in treating of the coaft of Coromandel. The provinces which lie fouth of Decan and Golconda, are Birnagar, Tanjour, and Madura: the chief towns which give name to the three provinces, and lie within land. The ports are Tranquebar, Negapatam, Cultimere, and Turawrin, on the eafterin coaft, and Tegaparan, Anjengo, Cochin, Calicut, Tellicherry, Cananor, Manguelore, and Baffilofe, on the weft or Malabar coaft.

In our description of the principal cities and towns, we shall begin with Dehli, or Delly, which is esteemed the metropolis of the empire, and is situate in the heart of it, in feventy-eight degrees east longitude from London, and in twenty-fix degrees north latitude. It flands in the form of a crefcent, on the river Jerama, which divides it, being about ten miles in circumference. There are two long spacious streets which cross each other, and centre in a grand square in the middle of the town, on one side whereof stands the palace, fortified like a castle, before which, and in the first court of the palace, the guards are drawn up and relieved, as is mentioned in treating of the palace of Agra: to the durbar, or court before the royal apartment, the people come at the time the Mogul gives audience to his subjects. In this court are three divisions, audience to his tubjects. In this court are three divinons, the outermoff being affigned to the inferior people, who refort hither with their petitions to the fovereign. The next division has a raised floor, where people of better quality wait, and upon a floor raised fomething higher, the ommens, and those of the first quality are stationed; when the mufic plays, the Emperor approaches, and places himfelf on a magnificent throne, covered almost with diamonds, which is fet in a gallery fomething higher than the flage on which the omrahs are placed. Here the Mogul receives peti-tions from all his subjects, and hears causes several hours every day, at least forme princes have done this: but there have been indolent princes also too much addicted to pleahave been indolent princes allo too much addicted to plea-fure to trouble themselves about redressing their subjects grievances: in this city, Kouli Kan kept the Mogul and his nobility prisoners, till he had extorted from them all the wealth they had, or could procure, amassing together the greatest treasure, especially in diamonds, that ever any conqueror made himself master of; which we have taken particular notice of, in our account of Persia.

The most distinguished public buildings, besides the palace, are a grand mosque or Mahometan temple, covered with several extensive marble domes, and a caravansera built by a Mogul princess for the entertainment of tra-vellers; the tomb of Amayum the great Mogul, near which is a stone pyramid, said to be erected by Alexander, on the victory he obtained over Porus, the most formida-ble of all the Indian princes he subdued.

Their faras, or caravanferas, which ferve them instead of inns for the entertainment of travellers upon the road, are built much in the fame manner their sheds are before their built much in the fame manner their sheds are before their houses, being open on one fide, and no doors to secure them from wild beasts or robbers; near these places is usually a tanque, or large refervatory of water, and several of their effervatories of water they have in every great town, which are filled in the rainy season, and serve the inhabitants for seven or eight months, till the rains return again. They have also very large walls enclosed with brick, they are at a prodigious expence in their wells and refervatories, though they are at so little in their houses. Some of their tangues are above a mile in circumserence, and lined with tanques are above a mile in circumference, and lined with fquare free-stone, with steps down to the bottom, on every side: in the middle there is often a summer-house of stone, furrounded with galleries, from whence you may descend nurrounded with galteries, from whence you may detected by stone steps into the water, and they are so contrived that several persons may bathe themselves at one time, with the greatest privacy; and there are sew people of quality but have their private baths in their gardens. The wives and daughters of inferior people, who have not baths, pour water upon their heads two or three times a day, for half an hour together, and it is one great part of their business of stell water morning and expenses.

an not together, and it is one great part of their owners to fetch water morning and evening from the commen wells, upon their heads, in great round earthern pots.

The poorer fort of people have house built with clay, and thatched, but they have convenient courts and gardens. There are, besides these, a great number of small cottages built of clay and straw, which are chiefly occupied by those who deal in provisions. They are so numerous and close together, that fires often break out, and destroy much pro-

perty and many lives.

Their temples, or pagodas, are many of them very magnificent thructures, built of ftone, with lofty fpires, and a variety of figures carved on the out-fide as well as within; but the infide is very difinal, only one long dark room without windows, extremely hot of itself; but as there are a multitude of lamps always burning before their Images, the place is fo fuffocating that a man is glad to retire, let his curiofity be never fo great: but there are a great many other little pagedas in the country, open before, which are but just big enough to hold the image; and here the people generally facrifice, and perform their devotions. The figures, both in one and the other, are votions. The figures, both in one and the other, are very thocking and monitrous, which have occasioned our people in general to denominate them devils; we fee perhaps the head of a hog, the body of a man, and the lower part of alion, in one figure; in another a man with fourteen or fifteen heads, and twice the number of arms, and these they believe represent a race of people who lived formerly on the earth, and are now a kind of inferior deities or mediators for them in heaven, which is very fair from the notion we entertain of devils: but we shall enlarge upon this subject, when we come to treat of their re-ligion.

The only places worth mentioning are the cities of Dehli and Agra, which are fituated in the inland provinces of

and Agra, which are fituated in the inland provinces of Indoftan, that bear the fame name.

Dehli, or Delly, is capital of the province, and in the heart of the empire: it is in feventy-eight degrees east longitude from London, and in twenty-fix degrees from latitude. It flands in the form of a crefcent, on the fiver Gomma, which divides it; and is diffinguished into three towns, lying within about one hundred and twenty miles morth of Legra, in a fine plentiful country, when the sir north of Legra, in a fine plentiful country, when the air is more cool and falubrious than at Agra. The first town that was built is faid to have had nine castles and fifty-two gates. At fome distance is a stone bridge, and a delightful plantation of trees, leading to the second town, which was taken from the Indians by the first Mogul conqueror. This was adorned and enriched by several magnificent sepulchres as well as other stately monuments, of the Patan princes, which were all demolished by Shah Jehan, father of Aurengzebe; but the latter rebuilt the town, and called it Johanor the city of King Jchan, Abad, transferring the it joinanor the city of King Joinan, Abad, transferring the feat of the empire hither from Agra, where the heat in the fummer was too violent. The third town, which was erefted close to the fecond, and formed out of its ruins, was called Dehli by the Indians, inflead of Jehan Abad, the foundation of which was faid to have been laid in blood, as the throats of malefactors were cut, by Jehan's order, "the better (he faid) to cement the flores." he foared no expence whatever to beautify and adorn the gar-dens, belonging to the royal palaces, which was formed after an Italian model, by an ingenious Venetian:

after an Italian model, by an ingenious Venetian.
Delhi is entered by a long fireet, with arches on each fide of it, under which are the thops of the tradefmen.
This fireet leads directly to the palace, at the entrance of which are two figures of elephants, on whose backs ride two faunous rajahs, that represent two brothers who loft their lives in bravely defending certain towns laid siege to by Eckbar. The palace wall, which is of hewn flones with battlements, every tenth of which has a tower, is not much less than two miles in circumference. The ditches encompassing the wall are likewise faced with hewn stones. encompassing the wall are likewise faced with hewn stones and are full of water.

The great lords and other grandees enter into the first court of the palace anounted on elephants, richly caparifon-ed. This court has an avenue to a passage adorned with bril-liant porticoes, underneath which are small apartments for liant porticoes, underneath which are finall apartments for the accommodation of the guards. On each fide of the passage are apartments for ladies, and the halls of justice. There is in the centre a fine coral, formed elegantly, at proper distances, into less reasons. This grand pessage less to a second court, where the omrahs are seen mounting guard in person. On entering a third court, the divan is seen in full view: and here the Emperor gives audience. This structure which is open on all sides, and arched at we in successful hy above their translet wither. arched at top, is supported by about thirty marble pillars, most beautifully painted with flowers. It has a grand hall, ascended to by a flight of marble steps; and in the centre of this hall is a fort of alcove, richly ornamented, in which the Emperor is seated on a splendid throne which glitters with diamonds and costly jewels.

The city of Dehli has very few mechanics in it, which is not owing to the want of itill in the people, but from the ill treatment of the omrahs, who, if they can meet with them, oblige them to work, for which they reward them them, doing them to work, for which they reward them according to their own differetion. The rajahs, and many others of the principal inhabitants, are exceeding wealthy? their most estimable possessions are jewels, which they take particular care shall be faithfully transmitted to their heirs. Timur, after many revolutions that had happened at Dehli, was placed on the imperial throne in the year 1757.

are, t. Dente and Ba-Decan are,

oule, Bomof Balagate,

agar, Gain, f Golconda

Agra, the capital of the province of that name, is fituate in twenty-seven degrees odd minutes of northern latitude, and is about feven hundred miles north-east of Surat, which journey the caravans ufually perform in thirty-five days; this was but an inconfiderable place, till about one hundred and fifty years ago, when the Mogul Ecbar new built it, and called it after his own name, hebarabad. It lies upon the river Jemma, in the midft of a barren fandy plain, which adds confiderably to the heat of the climate: the town itself is seven or eight miles in length, but not near fo much in breadth, it is not fortified (except the palace) but there always lies a great army in the place, especially if the Mogul be there.

The buildings of the omrahs and great men are of stone,

and very magnificent, they fland upon the banks of the river Jemma, and have large gardens adjoining to them; the rest of the houses are but mean, however, the great number of Mahometan mosques, caravanieras, large squares, baths and refervatories of water, intermixed with trees and gardens, and the river Jemma running, the whole length of it, renders the prospect of the town very agreeable; and the Mogul's palace is looked upon to be one of the

finest pieces of architecture in the east.

There is a large plain between the town and palace; here the raja's draw up their rashboots when they mount the Mogul's guard, as they do in their turns every week, with fifteen or twenty thousand men; the palace or mahal, as it is called in the language of the country, lies in the form of a crefcent upon the river Jemma, but from the town, appears to be of a round figure, it is three or four miles in circumference, and fortified with a high flone wall, mounted with artillery; the mahal may be feen at a great diffance, and as the stones it is built with are red, and have a lustre like polithed marble, nothing can look more brilliant than it does when the fun thines; it is furrounded with a deep broad moat, over which are drawbridges, and the terrailes of the gardens ferve for a rampart.

There is a fine broad flone walk, with canals running on the fide of it, within the first gate of the palace, beyond which is a large fquare, where the Mahometan guards draw up; here the omrahs their generals pitch their tents, fo that one passes through two armies, one on the out-fide, and the other within the palace, before we come to the royal apartments; beyond this square is another court, where the Mogul's music, as it is called, sounds every morning, moon and night, and whenever he goes abroad: this is a compliment inferior governors and magistrates have paid them in all the towns in India, though furely nothing can be more harsh or disagreeable, than such a number of large brazen trumpets, and ill founding drums, to those who have ever heard other music. Our Eu ropean governors, therefore, though they will not difpense with this piece of flate, yet generally order them to be placed at a convenient distance. From this court where the music stands, we come to the durbar, which is another large court, whither all people refort at the time of au-dience: this is divided by rails or halustrades, into three parts, at the outward rail fland the common people; without the next, which is raifed on a platform fomething higher, those of better quality; and within the third, upon a platform or stage still more elevated, stand the omralis and great lords of the court: in this manner, all attend the approach of the Mogulat the time of audience, who, upon the playing of the mufic, appears in a kind of gallery, above the place where the omrahs are, and feats himfelf upon a glorious throne, covered with precious stones of an inestimable value. Here the Emperor receives petitions from all his subjects, and spends several hours every day in hearing causes.

In 1638, there were seventy mosques in this city; and pilgrimages are at this time made to a famous mosque in which there is a sepulchre of a faint, thirty feet long, and near fixteen broad. It also contains eight hundred purifying baths, and near it stands that grand piece of architecture the maufoleum, in building which, twenty thousand men were employed twenty-two years.

When a man is purfued, in order to be punished for any particular crime he has committed, he flies directly to a mosque, and there finds a certain shelter; nor can the Emperor himfelf hurt him, after he has taken refuge within its facred walls; for the attempt to punilh, in this cafe, would be a direct violation of that profound respect and reverence due to such as have the title of faints.

Most of the inhabitants of Agra are Mahometans and Pagans. The city in general has but little to boaft of with regard to commerce; but flournhes when honoured with a vifit from the great Mogul.

There is a very formidable nation called the Scheiks, out the north of Indoffan, who can bring fixty thousand ca-valry into the field. They possess the whole province of Punjal, the greatest part of the Moultan, and the Siedi, together with all the country towards Dehli, from La-hor to Serhend. These people have found means to free themselves from the chains of despotiin, though encompassed by nations of slaves. During the calamities of the Mogul empire, their number encreased confiderably by refugees from different nations. Such is their love of freedom, that nothing more is required, in order to be admitted among them, than to fivear an utter abhorrence of monarchy. It is affirmed they have a temple with an altar, on which flands their code of laws, and next to it a feepire and a dagger.

Cashimere, or Cashimire, capital of the province of that name, is fituate in feventy-five degrees of eattern longitude, and thirty-five degrees of north latitude, on a lake four hundred miles north-west of Dehli. The air being more temperate here than in any province of India, the country abounds in corn and fruits, and affords the most delightful protects imaginable, from whence it is called the paradile of India; hither several of the Moguls have retired with their courts in the hot season. It is well defended against the incurtions of an enemy by the mountains which furround it, from whence defeend a multitude of finall rivulets into a fruitful plain, in which

most of the towns of this province are situate.

The natives, who are Mahometans, are industrious, lively, fenfible, and ingenious; they are of European complexion; and the women, who are diffinguished for their personal accomplishments, are purchased by the omrahs

on that account.

Lahor stands about three hundred miles north-west of Dehli, and eight hundred miles north of Surat, in thirty-two degrees north latitude; and here ends that grand avenue or walk of trees, upwards of five hundred miles in length, extending from Agra to this city: Lahor was built by Amayum, who made it the capital of his empire : it is flill a large city, though the court be removed to Dehli; and here are still to be feen the ruins of feveral palaces, mosques, and refervoirs, which discover the magnificence of the Mogul princes who refided here. We thall now attend to the chief places on the west of India.

The province of Sindy, fituate in the river Sind, is a very fruitful country. Here is a great plenty of cattle of all forts, and numbers of tame and wild fowl. The province abounds in wheat, rice, and pulfe, nor have they ever a dearth, the Indus overflowing all the low grounds in April, May, and June, and leaving a fat flime that enriches the earth. This country produces falt-petre, fal-ammoniac, borax, lapis-lazuli, lapis-tutiæ, alfa-foxtida, lignum-dulce, bezoar, opoponax, and raw filk. The natives manufacture both filk and cotton, as well as chintz, and very handsome counterpanes. They make also sine cabinets lacquered, and inlaid with ivory. They export a great deal of butter, which is put in duppas or jars, containing from five to two hundred pounds weight.

The quota of forces furnished from hence to the Mogul,

is, four thousand horse, and eight thousand soot. The the gentoos are ten to one more numerous than the Ma-

hometans.

There is a particular kind of festival celebrated here. called the feaft of Wooly, when both fexes meet, and dance to the found of pipes, drums, and cymbals. The men fquirt oil at each other, and the women distribute fweet-meats.

The capital city of this province is Tatta, fituated in a large plain; it is about three miles in length, and about one and a half in breadth. Here is a citadel, and also a palace for the nalvob. The citizens are celebrated for making very handfome palanquins. At a finall diffance from the city are feveral very large and magnificent tombs, which contain the remains of fome of the antient monarchs of Sindy. The largest, which is in the form of a cupola, is about thirty feet in height, and twenty-one diameter. It confifts of the most beautiful variegated porphyry, po-lished in the most exquisite manner. The citadel, which lifted in the most exquisite manner. The citadel, which stands at the west end of the town, has barracks and stables, capable of accommodating between twenty and thirty thousand men and horse.

The province of Guzarat, or Cambaya lies to the fouth of Sindy: it is rendered a peninfula by the bay of Cambaya, on the fouth-eath, and Sindy bay on the north-wett. It extends about three hundred miles from north to fouth. and about four hundred miles from earl to weth.

Amadabad is the clief city of the province of Cambaya; it is fituate about one hundred and forty miles to baya; it is fituate about one hundred and forty miles to the northward of Surat, in twenty-three degrees north latitude, and feventy-two east longitude from London; it is the most noted inland town of the Mogul empire. It flands in a most delightful plain, watered by a little river called Sebremetty. It is furrounded by a wall of brick and stone, slanked with round towers, forty see high, and has twelve gates. The town, including its suburbs, is about four miles in length; the streets are generally wide, but the principal street is not more than thirty paces over. The meidan-hah, or king's square, is seven hundred paces long, and four hundred broad; and has trees planted on every side. On the west side of this square is the castle, and the great caravansera for lodging strangers stands on the south; and these are several other buildings in it, where the catoual administers justice. Near the meidan where the catoual administers justice. Near the meidan also stands one of the Mogul's palaces; over the gate is a large balcony, where the country music and trumpets stand and play morning, noon, and in the evening: the English factory is in the middle of the town, and the

English factory is in the middle of the town, and the Dutch have another in the great street, and their warehouses are usually filled with rich Indian goods.

In this city, there are a great many mosques, or Mahometan temples, but that called juma messid, or the Friday's mosque, whither most people refort on that day, is the noblest: it is ascended by several large steps, and before it has a square clositer, of one hundred and forty paces in length, and one hundred and twenty in breadth, adorned with swelve domes, and an open paved square in the middle of it. In the front of the temple are three large arches, and on the sides two great doors which open into it, over which are very high steeples, from whence they call the people to their devotions. The chief dome is furrounded with several other small ones, and two minorets or spires. The to their devotions. And their donies in instruction with feveral other fmall ones, and two minorets or fpires. The whole pile is supported by forty-four pillars, standing in two rows, and the pavement is of marble. There are abundance of pagodas, or idol temples also in Amadabad, but the finest of them Aurengzebe converted into a mosque, at which ceremony he ordered a cow to be killed in the temple, being affored that the gentiles would never enter it again after it was fo polluted; and he ordered all the fi-gures of men and beafts to be defaced, fo that it has loft much of its original beauty.

The city is so intermixed with groves and gardens, that at a distance it looks like a forest. The King's garden, which lies without the walls by the river side, is filled with all the fruits of India. It consists indeed of several gardens. dens thrown into the form of an amphitheatre, rifing gra-dually one above another; and on the highest is a terrais, dually one above another; and on the inguest is a terrals, from whence there is a profiped of the country villages for feveral miles: four or five miles from Amadabad is the village of Serquech, where are the tombs of the former Kings of Guzarat; they are large square buildings with three great arches in each front, and over them a great many ledier. There is a magnificent dome in the middle, and several little ones on the fides of it; and the tomb is

always directly under the largest dome.

Sickand lame beasts and birds had formerly hospitals provided for them in this city, by the compaffionate. Indians; who imagining the fouls of their relations or anceftors might be removed into these animals, thought it the greatest act of charity to administer to their necessities: they purchased infirm wounded animals frequently of the Christians and Moors, to deliver them from the crueky of the infidels, as they termed them: and these creatures remained in the holpital till they died, if they could not be cured; but if they recovered, they were fold to some of their own persuasion, that they might not be abused again.

The city of Cambaya is about two leagues in circum-

ference, and has very extensive suburbs exclusive of fine gardens; the fireets are spacious, and the houses well built It is fituated in twenty-three degrees north htitude, at the bottom of a gulf of the fame name. | The English and Dutch have factories here, though great part of the trade is removed to Surat; on which account the city is but thinly inhabited. It is furrounded by a brick wall and has feveral fepulcines, befides a flately callic for the nabob.

There are great numbers of monkies here, which are very mischievous, but the Banian inhabitants shew a particular indulgence to them. Percocks are also very numerous, which the natives catch after the bird has retired to reft: the flesh of the young ones is white, and in taste refembles that of a turkey.

The tide in the bay of Cambaya runs with such a smaring rapidity, that it is faid to exceed the pace of the faith of united.

fwittelt animal. No. 8.

Surat is in the latitude of twenty-one degrees thirty minutes north latitude, longitude feventy-two from the meridian of London. It flands on the river Tapte, about ten miles diffant from the fea; and the town winding with the river, is almost in the form of a crefcent. It is defended by a wall and towers, and has a square castle, with a tower at each angle on the fouth west part of it, which commands both the river and the avenues to the town by land. The river runs on one side of the castle, and there is a most on the other. The city is between two and three English niles in circumstrence, and has fix or seven gates, at which centinels are placed, who teaquire a strict account of such people as pass them, if they have any fuspicion of them. The streets are most of them narrow, and the houses generally low and mean, the sides being splintered with split cane, and the roofs thatched with cajan or palm leaves; but the Europeans, and some of the rich Moors have more losty, house, built with brick or stone, and covered with tiles. The floors, both of the upper and ground rooms, are of terras, which is brick or itone, and covered with tiles. In a floors, both of the upper and ground rooms, are of tetras, which is looked upon to be cooler than boards; and they have no glazing to their windows that the air may have a free pafage. The city is very populous, being frepposed to contain about two hundred thousand inhabitants; and the bazar or market-place thronged with Banians and other merchants, who fland with their filks or flutte upon their merchants, who thand with their files or turns upon their heads, or in their hands, to expose them to fale. In the middle of the city, before the castle, is a large open place called Castle-green, from the neighbourhood of the castle; where are laid all forts of goods in the open air, both day and night, except during the monstoons; and here the Europeans as well as natives place their bales, and prepare to look this this. to load their ships.

Before the English East India company became possessed of Bombay, the prefident and council managed their affairs at Surat, where a factory, which had been established there, was still contrived, after the prefidency was removed to Bombay. This factory had received many very valuable ammunities from the Mogul government: and Perable immunities from the Mogul government: and Perfians, Moguls, Indians, Arabs, Armenians, Jews, and Europeans, all reforzed to Surat, where money was eafily obtained and bills of exchange were to be had for every market in India. Bags of money, ticketed and fealed, would circulate for years, without being weighed; fuch was the honesty of the traders. Fortunes were proportionable to the eafe and readiness with which they were to be acquired to the commence. the cale and readmets with which they were to be acquired by commerce: they frequently amounted to two hundred thouland pounds. Many of the Gentoo inhabitants enjoy places under the Moorith government, fuch as collectors, furveyors of the cultoms, &c.

In hot weather, the chief inhabitants retire into the country; and the English Ead India company have a very pleasant garden, kept in the most regular order.

At this place there is great plenty of provisions of all kinds: the foil of the country is extremely fertile, and kinds: the foil of the country is extremely fertile, and

kinds: the foil of the country is extremely fertile, and produces the finest wheat in India. Here is also abundance

produces the fineft wheat in India. Here is also abundance of wild fowl, great numbers of antelopes and some deer.

All religious are tolerated here by the Moors, who have the government inticely in their bands. When they take an European into their fervice, they never attempt to make him a profelyte, nor do they make the least enquiry about his religion.

In 1664 Surat was plundered by Rajah Sevagi, who took from thence one million two hundred thousand pounds. The pillage would have been much more confidenable, had not the English and Dutch avoided the depredation, by lacking their richeft commodities in the callies. dation, by placing their richest commodities in the caltle, which was out of the rajah's reach; they had, besides, well fortified their factories; so that the invader thought proper to retire, without attempting to attack the place. After the above great lofs, the inhabitants, for their better fecurity built walls round the city of Surat, which is at

fecurity built walls round the city of Surat, which is at this time in a flourifhing condition.

A confiderable part of the produce of the manufactures of Guzarat, which are deposited in watchoules, is carried into the inland countries, and the rest to all parts of the globe. Those most commonly known are, blue linens, white linens, blue and white checks, printed callicoes, silk and cotton stuffs, gauzes, shauls, and dutties Surat receives, in exchange for her exports, great quantities of spices from the Dutch; itot, lead, cloth, cochineal, and hard wares from the English; silk from Bengal and Persia from Malabar, masts and pepper; from Arabia, slaves and perfunces; from China, teas, sugars, camphire, quickfilver, and toys; and guins, dried fruits, pearls and copper from Persia.

The manufacturers here have generally their work be-

fpoke by the wholefale merchants and this being the only fea-port of any importance in the Mogul's dominions that the Europeans do not possess, the inland trade employs great numbers of caravans for the distribution of the ar-ticles imported; and a continual intercourse is preserved from hence to Bombay, both by fea and land.

The governor of Surat, who, in the administration of public justice, attends perfonally in the durbar, presides with great state, and decides on all actions of a civil and

criminal nature. Bifnagar, properly fo called, is the western side of the kingdom of that name, and has Golconda and Visiapour on the north, Coromandel on the east, Gingy on the fouth, and the mountains of Gate, which separate it from Malabar, on the west. The chief towns are, 1. Biffrom Malabar, on the west. The chief towns are, 1. Bisnagar, or Chandegry, seated on a high hill in the latitude of fourteen degrees, some odd minutes, hear the river Nagundi, which falls into the Christena. 2. Narsigna, another considerable town, which did also give name to the kingdom formerly, lies about thirty miles farther to the northward, upon the same river Nagundi. Many incredible thinga are related by modern writers of these two cites, and particularly that Bisnagar alone is able to raise a hundred thousand horse, when there is hardly a horse fit for service in the country; and the kingdom has for a considerable time been a province of the Mogul's empire. They also tell us it is an excellent haven for ships, though it stands in the very heart of the country. No Europeans, have the privilege of establishing trade in this place, the prince only allowing them to be here in the capacity of travellers or visitions. The prince has a very stately palace.

The chief articles of trade at Bisnagar are, damasks, fattins, chints, rich velvets, &c.

SECT. III.

Treats of the English possessions and settlements, and those of other European nations in the East Indies.

BENGAL is the most easterly province of the Mogul's dominions. It is bounded by the provinces of Patna and Jesuat towards the north, the kingdom of Arracan and Assem towards the east, the bay of Bengal and the province of Orixa towards the south, and by the province of Malva towards the west; it is in length from east to west upwards of four hundred miles, and near three hundred in breadth from north to fouth, and is usually compared to Egypt for its fruitfulness, the river Ganges dividing it-

overflowing it, as the Nile does Egypt.

The chief towns are, r. Dacca, which lies upon one of the eaftern branches of the Ganges in the latitude of twentynare antern transpose of the Ganges in the ratitude of wenty-four degrees; it is four or five miles in length, but very narrow, winding with the river. This may properly be called the capital, being the feat of the viceroy, and here the English and other Europeans have their agents to take care of their trade, which is very considerable in this pro-vince. 2. Ragemahal situated higher up the Ganges; and is between two or three hundred miles from the mouth of as octween two or three nundred miles from the month of it, in the latitude of twenty-five degrees. Below Ragemahal lies the city of Caffimbuzar, in latitude twenty-four, where the Europeans have their factors, the country affording great quartities of filk and multins. 3. To the fouthward of Caffimbuzar stands the city of Hugley, upon an island made by the Ganges, in the latitude of twenty-three degrees, about a hundred miles from the mouth of the degrees, about a hundred miles from the mouth of the river; it is a large town, and besides Moors and other Inhas feveral thousand Portuguese Christians in it : most European nations who trade to India had their factories here, and particularly the English; but the unhealthinefs of the fituation induced them to remove, and the English have fince built them a fort a little below near Calcutta, which they named Fort William, from the Prince of Orange who mounted the throne of England about that time, In 1757, the fubah of Bengal, whose indignation had been raised by some procedures of the company, invested Calcutta, which was then in a defence . company, inveited Calcutta, which was then in a defence-lefs fatae. The governior, alarmed at the appearance of a very numerous army, abandoned the fort, and, with many of the principal inhabitants, repaired on board a veffel in the river. Mr. Holwell, however, who was fecond in command, affifted by a few intrepid officers, and a weak garrifon, defended the place for founc time, but was ar length obliged to furrender; and the inhabitants, with the whole garrifon, were all forced into a dungeon called the

black-hole, from which only twenty-three out of one hondred and forty-fix came out alive, the reft were either fuf-focated with the extreme heat, or died raving mad with fevers or violent thirst: there was a lady, one Mrs. Carey, among the number, who survived the calamity. 5. The city of Chatigan lies near the mouth of the most casterly city of Chatigati hes near the mouth of the most easterly branch of the Ganges. Here the Portugues set up for a kind of sovereignty formerly, and associating with pirates and banditti of all nations, owned no subjection to their own prince or the prince of the country, but committed daily robberies by sea and land, and so interrupted all commerce, that the late Mogul found it necessary to send an army against them and extipate them. 6. Malda which stands a little to the castward of Rageniahal, where the Europeans also have their seasons.

frands a little to the caftward of Rageniahai, where the Europeans also have their factors.

This province of Bengal is deemed the most fertile
country in India for a variety of articles, such as sugar,
silk, gum-lack, falt-petre, rice, opium, pepper, fruits, &c.
The greatest part of the Bengal silk is produced in the territory of Cassimbuzar, where the silk-worms are reared
and sed in the same manner as in other places; but the
country in the silk produced and sed in the same in the same should be such that the same should be s natural heat of the climate hatches and brings them to per-fection at all times of the year. Confiderable quantities of file and cotton fuffi are manufattured here, and cir-culated through part of Afia. Bengal is also famous for its fine canes, and a small fort worked into vessels, which, be-ing glazed within fide, will hold any liquid. There is also an herb here, from which they make very beautiful thuffs

and tapeftry.

The forces in the fervice of the English company, which are established at Bengal, are very confiderable. The power is invested in Europeans, though the bulk of the army consists of natives: the whole is divided into the army confilts of natives: the whole is divided into three brigades; each confilting of one battalion. of European infantry, and one regiment of feapoys; each battalion contains ten companies, and cach regiment ten battalions. Every regiment of feapoys, or black infantry, is commanded by a jemantadar, or native officer, who is subordinate to the English officers of a much lower rank. The artillery forms one regiment of four companies of Europeans, but the principal dradgery is done by black Europeans; but the principal drudgery is done by black feapoys: every company of artillery is ftrengthened by four companies of lafears, containing fifty men in each company, who ferve as matroffes; and the brigades have a troop of black cavalry appertaining to each, who are commanded by English officers.

But, before we quit the province of Bengal, it will be oper to give a further account of the town of Calcuttafituate on the banks of the river Hugley which is an arm of the Ganges. It is tolerably large, but appears very uncouth to the eye, from the great irregularity of its buildings; for every person who creds a house, pleases his own fancy with respect to the manner of the edifice, without paying any attention to uniformity, fize or elegance

Bezar is the principal street in this town : it is inhabited by persons who keep little shops for the sale of various commodities. The English send their servants hither, to buy whatever is wanted, relying on their fidelity; so that the place is feldom visited by them.

Near the centre of the town, on the fide of the river Hugley, is the old fort, in which is the place before men-tioned, called the black-hole, where the unhappy Englith fuffered the most wretched punishment, by order of the nahob Serajah Dowlah. Some of the apartments in it are used occasionally for the performance of divine fer-

By the fide of the river, about a mile from the town, is the new fort, which is avery frong and handfome building, exceeding fpacious, and furrounded with walls. It comtains magazines for stores, barracks for soldiers, and ele-gant apartments for the several officers that reside at Calcutta, who, as well as the engineers, have houses in it for their accommodation.

The Portuguese and Armenians have one part of the town fet apart for their residence where they exercise their own mode of worthip. There is a church belonging toeach; but the former are restrained from exhibiting their religious processions without the limits of their own diftrick. The generality of these people perform the most menial offices, being employed as servants by the wealthier part of the inhabitants. The Armenian women, indeed, are not employed in any kind of business; but the men collect goods in different parts of India for the merchants. Some of these are permitted to trade for themselves, and obtain very considerable possessions.

The dress of the Armenian women much resembles that

of the Mahometans, except the head, which is covered

o gotti til fe w m ne prin ar cil pri co

ftr branch dan ho co

with a turban of a prepoferous fize. They have likewise a singular addition to their head-dress after marriage; it is called a mouth-pisce, and consists of a piece of mushin, which covers the sace from the chin to the under part of honr fuf-th fe-. The afterly for a

which covers the face from the chin to the under part of the noftrils, and is placed so close to the face, that their breathing is greatly hindered by it.

Calcutts has many elegant buildings about it, which are the country refidences of English gentlemen who retire thither, particularly in the hot season, to enjoy the benefit of the air, which is cooler and much more wholesome than in the town. The intense heat of the climate renders the inhabitants subject to many discases; but the most fatal is that called the pincker sever, which in a very short space of time carries off the person seized with it. More men faid to die here in proportion than women, because the latter are more absternious, and less addicted to internathe latter are more abstemious, and less addicted to intem-perance than the men.

Patna is one of the largest cities in India, and the capital of a territory of the same name. It is situated to the pital of a territory of the same name. It is fituated to the north of the kingdom of Bengal, where the English have factories for falt-petre, borax, and raw filk. It also produces large quantities of oplum. The town is large, but the houses are built at a distance from each other. It is feated in a fertile, pleasant country, four hundred miles east of Agra, in eighty-five degrees forty minutes east longitude, and twenty-three degrees twenty-five minutes north latitude.

The most extensive city in the kingdom of Bengal is Dacca, which produces the best and finest emissistence in gold, filver, or filk. The town is situated in twenty-four degrees north latitude; the foil is fertile, the fituation fine, degrees north latitude; the foil is fertile, the intuation line, and the richest commodities of India and Europe are brought to its market. It receives considerable advantages from its cottons, from which are produced striped and worked intuitions, which, for their texture, are more valuable than those made in any other part of India.

Madrass, or Fort St. George, as it is generally called from the English fort there, stands about four miles to the northward of St. Thomas, in thitteen degrees, some odd miles.

ward of St. Thomas, in thirteen degrees, fome odd mi-nutes latitude, and eighty degrees of longitude; being near four thousand eight hundred miles to the eastward of London, fo that the fun visits them about fix hours before us, and fets in that part of the world before we fit down to dinner in this; for there is so little difference in the length of the days there all the year round, that we always reckon it to be fix o'clock at sun-rise and sun-set.

The fort is a regular square, about a hundred yards on each fide, with sour bastions, built with what they call iron stone, being of the colour of unwrought iron, and very rough on the outside like honeycomb. There is no ditch about the fort, and the walls are arched and hollow within, so that they are not cannon proof. It has two gates, one to the east and the other to the west. The western one to the eaft and the other to the weft. The weftern gate which looks towards the land is pretty large; and here the main guard is kept, the foldiers of the guard lying on the right and left of it, under the wall, which being hollow ferves them initead of a guard-houfe. The east-gate towards the fea, is but finall, and guarded only with a file of musqueteers. In the middle of the fort stands the governor's house, in which also are apartments for the company's fervants; it is a handsone, lofty, square stone building: the first rooms are ascended by ten or twelve steps, and from thence another pair of stairs leads to the council chamber and the governor's lodgings. The fort stands pretty near the middle of the White-town where the Europeans inhabit. This ir an oblong square about a quarter of a mile in length, but not half so much in breadth.

To the northward of the fort are three straight handsome streets, and as many to the south. The buildings are of brick; several of the houses have one stoor above the ground stoor. Their roofs are flat, and covered with a plaisfer made of sea-shells, which no rain can penetrate; and being secured with bathanases that a the forter.

ground floor. Their roofs are flat, and covered with a plaisfer made of sea-shells, which no rain can penetrate; and being secured with battlements they take the fresh air npon them morning and evening. The walls of these houses are very thick, and the rooms lofty. The governor and people of condition have gardens at a little distance from the town. Over against the west gate of the fort is a barrack, or rather one long room where all the company's solliest so lodge when they are off the guard: foldiers are obliged to lodge when they are off the guard; and adjoining to it on the north is a very commodious hospital, where they are taken care of when they are fick. At the other end of the foldiers barracks is a mint where the

company coin gold and filver.

On the north fide of the fort flands the Portuguese church; and to the fouthward the Englith church, which is a pretty elegant building, and moderately large: it has a handiome altar piece, a gallery of fine carved wood refem-

bling cedar, and an organ; when the governor comes into church, the organ aways plays. The church is floored with black and white marble; the fests regular and conve-nient, and all together it is the most airy lightfome temple that is to be found any where, for the windows are large and unglazed to admit the cooling breezes, and if it were otherwife, the people must fweat intolerably at their devo-tions; for though in their own houses they are as thinly clothed as possible, yet when they come to clurch it is al-ways in the European drefs; but to avoid these inconveways in the European ares; but to would these inconveniencies as much as possible, prayers are appointed at feven in the morning, and in the evening they are usually refreshed with a sea breeze. Here is also a free school, where children are educated in reading and writing; besides which there is a library. These are the only public buildings in the White-town, except the town-house, where the mayor and his brethren assemble; and a court of justice is held for civil causes. for civil caufes.

A river runs close to the buildings, on the west part of the town; but on this side there is no wall, only one large the town; but on this indethere is no wall, only one large battery of guns upon the river which commands the plain beyond it. On the east there is a flight stone wall pretty high, and appears something grand to the shipping in the road; but here is very little occasion for any tortification, the sea coming up close to the town, and no large vessels can ride within two miles of the place, the sea is so very shallow; nor is there any landing but in the country boats, the surfar runs so high and breaks so far from the shore. The north and south ends of the town are each of them defenddby a frone wall moderately thick; but then, like the fort walls, they are hollow within, and would hardly hold out one day's battery. There is a little fuburb to the fouth-ward of the White-town, inhabited only by the black watermen and filhermen, and confills of little, low, thatched cottages, which hardly deferve the name of buildings. Beyond this is an outguard of blacks, who ferve to give intelligence to the fort; but there is no other fortification on

this fide.

The Black-town adjoins to the White-town, but is much larger, and fituate to the northward. Here the Portuguese, larger, and istuate to the northward. Here the Portuguete, Indians, Armenians, and a great variety of other people inhabit. This is built in the form of a square, and is better than a mile and a half in circumserence; being surrounded with a brick wall seventeen seet thick, with haltions at proper distances, after the modern way of sortification: it has also a river on the west, and the sea on the cast; and to the northward a canal is cut from the river to the fea, which ferves for a moat on that fide; fo that Madrafs, confidering where it stands, might now be reckoned a town of strength if the garrison was answerable to the fortifications; but it consists of no more than three companies of fourfcore or a hundred men each, and one third of these topazes or Portuguese Indians. The company, of these topazes or Portuguese Indians. The company, indeed, entertain two or three hundred of native blacks in their fervice, and a body of men may be formed out of the inhabitants, who are very numerous; but these would be of little service against an European enemy, or even against the Mogul's troops, if there was occasion for them beyond their own walls.

The streets of the Black-town are wide, and trees planted in fome of them; and having the fea on one fide and a river on the other, there are few towns fo pleafantly fitu-ated or are better fupplied; but except some few brick houses the reft are miferable cottages, built with clay and thatched, and not fo much as a window to be feen on the thatched, and not fo much as a window to be feen on the outfide, or any furniture within, except the mats and carpets they lie on. The houfes of the better fort of Indians are of the fame materials, and built usually in one form, that is, with a little square in the middle, from whence they receive all their light. A firanger scloom comes farther than the door, before which is crested a little shed supported by pillars, where they sit cross-legged morning and evening to receive their triends or transfact their business. The great streets and the bazar, or market-place, are thronged with people; for notwithstanding the houses are low and small, they are very well filled, fix or seven people sleeping in one little room, without any other bed than a mat or cloth spread under them; but notwithstanding all this appearance of poverty abounds among them, the people from the highest to the lowest are extremely neat, washing themselves several times a day. In this black town there is an Armenian church, and several little pagodas or Indian temples, to which belong great numbers of semale choiriders, who spend half the time in finging to the idols, and the rest in intriguing, or chanting in companies idols, and the reft in intriguing, or chanting in companies before the great men as they pais along the firects. wealthier n, indeed, the men the coast of Coromandel, and the western coast of Sumatra. He is likewise captain of the first company of soldiers, the second being commanded by the next in council. The the fecond being commanded by the next in council. A ne governor lives in great fate, though his falary is but finall; but this is pretty smply compensated to him by the confiderable emoluments he reaps from the privilege he has of trading on his own hottom. His usual guard is three or four hundred black men; and when he goes abroad, on any public occasion, he is attended by trumpets, fifes, and drums, with streamers flying, accompanied by the council on horseback, and their ladies in palanquins.

Six persons compose the council, who have annual fa-Besides whom, there are two senior merchants, two junior merchants, five factors, and ten writers; also two clergymen, a judge advocate, an attorney-general, two affay-matters of the mint, and a furgeon; all of whom have yearly flipends, which (as we observed with respect to the governor) are trifling in comparison of the advantages and profits

they acquire by trading for themfelves.

The Armenians and Jews have ingroffed the trade of this colony. The articles the English deal in are diamonds, chints, callicoes, &c.

In 1746, this place fubmitted to the French, but was reflored at the peace. General Lally attacked it again in 1758; but the force Draper repulfed him. forces under the generals Laurence and

It was computed that fome years ago the towns and villages belonging to Fort St. George contained eighty thou-fand people, of whom five thousand were Europeans.

The trade carried on from this place extends to all ports eastward of the Cape of Good Hope; but the largest thips use the Mocha, Persa, and Surar markets; with Bengal and China commodities, and touch, in their voyage, on the Malabar coaft for pepper, cocoa, drugs, &c. The European goods, which fetch the best market price here, are wines, beer, ale, cyder, cheefe, gold and filver lace, worsted and thread stockings, lead, flint-ware, lookingglaffes, and a variety of other commodities

At a little diffance from Madras the nabob of Arcot has an elegant villa, supported by pillars instead of walls; the apertures of colonades admit the light, in lieu of windows, and open porticoes ferve the purpose of doors: the style of and open postices feve the purpose of cools: the type of architecture there appears elegantly airy and open, and in a climate exceedingly fultry, the confequent coolnefs renders it an agreeable and delightful retreat.

Great and Little Gingi or Gingee, are encompation

with mountains. They confift of two towns, both of which are furrounded by a wall and five lofty rocks; and on the ton of each rock is a strong fortress. These towns are setop of each rock is a strong fortres. These towns are se-parated from east to west, by a wall fortified with cannon, which one of the rocks desends as a citadel.

Another colony and fort belonging to the English is Fort St. David, fluated four or five leagues to the fouth of Pondicherry. This place was purchased in 1686, for the confideration of ninety thousand pagedas, by the governor of Fort St. George, for the East India company: it is efftecmed a fituation of very great confequence to the English. It was taken, in 175%, by the French forces under the command of general Lally, who blew up the fortifications; but the events of war proving afterwards unfavourable to the victors, they were forced to give up most of their poffestions to the English. Great quantities of chints, callicoes, and muslins, are manufactured here

Tanjore, the capital of the kingdom of the fame name, lies to the fouth of Fort St. David. It is fituated in eleven degrees north latitude; and the kingdom is bounded by the ocean, on the caft; by Trichinopoly, on the west; by the river Coleroon, on the north; and on the fouth by the territories of two great personages, styled poligars, or lords. The English have a fort, with land belonging to it, near the mouth of the Coleroon. In 1748, Montieur Lally al-tacked this place, but was repulfed. When that general made his appearance before it, he privately crefted batte-lies at the very time he was pretending to commence a capirulation with the prince, and even fired upon the town; when the inhabitants, inflamed with a just refertment, at-tacked the French with fuch spirit and vigour, as to drive them intirely away. The fort possessed by the English at the mouth of the river Coleroon, and which is named Daverotah, was granted to them by the King of Tanjore.
The town of Trichinopoly stands in a plain that was

once encompassed by numerous plantations of trees and opulent villas, but now wears a much less pleasing afpect. It is about four miles in circumference, fortified with a double wall, and defended by towers; it has a ditch, near thirty feet wide. There is a rock in this town about thirty feet high, on the furamit of which is a pagoda.

nopoly is the key of Tanjore and Madura, and gives them great influence. It was a principal fcene of our military operations laft war.

The French, in 1753, made an attempt to take it by furprize; and vainly furmifing that firing alone would terrify the garrifon, turned a couple of our twelve pounders on the battery against the town, having previously sealed the outer wall. They were, however, through the exertion of equal judgment and bravery, intirely repulied, and

upwards of three hundred and fixty were made prifoners.

Madura is the capital of the province of Madura, and is a large fortified town. It was taken by the English in

Tellicherry lies ten miles to the fouth of Cananor: the English East India company have a well-defended factory in this town, which stands at the back of the fort; and has a stone round it. The religion of the place is that of the Canana there are, however, some sew black Christians, Gentoos: there are, however, fome few black Christians, who live protected by the factory. Hereabout a fine deep purple opium is produced.

The English company have also a factory at Anjongo, the company have also a factory at Anjongo.

which is farther to the fouth, with a fort and garrison. river, which is three fourths of the year choaked up with fand, and not a drop of water fit to be drank can be had within less than three miles of the factory. This fettlement is in general more advantageous to the agents of the company, who purchase cinnamon, pepper, and chian on their account, than to the company themselves, who only trade for linens of no great worth, and about fifty thoufand pounds weight of pepper.

The harbour of Carwan is fituated about thirty-fix or thirty-eight miles to the fouth of Goa. Here is an Engthirty-eight mires to the found of Goa. There is an Inter-lish factory, which stands on a very commodious bay, fa-cing an ille that produces every species of game. The town is surrounded by fertile vallies, and yield great plenty of corn and pepper. In the woods on the mountains are deer, elks, wolves, tygers, monkies, with wild peacocks and other birds: they have also particularly large bees

We thall next give fome account of the French poffessions in India.

The capital of the French fettlements in India, is Pondicherry, on the Coromandel coast. It is a large handfome town, fituated in eighty degrees thirty minutes earl longitude from London, and twelve degrees twenty minutes north haitude. The fireets are all very regular, and the principal one not less than half a league long. The town is furrounded by a wall, and has fix gates, ten or eleven bastions, and upwards of four hundred cannon mounted, exclusive of mortars, bombs, &c. It flands upon a low ground, and veffels cannot anchor nearer than within about half a league; even the canoes came up to it by a great space; so that the blacks convey persons and mercantile articles to the fleet in flat-bottomed boats.

The principal buildings are, the house of the governor, the jesuit's house, and an elegant structure in the company's gardens. The houses in common confist of one pany's gardens. In the noutes in common conflict of one flory, as is usual in most of the towns of the province. The Gentoos generally fleep in their courts, or on the tops of their houses: these people toil hard in their respective professions, such as weaving, painting, &c. for about a penny per day, and their usual tood is boiled rice; for the country, notwithflanding its natural dinefs, produces great quantities of that necessary of life, owing principally to the unwaried industry of the Gentoes, who dig wells at pro-per distances in the sields, for refreshing the ground. The Mahometans, on the other hand, are as indolent and slothful as the others are affiduous and careful; nor does the laudable spirit of industry in the Gentoos effect the least change in them.

When the governor is honoured with a vifit from any

great personage, he is attended by three hundred peons or foot guards; and when he goes out on any public occasion, he is carried in a palanquin, the canopy of which is em-

bellished with the most superb ornaments.
In the year 1693, Pondicherry was taken from the French In the year 1093, Pondscherry was taken from the renen by the Dutch, and reflored at the peace of Rykinck; and in 1751, it was taken by the English, but reflored in 1762. Previous, however, to the period of 1751, rear-admiral Boscawen was sent out with a strong squadron, in order to lay stege to Pondicherry, and was joined in India by several men of war under admiral Griffin. Arriving at Fort St. David in July 1748, on the 10th of Angust following the army were in full motion, and preparing for the fiege.

On the 11th, the French made a fliew of about three On the 11th, the French made a fliew of about three hundred infantry and fome cavalry, at an intrenchment

they had thrown up, but abandoned it on the approach of the English forces. The English attacked the place with their usual spirit and intreplairy, but were constrained, through the violence of the periodical winds, to raife the constraint of the periodical winds, to raife the second of the periodical winds, to raife the second of the periodical winds, to raife the second of the periodical winds and fifty follows. diers, upwards of two hundred and fixty feamen, and fe-

veral engineers.

Karical lies in ten degrees thirty-four minutes north. latitude about four leagues fouth of Tranquebar, and twenty-five fouth of Pondicherry. This is an ancient city and fettlement belonging to the French, it contains five spacious pagedas, nine lester ones, four mosques, between fix and seven hundred houses, and about five or the board assets. fix thoufand people. Tironmale Rayan Patuam is under the jurifdiction of Karical, and lies to the fouth of it. It is a large town, containing four large pagodas, near thirty lefter ones, four mosques, and about five hundred black houses, exclusive of twenty-four public inns for the accommodation of travellers.

Chandernagore alfo belongs to the French. It is fur-tounded by a wall, and well fortified; but was reduced by Meffrs. Watfon and Pocock, in conjunction with colonel Clive. This place has the disadvantage of being sather exposed on the western side; but its harbour is excellent, and the air is as pure as it can be on the banks of the Ganges. Here is a very confiderable manufacture of handkerchiefs and ftriped muffins: this, however, has not made Chandernagore the rival of Calcutta, whose im-mense opulence enables it to engage in the most extensive

commercial undertakings.

The Portuguele policifions in the Indies being now come under our confideration, it is necessary to observe that we shall postpone the description of Goa, the principal of them, and Diu, or Dio, both which are islands, till we give a general account of the oriental islands.

Meliapour was once the most considerable place on the Coromandel coast: it is about three miles south of Fort St. George. The Portuguese raised it from the verge of ruin, to a state of opulence and magnificence; but were driven from thence by the Moors, when it became subject to the King of Golconda, but was reduced by the french in 1666; the Dutch, however, in conjunction with the King of Golconda, about four years after, took it from the French; upon, which the fortifications were intirely destroyed, and never afterwards repaired. The inhabitants are Portuguese, Gentoos, and Moors, and others of different nations. The Portuguese, after settling in this place when in its declining state, and beginning to rebuild st, gave it the name of St. Thomas, from an opinion that the apossible was matrived here; and these populs, finding the apostle was martyred here; and these people, finding fome bones (which they afterwards enthrined) concluded they were those of St. Thomas, especially as it was pretended his sepulchre was on a hill at a little diffance from the town.

The city of Calicut lies in eleven degrees, twenty minutes north latitude. It was, when the Portuguele arrived here, the greatel place of trade in India. The Moors did all that was in their power to prevent the Portuguele fettling here; whereupon they landed a body of troops, and built astrong fort to desend their possession, but were driven out of it again; though others fay it was demolished by the Portuguese themselves, as not thinking it worth maintaining: but however that matter be, the fort is now wathed away by the fea, of which part of the ruins may fill be feen at low water. Several European nations have their factories, and trade hither at this day without refraint; and particularly the English. It is a large strag-gling town, and the Prince's palace, as it is called, is an old irregular building out of repair, which he feldom vifits. There are five white tombs a little to the northward of the town, which ferve as a fea mark to the failors. The fa-morin or king of this country, entered into an alliance and confederacy with the English against the Portuguese in 1615. Calicut is fur junded by a brick wall, and contains about fix thousand crick houses, most of which have gardens. This was the first place at which the Portuguese landed in 1408, after their discovery of India.

The country of the raja of Sarimpatan lies contiguous to the prince's dominions: it is faid, this country was never con-

quered; the natives are acivilized, just, and humane people. Farther to the fouth is the city of Cochin, a city fituated in a kingdom of the same name; in nine degrees fifty miin a kingdom of the fame name; in nine degrees fifty minutes north latitude, and is about eighty miles to the northward of Anjengo. This is a great town of trade, and the belt fettlement the Dutch have upon the Malabaz coaft: it was fortified by the Portuguefe in the year 1504, when the two Albuquernjues commanded the Portuguefe forces. It is divided by fome into Old and New Cochin;

the Old Cochin lies a lague and a half from the fea, and is called by the Portuguele Cochin Dacina, or the Higher Cochin, because it lies higher up the river, and by the Dutch Malshar Cochin, for here their king resided. The other Cochin, commonly called New Cochin, is fearce a league distant from the fea upon the fame river. The Portuguele built and beautified it with feveral fine edifices, chunches and monafteries, to which belongs a pleasant gardens and fine walks. The Jesuite church and college faced the fea shore, and had a long steeple. The cathedral was a noble piece of architecture, adorned with cathedral was a noble piece of architecture, adorned with two rows of pillars, and had a lofty fleeple. The church and convent of the Auftin friars flood upon the banks of and convent of the Auftin frairs flood upon the banks of the river; and the church of the Dominicans and their convents were two fine pieces of workmanthip, beautified with a double row of pillars of excellent flone; but the Dutch having this city furrendered to them in the year 1667, immediately gave orders for demolithing great part of the houses, and all the churches but one, in order to bring it into a narrower compais, and render the fortifica-tions more regular; and they have made it almost impreg-nable, considering the part of the world it slands in, to which the Rones of the c'urches they pulled down in a great measure contributed. The simple Portugues had converted then indeed to pious uses, but the Dutch knew how to employ such materials much better: and it is obfervable, that all over the Indies they think one church fuf-

tervable, that all over the Indies they think one church fur-ficient for the largeft cities, informuch that in Batavia it-felf they had for many years but one Dutch church. The dominions of the King of Cockiin have been re-peatedly invaded by the natives of Travancor, a country extending from cape Cemorin to the frontiers of Co-chin; and he is, from neceffity obliged to dwell in Gold-town, which is fituated or river half a league from the form, which is therefore the hard a league from the fea, and has feveral pago.as. His revenues is fourteen thousand four hundred lives, flippiated to be paid him by antient capitulations, out of the produce of his cutloms. There is a colony of industrious Jews in this town, who are white men, and abfurdly boast that their ancessors were

fettled here at the ara of the Babylonith captivity; they have, however, certainly been here a confiderable time. They have a synagogue, in which their records are very

carefully preferved.

Cananor is a very populous and confiderable town in the kingdom of the fame name: it is fituated in twelve egrees north latitude, and has amost convenient harbour. The Dutch, who have on all occasions diffinguished themselves by their industry and enterprising genius, have an extensive fort here. Cananor was originally possessed by the Por-tuguese from whom the Dutch took it in 1060. The chief articles in trade here are pepper, ginger, cassia, am-bergris, mirobolans, tantarinds, and precious stones. This town is inhabited principally by Mahometan merchants.

town is inhabited principally by Mahometan inerchaints. There is a large town at the bottom of the bay, which is independent of the Dutch: it is under the jurisdiction of a prince who can bring twenty thousand men into the field. The city of Cranganor lies fourteen or fifteen miles to the northward of Cochin, and was also the capital of a kingdom of the same name. This place was politified and fortified by the Portuguese soon after their arrival in India. but riken from them bythe Dutch in January (6612.) dia, but taken from them by the Dutch in January 1661-2.
The Dutch found here a noble college of Jesuits, with a flately library belonging to it, and it having once been the feat of a bishop, here was a cathedrah, and fix or seven other churches, which underwent the sate of those of othe: places which the Dutch conquered, and have nothing of them remaining but their ruins. Without the walls was the college of Chanote, famous for the refort of the Christians of St. Thomas hither, who exercised their religion here in the Syrian language. They had also a Syrian school for the education of youth, and several masters and priefts of their own.

Between Cranganor and Calicut lie the towns of Panane and Tanor; these were also once possessed by the Portuguese.

At Panane it was that Vasca de Gama treated with the Samorin, or King of Calicut, concerning their fettlement on this coast; but being opposed by the Mours, they afterwards attacked the place in form and took it. The Dutch fucceeded the Portuguese, and have now a factory here. Tanor is a poor straggling place, but the Europeans refort hither fornetimes on account of the trade: both thefe towns are reckoned to be in the kingdom of Calicut.

Chinfura, more generally known by the name of Dougli, is at the diffance of about a mile from Chandernagore : the Dutch have a fort here, but no other possessions whatever, as the territory round it depends on the government

of the country.

86 THE NEW AND UNIVERSAL SYSTEM OF GEOGRAPHY.

Hugley is fifty miles to the north of Calcutta: the English had once a fictory here, but removed it to Calcutta. This is a place of very confiderable traffic, particularly in the article of opium. The Dutch have a faccularly in the article of opium. The Dutch have a fac-tory here, erected in an opeu place, at a fusual diffrance from the river. It is defended by a firong fortrefs, and fur-rounded by a very deep ditch.

Saumelpour is celebrated for its preclous fiones, which great numbers of people are employed in fearching for thicke are not, as in other places, dug from mines, but found in the finds of the river. This is a finall place.

Ilandel was formerly the chief feat of the Portuguese commerce: it is now a factory for the fale of women to the Moors and Dutch: there are fome miserable wretches.

the Moors and Dutch : there are fome miferable wretches here, chiefly Portuguefe, who employ themselves princi-pally in the above shocking traffic, and are at the distance of about eighty leagues from the mouth of the Ganges. At Chaligan the Portuguese once established a fort of ab-folute or sovereign power, and sourced an alliance with the

robbers of different nations who took refrige here, and acknowledged no fubordination to any prince whatever, not even to their own: the Mogul, however, finding them too troublefome to be borne with, fent a force against them, who totally extirpated them. The town lies in twenty-three degrees north latitude, near the mouth of the most easterly branch of the Ganges: it has no confiderable manually the confiderable manua

The next fettlement on the coast of Coromandel is Tranquebar, which is claimed by the Danes: it is fituated in eleven degrees fixteen minutes north latitude, furrounded by a wall, and is about two miles in circumference. It was purchased of the King of Tanjore, by the Danes, in 1621.

The streets of this tuwn are wide, and have a brick paveright on the sides. The houses of the Danes, and other Europeans, are of brick and stone; but with only the ground-stoor; those of the Indians are very mean. The Danish missionaries have a congregation here, which thrives though vigorously opposed by the Papists. They have a school here for youth, who are instructed in the Protestant sint; also a printing-office, and a paper-mill.

The town is supposed to contain about five thousand in-

habitants; and hath a most agreeable prospect from the fea. In 1699 it flood a fix months fiege againft the King of Tanjore's forces, athitled by the Dutch; had not governor Pitt fent its relief a reinforcement of Englith from Fort St. George.

The above described are the chief settlements belonging to the Europeans, except the infular ones, which we shall take notice of in our account of the eastern ides; and proceed to give a description of the situation and extent of Coromandel, which is bounded by Proper Nar-tings on the west, Golconda on the north, the bay of Bengal on the east, and Gingi on the south, though Gingi, Tanjore, and Madura are properly enough by fome reckon-ed part of the coast of Coromandel, these making formerly the east part of the kingdom of Bisnagar, and going under the general name of Coromandel before these little principalities were erected; and according to this account, the coast of Coromandel reaches from cape Comorin, which hes in seven degrees, thirty minutes north latitude to Masfulapatan, the fift town in Golconda, in fixteen degrees, thirty minutes, fo that this coast takes up nine degrees of latitude, which allowing for the winding of the Ihores makes a fea coast of at least feven hundred miles.

The first settlements on this coast were established near the shore, some by dint of sorce, and others by the con-fent of the sovereigns. The manufactures of Coroman-del first inspired the Europeans with the resolution of settriing here. Hedges of thorny plants were the first boundaries, till, the colonists increasing in power and opulence, fortifications were raised for their defence. Almost the whole trade of this coast is now in the hands of the Europeans; though for some time Coromandel was no object of their attention, being separated from Malabar by inacceffible mountains.

We shall conclude this section with a particular account of the kingdom of Golconda, which extends two hundred and fixty miles along the bay of Bengal. It is in the form of a crefcent, and about two hundred miles in the broadest part from east to west. It has Bisnagar on the south, the mountains of Gata on the west, and those of Orixa and Halligate on the north.

This country is famous for its diamond mines, in fome of which the diamonds lie feattered within a few fathoms of the earth's furface, and others are discovered in a mineral in the rocks more than forty fathoms deep. workmen dig into the rock, and then, by means of fire, foften the flone, and fo proce of till they find thevein, which often runs under the rock two or three furlongs. All the earth is brought out, and, after great care is beflowed on it, produces flones of a confiderable fize, and pretty good

water, but of different shapes.

Near the place where they dig they make a ciftern about two feet high, and fix feet over, with a small vent in one of the sides, about two inches from the bottom, by which it empties itself into a little pit made in the earth to receive finall stones, if by chance any should run through. The vent being stopped, they fill the cistern they have nade with water, foaking therrin as much of the earth they dig with water, toaking therein as much of the earth they dig out of the mines, as it can-conveniently receive at a time; breaking the clods, picking out the greatest stones, and stirring it with shovels till the water is all muddy, the gra-velly stuff falling to the bottom: then they open the vent, letting out the foul water, and supplying it with clean, till all the earthy substance be washed away, and none but a gravelly remains at the bottom. Thus they continue washing till about ten of the clock before muon, when they take the gravelly ftuff they have washed, and spread it on take the graverily four they have wained, and spread jobs a place made plain and fimouth like a bowling-alley, for the purpose near the cistern; which being from dried by the heat of the fun, at that time of the day, they very curiously look it over, that the simallest bit of a stone can hadly escape them. If they find a large stone, they deliver it not till they have done work and then were extractly. Let they have done work; and then very privately, left it should come to the knowledge of the governor of the place, and he require a share, which in the kingdom of Golconda is ufually practifed, without respect to any agreement made with them.

The workmen are obliged to be watched with the utmost diligence, lest they should be tempted to embezale any of the precious articles which they are employed to fearch for. One of them was detected in putting a small some into the corner of his eye; and many others have swallowed the diamonds,

The principal perfons concerned in this trade, are the Banyan merchants; but both they, and the perfons employed to work the mines are greatly oppielled: the first affecting to be poor, and the latter being fo in reality; for the governors do not fuffer any to be rich, if they know them

to be fo. But in Visiapour they are more humanely treated.
Those diamonds which exceed the weight of a pagoda, are the King's property; but all of an inferior weight ap-pertain to the merchants. The largest diamond ever found was presented to the Mogul, weighing two hundred

and feventy-nine carats of four grains each.

Maffulapatan is the chief harbour in the kingdom of Golconda; and the country extends from the gulf Vitiapour: it once formed a part of a very extensive empire, fub-jest to the Emperor of Bisnagar, and comprehended nearly the whole of the peninfula, from the northern extremity of Orixa to Cape Comorin.

The city, Golconda, which is about two hundred and thirty-eight miles west of Massulantan, and about two hundred north-west of Madras, is situated in a good soil, and falubrious air; it has stone walls surrounded with deep ditches, divided into tombs or ponds of clear water. has many grand mosques, in which are the tombs of the kings of Golconda. In 1614 about five thousand houses were wethed away, and fome thoulands of people and cattle peralied by an inundation.

The town and harbour of Maffulapatan is fituated on the north fide of the river Nagundi, which separates Golconda and Bifnagar, in cighty-one degrees forty minutes cast longitude from London, and fixteen degrees thirty minutes morth lat....e.. Towards the close of the last century, it was one of the most thirving towns in India, and the most advantageous of the Englith factories. The Danes, Por-tuguefe, and Dutch, had allo factories here, and the cultoms amounted to fourseen thouland pagodas per aunum, it being the most celebrated mart for callicoes, indigoes, diamonds, and other precious flones; and there were about two hundred thouland inhabitants; it is now, how-ever, only a Dutch factory for chints. It is furrounded by a wall and ditch, and over the land fide is a deep morafs, with a bridge over it.

rats, with a bridge over it.

The French, under the marquis de Conflans, poffessed themselves of this city in 1759; but it was taken
from them by the English forces under the command of
colonel Forde. The waves, near the bar, are so rapid, as
to make a noise like the cataracts of the Nile, and iometimes have almost as great a fall. The heat here, especially in May, is so intense, that people dare not itir out of their houses in some parts of the day.

Property of the control of the contr

the city of Maffulapatan, is Pettipoly, or Penta-pooll, where the English have a factory. The printed and dyed stuffs of this place are highly esteemed; and in an island opposite to it grows a root which makes so deep a colour, that it is obliged to be mixed with other colours to make it lively. The English have also a factory about one hundred miles farther fouth, called Coletore, and the Dutch have a factory called Palicate, still a little farther to the south. the fouth.

SECT. IV.

Contains an account of the genius, temper, persons, babits, food, diversions, reads, &c. of the Indians.

THOSE Indians who are Pagans (and are ten times more numerous than the Mahometans their governors) are men of bright parts, and will imitate almed any thing at first fight. They are very fober and abstemious, never drowning their sense by drunkenness and intemperance, extremely obliging, and of a very pretty address, an even composed temper, and studiously avoiding all manner of contention; but they are generally thought to want courage. I have known some of them, however, as brave, as the bravest Europeans; men that would be cut to pieces before they would defert their post, and endure the feverest tortune, rather than betray their friend, dure the feverest torture, rather than betray their friend, oure the reverest torture, rather than betray their friend, or the cause they were engaged in. But to return to the ingenuity of the Indians: they will copy our pictures so nicely, that you can scarce distinguish the copy from the original. The common people paint those fine chints and calicoes we import from India, and their carpenters will imitate the model of an English ship, as if they had been brought up thip-carpenters, and it is amazing to see how quick they are at accounts.

They are of a middle five foldom complete their

They are of a middle fize, feldom corpulent, their features good, but their complexion for the most part black; they have long black hair and black eyes; but though the men in the middle of the penindla, are as black as jet, towards the north they are tawny, as well as on the coast. The women in their stature, features, shape, air and mein, have no rivals; without the advantage of a dancing-mafter, their motion is bewitching, they tread the ground as elegantly as an actress does the stage. Their cloathing does not prevent their shewing the natural shape of their bodies; they are neither distorted or rendered of their bodies; they are neither difforted or rendered crooked by firait flays, or lose the true human flape in a monftrous hoop. They have a piece of white callico tied about their waifts, which reaches to their knees, and the rest is thrown across their shoulders, covering their brass, and part of their backs. Their hair is tied up in a roll, and adorned with jewels or toys; they have pendants in their ears and noses, and several strings of beads round their waits their transparences. their necks; they wear bracelets on their writt and ancles, and rings on their fingers and tous; they put their bare feet into flippers; though the women, in the fouthern parts, wear neither flippers nor shoes.

The Indian men wear white vefts, girt about with a A The Indian men wear white versa, girt about with a fash; in which they have a circe or dagger. Their hair, like the women's, is tied up in a roll, over which they have simall turban. The upper part of their garment is contrived to fit fo as that the weater's shape may be feen. Under this is another somewhat shorter, and their legs are covered by their breeches: they wear slippers peaked like women's shoes, into which they put their bare feet.

The Moors or Mahometans are well shaped; the complexion of those in the north is fair; those in the south, saveney, but their two have generally black hair and black

tawney; but these too have generally black hair and black eyes, and like other Mahometans, shave their heads all but one lock on the crown, and wear their beards long; their habit is a vest and large turban.

The banian caft, or tribe of Pagans, eat no flesh or eggs any more than the bramins (priefts) antiently called brachmans, but live upon rice, herbs, roots, and fruits. The reft of the Pagans eat almost every thing but beef and fish without scales. The Monts or Mahometans eat almost all flesh but that of hogs, hares, and such flesh as the Jews were prohibited to eat. They all fit crosslegged, or loll upon mass or carpets at their meals, and iegged, or loll upon mass or carpets at their meals, and wash before and after. The principal dish, among both Moors and Pagans, is, pilau, made of fowls or mutton, or rice. The meat, whatever it be, is stewed to rags, of which they make a strong soup, and season it very high. They make a strong soup, allo of venison, sish, and almost all manner of slesh. When the company is set down upon a sopila or raised sloor, covered with a mat or carpet at the uponer end or tides of the room. a fervant comes in at the upper end or lides of the room, a fervant comes in

with a bason and ewer, and a towel, and every one washes his hands; then a large plate, or a leaf of a foot diameter is set before every one of the guests: after which, other fervants bring in large brazen or earthern bowls, full of rice, and with a ladle, lay a quart or three pints of boiled rice on every man's plate, pouring as much of the strong soup upon the rice as will moisten it, and a little part of the meat is laid on the side of the plate. A bottle or cruster of water, also, which is their common liquor, is set by every one, of which they drink when they please, without healths, or taking notice of any of the company. If they are entertained with fish, a strong soup is made of them, which is called curee, and mixed with the rice. They boil their rice in such a manner, that it is quite dry, not the least drop of water is left in it, and frequently co-They boil their rice in such a manner, that it is quite dry, not the least drop of water is left in it, and frequently colour it with faffron or turmerick. Their fauces are chiefly pickles, which they call achar, made of green bamboo, or mangoes, and other fruits. And foy is another fauce which is brought to England, and therefore needs no defeription here. Abundance of garlic is used in all their pickles, efpecially in the mangoe.

They are remarkably fond of smoaking tobacco. The poor roll up a leaf of tobacco, about four or five inchea long, and, lightning it at one end, smoak the other till it.

long, and, lightning it at one end, fmoak the other till it is about half exhausted and then throw it away.

The Indians have feveral kinds of divertions among them. They fometimes game for small matters, but not fo eagerly as the Chinese, and are seldom seen out of temper. At a seast, the music is sent for, particularly the girls dedicated to the temple, who, having sung and danced before the company, will retire with any of them, if defired. Plays are acked by torch-light in the fields; during the first force, when the agentics a veraging force. the fair featon, when the evening is exceeding ferene.
Fights of wild beafts are the diversion of the court, and

the dancing of the cobre capelle, or hooded ferpents is feen in every village. Their keepers bring them in covered in every village. Their keepers bring them in covered backets, and beginning to fing and play on very bad infiruments, at the uncovering the backets feven or eight of thefe creatures get up and dance to the founds, which hardly deferve the name of music; but if it is difcontinued ever fo little, they get out of their baskets, and hiss very

terribly. However, as foon as the music begins again, they are reclaimed and fall to dancing as before.

The chief rural fports of the Indians are hunting and hawking: they furround part of the country, and drive the country. the game into a narrow compass, and then shoot at it: they teach even tygers and leopards, it is faid, to take the game, teach even tygers and leopards, it is laid, to take the game, which they do by jumping upon it from bushes, or other cover, but never run fairly after it. They purchase hawks and other birds of prey from Persia, which are taught to fly at all manner of game, and even at wild beafts, fixing on the head of the animal, and bushesing him with their wings, while the dogs come up and take him. An ox being taught to stand fire, they make the same use of him all we do of stalking hoofer to get next their game. as we do of stalking horses, to get near their game. Another diversion is that of racing; they make the same use of oxen, as we do of horses.

Having, among other Indian diversions, mentioned that of the fights of wild beafts, we shall, before we quit this subject, describe an entertainment given by the great Mogul to foreign ambaffadors, which is of a very fingular nature: it confifts of wild beafts of various forts fighting with each other, or combated by men, who engage in fuch dangerous enterprizes in order to obtain the favour of the King. The manner of one of thefe fights, which was exhibited at Agra (when the Mogul's

the state of the s proofs of their valour, in fighting against the wild beast s with shield and sword, let them come forth; if they conquer, the great Mogul will thew high favour to them."
On this, three perious entered the lift, and engaged to
undertake the combat; when the governor calling aloud, faid, " None must fight with any other weapon but sword and fhield; those which have a dagger about them, must throw it away, and fight fairly." A lion was then driven into the ring, where one of the three flood ready to en-counter him: the lion immediately ran to him with the greatest ferocity, but the man defended himself a confiderable time, till his arms growing weary, the hon laid one of his paws on the shield, and the other on his arm. The man, finding himself unable to use his sword, and seeing the danger he was in, with his left hand drew out his In-

dian stiletto, and gave the lion so violent a stab in the dian (illette, and gave the lion fo violent a flab in the throat, that he immediately let go his hold; after which, he fevered his body almost in two with his fword, and, purfuing his victory, effectually killed him, when the people thoused out, "Thanks be to God, he is conquered." The Mogul, however, fmiling, faid to the conqueror, "You are a brave foldier, you have fought valiantly; but did not I command you to fight fairly, with fword and shield only! but, like a thief, you have folden the lion's life with a flietto." After this the favage tyrant ordered the man's belly to be immediately ripped open, and that his hody should be carried on the back of an elephant throughout the city; which sentence was immediately the property of the same throughout the city; which sentence was immediately ripped open. elephant throughout the city; which fentence was imme-diately executed.

Then a tyger was brought to the ring, which was en-countered by a very strong man; but the tyger was so active, that he suddenly leaped on his antagonist, and tore him to pieces. A very small person then engaged the tyger, and at the first encounter cut off both his fore seet, which and at the first encounter cut off both his fore set, which obliged him to fall; when pursuing his efforts, he soon killed him. On this the King, calling to him, asked his name: to which he answered, Geiby. The King hereupon ordered one of his servants to carry him a cloth of gold, who, when he delivered it to him, said, "Geiby, receive this coat, which the Mogul of his bounty hath fent." The conqueror received the coat with great humilian king is the said of the work of the said o ne conqueror received the coat with great himility, kiffed it leven times, and afterwards holding it up, prayed to himfelf for the Mogul's profperity; which done, he cried aloud, "God grant the Mogul to grow as great as Tamerlane, from whom he is derived; may he live teven hundred years, and his ceneration continue. great as 1 auneriane, from whom he is derived; may he live feven hundred years, and his generation continue for ever!" after he had thus expressed himself, he was conducted by an ennuch to the King, who, on his going away, said, "Be praised, Geiby Chan, for your heroic exploits: this name you shall keep for ever; I am your favourable lord, and you my vassal."

The Indian roads are not laid out as with us; in the open country, we travel over deep fands, where there is no track, and through thick woods a way is fometimes cut; but little or nothing done towards the raifing or repairing them. At every ten or twelve miles end, however, there is a caravansera, or choultry, for the convenience of tra-vellers, with a tank, or reservoir of water, near it, and fire for dreffing their food; but no inns, inn-keepers, or beds. The traveller takes care to furnish himself with every thing he may have occasion for on the way, before

A person in opulent circumstances, takes a palanquin, which is a couch, covered with an arched canopy, with a mattress, quilts, and cushions, or pillows to lie on. Then he hires ten cooleys, or chairmen, four of whom carry him at a time; for the palanquin is hung upon a bamboo or hollow cane, about five or fix inches diameter, and ten feet long, and is 6 bent in the middle, while it is growing, that it may fuftain the arched canopy over it; and a gen-eleman may fit upright, or lie at his length, lolling upon the cushions, if he pleases. As there are but four of the cooleys that carry him at a time, two before, and two behind being the might be made of the hamber care, on which the hind, laying the ends of the bamboo cane, on which the couch hangs, on their shoulders, the rest are employed in carrying large umbrellas, finely carved and gilded, to fcreen the fun from their master, morning and evening; for when the sun is many degrees above the horizon, the canopy foreens him from it); while another cooley brushes the flies off his mafter.

In many parts of India where there is any danger of being fet upon by the mountaineers, they travel in caravans, or large companies of feven or eight hundred. carrying of goods they make use of camels, oxen and affes; their horses come from Persia or Tartary, and are of too great a price to be put to these drudgeries, and their own little breed are not very sit for burthens: but what makes the camel of great fervice in all hot fandy countries, is, that he will travel feveral days without water; oxen are also used to ride on, as well as for burthens, and they draw both their waggons and hackeries, or coaches with two wheels; inflead of a faddle they lay a foft cushion on the ox to fit on, and inflead of a bridle put a rope through the cartilage which feparates the nostrils, and with this they guide him, they will trot along at a pretty round rate, and fometimes they run races with them; what they differ from ours in, is, that they have a large bunch of fleth higger than a man's double fift, that flands up between their fhoulders near fix inches. The buffalo is as large as the ox, but a more fluggish animal, and therefore ofed only in carrying water from the tanques to their houses, or to draw in the scavengers carts. Their hackeries are square like

our coaches, but have no raifed feats to fit on, however pillows are laid at the bottom to lean on

There are no people of any quality but have a stable of fine Persian horses for their own riding, and our East-India company keep a set of them for the use of their factors and servants in their principal settlements. The Mogul and his omrahs have elephants, on which they travel with their women and harmer from place to always. travel with their women and baggage from place to place; there are not, it is faid, lefs than five hundred of their that attend the Mogul in all his marches, befides a prodigious number of camels and wheel carriages; their carriages are usually drawn by eight or ten oxen, and their wheels have no fookes but are only a thick round board.

Travelling in the rainy featon, is very troubleforme, the flat country being overflowed, and innumerable torrents

falling from the mountains, but this does not hinder the common people from taking journies at this time of year, for they will take the water like a spaniel, and swim with that strength that I never faw any of our people able to come near them. I happened to be in the country during the rains, and having two or three broad rivers to cross which ran very fwiftly. I trufted myself to two of these blacks, who took me between them and swam cross the tiver with one hand with all the ease imaginable, and thus the whole company was carried over to the number of twelve or thirteen.

There are no posts in the country, but all letters and packets over land are dispatched by messengers on purpose, who travel on foot with great expedition, and are very reasonable in their demands.

SECT. V.

Treats of the natural history of India, namely, of the feil, pra-duce, plants, animals, minerals, &c.

R ICE is the most common fort of grain in that part of India which lies within the tropic of cancer; further north, they have wheat, barley, peas, and beans. The rice is first sown in beds, where coming up too thick to produce any thing but straw, it is transplanted into their fields in June, when the rains begin to fall, for the husbandman having ploughed and weeded his ground, converts the earth into a kind of hotch-pot with the water as it falls; and the cottagers, with their wives and children, bring the spires of rice in baskets, from the beds where it was first fown, being then about half a foot high, and plant each fpire or blade of rice in a ftrait trench, fupplying it with water as it grows, by little rills or chanels, if the rains do not water it for them; but ufually as the rice grows, the floods increase in proportion, and the rice is supplied with water till near harvest, which happens in November or December; and by that time the fun having exhaled all the water, the earth is hardened, the rice is cut, and usually tureflied out in the field.

This grain grows most like oats, the straw is not hollow It is grain grows note the coat, the traw is not pollow like that of wheat or barley, but fiff and hard, as we may fee by the whitks or bruthes made of it and brought to England. Every grain of rice has a thick brown fkin upon it, and must be well beat in a wooden mortar and fifted, before it looks of that pure white we fee it here. And portainfulfanding few much mains are raken with it bear And notwithflanding fo much pains are taken with it, be-fore it is fit to eat, the price is very low: three-pence will porchafe enough to feed a family of nine or ten people a whole day, though an Indian will est three times as much as an European; and this, with a very little fleih or fifth, cucumbers, melons, fruit, roots and herbs, are the usual food the generality of the Indiana live upon; they have very

little variety, nor do they feem to defire more than they have.

During the rains, and for fome time after, it is amazing to fee how fast all manner of vegetables grow; then green fields, corn, grafs, and flowers, adorn the face of the earth again: the natives rejoice, notwithstanding the loud thunder they hear every evening, well knowing that the rain it brings with it, is the foundation of all their plenty; but if the rains fail, they have nothing to expect but famine and fickness, having been fometimes obliged even to sell some of their children to the East india company, for fmall quantities of rice; having no other choice, but to part with them to fave their lives, and preserve the rest of the family from perishing for want of nourishment. In this dry feafon the grafs is burnt up, and there is none to be found but fome rank, four stuff in the woods. Their fields lie open, except near the towns and villages, where people make some little enclosures for their conveniency; and as no man has any property in the land he fows, the prince's officers take a third, or one half of the crop, or more, as they think fit; and leave the hulbandnen the

ASIA.

Nor is it left to the hulbandman's choice whether he reft. Nor is it left to the hulbandman's choice whether he will fow or not; for the refpective governors and generals, having certain towns and villages affigned them, to enable them to maintain the quots of troops they are to furnish; order fuch a quantity of ground to be marked out for every village to manure, and at harvest fend their officers to take as much of the crop as they think fit.

The gardens in India are flocked with a great variety of fruit trees; but they are planted in no manner of order, any more than their flowers. Their fruits are mangoes; guavas, nomeramates, annuas or pine-anoles, coca-nuts.

any more than their flowers. Their fruits are mangoes, guavas, pomegranates, ananas or pine-apples, cocoa-nuts, limes, lemons, oranges, and all manner of tropical fruits in the fouth; and in the north, they have apples, pears, and most of the European fruits. Both fruit-trees and fored-trees in the fouth of India are ever-greens, and fome of their fruit-trees are in bloffom, and have green and ripe fruit on them at the same time. The kitchen garden affords melons, pot-herbs, and roots; pepper grows on the Malabar coast, and they have also ginger, faffron, turmeric, sugar, cotton and indigo.

The cocoa and cottun-trees are the most useful in India. The cocoa affords meat, drink, oil, and timber for build-

The cocoa affords meat, drink, oil, and timber for building; the fibres of the bark make their cordage, the branches cover their house, and the leaves ferve them to write upon; and from the cotton-tree they have their callico, and most of their cloathing. The province of Bengal furnishes them with filk and muslin. The banian tree feems peculiar to this country, and deferves a particular defeription. The principal body grows to a great bulk, and fome of its branches shoot horizontally from the trunk, and from those branches little twigs shoot downwards perpendicularly, and taking root form other bodies, which, like pillars, support the arms they sprung from; and thus one tree comes to have twenty or thirty bodies, and covers a great space of ground, sufficient to shelter a regiment. Neither this, nor any other of the Indian trees are without Neither this, nor any other or the indian trees are wishout leaves at any time of the year. It is under thefe trees that the banians and other fuperstitious people place their images; and here their hermits voluntarily undergo the feverest penances, co-dr-mning themselves to fit or lie in one posture all their undering themselves useless

one potture all trees and the state of the many by the state of the st for the purpose: After the water has extracted the blue from the leaves, it is drained off; the sediment is then exposed in broad shallow vessels to the sun-beams, through the heat of which the moisture evaporates, and the indigo

remains in cakes at the bottom of the vessel:

Oxen are of great ufe; among other Indian animals, either for riding, carrying burthens, or for draft. They are not so large but make much more speed than ours, traveiling thirty miles a day, and more, chiefly upon a trot; and they have a bunch between their shoulders, very convenient for fastening their pack-saddles to; ten thousand of these animals are sometimes seen in a caravan, (which or unice animals are iontetimes feen in a caravan, (which comifits of feveral hundred or thouland cartiels, oxen, or beatle of burden, loaded with merchandize, and not wheel-carriages) their governors being employed in carrying the provitions of one province to another, and are fometimes fliled princes, and wear firings of pearl about their necks. The people are divided into four tribes, there being about one hundred thouland fouls in each. They live in tents, and have no place they can call their home, engaging on firth ground shripfle very night, and carrying eamping on fresh ground almost every night, and carrying their wives and children with them. They are attended also by their priests, and every morning before they set out pay their devotion to an idol. One of these caravans carries barley, another rice, a third peas and beans, and a sourth salt. There are ten or twelve oxen usually employed In drawing a waggon, and two in drawing a hackery or chaife; they feed these oren with barley-dough and grass when they can get it; but there is little of this to be had in the south of India in the fair season, which is the had in the louth of India in the fair lealon, which is the proper time of the year for travelling; camels also make part of the caravan, one of which will earry feven hundred or eight hundred weight and more; and the dromedaries which are a smaller species of camels, are as remarkable for their switners as the other for their strength, for they will trot two hundred miles a day. These are also fed with balls of barley-dough, or some other grain, and are very useful in this and other hot countries where water is fearce, as they will travel eight or nine days without water; but though they are proper for fandy defarts, if they come

upon a clay foil after any tain is fallen, the caravan is forced to lie filli till the ground is dry, the camel having a fimoth foot, without any hoof, and if he flips, he is in danger of being foolied.

There is a great number of elephants produced in India, which being an animal of remarkable fize and quality, we fhall here give a particular defeription of it as being the largeft quadruped in the universe. It is from twelve to fifteen feet high, and about seven broad. Its fixin, about the belly is fo tough, that a fword cannot penetrate it: it is of a darkish colour, and very much fearined; it has exceeding finall eyes, large ears, tround and full body, and the beny is to tough, tase is of a darkith colour, and very much fearified; it has exceeding finall eyes, large ears, tound and full body, and the back rifes to an arch. On each fide of its jaws, within the mouth, are four teeth, or grindlers, and two teeth project outwards: in the male, they bend downwards, and are firongeft, in the female, they turn upwards and are finarpeft; both male and female use one which is sharp, as a defensive weapon, and the other, which is blunted, to grub up trees and plants for food. The teeth of the male fometimes grow to the length of ten feet, and have been known to weigh three hundred pounds each. The teeth value is one of valuable ivoy. known to weigh three hundred pounds each. The teeth of the female though left, are the most valuable ivory. They naturally shed their teeth once in ten years, and bury them carefully in the earth, to prevent, as is imagined, their being found by man. The elephants tongue is small, but broad; their feet are round and ample, the legs have joints which are flexible; the forehead is large, and rifing; the tail refembles that of a hog; and the blood of this creature is colder than that of any other. But the organ which most peculiarly diffinguishes the elephant, is its trunk. This fingular member is crooked, grifly, and flexible, about from feet in length, and more than three in circumference towards the head: but it gradually diminishes to the extremity. At the root, towards the noie, are two passages, the one into the head, the other to the mouth; through the first it breathes, and by the latter it receives its provifrom, the trunk ferving the purposes of a hand to feed it and a weapon to defend it. It is so strong, that it can lift a prodigious weight; and so delicate in the sensation of seeling, that it can take the smallest piece of coin from the ground. They delight much in water, and will swim a

The male elephant is fometimes mad after the female, at which times he is apt to be very mischievous, and will strike any one he meets with but his keeper, and therefore trike any one ne meets with our line keeper, and include they are at that feafon chained by the legs to great trees, and if by chance they get loofe, they will overturn any thing in their way; nor is it possible to stop or divert their rage but by fire-works, which burthing with a loud noise will make them stand still and tremble: when they are in will make them fland fill and tremble: when they are in these mad fits they sweat prodigiously, and smell much ranker than a goat: it is credibly reported, that an elephant having broke loose in this rage, and making towards the bazar, or market-place, from whence all people fied as fast as they could, he camte to an herb woman's, that used to give him a handful of herbs as he passed by, and the woman having run away and left her child upon the ground in her fright, the elephant gently took it up with his trunk, and laid it upon a stall, without doing it any hurt, and then proceeded to overturn and do mischief to every thing that came in his way as before.

that came in his way as before.

The Mogul has five hundred, fome fay one thousand of The Mogul has five hundred, forme fay one thousand or these elephants in his service, which are trained up to war, that will not only stand fire, but fuffer a great gun to be fired off their backs: the gun they carry is about five feet long, and placed upon a square frame of wood, which is saftened to a broad thick pannel, tyed on with strong cords and girths. At the four corners of the frame they plant four filk stags, or colours upon little antient-staves. Upon and girths. At the four corners of the frame they plant four filk flags, or colours upon little antient-flaves. Upon the neck of the elephant fits the man who guides him, who has an iron rod in his hand about half a yard long, tharp at the lower end, and a hook turned up, with which he pricks him forward, or pulls him back as he fees fit. The gunner fits on the wooden frame, where he has his bullets, and ammunition, and all things necessary for loading and firing, and the gun carries a ball about as large as a tennishall.

Befides the beafts of burthen already mentioned, they have buffaloes, and affes; the buffaloes differ very little from cows and ozen, but only they are a more fluggift animal, and have a finooth thick ikin, without hair: the female gives milk, and the flesh of them is sometimes eaten,

but it is very coarse food:

The fleep they have in the fouthern parts are thin long legged creatures, and have a redith hair inflead of wool upon their backs, the flesh of them is lean and dry, and good for little. But towards Perss and Tartary they have

very fine fleefs, with good fleeces; and langutails, weighing feveral pounds, and it is observable of the Persian sheep, which are brought into India; that they have store time to feven horns apiece, and some of their horns standing up-right on their forcheads, the battles of their rams are very oody. Goats they have here plenty, and the fieth of their

bloody. Goats they have here plenty, and the fielh of their kids are tolerable good eating.

"The Indian black hogs, with their bellies down to the ground, are looked upon to be the best butcher 's must they have in India, 'especially that of the wild hogs, of which there is great plenty; as there are of deer,' antelopes, and hares, in which no body claiming any projectry, all people are at liberty to kill them as well as other game; for not-withstanding the Mogul is the proprietor of all the lands in the country, he does not monopolize wild bestle, and wild fowls, and urees, and whatever also grows spontaneously in the woods, and wide fields, are enjoyed by the people in common; so that through they have no lands they are to the common; so that through they have no lands they are the common fo that though they have no lands the y c 1 call their own, the privileges they enjoy in those of the plane are almost an equivalent. The lion is the only leaft of the forest, the hunting whereof the Emperor referves to himfelf. Their wild beafts are lions, tygers, leopards, wolves, morkies, and jackalis, which last are a kind of wolves, morkies, and jackells, which laft are a kind of wild dogs, of the colour of a fox, and fomething larger; which run about in companies at midnight, and make a hiddeous howling, not only in the country, but in the middle of great towns. One or more of thefe, it is faid, always attends upon the lion, and hunts his prey for him; the truth is, every creature in the forest is set in motion by the cries of the jackell, and by their dreastful howling terrify other animals, and make them an easy prey to the lion. There are great numbers of them in all parts of thecountry, as well in those places where there are no lions as where there are: and they will dig a dead corpse out of the grave, if it be not buried very deep: they are constant attendants upon caravans and armies, excepting that death

ane grave, it it be not butted very deep: they are confiant attendants upon caravans and armies, excepting that death will supply them with a feast.

Here is great plenty of all kind of poultry, as geefe, hene, ducks, pigeons, turtle-doves, partridges, quails, peacocks, paroquets, &c. The fiest of the ponkry is generally dry, lean suff, and some of them have bones as black and the bare is feare any difference in the section. as jet, but there is scarce any difference in the eating, be-tween those which had white bones and those which had The vultures are no where fo common or fo tame as in India, which we believe proceeds from the banjans feeding them as they do other animals, for the banjan tree abovementioned are quite covered with them, nor will they fir till a shot is fired at them, though the person is under the tree; they are confiderably larger than an eagle, and much of the fame make. But there is a kite with a white head which the banisms have still a greater veneration for, and feem to pay it divine honours. It is not an uncommon thing for these birds as they are flying at noonday, to be overcome with the intense heat of the fun and drop down in the streets, and upon such an accident our foldiers never fail to make fix-pence or a shilking of it, for they carry the kite into the market-place, and threatning to wring his neck off, the inperfitious people croud about him and contribute their half-pence a piece for the bird's liberty. We are informed by a traveller, that they have no great variety of finging birds in India, though he was a confiderable time in the woody part of the country; but there is one lefs than a wren which is exceeding pretty, adorned with the gayest plumage, and whose notes equal the best of ours. The numerous herds of monkeys which haunt the woods in the southern parts of India are tetrible enemies to these little birds, but nature has taught them to preferve themselves and their young ones, by building their nests at the extremity of the twigs, where they heng like small purses out of their reach, or in places inacconsiste to their entemies. There are also in this country bats almost

as large as kites.

We may recken, among other inconveniencies that lef-fen the pleafure of living in this defirable country, are those swarms of infects and reptiles that perpetually difturb the natives, but much more foreigners, particularly the gnats or mufketoes, as they are called, that are always the graits or insufactors, as they are called, that 'are always buzzing about our ears, who is fings swell a man's head and face at life first coming a-shore, that his friends can hardly know him.' The stings have not this effect afterwards, indeed, but people can never rest in quiet for them, unless fome slave stands by and bruthes them off, while they steep. Bogs are another plague, but these may be avoided by tarring the feet of the cot or couch the person lies on, for a bug will never crawl over tar, which they have an average to a res stronged by their sicking in it. have an aversion to, or are stopped by their sticking in it.

Of this feorplons there are federal kinds, the wood feorplons are said to be black and their fing motel. The hoale feorplons we cannot well avoid feering often; they are about the longth of a man's little finger and a thick, thisped shoot like a lizzard, but carry their init runed up upon their backs, and at the end of the tail there is a fling not much bigger than a horitet's, always wildbey. I gentleman who had the misfortune to be fung, without his properties of the pair was about the properties. related that for the first twelve hours after, the rain was that he run into the freet like a madman, till they laid hold of him and anointed the place with oil of feor-pion, and that after the first twelve hours the pain gradu-ally abated for twelve hours more, till at length it wore quite off.

with the is likewife a little green fnake which will dart from take to tree, where the trees fland thick, whence fome people have given them the appellation of the flying

Snakes also will fometimes get into rooms, or wars-houses, and conceal themselves, and if you happen to come too near them, will dark themselves at you and hite. if They are dangerous too abroad, if you come near the cover where they conceal themselves, and sew peo-ple care to wainscot, or hang their rooms, lest this kind of vennin get behind there. Stakes and serpents are of various kinds, of which the cohe capelle, or hooded fer-pent, is the most beautiful, and his bite is reckoned the most dangerous. When he dances to music, he opens lsia head as wide as one's hand, and fhews a kind of human face. These reptiles are first drawn from their holes by means of a nusseal instrument, somewhat like a slaggest of the powerfully, as we are well informed, does the music operate upon them. The country physicians can cure his hite, but they pretend to do it chiefly by a charm; however, they give the patient a medicine and fing to keep him waking, for, it is faid, if he sleeps, he dies; and the poison, we are tald, inclines the wounded

dies; and the points, we are transfer and the production man to fleep.

During the rains, frogs and toads do multiply prodigiously, and grow to a confiderable fize, which has given fome people occasion to imagine it rained frogs. I heir rats, which they call bandecoots, also grow to a very great fize, three or four times as big as ours, and are fo impulsion that they will hardly give a man the way; but the dent that they will hardly give a man the way; but the mood dangerous of all venomous creatures, are their fcor-pions, centipedes and ferpents, of which there are various kinds, and as they will harbour and breed in every corner, there is no fach thing as being fecure from them, but by continual fweeping and bruthing; and this we prefume is the reason that no body has any wantfoot or hangings in their houses, for here they would certainly make their nests. The centipede (i. e. hundred feet) takes its name from the great number of legs it has; it is a little creature not much bigger than a goofe quill, and three or four inches long, but though it is so small, its bite is extremely dan-

Swarms of ants also infest many parts of this country; and they are particularly destructive to cloaths, furniture, and even buildings.

There is a great variety and quantity of sea and river-fish in India: sea-fish are the cheapest food we can eat; among their are dolphins, albacores, and bonitoes which are utually met with a good diffusice from land. The dolphin is much abused by our painters, they certainly meant a porposite or fea-log, when they drew a dolphin, which is the straight that twims, and lass the brightest colours, especially while he is alive; but he is dead almost as foon as he is taken out of the water; however, his co-lours are then exceeding fine. He may be about a yard long, the fleth white and well talted, and fwims at th of eight or nine miles an hour, as does alfo the albacore and bonito. The bonito undoubtedly takes its name from its being highly agreeable to the tafte of the Portuguefe, the first Europeans that navigated the Indian occan, and gave it this name, which in their language, fignifics delicious. It is a firm, but dry fish, and requires a good deal of fauce to make it palatable. The albacore is nearly of the same kind as the bonito, but grows to a much larger fize; fome weigh from fifty or fixty to one hundred pounds, and are still drier eating than the bonito. All these pursue the flying fish, the latter spring out of the water, and fly circularly near half a mile, while their fins, whileh serve them for wings, are dry, and then they drop into the water again, where their enemies, the dolphins, are ready to receive them; they jump out of the water therefore as before, and take another flight as long

as their wings are wet, and this deep repeat till they are devoured, or have made their ortage? whitings, and a fifth like a bream, but much larger, we can near the coaft, and another called the baldpate, having no fealed on the head or neck. The raven fifth is also good food, which is about a span long, and their rivers and refervoirs, or ponds, afford carp and cels: The fhark is the greatest devourer of any fifth we meet with at fea; there are form of from twelves. any line we have twent as a factor only feed upon fish, but will chop off a man's leg at a bite, and is mifeliurous when he is taken out the water. The carpenter therefore stands ready with his ax, when he is drawn to the side of the ship, to cut off his tail, which disables him from doing hurt. He has several rows of teeth, according to his age; the inip, to cut off his tail, which disables him from doing hurt. He has feveral rows of teeth, according to his age; but as he does not fwin more than two or three miles an hour, it is easy to avoid him. When a bait is thrown out for him, fastened to a great hook, two or three fish, twice the bigness of gudgeons, and prettily striped, run before him, and sinell to the bait, and then return to their master again, as if they would inform him if it was proper for him. Then he comes to it, and turning upon his back, takes in the bait, and the motion of the ship strikes the hook into his jaws; we may easily see the whole transaction, the sea being as clear as crystal at a distance from land. The reason he turns upon his back to take the bait, is, that his snout, or upper jaw, is so much longer than the under jaw, that he cannot take it in without turning upon his back: shark's sleth is very indifferent food, but when beef is wanting, it will go down. The pilot sist are looked upon as the nicest sist he reason. The pilot sist and be caught. These sist, when in company with a shark; but when they part from him, they will sometimes bite and be caught. These sist, which hath a most beautiful spearance in the water: they, however, when taken out, lose much of their lustre.

There are very good shell-sist to be met with most the of their luftre.

There are very good shell-fish to be met with upon the coast of India, such as crabs, oysters, &c. The oysters at Fort St. George are much of the same size as ours in England, and equally good; but there are some shell-sish in these seas of a prodigious bulk. There was a shell, much of the shape of the under shell of an oyster, which stood in the fort at Madras, which, when the sish was in it, much

the fort at Madras, which, when the fifth was in it, must have been a load for a man to carry.

There are amphibicus animals, called alligators or crocodiles, in India, especially in the mouth of the Ganges, that are as great devourers of fiesh as the sharks: they are invited hither by the multitude of dead bodies which are cast into this river, on which they prey, as they do upon the living when they have an opportunity; it is said they will take in the body of a whole man at once, some of them being twenty teet long; they have rather claws than legs, and their backs are armed with impenetrable scales. The crocodile will pursue his prey as well by land as water; but then, as his body is of that unreassomable length, he turns with so much difficulty, that a man may easily avoid him, if he fees him. He lies in the sedge, or old tree the traveller sometimes approaches him, not being old tree the traveller sometimes approaches him, not being apprehensive of his danger, and the monster jumps upon him and devours him.

him and devours him.

There are no mines of gold and filver opened in India, though it cannot be supposed but in so vait an extent of country there must be some, though perhaps not worth extracting, especially as there are mines in several of the neighbouring kingdoms, particularly in Siam, Pegu, &c. Some indeed mention copper, iron, and lead-mines, but if there be such, many of them are not wrought, for lead was formerly one of the best commodities the merchants carried to India. The diamond mines are the only remarkable ones: these lie chiefly in the provinces of Visapour and Golconda, of which notice has been taken already. India has been famous for some other valuable jewels, particularly pearls: they fish for pearl-oysters in the streights of Ramanakoiel, between the continent of India and the island of Ceylon, which is now in the power India and the ifland of Ceylon, which is now in the power of the Dutch,

SECT. VI.

Contains an account of the Indian manufactures, trade, foreign and domestic, navigation, shipping, &c.

THE Indoftan merchants, the basians, and fome others, carry on a problem with the others, earry on a prodigious rich trade to Perfia

and Arabia, especially from Surat, furnishing those countries with all the rich merchandiac of India, and bringing from thence Persian carpets, pearl, cossee, and other goods, the produce of those countries, but more treasure than any things, which they hire English and Dutch ships to carry to Surat for them, as they are better able to defend their rich cargoes against pirates than country ships are; and this appears to be a considerable branch of the company's profite; for they exact an extravagant price for the freight of the goods, as well as presengers, which the Indians can afford very well to pay, these thips being loaden as deep as they can swim, their cargoes valued at two hundred thousand pounds and upwards sometimes. The company also usually fend a ship upon their own account to Mocha in Arabia, every year, for coffee. Though the Mogul has a sea-coast of two thousand miles extent, he has learce a single sea-port, or a ship of war to protect the trade of his tubjests. There are no harbours a ship can get into, except Goa, Rombay, and the mouth of the Gauges, which are all possesses and the mouth of the Gauges, which are all possesses and the mouth of the Gauges, which are all possesses and the mouth of the Gauges, which are all possesses the proving supersesses they are the richest merchants in the world, they have not a single man of war or barbour for their feerings. chants in the world, they have not a fingle man of war or harbour for their fecurity, in any part of his dominions. Besides their trassic by sea, the Indians having long had a very considerable trade by land, by numerous caravans, which travelled to Perssa and Bochara, and from thence to Russia and Tartary, to Trapezond on the Black-sea, to Aleppo and Smyrna, and to Constantinople on the Bostantinople

The principal manufactories of this kingdom, are filk, mustins, cottons, chinns, and callicoes; we import from thence diamonds and other precious stones, great quantities of pepper the growth of the Malabar coast, saltpetre, indigo, cardamums, opium, assacried from Europe thicher, are English broad-cloth, lead, looking-glasses, swives, haberdassier's wares, gold and silver lace, tin-ware cwine, brandy, beer, and some other provisions, taken of chiefly by our own factories; the ships also frequently take in flints with their ballust, for there is not a fint to be found in India, at least in those parts the Europeans have visited, insomuch that a bag of gun-shints is single as valuable as money in the inland country, where the people had not an opportunity of being supplied by our shipping; but it must be consessed, that all the goods we carry to India are a trife, compared with the bullion and foreign coin transported thither. Our ships are in a manner empty of merchandise when they go out, though there is bardly any of them carry less than three or fourfeore chouland pounds of treasure, which has made it a question, whether the Indicates the second of the content of the co The principal manufactories of this kingdom, are filk,

of treafure, which has made it a question, whether the India trade be of any advantage to this nation.

Weaving is the principal employment throughout India; but the greatest manufactory is at Daca in Bengal, where the finest callicees, muslims, and dimities are made. Those manufactured for the immediate use of the Great Mogul and his zanannahs, are of exquisite workmanship, and of-tentimes greater value than any that are permitted to be fold either to natives or foreigners. The alligrame are adfold either to natives or foreigners. The filligrane are admirable, the workmanship cotting a great deal more than the metal itself. It is not perforated as with us, but cut with shreads, and joined with such inimitable art, that the nicest eye cannot perceive the juncture. The embroidery and needle-work are greatly superior to any thing of the kind done in Europe; but it is remarkable, that there are no semale embroiderers or semptirelise, but the men do all the work in these branches, and their patience is associated as their sources is fingular. Gold and silver silks and sauses are manufactured at Benaras: but their richness expenses. ing as their howhers is lingular. Gold and hiver hims and gaufes are manufactured at Benaras; but their richnefs exceeds their elegance. They are executed without tafte, and make a very doll appearance when finished, being defitute of that delightful glofs, and those vivid colours, which so greatly enliven, and give such spirit and beauty to

the filks and gaules of Europe and other countries.

It has been effimated, that there have been annually exported three thousand five hundred bales of callicoes from Coromandel to the several sea-ports of India: of these the English carry one thousand two hundred to Bombay, Malabar, Sumatra, and the Philippine illes; the French eight hundred to Malabar, Mocha, and the ille of France; and the Dutch one thousand five hundred to their several setthe Duten ofte installed in the leveral re-tements; Coromandel supplies Europe with nine thou-fand five hundred bales; three thousand of which are brought by the English; three thousand by the Dutch; two thousand five hundred by the French; and eight hun-

dred by the Danes.

The Indians copy with exactness, but have neither genius to invent, nor in genuity to improve. Hence their

works are admirably neat, without being pleafingly ele-gant; and difplay the most exquisite finencis, without the least delicacy of taste to give them real merit.

They are, at Surat, very fkilful in the art of fhip-building; though it nunt be acknowledged, that their naval, as well as their other architecture, is rather aukward and clumfy. Their veffels are made of a wood called beak, which is as durable and as folid as oak, and their masts tome from the coast of Malabar. Their ropes are made of the fibres of the cocoa-nut tree, and their fail-cloths from their cotton manufactures. They use the gum of the damar-tree for pitch; and their anchors are for the most part European: the most valuable of their cordage also is the produce of Europe. The small vessels that are used along the coast of Malabar, are made of the above wood, the planks being fastened together with cords; they are flat at the bottom, and have not any rudder.

The Indians use a kind of float (for it can neither be called a boat or vessel), which they find is of great use in carrying anchors, great guns, and other heavy weights on board a fhip, and that is nothing more than three rough timber logs tied together called a cattamaran, on which they fornetimes set up a sail, and at others paddle along with a flat stick, about as broad as a man's hand. They go out upon these three or sour miles to see a fishing; and one hundred of them are frequently seen on a line. On one of these cattamarans, an English officer, by setting up a sail, has gone one hundred miles along the coast in the fair season; and there seems to be no less danger on these than in a boat, because the timber will not fink. All the diffim a boat, because the times will for aim. And we discussed the furf that beats on the flore when the winds blow hard. In such weather the sea has sometimes overfet the cattantarah, and consequently beat off the waterman; but he turned his logs, again got upon them, and made his way through the surf to the ship he was fent to, which was at that time in great diffres, and to the relief of which he was fent.

SECT. VII.

Treating of the learning, languages, characters, arts and feiences, physicians, diseases, &c. of the Indians.

T is the general opinion, that the sciences originated in this country, the Greeks having travelled into India for instruction before the time of Pythagoras; however, at present they have not much learning, but have some traditions concerning Aristotle and Avcenna (the latter was born at Samarcand, Tamerlane's capital) and the Moors have some passages of the Old Testament in the Arabian language; the Moors, many of them, being descendants of the Arabians,

The Gentoos, or original Indians, begin the year the first of March, and the Moors the tenth, when it is supposed the sun enters into Aries (the vernal equinox) the year being divided by the Moors into thirteen moons. From the first of March to the tenth, the Moors celebrate a grand festival to introduce the new year, and then every governor and great officer makes a prefent to his prince, who appoints what polts every man shall hold the follow-

ing year.

The Indians are better verfed in the practice of arithmetic than in any other branch of the mathematics, and metic than in any other branch of the mathematics, and will caft up a fum only by the help of their fingers, fooner than an European shall with his pen. The bramins calculate an eclipic pretty exactly, but seem to be very much out in other parts of astronomy, when they imagine the moon to be above the sun, the contrary being cassly demonstrated in an eclipic; and what is still more absurd, they believe, when the sun sets, that he hides himself behind fome mountain, having no notion of the earth's being tpherical. They know the figns of the zodiac, however, and in their language call them by the fame names we do. But aftrology is their beloved study; none of their princes will undertake any thing of moment, until they have en-quired of the astrologer, if the hour be fortunate; and if he be of opinion the time the prince defigned to begin the enterprize is not favourable, he waits till the cunning-man directs him to begin it, and fets out that very moment.

Their skill in physic is not very great, understanding nothing of anatomy; however they use simples, and apply them with success, and have secret recipes which they do not communicate. In feveral diftempers abstinence is only prescribed, and they seldom eat any thing but a little con-

gee or gruel made of rice, till they find themselves better.

The mort-de-chin rages fometimes on the coast of Ma-

labar: It proceeds from indigeftion, and throws the patient into a violent vomiting and purging, with racking pains, which fometimes carry them off in twenty-four hours, is cured by elapping a red hot iron to the fole of the foot, near the heel; and it is faid that the cholic is frequently cured by heating an iron ring red hot, about an inch thick and an inch and half diameter, and applying it to the pa-tient's belly, so that the navel may be in the center of it; it may be taken off again immediately, but the fudden re-volution it easies in the belly, it is 1, will foon ease the patient of his pain.

The Indians are also subject to the bloody flux, which they cure by the prescription of stewed rice. The plague also frequently visits them, for which they feem to have no

remedy

The language of the Moors is different from that of the antient original Indians, but, however, they have borrowed the Indian characters, being defitute of letters themfelves, and in all their writings use either the characters of the Pagan Indians, or of the Persans. The court language is the pagan characters of the Pagan Indians, or of the Persans. guage is the Persian, which is spoke by all the great om-rals, and the polite world in general: the learned language and the work work backwards from the right and to the left, like the Hebrew, from whence they borrow many words; but this is fill to be understood of the Moors; for the antient Indiana have a great variety of other lan-guages, very different from those used by the Moors. The bramins, or brachmans, which is the chief sect among the idolaters, have a language peculiar to themselves, and in that their records, and books of divinity, and philosophy, and the fables of their priests are written, wherein their ignorance in the creation of the world, and the duration of it, are fufficiently manifest.

Indoftan, incorporated with many Persian and Arabic words, is tooken in that and feveral other parts of India, though the accent and dialect differ in the respective places where it is spoken; the pureft is in the province of Agra.

The Pagans generally write on the cocoa-nut or palm-tree leaves, with an iron stile or bodkin. They do not write in a straight line downwards, as the Chinese, but from the left hand, flanting to the right; and though in most places the long narrow palm leaves and bodkin are used, yet the Moors have a thin shining paper, sometimes ten feet in length and a foot broad, and they tack as many sheets together as the writing requires; the pen they write with is the antient calamus, or reed, about the thickness of a goose quill. When they write to a prince, the whole furface of the paper is gift with gold, and for fecurity of letters of consequence sent to court, they are inclosed in a hollow cane or bamboo, and fealed up, that no wet can hurt them. Upon their feals, or chops as they are called, they have no coat of arms, there being no such thing in the country, but they have their own names engraved upon gold or filver, or perhaps on a cornelian flone.

The antient Indian medals, in fuch effect among the

Chinese, prove that the arts were cultivated in India even before they were known in China. We owe to them the use of cypliers, which, though imported among us by the Arabians, came originally from India, where also the game

of chess was invented.

SECT. VIII.

Of the Mogul's court, forces, revenues, &c. of his civil go-vernment, laws and punishments, coins, weights, meafures, &c.

S the Mogul has no council of flate to advise with, hike other princes, the affairs of the empire are minaged by four or five great officers who receive their orders from him, and report the ftate of the feveral provinces to him. As the Emperor gives a particular name to every officer he advances, so he always takes a new magnificent title himself on his accession to the throne, as, " the conqueror of the world; the ornament of the throne," and the But coronations are not known in this part of the hike. But coronations are not known in this part of the world, nor does the prince ever wear a crown. He fits himfelf as judge of all criminal matters in the province where the court refides, as his governors do in their reflective provinces. The Emperor's fons have the title of fultans, and his daughters of fultanas, and the viceroys that of nabob. The next in degree which answers to our nobility, have the title of chan, or caun, as it is pronounced, and are diffinguished by the names they receive upon their advancement, as afaph chan, the rich loid; chan channa, lord of lords. One of the Moguls, it feems, gave

his chief physician the name of mocrib chan, or lord of his health, and these names re usually expersive of some peculiar excellency, supposed obe in the person preserved. The great military officers are called oursals, and one two has been general, mirza. The chief cunuchs are treasurers, stewards and comptrollers of the houshold. Fits other ware officers are the forestwing of the theorems. other great officers are the fecretaries of flate, the governors of the elephants, the mafter of the tents, and the keepers of the wardrobe, who are entrufted with the jewels. The ladies of the haram or feraglio, as it is usually called,

are either wives or concubines, princess of the blood, go-yernantes, or slaves. Those which are called wives, and are contrasted with ceremony, feldom exceed four, what the number of the concubines are is uncertain; but it is generally agreed they amount to above a thouland. The Mogul never matches with the daughter of any foreign prince, but usually with the daughter of fome great raja of his own country, notwithstanding they are idolaters; fometimes he will advance the meanest slave to that dignity, if the please him, and the first son he has by any of these mines are to the days of the sum if the pleate him, and the first fon he has by any of these wives, is looked upon to be heir to the empire; though the longest sword usually carries it, and whoever possells himself of the throne, immediately destroys all his brothers, and their male side. But what is very observable, is, that we never hear of above one fon of any one wise, that ever comes to man's estate, which has given occanion to fome to conjecture that the rest are dispatched as soon as they are born. The Emperor always gives some fine names to his wives, as he does to his great officers, one was called the light of the world; another the cown of the nine names to his wives, as he does to his great officers, one was called the light of the world; another the crown of the mahal, &c. Their apartments are faid to be extravagantly fine, and their gardens beautiful, shades, rivulets, cascades, and grottos, render those abodes so cool and refreshing, that the heat of the chmate is not perceived.

The young fultans are married when about thirteen or

fourteen years of age, and then have a separate court, little inserior to that of the Emperor's: and when they come to age are sent to distant governments, except the heir apparent to the crown, who remains near his father. The young fultanesses are bred up with all the tenderness and softness imaginable, and are not under so strict a restraint as the other women, and there do not want inflances of the Emperor's indulging them in their gallantries, which is the more reafonable, because the royal blood must never match with, and be under the controll of a fubject. The match with, and be under the controll of a fubject. The number of jewels and precious stones, which it is faid the ladies of the seraglio wear, exceeds all belief. Their clothes are as thin and light as possible, so that the filk they wear is wove so very fine, that the whole habit weighs but a few ounces, and that their linen is transparent. The governantes of the young princesses, and those who are spies upon the conduct of the King's women, are a considerable body in the seraglio; and it is faid, have a great share in the government of the empire: if this Prince has any council, it is composed of these ladies, for it is by their influences the great offices of state, and governments their influences the great offices of state, and governments are disposed of, and every one of them have a title answer-able to some great office. One is styled prime minister, another secretary of state, another viceroy of this or that province; and each lady maintains a correspondence with the minister, whose title she bears, and there are ennuclis prepetually carrying letters backwards and forwards between them. By the interpolition of these ladies all business of consequence is effected, who have better opportunities of representing things to the Emperor, than his ministers have without doors. The Mogul is served altogether by women in his retirement; and it is faid his person is guarded by a number of Tartar women armed with bows and seyments, a multitude of cuncles also guard the gates, and all the avenues to the railege.

The Mogul's forces are computed at about three hundred thousand in the whole empire; but besides these, there are the sorees of the rajahs, or Pagan princes, whom the Mogul has also in his pay, which may amount to as many more. But, besides the troops already mentioned, the Emperor has several companies and regiments, which may properly be called the body guards or troops of the houshold; first there is a regiment of four thousand men, called the Emperor's slaves, to express their devotion for the person of their Prince. This is the most honourable body among the Mogul's troops; their captain is called the daroga, who is an officer of great authority, ro whom the command of the army is fometimes committed. Every foldier who is admitted into this battalion is marked in the forehead, and out of these the menselulars or fubaltern officers are taken, who by degrees are preferred

the avenues to the palace.

to the dignity of omralis, which answers to our general officers. There are also the guards of the golden mace, of the filver mace, and the iron mace, who carry a club officers. There are also the guards of the golden mace, of the filver mace, and the iron mace, who earry a club or mace on their shoulders, with a large ball or globe at the end plated over, the foldlers whereof are. Herently marked in the forehead, and their pay is proportioned to the metal with which the mace is covered. All these themselves the sources has recombodies are picket whom their courage has recom-mended; and it a necessary to have ferved in one of these battalions to be qualified for a post in the government. The arms of a horseman are a broad tword bending a

little backward, a dagger, a bow and a quiver of arrows, a lance, and fometimes a thort piece like a carbine, and to this is added a great thield, fo that they are really incumbred with arms. A footman carries also a fword and dagger, a shield, a bow and arrows, and sometimes a match per, a linear, a low and arrows, and optionies a mater-lock mulket; and others of them carry pikes inflead of mulkets: they have also heavy artillery, but are generally obliged to European gunners to manage them; some thort pieces I have already mentioned, which carry a bullet about as big as a tennis ball, and are fired from the back of an eleplant; there are also about threescore small field pieces which stread the grade army.

which attend the grand army.

Here it may be proper to observe the manner in which the Indians encamp and draw up their men when they engage. It has been observed already, that the Mogul takes the field during the fair feafon, which lafts feveral months, and makes a tour through great part of his dominions, being followed by all forts of people, tradefinen and neechanies, as well as by the ladies, and the reft of the court, there being feldom lefs than one million of fouls attending

him, of which one hundred thousand are soldiers.

The camp is always disposed in a circular form; the The camp is always disposed in a circular form; the Mogul's pavilion being pitched on an eminence in the middle, is surrounded by the tents of the court-ladies, about which there is a sence ten seet high, which solds up like a fereer Beyond this inclosure, is another circle of the nobility and great officers of state, and so on, the meanest people being in that part of the camp, at the greatest distance from the royal pavilion in the center; and there is a market-place well replenished with provisions in every output. In drawing, up an army, every general. every quarter. In drawing up an army, every general commands his own men, and the most honourable place is in the center where the general takes his post, that he may be witness of the bravery of his troops. They know little of rank and file, or any other order in charging, but every man advances as his natural courage or opium inspires him. There are not less than twenty thousand or thirty thousand carriers that constantly attend the army, and bring corn, flesh, salt, and all other necessaries to the camp. They feldom march more than ten miles a day, and always chuse to pitch their tents, where they may be supplied with water. There are a great number of boats also laid upon carriages, and drawn after the army for the conveniency of passing rivers: leopards, dogs, hawks, and their keepers, make part of the train; these expeditions being intended for pleasure, as well as business. Tho being intended for plealure, as well as bufinels. Tho Mogul spends part of his time in hearing and redrefting the grievances of his subjects that live at a distance from the capital of his dominions, and the rest in hawking. hunting, and other sports; and before the rains begin to fall, this vast multitude retire into the towns, which during the fair scason are almost defer ted.

The revenues of the Mogul arife from the product of the ground, the labours of the people, the customs of the sea-ports, the estates of great men which devolve on the crown by their deaths, and prefents from the subjects, who rever approach their prince or governor empty handed. The viceroy of every province, it is faid, is obliged to answer the crown such a certain sum, which he raises out of the manusactures and the product of the foil: this part of the revenue therefore may easily be computed; and Manouchi, who redied in the Mogul's court forty years, makes these long amount to three hundred, eighty force. makes these alone amount to three hundred eighty seven millions one hundred and ninety sour thousand roupees, which he reckons to be of the value of half a crown, the just value is two shillings and three-pence, and then the just value is two shillings and three-pence, and their the annual revenue of the provinces may be reckoned to be between forty and sifty millions sterling; and much the greatest part of the troops being maintained by the respective omrahs and rajas, this may be looked upon also as a considerable addition to the revenue, it saving the crown a prodigious expence. The rajas also many of them yield a yearly tribute, but then as many of them receive large pensions, one perhaps may balance the other; but the wealth he possession should be supposed to the receives from the receives of the profession of the supposed to the receives from the power round site, and the daily prefers the receives from rich governors die, and the daily prefents he receives from

his swojects, thust amount to an immense sunt; the diamond mines also are an inexhaustible treasure.

So extendive and depote is the authority of the Great Mogul, that the lives and fortunes of his subjects are intirely at his disposal. Civil flavery hath here been added to political; and the opprefled fubject has to law to protect him. Here a man fearee dare to think; despotifin week min. Frete a man reserve date to think; deporting debars every faculty, and filtes every kind fentiment of the foul. The fubject is neither master of his understanding, his talents, his life, or property; the will of the Prince being the only law of his subjects. When the sun rifes, the Emperor of Indostan sometimes appears at a window, when all the great men of his court are obliged to attend in his spartments to do him homage. At fun fet he attend in his apartments to do him homage. At fun fet he also appears at a window, and receives the acclamations of the people. No person must presume to enter the imperial palace, except the rajas and great officers, who pay a short profound reverence to the Emperor, and prostrate themselves when they depart from him.

The principal officers of his empire are, the prime visit, the first secretary of state, the treasurer, the chief of the connection that the secretary of the slephone and the master of

eunuchs, the general of the elephants, and the master of

the wardrobe.

When the great Mogul appears in public, no pomp, magnificence, or tuxury can becompared to the oftentations brilliancy exhibited at that time. He fits upon a throne of gold glittering with precious frones: the throne and anonarch are both upon the back of an elephant; which elevation gives the Emperor fuch an air of grandeur, as must lurgals the conception of any European who has not feen him. As the elephant moves flowly on, the people fall profit at before their reverend and mighty Prince. Thus, he lupports his detpotic authority, by dazzling the eyes of his flaves, and firking them with terror. On his distanced and white. fhield are diamonds and rubies; on his head a gaudy tur-ban; and on his neck, a rich chain of pearls. Belides a ban; and on his neck, a rich chain of pearls. Beides a fword, he has a quiver of arrows; and on the right and left hand fide of him hang rubies or diamonds: he holds a flaff in his hand, adorned with drilled diamonds. He has rich bracelets on his wrifts, as well as above his elbows; and on his fingers are coftly rings.

The Mogul, when he matches at the head of his troops, is attended by about one hundred elephants, richly caparifoned, and ten or twelve thousand men. In the centre either on an clephant, or a fine Persan horse, rides the Emperor. He is seated in a covered chariot drawn by oxen,

when he goes into the country.

The four principal fecretaries of flate are, t. The bag-The four principal recreatives of state are, t. I no bag-fehi, who has the care of the army. 2. The adelet who superintends the ministers. 3. The divan, who divides the land to the officers of provinces, and inspekts their condust. 4. The casaumon, or high treasurer, who every week lays the accounts of the provinces before the

The Mogul is above sending any amhassador to a foreign court, looking upon the rest of the princes of the world to be much inserior to him, neither does he treat ambassa dors as representatives of their prince, but as common messengers. The Mogul's letters, and orders are received with as much reverence as if he himself was present, for the governor to whom they are fent, having intelligence they are upon the road, rides out with all his officers to meet the pattamar, or meffenger, who brings them : he no fooner fees the packet, but he alights from his horfe and falls down on his face to the earth, then he takes them from the messenger and lays them on his head, whereon he binds them faft, and returning back to the court where he usually dispatches business, he reads them, and returns an answer without delay.

answer without deay.

The following account will afford fome idea of the adminishration of justice in India. When the Great Mogul himself holds a divan or public court, he is feated on the mushoud, which is a kind of stage elevated to the height of about two feet, covered with a superb cloth, embroidered and fringed with gold. In the centre of the mushoud is alread an obtaine plate of filter gilded, turned up at the placed an oblong plate of filver gilded, turned up at the edges, and refembling a tea board, upon which the coneages, and retembing a tea-board, upon which the con-queror of the world (as the Mogul Hyles himfelf) fits crofs-legged like a taylot. His officers furround him, his cour-tiers flatter him, and the unfortunate petition him. On the latter occasion the petitioner is obliged to leave his flip-pers on the outfide of the door, and advance barefooted in token of humility; he then makes three falams, or falutes, to express his profound veneration, bows his forchead to the ground, and presents his petition, together with a purse of gold, as the one would be useless without the other, for the first only contains a detail of grievances, but the

latter is filled with the most persuasive eloquence. The petitioner on giving the paper or purfe, ulually fays, "Read this my petition; the day will come when all petitions shall be read." If the Mogul does not chufe to receive the petition, he frowns and turns away his head; but if the petitioner, finds favour in his tight, that is, if the bribe is fufficiently large, and the ministers have been previously well fee d, he imiles and gives a gracious nod of appro-bation. The Mogul does not, however, always redrefs the grievance when he receives the memorial and its golden attendant, but is frequently to charmed with the rhetorie of the latter, that he puts the object of opprefixon to the trouble and expense of repeating the former. Such is the equity of this country, where avariee is the leading principle, and the judge himself is even a stranger to every just and tender fentiment.

There are no written laws in the empire ; however certain punithments are ulusily inflicted on certain crimes, as murder and theft are punished by death, but the manner of the execution is entirely in the breast of the prince or his viceroy. They never luster material or to lie above a night in prison, and very often not at all, for if the offender be apprehended in the day time, he is immediately brought before the governor and either acquitted or condenned, and from judgment he is hurried to his execution, which is uffiely done in the bazar or market-place; fome malehelors are hanged, others beheaded, fonce impaled on tharp flakes, fome torn in pieces by wild beafts or killed by elephants, and others bitten by fnakes. If are elephant be commanded to dispatch actiminal immediately, he stamps upon the wreich who lies trembling before him, with his broad round foot, and crushes him to death in a moment; if it be intended he thould feel his death and die in torture the elephant breaks first the bones of his legs, then his thighs and arms, and leaves him to die by the wounds he has given him. Sir Thomas Roe relates, that when he was at the Mogul's court, a hundred thieves were brought chained before the Mogul with their accusation, and the Mogul Immediately ordered them to be carried away, the chief of them to be torn in pieces hy dogs, and the reft to be put to death in the ordinary way; accordingly the prisoners were divided into several quarters of the town, the chief of them was torn to pieces by twelve dogs before the ambassador's house, and thirteen of his sellows at the fame place, had their heads tied down to their feet, and their neeks being chopped half off with a fword, they were left naked and bloody in the fireets, where they became a great annoyance to the neighbourhood.

The Mogul expects prefents not only from all his fublects whenever they address him, but from ambaffadors and

foreign ministers; and fuitable to their prefetits, generally

Is their reception.

The coins we meet with in this country are the pice or eash which are copper, and about the value of a half-penny; fanans, a filver coin of the value of three-pence; the another filver coin, two shillings and three-pence; the gold moor or rupee, which is about the value of four-teen filver rupees, and the pagoda, fo called from having the figure of a pagoda stamped upon it, is of the value of nine shillings; the last are coined chiefly by the rajas or petty princes, they are flat on one fide and the other is con-The gold and filver coins are finer here than in any other country. Foreigners have their mints, and coin both gold and filver, particularly the English at Fort St. George; foreign coins also are current in this country, but there is not much of this; for little matters they fometimes use bitter almonds, or sea shells called black-a-moor's feeth, fixty whereof are about the value of a half-penny. Whatever foreign coin falls into the hands of the Mogul's governors is melted down into rupees, with the characters of the reigning Emperor, and after his death, it abates in the value a half-penny or penny, on account of wear, as they pretend, and only the new ecin paties at the full value. Great fums are reckoned by lacks, carons, and arabs.

A lack is a hundred thousand rupees. A caron or carol. as some call it, is a hundred lacks, and an arab is ten carons. They make a three-fold division of interest; one of which is vice, another neither vice nor virtue; and a third virtue; this is their manner of expression. The interest that is vice, is four per cent a month; and the in-

terest that is virtue, one.

At Surat corn and rice and other commodities which are fold with us by hollow measure, are there fold by weight, the common weight at Surat is the feer, about one thouland three hundred and three pounds; files and calli-coes are fold by the pieces or by the cobit, which contains twenty-feven inches.

The cofs by which they measure their roads is also very uncertain, near the counts it is about an English mile and an half, but farther up in the country, and particularly about Brampour, it is near two English miles. In liquid and dry measures, one measure is a pint and a half; eight measures are one mercall, or twelve pints; and four hundred mercalis are one garse, or six hundred gallons.

5 E C T. 1X.

Contains on account of the religious, professed in the empire of the Great Magul, and the secturies or tribes into which they are divided.

TOOLATRY is the religion of the Pagan inhabitants, of Indottan, who are much the most numerous. These are divided into upwards of fixty casts or tribes, that will not marry, or eat and drink with one another; and, as I apprehend, every east is of a different trade or profession. The chief of these tribes, which is eftermed the most noble, is that of the heavings of background the most noble, is that of the heavings of background the most no-The chlef of these tribes, which is esteemed the most noble, is that of the brannins or brackmans, who are their priests; and these are divided again, 1. Into those that eat no stellar, 2. Those that eat some kind of stellar, and refuse others.

3. Those that narry.

3. Those that vow celibacy, and will not fo much as look upon a wontan; and, 5. The bramins that fotbear walking at all, lest they should destroy some living creatures; thele wear a piece of silk or muslim before their mouths, that they may not draw in a silv with their breath. Neither will they burn any wood, lest they should kill some insect, and carry a brush always in their hands to sweep the place they design to sit on, lest they should dislodge the foul of some animal, and some relate they avoid marrying for fear they should destroy some animal by their embraces. These brannins are priess of every lest, and are useemed not only the most noble, but the niost learned of the Indian tribes, having a language peculiar to themselves, in which their divinity noble, but the most learned of the Indian tribes, having a language peculiar to themselves, in which their divinity and rule of life is written, and according to their tradition, it was given them by Brama, their lawgiver, great part of which they repeat exterippore to their followers. They hold there is but one God infinitely perfect, who has existed from all eternity, but that there are three fubordinate deities, namely, Brama, whom he vetted with the power of creation; Whistnow, the prelever, and Routeren, the enemy and destroyer of mankind.

The Indians believe, that the images they worthip were with and are inediators for them to

The Indians believe, that the images they worthing were brick holy men upon earth, and are mediators for them to the fupreme God in heaven; and they have fome traditions of the creation and of the flood; but thefe are mixed with many fables: As that Brama made a great number of worlds, at leaft fourteen; that the world we live in has continued feveral hundred thousand years, and that it has continued feveral hundred thouland years, and that it has flill four hundred thouland years to come: that their god Mahadeu has appeared feveral times on eatth, under different forms. One of the images of him has four heads, and four arms; another, called Whiftnow, has the head of a hog with tufks, and the body of a man; another is part man and part fifth; a fourth has ten heads and twenty hands, and feveral other monthrous figures we find adored to India.

A pre-existent state seems firmly believed by the bramins, and that some are rewarded and others punished here for what they have done in another world; they believe also that this is a flate of trial, and we shall be dealt with in another life according to our behaviour here. The hramins advise their followers to go in pilgrimage, to certain places effected holy, and effecially to the pagodas cear the mouths of the Ganges; the walking in that river alone will cleanfe them from a multitude of fins, in the opinion of molt Indians; but however erroneous their creed may be in some respects, they are much to be commended for the moral duties they teach, namely, temperance, justice, and humanity. A certain Proteflant divine relates, that a bramin assured him, that they acknowledged one supreme God; and when they represented him as having a thou-fand eyes, and as many hands and feet, they only intended to teach their people that he is almighty and omnificient, to induce them to be very exact in the performance of all

The most honourable tribe or cast next to the bramins, is the rajapute, or rallboot; and this the only fighting tribe, making arms their profession. These have some of the superlitions of the bramins, but are not quite so serupulous; they will eat the flesh of most animals, except that of neat cattle, and some other beafts they worthin. The banians are the third tribe in honour, and the most

tender of the lives of animals of any of them. They do not only prohibit the killing of them, but fludy an ways for their prefervation, which proceeds from their favourite doctrine of trantimigration, believing that every creature is animated by a human foul, and is noble or ignoble, according to their behaviour in a pre-existent flate. The begging friars autoing the Pagana are called faquirs, and of thefe their are great numbers; they make vows of poverty and celihaey; but their vows of poverty are fe far from depriving them of food, that their profession is the most effectual means to be provided for. They are almost tasked, letting their hair hang down to their midd dies, powdering it with aftes; and the relieving them is effectual means to be extremely mortified, they are fometimes very merry among themselves. There is also an order of mendicatt strollers among the Mahometans, who vow poverty and celibacy; but their eather continuant than ask charity, and if denied, plunder the villages they match through.

march through.

Befides the fects already mentioned, there is another called gaurs, who fled hither from Perfia, when the Machael gaurs, who fled hither mafeers of that country. These called gaurs, who fied hither from Perfia, when the Mahometans made themfelves matters of that country. These are defeended from the ancient Perfians, who worthipped the fun and fire: they adore God the creator of the world, but have a t. dition, that Zertooft, or Zoroaster, their lawgiver foine thousfald years fine; brought fire from heaven and commanded his difficients to worthip it. The exatinguithing the holy hire, which has been kept continually burning ever fince in their egyanes or temples, is accounted a great fin; and they do not reckon the putting out any other fire a much lefs crime. The took is adored by them with as much devotion is the cow is by the bandans. They abstain from eating beef and pork at Surat, in compliance with the custom of the country, the Pagans of India forthearing to kill the one, which they hold lacred; and the Moors abominating the other, looking on themfelves to be poiluted by the touch or any man that has but touched a hog. They fer apart the first day of every touched a hog. They fer apart the first day of every month for their public worthip, and have prayers also on fome other days

The religion of the Mohometants or Muffelmen will be

The religion of the Mahometasts or Multilmen will be treated of in our account of Tirky.

The hindoos or gentoos, are diffinguished into four tribes, or classes.

The bramins, who received their name from Brinha. This class is the most noble, as the proceeded from the head of Brinha, when he created the world. It is allegorical of their tuperiority over the other classes. 2. Sitti, or the military. This class is faid to have proceeded from the heart of Brinha, which derivation is failed to be emblenatical of the courage steedshive to have proceeded from the neart of Brinis, which deriva-tion is faid to be entiblentical of the courage teceflary to warriors. 3. Bice, or the trader. This class is figura-tively laid to have fprang from the belly, as trade hipplies mankind with the necessaries of life. 4. Sudder, or la-bourer, which class is typified by having fprung from the oourer, which class is typined by having printy from the feet, pointing out by implication the menial fituation of those who belong to it. The harri or hallachore class, or cast, are the refuse of both the Mahometans and gentoos, and their only employ the most base and fervite offices. The people of this class, being excluded from all fociety among the Indians of every denomination, are glad to find efficient the law of any communion, they therefore. find refuge in the lap of any communion; they therefore brome Roman Catlolies, and the millionaries have few other profelytes to boat of. It is very probable, from hence that the black Roman Catholies in general are converts more from compulsion than inclination; for if a verts more from computing that instanting in the married woman commits any atrocious crime, or happens to miltake any man's bed for that of her hulband, he immediately cuts off her hair, which is the greatest mark of infamy she can be braided with. After such an ignominy, none will converse, or be connected with her: the there-

none will converfe, or be connected with her; the therefore flies to her prieft, and embraces the Roman Catholic religion, to avoid being totally excluded from fociety.

Though the hindoos are gentle, patient, temperate, regular in their lives, charitable, and firid observers of their religious ceremonies; yet they are at the fame time superstitious, effeminate, avaricions, and erasty: deceitful and dithoneth in their dealings, void of everly principle of honour, generosity, or gratitude. Gain is the predominant principle; and they can cheat without fearing the anger of their gods; as a part of their gains, which is bestowed in gifts to their priests, or charities to the poor, will procure their pardon for any offence.

their pardon for any offence. It feems generally agreed, that Christianity bath been planted here ever fince the apostles times; but however that be, cert in it is, that Christians were found here when the Europeans first visited these coasts, who had a tradition

among them, that Thomas was martyred near Meliapour, on the coast of Caromandel to which town therefore the Portuguese afterwards gave the name of St. Thomas: this city flands about a league to the fouthward of Fort St. Leorge, and is at this day a bithop's fee. The points wherein the Indian Christians differed with the Romith church, were their administering the fareament in both kinds, but noing, instead of wine, a liquor made with Anda, but being, initial of wine, a liquor made with railins, there being no wine made in the country, a. They did not baptize their children till they were forty days old, sanlefs they were in danger of death. 3. They had no integes in their churches but the crofs. 4. They allowed their priefts to marry once. 5. They used no extreme unction. And, b. They did not acknowledge the pope's jurisliktion. But to the last, and some of the others, the Romith millionaries have brought them over, and they could the form of the others, the Romith millionaries have brought them over, and they could the form of the others, the Romith millionaries have brought them. go to the fame church the l'ortuguese do, at Madrasa; but not at the fame time,

SECT. X.

Treats of the marriages and fanerals of the Indians.

T is the cuftom in India, for the gentuos, or Pagans, to marry their children in their infancy; the confent of the proper parties is never alked, but they are al-ways married to one of their own cast or tribe, and to one of the fame trade: a carpenter never marries a finith, or a weaver with a waterman. At what age source was a waterman. At what age, foever the parents contract for their children, they do not cohabit till the woman is twelve years of age, and the man fonce years older. Before the match is agreed on, the aftrologer (whom we take to be a brannin or prieft) is always confuited, whether it is likely to prove fortunate. An enquiry also is made, what hour is likely to prove pro-An enquiry also is niade, what hour is likely to prove pro-pitious for the solemnization and consummation of it. And when all things are settled, a grand proceedion is made through the streets for several nights successively by the light of torches; the lady carried in one palanquin on mens shoulders, and the b. idegroom in another, with anusic playing before them. When the show is over, the little bride and bridgeroom are set down at her father's hours and here a table being placed between them them. houfe, and here a table being placed between them, they join their lands across it, and the priest covering both their heads with a cloth, repeats some prayers for their liappi-ness, and gives them his benediction; and having sprinkled the company with perfumed water coloured with faffron, the ceremony is concluded, and an entertainment prepared for their friends and acquaintance. The woman is entirely in the power of her hulband, and confequently the regards him as her lord: the brings him no other for-tune than her cloaths, and a female flave or two. On the contrary, the husband, or his father, if it be a wealthy family, make rich prefents to the wife's relations: no man (except the bramins and banians) is confined to one woman, but takes as many wives and concubines as he pleafes, and treats them, as the gentoos do all mankind, with great

The thange custom of one wife being subject to several husbands, prevails among some of the naires, or nobles: as by a fort of facit convention, by which it rarely exceeds half a dozen. The hubbands cohabit with her alternately, according to priority of marriage; and each on going re spectively to her, leaves his arms at the door, as a fignal that none of the others must prefume to enter till he de-

The Indians give a name to their children about ten days after their birth; they affemble ten or a dozen children, who flanding in a ring hold a fleet in their hands, wherein the bramin or pricet pours a quantity of rice, upon which he lays the child to be named; the boys who hold the theet shaking the child and the rice together about a quarter of an hour, when the father's filter advances and names the child, cuttom having given her this right; but if the aunt be not prefent, then the father or the mother name the child. A month or two afterwards it is carried to the pagoda or temple to be initiated in the banian religion, where a bramin mixes fome thavings of fandal wood, camphire, cloves, and other fiveets, and puts them upon the child's head, from which time the infant commences a complete banian. The lying-in-woman is looked upon fo impure, that none must touch her for the first ten days hut her nurse, and rill forty days are past the must not concern herfelf in dreffing meat or any other houthold affairs. They have fwinging cradles fastned to the beam of the house, which go much quieter and easier than ours that

fland upon the ground, the fame fort are used in Holland. The Indians never bind or fwaddle up their children as we do, butlet then go perfectly naked both boys and girls, till they are fix or feven years old, and it is not to be imatill they are fix or feven years old, and it is not to be imagined how very young they will crawl about the floor. The inhabitants of the fouthern part of India, who are most of them as black as jet, have a redifficalt for fome time after they are born, and turn quite black as they grow up. There are no crooked or mit-shapen people amongst them, but they are in general strait and well proportioned; which fome think proceeds from the leaving them to their natural liberty, and not eramping or swalding the childree as we do here. But however that may be, the frequent rubbing and washing them in cold water, certainly contributes to revent, as much as any thing, their being weak butes to prevent, as much as any thing, their being weak

when a wife, who has more hulbands than one, brings forth a child, the nominates its father, who is at the expense of educating it; but from the impracticability of afcertaining the real heir, the effates of the hulband defeend to the children of their fifters, or others near in

With respect to the funerals of these people, some bury the bodies of the deceased, and others burn them or piles; the latter is the most customary. Before they burn piles; the latter is the most customary. Before they burn their dead, they carry them, on a bier to a small dulance from the town or village where they died, diesked in their usual apparel. Here a pile is effected, and the cerpse is placed upon it; and, as soon as the braunin has done prayplaced upon it; and, as foon as theoremin has done praying, one of the corners of the pile is fet fire to. When the body is confumed, its relies or albes are gathered and thrown into the fea by the bramin; for the funeral pile is always erected near the fea, or forme large piece of water, as the ready road to paradife, the Ganges, and other rivers in India, being the objects of their adoration. The perin India, being the objects of their adoration. I he per-fon who fets fire to the pile, is always the nearcht male-re-lation, who walks bare headed, in a coarfe tattered gar-ment (their common mourning) round if three times be-fore he applies the fire fick, and when the whole is in a blaze, abundance of fweet-wood is thrown into the fire; but the perfon who fet fire to the pile, appears diffracted with the most attonishing grief.

We shall here give some account of the gentoo women burning themselves on the death of their husbands. But we must first premise, that, as the gentoo laws allow bi-gamy, the first wife has a limited time given her to consi-der whether she will burn herself or not, if she declines it, the choice is given to the fecond; if the fecond declines alfo, then they both lie under the imputation of being re-mifs in the genuine principles of honour and effecm. Some fay that this cuffom was inflituted in order to terrify some lay that this curiom was instituted informs to evily the women from poifoning their hufbands, to which they were once addicted, others, that the women proposed to enjoy a more exquisite and durable happiness with her hufband in snother life than she had done in this, and there are others that impute it altogether to priefleraft; for that the people of quality being to be dreffed up with rings and jewels to a very great value, and the bramins only having the privilege of meddling with the affect, founctimes pofficie therefore of the control of the c

felled themselves of great wealth by this means.
Soon after the settlement of the English at Fort St. George, a bramin woman demanded leave of the governor to hurn herfelf with her hufband; and not being able to diffused her from her refolution, and firongly folicited by the whole cash, that he would grant them this their antient privilege, he at-length contented to it, it is faid, accordingly great preparations were made, and the woman dressed to the best advantage, as if she were going to her wedding, the music played, her friends rejoiced, and the people shouted as on some glorious occasion; but the woman, when the faw the funeral pile prepared, and the fire about to be kindled, begun to repent herfelf, and would fain have withdrawn, but was hurried on to the pit where the fire was made, and there knocked on the head and murdered by the beamins to prevent her escape, and after-wards burnt with her hulband's corpse.

About the year 1743, the widow of the rhaam Chund

Pundit, in her feventeenth year, fignified to the bramins her resolution of burning herself, the dreadful pain of the death the fought was delineated to her in the most striking colours; all, however, had no effect; the even put her hand into a fire and held it there fome time. Her friends finding her fo inflexibly determined, confented to a funeral pile being erected, the melancholy hour approached; the took leave of her mother and three children, direfted herfelf of her ornaments, walked three times round the pile with the bramins, from whom the received a wick of cotlland.

ton, and, taking one more tender farewel of her children; &c. afcended the pile, and fet fire to it. The above lady's hufband, who was in the twenty-ninth year of his age; when he died, was confumed on the fame pile with her. She feated herielf by him, looking fledfafly at him; but, perceiving that the flames blew from her, the, with attonithing resolution, for fire to it in a fresh place, when the whole was foon in a blaze.

whole was foon in a blaze.

whole was foon in a blaze.

We shall give but one more description of these horses ble sacrifices, as taken from a letter dated from Inglee in Bengal, dated December 30th, 175t, and the horrid deed was committed about fifteen days before the date of the letter, the writer whereof being an eye witness of the whole transaction. This tragic scene was acted at Calcutta in Bengal, when the naked body of a gentoo was laid of the committee of the length. a pile of wood, made up in a regular form, and his wife, not above fifteen or fixteen years of age, walked to the pile, conducted by her friends, her father on one fide, and her mother on the other. After a great number of previous ceremonies were performed, the walked round the pile feven or eight times in a melancholy and devout manner, conducted, as before, by her father and mother: the then ftepped upon the pile, and quietly laid herfelf down by the torpic of, her hufband, about whose neck her hands were fathened, and her legs tied to his; then both their bodies were anointed with a fort of unguent called glae; over them was strewed a fort of yellow dust, and they were covered with a cloth which was been dear her for the property of the cloth which was been deared for the property of the covered with a cloth, which was kept down by fonce pieces of wood. At last, the father of the deceased husband fet fire to the pile, which ran through it like lightning, by means of the yellow powder. And the fire was fo ferce, that the spectators were obliged to draw backward from the heat. The whole was confumed to ashes in about an hour's time.

These thocking spectacles have been much less frequent than formerly, since the Mogul's became matters of In-dostan; for neither the Mahometans or Europeans will now permit the barbarous custom to prevail, where they

have any power.

We hinted above, that the mourning used here, is a tattered neglected drefs: to which we may add, that the wo-man shave their heads on the death of a husband; but the men never shave their heads, or cut their hair, unless it be on the death of a father, or a fovereign prince. The relations, in order to shew their regard for the deceased, often visit the place where the corple was burnt, carrying thither rice or other food; which they cannot be ignorant is eaten by beafts or birds; as foon as they are gone.

The Gaurs, the posterity of the antient Persians, who sted to India when the Mahometans, conquered Persia, have a repository for their dead about a mile from Surat, where there is a colony of them: they are of opinion that they cannot do their decaded friends greater fervice than by leaving them to be devoured by birds of prey. They therefore erect flages or raifed floors in this repository, which is furrounded by a wall twelve feet high, and an hundred in circumference, where may be feen great num-bers of dead bodies with part of their fieth torn off by vultures, their eyes dug out and mangled from head to foot, and the vultures fo glutted with human flesh, that they can fearer raife themselves to fly; fo different are the cultoms of different countries! In most places the leaving a corpse above ground unburied, is essented an act of great impiety, but by the Gaurs it is deemed a piece of barbarity to bury them.

SECT. XI.

Contains the history of India, from the earliest accounts, to the present century.

THERE feems to have been little more than the name of India known to the antients. Semiramis, foon after the commencement of the Affyrian empire, is faid to have carried her arms thither; and it is conjectured that Bacehus conquered part of this country, but Alexander's invation of India, about three Innidred years before the hirth of Christ is not doubted. None of these heroes, however, retained any part of their conquests if they made any, or resided there long enough to acquaint themselves with the flare of it, or even to describe the bounds or true tituation of India: and the Romans never attempted to reduce it under their dominion; confequently we re-min very much in the dark as to thefe people until the regin of Tamerlane, who fublued this, and almoft all the reft of Atia, about the year 1400, when it appears to have been divided amongst a great number of petty sove-

reigns.

A ameriane was the great cham or chief of all the Mogul Tartars. His third fon Miracha fucceeded him in the northern provinces of India and Perfia, and in the flyle or title of Great Mogul, which title his pofterity, the Emperor of India, enjoy at this day. Miracha made Herat in Perfia the feat of his government, but every year, in the fair feafon, made a tour through his Indian dominions, attended by the ceurt and army; and demanded the annual tribute due from those princes which, it feems, was fometimes denied hima, and he found himfelf obliged to make war upon one of those raja's, to compel the payment of it; in which war, he had the misfortune to be taken pri-foner, but obtained his liberty from the raja, on condition he would release the tribute, and make no demands of this nature on that victorious prince, or his successors for the nature on that victorious prince, or his fuccessors for the future. But, Miracha, like some other princes, remembred his engagements, no longer than till he had obtained his liberty; for he no sooner returned to his dominious, but he levied a more powerful army than he had loft, invaded that raja's territories again; and, having taken him pri-foner, put out his eyes. Historians relate, that Miracha foner, put out his eyes. Historians relate, that Miracha coming to view his Tartar guard, afterwards, on a day affigned for their shooting at a mark, and being informed that his prifoner the blind raja, was fill a better archer than any of them, he fent for him, and ordering a bow and arrows to be brought, the raja defired his Majethy to give the word of command when he should shoot, which he had no sooner done, but the raja let fly an arrow at the place from whence the voice came, and killed the King outstrich.

out-right.

In the reign of Babar the great grandson of Miracha, there happened a war between him and another prince of the posterity of Tamerlane; in which war, Babar lost the city of Samaraand, and, as I apprehend, he loft Herat, and the Persian provinces also; whereupon he made Delli in India the capital of his dominions, and invading the Indian princes on the fouth-east, conquered the kingdom of Patan or Patna, which lies upon the Ganges, and is contiguous to Bengal. Babar died in the year 1530, having reigned thirty-years in India, and was succeeded by his

fon Amayum

A young Patan lord, named Chira, having been educated with Amayum, gained fuch an afcendent over him, that he made Chira the commander of his army, and his prime minister, who taking all opportunities of ingratiat-ing himfelf with the Tartars and Indians in the Mogul's army, and being extremely concerned to find his native army, and being extremely concerned to find his native country of Patan treated as a conquered province, he entered into a confipracy against Amayum, his great benefactor, who having received advice of his treachery, raised a body of forces, and gave battle to Chira, but was defeated by him, and obliged to fly into Persa for protection, and Chira was immediately after proclaimed sovereign of Indoftan. Here our historians furnish us with some omens of Amayum's refloration; they tell us, that this prince laying himfelf down to fleep in his flight to Perfia, an eagle hovered over his head, and fereened his face from the fun: Amayum being well received in the court of Perfia, and promifed to be affifted in his refloration, waited there, however, near nine years without any thing done towards reftoring him; but at length he received advice from Delli, that Chira was killed by the burfting of a cannon which he went to fee fired, and that the Moguls and Patans could not agree upon a fucceffor to the throne, but if he returned to Delli, he had now a very fair chance of possessing the throne of Indostan again; and having communicated this advice to the Sophy of Persia, that prince afforded him a body of troops, at the head of which he marched to India, and joining with such of his subhe marched to India, and joining with itech of his tubjects as were in his intereft, he was advanced again to the
throne without bloodfhed; but notwithflanding this revolution could never have been effected without Perfian
forces, and he had promifed to ecce the province of Candahor to the crown of Perfia (to which the Sophy pretended
a right,) he was not as good as his word, but fill kept
the poffelion of it. So little are the profefions of princes,
when they are in diffrefs, to be depended on.

The Indians afcribe to the Mogul Amayum the building of carayanters as or houses for the entertainment of tra-

ing of caravanferas or houses for the entertainment of travellers, and the regulating weights and measures. This prince, after his refloration, built a most magnificent tomb or himself in India, which is, to this day, effeemed one of the greatest curiosties in that country. And as he was one day walking over the scassoling, and giving his orders to the workmen, a plank deceived him, and falling from

from a great height to the ground, he was to miferably bruifed, that he died immediately, and was buried in his new tomb, which was then fearly finished; but fothe ormanents were afterwards added by Alabar, his fort and facetifor.

Akebar proved an enterprising prince; but having as yet o communication with the fea coast of India, from whence a very rich trade was carried on with the Europeans, par-ticularly from the kingdom of Guzarat and Cambays, which extends from Surat, fituate on the river Tapte; to which extends from Sufet, Stuare on the river Tapte, to the mouth of the river Indus, he determined to make a conquest of it. Sultan Bader, or Baltadar, a Mahometari prince, whose ancestors were Arabians, was then fore-reign of that country, and had been at war with the Portuguese for some time, who were perpenalty encreaching on his territories, and had lasely taken from him the town of Din, stuare reset the entrance of the gulf of Cambaya, almost opposite to Surat; but both Sultan Badar and the Portuguese received advice; that the Mogus was on his struch to invade Cambaya, and sorrehenditire that nether Portuguele received advice; that this Moguli was on his march to invade Cambaya, and apprehending that neither of them were able to oppose him ingly; thought it prudent to make a peace, and unite their forces against the Mogul; nor were both of them able to flop the torrent of his arms. They relied much on the European artillery; but, coming to an engagement Akelsta's numberous army bore down all before them. Suitan' Badar retired out of the battle; L. children were made prifoners, and put to death by Akebar, who made an intire conquest of the kingdom of Guzurat, except Din, and such other towns as the Portuguese had fortified and furnished with artillery.

Akebar finding Guzarat fo easy a conquest bent his rms towards Decan, which lies to the fouthward of it. arms towards Decan, which lies to the fouthward of it. This was divided into feveral little fovereignties: Multapha, a Mahometan prince, poffeded that part of the country wherein the towns of Brampour and Acer are fituated, whose fubjects gave him the title of melec, or king. Amadanger, and the territory belonging to it, was subject to the Queen of Cande; and Ambar commanded the district of Doltabad. These princes, though at other times enemies, united their forces against Akebar, and gave him battle, but were deseated by him, with very little lofs. The towns of Acer, Brampour, and Amadanger, held the conqueror in play some months afterwards; but at length Multapha and the Princess of Cande, both furrendered their capitals upon conditions. Multapha afterwards attended the Mogul's court, and was content for some time to remain in the rank of an Indian raja: and fome time to remain in the rank of an Indian raja; and the Princels of Cande was taken into the numb conqueror's wives, and treated in the quality of a fovere queen, remaining for a considerable time the favourite fultaness: though such was her enmity to Akebar when he belieged her capital, that despeiring to hold out, she caused all her treasure to be melted into bullets, and in-

cauted all her treature to be melted into ballets, and in-feribed with the bittereft curfes against her enemy, thet them into the neighbouring woods, to prevent his possessing it. Some of these gold and filver ballets were as-terwards found by Manouchi, who was a physician in the 'Mogul's court, who relates, that he read the in-feription on them, and that one of the ballets weighed eighteen pounds. As for prince Ambur, he was killed in an engagement during the war, and his territories seized by the trooperate.

by the conqueror.

After this fuccefs, Akebar invaded Chitor, which lies cast of Guzarat, and was then subject to the sais Rama, who having entered into a confederacy with several of the who having entered into a confederacy with feveral of the neighbouring powers, ventured to oppose the Mogul, but being soon obliged to quit the field, he retired into his ca-pital city of Chitor, naturally one of the groupest fortresses in ludia, standing on an high mountain in the middle of a plain; the river Nug almost furrounded it, a rivulet also rose within the walls of the town, and there were fields within its bounds, which produced provisions sufficient to support a remerous garrison. But notwithstanding the advantage of its situation after a two years siege the town was taken, and the rest of the country thereupon submitted to the conqueror.

to the conqueror. Being now disposed to reign in peace, Akebar applied himfull to the building of fine towns, promoting the traffic of his fulficle, and adorning his palaces. He rebuilt the city of Delli, enlarged that of Agra; and planted the fine averuse of trees, extending from Agra to Lahor, which is near five hundred miles, under the shade whereof a traweller may be fercened from the fun in the hottest feafon.

Some of his favourite amusements were, the management of his war-elephants, and the breaking head-ftrong The first was so hazardous an exercise, that the friends and relations of the persons, who are obliged to train them up to the war, put on mourning for them, as

must destined to destruction. The peasants (by whom I prefume out historians mean the hindoos, the original inhabitants of the north of India) breaking out into rebellion against the Mogul, and atting into a fortrefs, Akebar commanded the espetains of fills, elephants to break open the gates, which they feeming backward to attempt, he put on a common folder's coat, and mounted an elephant himself, and adversein to one of the gates, made his elephant break it opens, while a shower of arrows was discharged at him from the walls. This war with the hindoos lasted feater very, it being a mountained, woody does lafted fette years, it being a mountainous, woody country, and the people having posselled themselves of the passes through which an enemy could approach it; and that which people and Akebar still more was the rebellion of his which perplexed Akebar ftill more was the rebellion or me tideft flor, Jeham Guire, about the fame time. However, this prince had the good fortune to suppress that robellion. this prime had the good between the respect that account of And to deter his fou from such attempts for the future, he carried him into a forest after he had pardoned him, and shewed him the heads of his affociates hanging on the branches of the trees, which had such an effect on him, that he ever after proved a very duciful son.

Thefa wars were no fooner ended, but he was exercifed with a rebellion of the Patans, who endeavoured to render their country independent of the Mogul again; and thefa people were fo fortunate to defeat an army of eighty thousand inen, the Mogul fent against them. Whereopon Akebar, observing that the want of people to manage his artillery was the principal occasion of his ill fueces, invited Lorotean guitners into his fervice; arong whom we artillery was the principal occasion or and nucces, sirvited European guiners into his fervice; anang whom we are told, there was an Englishman, whom the Mogul required to live as his people did, without strong liquor, which the gunner made ofe of the following fratagem to obtain. Being to shoot at his mark before the Mogul, at orian. Being to shoot at his mark copier the Mogul, at a time appointed, he fhot much wider off it than he had done at any time before the prohibition, and being afked the reason, he said his fight had failed him ever since he had been debarred the use of wiae; whereupon the Mogul ordered him as much as he would drink; and after he had death arms a mark all. drank pretty plentifully, he made fome very nice shots, and the prohibition against his drinking wine was taken off, and it was recorded in their archieves, " That wine was as natural to an European, as water was to a fish," which the historian relates he saw himself; and that afterwanted foreigners were permitted to plant vineyards about Agra, and make what wine they pleased.

Akebw, finding that his people were as deficient in most other feiences, as in the art of war, invited those of other

profefficas to refort to his court, offering them great en-couragement, and fent for the Portuguete mifficant is to instruct him in the Christian religion, as he pretended, and as the fathers, no doubt, believed; but it is evidend from his future conduct, that he wanted them to teach the

and as the fathers, no doubt, believed, and as the fathers, no doubt, that he wanted them to teach the mathematics to his family; however, the fathers believeing him to be in earness, prepared to make a convert of him.

The Mogul having at length intirety suppossed the Patan rebellion, and being at liberty to follow his inclinations without sestraint, instead of favouring the fathers any longer, became the founder of a new religion, which floods comprehend all the religions he was acquainted with, and unite his subjects in one uniform way of worship; in which he chose to revain the baptism of the Christians, the circumcisson of the Mahometans, and the idolatry of the circumcisson of the Mahometans, and the idolatry of the Pagans; but he would never hear of parting with his wires, and confining himfelf to one woman. The miffioaries after, that after this he was always unfortunate, loft his beloved fon, was harraffed with infurrections, and loft befored ion, was narraned with infurrections, and foir form of the most confiderable provinces of this empire; and at length, having formed a defign to poifon feveral great men he fuffected were in a configuracy against him, died by the poison he had prepared for others; which happened in the year 1605, and was fucceeded by his fon Cha Selim, who, at his acception, took upon him the title of Jehan Chains of Greenium of the media.

This emperor, in confequence of the education he had received in his father's court, was inclined to make the like enquiries into the truth of the feveral religions professed in his dominions; and he looked upon the confining men to fome particular food and liquors, to proceed tather from fuperfixion than true piety, as it could ferve no good end or purpofe whatever; and observing that the Christian religion allowed its votaries the greatest liberties of this kind, he fent for the Franks, or Europeans, and drank pretty. he tent for the France, or Europeans, and drank pretty freely with them, which greatly alarmed the Mahometan priefts, apprehending he would in the end profess Christianity. They represented to him, therefore, the unlawfulness of drinking fitrong liquors; but form of the wifest of them observing, that it was rather his love of wine than

feverity, declaring, the could never think of matching with her hulband's murderer; but when her mourning was ended, and the Mogul continuing to load her with his favours, the was prevailed on to comply with the love-fick emperor on the following conditions: that the should be soverign of the feraglio, her father prime minister, and her relations preferred to the most honourable posts. The marriage was accordingly solemnized by a session of eight days continuance, and her name changed to Nour Jaham, the light of the world. This princes had not been a year in the feraglio, before the destroyed, by possion or otherwise, sive of the emperor's greatest favourities; and married her only daughter to Sultan Schleriar, the youngest of the Mogul's sons. Whereupon Sultan Costou, the eldest son, not doubting but the designed to advance his youngest brother to the throne on his father's death, and he're informed, that his grandfather akebar intended that he (Costou) should succeed to the throne before his father, the present ther to the throne on his rather's death, and being informed, that his grandfather Akebar Intended that he (Cofrou) should fucceed to the throne before his father, the prefer emperor, he raifed an army in order to fecure his accession to the Indian throne; but being defeated and made prisoner, he was murdered asterwards by the direction of one of the Mogul's ministers (who had as interest to serve by his destruction) without his father's knowledge. Sultan Chorrott, another of the emperor's sons, raising an insurrection also was defeated, but was so fortunate, however, to survive his stather, and succeed him in the year 1627, shough Bolaqui the late Mogul's grandson, whom he defigued his successor, was shift proclaimed emperor, and enjoyed that title a little while, but being defeated by Sultan Chorrom, was obliged to return into Persia; and Chorrom, on his accession, took the title of Shah Jehan, or king of the world. His youngest brother, Suttan Scheriar, was at this time a prisoner, in the palace of Agra; he had his eye put out in the former reign, but Shah Jehan not concent with that, ordered him, with his two sons, to be enclosed between sour walls and starved to death; and, thus having destroyed all his family, Chorrom remained in possession as the title and the struck.

The seat of the government was removed by Shah Jehan, from a real behan, which he wells and that and han, from a real seat of the survey which he wells and that and han, from a real seat of the survey which he wells and han, from a real seat of the survey.

fefion of the throne without a rival.

The feat of the government was removed by Shah Jehan, from Agra to Delli, which he vaftly enlarged and beautified; and here he proposed to have spent his reign in all the delights a great emperor could command. But as hen his brothers had been engaged in perpetual rebellions against their father, he found himself sufficiently punished for his undustifuners, by the rebellion of his own children, and the disaffection of his nobility, occasioned by his flagrant lusts; for though his feragio, like that of other eaftern princes, was furnished with hundreds of the most celebrated beauties in his dominions. he would fend for eatern princes, was furnished with hundreds of the most celebrated beauties in his dominions, he would fend for the wives of the greatest omrahs to his bed; which though none of them dared to estile openly, they were so disgust-ed, that many of them at length deferted his service, and joired one or other of his rebel sons. His aldest son Dara-or Darius, indeed, always 'remained faithful to him, and had, in a manner, the administration of the government put into his hands, which he well deserved, being a most accommissing or manner. put into his hands, which he well delerved, being a most accomplished prince, having great natural parts, 'improved by the European missonaries, who instructed him in philosophy, mathematics, and other liberal arts; in return for which, he declared himself in their favour, and gave them great encouragement, but this made the zealous Mahometans, his enemics, dread a change in religion, if ever he succeeded to the crown. And as his education had rendered him such success as here of his conviction and rendered him. deted him much superior to any of his courtiers and mi-

any inclination to become a Chriftian, that induced him to take these liberties, they declared that the prohibition to drink wine was never defigned to extend a fovereign princes, they were at full liberty to eat and drink what, they pleafed; which kind folution of their prophet's precepts, gave him entire futisfaction, and he never gave any further evidence of his favouring Christianity, unless it was by his forbearance to perscute the Christiani, and admitting them to drink with him, which they frequently did fill morning. The missionaries, it seems, looked upor this also as an evidence that he designed an alteration in religion, as well as the Mahometan priefa; but they were both deceived; the indulging his appetite being all he meant by these practices.

The Mogul having removed the royal sea from Agra to Lahor; and there from his terrace seeing a most beautiful kaly, named Nourmahae, in a barge on the river, being fertened from the sun by a canopy over her head, fell desperately in love with her; but hearing she was married to one of his officers, the foom dispatched his rival out of the way, and then renewed his courtship; but the lady, having some instituation how treacherously her late husbandhad been destroyed, expressed her refentment with great severity declaring, she could never think of marching with her hulband's murderer; but when he mourning was ended, and the Mogul continuing to load her with his favours, she was prevailed on to comply with the low-sick in the relations preferred to the most honourable posts. The marriage was accordingly foleranized by a seftival of eight days continuance, and her name changed to Nour Jaham, the light of the world. This princess has no honourable posts. The marriage was accordingly foleranized by a seftival of eight days continuance, and her name changed to Nour Jaham, the light of the world. This princess has no honourable posts. The marriage was accordingly foleranized by a seftival of eight days continuance, and her name changed to Nour Jaham, the light of t commanded by two of his fons, and forme superierited generals to affit them, to oppose Sultan Sujah's machb, whole forces being much inferior to those is fit the royalits, Sultan Sujah was defeated, but thiade his escape into his govern-

augan was decrease, but make his peace into an government of Bengal.

Anrengzebe and his bir ther Moral, in the mean time, having affembled their armies, advanced towards the capital. Aurengzebe, who had lived recludely as an harming with his utual hypocrify, give out, that he had no views with respect to this world; all he defined, was, to fee the true worthip of God, and the law of his holy prophet, aftabilihed in its primitive purity; that he was farry to observe that their brother Data was become a profelyte to Christianity, and Sultan Sajah followed the Persan hereofy; but he should endeavour, by the help of God, and his holy prophet, to prevent either the apodate or the hereof's mounting the throne of their father. And since Morad alone retained a true seal for the Alcoran; he would efficient with all his power and interest to oppose there beds; defiring no other return fee his services, but that he might feend the remainder of his life near the tomb of Mahorees, in acts of mortification and devotion. Sultan Morad was in acts of mortification and devotion. Sultan Morad was infinitely pleafed with his brother's pious intentions; and invited him to come and join forces with him, thes they might march in a body to Delli. Aurengaebe hereupon, with his friend Mirza Mulla, fet forwards towards Delli, with an army of veteran troops, who had ferred in the wars of Vifapour and, Golconda, well provided with all necessaries, and a production lank of money, which he had been heaping up for feveral years. When the armies same in fight, Aurengaebe difmounted and ran to meet his brother, profitating himself bothe him as his fovereign. Morad immediately took his brother up and embraced him, and the highest professions of metual triendship passed between them; Morad was prevailed upon by this master of dissimulation to take upon himself imperial style and state, and his brother was deased to massive those orders from him which he first advised. in acts of mortification and devotion. Sultan Morad we

When Sultan Dara underfield the two brothers were joined, he dispatched a trumpet with a letter from the Emperor to each of them, affuring them that he was in health, and shat they should retire and distand their troops on pain of his refentment. Morad, it is faid, was shocked to find his father was alive, and was inclined to obey his orders that Aurengaebe shewing him that it was too late to repent, and that there was now no medium between death and conquest; and that if ever the armies separated they were infallibly rained: that though their father might be yet alive, he was superannuated and incapable of regalcares; and in effect, that the prophane Dara had already possessified himself of the sovereign power, and would infallibly extingues their holy religion if he was not timely prevented. By these specious reasons he prevailed upon the honest Morad to continue his march. When Sultan Dara understood the two brothers were

Dara, of the other hand, took the most effect bal mea-Dara, of the other hand, took the most effectual meafer so defeat the defigns of his brothers: he possessed in a fituation where he could be constantly supplied with provisions
from the neighbouring cities; and his camp was to strongly fortified, that it was not possible to force it; but notwithstanding he had taken all the steps a prodent general
could do, yet by favouring the Christians, and neglecting
to cultivate a good correspondence with the general and
officers of the crown, he became to unpopular, that on
this critical occasion most of them deferted him, leaving the passes unguarded, and instead of opposing his enemies, fome of them actually went over to them. The brothers coming to a battle foon after, Sultan Dara was intirely defeated, which was generally aferibed to the conduct and forces of Aurangzebe; though the forces of Morad were principally engaged; which highly exasperated the generals of Morad's army, who began now to different the treachery and hypoerily of Aurengzebe, and they had laid a nefigurithout their mafter's knowledge to deltroy him, when he came next to his brother's pavillion; which Aurengzebe being informed of by his fpies, forebore conning to his brother's tent as usual, Aill carrying it fair with him, and fending his for Mahomet every day to enquire after his health. defeated, which was generally afcribed to the conduct and health

The Emperor Shah Jehan, observing that he was con-Rantly betrayed, and imagining that it might be occasion-ed by the prejudices the people had entertained of him, ab-dicated his throne in favour of Sultan Dara his eldest son, whom he caused to be proclaimed Emperor; whereupon Dara affembled a very numerous and gallant army in appearance; but being betrayed in this, as he was in the former battle, was totally defeated, and wish a few like the former battle, was totally defeated, and wish a few like a few lik wmer battle, was totally defeated, and with a fmall body of horse retreated to Agra, where he did not remain long; but continued his march to Delli, the governor of wh city, having received advice of his defeat, would not fuffer him to enter the gates, whereupon he bent his march to-

Aurengache and Morad, on the other hand, advanced to Agra, which city was betrayed into their hands, and they possessed the Emperor's person, and of those immense riches, he had long been heaping up; for though Shah Jehan, in the beginning of his reign, appeared to be a most voluptuous prince, and his expences anbounded, he fell afterwards into the opposite extreme; and his principal pleasure feemed to be in visiting the vast treasures of precious stones, gold, and filver, in the vaults he had built, on purpose to secure them from accidents.

The army of the two brothers had hitherto treated Sul-

tan Morad as their Emperor of and Aurengzebe ordered arations to be made for his inauguration, and invited Sultan Morad to his quarters, under pretence of regulating fome affairs in relation to the procession, which he gave out was to be the next morning; but Morad's officers suf-petting that Aurengzebe had some treacherous views in this invitation, perfuaded him not to put himself in the power of his brother. Morad, however, who is repre-ignted as a brave generous prince, and having no finiter defigns himfelf, could not entertain an ill thought of his brother, wentured to go to his brother's tent, attended only by his cunuchs, and some other fervants. An elegant entertainment was brought in, with wine, among other liquors, which was the first time, it is said, that Aureng-zebe suffered any to be brought to his table. The brothers eat together, and greet prefettions of perpetual friend.

This passed on both fides and while Morad drauk plentifully of wine, he fell affeep. As to the absternious Au-rengzebe, he tasted nothing but water, and when he found his brother and the rest of the company intoxicated, he retired to prepare for the next villainous scheme; for he returned with his guards towards morring, and commanding his brother to be bound hand and foot before he was well awake, fent him away prisoner to Agra; which was effected fo privately, that neither of their armies had any fufpicion of the matter. At the fame time it was reported, that Sultan Morad was ftill at Aurengzebe's pavillion, and that the proceffion to his inauguration would begin from thence, and orders were issued at the fame time, that sonce flouid appear armed at the farmetime, that some flouid appear armed at the folemnity but the guards appointed to attend. But Aurengaebe having furrounded the place with his army, where the ceremony was to be performed, to the furprize of all men that were not in the feeret, advanced in the imperial robes, and placed himself on the throne; at which his army flouted and cried out, it long the the throne is a which his army flouted and cried out, Long live the Emperor Aurengzebe," which Morad's army could not oppose, as they were all disarmed; but, on the contrary, when they found themselves in the power

of Aurengzebe, many of them thought fit to come over to his interest, and join in the joyful acclamations, in which they were encouraged by some of their own generals whom Aurengzebe had corrupted.

This prince's next care was, to prevent Sultan Dara from affembling another army; he therefore pursued him with great expedition to Lahor, whereupon the finall body of troops which Sultan Dara had with him differred.

of troops which suitable Dara had with him dispersed.

Sultan Sujah, the fecond of Shah Jelam's foins, underflanding that Aurengaebe was marched northward, had
left his government of Bengal a fecond time; and advanced
towards the wealthy city of Agra, but Aurengaebe returning with a furprising celetity, prevented that capital from
falling into his lands. However, Sultan Sujah had polied his troops for advantageoutly that he was not to be forced
the suppose of t in his camp, and kept a communication open with feveral towns, from whence he was well fupplied with provisions, while his enemies wanted all necessaries, and even water, which they were forced to bring to their camp upon the back of camels from the Ganges, which lay at twenty be given out that he would decamp the next morning, and cordingly the tents were ftruck and the troops actually in motion; which Sultan Sujah observing, prepared to fall upon their rear. The troops of Aurengache were ordered to give way upon the first charge, until they had drawn the advanced guards of Sultan Sujah source distance from their camp, and then to make a ftand, which orders were punctually executed; and Sultan Sujah observing his men-were over-powered, detached still other troops to support them, and the enemy doing the like on the other fide, it came at length to a general bactle. The generals advanced with their bodies under their immediate commands to engage each other; and the battle was fought with great ob-ftinacy, till Aurengzebe artfully drew his enemy into a field where he had ordered pits to be made the night be-fore and covered over with turf, fo that they lay unper-Here the brave Sultan Sujah was advancing to engage his brother, and personally decide the fortune of the day, when his elephant flounced into one of these pits prepared for him, from whence the Sultan found it impol-fible to difengage himfelf faddenly; whereupon the army, not feeing their general, imagined he was killed, and thought of nothing but making their retreat. Sultan Sujah afterwards mounted a horfe that was brought him, and endeavoured to rally his flying troops, but it was too late, the rout was total; a panic feer had feized his forces, said they could never be brought to make a fland again; and Sujah, with great difficulty, made his cleaps into the province of Bengal. Here he recruited his fattered troops, and having posted himself in an advantageous camp, waitep the approach of the enemy; when he understood, that Mahomet, the eldest fon of Aurengzebe, was in some dif-grace, and secretly invited him to come over to his party: which negociation was fo well managed, that he did not only defert his father's court himself, but brought over with him feveral of his best officers.

Aurengzebe, who fuccesded better by creating divitions among his enemies, than by force, found means to create a jealoufy between the uncle and nephew, and at the fame time gave his fon all imaginable encouragement to return to his duty; and by these means he prevailed with the young prince to quit the fervice of Sultan Sujah, but the father had no fooner got him into his power but he clapped him into the caftle of Gualleor, and Sujah became to weakened by the defertion of Mahounet and his other officers. cers, that he was in no condition to give Aurengzebe any diffurbance: whereupon that prince made his triumphant entry into the city of Delli, couring money, or rather medals, to be firuck upon the occasion, with the following inscription, "I king Aurengzebe, conqueror of the world, have caused this money to be coined bright as the

Sultan Dara arriving in the mean time at Guzarat, and finding that the people in general took companion on him, and abhorred the hypocrity of his rival brother, altered his refolution of going to Perfia, and endeavoured to affemble another army; but the generals, employed by Aurengzebe in that province, to over-awed the people, that a flop was from put to his levies, and the few troops he had railed were differred, only two thousand hote remained with him, and with these he retired towards the city of Amadabat, which was garrifoned by his own forces; but his way lying over a valt defart, where no water or provisions were to be found, and wanting even tents to icreen his people from the fun in the hotest feafon of the year, they fuffered extremely in passing it; and what was worse, when

they arrived within a few miles of Arnadabat, and fent to acquaint the governor with it, he gave Sultan Dara to understand, he durst not admit him. On hearing that neither the Sultan or any of his people, could be admitted into the city, the citizens were in the utmost consternation. tion; the women also broke out into the most dismalcries and lamentations, having already gone through inexprefible hardhips, and expecting fill worse, being abandoned by most part of that body of horse, who had hitherto protected them against the country people, and the partizans of Aorengzebe; but still there remained four hundred or five hundred horse with Sattern Pears with the Archivest Pears with the sattern and the satt of Aorengabe; but fill there remained four hundred or five hundred horse with Sultan Dara, with whom he began his march towards Persa, to which he was induced by remembering, that Given Cham, one of his favourites, commanded a fortress on the frontiers of Persa, and might favuur his retreat. He undertook a very difficult march, therefore, in which he lost several of his women by the heardships they suffered, and at length arrived at the fortress, where they promised themselves great security, as well as refreshments, especially when they saw the governor receive the Sultan with open arms, and the strongest expressions of his duty and affection, as well as gratitude, for the unspeakable savours he had received from him; and once indeed he saved his life, when the Emperor Shah Jehan had condernated him to be trampled to death by his elephants; but Sultan Dara had been but a very little time in the fort, before Given Cham sent an express to the gening the saved and the saved in the received in the received in the received the saved the elephants; but Sultan Dara had been but a very little time in the fort, before Given Cham fent an express to the general, who commanded Aurengzebe's forces in the province, to inform him, that Dara was arrived there, and he was ready to deliver him up whenever he should demand it; and soon after a detachment of Aurengzebe's army appeared before the place, and having made the Sultan their prisoner, carried him with them to the city of Bakar, the only town that held out for Dara where there made him prisoner, carried him with them to the city of Bakar, the only town that held out for Dara, where they made him send his orders to the governor to surrender; which being obeyed, Sultan Dara was carried prisoner to Delli, where his brother caused him to be fet in an open chair, upon an elephant, in chains, and his younger children about him; and thus was he shewn to the inhabitants in his capital, where, a little before, he had been proclaimed emperor, and actually vested with the power of a sovereign prince; a fight so moving, that it drew tears from those who had been, and were still indeed his subjects, if right or justice could have taken place, which was not to be expected in the reign of an usurper.

the reign of an nurper.

After this miferable cavalcade was ended, Dara was again fent to prifon, without being permitted to fee the face of his brother, who immediately called a council of the nobility and great officers of state, desiring their advice, as to the disposal of Sultan Dara, whether he should be condemned to perpetual imprisonment, or be put to death; believing, that as they gave their voices, he should be able to discover who were Dara's friends; but as they were sensible nothing lefs than the death of Dara would Litisfy him, and that their own lives would be in danger, if they did not confent to it, they all voted for his deadh ex-cept one, who had always professed himself an enemy to that prince; which piece of generosity Aurengzebe was so pleased with, that he took him into the number of his most intimate friends. Sultan Dara, who well knew that neither his brother's ambition or malice would fuffer him to live, prepared for his execution; which accordingly happened privately in prifon; and, if we may credit the miffionaries, he died a Chriftian. His head being carried to Aurengzebe, the viewed it with fome pleafure, and faid, to his attendants, "Behold a weak man, that would have derived most of the aurice which have not state that the state of the surprise which have not state the state of the surprise which have not state on the state of the surprise which have not state on the state of the surprise which have not state on the state of the surprise which have not state on the state of the surprise which have not state on the state of the surprise which have not state on the state of the surprise which have not state of the surprise state of the surprise which have not state of the surprise which have not state of the surprise state of the surprise which have not state of the surprise which have not state of the surprise state of the surprise which have not state of deprived me of the empire, which he was not qualified to govern.

Another brother still remained, who, Aurengzebe ap-Another brother till remained, who, Aurengzebe ap-prehended, might one day diffure his tile to the throne; this was Sultan Sujah, Shah Jehan's fecond fon, and vice-roy of Bengal. This prince was the first thre began the rebellion against his father and afterwards oppoled Au-rengzebe, but had been unfaccessful in both expeditions: and as he thought it would be impolitic in him to provoke the uturper, in whose person the whole power of the em-pire was in a manner now united, he lay quiet in his go-vernment of Bengal, till he heard Aurengaebe had assembled a numerous army, and was preparing to invade that province. He was sensible that he was not in a condition to oppose him, and therefore agreed with the Portu-guese, who were then possessed of the port of Chatigan, at the mouth of the eastern branch of the Ganges, to transport him with his family and treasure to the king-dum of Arracan; and they actually carried Sultan Sujah shither, but the ship, in which was the treasure, was sunk. This misiortune occasioned him to be not so well received at

the court of Arracan as he expedied, and from no difference, the King of Arracan proceeded to be his mortal enemy, whether incited to it by Aurengzebe, of upon what other motive does not appear; but this unhappy prince, rith his wife and children, were all murdered in the kingdom they fled to for protechion, in 1648.

There ftill remained the eldeft fon of Dara, named Chacu, an enterprising prince, proteched by the raja Sirinagar, who refuled to deliver him up to Aurengzebe upon any confideration; but notwithstanding he could not prevail on the father, he found means to cotrupt the fron of Sirinagar, who promised Aurengzebe to bring him into a part of the country, as they hunted, where a party might surprize and carry him off; which was effected in a little time, and Sultan Chacu imprisoned in the fortress of Gualeor, where his uncle Morad remained a prisoner. But. Aurengzebe fill though himself unsele, though he had all the royal family that was living in his power; he there-Aurengzete till thought himlet unlast, though he had all the royal family that was living in his power, the therefore, in the next place, dispatched his brother Morad, and made his love of justice a pretence to effect it. After these transactions, the inauguration of the usurper was performed with the usual folennity on the 20th of October, 1660. ed with the usual folenmity on the 20th of October, 1660. Being thus raifed to the throne, he was not only congratulated by his own fubjects, but by feveral foreign princes; only Shah Abbas, sovereign of Persia, repreached him with imprisoning his father, and facrificing his elder brother, and the rest of his family to his ambition; and when Aurengzebe sent an envoy to the court of Persia, to negociate an affair between these powers, attended with presents, Shah Abbas expressed the utmost detestation of the usurest, ordered the envoy's beard to be to torn off, and his presents to be burnt, and was making preparation, for the invasion of India; when, happily for Aurengzebe, the great Shah Abbas sell fick and died, and thereby freed him from the sears of being attacked by so formidable an enemy.

Aurengzebe was now apprehensive that his generals and officers, who had been the instruments of raising him to the throne, were not destitute of ambitious views them-sclves, particularly Emir Jemla, who was acquainted with all the wicked arts he had made use of to obtain sovereign all the wicked arts he had made use of to obtain sovereign power, and had advised the practice of them. He had advanced the general to the highest posts in the govern-ment; and, knowing him to be of a refules, ambitious spirit, dreaded his making use of the same arts to ruin him, as he had done to raise him, if he was not employed in some distant service; he therefore sent him, at the head of a numerous army, to invade the dominions of the king of Acham, the most potent prince of the sarther India, to acanam, the most potent prince of the farther India, to whom the rest of those princes were at that time tributary; and as there was no way to approach the territories of that prince, but over mountains, that were till then thought unpassable for an army, it was highly probable that Emir Jemla must have perished in the attempt, but the Mogul encouraging him to hope that he should be advanced to the sovereignty of all the countries he should conquer, he entered men the expedition with a creat deal of wheter the lovereignty of all the countries he thould conquer, he entered upon the expedition with a great deal of alacrity, and forced his way through the paffes of the mountains, drove the King of Acham from his capital city of Chamdara, and had formed a defign of invading China, and fubduing that vaft empire, but what the arms of the enemy could not do, the unhealthfulness of the climate effected. The rainy feafon coming on, Emir Jemla and the greatest act of the arms of the whole first the first the first that the country of the part of the army were swept away by the flux, to the great joy of the Emperor Aurengaebe. Hence we may observe the reward that wicked ministers sometimes meet with, who have run the greatest lengths, and stuck at no villainy to advance their master's interest, or comply with his inclination, on the other hand, we may remark the terror that usurpers are always in, of beirg destroyed by the very latenary that the complete of the comp ents of raising them; and how readily, and without remorfe, they will facifice twenty thousand innocent men with no other view than to deftroy a rival. But to return to the Mogul; notwithflanding the fucces his forces had met with on the invasion of Acham, the first campaign. the Mogul, when his end was answered, gave himself further trouble to support that war, and never made another attempt to disturb the repose of the King of Acham.

Acham.

It is frequently observed, that the more desective the title of the prince is, the better, usually, is the administration, being under a necessity of doing many popular acts, to gain the affections of his people; and this appears to have been the case of Aurengaebe; for the first enterprize he undertook, after he had subdued his rivals, was to suppress the pirates, who had possessed the mouths of the Ganges, and in a manner had destroyed all

c provisious icreen his e year, they orle, whyn the trade of the province of Beng 1; these pirates were chiefly Portuguese, who inhabited his port nown of Chattanh, being the very men that had a bled his brother Sujah of his treasure, though there were amongst them some of every European nation. These privace burns and plandered, the Mogul's frontier towns, and carried his sobjects into slavery, undering the navigation of the bay of Bengal se dangerous, that its merchant thins date venture this reflective at length entirely suppressed by the prudent loaded of the Mogul's general, and Bengal rendered to cause as any part of his dominions.

The next attempt of Aurengzebe, was, to suppress that

The next attempt of Aurengabe, was, to suppress the plunderer the raja Sevagi; who disturbed the trade of Suriat, is much as the pirates had done that of the buy of Beingal; but in this he was not fo fuccessful as he was in the other attempt; for Sevagi, having possessible hunsels of the interest in the other attempt; for Sevagi, having possessible hunsels of the intacessible mountains of Visapour, defended hunsels of the intacessible hunsels of the intacessible hunsels of the intacessible hunsels of the hologul's troops, that his generals thought fit to retire, and leave thin in possession that he becomety, he had divinged the dominion of. And they had no fooner withdrawn their troops, but Sevagi formed a design of plunduring the porterior of the possessible hunsels, but the dominion of. And they had no fooner withdrawn their troops, but Sevagi formed a design of plunduring the porterior of the possession of the richest marts in India, but the decrete his eremies, he marched with the bulk of his array a quite courtary way, until he had drawn the Mogal's forces from the neighbourhood of that city; then, on a studden, with only four thousand men, he was not by wish marked the plundering of it for four days forcashely; the governor retiring into the castle, and the merchants forfaking their houses, and flying into the country, so that he met with no opposition, but from the English and Durch factories, who having erested batteries believe their houses, and standing upon their defence, fixed their effects; and Sevagi not having any artillery, thought at to march off with what he had got, which is gold, silver, and swels, amounted to these salloons feeling. In the house of one Barian merchant, he possesses feeling in the house of one Barian merchant, he possesses a great quantity that had not been piered. This exterprize of was a design to this enterprize of Sevagis, as the greatest addition that ever was performed; expressing a frong define of making him his friend; he gave him his word and honour, that if he woul

The late emperor Shah Jehan dying about this time, this fon Aurengzebe appeared inconfolable, and condenued himfelf to perform a persetual penance for his unduffied behaviour towards him; for he fermed to be as ambitious of the character of a faint as that of a conqueror; possibly as his pretended zead for the Mahometar religon paved the way, to his conquests, so his firm adherence to it effablishes him in the affections of his people. India abounds with inflances of people's going through the greatest hardships for no other reason than to be abored as faints by the

vulgar, and indeed by the bigots of all ranks. We shall give a specimen of Aurengzebe's regimen and administration after he was established on the throne; at break of day, after bathing, he went to his devotions, in which he spent some hours. Having made a stender meal afterwards upon rice or sweetmeats, he applied himself to affairs of state; and before noon, he appeared in a gallery, from whence he heard the complaints and grievances of his meanest subjects, as well as the greatest: then he went to his devotions again; after that, to direner, where the dishes consisted of rice, herbs, and fruits; he never tasked sieth or fifth, nor were any strong liquors ever brought before him. In the afternoon he gave audience again, which being over, he prayed a third and fourth time. The remainder of the day, till two hours after it was dark, he tigent in the private concerns of his family, then he supped, and shept afterwards only two hours; after which, it is said, he read the Alcoran, and prayed almost all the re-

maining part of the night. And here we have a remarkinflance of what valt edvantage an abitemious regular
courte of life is towards the procuring health and long life,
and rendering a prince always if for the most important
and intricate affairs: for this Emperor, notwithflanding he
vas an unwearded heaver of causes, and conflantly directed
the affairs of fo valt are suppre, and conquered everal large
kingdoms, lived without contracting any difference; and
neither his judgment or memory were at all impaired when
he was ninct veras of acc.

he was ninety years of age.

Amengache, it is true, had feveral hundreds of very ocastifat girls in his haram, as all other eaftern princes have; but thete feem to have been kept only for flate; or it conformity with the custom of the country; for it is related 4 him, that even in his youth, having fingled out a young lady in the Latani to fleep with him one night, and he had dieffed and prepared herfelf to receive her royal lover, the King coming into the apartment at the appointed hour, infleat of going to bed fell to reading, and between his books and his devotions passed the whole night without ever taking notice of the expecting lady. When the cumuch came the next morning to acquain the Emperor his bath was ready, which is ever used by the Maltometans after they have been with their women, the lady inswered, there was no need of a bath, for the Sultan had been all the night at his devotions, without pollation himself.

lating himfelf. The himself life being from in the conquest of the kingdoms of Decan, Visiapour, Golconda, and other territories which lye towards eape Comorin, he usually lived in the field. When he decamped at any time, no sels than one hundred and twenty elephants, one thousand four hundred cames, and four hundred carts were employed in sarrying the royal tents, baggage, and furniture, and these area always tent away the night before; the Emperor and every orace in the army having a double full of tents and field entipage, to that when they came to their ground the camp v as always roady pitched, and provisions of all kinds to be bar as to foon as the march was over.

The diffurbances and calamities Aurengzebe underwent from the rebellion of his children towards the latter end of his reign, no doubt, brought to his remembrance his un-dutifulnefs to his father: his eldeft fon Maliomet very early described to his enemies, whom he prevailed on to return to his duty, on a promise of pardon and preferment; but he no fooner had him in his power, than he shut him up in the royal prison of Gualeor, where he died either a natu-ral death or by violence. He had four sons more, viz. 1. Shah Alem; 2. Azem Dara; 3. Akebar; and, 4. Chanbux. Shah Alem was fo much in hafte to afcend the throne after his brother Mahomet died, that he caused a pit to be dug in a road his father was to pass, which he very nar-rowly miffed falling into; and the Mogul. having sufficient evidence of his fou's defign, confined him in a dark prison, where he remained many years. Azem Dara, the priority, where he remained many years. Azem Dara, the feecond furwing fon, confuiring againft his father, fearing a diffeovery, deferted to the king of Vifiapous; and Akebar, the next brother, being oxdered to invade the territories of the raja Lifont, near Afiner, joined the raja againft his father, and they had agreed with their united force to street the Mogent is his construction. attack the Mogul in his camp, whose army was then much inferior to the allies, which Aurengache receiving timely advice of, he dispatched an expres, with a letter to his son, which he contrived should fall into the hends of the raja, wherein he tells his fon, he approved his conduct in bringing the raja's army to the place where they were en-camped, informing him that he intended next day to march to a certain field, where they should have the raja's forces between them, and might very easily defeat him; this ex-press being taken by the raja's footts, and the letter read among his officers, the feemed of opinion, that Akebar was not to be confided in, at leaft it was proper to defer the attack till they were better farisfied of the prince's fidelity and though Akebar, when the letter was fliewn him, fwor by the Ale ran, that it was all a contrivance of his father them, the rais would not be periis gave the Mogul an opportunity forcing ans troops, and rendering his army fuper

The youngest of the Mogul's fons, named Chanbux we the only one that did not take up arms against his fatter and he is faid to have forborn breaking out in to actual bellion, only upon prudential motives.

bellion, only upon prudential motives.

The Mogul had heretofore compelled the kings of Villageous

flapone to become tributery to him; but in the years 1685 and 1686 he entirely deprived them of their territories, and made them provinces of his empire; whereupon all the petry princes to the fouthward of thefe, as far as cape Comonin, fubmitted alfo to his dominion, except the mountaineers, of whom there were feventeen rajas, that pretended to be independent of him, when the writer of thefe theets was in India. These till retain their own laws and religion, which is Pagan, but feldom give the Mogul any diffurbance, being very well contented that they are suffered to govern their little principalities in quiet, and some of them are in alliance with him. The Indian kings and princes, tributary to the Mogul, seem to be as free and independent as they were before he made a conquest of them, except in the matter of tribute; which if they pay in a littly, they are at liberty to profes their own religion, enter into alliances, and commence wars, whenever they see fit provided the Mogul is not prejudiced thereby. The see of Tranquebar is a remarkable instance of this; for the law of the order of peninsula of India, having a dispute with the Danida governor of Tranquebar, or Trincumber, fituated in that coast, it terminated in an open war; the king of Tanjour's forces, in the year 1690, invested the town with an army of between twenty and thirty thousand men; of which one thousand were horse. The Danes applied to Mr. Fix, then governor of Fort St. George, for affitiance, whose t him a re-inforcement, which, with part of the Danish gartison, made several fuccessful fallies on the enemany, whom they routed, and took their trenches; to that the king of Tanjour being weary of the enterprise, at length concluded a treaty with the Danes, fix months after the English arrived there. But in all this time the Mogul never intermeddel in the inauter, though the thing of Tanjour was tributary to hot him, and the Danes traded to

affual igs of Vi the English arrived there. But in all this time the Mogul never intermeddled in the inatter, though the king of Tanjour was tributary to him, and the Danes traded to India under the Mogul's protection.

Aurengache having subdued all the Indian princes of any figure, as already related, lived in peace in the latter part of his reign, and being arrived at a very great age (upwards of ninety) he thought fit to divide the government of his dominations arrough this three figurities force. (upwards of ninety) he thought fit to divide the government of his dominions among his three furviving fons, viz. Shah Alem, Azem Dara, and Chanbux. The best provinces in the middle of his empire he assigned to Shah Alem; the government of Decan to Azem Dara; and Visapour, Golconda and Bisnagar, to Chanbux. As to his eldest son Mahomet, he died in prison; and Acbas, who fied into Persia, died there; and none of the survivors having any great share in his favour, it seemed indifferent to him which of them succeeded in the throne; when some of his ministers, who were in the inserted of Shah. fome of his minifers, who were in the interest of Shah Alem, desired his majesty to nominate that prince his successor, he answered, "I see hande him king of proper Indostan, but God alone could establish him!" and with-

Indostan, but God alone could establish him; and without any other disposition of his dominions, died on the 4th of March, 1708.

Shah Alem and Azem Dara having each caused themselves to be proclaimed emperor, had recourse to arms, but the latter, being descated in a general battle, but an end to his own life; and Clanbux, the youngest brother, being also soon after descated by Shah Alem, and killed in the field of battle, the latter took upon him the title of Badour Shah, and remained sole emperor of India. These is little more remarkable in the history of India till the rign of Shah Alem (grandson to the above prince): who reign of Shah Alem (grandfon to the above prince); who was made a prisoner by Kouli Khan, who usurped the

Persian throne.

After the invalion of the Mogul empire by Kouli Khan, diffeord and tunnult prevailed every—where; and the general calamity reached the coaft of Coroniandel, after having ten years haraffed the provinces. At this juncture, the European merchants, dreading that their trade would be intirely ruined, hit on the expedient of having a territory of their own, capable of containing a number of manufactories fufficient to make up their lading. This feheme was projected by one Dupletx, who was well acquainted with the disposition of the Moguls; and flattering himself he should be able to attain a great sway in Indostan, nothing deterred him in the execution of his plan. He foon andertook to dispose of the subability of the Decan, and the nabobling of the Canatic. The former being vacant in 1748, in the reign of Maltomet, who was streeded in 1740 by Achmet), he in 1750 gave it to Salabatjing, a son of the late vicetory, after having experienced great weakness in the Indians, and a corruption of manners in the Moguls. He bestowed the nabobling of the Canatic upon Chundafach, a kinsman of the late nabob, and made him give up a vast territory in return for this signal service, the chief acquisition was Seringham, the situation of which gave the French great insurance over the nelghbouring countries, and an abolute control over Tanjour. They afterwards obtained other considerable possession, and the dignity of nabob was conferred on Dupleix limsels.

But these transactions sid not pass unnoticed by the English, who looking with a jealous eye upon the proceedings of the French, whom they considered as their avowed enemies, siltered up a rival, Mohammed All Khan, against Chundaseb, nabob of the Carnatic. These princes biten engaged, though with shuduating success; it was well known that neither of them would studmit, whilt he had either troops or money. The English and French ministry, however, caused the two companies to fix certain terms of agreement. They formed a treaty, while commenced with the suspension of host littles i

C H A P.

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF

RUSSIAN TARTARY.

SECT. I.

Containing a general account of the Russian dominions in Afatic Tartery, including Siberia, the Samoaids and Officials, Ge.

R USSIAN Tartary is generated to 1621 to extend as far castward as the river Argon benefited one hundred and five from the meridian of handle one the western

boundary of it, if we reckon from the mouth of the Tanais, lying in the thirty-ninth degree of longitude. Ruffian Tartary takes up no lefa than fixty-four degrees of longitude, which, if we vilow only fifty miles to a degree, is three thoufand two hundred miles in length; and if we extend it from forty live degrees of latitude, and confequently is one thoufand eight hundred unles in breadth, to which

which if we add the Ruffian dominions in Europe, makes it a country of the largest extent in the known world sub-ject to one sovereign; and, as the dominions are contigu-ous, might give the neighbouring princes in Europe and Asia some uneasiness, were it proportionably populous and

fruitful.

The air of this country, great part of which lies within the arftic circle, is for the most part excessively cold, the northern district being covered with ice and snow great part of the year, and some of it scarcely habitable.

Siberia is bounded by the Frozen Ocean on the north; by China, and the Pacific Ocean, on the east; by Tibet, Utheck Tartary, the Caspian Sea, and Afracan Tartary, on the south; and by European Russia, on the west; and is situate between fixty and one hundred and thirty degrees of castern longitude, and between forty and seventy-two degrees of north latitude, being upwards of two thousand miles in length, and one thousand five hundred in breadth.

iand miles in length, and one thouland five hundred in breadth.

The Tobel and Irtis are the chief cities of Siberia, which running from north to fouth, join the Oby, the united ftream falling into the Frozen Ocean, and dividing Afia from Europe: the Lena and Jenith, which run from north to fouth, fall also into the Frozen Ocean: the Yamour and Argun, which divide the Russian from the Chinese dominions, whose united streams fall into the bay of Corea. These are also agreed many large lakes in this nefe dominions, whose united streams fall into the bay of Corea. There are also a great many large lakes in this vast tract of land, of which the largest are those of Baikal and Kifan. The Barabinski Tartars, with the Kamski and Bratski Tartars, and the Samiosed, are comprehended in this description of Siberia. The names of all the numerous tribes and countries in the north of Asia are now fivallowed up in the general name of Siberia. The principal towns are, i. Tobolski the capital, situate near the confluence of the rivers Tobol and Irtis, in sixty-three degrees of east longitude, and fifty seven degrees and half of north latitude, about one thousand miles cast of Pertriburgh. It stands upon a hill, and is defended by a wall teriburgh. It flands upon a hill, and is defended by a wall and other works, being a large and populous town, the fee of an archbishop, and has several good churches and monasteries in it, besides the cathedral. 2. Tara, situate monateries in the chieves. The same and the river Iris, about fix hundred miles fouth of Toboliki. 3. Tomfkoi, fituate on the road to China, about
one thouland miles fouth-eaft of Tara. 4. Jenfilka, fituate on the road to China, on the river jenifa, in fiftyfeven degrees of northern latitude. It has three churches,
a monaftery, a nunnery, and an exchange; and about
feven hundred houses. 5. Bratikoi, fituate about five
hundred miles east of Jenfilka, in the fame road, at the
confluence of the rivers Angara and Ocea, which fall
into the Jenifa. 6. Irkutikoy lies upon the river Irkut,
near the lake of Baikul. It is a large populous place; conains about one thousand good houses, furrounded by
pallifadoes. It has four churches, two of stone, and two
of wood. It is the capital of the province of the fame
name, and is the fee of a bishop. It is fituated near the
river Angarce, and is defended by a strong fort. 7. Nipchew or Nertzinskoi, situate near the confluence of the
rivers Yamour and Argun, in fifty-three degrees of north on the river Irtis, about fix hundred miles fouth of Torivers Yamour and Argun, in fifty-three degrees of north latitude, being the frontier town of the Ruffians against China, where the last treaty of peace was made between the Chinese and the Russians.

the Chinefe and the Ruffians.

The only part of Siberia, fit for human beings to live in, is the fouthern, where the foil appears to be capable of cultivation, and that it might be rendered fertile; but, for want of inhabitants, very little corn is produced. But the northern part exhibits nothing but impenerable woods, fnow-topt mountains, fens, lakes, marfhes, &c. and, being expofed to the bleak winds, is quite barren and defolate. Not a bird appears to give notice of any change of feason; even rooks and magpies quit these defarts, where nature becomes quite torpid. The natives are obliged to make passages through heaps of snow, and the delights of summer are not experienced here but about delights of fummer are not experienced here but about three months, during which thort space of time the inhabitants fow rye, oats, peafe, and barley; but these seldom sepay the hulbandman's toil. The natives are generally that up in their cottages for nine months in the year, fearcely ever venturing out: fir-trees of confiderable he rearcely ever venturing out: nr-trees of confiderable height bend under the weight of fnow; a melancholy gloom fpreads all around, and the fillness is interrupted only by the cries of some wretched travellers in fledges. To these dreary regions the Czars of Muscovy banish their courtiers and other great persons, who incur their displeasure. Some are banished for a limited term of years, and others for life, with the allowance only of one penny per day, and fometimes without any allowance at all; so that, as

they are fent defiture from court, these miserable exists pass a most dreadful life. They shoot for their livelihood, and are obliged to fend an annual tribute of sits to the chars, or they are most severely punished by the take-

egast, or they are most severely punished by the task-masters.

There is found a surprising kind of bone like ivory on the banks of some of the rivers in Siberia: it hash the resemblance of elephants testh: and, when split or sawed, exhibits a variety of figures, such as birds, slowers, &c. Several trunkets are made of ir, and sent to China. Here are gold, silver, copper, and iron mines; also lapis lazuli, jasper, and load-shones; the iron ores are excellent; the brown ore is of a very sine grain, and the loadslone asts upon it only after it has been calcined. This country is faid to have been first discovered in 2562.

The north part of Muscovite Tartary is inhabited by the samoleds and Offitacks. The Samoleds are of a flort squat make, particularly their women, who have very small seet; their complexion tawny, like those in hot climates, it being observable, that extreme heat and extreme cold, in this and many other instances, have just the same effects: they have long little eyes, high cheek bones, broad statisficace; and, in general, not very agreeable countenances: both men and women wear their hair hanging at full length, and there is little difference in this respect between them, except that the women sometimes braid their hair, and tie little bright pieces of copper and slips of red clott at the ends of it. The men have fearce any beards, which makes it still more difficult to distinguish them from wumen. They wear sur caps, with waitloosts and breeches of the same, and butkins almost white; but the women

men. They wear fur caps, with waificoats and breeches of the fame, and bulkins almost white; but the women fometimes diftinguish theirs by a red edging. They wear coats of rain-deer skins over their waificoats, and in the winter time have an upper coat of one piece of fur, which covers all, and ferves even for a cap and gloves, so that no-thing can be seen but part of the sace; and they have boots which come up to their knees. The thread they use is

made of the finews of animals.

Their houses are built with poles and the branches of trees, and covered with bark: they are almost in the form of a bac-hive, and have a hole in the top to let out the fmoke, for the whole house is but one room with a hearth in the middle, round which they fit or lie upon rain-deer fkins, their only furniture, except the horfe fich, and other earlien, which hangs round the buts; for they feldom eat it while it is fweet, which makes their habitations ineat it while it is fweet, which makes their habitations injupportable to any but themselves; and it is said the sumes,
that arise from their own unsavoury hides, are almost as
disgreeable as those which proceed from the carrion, their
diet. They can the slesh of horses, oxen, deer, sheep, and
fith indifferently; but think it has the best gust when it
begins to be a little touched, and prefer the entrails of an
animal to any part of it; using neither bread, rice or salt at
their meals. their meals.

their meals.

Thee people travel in fleds drawn by a pair of rain-deer or dogs. The fleds are about eight teet long, and three or four broad, and turn up before like feates; the driver fits crofs-legged with a flaff in his hand, with which he puthes and drives the rain-deer. They crofs the frozen rivers, ice and fnow in these fleds; and the rain-deer run with greater swiftness than a horse, holding up their heads so high, that their horns touch their backs; they never three they are weary mu out their tongues and fweat, but when they are weary put out their tongues and pant like dogs. They are much like stags, but stronger, and have fhorter legs: their colour is pretty near white, and fome of them grey, with a kind of black hoof; they caft their horns every fpring, and generally live eight or nine years. The Samoieds fer nets for those that are wild, and hunt them in winter, being shod with wooden rates, and must their in winter, being inou with wooden featers, with which they run even over hills with incredible fwiftness upon the suow; and having a kind of shovel in their hands fastened to a long staff, with this they throw snow at the rain-deer to force them into the places where they have set their nets. The food of these beads is a kind of white moss which grows in marthy grounds; and they will dig through the show if it lie a fathom deep to come at it: the tame ones cat grafs or hay.

The principal water-game which the Samoieds use is the

hunting of fea dogs, who in March and April couple upon nunting of fea dogs, who in March and April couple upon the ice. Here the Samoieds watch them, being dreffed more like brutes than men: they venture upon the ice fometimes half a league from the flore, with a large hook and line in their hands, creeping upon their bellies, and when they come within diffance, throw their hooks, and the fea dog, attempting to get away, most commonly faftens himself upon it. They extract an oil from them, eat the flesh, and with the skin clothe themselves; but the

fea-dog fometimes jumps into the fea with fuch a fosce, that he pulls the poor fitherman in after him, the rope being faftened to his middle. They take rain-deer alfo fometimes by clothing themselves with the skin of that beast, and creeping among the tame deer till they are within the reach of the wild, kill them with their darts.

They purchase their wives of their relations for three or four rain-deer, and take as many as they please, returning them again to their friends if they do not like them; and their loss is only the rain-deer they gave for them. And in some parts of the country they take the sherty of selling their wives for saves when they are offended with them. They bury their dead in the clothes they wore when alive, hanging by them on the neat tree their bows, quivers, hatches, and other utenfils.

A gentleman who lately travelled in this country acquaints us, that examining one of the Samoieds about their religion, he answered, that they believed there was a heaven and a God, whom they stiled heyhs. That they were convinced nothing could be greater and more powerful than God; and that all things depended on him: that we had one common father, and that good men would go to paradife. But notwithstanding this, they worshipped the sun, moon, and planets, together with several ained of beasts and birds, from whom they hoped to receive some benefits. Images they also worshipped in human shape; but so very ill carved and dressed. They have priest among them, who prevend to the magic art, and no socret furure events: these they consist upon alloccasions, as whether they shall recover of a fit of sickness; what success they shall have in their hunting, stilling, sec. When they come to enquire any thing of him, he works himself up into a kind of sit, and in this condition delivers his oracles; from whence some will have it, that he is possessed by the devil at these times: they give us also abundance of instances of the tyranny of wicked spirits among those poor nothern people, which possibly, when we co

we come to be better acquainted with them, may appear to have as little foundation as fome other tales of the like nature. The Ofliacks are deferibed by travellers as a favage, vagabond people, very little if at all different from the Samoieds, fome have made them inhabit the fame country; but the Samoieds are more generally deferibed as inhabit age that part of Muscovite Tartary, which lies towards the west; in and next to Europe; and the Assistant the worst in and next to Europe; and the Assistant the morth east part of Muscovite Tartary nearest to the Chinesian Tartary, of whom a late writer gives the following account: "You will meet with this people (says he) three days journey beyond Tobolski, the capital city of Siberia: they extend along the river Irtis to the place where it falls into the Oby, from thence you will find them extending themselves to the northward along the banks of the Oby, and Jenisea, till they fall into the guba or gulf of Mangasa, and from the guba to the streight of Waigass, inhabiting on the banks of the many rivers which fall into the Oby and Jenisea. Narim is their principal town.
When the hunting season comes on, these people go into the woods with their bows, dogs and nets, killing fables, soxes and ermins, bears, elke, rain-deer, martenas, &c. and of these skins the Empress has a certain share by way of duty, the rest are fold to the Russian governors at effect of size, and sovernous the same protections they are constituted to discoger.

way of duty, the reft are fold to the Russian governors at a stated price, and sometimes they are permitted to dispose

of them to private persons.

Their diet is chiefly fish, venison, wild fow! and roots, for they have neither rice nor bread. Their drink is for the most part fair water, and sometimes the blood of a rain-deer, or of any other beaft they take; and, it is said, they can dispense with a draught of train oil. Tobacco they are immoderately fond of, but instead of blowing they are immoderately fond of, but inflead of blowing the finske out of their mouths, they hold a little water in their mouths, with which they fwallow the finoke down, which fo intoxicates them that they foon lose their fenses, and throw up the plategm: this they will repeat feveral times in a day, and it is thought to be wholefome playfic to an Ofliack conflictution. Their water are low in the ground, with a roof of backs to the point furginer, they build on the banks of the riving and employ themselves in fithing. felves in filhing.

Their sell on is nearly the same as that of the Sa-oieds. To which we may subjoin, that they have small moieds. To which we may judgoin, that they have man brazen idols, placed in groves, or on the tops of houses. When they make offerings, they present an animal to the idol, and one of them puts up the particles of those who brought the facrifice; he then pieres; the beaff with an arrow, and they all join in killing him; then the animal is drawn round the idol, and some or them sprinkle the

No. 10.

blood upon it; after which, they dress the fiesh and car it, with great shouting and merriment.

SECT. II.

Containing a particular description of the chief cities and towns in Siberia with the genius, manners, religion, unde of living, diversions, &c. of the Russian inhabitants there.

TOBOLSKI, which, as we before observed, is the capital city of Siberia, was built on the fide of the old city which had then the name of bibir. It contains about fifteen thousand inhabitants, almost all Rossans, or naturalized. There are feveral Mahomeran Tartars of the latter fort; the greater part of whom, that they may perform uninterruptedly the ceremonies of their own religion, live without the city.

The larger part of Tobolski is fituated on the banks of the Irtis; and the other upon a hill, the top of which is a kind of platform extending to the east of the town. That part on the hill is fortified both on the east and north, by a rampert, bastions, and a ditch fix feet foroid, bordered with pallisadoes. The lower town is in a plain, between the hill and the river; and both towns taken together, are of a considerable circumference. All the fortifications of the upper town, which is called the city, on the star the fouthern part of the city, on account of a deep gorge, is difficult of access; as is also the western part, because the river slow: at the foot of the hill, which being composed of a loofe fand, cannot be scaled but with great danger: large pieces frequently break from the hill, and, falling into the river, bear every thing before them.

There is a governor in Tobolski, whose jurisdiction reaches almost allower Siberis here is also account of courter courter.

large pieces frequently break from the hill, and, falling into the river, bear every thing before them.

There is a governor in Tobolski, whose jurisdiction
reaches atmost allover Siberis; here is also a court of equity
composed of fifteen counsellors, who conduct both civil
and military concerns, But as Tobolski is near eight
hundred leagues distant from the court; therefore, that the governor may not abuse the power with which he is invested, there is a proctor, who ranks next to the governor, but who is neither dependent on him or the court of equity; so that the business adjudged by the governor, or by the chancery, cannot have a final determination without

In the upper town, or city, there are three churches and a convent; but their are built of wood. In the lower town are feven churches and a convent built of flone: town are leven churches and a convent built of thin; and there are three diffusnt communications from the upper to the lower town. There is an archbishop at Tobelski, whose diocede extends over the greatest part of Siberia. The counfellors of chancery, and great numbers of the merchants, live in a very reputable manner.

A considerable traffic was once carried on between this city and the Chinese by means of caravans; but the knavery both of the Chinese and Russian merchants reduced it in a there time to a very laponifishing that.

city and me cuinete of means are very both of the Chinese and Russian merchants reduced it in a short time to a very languishing state. It has a garrison constituing of two regiments of infantry. Most persons employed here are fent from Moscow and Petersburgh. At the distance of about an English mile from Tobolski, the very is delighted with a most beautiful view, from the number of small steeples in the city, most of which are covered with brass; but this agreeable scene disappears on entering the town, the houses of which are all of wood, and were till built; the governor's and archbishop's palaces, tering the town, the houses of which are all of wood, and very ill built; the governor's and archbifhop's palaces, the town hall, and a fort of citadel, are the only build formed of brick and flone. The fireets, both of the per and lower town are exceffively dirty; and though, on this account there are footways made by planks in fonic of the fireets, they are nevertheless kept in very bad condi-

Neiwianskoj is in the province of Tobolski, and is stuated on the river Neiura. It has a fort and about eight lundred houses. There are made very valuable brais and copper utenfils, and there are considerable iron works in neighbourhood.

In the abovementioned province; is Catherineburgh, which contains upwards of four hundred houtes exclusive of those in the suburbs without the wall. Here are a wooden church, age, and a cultom house. This city being in the centre of all the Siberian mine-works, the director of the mines takes up his residence here: the fuburhs are partly peopled by such as toil as mines, or by those sent thickers, and destined to labour for their offences. Provisions of all forts are very plentiful here, and fold reasonably. It is situated on the river lifet, and is well defended.

Thusers is likewife in the province of Toboliki, and fituated on the river Tura to the fouthward, over which there is a bridge upwards of eighty fathoms long; at a small distance below it there is a stone fort, and without this fortification are five hundred houses, fix wooden churches, and a convent. The suburbs of Tiumon are divided into two parts, the one part containing about two hundred and fifty houses, three stone chusches, and a monastery; the other part is inhabited by Mahometan Tartars and Buchariana, as well as Russans; the latter

Tartars and Buchariana, as well as Ruffians; the latter have a church, and the former a mosque.

Tomikoi (whose fituation we deferibed ab we) is the espital of a province of that name. It is at long frontier place, lying in fifty-fix degrees fifty minutes north latitude, and in eighty degrees thirty-fix minutes longitude, from London. It contains about two thousand houses, and is fituated on the river Tora. A calle built of wood, with fourteen pieces of cannon, flands in the highleft part of the city, in which are also a cathedral built of wood, a chancery court, and an arfenal. In the lower part of Tomskoi there are four churches, befides a monastery and a numbery. Provisions of all kinds are in great plenty, and the people

Provisions of all kinds are in great plenty, and the people carry on a very confiderable trade.

Narim is the capital of a province of the fame name. It has a strong fortrefs for its defence, garrifoned by Coffacts. It is in fifty-eight degrees north latitude, and fituated on

the Oby.

Policin is fituated on a river flowing into the Tobol from the north. This town is pretty well peopled, and

from the norm. I have work to be the Ruffians, when We shall take notice of the religion of the Ruffians, when we come to treat of the Ruffian dominious in Europe, as the people of this nation profess the fame throughout the

whole empire.

With respect to the mode of living as practifed by the inhabitants of Siberia, they spend great part of the year in floth and idleness, shut op in their hovels, the silthiness of which is intolerable to persons of the least delicacy. The unwholesomeness and inconvenience of their hovels of which is interested to periods of the lean delicacy. The unwholefomenets and inconvenience of their hovels are confiderably sugmented by the inclemency of the weather, which prevents a communication with the fresh air: their windows are generally no more than one foot high, and fix inches wide; befides which the sinhabitants are almost deprived of the light of the fun during the time; it remains in the western constellations; in this dark feasion they receive light only from splinters of birch, which they call couchines: these natives, however, are shout, healthy, robust, muscular, and live to a great age: though it must be consessed an infinite number of children die, especially among the common people, of whose families one third part seldom survive their infant state: parents who have had fixter or eighteen children born, having no more than three or four alive; and the small-pox, scurvy, and venereal disease, concur gradually to thin the country of inhabitants; so that unless the Russian government adopts some measure to put a stop to this depopulation, there will soon be an end of the human species here. species here.

The women of this country are in general tolerably handforne; and those of all ranks and ages paint. handforne; and those of all ranks and ages paint.

At Tobolski, in particular, the women are extremely fair, and their countenances perfectly agreeable: their eyes are black, languishing, and down cast, for they are so bashful that they never look a man full in the face; they wear no caps, but coloured handkeretheir, which they so curiously interweave among their hair, generally black and unpowdered, that this kind of head-dress gives them a very attractive look. They are unacquainted with that variety of undress to which the Europeans are accustomed, and change their linen but feldom. The age of the Siberian women is distinguished by their desir, the old are dressing. women is diffinguished by their drefs: the old are drefsed in the Ruffian falhion, and the young wear a Ruffian robe, in in the manner of the Polanders. They have strait caps, with their hair hanging down from each side or behind; the cap is adorned with very indifferent fringers of a stuff pecu-liar to the lates which is broaded. liar to the place, which is bound round in curious circles.

The people of rank at Toboliki have feldom more than

The people of rank at Toboliki have leidom more than two beds in their houses, one for the husband and wife, and the other for the children; all other persons in the house he upon benches or mats. The beds have no curtaine; and, instead of a boliter, they have feven or eight pillows, one less than the other, raised up in the form of pyramids. This bed is generally the principal piece of furniture. In 1663, people of quality used to lie on bare benches, on which only a skin or other covering was forced; they have feare any furniture in the houses, and at forcad: they have fearce any furniture in the houses, and at meals, very few of their tables were covered with a cloth.

The men of this place are extremely lealous of their wives, who feldom go from home, but live wholly fequestered frem fociety, and are given up to indelence and negligence. That species of sefuned fove, which flows from fensibility, and predominates over the human foul only is here unknown and unfelt. Alover never has the fathsfaction of feeing the diforder and embarraffment of his miftres, endeavouring, though in vain, to conceal her passion. In this harbarous country, men tyranniae over their wives, and treat them as slaves, requiring them to perform the most fervile and menial offices: no wonder, then, that the delicacy of fentiment, which characterises the natives of more civilided countries, is fo parely to be met with here. But though the men use their wives with such feverity, they are very indulgent to their daughters they think married we ment fould be whelly taken ap with their husband. It is a like to the late measus they may have an opportunity of getting hattoands; and the girls very soon avail themselves of this liberty, without either the consent of their passents, or the fantion of the church.

Society is scarcely ever enjoyed in this city nor indeed it is not be the said be much under a covernment.

of their puents, or the fanction of the church.

Society is fearcely ever enjoyed in this city; nor indeed is it possible there should be much under a government, where no individual partakes of that effential freedom, by which the happines and welfare of the citizen is secured. A reciprocal fear prevails among people here, whence arise distrust, diffirmulation, and perfiely. Grade on indship, that noble quality which se power, and went to the common selicity of human belogs, glows not in the breast of a Russian. Nor are the people here governed by any principles of morality: the clergy, who are very ignorant, are as libidinous and drunken as any. We do not mean, however, to establish an unsavourable opinion of their whole body; fince there are some among them who are of liberal capacities and irreproachable characters. The higher classes of people never assume the priest's office, so that there is no intermediate state in the ecclessatic body; it is made up intirely of the common people, or the cluidren of the priest's, who are often the most dissolute; by which means the depravity and ignorance of the clergy may be means the depravity and ignorance of the clergy may be imputed to their not having acquired any refinement from

Dancing is a common divertion among the young women of this country. Sometimes fix or eight couple are
fien dancing together, and at other times only two, a man
and a woman. Most of their dances are characteristic: a
lover expresses spation by the most wanton and lactivious movements; his mistress answers him with all the graces peculiar to the fex; which are extremely alluring in these girls, as the inactivity of these girls gives them a kind. thefe girls, as the inactivity of thefe girls gives them a kind of languor very tender, expressive, and captivating. Some of their dances are pantomimic, which the young people perform with admirable dexterity; they turn round on one foot, while they are aimost situing: then rising up instantly, they throw themselves into form mimic or grotefque posture, which they vary every moment, in advancing, retiring, or turning round the room. This dance is generally performed by one couple only. Some of the young women atto amuse the afelves in fine weather by swinging upon a plack balanced across a beam lying on the ground.

SECT. III.

Treats of the Kuriles, the Koreki, the Trinkesskei, the Tungusi, Jakuti, Brasski, Kamski, and Barabinski, with the mouners, customs, dresses, abbitations, Ge. of these several and distinct nations of people.

THE Kuriles are remade le for their hospitality and their neighbours the Kat are more civilized than treat in the following fection) : they ar also more agreeably featured, and both fexes wear ear ogs of filver, with which they are furnished by the Japanese. They are of finall fature and round visage, and pay little regard to uniformity of dress, their cloaths being commonly formed of the skins of different animals. Their habitations resemble those of the Kamtschadales, though kept somewhat cleaner, and their provisions are generally the flesh of amphibious animals.

The Koreki dwell on the coast of the eastern-ocean, from the river. Ukoi to the Anadit, and along the coast of the Perchinan fea. This nation is divided into the fettled Koreki, and the wandering or rein-deer Koreki. The fottled Koreki are imitators of the Kamtichadales in every respect. The Koreki differ from each other bath in dif-

iproid Tu

not the

winter, who will travel nas one hundred miles in a day. With respect to the funeral ceremonies of the Koreki, we must observe, that they dress the decasted in his best cloaths, and fixing him upon a pile of wood, throw on it his bow and arrow, and then set fire to the pile. The corps is drawn on a sledge to this pile by the rein-deer, which is put to death, and thrown tito the fire, while the pile is confirming.

The Koreki live in continual fear of spirits, which they think hover at woods and on mountains. They fortgenings fix the head of a dragon upon a state, and tenning the animal's face towards the saft, cry out, "Take this, and fand us something better for it."

Near to the Koreki are the "L'aukottkoi, who inhabit the banks of the river Anadir, a. dextend along the shore, to the north and south-saft, to seventy-four degrees of latitude, and those who live to the north of the Anadir, not being subject to the Russians, often imprison and destroy those who are. The habitations of these people are more commodious and warm than those of the Koreki; and when a visitor comes to see them, he is always presented with the matter of the hut's wife or daughter, who hands to him a bason of here own wine, with which the visitor washes his marth, or he is not looked upon as a friend. The dress of the Tschukottkoe is the same as that worn by the Kamptin lales: their food is the rein-deer and other animals. In the country.

There are vanual tribes of the Tungus, or those who use roin-deer; and the Sabsteith Tungus, or those who use roin-deer; and the Sabsteith Tungus, or those who use roin-deer is the same the colded upon the branches of trees, the field of which rots off, or is devoured by animals or birds; after which they don't be devoured by animals or birds; after which they burn the bones.

Jakuti, or Jakutzk, is a province situated to the north. The cold here, and in the southern parts of Siberia, increases for considerably, in a few hours, as to strike men and cantle dead who happen to be at too great a diffusice

ther is succeeded by so hot a summer, that the inhabitants

ther is fucceeded by to not a tummer, that the innabirants are obliged to go partly naked.

In the most northern parts, beyond the fixtieth degree of latingde, the earth produces neither corn nor fruit: they are, however, supplied with these necessaries from the southern parts. They have great plenty and variety of fish, and abundance of tame and wild beatls; and likewise great. and abundance or time and wine beaut; and neewine great-quantities of fuel. Though they have fome corn in the country, they pay little regard to it is the hunting of ani-mals being what they chiefly delight in.

Jakutak, on the river Lena, is the capital of the pro-vince, and is about four hundred miles from the Frozen

ocan. The Jakuti form one of the most confiderable and numerous Pagan nations in all the vast country of Siberia, and are divided into ten tribes, making in the whole, not left than thirty or forty thousand perfous, all under the dominion and taxation of Russia.

position and sorm, as well as in their dress and castorms.

The wandering or rein deer Koreki are naturally very paleous, and often put their wives to death upon the slightest fulpicions; and if man and woman be actually developed in criminal connection, both of them are sure to their death; the women therefore avoid setting off their persons to edvantage, and never wish their sees, or comb their heads. But this is not the case with the serves of their heads. But this is not the case with the serves of their heads. But this is not the case with the serves of since the wish or daughter of his friend is always at his service. The wandering Koreki are of short assets a line service, and never washed the sale of the serves of short nosses. Sont the Koreki are obliged in the former are neither so theorem for the serves states and another, the wish or daughter of his friend is always at his service. The wandering Koreki are of short assets as the service with the service of the serves of states and unghter, mother and son: they generally marry into their own family; and gay very little regard to personal accomplishments. Their marriage estimates are nearly the same as at Kamtchatks.

The Korekian fledges are drawn by rein-deer in the winter, who will travel nare one hundred miles in a day.

With respect to the futural ceremonies of the Koreki; we must observe, that they dress the deceased in his best contained as energy the same as at Kamtchatks.

The Koreki in the nare one hundred miles in a day of the same and the serves of the serves

begon their buts. As for temples, there are mone in Siberia but what the Russians have lately built.

Both men and women are of a very tawny complexion, but better dressed than most of their neighbours. The women particularly wear long plaited gowns, and the virgins distinguish themselves by adorning their hair with brass, and other glittering toys.

The vast desart of Baraba sies forther to the westward this is inhabited by the Barabinski, who thift their quarters in the summer, and repair to the banks of tiverters in the summer, and repair to the banks of tiverters in the summer, and repair to the banks of tiverters in the summer, and repair to the banks of tiverters in the summer, and repair to the banks of tiverters in the desart of Baraba, the liquor of these people, during their residence there, is melted snow: they asso drink mare's-milk, as most of the other Tartars do.

There is a nation of Mahometans along the river Irris, who keep numerous stocks and herds: these pay a tribute to Museny, though they are governed by princes of their own. They resemble the antient Russians in their dress, and the women wear rings in their noses.

SECT. IV.

Treats of the fituation, extent, climate, &c. and natural bifters of the peninfula of Kamtfcbutta.

which feparates it from America; its western boundary is Penschindea, commencing near the fouthern point of the cape of Kamtschatta, and extending northerly between Oeshorskoy and the western coast of Kamtschatta. The fouthern part is in fifty-one degrees north latitude, and in one hundred and forty-three degrees longitude, east of London. This pensions is wided into two parts by a claim of hills running from north to fouth the chief rivers are the Awatscha, the Kamtschatta, the Teghil, and what is called the great tiver. There are many extensions what is called the great river. There are many extensive lakes in it.

Their fpring and furmer do not continue more than, four months, but the latter is far from boing agreeable, for as the adjacent hills are covered with mon, the air, even in the middle of furmer, is fornetimes petty cold, attended with frequent rains: the winter, however, is not very inclement.

In many places: mines of iron and copper have been dif-

e Tungufi, everal and

tality and we shall ore agree lver, with ney are of formed of ns refemfomewhat of am-

ean, from out of the es in every polition covered: the iron ore hath been found to be compact, of a yellow colour, inclining to red; and, in fome parts, of a yellow colour, inclining to red; and, in fome parts, than the reft of the ore. This ore, when crude, could not be attracted by the load-flone, but, when calcined, became fo in a finall degree. A folid iron ore has also been discovered here, similar to that found to the south-west of Echaterinenburg: its furface was found to be covered with a yellow oker, of a reddith brown in the breakings of its folid parts. The ors, when crude, was not acted upon by the load-flone, though, after alcination, slightly attracted by it. The copper mines are like some of those produced on the Ryphean mountains, having the malachites, in the form of stalactites and statagnites, in their cavities, very beautiful, and capable of being polithed.

There is great choice of timber for a variety of uses in Kamtschatka, as well as abundance of thrubs of divers kinds, they have also several excellent medicinal plans. Barley, toats, peas, turnips, &c. grow likewise here. The grafs springs up so fast, that they have three harvests; and the blades are frequently sive feet in height.

This country abounds with tame and wild fowls. The wild animals, are, black and white bears, wolves, lynxes, boars, elks, and a kind of sag very much like the fallow-deer. The bear never attacks a man, unless they find him astep, when they tear the scale off the back part of the lead, and sometimes intirely defiroy him. Foxes are also very numerous, some are white, some reddishedless, and

are also very numerous, some are white, some redish-yellow; some grey, with a black streak on the back; and are much valued; the white ones, however, are also va-lued, as being scarcer. There are also black-chesnuts and lucd, as being feareer. There are allo black-chefnuts and blue-breafted foxes; and they are in general two crafty for their purfuers, their fagacity exceeding that of the other species. The opulence of the country confills in its fables and ermines; the fables which are fold at a high price, excel those found in any other part of the globe; the natives eat the flesh, and effect it a very fine food.

Here is 16 found the mole sections.

Here is also found the gulo, or glutton; likewise other kinds of beaver, as the atis, rein-deer, and sayga. The natives collect themselves in companies to hunt these animals; they go at the close of the winter, from the month of March to the end of April, taking provisions with them. The glutton, which hath a very fine fur, is a terrible enemy to the deer; it will dart itself from a tree upon a deer's back, and, fixing between the creature's horns, tears out his eyes ;

and, fixing between the creature's horns, tears out his eyes; the sfflicted animal, with excess of agony, falls to the ground, when the glutton strips his slich from his bones.

Dogs are very numerous in this country: these resemble the European, and live much upon mice and fish; they feratch up the ground for the former, and selies the others from their streams. These dogs are extremely serviceable to the natives, in drawing their sledges over the snow: in the most dreadful weather, they scarce ever lose their way.

Several forts of amphibious animals are also in Kamstichatka. One is the sea-cow, shout thirty feet in length, and weighing six or seven thousand pounds, the skin of which is so hard, that scarce an hatchet or ax will penetrate it. The steff of a young sea-cow, when properly boiled, has a good taste; the sean part is somewhat like veal, and the fat part like pork. The method of catching this animal is, by an iron hook struck into it by some men in a small vessel, then by a rope held by people on shore, the sea-cow is drawn gradually to the land, while those in the vessel and the site of the hand, while those in the vessel and the site of the third with instruments in several parts of the back will be reserved. the veffel cut the creature with instruments in feveral parts of the body, till it expires. It is not very difficult to take the fea-cow from its elements, for it feldom raises its head above the furface of the water, though its fides and back are often feen.

Sea-horfes and fea-cats are also met with here : the latter have long hairs flanding out on each fide of their mouths like those of a cat, and they weigh from five to eight thou-fand pounds: their eyes are as large as a bull's, and they will fly at people in boats; even if they are blinded hy flones thrown at them, they will not retire, but gnaw the very flones that are thrown; however, when once deprived of fight, there is no great danger to be apprehended from them. The male and female differ both in form and disposition; so much in form, that they might be taken for different animals; and as to disposition, the female is mild, inoffensive and timid: as a proof of this, when an at-tempt is made to feize a young fea-cat, and the male, by vigorously defending it, affords the female an opportunity of taking it off in its mouth; if, in this case, the female should happen to drop it, the male abandons its adversary, and, flying directly at the female, feizes her with all ima-ginable fury; when the latter, by licking his paws, and shewing every kind of submission, endeavours to mitigate his rage. The feas also abound with feals, which are caught by different methods; sometimes they are taken in the water, and at other times they are killed while steeping on the rocks. Here are whales from seven to sistem fathoms long.

fathoms long.

Amongst a variety of fish, here is the sterlet, which is fo much like the sturgeois, that there is scarce any difference, except that it is finaller and smore delicate; it is for far, that it may be fried without oil.

Some of the birds of Kamtschatta are, eagles, hewks, pelicans, swans, geefe, wigeous, decks, cuckows, magner, finipes, partridges, &c. A bird called the red-neck diver is very curious; it has a beautiful spot on the lower part of its neck; beneath this spot, there are seathers of a brown colour in the middle, and edged all round with white; the breast, belly, and legs, are of a very beautiful white.

Sea-fund are very numerous on the coast of the eastern

Sea-fuwl are very numerous on the coaft of the eaftern ocean, as peacocks, fes-pies, green-thanks, pulfins, &c. Here too are the cormorant, fea-raven, and urile.

Clouds of dragon-flies, locuits, and gnats, are fome-times feen in this country. The latter are fo troublefone, that the inhabitants are obliged to vail their faces, to avoid them. The dragon-flies, forming columns, ily with inthem. The drag

Contains an account of the Kamsfebadales, their dreft, habi-tations, marriages, children, treatment of their dead, Ge.

HE natives of Kamtschatka inhabit the fouth of the peninfula; the northern part is inhabited by the Koreki, and the fouthern by the Kuriles, of whom we have treated above; but the Ruffians call the whole countraves are the control of the contro

Siberia, except that their faces are fomewhat shorter, their mouths larger, and their checks fuller; they have dark hair, hollow eyes, sharp nofes, and taway complections; the latter is faid to be principally owing to the influence of the sun reflected from the snow in the pring-feason, when the sun is stated from the finow in the pring-feason, who are obliged to be in the woods, cover their faces with a kind of netting, to prevent the effects of the sun-beams darting on the snow; for the eye-fight suffers by this refraction, as well as the complexion.

These people dress in deer-skins, with the fur outwards; they use also, for this purpose, the skins of dogs and other animals. They often wear two coats, the sleeves of the outer coat reaching down to the knees; they have a hood to it, which in bad weather serves to cover the head; and they adorn the back part with shreads of skins, and sometimes of silks of different coloure. The women wear the same fort of garments as the men, though their coat, or rather waistroat, its closer to their bodies, and is decorated with slips of red, blue, and yellow cloth, and sometimes ribband, or woolen list. To this waistroat is joined a fort of petticoat coming about half way down the leg. The men wear a leather belt round them, and their legs are covered with different coloured skins; they wear feal-skin caps or hats, and sometimes a cap or hat of birch bark; forme have caps of brafs plaited. The women let their hair, forme have caps of brafs plaited. The women let their hair, they have for the same and the women.

The natives of this country never wash themselves, but live in a mont beastly manner: they neither cut their nails.

The natives of this country never wash themselves, but The natives of the courtery never want termitered, but live in a most beafity manner: they neither cut their nais, nor comb their hair. They eat raw fleth, carrion, flale-fith, or any thing they can get, how fithy foever it be. They live in huts under-ground, covered with grafs or earth, and fometimes with the skins of the animals they earth, and ionicians with the mini of the annuas they have killed in the field, undreffed, and yielding a notioner flench. They place benches in their lovels, with a fire-place in one corner, and on their benches they repofor themselves. Some of the huts are covered and lined with mats. These are their winter dwellings; nor are with mats. I nete are their where dwellings; nor are their funmer retreats much more elegant, except that they are built on the furface of the earth, and with rather more regularity. Thefe, it is true, are built high on pillows, with beans thrown acrofs them, on which a floor is fixed, with a roof rifing from each fide to a centrical point; and, indeed it is necessary that their funmer habitations should has thus his elfe the inhabitant would be in continual be thus high, elfe the inhabitants would be in continual danger from the wild beatts. We shall now take notice of their marriages. When a man hath met with a young woman that he likes, he engages into the fervice of her perents, and, after the expiration of a limited time of fervitude, obtains either permition to marry her, or is difmisfed with a requitat for his fervice. If he has leave to marry, the nuptials commendes immediately, and the whole ceremony consists in stripping the bride naked, whose cloaths, however, are to fast bound by straps and girdles, that he finds it no easy task to excomplish his purpose; at this crifis several women shelter and protect her from him; who, however, seeking an opportunity to sind her lefs guarded, makes fresh efforts to undress her; but if she cries out, and her exclamations bring affilience, the women who come fail upon the man, bring affilence, the women who come fall upon the man, feratching his face, teering his hair, and otherwise roughly treating him; till the bride, thewing fome concern for his fituation, and the women becoming left violent in their affault, the man at length fucceeds, and then retires from her, who however calls him back, and acknowledges in a foft plaintive tone, that he has conquered her. Thus the ceremony ends, and the next day the happy couple repair to the hut of the hulband. In about a week afterwards they make a visit to the wife's parents, where they cele-brate the marriage feast with the relations of both parties. Some of the men marry three wives, who in general live

Some of the men marry three wives, who in general live in a friendly together, and are never jealous.

Notwithilanding it is deemed a very capital offence in a woman to procure abortion, yet if twins are born, one of them must be destroyed. The women put their infants in a basket fastened to an elastic pole, which is easily moved with the foot, to rock them. As foon as they can fland on their legs, their mother's leave them to themselves, fusive them to roll on the ground any where, they are

intinual

w 19. UE

on their legs, their mother's leave them to themselves, suffering them to roll on the ground any where; they are most commonly half naked, and begin to walk at a time when a child in Europe would not be able to stand.

These people never bury their dead, but often give them to the dogs; and fay, that as the deceased are thus devoured by dogs, they will ensure to themselves a pleasant carriage in sledges drawn by fine dogs in the other world. This aboninable custom, however, is not universally practiced; some leaving their dead in their hut, and seek a new habitation. The apparel of the deceased person is always thrown away, from a superstitious notion, that whoever should wear it would meet with some dreadful calamity.

calamity.

They travel on fledges drawn by dogs; their number is generally four, which are driven by a whip. The perfon in the fledge is feated on the right fide of it, with his feet hanging over, and is obliged to balance himfelf with great care, left the fledge should overfet. Where the roads are in tolerable condition, they can travel to a great distance in a short time, carrying with them provisions, &c. They fometimes travel, in this manner, about thirty wersts, that is, upwards of twenty-three miles in a day.

They hunt the bear, among other animals; on which occasion, they use rackets to walk upon the show with.

occasion, they use rackets to walk upon the snow with, arming themselves with pikes, and taking dogs with them to provoke the animal. They then wait till he comes out of his inclosure, for they would attack him to great difadvantage while he remained there; because the snow being very firm in that place, the bear would be able to avail himself of all his strength; but the instant he comes out, he ficks into the firow, and while he is striving to difengage himself, the hunters with their pikes easily destroy him.

They dress their feal-skins in the following manner:

they first wet and spread out the skin, and with stones fixed in wood ferape off all the fat; then they rub it with caviar, roll it together, and tread on it; they afterwards ferape it again, and repeat the first part of their process till the ikin is thoroughly cleaned and fost. They prepare in the fame manner skins of beaver, deer, dogs, &c.

When the men are not employed in hunting or fifting, they weave nets, and conftruct fledges and boats; and in the firing and fummer they procure the necessaries of life, and lay up a flore for the fucceeding winter. The women make shoes, few cloaths, dye skins, &c. they also make glue of the dried Ikins of filhes, and particularly of the whale.
They use a board of dry wood to light their fires; in this board are feveral round holes, into one of which putting the end of a small round slick, they roll it backwards and forwards till the wood takes sire by the friction.

The people of this country are arrant cowards, and yet feem to despife life, through an innate kind of stupidity. They never attack their enemies openly, unless compelled to it; but fleal privately to their huts, and treat them most

barbarovsty, cutting them to pieces, and each tearing out their entrails a their exuelties are exercited with triumph and shouts of joy. Whenever they hear of a fee advancing towards them, they revier to some mountain, and fortify it as strongly as possible: if there be a probability of the enemy getting the better of them, they inmediately cut the throats of their wives and children, and then neet their assailants with a frantic rage, selling their lives as dear as possible. Their weapons are bows and atrows, and spears. The religious notions of the Kamtschadales are pretty singular. They erect a fort of pillar on some plain, and cover it with a parcel of rags. Whenever they pass by this pillar, they throw at it some fish or sless, and avoid skilling any bird or beast near it. They think that woods and burning mountains are inhabited by evil spirits, whom they live in great fear of, and make them offerings; some of them have idols in their huts. They have a very imperfect idea of a supreme Being, and think he can neither dispense happiness nor misery; the name which they have for the Delty, is Kutcho. They reverence some particular animals, from which they apprehend danger, and sometimes offer sizes at the holes of soce; they implote wolves not to hut them, and beseed amphibious animals not to overset their boat. Many of them, however, adopt the Russian manners, and contemns the customs of their country; they have been instructed by Russian millionaries in the Christian religion; and schools have been erected for their children.

onaries in the Christian religion; and ichoost have been erecked for their children.

These people strictly observe the law of retaliation: if one man kills another, the relations of the person killed deftroy the murderer. They punjish these they burning the singers of the thief. Before the Russians conquered them, they had fuch frequent inteffine broils, that a year rarely passed without fome village being intirely ruined.

Great havock is made in this country by the finall-pox. The feury, with the irregularities of parents, bring a variety of diffusion upon their offspring, to cure which, they apply roots, herbs, &c. The manner in which these people live in their huts, and their except of debauchery, continues to make the supercal differs year frequent among

people live in their huts, and their excess of debauchery, contribute to make the venereal difeafe very frequent among them. They have a diforder called the futhutoh, which is a fort of feab, to which they apply the raw fkin of a hare cause a suppuration. They are likewise subject to the passiv, jaundice, boils, cancers, and other diforders.

There are three volcahoes in Kamtschatka, the first is that of Awatcha, to the northward of the bay of that name; it is a chain of mountains, the base of which is covered with trees, and extends to the bay. The middle forms a kind of amphitheatre, and the various summits which are spiral cannot be viewed without exciting the most awful ideas. They always emit smoke, but rarely fire. There was indeed a terrible cruption of sinoke and cinders in the funnmer of the year 1747, but it only contiluded one day 1 funmer of the year 1737, but it only contlined one day t many of the cinders weighed almost two pounds avoirdupoife. "This eruption was the forerunner of a terrible earthquake, which happened on the fixth of the enfuing earthquake, which happened on the fixth of the enfuing October, and in a quarter of an hour overturned all the tents and hurs of the Kamtfchadales, being accompanied by a fingular ebbing and flowing of the ita, which at first rofe to the height of twenty feet, then funk, and retired to an unufual didlance; it foon after rofe higher than at first, and suddenly finking again, retired so assistantly far from the common low-water mark, that it was for a considerable time lost to the eye. At length the earthquake was repeated, the sea returned once more, and role to the height of two hundred seet, overwhelmed the whole coast, and then simply retired, after having destroyed the coaft, and then finally retired, after having defroyed the ods, cattle, and many of the lives of the inhabitants, and goods, cattie, and many or member of grounds and ad-jacent fields. The fecond volcance i Tues from fome rooun-tains fituated between the river of Kamitchatka and that of Toboliki. Nothing was ever known to exhall from this but fmoke, till the year 1739, when it vomited a torrent of flames, which deftroyed all the neighbouring forells. The third volcance iffues from the highest mountains in Kamtichatka, on the baths of the river of that name. It Kamtichatka, on the banks of the river of that name. It is environed by a cluster of lesser mountains, and the head is rent into long crevices on every side. Its greatest erupation began September 25, 1737, and continued a week, which, with an earthquake that followed, did very considerable damage.

In the fouthern extremity of Kamtichatka there are hot formings; they form rivulets, and run almost the length of the first of the state of the st

the river Ozemaya which iffues from the lake Kurilfky, and then join that ftream: the waters, however, have no

very confiderable degree of heat in them.

There is a mountain near the river Pandia, from whose

fummit a prodigious cataract of boiling waters fall with a terrible noife, then running to a confiderable diffance, they continue boiling up to the height of a foot, till they lofe themfelves in feveral lakes, which contain a great number of islands. From this mountain the inhabitants obtain fome beautiful flones, on which they fet a great value on account of their admirable variegated colours, which are merely the effects of the different powers of heat, humidity, and friction; for thele stones are washed from the mountains, and are polithed by the above-mentioned hot and impetuous waters.

During the winter, a great quantity of fifth harbour in

the river of Kamtichatka. In the fpring, when the ice breaks, they attempt to get to the fea; but the natives watch the heads of the rivers, and take a great number of them in a kind of nets; some they dry in the summer and lay by for their winter food, and from others they extract the fat or oil by means of red-hot flones, which they

carefully referve for a great variety of uses.

The late gallant Captain Cook was killed by the natives at an island called O-why-hee, near Kanttschatka; an account of whose death, and discoveries in these parts, as contained in his third voyage, will be given towards the con-

clusion of our work.

C H A P. VII.

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF

CHINESE, MOGULCAN, AND INDEPENDENT TARTARY.

SECT. 1.

Contains an account of the Mantcheoux or Mantchew Tartars; with a defeription of the provinces of Mugden, Kirin-ula, and Tsusi-kar, their manners and customs, &c.

THE Mantcheoux or Mantchew Tartars live chiefly in huts on the banks of rivers. Their country is in huts on the banks of rivers. In huts on the banks of rivers. 'I heir country is in the north of Lao-tong, the most easterly of the Chinese provinces, and is bounded by the river Saghalian-ula on the north; by Corea and Lao-tong, on the south; by the ocean, on the east, and by the Mongol's country, on the west. It is divided into three provinces; namely, Mugden, Kirin-ula, and Titti-kar; and from hence that the province of the country of enterprifing Tartarian spirit originated, which triumphed on the imperial throne of China. But we shall speak more particularly in this section, of these provinces, and of the Tartars in general.

The former of these provinces (which is about two hundred and seventy miles long, and one hundred and twenty in breadth) hath a favourable foil, producing wheat, anillet, and cotton, as well as plenty of pasture for cattle, and feveral forts of fruit. This province of Mugden has given name to the capital, in which are feveral public buildings, and courts of justice, as at Pe-king. But the most populous city is Ton-wang-ching, which indeed may be deemed the key of the great peninsula of Corea.

There are two large landfowe roads from Mugden all the way to the city of Pe-king, which is about one thou-fand one hundred miles diffant: these are kept constantly in repair, having been formed with great labour principally for the emperor, whenever it should be his royal pleasure to visit his Tartarian dominions. One of these roads is for the passage of his majesty to Tartary, and the other for his passage to Pe-king back from Tartary.

The fecond province is Kirin-ula: it has Lao-tong for its boundary on the west; the ocean, on the east; Corea, on the fouth; and the river Saghalian-ula, on the north. This country is a mountainous defart, upwards of seven hundred and forty miles in length, and fix hundred in breadth. Here is fearce any thing to be feen but the gloomy tops of mountains, nor is any thing heard but the hideous howlings of wolves and tygers. Very little rice grows here, but plenty of oats. The air is exceedingly bleak here, but plenty of oats. and keen.

Some of the Tartars take up their refidence in huts on the river Ufuri, and fubfift principally on fish; these are the Yupi's: they imitate the Chinele in dress, and the women decorate their hair with a variety of bautles. The Ke-cheang Tartars live after the fame manner, on the banks of the Saghalian-ula. These people, when the rivers are frozen over, are drawn in fledges upon the ice hy dogs. They are very ignorant and uncivilized, though peaceable and inoffenity. The Yupi's have no fovereign prince, but chule feveral d. lefs. The Mugden provincials have a Tartarian general, who has feutenant-general.

rals and a great number of foldiers under him.
The third province of Chinese, Tartary is If thekar. The capital, which has the fame name, is a place of tole. rable trade, and chiefly peopled by Chinefe.

The hunting of tables is an employment for which the

folar Tartars are famous, the fkins of thefe creatures being of great utility to them: the women hunt them as well as the men. In the pursuit of this game, they generally meet with tygers, which they are never afraid to engage, and generally get the better of them; however, if any one unfortunately falls at the feet of this animal, the reft do not decline their pursuit; for their livelihood depends principally upon the furs they get from the fables they take.

In fome of the rivers there are feveral fine pearl-fifluries,

and the natives fet a high value on the pearls.

The inhabitants of Tartary have all nearly the fame language, though they are diffinguished into different nations, and speak in different dialects. Their origin and cuftons are both equally ancient; for the former could never be traced, on account of these people having for such a series of years been continually wandering about from place to place. If we examine the most remote antiquity, we shall discover a striking resemblance of the people of the early ages, and the Tartars of the present time; for as their an ceftors lived, fo live they

The religion of the Tartars appears, from monuments of undoubted authority, to be of above three thousand years standing; and is founded on the sublimest principles of morality. They have in general been followers of the grand lama, or immortal father. This religion made a confiderable progress in early ages; and the authority of this chief pontiff is so highly revered, that the emperors of China, previous to the ceremonial of their eoronation, always implore his protection, and fend him rich prefents. This worthip has not, like the Chinese, been mixed with other fystems; for neither time, nor the influence of man, hath had power to thake the authority of the grand lama, who, however, acknowledges that he is no deity, but only a representative of the divinity; and that he is appointed by heaven to decide ultimately upon whatever relates to public worthip.

His influence extends as fully to temporal as to spiritual concerns; but he considers all civil matters, held profune by him, as inconfiftene with his dignity, and therefore commits the care of government to to slone calculated to conduct affairs of that nature.

In Tartary, there are feveral worshippers of the idea Foe, who pay an implicit obedience to their priefts, making them prefents, and firiftly attending to their directions. Many of these priests migrate from place to place, in the service of religion and themselves, but they are in general very ignorant.

SECT. II.

Treats of the Mongols; the Situation, boundaries, and climate of their country; alfo of the natives, animals, &c.

THE Mongol country is fituated to the north of China; and is bounded, on the caft, by the the forces of the Mantchews, on the well, by the count you deast on the fouth, by China; and, on the rounding eathern Tartary and the Lalka Tartars. It was about three hundred leagues in length, and two hunor at ra breadth. This country is not very well known, except that part of it which the consums pull in travelling to a the ice natives uber of ner and extract h they

north of Chithe the torics unt you fol-he touth of Ir was about o humana ta nown, corpt cavelling to a Michory

Muscovy to China. The climate is exceedingly severe, and ice lies upon the ground eight or nine months to-

gether.

The natives (who are of the fame original es those who accompanied Tamerlane in the conquest of India, Persia, &c.) are in general of a middle fize, but very strongly made, with broad faces, black eyes, fast noses, long whisters, fallow complexion, and of a most rude behaviour. Their hair is almost as thick and strong as horse-hair, which they cut close to the head, and leave only a tust at top. They wear large shirts, and callico drawers; and their garners. Jined with sheen-skin, reach down almost to their ments, lined with fheep-fkin, reach down almost to their

They wear large shirts, and callico drawers; and their garments, lined with sheep-skin, reach down almost to their feet: these they fasten on their bodies by strong leather straps. When on horseback, they wear a short jacket with narrow deer-skin sleeves, having the sur outward; trowfers and hole of the same kind of skin, both of one piece, and light to the limbs. They have on their heads, caps bordered with sur. The women are not quite so coarse featured as the men, but their dress is nearly the same as theirs. This country has in it a great variety of animals, such as camels, dromedaries, cows, hortes, sheep, elks, bears, tygers, wolves, &c. There is also every species of game known in Europe. Rhubarb and other medicinal plants grow here, salt and salt-petre are also sound in great plenty.

The Kalka Mongols, who are a race of Tattars, are dependent on China: their persons, habits, manners, &c. are the same as the Mongols: they dwell beyond the Mongols, and take their name from the river Kalka. In giving a surther account of the Mongols, we must observe, that they live in little moveable huts, formed of twigs covered with matted wool; they have a fire in the centre, with a hole at the top to let out the sinoke, and boards or benches round the fire to fit or lie upon. They are siltly both in their dress and in their food: they often make use of the dung of their cattle for such.

It has been a very antient custom among these people, to support a war, by ravaging the country. Their tribes are commanded by several chans or leaders; and they elect a great chan, who claims a paramount power over all: his residence is a kind of military moving station, and he can bring from twenty to fixty or seventy thousand horsemen into the field. The grand chan of Cambalu is said to have controuled the whole mighty power of Tartary in the days of Tamerlane; and so much was he puffed up by his authority, opulence and grandeur, that each day tary in the days of Tamerlane; and fo much was he puffed up by his authority, opulence and grandeur, that each day it is related, as foon as he was feated to dinner, a trumpet founded, which was intended to give notice to all the other monarchs in the globe, that they might alfo go to dinner.

They are remarkably dexterous in handling their fabres,

and thooting with bows and arrows: they are enured to horfemanship from their infancy, and will, while on full gallop, split a pole in pieces with an arrow, though at a confiderable distance. But they have the utmost contempt for agriculture, looking upon all business of that kind as the most abject flavery. When they are angry with any one, they with it may be his fate to work like an Eurogen.

pean. It is common, with these people, when any of them be-come very infirm by age, for others of them to make small huts for the aged invalids near river, and there leave them that not the aged invalues near river, and there leave them to take their paffage into the next world. They think that in this they act in a friendly manner towards them. Those who die in their huts, are thrown into a burning pile, and their bodies confurned to ashes, which are afterwards intered on form suggests. wards interred on fome mountain.

The Mongols fell or exchange their cattle with the Chinese for ordinary tea, coarse cloth, &c. They are never troubled with much care or anxiety, for they have no-

body to pleafe, nor any body to fear.

Though thefe roving people are under no very regular form of government, yet their country is divided into difftiels, each of which have a chan of its own; but the Tartars of one province must not migrate to another; they, are to continue themselves to their own nation, where they have full liberty to roam at their pleasure.

Their marriages are not attended with much ceremony:

the men purchase their wives with cattle; and when the wife is turned of forty, the is employed by the hutband as a flave, and, as fuch, must attend upon the young wife

who supplies her place.

The people of this country worthip the idol Foë; they have a high pried arrang them, to whom they do homage, and thing that he has the power of obtaining favours for them from Fo2. Whenever this pried fignifies his pleafure to remove to any particular part of the country, the interior priests and a great number of other persons attend him: and they who reside on the spot to which he is go-

ing, meet him on the road in crowds, fupplicating his bletling; which he never fails to beflow on fuch as can bleting; which he never fails to bettow on such as can make him an adequate contribution towards his support; and this he is in no doubt of receiving for his benediction, as he suffers none to approach his facred person but the higher order of people. This high-priest is named khutuchtu; and some of the deluded people think that the holy Spirit which animates him, immediately on his death passes into the body of him who is elected to succeed him; which traching its person is person support to the body of him to be constant with the docpattes into the body of him who is elected to fucceed him; which transingration is perfectly confonant with the doctrine of the metempfychofis, the established system that prevails in many parts of Asia. Others think that he grows old with the decline of the moon, and refumes his youth when the new moon appears. For a further decliription of these people, we beg leave to refer the reader to our account of Chinese Tartary, Page 36.

SECT. III.

Contains a description of Western Tartary; including the king-dom of Astracan, the Calmucks, Circassians, Usbeck, Crim, and Lesgec Tartars.

THE kingdom of Aftracan is bounded by Ruffia on the north, Siberia and Calmuck Tartary on the east, the Caspian sea on the south, and Circassan Tartary on the weft; and that part of it which lies between the Wolga, the river laika, and the Cafpian fea, is generally called Nagaia; as is also that part of the country which lies to the westward of Astracan, and the natives Nagaian Tartars,

Affirean, the capital city of this kingdom, is fituated on the caft fide of the Wolga, in the latitude of forty-feven degrees north, longitude fifty-two from the meridian of London: the most fruitful part of the country lies to the caftward of the city towards the river Jaika: to the fouth west is a defart of feventy leagues in length. town is defended by a stone wall three miles in circum-ference, and has a cathedral and several other Russian churches being the see of an archbishop, who lately built

the cathedral.

The city of Afracan, is supposed to contain one hundred thousand inhabitants; it has ten gates, fix whereos look towards the river, and two are in the citadel, which serves as a wall to the town on the opposite side. Within the citadel is the governor's palace, being a large wooden building, and contains a great number of pleasant apartments, particularly a great hall which has a noble prospect on all sides. Both the churches and houses are built of wood, except the cathedral, the bishop's palace adjoining to it, and one church more here are also a monastery and a numery built of wood. Besides the governor, there are three other great officers of the crown here, the sirth of whom presides in the council; the second has the government of the public houses; and the third the direction of the sistery. On the opposite side of the river stands a fine stone monastery, and two others, and several suburbs. The soldiers suburb sies on the east side of the city along the river K tunne, which falls into the Wolga: the cathedral. city along the river K.tunne, which falls into the Wolgar another of the fuburbs is called Walga, where the royal fhipping lies. There are two other fuburbs inhabited in-differently by all forts of people. The Tartarian fuburb is feparated from the reft, and built of bricks dried in the fun. The Tartars inhabit it only in the winter, for in fummer they eneamp in the open fields. The country is moderately fruitful except in corn, of which they have none but what comes from Cafan. Fifth are very plentiful, they have one kind called belugz, which are faid to be two fathoms long; but the most delicious fish in this river, if not in any other, (fay some travellers) are the sterlets, they are an ell long, and yet fold for two-pence or three-pence a-piece at Aftracan. In the neighbourhood of this city there live about forty or fifty Armenian families who have their thops in the towns: and the Indian merchants have their caravanters where they carry on their trade. This is a spacious building furrounded by a wall of square flone and several noble gates, at which there are guardy placed every night for the protection of their goods. In the gardens about the town are vines and fruit trees, fuch as apples, pears, plums and apricots; but the fruit is not to good as in some other places: they let their vines grow to the heighth of a man, but not higher and then pro-them up: the grapes are black and large, two which grow in private gardens are fold in the market; but all thole in the vineyards, which are the Czarina's property, are made into wine. The ground is naturally a fandy barren foil; out they have large wells from whence they convey the

water by pipes or little channels into their grounds. The vineyards lie about two or three wersts from the town, they encrease every day. The old city of Astracan, stood about feven wertls (a werft is three quarters of a yard) to the eastward of the new, but there are now scarce any remains of it. This city is garrifoned by five regiments of infantry and one of dragroons; many field regiments and Cossacks, exclusive of the Tartar militia, winter here, befides the garrison. The use of the regulations to prevent the incursions of the wild Tartars.

This country also produces reeds, liquorice, kal, genista, aculeata, the herb astrachania, introria, &c. The inhabitants likewife raife melons and pompions, which they cat with bread; their garden vegetables are good, but their nulberries are unwholsome.

They have a great variety of wild animals; such as boars, elks, red and fallow deer, antelopes, hares, wild horfes, &c. The same kind of tumeanimals which abound in Great Britain, are found here. The antelope is of a light gray colour, of the fize of a deer, with a head re-The antelope is of a fembling a cow, but the nofe is without a griftle. It has fine black eyes, but is purblind: the horns are beautiful, but without branches; they are taper to the top, and have rings at equal distances. The flesh is tender, but seems to taste of musk. Here are also pelicans, corovaikes, swans, ducks, &c. The Wolga is replete with a great variety of med delicious fish; but there are few reptiles. Their camels have two bunches on their backs; their sheep like those of Persa, have very sat tails, and their cattle is exceedingly large.

Their commerce consists chiefly in filks, brocades, vel-

vets, fattins, drugs, copper, cotton, Persian fruits, wines, sweetmeats, &c. which they import, and in return export, rweetnears, etc. which they import, and in return export, meal, fifth, falt, woollen, &c. The inhabitants are prohibited from exporting naval and inilitary stores to Persia. The merchants of Aftracan have permission to navigate the Caspian sea; besides which they always keep a great number of barks in the Wolga. The pirates who are convicted of robbing on this river are hanged up alive by the rihs upon gibbets fixed on floats, where they are left to expire in the greatest agonies; and if any persons relieve them, they are fentenced to fuffer the fame punishment.

The Russians, Armenians, Georgians, &c. who inhabit Astracan, have the same customs and manners as the people of their respective countries. The real natives, or Nagai Tartars, greatly differ from the others in many respects. They live in huts formed of canes or bulruthes. They pay no taxes, but are obliged to ferve in the Russian wars; and some of their chiefs are always left in the cafwars; and fome of their enters are always action the of Aftracan as hoflages for the fidelity of the reft.

The people of Aftracan have olive complexions, large faces, little eyes, finall beards, are low of flature, and inclined to corpulency. They shave their heads, wear a coarse gray caffock, and over it a sheep-skin cloak, with the wool out-wards, and a cap of the same materials. Their women wear linen, and a cap with Ruffian coin hanging found. Their persons and seatures are tolerable. The males wear a ring in the right ear, and the semales in the nose; the rings worn by the latter are afually fet with a piece of coral, a ruby or torquoife. The Aftracans are in general Mahometans, and devote their offspring to God or fome faint. Hunning, fishing, and their cattle support them.

They wie fish dried a the sun instead of bread, though

they fometimes make cakes of rice, millet, or meal, which they fry in oil or honey; their drink is water or milk, but they prefer mares milk, and are exceedingly fond of the field of camels and borfes.

The Kalmuck a retars inhabit a prodigious defart, which lies between the rivers Don and Wolga. These people like some of their neighbours, are continually roving about; in the winter, they usually refide on the borders of Circassa; they proceed northerly in the spring, and return back again at the latter end of autumn. They never cultivate any land, their only riches being their flocks and cattte, on whose account they principally roam about in search of first pasture. Their temporary or moving habitations are huts, which the poorer kind cover with reeds or rushes, and the more opulent with selt.

These people are divided into different hords, each of

which hath its chief, but all are subject to one sovereign, who is called chan. This chan has an agent or envoy at

Aftracan.
The Kalmucks always affert their independance, but admit that they are happy in the friendship and protection of the Russians, who claim them as their subjects. A Ruffian refident, attended by a guard of three hundred foldiers, is always flationed in the court, or rather the camp of the chan.

With respect to their religion, they believe in one God only, are fond of keeping holidays, and are tolerably decent in their mode of worship. However, they keep idols about them, but pretend not to pay them any kind of adoration, but only to treat them with respect out of regard to the falms they represent. On all occasions they effect to profest the Chinefe religion, though they know very little of its principles. They use an odd emblem of eternity during the time of their worship; which is the neck of a double-gift spear, of about eight feet in length, is encompassed with a ring, to which a leather thong with a piece of lead at the end is sastened; during their devotions, the end of the spear is placed on the ground, with a piece or lead at the end is rattened; during their devotions, the end of the spear is placed on the ground, and one of the congregation, with great dexterity, occasions the metal to turn round during the whole time; they likewife fing, and make use of cymbols, and other musical infiruments, which are firinged; to these they beat time; and look upon notes, which are prieked down the page, from the top to the bottom,

The Kalmucks are allowed but one wife at a time; and adultery is feverely punished, for if the wife is a time; and adultery is feverely punished, for if the wife is caught tripping, she is immediately condemned to death; and the husband if he thinks proper, may be her executioner. But conjugal infidelity is rarely known among them.

If two young people are disposed to marry, they collabor together for a twelvementh; if in that space the

woman proves pregnant, the marriage is legal, but if the contrary is the case, they are at liberty either to part intirely, or to make another year's trial. The woman's reputation is in no respect injured by this procedure. As to the priefts, they are neither permitted to have money or wives, for these two reasons; first, they are allowed to supply their necessities from the properties of whom they please; and secondly, they have the liberty of passing a single night with any married woman they chuse; and this is so far from disquieting the husbands, that they take it as a mighty great favour done them.

The Kahnucks had formerly the most singular, and yet the most significant method respecting their treatment of the dead, of any perfons in the universe. As they considered them for many years, they engaged every element in the concerns of their corpfe. In the first place, they build them, that they might return to their original clay; but before it was possible for the bodies to corrupt, they took them up again, and threw them into the Wolga, but took care to fecure them fo, that they might eafily be drawn out again. After having been immerfed in water for some time, they drew up the bodies, and half-burned or rather roafted them, to bring them acquainted with the element of fire : then, that they might not omit the fourth element, air, the carcafes were exposed upon the banks of the Wolga, to be devoured by birds of prey, or Tartarian dogs. If they were devoured by dogs, it was deemed a lucky omen, for dogs being looked upon in a facred light, they supposed that the spirit appertaining to a carcase belonging to any person devoured by dogs, must be in an absolute state of felicity. This mode of treating the dead, has, however, for fome years been prohibited by an order from the imperial court of Russia; and the Kalinucks, at present, are compelled to bury their dead, in the fame manner as the Christians of Astracan.

The Kalmurks are always quarrelling with their neighhours, though they feem neither to be irrayed by ambition or avarice; and have a particular enmity to the Karacal-paaks. To prevent these quarrels, the Russians are under the necessity of keeping a military force in the fummer-time upon the banks of the Wolga.

The dogs of this country are exceedingly fierce and very voracious, and will attack any man . . o gives them the least offence. They will, in bodies afault a number of armed men; but the inhabitants o Aftracan frequently go out on purpose to shoot them, so that it is supposed the hole species will in time be extirpated.

We shall proceed next to the description of Circaffian Tartary: this country is bounded by Afracan and the Cafpian fca towards the east; by Georgia and Dagistan to-wards the fouth; by the river Don, the Palus Marotis and the Black fea towards the west; and by Russia towards

The thief city is Kizlaar, which was built by the Ruffians; the citadel is only formed of earth, but the garrison confifts of about five hundred regulars, and three thousand Coffacks, the latter of whom are permitted by the Ruffian government to erect habitations on the banks of the Terek. Kizlaar is only in forty-foar degrees north latitude, confequently the air is wholfome and fetene.

The next town is Terki, fitures on or near the Caspian

fea, about three or fourfeore miles to the fouthward of Aftracan, and frequently mistaken for. Terki, in Dagestan, a great deal farther fouthward, and subject to the crown of Persia. Terki is situate in a large plain, and defended by a wall of earth with bastions, after the modern way; and the buildings are for the most part of wood. This was the Muscovite frontier towards Persia, till very lately, and generally had a numerous garrison; but they are now advanced much farther fouthward through Dagettan and Shirvan, into the Persian provinces on the south

The Circaffian fea.

The Circaffian Tartars generally acknowledge themfelves dependent on the crown of Ruffia, though there are inflances where they have not flewin the fubmilities of fubjects, which is not much to be wondered at, fince they jects, which is not much to be wondered at, fince they live fo remote from the feat of the government, and are ever rambling from one place to another. Those Circassians who lie next to Persia and Turky, may be reckoned under the dominion of one or other of those crowns: but nothing is more common than to put themselves sometimes under the protection of one prince, and sometimes under another. There is no considerable town in this country, except Kizlaar, which is inhabited chiefly by Russians, for the whole nation of Circassians live in tents or huts according to the season of the year, removing from one place to another, like their neighbours of Astracan: nor does the country produce any thing valuable enough to does the country produce any thing valuable enough to induce foreigners to build or fettle amongst them.

We are informed by a gentleman who travelled into these parts, that being sent into Circassia by the late Czar, to view the mines of that country, he sound they were well furnished with silver ore, and that the kneeses (the Tattar furnished with silver ore, and that the kneeses (the Tartar lords) produced some pieces of ore, which upon assay afforded a great deal of silver: that he found the people tolerably civilized: that their military men wore armour, with a kind of silk vefts or gowns over it. That their arms were bows and arrows, and they were generally very well mounted. That they lived in summer under tents like their neighbours, and there was a great variety of beautiful women amongst them. And from thence it seems it is, and from the peighbouring country of Georgia.

beautiful women amongit theri. And from thence it feems it is, and from the neighbouring country of Georgia, that the harams or feraglio's of Ispahan and Constantinople are chiefly supplied with virgins.

Though Circastla produces very little grain of any fort, they have large herds of cattle which they drive before them like the other Tartar nations, and stay no longer in smallest that they are find achieve for them. any place than they can find pasture for them.

any place than they can find patture for them.

A gentleman who travelled through Circaffia, gives us the following account of that country: nothing, he fays, can appear more agreeable than the profpect of it, on account of that variety of mountains, vallies, woods, little lakes, springs and rivers, with which it is every where divertified. It is fertile beyond imagination, every thing grows there almost without fowing, at least, whatever they fow, which is usually barley, cats and cummin, thrives to admiration, after only once slightly turning up the earth, which they do but just open to receive their grain. Though this account of the foil is very different from what other travellers give us, who usually represent Circassa as bartravelers give us, who untaily represent Circaina as a bar-ren country; yet as they all agree that great herds of cat-tle are fed here, it must certainly produce good herbage, and confequently would produce plenty of grain if it was well cultivated; but the natives wandering from place to place, sow no more, it seems, than will just serve for the subdiffence of their families; and if there happens to be a bad erop, they are reduced to great distress for bread corn, at some cautheren observe.

as fome gentlemen observe.

The Circaffians, both men and women, are of an easy thape and well proportioned. Their complexions good. Their features just according to the notions we entertain of beauty. Their hair and eyes are generally black, and of beauty. Their hair and eyes are generally black, and not a cripple or a crooked person scarce to be sound among a them. The women wear no other head-dress than a filk or fluff cap in the house, their hair hanging down in two treffes behind them, but are vailed when they go abroad. The general food of the Circassians is mutton, beef, poultry, wild fowl, and venilon, all which they have in poultry, while rown, and evention, all which they have in great plenty; but a piece of a young colt is preferred be-fore any of these. Their bread is made into thin cakes, either of barley meal, or millet, which they bake on the hearth. They are extremely hospitable, and will not suf-fer a traveller to pay any thing for the enertainment of himlest, his fervants, or horses; but will contend frequently who shall have the honour of treating bilin. As for the natives, when they are upon a journey, they carry no provitions with them, but are as welcome in every house they arrive at, as in their own; so that if any people may be No. 11.

faid to have all things in common, it is the Circaffians. Their usual drink is water or mare's milk, like the other Tartars; and persons of all ages and sexes smoke tobacco. Tartars; and persons of all ages and sexes smoke tobacco. They sit cross-legged, and have a carpet or piece of Russian leather spread before them, stid little wooden tables, at their meals; but neither linen nor plates. They observe no regular hours for cating, drinking or sleeping; but just as they have inclination or opportunity. The river Terek, which slows from east to west; produced great variety of sish, as sturgeons, slamon, &c: It meanders beautifully through the country, till it disembogues itself into the Capinan sea.

Those Gircassians, who are immediately under the pro-

ders beautifully through the country, till it dilembogues idelif into the Calpian fea.

Those Circallians, who are immediately under the protection of the court of Russia, have chiefs of their own, the principal of whom is stilled becovitch; he is a majorigeneral of irregulars in the Russian army: he is however always ordered to remain in Circassian, where its imagined his fervices can be the most useful. Though the Circassian princes, are exceedingly honoured and respected by the subjects, yet such is their independency of the people, that they are not obliged to do any thing at their command, but are guided by their own inclination. The princes themselves are likewise independent on each other. Whatever presents the Empress of Russia sends to the Circassian princes, their respective subjects expect a part. If the things cannot conveniently be distributed, they will have an equivalent in specie, or such a commodity as may be easily parted among them. The spoils taken in war are divided amongs hen. The spoils taken in war are divided amongs them to them.

Their substitution to Russia is only consined to a formal each of University and the substitution of Sussian constitution of a formal each of University and the substitution of Sussian constitution to a sussiant constitution to Russia is only consined to a formal each of University and the sussiant constitution of Russiant constitution to Russiant constitution of Russiant

from any fhare of them.

Their fubordination to Russia is only confined to a formal oath of allegiance, in which they twear to be submissive to a certain number of general laws, as long as their being so continues to be effential to the good of the Russian and themselves. The imperial court, for many cogent reasons, feldom interiers with their political, and never with their religious concerns. They have a great veal nearling for antient houses; and are extremely tanacious of their family bonour, by not intermatricing even for of their family honour, by not intermarrying, even for

gain, with an inferior.

The contract for marriage is entered into by the parents or guardians; after which, the young couple are permitted to fee each other; and after a few wifts, the aftair is con-cluded, and the bride is fent home to the bridegroom's cluded, and the order is left home to the bridgeroom's house in a close waggon finely painted, attended by her women. But as the bride's relations give nothing with her but a few fuits of cloaths, this matter often falls heavy on the bride's relations of horfes, dromedaries, cafents to the bride's relations of horfes, dromedaries, camels; cows, &c.

Polygamy is permitted to such of the Circassians as pre-fer the Mahometan religion.

fer the Mahometan religion.

Thefe people, like the Turks, have harams or feruglios for their women, from which all men except the hulband is excluded. Thefe are contiguous to their dwelling houses, though seperate from them. A remarkable culton in this country is, that when the principal lady of any of their princes is in labour, the first Circassian who hears of tie, let his station be ever so menial, runs and places him felf at the door of the haram, from whence none are authorized to drive him. When the lady is celivered, if it happens to be a boy, he is richly dressed with the utmost speed, and delivered to the Circassan, who inuncediately takes him home, and, if he is a married man, delivers him to his nome, and, it he is a martier man, delivers min, to his wife to nurfe: if he is a bachelor, a nurfe meal be provided, and the child remains under his inspection and tuition till he is nine years of age, when he is restored to his parents, who receive him with great rejoicings, and many public ceremonies. The reason they give for this singular cultum, is that the child may not be spoiled in his infance. by the delicacies of a court, or the effeminate treatment which its would receive in the naram; but rendered, by this means, so hardy and robult as to become in time a buggateer or liero; for personal courage and frength are effected as the most noble qualifications of a human being

buggated as the most noble qualifications of a numan penning by the Circassians.

The country abounds with wild swine, wolves, and foxes; which they earth in the following manner: after digging a hole in the earth nine feet deep, they drive a stake into the middle, which projects from the surface of the earth about four feet. Upon the top of the stake a moveable cart-wheel is fixed, to which a young pig is saftened in the evening. The mouth of the pit is then covered with branches of trees in a very slight manner, over which grass is scattered. The pig does not sait to squeak all night, being irritated by its confinement. When any of the wild animals hear the noise, they hasten to visit the place; F i

114 THE NEW AND UNIVERSAL SYSTEM or GEOGRAPHY.

which they no fooner approach than they fall into the plt, where they remain till morning, being totally unable to diffengage themfelves. The hare is hunted with hounds, as in England. They have great variety of game, particularly pheafants.

Reyond the independent village Bragutkoi, fouth of the river Terek, they have a hot fpring. fituated upon a hill; water boiling hot iffues from it, which finells ftrongly of naphtha, and falls into a bafon of about twelve feet diameter, and three feet deep. On the welf field there are diameter, and three feet deep. On the west fule there are feveral small springs of the same kind of water; and on the east side there is an acid spring. The water of the chief well will boil a fowl in about nine or ten minutes.

Provisions in general, and meat in particular, are exceedingly scarce here.

About the city of Terki there are a great number of repents, which make holes in the ground that are extremely dangerous. They are fix or feven feet long, and about as thick as a man's arm. There are likewise mice as large as fourierls, which are called jerhuch. Their ears are long, and their fore feet shorter than those behind, which prevents their running swiftly: but they lay their tails on their back, and leap to a considerable height or

SECT. IV.

Contains a description of the river Jaik, together with an ac-count of Karakalpaak, Kirgee, Baskeer, Usbeek, Crim, and

A T abe ut three hundred wersts from the louise of more river Jaik, which runs through a desart of a prodigious extent, and at length empties itself into the Caspian sea; there is a strong town built by the Don Cossaks. This, after the river, is called Jaik, and the Cossaks have bravely defended it from the attacks of all the different Fartars that furround it. There is no inhabited place, except the above-mentioned town, between Aftracan and This vast defart is, however, infested by innumerable hords of wild Tartars.

The Karakalpaaks wanders about the Caspian sea, to the northward of whom the Kirgee and Baskeer Tartars take up their abode. The Kalmucks are continually at war with these tribes. The Kirgees and Baskeers profess the Mahome an religion; and, being perhaps the most ignorant and unpolished of any who profess it, they are of

course the most superstitious.

In the year 1739, during the war between the Russians and Turks, the Kirgees and Baskeers, consonant to the notions they had imbibed, thought they could not do a more esential service to Mahomet, than by injuring the Russians as much as possible. They accordingly sell upon all the desenteless towns and villages of the province of all the detellicies towns and villages of the province of Umfimafolkaga: all who were young and vigorous they carried with them, defigning either to use them as slaves, or to fell them as such. The old, infirm, and very young, fell indiscriminate victims to their remorfeles sury. The governor of Orenburg, however, being informed of these cruel depredations, dispatched a body of five thousand regolars and three thouland Cossaks, who marched with fuch screecy, that they attacked the Kirgee camp in the night, and destroyed the greatest part of those barbarians, though they were twenty thousand strong at the time.

The river jaik was first discovered by the Cossaks, who

acquired great riches by filning in it; and, after having cured their fifh, felling them to the Aftracan merchants for

the Russian market.

A scheme having been entered into by Peter the Great, for turning the Wolga to a political advantage, he gave an exclusive privilege with respect to the fishing to one Demidioff, advancing at the fame time twenty thousand rubles, the better to enable him to carry his defign into execution. In a few years Demidioff repaid the money, and became exceedingly rich. At length, the filheries carried on in the Jaik river exciting the attention of the court of Russia, they determined to tax the filteries on that river, as well as those of the Wolga; proper officers were accordingly fent to enforce the tax, but they were thrown into the river and drowned by the Cossaeks, to whom the very idea of any kind of taxation was odious. Continual expresses were fint from St. Peterflurgh to inquire why the officers had not fent an account of their proceedings; but the mediengers were treated exactly as the officers had been. At length the court was informed of the whole affair, but it was thought most prudent to wink at the infult, the

Russian ministry having too much sense to quarrel with a set of people, whose situation rendered it impossible to conquer them, and whose sentiment ensured their inde-pendency.

pendency.

The Ufbecks are generally efteemed the most civilized of all the Mahometan Tartars; nevertheless they pillage and rob their neighbours, as well as any other Tartarian tribes.

They nearly refemble the Persans in their drefs; here their boots, which are uncommonly tribes. They nearly refemble the Perfains in their drefs; but we must except their boots, which are uncommonly large. The chiefs wear a plume of feathers in their turbens, and, as well as their chan, pride themselves much on being the descendants of their renowned Tamerlane. Their common food is pilau, or boiled rice; but their greatest delicacy is horse-sein. They drink a kind of arrac or fermented liquor made of mare's milk. Their language is a mixture of the Turkish, Persian, and Mongol; but they are well acquainted with the Persian language in its purity. Their arms are like those of the other Tartas, viz. large bows, arrows, darts, and sabres, which they use with admirable addrefs. Of late they have begun to use mustees, and many of their eavlary wear excets of mail. use muskets, and many of their cavalry wear coats of mail, and carry fmall bucklers.

It is affirmed, that the Tartars of Great Bucharia are the most courageous and rohust of their whole nation.

The Persians, who are not deficient in courage, look upon I he Perfians, who are not detecent in courage, look upon them with terror. The women themfelves affire to military reputation: they are flrong and well limbed, but in their features have all the delicacy of Afiatic beauty. The horfes belonging to the Tartars are not handfome, but they are hearty, indefatigable, and exceedingly (wift; they are the best adapted in the world for scouring the defarts, as they can live upon almost any thing, and a very small quantity of provender seems sufficient to keep up their

The Ufbeck Tartars are continually at war with the Perfians, the fertile plains of Chorazan exciting them to make frequent incursions into that rich and plentiful country; they do not find it quite so easy to penetrate into the dominions of the Great Mogul, on account of the prodi-

gious mountains which intercept the paffage.

Those Usecks who subsist upon their cattle, or by plundering their neighbours, live fometimes in liuts, and fometimes in tents, every tribe forming a camp of its own, and, like other Tartars, they frequently move from place to place, as it fuits their inclination or conveniency. O. thers, who cultivate the earth, and are fomewhat honester in their principles than their wandering brethren, form fo-cieties, and live in towns and villages; these latter are either the real Buchanians, are descendants from the Sartes, the antient inhabitants of the country; or the Turkomsros, who were fettled in the country long before the Ufbecks or Tartars, properly fo called, fubdued it. The Ushecks in general, however, despife the thoughts of cultivation, and deem it meritorious to make excurtion upon and plunder their neighbours.

The capital city is furrounded by a mud wall: the houses are built of wood, but the mosque and caravanieras are of brick: it is tolerably populous, but not equal to what it was formerly. The chan takes the liberty to seize upon the property of any one; which injures conumerce, and damps the spirit of cultivation.

For a further account of these people, the situation of their country, rivers, account of Tamerlane, their great leader or cham, &c. we must refer our readers to the de-feription given, page 57 of the Chinesian Tartar kingdoms and state; and shall close this part of our work with an account of Crim Tartary, which was antiently ealled Taurica Chersonesus.

This country, which is inhabited by the Crim and Lefgee Tartars, is furrounded by the Black fea on the west, fouth, and part of the east; on the north, it has the Palas Mocotis, and Leffer Tartary joins it, on the north-west, by a narrow ist.mus. Its greatest extent, from north to fouth, is about one hundred and fifty-five miles; its greatoft breadth, from east to west, is near one hundred and forty miles; and its breadth in other places is only about eighty miles. It is fituated between thirty-three and eighty miles. It is lituated between thirty-three and thirty-feven degrees east longitude, and between forty-four and forty-fix degrees north latitude. The chief cities, if they may be so called, are Precop, Crim, Aarabet, Sachingeri, Cassa, Sidagoy, &c.

It is exceedingly fruitful by nature; and, were it properly cultivated, would be a fine country. There are towns and villages; but the houses are wretched hats. It is solvied to a he Grant Simon, whom the clean is obliged.

is subject to the Grand Signor, whom the chan is obliged, in time of war, to surnish with thirty thousand effective men. These troops, however, never receiving any pay,

entertainment.

Thefe people, in time of peace, purchase beautiful children in Circaffia, and fell them to the Turks, who pay for them in cloathing, arms, coffee, tea; rice, raisins, &c.
They travel in close carts, which contain themselves, their wives, children, baggage, &c.
When their daughters marry, the only portion they give is, a painted waggon, and a hut covered with white linen, with a painted cloth at the top, tied with red ftrings; but they expect a handsome present from the bridegroom. They bury their dead very deep in the ground; creek a tomb of mud over their graves, and adorn it with a variety of slags, expressive of the quality, circumstances, and actions of the decased.

The Lesgee Tartars are an independent people. Their country extends near an hundred miles in length from north to fouth, and about fourteen from east to west. It

is fertile and pleasant, producing all kinds of grain and cattle. The people are good mechanics, and carry on feveral manufactures: they are not only very warlike, but excel in making fire-arms, with which they trade into Perfia. Their chiefs, who are named shamkalls, in any common case of danger, unite their forces, and are unanimous in their operations.

The natives was obline and wall proportioned takes.

The natives are active and well-proportioned; their eyes are black and full of fire; their complexion swarthy, and their features regular and engaging. They dress after the Arabian sishion, and wear whitkers: some few indeed

the Arabian fathion, and wear whifters: fome few indeed let their hair grow.

They trade with the Persans, Russians, and Armenians, giving fire-arms and madder for cloathing and necessaries. But though they are fond of commerce, they can rob and plunder as well as any of the other Tertars; however, if they promise to protect or conduct any stranger they never break their words, or violate the laws of hospitality.

Their mode of worship is the same as that of the Turks, and they imitate the Persans in their manners; but in one particular they outdo most of the oriental nations, for they can drink like Europeans, whether British or German.

C'HAP. VIII.

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF

SECT. I.

Of the situation, extent, names, seas, rivers, mountains, air, winds, and scasons, division of the country, and towns.

A RABIA is fituate between thirty-five and fixty degrees of eaft longitude, and between twelve and thirty degrees of north latitude, being one thousand three hundred miles long, and one thousand two hundred broad; and if we include the antient Chaldea or Eyraca Arabick, we may extend it two degrees further north. The boundaries of Arabia, are, Turky, on the north; the gulphs of Parks or Rossers and Ormus. on the east; the Indian RABIA is fituate between thirty-five and fixty de-Perfia or Boifora and Ormus, on the eaft; the Indian occan, on the fouth; and the Red fea, and the Ifthmus of Suez, which divide it from Africa, on the weft.

Arabia is the antient, as well as the modern name,

Araba is the antient, as well as the modern name, though the people have been long called Saracens, or the inhabitants of the defarts; Sarra in their language fignifying a defart. Some derive the name Arabia from Harabi, a thief or robber, as they have been generally efteemed by their neighbours, ever fince they were a nation, to the prefent time: others observe, that the word Arab in Hebrew fignifies black; as the inhabitants of this country, it is faid, antiently were, and this country called Ethiopia, as well as Abythnia, or the Upper Ethiopia, which is divided from it only by the Red sea, and the narrow streight of Babmandel.

mandel.

The feas and promonories of Arabia are the Indian occan, the gulphs of Boffora and Ormus, the Red fea, and the streights of Babmandel, in which are the capes of Rofaigate, Mussicelen and Mocho.

The Red fea, fometimes called the Arabian gulph, divides Arabia from Egypt and Ethiopia; but if we take it in its largest extent, the name of the Red fea was given aniently to all those feas which border upon Arabia and Persia from Africa to the East Indies. The reason of calling it the Red sea, some imagine the red mountains near to occasioned it to be called so; others, that the red sand upon the shore gave it that name; and others are of opinion, that it had its name from king Etythrus, sovereign of this country, which Erythrus is supposed to have been East, whose posterity planted part of Arabia. It is called in seripture Yam Souf, the sea of weeds or rushes, the banks being covered with them in some places; but from banks being covered with them in fome placet; but from whencefoever the name is derived, no fea has been more wheneeseever the name is derived, no rea has been more celebrated than this upon various accounts; as, 1. The paffage of the Israelites through it; and, 2. for being the usual road through which the fine fpices and all the rich merchandize of the east were conveyed to Africa and Europe, for three thousand years and upwards.

No country is more destitute of rivers. Chat, Pran, and Nagiran, are the chief, neither of which is navigable; and some add the western branch of the Euphrates, which runs

near the eastern borders of this country.

The mountains are those of Gebel-el-Ared; or the great mountains in the middle of the country, and those of mount

Sinai and Horeb in Arabia Petræa.

As to the air and winds, those parts of it which lie within the tropic of cancer, or near it, are excessively hot, and have their monstoons and sea breezes regularly, as in other countries, under the same parallels; the vernal monfoon, in the ocean on the southern coast of Arabia, blows from the fourth-weft from April to September, and then this or turns about, and blows in the opposite direction, the other fix months. The hot winds are intolerable in April and May; they have generally clear ferene weather, feldom fkreened from the fcorching fun by clouds, or referred with flowers.

freshed with showers.

Arabia is usually thrown into three grand divisions, viz.

Arabia Petrza, Arabia Deferta, and Arabia Felix.

Arabia Petrza is the smallest of the three, and is situate in the north-west part of this country, between Egypt and Palestine, the chief town Suez lying at the bottom of the Arabian gulph or Red sea, being the port where the Turkish gallies usually lie. Tor, a port town on the Red sea, so the Arabian gulph or Red sea, so which divides the Mediterranean or Levaut from the Red sea, is about one hundred miles, over the most mountainous and rocky country of all the Arabia's, which it is impossible to cut through, nor has ever any prince attempted it, though it through, nor has ever any prince attempted it, though it would have much thortened the voyage of the Europeans to the Eaft Indies, if it had been practicable. In the plains of Arabia Petrae there are abundance of acacia trees, from which iffues a valuable gum, that is gathered in autumn.

Arabia Deferta is so called from the nature of the soil,

which is generally a barren fand; however, there are great flocks of fheep and herds of cattle near the Euphrates, where the land is good. In the defart, there are great numbers of officienes, and there is a fine breed of camels in

feveral places.

Arabia Felix is fo called on account of its fertility, with regard to the reft. Some give it the name of Yemen, but improperly; for that is a kingdom on the fouth coast, whose capital is Sanae.

We shall next proceed to the description of some of the principal towns; and sirst, of Medina, where Mahomet's tomb is: this is called by the Arabians Medina Talmabi: the city of the prophet, being the place Mahomet fied to when he was driven from Mecca, and where he was fift invefted with regal power. It lies in the latitude of twenty-four degrees thiny uninutes north, about eighty miles to

the esstward of the Red sea, and two hundred miles to the north of Mecca. It consists of about a thousand houses the-essward of the Red less, and two fundred mines to me north of Mecca. It confils of about a thouland houses built of brick and stone, but not very lofty, having but one shoor: there are several noble mosques in the city, the principal whereof is called Mos a Kibu or the most holy; it stands in the middle of the town, and is a square building an hundred paces in length, and sourfeore in breadth, and supported by four hundred columns, on which there hang four thouland lamps. Mahomet's tomb stands in a tower in this temple covered with a dome, and encompassed with iron rails: the tomb itself is surrounded by a filter. tower in this temple covered with a dome, and encompassed with iron rails: the tomb itself is surrounded by a filver-grate, and the wall on the inside is bung with rich filks, upon which are abundance of precious stones, the gifts of Mahametan princes: The pilgrims never see the tomb itself, only the tower which it is enclosed in; but when the pilgrims are returned home, and the crowd is lefs, they make no difficulty of shewing it to any Mahametan for a

piece of money.

Mecca stands about two hundred miles fouth of Me Mecca fands about two hundred miles fouth of Medina, in the latitude of twenty-one degrees fome old minutes, and is a day's journey to the eaftward of the Redfea in a valley alraoft furrounded with mountains; it is twice as large as Medina, built of brick, with flat roofs, and ballufters on the top. In the middle of the town flands the kaaba or house of God, which, according to the Ara-Ban tradition, was built by Abraham, and to which Mahomet obliged all his followers to go in pilgrimage once in their lives. This house is not above fifteen feet in length and twelve in beacath, and sout five fash trus high; the door is in the corner, on the left hind, about a fathom and a half high and a fathom wide, made of beaten filver, it being raifed fix feet above, it yound: the roof is flat, and supported by three pillars a locs wood of an octagonal form; the fides are hung with red and white fluff, with the following words several times wron hit in them, viz. La Illa Illalla, Mahomet resoul allah, i. e. God is a great God, and Mahomet his prophet. God, and Mahomet his prophet.

Sibit is fituate near the eaftern shore of the Red sea, in

forty-five degrees of eaftern longitude, and fifteen degrees of north longitude, being the greatest mart for myrth, frankincerse, and other odoriferous gums and drugs in Asia; but there are no spices either here or in any other part of Arabia, though the fine spices which are the growth of the Indian islands, are frequently called Arabian spices, because they were first brought by the caravans to Egypt, and other countries on the Levant sea through Arabia.

Mocho, or Moco, is fituate on the eastern shore of the Red fea, just within the streights of Babel Mandel, about one bundred miles fouth of Sibit, in forty-five degrees of eaftern longitude, and thirteen degrees of north latitu It flands in a barren fandy plain, and has the greatest plan-tations of coffee in the world, in the adjacent country; and from hence coffee was first brought to Europe by the Turks, though there are several islands in the East and West Indies at present, that produce coffee; however Moco has still a great trade in that commodity. The town is large and populous, the house well built with brick and stone, the roofs stat and terrassed, the shops surplished with all manner of eastern merchandize; and here the several East India companies of Europe barter the produce of India for their coffee, frankincense, &c. the produce of Arabia.

Aden is fituate without the streights of Babel-mandel,

about one hundred and twenty miles eaft of Moco, being a port town on the Indian or Arabian ocean, in forty-fix degrees of eastern longitude, and twelve degrees of north

Muscat is a port town, fituate on the western shore of the gulf of Ormus, about one hundred and fifty miles north-east of cape Rosalgate, in fifty-eight degrees of eastern longitude, and twenty-three degrees of north lati-tude. It lies in a bottom, surrounded by three rocks, which secure the harbour, and render it of difficult access which recure harbour, and render to a finitum access to foreigners. It was once possessed by the Portuguese, but is now capital of a large territory, subject to an Arabian prince, called the king of Musear, or Oman, who is the only naval power on the coast of Arabia, except the Turks, who are matters of the navigation of the Red sea; of which we thall be more particular, when we come to treat of the forces of the Arabian princes.

Eleatif is the laft town we shall mention: it is fituate to the northward of Muscat, higher up the Persan gulf, in

the latitude of twenty-feven degrees north. This was formerly a place of great trade, and much reforted to when the pearl-fishery near it was in repute: but is at present on the decline, the king of Muscat or Oman having brought all this coast under his subjection.

The Arabs who live in towns are a very inconfiderable The Arabs who live in towns are a very inconfiderable number, compared with those who live in tents, and are called Bedouins: these people have no fixed habitation, but being possessed of large stocks and herds of camels, sheep, and goats, rove from one part of the country to another, where they can find pasture and water for their cattle; and when they have destroyed all the forage, they load their goods and baggage on their camels, with their wives and children, and march on in search of fresh pasture. Their tents being made of black or dark-coloured goats hair, make a very indifferent appearance when they encamp.

SECT. II.

Treass of the perfent, habits, genius, food, falutations, roads, and way of travelling, G.c. of the Arabians.

HE natives of Arabia are of low Rature, flender bodies, and fwarthy complexions: their voices are farill and effeminate, their hair is of a dark brown, and their eyes are black and fparkling; they weat long beards, as a mark of gravity and confequence; being ferious and referved, they fpeak little, use no getture, make no pauses, and never interrupt each other.

Their apparel is a loose diforderly kind of dress, five or fix yards long, and not less broad: this they wrap round them, and are forced to gird it with a fash; at night in ferves them for a bed and coverlid. Their upper garment is generally wove in one piece; it has a cap for the head, is tight about the neck, and grows wide towards the bottom; this garment is only worn in ebld and rainy weather; under this, and the garb that wraps intirely over the whole, fome of them wear a long clofe-bodied waiftcoat without fleeves; their fash or girdle is of worsted, and in ut they thick their poniards, their ink-horns, or badges of their calling. The woman wear a kind of short waistcoat and drawers; but fometimes they have only a towel wrapped round their loins. When they go out; they are so wrapped up, that nothing can be seen but their faces: for the male Arabs are extremely jealous. Some of the men go almost naked in hot weather; others wear drawers and slippers, but they have not flockings on their legs.

Though this people are not more taken notice of for rambling than they are for thieving, both by sea and land, and the not in small parties only, but by publick authority in a manner, with their princes at the head of them; rity in a manner, with their princes at the nead of them; there are notwithflanding frome modern travellers who cry up the Arabians for their judice, humanity, temperance, and other virtues at a very great rate; but this feems contrary to univerfal experience, or they must mean that judice which they exercise among themselves; for certainly feedings were often offer by their rapine; we find that the property of themselves are the first property and the state of the sta foreigners very often fuffer by their rapine : we shall take the liberty of repeating, however, what Captain Say relates of the justice and other virtues of those Arabians who inhabit near Muscat: he says " they are very courteous in their behaviour, extremely civil to strangers, and offer no violence or affront to any, and though they have the highest veneration for their religion, never endeavour to force it upon others; that a man may travel hundreds of miles in upon others; that a man may have innerces of muse in their country, and not fo much as meet with abufive language, and if the traveller has a charge of money, he needs no arms to defend it, he may fleep with it fairly in his hand by the highway fide."

Their food is rice, beef, mutton, goat's flesh, venifon, and camels flesh, which they efteem more than any other,

but they eat no hog's fieffi; and they make thin cakes of flower and water inflead of bread; but many of them choofe dried dates before them; they eat also not forts of fish, except fuch as have no feales; but whatfoever animals they eat, they are very careful to have all the blood well drained out. Those about Museat do not only abstain from wine, as other Mahometans do, but deny themselves even tea and coffee, and other innocent liquors: nor do they indulge themselves in fanoking tobacco: water is their ordinary drink, or a sherbet made of oranges, water and fugar. They dress their victuals by digging holes in the earth, and then making a fire with whatever they can get, or with the dried dung of their camels: they carry water

with them, loading their camels with that necessary article. People of the highest character among them think it no difgrace to be employed in the most menial offices; nor is the greatest prince or chief of these countries ashamed to turn drover or butcher, by bringing a lamb from his herd, and killing it; while his lady or mattrefs makes a fire, and puts on a kettle to drefs it. ble ard on, ela, anicir hey heir oafired hey

Upon meeting one another, they fill use the primitive falutation of, "Peace be unto you." Before the Mahometan conquelts, the expression was, "God prolong your life." The interiors, out of respect and difference, kills the nte. The interiors, out of refpect and difference, kifs the feet, knees, or garments of their fuperlors; whillt children and other kindred pay the fame refpect to parents and relations. The potture they observe in giving one another the falute, or atlemah, is laying the right hand upon the breast; while others, who are perhaps more intimately acquainted, or of equal age and dignity, klis the hand, head, or thoulder of each other. At the selfs conditions to the refer following the wife compliments.

head, or shoulder of each other. At the seast of their pyram, and other great folemulies, the wife compliments her hulband by kiffing his hard.

There are no roads laid out in this country, but the caravans travel over fandy defauts, where there is no manner of track; guiding themselves by a compast, as at sea, else by the stars, for they travel chiefly in the night on account of the heats. People choose to travel with the drawners in which are forements two or street hundred. caravans, in which are frequently two or three hundred men, attended by a great number of camels and dromedaries, for conveying their necessaries and provisions. The camels will carry fix or seven hundred weight; and the droundaries, which are a species of camels, but less, about five hundred weight; both lie down to take up, their burthens, and will travel through this parched country selbs or sulfid darks included and selbs or sulfid darks included and selbs or sulfid and selbs or sulf

eight or tilde days widhout water.

As there are no caravanieras or houses of entertainment for travellers to call at in the defart part of the country, travellers provide themselves with tents, which are set up in bad weather; but when the weather is fine, as it most in bad weather; but when the weather is fine, as it most commonly is, they lie down upon a carpet or matras in the open field; and as they are obliged also to carry their provision along with them, the flaves and fervants who belong to the caravan get ready their masters meat when it is thought convenient to halt. "neir way of drefling meat; is to make a little hole in the ground, and fet a pot over it, and if there be no brakes or fewel to be met with; they make a charcoal fire, and a they convince they make a charcoal fire, and a they convince they make a charcoal fire, and a they convince they make a charcoal fire and a they convince they make a charcoal fire and a they convince they make the convince they make the convince they make the convince them. they make a charcoal fire; and as they fometimes meet with no water in feveral days journey, they carry water with them in skins, with which they load some of their earnels. The Arabs observe, that wherever there are trees, there seldom fails to be water; and one would think the camels were sensible of this as well as their think the camers were remined of this as well as their mafters, for when they come within fight of fuch places, they are not to be refutained from fetting up their great trot to come at it, especially where they have had none for some time: the natives imagine these creatures smell the water at a great diffance.

The people of the caravan, before they begin their match, elect an officer, called the caravan batha, who is in a manner their leader, and directs all their motions, and where they shall rest, and to whom all differences which happen upon the road are referred; he compounds also for the several duties demanded of the caravan, by the governors of the countries through which they pais.

The incichants who travel with the caravan, ride upon horses or mules, and sometimes opon asses, which travel fuff enough for the loaded camels, who feldom go above a foot-pace; and the Christians or Franks, as they are called, are obliged to provide themselves with mules or pack-horses to carry their wine; for the camel-drivers being disciples of Mahomet, will not suffer that animal to be loaded with ftrong liquor, the camel being confecrated to Mahomet, who fluidly forhad the ule of wine, and all intoxicating liquors: the wine as well as water is put into goat-skins with the hair inwards, for they foon prove leaky if the hair is off.

Every merchant and his fervants ride near the camels, which carry their goods, to preferve them from thieves a for as they frequently travel early in the morning, and late in the evening, these pifferers, fornetimes, cut the strings by which the camels are tied together, and lead off some of them without being perceived.

There are fome poor people who conftantly attend the caravan, who ferve as watchmen when they are encamped. They walk about, continually crying, "God is one, God is merciful," adding frequently, "Have a care of your-felves." They give notice also to the caravan basha when it is time to rife, who orders the watchmen to cry, "Saddle your horses," and a little after, "Load your goods:" whereupon they all appear ready for the march i When the march happens to be long, the merchants will halt by themselves, and while the caravan marches on, open their wallets, which every man carries upon his horte, and dine viou a carpet.

Travellers are advited to drefs themselves in an Arabian

vest and cap, or they will be liable to infults from the zeal-No. 11.

ous Arabs, and perhaps topped at fome of the towns, they pass through. Boots made of a kind of glove-leather, which are no hindrance to walking, must be had alfo, but they never wear spurs, the flirrup having a sharp spike fixed to it, with which they prick their horses.

There being but very few rivers, the water they meet with, is usually sound in wells or cisterns, where no more than two or three people can draw water at a time, so that a traveller must wait several hours sometimes, before he can get a drawful of water a the cannel chivers will have their

get a draught of water; the camel-drivers will have their cattle first served. They are a brutish fort of people, and so numerous, that there is no contending with them.

SECT. III.

Of the nature of the foil, busban.rs, gardening, plants, ani-muls, &c. of Arabia.

Till S country, even that part of it which goes under the name of Hyaman, or the Happy, confifts for the most part in fandy delarts, or dry barren mountains; but there being some parts of south Arabia tolerably fruitful, and abounding in corn and herbage, as well as aromatic guins, it is, compared with the other parts of Arabia, a

happy country.

They never endeavour to cultivate their hills, being for the most part a rocky foil, and scarce capable of improvethe most part a rocky foil, and fearce capable of improvement: their vallies from equally barren when water is wanting, and bear fearce any herbage; but where they can bring water into them, they produce corn; berbs, flowers, and all manner of garden fluff; and no country in the world affords a rrore agreeable profpect. They draw water in large skins out of their wells morning and evening with oxen, conveying the water along little canalit, by the sides of which their uses and plants are set; they cut also little channels through their corn fields, by which they let the water into them as there is occasion, for rain they have very feldom any. have very feldom any.

There is a great variety of excellent fruits in Arabia, fuch as oranges, lemons, grapes, peaches and apricots; but what this country is most famous for, is their dates and their coffee, with which abundance of thips for Europe and India are loaden every year, befides vaft quantities that are fent to Turky. Dates are fearcely found any where elfe but in this country and Persa. The coffee shrub grows eight or ten feet high, and has a gray smooth bark, the wood is white, and has not much

pith; the twigs rife by pairs opposite to each other, and the leaves on the twigs in the same manner, one pair about two inches distance from another. The leaves have soot flalks a quarter of an inch in length, and are about four inches long, and two broad in the middle, from whence they decrease to both extremities, ending in a point. They they decreate to both of termines, ending in a point. A my are fmooth, whole and in ithout any incidures on the edges, and near the form of a by left, the fruit conies ex alis foliorum hanging to the twig by a foot flalk, formetimes one, two or more in the fame place. These structures are planted in a rich ground, and watered by artificial channels, as their other vegetables are, and after three or four years bearing, the natives plant new shrubs, because then the old ones begin to decline. They dry the berries in the fun, and afterwards take off the outward hufk with hand-mills; and the Arabirns in the hotteft feafon make use of the hufks roafted in the room of coffee berries, efteeming the liquor made of them more cooling.

Coffee has been in the abouttwo hundred years in Afia. In the year 1652, Mr. Edwards, a Turky merchant, brought a Greek fervant into England to make coffee, and this fervant of his, named Pafqua, was the first, it is faid,

who kept a coffee house here.

The best coffee berry is large and plump, with a greenish east, and has a transparency on the thinest parts: the other has a yellowish east and is more opaque, but when other has a yellowish cait and is more opaque; but when they are roasled, it is difficult to diffinguish them. The best way of keeping the berries when they are roasled is, in some warm place, where they may not imbibe any moifure, for this palls it, and takes off the briskness of the taste; and it is best to grind it as it is used. It is observed that costee distilled yields double as much oil as beans, and almost treble a much as wheat.

ds in myrrh, manna, cassa, incense, barn and frankincense, besides some Arabia sloes, old other valual: 178 s, and indeed they have very little wanted than tar e vey.

wor of 1 k i re most useful and excellent in t) kin s : the cimels are extremely extremely proper for this fandy country, and the largest of them will carry a vast borthen; some say, near eight hundred weight, and with this burden will travel at the rate of about two miles and an half in an hour; having for many days together only a few dates, some balls of bean or barlay-meal, or perhaps only the misrable thorus found in the fandy defart. It has four stomachs, like other animals that them the cod; and a fifth, as a refervoir to hold more water than it lisd occasion for, where it remains without corrupting or adultrating. It throws up a quantity of this water, by a contraction of the muscles, into the other stomachs, to macerate the food.

The Area has in six shirful camel, from its tender slage.

Romachs, to macarate the food.

The Arab trains his faithful camel, from its tender flage, to all the hardfhips it is to undergo through the whole course of its life; he accustoms it to travel far and eat little, to pass its days without drinking, and its nights without sleep; to kneel down to be loaded, and to rise the moment it finds the burden equal to its strength, beyond, which it will not suffer an ounce to be laid on its back. Its feet are adapted to the funds it is to pass over, their toughness and spongy fostness preventing them from cracking. The Arabian free-booter qualifies his causel for expedition, by matches, in which the horse runs against him. The camel, though lefs active and nimble, tires out his rival in a long course. With these animals the Arabian robber forms a society, for the purpose of carrying on his trade of plunder, in which the man is to have all the profit, while the camel, who carries off the booty, is to have all the fatigue.

the fatigue.

Their breed of Horfes are only fit for the faddle, and are never ofed either for draughtor burthen: the fineft horfes we fee in the Persian court are brought shom hence, and are admired for their make as well as for their high mettle and swiftness. The common food both of camels and horse is barley or barley meal made hat odough; but in some parts of Arabia, they feed them with camel's milk, butter, and wheat, and sometimes with camel's flesh dryed in the superior of the supe

An Arabia: has no relith for domeflic pleafure, and feldom converfes with his wife or children; he values nothing fo much as his horfe, being feldom fo well pleafed as when he is hunting, at which diversion they are very expert; for most of them will hunt down a wild boar with assonishing expedition. After they have roused the loar from its place of retirement, into some neighbouring plain, they endeavour there by frequent overtaking and turning to lire and perplex it; then watching a proper opportunity either to transfix it with their lances from some distance, or else, coming close by its side, fix their socars in its body.

or elfe, coming close by its fide, fix their spears in its body. When the Arabians bunt the lion, great numbers of people assemble for that purpose, who forming themselves into a circle, inclose a large piece of ground, of three, spur or five miles compass; then the people on foot, advancing fast, rush into the thickets with their dugs and spears, to rouse the game, whilst the horsmen, keeping a little behind, are always ready to charge upon the sirth sally of the beast, in this manner they proceed, still contracting the circle, till they at last either close together, or meet with game to die ret them. Sometimes the several forts of animals, such as hyenas, haves, jackals, &c. that happen to lie within the circle, being driven together afford excellent diversion. The first perion against whom the lion shes receives him on his spear, which furnishes the others with an opportunity of attacking him behind; and the lion sindiff b'imself wounded in the rear, turns that way, which gives the first man time to recover. Thus being attacked on all sides, they disable and dispatch him.

A favourite diversion among the Arabs, is fowling: they do not spring the game with dogs, but shade themselves and with a piece of painted cloth, stretched upon two reeds,

walk thus covered through the feveral brakes and avenues where they expect to find game. In this painted cloth are feveral holes for the fewler to look through, in order to observe what palies before him. The fportiman, on fight of the game, tells his shade upon the ground, and, directing the muzzle of his gun through one of the holes, thus discharges it.

charges it.

We do not find that there are any mines of gold or other
metal open at prefent in this country. The King of Mufcat is faid to have the command of the peat! fifthery in the
gulf of Perfia; but though they are very good, no great advantage accesse. So in it, pearls being as dear here as in other
parts of Alia.

E do not find that the Arabians carry on any confiderable manufacture at prefent; but they trade with all Malometan countries, to which they do not only feind the produce of their own country, and receive the product of others in return; but lying between Perfia and India on the eaft, and Europe and Africa on the weft, there are caravans of merchants perpetually going and returning through their country, either belonging to the natives or firangers; and they profit confiderably by the toll they take of foreigners, as well as by the provisions they fell to the caravans. It was by the caravans of Arabie, that Europe, and the weftern part of our continent, were first fupplied with spices and other produce of India, fo, long fince as Jofeph was fold to the Ithruselites, or Arabian merchants, who were then going down to Egypt with them, and how long beforn they were engaged in this traffic, (which continues to this day) is uncertain. In process of time, they began to traffic by fea with India, and brought the fine fipices up the gulph of Perfia and the Red fea; and those that came up the Perfian gulph being landed at Hoffora in Chaldea, or Eyraca Arabick, were loaded on the backs of canels, and brought through Afabia to Egypt, and the thores of the Levant, and from thence disperted by the Phoenicians all over Europe; and the Phoenicians, Egyptians, Ethiopians, and Jews affect and so the reservants grew vastly rich and powerful, by bettering the produce of the west, and brought back the spices, and other neerchandize of the east, in return. The Venetuation Genocia, and other states, situate in the Mediterranean, afterwards grew vastly rich and powerful, by bettering the produce of Europs for the merchandize of India, which they received from Alexandria and the ports of the Levant, and disperfed all ever Europe; but this trade ceased when the Portuguses found the way to India round the Cape of Good Hope, and brought home the same merchandize all the way by water-carriage.

But there is fill another branch of traffic t

But there is fill another branch of traffic that remains to be confidered, and that is, the trade the Malonuckan pilgrims carry on when they refort to Mecca; for thefe expeditions are performed as well on the account of trade as religion. The pilgrims who come from Morocco and the coaft of Barbary, the whole length of Africa, carry the produce of the well with them, which they barter at Mecca for the produce of Perfia and India. The pilgrims of Turky, who neet the Africans in Egypt, from whence they are both convoyed by the Grand Seignior's forces to Mecca, do the fame. 'The pilgrims of India moth commonly go hy fea, as the Perfians do fometimes, when the Arabs are troublefome; and all these are trading voyages; interest, as well as devotion, carries them to Mecca. Mocho is the principal port reforted to by the Turkith gallies, which bring the coffee, and other produce of Arabia, na-Suez, at the bottom of the Red Sea, and from thence it is carried to Egypt, and the ports of the Levant, where the English and other Europeans meet with it: the English Dutch, and other East-India ships also refort to Mocho, directly, for coffee and other goods, which they bring to Europe round the Cape of Good Hope.

Their weights at Mocho are, the balar, which is four

Their weights at Mocho are, the balar, which is four hundred and twenty pounds English: the frallel, or twenty-eight pounds, whereof infecen go to a bahar: the maun, of which ten go to a frailel: the iskea, of which forty go to, a maun; and the coffila, of which ten go to a fakea.

Their dry measures are the medeeda, which is three pints Englith; and they measure cloth and filk by the cubit, which is twenty-four inches.

The coins which are current at Mocho, the principal port in the Red fea, are dollars of all kinds, but they

principal but they abote abate five per cent. on the pillar dollars, hecanfe they are reckoned not to be the purelt filver, and the dollar weight with them is feventeen drains, fourteen grains. All their coins are taken by weight, and valued according to their finences. The gold coins current here, are ducats of Venice, Germany, Tarky, Egypt, &c. The comaffees are a fmall coff, which are taken at fuch a price at the government has upon them, and they keep their accounts in an imag, ary coin of cabeers, of which eighty go to a dollar.

dollar.

The Arabian kingdoms which lie upon the coat, (the houndaries whereof are already deferibed) appeared fome of them to be of a very large extent, and their monarchs are frequently filled Xerifs, as the Xerif of Mecca, and others we find called innan; but both one and the other we perceive, fignify the office of prieft as well as king, as the califs, of the Sarscens, the fueceffors of Mahomet were, till conquered by the Turks, whose emperors do not indeed pretend to the priefthood, but govern and control the ecclesialitical jurisdiction however, as they please, and give laws to the nunfti or high prieft, as will appear when we come to treat of Turky. As to the form of the Arabian government and laws, what we can learn of them is, that their monarchs are absolute both in spirituals and temporals, and the succession hereditary; that they have no other laws than what are to be found in the alconar and the comments upon it, which we shall enquire into

have no other laws than what are to be found in the alcorais and the comments upon it, which we shall enquire into when we come to the lead of religion.

We do not find that they have any standing regular militia by land, but their kings command both the purses and persons of their subjects whenever they see fit: the most potent monarch by sea, is the King of Oman or Museat, who is indeed become very formidable, not only to the Asiaticks, but to the Europeans themselves: they are always at war with the Portuguese and Danes, and if an English reside one in their way, if the be not a ship of sorce, they will not scruple making a prize of her. Mr. Lockhart who travelled to these parts, informs us, there were no less than sourcen sail of men of war in the mole at Museat when he was there, besides twenty merchant men. That one of their men of war carried seventy guns, and none of them less than twenty, but the biggest of them would not have made an English sourch rate, their ports being as close as they can well set their guns by one another. There were at the same time fiscen or fixteen sail of their men of war cruising abroad, which were expected home in the south west monson, when it usually blows hard; for though they are always full of men they cannot endure bad weather. Their colours are red, which they display in streamers and pendants at every yard-arm, and mail-head, and other remarkable parts of the ship, which make their fleets look exceeding sine.

S F C T. V.

Treats of the present state of the sciences, learning, languages and religion in Arabia; also an occount of the temple at Mecca, and the Mahometan pilgrimage thither.

An able writer, (speaker of the time when the Arabians threw of the yoke of the califs) says, "With regard to the sciences, it must be consessed that the Arabians made a most amazing progress therein: it was however late ere they began to cultivate them, though the fire and vivacity of their genius rendered them very apt for the purpose. The truth is, the first califs were utterly ignorant of every thing except the koran and the art of war; but under the government of the descendants of Abbas, a taste for the sciences prevailed throughout the whole nation, and men of learning appeared on every side, who, being savoured and protected by the princes, were improving arts and sciences, and composing works in different kinds of literature." But, whatever progress they may have formerly made in the sciences, they are at present in Arabia at a very low ebb; the Arabs as fording no monument of genius, no productions of industry, that intitle them to any rank in the history of the human mind. Physic, philosophy, altronomy, and the mathematics, for which they were once samous, are so lost among them, that scarcely the traces of them are remaining: we must say, however, that the present Arabs have throng intellects, and that nature has in general given them a genius: but application and inclination are both wanting to improve it.

They frequently use charms and incantations to remove a diforder, or leave it to contend with nature. They pour

hot fresh butter into simple and gun-shot wounds, and this remedy sometimes succeeds: an application of the prickly pear, roasted in ashes, is successfully made in suppurations.

in these countries time is measured by hour glasses, and in some parts of Arabia Petran, they have calendars that were left them by their ancestors, which are rather curious, and, in which the sur's place, the semidurnal and nocturnal arch, the length of the twilight, and the hours of prayer, are inserted in their proper columns, and calculated to a moment.

culated to a moment.

Algebra, or nunerical arithmetic, they are intirely ignorant of, though their anceflors furnished us with the characters of the one, and with the name at leaft of the other; yet they have a way of reckoning, by putting their hands into each others fleeves, and touching one another with a centum joint or finger fo expredively, that without ever moving their lips they can conclude bergains or contracts. But it is faid there are fome wife men among them, who, if you believe them, are fo skilled in figures, as to be able by a certain combination of numbers, to form even the taoft

It is a disput amore then the language, the her fupposed by some to have however, both of or of them being sperity. The Arabe the language of their punders dood by some of the language of the penders of the language of the lan

worthip.

The antient religion of the Arabs was Sabeifin, even previous to their acquaintance with the people of Upper Afia: they had at an early period conceived fome very elevated notions of God; they paid adoration to the flars, or luminaries enlivened and beautified by heavenly spirits; but there was also a religion in Arabia Deferta, not quite for rational, part of which consisted in offering up human facrifices to the sun.

It has been observed by a writer of credit; that #Chris.

It has been observed by a writer of credit, that "Chriftianity was planted in Arabia by St. Paul and his disciples, so that it received the light of the gospel very early 1 but, in many parts of it, that religion was much clouded, if not totally celipsed, long before the grand impostor Mahomet their countryman made his appearance; and, upon their being subdued by the Turks, they embraced his religion.

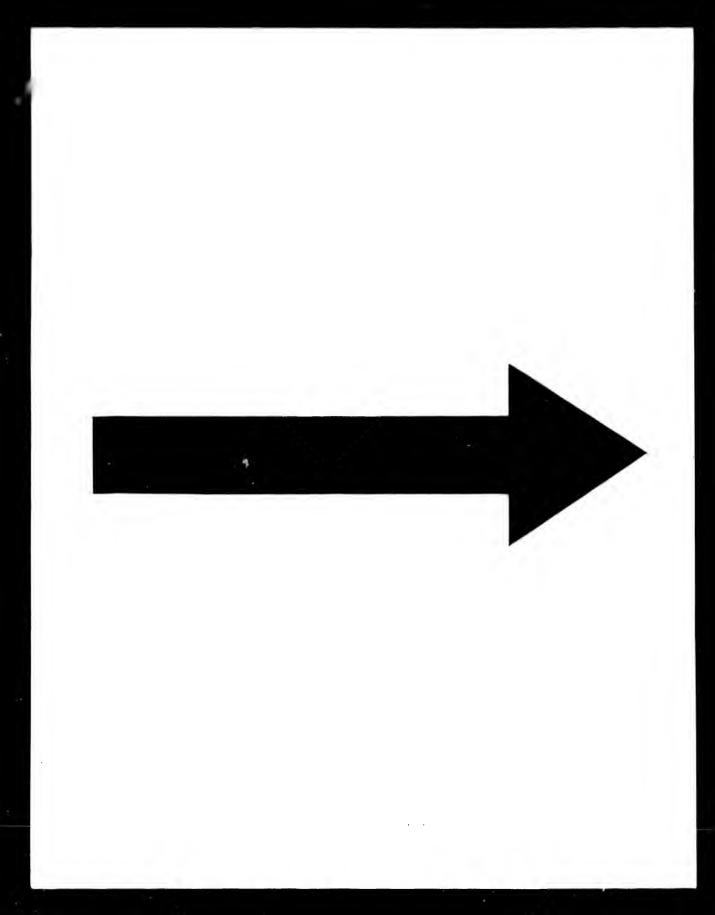

totally éclipfed, long before the grand impostor Mahomet their countryman made his appearance; and, upon their being subdued by the Turks, they embraced his religion. So addicted are many of the modern Arabs to superstition, that they carry about with them a paragraph of the Koran, which they place upon their breasts, or sow under their caps, to prevent fascination. They have a great veneration for the Marabbats, who are deemed faints, and are persons of a rigid and authere life, continually employing themselves in counting over their beads, or else in prayer and meditation. The above saintship goes by suecession, and the son is entitled to the same reverence as the father, provided he can keep up an equal gravity and decorum. Some of them have the reputation of being blessed with heavenly visions, and conversing with the godhead; while others, who are supposed to work miracles, pretend they are endowed with gifts which Mahomet durst

pretend they are endowed with gifts which Mahomet durft not pretend to.

There are four fundamental points of religious practice required by the koran; namely, prayer, giving of alms, fasting, and the making a pilgriniage to Mecca. Under prayer are comprehended those legal washings and purifications which are preparatory thereto; of which there are two degrees, the one called Ghost, being a total immersion in the water; and the other Wodu, which is the washing of their faces, hands, and feet. The first is required in some extraordinary cases only; the other is the ordinary ablution in common cases, and before prayer, and must necessarily be used by every person before he can enter upon that duty. Some of the Mussummerstand, who, they add was enjoined by God to practife them, and was shewed the manner of making the ablution by the angel Gabriel, in the form of a beautiful youth. Others carry the culton still higher, and say their religious ceremonics were taught our first parents by the angels.

In the fifth chapter of the koran, there is another putstants in the source of the content of the content

In the fifth chapter of the koran, there is another purification enjoined, which is performed by defrication. It is called at taya mon, denoting properly the action of taking any thing from the furface, as fine fand from the earth's furface; where the parts of the body are formetimes rubbed with fine fand, inflead of being wathed with water. The words of the koran-are, " If ye be fick, or on a journey;

FILL ST.

or if ye have touched women, and ye find no water, take fine clean fand and rub yourselves therewith."

There is also, besides these purifying erremonies, the ceremony of circumetison; which, though not directly required in the koran, is yet held by the Mahometants to have been originally of divine institution, and is exercised save been originally or divine inflittuning, and is exercise on children as foon as they are able to pronounce the prefeifion of their faith. Combing the hair, paring the nails, and plucking out the hair of the arm-pits, being all points of cleanlines, are effentially necessary to internal purification; and therefore are looked upon as indispensable duties better the Meditage. by the Muffulmen.

In confequence of the divine command pretended to In confequence of the divine command pretended to have been given to Mahomet for that purpole, every first and conscious Mussum performs public prayers five times a day! this he does either in a mosque, or in some other place that is clean, after a prescribed form, and with a certain number of praises or ejaculations; and whenever they pray, they must turn their faces towards the temple of Mecca. They do not attend the public worship in elegant apparel, but drefs themselves only in a becoming and described and the second of the

The women are not fuffered by some of the Mahometans to attend the mosque; and the illiterate think that the semale sex have no claim to the joys of heaven, as having no souls to be saved; but the more enlightend, generous, and candid, allow that women are as well initialed. to heaven as the men; and many Mahometans think that there is a mansion in heaven fet apart intirely for the fouls

of good women.

Those who profess the Mahometan religion are for the most part prodessinarians: for one article of faith in the koran is, God's absolute decree and predestination of both good and evil; that whatever hath or shall come to pais, whether good or bad, proceeded, and will proceed from the divine will alone; though the feet called the Motazalites contradict this doctrine, as tending to make God the author of fin, and destroy man's free agency.
We shall now give an account of the annual, most no

merous and folemn pilgrimage of the Mahometans to the Masjad Al Haran, or facted temple of Mecca, which pil-grimage was indituted by Mahomet. A prodigious con-courfe of people refort to this holy temple, in the antient city of Mecca. The temple flands in the centre of the town, and hath a famous casha, or fquare firefore, pe-culiarly hallowed and fet apart for worthip: its door is of filver, and a golden spout carries off the water from the roof. This caaba, from north to fouth, is twenty-four cubits long; twentry three broad from east to west, and its height is twenty-freen cubits. The filver door, which is on the eaft fide, flands about four cubits from the ground, and is afcended to by a flight of fteps. In the corner next to this door is a famous black flone, faid to have been brought down from heaven by Gabriel, at the creation of the world, and which was originally white, but contracted the blackness that now appears on it from the fins of man-kind. On the north fide of the caaba, within a femicircular incloure fifty cubits in length, flands a elechrated white flore, faid to be the fepulchre of lihmael, which referves the water that falls from the golden fpout. The caaba has a double roof, fupported within by oftangular pillars of aloes wood; between which, on iron bars, hang filver lamps: the outfide is covered with rich black damafk, adorned with an embroidered band of gold, which is changed every year, being provided by the Grand Seignior. At a small dilance from the caaba, on the east side, is the station or place of Abraham, where is another stone which is in high eftern with the Mahometans, and on which they stated by the being stone of the being stated to the stated to the being stated to pretend to shew his footsteps, afferting, that he stood on this stone when he built the caaba. Not far from hence the caaba is neatly furrounded by pillars, joined towards the bottom by a low baluftrade, and towards the top by filver bars. Just without this inclosure, on the south, north, and west side of the caaba, are three buildings, in which three particular sees a slemble to perform their devotion. Towards the south-east is an edifice covering the votion. A owards the fourth-east is an eating covering the famous well zemzem; also the treasury, and the cupola of Al-Abbas. We must not omit to observe here, that this celebrated well is faid to have been the fame that Hagar sat near to when comforted by the angel; the pilgrims drink of its water, and attribute many virtues to it. The whole of its water, and attribute many virtues to it. "The whole of these buildings are surrounded by a grand piazza, which some writers make to consist of upwards of tour hundred and forty pillars, and there are thirty-eight gates to the buildings, which are covered with small domes or eupolas, from the four corners of which rife four gilded fleeples ..

I he caaba made no very splendid appearance in the days

of Mahomet, nor even in the reigns of his two immediate of Mahoutet, nor even in the reigns of his two immediate fueceffors Abubeker, and Courar; but the furulure has been raifed, by the munificence of succeeding princes and great men, to its present susgnificent slate; though its primitive or original form has not undergone any material change since the year of the Hegira 74. The Mahometans pretend that this caaba is nearly coeval with the creation; and affert, that Adam, after his expulsion from paradife, obtained permission of the Almighty to credit; that however it was destroyed by the deliver, and that Adam are ever it was destroyed by the deluge, and that Abraham re-built it on the same spot and after the same model.

The pilgrims refort annually in prodigious numbers to the above antique and celebrated edifice, when there is a fair held for all forts of merchandize, ac. people in crouds, from different nations, affembling, to the amount generally of two hundred thousand, at which time even the very vaults of mosques, and the caves of neighbouring mountains, are flored with rich commodities. The holy temple is opened four times in the year, but the greatest mulaitudes assemble at the folemn seast of the bayram or easter, when they purchase relies of the old black damask covering, previous to its being succeeded by a new one from the Grand

to its being lucceeded by a new one store the comments of the pilgrims. At a place called Labbock, they firip themselves almob naked, having only a napkin round their middle, and another round their neck: in this condition they enter Mecca, but neither buy nor sell any thing for eight days. The pilgrims commonly wear a fort of black cloak, with a caul; the people of Barbary wear them white; it is fastened about the neck with a long loop, and hangs loofe behind. The camels are ornamented, especially the leading one of every company, which hath on its head a leading one of every company, which hath on its head a plume of feathers.

Many. Turks go this journey often; but, it is observed that they are rather worse after it than before, and it is a common saying among the Christians and Jews, "If a man has been ence at Mecca, take care of him; if he lass been twice there, have nothing to do with him; but if he has been three times at Mecca, remove from his neighbourhood;" and one who went to Mecca on pilgrimage, affirms, that there is as much debauchery practifed at that

place as in almost any part of the universe.

Having entered the city, the pilgrims moved to the holy temple, and walk round it seven times, the three first times temple, and walk round it teen times, the three first times with a very quick pace, to manifest their readines to fight for (what they deem) the true worship of God. They accompany their prayers with many strange gestures of the body, amitating the hamirag, or high-priest; and, after having made a facrifice of sheep, repair to the vale of Mirst, and throw stones at the devil's head, who they say tempted Abraham in this vale, when he was about to facrifice his for Islands and the say they are the say of the strength within these for the says of the says for Ishmael, not Isac; for the intended victim, they fay, was Ishmael. They pretend, that on the mountain of Micfa, which constitutes the vale, Adam and Eve wandered upwards of two hundred years without the other, after their expulsion from Paradife, till they hapdered upwards of two hundred years without feeing each pened by meer chance to meet together at the top of the mountain, when Eve threw stones at the devil's head, for his having held up to her a glafs, and telling her, that the image she then saw was another woman with whom Adam was enamoured. From this mountain the priefts deliver their pious harangues, and afterwards in the vale make fresh facrifices of sheep, the flesh of which is given to the

An eminent writer afferts, that when he was in this part of the globe, upwards of fix thousand persons belonging to one of the caravans died in the road between Cairo and Mecca; and that the effects of fuch as die devolve to the priefts. The northern Arabs, who are subject to the Turks, receive confiderable gratuities from the Grand Seignior for preventing the pilgrims from the robberies of

their countrymen.

SECT. VI.

The history of Mahomet, founder of the Mahometan supersti-tion, and his successors.

MAHOMET, or Mohammed, as filled by the Arabians, was of the tribe of Koreis, one of the most lionourable in Arabia: he was born at Mccca, A. D. 571.

his grandfathie Abdole Matallah took him into his family, and, dving the year following, recommended him to his uncle Abutaleb, a great merchant, who having infureded him in his bufniefs when he grow up, fent him as his factor, with a caravan, into Syria and Paleftine, where he became acquainted both with Chriftiaus and Jews: He continued in his uncle's fervice till he was twenty-five years of age, and then left him, and became factor to a rich widow named Cadighs, whole affairs he managed, trading to Damafeus, Egypt, and other places, about three years, when Mahomet and the widow entered into the flate of matrimony, the being then about forty years of age; but what the wanted in youth, fite made up in fortune. Mahomet was now efteered one of the richest men in Mecca, and from this time; it is faid, he began to form fehemes to obtain fovereigh power. His ancestors, he was intormed, had been chiefs of their tribe for several generations; and he was descended from the eldest branch, and confequently ought to have succeeded to the power which others had ofurped; and the 1-adiest way to recover this, he imaginted, was to turn reformer, and become the head of a new religion. As he well knew the genius of his countrymen, he entertained the most fanguine hopes of success: he was aware that the Arabians were sond of nowlety, and that they were addicted to illusions and entitufissm. The times also proved to be very favourable for him, as the Christians of the east were queuerelling with one another, and appeared to be very loose and dissolute in their morals. He pretended, therefore, to review the primitive way of worthip and purity of the antient partiarchs, and that he might succeed the better, he did not profess himself an enemy to any religion then in being, but proposed to unite Christians, Jews, and Pagans in one profess himself an enemy to any religion then in heing, but proposed to unite Christians, Jews, and Pagans in one profess himself an enemy to any religion then in heing for the expected to meet with succe

first convert.

Mahomet having acted the part of a hermit for some years, and acquired some reputation for his piety and virtue, he declared himself a prophet sent from God among his friends, being then about forty years of age: three or four years after he avowed his miffion publicly. One of list first converts was his consin Haly, who used to skile himself, "The first of believers;" his slave Zaid became himfelf, "The first of believers:" his slave Zaid became another of his disciples, whereupon he gave him his liberty, and made a law, that every slave that professed himself a Mahometan should have his liberty, which is observed to this day by the Turks. His sourth disciple was Abubeker, a man in great reputation for his wisdom, as well as wealth. After which Osman, and several others, men of figure in Mecca, who were afterwards generals in his army, professed themselves believers. Being thus supported, he proceeded to publish his new doctrines to the people, and declare he was sent from God to reclaim the Arabians from their idolatry. He taught them that there is but one God; that those who teach that God has sons, or daughters, or companions, ought to be abhorred, conor daughters, or companions, ought to be abhorred, con-demning the doctrines of the trinity and incarnation; he forbid allo the worthip of images, and of feveral female deities, which the Arabians adored as the daughters of

Mahomet affirmed, that this was the religion which God gave to Adam, and reflored or revealed to Abram, who taught it Ishmael, the great ancestor of the Arabians, which being corrupted, he now came to restore. He did not deny the mission of Moles or of Jesus Christ, or the authority of the feriptures, but accused both Jews and Christians with corrupting them. The angel Gabriel, he affirmed, was sent from God to communicate his will to him; he fell into a trance, he pretended, when the angel delivered the divine messages to him; and being subject to the falling ficknefs, this gave fome countenance to what he afferted. He published his pretended revelations by chapters, fome of them at Mecca before he was driven from thence, and the rest at Medina: He used to distate every new chapter to his amanuensis, who read it to his disciples till they had it by heart, after which it was laid upin a cheft, balled the "Cheft of his apostleship," which he left in the custody of his wise Hapsa, from whence the koran was compiled by Abubeker, his immediate successor, who supplied the want of several passings that were lost from the memory of those people, who had learnt them by heart, and new modelled the book so, as it might best ferve the ends he had in view; and many absurdities still remaining, Ofman, while he was calif, called in all the copies which had been given out, under pretence of correcting them by the original, caused them to be burnt; and, in a manner; composed a new koran, in the twenty-third year of the Hegira, A. D. 6423 being about twenty years after Mahomer's death. What proof there is of such alterations, does not appear.

does not appear.

Great opposition arose against Mahomet at Mecca; some derided, and others threatened him; but still he proceeded in making converts; and being a man of great wir and winning address, flattering the rich and relieving the poor, he became exceedingly popular, insonuch that the government began to apprehend that he was siming at sovereign power; and as he was already become too great to be brought before a court of justice, they had determined to take him off privately; of which receiving advice, he fied to Medina. As he contested he had not the power of working miracles, many of his disciples left him; which occasioned him to observe to the citizens of Medina, that God had indeed fent Moses and Jesus, and had given them the power of working miracles, and yet the world was not reclaimed by them; therefore God had now sent him last to reduce them to obedience by the sword. He commanded his disciples at herestore. reduce them to obedience by the fword. He commanded his disciples, therefore, not to enter into disputes about religion, but maintain it by force; and destroy all those

religion, but maintain it by force; and defiroy all those that refused to obey him, promising great rewards to those who took up arms in this cause, and eternal happiness to such as happened to die in the defence of it.

In his twelfth year, Mahomet gave out that he was carried up to heaven by the angel Gabriel, who had seventy pair of wings, whiter than snow, and cleaver than crystal; that he set him on the beast alborack, less than a mule, which in a moment carried him to Jerusalem, where he left the beaft, and mounted by a ladder of light to heaven, and from one heaven to another, till he came to the throne of God, which was in the feventh or highest heaven; he adds, that the feven heavens were five hundred years joursads, that the jeven heavens were nev numbers years jour-ney afunder, and that he faw a gigantic angel in one of them, whole eyes were feventy thousand days journey afunder; and this journey of Mahomet's, heaffured his dif-ciples, was performed in the tenth part of a night, which the Mahometans believe as firmly as any article of faith, the think in the for force time if force the highest the history. though it was for some time disputed whether all this was not avision; but the doctor's at length refolved that it was a real journey, and all his fayings have ever fince been re-garded as facred truths brought down from heaven, which having been reduced to writing after his death, make up these volumes of tradition which the Mahometans call the

About this time, the Jews and Christians of Arabia perfecuting one another with great fury; one of the parties, to ftengthen themselves, it is said, entered into an alliance with Mahomet; and it is generally thought it was the Christians, from his kind utage of them, and his cruelty to the lews.

After the arrival of Mahomet at Medina, he married his daughter Fatima, whom he had by his wife Cadigha, to his coulin Haly, Fatima being the only child by that wife which furvived him, and from her all those derive their right who pretend to be of the family of Mahomet. their right who pretend to be of the family of Mahomet. He held Cadigha, to be the most perfect of women; for he was used to observe, that there never were but sour good women in the world, namely, z. This Cadigha, that made his fortune; z. Asial, the wise of one of the Pharaoh's; Z. The virgin Mary; and, z. His daughter Fatima. Having brought over most of the people of Medina to his ininterest, he began to make incursions on the neighbouring of the province and particularly on the shields of Mesca. from states, and particularly on the subjects of Mecca, from whence he was expelled; and to distress that city, interrepted their caravans that went from thence to Syria and Paledine, killing these who refused to embrace his doctrine; and enriching his disciples with the plunder; which induced many of the thievish Arabs to join him, especially as the robberies they committed were denominated acts of

the Ara-1. D. 571. antinople ; sled a most ie was two fublish on, religion, and the cause (that is, the destroying all that dif-

fered from them) the cause of God. He at first directed his disciples to turn their faces towards Jerusalem when they prayed; but looking upon the Jews afterwards as his mortal enemies, and observing that lews afterwards as his mortal enemies, and observing that his countrymen had fill a great veneration for the caaba or temple of, Mecca, which had for some ages been the place where they performed their devotions, he ordered them to direct their devotions to Mecca, and go in pilgriange thither, as they tied to do, and many of their dolatrous rites to be retained. It is observed to have been one of the most successful stratagems Mahomet used, so to frame his new religion as to make it most agreeable to the humour, interest, and appetites of those he hoped to delude, and bring over to his party.

'The Jews having provoked him by taking part with his enemies, or some other affront he had received from them, he fell upon several tribes of the Jewish Araba, and having taken great numbers of prisoners, fold them for slaves,

ne rell upon tereta tribes of the Jewith Araba, and having taken great numbers of prifoners, fold them for flaver, and divided the plunder among his difciples, which still increased the number of his followers; but receiving a defeat afterwards at mount Ohad, the people began to furpect he was not a true prophet; and some, that had lost their relations in the battle, began to murmur; whereupon he told them, that it was their fins, that had occa-fioned the defeat, and as to those that fell in battle, they fioned the defeat, and as to those that sell in battle, they would have died, if they had remained at home, the period of ever sain's life being fixed by God, beyond which it could not be prolonged; and as they had died in defence of their faith, they had obtained their crown of martyrdom, and were now slive with God in Paradise, in a state of evertaining blifs; which doctrines, he sound, awe great courage and resolution to his people, and therefore continued to inculcate these doctrines, as his successor do this day. to this day.

Having gained a fecond victory over the Jewish Arabs, he put them every one to the sword, perhaps because they made such a brave resistance, as had like to have put an end to his usurped dominion; for they had surprized his army when a great many of them were drunk and engaged in play; and it was with the utmost hazard and difficulty that he wrested the victory out of their hands, which was the reason of his prohibiting the drinking of strong li-

quors and gaming.

The citizens of Mecca, in the mean time, finding him grow very formidable, entered into a confederacy with fonce of the neighbouring tribes, and marched with a powerful army to give him battle, which Mahomet declined, apprehending he was not strong enough to engage them in the open field: he made choice of a very strong camp, therefore, which he entrenched and fortified, and the enemy lying pretty near him, he found means to cor-rept fome of their principal officers, who adving a re-treat, delivered him from his fears; and having increased his army he marched towards Mecca, and a battle being fought between that city, and Sidin or Judda, in which neither party had much reason to boast of their success, a truce was concluded between them ; in which it was agreed, that Mahomet's friends in Mecca should be at liberty to join him, and those in his army who defired it, might return to Mecca. Mahomet now looking upon his authority to be fufficiently eliablished, caused himself to be proclaimed king at his return to Medina; this being the fixth year of the Hegira, or Mahometan æra, A. D. 627. But Rill he retained the office of high prieft, and his fuccelfors, the califs, enjoyed both offices until the 325th year of the Hegira, when the governors of the feveral provinces of the Saracen empire assumed an independent authority with the title of fultans, leaving the califs possessed only of the ecclesiastical authority. The Mahometan princes afterecclefiafical authority. The Mahometan princes after-wards proceeded to conflitute a pontiff in their refpective dominions, who is called the fedre in Perfia, and muft in Turky, who interpole only in ecclefiaftical matters, except that they fit as judges in the supreme court of justice: the reason whereof is, that the Mahometan laws are only the laws and precepts of the koran, and the comments upon them, of which the high-prieft and his clergy are fill efteemed the fole interpreters; but then, if the multi does not determine as the Grand Seignor would have him, he is deposed, and another advanced to that post; fo that he, the mufti or chief prieft, is, in effect, no more than the tool of the ministry in every Mahometan country, as the chief prices of a better religion too often are. But to

Mahomet fill continued to preach and pray, and perform the office of high-prieft as before; only, inflead of leaning on the flump of a palme-tree, before his advance-

ment to the royal dignity, he caused a magnificent temple to be built at Medina, and harangued the people from a pulpit: and the Mahometans have a tradition, that the forfaken stump of the palm-tree groaned, when it sound itself deferted by Mahomet, and had no longer the honour to sustain his weight.

The Jewish Arabs having become the objects of this usuper's implacable harred, he continued to make war upon them: they were extremely obnoxious to him in the latter end of his reign, though he had courted their favour in the beginning. He took one of their cities, and being afterwards at supper at the house of Hareth one of the principal citizens, one of his officers dropped down dead, positioned by a shoulder of mutton, which a daughter of the samily had prepared for Mahomet, it is said; and he tasked to much of it that he never was well afterwards, though he survived it several years. His disciples construed his escape at this time a miracle, for they have a tradition amongst them, that the shoulder of mutton spoke to Manones the survival of the survival amongst them, that the shoulder of mutton spoke to Ma-

amonger them, nat the inducer of mutton poke to Mahomet, and warned him of his danger.

After Mahomet's death, it was discovered that the meat was positioned by Zainab; the daughter of Hareth, on this principle, that if he was the great prophet he pretended to be, the position could have no effect upon him.

Having very little regard for the truce he had made with Mecca, he privately assembled a body of ten thousand men, and surprised that city, massacring all those that durft oppose him: thus he proceeded in his pretended reformation of religion, broke down the images in the casha, confecrated that temple to his new religion, and command-ed his difciples to go in pilgrimage thither once in their lives. The principal images he expelled the caaba weige those of Abram and Ishmael, and the images of some thote of Abram and linmael, and the images of tome departed faints, which the Arabians worthinped as mediators to the fupreme God. For the Arabians always held that there was but one God, the creator of heaven and earth whom they filed Alia Tael, or the God of gods, and as they imagined he was too great to be addressed without a mediator, they implored the intercession of holy men, that were gone to heaven, to recommend them to his favour; and this feems to have been the religion of most nations antiently, as it is at this day: it is not to the image, but to the faint the image represents, as the Ro-man Catholics say, that they give this inferior kind of

Mort of the Arab tribes, refenting the infult put upon their religion by breaking down their images, united against Mahomet, whom they defeated in a general battle, and compelled him to retire under the walls of Mecca; but he being victorious in a fecond battle, compelled them to acknowledge ' ir fovereign, and to profess the religion he had for a revelation of the deity; and to r fovereign, and to profess the refet them an exci. ... c undertook a pilgrimage in person to Mecca, attended by a multitude of people from all parts of Arabia; and now finding himself to be in a bad state or Araba; a such now anding nimers to be in a cast take of health, occasioned by the poison the Jewess had given him in the shoulder of mutton, as before related, he became delirious, complaining of the pains he had suffered ever fince he had eaten that statal morfel, and at length expired in great agonies in 620, being just fixty three years old on the day he died. His disciples were in great confusion after his death many of them having head of continue fion after his death, many of them having been of opinion that he could not die, or if he did appear to be dead, ho that he could not cle, or in a did appear to be dead, no would foon come to life again. Omar, one of his generals was of this opinion, and, drawing his fword, twore he would cut any man to pieces that should say he was dead. Abubeker thereupon demanded, if they worshipped Mahomet, or the God of Mahomet? if you worshipped Mahomet, or the God of Mahomet? if you worshipped Mahomet, or the God of Mahomet? It you worthin the God of Mahomet, fid he, be is immortal, and lives forever; but as to Mahomet, he is certainly dead; and that he must die, he observed, was plain from several passages in the koran; with which Omar and his party were fatisfied. Another dispute arose about the place of his burial, some were for having him buried at Medina; others at Mecca; and a third party would have him buried among the pro-phets at Jerusalem; but Abubeker declaring he heard Mahomet fay, that a prophet should be huried in the place where he died, they all acquiefeed in this, and a grave he-ing made under the bed where he lay, there he was in-terred, and over the grave a chapel was built which stands at one of the corners of the great mosque at Medina, which was founded by Mahomet himself.

Mahomet took no other wife as long as Cadigha lived; but afterwards he had fifteen, fome fay, twenty, most of them cohabiting with him at the fame time. Of these, five died before him, and he divorced fix: Ayesha, the daughter of Abubeker, was the greatest favourite, though

the was charged with being false to his bed, which he pre-tended not to believe, and added one chapter to the koran, to declare her innocence. His wife Haphs, the daughter of Omar, was the most respected next, with whom he or Omar, was the moir respected next, with whom he trufted the clieft of his apossibeship already mentioned, where the original writings relating to his pretended revealations were deposited. His wife Zeida he was soon weary of, and was about to part with her; but upon, her confenting to resign her turn to Ayesha, he permitted her to retain the honour of being one among the number of his wives: he took also Zaidah, the wife of Zaid his enfranchifed slave, at which his disciples were much offended; he composed a chapter of his koran, therefore, wherein he introduced God appi ving of the match; and this lady used to boast, that he received his other wives from their relations, but the was married to him by God himself.

Besides his wives, he had several concubines, and particularly an Egyptian in his old age, of whom he was extended from an and a prophet, to prove safe to their bed, and pursue his lusts in his declining age; which occasioned another revelation, wherein he makes God permit him and his disciples to lie with their semale slaves, as is practifed by the Mahometans at this day; and in some, if not in all Mahometan countries, the children of such saves are deemed legitimate, and share their fathers essate, with the iffue of their wives. trusted the clieft of his apostleship already mentioned,

with the iffue of their wives.

with the issue of their wives. In The having several wives alive at once, was practifed by the Arabs from the earliest ages, but was limited by Mahomet to four; and as to the taking their slaves to their bed, Abram, the sather of Ishmael their grand ancestor, did the same; and Jacob, we find, had sons, by two of his slaves, and made no diffinction between them and the issue he had by his wives; they were all stiled patriarchs, and the promised land was divided equally among the potential of the same of the same of Mahomet seems equitable enough, namely, that a man hould make no difference in the

One of the laws of Mahomet feems equitable enough, namely, that a man should make no difference in the cloathing or diet of his wives, but they should all fare alike; and the same in the duties of the bed: and if a wife complains of her husband's beling partial in any of these respects, the magistrate will relieve her, or grant a divorce if she desires it: and the keeping of boys for their bedsellows is allowed to be another sufficient reason for a divorce; and yet this is what the turks frequently practife. He also gave is disciples a table containing the degrees of marriage, as that they should not marry their mothers-inmarriage, as that they should not mary their mothers-in-law, fifters, or fifters-in-law, or their-daughters; that they should not marry the daughter of any woman they had lain with, or another man's wife; he had himself, indeed, married the wife of his servant Zald; but in another chapter of the koran, he brings in God, forbidding him to take another man's wife for the future; and though he allowed himself great liberties, he forbids all men entering into any convertation with his wives, or the wives of other men; and commands all wives to forbear speaking to any man, but with their faces veiled; that they should remain widows affect their highlands death, and that no man should widows after their hubands death, and that no man fhould touch them; but whatever he requires should be done, he always represents heaven approving it, and composes a chapter in the koran to countenance the practice.

Mahomet had appointed Hall, the husband of his eldest dambter. Eximple to the his function, how habeless his

Mahomet had appointed Hali, the hufband of his eldeft daughter Fatima to be his fucceffor; but Abubeker, his father-in-law, and one of his most celebrated generals, afformed the title of calif, or fovereign of the Saracens, both ln spirituals and temporals. He enjoyed this honour ten years, and was succeeded by Omar, another general of the Saracen army, who made the swiftest conquests of any prince we read of; for he added Persia, Syria, Palestine, Mesopotamia, and Egypt, to his dominions. To him succeeded Othman, another of Mahomet's generals, who added all the north of Africa as far as the pillars of Hercules (the straights of Gibraltar) to the Saracen emwho added all the north of Arrica as are a state pulsar of Hercules (the ftraights of Gibraltar) to the Saracen empire. But the faction of Hali prevailing against him, he became this own executioner, threw himself upon his faword, and died in the eighty-seventh year of his age, and the tenth of his reign, though some have afferted, that he was affassinated; and his successor Hali was affassinated,

before he had reigned three years, by Mahuvias.
Hali left two fons, on the eldeft of whom, named Hafan, the Arabians beflowed the crown. After reigning about fix months, he abdicated his throne in favour of Monwiyah, who had been a continual terror to him; fo that Moawiyah, who had formerly excited a revolt in Syria against Hali, now became fole possessor of the throne, was seknowledged by all musfulmen as the true and lawful

calif, being the first of the dynasty of the Ommiyans, so called from Ommiyah, the head of that princes's family.

As foom as this prince was firmly feated on the through is first grand object was to augment his glory i he profecuted such enterprizes as former califs had begun against the Greeks; he drove their out of Armenia and Anatolia, and adopted measures to render the dignity of calif here-ditory, which had been before cleftive, and succeeded in his design. his crown descended to his son, and af-terwards to the rest of his posterity. That dynasty of princes maintained themselves with great glory for four-teen successfront, though not always in a right line; for brothers often ascended the throne to the periodice of their nephews, when the latter were not of due age, or there were any other reasons that artisice could assign; ther were any was always in the house of Ommiyah till the time of Merwan the second. The house of Ommiyah, however, was not destroyed by the Abbassians, princes so denoted from their being descended from Abbas, uncle of Mahomet. They took up arms against the Ommiyans, under pretence of revenging the death of Hali, who, they alledged, had been murdered by them, Abul Abbas was

alledged, had been murdered by them, Abul Abbas was accordingly proclaimed calif.

Abdallah, who was the uncle of Abul Abbas, caufed an act of grace to be published, in the callf's name, for all the Ommiyans who should appear before him, and take the oatts of allegiance to the new calif. A day was fixed for a meeting of the chiefs or princes, and Abdallah attended them; but while he was preparing to tender the oaths, a party of foldiers, appointed for the purpose, drew up behind them, and destroyed them all on the spot, except one, who escaped and sed to Spain. Immediately after this barbarous deed, the foldiers put to the sword a great number of musicalmen known to be devoted to the house of Ommiyah; and Obdallah, having put an end to the saughten, completed his bloody transaction with a most horrid entertainment. The above infernal monster caused the bodies of the Ommiyans, who had been slaughtered. horrid entertainment. The above infernal monfler caused the bodies of the Ommiyans, who had been slaughtered by the soldiers, to be placed close to one another, and covered with boards, over which he ordered carpets to be laid, and upon this slooring, formed by dead carcases, he gave a sumptuous feast to the officers of the army. "Perhaps, said he, all of them may not be quite dead; in that cate, we shall have the happines to hear them groan," Such was the beginning of the reign of Abul Abbas, who however was not accused of having any share in the above massiscre, upor did he enjoy the throughout. nowever was not accused of naving any material to a love-manfacre; nor did he enjoy the throne long, for he died at the age of eighteen, of the small-pox.

Abul Abbas was succeeded by his brother Abu Giaffer, furnamed Almanzor, or Victorious; and soon after he si-

nurnamea Aimanzor, or VICCOTOUS; and 10011 after he af-fumed the diadem, his uncle, the infamous Abdallah, was crushed to death, with several others, by the suddenly falling-in of the stoor of a chamber in which they were stitting. Almanzor built the city of Bagdat, which was the capital of the empire till the race of Abbas became extinct: on which account the Abbassians have been commonly on which account the Adoannatis have been commonly called califs of Syria, on account of their conftant abode in that country. The Abbaffians, who flitled themfelves the true children of the house of the great prophet, posefield the diadem, under the thirty seven princes, for

tetted the diadem, under the thirty leven princes, for upwards of five hundred years.

The unlimited authority with which the boufe of Ommiyah entrufied the governors of provinces, was the fole cause of their ruin: the defcendants of Abbas fell into the fame error; this however supported their dynafty longer than was that of the Ommiyaus, but with lefs splendor with regard to the extent of their authority. During their reigns, part of their empire was at several times granted away: and the territories, thus dissembered. away; and the territories, thus difinembered, were erected into as many dynalties; of these were the Thaherians, and the Softarides, who reigned in Persia, Transoxtana, and Turkestan; as also the Tholanides, and Aschidens; and Turkestan; as also the Tholanides, and Aschidiens, who ruled Egypt under the title of sultans, though at the fame time they acknowledged the supremacy of the calif of Bagdat. But the Aschidians were succeeded by the Fatimites, who pretending to be the true and rightful successions of Mahomet, as descended from Hali by Fatima, assumed the title of calif in Egypt: thence the name of the califs of Bagdat was suppressed in the public prayers throughout the whole extent of their dominions.

The new dynasty possessed the full and intire sovereignty for almost three hundred years, when, however the Egyptian Fatimites were at length totally ruined by the califs of Bagdat, who recovered the possessed by the califs of Bagdat, who recovered the possessed of Salaheddin or Salahi, to whom, on consideration of his services, the

Saladin; to whom, on confideration of his fervices, the calif Naffer folemuly confirmed the fultanthip of Egypt

which lived : nost of thefe, ia, the though and Syria; and in the beflowal of this grand act of favour Naffer acquired a conflant protector; and while the muffoliuen of Egypt and Syria were fighting, under the ban-ners of Saladin against the Christian armies, Nasser quietly enjoyed at Bagdat all the honours due to the califat, being acknowledged fovereign in all countries then inhabited by muffulmen

multuren;

A new dynatty, called Genghifkanians, from their founder Genghiz Khan, strofe after the extinction of the Fatimites. This prince, who became highly renowned for the rapidity of his exploits, put himfelf at the head of an army of Moguls and Tartars, and foon conquered an immenie tract of land, his fucessfors, who inherited his bravery, as well as his antipathy to muffulnate, added to their crown almost all the states which had been feized by the princes of the other dynastics, and at length made their crown almost all the states which had been seized by the princes of the other dynasties, and at length made themselves masters of Bagdat, massacred the calif and bid children, and by their death put a final end to the illustrious house of Abbas, which had sat on the throne upwards of sive husidred years.

At this period the history of the califs properly concludes; for we cannot include, among the califs, Ahmed, who was three years afterwards proclaimed calif by the Mannlucks of Egypt, under the name of Mostanzer Billah. They called him the son of Daher ben Nasser her Abbessian and Bilben, who was then sultan of the

Manilucks of Egypt, under the name or monanzer Billah. They called him the fon of Daher ben Nasser the Abbassan; and Biban, who was then sultan of the Mamlucks, caused him to be recognized in Egypt; so that a second dynasty of Abbassans was formed, if the name of dynasty can be allowed to a race of princes who were only looked upon as the head of the church. This pretended dynasty substitute that the eggst year of the Hegira and 1517th of the Christian zra; when Selim, the first emperor of the Ottoman Turks, annexed all Egypt to his empire.

To sum up the whole, Abubeker, the immediate successor of Mahomet, began his califat, in the eleventh year of the Hegira, and 6.33d of the Christian zra. In the 4st of the Hegira, and 6.26 the dynasty of Orumiyans, of which Merwan II. Hegira, 127. A. D. 744. was the last Abust Abbas, the first of the house of Abbas, began to reign, Hegira 134. A. D. 752. and Mostazem was the 56th and last grand Abbassand in the 1222d of the Christian and the Hegira, and in the 122d of the Christian and the state of the second control of the christian and the Hegira, and in the 122d of the Christian and the second control of the 64th year of the Hegira, and in the 1242d of the Christian arra. So that from Abubeker, the first calif to that of Mostagem, is included a space of 500 years. It is remarkable of Mostasem, who began to reign, A. D. 833, that he was born in the eighth month in the year, was the eighth prince of this race, the eighth Abbaffian ealth, ascended his throne in the 218th year of the Hegira, commanded his troops eight times in person, reigned eight years eight months and eight days, died in the forty-eighth year of his age, had eight sons and eight daughters, and left exactly eight millions of gold in his treasury.

SECT. VII.

Treats of the antiquities of the Arabians; and also contains an account of Palmyra or Tadmor.

E shall here take some notice of the most antient and celebrated places of antiquity, beginning with the Red fea, or Arabian gulf, which flows from the Indian ocean, runs caftward as far as the ifthmus of Africa, to the town of Suez. It has its name, according to fome authors, from an orient brightness peculiar to its waters, being tinged with a red mineral earth; and it has a red fand on its shores, which is frequently repugnant to its quality and nature, mixed with the water by the flux and quality and nature, mixed with the water by the flux and reflux of the fea, which is fo violent in this gulf, as to tofs it to and fro like afhes, and prevent its substitution. Seafaring people have confidently afferted that the sand, thus borne and agitated by the turbulent waters, appears as red as blood; but that, if put into sill water, it will fink to the bottom. Some writers derive its name from the Greek word crythros, fignifying red, closeally as Erythros was the name of a king who reigned on the coaft. But from whatever its name be really derived, no fea has been more justly celebrated: the passage of the Israelites through it, and its conveyance of all the rich merchandize of the east for upwards of three thousand years, have given it an immortal

Mount Sinai deferves a particular description. It has two fuminits, and is called by the Arabs the mountain of Moses, because many remarkable things happened here to

that prophet. Here; they fay, the almighty appeared to him in a burning buth; and the fathers shew a bramble, which they affirm is of the same kind. Here he likewise fed the flock of his father-in-law Jethro; and not far off he struck the rock, out of which the water instantly guthed. There is a convent at mount Sinal, founded by the em-press Helena, and dedicated to the celebrated St. Cathe-fine it flands at the bottom of the mountain, and is an irrefine: it flands at the bottom of the mountain, and is an irregular, ankward building of unburnt brick, walled round and flopped up ac every entrance to prevent the incursions of the roving Arabs. The only free entrance is by a window that is upwards of thirty feet from the ground, and to which people are drawn up in a machine by a windias. Within the walls, which are two hundred and fifty-five feet long from east to west, and fifty-five feet broad from north to fouth, are mills, bake-houles, and every office necessary is a fequence of so the farmer of St. Catherine, the relice are deposited in a marble chest, whereon are carved feveral pieces of foliage in basilo cheft, whereon are carved feveral pieces of foliage in baffo

Another mountain, called mount St. Catherine, is fitu-ated near mount Sinai: to the former place the body of are near mount sinal: to the former place the body of St. Catherine was brought, after her martyrdom under the tyrant Manentius. It overtops mount Sinal, and its fold is a species of speckled marble, in which are seen beautiful configurations of trees, and other representations of the like nature in the vegetable world.

With respect to the magnificent remains of Palmyra, an able writer observes, that "Nothing but ocular proof could convince any man that fo fuperb acity, formerly ten miles in circumference, could enit in the midth of bar-ren, uninhabitable fands. Nothing, however, is more certain, than that Palmyra was formerly the capital of a great kingdom; that it was the pride as well as the em-porium of the eaftern world; and that its merchants dealt with the Romans and the welfern mations for the merchan-dizes and luxuries of India and Arabia. Its prefent altered fituation, therefore, can be accounted for only by natural causes, which have turned the most fertile tracts into barren desarts."

There is no part of a tour through the eaft so difficult as a journey to Palmyra, it being fituated in a dreary defart, a journey to Palmyra, it being fituated in a dreary defart, at a diffance from any common road, and beyond the Grand Seignor's protection. We shall now proceed to a description of the ruins of this place, than which no prospect can be conceived more remantic, more melancholy or more grand. Here are innumerable piles of Corinthian pillars, without any intervening building, or wall of the least folidity. A traveller, who with several others staid fifteen days at this place, remarks as follows: "The walls of this miles and supersons city, were shared with of this antient and supendous city, were slanked with square towers in many parts, particularly in the south-east, but nothing of them exists; and from the best computabut nothing of them exists, as afrom the best computa-tion of them, I imagine their circuit could not have been less than three English miles, provided they include the great than three English miles, provided they include the great than three English miles, provided they include the great than three English miles, provided they include the great through the state of the fact of the state of the in-stability of human grandeur? the fate of these two cities differs from each other: we have no telimonies of what they were, but their own noble fragments." Palmyra (continues he) in the defarts of Arabia, er, as by the circipture styled Tadmor in the wilderness, is a most awful spectacle. As you approach, the first object which pre-cents itself is a grand ruinated cattle, on the north side of the city. From it you deserve Tadmor, inclosed on three sides by long ridges of mountains; southward of it is a vast plain extending far beyond the fight. The city must have been of large extent, from the space now taken up have been of large extent, from the space now taken up by its ruins; among which live about thirty or forty miby its runs; among wince in we about marry or tarry in-ferable families, in tents of dirt, within, a faccious court which once inclosed a magnificent temple. This court hath a stately high wall of large square stone, adorned by pilasters both within and without: there are about fixty in each side. The beautiful cornaices have been beaten down by the Turks. Towards the centre are the remains of a calle, througing the fragments of a temple of ex-quifite beauty, as appears by what is still standing of its quitte beauty, as appears by what is this itement of the entrance, namely, two fones thirty-five feet long, carved with vines and clufters of grapes. In the great court are the remains of two rows of very noble marble pillars thirty-feven feet high, with capitals finely carved, and the cornices mut have been of equal elegance; fifty-eight of thefe pillars are intire: there mut have been many more, as it appears they went quite round the court, supporting a most spacious double piazza. The walks on the west

fide of the piazza, which face the front of the temple, feem to have been grand and fpacious; and at each end are two niches for flatues at length, with pedefials, borders, fupporters, canopies, &c. carved with inimitable art. The fpace within this once beautiful enclofure is (or rather was) supporters, canopies, &c. carved with inimitable art. The fpace within this once beautiful enclours is (or rather was) encompaffed by another row of pillars of a different order, fifty feet high, fixteen of which are yet flanding. The truple was ninety feet long, and about forty broad; its grand entrance on the west appears, by what remains of it, to have been the most magnificent in the world. Over a doorway in the remaining wiles you trace a spread eagle; as at Balbec; and here are the fragments of cupids, as well as of eagles, most shely imitating nature, on large stones mouldering on the earth. Nothing of the temple stands but the walls, the window places of which are narrow at top, but richly adorned with sculpture. In the middle is a cupola, all one folid piece. Leaving this court and temple, your eyes are faluted with a great number of pillars of marble feattered for hear a mile. To the north you have a stately obelisk before y.m., consisting of feven large stones besides its capital, grandly sculptured: it is more than sifty feet high, and is twelve fret and a halfin circumsternes just above the pedstal; and it is imagined a state once shout a quarter of a mile, is another obelisk, that scenation have corresponded with the first mentioned, and, according to the fragments of a third, it should seem that there was a complexed rance of them. On once of them, which was a continued rance of them. of about a quarter of a mile, is another obelifit, that feems to have corresponded with the first mentioned, and, according to the fragments of a third, it should feem that there was a continued range of them. On one of them, which is about forty feet high, there is a Greek infeription commemorating two patriots: and about one hundred paces from it is a large and lofty entrance, leading to a grand piazza, adorned with marble pillars, on most of which there are inferiptions. A little farther onwards to the lest, are the remains of a stately pile of remarkably fine marble, seventy-two feet long. On the west side of the piazza are feveral openings for gates; two of them appear to have been the smost superb that ever captivated the eye, both in point of grandeur of work in general, and the beautiful porphyry pillars with which they were adorned. Eastward of the piazza are a great number of scattered marble pillars, most of which have been deprived of their elegant empirals. A little ruined temple lies mouldering at a short distance, which appears to have been a very curious structure. But of all the venerable remains, none more attracture in the magnificent sepulchre towards the north of the city, extending a mile and more, and which at a distance have the appearance of the tops of decayed churches, or bastions of ruined fortifications."

It is evident that Palmyra was used as a place of strength, from alterations which have been made in the castle on the hill, and the temple of the fun, which must have been increded for defence. and are now more than five or six hun-

hill, and the temple of the fun, which must have been in-tended for defence, and are not more than five or fix hun-

dred years old. The most persect piece of antiquity is a mansolerum, upwards of one thousand seven hundred years old, with the stooring intire, and an infeription still legible, informing you that it was built by Jambliceus, son of Mocimus, as a burial place for himself and family, in the year 314, which answers to the third year of the Christian ara. We shall only add, on this lead, that the magnificent city of Palmyra is mentioned, in the Arabic translation of the Chronicles, as the fishing before the days of Solomon, but John of Antioch furnamed Malala, says it was built by Solomon, on the very foot where his father slew the philitine clief; and he affirms, that in commemoration of that extraordinary event the city was built. On the furnmit of a rocky hill, north-west of the ruins of Palmyra, stands an antique castle, the ascent to which is very steep and rugged: it is a mean structure not so old as the time of Justinian. It hash a dich round it, which cannot be passed without some difficulty, the draw-hidge being broken down. There is one building here, the remains of which are extremely grand, and this is affirmed to have been the temple of the sun, which being much injured by the Roman foldiers, when Aurelian took the place, the emperor ordered for the purpose of repairing it, three hundred pounds weight of gold, taken from the ressures of Zonobia; and one thousand eight hundred pounds weight of filver, levied upon the people; besides the jewels of the crown. The height and foldidity of the walls of its court tempted the Turks to convert it into a place of strength, and then on the north east and south they stopped up the windows, dug a ditch to the west, and demolished the portice of the grand entrance; building in the place of strength, and then on the north east and south they stopped up the windows, dug a ditch to the west, and demolished the portice of the grand entrance; building in the place of square tower, to stank that side. To the east and south of the hears and south of the hears being continu the whole bottom is a baion of clear water, about two feet deep; and the place on account of the heats being continued, is used as a bath. By an old infeription found here, on an alter facred to Jupiter, we learn that this stream was never esteemed while Palmyra sourished, and was under the care of certain people elected by ballot for that purpose.

Three or four miles south-east of Palmyra, in the defart, lies the valley of salt, whence Damaseus and the neighborish towns are sugglished with the compacting. On this

sart, lies the valley of falt, whence Damaicus and the neigh-bouring towns are fupplied with that commodity. On this place, it is supposed, David smore the Syrians, as men-tioned, a Sam. viii. 13. The ground is impregnated with salt to a considerable depth, and here they have a method of hollowing the ground to about a foot deep, and a sine white falt is gathered from the rain water that lodges in it.

C H A P.

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF

IATIC TURKY.

SEC.T. I.

Treats of the name, fituation and extent of Turky; also the mountains, feas, rivers and lakes, contained in it.

TURKY in Afia forms a grand division of the Turkish empire, the whole being nearly fquare and extending about two thousand miles each way. It abounds not only with the necessaries, but with all the luxuries of life, and contains some of the most fertile and delightful provinces in the universe, which are in the possession of the

winces in the universe, which are in the ponemon or the most indolent people existing.

The Turce, who were the progenitors of the Turks, were a Scythian nation, which refided, for the most part, itear the banks of the Palus Mosotis, in the country now denominated Koban Tartary, but led rambling lives, removing their habitations, or rather campe, as the featons changed, and they could find pasture for their cattle.

This country is lituated between twenty-five and fortyeight degrees of north latitude, and twenty-feven and forty-five degrees of east longitude. It is divided by fome into eastern, western, and southern, and by others into eastern and western: the latter comprehending Syria, Palestine and Anatolia, or the Lesser Asia; and the former Diar-

and Anatolia, or the Lesser Asia; and the former Liarbeck, Turcomania, and Georgia. It is bounded by Circassia and the Black sea, on the north; by Persia, on the
east; by Arabia and the Levant on the south, and on the
west, by the Hellespont, the Ægean sea or Archipelago,
which separate it from Europe.

The principal mountains are those of Olympus, Ida,
Taurus, Anti-Taurus, and those of Caramania or Cilicia,
all of them situate in Natolia, or the Lesser Asia; Mount
Caucassus, now called the mountains of Dagistan: the
mountains of Armenia, among which is mount A-rast,
where the ark rested, the mountains of Curdestan. br Aswhere the ark rested, the mountains of Curdestan, or Asfyria, whichlie beween Perfia and Turky, and the moun-tains of Palestine, particularly mount Hermon and mount

The feas bordering on this country are, the Euxine or Black fea; the Bosphorus, or fea of Constantinople; the Propontis, or fea of Marmora; the Hellespont, and the Ægean or Archipelago, which divide Asia from Europe;

and the Levant or White fea, as the Turks call it, being the eaftend of the Mediterranean; to which may be added, the gulph of Peria or Boffora: these feas, and the Red fea, which divides Asia from Africa, make a part of the Grand Signor's titles, who filler hinself "Lord of the black, white, and red feas." Next was a country more adversariated in the state of the state of the black, white, and red feas." Next was a country more adversariated. wantageoutly fituated for navization and foreign traffic than this; all the merchandize of China and India being brought up the Red fea and the gulph of Perfia, and by the other feas distributed to all the maritime countries of Europe and Africa. Another advantage is, that they want no timber or naval flores in their own territories; belides what has been mentioned already, their happy fituation in the middle of our continent between the extremes of east and

middle of our continent between the extremes of east and we't, and yet they apply themselves very little to foreign traffic; neither their hips of war or merchant-ships make any figure, compared with other maritime countries. The chief rivers are, the Euphrates, Tigris, Orontes, Meander, Sarabat, Halis, Kara, and Jordan. The Euphrates and Tigris rife in the north, and taking their course fouth-east, inclose that fine plain in Mcfopotamia (now Diarbeck) which is by some supposed to be the seat of Paradise. Certain it is the city of Bahylon, the first, the largest, and the most beautiful town, that ever stood upon the earth since the slood, was situate here, upon both banks of the Euphrates, the river running through the middle of it. The Euphrates and Tigris unite their streams below Babylon, and then, dividing again, fall into the Persian gulf by several channels below Bossor, the whence that ica is often called the gulf of Bossora: the city of Nineveh, little inferior to Babylon, stood upon the

Tigris, which, from its rapid ftream, obtained that name. The river Orontes rifes in mount Hermon, and running e-th-west through Syrophomicia, falls into the Levant Reg a little below Antioch, which city stands upon it. The river Meander (now Madre)-rises in mount Taurus, and running to the westward in a winding course, falls into and running to the weitward in a winding courte, falls into the Archipelago or Zegcan fea, below Epiletius. From this river, all ferpentine or winding fiteams are called meanders to this day. The river Sarabat rifes in Natolia, and running fouth-well, falls into the Archipelago, north of Smyrna: as to the little river Granicus, where Alexander obtained his first victory over the Persians, it is fo small a stream, that we foldon see it in any map; but from the concurrent relation of most writers, it falls into the Hellefport to the caftward of Abydos or the Dardi-nelles. The river Halis rifes in Cappadocia, (Aladulis) and running north, falls into the Euxine fea, between Sinope and Trabizond. The river Kara rifes in Natolia Proper, and running almost due cast, falls into the Euphrates. Jordan, so named from two little streams, Jor and Dan, which rifes at the foot of the Anti-Libanus, and after a course of about twenty miles, unite in one: it is not a river of any great length, depth or breadth, equal to its fame; its whole course till it falls into the Dead sea, being not above one hundred and fifty miles, its breadth not above twenty yards, and its depth not sufficient for navigation: in its passage it makes two lakes, the first called Merom, of small extent, and dry in summer; the second called the sea of Galilee, or the lake of Tiberias, or lake of Gennezereth, of one hundred furlongs in length, and forty in breadth. The Dead fea, as it is called from a falle opinion, that it killed even the birds that flew over it, is, by experience, known to deferve no fuch terrible name; it is, indeed, extremely falt, and the water thereby fo ftrong, that it will hardly admit a human body to fink, and has a bituminous stench : it is faid to entertain no fith, or other living creature: but in regard that fish-shells are found on its shore, there is reason to doubt the truth of that opinion. Its extent is seventy miles from north to south, opinion. Its extent is feventy mues nominated a plain, and fixteen from east to west, and was formerly a plain, wherein shoot the cities of Sodom, Gomorah, Admah, and Zeboini, destroyed by fire from heaven. The other rivers are Kidron, Chifon, and fome other fmall streams, which fall into the Mediterranean fea, and Jaboc and Arnon, which fall into Jordan and the Dead fea.

SECT. II.

Contains a description of the divisions, provinces and towns of Affatic Turty; and treats of the eastern division, namely, Eyraca Arabic, Diarbeck, Curdestan, Turcomania, and Georgia, with their towns.

SIATIC Turky may be divided into three parts; A 1. The eastern division; 2. The western division; and, 3. The fouthern division.

I. The eastern division contains, t. The provinces of Eyraca Arabic, Irsck-Atabia, or Chaldea. 2. Diartects, or Mesopotamia. 3. Curdestan, or Alfyria. 4. Turcomania, or Armenia; and, 5. Georgia, comprehending Mengrelia, Innuretta, and past of Civassia.

II The Western Division contains Natolia, or the Lesser Asia, divided into, 1. Natolia Proper. 2. Armalia, 3. Aladulia; and, 4. Caramania.

III. The Southern Division contains Syria, and Palestine, or the Holy Land.

I. Eyraca Arabic was antiently called Chaldea, and sometimes reckoned a part of stables and form experimental actions. It lies between thirty and forty degrees north latitude, on both sides the rivers Euphrates and Tigris, having Persa on the east, and Arabia Deserta on the west. The chief towns are Bagdat and Bassora; and the roins of Babylon and Seleucia.

Babylon and Seleucia.

Bagdat, the capital, is fituate in forty-three degrees of eastern longitude, and thirty-three degrees eventy injuntes north latitude, upon the river Tigris. It was built by Mahomet II. calif of the Saracens, on the western side of morth latitude, upon the river Tigris. It was built by Mahomet II. calif of the Saracens, on the weltern fide of the river; and about the year rice, another town was built on the eaft fide of the river, and both united by a bridge. It continued the capital of the Saracen empire, till it was taken by the Tartars, in the middle of the thirteenth century, when a period was put to the Saracen empire; but though they loft their country, they propagated their religion fo fucesffully, that the Fattars became Mahemetans, and continue fo to this day. This town lying upon the frontiers of Turky and Perfa, has been much contended for by both these powers, and taken and retaken feveral times: but the Turks have been in possession of it ever since the year 1589; and here the begierbeg or viccory of the province constantly resides. The town is near two miles long, and one broad, defended by a wall and towers, almost of the form of bastions, and the most wide and deep, and a fireng castle upon the river. It is the grand emporium of the Ottoman empire towards the Pertain and passengers travelling to and from Persa into Syria, Paledine, Egyp, Natolia, &c. besides Mahemetans; many Clurifitians, who are publicly tolerated, and son; Jews, reside here. The principal buildings are, the palace of the beglerbeg, the mosques, of which there are five, and the cloysters which surround the bazars or market places, and their bagnios, all which were built by the Persans, when their bagnios, all which were built by the Perians, when they were in the possession of Bagdat. The Cadi, who is they were in the possession of Bagdat. The Cadi, who is the principal ecclessation, and consequently, the chiefjudge, has a very great authority in this province. The testerdar or treasurer, who collects the public revenue, has a considerable instruction in their council, and the reis effendi or secretary, who is sometimes shield chancellor, is an officer of great consequence; and they are all of the viceroy's council, and a check on his administration, over when he has a marking the last a secondarial country. whom he has no authority: they are accountable only to the divan at Conflantinople. The garrifon of the place ufually confifts of four thousand or five thousand men, horfe and foot.

Bassora, Basralı, or Balsarra, is situate in forty-nine degrees ten minutes of east longitude, and thirty degrees feventeen minutes of north latitude, about three miles from the western shore of Chatal-Arab, or the united stream of the Euphystes and Tigris, with which it, has a commu-nication by a deep canal, the tide flowing up between forty and fifty miles higher than the town, which is a great ad-vantage to their navigation and foreign traffic. The walls vantage to their fixigation and foreign traffic. The walls of this town are twelve miles in circumference, within which are many void fpaces, fields, and gardens; but the buildings have nothing extraordinary in them, the houses being only two flories high, built with bricks dried in the fun, attd flat on the tops. The city is founded on a flony foil, and the environs are barron; but the circumjacent country is fo exceedingly fertile and delightful, that it is deemed by the Arabians one of the four paradifes of the eart. The inhabitants are fupplied with ware from the Euphrates, by a canal which is capable of carrying veffels of fifty tons burden: there is a fortrefs at the mouth of it, which is about forty-dre miles diffance from the of it, which is about forty-five miles diftance from the

The whole country lies fo low, that it would be subject to continual inundations, if a flout dyke or embankment did not prevent calamities of that kind; but the hot winds are very troublefome, and bring clouds of fand from the neighbouring defarts.

It is a place of great trade, and fwarms with veffels from most of the kingdoms of Asia and Europe. The English and Dutch have very considerable factories here, main-

tained by the companies for the better carrying on their commerce with Chiaa and other eathern parts, their difpatches being forwarded to England and Holland hy the way of Damafeus and Aleppo, by means of Arabian couriers, who are all exceedingly expeditious. The Dutch trade here with fpices, and the English with pepper, cloves, &c. The principal commercial affairs are managed by Armenian, Indian, and Perfian merchants; and all the richest commodities of India and Europe are sold in this city, through which the caravans to Mecca pass, which is another fource of wealth; the duties on goods are about five per cent. The inhabitants consist of Mahometans, Jews, Jacobites, Nestrians, Catholic, and Chaldeau Christians, or Christians of St. John, who are pretty numerous. There is a famous college here, called the academy of Nezam, from its founder Nezam al Monk, the grand viair of Shah Malar, the fultan of Iran. At present this city is a flourishing feat of literature, though it hath fewer colleges than Damaseus or Cairo. The horse which are bought here are very valuable, on account of their being able to travel with great expedition, and to undergo incredible fatigue: they fell from one thousand to two thousand crowns.

Basson is subject to an Arabian prince, who is tribute.

or their being able to travel with great expedition, and to undergo incredible fatigue: they fell from one thousand to two thousand crowns.

Bassor is subject to an Arabian prince, who is tributury to the Grand Signor. His revenue arises from the exchange of money for horses and camels fold here, but chiefly from his palm-trees, of which he hath a plantation of ninety miles in length. The manner of sowing the palms is as follows: About three hundred kernels are buried in the ground in the form of a normall, with the palms is as follow: About three hundred kernels are buried in the ground in the form of a pyramid, with the points of the kernels upwards, till the whole ends in a fingle kernel. The earth is then preffed clofe round it, and upon it. It is afferted by fome, that if the male and female palm are not placed clofe to each other, they will bear no fruit; while others affirm, that it may be made to bear by taking the bloffoms from the male, and inoculating the female therewith at the top of the ftem.

The income of the prince is fo great from money, horfes, camels, and dates, as to enable him to lay by annually three million of livres, after all the expences of government, and his tributary loan are defrayed. "The

nually three million of livres, after all the expences of government, and his tributary loan are defrayed. The prince given liberty to persons of all nations to trade here; and the police is so well managed, that the people are sate in the streets at all hours in the night: the garrison confits of about three thousand janisaries. It is affirmed, that the plague swept away eighty thousand of the inhabitants, when the city was visited with that dreadful calamity in

when the city was valued with this description.

Cerfa is fituated in thirty-one degrees, thirty-eight minutes north latitude, about fixty miles to the foodtward of Bagdat, and on the welf fide of the Euphrates; it was formerly a city of importance, being the refidence of the ealifs after they had quitted 'Damatous, and before they built Bagdat, but is now intirely defolated.

Traxt, on the Tigris, is a firong and well fortifled town, having two calles; it is about forty-two lengues beyond Bagdat. The Chaldean Apamea, is fupposed to

town, having two castles: it is about forty-two leagues beyond Bagdat. The Chaldean Apamea, is supposed to
have formerly stood on this spot.

II. The province of Diarbeck comprehends the antient
Mesopotania, Chaldea, Babylonia, and Assyria, it is situate north of Eyraca Arabic or Chaldea, surrounded by
the rivers Euplirates and Tigris, the chief town whereof
is Diarbeck, situate in forty degrees fifty minutes of eastern
longitude, and thirty-seven degrees thirty-five minutes
north latitude, on the river Tigris, and not far from its
source; about two hundred miles cast of Aleppo; the
Turkish name is Castemir, it is aulit on an eminence, the Turkish name is Caremit; it is built on an eminence, the descent from thence to the river very steep; the town is furrounded by a double wall; on the outward wall are fixty antique towers: in this city is a magnificent mosque, formerly a Christian church, and contains twenty thousand Christian inhabitants, whereof two thirds are Armenians, besides a great number of Mahometans; it is the sea of the beglerbeg, or viceroy, who has several sangiackships, or governments subject to him. The soil is very good in the neighbourhood of the town, abounding in corn, wine, cattle, wild fowl, and all manner of provi-fions i the meat, bread, and wine are admirable, and the fruits excellent. The principal manufacture is that of Turky leather, or maroquins, which employs a fourth part of the natives; galls and tobacco also are the produce of this province, of which great quantities are exported. This city is supplied with water from the Tigria, by means of an artificial canal, and embellished with many noble piazzas or market-places, and other elegant buildings : on the fides of the river are several caravaniera's, or inns; and near the town is a chapel, in which the Turks affirm that

Job was buried. The siz of the whole province is exceeding temperate and ferone, unfcorched by exceffive heart, and not incommoded by favere freds.

Bir, or Beer, another confiderable towit in this province, is fituate on the fide of a hill, to the caft of the Euphrates, in thirty-eight degrees fifteen minutes north latitude, feventy miles fouth-ealt of Aleppo, and is a great thoroughfare to Perfia: it has two largocatles, for its defence, one on the land fide, and the other on the bank of the river, and a garrifon of about two hundred janifaries and four hundred fanils, commanded—a fanciac: two finali rivulets run through the town. The Euphrates would be navigable as high as this city, if there were not forme cataracts and rocks in it, which hinder the transporting their merchandize to Baffora. Here are all kinds of provisions in plenty, particularly bread, wine, and fish. The neighbouring territory is pleafant, fettile, and well cultivated, except to the eastward, where it is rough, hilly, and rather fterife. Caravans are not allowed to either this city.

and rather sterife. Caravans are not allowed to enter this city.

Orfa, or Orpha, supposed to be the ancient Edida, is snother very considerable town, situate on the Euphrates, in farty degrees of eastern longitude, and thirty-fix degrees forty minutes of north latitude; where the caravans, travelling from Turky to Persia, usually rest eight or ten days; for here live the people that let the horses and mules for the abovementioned journey. Orfa, is the capital city of McGopotania, and, according to tradition, stands in the place where Abraham dwelt. The first thing they show foreigners is a large fountain, the springs whereof are under the foundations of the principal mosque in the city. The Christians have a tradition here, that this was the place where Abraham prayed before he went to factifice his son Isac; and that two springs of water arose from the place where he kneeded. These feed the large sountain abovementioned, and they will not seffer any person to abovementioned, and they will not feffer any person to enter the grotto, where these springs rise, without pulling off his shoes, and it is with difficulty that a Christian is permitted to fee it. The inhabitants are many of them Armenian Christians, and are permitted to perform divine fervice in their churches. Here are also to be seen several antient tombs of the Christians, in grottos, on the neighbouring monntains.

The walls of the city of Orfa are of free-stone, with towers at convenient distances; but the town is meanly built, and several void places in it without inhabitants. It is governed by a bassa, and has a garrison of fix or seven hundred spahis, and about two hundred janisaries, there being much more occasion for horse than soot, to oppose being much more occasion for horse than foot, to oppose the incursions of the Arabs, who frequently crofs the Eu-phrates, in hopes of plunder. There are several pleasant gardons near the walls, watered by artificial channels, and the soil produces good wine: but what Orfa is most re-markable for, is the manufacture of yellow maroquins, or Turky leather, as we call it; the red is made at Diarbeck, and the blue at Tocar.

The city of Nelbin, or Nasbin, situate about thirtyfive miles from the Tigris, is the refidence of a Turkith faugiac. It is divided into two wards, each on an emiscince, with a large tract of plowed land between. This gives it a pretty appearance at a diffance, though both wards in reality are scarcely worthy the name of a finall village; however, arches, gates, and the remains of a noble church are fill vifible, which evince that its antient fituation was far fuperior to its prefent. The foll is fertile; and, as the chief bufines of the inhabitants is agriculture, the land is well cultivated, and the inhabitants plentifully supplied with corn, wine, fruits, &c.

Five or fix days journey to the eastward of Nesbin, stands the city of Mosul, or Moussul, on the western bank of the river Tigris, (over-against the place where Nineveh is sup-posed to have stood) in thirty-fix degrees odd minutes, northern latitude: the walls of this city make a good appearance without, being built of free stone, and three miles in circumference; there is a little calle on the Tigris, where the baffa refides, but the houfes are very mean within, and many of them lie in ruins; it is however a place of good trade, being the ordinary road for the caravans from Aleppo to Peria, and has a communication with Bagdat, and the gulf of Peria, by means of the Tigris. It is chiefly inhabited by Greeks, Christians, Armenians, Nestorians and Maronites, but those of the citabiffuncist are Mahometans; and the garrifon ufually con-fifts of three or four thou and horfe and foot. There is a great trade for galls hase, being the produce of the neigh-bouring countries. A bridge of boats is laid over the river at this place, by which it has a communication with Affyria or Curdillan. The foil on this fide of the river is exceedingly barren, but on the opposite it is very fertile. The heat is fo excelsive in fummer, that none go river is exceedingly barren, but on the opposite it is very fertile. The heat is fo excessive in summer, that none go out of doors from two hours after sun-rise till an hour after sun-fet. There is likewise a malignant and dangerous wind called famile, which prevails from hence to Surat, and is supposed to be the same east wind mentioned by Job. It is impregnated with little streaks of fire as small as lairs, which immediately kill those who breath or inhale them, and turn the same back as a coal. When the people perceive them soming, they fall state on their faces, and iometimes escape. This wind is felt chiefly on the banks of the river, but not on the water, and is deemed a proceed from subprous vanours, which are kindled by to proceed from sulphurous vapours, which are kindled by agitation. Independent of this wind, the hot air is often dangerous and injures the lungs, instames the blood, and parches the skin, or mises it into blitters, and occasions it. parches the skin, or raises it into blitters, and occasions it to peel off. On this account travellers wear a kind of mask made of a fost black crape to preferve their eyes. But if, after all their precaution, they become inflamed, the afflicted person anoints them with a salve made of a mixture of sugar and long pepper fifted very fine.

Merdin or Mardin, is situated on the west side of the Tigris, between Mosul and Bagdat, and about twenty—size from Districts, in thirty save a like from Districts.

Tigria, between Motul and Hagdat, and about twenty-five mile: from Diarbeck, in thirty-feven degrees fifteen minutes north latitude, and forty degrees east longitude. It is about five miles in circumference, furrounded by a frong wall, and defended by an excellent castle of about a mile in compais, which is fituated upon an almost inac-cessible rock. The castle abounds in fine springs, and even contains cofn-fields. It is the refidence of a langiac, and has a garrifon of four hundred janifaries and two hunand has a garrifon of four hundred janifaries and two hundred fpahis. It is fortnongly fortified, that Tamerlane the great was obliged to abandon it, after having invefted it for near three years. The city is well built, adorned with many noble houses and a fine fountain, the waters of which come from the citadel. The manufactures are filk, cotton, and gold and filver fluss. Many Christians inhabit the city, who have an archbishop fubject to the patriarch of Anticela. The air is temperate and ferene; the architect is and further. territory rich and fruitfui.

There are a few other less confiderable cities and towns in Diarbeck, namely, Gezira, in thirty-feven degrees thirty minutes north latitude, and thirty-nine degrees ten minutes east longitude. It is situated in an island in the Tigris, the word (iezira, in the Arabic language, fignifying an island. It is a small, but tich commercial city, where a great number of merchants meet to carry on a where a great name of the state for raifins.

Amadia, or Amad, is about feventy-two miles east from Gezira, and the same west from Mosul.

Zibin, in the mid-way between Orfa and Moful, is a tolerable town fituated on an affent. It is furrounded with good walls and ditches, well supplied with springs and fountains, and furnished with a good stock of provi-

III. We shall now proceed to give a description of Turkish Curdestan, or Assyria, for the most easterly part of Curdestan is under the dominion of the Pertians. province has Armenia or Turcomania on the north: Per-fian Curdestan on the east: Chaldea on the fouth: and Diarbeck or Mesopotamia on the west: and is said to receive its name from Affar the fon of Shem. In this country the famous city of Ninevel once stood, on the eastern bank of the river Tigris, opposite to the place were Moussul now slands. This town was fixty miles in compals, or three days journey according to Jonah : twenty miles being an ordinary day's journey for a man on foot. The walls of it are faid to have been one hundred feet high, and to have had eleven hundred and fifty towers upon it, each of them two hundred feet in height. houses did not fland contiguous, but there were large gardens and spaces between them, as in Babylon. It was under the dominion of the same prince, who used to reunder the common of the rate plane, who are to be fide part of the year at one of the fice ities, and the other part at the other. It is faid to be built by Nimrod, or according to others by Nimus, from whom, it is conjectured, cording to other by Nima, from whom, it is conjectures, it received its name. It was befieged by Arbaces three years, when the river overflowed twenty furlongs of the wall; whereupon Sardanapalus, the prince, retired into his palace, and having collected all his weight, which, according to tradition, amounted to upwards of twenty thousand millions. of pounds, fet fire to the whole, and threw himself into

the flames. This city was afterwards intirely destroyed by Astyages, the eldest fon of Cyaxares, the eighth ting of the Medes, after Arbaces. There is nothing now to be feen but heaps of rubbith, almost a league along the river Tigris, over against Moussia, which people imagine to be the remains of this vast city. Half, a league from the Tigris also is a little hill, on the top whereof tlands a mosque, over the place where, according to the tradition of the gris alfo is a little hill, on the top whereof stands a mosque, over the place where, according to the tradition of the country, Johah was buried. And for this place the Turks have so great a veneration, that they will scarce suffer any Christian to enter the mosque. In the middle of the temple stands a tomb covered with a pall of tissue, and at the sour corners great wax cardles, besides several lamps, which hang down from the roof, and here some dervites or Turkish monks are employed in reading the alcoran. The province of Curdestan is a very pleasant fruitful soil, diversified with little and vallies. The hills are cloathed with the finest oaks, and a great variety of other timber and fruit trees. The vallies are well watered, and hear excellent grain where they are caltivated, but being unider the dominion of the stofful Turk, or rather a frontier country between Turky and Persia, there is

being under the dominion of the flothful Turk, or rather a frontier country between Turky and Perfia, there is very little of it manured. However there are vast flocks and herds fed in this country, the owners living in tents, like the Arabs. The governing part of the country are Mahometans, but the common people are faid to be a kind of Christians, at least they go under that denomination; but according to the accounts travellers give us of them, they have the wost abund notions invisionable of them, they have the most absurd notions imaginable of Chritianity; and the chief object of worship is the de-vil, of whom they are greatly affaid; we are also told, that there are not a more bruith people upon the face of the earth, and that they are not left addicted to thieving and earm, and that they are not lefs addicted to thieving and plundering the caravans than the Arabians; but this is not to be wondered at upon the frontiers of two great kingdoms, enemies to each other, where people will take greater liberites than in other places. Galls and tobacco are the principal produce of the foil at prefent, but it-feems fit for any thing, it being very deep, as travellers complain who pass through it: and though the country in general is pleasant, it feems the roads are not. There are fearce any towns and villages, but the Evolution like the are scarce any towns and villages, but the houses lie dif-perfed at the distance of a musket shot from one another, and scarce a house which has not a vineyard; however they

make no wine, but dry their grapes.

The capital city of Curdiflan at this time is Sherafoul, which lies to the eaftward of Ninevel, in the thirty-fixth degree of north latitude. It is the feat of the begierbeg, or viceroy of the province, who hath feveral fangiackfips or governments under him. The town is not large but built after a particular manner, the houses being hewed out of a rock on the fide of a hill for a quarter of

a league together; and you go up to them by lifteen or twenty flone steps, and sometimes more.

In this province, between Ninevel and Bagdat, are feyeral hills of fulphur, to which fome travellers impute the pernicious qualities of the hot winds, or faniel, abovementioned. There are likewise some sulphurous hot baths at a village called Alchamam, which is about a day's journey a vinige cause intendandi, which is about a days journey from Moiul; and at Attendach's there is a bill from which the Arabs dig gold. In the fame territory tamarifts, li-quorice, and frunach are produced iii great plenty; tho latter, together with falt, being infufed in water, gives it a red tinge, and renders it cool, fweet, and falubrious; taken in broth it is a remedy for the bloody flux.

This part of the country is greatly infelted by wild beafts, particularly lipns, jackalls, ceracoulacks or wild cats, which are remarkable for having large black ears of half a foot in length. Those who navigate the river in boats always go well armed on account of the lions, who will plunge into the water, and with great sury attack the

passengers.

The Tigris washes the western skirts of this province ; and the Lycus, Caprus, and Gorgus flow through it at almost equal distances; the first derives its name from a wolf, the fecond from a goat, and the third is the Zefbera

of Pliny.

The Curds, in fine weather, drive their herds and flocks about, in fearch of pasture, and while the husbands look out for plunder, the women manage the cattle, and make hutter and cheese. Their drink is either milk or water. The men ride upon very fine fwift horses, their only weapon being a lance. Their tents are large, and made of coarse brown cloth, that serves likewise for a covering to their portable houses, which are square, and made of cane hurdles. The floor is covered with mats, and ferves both for the purpose of bed and table. When they remove,

vering to le of cane rves both y remove, they load their oxen with wives, children, and houses, which are taken to pieces for the purpose. These people are very differeable to look at, having small eyes, dark complexions, wide mouths, black hair, and serocious afcomplexions, wide mouths, black hair, and terocious alpects; nevertheless they are very front and nimble, and,
while children, usually go naked, which renders them extremely hardy. The Curds acknowledge no fubjection
either to Turks or Russians.

The public revenue of this province is computed to
amount to fix hundred purses annually, besides three hundred more levied on the Armenian and Greek Christians,

and befides what is levied on the merchandize of the caravans, which is reckoned to amount, in the whole to nine

per cent.

Arbela lies on the frontiers of Persia, in thirty-fix degrees north latitude, and forty-four degrees twenty minutes of eastern longitude, and on the river Lycus, which runs through a fine plain thirty or forty miles over, in the middle whereof is a little hill, named Nicatorius by Alexander, and the ruins of a castle, where it is conjectured Darius shood to see the last state battle between his troops and the Grecians, commanded by Alexander, which put a period to the Perlian empire.

Betlis is fituate near the fouth shore of the lake of Van,

Betlis is fituate near the fouth shore of the lake of Van, in forty-three degrees thirty minutes of eastern longitude, and thirty-feven degrees fifty-five minutes north latitude. The bey or fovereign of this town, and the territory about it, is still independent, it is said, and his country lying on the confines of Persia, and Turky, refuses to own himself subject to either. It is a mountainous tract, almost inactive the state of ceffible; and he can, by taking the paffes, cut off the communication between both kingdoms: the Turks and Persians, therefore, think it the interest to keep fair with

him.

As you approach Betlis, you must travel a whole day among high steep mountains, from whence there fall prodigious torrents in the wet season. The way up to the city cut through a rock, where there is but just room for a camel to pass. It is built round the hill in form of a sugar loaf, and stands at an equal distance from two other mountains. There is no getting up to it, but by wheeling and winding round the mountain. On the top there is a plain where the castle stands. And here the bey also has his palace. It is said he can raise twenty-five thousand horse, and a good body of foot out of the shepherds of his country.

his country.

Harpel is fitnated on the river Caprus, and is furrounded

by a mud wall; the houses are miserably built: it is, however, a large town, and the residence of a sangiac.

Holwan is situated between the mountains that divide the Persan Irak, Curdestan, and Chaldæ, it lies in thirtyfive degrees north latitude, and forty-feven degrees ten mi-nutes east longitude. The Mahometants, who believe that Elijah is still alive, affirm that he lives in one of the

mountains near this town.

1V. The province of Turcomania, the ancient Armenia, is fituate north of Diarbeck and Curdestan, having Media or Aderbeitzen on the east, and Anatolia on the west.

The chief towns are Erzerum and Kars.

The chief towns are Erzerum and Kars.

The names of the rivers in this country are the Cyrus, Lycus, Phafis. Araxis, Tigris, and Euphrates. The mountains are, Ararat, the Paryada, Marufius, Anti-taurus, Niphates, Mofchifk, and Gordian mountains.

The city of Erzerum, the capital, is fituate at the foot of a mountain, in forty-one degrees of east longitude, one hundred and fifty miles fouth of Trapezond and the Nick for the Phage for the property of the prope

black fea. It is about two miles in circumference, fur-rounded by a double wall. The inhabitants confift of near twenty thoufand Turks, and fix thoufand Armenian Chriftians. The Armenian merchants manage all the trade of the Levant, and are in fact the greatest merchants in the universe. Many of them are to be found in Italy, France, Germany, Holland, England, &c. and in the do-minions of the Great Mogul; all over the Turkith and Perfian territories, in Siam, Java, the Philippine illands, and all parts of the east, China excepted: they are in general men of probity and politeness.

Moft of the Turks are called janifaries, giving a fum of money to the aga to purchate that privilege; but the greatest part of them are ordinary tradefmen: the name of janilary gives them great authority, as they are liable to be called to account by none but their aga, and can infult their fellow-fubjeck with impunity. People of figure are often obliged to enrol themselves in this body, to prevent their being exposed to the violences these people commit; but though they are very valiant at home in raising riots and abusing their neighbours, they never take

the field, or concern themselves in any wars the country is engaged in; neither do they receive any pay. I he go-vernment pay of a january is from about two-pence half-

vernment pay of a janilary is from about two-pence man-penny to ten pence per day.

The Armenians and Greek Christians have two churches and several monasteries, and each of them their billiop here. They are most of them artificers, employed in the leather and copper manufacture, the neighbouring moun-tains being rich in copper-ore, and some filver. The mountains are usually covered with snow, till midsummer; the air exceffively cold in winter, and their vallies are as much too hot in fuminer; the weather frequently changes on a fudden, from feorching heat to the contrary changes on a fudden, from foorthing heat to the contrary extreme, which is the more unfupportable, as they have fearce any fuel in the country; there is neither tree or bush to be feen for many miles; their firing therefore is cow-dung, and other flinking materials, which talast the air, and spoils the food they dreft with it. They trade pretty much in furs, and have a brifk foreign trade, the caravans passing through this city in their way to Trabizond, on the Black sta, and so on to Constantinople frequently, whereby they avoid the Araba, and other nile. quently, whereby they avoid the Arabs, and other pil-ferers, which they are in danger of encountering when they proceed in the direct road to Aleppo. 'A te Ezerum, the cultom-house officers collect the Grand Signor's du ties on all merchandize that paffes through the country is they feldom enter into particulars, but charge them in the lump according to their weight: for instance, they pay twenty pounds sering for every cantel's load, which is usually about eight hundred weight here; sometimes they pay five per cent. for all the merchandize exported, and

pay he per cent. for all the merenandize exported, and every traveller five crowns a head.

There is a little village called Elija, about fix miles from the above city which contains only a few finall houses built with mud; but is famous for an excellent bath, which is a neat oftagonal building. The basis is a neat oftagonal building. The basis is a neat oftagonal building. The basis is a man's body. The Turks are continually flocking histor four Exercise to hatle.

hither from Erzerum to bathe.

hither from Erzerum to bathe.

The city Van or Wan is fittated on a lake of the fame name, which is one of the largeft in Afia, in thirty-eight degrees twelve minutes north latitude, and forty-four degrees fifty-five minutes eaft longitude: it is large, and flands at the foot of a high craggy mountain, on which there is a fortreft deemed impregnable, that commands the town and country, and has a frong Turkith garrifun. The lake produces a variety of fine fith, particularly one of the pilchard kind, great quantities of which are exported to many diffinit places, as well as confumed at home, being used in fauces, and eaten in the fame manner as anchovies. The lake is one hundred and fifty miles in circumference, receives many, rivers into its beform, and counterence, receives many rivers into its beform, and contains feveral islands, two of which, viz. Lindati and Adareton, are confiderable, each having httle villages and

Adarton, are considerable, each having futle villages and a monaftery of Armenian monks on it.

The next considerable city to Erzerum abovementioned is Cars, or Kars, five or fix days journey to the north-east, in forty-two degrees odd minutes north latitude; and gives name to a river on which it flands. This place is the laft frontier town of Turky towards Persa. It is of an oblong figure, and has a double wall about it two miles in the state of the Carten of compais; but the place is very thinly inhabited : the castle stands on an inaccessible rock next to the river; the houses are very mean, more like dens than habitations for men; are very mean, more like dens than habitations for men; but there is a numerous garrifon in it, commanded by a baffa. The river Arpagi joins the Cars a little below the city, and afterwards going by the name of Arpigi, falls into the Araxes, 'or Arras. The Turkish officers at Cars exact intolerably on travellers, but especially on the Franks, who find great difficulties in passing through this town into

The country about it, though naturally fertile, is but very little cultivated, through the indolence of the inhabi-

tants.

The town of Irvan, Erivan, or Chirvan, is fituated in forty degrees ten minutes north latitude, and forty five degrees thirty minutes eaft longitude. It is about one hundred and eighty miles eaft of Arzerum, and has been alternately poffeffed by the Turks and Perfains a great many times, and in 1635 it was ceded to the Perfains. It was a spacious place, but ill built, and very dirty. The town is watered by two rivers, and the neighbouring country is extremely fertile. The castle is of no importance, and the fortifications are made of mud. Over one of the river called Zengsrie there is a full ridge of form. of the rivers called Zengeric, there is a fine bridge of four arches. Here provisions are exceedingly cheap: particularly game, and the fruits and wine are admirable. The

public square, or pizzza is handsome; and the bazar or market capacious. The public buildings are elegant and large. The river Zengeric issues from the lake of Erivan, which is about twenty-five miles in circumference, and contains an island, with an Armenian monastery, the monks of which lead a life uncommonly austere, never speaking to each other but four times a year, Though speaking to each other but four times a year. Though the lake which furrounds them is plentifully supplied with the most excellent fish, and their little island abounds with a variety of delicious fruits, they must touch neither, except on the four times when they are permitted to speak to each other. All the reft of the year they are obliged to live upon herbs and roots, and even those must not be obtained by cultivation, but such as are the spontaneous produce of nature are to be selected. Near Erivan is ano-ther famous monastery called the three churches, which is the residence of the great patriarch of the Armenians, under whom are forty-seven archbishops, who have each four or tive suffragans. The archbishops and suffragans usually refide in the fame monaftery. Every Armenian, above the age of fifteen, is obliged to pay five-pence annually to the great patriarch, whose revenue amounts to about fix hundred thousand crowns, out of which he pays a consider-

About feven leagues from the Araxes stands Nacksian.

About feven leagues from the Araxes stands Nacksian.

It was formerly called Artaxata, and was the residence of the antient Armenian kings. It is built upon a plain which Hannibal gave to king Artara, who then made it the capital of all Armenia. The celebrated battle beautiful and Mithridates was fought rear it. This city contains many basers, caravanferas, public baths, coffee-houses, handsome streets, &c. It is in thirty-nine degrees north latitude, feventy-five degrees fifty-five mi-nutes east longitude, and stands about fixty-three miles fouth of Erivan, which in 1635 was ceded by the Turks

to the Persians.

On the Araxes flands Zulpha, or Old Zulpha, to dif-tinguish it from the New, near Ispahan in Persia: the above river begins to be navigable about fix miles below this Shah Abbas carried feventy-feven thousand families from this province, to help to repeople fome of the depopulated parts of his own kingdom. About Zulpha are feveral Armenian monafteries, the monks of which are Roman Catholics of the Dominican order; many young Armenians are fent to Rome to be educated, who on their return fill the vacancies that may have happened in the monafteries. The district of Zulpha contains about fix thousand souls, who are all Roman Catholics, and do not in the least differ in their worthip from those of Eu-rope, except that mass is celebrated in the Armenian instead of the Latin tongue. At the foot of a high mountain near Zulpha are tome medicinal springs, which are celebrated for many virtues, but more particularly for curing those that are bit by any venomous ereature. Though Armenia Minor was formerly very consider-

able, it is at present of no great importance: on the east, it is bounded by the Euphrates; on the fouth, by mount Tauris; and on the west and north, by a long chain of anountains called Antitauris, Amanus, &c. It is in general a mountainous country, but in fome places there fruitful vallies, abounding with olives, vines, &c. The manners, cuftoms, &c. of the people always were, and still are, the same as those of Armenia Major. It is imagined that Armenia was first peopled by the immediate de-feendants of Noah; it then became a kingdom, and remained fo till it was fubdued by the Perfians, it was afterwards perferied by the immediate facceffors of Alexander the Great, and afterwards conquered by the Romans. About the year 687 the Saracens made themselves mas-About the year oof life spacetis made infinitely shares of it, and keep possession till they were driven out by she Turks and Tactars, from whom it had the name of Turcomania. The ark of Noah refled on mount Ararat in Armenia; the accent to which is not only difficult and tedious, but even dangerous through the ruggedness of fome parts, and deep fands of others ; not to mention the danger from the beafts of prey, the horrid precipices are beheld with horror even by the guides themselves.

V. The last province in the cattern division of Asiatic Turky is the county of Georgia, called also Gurgistan (the termination "tan," from the Celuc, signifying country); in treating of which, we shall comprehend Mingrelis, Imaretta, Abcassa, and Corrania. This province is bounded to the tends by Coordina on the fouth. maretta, Abcama, and Corrante. In sprovince is bounded on the north, by Circaffia; on the fouth, by Armenia; on the east, by Daghestan; and, en the west, by the Euxine, or Black sta: it includes Colchia, Iberia, and Albania. It is partly subject to the Turks, and partly to the Persans; but there is no dependence upon them; so that the fovereignty of those two powers over them is rather no-minal than real; for as they are a hardy, warlike people, and can assily retire to and defend the passes of their moun-tains, it would be dangerous to quarrel with them, as Lo army could subdue them; and, from the nature of their country; they might become exceeding troublesome by making excursions into the neighbouring. Turkish and Perfian provinces.

Perian provinces.

This country abounds with mountains and woods, which are interfporfed with a variety of beautiful vales and fertile plains. It has a dry air, cold in winter, and hot in fumaner; produces all kinds of fruits, which are excellent, and the bread is hardly to be parallaked. There is plenty of fine cattle: the pork is extremely fine, the wild and tame fowl are excellent; and the fifth, both in fea and the first country likestic. river, equal any in the universe. The country likewife produces great quantities of excellent filk. The inhabitants have better wine, and drink more of that liquor, than any other people in the world. A horfe-load of the best ee hundred weight) fells for only eight fhillings.

The Georgianu are robush, valiant, and of a focial temper, very truthy and faithful, endowed with good natural parts, but for want of education, vicious. The women are generally very comply, and their features and complexion the most admired of any people in the east, as well as their parts and genius: for hence it is, that the Turks and Persians replenish their harams or feraglios: hus force of the Georgians, who have more decrease and but fome of the Georgians, who have more decency and confcience than their neighbours, follow the Armenian custom of marrying their daughters when infants, to prevent their being fold for flaves, or taken away by the great lords for concubines.

They chuse the most sprightly and ingenious lads to be ducated in their academies at Constantinople and Ispahan, obliging them to apply themselves to such itudies and arts,

obliging them to apply themselves to such studies and arts, as they find they have a genius for; and out of these, are all their beglerbegs or viceroys, beys, bass, and governors taken, when they are of an age proper to be employed in, any commands or business.

From hence, also, are most of the young beauties collected, which furnish and adorn their feraglios. The Jews of Cornhantinople and other great towns; are the factors for this unpartial kind of nescentancies; they were factors for this unnatural kind of merchandize: they purractors for this unnatural kind of neerchandize: they purchase them of their parents or mafters, when they are very young, disposing of them again, either in the royal feragios, or to the basis and great men; and to that end, give them such an education, as may render them most agreeable to their masters. As to the male slaves that are fold, it is no wonder their masters make money of them,

it being the most ready road to their advancement, both in the Ottoman and Persian courts.

The Georgians are possessed of many qualities: they are great liars, implacable in their harred, and unforgiving to those who have offended them. They do not deem drunkennels, lawry, or libertinism crimes, or even follies. The clergy in general are worse than the laity, and the women are as vicious as either: they impair their beauty with paint, and their minds by the most licentious behaviour. They are all ofurers, and affect a grand deportment. Many individuals of the surrounding nations reside here, and the Armenians in particular are more numerous than the Georgians themselves. They are likewife richer, and occupy the principal places of trust and power. All religious are tolerated i... Georgia, every one being at liberty

gions are tolerated in Georgia, every one being at liberty to think, pray, and foeak as he pleafes.

They imitate the Perfians in eating, fitting, lying, &c. they have buttons and loops to their vefts, and wear them open at their breafts. The habits of the women are entirely Perfian; the men's covering for the legs and feet is in the Perfian fathion, but their bonnets or hats refemble those of the Polanders. Their houses are all built after

the Persian model.

The prince of Georgia is a Mahonietan, but the generality of the people pretend to be Christians, for they are so extremely ignorant, that they searcely understand the meaning of what they profes. They build their churches upon high and almost inaccessible places, where they are abundanced to the weather and lightend to be doned to the injuries of the weather, and luffered to be the habitations of birds. From their fituation the Georgians can fee them at a great diffance, when they neves fail to falute them with great refpect, but take care feldom or never to enter them. In fome of the towns, however, the churches are kept pretty desently. Befides the patriarch, there are feveral bishops, and a great number of infestional control of the churches. feriot elergy.

principal,

principal rivers are the Kur or Cyrus and the Aragus; the first rises in the Mnschian mountains, and discharges itself into the Caspian see, the latter springs from the mountains which separate Iberia from Colchis, and falls

Into the Cyrus.

Teflis, is fituated in forty-two degrees, The capire! Tells, is is fluated in forty-fewe degrees, forty-fevet. A north latitude, and forty-feven degrees five minutes on an analysis of the best in Afazit is watered by the river Kur. The walls are strong and handsome: it contains fourteen churches, fix belong to the Georgians, and eight to the Armenians; the cathedral, called Sion, is a stone edifice, built near the river. A large dome supported by four massy pillars, rises in the middle; the inside is filled with miserable Greek paintings, and the bishop's palace adjoins to it. The inhabitants of this city are thought to amount to twenty thousand.

There is a large fortres on the declivity of the mountain. The capital

this city are thought to amount to twenty thouland.

There is a large fortrefs on the declivity of the mountain, containing an arfenal, a market, and a public figure.

There is not a fingle mosque; which is remarkable, as the city belongs to the Persans, and the prince himself hath usually been a Mahometan; but prince Heraclius, who is supposed to reign in Georgia at present, hath attempted to throw off both the Turkish and Persan yoke, and to prevent the inhabitants from felling their progeny as flaves: it his hoped is laudable endeavours herein will

prove fuccefsful.

prove fuccefsful.

Their staple commodity is furs; but great quantities of raw silk are gent to various places, as the Georgians know nothing of weaving. The bazan, caravanseras, and some of the houses are built of sone, but the generality are only crested with mud and brick and are low and dark. The streets are very badly paved, and consequently disagreeable either in wet or dry weather. The palace of the prince is a superbuilding; it is adorned with extensive and beautiful gardens, aviaries, falconries, &c. and before it there is a large square furrounded by shops. Many tolerable, house and fine gardens render the environs very pleasant for several miles round. The grand visir's house is the sinest in the city, and the capuchin's monastery is pleasant.

The Georgians deal by way of barter; travellers have

The Georgians deal by way of barter; travellers have therefore an opportunity of procuring the moftexcellent provisions in great quantities, in exchange for necklaces, rings, bracelets, knives, pins, needles, &c. They use no weights or messures; and are such bad arithmeticians, that they cannot count an hundred. The Italian fathers receive from Rome but twenty-five crowns each annually to maintain them; but are permitted to practice physic, of which they know very little. If the patient dies, they receive no pay, and if he recovers, slaves, wine, cows, sheep, &c. are sent to the convent, by way of gratuity.

A merchant in Georgia, is less respected than a mechanic; and a mechanic less than a husbanduran. The principal merchants and traders are Armenians, whom the Georgian snaturally hate, and look upon thethe in the same despicable light, as Jews are considered in Europe. One of the most respectable employments in Georgia is that of a public executioner: the profession is honourable, and the professor become rich; if any man can trace a hangman amongst his ancessors, he is extremely proud of it, and never fails to mention it frequently with exultation; at the same time observing, that nothing is so noble as execution. fame time observing, that nothing is so noble as execut-ing justice, and that the safety of the state depends on the extermination of criminals.

When a war happens between Turky and Perfia, this country (like Flanders in Europe) is utually the feat of it. In 1578, the Turkish forces, under the command of Muftapha Baffa, took Teffis; but the Perfians coming to the affiftance of the Georgians, the Turkish troops were defeated and feventy thousand of them than. In 1583 hoftilities were recommenced, but the Perfians were again

victorious.

Besides what is usually allowed to the prince of Georgia, beiness what is utally allowed to the prince of Georgia, by the Persan monarch, he has the customs of Teslis, the duties upon brandy and melons, and one sheep for every fire-hearth in the whole country, amounting to forty thousand; the crown estates supply him with wine, butter, wax grain of all kinds, vegetables, fruits, &c. A great deal of gunpowder is made in Georgia, particularly at Lestic the mountain near that give produces less than the mountain near that give produces less than the mountain near that give produces less than the mountain near that give produces the control of the mountain near that give produces less than the mountain near that give produces the control of the mountain near that give produces the control of at Teffis, the mountains near that city producing large quantities of nitre. The people cat and burn a great deal of linfeed oil, which they have in great plenty; but they value only the feed, as they have no idea of beating the

Malk for finning.

On the death of a Georgian, a bishop fays mass over the corpse, for which his pay is one hundred crowns. If the deceased has not lest money sufficient to discharge this

exorbitant demand, some of his quondam friends very obligingly sell his wife and children for slaves, to raise the money; for the clergy mus not go unpaid; the bishop then says mais, and atterwards lays a letter upon the break of the corple, which is only a complimentary card to St. Peter, to inform him, that the funcral expenses have been heardly expenses and the state of the corple. honefily paid; and to intrest him therefore to be so oblig-ing as to open the gates of paradise to the departed soul; the body is then wrapt up in linen, and buried. The same absurd custom of sending a note by the dead to Ma-homet, is practised by his disciples.

homet, is practifed by his difciples.

The men in Georgia are generally more ignorant than the women, who receive fome education in the monafeteries. Their language is remarkable for its beautiful fimplicity. And with respect to the country in general, that ingenious traveller Mr. Tournefort observes, that "Paradisemust undoubtedly have been in the way between Erzerum and Testis, if it be allowed to take the Phasis for Pifon, and Araxes for Gihon; and then, not to remove paradise two far from the heads of these rivers; it must of necessity be placed in the beautiful vales of Georgia."

Mingrelia, known to the antients by the appellation of Colchis, lies in the western parts of Iberia or Georgia, and is bounded on the east by Georgia properly so called; on the west, by the Euxine sea, on the north, by mount Cauwett, by the Euxine fea; on the north, by mount Cauveafus; and on the fouth by Armenia and part of Pontus. It is watered by many rivers, 'namely the Corax, Hippus Cyancus, Chanftus, Abfarus, Ciffa, Ophir, and Pharis, where the Argonauts landed. All the above rivers empty themselves into the Euxine sea, but none of them are confiderable, except the Pharis, which rifes in mount Cauca fus. The inhabitants of this celebrated mountain are faid, by the most credible writers, to have little besides mesh, which right share are said. faid, by the most credible writers, to have little besides speech, which can intitle them to humanity; shey are tall and well-made, their looks are fierce, and indicate the favored disposition of their minds. They are the most darring, ferocious, and determined robbers in the world.

This country is in many parts extremely woody, very uneven, full of hills, and but little cultivated, the fold is bad and sterile; and the fruits ill-tasted and unwholes the means the great state which he covered into the content of the state of the sta

is bad and sterile; and the fruits ill-tasted and unwholes fome, except the grapes, which might be converted into some of the best wine in the universe, if the natives knew how to make it. The rains and humid vapours, which mingle with the hot exhalations frequent here, occasion pessioners, and a variety of other diseases. The earth is so moist, that the few who turn their thoughts to agriculture, fow their wheat and barley without plowing; and for their other seeds they turn up the land with little wooden ploughs, which are sufficiently strong so make the furrows in to soft a soil.

Colchis was faild by the antients to be exceedingly plea-

Colchis was faid by the antients to be exceedingly plea-fant and fertile, and even to abound in mines of gold, which gave rife to the celebrated fable of the golden fleece, sant and tertile, and even to abound in mines of gold, which gave rife to the celebrated fable of the golden fleece, and the Argon utile expedition; for the inhabitants ufed to catch the gold duft, which was brought down by the torrents from mount Caucafus, by fetting fleeces of wool acrofs fome of the narrow paffages of those torrents. They have plenty of beeves, hogs, wild boars, flags, and other venifon: likewife partridges, pheafants, qualis, &c. On mount Caucafus, falcons, engles, pelicans, tygers, b. s., leopards, wolves, and jackalls breed.

They make their bread of a finall grain called gomm, it is agreeable to the tafte, falubrious, cooling and laxative; but the people of quality eat wheaten bread. The principal food is beef and pork, the latter being excellent. The nobility fpend a great deal of time in killing and catching game, such as pheafants, water fowl, &c. but their favourite diversion is flying the falcon at the heron; which is no fooner taken, thai they cut the beautiful tust of feathers from its head and let it go again. They have a great number of excellent horses, which are never shod nor fed with corn.

nor fed with corn.

The houses are every where interspersed over the country; but there are no towns except two little ones by the fea-fide. With respect to easiles, there are about ten in number, in the principal of which, named Rues, the prince number, in the principal of which, named Rues, the prince keeps his court. Their caftles are built of stone, to the height of about fifty seet, in the midst of a wood. Here their treasures are deposited, though the garrison consists only of about fixty persons: near the castle are several magazines for provisions, built of wood, which likewife serve for places of retreat upon emergencies. They have many suits made of branches of trees, cames, and reeds; and are for several in these retreasts that tune can come at them. are fo fecure in these retreats, that none can come at them, but by one winding narrow passage, which is always stopped up when they are in danger of an attack from an enemy.

They build their houses of wood, but never raise them above two stories. They have neither windows nor chimnies, but are furnished with beds and couches. The whole family, with the cattle, all lie in one room at

night.
With respect to the natives of Mingrelia, the men are well-proportioned, and the women pretty, but they paint their faces and eyebrows; they wear their hair in curled ringlets, are witty and pollte, but vain, luxurious, trea-cherous, and feroclous; dextrous thieves, and glory in the practice. They think it prudent as well as lawful to have many wives, because they bring them many children, whom they can fell for money, or barter for necessaries: when children, however, come too quick, they murder them without the least remorie; as they also do the sick and sged, which they deem an act of benevolence. Adultery is thought but a trifle: when a man detects another in fa-militarity with his wife, he obliges him to paya hog, which being immediately drefied, all three fit down very lovingly to feast upon it together.

The peafants are compelled to maintain the lords, who fell them and their whole families whenever they think They are the umpires in all disputes between proper. They are the umpires in all disputes between their vassals; but when there is a quarrel between any of their great lords, they have recourse to arms. Bows and

arrows, fwords and lances, are their hostile weapons.

The laity suffer very little of their beard to grow, but those of the ecclefiaftics are very long. They thave the head, leaving only a little hair upon the forehead and round the ears. Their bonnet is made of felt, and in winter is lined with fur, but is not of much use to them, for when it rains they put it in their pocket, and go bareheaded to fave it. They are so poor, that the common people go almost naked, and have only a covering of a triangular form, which they turn against the wind or rain. They wear a shirt, but bave seldom more than one at a time; and that they only wash three times in the year. The shirt is tucked into a pair of breeches, and on the feet they wear sandals made of the untanned hide of a buffalo, which are saftened with thongs of the same. They wear snow shows

Both fexes of every class eat together. Thus grooms and feullions dine daily with the king and queen. On holi-days they eat venifon, beef and pork, but at other times the mafters have fifth and pulfe, and the inferiors nothing but gomms. Both fexes ulually get drunk at their entertainments, when the men boalt of their thefte, and the women of their amours. If the weather will permit, they dine

in the open court.

The revenues of the prince are estimated at about twenty thousand crowns per annum, which are raised by fines, impositions, the sale of slaves, and duties on all imports and exports; he spends very little of this money, for his crown lands are more than sufficient to maintain him, and the people are obliged to work for him for nothing. His forces are principally cavalry, and do not amount to above four thousand effective men. Every lord leads his own battle, but they are very oadly disciplined. They have money which bears the Persian stamp, but is coined in Georgia, the value of which is always sluctuating. All

commerce is carried on by barter.

Though the Mingrelians profess to be Christians, they are exceedingly ignorant in all religious matters; few of the clergy can either write or read; but they greatly impofe upon the people, by pretending to divination. When a upon the people, by pretending to divination. person is sick, the priest is sent for, not to pray by him, but to predict whether he will live or die. Having opened a book, he gravely looks in it, though he is unable to read a line; then flutting the book fuddenly, he declares that the patient will inevitably die, unlefs a very handfome pre-fent is made to himfelf. The fick perfon being greatly terrified, intreats the prieft to take what he pleafes. The conscientious clergyman does not want twice bidding, but packs up whatever he can lay his hands upon, and drives away all the poor man's cattle into the bargain : thus do the ignorant clergy plunder these superstitious people.

The governor allows the catholics four hundred vasfals,

who are obliged to work for him, that he may be supplied with whatever he wants. In return for their labour, he does not give them any pay, but takes away their wives, and fells their children for flaves. Sometimes he makes a tour through his whole diocefe, which extends not only over all Mingrelia, but throughout Innaretta, Gruici, Abea, and Mount Caucafus. In these excursions, he does not attempt to regulate the pastors, or instruct the people, but plunders and robs both clergy and laity of all he can find. The Catholicus has fix bithops immediately under

bim; and they make the whole Christian religion to consist in the abstaining from sich. They neither preach nor pray; their most important business being to get drunk daily; it is therefore no worder that their most in the constant business are the constant of the const daily: it is therefore no wonder that these people have

wretches upon the face of the earth.

After baptizing a child, which is done by immersion, prieft, parents; godfathers and guests indulge themselves in gluttony and intoxication to the greatest excess. When a man wants a wife, he must boy her: a tolerable good price is given for a virgin, less for a widow, and least of all for a woman who has been divorced They may divorge their wives either for barrenness or ill-nature. They their wives client for barrenness or ill-nature. In hey keep their dead forty days above-ground, during which time they mourn; but after the body is buried, they get drunk in order to forget the deceased. A burial is frequently the rain of the whole family, as the prieft who lays mafs lays claim to all that belonged to the deceased.

lays mass says cann to all that octonged to the deceased.

Befides Mingrelia, there are two principalities in Weftern Georgia, viz. Imaretta and Abaffia. They lie to the fouthward of Mingrelia, along the Euxine fea: the princes of both are tributary to the Grand Signor. Imaretta is about one hundred and twenty miles in length, and fixty in breadth: it contains many hills and woods, but the plains produce corn, cattle, pulle, &c. They have fome excellent iron mines, carry on a great deal of commerce, and coin money. The principal towns are Cotatis and Akalziki. Cotatis is now the relidence of a Turki bassa. It is situated at the foot of a mountain, on the top of which there is a strong castle to command and defend it: it is watered by the Phasis. The town has no walls, and contains only about two hundred houses. It lies open on all fides, except where the rivers and mountain furround it. On the opposite side of the river there is a citadel on an eminence, which has a double wall, and is flanked with high towers. It lies in forty-two degrees twenty-three minutes north latitude, and forty-three degrees fifty-four minutes east longitude. Akalziki is likewise the residence of a Turkish bassa. It is situated in a hole, surrounded by about twenty hills, in forty-one degrees fifteen minutes north latitude, and forty-four degrees fifty-five minutes east longitude; the river Kar flows very near it. The town contains about four hundred houses; the inhabitants are a mixture of Georgians, Armenians, Jews, Turks, Greeks, &c. who have feveral churches and a fynagogue. The walls and fortifications are old and ruin-ous, and the houses are built of wood.

The northernmost of these countries is Abcassia, having the Euxine fea to the fouth; Circaffian on the weft, and mount Caucafus on the north and east. The principal traffic is in flaves: the inhabitants, however, deal in the skins of tygers, deer, &c. box wood, honey, wax, and thread, which they exchange with the merchants for other goods. They go almost naked, and live in little mean low huts. They were once Christians, but now little

better than favages.

It is proper to observe here, that the Mamlucks, who ere once to celebrated in Afia and Egypt, and contended fo long with the Ottomans for fuperiority, were originally Georgian children, who being brought up to a military life, became so powerful as to revolt against their masters.

and usurp the throne of Egypt.

Comaniaci by most geographers is included in Georgia: it is bounded by the Caspian sea on the east: by a ridge of mountains which part it from Circassia, to the west; by Afiatic Muscovy, to the north; and by Georgia, to the fouth: the country is thinly inhabited, and badly cultivated; but the foil is flat, low, and fertile. It is watered hy several rivers, which descend from the mountains about Caucasus. The climate is rather cold, and tains about Caucaus. The climate is rather votal and pretty much fubject to rains. The inhabitants, who are called Comani, or Kamouche, live principally by plunder. They wear Perfian linen and filks, but drefs like the natives of Little Tartary: the men wear fliort jackets and drawers, and the women long loofe gowns which refemble shifts. They have nothing that can be called a town, but their little liamlets confist of about fixty huts. Their food is milk, game, the flesh of their cattle, honey, such

Fulls as their country frontaneously produces, and rice, which they have from the Persians.

Ganiel is too little known to admit of a description: it is a small district belonging to Mingrelia, and the manners of the people are said to resemble those of that

The Dagestan mountaineers are accounted some of the most ferocious of all the Asiatics, and are deemed the de-feendants of the antient Parthians. Their country is H Y. .

bounded on the east by the Caspiari sea on the west, by mount Caucasus; on the south, by part of Persia; and on the north, by Circassia. These people extend themselves from the capital of Circassia, for about forty leagues along the coast of the Caspian sea.

The Dagestane circumcife their children, and we some coast of the Caspian sea.

The Dagestane circumcife their children, and we some coast of mall, carry helmets and bucklets; and die bows, arrows, datts, lances, and broad swords. Their faces are very usly and tawns.

helmets and bucklets; and tife bows; arrows, darts, lances; and broad fwords. Their faces are very ugly and tawny; and their hair black and diffecelled; their dreft is a long loofe gown made of a dark coarfe cloth, and over this they throw a closk made of the fikin of fixes of fome other animal. Their caps, which hang down to their eye-brows; are made of various flips of cloth or fir! Their floos; confit of only one piece of fikin, and are fewed about the ancles in a clumly manner. Their food is the fieth of their nunerous herds, and milk.

Their Tartars of the moontain spare neither age, fex; or condition, but rob all alike, and even plunder their very nearest relations; whose children they fell without the least remorfs. They oblige all merchants to pay them tribute, and, if strong-enough, rob them of every thing, which occasions the caravans always to have a powerful efeort.

efcort.

There are as many petty lords, called myrfas; as towns: from them a chief is felected; called themkal. On the death of the themkal, the myrfas aftemble in string, in the middle of which stands the priost, who throws a golden ball among them at random, and the that first couches it is duly elected. His power, however, is limited by the others, nor is he anuch respected: These Tarrars are fometimes consounded with the Leigee; who are a different people, though near neighbours: Tarchu, the capital of this country, is situated on the western coast of the Caspian sea, about one thousand wooden houses, built after the Perfam ammer, but with left elegance:

fian manner, but with left elegance: cafus: this is one of the highest mountains, or rather chain of mountains, in the universe; innumerable fir-trees are found upon it. It is full of terrible rocks, hideous precipices, diffnal caves, &c. Paths have been out through it with immense labour for the convenience of passengers, but by reason of the steepness they are difficult to pass even in summer, but in winter much more so, on account of the vast quantities of ice and snow. The account of the vast quantities of ice and snow. The highest parts are covered with snow all the year, which makes the passage exceedingly dangerous in windy weather; for the clouds of snow, when driven by a harveane, have been known to overwhelm whole companies of men and horses. The passage quite across the mountain is about one hundred and twenty miles in extent; by the way are several villages, well supplied with provisions; for the soil of these astonishing mountains is fruitful, and produces plenty of corn, grapes, fruits, honey, cattle, &c. which is principally attributed to the richness of the manure yielded by the fnow. The inhabitants have forces soultree. yielded by the fnow. The inhabitants have (toreof poultry, eggs, pulle, bread, &c. They breed hogs, whofe flesh is very att and delicious. They call themfelves Christians, but are in reality little entitled to that epithet: they are fubject to

The antients deemed the Euxine fea only a lake. It has been usually denominated the Black fea, not from the color of its water, or of its fand, but from the forious tempets faid to rage here: though it has not more frequent nor more violent florms than other feas. It extends about nine hundred miles from east to west, and about three hundred and eighty from north to fouth, in fome parts, but is lefs in breadth in others. It is encompassed by Crim Tartary and Circustia, on the north; Turky in Europe, on the west; Georgia, on the east; and Anatolia, or Asia Minor on the south. None but the Turks are permitted to navigate this fea, though infinite advantages would redound to the Porte, if it was open to the Franks, or Europeans, as the Ottomans are very unskilful mariners, know little of navigation, are without charts, and do not understand the compass. As this fea hath no communication with the Mediterranean, and re-ceives many large rivers into its bosom, its waters are freiher and clearer than those of most other feas. principal rivers which fall into it, are the Danube, the Don or Tanais, the Nieper, the Phasis, and the Niester. The Euxine fea joins to the Palus Mocotis, or fea of Azopli, by the straights of Caffa, which were termed the Bosphorus Cimmerius by the anticuts.

Containing a description of the western division of Afatic Turky comprehending Natelia, or Lesfer Asia, divided into; 1. Na-tulia, or Anatolia Proper ; 2. Amasia ; 3. Aladulia ; 4. Garamania.

I. A \$1A Minor, or Anstolia, is bounded on the north, by the Evanine fea, on the north-weft, by the Archipelago, the Hellespont, the Propontis or fea of Marinora, and the Thracian Bolphorus, or straight of Confantinople; on the feath, by the Levant fea, Syrifa, and the Euphrates; and on the east, by the Mediseranean. It lies between thirty-feven and forty-one degrees, thirty-minutes of north latticed, and twenty-feven and forty degrees of east longitude, extending in length about fix hundred miles from east to west, and in breadth about three hundred and twenty from north to south. Mederal geographers divide it into Anstolia, properly so called, Amasia, Aladulla, and Caramania. These provinces antiently included Galatia, Paphlagonia, Pontus, Bitchiris, Myna, Phrygia, Lydia, Moman, Ionia, Æollis, Carias, Doris, Pamphylla, Piddis, Cappadocia, Lycid, Lycasania, and Clicia. Anatolia is under the government of a vice-roy or begletbeg; to whomseveral bass, and a great number of fingiact as te fubordinare.

This country naturally is, and always bath been deemed

and Clicia. Anatolia is under the government of a viceiroy or begletbeg; to whomfeveral beffas, and a great number of fangiaca are fubordinare.

This country naturally is, and always hath been deemed
one of the fineft in the univerfe; yet fuch is the miferable
policy of the Turklifi government, and the indolence of
the people, that it hath been fuffered to become a mere
wildernefs; and, though uncommonly rich, fertile, and
well-watered, they have permitted it to be over-run with
weeds, briars, and brambles. The air is exceedingly ference
and temperate, and would doubtlefs become fill more failubrious; if the lands were properly cultivated; for the
inhabitants are not incommoded by excellive heats, norchilled by intenfs frofts. The few cultivated parts prodocc, with little labour, plenty of various forts of corm,
exquifite grapes; oranges, lemons, citrohs, olives, figs,
dates, &c. befice abundance of coffee, rhubarb, opium,
balfam, galls, and many other valuable drugs; gums, &c.
The principal rivers are thofs known by the name of Kanthus, Cydnus; Measder, Graniens; Scamader, Cayfter,
Hermus; Pactotus; and Caicus, which difcharge themfelves
into the Mediterranean and Euxine feas; the Archipelago
and the Euphrates; Its principal lake is Guol. Bug. Shaw,
fifty miles forig and twenty-two broad.

Anatolia Proper is the nearest to Europe, and the largest
of the four pirovinces into which Afia Minor is divided.
It extends almost from twenty-fix to thirty-five degrees of
east longitude, and from thirty-fiven to forty-fone degrees
of north late the, being bounded by the Archipelago and
Propontis, to the west; by the Euxine feas to the north; by
Cammania, on the fouth; and by Amaria and Ahadulia,
on the east. This province is governed by a beglerbeg
who has fubordinate to him five fangiacs, two hundred
and forty trinars; the number of troops are fixty thoufand; the annual revenue of the beglerbeg is one million
of aspert. It contains the provinces of Bithynia. Bithy nia
is separated from Europe only by the T

indolent Turks.

The capital of Bithynia is Prufa, or Burfa; as the Turks call it: this city was the metropolis of the whole Otto-man empire before the Turks polleffed themselves of Conman empire before the 1 wirks possessed memlelves of Con-flantitople. It lies in forty degrees fixteen minutes north latitude, and twenty-nine degrees thirty-five minutes east longitude: It is fituated at the foot of mount Olympus, twenty miles from the fest of Marmora, and fifty-eight fouth of Conflantinople: it is exceedingly well built; and deemed one of the best paved cities in all the Turkish emdecemed one of the best paved cities in all the Turkish em-pire; the firetes are finacious, the caravanseras noble and convenient, and the mosques magnissent; the latter are adorned with cupolas covered with lead, and computed at about three hundred in number: in one of the mos-ques, the tombs of many of the antient Turkish fove-reigns are to be feen. This city is a place of consider-able traffic. In the bezestine, all kinds of commodities of home manufacture, and others from the Levant, are exposed to sale: it is a large edifice, well built, and contains many excellent shops and warehouses: the workmen here manufacture the best silks, hangings, carpets, tapestries, &c. in Turky. The city is about time miles incircumference, but the walls are falling to decay. It is computed to con-tain forty thousand Turks. The suburba, which are more fpacious. fpacious and handform than I the city stiell, are inhabited

fpacious and handfortst than title city itself, are inhabited by four thousand Jews, are hundred Armenians, and three hundred Greek families, besides, many foreigners. The fine crichards, gardens, plantations of mulberry, plantains, and these steers, &c. afrord some of the mod delightful and shate steers, &c. afrord some of the mod delightful and shate steers, &c. afrord some of the mod delightful and shate steers, &c. afrord some of the mod delightful and shate steers are steered for the respective of the steer in their kinds, but yet shate and quite reasonable. A steer their kinds, but yet shate and the mod decay. The fength, buile by Manhonant IV. is a noble edifice. The city is wortened by a these, a endy or modula and a jundary agi, who has before two hundred and thinky join refusion, enters him to have been two hands one churches harde substants the hereochesis are, and the jews four four succession of the steer the steers are handforne stretches towered with domes, and much frequential of account of the stretches of the

Levant is the remains and the houles well built.
This city was calebrated for heling the fact of the first gemind concil convened by Conflantine, A. D. 23, to consider the doftrine of the Arians, of which heterodox opsider great part of the Christian world then were.

The city of Nacan, the received its mame from Nicoredder; hing of Bithynia, who: made it his metropolis,
redded in it and enlarged and embellished it. The upsellasion witch the Teritary gave it is figure, or Rungimod. It
is larget handlome; and populous; and is fituated at the
end of a gulf of its own name, forty miles north eaft
from Buffa i in point of fituation, it exceeds all the cities
in the Turkish territories. Conflantinople excepted; the
inhabitants, bompofed of Turks, Greeks, Armenians
and Jawas are faild to amount to thirty thousand, who
carry on a confiderable traffic in filks, cotton, wollen, and
time teaths, cartiters ware, and gafa: it is also the prinacipal place belonging to the Turks for building thips.
Several curious articent metriptoms in Greek and Latin
are all widths in many parts of the city. To the wellward it a fourthin of surieral waters, much admired for
the surious articent metriptoms in Greek and Latin
are all widths in imany parts of the city. To the wellward it a fourthin of surieral waters, much admired for
the city of Chalcedon, which was once very opalant,
is flingly long, and trewber synth bound. The fire gulf, which
receives its name from the city is possed and deep,
but only about a mile and a half broad.

The city of Chalcedon, which was once very opalant,

river Chalcedon flows to the eastward of it : there was antiently in it a temple of Venut, and an oracle of Apollo. The once opulent city of Lybysia, famous for the death of Hannibal, stands between Nicomedia and Chalcedon;

ngether, as the exact limits are not afcertained: in conjunction, they are bounded on the north, by the Propontis; on the fouth, by Lydia and the Archipelago; on the eath, by Phrygia Major; and by the Hellefpont, on the welt. The famed mount Olympus, or rather the double chain of mountains to denominated, is fittated in this country; Thefe are thought to be the highest mountains in the east, particularly the central part, or the cele-brated mount Ida of the antients: they are continually covered with fnow, and the fides abound with pine and other trees, with wild thyme and other fhrubs, more parricularly the laudanum ciftos with broad leaves. About the beginning of the dog-days the air of mount lda is fo ferene, that not a fingle breath of air appears firring, and at night the fuir's rays appear to dart all round the ho-

Tizon, which make it appear as if on fire.

Among the principal rivers in this part of the country, we may reckon the Goanicus and Eopus, which discharge themselves into the sea of Marmora; and the Shuois and Xanthus, which empty theinfelves into the Hellespont:

the Caicus, with the Pergamus and Cayfer, flow theough: Myfis, which contains the following places.

Ciakus or Cyaims, (which is now Chiailo, and Spiga,) though antiently a magnificent city, is at prefere-but as inconfiderable town, fituated about thirty miles well-ward of Butfa, on the fouth-oak coak of the ice of Marmora.

of, Buris, en the fouth-east coals of the fea of Marmora. Opposite to this town, in the Propontis are several small islands, which are called the Marble islands, from the great number of marble quarties in them; they likewise abound in corn, fruits, eattle, cotton, wine, &c.

The city of Lampiscus, or Lampisco, bath lost much of its antient spiendor: it is but a small place at present, thinky inhabited by a few Greeks and Turks: but its port thinky inhabited by a few Greeks and Turks: but its port to convenient. It is futuated at the mouth of site Helsefpont; opposite to Gallipoli in Furoje. The neighbouring country is exceedingly fruitful in vines and pomegranates reference even the indokent Turks cultivate, and make excellent wine and brandy to mix with their sherbet. It is related, that Alexander, having vowed the defruction of this place, and hearing that the inhabitants were coming to implore his mercy, he swore he would reject their pation; I which the eithens being acquainted with, they addressed him; to, destroy their city, and were saved by this stratagem, the young hero thinking his oath might not be dispensed with.

Abydos stands in forty degrees sinteen minutes north la-Abydos fands in forty degrees fixteen minutes north latitude, and twenty-feven degrees fixteen minutes east longitude, upon the fixight that divides Afia from Europe, which is three miles over. It is now called Avida or Avio, and was formerly effected the key of Afia. Here Xerxes began his famous bridge, which was to well completed in a week, that one hundred and feventy thou-fand foot and eighty thousand horfe, inclusive of carriages and camels, marched over it. About the year 1335 mine of gold was found near this city, which enabled Priams kinged Troy, to carry on "many ufeful and magnificent public works. Philip of Macedon laid fiege to this city, and took it by fform; but the citizens fooner than be carried into flaver by the conductor. Let fire to the city, and then flavery by the conqueror, fet fire to the city, and then mandered their wives, children, and themfelves. Abydos was an epifcopal fer, Hermias, the bifnor thereof, having affifted at the council of Chiledon. In A. D. 1330 it was betrayed to the Turks by the treachery of the ge-

was betrayed to the Turks by the treachery of the governor's daughter; and Avido is at prefeat one of their eaftles upon the Dugianelles.

The following are the principal places in Leffer Phrygia; Affos, formerly a confiderable fan-port two no the fourth coaff, now an inconfiderable village. Antandros, now called &t Demitri, is fituated further eaft of the foot of mount fals. Though it was demand. now called & Demitri, is fituated further east of the foot of mount Ida. (Though it was formerly place of importance, it now fearcely deferves mentioning. Adramy thus, or Endromie, as the Turks call it, stands at the mouth of the gulf as which it gives name, opposite the island of Lesbos. At present, like the last mentioned places, it is not of the least importance, though formerly it was a place of note, and is mentioned in the Act of the Aposlles. Pergamus, which was formerly the metropolis of a kingdom, and is two dwindled to a small village, is fituated farty miles north of Smyrna, on the banks of the Caicus. Here stood one of the seven churches mentioned in the Revelation: here asset the elebrated physician Gain the Revelation : here also the celebrated physician Galen was born, and parchinent invented: fome affirm that tapeftry was likewife invented at this place. A flately teme of Efeulapius once embellished this town. Turks have a mosque, and the Greeks a church in this

Troy, or llium, at leaft the ruins of that once celebrated city, is fituate near the coast of the Algean fea or Archipelago, in twenty-feven degrees or cancin longitude, thirty-nine degrees thirty minutes north latitude, twenty miles fouth of the Hellespont, opposite to the linds of Tenedos, rendered memorable by Homer, Virgil, and ago, in twenty-feven degrees of eastern longitude, and other poets, for the ten years fiege it sustained against the power of the Greeks; the magnificent ruins of which town fill remain. This siege is supposed to have happened about the year of the world 2816, before Christ 1184 years. The Turks have lately discovered a rich filver mine near thefe ruins.

tonia and fiolis being usually laid together are a long tract of land upon the coast of the Ægean sea or Archipelago, extending from north to fouth, opposite to the island of Lesbos. The chief towns are, 1. Elea, fituate on a bay of the sea, at the mouth of the river Caicus, the port town to Pergamus. 2. Cuma, antiently the capital of Eolis, from whence one of the fyhils obtained her name. 3. Phoces, fituate on the fame coast, to the fouti-

Smyrus,

Smyrna, or Ifmir, is fituate on the bottom of a fine bay in that part of, this divition called lonia, in twenty-feven deresso genforn longitude, and thirty-feven degrees thirty mines north latitude, one hundred miles north of the illand of Rhodes, and copolite to the illand of Scio. It has a large commodious harbour, and a very great foreign trade, confuls from many of the European nations refiding here, belides the Turkish inhabitants, which are very numerous, there are feveral thoufands of Greek and Armenian Christians, and abundance of Jewa; there are also found hundreds of Franks of Latin Christians, feveral Popilic convents, an archbishop of the Greek church, and a Roman Cattolic bishop. The gardens, vineyards, olive-yards and groves about Smyrna, sender it exceeding pleasant. The town is about four suites in circumference: the river Melus runs through it, bus the banks whereof they have a tradition, that Homer, was born; but many other places contend with them for that honour. A castle stands at the entrance of the harbour, which commands the shipping going in and out: though the situation of Smyrna is exceeding pleasant, yet sew people would chuse to reside there, under drawn thither in hopes of gain, it being great part of the year excessive hot, unhealthful, and very subject to earthquakes. The town is fearce free from them two years together, and they have continued sometimes forty days without intermiftion; in a terrible one which diappeared in 1688, the earth opened, the castle and great part of the town were swallowed up, with some thousands of the inhabitant.

This town is plentifully supplied with provisions: the mile of the sheep weigh ten pounds, and are deemed a great dainty. The sist taken in the bay are excellent; wild hoge, hares, and all other kinds of game, sowls, &c. may be had in abundance; the wine, olives, fruits, &c. are all admirable. The musquitos, as well as a much simaler sy, common here, are extremely troublesome, especially to strangers; lemon juice is the best remedy for the f

ground belonging to the English is walled in, and contains some curious monuments, the sculpture of which is admirable. They were, however, not executed at Smyrns, but brought from Italy: one in particular is to the memory of Mr. Bouverie, who died at Magnesia.

Near Smyrna are feveral places which are greatly dwindled from their antient splendor; the first we shall mention is, Clazomene, situated on the Ionian peninsula, twentyeight miles to the fouth-west of Smyrna: it was one of the twelve antient cities of Asia, and famed as the birthplace of Anaxagoras. It is now called Urla or Vourla, was a city of importance in the time of the Romans, but is now a defpicable village. 2. Ærythræa, like the latt-men-tioned place, was formerly a confiderable city, but is now only: a mean village it is on the Ionian coaft, between only: a mean village: it is on the lonian coalt, between Teosand Clazomene. 3. Teos, the birth place of Anacreon, was antiently a good fea-port, but fearce retains any vertages of what it formerly was. 4. Lebidus, or Lebidus, is now a poor fea-port, near the iflinum of the peninfula, though it was formerly one of the twelve capital cities of Afia, and was famed for the games of Bacchus, which were celebrated there. 5. The city of Colophon, about thirty make fourth of Smyras, is one of these which laid were ceieprated there. 5. The city of Colophon, about thirty miles fouth of Smyrna, is one of those which laid claim to the birth of Homer. It had a temple and an oracle, but at present is very inconsiderable. There are fearce any vestages left of the antient cities of Heraclea, Lathiaum, Beryglia, Mylasia, Mmyzon, Alabanda, Stratonice, and Alinda. From the infability of huntan glory, and the mouldering remains of the firongest and the most magnificent structures we may be raught to reflect on our own approaching mortality, the vanity of life, and the general dissolution which must await all fublunary things. Ephefus, fituate fifty miles fouth of Emyrns, near the mouth of the river Caittrus, now a poor village of twenty or thirty hopfes: it is in thirty eight degrees fixten minutes north latitude, and twenty-leven degrees three minutes and longitude. It was pleafantly feated near a fina haven, and under the Romans was the metropolis of Afia. It was antiently famous for the temple of Dians, effected one of the wonders of the world. This firucture, is faid, was four hundred and twenty-five feet long and two hundred and twenty-feven marble pillars feventy feet in height, detroyed by Erofitatus, to eternalize his name, who fet it on fire the fame night Alexander the Great was born. St. Timothy was the first bishop of this city i and St. Paul honoured them with an excellent epistle, which is part of our emoins, but the inhabitants are fo exceedingly lonorant that none of them are able to read it. And the third general council was held here. There are ftill the velliga of a Roman theatre, circus and aqueduct; and heaps of stately ruins, which some suppose to be the remains of Dlana's temple; for there was a second temple, it seems, built to the hosiour of that goddefa, after the destruction of the spire, not at all inferior to the former in magnificence. The Greeks call this city Eleso, and the Turks have given it the name of Ajasalouch. There is yet studing a church dedicated to St. John the Evangelist, who was buried here: it was receded by the primitive Christians, but is at present converted into a Turkish mosque. The celebrated painter Parthasius and the weeping philosopher Heraelitus were nartives of this place.

An ingenious modern writer observes, that "the tives of this place.

tives of this place.

An ingenious modern writer observes, that "the Ephesians are now a few Greek peasants, living in extreme wretchedness, dependence, and infensibility the representatives of an illustrious people, and inhabiting the wreck of their greatness." With respect to the state of religion, the same author says, that the glorious pomp as its heathen worship is no longer emembered; and Christianity, which was there planted and nursed by apossible, and fostered by general councils, till it increased to fullness of stature, barely lingers on in an existence hardly visible, Such are the present citizens of Ephesus, and such is the condition to which that renowned city has been gradually reduced.

Caria and Doris are usually thrown together, and now called Adinelli, being bounded by the sea on the fouth and west, and by the river Meander on the north, tho chief town in Caria Proper is, Miletus or Misetum, now Palatchia, situate on the south side of the river Meander, near

town in Caria Proper is, Miletus or Miletum, now Falstichis, fituate on the fouth fide of the river Meander, near the fea. It was antiently a large city, and had a magnificent temple dedicated to Apollo, once the feat of the oracle. It was also famous for being the place of Thales's nativity. It is now only an inconfiderable village, confisting of shepherds cots, shough the ratin of the antientity age very large. Near this place is the mountain Latmus, where the poets feign the apoon, made her visits to Endymion, with who was enamoured.

In Doris, which is the fouthern part of Caris, the chief towns are, 1. Mindus, a fea-port, liquate on a small bay, called lasseus Sinus, and is the feat of a Turkith bass, or fangiac. 2. Halicarnassus, fituate to the fouthward of Mindus, once the capital of Caris, but now a heap of ruins, famous heretofore for the tomb built by queen Artemiss, in honour of her husband Mausolus, being so not be a structure that it was esteemed one of the wonders of the world. And in this city those two celebrated listorians Herodotus and Dyonjings were born. Ceramus, Cyndus, and Cress on this coast, were now nothing that tenders them remarkable. ders them remarkable.

mous for their harbours, but have now nothing that renders them remarkable.

Lydia, or Mozonia, is bounded by Phrygla Major, on the east; Caria, on the fouth; and by Æohis and Mysia on the seef. It was a fruitful country, being well watered by form considerable rivers, particularly the Caicus, Hermus, Caistratus, and Pactolus, which run through it from east to well. Of this country the wealthy Crocius formerly was fowering. The chief towns are, 1. Sandar mitently the eastlad city, and the feat of Crocius, but you a poor village on the river Pactolus, about forty-eight miles to the eastward of Smyrna. It was a bishop's leg, and one of the reven churches of Afia, demolished by ancantinguake, and there are still some noble ruins to be seen, where the city shood. It contains, however, a large caravanters for the accommodation of travellers and caravans, who the commodation of travellers and caravans, who the commodation of travellers and caravans. It is fituate in a fruitful plain, on the north side of the meuronal Molus.

Moted, but fallen much from its primitive grandeur; however, fome travellers relate, it fill contains about feven thousand inhibitants, are principally Greeks, and have four churches in the place. As the neighbouring country is very fertile; provisions are pretty plenty. 3: Thysitra; a bifindy's fee, and another of the feven churches, now dalled Akhifar, is fituate about thirty miles to the northi-west of Philadelphie; next the fourth bank of the river Hermuls, where are feen the ruins of antient marble fituations, but the preferit buildings have no better than clay walls. It is however fail to be a place of forme trade for corn and cotton. It contains about five thousand inhabitants, who are chiefly Turke. 4. Magnefia, now Siphylim, fituate on the river Meahder, about fifty miles lowth of Sardis; was antiehty a confiderable city, as appears by its ruints, and is fill a pretty large walled town, trading to Smyrna with cotton-yard. The inhabitants are composed of Turka and Jews, the latter having three fyngsogues. 5. Laodicea, or Efichilfar, fituate on the eatern boundaries of this provides, and has been reckoned part of Phrygia. It was antiently one of the feven churches, and avery large city, as appears by the rolns; among which are three theatres of white marble, almost entire, and a fately circus; but the place is perfectly unishabited at prefent.

Phrygia Major, called by the Turka, Germian, is an interpretation.

Phrygia Major, called by the Turks, Germian, is an in-land province, having Bithynia on the north, Pamphylia on the fouth, Myfia on the west, and Galatia on the east. The rivers Hermus, Meander, Marsias, and Sangarius, rife in this province, which with proper cultivation would be exceedingly fraitful. The chief towns are, 1. Cotycum, or Kurshia, or the river Sangar, about Swapp, where mither be exceedingly fruitful. The chief towns are, 2. Cotyceum, or Kutahia, or the river Sangar, about feventy-three miles fouth-east of Buffa. It was a very confiderable city anciently, and is full a vary flourishing and populous town; is at prefent the feat of a beglerbeg, and was formerly the Turklift emperor's place of residence, prior to the taking of Constantinople. 2. Mideum, or Middeum, antiently the royal seat of the celebrated King Midas. The antient geographers placed this town near the north-east limits of Phrygia, on the river Sangaries; but there are no vestiges of it at prefent to be feen. 3. Gordium, once the refidence of Gordius king of Phrygia, who tied the knot in Apollo's temple, which Alexander cut with his sword. 4. Apamea, tituate on the river Meander; this was once Apono a comple, which Alexander cut with his fivord.

4. Apamea, tituate on the river Meander; this was once
one of the most considerable cities of Asia, but is now
quite run to decay. 5. Coloss, Coloss, or Chonos, was
situated on the fouth side of the river Meander. St.
Paul's epistle to the Colossians was addressed to the inhabitants of this city.

Scarce any traces are now to be found of the

Scarce any traces are now to be found of Hierapolis, Synnada, Eucarpia, Prymnefa, Tiberiopolis, Hipfos, &c. except the hot firing and fuperb ruina of Hierapolis. Apamea is also now quite run to decay, though it was once one of the most confiderable cities of Asia: this city was fituated on the river Meander, a little above where the Marcias falls into it, and arose out of the ruins of the an-

Marcias falls into it, and arose out of the ruins of the antient Celene, whose inhabitants were transplanted into it by Seleutas, who named it after his wise Apamea.

Galatia, called at present by the Turks Chiagare, is bounded, on the north, by Paphlagonia; on the foutli, by Pamhylia; on the east, by Cappadocia; and on the west, by Phrygia Major. It received its name from a colony of Gauls, who passed through Gresce into Asia, and settled in it. A great number of Greeks afterwards mingled with them, whence it was called Gallo Gracia: it was always a fine fer-ile country, and was formerly well cultivated, but at present lies neglected likeother places, through Turkish indolence. St. Paul addressed his epistle to the Christian inababitants of this city.

The city of Ancyra, or as the Turks call it, Angouri, or Angora, is in forty degrees north latitude, and thirty-two degrees fifty-eight minutes east longitude, two hundred and fifty miles east of Smyrna. It is the residence of aged and any mine eart or physics. It is the rendence of a fangiac, and a very populous trading place. The inhabitants are efficient at forty thousand Turks, five thousand Armeniaus, and one thousand Greeks. The chief manufacture was camlets: the evidences of its primitive grandeur are innumerable; the firetts, piazzas, &c. being full of stately remains, columns, &c. of the finest marble, porphyry, red jafper, and other beautiful ftones elegantly wrought; the modern buildings, however, are mean, low, and formed only of mud and turf. A great variety of inferiptions in feveral languages appear upon the gates. In the caftle there is an ancient, little, dark Armenian church, built one thousand two hundred years ago. It has only one window, which is not glazed, but hath its vacancy filled by a transparent marble, through which the light penetristes into the thurch, but receives a reddifit tinge from the nature of the flone. This city was once an archishop's fee, with §2 fuffrigane under him. The theop breed here are some of the fixed, and the goats the most beautiful in the universe; the hair of the latter is of a deanling whiteries, as fine as fill, it is curled naturally into locks of eight or nine inches long, which make the finest camiete: This hair is soun in the country, and manufactured in Angora. These goats are only to be feen within a few miles of this city, as the breed degenerates, if they are removed to other places.

Belli is the metropolis of, the province, and the resistance of the fifteen sangiacs under the begieving of Anatolis Proper. The other places are Andres, fituated a little to the eart of Anatonis. Thorsame, so called from its hot baths; Germastes, formerly Geruins, on the Sangasies; Ophium, a dirty, ill-built town which receives its name from the opium made in and about it, its environs being covered with poppies, from which the Turks extract their opium.

opium.

Pontus and Paphlagonia or Pender are bounded by the Euxine fea on the north, Cappadocia on the east, Galatia on the fouth, and Bishynia on the west i the name of Pontus extended formerly to all the coast of the Euxine fea, then called Mare Pontieum. This, which we treat of with Paphlagonia, is but a small part of it: the chief towns whereof are, I. Heraclea Ponti, now Penderachi, a sea-port in the horth-west part of this country. It was once celebrated for being the residence of the Commoni family, the founders of the Trebiasond empire. The houses are small, mean, and ill-built. 2. Amastris, now Semastro, also a sea-port, situate at the mouth of the river Parthenias. 3. Claudianopolis or Bithymium now Castromens, is a very small town though once an episcopal see. 4. Tewthramia, now Tripoli, is fill a good town on a bay of the Euxine sea, but it must be observed that there is a town of the same name in Amasgood town on a bay of the Euxine les; but it much be observed that there is a town of the same name in Ana-

tolla, firuated on the Meander.

Amafus, now Amid; Gangara, now Zagyra; Junopolis, now Cinopolis; and Pompeiopolis, or Cinolis, though formerly confiderable, are now either totally deferted, or

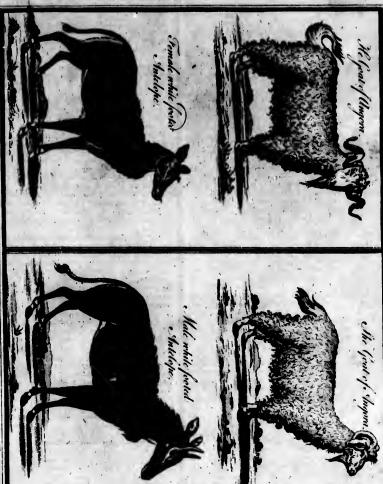

Sinope is the most considerable city in this part it was antiently the metropolis of the kingdom of Fontus, and the birth and burial place of the celebrated king Mithridates. It is fituate in forty-one degrees fourteen minutes north latitude, and thirty-four degrees fifty-two minutes north latitude, and thirty-four degrees fifty-two minutes east longitude, and is at prefent a good trading town. In Strabo's time most of the stately walls, edifices, and the castle were standing. The walls, which now surround it, were built by the Greek emperors. They have double ramperts, and are stanked with pentagonal and triangular towers. On the land side, however, it is commanded by eminences which would greatly expose it to an enemy, but by sea it would require two sleets to befiege it. The castle is now decayed, and there are but few janusaries in it; yet the Turks are so is selected. is now decayed, and there are but few januaries in it; yet the Turks are so jenious of it, that they foster no Jew to live in it, and confine the Greeks to a certain luburb. Here is a profitable sishery, and a great deal of trade car-ried on. Many magnificent antique remains are to be feen, and the new buildings are intermixed with innumer-able noble fragments of the old. Diogenes, the celebrated cynic philosopher, was a native of this place. The water here is excellent, and the country fertile; abounding with walnut, olive and maple-trees; and a fine fort of worm-

II. The province of Amalia which contains the whole or the principal part of the antient provinces of Pontus Cappadocia, Pontus Galaticus, and Pontus Ptolemonia-Capitalocia, Pontus Galaticus, and Pontus Proteinometal, has the Euxine fea on the north, Caramania and Aladulia on the fouth, Anatolia Proper on the weft, and Amania and Georgia on the east. The chief towns are, Armenia and Georgia on the eaft. The chief towns are, in Annenia and Georgia on the eaft. The chief towns are, in Annafia. 2. Themifeyra; and, 3. Comana, 1. Annafia, which the Turks call Armafan, is fituate near the banks of the river Iris, in thirty-fix degrees of caftern longitude, and forty-two degrees of north latitude, fe-venty miles north-west of Tocat, and seventy miles south of the Euxine fea. It was antiently the refidence of the kings of Cappadocia, and fometimes of the beglerbeg or Turkish viceroy: it is pleasantly situated on an eminence, from whence there is a prospect over an extensive plain on the fouth. The buildings are mean, nor is it a place of any great trade; but there are some magnificent ruins, where the palaces of their ancient princes stood. The Greek Christians have an archbishop here: Selim the first emperor of the Turks, and Strabo the geographer were natives of this place. 2. Themiscyra, now Lerio, stands

on this goes The in a war and the best of the court of th

on the Eurine sea, firsty miles north-east of Amasia. 3. Comana, eight miles to the cast of Amasia, formerly a bishop's see; but it is now dwindled to a village. 4. Tocat is stuate at the foot of a mountain, in thirty-seven degrees of eastern longitude, and forty-one, degrees thirty minutes north latitude, about one hundred miles south of Sinope and the Black sea, a populouse city, inhabited by Turks, Armenians, Grecisus, and Jewe. It is large, strong, and well-built ton the top of two marble rocks as two old callest every house hastle a sound of fresh water in it. It is governed by a cadi, a wayvode, and a janisary aga. The Armenians are nost of them mechanists, working in copper and other hard-ware; and there is a good manufacture of Turky leather. It is a great thoroughfare of the caravans bound from Turky to Persa, Arabia and India. The Christians make excellent wine licre, and the adjacent country abounds in good fruit, there is no part of Turky the produces more fastion. When the caravans fet out, either east or west, som hence, they pay a duty of haif a crown for every camel loaden with merchandiae, and half as much for other beasts of burthen, but nothing for the beasts that carry provisions er passenger; and the government raise or lower these duties as they see fit.

Sivas, formerly Sebaste, lies about two days Journey sputh of Tocat, where the beglerbeg sometimes resides. The Amasona, if ever there were any such people, are supposed to have resided in this part of the country. The environs are extremely fertile; some excellent plants are produced, and curious sofisis found, particularly many tuberraneous vegetations of admirable beauty. Like our sliter particularly demonstratived mother of pears, and others appear like candide lemen and orange-peal. This city is governed by a

aipsays formed remember of yearl, and others appear like candided lemen and orange-peal. This city is governed by a cad or wayvode, and a janifary aga. The garrifon confifts of about one thoufand janifaries and spatins. It has weever mosques, seven Armenian churches, and a Greek chapel.

Trebisond is fituate at the foot of a mountain, on the shore of the Euxine sea, in forty-two degrees twenty n andre or the Eusine ies, in forty-two degrees twenty minutes caffern longitude, and forty-two degrees twenty-fix minutes north latitude. It is a large, populous city, pretty well built, and within the walls are groves and gardens, intermixed with the house. It had a frong caffle founded on a rock for its defence, but now much decayed, and ed oil a rock for its derence, but now much decayed, and the harbour, which lies east of the city, was formerly esteemed a very good one; but is now so landed up, that great ships cannot enter it. The suburbs, which are in-habited by Greek and Armenian Christians, are larger than the city; the country about it is very fruitful, but their trade is much declined: the sinest forest lies about twenty-five miles fouth of the city, in the midft of which fland the famous convent of St. John, built all of wood, upon a large rock, and furrounded by one of the modernetic wilderneties in the univerfe. A great deal of rock lioney is found in the neighbourhood of that city, which lioney is found in the neighbourhood of that city, which is so exceedingly luschous, as to render the eating much of it dangerous. It was subject to the Roman and Grecian emperors; and David Comnenus, a French gentleman, nusurped the dominion of it, with the title of duke, about the year 1200. His successor, John Comnenus, assume the title of emperor, and his successor were sovereigns of this city and the neighbouring country, till the year 1462, when Mahomet II. took it, and having put to death all the remains of the Commeni family, added it to the Turkish empire.

The town of Phamacia is about forty-four miles west of Trebizond, and situated near the coast of the Euxine sea, the Turks call it Kerifan; it is a large and populous place, but its harbour is only fit to receive those small vessels called faics. It is generally thought to be the antient Cerasunta, and to have been so denominated on account of the great number of cherry-trees with which its environs abound.

III. The third division of Asia Minor is Aladulia, or

Anadulia, called by the Turks Dulgadir. is unfit for the purposes of agriculture, being rough and hally, but it abounds in excellent pastures, and produces abundance of admirable fruit, wines, and cattle, particularly horfes and carnels, befides walt herds of goats and theep, venifon, all kinds of game, &c. There is filver, copper, iron, allum, &c. in the mountains. The proviuce is divided into four fangiacthips, which are again fubdivided into zamets and timariots. The plundering ban-ditti, or free-booters, are very trouble fome in this country.

The principal places are, a. Caifar, the antient Cæfarca; it is a large town on the banks of the Milas, near mount Argæus, and about feventy miles west of Secias.

walls are strong, and sanked with towers. The castle is in the center of the city. The beaar is handsone, and wall furnished with all forts of merchandiae; the house in its neighbourhood are built either in the form of a tower with a cupola, or they resemble a loaf. The city is well supplied with water stron the river; and their principal trade is in cotton. 2. Malashish, at the constituence of the Euphrates and Arsu, was antiently called Mystiene. It is in thirty-eight degrees twenty-two minutes north latitude, and thirty eight degrees fity sin minutes and longitude. It was formerly the feat of the Ottoman princes, and now of a Greek archishop. It is still a considerable rown. 3. Mars, or Marasch, is a large well built city in the foutheast boundaries of the province. It is situated on a small siver, which falls into the Euphrates, about two miles to the southward of Trebusond it is the residence of a basis, and a place of some commerce. Pausinias the Greek historian, the two Greeners of Nasianzen, St. Basil, and St. George the tutelar samt of England, may be ranked the foremost among the eminent men who were born in this provinces. IV. Caramania is the fourth and last division of Assandment to south, comprising the antient Lycia, Panaphilla, Pissia, Lycaonia, Rad Cikicia, with part of Tauria, Phrygia, Pacatiana, Galitia, Salutaria, and Cappadocia, It reaches from the neighbourhood of Alexandretta to the gulf of Maeri, at the mouth of which lies the island of Khodes. This country is called Caraman-Ili by the Turka, and is divided into the Greater and Lesser, whose is

lying slong the fea-coatt, and the former to the north is the gates of the reaction and the former to the north mount Tauris. It is governed by a beginning, whose i venue is exceedingly large, and seven fangiacs, with man saims and timars, are subordinate to him. The following are the principal places in this province.

1. Myra, or Myrra, called by the Turka Strumita. This was once a confiderable city, but is now dwindled almost a continuous to the continuous control of the co

to nothing it is about twenty-two miles north-east of Patora, situated near the mouth of the Limyrus.

2. Patora; which was once the metropolis of Lycia; but is now a very inconfiderable village near the mouth of

the Xanthus, between the gulfs of Satalia and Maces, 3. Satalia, called by the Turks Sataliah, is the antient Attalia. It was formerly an important city in Pamphylia, at the bottom of the gulf of its name, in thirty-fix degrees forty-five minutes north latitude, and thirty-one degrees forty-five minutes and the latitude, and thirty-one degrees twenty minutes earling tude. It is the firongen place the Turks have upon this cast. The entrance of the harbour is both difficult and dangerous. This fingular place is divided into three diftinct towns, each of which is feparasted from the others by its own frong walls, and the gates are flut up precifely at noon every Friday till one o'clock, from a pretended prophecy, that on fuch an hour the Christiana are to surprize it. The whole is about fix miles in cirare to surprize it. The whole is about fix miles in cir-cumference; the buildings are good, the place populous, and the trade considerable. The summers are so hot, that those who can afford it retire towards the mountains, where those who can amore reture towards the mountains, where there is more air and flade. The caftle, which commands the town, is a very good one. The Christians had for-merly a fine church in one of the towns, but it is at present coverted into a Turkith mosque. The neigh-bouring country is sertile and delightful, being covered with citron and orange groves, which afford an excellent odour.
4. With respect to Sagalussas, though antiently a toler-

4. With respect to Sagainman, though ancient, a able town, it fearcely merits at present the name of a village. The same may likewise be said of Antiochia Pisediæ, or Cefaren, which stands at the foot of mount Tau-

ris, and was once the metropolis of the province.
5. Iconium which the Turks call Cogni, is the metropolis of the beglerbegate. It flands in the antient Lycaopoils of the beginning in Thands in the antient Lycurnia; in a fertile pleafant plain, near a fine lake of fresh water, which was antiently called Palus Trogilis. It is about one hundred and ten miles from the Mediterranean fea. It is furrounded with strong walls, adorned with towers, and a broad ditch. The Turks only inhabit the city: the Greeks, Armenians, and Jews, inhabit the suburbs, which are spacious. The city is commanded by a finall castle, and adorned with several mosques, a seraglio, and some spacious caravanseras. The mutton here is equisite, the wool of the sheep admirable, and their tails so large, that they are drawn upon sledges saftened to the animal.

6. Tarfus, which was antiently the capital of Cilicia, and one of the finest towns of the Lesser Asia, but is at present quite decayed. It was the birth-place of the great apossile St. Paul; and is situated upon the Cydnus, about six miles from its mouth. The Turks call this town Tarson, Taristu, and Hom. If we may judge by the ruins of the old wall, it appears to have been near twelve miles in eirAt the mouth of the river there is a good harbour , and about a mile below the town

cumerence. At the mouth of the river there is a good commodious harbour; and about a mile below the town there is the lake Rhegma, through which runs the Cydnues.

7. To the eastward of Terfes, is Adama, a confiderable town on the river Choquen: it flands about thirty-five miles on the road to Aleppo, and about eighteen miles from the Mediternmean. This town contains a great number of beautiful fountains supplied with water by aqueducts, and over the river there is a superb bridge of fitteen arghes. The adjacent country is exceedingly pleafant, and the foil extremely fertile.

8. The laft place is Ajazzo, or Lajazzo, formerly called Hisu, and is fituated on a gulf of the Mediterranean; to which it gives its nance. It was antiently a place of very great importance, and is at present a neat, strong; opalent, sea-port town.

great importance, and is at prefent a neat, strong, opulent, sea-port town.

Azar, Annzarba, Telenessus, Xanthuz, Pheselis, Pignara, Olbia, Magidis, Side, Perga, Sitnum, Arpendus, Termessus, Olbasa, Lystra, and several other cities and sowns, which were known to the antients, but of which the moderns have very imperfect accounts, are now fo reduced to poor, mean, little hamlets, or so totally ruined and deferted, as not to merit any particular description.

The rivers of most note in Caramania are the Xanthus, Lamus, Cefrus, Eurymedon, Cydnus, Sarus or Smarus, Pyramus, Limiyras, Latamno, &c.

Caramania contains many celebrated mountains, most of which are branclies of mount Tauris or Taurus, viz. Olympos, there being many mountains in Asia of this name: Cragus, the etymology of which Bochart derives from the Arabic world Crac, which signifies a rock: from whence it is probable the English word Crag originated; and Antipague, all in Lycia, and runs castward. In Cilicia, the most remarkable is Annaus.

We must not omit to mention the celebrated Lycia.

Cilicia, the most remarkable is Amanus.

We must not omit to mention the celebrated Lycian volcano mountain, called by the antients Chimera. Its bottom was infested with serpents, the middle parts afforded passure the idea to the poets to freign the monster Chimera, which was represented with the bead s of lion belching fire, a goat's body, and a serpent's tail. Hence incongruous ideas are called chimeras, and inconsistent strategens are said to be chimerical. The Lycians built the city of Hephesiae earst this mountain, in honour to Vulcan, on account of near this mountain, in honour to Vulcan, on account of

SECT. IV.

Gives an account of Syria, its division, situation, extent, ei-ties, towns, climates, foil, fertility, produce, inhabitants, Uc.

SYRIA, called by the Turks, Sourie and Soristan, was originally so called from its capital Tzor and Tzur, which the Greeks softened into Sur and Tyre. This counwhich the Greeks fottened into Sur and I yre. I his country is fituate between thirty-five and forty-one degrees of east longitude, and between thirty-one and thirty-feven degrees of north latitude, and, in the most exensive fense; includes Syria, properly fo called, Phoenicia or Phenice, and Judea or Paletline. It extends from north to fouth about foor hundred miles, and about two hundred from east to west. The antient kingdom of Syria, which Seleucus and his successors governed, extended as far callward as Perfia.

ward as Persa.

The modern Syria is bounded by Turcomania or Arsania, and Aladulia on the north, by the river Euphrates, which divides it from Diarbeck or Mesopotamia, on the east, by Arabia on the fouth, and by the Levant sea, and Cilicia or Caramania on the west. Syria is at present divided into three governments, or beglerbegships, viz.

That of Aleppo. 2. Tripoli; and, 3. Damaschus or Scham; every one of which are subdivided into fangiachips or little governments, which have their respective basia's who command them under the beglerbeg of the arravince.

The begler begfhip of Aleppo is the most northerly of these, the capital whereof is of the same name, situate in thirtyfeven degrees forty minutes east longitude, and thirty-fix degrees thirty minutes north latitude, about ninety miles east of the Levant fea, but on four hills, in the middle of east of the Levant rea, but on four hills, in the middle of a spacious plain, being of an oval figure, and about three miles in circumference, and furrounded by a stone-wall. The castle stands on the highest hill in the middle of the city. "The town is better built than most of the towns of Turky, and there are a great many mosques, caravanseras, bagnios, fountains, and refervoirs of water, sine gardens, vineyards, and orchards of spples, oranges, lemons, cherries, and forme other fruits, which are but indifferent it is one of the briffeft towns of trade in Turky, where the merchants purchase filles, carpets, mohair, yara, flag-reen, Turky leather, cotton, and other produce of Persia and Turky! the churches and houser of the Christians are in the faburbs, of which there are four fects of eastern Christians, viz. Greeks, Armenians, Jacobites, and Marcottes or Syrians. It is computed there are two hundred thousand soals in the city and suburbs, of which thirty thousand are Christians, besides five thousand Jews; for most of the maritime powers in Europe have their confuls and sactors here, and are allowed their chapels and public worship in them. There are about forty English sactors, who live in a large sparse building, like a college. Mo have their chaplain, to whom they allow a handsome revenue, and he performs divine service as in a college. No people live more genteelly than these factors of; they rise out in the country, and follow their sports at vacant hours, with as much freedom as they could in England. The beglerbeg of Aleppo commands all the country between the Levant and the river Euphrates; but the governor of the eastle is independent, and some but the governor of the earlie is independent, and fome check upon him. Twelve miles fouth-eaft of Aleppo there is a falt lake feven miles wide, having a dry cruft of fait on the furface, with which the magazines about Aleppo

The foil in the neighbourhood of Aleppo produces good crops of wheat and barley, and their valles abound in clive trees and capers, but there is very little pasture; their graffs is burnt up in the fair featon. Their kitchen gardens produce fallads, cauliflowers, artichoaks, melons, kidney beans

and other pulse.

As Aleppo is accounted the finest and most opulent city in all Syria, we shall here give our readers a more parti-cular description of it and the environs. The houses are an all byris, we intail here give our readers a more particular defeription of it and the environs. The houfes are of ftone, built in a quadrangular form, confifting of a groundfloor and anattic ftory; the roofs are flat, and elther pread with plaifler or paved with ftone; the ceilings, pannels, doors, windows, &c. are neatygilded and painted, and adorned with inferiptions from the koran, or the beft of Afiatic poets. The doors of the houfes are firongly cafed with iron, but the locks are only flightly made of wood. The firests have adult appearance, being fhielded from the view by dead walls. The beft houfes have ufually on the ground floor a hall covered with a dome, with a fountain in the middle to cool it. There is a fountain of ablution, and fometimes a little garden in the area of each; and in every garden there is cyprefs. The kans are fisacious and elegant, but the floop are finall; the buyer flands always without, none being admitted within a floop but the mafter and his clerk. They ufually flut them about an hour and a half after fun-fet. The firets, though narrow, are extremely clean, and always well paved: all offen-five manufactures and dilagreeable trades are confined to the fuburbs; in which, among others, there is a glaff mathe suburbs; in which, among others, there is a glass mathe tuburbs; in which, among others, there is a glafs ma-nufactory. Every house has a well; but the waters being brackish, are not used in dressing provisions, or to drink; the water for these purposes being brought from some sine springs by means of an aquedust, and properly distributed by communicating pipes. The house sull is wood and charcoal, but the bagnies are heated with dung, the par-ings of fruit, &c. in the collection of which many poor

people are employed.

The western part of the city is washed by a stream called Coic, which, with the wells in the city, and the water brought by the aqueduct, is all the water that is to be found for the fpace of thirty miles round; the neighbouring villages having no water but rain water, which they fave in large cifterns. The air is so pure, and free from damps, that the inhabitants sleep on the house-tops without the leaft

inconvenience.

Their only winter is from December 12, to January 20, but even then the fun has great power in the middle of the day. The fnow never lays more than a day u the ground, and the ice is feldom frong enough to bear The fnow never lays more than a day upon weight of a man. From May to the middle of December, the air is extremely hot, but the most malignant heat continues only about five days, during which the inhabitants keep within doors as much as possible, and defend them-felves from the pernicious winds by shutting close their windows and doors. The harvest commences at the be-ginning of May, and usually lasts about twenty days.

Near the city, but more particularly in the neighbour-ing country from Shogre to Letachia, are a great number of tobacco plantations, a confiderable trade being carried on in that article with Egypt. At some distance from the

city a species of fullers earth is found, which is an excellent substitute for scap. Black cattle are starce, the largerfort are kept for labour, the smaller have short horns, and
the buffaloes are valued on account of their milk. The
Turks or Jews feldom eat beef, their scod being mutton,
of which they have plenty at Aleppo. There are two
forts of sheep, the one resembling the English sheep, and
the other with large tails, already mentioned. The goats
have long cars and give excellent milk. The people are
very fond of leban or congulated milk. The butter and
cheese is made either from the milk of cows, buffaloes,
sheep, or goats. The common bread is made of wheat
badly fomented, and badly baked; people of schion have,
however, a better fort. Besides these, they have biscuits
and rusks strewed with sennel slour.

Here are plenty of hares and antelopes; the latter are

badly tomented, and badly baked: people of fashion have, however, a better fort. Besides these, they have biscuits and rusks strewed with sennel stour.

Here are plenty of hares and antelopes; the latter are of two forts, viz. the antelope of the mountain, and the intelope of the plains. The former is the most beautiful, the back and neck being of a dark brown; the latter, though the colour is brighten Is neither to swift or of well made. Tame rabbets are kept in the city, and some few wild stags are found in the country, as well as postupines; the Franks of the Romish persuasion, often eat land turdes and frogs. The camels of this country are good and serviceable; but the horses are very indifferent; these last are sed with barley, as oats do not grow nearer than Antioch. Hyanas are sound among the rocks; they feldom attack the human race, but commit great ravages among the slocks, and eyen plunder the sepulchres. In the city of Aleppo are a vast number of dogs, and the environs are insessed with wolves: septents are very numerous, particularly a white snake, which is sound in houses, but whole bite is not venomous. The scolopendra and scorpion often sting the natives, but a few hours pain is the only consequence. Here are also locusts, lizards, bees, silk-worms, all kinds of fowls, &c. Hawking and hunting are favourite amusements: the sportfusen have a very beautiful species of the greyshound: shooting is exercised only for a substituce.

The common language is vulgar Arabic; Turks of condition speak the Turkish; the Jews, Hebrew; the Arabenians their, native tongue; and some of the Syrians understand the Syriae; but the Greek's know little or nothing of either the antient or modern Greek language.

The people are in general well made, of a middle stature, inclining to lean, but inactive and languid: the citizens are usually fair; but the peasans, who are expected to the sun, swarthy; both have black hair and black eyes; they are tolerably handsome when young, but seem to appear old by thirty. The semales mar

look sender; and the women do all they can to render themselves plump, as they deem a sender waist a great deformity. They are for the most part polite; and though they often quarted, never sight: the costee-house are frequented only by the vulgar. The anusaments within doors are their, back gammon, draughts, but the game of the ring, which only consists of geessing under what costeerup the ring is put; the winner blacks the face of the loier, and puts a sool's cap on his head. Though Christians are fond of playing for money, the Turks only play for amit ment, or sometimes for a seast to entertain their friends. Dancing is despised, and only practifed by buffoons, who, as well is wrestlers, are attendants at all entertainments.

They entertain their visitors with a pipe of tobacco, wet fweetmeats and coffee, without fugar or milk. When particular respect is intended, sherbetand a sprinkling of rose water are added. But as soon as the host begins to wish his water are added. But as foon as the hoft begins to with his vifitor gone, the wood of aloes is produced, which implies, that the vifit has been fufficiently long. Men and women here fimoke to excefs. The tube of the pipe is made of the wood of the rofe-tree, but the bowl is of clay. Opium is in little efteem at Aleppo, end they who take it to excefs are looked upon as debauchees. Here are no coachea; the better fort of people ride on horfeback, with a number of fervants on foor parading before them. Women of rank are carried in litters, and the lower class in covered cradles on nules. dles on niules.

The people here go to bed early, and sleep in the principal part of their cloaths. Their bed comists of a matters, and over it a sheet, in summer; and a carpet, with a sheet sewed to it in winter. The men are either fulled to rest by music, smoke themselves to sleep, or are talked to fleep by their women, who are taught to tell innumerable flories for that purpose. The people in general are grofly

ignorant, few even of the better fort can read. The elergy are not only divines, but lawyers and physicians: they have many colleges, but little or nothing is taught in them. The government permits not the practiles of anatomy: their physicians and furgeons, therefore, can know but little of the furniture of the human body, or the medical art.

The women in, the villages, and all the Chinganas and Araba, wear gold or filver rings, through their right notirils. The old men colour their beards black, to conceal their age; and the old women dye their hair red, wild henna, to render it gracefol. They likewife dye their hands and feet.

The flaves in Aleppo are in general white, being Georgians, but they have a few that are black, and are brought from Ethiopia, by the way of Cairo. Criminals here are hanged, impaled, or beheaded, at the option of the judge; but janifaries are firtugled by a cord twifted twice round the neck, and drawn light with a piece of filk.

A Maronite nuptial cerem thy is thus conducted: the bridegroom's relations are invited to an entertainment at the house of the bride. After supper, they return to the bridegroom's relations are invited to an entertainment at the house of the bride. After supper, they return to the bridegroom's thouse, who hithertd has not appeared; for he is obliged to hide himself, and not to be found without a pretending search. At length he is brought out in his worst cloatts; but soon after the bridemen conduct him to a chamber, which contains the wedding garments, where he is left to dieta himself. After midnight, the company, preceded by a band of music, each carrying a lighted cande, go to the bride's house and detumn to the part of the bride and not himself, and not to be found without a refuse of the bride and not proven the finger. A few ridiculous and riotous ceremony, in which he puts crowns on their heads, and joins the hands of the bride and bridegroom, who each have a ring to put on the singer. A few ridiculous and riotous ceremony is not held the brides for

closths well, change them often, and fmoak them with folghur."
Scanderoon, the port town to Aleppo, is fituate on the Levan' fea. In thirty-feven degrees of eaftern longitude, and thirty-fix degrees fifteen minutes north latitude, about forty miles north-eaft of the illand of Cyprus; it had antiently the name of Alexandretta, and is supposed to have been built by Alexandre the Great. The town makes no great figure at prefent, and is inhabited chiefly by feafaring men, few people care to reside there that can help it, the sat marshes rendering it very unhealthful. When ships arrive, the factors who reside here, fend advice of itro Aleppo immediately by carrier pidgeons bred there, which sly home in about five hours, though Aleppo is near ninety miles diffant from this port.

home in about five hours, though Aleppo is near ninety miles diffant from this port.

Antioch is fituate in a fine plain, eighteen miles in extent, on the river Hafi, once Orentos, near the Levant fea, in thirty-feven degrees of eaftern longitude, and thirty-fix degrees of north latitude, about thirty miles fouth of Scanderoon, once the capital city of all Syria, but now in ruins. Here the diciples of the helffed Jefus first obtained the name of Christians. The Greeks gave this town the name of Epidaphne, from the grove and oracle of Apollo that was consulted here. The Turks call it Antaochia. The vast number of splantane, poplars, sycamores, fruit-trees, &c. in the gardens of the town, make it at a distance look like a forest. It has a castle which commands the town and river, and some considerable recommands the town and river, and fome confiderable re-mains of antient temples, walls, churches, &c. together

with an extensive canal. St. Paul and St. Barnabas preached a twelvemonth in this place; St. Luke the cvangelist, and St. Ignatius the martyr, were born here.

Assatic Tripoli, is situate on the Levant sea, at the foot of mount Libanus, in thirty-fix degrees fisteen minutes east longitude, and thirty-four degrees thirty minutes north laitude, the capital of this division of Syria, antiently stiled Phoenicia, the first and greatest of all the tharitime powers on this continent; their navigation extending eastward to the farthest fine is idands in the India tending callward to the farthest spice islands in the India seas, and to the most western capital of the province, and feat of the beglerbeg or viceroy, and garrisoned by two hundred janisaries: it is rather a road than a harbour, there begrees the first tendence of the beglerbeg or viceroy, and garrisoned by two hundred janisaries: it is rather a road than a harbour, there begrees the first the first tendence of the contract of the season of the ing very little fecurity for the fhipping which lies here. It is faid to be called Tripoli, as confifting formerly of three towns, which flood upon as many hills, about a furlong diltant from each other; a rivulet runs through their gardens, which abound in plantations of oranges and multipress trees, and that have a contracted fill we and mulberry trees; and they have a pretty good filk manufacture.

This city contains eight thousand houses, and fixty thousand inhabitants, who consist of Turks, Jews, and Christians. It is watered by a little river, which has a frome bridge over it, and turns feveral mills. The air is clear and healthy, the country rich and fertile, and the town plentifully supplied with all kinds of provisions. The Christians have some monasteries and chapels, and the jefuits a handfome chapel: here is a large handfome mosque,

which was once a Christian church.
Sidon or Sayd, is fituate on the fame coast, in thirtyfix degrees thirty minutes east longitude, and thirty-three degrees fifteen minutes north latitude, about feventy miles fouth of Tripoli, and about as much to the northward of Jerusalem; this was the mother of Tyre, and the first city that attempted a foreign trade by sea. It is at present a sangiachip, and governed by a Turkish bassa, subject to the beglerbeg of Tripoli; the town though small is still well peopled, containing about fix thousand inhabitants; and near the place are magnificent ruins, which discover its aucient grandeur. The exports confifts of Turky lea-ther, pistachios, senna, buffaloss skins, cotton, blue filks, rice, loap, asnes, oil, raisins, &c. Here are many mosques, two kans, a public bagnio, and a fine square building called the cotton market.

Tyre or Sur, is fituate on the coast of the Levant, in thirty fix degrees of eastern longitude, and in thirty-two de-grees thirty-two minutes north latitude, twenty miles fouth of Sidon: it flands on a peninfula, and at diffunce makes a grand appearance, but when you approach it there is little effe to be found befides ruins. On the north was an old Turkish castle, where we meet with only broken walls and pillars at present: the inhabitants are poor fishermen who live in vaults and caves. The island of Tyre, which was joined to the continent by Alexander, feems to have been of a circular figure, and not to have contained above forth care of ground a cond which castled the care in the first parts of ground which can full the resistance. forty acres of ground, round which are ftill the remains of an ancient wall: in the middle of the ruins flands a pile higher than the reft, being the east end of a great church, which Mr. Maundrel conjectures to have been the cathedral of Tyre, for it was a bishop's see; and he observes, that of all the ruined churches which he saw in this country, he always found the east end standing and tolerably intire; and that he did not fee fewer than an hundred of these in-thances; from whence he seems to be of opinion that they have been preserved by a miraculous providence, as standing monuments of Christianity in these unbelieving regions, and are prefages of its future restoration. giots, and air pirages of us future retroation. I mis is not the antient Tyra which was deftroyed by Nebuchad-nezzar, after cleven years fiege, but that which was built on an island about half a mile from the coast, which Alexander could not take till he had made a causeway from the continent to the island; and the citizens still making a very brave defence, Alexander, after he took the city, crucified two thousand of the inhabitants on croffes, crected upon the flore, which must ever render his memory in-famous to posterity. It is associating the world should so far mistake his character, as to compliment him with the name of Great, unless they effects him great for perperuating what all the virtuous part of the world abhor, namely the most cruel nurders, robberies, drunkenness, ingratitude to his friends, and, after all his preposterous vanity in forcing the copie he had enflaved, to pay him divine honours. Lous V. in imitation of him, also expected to be adored, for acting the part of the common enciny and feourge of mankind.

Br. ween forty and fifty miles to the fouth of Sidon, on

the same coast, stands the town of Acra, antiently called Acho; it was enlarged by Ptolemy the first, and called by himaster his own name Ptolemais, but fince it has been in him after his own name Ptolemais, but fince it has been in the policifion of the Turks, it has almost acquired its antient name again, being called Acca or Acra. On the east and north of it lies a spacious fertile plain; on the west it is washed by the Mediterranean; and on the south by a large bay, extending from the city as far as mount Carmel. The Saracena took it from the Christians in the time of Omar, and afterwards with the rest of Syria it fell into the hands of the Turks; it was several times taken and retaken in the holy war. In the year 1191 it was taken by King Richard the first of England, and Philip of France, and given to the knights of St. John of Jerusalem, who kept possessing the possessing the several times the Turks again made themselves masters of it, and razed it to the ground.

made themselves masters of it, and razed it to the ground. There being a fine nunnery in the town of Aera when the Turks took it the last time by storm; it is related of the abbess, that fearing she, and the sirgins under he care, should be obliged to submit to such occasions, summoned the nuns together, advising them to cut and mangle their faces, as the only means to preserve their virgin purity, and immediately cut and disfigured her own, to tet them an example; the nuns thereupon gashed and tore their faces, and cut off their noses, and made themselves such dismal spectacles, as they might be infallibly sure would preserve them from a rape; at which, it is said, the Turkish soldiers were so enraged, who expected here to have found a kind of paradile on earth, and to have induged their wanton flames among the beautiful young nuns, that they put them every one to the sword, thus restoring them, says an ingenious traveller, to a new and invisolable beauty.

We proceed now to enquire into the present state of Dameston.

We proceed now to enquire into the prefent flate of Damascus, the capital city of the south part of Syria, and the seat of a Turkish begierbeg or viceroy. This city is called Sancor Scham by the Turks, and stands in thirty-three degrees of north latitude, and thirty-seven degrees four degrees of north latitude, and thirty-feven degrees four minutes call longitude, two days journey to the caltward of Sidon and the Mediterranean fea. As we approach this town, on the fouth-weft fide of it, there is 'erected a little building on the top of a high precipice, under which runa the river Barrady, from whence DamaGus appeks a perfect paradife. It is fituate in a plain of that extent, that the mountains which encompals it on the farther, fide are but juft differentable. The town is built on the weft fide of the plain, about two miles from the place where the river Barrady falls from the mountains, the gardens extending almost thither. The city firetches itself from the fouth-west to the north-east, extending near two miles in length, west to the north-east, extending near two miles in length, and is narrow in the middle, but swells to a greater bulk at each end. It hath, eight gates, and strong walls; and the principal streets, both in city and suburbs, are arched, to keep off the sun and rain. It is encompassed with gardens for near thirty miles about; which are well planted with fruit of all kinds, and ever fresh and green, being watered by several branches of the river Barrady. You fee allo towers, and steeples, and pleasure boules in every part, listing up their heads among the trees, which renders the prospect still more entertaining. The Barrady, which plentifully supplies both the gardens and city with water, as soon as it issues from the clefts of the neighbouring mountains, immediately divides itself into three streams, of which the middlemost and biggest runs directly to Damascus, through a large field called the agar damascenus, and serves all the sountains and receptacles of water in the city. The other two branches, which seem to be the work of art, slow on the right and left, on the borders of the west to the north-east, extending near two miles in length, of art, flow on the right and left, on the borders of the gardens, into which they are let by little channels, and disperfed into every part of them. There is not a garden which has not a fine quick stream improved into sountains, cascades, or other water-works, though it must be confessed they are not contrived with so much art, as in some gardens of Europe. This river having thus contributed gardens of Europe. This river having thus contributed to the beauty and fertility of the fields and gardens about Damascus, loses there so much of its waters, that in a few leagues beyond the city it is intirely dried up, and never reaches the sea. The Greeks, and, from them, the Romans, called this river Chryforrhous. It is supposed the branches of the Barrady were the Abana and Pharphar; mentioned in 2 Kings.

The mosques, bagnios, bazars, kans, &c. are magnifi-cent, but the private houses are low and mean, being credled either with son-burnt bricks, or mud; yet though the houses are despicable, they are in general accommodated with stately apartments, square court yards, marble fountains,

fountains, and marble portals. One coffee-house in the town will contain five hundred people; it is divided into two parts, the one for summer, the other for winter. In a large field, called the meidan, near the city, is an hospital for pilgrims and strangers of all religious, who are naintained at the Grand Signor's expence. The grand mosque is a magniscent edifice, and was formerly a Christian church, built by the emperor Herachius, in honour of Zecharish, the father of John the Bapost; but at prefent it is death for any one except a musfulman to enter it. The Jews have some handsome synagogues, and Christians of all denominations have their churches of worship according to their own communion. About the middle of the city there is a castle of an oval form, with strong walls fourteen inches thick, slanked with founer bowers mounted with cannon, and well surnished with arms, water, see it is garrisoned by fifteen thousand janisaries; sive thousand to guard the city, five thousand to attend the Sultan when he goes to Bagdat, and sive thousand to escort the Mecca caravan. There is a large bake-house, where biscuit are made for the pilgrims that are going to Mecca, as the Grand Signor allows them two hundred cannels load of biscuit, and the same quantity of water. The manufactures of Damascus are seymetare, knives, sword-blades, bridgit, and many other iron and steel wares, in which about twenty thousand of the inhabitants are employed. Caravans bring hither the merchandizes of Turky, Arabia, and India, and caravana are constinually going to and returning from Bagdat, Aleppo, Mecca, acc.

The neighbouring territory is pleasant and fertile; the grapes are remarkably sine, some of the bunches weighing

The neighbouring territory is pleasant and fertile; the grapes are remarkably fine, fome of the bunches weighing from thirty to forty pounds; and the sheep, which are exceedingly large, and their meat delicious eating, have tails that weigh in general sixty pounds. Near the city, alabaster is found in great quantities, and a red earth, as an efficacious remedy against the bite of venomous creatures. The corn is not horse threshed as in most other countries; but the straw is cut off with iron pineers fastened to wooden rollers, drawn over the corn by a horse. The empeory Julian sormerly stilled Damascus the city of Jupiter, the eye of the cast, and the seat of magnificence. Mahomet, beholding it from a neighbouring mountain, was so delighted with the appearance of the city, and its environs, that he resused to enter, or even approach any nearer to it, saying. "I am sure there is but one paradic designed for man, and I will not enjoy mine in this world."

We shall conclude our description of the citles and places in this division of Syria with an account of the venerable rains of what was once one of the most magnificent sities in the universe, called by the Greeks Heliopolis, or the city of he sun. About thirty miles north of Damascus, and the same east from the sea-coast, in thirty-tured degrees north latitude, and thirty-seven degrees thirty minutes cast longitude, stands the city of Balbeck, in a most engaging situation, on the cast side of the valley of Bocat, for it is encompassed with pleasant and fruitful gardens, through which ron several fine rivulers. The city is of a square sigure, and surrounded with a tolerable good wall, with towers at equal distances, each side of the square being about a quarter of a mile in length, but the houses within are very mean, such as we usually sind in Turkish villages. On the south-west side of the city are the ruins of a noble heathen temple, with some other buildings belonging to it, all of them exceeding magnificent; but of late years these antient structures have been pieced up, and the whole converted into a castle. The additional boildings are of no mean architecture, but are however easily distinguishable from the more antient.

As we approach the ruins, the first thing we observe is a little round pile of building, all of marble encompassed with beautiful pillars of the Corinthian order, which support a lovely cornish that runs all round the structure, and shough this part of the fabrick be in a very tottering condition, the Greeks have converted it into a church, and celebrate divine service in it at present, From this place we come to a large firm pile of building, very losty, and composed of vast square stones, but yet does not see to be part of the original building. Through this we advance into a stately arched walk or portico, an hundred and sisty paces long, which reaches to the temple.

The form of the temple is an oblong square, thirty two yeards in breadth, and sixty-four in length, of which the

The form of the temple is an oblong square, thirty-two yeards in breadth, and fixty-four in length, of which the anti-temple took up eighteen, and is now tumbled down. The body of the imple, which is standing, is encompassed with a noble portico, supported by pillars of the Corintian order, fix feet and three inches in diameter, and forty-five feet high, confishing each of three stones only.

These pillars stand at the distance of nine feet from each other, and as much from the wall of the temple. A stately architave runs round the capitals of the pillars, and a comish exqussitely carved. The position is covered with large stones, hollowed like an arch, and extending between the columns and the wall of the temple, and the figures of some Heathen gods and goddesses or heroes are carved on each stone; among the rest there is a Ganymede and an eagle stying away with him, done to the life.

the columns and the wall of the temple, and the figures of foune Heathen gods and goddeffes or heroes are carved on each flone: simong the reft there is a Ganymede and an eagle flying away with him, done to the life.

In the walls of the temple all round are two rows of pilafters, one above snother, and between the pilafters, niches, which feem defigned for images. About eight yards from the upper end of the temple are flanding part of two fine fluted pillars, which feem to have made a patition in that place, and to have supported a canopy over the throne of the chief idol: On that part of the partition which is remaining are fill to be feen carvings in relievo, reprefenting Neptune, tritons, fishes, fea gods, Arion and his dolphin, and other marine figures. The roof of the temple is entirely broke down, but yet, says Mr. Maundrel, the whole, as it now stands, strikes the mind with an air of greatness beyond any thing we have feen, and is an eminent proof of the magnificence of the antient architecture. This temple was antiently accompanied by some other magnificent buildings, as is evident from four ascents to it, one upon each angle, with marble steas long enough for ten people to go a-breaft.

fteps long enough for ten people to go a-breatt.

The old wall, which encompaffes all the ruins above-mentioned, is built with flones of that prodigious bignefs, that the natives afcribe the architecture to the devil. A gentleman who travelled to these parts, was at the pains of measuring three of the largest of these flones, and found one of them twenty-one, and the other two twenty yards apiece in length; each of them being four yards broad, and as much in depth, and these three flones lay in the same row, end to end, extending fixty-one yards; and which was equally strange, they were listed up into the wall more than twenty feet from the ground.

The palace, which is what the Turks call the castle, must have been one of the most superb structures that immerination can conceive, but it is much more decayed.

The palace, which is what the Turks call the castle, must have been one of the most superb structures that imagination can conceive, but it is much more decayed than the temple. A dark arched vault, containing many busts, leads to an hexagonal building, which forms a foacious theatre; the end opens to a terrace which is ascended by magnificent buildings; on each hand are doubler ows of pillars, which form galleries of fixty-fix fathoms in length, and eight in breadth. The bottom of this court is over spied by a building smazingly sumptuous, which appears to have been the body of the palace; the columns are as large as those of the Hippodrome at Constantinople; nine of them are standing, and a good piece of the entablature; but it is surprising that each of these large columns is made of one intire block only. All the buildings in this castle from the east, and the Corinnhan order prevails throughout the whole: there is no place where such precious remains of architecture and sculpture are to be found, in which the fine taste of Greece and the magnificence of Rome seen to be blended; the ornaments are at once innunerable and exquisite. Beueath the whole are vaolts in which vast slights of marble stairs, of two hundred steps in a slight, are frequently found. The turn and elevation of these vaults are bold and surprising; they contain many noble halls and superb apartments, admirably decorated. Some of these vaults are bold and surprising; they contain many noble halls and superb apartments, designably decorated. Some of these vaults are built with such enormous stone, as those before mentioned, without any visible signs of mortar, or any kind of cement whatever. Many houses, which contain various apartments, are cut out of the folid rocks. It is inhabited by about thirty or forty Christian samiles. A see see the three the hundred Turks.

morrar, or any kind of ceinent whatever. Many houles, which contain various apartments, are cut out of the folid rocks. It is inhabited by about thirty or forty Christian families, a few Jews, and near eight hundred Turks. We shall now preceed to describe those towns in Syria which are of inferior note; the principal of which, on that subdivision of Syria Proper, called Congagne, are, I. Tamosata, which the Turks now call Scempsal, and was once the capital of Comagene, but at present is only a wretthed village, surrounded by heaps of ruins. It shads on the Euphrates, on the confines of Armenia Major, twenty-two miles from Edissal: this was the birthplace of the celebrated satirical poet Lucian. 2. Dolica, called by the Turks Doliche, once an episcopal see, but at present a mean, ill-built town, thinly peopled, and of little consideration. It is situated on the river Marsyas, which disembogues itself into the Euphrates. Nothing now remain but the names and a little rubbish of the an-

N n ten

tient cities Germanicia, Singia, Antiochia ad Taurum, Catamana, Deba, Chaomia, and Chelinadura.

Tertafo, formerly called Orthofia and Antaiadas, from its being fituated over against the little sile of Aradus, was once a famed sea-port, and an epiteopal see; at present, it is a very inconsiderable place, and inhabited only hy poor sistlemen: it is about nine miles to the northward of Tripoli.

Latakia, or Lashikiya, the antient Laodicea, was founded by Seleucus Nicanor, or the Victorious, and called by him after his fifters name. It is the most norther city of Syria, situated on a rising ground, with a full prospect of the sea, in thirty-five degrees thirty minutes north latitude, and is a considerable maritime town. It contains many antique remains, particularly several rows of columns latitude, and is a confiderable maritime town. It contains many antique remains, particularly feveral rows of columns of graniteand porphyry, with part of an aqueduct, which Jofephus affirms was built by Herod: the firucture is spacious, but not arched. Here is a mosque formed of a magnificent antient triumphal arch, supported by Corinthian pillars; the architrave is embellished with a variety of warlke trophies. Many Greek and Latin inscriptions are sound among the ruins, but they are in general so much defaced as to be illegible. To the westward of the city are the remains of a cothort, his enough to hold the largest may in mains of a cothon, big enough to hold the largest navy in the universe. The mouth which is about forty feet wide, is defended by a castle, and the whole is an amphitheatrical form; it is so choaked up at present, as to admit only a few veffels.

A little to the northward of the city are those remarkable catacombs which excite the attention of travellers. They contain large stone cossins, embellished with emble-

matical figures, flucils, &c.

The covers of fome are fupported by pilafters, geneselly of the Corinthian, but fometimes of the lonic order:
thele coffins are deposited in cells on the sides of a number of chambers hollowed deep into the rock, being each from ten to thirty feet fquare. The most respected of these se-pulchral chambers is that called St. Teckla, which is dedi-cated to that first virgin martyr: in the midst of it is a

The internixture of rocks, woods, fepulchres, plains, grottoes, fountains, cafcades, &c. render the whole of the adjacent country extremely romantic.

A few miles from a place called the Serpent Fountain, are the Spindles, or Maguzzels, a name which is given to feveral painted cylindrical buildings that are erected over a

number of sepulchres.

Opposite to the northern extremity of mount Libanus, are the ruins of the antient city of Arka, to the eastward a are the ruins of the antient city of Arka, to the eathward a romantic chain of mountains appear; a fine extensive plain, intersperied with castles, villages, ponds, rivers, &c. opens to the north; and the sea is seen to the west. The city was crested on the summit of a hill of a conical form, which appears to have been a work of art: the inhabitants were supplied with water from mount Libanus, by means of a magnificent aqueduct, notwithstanding a fine stream

waters the valley below the city. The places of inferior note in Cœlo-Syria come next under confideration.

Apamea, founded by Seleucus Nicanor, and so named in honour of his mother, is greatly fallen from its antient fplendor, but still remains a considerable town, standing on a fpot of ground which is almost furrounded by a lake formed by the river Orontes, about fixty miles to the fouth-ward of Aleppo; so that it hath no communication with the land but by an ifthmus, or small rock. The Turks and Greeks call it Hama: it is the residence of a beglerbeg, whose government is very extensive: the adjacent territory is exceedingly rich and fertile; the city is well watered, retains many marks of its antient magnificence, and was very early an episcopal see. It lies in thirty sive degrees fix minutes north latitude, and thirty-seven degrees eighteen minutes cast longitude. Seleucus constantly fed five hundred large elephants near this city.

Near mount Lifa, between Antioch and Tortofa, there is a little mean village called Margat, which was antiently

onfiderable place, called Marathos.
On the river Orontes, between Apamea and Laodicea, the town of Emela, Emissa, or Emisa, is situated. mad Roman emperor Heliogabalus was born there, and on that account took the whim into his head, to be made one of the pricits of its temple; the Turks at prefent call it Haman, or Aman. It is under the juridiction of the beglerbeg of Damaccus, who governs it by means of a deputy. It fill makes a confiderable figure, notwithfauling what it has fuffered by carthquakes, and the various changes it has undergone. It is furrounded by good from walls, with fix fuperb gates, and feveral magnificent towers ar proper diffances. The walls are environed by a spacing ous ditch, and on an eminence there is a castle which commands and desends the town. Here are some since churches, the greatest part of which are converted into mosques. The cathedral is a magnificent structure, supported by thirty-sour marble columns, adorned with basicrelievos and Greek inferiptions. The Christians are permitted to pray in it at certain times, befides which they have fome churches appropriated entirely to their own ufe The bazars, kans, caravanferas, &c. are in general very handfome fiructures. The inhabitants trade in filks, and a fine kind of needle-work of filk, gold, and filver, curl-oully intermingled together. The adjacent country is very rich and fertile, and the gardens in the environs ex-ceedingly delightful, abounding in a great variety of ex-cellent plants and delicious fruits. In all the gardens great number of mulberry-trees are planted in regular rows, and well-watered, as the demand is very great for mulberry-leaves to feed their filk worms with. This city and Aleppo are the principal places in the division of Coelo-

The town of Botrys, or Botrus, in Phatria, was once a confiderable place, but is now a poor village of fishermen, standing on the coast to the fouth of Tripoli, and called by

flanding on the coast to the fouth of Tripoli, and called by the Turks Patron, or Elpatron.

On the coast, about twenty miles fouth of Tripoli, is situated Byblus, or Byblos, formerly a fine city, but now a mean village, denominated Gebail. The river Adonis, descending from mount Libanus, runs through the town. This river is subject to swell to an immoderate degree by the melting of sinow or falling of rains, and at certain times the waters appear bloody, which the superstitious inhabitants used to impute to the death of Adonis, who is alluded to in sections under the name of Tampuz, or alluded to in scripture under the name of Tammuz, os Thammuz, Ezek. viii. 14. The natural cause of thia pretended bloodiness, is only a kind of minium, or red pretended bloodines, is only a kind of minium, or red earth, which is brought away by the waters when they fwell to an unufual height, and give the river a crimfon tinge. In this town there is a deputy governor fubordi-nate to the beglerbeg of Syria, and a finall garrifon; there is, however, but little trade, the harbour being almost

Choaked up.

The city of Berytus was once in a flourishing state, but is now upon the decline: the streets are narrow, dirty, and dark. It is, however, a trading place, and a stage for the caravans that go to Grand Cairo. It is situated on the seacoaft, in a fertile and delightful country, about four milea from Tripoli. Some flately ruins are fill vifible about the town, particularly those of the palace and gardens of Taccardine, the fourth emir or prince of the old Drusians, and of an old amphithreatre supposed to have been built by Agrippa. The trade consists of fine tapestry, camlets filks, cinnamon, nutmegs, ginger, caffia, pepper, rhubarb, cochineal, &c. gourds, colocynth, &c. allo mulberry and other trees, abound along the coaft.

Serepta, Serphant, or Serphanda, a city antiently celebrated for the abode which the prophet Elias made in it

with a poor widow whom he relieved, is at present but an indifferent village about a mile from the fea, and fituated on a hill.

SECT. V.

Treats of Palestine, or the Holy Land, being in the southern division of Matic Turky, its situation, extent, air, climate, fiil, mountains, rivers, lakes, cities, towns, &c.

PALESTINE, called alfo Judga and the land of Canaan, is fituated between thirty-one degrees thirty-minutes, and thirty-two degrees twenty minutes north laritude, and from thirty-four degrees fifty minutes, to thirty-feven degrees fifteen minutes east longitude, being bounded by the Mediterranean fea, on the west; Syria and Phoenicia, on the north; Arabia Deferta, on the cast; and Arabia Patraza, on the fouth. It is therefore near two hundred miles in length, and about ninety in breadth towards the miles in other places; the longest day is about fourteen hours fifteen milutes. The air of Judga is the safe full full and the length of the little places; the longest day is about fourteen hours fifteen minutes. The air of Judga is the most falubrious and pleasant imaginable; neither heat nor cold are felt in the extreme; but an agreeable ferentity diffuses itself throughout the year, which puts the franger in mind of the golden age; and as the climate is the most admirable in the universe, we have no doubt but in the early ages of the world, when the pastoral life was the most honourable, and agriculture the most reputed em-ploy, it far exceeded its present excellency, by means of the general cultivation of the country.

We

We have the most authentic testimoriles of the richness and fertility of its soil: in particular, that it abounded in corn, wine, oil, honey, pomegranates, dates, sigs, citrons, oranges, apples of paradife, sugar-canes, cotton, hemp, ax, cedars, cypresses, and a great variety of other stately, fragrant, and fruitful trees, balm of gilead, and other precious drugs, &c. cattle, fowl, sish, game, and other delicacies as well as necessaries of life. Whoever, indeed, considers the very small extent of Judexa, will be sensible to maintain such a normber of inhabitants as resided in it in the time of king David, since they amounted to six millions. The produce of the land not only subsisted this prodigious multitude, but there was a sufficient superfluity to export to Tyre and other places. Yet the foil was only cultivated six years in seven, as the septennial year was always a time of rest from the assairs of agriculture; but we must observe, that the whole of the country was cultivated. must observe, that the whole of the country was cultivated, and that woods, parks, waste grounds, see, were unknown. An eminent writer affirms, that with a little cultivation it would yield as much as in the days of king David and has fon Solomon; but that it is now unhappily inhabited by the most indoent people existing.

Libanus and Anti-Libanus, are the principal mountains of Palestine, forming a chain that divides Syria from Palestine: the whole is about one hundred leagues in compass, and consists of four ridges one above another, two of

pass, and consists of four ridges one above another, two of which are fertile, and two barren, viz. the lower is rich which are retire, and two variety years and barren; the third abounds in gardens and orchards; though higher than the preceding, and the funnith is fleril and uninhabitable, by reason of the excessive coldness on its airy brow: the Manual Colons of the excessive coldness on its airy brow: sonites inhabit its lower regions, and Arabs all the other parts except the top. In this mountain feveral celebrated parts except the top. In this mointain everal effectives a vivers have their fource, viz. Jordan, Rocham, Nahur-Roffian, Naha-Codicha, and Abouali, the first only of which runs through Paleitine. Of these mountains the western part alone is properly called Libanus, the eastern being named Anti-Libanus, and the intervening part Coelo-Syria. The whole chain, however, always was, and is still looked upon, as a retreat for robbers.

Hermon, like Libanus, is very high, and for the greatest part of the year capped with show.

part of the year capped with fnow.

Tabor, antiently called Mons Alabyricus, and Ilabyricum, from a city of that name which stood upon it, is

admirable with respect to its constant vendure, beauty, fer-tility, and regularity, as well as for its situation, which is in the middle of a large plain, at a distance from any other hill: a winding ascent of about two miles leads up to it; and the plain, on its top, is half a mile in length, and a quarter of a mile in breadth. This mountain is held in great veneration, and has been much reforted to hy Chrif-tians of all ages, as it was the scene of our Saviour's transfiguration.

figuration.

Carmel, fituated on the fea-shore, is the most remarkable head-land on that coast. The prophet Elijah is supposed to have resided here in a cave, previous to his being taken up to heaven. The cave is eighteen feet in length, and eleven in breadth, and is still shewn to travellers. Olivet, or the mountain of olives, is only about a mile from Jerusalem, being separated therefrom by the brook Kidron, and the valley of Jehoshaphat. It is of a confiderable height, and from its summit there is a sine profiderable height, and from its summit there is a sine profi-

fiderable height, and from its fummit there is a fine profspect of Jerusalem. It runs in a ridge, and has three or four heads higher than the rest; from one of the principal Christ ascended into heaven; and the impression of a foot in a hard rock, shewa there at this day, is said to have been made by him!

Calvary, or Golgotha (the place where our Saviour was erucified), is a rocky hill on the weft fide of Jerusalem, and was antiently used as a general charnel-house to that city, from whence it derived its name of Golgotha. This mountain, according to the authority of the "ntient fa-thers, is the same on which Abraham went to offer up his fon Iface. It was formerly the place where criminals were executed; but, fince the crucifixion of Christ, it hath been fo reverenced and reforted to by Christians of all denominations, that it hath, if we may be allowed the expression, drawn the city round about it, for it now stands in the midst of Jerusalem. Constantine the Great enclosed it within the new walls: and, that none of Calvary should be excluded, he even left out some part of mount Sion.

Moriah is the mountain on which the temple of Solomon

Gibion stands about a quarter of a mile from Jerusalem, and the pool from whence Hezekiah brought water by an aqueduct into the city, is still to be seen on it.

Ebal of Hebal, and Gerizim, though lefs confiderable than the former, are neverthelefs remarkable for being the mountains on which the twelve tribes of the Ifraelites mountains on which the twelve tribes of the Ifraelites were placed, fix tribes on each, to hear the curfes promounced by the Levites on the transgressor of the law of Moses, as recorded in Deuteronomy xxvii. There is likewise Engedi, near the lake of Sodom; Amalich and Galiath, in the tribe of Ephraim; Pisgah and Nebo, on the other side Jordan, whence Moses was permitted to view this country, called The Land of Promsse; the mountains of Gilbon, famed for the deseat of Saul and Jonathan by the Philistines, and the chain of hills called the mountains of Gilead, extend from north to south beyond Jordan, and are celebrated for their excellent resin or balm.

are celebrated for their excellent refin or balm.

The chief inland feas, or rather lakes, are, the Dead fea, or lake of Sodom; the fea of Galllee or lake of Tiberias; and the Samachonite fea, fea of Jezar, or lake of Sa-

machon

The first of these, called by the several names of the Dead sea, lake of Sodom, Asphaltic lake, or Salt sea, hath had many erroneous reports concerning it; namely, that nothing would sink in it; that it cast such a stench and moke, that the very birds died in attempting to fly over it; hence, and because nothing would live in it, it was termed the Dead sea; that there grew apples about it fair without, but all ashes and bitterness within; and that the ruins of the five cities that were destroyed by fire from heaven, were still to be seen under the water in clear weather; that a were tiil to be feen under the water in clear weather; that a fmoke containtly afcended from it, &c. All thefe abfurd, notions have been refuted from feripture itself, by Reland, in his Palettine Illustrated. This lake is called Afohalitie, from the quantity of bitumen in and about it. Formerly it was imagined that great quantities of this combustible matter were thrown up by the fea; but the mountains on both fides produce it, and not the lake. It refembles pink, and is only to be diffinguished from it by the fulphureousness of its taste and finell. For the bitumen itself, four have mittaken a black poble found on the shores. suppureounces or its talte and smell. For the bitumen itfelt, some have mittaken a black pebble found on the shores
of the lake, which being held in the slame of a candle,
presently takes sire, and burns with a most intolerable
stench. Besides the above quality, these pebbles have this
singular property, that by burning, their weight only, and
not their bulk, is diminished. A traveller of credit affirms, not their bulk, is diminished. A traveller of credit affirms, that it contains fish, though he confesses, that no collection of waters in the universe have so great a degree of sattness, from which quality it is denominated the Salt sea. Galen observes, that the exceeding sattness of the water is mixed with an unpleasant bitterness; and that with respect to specific gravity, it as much exceeds other sea-waters, as they do river-waters. Its waters are clear, limpid, and the standards are the satt search and the satt search. transparent. It is about twenty-four leagues in length, and between fix and seven in breadth. It is bounded on the east and west by exceeding high mountains: on the north, by the plains of Jericho; but to the south, the view is intirely open beyond the reach of the eye.

The lake of Tiberias, or sea of Galilee, is much smaller than the lake of Sodom, but abounds in fish, and is highly

commended for the excellency of its waters: the river Jor-dan paffes through it. On this fea, St. Peter, Andrew, John, and James, followed their employ as fishermen, till Christ called them to be fishers of men.

The Samachonite fea, or lake of Samachon, is an hundred furlongs north of that of Tiberias, near the fource of the river Jordan, it is not above half a mile broad in the widest part, but is between seven and eight miles in

length.

The most considerable, or indeed the only river in this country, is Jordan. It takes its course at the lake of Phiala, whence proceeding it divides enters the Samachonite lake, whence proceeding it divides the fea of Galilee, and at length difeharges itself into the Dead fea; after tiling at Phiala, it runs under-ground for the space of fifteen miles; then appearing again at Panoum, it passes the before-mentioned Samachonite lake, flows for fifteen miles more, enters the fea of Tiberias, and, having passed it, streams through a desert till it disembogues itself into the Asphaltite lake. Contrary to the general nature of rivers, it is fulleft in fummer-time: its banks are so covered with tall reeds, willows, tamarisks, &c. that they harbour innumerable lions, and other wild beasts. Its stream is fo rapid and firong, that a man cannot frem it in fwimming The breadth in the widest part does not exceed fixty feet: the waters are turbid or muddy, the natural confequence of its rapidity; but they are at the same time salubrious and incorruptible.

Arnon-Jabok, Cherith, Soree, Kishon, Bosor, Belus, Nahar-al Sarat, and Jezreel, are the other rivers, or rather rivulets, in this country.

The principal vallies mentioned in feripatre, and by profane writers, are, 1. Berakhap, or the Valley of Bleffing, on the welf fide of the lake of Sodom; 2. The vale of Siddim, which contains the Afphaltite lake; 3. The valley of Shaveh, or royal Vale; 4. The valley of falt; 4. The valley of Farrei; 6. The vale of Mambre; 7. The vale of Replaim; 8. The valley Jehofhaphat; 9. The valley of the children of Hinnom; 10. The vale of Zeboim; 11. The vale of Achor, near Jericho; 12. The vale of Bochim; and, 13. The valley of Elah, where David slew the giant Goliath.

sochim; and, 13. The valley of Elah, where David flew the giant Goliath.

We may reckon among the plains, those called the Great Plain, through which the river Jordan flows; the plain or valley of Jezreel, the plains of Sharon and Sephelah, and the plain of Jericho. As we hinted before, the whole country is at present a perfect wilderness, through the want of cultivation, and the indolence of its inhabitant.

inhabitants.

There are many natural curiofitica in this country, particularly flones, which exactly resembles citrons, melons, olives, peaches, bunches of grapes, and even many kinds of fish; they are found principally about Mount Carmel: those that resemble olives are the Lapides Ju-Carinel: those that retemble olives are the Lapides Judaici, which have always been deemed an excellent remedy for the stone and gravel. Near Bethlehem are found little stones which greatly resemble peas, they are therefore called the Virgin Mary's peas; and another stone of a chalky nature goes under the appellation of her milk; a stone of the state kind, which is sound not only here, but in Phoenicia and Syria, exhibits in every state the representation of a great variety of sishes. There are many hot and missand present and pear the Red for are a number of his of a great variety of fishes. There are many hot and mi-neral waters; and near the Red sea are a number of hil-

heral waters; and feat the executed are a minimo in in-locks refembling places where there have been lime-kilns, and abundance of faline efflorefeences.

In the plains of Jericho a thorny bush grows, which bears a fruit that has fome smilltude to an unripe walnut; from this fruit the Arabs extract an excellent oil, which is a fovereign remedy for bruites, when internally applied; and for wounds, when used externally: its reputation is fo great that it is even preserved to the balm of gilead. Two more natural curiotities are also to be met with in thefe plains; namely, the wood-olive, the outward coat of which is green like the common olive, but being taken off, a nut of a woody fubflance appears; it is about the thickness of an almond-shell, and ribbed long-wife. Alfo the carouberlocust-tree that bears a fruit like a bean, in which are some small seeds; the shell, when dried, is eaten, and has a very agreeable taste. St. John sojourned here, where it is called St. John's desert; and these are thought to be the locusts on which he sed, and not the in-

thought to be the focusion of which are equ, and not the in-fect of that name, as many have supposed.

This country was peopled by the descendants of Amor Cham, who came hither with his eleven sons after the consustion of tongues at Babel, five of whom settled in Syria and Phœnicia, viz. Heth, Jebus, Emir, Girgashi, and Heve, who were the founders of fo many nations, and these were afterwards increased by the descendants of and these were atterwards increased by the dead out of Meso-potamia to sojourn here, and whose posterity were in pro-posted in the part in possession of the whole territory. We cess of time put in possession of the whole territory. shall therefore take occasion in this place to particularize the feveral diffricts allotted to the feveral tribes, beginning with the two tribes and a half who fettled beyond Jordan; and then, proceeding to the opposite side, comprise the other nine tribe and a half, as they lie from north to

1. Reuben's lot extended along the banks of the river Jordan, from the north-east coast of the Dead sea, and was bounded, on the east, by the country of the Moabites and Ammonites; on the fouth, by the river Arnon, which separated it from the country inhabited by the Midianites; and, on the north, by a finall river, which parted it from the lot of Gad.

2. The lot of Gad had half the tribe of Manasseh, on the north; Reuben, on the fouth; the Ammonites, on the eaft; and Jordan, on the west.

3. The lot of the half tribe of Manasseh had Gad to

3. The lot of the half tribe of Manaffeh had Gad to the fouth; mount Lebanon, to the north; Jordan, and the Samachonite lake, to the west; and the hills of Bashan

and Hermon, on the eaft.

and retinon, on the can4. The lot of the tribe of Afher, on this fide Jordan,
was bounded, on the north, by Phænicia; on the fourh,
by Zebulon; on the eaft, by Naphtali; and, on the weft,
by the Mediterranean. Of all the cities and towns belonging to the descendants of Asher, none are now re-maining, except Acra, already described. Saphat, a town near Acra, was destroyed in the year 1759, by an earth-

quake, which did a great deal of damage all over Syria, but more particularly about Damafeus. 5. The tribe of Naphtali extended along the weftern banks of the river Jurdan, from Lebanon to the fea of Galilee. None of the antient cities formerly belonging to the above tribes are now in being; and the very few villages are fo poor and inconfiderable as not to deferve notice. We shall, however, give some particulars of two of the antient cities, namely Capernaum and Dan, though there are at prefent no remains of them.

A

It is observed by a judicious author, that Capernaum is not mentioned in the old testament: it was therefore more probably one of the towns built by the Jews after their return from the Babyloniih captivity, on the sea-coast, that is, on the coast of the sea of Galilee, in the borders of Zebulon and Naphtali, and confequently towards the upper part of that coat: it took its name from an ad-joining spring, samed for the excellency of its crystalline waters. Our Saviour chose this as the place of his residwaters. Our Saviour chofe this as the place of his refid-ence, in preference to Nazareth, where the stubbornness and incredulity of the people had obstructed the propa-gation of his doctrines; he abode here during the lag-three years of his life; but, for their neglecting his admo-nitions, he denounced a heavy judgment upon them (see Matthew xi. 23.) and his prediction was verified in the Jewish wars, when it was totally destroyed, fo that there is not at present the least trace of it lest. The city Dan was built by the Danites, who being too straitened in their own tribe, and seeking for a new habita-

firatened in their own tribe, and feeking for a new habita-tion, those of Zerah and Eshtaol armed fix hundred men, who seized the rich town of Laith, destroyed its inhabitants, burnt the city, then rebuilt it, and called it Dan, after the name of their progenitor. It was deemed the northern boundary of the land of Egypt, as Berfheba was the fouthern: hence the proverbial feripture expreffion, of from Dan to Beersheba." Rehoboam placed one of his golden calves here. Augustus gave this city to Herod the Great, who bequeathed it to his younger ion Philip, who

called it Cæfarea Philippi, and made it his capital.

6. The tribe of Zebulun had the Mediterranean on the west; the sea of Galilee, on the cast; Islachar from which it was parted by the brook Kishon, on the fouth; and Naphtali and Ather, on the north. The principal town of this diffrict is Nazareth, it is now a very inconfiderable village. A convent is here built over the place of the Annunciation: the monks show a house, in which they tell us Christ resided near thirty years, and which they affirm was the house of Joseph.

Bethfaida (whose name in Hebrew implies a fishing

place) was but a trifling village, till Philip the tetrarch ren dered it a magnificent, rich, and populous city: it only confifts of five or fix poor cottages at prefent.

Joppa, called at present Jaffa, is fituated on the Mediterranean coaft: it was antiently the principal fea-port town to Jerusalem, and all Judgea, and the place where the cedars of Lebanon, brought in floats from Tyre, for building the temple, were landed. It was pleafantly feated on a rock in a beautiful plain, and fituated in thirty de-grees twenty minutes north latitude, and thirty-five degrees three minutes east longitude. Jonas here embarked for Nineveh. In Joppa, St. Peter raifed Dorcas to life, and received the melfengers of Cornelius. Though it was anteently a very magnificent town, and a great commercialmart, yet the harbour was never commodious on account of feveral rocks, which render the passage into it danger-cus. It lay for many ages in ruins; but it hath of late been much improved, though it still falls beneath its origibeen much improved, though it till falls beneath its origi-nal fplendor. The lower ground towards the fea is co-vered with good houses, chiefly of ftone. The principal commodities are Ramah and Jerusalem foap: rice, and other articles, are brought from Egypt, and exported from hence to various places, which yields the baffs of Gaza a confiderable annual income. The inhabitants are sup-plied with water from an excellent spring on the west side of the town. The Christians as yet have no church as of the town. The Christians as yet have no church, except one almost in ruins, and uncovered; but they have feveral handsome houses appropriated to their use, and for the entertainment of pilgrims.

The town of Cana of Galilee, so called to distinguish it

from a place of the fame name, which lay near Sidon, is not far from Nazareth. Here Christ performed his first miracle, hychanging the water into wine at the marriage feaft. A young gentlemen of genius, who was placed in a certain feminary of learning for education, having a few years fince the miracle of Cana given him as a theme, neglected to prepare it for the inspection of the master till within a few minutes of the time when it was proper; fearful of

being punished for his remissies, he sat down and comprized the whole in the following admirable line:

""" The modest water saw the Lord, and blush'd:

The master was so charmed with the energy and beauty of this sentence, that he easily pardoned the young pupil for not rendering the theme more copious. Cana was the native or at least dwelling-place of the apostle Nathaniel, of Cana in Gailiee; see John xxt. 2.

7. The lot of the tribe of Islachar was bounded on the north by Zebulun; on the south, by the other half of Manassien, in the same of the mounts Carmel and Gilboa, the valley of Jezreel, and plain of Galilee, now called Saha: though its fertility is attenting; it contains only a few miserable inhabitants, who reside in scattered buts, and lass scarce any remaining traces of the towns or villages it might formerly contain. But as the following places in their antient state, were remarkable, on account of some curious circumstances with which they were connected, we shall here give some description of them.

According to Joshua, chap. xix. the city of Sumen, or Shunen, was situated on the borders of the tribe of Islachar. In 1 Sanuel xxxiii. 4, it mentions, that the Philitines picked here, as the Issessing divined the college.

char. In Sanuel xxviii. 4. it mentions, that the Philiftines pitched here, as the Ifraelites did in Gilboa. This city was likewife famous as the place of refidence of the holpitable Shunaminite, who was fo kind to the prophet

Another remarkable place is Endor, mentioned 1 Sam. Another remarkable place is Endor, mentioned 1 Santaxvili. as the place of relidence of a witch, or woman who had a familiar fpirit, to whom Saul applied, that she might raife the spirit of Samuel: it was situated on the worst of the river Jordan. St. Jerom and Eusebius inform us, that in their days there was a considerable town of that name at about four miles to the southward of mount

Tabor.

The other half tribe of Manasseh had Islachar on the north, Ephraim on the south, the Mediterranean on the west, and Jordan on the east. It was a beautiful country, sincly diversified with mountains, vallies, lawns, springs. Sc. The most considerable place was Bethsan, or Bethshan, situated on the west of Jordan, and the south coast of the sea of Galilee: it was considerable in the time of St. Jerom and Eusebisses: the Turks call it Elbyzan; the Jews called it Bethsan; and the Greeks, Scythopolis, as it is likewise named in the Anocryplia.

salem, or Solyma, was another remarkable place: but no traces are at prefent left of this or any of the other laft mentioned towns; nor can their fituation be after-

tained.

8. The lot of the tribe of Ephraim, afterwards known by the name of Samaria, had the river Jordan on the eaft; the Mediterranean on the west; the tribe of Benjamin, on the south; and the half tribe of Manasseh, on the north: the rupture between the kingdoms of sirael and Judah originated here. The principal places in this lot were these which follow:
Sichemor Secheni, since Neopolis; it was once considerable, being a city of refuge, and, after the destruction of Samaria, the capital of the revolted kingdom: on the place where it stood, there is at present a town known by the name of Naplosa or Naplouse, between the mounts Ebal and Gerizim. It is the seat of a Turkish fangiac, and capital of a territory consisting of one hundred the mounts Ebal and Gerizim. It is the feat of a Turkish fangiac, and capital of a territory confissing of one hundred villages. It consists of only two streets lying parallel under Gerizim, but well built and full of people; though travellers reckoned it to be in a poor condition, compared with what its antient ruins shew it to have been.

Arimathea, or Ramah in Hebrew, which fignifies a high place, was the place of the nativity of the prophet Samuel.

Samaria, antiently called Someron, from the mountains on which it was built, but now Sebaste, was the capital of the revolted kingdom, and raifed by its monarchs to great fplendor; it was destroyed by the Assyrians, but Herod rebuilt it, and embellished it with many magniticent Herod rebuilt it, and embellifted it with many inagniticent edifices, of which there are fill forne remains, particularly a large fiquate piazza encompaffed with marble pillars, fome flanding, others lying; the fragments of fome frong walls, and the church built by the emprefs Helena over the place where John the Baptift was beheaded, or, as fome fay, buried. The remains of this church are divided into two parts, one of which belongs to the Chriftians, and the other to the Turks; the fatter divifion is paved with marble, and has a chapel under-ground, to which there are twenty-three fleps to defend; there are three tombs in it, where it is affirmed the Baptift, Elifha, and Obadiah are buried. The Turks likewife fay, that in No. 14. No. 14.

this chapel St. John was imprisoned and beheaded, for a trifle of money they let Christians down to see the tombe, or rather to peep at them through some openings in the wall. Not far from these ruins, Jacob's well is shewn, where Chirist held the conference with the Samaritan woman; It is covered by a stohe vault; and they who are desirous of seeing it are obliged to be let down through a narrow hole, where they may discover the inouth of it; it is hewn out of the folid rock, is three yards in diameter, and thirty-five in depth, sive of which are silled with water.

There is at prefent ne remaining of Shiloh, or Sio, celebrated for the tabernach, in which the ark was kept, till jult before the death of Eli; foe 1 Sam. iv, 2 &c., To the fouthward of the whole country lay Judea, properly fo called, which contained the tribes of Benjamin;

perly so called, which contained the tribes of Benjamin; Judah, Dan, and Simeon.

9. The lot of the tribe of Benjamin had Samaria on the north, Jordan on the east, and Dan on the west. The principal places in this lot are the following:

Jerusalem, antiently the regal seat of the Jewish monarchs, and the centre of the lewish religion. In its most sourcilled parts, each 1 sing enclosed by its own walls, viz. The old city of Jebus, which shoot on mount Zion, or Sion, where the prophets dwelt, and where king David built a superbalace, which became the residence both of himself and his fueccessors, and his successors, which second it was called the city superb palace, which became the residence both of himself and his fuccessor, on which account it was called the city of David. 2. The Lower City, or the Daughter of Zion, so called on account of its having been built subsequent to the other. In this division shoot the two magnificent palaces which Solomon built for himself and his queen; the fine palace of the Maccabean princes; the chadle amphitheatre crecked by Herod, which was faid to be capable of containing eighty thousand spectators; the chadel built by Antiochus, which was destroyed by Simon the Maccabee; and the second citated called Autonia, which was crecked by Herod upon a crazer rock. 2. The New City, principally Herod upon a craggy rock. 3. The New City, principally inhabited by merchants, artificers, mechanics, &c. and, 4. Mount Moriah, on which the temple of Solomon was

4. Mount Moriah, on which the temple of Solomon was bullt, of which an ample defeription is given; 1 Kingavi, vii. Jerufalem is still reckoned t! capital of Palettine, struate on a mountain, about thirty miles east of the Levant, in thirty-fix degrees of eastern longitude, and thirty-two degrees of north latitude, about ninety miles south of Damaseus, and two hundred and thirty miles north-east of Grand Cairo in Egypt, from which it is divided only by the territory of Arabia Petræa. The situation of the city is altered from what it was at the crucision of our Saviour; for mount Calvary then slood without the walls, but has now drawn the city round about it, and the church of the sepulcher built upon it riow stands almost in the of the sepulchre built upon it now stands almost in the middle of the town, and mount Sion, which stood near the center, is now lest without the walls. The present town is not more than three miles in circumstrence, but is town is not more than three miles in circumference, but is prefuned to have been much larger in its flourishing state; it is but thinly inhabited at present, and the buildings mean; the resort of Christian pilgrims to it is the most considerable advantage it has new, and the accommodating them with lodgings and previsions the chief business of the inhabitants. A bassand a good garrison is kept here by the Turks, to keep good order, collect the Grand Signor's recenues, and protect the pilgrims against the Arabs, who possess the adjacent country. The grandest building in the place is the church of the sepulchre, in which every Christian nation almost has a chapel. The middle of the church is covered with an open dome or cupola, from whence the church receives light; and under this open cupola stands the glorised sepulchre. There are also in this church twelve or thirteen places, confecrated on account of some particular actions done in them, relating to the death and resurrection of Christ, as the place where he was nailed to refurredtion of Christ, as the place where he was nailed to the crofs, the place where the foldier flood who pierced his fide, where the angels appeared to the women after the re-furredtion, &c. and on Good-Friday, annually, our Savi-our's passion is folemnized in this clurch, and all parts of our's pation is foleminized in this church, and all parts of it acted; fuch as nailing him to the crofs, crowning him with thorns, taking the body down from the crofs; and here is to be feen the cleft of the rock which was made by the earthquake, when our Saviour expired.

The wall and forlifications are very artique, having old fquare towers upon them influed of ballions; but thefe are fufficient for its defence, there being no other enemy parts to be the proposition.

near It, but the wandering Arabs, who have no artillery. The ditch is inconfiderable; and the gates are fix in number, viz. Damafeus, St. Stephen's, Herod's, Sterquiliana, Bethlehem, and Mount Sion cate; befides the Golder

gate, which is shut up, on account of a pliophecy which the Turks have among them, that the Christians are to take

Jerufalem by that gate

In the fouth part of the city, on mount Moriah, fland the edifices called Solomon's temple, which is fituated upon the antient temple above-mentioned; but it is uncertain by whom this was creeked. The middle part, where the Jewith fanctum fanctorum was supposed to have stood, is converted into a Torkilli mosque.

thood, is converted into a Toikili molique.

The Turkilfh fangiae, who governs this city, refides (as they tell us) in the very honde where Pontius Pilate is supposed to have lived. Molt of the churches have been converted into mosques. The priests and other Christians are kept miterably poor by the tyranny of the government, and have scarce any substitute that they procure by accommodating ftrangers with food and lodging, and felling them relies.

The most remarkable antiquities in the neighbourhood

of Jerusalem are: of Jerulalem are:

The pools of Bethefda and Gihon; the former is one hundred and twenty paces long, forty broad, and eight deep; it is at prefent dry, and the arches dammed up; but Gihon, which is about a quarter of a mile from Bethelm gate, is a magnificent relie, one hundred and fix paces long, fixty broad, lined with a wall and plainter, and well doesd with under. flored with water.

In the valley of Jehoshaphat is the tomb of the Virgin Mary: there is a defeent to it by a slight of forty-feven magnificent sleps. On the right land is the sepulchre of St. Anne, the mother of the blessed Virgin; and on the left hand is that of Joseph her husband; the whole is cut

into the folid rock.

The next thing remarkable is Abfalom's pillar or place, The next thing remarkable is Abfalom's pillar or place, which they affine us was erected by that prince in order to perpetuate his memory, as he had no male iffue: it re-rembles a fepulchre, though it is not known that he was buried there. A great heap of stones lie about it, which are always increasing; for all Jews and Turks, who pass by it, make a point of throwing a stone each upon the heap, as a token of abhorrence to Absalom for his unnatural rebellion against his father. The structure itself is twenty cubits square, and sixty high, adorned below with four columns of the lonic order. From the height of twenty to forty cubits it grows less, and is plain, a small stilet at the forty cubits it grows lefs, and is plain, a finall fillet at the upper end excepted: from thence to the top it is circular, and runs up fpirally to a point, the whole being cut out of a folid rock: there is a room within confiderably higher than the level of the ground without, on the fides of which are niches, probably to receive coffins.

Eastward of the above is the tomb of Zechariah, the

fon of Barachiah, whom the Jews flew between the temple and the altar, as it is commonly supposed. It is ent out of the rock, eighteen seet high, and as many square, and adorned with lonic columns on each front, cut out of the

fame rock, and supporting a cornice: the whole ends like a diamond, in a jointed top. The most elaborate, curious, and magnificent antique remains that imagination can conceive, are, the royal fe-pulchres without the wills of Jerusalem. It is uncertain by whom they were built, but they confift of a great mimber of apartments, most of which are spacious, all cut out

of the marble rock.

There is a lpot of ground near Jerufalem, of thirty yards long and fifty broad, which is now the hurial place yards long and inty broad, which is now the furnal place of the Armenians. It was formerly the Aceldama, field of blood, or potter's field, purchafed with the price of Judas's trealon, as a place of interment for ftrangers. It is walled round, to prevent the Turks from abusing the bones of the Chriftians; but one half of it is occupied by a charnel house.

The remains of an old caftle are flewn at Bethany, which flood in the road between Jerufalem and Jericho: this place, it is affirmed, belonged formerly to Lazarus: there is a defeent of twenty-five fleps to the room where he was laid, and the tomb out of which he was raifed.

dencho is about twenty-three miles from Jerufalem, and was remarkable for being the first city invaded by the Ifrachtes after their paffage over Jordan, when it was taken by the fingular fall of its walls. It is reduced from a mag-nificent city to a little mean village, without any veffiges of its former fplendor, except fome grand arches of an old conduit.

10. The lot of the tribe of Judah was bounded, on the fouth, by the mountains of Edom; on the north, by llenjamin, on the eaft, by the Dead fea; and on the west, by the Mediterranean. I his was the most fertile, populous, and largest of all the twelve lots, but at present there are no remains of any places which it might formerly contain, except Bethlehem, the place of the nativity of our Saviour Jefus Christ, and therefore the most worthy to be held in effecm by all mankind, for the bleffings be-flowed upon them by the Redeemer. Bethlehem is diftant about fix or feven miles from Je-

rufalem to the fouth-west in the way to Hebron : it lies in rulalem to the fouth-west in the way to Hebron: it lies in thirty-one degrees thirty-five minutes north latitude, and in fixty-five degrees fifty minutes longitude. It was antiently called the city of David, having been the birth place of the royal psalmiti, it is feated on a pleasant hill, in a fine fertile plain, and enjoys a most excellent air. It was once a fine and flourithing city, but is now a poor village, only reforted to at this day on account of its being the place of our Lord's nativity, over which Helena, the mother of Constantine, erected a magnificent temple, the roof whereof is cedar. I opported by four rows of white roof whereof is cedar, supported by four rows of white marble pillars, ten in each row; the walls of the church is built in the form of a cross, of which the chancel con-fitutes the upper part, and is covered with a noble cupola. Under the church in a cave hewn out of the rock is the chapel of the nativity, where they shew the manger our Saviour was laid in, cut also out of the rock, and now crufted with marble. An altar with the repredentation of the nativity is erected here, and lamps kept burning before it. Here is also the chapel of St. Joseph, the supposed father of our Lord and of the Holy Innocents; and adjoining to the church is a monastery of Franciscans; they there a valley near this sound when the church is a monastery of the supposed father of the supposed in the supposed father of the and adjoining to the entirents a monatory of Franchisms; they flew a valley near this town where they fay Jacob kept his flocks; being the fame, as they relate, where the angels appeared to the shepherds, declaring the birth of Christ. Here the same pious empress also built a church, but it is now in ruins.

In the neighbourhood of Bethlehem, are those famous In the neighbourhood of Bethiehem, are those tamous fountains, pools and gardens, faid to have been the contrivance and delight of Solomon, and to these works this king is supposed to allude, Eccles, it, 5, 6, where, among other instances of his magnificence, he reckens his gardens, vineyards and pools. These pools are so disposed, that the waters of the uppermost descend into the second, and those of the second putto the third, their source is owned. and those of the second into the third; their figure is qua-drangular, and their breadth the fame in all, but their length is different, the first being about an hundred and fixty paces long, the fecond two hundred, and the third two hundred and twenty. They are all lined with a wall, and contain a great depth of water: and about an hundred and twenty paces from them is a fountain, from whence. they principally derive their waters, which are carried this they principally derive their waters, which are carried thi-ther by a large fubtern mous paffage: but there is an aqueduct laid from it, which receives part of the stream, which carries it by many turnings and windings about the mountains to Jerusalem. And our author does not think it improbable that the pools abovementioned are the same with Solomon's, there being not the like store of excel-lent spring water in all Palestine. But I should tire the reader's patience to enumerate every little place which feripture flory has rendered remarkable in the Holy Land; I shall mention therefore but very few more, before I take my leave of it, and one is a convent of Greeks, between Bethlehem and Jerufalem, called the convent of the holy crofs, having obtained that name, because, according to tradition, here is the ground which nourished the root that bore the tree which yielded the timber that made the crofs of our Saviour, and under the high altar is shewn the hole where the flump of the tree flood, which the pilgrims frequently fall down before and worship ; and this peris as remarkable an inflance of the credulity and fuperfition of the poor bigotted people, as is to be met with in the Christian or heathen world; and cannot but excite the laughter of infidels.

Another pious fraud of the Greek fathers is their pretending, that upon every Easter eve a miraculous flame descends into the holy sepulchre at Jerusalem, and kindles all the lamps and candles there. But we shall quit this all the tamps and candies there. But we man quit this place, and pass on to Hebron, the antient lear of David before he took Jerufalem, but which hath long fince been ruined : near it frands the village called Elkapii, on a pleafant hill that overlooks a most delightful valley. Ruinons as its prefent condition is, it full contains a handlome church, built by the empress Helena over the sepulchral eave, where Abraham and Sarah, Ifaac, Jacob, and Leah lie huried. The Turks, Christians, and Jews, all regard it with equal veneration. This town is the capital of a diffrict, confifling of about twenty-four Little villages, which the Turks call the territory of the friends of God.

There was formerly a very ftrong fortress called Beth-zor, or Bethzora, which is supposed to have flood upon

r pre-flame David been plcainous Home lchral Leah egard lof a lages, upon

a craggy hill twenty miles to the fouthward of Jerufalem, where there is now a village named St. Philip, from a tradition that it was from a fountain near this place where St. Philip haptized the cuncht of queen Candece.

The village of Engaddi, on the top of a rock hear the Dead fea, about four miles test of Tekoah, is famed for the great quantity of palma, and other odoriferous trees, which grow on the mountains above it. Athorig the caverns of these mountains, two are very retnarkable; the one for being the retreat of Lot and his daughters after the conflagration of Sodom, &c. and the other for being the cavern, in which David so generously spaced the like of Saul, contenting himself with only cutting off the skit of his garment.

meon; on the north, by Ephralm; on the eaft, by Judah and Benjamin; and, on the week, by the Philifflines country and the Mediterranean; the length being forty miles from north to fouth, and the greateft breadth not exceeding twenty-five miles. It abouted in all the necessaries and luxuries of life; and the sples brought to the lifaelithth eamp from this country noble specimens of its admirable fettility.

12. The lot of the tribe of Sinteon lay in the most fouthern corner of Judea; and was bounded by Dan, on the north; by Gihon, on the fouth; by Judah, on the east; and a neckof land, towards the Mediterranean, on the west. This partwas not so fertile as the rest of the land of Canaan, nor were the towns either many or considerable, none deferving any mention, even in antient times, except Anthedon and Rhinocolura, which are now poor ruined towns standing on the seconst, and Beersheba, of which, in Gen. xxi. we learn, that Abraham, having entered into a solemn league of friendship with Abimeslech, king of the Philistines, who had before taken feven wells from him, preferred the king with seven young theep, and intreated him to accept of them as a token that he had dug such a well a small and should thenesforth be permitted peaceably to enjoy it: upon which occasion the place was called Beer-Sheba, or the Well of the Oath, because of Beersheba was in process of time given to the city crested means. Beertheba was in process of time given to the city crefted

near it.
The following are the most remarkable places comprifed in a finall part of the prefent Palefline, fituated on the coast of the Mediterranean, and extending to the fea-port of Jamnia, which was long fubject to the five lords of

the Philittines.

1. Atkalon, which is dwindled into a very trifling village: it flands on the fea-coaft, and was the native place of Herod the Great, who was thence called Afcalonites. This was an epifcopal fee from the earlieft ages of Christianity; and, during the holy wars, had many flately edificer remaining, which have fince been all ruined by the Turks and Saracens.

2. Gaza lies in thirty-one degrees twenty-two minutes north latitude, and thirty-five degrees east longitude, and is fituated between two and three miles from the Mediterranean fea. It retains many monuments of its prilline grandeur, and on all fides fome noble remains of anriquity are to be feen, viz. feveral rows of flately marble columns with all their ornaments intre, magnificent fepulchres, monuments, &c. Among thefe is one in particular furrounded by a high wall, which belongs to a Turkith family. Near the city flands a round calle, flanked with four figure towers, defended by two flrong iron gates, and other works; opposite to which is the le-raglio, where the balla's wives and attendants are kept, and a little above are the remnants of an old Roman calle, the materials of which are fo firm, that the hammer can make no impedition on them. The Greeks and Armenians have each a church here; and near to that of the latter, have each a church here; and near to that of the latter, the foot is thewn where the temple flood which Sampfon pulled down over his head, and deftroyed at once himself with a great number of Philifthines. The caftle is the relictnee of a fangiac, who is feppofed to have near three hundred finall villages or handers under his jurifdiction. At a little diffance from the town quite up to Egypt, the country is inhabited by a race of wild Arabs, who not before the first transparence are required by a face of which are transparent to continue the country. ing foliject to any regular government, are continually roving about from place to place.
3. Mathina, or New Gaza, flood about ten miles from

Atkalon, near the mouth of the river Bezor: it was the antient fea-port to the former, or Old Gaza, and on that account only was of note: about it are fill fome antique remains, but it is uncertain whether they belong to New

or Old Gaza.

4. Two miles it the fea, and about three miles fouth from Gaza. Stands a no nar I Lariffa it is at prefent from Gaza, funds a wo nate I Lariffi it is at prefent a poor mean place, defed an old celle, and a garti-fon of two hundred n but was fit ly celebrated as to not two nuncted in the birds of personnel as the birds place of Posspey the Great, to was killed in its neighburhoud.

5. Raphia flands at title diffunce fine the above is now to inconfiderable as fearcely to deferve method, the new former account of the Maccabes it was a function of the maccabes it was a former account.

fome account.

form account.

6. Gath was antiently the principal of the five pital cities of the Philifthes, being the regal feat, it dwindled away so early, that no veiliges of it are now remaining, and it is even uncertain where it exactly shood it was firmed as the residence of the remnant of the giaut rate, and was the place of Goliath's hativity.

7. Ekron was the northernmost of all the five cities which gave name to the five lordships of the Philistines; it was often a place of great wealth and power, and frequently mentioned in the facred writings, but is now little noticed by any profane authors, being almost dwindled to nothing.

little noticed by any profane authors, being almost dwindled to nothing.

8. Alhdod, or Azotus, bore an extraordinary fame among the antients: it was fituated about twelve miles to the north of Afkalon. The fituation was inland, and the circumjacent country exceedingly fertile and pleafant. It was famous for the temple of Dagon, where was the grandest and most famous god the Phillistines had. To him they attributed the invention of agriculture. Some infit that the idol Dagon represented a man; while others affirm, that it refembled a fea-monster. There are at present no traces of this city left, though in the times of prefent no traces of this city left, though in the times of

prefent no traces of this city left, though in the times of primitive Christianity it was an epifeopul fee, 4thd was even a fair village in the time of St. Jerom.

Thus having given a geographical defeription of the antient as well as prefent state of the Holy Land, which was the scene of a great variety of the most remarkable and interesting transactions, in which the antient Jewish partiarchs, prophets, and kings, bore a considerable part is and also the spot in which our glorious Redeemer wrought many miracles, and accomplished the work of redemption; as foretold in the Old Testament, and fulfilled in the facered and infinited pages, written by the four examplishes. tion; as foretold in the Old Teffament, and fulfilled in the facred and infpired pages, written by the four evangeliffs; we think it unnecessary to recapitulate those memorable events in this place; but for the general satisfaction of our readers, beg leave to refer them to the Rev. Dr. Wright's New and Complete Life of Christ, printed in crown folio; and now publishing in thirty-fix weekly numbers, at only fix-pence each, with elegant copper-plates.

SECT. VI.

Containt an account of the original of the Turks, their genius, temper, perfors, babit, diet, liquors, diversiont, ceremonies, &c.

THE Turks are generally agreed to have been of Sey-thiant or Tartarian original, and to have been very little known till the eightle century, when they came down upon Georgia, and plundered that country. In the year 844 they penetrated as far as Armenia Major, where they 844 they penetrated as far as Armeina Major, where they fixed themlelves; and from them this country obtained the name of Turcomania. But we fhall have occasion to speak more particularly of them as a nation, when we come to treat of their hiltory.

With respect to their genius and temper, they affect to appear sedate, passive, and humble, but they are easily provoked, and their passions are furious and ungovernable: they are full of distinguishing includes sufficience and

they are full of diffimulation, jealous, sufficious, and vindictive: in religious matters, narrow-minded, bigotted and enthufiaftic : they feem to have no manner of inclination for the improvement of arts and fciences, any more than for the manuring or cultivating their lands: a fluggifh indolent way of life is preferred to every thing elfe: and the greatest of them faunter away the best part of their time among the women, in their harams. Anatolia, the most fertile country in the world, lies great part of it unmanured; and several provinces of that empire, which formerly were exceedingly populous, and abounded in all things, are now become perfect defacts for want of cul-ture; and fearce any thing but ruins are to be feen in those countries which were heretofote famous for fine cities and

elegant buildings.
There people, as they feldom or never travel, fo they have no curiofity to be informed of the flate and condition of other countries, or indeed of their own: they never enquire after news, and if a minister of state happen to

be displaced, or drangled, they do not concern themselves about the reason of it; you hear them say no more on such an occasion, but that there is a new visier, or a new baffa, of fuch a province; but, perhaps, this is as much as they date fay in flate matters; however, it is certain they as they dare fay in flate matters I however, it is certain they die far from being talkative: for we frequently fee five or fix of them fit fluorshing together, and a word thall fearee drop from any of them in a quarter of an hour. Some women are allo, among the common people, addicted to fineaking: the items of their pipes are of role or cherry-tree wood, fome of them carved or ornamented with filter: the bowls are neatly made of elay: the rich use the Perlan caalean, which is, making the finoke pass in filver tubes through a vessel of water before it reaches the mouth, which repless it less dispersed to the fineal and talks. which renders it less disagreeable to the smell and taste. Friendship, wit, and agreeable convertation they are per-fect strangers to, as a modern traveller observes; but in matters of trade they are sharp enough, and will earry long accounts in their heads, without the help of books, by a natural arithmetic, improved by cuftom and necessity, Walking is no left their aversion than talking: the taking

a walk, as we call it, for walking fake, is to them the most ridiculous exercise in the world, and they look upon our people to be distracted or mad, when they see them taking people to be distracted or mad, when they tee them taking a turn backwards and forwards; they choofe rather to loll all day long or fit croß legged on their fofa's; and though they have company about them, there is no more converfation amongst them than among fo many horfes; they affociate themselves together at certain times, as animals of a lower species do, but their fairisfation seems to arife only from their fitting near each other. These who have country houses or gardens distant from the towns, will feare full mit to the toil of vifiting them; because where coaches, and other fuels like vehicles are little inuse, they are under the necessity of breaking through that fixed and syttled habit of indolence which seems universally to

posses them. The honesty and probity of the Turks is highly cried up by fome travellers; but our merchants observe, that those who deal with them ought to be upon their guard; and indeed, as all people agree that covetoufness and extor-tion are the fathionable vices of Turky, and universally practifed by their governors and ministers of state, who practited by their governors and miniters of tate, who expose offices and every thing to fale, it is not likely that their inferiors are perfectly innocent: they will not perhaps be guilty of an open fraud, or a downright lie, which might affect their credit in trade, and ruin their reputation; but where they can circumvent another fecurely, it is not to be supposed they will refist the temptation, where covetousies is to predominant. Some I find make a diftinction between native Turks and those who have changed tinction between native Turks and those who have changed their religion upon secular views: these latter are by all people held to be the most abandoned villains, whatever thews of fanctive they may put on; and for the reft, I do not at all doubt but the probity of our own merchants is at least equal to that of the Mahometan traders.

The temperance of the Turks has been observed also to exceed that of the Christians: but there are four of them.

exceed that of the Christians; but there are few of them which abstain from wine in private, notwithstanding their law probabits it; and the government punishes feverely those that are found difordered by it in the streets: nay, those year magnifrates who punish others for drunkenness, will, like those of some Christian nations, drink in the will, like those of some Christian nations, drifts in the right to a very great excels; and fo as they behave themfelves quietly and inoffenfively in their liquor, do not think they have committed any great crime. Sodomy alfo is a vice which they are intolerably addicted to, notwithfunding they are indulged in taking as many women

as they pleafe.

Their charity however, if it be not done for oftentation, as fome travellers fuggeft, is very commendable : they are as some travellers juggen, is very commensate; they are careful even to prevent the unfortunate being reduced to necessities; they vifit the prifons, and pay the debts of the poor who lie there. In case of sires, which are very frequent in their timber buildings, the lostes of the sufferers are foon made up by the contributions of others. They repair highways, erect fountains and eitherns at their own expence, for the conveniency of travellers : build caravanferas for the entertainment of them; and fome devout people, it is faid, fet up fleds by the way fide purely to be affilient to people in their journies, and refresh the wearied traveller. The charity of some of them extends even to animals and plants: they will purchase the liberty of imprisoned birds, procure food for others, and religioully water certain trees.

Their quarrels feldom proceed to blows, and duelling is not known amongst them; but no people exceed them in

billing frate language and complicated curfee, when they are provoked, but never prophase the name of God, or make themfelves merry with facred things, as Chriftians often do. Their pride is infupportable, defpting and contemping all people but their own, especially those of a different religion; themselves alone they esteem wife, valuant and holy; the relt of the world are a peak of reprobates, not entitled to the good things of this life or another. It is not only held lawful, but their duty to extend their conquests to the ends of the earth, and bring all nations in subjection to the Mahometan yoke; and they are taught that by dying sighting in this cause they purchase feats in paradise.

The doctrines of site and predestination have such an influence here, that no man lies from his house in the plague, which is very domined amongs them, nor do they

plague, which is very common among them, nor do they fend a flave away who is infected with it, but attend the fick as if the difference was not contagloss. This perfusion also inspires them with coursegs in the fickl.

As the Turks make choice of wives for their beauty

or merit, it is no wonder that both men and women are handfome; they fearch every country where beauties are to be nect with as diligently as our gentlemen purfue the ladies for their fortunes; people here feem more careful in the breed of their dogs and horis than their children, and their illus frequently flew it.

In Turky the men there their heads, leaving one lock In Turky tine ment thave their fleasy, leaving one foek upon the crown; and ufe a proverbial expression in justification of the practice, that "the devil nesses in long hair;" they wear their beards long, except the officers in the palace and military men, and these leave only whiskers on the upper lip. All of them wear turbans usually white, but the family of Mahomet green. A turbant contains at whole piece of linen or filk, wound about their heads to the biguess of half a bushel almost, and adorned fometimes with lace of since, the greens the arter, the audition of the contains at the contains the contains the second since the greens when the contains the second since the greens when the second since the second s tines with lace of fining; the greater the quality of the man, the bigger his torbant is ufually. (Their Cluriflian fubjects, the Greeks and Araneniaus, are not fuffered to wear white turbants.) Next their fains the Turks wear a kind of thirt, without collar or wriftbands, and over it a long reft tied with a fash, the fleeves close and reaching down to their wrifts; over the vest they usually wear a loofe coat of the banjan make, of almost any colour; their breeches or drawers are close before and behind, and their breeches or drawers are close before and behind, and let down when they water, which the men do fitting as well as the women. The flockings are of a piece with their breeches; inflead of thoes they wear yellow flippers, which is another mark of distinction; they will not fuffer a Christian to wear fuch: the flippers are always put off in entering a house or temple, but the turbant or cap never. They put their knife, handkerchief and purse in their bosoms, and have a daggae or poniard in their fash.

The first part of the ladies drefs is a pair of drawers very full, which reach to the shoes, and conceal the least

the protection was to the to an

ra walfa Tof he tiched on by he Sie fo pit

at th th

01

very full, which reach to the shees, and conceal the lega more modefly than petticoats; these are made of thir rose-coloured damaik, brocaded with silver showers. The shoes are of white kid leather embroidered with gold: over this hangs a fmock of a fine white filk gauze, edged with embrodiery; this fmock has wide fleeves hanging half way down the arm, and is closed at the neck with a dia-mond button; but the shape and colour of the holom are very well to be diftinguished through it. The autery, is very well to be dittinguined through it. An enterty, is a waifteen made clofe to the thape, of white and gold damafk, with very long fleeves falling back, and fringed with deep gold fringe, and fhould have diamond or pearl buttons. The caftan, of the fame fluff with the gravers, is a robe exactly fitted to the flape, and reaching to the feet with very long, strait, falling sleeves: over this is a girdle about four singers broad, which all who can afford it have entirely of diamonds or other precious stones; those who are not at that expense, have it of exquiffic embroidery on fattin, but it must be fastened before with a class of diamonds. The curdee, with a loose robe, is put on or thrown off according to the weather, being a rich brocade fined either with ermine or fables, and has fleeves which reach very little below the shoulders. I he headdrets is composed of a cap called talpoe, which in winter is of fine velver embroidered with pearls or diamonds, and in funmer of a light thining filter ftoff; this is fixed on one fide of the head, from which it hangs a little way down with a gold taffel, and is bound on either with a circle of diamonds, or a rich embroidered handkerchief: on the other fide of the head the hair is laid flat; and here the ladies are at liberty to flew their fancies, some putting, flowers, others a plume of heron's feathers, in short what they please; but the most general fashion is a large bouquet of jewels made like natural flowers, the buds of pearls, the rofes of different coloured rubies, the jeffamines of

diamonds, the jonguils of topaxes and the like, fo well fet and enamelled, that it is hard to conceive any thing of that kind fo beautiful. The hard hangs at its full kingth be-laind, divided into trelles, besided with pearl or ribbands.

and enamelled, thei it is hard to conceive any thing of that kinds be beautiful. The hard hard are its full knoth behand, divided into treffes, braided with pearl or ribbands, an great quantities.

Their food is chiefly size. raixed with the foup or gravy of flewed meat, which fearce wants a knife to cut it both their roaffed and boiled meat are fo much done; that they can pull it to pleces with their fingers. Their grand dith here, and in all the Eaft, if piles, which confifts of mutton and fowle boiled to rags; and the rice being boiled pericelly dry, the foup made of the meat, which its very high feafoned, is poured upon it. Those that do not chuse rice have cakes baked upon the hearth, which they eat inflead of bread. Their usual liquors are water, sherbet, or coffee. As for the common people, they live very anuch upon co-cumbers, melons, roots, and other graden stuff, and nave the same final liquors as their betters.

Few of the Turke lie in beds, but on curpets, mattroffes or mats, on a sopha or raifed foor, on the sides of the room, or at the end of it, and cover themselves with quilte. They lie in linen wisseous and drawers, as they do in other eastern countries, and have no need of sheets.

The usual falutation among the Turks is, a little inclination of the head, and elapping the right hand to the breast: but when they salue a person of distinction, they stoop so low, as to take up the hem of his vort and kils it. They usually sit in an open hall upon a sopha, (which is a bench or slage about sive feet broad, and a foot and a half high, at the upper end of the hall, and formetimes on all sides of the room, covered with carpets sand cushions to lean on.) Here they spread a piece of leather when they east, and set little wooden tables about half a foot high, sometimes, upon which they place a great bowl of rice, with a ladle, meat and plates, and the mater of the heuse single strength, which is not the most farmondous in the name of God almighty, mere insulation of their law, which prohibits gaming chie

gerous brustes.

Their manner of travelling over the defarts with the caravans, does not differ from that of the Persians and Arabs, which we have mentioned already; we therefore begleave to add here some observations of Mr. Motraye upon the same subject, who affures us, that it is cheaper travelling in Translation in amusons win the surely accounty on second. fabject, who affares us, that it is cheaper travelling in Turky than in any country in the world, not only on account of the great plenty of provisions, but the small expence of horse hire; and particularly for Franks, or European Christians; for if a gentleman is about to undertake a journey, he need only apply himself to the ambassador or resident of his nation, who will send his interpreter with him to court, or the governor of the place, and procure him a menzil farman, or a yoll farman, which are never resused by the first of these all his expences are borne, whether of horses or provisions, during the whole iourney at the Grand borses or provisions, during the whole iourney at the Grand by the first of these all his expences are borne, whether of horfes or provisions, during the whole journey at the Grand Signor's charge, who at the distance of every three or four leagues, has house of entertainment, and horses laid to furnish the couriers and expresses be fends to the several parts of the empire, and for any other person to whom the court grants one of these firmans or orders, for there are no stated general posts in Turky, as with us: however, the expresses which the court sends will take the letters of the Fraik merchants with them now year restorate on his terms. the Frank merchants with them upon very reasonable terms, and deliver them at Aleppo, Srayrna, Bagdat, &c.

When a gentleman who has the Grand Signor's order,

or firman, arrives at any ftage, there are people ready to take care of his hories and baggage, and provide fresh hories while he refreshes himself; and there is also formething dreffed, as meat, fith and rice, at whatever hour of the day or night he comes in. If the traveller has only a yoll firman he pays ten afpers (half-pence) for every three miles for his own horfe, but nothing for his guide or provisions.

No. 15.

As for the caravanteras or inns where traveller's lodge who have no firman, we meet with them in almost every town and village at proper distances: those in the towns are magnificently built of stone and covered with lead; they are generally in the form of a square with a little pianes or cloyster in the inside, and cells for lodging, like those in monasteries. They are furnished with mass or straw, but no beds to lie on; and the traveller does rot only lodge gratis, but in some they give bolled rice, meat and bread to such travellers as will accept it; but provisions are so cheap, that people generally make use of their own; and such is the hospitality of the Turks, it is observed, that if a poor traveller has no provision of his own, he may without any ceremony sit down and eat with any of his countrymen.

The roads, bridges, eisterns, and caravanteras for ensertainment of travellers, are kept in repair in Turky by the contributions and shours of private people, who look upon it to be a work of charity, and highly acceptable to heaven, to provide for the necessities of the wearied traveller; even those who live by their labour, and have nothing alse to contribute, will spend part of their time gratis in these employments; and travellers relate, that in the saftern parts of this empire towards Mesopotamia, the hospitable natives, like Abraham of old, will invite travellers relate through their country, and contend for the honour of entertaining them. As for the caravanteras or inne where travellers lodge

SECT. VII.

Treets of the produce, manufastures, and trade of the Turks.

Treets of the preduce, manufallures, and trade of the Turk.

TURKY in Asia produces rice, wheat, barley, taw filk, carpets, goats-hair, mohairyarn, goats-wool, cotton wool, cotton yarn, dimities, burdets, shagreen skins, blue, red, and yellow cordovants, coffee, (th: product of Arabia) rhubarb, turpentine, storax, gum senegal, gum traganth, gum arabic, opium, galla, nsalic, werns feed, senna, enterakts, terra lemnia or sigillata, pomgranates, sponges, pilachio nuts, dates, almonds, wine, oil, sgs, rassins, mother of pearl, visco, valinia for dying, sal anmoniae, china root, alum, botargo, Roman vitriol, box wood, bees-wax, and saffron.

We have before observed, that the Grand Signar's dominions are the best situated for a foreign trade, of all countries in the world, as they lie in the middle of the continent; and the seas bordering upon them give the Turks an opportunity of trading with every nation, more assiy than other people can. The Red sea and the gulf of Persia render the voyage very shorted india and China; by the Mediterranean, the Agean, and the Black sea, they might trade with every country of Europeand Astica. They have timber and naval stores in their own territories instinction all these advantages are lost. They seldom or ever undertake distant voyages either to the east or west: the product of Turky is exported in foreign bottoms, and by the same vessels all the product of foreign countries is carried thither. They concern themselves very little in navigation; their own ships do little more than transport ried thither. They concern themselves very little in ma-vigation; their own ships do little more than transport the produce of one province to another, and their ships of

the produce of one province to another, and their fhip of war, their royal navy, is not able to contend with the meanest of the maritime powers of Europe.

The raw filk imported from the Grand Signor's dominions is for the most part of the growth of Persia; the filk which Torky produces being manufactured and spent there. There are no wrought silks imported into England from Torky, or any other country, because they are at present prohibited by act of parliament to be worn here: but the Turky burdets, which have a mixture of silk, are however pretty much worn amongst us, and wrought silks may be brought to England, provided they are exported again.

wrought filks may be brought to England, provided they are exported again.

It feems to be much more for the interest of the Christian princes, that these fine countries should be in the hands of the indolent Turks than of any Christian power, not only as it would make that power which should possible most of the trade of the world; for it is not much more than a month's voyage from Basson, or the Red sea, to India, from whence might be imported all the riches of the east, and from the ports on the Medierranean they might be distributed to all the kingdoms of the western world in their own bottoms, and consequently they might set what price they pleased upon them: the trading nations fet what price they pleafed upon them : the trading nations

of Europe were so sensible of this, that when they saw it in the power of the imperialists to drive the Turks out of Europe, as was once the cafe, when prince Eugene, the imperial general, drove them before him almost to Adrianople, then the English and Dutch interpoled, and by their mediation put a flop to the imperial arms.

The prices of the most considerable articles we import

from Turky were, not long fince, as follows;
Sherbuff filk and Ardept filk imported from Smyrna, is fold by the hatman of two thousand four hundred drachms, which ought to hold out eleven great pounds of twenty-four ounces, (as this and all raw filk is fold) for fixteen pounds and a half of fixteen ounces to the pound; is worth about fixty-five dollars per batman, the first fort, without the charges of custom, &c. Dollars.

SECT. VIII.

Containing an account of the forces and revenues of the Grand

THE Turkish forces are of two forts. The first may be compared to our guards and standing forces that are paid out of the treasury, namely, the spahis and janifaries; the one horse and the other foot. The second fort of foldiers are those which are raised and paid by the gen-tlemen of the country, who hold their estates of the prince, on condition of bringing a certain number of men and horfes into the field whenever they are required; these are called zaims or timariots. We shall speak first of the

standing forces, the spalies and janifaries.

The spahis or horse, were originally gentlemen, who had their education in the academies of the seraglio, and are about twelve thousand in number, divided into two bodies, viz. the filachteri, whose colours are yellow; and the spahaoglari, whose colours are red; these last were the esquires or servants to the former, but are now equal, having in some battle stood their ground, when their masters ran away, whereupon the emperor ordered that there should be no distinction made between them for the future. Bows, arrows, and darts, were formerly their weapons; but now they have carbines and piftols like our troopers. The spahis of Asa are said to be generally best mounted; but those of Europe best disciplined. Their pay is very different, from twelve to one hundred aspers a day; but none have more than one hundred, which is about four hillings and two-pence of our money; and though it may be imagined that those of the lower class could not subsist, and keep themselves and their horse, on fix-pence a day, yet provisions are so exceedingly cheap in Turky, that it is very possible to maintain themselves with that allowance, especially as their sons are allowed to be enrolled in that hody, and receive twelve afpers a day each; and when the Grand Signor takes the field in perion, he advances to the grain organor takes are noted in perion, he advances to the spanis five thousand aspers a man, to surnish them with arms and accourtements: These gendemen manage their arms and horses very dezterously, but charge in no manner of order, though with a great deal of sury; which if their chemics can fustain a little while, they retire in more hatte than they advanced, and can have the heavy that they are not to the surniversal of the surniversal than they advanced. than they advanced, and can never be brought to return to the charge again. Great numbers of volunteers usually join the fi ahis when the Turks enter into a war, in hopes

of heing preferred in that body.

The janifaries, who are all foot, are educated also in the feminaries of their feraglios, where they are trained up to arms; and in order to increase and recruit this body, every fifth Christian captive, under fifteen years of age, in referved for the Grand Signor's fervice; and the most councly lads amought them have a fuitable education given them, being first instructed in the Turkish language and religion. The body of janifaries slid not at first exceed feven thousand, but were afterwards increased to twenty-five thousand, and there may be one hundred thousand more that purchast the name and privileges of janifaries, but these seldom serve in the army, or receive pay: the rest of the slaves that are not incorporated in this body, are brought up to such business and employments as are found fittest for the service of the several royal palaces; the most ingenious are prepared for offices in the state; others are made gradeness, similar, carpenters, see, and others are made gardeners, fmiths, carpenters, &c. and fome are quartered on the lands and estates in Anatolia,

from whence this body is frequently recruited.

As foon as a young janifary is enrolled, he receives from one after a day to feven, befides his diet; but this pay is never increased to more than twelve afters till he is any officer. Those that are unmarried live in a particular officer. Those that are unmarried live in a particular quarter of the town, and eat in common as in a convent, and lawe their cloathing also provided for them by the government; but living idly, and having nothing to do in time of peace, they frequently grow matinous, and pratend to direct the administration: and if they apprehend any of the ministry are not their friends, they demand their heads, nor will this always fatisfy them; they proceed for far fometimes as to depose the Grand Signor, and advance one of his relations to the throne.

Their disfiftedion is nually discovered when they come

Their disaffection is usually discovered when they come Their disaffection is usually discovered when they come to the divan, whither they are fommoned twice a week by their aga, or general, and have an entertainment provided for them from the Grand Signor's kitchen. If they apprehend that they are like to be oppressed, or discountananced by any greatman, they overturn their plates, and slight the meat provided for them; which when the court are apprissed of, they endeavour to fatisfy them by gratuities and fair promises, to prevent the disaffection becoming general. There are about one hundred and sixty house are assuments of the insufacies in Constantinoole, which or spartments of the janifaries in Conftantinople, which are called chambers, and every chamber has its tchorbsgi, or captain; the edabashee, or master of the chamber, who is lieutenant of the corapanys, it weekilbarg, or pay-mal-ter; the baizacktie, or entiges, who carries the colours; the cook, who punishes them when they have committed any fault; and the undercook, whole business it is to sunmon all married janifaries, who live at Constantinople, to attend when there is occasion for them: but their marry being a bar to their preferment, most of them live single, and have two meals a day provided for them. These troops are most relied on in the day of battle; and indeed the rest are little better than our militia; nor can the discipline either are httle better than our militis; nor can the dicipline either of the spahis or janisaries be much applianded, for though they charge an enemy with great fury, they observe very little order, and it is very well for their enemies that they are too proud to learn. Bassa Boneval was very well-qualissed to have instructed them, but they would not bear the mention of it; and he ran the hazard of being sacrificed to their refentment by proposing it. No Christian power would be able to oppose the Turks, if their numerous armies were disciplined like those of the Europeans.

Besides the spahis and januaries, which are the slower of their armies, there is that other militia, already mentioned, which is much more numerous; and are raifed and maintained by fuch gentlemen as hold their lands of the government by military tenures; and fuch gentlemen are denominated either zaims or timariota, cording to the number of men they are obliged to bring into the field. The revenues of the lands of a zaim are from twenty thousand aspers to ninety-nine thousand nine hundred and ninety-nine; if they are valued at an afper more, it is the revenue of a fangiac, bey, or baffa, which is from one hundred thousand afters to nine hundred and ninety nine thousand nine hundred and ninety-nine: If it amounts to more, it is the revenue of a beglerbeg, or viceroy, who has feveral governments or fangiacthips under his command. A zaim is obliged to raife from four to nineteen foldiers; and a timariot is not obliged tomaintain more than four. Some timariess hold their lands directly of the Grand Signor; and others of the

beglerbeg or viceroy of the province.
In time of war the zaims bring grand tents or pavilions into the field, to which are amexed kitchens, flables, and all manner of conveniences; and for every five thousand aspers yearly rent, must find a trooper compleatly armed, which does not amount to nine pounds sterling; and that it is faid, will maintain a trooper there, provisions are so cheap, though it would not maintain a foot foldier here; and in time of peace the zaims and timariots are no ex-pense. These foldiers are formed into regiments, having their feveral colonels, captains and other commission

officers, and have different colours: the colonels are commanded by fangiacs or baffas, and thefe by the beglerbeg or viceroy of the province; and the whole army is commanded by the Grand Signor; and when he is not in the field, by the prime vifir or ferafkier. The zaims and timation are obligated as for a first province of the field of the field with the field.

field, by the prime vifir or ferafkier. The zaims and timariots are obliged affo to find men for the fea-fervice; and both of them are obliged to ferve in perfon by land; but the timariots only on board the fleer.

The province of Natolia Proper brings about twenty-fix thoufand men into the field; Caramania or Cilicia, five thoufand; Diarbee, eleven thoufand; Damaseus, three thoufand; Sivas (part of Armenia Major), eleven thoufand one hundred; Eraerum, twelve thoufand three hundred; Eraerum, twelve thoufand three hundred; Pun, two thoufand for hundred; Tripoli, one thoufand feur hundred; Rika, two thoufand; Trebizond, one thoufand four hundred; Rika, two thoufand; Trebizond, one thoufand four hundred; Aleppo, three thoufand two hundred; Tchilder! (part of Georgia), two thoufand four hundred; the captain baffa for the illes, three thoufand five hundred; Romania, in Europe, twenty-feven thoufand; the militia on the fron-

for the ides, three thousand sive hundred; Romania, in Europe, twenty-seven thousand; the militia on the frontiers of Hungary, seventy thousand.

The horse raised by the zaims and timarious only are computed to amount to one hundred thousand men and upwards; to which are added a great number of volunteers, that serve at their own expence, in expectation of fucceeding the zaims and timarious that fall in battle, who chuse to engage in the most desperate enterprises. When a zaim is superannuated or disbled, he may resign to his son, or some other relation. A peasant or farmer cannot a zaim is superannuated or disabled, he may refign to his fon, or some other relation. A peasant or farmer cannot be a spahi or trooper, unless on the frontiers where he has manifested his courage against the enemy; and in that case he is allowed to be a candidate for the lands of a zaim or timariot that is dead. In Romania, when a zaim or timariot dies in battle, his lands are divided equally among his children; but when he dies a natural death, the beglerbeg or viceroy of the province has the disposal of the estate, and ought to give it to the person who is most capable of serving the government; but he considers principally his own: interest, and gives it to him that advances most money, which has rendered that militia much less considerable than they were heretofore. But there are lefs confiderable than they were heretofore. But there are many zaims and timariots in Anatolia, whose lands de-feend to their heirs.

The forces of the Grand Signor in Egypt are computed to amount to eighty thousand men; notwithstanding which to amount to eighty thousand men; notwithstanding which his authority is often disputed by the Egyptian princes, which are about twelve in number, and whose concurrence seems necessary to the raising money and the making laws in that kingdom; and, if any incroachments are made on their liberties and properties, they are ready to desend them; and have sometimes deposed the beglerbeg, and compelled the Grand Signor to appoint another more acceptable to them. These are most of them the desendants of the Mamelukes, or Mamlucks, who were for some hundreds of years sovereigns of this kingdom. In Egypt, therefore, the Grand Signor, seems to be but a limited monarch. The tributary countries, such as Tartary, Walchia, and Moldavia, are obliged to raise a certain number of troops, and join the Turkish army when tequired. The kan of the Crim Tartars is obliged to raise one thinded thousand men; and the princes of Moldavia and Walachia are obliged to bring fixty or seventy thousand men into the field. The two last are Christian princes of the Greek communion. the Greek communion.

the Greek communion.

The revenues of the Grand Signor arife from the demente lands, or lands of the flate; from the duties of import and export, or customs; by the tribute paid by the kan of Crim Tartary, Moldavia, Walachia, and the Grecian islands; by a poll-tax on the Christians, and those who are not of the edablished religion: and the armies raised and paid by the zaims and timariots in time of war may well be reckoned part of the revenue, as it saves him fo great an expence; but the greatest part of the public revenue arises from the prefents and sanual payments which are made by the governors and other great, officers of state, and the consistency of their edates when they die or are displaced; for whatever his begletbers, viceroys, die or are displaced; for whatever his beglerbegs, viceroys, or governors, have amassed or extorted from the people, or givernors, nave amanic or extorter from the people, falls to the Grand Signor at laft, who is heir general to all of them, and only allows their wives and families a fublifience out of them, but it is not fo with the native Turks, the gentlemen of the country, who are not in office, their entares ufually defeend to their children, and fo it is in that rich province of Egypt. The Graud Signor has not more than half a million flerling from thence more

than what bears the charges of the government; and if he

frould attempt to raifs more in that kingdom, it would probably occasion ageneral revolt of the Egyptian princes, who may be looked upon as independent fovereigos almostian their respective territories, and cannot be displaced by the Grand Signor: as to the rest of his dominions, this prince is not only heir to all his officers of state, but has vast sums of them, when they enter upon their posts, and annually afterwards. When a great man in the feraglio is nominated to a government, he immediately makes a present to the throne, and, if he has no treasure of his own, usually borrows it of the senuchs of the seragho, who are generally great usurers, and know how to get paid again. For it such governors are not punctual in repaying what they borrow, the eunuchs know how to misrepresent their actions at court, to the endangering their heads: the first money, therefore, a basse servers from the people, is paid to the eunuch he borrowed it of. eunuch he borrowed it of.

Besides the constant revenue, if there happen to be a war with the Christians, or any other pressing necessity, the treasures of the mosques or churches, which are very great, may be made use of to save the state.

The emperor has also a private treasure lodged in vaults, as a reserve in extraordinary cases, where none but the officers of the treatury and the prime vizier ever enter. And as this is an arbitrary government, the Grand Signor is, in reality, mafter of the purfes of all his fubjects: and it is not an uncommon thing, when the treatury is low, to borrow fums of those that are known to abound in wealth; and what is borrowed of private men, is always punctually repaid; but what is borrowed of governors, or officers of flate, is feldom returned; for these are not supposed to have a property in any thing, but what the sovereign can demand when he pleases. These are creatures raised by him, and have nothing but what they receive from his bounty; and though they are vessed with great power and wealth for a time, they are really in a worfe situation than the lower class of people, who enjoy what they have with as much ease and freedom as the subjects of any other country, though they are feldom preserved to any posts is the government. and what is borrowed of private men, is always punctually the government.

SECT. IX.

Affording a description of the Grand Signor's court, also of his haram or seraglio, women and other inhabitants of it, great officers of flats, and some maxims of the Turkish pa-ticy.

THE dominion of the Turkish emperors being sounded in sorce, their power is unlimited, and they look upon their people, as well as their country, to be their property, and at their disposal; the Grand Signor is retrained by no laws or compacts but those of his religion; nevertheles, we must also observe, that though he exercises an arbitrary dominion over his governors and officers, who depend upon him for all that they enjoy, yet private gentlemen, native Turks, who are not in any post, enjoy their liberties and properties as fully as if it was a limited monarchy, as Motraye assures us, who lived amongst them, and made it his business to inform himself of the nature of their government and administration; and should them, and made it his bufines to inform himiest of the nature of their government and administration: and should their fovereign break in upon their properties, it would very probably occasion an infurrection. Over his Chris-tian subjects, indeed, which are almost as numerous as the Turks, he tyrannizes most unmercifully, as well as over the great officers of state, and suffers his Mahome-tan subjects to insult and abuse the Christians with impunity; though they are the most useful of his people, and punity; though they are the most useful of his people, and chiefly carry on their manufactures and foreign traffic, without which it would be difficult for the government to substitt. He compels the Christians, also, to distinguish themselves by the colour of their cloaths and other marks of contempt, by a burdensome poll-tax, and other duties, from which the native Turks are exempted.

The Grand Signor, among his other titles, assumes these; namely, "The Shadow of God, a God on Earth, Brother of the Sun and Moon, Disposer of all earthly Crowns;" and as long as he is successful, his subjects adore him; but if he is unfortunate in his wars, he loses his dignity, is slighted, and frequently deposed. This

adore him; but it he is unfortunate in his wais, he foles his dignity, is flighted, and frequently depofed. This prince is never crowned, but, on his acceffion, is carried from the palace, and inaugurated at a place called Job, near the walls of Conftantinople, where the tomb of fone of their prophets flands, which according to their traditions is the tomb of Job. Their traditions add, that Job was

a judge in the courts of Solomon, and that Alexander was a judge in the courts of Solomon, and that Alexander was the general of Solomon's army; which discovers their extensive knowledge of history and chronology! At the inauguration, after solemn prayers for the prosperity of the Grand Signor, the musti gives him his benediction and his majethy stears to maintain the laws of Mahomet, by which is understood only that part of the law which concerns religion; for he is at liberty to repeal and alter any

Those who receive any pay or falary from the g Finds who receive any pay or latary from the government, or arc in any office under the crown, are fulled the Grand Signor's flaves, which is a much more honourable title than fubject here, as well as in Perfa; and in effect, they have the command of those fubjects who are not in the Grand Signor's pay, and infult them at their pleasure. The term "flave," in Turky, fignises one who is entirely refigned to the emperor's will, and ready to execute whatever he commands, how difficult or dangerous foever is be

The young lads who are educated in the feraglio, and defigned for employments in the government, are called ichoglans; they are the children of Christian parents ichogians; they are the children of Christian parents taken in war, or presents of the vicetoys and governors from Georgia, Circassa and the remote parts of the empire. The most beautiful, well shaped, forightly children that can be met with. The Grand Signor reviews them before they are admitted, and orders them to be received into the feraglio's of Pera, Adrianople or Constantinople, which are the three colleges or seminaries, where they are admental according to the conjugate the stretchin. which are the three colleges or iemmaries, where they are educated according to the opinion he entertains of them; but those who are ordered for the feraglio of Conflantinople are efteemed mod in the way of preferment, and are placed under the care of the chief of the white ennuclus called the capi agast. The enruchs (who study every lads genius, directing his studies towards what he feems best qualified for) treat their popils with extraordinary severity, it is said, not passing by the smallest faults; sometimes they order them a certain number of blows upon the folles of their feet, and as others unnight them by upon the foles of their feet, and at others punish them by watching, fasting, &c. making them undergo a severer dis-

watching; rating, &c. making them undergo a reverer discipline, than the novices in a monaftery.

The first lessons which are taught them are, silence, and an humble model behaviour: then they are instructed in the rites of the Mahometan religion, and to speak, read and write the Turkish language, and asterwards the Perfirm and Arabic. Their diet is rice, and other wholesome food fit for scholars, and their cloathing generally of English cloth. They are never from under the eunuch's eyes, and ledge in long research upon fool's where languages. and lodge in long rooms upon fofa's, where lamps are al-ways burning, and an eunuch between every five to infect their behaviour. When they are fit for mauly exercise, they are taught to handle the spear, to draw the bow, and throw the gerit or dart, in which they spend several hours' in a day, and are severely corrected if they make no proficiency. Thus by confant exercise they improve their health and strength, and become fit for military employments: they are taught, as in Persia, to shoot their arrows on horse-back in a full career, backwards, sorwards, followays, and almost in any positure: and at these exercises and lodge in long rooms upon fofa's, where lamps are alfideways, and almost in any posture: and at these exercises the Grand Signor himself is sometimes present.

From these seminaries, the emperor makes choice of all the officers of his houshold, which are forty in number, of whom twelve are the principal; and as governments fall, they are preferred, but feldom till they are forty years of age. When they leave the sergilio, they recommend of age. When they leave the feraglio, they recommend themfelves to the favour and patronage of the principal cunuclus; and, on these occasions, appear as polite and obsequious in their addresses as our courtiers do at this part of the world; for they treat those of a different faith with great haughtiness, or rather infolence, yet they behave with as much civility towards each other as gentlemen do

As the lade of the feraglio never have the fight of a wo-man, they frequently fall in love with one another, to which is fometimes given the name of platonic love, which frequently ends, however, in luft; nor can the feverest pufrequently ends, however, in luft; nor can the severest punishments deter them from pursuing it. The old enucha watch them strictly, when they perceive any symptoms of this passion; but they will carry it on by signs, when they are prohibited the conversation of the amiable object; and there are sometimes such jealowsises among rivals, and such schemes for destroying those they suspect, as sometimes throws the whole apartment into confusion. The great officers of the sergido, also, sometimes make love to the pages, who are usually the most beautiful boys, and make interest to get them retained in their service, suffering themselves to be governed and influenced by them.

There are inflances of emperors, who have kept fuch boys, and admitted them to a fhare in the government.

The ladies of the feraglio, also, make love to one another fonetimes; which would tempt one to think, there is no filting an amorous fame, but if it is not fatisfied in the way nature directs, will find another vent. The deaf and dumb, or mutes, in the feraglio, are about forty, who converte by figns; some of these constantly attend the emperor. Dwarfs that act the part of bussons are still retained in this court, as they were in courts and great familes here in the last age, when gentlemen made themselves merry with the defects and deformities of their own species. But no people have a greater share in the government of the seraglio, or a greater influence on effairs of state without, than the cunuchs and castrated inhabitants. These princes seems to conside more in their cunuchs. flate without, than the cunwells and caftrated inhabitants. These princes feam to confide more in their cunwchi, than in any of their officers or fervants, not only to guard the chaftity of their women, but in the most important affairs. The killar sgaf, a black cunuch, is the fuper-intendant of the women; and the capi sgaf, a white ennuch, is governor of the pages and white cunuchs belonging to the court.

The feraglio is fupplied from time to time with young blooming beauties taken in war, or purchased in Georgia and Circaffia, but chiefly, by the governors of provinces, who never fail to make prefents to the court of fuch young ladies, in their respective provinces, as are eminent for

who never fail to make prefents to the court of fuch young ladies, in their repeditive provinces, as are eminent for their beauty 1 and when thefeyoung ladies are admitted into the feraglio, they are taught music and dancing, and whatever may render them most agreeable to their lord. Waen any of them are made choics of to attend the Grand Signor in his spartment, the is complimented, on the occasion, by the reft of the ladies of the court; and she that has the first, son, is it a manner empress, and filled the hasaki fultana. For the Grand Signor never marries any of them, since Bajaset was taken prisoner with his wives, and saw them abused by the conqueror's officers.

The only women that have a man to themselves in Turky, are the Grand Signor's fifters or daughters, whom he marries to the governors of provinces, and other great men: these ladies assume the late of queens, and have their hulbands in as much subjection as other Turkish hulbands have their wives, and oblige, them to put away

their numands in as much judgettion as other Turkith hufbands have their wives, and oblige them to put away all the reft of the wives and concubines, how long foever they have lived with bins. And it feldom fails to prove fatal to him, if he takes another woman to his bed.

If the chief fultana lofes her fon, the lofes her title, and the next who has a fon fucceeds her. The Grand

ignor frequently takes the air with his women in the gar-Signor resourchly takes the air with his women in the gardens of the feraglio, after the gardeners and all others have had notice to keep their diffance; and he fometimes goes over the Bofphorus with them to the palace of Scutaric on the Afian fide, which is not much more than a mile from Europe; the ladies being carried thither in covered boats, so that no man can see them, and when the emperor removes with the court by land to any other palace, the ladies ride in close charjots, and fignals are made for all men to quit their houses which lie near the road, and remove a good distance from it.

We come next to give an account of the great officers of flate, who are generally of the number of the royal flaves, who have had their education in the feraglio: and at the blead of these is the grand visier, on whom the Grand Signor, in a manner, devolves his authority, leaving the administration intirely in his hands. He has the sole comadministration intrely in his hands. He has the fole com-mand both in peace and wer; has the direction of the re-venue, and is the supreme judge in civil as well as criminal causes; though it is very rare they-meet with a genius ca-pable of executing so many different charges.

There are, befores the grand vizier, fix other stilled vi-ziers of the bench of council, and bassa of three horse

mils, because there are three standards or horse-tails carried before them, whereas other baffas have but one. These viziers are men learned in the law, and well versed in politics, whom the grand vizier fummons to the divan as his council, though he is at liberty to take or reject their ad-vice as he fees fit: the mufti, and other civil judges, are also frequently called to affift at their councils, and ordi-nary matters are usually referred to some of their determinations.

Their divans are both councils and courts of justice, and one is are both councils and courts of justice, and one is held every day of the week at the viaer's palace, except Fridays; he goes also four times a week to the divan in the feraglio in great state, being preceeded by the chiaux bassa, and everal other chiauxes and virgers, and attended by the great officers of the empire, and his Albanian guards on horseback, the people shouting and

The Turks apprehend, that nothing contributes more to the peace and fecurity of their empire, than their deftroying all appearance of a nobility and great families amongti them, and fuffering no fucceffion to eflates or offices. Their baffas or governors are all taken out of the feraglio, perfectly ignorant of what blood or family they were of, and have no powerful relations or dependants to support them, if they thould entertain any afpiring thoughts. The duration of their command is also fo very thort, that they have not an opportunity of ingratiating themselves with the people, or forming an interest superior to that of the Grand Signor; and of all the rebellions that have been formed by the baffas of distant provinces, we fearee find any one that has been of long duration; the rebels have been usually dispersed without coming to a hattle. The Sultan has no more to do, but to procure their leader to be taken off, and he is sure of a victory without sighting, there being no powerful relations to support the cause; and it is farther observable, that when a rebel meets with success, he is never able to maintain hinvess any other way than by setting up another prince of the royal family, who is no sooner established in the government, but he usually makes the person who raised him a present of a bow-string (i. e. causing him to be strangled) for fear of being served as his predecessor and the strangled) for fear of being served.

The ballas of some petty governments, indeed, have been allowed the privilege of leaving their commands to their children, as heretofore the balla of Gaza; but one of them happening to live seventy-five years in that government, it was thought so ill a precedent, and so contrary to the Turkish politics, to suffer a person to remain so long in one command, that he was invited to court, and, without any process or charge against him, ordered to be strangled as soon as he arrived. And because power naturally attends on riches, if they remain long in a family, the wealth of a balsa is scarce ever permitted to descend to his

children.

When a baffa dies who has married a fultana, her dowry is first paid out of his estate, and the rest devolves on the emperor; and if there be any issue of such marriage, the Sustan makes some provision for the sons; but it is an unalterable maxim, that such sons shall never be preferred to any considerable post in the government, lest their near relation to the royal family, should inspire them with ambitious views. One reason that the Turks encourage traffic so little, is, designedly to impoverish their subjects, that they may not have it in their power, how much soever they may have it in their will, to rebel. Lord Bacon observes, that it is not possible for a nation overloaded with taxes to retain a martial spirit; they fubmit to oppression, and patiently endure all kind of violence. This seems to be the opinion of the kings of France, and other princes, who chuse to reign over slaves, rather than a free people. The Turks kcep many countries in subjection, that were once wealthy and warlike nations, who, by the loss of their liberty and properties, is, and, like the poor French in their wooden shoes, throw up their caps, and cry, Vive le Roy, when they are perishing, and deprived of all the ne-cessaries of life by their grand monarque.

SECT. X.

Treats of the Mahometan religion professed by the Turks, and also of the Greek church in the Ottoman empire.

THE religion of the Turks, namely, the Mahometan, is divided into a multitude of feels; every confiderable town almost differs from another in fome particulars, which is supposed to proceed from the many profelytes they make almost of every nation, some of whom are induced to profess the Mahometan faith to obtain their liberaty, and others, in hopes of preferment; and every nation introducing some favourite opinions or doctrines of the country from whence they came, naturally occasions a variety of feels: and if they be not opposite to the Turkish doctrines, and they hold the unity of the Godhead, and Mahomet's mission, and observe the five chief precepts, viz. their purisications, prayers, sfits, alms, and pilgrimages, and so they do not advance any opinions that may prove dangerous to the state, the government takes little notice of them.

We have before hinted, in treating of Arabia, that as Mahomet left no fons, both Turks and Perfans derive their fipiritual and tentporal authority either from Hali, the hulband of his daughter Fatima; or from Abubeker,

whose daughter Mahomet married. As the Persans prefer the doctrines of Hall, and the Turks those of Abubeken and charge each other with corrupting and misinterpreting the koran; these two seets retain stronger prejudices against one another, than they do either against the Jews or Christians; and when they are at war, both nations call the war "The cause of God," and their adversaries heretics, and seldeng give quarter to each other in battle. Among the Turks, there are four selts, which differ only in ceremonials, and are esteemed orthodox in the main. 1. The first are called the hannisses, who inhabit Turky and Tarbary. 2. The shaffees, of which are most of the Arabian tribes. 3. The malchees, who posses the coast of Barbary, viz. Algiers, Tunis and Tripoli, and, according to some a small tribe of Arabians. All the Mahometans, except the Persans, are of one of these seets; but then these are split into a multitude of other feets, diltinguished by the names of their respective leaders. We shall mention some of them; and first, the seet of moatzali, who are slided the defenders of the equity and unity of God; these respectives are a similar their several tenets with a kind of frantic zeal, charging those that differ from them with insidelity. One of the subdivisions maintain, that Christ was eternal, as such as the subdivisions maintain, that Christ was eternal, as the subdivisions maintain, that Christ was eternal, as the world at the last day; which they prove by that text in the koran, viz. "Thou, Mahomet, shall see thy Lord return in the clouds."

The most general opinion in relation to a future state is, that the virtuous will be happy; that the wicked will be punished for a time, but will at length be admitted into

Paradife

There is another feet that believe transmigration, that the fouls of the deceased go into other animals, which makes them extremely compassionate and tender of them. The feet stilled the escrachi are of opinion, that the happiness of the other world consists in the contemplation of

piness of the other world consists in the contemplation of the divine nature, and not in sensual enjoyments.

There is another sect, which may be stilled the doubtful,

There is another tect, which may be titled the doubtful, who will be positive of nothing; they neither endeavour to persuade any thing, or to dissuade any man from his purpose. They observe, that truth may be, and often is, so dressed up, that it cannot be dissinguished from falsehood; and therefore to any questions that are asked them, they answer, "God knows, it is unknown to us." And of this seet are some of their greatest men; but I take this to be rather an article of policy than religion, as it may be dangerous to give their opinions one way or other in an arbitrary government.

Great numbers either are, or pretend to be, atheits; but these are generally renegados, who have apostatized, and the most profligate amongst them, who, dreading to be called to account hereafter, endeavour to persuade themselves they have nothing to fear after death. They believe the world to have been what it is from eternity; that men, as well as trees and flowers, perish; and one generation will fucceed another, as it has done hitherto, to all eternity.

The Mahometans have their dervises or friars, and conrents, as well as the Christians, and it is presented that their religious houses were instituted by Mahomet; but there is no particular mention made of them in their books till within these four or five hundred years. The word dervife fignifies one that is poor, and has renounced the world. The first convent that was erected is at Cogni (olim Iconium) in Lycaonia, in which there are betw three hundred and four hundred dervises, the superior of which house is the general of the whole order, by virtue of a charter of Ottoman, from whom their emperors derive their pedigree. These dervises go meanly cloathed, put on a dejected look, fast, pray, and perform penances as the Roman Catholies do, and have strings of beads by which they number the prayers they repeat: on Tuesday every week the superior of the convent preaches or expounds part of the koran to them, at the conclusion whereof the monks having made a profound reverence to their superior, fall into a dance, turning round perpetually with prodigious swiftness, one playing to them on a kind of flute. The music ceasing, they stop in an instant, not at all dis-ordered by their circular motion, to which they have been trained up from their infancy; and this they pretend to do in memory of Mevaluna, their founder, who continued this circular motion, they affure us, fourteen days, without eating or drinking, and then falling into a trance, received certain revelations concerning the institutions of this order, the flute being (as they tell us) the infrument that Jacob and other holy shepherds used to praise God

upon; but, however that be, it has a very doleful found, which would incline one to think they were rather be wailing their condition, than praifing the deity; but as the koran prohibits all kinds of music in their devotions but vocal, this is used by few; nor do they ring bells to call people to prayers, it is faid, for the like reason, but furmon them from the minorets, or fleeples of the mosques.

Notwithstanding these dervises, like the Romith friare, wow challing, movers, and obedients they may leave the

vow chaftir, poverty, and obedience, they may leave the convent if they defire it, and enter into the flate of matrimony. In these convents they are taught the Turkith, Persan, and Arabic languages, but scarce any art or Perfian, and Arabic languages, but fearce any art or feience, unlefs it be legerdemain or magic, or rather a presence to it, and are as mere drontes as the monks in this part of the world. To increase their flupldity, they fwallow as much opium is would poifon a dozen men that are not used to it; and though it may raise their spirits at first, this is succeeded by a stupefaction which renders them incapable of any kind of conversation. There are monafteries of these dervises all over the empire, and absent the value are the present on the contraction. through India as far as China, where the brethten are en-tertained in their travels; and as they have excellent intelligence, the Turks make use of them as spies in the castern nations. From these convents come most of the sheiks or preachers, to which office any man may advance himfelf, as there needs no ordination; and he may lay it down again when he pleases: those of the family of Mahomet are stiled emirs, and are known by their green turbans, that being Mahomet's favourite colour. These are esteemed being Mahomet's favourite colour. These are efteemed such holy men; that any one who strikes them forfeits his right hand; these emirs seldom apply themselves to any trade, except it be the purchasing of slaves to make Mahometans of them, this being efteemed a very meritorious employment among the Turks. We must not omit to mention their fantos or hermits, who go naked, and let their hair grow down to their waits: these are in a manner adored by the devout people, and in some parts of the sumpic take upon themse forces criminals fore in this. empire take upon them to fereen criminals from juffice.

The office of high-prieft, as well as that of king, hav-

ing been affumed by Mahomet, his successors, the califs of Babylon, exercised both for several hundred years; but the musti, or high-priest in Turky, and other Mahometan countries, enjoys little more than the fhadow of temporal power at this day, and their princes take the li-berty of advancing and depoling them at their pleafure. The mufti has indeed fill the power of appointing all civil magifrates, their civil and ecclefiaftical laws boing in re-

ality the same.

The koran and the comments upon it, are the rule by which they judge of all matters, unless where the temporal power, in some extraordinary cases, is pleased to interpose; all appeals are made to him; and in cases of importance, he is the sail resort. The Grand Signor scarce ever alters or reverses his sentence; and without his fets or fiat no confiderable revolutions are taken, either in regard to peace or war; but if he refuses to ratify or confirm what the miniwar; but it ne retues to rathy or confirm what the mini-fly refolve on, he is depofed, and a more complying high-prieft advanced in his flead; but the reason of demanding the mufti's fatfa at this day, seems to be; to prevent the clamours of the people, where success does not answer their expectations, it being prefuned that men will cease to murmur where a resolution has been approved by their high-prieft. When the Grand Signor writes to the mustif, he directs to the "Efad, wisest of the wise, instructed in all knowledge, the firms of virtue and true Signor all knowledge, the fpring of virtue and true science, key of the treasure of truth," with several other pompous spithets.

Though the koran is generally held to be the rule of the I hough the koran is generally held to be the rule of the Mahometan faith and practice, the musti takes the liberty to make it fpeak what language he please, as appears from many instances. It being demanded of him, what they should do in relation to the hours appointed for their devotion, if they happen to be in a part of the world where the whole day was but an hour long; he answered, heaven did not require things impossible, but so as the duty was sensor with the transfer that the state of the same than the same performed within the twenty-four hours, it was fuffic and the Mahometans being appointed to turn their faces towards Mecca when they pray, it was demanded, if they should be in part of the globe, either by sea or land, and did not know towards what point Mecca lay, how they should comply with that precept: the musti directed them to obterve a circular motion at their prayers, and they would

not fail sometimes to fer their faces right.

The cadiliquiers are the next judges to the musti, of which there are three, viz. 1. The cadilifquier of Romania.

2. The cadilifquier of Natolia; and, 3. The cadilifquier of Egyps, who are ecclesiastics; and no man can be advanced

to the high office of musti till he has passed through one of these; and there is in every province a mollah cadi, who is the chief judge of the province, to whom the people may appeal from the several cadis or judges in the towns of that province; but notwithstanding these already mentioned are said to be the only legal judges, the beglerbega and governors of towns and provinces take upon them to

and governors of towns and provinces take upon them to punish men, and even to put them to death fometimes, without allowing them any trial whatever.

The imaums, or priests which officiate in their modques, are not appointed by the mosti or any ecclessatic, nor are they subject to them; any one who has the reputation of an honest man, and can read the koran, may take upon him this office on the recommendation of the people, of the place to the governor of the town or province, when a church happens to be vacant; and as the confert of the governor is necessary towards admitting one to officiate as a priest, so he may turn him out when he please; and the priest may leave his cure, and become a layman again, if he sees fit. Their habit is the same as that of other propeles, only their turbans are a little enlarged, and they as ples, only their turbans are a little enlarged, and they a ples, only their turbans are a little enlarged, and they af-fume an air of gravity: and in the mosques, when the Imaum stands, or fits, or proflates himself, the people imi-tate him: the Imaum also reads some part of the korsu-every Friday, which is their sabbath, but seldom preaches. This is the business of the sheicks, who make preaching their profession; and these usually have their education in the convents already mentioned. There is another duty the linearing reform and that is the calling the prople to the convents already mentioned. There is another duty the Insuuns perform, and that is, the calling the people to prayers at the appointed hours, from the tops of their, mi-norets or fteeples; for they will not fuffer bells, any more than instrumental music in their churches, as has been observed already.

RKIS

observed already.

The mosques are endowed with all the lands and revenues which belonged to them when they were Christian churches: the lands which belonged to the cathedral church of Santa Sophia, now converted into a mosque, amount to fifty thouland pounds a year; the rents whereof are employed to the maintenance of the innaums and doctors of their law, that officiate in the mosque, to the education of young lads, to the providing oil for the lamps, and to the relief of the poor; and what remains is laid up in the treasuries of the reflective churches, for the reup in the treasuries of the respective churches, for the repair and beautifying them, and fometimes employed in carrying on wars against inside nations, when they appre-hend themselves in imminent danger. The tenants of the lands appropriated to churches, fometimes pay their rent in kind, viz. corn, and other products of their lands; and these tenants, it seems, enjoy greater privileges than any other men, and are not liable to be plundered and opany other men, and are not liable to be plundered and op-preffed either by the baffas or janufaries, as other inh abi-tants fometimes are. None are fo abandoued, as to pillage what is appropriated to pious uses. Churches that have no lands belonging to them, have effates in money; the interest whereof is applied to the fame uses as the eross of lands appriated to their temples are; there are no other cases where the Turks allow of usury, except it be for the maintenance of conhece. maintenance of orphans.

When the Grand Signor invests the musti in his office, he puts on him a vest of sables, and presents him with a purse of gold, of the value of one thousand dollars, and grants them a revenue of one thousand aspers (about two guineas) a day; befides which, the mufti has the prefentation to the royal mosques, which he fells openly, and prefents are frequently made by the great men, to favour them in their addresses to the Grand Signor and his miniflers, which amounts to more than all the other articles.

A Mahometan, when he enters a temple, puts off his shoes instead of his cap, and, while he is there, neither falutes, convertes, or takes notice of any perion, nor can any accident divert him from his prayers; nor may he fpit, cough, or rub himself, any of which actions would so defile him, that he must wash, and return to his prayers again: they figh and groan in a very doleful man-ner, till they begin to pray. The prieft begins with the praifes of God, and all the people follow him, and imi-tate his actions, as well as repeat his words; but both prayers and praifes are very short; the whole not above the length of two or three little collects. What they infift upon chiefly at their devotions, is, that " God is one; that he neither begets, nor is begotten; has none like him, or equal to him; and that Mahomet is the mellenger of God." They believe their prayers will not be heard They believe their prayers will not be heard, unless they forgive their enemies; and therefore, on every Friday, they endeavour to be reconciled to those they have quarrelled with; and for every day of the week, they have a particular prayer; as on Friday, they pray that God

would blefs all true believers; on Saturday, they pray for the conversion of the lews; on Sunday, for the converwould be a fine bettering on satisfay, they pay for the convertion of the Jews; on Sunday, for the prophets; on Tuefday, for the priefts, and those that honour the faints, on Wednesday, for be lievers in flavery among infidels; and on Thursday, for the whole world, of every nation and reliation without distinction.

and religion without distinction.

The Mahometaus perform their devotions with the greatest folemulty on Fridays, when the emperor, ministers, and magistrates, all refort to the mosques in Turky; though in Perfia they feldom appear in the mosques, but pray fingly in their houses, or in the fields; and the Turks are generally centured for being too police and oftentatious in their prayers. Their enem ... aggest that they are hypocrites at bottom, as they are frequently (like the are hypocrites at bottom, as they are frequently (the hip-pharities of old) feen praying in the markets, and the corners of the fireets, and other public places, to obtain the applause of men; and a writer of credit, who resided fome time among them, observes, that their religion seems calculated to keep up great gravity and folemnity, without the leaft tincture of virtue: he further remarks, that they were the most lowly prostrations, and utter their prayers in a most hollow difinal tone; which, with them, are efteemed the great excellencies of prayer. But we are in-clined to think, that this character is in general too fevere; and that, on the contrary, there are fome among them who are in reality as fincere and devout as they pre-

Their Ramazan, or Lent, is the most strict fast that any nation observes; for no person, not so much as a day-la-bourer, will eat, or drink, or smoak, till sun-fet at that season; but they are allowed to eat and drink in the night-time; and the whole town, and particularly the mosques, are illuminated both within and without till morning. At the end of the month the saft ends, and at the next new At the end of the month the fast ends, and at the next new moon, viz. the beginning of the month Schenval, the festival called Bairam begins, which last three days, when they celebrate a thanksgiving in their mosques or temples, and fing feveral short hymns, and among others, that which follows, viz. "We thank thee, O Lord, the only infinite, perfect, eternal, and most merciful being; in that thou last communicated thy all holy, true, and pure law to us; and that we have preferved it miss printy, as it was delivered to us by the prophet forward and the as it was delivered to us by thy prophet, 'ervant, and an.-baffador, Mahomet; to whom be falvation and bleffings;

as allo to thy other prophet Jesus, the so. of Mary, Mo-fes, David, Solomon, &c.

After prayers, the Sultan receives the compliments of the great officers of the porte, feated on his throne, and even of the fultaneffes. The people, draffed in their best habits, vifit one another; and acquaintance embrace when they meet in the streets; and where they have had any differences, they are reconciled. Even their women, this time, are allowed the liberty of going abroad, it is faid; and some of them make use of the opportunity to back look from their knake the or the opportunity to break look from their keepers. Sarifices of oxen, sheep, and lambs, are also made by the wealthy, and their slesh distributed among the poor; so that at this time a general joy appears, and most of our travellers compare it to the Easter of the Christians, because it succeeds their Ramazan, as Easter does our Lent. It is also a moveable feast, being held in every month in the year, in the compass of thirty years, or thereabouts; for the Mahometan year in ecclesiastical matters being lunary, and consequently, between eleven or twelve days thort of ours, their fasts and festivals happens so many days sooner every year, than they

did the preceding year.

The Armenians, Maronites, Jacobites, and other feets of Christians in the Turkish empire, have their patriarchs; and the pope appoints atitular patriarch at Conflantinople, as well as a bishop.

The Greeks and eastern Christians have fuch a prejudice against the Latin or Roman church, that they would rather continue under the dominion of the Turk, than live under a popish prince: and the Papists, on the other hand, treat the Greeks as insidels, and are continually inciting the Turks to defiroy and oppress them. They caused one of the patriarchs of Constantinople to be put to death upon falle suggestions they made to the government, because he refused to submit to the pope.

The whole Greek church, taking in every feet, is of a vaft extent, containing not only the Christians of the Turkish empire, who are in many parts of it much more numerous that the Mahometans themselves, but also the Christians of Muscovy, the Cossacks, the inhabitants of Podolia, and Black Russia, the people of Ethiopia and Abyssinia, south of Egypt. Those of Circassia, Georgia and Mingrelia, and the inhabitants of the islands in the Mediterranean, under the Venetians, are generally of the Greek communion: but we shall treat chiefly of those who are under the dominion of the Turk, who are go-

verned by four patriarcits, viz. the patriarcits of Conftantinople, Alexandria, Antioch, and Jerufalem.

The Greeks observe twenty-two fixed and immoveable featls; the two first of which are, the nativity of the blesses virgin Mary, and the exaltation of the Holy Crofs; the reft confift principally of the antient Greek faints and mar-tyrs. They keep four annual fafts. They give to their patriarch of Confiantinople, whom they confider as their head, the ponpous titles of Most Holy Father, or your Holiness, Most blessed Father, or Your Illessedness; mak-ing him in all respects equal to the pope. The revenues Holinefs, Most bleffed Father, or Your lilestedness; making him in all respects equal to the pope. The revenues of their priests are very small. Marriage, with them, is no legal objection against a person's going into orders; but the general practice of their church is against marriage afterwards: they have a great number of deacons, who belong to the bishops; and their monks lead a very severe course of life. The modern Greeks reckon up seven mysteries or sacraments, which they are supposed to have taken from the Latins; namely, baptism, unguent of christin, the cucharist, penance, holy orders, marrimony, and oil with prayer. Their celebration of the eucharist is attended with a great number of ecremonies. The laity are with prayer. Their celebration of the eucharit is attended with a great number of ceremonies. The laity are obliged to receive the communion four times in the year, with which they readily comply; and none omit it at Christmas or Easter. They also retain the doctrines of consession and penance; but, with respect to the former, they do not require the penitent should enumerate every particular circumstance, for if he disclose as much as he should be a product to the control of the c thinks it prudent to declare, it is accepted. Divorces are eafilyobtained among the Greek Christians, as these people are very prone to revenge where they have been ill used. They retain only the Nicene or rather Constantinopolitan creed in their liturgies and catechisms, and are wholly strangers to that of St. Athanasius: but they acknowledge the holy Spirit to be of the fame sub-flance with the Father and the Son; to be God from teternity, proceeding from the effence and nature of the Father, without beginning, and to be equally adored, With respect to the state of the dead, the Greek church believes, that the fouls of the righteous do not go immediately to heaven, but to fome third place, which is fome-times called Paradife, where they wait till the refurredion; and though it is faid they deny purgatory, they imagine however, that the fouls of fuel as are not fufficiently purified to enter Paradife are confined in fome fecret recesses under-ground, there to fuffer grievous pangs; and that these may receive a mitigation of their torments from the prayers, obtainens, and facrifices of the living. They ad-mit of pictures of our Saviour and the faints, and honour them by bowing, kiffing, and offering up their devotions before them. They use two kinds of adoration, in which before them. They use two kinds or adoration, in subsective them. They use two kinds or adoration, in the first, they bow almost to the ground; the other is only a little inclination which they perform when they come of the head and knee, which they perform when they come first into the church, or when they happen to come within fight of a church or chapel either by sea or land. They perform their devotions with their faces towards the east; nor do they pull off their caps in the church, except at solumn processions, when the gospel is read, or at the celebration of the eucliarist. The Greeks abstain from blood, and things stranged. When they are brought upon their oaths, they lay their hand upon the cross, afterwards kiffing it, and putting itto their foreheads.

Upon the whole, it is rightly observed, respecting the

Upon the whole, it is rightly observed, respecting the religion of the Greek church, that there is a great deal of superstition intermixed with their divine offices; as the perfuming their churches, the pictures of their faints, the holy table, and the people, with incense; their frequent croffing themselves, the extravagant respect they pay to the unconsecrated elements, and their concluding many of their prayers with these words: " For the intercession of our Lady the spotless Virgin, Mother of God," &c. with feveral prayers and ascriptions to the Virgin Mary, which

come little short of blasphemy.

The Greek and other Christians are greatly oppressed by the Turks, who will not fuffer any of them to wear the honourable garb of those of the established religion, under the severest penalties: it is criminal for a Christian to be feen with a white turban or a yellow flipper, which are worn only by their haughty matters; and every raf-cally Turk will beat and infult a Christian upon the least, and fometimes upon no provocation; for which there is no remedy but patience. The ordinary capitation tax every Christian pays is not to be accounted among their greatest grievances: the bassa and inferior magistrates are ever finding some pretence or other to extort sums of money from them; and the over righteous Mahometan scarce, thinks it a crime to give faile evidence against a

SECT. XI.

Contains a history of the Turks, from the earliest accounts of that nation, to the conclusion of the war between them and the Russians in 1772, and the treaty of peace ratified by these

IN the eighth century, the Turks, who had before that time refided chiefly north of the Palus Maotis and the Enxine feas, travelled fouthward, and fettled in Georgia, between the Euxine and the Cafpian feas, where they con-tinued about two hundred years. About the year one thousand, they removed farther fouthward into Armenia, the name of which they changed into that of Turcomania. They foon after fubdued Bagdat, ravaged Persia, and made themselves masters of the northern provinces of Arahla, at which time they were all Pagans; but their leader Tanwhich time they were all Pagans; but their leader I angrolipix thought proper, from motives of policy, to turn Maliometan, wellkinowing that a fovereign of a different teligious perfuation is never agreeable to the generality of the people The Turks then proceeded to invade the territories of the Grecian emperor in Afia Minor, where they conquered feveral cities, as the Saracena had done in

Syria, Palettine, and Egypt.

The emperor of Conflantinople was at this time head of the Afiatic Christians, who, being greatly oppressed, implored the affishance of the different towerigns of Euimported the antitance of the different towereigns of Europe, in order to oppose both Turks and Saracens: all Europe took the alarm: the pope also intercited himself in the affair; and the clergy in general used their endeavours to excite an emulation, by which the Holy Land (as they termed it) might be rescued from the hands of the install.

infidels.

The first crusade commenced in the year of our Lord 1006, when eight hundred thousand persons engaged in the enterprize, and proceeded towards Palestine: but above half of them perished by sickness, famine, and the sword; the latter being cut off by the Christians through whose countries they passed, and who were obliged to repel force by force, in order to put a stop to their depredations.

Many of the undisciplined multitude, who arrived at Conflantinople, wherecut to pieces on their landing: but the more regular troops under the conduct of Godfrey of Boulogne, and other fkilful commanders, arrived at Conflantinople in and other training commanders, arrived at Conflantinople in tolerable order; but their numbers creating a jealoufy in the breaft of the Grecian emperor, inflead of joining them as he had promifed, he contrived by every finifer means to diffres them; however, to avoid their refentment of this treacherous conduct, he granted them shipping to trans-port the troops; on mustering of which, it appeared, that the Christians had one hundred thousand horse, and near

twice that number of foot.

This vast army began its operations by besieging Nice in Bithynia; to relieve which the Sultan Soliman marched, but was totally defeated, when the place furrendered, and was put into the Grecian emperor's hands, as had been previously agreed upon. The Christian army then proceeded towards Antioch, when Sultan Soliman, at the head of two hundred thousand men, gave them battle, but was again totally defeated. Antioch was foon after taken; but the Christian leaders did not think proper to put it into the hands of the emperor of Conflantinople, whose per-fuly had so repeatedly disgusted them. They then marched so Jerusalem, which they invested with only fifty thousand men, their numbers being so far reduced; and the garrifon was at the same time more numerous than the be-ffegers. The arrival of a fleet of English, Norman, Fle-mith, and Genoese ships, however, gave new birth to their operations, by bringing them a fresh supply of men. The outward wall was foon carried by ftorin, and the city itfelf was foon after taken fword in hand, when Godfre Boulogne was crowned king of Jerufalem. He foon fub-dued Prolemais, Cefaræa, Antipatris, Afcalon, &c. hut died within a year after his coronation; and Baldwin of Bruges succeeded him, A. D. 1100. In his reign, the Christians took the city of Tyre, and obtained three tories over the infidels; he then laid fiege to the city of Damascus, but proved unsuccessful in his attempt: after reigning thirty years, he died, and was succeeded by Fulkearl of Anjou, in 1131. During this reign the Christians began to quarrel among themselves, but, Fulk being killed by a fall from his horse, his eldest son, under the title of Italdwin II, was elected king in the year 11421 hut being then only thirteen years of age, his mother was joined with him in the government. Four diffine kingdoms were established by the Chris-

Four diftinct kingdoms were eftablished by the Christians, who had been in possession of the Holy Land and connitries adjacent more than forty years: these were, t. The kingdom of Edessa, which comprehended the countries on the banks of the Euphrates. 2. The kingdom of Tripoli, which was near the sea coast. The kingdom of Antioch; and, 4. The kingdom of Jerusalem.

The continual discords among the Christians gave great advantage to Sanguin, fultan of Aleppo, and afterwards to Nautraddin his son, who retook many of the computed places; which occasioned the Christians again to folicit the affistance of the European sovereigns. Upon which invitation, Conrad, emperor of Germany, at the head of one

tation, Conrad, emperor of Germany, at the head of one hundred rhoufand men, undertook the expedition; but

hundred thoufand men, undertook the expedition; but the Grecian emperor, proving as great an enemy to him as the Turks, he loft the greateft part of his army, and returned home greatly disappointed and chagrined.

In 1187, Salading, fultan of Damaseus, was very fuccessful against the Christians, from whom he took Jerusalem. This engaged Frederic, emperor of Germany, in another crusade; but the imperial forces, who proved for fome time fuccessful, were at length visited by the plague, which destroyed the army. Richard I. of England, and Philip Augustus of France, were then thimulated by the long to greatly the great heighting, which they did in pope to carry their arms into Palestine, which they did its 1190; but the two kings difagreeing, this, like the pre-ceding enterprifes, likewise misearried.

Conflantinople was aken by the Latins in 1700; and Baldwin, earl of Flanders, being elected emperor thereof, foon after laid fiege to Adrianople; but the Greeks inviting the Tartars to their affiftance, the Christian army was defeated, and Baldwin himself taken prisoner. They cut off the hands and feet of the unhappy monarch, and left him to perith miferably in the field, where he died three days after in the first year of his reign, and the thirty-third of his age. After this, Henry, the brother of Baldwin, being elected emperor of Constantinople, by the affistance of the king of Thessal, drove the Tartars out of Thrace, and recovered all the places they had taken from the Children. from the Christians

As the fultan of Egypt was now become the most for-midable Mahometan power, the Christians determined to invade that country, which they did under the conduct of Lewis king of France, commonly called St. Lewis, who fet out from Europe with a fleet of one thousand eight hundred fail, containing an army of fixty thousand men, including a outthirteen thousand knights, English, French, and Cypriots. The army landed near Damietta, which they entered without opposition, the infidels having previously abandoned it. Lewis left his queen at Damietta, with a confiderable garrison, and began his march towards Grand Cairo, at the head of twenty thousand horse, and forty thousand foot; but they were so harraffed by the enemy, that they were above three months in advancing forty miles. At length the Mahometans, taking advantage of the van of the Christian army being feparated from the main body, attacked the crusaders with great fury, totally defeated them, took prifoner the king of France, and all the troops who were not flain in the engagement. It was debated by the Mahometana, whether they should not cut the throats of all the prifoners; but avariee getting the better of revenge, they determined to spare them, its order to exact a large ransom for the recovery of their li-berty. They therefore agreed to release the king of France, berty. They therefore agreed to resease the arms and the reft of the prisoners, upon the delivering up Damietta, and paying an immense sum of money to the

An army of Tartars, under the conduct of Haalon, came down about this time like a torrent from the northward, and took Bagdat, Aleppo, Damaícus, and Iconium. The fultan of Egypt at the same time possessed himself of the principal places in Syria. These transactions occathe principal places in Syria. These translations occa-fioned another crusace to be undertaken in 1271, by prince Edward, afterwards Edward I. of England: he took Na-zareth, and defeated the Turks in several engagements; but not being properly supported by other Christian princes, he returned to England, after having been a year and a half in Palestine; whereupon Elphis, sultan of Egypt, invaded Syria, took Tripoll, Tyre, Sidon, Bere-tius, and all the towns postetied by the Christians, except Ptolemais. A truce was however agreed upon for five Ptolemais. A truce was however agreed upon for five

years; but being broken by the Christians; the fultan of Egypt laid fiege to Ptolemais, but dying before the place, his fon Araplius took it by storm, and gave the plunder to his soldiers; after which, the Christians were intirely expelled from Paleitine, one hundred and ninety two years subsequent to the taking of Jerusalem. But Caffanes the Tartar, who was sovereign of Persia, revenged the quarrel of the Christians, by falling upon the Sultan of Egypt, defeating his armics, recovering most of the places in Syria and Paleitine, which he had taken, and re-uliding the city of Jerusalem, which he did at the defire of his queen, who was an Armenian Christian; he sikewise offered to join the Christian princes, and re-estabilithem in the Holy Land; but the principal fovereigns in Europe were unhappily engaged in war amongst themselves, and could not therefore spare any forces to fend to Paleitine; upon which, Cassanes retited into Persia, and the Sultan of Egypt recovered all he had lost. The Turkish lords, upon the death of Aladin, the last prince of the Selzucian family, divided the country among themselves, the principal of whom was Ottoman or Othman, the fon of Enthogral.

When the Turks were driven out of Persia by the Tartars the Christians estimated and the startage the Christians estiments.

When the Turks were driven out of Perfia by the Tartars, the Christians of Ilithinia permitted their flocks and tars, the Chrittians of lithinia permitted their flocks and herds to graze upon their mountains; but the Turks, after having been here for fome time, began to claim the place as their right, and to difpute the policilion of it with the Chrittian natives; whereupon the latter complained to the governors of the neighbouring Grecian calles, that thole whom they had fuccoured, through compaffion, wanted now to be their mafters. The Grecian governors, therefore, affembled a body of forces, in order to compet the Turks to acknowledge the forereignty of the Grecian emperor, or relinquish the place: but Ottoman putting himself at the head of a body of troops, defeated the Chriftians, and took Cara Chifar, a fortret situated on the frontiers of Bithynia and Phrygia. He afterwards plundered all Bithynia; which fo greatly alarmed the Chriften dered all Bithynia; which fo greatly alarmed the Chrifdered all litthynia; which fo greatly alarmed the Christians, that they prevailed upon the governor of Belezugar to invite Ottoman to the folemnization of a wedding at his catha, that they might have an opportunity of taking him off. Ottoman, being apprifted of the defign, contrived to introduce a party of foldiers in difguife, who killed the governor and all his guefts, and took possession of the caftle. He then made himlest master of many other places in Phrygia, and even laid siege to the city of Nice. The emperor of Constantinople sent an army to relieve the places, but it was deseated by Ottoman. army to relieve the places, but it was defeated by Ottoman, who from that time, viz. A. D. 1300, took upon himfelf the title and flate of fultan, and made Neapolis the feat of his government. The Chriftians invaded the territories of this new fovereign, but were defeated; and Ottoman now growing old, conflituted his fun Orchanes generalif-timo, who fubdued all the remaining places in Bithynia and Phrygia, and fucceeded his father, who died A. D.

Orchanes, having taken Abydos, at the entrance of the Hellefpont, on the ASatic thore, from thence transported his army into Europe, and, in 1338, 100k Gallipoli, which was the first town in Europe the Torks ever possessed.

This prince died in 1359.

Annurath, who fucceeded his father Orchanes, was in Aminath, who inceeded his father Orenanes, was in the beginning of his reign diffurbed by a confeder cy between the leffer Mahometan princes in Afia and the Chriftians: but fuppreffing thefe, he transported his arra into Europe, where he took many places from the Greeian emperor, particularly Adrianople, which he fubdued in 1362, and made the capital of all his Afiatic and European dominions. About this time the body of janifaries was effabilithed. Foregoes fifth earning about tifteen wears of and bliffied; for every fifth captive above fifteen years of age was by a murath's order, retained in his fervice, and edu-

cated in the feraglio, when at a proper leafon those of the largest flature were to be desected for the guard of the fultan. The Servians, Bulgarians, and Hlyrians having raised an insurrection, and invaded the European dominions of Amurath, he returned into Afia to suppress it; but the emperor of Constantinople not joining them at this critical juncture, the fulian, at the head of two hundred thousand men, croffed the Bosphorus, and totally defeated them. Amurath, however, survived this victory but a short time t for a Christian foldier, pretending to beg his life of him, took an opportunity of slabbing him with a dagger, which he had concealed under his cloaths, of which wound the fultan immediately died, in the year 1373, and was fue-ceeded by his fon Bajazet, who, that he might have no rivals, began his reign by the murder of his brother. then invaded Servia, and laid fiege to Crotava, which furreindered on condition that the garrifon should have leave to march unmotested away, and join the Christian army. They were liowever no founter out of the town, that Ba-jazet ofdered a detachment of his troops to put their all to the fivord; which bloody injunction was immediately executed.

The Turkish generals, the cultuing year, plundered the countries north of the Danube; while Bajazet histelf passing the Hellespont, took the city of Philadelphia in Lybia, conquered Caramania, Ionia, and the coast of Natulia. The compliance which the Greecian emperor had tolia. The compliance which the Greedan emperor had hewn the Turks, was not of any fivice to him; for Bajazet, unmindful of his obligations to that monarch, laid fiege to Conflantinople, which was fo well defended, that he blockaded it for eight fuecefive years, till Sigifmund, king of Hungary, affifted by the French, compelled him to raile the fiege; but Bajazet foon after defeated the Chrillian army, and took fuch a multitude of prifoners; that every Turkifh foldier had a flave to his fhare. After this victory, Bajazet again laid fiege to Conflantinople, but was chiged a fecond time to raile the fiege on account of the approach of a vaft army under the command of the approach of a vaft army under the command of of the approach of a vaft army under the command of Tamerlane, commonly called The Great, the Mogul monarchi, who had been invited to march against Bajazet, not only by the empetor of Constantinople and other. Christian princes, but by the Mahometans themselves; who were greatly opperssed by that tyrant. The defast of Bajazet by Tainerlane, and what afterwards beled him, we have already taken notice of in our account of Tamer-

lane, p. 67,58, to which we beg leave to refer.

The five fons of Bajazet, after his death, disputed for The live lons of Bajazet, after his death, disputed for the fover 'mity of the Ottoman empire, during ten years; but at length Mahomet, the youngell, proving fuccefsful; was manimoully acknowleged fole fovereign of the Turkith dominions. Having rendered Walachia and Transfylvania fubject to him, he died in the year 1422, and was fucceded by his fon Amurah, commonly called Amurah II.

ceeded by his fon Amurath, commonly called Amurath II.

This prince, after fupprefling feveral domeflic infurrections, fubdued great part of Greece, recovered Savia and Caramania, and then invaded ! "gary with at. rmy of eighty thousand men; but was repulled by the prince of Transilvania, who, being joined by the king of Poland, passed the Danube, drove the Turka out of Servia, and advanced to mount Heimus; the passes of the mountains were, however, so well guarded, that the Christians, not being able to penetrate into Romania, were obliged to retreat: the Turks pursued them, and, coming up with their tear, a general battle ensued, when the Christians obtained a complete victory. During this engagement, the celebrated Scanderbeg, who commanded a body of Turkish troops, defreted to the Christian army. This prince was the ion of John Castiot, prince of Epiras, whose territories Amurath invaded, and compelled him to deliver up his sour sons as hostages for his fieldelty. Amurath their ordered all the young princes to be circumcised, and inhis four fons as hoftages for his fidelity. Amurath their ordered all the young princes to be circumcifed, and infructed in the Mahometan Iuperflition; and, on the death of their father, feized the country of Epiras as his own, after putting to death the three elder princes. He however pretended to have a great regard for the younger, on whom he conferred the title of Scanderbeg, which lignifies Lord Alexander, Scander implying in the Turkith language Alexander, and beg being the titular appellation for lord. The Turks affected kindnefs could not however efface from the young prince's bolom the fenfe of the wrongs he and his family had fuffained from the infidels; he was a Cliriftian in his heart, and had long meditated to he was a Christian in his heart, and had long meditated to escape from the Mahometan. The abovementioned battle presented him with an opportunity, when he not only enticed three thousand foldiers, who were natives of his own country Epirus, to desert with him, but brought off own country Epirus, to detert with him, but prought our the Ottoman fecretary of war. He afterwards proceeded towards Croia, the capital of Epirus, and compelled the fecretary to write an order in the name of the baffa his mafter to the governor, commanding him to deliver up that city to the care of Scanderbeg. The governor, not fulpeding but that the order really came from the baffa, and were written with the conventence of Armachia. and was written with the concurrence of Amnrath, and was written with the concurrence of Amurath, delivered up the place without heftation. Scanderbeg, being joined by the inhabitants, immediately put all the Turks in the place, who refuéd to turn Chriftians, to the fword; and having affembled an army of twelve thousand men, marched to Petrella, which surreodered upon the first fummons, and Stellusa followed the example; which fuccess gave him encouragement to invade Macedonia, and lay it under vast contributions, raising by this means a sufficient sum of money in the enemies country to pay, and even augment his army.

Alarmed at the proceedings of Scanderbeg, Amurath fent Ali baffa, at the head of forty thousand men, to prevent his excursions; but Scanderbeg had the good fortune to defeat him. The Turkiti monarch, therefore, dreading the consequence of these successions, patched up a peace with the Hungarians, that he might have an opportunity of head line with the Hungarians. tunity of bending his whole force against Scanderbeg. The Hungarians, foon became sensible of the error they had committed, in making a peace with the Turks at the time the prince of Episus was so successful, and consequently enabled to make a powerful diversion in their forces. your; these sentiments were sollowed by a breach of the treaty: they were however, totally routed at the battle of Varna, and their king Uladillaus slain.

The fultan now determined that his forces flould plunder Epirus; but three armies, which he feut for that pur-pofe, were feverally defeated by the fortunate Scanderbeg; and it is remarkable, that his forces never amounted to a third part of the number of the Turks in all these engagements.

Amursth, enraged at length with his continual loifes, difappointments, and defeats, by an haudful of men, varied an army of one hundred and forty thoughand troops, at the head of which he himfelf marched, and laid fiege at the head of which he himself marched, and laid fege to the capital city of Croia, which was defended by a firong garrison and a brave governor, on whom Scanderbeg could depend, while that prince commanded a flying army in the mountains, which continually harraffed the Turkish forces. Amurath affaulted the city many times with great fury; but he was not able to reduce it, for he died before its walls, in the thirtieth year of his reign, and was fucceeded by his eldeft fon Mahomet, furnamed Mahomet II. This

by his eldeft fon Mahomet, furnamed Mahomet 11. This prince, immediate? after the death of his father, raifed the fiege, and returned to Adrianople.

This prince began his reign by murdering his hrothers, and then proceeded to befiege Conflantinople, which he took on May 20, 1453. The laft Grecian emperor, Conflantine Palcologus, was killed in the affault; and all his relations, with the principal citizens, were afterwards put to death in cold blood by Mahomet. The plunder of this wealthy city was given to the troops, and the feat of government was transferred from Adrianople to Conflantinople. Mahomet, having thus added the Grecian empire to his own, affirmed the title of emperor, which has ever to his own, assumed the title of emperor, which has ever

incoher incohe occasioned a dangerous mutiny among the janisaries; but Maliomet's temper was so sierce and savage, that none dared to mention the fituation of his affairs. At length one of his baffas ventured to acquaint him with his danger. Mahomet severely reprimanded him for his insolence, as he termed it; but being sensible of the seasonableness of his advice, he told him, "That his subjects should find, that he could rule his paffions as well as he could rule kingdems." He then gave orders that the principal officers of the army, and all the great officers of state should attend him the enfuing day in the divan. At the time ap-pointed, every one attended with wondering expectation. The emperor appeared, and with him the beautiful Irene. dreffed with the most costly care in all the extravagance of Afiatic elegance. The emperor then ordered the lovely Greek to fland upon a raifed floor, and fternly demanded of all prefent, if they thought he was blancable for deof all pretent, it they thought he was manuscribed voting himfelf to fo charming an object. They unanismouthly agreed, that it was impossible for any man to reiss fo much becauty. "Then, said he, you shall find that
I am more than man." So saying, he instantly sized
the fair Irene by her beautiful locks of hair, and struck off her head with his feymetar, to the great aftonishment of all present. Some have greatly commended, and others feverely blamed Mahomet on account of this fingular transaction. Whether Mahomet was sated by a long un-interrupted possession of Irene's charms, or was really that patriotically heroic monarch he wished to be thought, is immaterial; hut it is our opinion, he might either have parted from the lady, or evinced his regard for his subjects, without proceeding to fuch a barbarous extremity. rerocious conduct plainly proved, that all his paffions were of the brutal kind; his lowe being founded on fenfuality, and his pretended fentiments of honour on a favage and yain parade of dignity and felf-importance.

Maliomer, being entirely routed from his lethargy by his late danger, deprived fome of the princes of the Morea of their territories, fubdued Servia, and laid fiege to Bel-

rade | but was defeated by Hunniades, the brave prince of grade; but was defeated by runninger, or fame year. He Transylvania, who unhappily died the fame year. He then attacked the Mahometan princes on the fouth coaft of the Eurine fea, particularly the prince of Sinope, whose capital he besieged by sea and land; which being surrendered to him, he invested Trebizond, took it, and put an end to that little empire. He then extended his conquesta in Europe, and subjugated Walachia. His prodigious success, obtained him the name of Great; nevertheless, he was a most abandoned cruel wretch, and guilty of almost every crime which could debase human nature. He died A. D. 148t, in the thirty-third year of his reign; and was succeeded by his elden fon,

Bajazet II. who figent fo much time in a pilgrimage to Mecca, that he was near being supplanted by his brother Zemes. This so much alarmed him, that he had his brother murdered, and rewarded the affaffin with the post of princ minister, though he was only a barber. He took several towns from the Venetians; but was continually alarmed with domestic plots against his life, which

at length took effect; for he was dethroned by the janifa-ries, who made his fon Selim emperor.

This prince began his reign by murdering his father, his brothers, and all their children: he then subdued the

his brothers, and all their children: he then subdued the Mamelukes, and put an end to their empire in Egypt, which from that time became a Turkish province. Selim died A. D. 1520, in the fifty-fourth year of his age, as he was preparing to invade the Christian princes.

Solyman II. or Solyman the Magnisicent, succeeded his father Selim: and immediately after his accession, laid-siege to Belgrade, which he took on the 20th of August, 1521. He invaded the island of Rhodes the year enfuing, the capital of which submitted to his arms on Christians-day 1522. Solyman then invaded Hungary, defeated the day 1522. Solyman then invaded Hungary, defeated the Hungarians, and took the cities of Buda, Peft, and Segedin. In 1529 he penetrated into Auftrla, and laid fiege to Vienna, but it was fo well defended, that he was obliged to raise the siege and retire; he returned, however, again into Auftria, with an army of five hundred thousand men; but

Auftria, with an army of five hundred thousand men; but the emperor, and other Christian princes, being well prepared to receive him, he again retreated to Constantinople. Andrew Doria, the celebrated Genoese admiral, joining the sleets of several Christian powers, particularly that of the Spaniards, invaded the Morea. Solyman, in return, ordered his steet, under the consmand of his admiral Barbartoss, to plunder the coasts of ltaly and Sicily. These orders being obeyed, the Turkish admiral flood over for the African coast, where he deposed the deys of Algiers and Tunis, and had those kingdoms consisted to him by the emperor.

the emperor.

Solyman, in the mean time, invaded Perfia with a large army, but met with very little fuccess in this expedition. He then sent a fleet to the Red sea, to attack the Portuguese fentlements in the East Indies; but his defign here likewife failed.

At this time the French, who were contending with the emperor of Germany for the Milanefe, made an alliance with the Turks, whose sleets again plundered the Italian and Sicilian coafts; and the Ottoman armies met like-

wife wirh great fuccefs in Hungary and Italy.
Solyman again invaded Perha in 1548; but the Perhans deftroyed the country before him as he advanced, by which means most of his army perished, and he was obliged again to retreat; but to make him fome amends, he, in 1551, took the strong city of Temeswar, in Hungary, and

the territories belonging to it.

The emperor, who was now advanced in years, became fo extremely fond of his concubine Roxalana, that he put his eldels fon Mustapha to death to oblige her, and even confened to marry her, though no Turkith fovereign, from the time of Bajazet, had ever been married, as it was contrary to the policy of the Turkith government. Bajazet the youngelt fon, foon after underwent the fame fate as his brother Mustaplia, for being concerned in a

plot against the government.

The Turks now made a fruitless attack upon the island of Malta, but fill continued successful in Hungary; when death put an end to Solyman's progress, A. D. 1566, and took him off by means of a bloody flux, in the feventyfeventh year of his age, and forty-leventh of his reign.

Sclim II. the only furviving fon of Solyman, fucceeded him, whose first expedition was, to invade the island of Cyprus. He laid fiege to Nicosia, which he took by storm, A. D. 1570, and the enfuing year he invested Famagusta, which capitulated upon honourable terms, but the garrifon were no fooner marched, than a great number of the inhabitants were maffacred, and the brave governor, Bra-

gadino was flayed alive. The baffa Mustapha here found an immense treasure, which he put on board three flips, together with many lovely captives, among whom was a young lady of exquisite beauty, who, dreading the thoughts of being factificed to the embraces of a Turk, fet fire to the powder, which blew up the flip in which she was, and the two others that were near it, together with herest, and the two others that were near it, together with herest, and the two others that were near it, together with herest, and the two others that were near it, together with herest, in the mean time the Turkish admiral proceeded to make descents on many of the Venetian lsands, as Epirus, Dalmatia, &c. from whence he carried many thousands of the inhabitants into captivity. It is affirmed, that the town of Curaola was forfaken on the approach of the Turkish sheet, by the governor sand all the men, but that the women, taking up arms, defended the place till a storm arose, and obliged the Turks to rettic to their gallies, in order to preferve them.

The Turks, in the year 1571, fitted out the largest fleet

their gallies, in order to preferve them.

The Turks, in the year 1921, fitted out the largest seet that ever they seen 1921, see on spaged at the entrance of the gulf of Lepanto, by the united Christian steet, commanded by Jon John, brother to the king of Spain, in conjunction with the Venerian admiral. The sight was obtinate and bloody, and lasted five hours, when the Ottoman steet was totally defeated; the Turkish admiral, with sisten shouland men, were killed, and one hundred and fixty gallies taken, or sunk: the Christian lost about six thousand men, among whom were many brave and distinguished officers.

Selim, after this overthrow, equipped another seet, and

brave and diffinguished officers.

Sclim, after this overthrow, equipped another fleet, and took Tunis, on the Barbary coast, from the Spaniards, which was the last considerable action of his life, for he died September 9, 1574, in the fifty-second year of his age, and ninth of his reign.

Amurath III, eldest fon of Selim, succeeded to the thione.

Amurah III. eldeft fonof Selim, fucceeded to the thione. Like many of his predecessor, he began his reign with an act of cruelty, by the murder of his five brothers; and, to prove himself a true Turk, and not inserior in cruelty to any of his ancestors, he had them executed in his presence. That nothing might be wanting to complete the harbarous spectacle, he obliged his late sather's far-ourite sultana to be present, who was so affected at the massacre of the young princes, that she stabed herself to the heart, and expired in the presence of the young tyrant. He attempted to reduce the Persana, but lost three sine armies in the attempt. These disappointments to chaggined him, that in 1589 he assembled an army of one hundred and eighty thousand men, and gave the command of it to the grand wifir. In this expectition, the Turk lost eighty thousand men by the sword and farmed on this war with great reductance, he withdrew the army from Persa, in order to employ it in Hungary. Nothing, however, decisive was done; and Amurath died January 18, 1595, in the thirty-third year of his age, and eventieth of his reign; and was succeeded by his son.

third year of na 3ge, shortweintert of his reign; and was fucceeded by his 60n,
Mshomet 111. who also began his reign according to the Ottoman custom, by putting his brothers to death, who were no lefs than twenty in number; however, he was not sufficiently glutted with this bloody facrifice, for he ordered ten of his father's concubines, whom he imagined to be pregnant, to be thrown into the sea. As foon as he was feated on the throne, finding that his general Ferrat Bassa had been unsuccessful in Hungary, he ordered him to be Granused. The Christians, however, fill large, him to be frangled. The Chriftians, however, ftill pro-ing victorions, Mahomet affembled an army of two hun-dred thousand men, put himself at their head, took the city of Agria, where he practifed unheard of cruelties, and afterwards defeated the Chriftian army; by which means he recovered Moldavia and Walachia. Being obliged to march back into his own country, to quell fome domestic tomults, the Christians seized the opportunity, and recovered many of the places they had lost; while, on the other

fide, the Perfians retook Tauris.

Mahomet's cruelties had rendered him fo obnoxious to the people, that a conspiracy was formed to depose him, and place his eldest son upon the throne. Being apprised of the affair, he had his son strangled, and put to death all the conspirators who were so unfortunate as to fall into I is the conspirators who were to unfortunate as to fall into 1 is power; but now, being every-where unfuccefful, and many of the infurgents continuing in arms, he began to think that the wrath of God purfued him for his manifold crimes. To avert, therefore, the vengeance of heaven, he ordered prayers to be put up for him throughout his dominions; and lent two mollas, barefooted on a pilgrimage. to Mecca. He died, in 1604, flung with all the horrors of a guilty confcience, in the forty-fifth year of his age, and ninth of his reign. His fon Achunet succeeded him. In the reign of this prince, the Turks obtained fomo advantages over the Christians, being joined by the Pro-testants of Austria, Hungary, and Transjevanis, who were fo cruelly perfecuted by the Roman Catholics, that they were obliged even to feek fuccour from lefs intelerant in-

fidels.

The principal fultana of Achmet, understanding that the entperor had taken one of his fister's slaves to his bed, was so instanced with jealousy, that the caused her to be strangled. This Achmet resented, by stabbing her, and trampling upon her body. At length he departed this life on the 13th of November, 1617, in the 31st year of his age, and thirteenth of his reign, and was succeeded by his brother.

Mustapha, whose accession was extremely singular. The brothers of the fultans had usually been put to death by the reigning sovereign, through the absurd idea of rendering himself fecure; but Achmet, being only thirteen years of age when he assended the throne, was advised to spare his brother Mustapha, till he saw whether he should have any children of his own, as no other prince of the Ottoman family was then living. Thus Mustapha was secured by the policy of the state, till Achmet had children, when it was debated in council whether he stoul not be put to death, and the execution was agreed upon according when it was debated in council whether he fitbuld not be put to death, and the execution was agreed upon accordingly; but Muflapha was again providentially faved, for Achiner dreaming that he faw his brother executed, was fo terrified at the vilinary spectacle of horror, that he would never suffer the sentence to be put into execution. Mustapha, however, respend but five months; for the basis, finding him totally unqualified to govern, again confined him to the feraglio, and advanced to the throne his newbow.

pnew,
Ofman, who, foon after the commencement of his reign, marched to the frontiers of Poland; but the jaulfaries refuling to march any farther, he was obliged to patch up a dishonourable peace with the Poles. This fo entaged him, that he determined totally to abolish the body of janifaries; which those regular bravoes understanding, they murdered him in 1622, and reflored his uncle Mustapha to the throne, but he being no better caulified convertibles. the throne, but he, being no better qualified ingovern than before, was a fecond time deposed; when they advanced Amurath to the imperial dignity, who was the younger

brother of Ofman.

Amurath IV. afcended the throne In 1623: his reign was not only filled with infurrections and mutinies, but the Persians ravaged the Turkith frontiers, took Bagdat, which the Ottoman forces belieged three years, without being able to recover. This emperor was a cruel tyrant, but he was certainly impartial in his inhuman conduct, equally opprefing and murdering Chriftians and Turk, but in many inflances he shewed himself to be a most savage and unfeeling monster.

unfeeling monster.

During this reign, a dreadful fire happened at Constantinople, which consumed upwards of twenty thousand houses. Amurath, however, determined on a Persan war; but, being in great want of money, he encouraged a number of inturmets to accuse the richest people he could get intelligence of, with being guilty of various crimes. This gave him a pretence to put them to death, and seize their effects. By these insernal means lie was enabled to raise an army of three hundred thousand men, when, marching to the frontiers of Turky, he took Tauris, ordered it to be plundered by his foldiers, marched back without atchieving any thing sarther, and then ordered a feliwal of seven days to celebrate his wonderful exploits!

Amurath's cruelties now grew dreadful and detestable to every one; the inurders he committed were incredible, and the modes of execution were shocking to human na-

and the modes of execution were shocking to human naand the modes of execution were mocking to numan hatture; among the reft, his brothers Bajazet and Orchan fell victims to his ferocious disposition: indeed nurder was his supreme delight, for the most favourite amusement of this blood-thirfly wretch was, to fit in a pavilion in the palace gardens, and fire upon those who passed by in boats, by which means he killed a prodigious number. It must, however, be admitted, that he seldom performed these fronciscs but when he was drunk; but it was unhappy for his shields that he was feare ever otherwise. fubjects that he was fcarce ever otherwife.

He prepared again to invade Perfia in 1637; but, before s departure, caused another of his brothers to be strangled, who was a promising prince of great accomplishments. He then invested Bagdat, when the garrison furrendered on condition of receiving no personal injury. Amurath solemuly promised to spare their lives; but they had no sometiand down their arms, than he ordered them all to be cut to pieces, including in the bloody mandate not only men, but women and children. For this conquest he

caused a sestival of twenty days continuance to be procrimed, at which he very happily drank himself into a fever, that took him off on the 8th of February, 1640, in the eighteenth year of his reign, and only thirty-fecond of his age. This tyrannical brute was succeeded by his brother Ibrahim.

The readon why Ibrahim was not murdered as well as the reft of his brethren, was owing, as fome fuppofe, to there not being any other prince of the Ottoman line living; but others fay, that he was an ideot; on which account Amurath depifed him too inuch to think him dangerous. Ibrahim, however, had more cunning than was suppofed; for it appeared, that he had acted folly and feigned ideotifm only to fecure his life.

This neither in the beginning of his rains, the angle of the principle of his rains.

suppored; for it appeared, that he had acted folly and feigned ideotifm only to secure his life.

This prince in the beginning of his reign, put an end to the tayages of the lavage Cosacks, took the city of Asoph, and added the greatest part of the island of Candia to the Turkish dominions. He was, however, in 1648, deposed by his mother and the janifaries, and soon after murdered; after which, they placed on the throne his son Mahomet. IV. then a child of seven years of age.

During the minority of the emperor, the fultana mother, the grand visir, and the aga of the janifaries, were invested with the administration; but affairs turning out a little unsuccessful, the grand visir, was soon deposed, as were several others who succeeded him; for be the fault where it may, that minister is sure to bear the blante.

where it may, that minister is sure to bear the blame.

In 1658, a formidable insurrection was with difficulty suppressed. The Turks were next visited by the plague, which usually carried off one thousand four hundred or which usually carried off one thousand four hundred or one thousand five hundred people every day in the city of Constantinople only. An oblitinate battle was fought in Hungary, between the Christians and Turks; in which the latter were totally defeated, and left seventeen thousand men dead on the field of battle: this occasioned a peace between the Porte and the emperor of Germany; however, to recompense the above lofs, the antient Chaldea was subdued, and added to the Turkish empire, together with the island of Candia.

The Turks in 162 invaded Polend concerned many

with the illand of Candia.

The Turks, in 1672, invaded Poland, conquered many of its towns, and obliged the government to confent to pay feventy thouland dollars annually; but on the failure of the flipulated payment, the war broke out again in the enfuing year, when the Polifa general Sobieki had the good fortune to obtain a fignal victory over the infidels. The people of Tripoli in Barbary; about the fame-time killed the baffa, and threw off the Turkith yoke, by which they became independent of the Porte in every thing, exkilled the baffa, and threw off the Turkift yoke, by which they became independent of the Porte in every thing, except a finall tribute. In 1683, the Turks laid fiege to Vienna, but were attacked in their trenches and routed by John Sobiefki, King of Poland, at the head of the Germans and Poles. The city of Buda was afterwards invefted by the Imperialifts, and taken, August 22, 1686. King George the First, then elector of Hanover, was present at this siege; and brought from thence the two Turks, who afterwards constantly attended him when he was King of England: several other noble volunteers were present, particularly Lord Cutts, who took a young Turk prisoner, to whom he gave the name of Budiana; this Mahometan afterwards turned Christian, and became an officer in the English army. In the same year, the Vean officer in the English army. In the fame year, the Venetians recovered great part of the Morea; prince Lewis of Baden totally defeated the Turks; and the Poles gave a great overthrow to the Tartars.

Thefe, and other subsequent ill success, so dispirited the trees, the theat depended the control of the success.

There, and other tubecquest ill successes, to dispirited the troops, that they demanded the grand viir's head; this the Grand Signor fent them, with the heads of feveral other great officers, without which they did not appear disposed to be fatisfied; but, after all his compliances, they deposed him in the thirty ninth year of his reign, and fifty-third of his age. He died a natural death five years after in the feed of the second o

in the feraglio.

in the feraglio.

In 1687, Solyman III. brother of the last emperor, was advanced to the throne. In the beginning of this reign, the duke of Bavaria took Belgrade; prince Lewis of Baden obtained a victory over the Turks at Bofnia; and the Venetians extended their frontiers in Greece and Dalmatia. This run of ill luck induced the Turks to offer very advantageous terms to the Christians; but the treaty was besten the the medium times to the French the Lewis Lewis very advantageous terms to the Christians; but the treaty was broken by the machinations of the French king Lewis XIV. who promifed to invade Germany, and divide it with the Turks; but neither they nor the French were able to compais their defigns; and Solyman died in the fourth year of his reign, and fifty-third of his age.

Achinet II. brother of Solyman, fucceeded him, in 1692; and on the 19th of August in the same year a numerous army of Turks passed the Danube, but they were

defeated by prince Lewis of Baden, where the grand vifir

deteated by prince Lewis of Badeh, where the grand vitter and twenty-eight thousand men were slain. A chinet died in the fourth year of his reign, and fifty-first of his age, and was succeeded by his nephew,

Muttapha II. who raifed an army of one hundred and twenty thousand men, took Lippa, and defeated the Imperialits: his fleet was likewise successful against the Venetians; but, on the other hand, the Rustians took Aspale from him. and opened a communication to the Black Lia.

from him, and opened a communication to the Black fea.

Prince Eugene, in 1692, defeated the Turks at Olack, when the prime vifir, and thirty-thousand men were flain. A dishonourable peace being now concluded, the selfa a was deposed in 1703, and his brother Achinet raised to the

Achmet III. began his reign with displacing all the great officers of state who had brought about the revolution; the reason for which was said to be, that they assumed too

much upon that account, In 1709, the king of Sweden, after his defeat at Pultowa, took refuge in the Turkish territories, and had sufficient interest to stir up the Grand Signor to declare war against

interest to tir up the Grand Signor to declare war against the car. of Muscovy; the car raised a large army, but, not asting with prudence, he was soon compelled to fign whatever conditions the Grand Signor peased to preferibe.

The Turks, in 1715, subdued the Morea, on which the emperor of Germany declared war against them; and in 1716 the Ottoman army was deseated at Carlowitz by prince Eugenie. In this battle, the grand visitr, the aga of the janisaries, a great number of ballas, and one hundred thousand men were sain: Tunestwar was taken by the thousand men were flain: Tuneswaer was taken by the thouland men were slain: Tuncswar was taken by the Imperialists this campaign; and in 1717 prince Eugene took Belgrade, and again deseated an army of two hundred thousand Turks. However, by the mediation of Great Britain and Holland, a peace was concluded in 1718.

After these transactions, the Turks, in 1721, invaded Persa, and had some success till compelled by the celebrated Kouli Khan to retire. Achmet's ill success occasioned him to be deposed; and in 1730 his nephew Mahomet was raised to the throne.

Mahomet V. as sone as he began his rain, made peace.

Mahomet V. as foon as he began his reign, made peace with Persia, and entered into a wat with Russia. In 1737, the Turks defeated the Imperialists at Crottka, and took Orfova. In 1739, they befieged Belgrade; but a treaty being entered into between the Germans, Trench, and Turks, it was unanimoully agreed, that the Turks thould liave Belgrade, but the fortifications were to be demoifiled. The Danube and Save were to be the northern boundaries of the Turkish territories; the river Atlanta and the iron gate mountains, the eastern boundary; and the river Unna, the western limits, towards the German dominions. By another treaty, the Russians were obliged to demolish all their forts on the Palus Mocotis, and Euxine sea, and to

their forts on the Palus Mocotts, and Euxine ica, and to destroy the fortifications of Asoph.

Mahomet was of a pacific and just disposition, and on that account respected much by the Christian princes. Nothing material, except the above transactions, happened during his reign; and on the 13th of December, 1754, he died suddenly of a fit of the althma, and the same dry his brother Ofman was proclaimed emperor, from the improvement of the medium.

narets of the mosques.

Ofman III. began his reign in a time of profound tranquillity; and nothing material occurred till his death, which happened in 1757, when he was succeeded by his

Mullapha III. who began his reign with every perfonal advantage: he was of a different disposition from most of his predecessors, being of a liberal way of thinking, a lover of learning, and the first who introduced the art of printing into the Ottoman empire. In the year 1766, a general spirit of liberty seemed, to distuse itself through many parts of the world. The Furkill empire was affected by its influence, the Georgians begantoafpire at independence, and many influencetion's happened in Fgyrt and Cyprus; which, though fuppreffed, evinced the fpirit that prevailed at this period.

A war broke out, in 1768, between Ruffia and the Porte; A war floke our in 1702 and a confederacy was formed against the Rullians among their own fubjects and dependents, which was formered and increased by the Ottomans. The confederates were, and increased by the Ottomans. The confederates were, however, obliged to retreat into the Turkith territories. A Turkith army was affembled between Choezim, Bender, and Oczakow, the Ruffians formed a line of troops along the frontiers of Poland, and a large body of Tartars appeared

on the Ruffian fhore.

The Ruffian admiral Spiritdoff fet fail, in 1769, with a powerful fquadron for the Levant, and was afterwards joined, in 1770, with two other confiderable fleets com-

manded by a don Elphinstone and Count Orloff: foon after which, an engagement happened between the Turkish and Russian sleets, hear Napoli-di-Romani; in which the former were totally descated, and took shelter in the harbour of the above-mentioned place, whither admiral Elbour of the above-mentioned place, whilther admiral Ea-phinftone purfued and greatly almoyed them. Count Orloff was at this time acting by land in the Morea; but he foon after joined the other fquadrons; and the whole fleet, on the 7th of July, 4770, engaged that of the Turks; who were totally defeated. In this fight, which was very bloody and desperate, ladmiral Spiritdoff engaged the Capitana of one hundred guns, yard-arm to yard-arm, when the Turkish ship taking fire, the slames communicated to the Turkith ship taking sire, the slames communicated to the Russian ship: both unhappily blew up, and the crews, a few officers and men excepted, perished, either in the explosion or the waves. The Turks now sled, in order to fecure themselves in the bay of Schisma, where a few nights after their sleet was burnt by means of three sire ships sent amongst them by the Russians. It may well be imagined, that a sleet constituing of one hundred sail, almost in one general blaze, must present a scene of distress and horror dreadful beyond description; while the slames with the turnost randist were foreastling destruction on all sides. horror dreadul beyond description; while the names with the utmost rapidity were spreading destruction on all fides, and ship blowing up after ship, with every foul on board, that feared to trust the waves to swim for shore; the Russians kept pouring upon them such showers of cannon-balls, shells, and small-shot, that not one of the many thoulands of their weeping friends on land, who saw the state of the state of the state of the same state of the state of the same state of their diffress, dared venture to their relief. Nothing now remained but united shrieks and unavailing cries, which, joine I to the martial music and the loud triumphant shouts of the victors, ferved to fwell alternately the various notes of joy and forrow that compose the dirge of the departing glory of the Turks. The loss on the part of the Ruffians was admiral Spiritods's ship, and between seven and eight hundred men: on the side of the Turks, besides the destruction of their whole sleet, above nine

thousand men perished.

After this disafter, the Turks quitted Schisma in great confernation, and, hasting to Sinyma, murdered an in-credible number of Greeks and other Christians, whom credible number of Greeks and other Christians, whom they supposed to be well affected to the Russians, sparing neither age nor fex. The Russians also, in this expedition, spread defolation through the coalts of Greece, Asia, and the islands of the Archipelago, and greatly injured the trade of the Levant; but they acquired little benefit to themselves by their successes. This year likewise the Turkilh army on the Danube, under the command of the grand vizier, was attacked and routed in its trenches at Bahadagh.

Negociations were in 1772, fet on foot, in order to pro-cure a peace; but the plenipotentiaries not agreeing, the whole proved fruitlels; nothing, however, of any confequence was performed this year by either army. But in Syria and Egypt the people were in open rebellion; Ali Bey was, however, defeated and driven out of Egypt by Mahomet Aboudaab, when he fought refuge in Syria, and was affectionately received by his friend Sheik Dabir, an Arabian prince

Mustapha III. departed this life at Constantinople, on the 2:st of January, 1774, in the fifty-eight year of his

age, and feventeenth of his reight; with the character of having been the wifelt, beft, mod humane, and diffuterefted monarch that ever governed the Ottoman empire. He was succeeded by his brother Abdul Hamet.

On this emperor's accession to the throne, some come motions were excited in favour of the young prince Selims but they were eatily suppressed the war upon tile Danube was carried on with vigour; nor did the Ottoman mini-fity fail to encourage as nucla as possible the rebellion of Pugatchest against the Russian government. The Turks were, however, defeated in various engagements; diforwere, however, deteated in various engagements; unoder, mutiny, and defertion, prevailed among the troops; the grand vizier being abandoned by the greatest part of his forces, was obliged to accede to the tetrus prescribed by the enemy, who had surrounded him at Schunla. These ill successes threw the whole Ottoman empire into the Basic because under the present comconfusion; the Porte, however, under the prefent com-plexion of affairs, thought proper to ratify the articles of peace, the principal of which were: 1. The independency of the Crimea, 2. The absolute certifion to Ruffa of Kil-burn; Corche, Jenichala, and all the diffriet between the burn; Corehe, Jenichala, and all the diffrie between the Bog and the Niaper. 3. A free navigation in all the Turkiff feat, including the paffage through the Dardanielles, with all the privileges and immunities which are granted to the most favoured nations: In return for which conceffions; Ruffia was to reftore all file had conquered. Afoph and

Taganrock excepted.

Soon after the conclusion of this peace, the grand vizier died, as is supposed of a broken heart, on his return to Constantinople; and public rejoicings were made at St. Petersburgh, for the uncommon success of the Russian arms. The rebei Pugatcheff was also not long afterwards defeated by the Ruffian forces, taken prisoner, and put to

Mahomet Aboudaab, with an army of Egyptians, in the year \$745, conquered the country of the old and brave Shick Dalter; but Aboudaab dying in the midt of his fuccesses, Shiek Dalter was in hopes of retrieving his affairs, when a baffa arrived upon the coast of Syria with a considerable reinforcement. Shiek Daher was foon subdued, his treasures seized, and his head sent to Constan-

At the beginning of the present year 1782; the Kiasa Bey was deposed, and his place supplied by Amer Effendi; an intimate friend of the grand vizier. In the same year, the Porte caused the dragoman of the Morea to be beheaded, and has annexed his income of ten thousand piastres per annum to that of dragoman to his fublime highness, who will for the future enjoy a falary of twenty thouland piastres annually, besides several other emoluments.

Since the foundation of the Turkifh empire, it has een governed by twenty-eight monarchs, the first fevent of whom were kings; beginning with Ottoman, or Of-man, who mounted the throne in 1300, and ending with Amurath II. who began to reign A. D. 1422. After this reign, its monarchs affumed the title of emperor, of whom there were twenty-one, the first of whom was Mahomet II. who began his reign in the year 1450; and the last was Abdul-Hamet, with whom we closed our history, who ascended the throne in 1774, and was the brother and successfor of Mustapha III.

C H A P. IX.

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF

THE ASIATIC ISLANDS IN THE PACIFIC AND INDIAN OCEANS.

JAPAN.

SECT. I.

Treats of the extent of the empire of Japan, its cities, palaces, buildings, furniture; genius and temper of the people, their habits, diet, diversions, festivals, forms of falutation, manufactures, husbandry, Gc.

THE extensive and opulent kingdom of Japan (which the natives usually call Niphon) confits of three large and many leffer islands, is one hundred and thirty No. 16.

degrees eastward of London, extending from thirty to forty one degrees north latitude, and from one hundred and thirty to one hundred and forty-feven degrees east longitude, the whole cluster being about fix hundred leagues in circumference, and two hundred in length. The larger islands are Japan itself; Xims, the next in extent, and Xicoco the smaller of the three, which is situated between the former two, and is divided into four provinces. There is also the island of Tonsa, which lies south of Niphon, being divided from it by a narrow channel; the capital

مرازان

city whereof is Nava, fituate on the north east part of the i land. The island of Bungo lies fouth-west of Tonia, being between four and five hundred miles in circumference, the capital city whereof is Nangascki, situate on a bay of the ica, on the west side of the island (of which more hereafter); and near this city is the little island of more hereafter); and near this city is the little illand of Difinia, not much more than a mile round, where the Dutch factory are permitted to refide; but of this we shall speak more particularly, under the article of their trade with the Japanese. The island of Firando is pretty confiderable, extending from thirty-three degrees twenty minutes to thirty-four degrees north latitude, and from one hundred and thirty-one to one hundred and thirty-two degrees call longitude.

hundred and thirty-one to one hundred and thirty-two degrees cast longitude.

Jeddo, or Yeddo, the capital of Niphon, and of the whole empire, stands in the midst of a fine plain in the province of Musasi, and is struste on a bey of the sea, in the north-east part of the island, in one hundred and forty-four degrees ten minutes of cast longitude, and thirty-six degrees of north latitude: being one of the largest, most opulent, and beautiful cities in that part of the world. The imperial palace, with its courts, parks, and gardens, is a square of sive miles in circumstrence, and stands in the middle of the city: that part of the palace where the king resides, makes such a shatting appearance, that some travellers have related, it is covered with gold plates instead of tiles: probably, they resemble the varnished gilded tiles which cover the palace of Pekin.

This noble structure is formed by several piles of build-

tiles which cover the palace of Pekin.

This noble structure is formed by feveral piles of buildings, and inclofes many fireets, courts, spartments, pa-vilions, guard-houses, gates, draw-bridges, gardens, ca-nals, &c. In it refides the emperor and his family, the nals, ec. In it refides the emperor and his family, the royal domeftics, tributary princes, and their retinues, the minifers of flate, many officers, and a great garrifon. The walls are built of free flone, which are not cemented by mortar, or braced together with iron; but, being prodigioufly large, are laid loofe upon each other; which is a precaution taken, that they may not receive any confiderable injury from the earthquakes which are fo frequent. Many of the flately apartments are formed and altered at pleafure, by means of magnificent freens, and fuperb moveable partitions. The principal apartments are the pleafure, by means of magnificent fereens, and fuperb moveable partitions. The principal apartments are, the hall of attendance, where the emperor gives audience; the council chamber, where the ministers of state meet; the hall of a thousand mats, where the tributary princes do homage, &c. This magnificent palace was built in the year 1600, in the reign of the emperor Tayko.

The city is in the form of a crescent; and is interfected

I he city is in the form of a creteent; and is interfected in almost every firest by canals of water, where banks are planted with rows of trees. These canals not only serve as ornaments to the city, but are of singular utility in cases of fire, as they both afford a ready supply of water; and stop the progress of the conflagration. There is a strong castle to defend the city, which is not forwanded by the castle t asong caute to detend the city, which is not furrounded by walls; the river Tonkag waters it, supplies the castle ditch, and, being divided into five streams, has a bridge over each. The principal of these bridges, named Niphonbas, is the standard from which all the roads, posts, and distances of the empire are taken. The standard form the standard from the standard fro and diffances of the empire are taken. The fireets are wide and handfome, but irregular. The public buildings are magnificent, but the private dwellings are mean, though The public buildings This city is under the direction of two governors, who rule a year each alternately like the chief magistrate of London; under these are inferior officers like our aldermen, who have the direction of particular diffricts or wirds; and fubordinate to these are the ottonas, to each

of whom the care of a particular fireet is committed.

The next royal city is that of Meaco, fituate on a lake, near the middle of the island of Niphon, about three hundred miles fouthward of Jeddo, in forty five degrees thirty-eight minutes north latitude, and one hundred and thirtychick degrees fifteen minutes east longitude, being two antient metropolis of the whole empire, but is at prefent the residence of the dairo. It is built in a pleasan, and extenfive plain, on the fouthern coast of the island of 'ar being furrounded at some distance by mountains, which give a delightful and romantic prospect to the whole. The circumsecent country between the city and the mountains, and the mountains themselves are covered with semples, fepulchres, and nonafteries, and embellished with a variety of orchards, gardens, groves, cascades, and puri-ing streams. Three considerable rivers water the sertile plain, and unite their streams in the centre of the city. where a magnificent stone bridge facilitates the communication between the upper and lower town. The dairo has his residence in the north part of the upper town.

On the western side of the city is a strong castle, which serves as a palace for the cubo, when he comes to pay homage. It contains a small garrison, is fix hundred yards in length, has a tower in the centre, and is furrounded by two ditches, the one dry, the other full of water, and abounding with the most delicious sish. Since the emperor's court has discontinued to reside here, this city has greatly declined; it was then twenty miles in length, nins in breadth, exclusive of the suburbs, and surrounded by strong and stately walls. The streets were long and narrow, and exceedingly crowded with inhabitants i for on a list being given in by order of the government, the number amounted to sive hundred twenty-nine thousand seven hundred and twenty-sin, though the dairo's court, and strangers not constantly residing in the place, were not included; but it is said at present not to contain above one hundred thousand souls. The universities, colleges, monateries, temples, sec. are almost incredible in number, and magnificent in appearance. The private hoases are but two stories high, built of wood, and covered with On the western side of the city is a strong castle, which natheries, temples, &c. are almost incredible in number, and magnificene in appearance. The private house are but two flories high, built of wood, and covered with clay, or thatched. Every house is obliged to have a referroir, or trough of water, ready in case of fire; but they join neatures with simplicity; and every trade or calling hath a particular street or district assigned to it.

The palace of the daire is inclosed by magnificent walls flanked with stately towers, and surrounded with a double ditch. It contains twelve capital firetts, in the centure of

ditch. It contains twelve capital fireets, in the centre of which are the royal apartments, superbly built, elegantly furnished, and adorned with gardens, orchards, pavilions,

terraces, groves, &c.

Oface is the next most confiderable city in Japan, which
is fituated at the mouth of the river Jodogawa, about fifis fituated at the mouth of the river Jedogawa, about fit-teen leagues from Meaco, and in thirty-five degrees fifteen minutes north latitude, and one hundred and thirty-feven degrees twenty minutes east longitude, it is deemed the principal fes-port in the empire, and is filled with an in-credible number of merchants, tradefmen, mechanics, ec-clefaftics, &c. It is fo populous. clefiaftics, &c. It is so populous, that an army of eighty thousand men has been drawn from it upon emergencies. thousand men has been drawn from it upon emergencies. It is near fifteen miles in circumference, coatains many elegant houses, and some palaces belonging to the nobility. A strong quadrangular castle defends the port. The walls are thick, the towers with which they are finnted well fortified, and the garrison numerous. Two officers command here, one has the superintendance of the castle, and the emperor's treasures, stores, and eustoms; the other prefides over the garrison: but the city itself hath a governor of its own, who hath the regulation of all civil affairs. The houses in this city are covered with a kind of earth of a yellow colour, which gives their roofs as elagant appearance.

In this city, the watchmen make the hour known by means of three infiruments. An hour after fun-fet, they beat a drum, the fucceeding hour is fignified by firiking on a brazen bowl, and the hour fubfiquent to that by ringing a bell; the next hour they begin again with the drum, proceed to the bowl and bell, and so continue the whole night, using the three instruments alternately. In all other parts of the empire, however, the hour of the night is told by beating against each other two wooden cylin-

Suranga is fituated in thirty-five degrees twenty-two minutes north latitude, and one hundred and forty-two degrees thirty minutes east longitude, is the capital of the province of the same name, and a very considerable sea-port town, some of the emperors resided in it; and some port town, some or the emperors remove in it, in of the English were not long fince permitted to trade with the merebants who lived chiefly in the fuburbs. It is now greatly on the decline, but full retains force of its antient country.

greatly of the centre, but his teams only or to an arterial privileges, particularly the liberty of coining money.

Saccai flands about twenty miles from Ofaca; it is in-habited by a proud fet of people, who all boaft of their anceftors, and pretend to be defcended from the antient Japanefe emperors. This city is very advantageously fituated as a place of strength, being defended on the different fides by a strong wall, an inaccessible mountain, a capacious ditch, and a formidable castle. Near the harbour is a little island called Pie-nes, colebrated for its pleasant groves, and famed as the residence of a favourite idol, to whose temple many of the inhabitants of the city repair in boats; and fome, through excess of zeal, jump into the water by the ay, and drown themsalves.

way, and drown memeaves.

Cangoxima is a fea-port on the fouthern part of the island
of Ximo, and was the first place where the Portuguesa
landed when they discovered Japan. It lies in thirty-one
degrees forty-two minutes north latitude, and one hundred and thirty-three degrees fixteen minutes east longitude, a

under the vest, gow cap or hat brellas the raftle is built on a rock in the harbour, and a fight house, on another very high rock in the harbour. Many flately temples adom the city, and a good garrifon is kept here. Nangafeki (mentioned above) lies in thirty-two degrees

temples adom the city, and a good garrifon is kept here. Naugafeki (mentioned above) lies in thirty-two degrees thirty-fix minutes north latitude, and in one hundred and thirty-one degrees twenty-two minutes east longitude. The city is in the form of a crefacut, delightfully fituated among verdant lawns, and farrounded by pleafant hills it contains many handlome halldings, particularly temples, and is frongly garrifoned. The firees in general are narrow and crooked, but run a confiderable length, the temple, or fome public buildings, utually steminating the viffa. The town is watered by three rivers, and divided into upper and lower; the former containing twenty-fia, and the latter fitty one firees; but firangers reside in the suburbs, and are narrowly watched. The principal buildings are five warehouses, in which are haid up all the materials for forming three men of war, which, upon an emergency, may be taken out, and put together in a very short time; a powder magazine, the palaces of the two governors, the palaces of between twenty and thirty-five grandees, fixty-two temples, thirty-five bridges, twenty being of stone, and the rest of timber, &c. the gokina or priton, which the people very emphatically stile hell. It consists of about one hundred dungeons, or cages fepar 's from each other, apartments for private executions, and baths in which the prisoners are obliged to wash themselves, in order, ar much as possible, to prevent insections.

The Japanese build with wood, and generally upon one stoor; but their apartments are very commodious: i.e. partitions of their rooms are made to fold up like a skreen, to that they call as sections of the nobility are wainstooted.

partitions of their rooms are made to fold up like a ikreen, so that they can lay feveral rooms into one, as they have occasion. The houses of the nobility are wainforted with cedar, the stoors paved and covered with sine mats, their ceilings are painted and gilded, and the doors finely varnished. The tradesmen and inferior people content themselves with thatched roofs and clay walls, though they the stoody of the stoo have a little apartment built of stone or earth where they secure their most valuable goods from sire. They have no glass, or any thing like it in their windows, but only

They afe neither tables, beds, or chairs; but fit on mats when they est, and lie on them when they firep. Their rooms are ufually hung with pictures or painted paper, the reft of their furniture conflits in cabinets, fixcens, china-ware, and fine fwords, which they hang up in their

A first watch is kept every night, lanterns hung out, and every ward or division in their cities shut up; that in case of fire, it is faid, they are not suffered to break in

upon one another.

The inhabitants of this island are faid to be of a quick The inhabitants of this island are said to be of a quick apprehension, good underslanding, modes, patient and courteous; and to just in their dealings, that if a person makes a mistake they will not take the savantage of it. On the oft.:: nand, we are told by the same authors, that they are cruel, ambitious and uncharitable; and have so little compassion for the poor, the fick or the lame, that they will telt them lie and persish before they will relieve them; that they are intolerably proud, and so passionate, that they will kill themselves if they cannot have their revenge. However inconsistent this character may seem to venge. However inconfiftent this character may feem to be, there are few books of travels where the reader will not be shocked with contradictions of this nature; and per-haps if we observe a medium here, as in other doubtful haps if we observe a medium here, as in other doubtful cases where the writers are not competent judges, or give characters of a people from some sew instances they have observed, we shall come nearer the truth, than by adhering, firstily to either. These people probably are neither so exceed-ingly courteous or patient as some relate, or so barbarous and passionate as others would have us believe; and Japan being a country not only the most distant from us, but the most insceedible to Europeans of any other upon the face of the earth; it may be some time before we are rightly informed of the temper and genius of this people. rightly informed of the temper and genius of this people. The persons of the Japanese have in general but a for-

The periods of the papears have in general but a tor-bidding appearance; a very flat nofe, and eye-lids dif-gudingly thick disfigure a face unproportionably broad, and diagreeably tawny. Their flature is fhort, their bodies thick, and their legs clumfy; though many of them differ from this defeription, and refemble the Chinefe, who live under the fame parallel; and their habits are alike, namely, veft, gowns and drawers, or breeches, that fail down to their ancies, and fippers without heels; but they were no easy that and forces themfelves from the weather wish cap or hat, and fcicen themselves from the weather with the fan they always carry in their hands, or extensive um-brellas the slaves carry over their heads, which are close

flaved half way. Every gentleman weats a crice or dagger in his fails, and a great broad fword on his thigh whenever he goes abroad.

People of ligure eat chiefly venifon, fifth and wild fowl of their own taking. Some feels among them eat no meat, or drink any firong drink, but live upon rice, roots, herbe and fruit; water and tea are their fulual liquors and foine indulge in firong beer, made of wheat and mixed with fiprites. Their diversions in towns, are plays and matiquorades: the fullyleft of their plays here, and in most eaftern countries, is the listory of some hero, or great man, their country hast produced.

There is a great festival celebrated every year, when they visit the tombe of their ancestors: at these foleranities every house is illusticated, and they march out of their

every house is illuminated, and they march out of their towns at midnight in a folemn proceding to the graves of their dead friends, where they eat and drink, and make merry for faveral nights fuecessively: at the conclusion of the feaft they march round the town with flags, freamers, and bannars, beating upon brais pans before the temples of their idols, and at the doors of their great men.

Their infirumental music is not at all harmonious, but

of their idols, and at the doors of their great men.

Their infirumental music is not at all harmonious, but fome of their voices are pretty tuneable. At the end of every play or masquerade there is always a noble entertainment provided at the charge of the company: these people, it is observed, spend great part of their night in eating and drinking, which others spend in sleep; and because their manners and customs are acknowledged to be different from the rest of the world in many inflances, some people carry, it fo far as to assime they resemble us in nothing; and particularly, that instead of bowing to shew their respect to their betters, they shand up satisfist, sat beyon; but I find by the best wisters that they bow their bodies as we do, and never approach their magistrates but upon their knees. As for putting off their shoes of slippers instead of hats, the people of the other eastern nations always put off their shoes when they enter their temples, or the houses of those for whom they have any respect, which appears to be a custom almost as antient as the world, and therefore need not be thought strange in the Japanese. And as for their not putting off their shats, this need not occasion any wonder, since they wear none.

They keep their roads in very good repair, and shew the distances of places by placing trees at the end of every three miles. But there are so igns or public houses for the entertainment of travellers: and what is a very great aussace, in the careases of their malefactors, whom they generally crucify with their heads downwards. are

nuifance in them is, the careaces of their malefactors, whome they generally crucify with their heads downwards, are placed upon the roads in terrorem.

placed upon the roads in terrorem.

As to their trade, the natives themselves are not permitted to carry on any but with Jesso. Kurea, the Chinese and the Dutch. The Portuguese Christians about the year 1622, being accused of forming a conspiracy, against the crown and government, the Christians were all cut to pieces, and a decree made against having any merce with them, or any nation that profess Christianity. The Dutch, to convince the Japanese that they were not Christians, did not resule to trample upon the cross of our Saviour; and the Japanese are so well satisfied of their infidelity, that they are remitted to have a fastory there to Saviour; and the Japanele are so well satisfied of their in-ideclity, that they are permitted, to have a factory there to this day; which all other nations, who abhor their im-pious hypocrass, are excluded from a but the Japanele are so jealous even of the Dutch that which any of their ships arrive, a mightrate goes on board and tikes an account of the number of their men, and carries their fails, ammu-nition, guns and rudder ashore, till they are ready to fail. Nor have the Dutch factory, which stands on the point of a rock, and is separated from the city by a river and a wall, any communication with it for eight or nine months in

the year.

A judic ous and accurate traveller, gives the following description of the island of Disnia in the Dutch possession:

"This island (he says) is not more than two miles incircumstrence; and no Dutchman can stir out of it, or come into the town of Nangascki (to which it is joined with a bridge) without hazarding his being cut to pieces by the guards, who are appointed to watch their motions: nor are the Dutch to much as suffered to have a license lead in the house. lighted candla in their houses in the night-time. If the centinels perceive the least noise, they blow a little and centinels perceive the least noise, they blow a free, and the governor immediately sends a party to learn the reason of it, which does not return till the occasion is discovered, and then the authors are feverely threatened, if not punished. In this flavish condition the Dutch remain eight.

The Japanese mechanics and manufactures excel in their different branches, and are even far superior to the ingenious

ingenious Chinefe. Their filks and cottons are excellent, and their Japan ware and porcelane unequalled. The fwarms of pirates in their feas add to the obliscles that obstruct their commerce. The commodities exported are, wrought filk and cotton, Japan ware, porcelair, gold, firer, topper, iron, feel, artificial metals, furs, tea finer and better cured than that of China; gums, medicinal herbs, roots, &c. diamonds, pearls; coral, thefits, ambergits, &c. Whatever goods the Japanefe want, they pay for either by way of barter for other commodities, or in bullion of gold, filver, or copper.

Their fitips which refemble those of the Chinese, are built of cedar-wood, but are only fit for very short voyages: they are built from eighty to ninety feet in length, and from twenty to twenty-five feet in heradth, and confirted choth for failing and rowing: they contain many fittle cabins, separated by skreens, folding-doors, &c. they have only one mast and one fail; the ropes are made of the estaw, and the anchors of course iron. Their pleasure-boats, which are intended only for the navigation of takes, rivers, &c. are extremely beautiful, being finely gilt, carved, and otherwise adorned with the most curious and superb embellishments. ingenious Chinefe. Their filks and cottons are excellent,

superb embellithments,

there is the continuents.

The Japanese have almost all forts of cattle and poultry that are found in Europe, but their horses are very small. Rice: is the principal grain the country affords, which is managed in the fame manner as in China, and always grows in water till it is ripe. They have also very good red wheat, but not in so great quantities as rice. Their hubardmen are little better than flaves; they plow and manure the ground for the great lords, but have no properties of their own. ties of their own.

The gardens feems to be in much greates perfection here than in Perfia; they have a handfome large court usually before their houses, and a garden behind them, laid out into fine walks, mounts and terraces, and adorned with greens and flowers, which are feen from the firect,

with geens and nowes, which are retributed in the there being always a large vitlo from the outward gate through the loude into the gardens.

There is a prodigious high mountain in Japan, which, though it flands above eighteen leagues within the land, is feen above forty leagues at fea. There are also eight volicies and football.

canoes, or mountains which vomit fire and fmoke.

SECT. II.

Containing an account of the Japanele learning, arts and friences, laws and punishments, and of the revenues, forces, and prerogative of the crown, &c.

THE common learning of the Japanese consists in reading, writing, understanding their own history civil, military, and ecclessatical, and a sew simple precepts of morality; but many of them acquired several branches of the mathematics and philosophy from the European missionaries at various times, which their descendants still retain; their philosophy, however, is tinctured with many superstitions of their own, and their astronomy blended with the absurdates of astrology. Prior to the arrival of the Europeans in their country, they were so ignorant with respect to geography, that they imagined their own empire, China and Jam, to be the only countries in the universe; and their notions were very impersect with respect to the extent and situation of these: they have, however, many universities and public academies, for the trainover, many universities and public academies, for the training up of youth in the learning of the country, and the practice of the moral duties. These seminaries are well supplied with books, and resorted to by a great number of students, governed by bonzas, who are usually of noble descent, and well endowed with money for their support. description and went rendered with mostly to their tapport. According to the Portuguese missionaries, these superior of the public seats of learning are adopts in moral philosophy, and great masters of the most persuasive elecution. Indeed it is not to be wondered at that they make a swift progress in whatever they are taught, being possessed of the most retentive memories. Their poety is lofty, sublime, melodious, and descriptive; their music is less agreeable; but their paintings are the best executed by any of the orientals, though they fall far short of the Europeans in every effential except colouring, in which they exceed

These people have no regular system of physic; their doctors trust to experience, and always prescribe according to precedent, if they have a precedent to go by; but where that is wanting they proceed intirely by conjecture, so that fimilar cases, and guess-work, form the whole of their

materia medica: but the most fashionable remedies, upon all occasions, are not and cold baths. I he surgeons are more unskilful than the physicians in every thing except the surgeon of the such as a surgeon of the su

ufuelly acquire connecesore to twince, among them.

The Japanefe write, like the Chinefe, from top to bottom in columns, which they begin at the right hand; and their letters were originally the fame; but they have changed the form, and ever the found of many, in order to differ as much as possible from the Chinefe, whom they naturally hate, and affect upon ell occasions to hold in the utmost

contempt.

The invention of genpowder and printing is claimed by them, as well as the Chinefe, the preparation and use of the first they are much inferior to them; but they excet them in the latter, which is performed in a similar manner, as well as in the composition of ink and paper.

Children are educated in this country with great care, and won to a love of their studies by motives of emulation, and the most expitivating endearments. They differ from all the other oriental nations in inculcating a contempt of pain and death, teaching them to despise all kinds of loauries, weaning them from every thing that in the least tends to effectionacy, and entering them to expect which of hardship.

of hardflip.

Not only the petty kings, but every lord of a diffrict, and father of a family, has the power of life and death, and tries and condemns his dependents according to his own arbitrary will; there being few written laws, if any, and no public courts of justice in this country; the finalleft theft, or a bare affault, gaming, and even lying, as it is faid, is often punished with death; and for defrauding the faid, is often punished with death; and for defrauding the king of his revenue, murder or treason, and such enormous crimes, the offenders relations, parents and children suffer with him; except the semale relations, who are sold for shaves. The petty kings are feldom put to death, but banished to a certain island, where they are put to service employments during the remainder of their lives. Their usual punishments for great offences are burning, crucifying with the head downwards, tearing them to pieces with horses, and boiling them in oil; and where an offender refuses to come in and submit, he is ordered to be cut in pieces wherever he is found. A gentleman or soldier convicted of any capital crime, has the savour of dying by his own hands; and it is reckoned very ignominious side waits for the executioner to dispatch him in that case. be waits for the executioner to dispatch him in that case,

This prince's revenues are also faid to amount to an in-I his prince a revenues are also taid to amount to an incredible fum, far exceeding the revenues of all the princes in the world besides; which inclines me to think there is a mittake of a figure or two; and that the writers, who agree pretty near in the fum, have only copied after one another; though it is observable, that the revenues and forces of distant kingdoms are often magnified beyond all

forces of diftant kingdoms are often magnified beyond all belief. Some authors have afferted, that the revenues of the emperor amount to twenty-eight millions flerling; but the truth of this is greatly to be doubted.

When this prince goes abroad, he is attended by no lefa than five or fix thoufand of his guards, and his flanding forces are faid to amount to twenty thoufand horfe and one hundred thoufand foot in time of peace: in time of war each of the petty fovereigns is obliged to furnish his quota, which increases the army to thirty-eight thoufand horfe, and three hundred and fixty-eight thoufand foot: hut against whom fuch numerous forces should be raifed is not eafy to whom fuch numerous forces should be raised is not easy to whom tuth numerous forces insolute is rated as not easy to conceive: we having no account of any foreign wars they were ever engaged in. The Japanese troops march in divisions of fifty men each, sive in front, and ten deep, each division being commanded by a single officer, who keeps them in exact order. They are armed with either muskets, pikes, bows and arrows, sabres and targets, or battle-axes. Fixe of these divisions forms a kind of seriosmy, but they Five of these divisions form a kind of regiment : but they are not accompanied by any warlike mutie; between each divition are three led horses finely capatifored, and three flaves are appointed to lead each horse with long reins. The captains ride on horseback behind their respective divisions; on each side of the horses are a kind of paniers, vinous; on each ide of the hories are a kind of painers, containing the officers bedding and baggage. When an officer grows old, he is permitted to have a finall fort of couch or supporter behind him, against which he may commodiously lean, when fatigued, by sitting upright.

Japan and the neighbouring islands are under the government of tifty or fixty petty kings, vested with fover-

es, and the state of the state

reign power in their respective territories, but subject to one grand monarch, who can depofe and punish them as he fees fit. Antiently this great king was high prieft as well as fovereign of these islands; and the present dairo, or high priest, who is a descendant of the former kings, entirely who is a descendant of the former kings, entirely who is a descendant of the former kings, entirely who is a descendant of the former kings, entirely who is a descendant of the former kings, entirely who is a descendant of the former kings, entirely who is a descendant of the former kings. july high the file and flate of a king, notwithflanding another family possesses the throne: and, it is faid, the reigning prince is obliged to marry one of his daughters, and do him homage once in three years, and acknowledge he holds his crown of that family: but this scents to be done

rather on a religious, than civil account.

The king commits the administration of the govern-ment to his prime minister, who is stilled cubo: one of the cubo's stripped the dairo of the civil and military authe cubo's tropped the dairo of the civil and military authority; fo that the cubo may at prefent be deemed the emperor, as he hath all the power; and the dairo, the high prieft or pontiff, as he ftill possesses all the ecclessifical dignity; he has a privy-council also, consisting of twenty-eight members, of which four are petty kings. The vasial kings are obliged to attend at court one half of the year, and have each of them a houfe in the king's palace at Jeddé; as has been hinted already. The eldeft fons of the prin-eipal nobility are also kept at court till they are preferred to some post; and for the farther security of the govern-ment, oaths of allegiance are also administered every year; and so jealous is the prince of his subjects, that he has spies throughout all the country: but the better to divert them from seditious practices, it is said, he employs one hundred thousand of his subjects by turns in erecting palaces and public buildings, or beautifying them, and in panele, for domeflic purposes, coin various pieces of money. The gold coin are obans and cobans; ten cobans trake one oban; and the latter is of about two guiness. value. The filver coin is composed of a variety of flat pieces of different shapes, dimensions, weight and value; and a copper coin is stamped for the inferior purposes of change.

SECT. III.

An account of the religion, temples, and superstition of the Ja-panese; also of their marriages and funerals.

HE Japanese are idolaters and worship the heavens and the planets, with several monstrous idols; but the gods they principally adore are Xaca and Amida, to whom they chiefly apply in their differs: they give no ac-count of the creation of the world, but generally believe the immortality of the foul, and a flate of rewards and punithments, and most of them believe transmigration, or that their fouls shall animate other bodies after death. They have abundance of cloysters and nunneries, where their priests and devotees live unmarried, and perform fuch penances as their religion requires; and confession, the jesuits tell us, is practifed amongst them, in which their priests are so strict, that if they apprehend any thing is concealed, it is as much as the poor finner's life is worth; for they throw him down from the top of the rocks, where their flools of confession are placed, to create the greater dread, and induce their disciples to be sincere.

There is a flately temple at Meaco, built of free-flone, which captain Saris tells us, is as long as the body of St. Paul's, and as lofty, with an arched roof, fupported by mighty pillars, in which stands an idol of fupported by mighty pillars, in which stands an ideal of copper, which reaches as high as the roof, and according to Sir Thomas Herlvert, his chair is seventy feet high and eighty broad, his head big enough to hold fifteen men, and his thumb was forty inches round, by which we may form a judgment of the whole; this temple stands upon a high hill, and on each side of the ascent are finity pillars of free-slove, ten paces from each other, and on the top of every pillar a lanthorn, which make a fine show in the night. There are no less than fixty other temples in Meace, and between three or four thousand rided idois. in the night. There are no less than fixty other temples in Meaco, and between three or four thousand gilded idos in them. In the road between Surungo and Jeddo stands the idol dabis, made of copper, in the form of a man fit-ting upon his legs and extending his arms, and is two and twenty feet high. At I encheda the bonzes pretend their god appears in human fhape to a young virgin whom they bring every new moon into the temple there; having placed her before the great image they illuminate the place with golden lamps and burn performes, when on a fudden the lights are miraculously put our, and fomething in human form immediately embraces, and fometimes impregnates the young damfel, but whether the phantom

they worship, of one of his prices do her the favour, is left to the teader to conjecture: however that be, the quondam maid is from thenceforward highly honoured, quondam man is from the nectorward mignly nonource, and at the coming our of the temple is entertained with fongs and music, and so inspired, says Sir Thomas Herbert, is the entulusable girl, that she takes upon her to resolve the most difficult questions that are propounded to her. The bourzes, or priests, are so respected by their prince, that he rises up to falute them, and suffers them to sit in his presence; they preach up great autherities, and teach morality and a contempt of the world. But the Romith acids will have it, that they are level fellows, and mith priests will have it, that they are lewd fellows, and do not live according to their doctrine.

Christianity was first preached in this island in the year 1552, by some Portuguese priests, sent thither by father Xavier from Macao; and the Christian religion so en-Aavier from Macao; and the Christian religion to en-creased, that before the year 1622 three petty kings, and several other great men, with multitudes of people, made profession of the Christian religion; if we may credit the missionaries. But about that time, a decree was made for extripating all Christians under the Japanese government; whereupon there followed so terrible a persecution, that there is not now one Christian left in Japan, nor are any people who acknowledge themselves Christians suffered to come into their poers.

people who acknowledge themselves comments numerous ocome into their ports.

The Japanese allow of polygamy and concubinage.
The consent of the parties is seldom asked in Japan any more than it is in China; children are disposed of by their parents very young, and when they are arrived at a proper age, are led to the temple, where a botter places them before a limited from of their rode, putting a lighted toreh. fore an image of fome of their gods, putting a lighted torch in either of their hands, while he repeats the words of the contract; after which oxen or other animals are facrificed to the idol, according to the quality and circumflances of the married pair; and the eeremony is concluded by a grand procession to the bridegroom's house, where the guests are entertained for several days.

The wife has no fortune here any more than in China, and after marriage she is entirely in the power of her hufand after marriage the is entirely in the power of her hul-band, who may punish her, or take away her life if she does not behave well, especially if the be salfe to his bed. The women, it is said, esteem it no crime to procure abortion, and if they are poor, or bring too many girls, will strangle them with their own hands; but the boys are always provided for by the sovereign. Common women are allowed here, and no punishment or brand of infamy is fixed upon procurers in their life time; though they are treated as criminals when they die, and their bodies are thrown into the highways, and fuffered to rot above-

ground.

The Japanese do not inter their dead as the Chinese do, but burn the corpfe, putting the afhes into an urn. The family and friends of the deceated attend the corpfe to the family and friends of the decealed attend the corple to the funeral pile, with lighted torches in their hands, and the eldeft fon fets fire to the pile, into which are thrown fweet wood and aromatic gums, which perfume the air, and this makes the funerals of people of condition vafily expensive. The whole concludes with a banquet and entertainment of such music as is best fuited to dispel melancholy restections. They pay an annual visit to the tombs of their ancestors; at which time, when the company have actived at the femilehers of the dead, the boards dehave arrived at the sepulchres of the dead, the bonzes defcribe the fituation of the persons deceased, and inform their relations of all that they have occasion for in the other life, which demands are usually very extravagant; the kindred, however, furnish every article with great fatistaction, which they fend, together with a fow kind and complimentary messages, to the defunct, by means of the bonzes, who convert the whole to their own uses, and leave the

dead to fhift as well as they can for themselves.

As the English have had no commerce with Japan for apwards of one hundred and fifty years, and as we can receive no intelligence from thence but what the Dutch are pleased to give us, a letter from an English East India captain to his friend in England, when we were allowed a free trade to that kingdom, may give us a juster account of the state of it, than any thing that has been communicated to

us fince; the fubflance whereof follows.

" SIR.

"I arrived at Firando, one of the islands of Japan, on the 11th of June, 1613. It is fituate in thirty three de-grees fifty minutes north latitude, a little west of the island of Bongo. Here Foyne Sama, the viceroy, or king of Firando, as he is called, eame on beard our ship, with his nephew Fone Sama. They were attended by forty galleys, some of them rowed with ten, and others with issuen oars

The king and his nephew were clothed in blue filk gowns, and each of them had on a fine linen thirt and breeches; their heads were thaved half-way; the reft of their hair, which was very long, was tied up in a roll on the hinder part of the head; they had neither hat nor cap on; nothing on their heads but their hair; each of them had a skind of steward, who commanded their flaves. They faluted me by putting off their shoes, and clasping their hands together, and bowing a little, carried them as low as their knees. I entertained them in my cabin, after which they took their leave, and feveral of the great men of the island came on board, every one bringing a prefent of venison, fish, fowl, or fruit. The king came on board again, and ordered fixty of his gallies to affit in bringing the ship into the harbour, there being a dangerous point to pass. I came to an anchor at length before the town of Firando, in five fathom water, so near the shore that I could talk to the people in their houses. We saluted the town with nine pieces of cannon; but they had none to

town with nine pieces of cannon; but they had none to anliver us, and no fort, but a barricado for fmali fliot.

"The fhip was continually crouded with people; among whom were fome women of quality, that I introduced into my cabin; and feeing the pictures of Venus and Cupid there, they immediately fell down and worfhipped them, taking these pictures for the Virgin Mary and her Son, having been taught to adore such pictures by the Portugues missionaries. The king afterwards brought some of his ladies on board, who had filk gowns on, one side folded over the other, and girt with a fash, their hair long, and tied up in a roll on the crown of the head, none of it and tied up in a roll on the crown of the head, none of it fliaved off. They had good features, were very fair, but had no colour in their faces, but what they had laid on. They were of a low flature, but very fat; had delicate limbs, their legs bare, only a fort of half-bufkin tied on the inftep with ribbons: they feemed fomething baftfull still the lites hid them because and then the more and the still the lites hid them to make and then the more and the still the lites hid them to make and then the more and them the more and them the more and the still the lites hid them to make and them the more and the mo till the king bid them be merry, and then they fung, and played on an influment that refembled a lute; they kept time, and fung and played by book; and after I had entertained them, and made them fome fmall prefents of English curiofities, the king and the ladies took their

" I afterwards went on shore, and delivered my presents to the king, in which were plate and other things to the value of one hundred and fort; pounds; and the king, inviting me to an entertainment, drank to me out of one of the cups (part of the prefent) filled with rice-arrac, containing a pint and a half. He drank it off to the king of England's health; in which I pledged him, and he

or England's neath; in which I pleaged him, and he made all the company do the fame.

"The king afterwards brought fonte aftreffes on board, who go from ohe island to another, afting comedies in the great towns they pafs through. They are all one man's flaves, who fets a certain price upon their favours, which he can never advance, on pain of being capitally punished: there is no bargain made with the courtefan, but with her master, whom she is obliged to obey. A nobleman, when he travels, is not ashamed to fend for one of these keepers to his inn, and bargain with him for one or more girls to wait on him at table, and be his bedfellows, if he thinks fit; for all men of fashion are waited on by women only in the house. These keepers of hackney-girls, in their life-time, are admitted into the best company; but when they are dead, the corpfe is treated with the greatest indig-nity, not suffered to be buried, but dragged through the

he devoured by dogs. "A Dutch thip coming in while I lay at Firando, it was reported that the crew were Englithmen; for the natives did not at first distinguish one of these nations from the other, and the Portuguese had represented both as pirates, and taught them a fong, which they called the Eng-lish crofumia, acting a kind of farce alfo, wherein they pretend to shew how the English attack the Portuguese ships

fircets, and thrown into the fields to rot above-ground, or

"While we lay in the harbour, two of the officers happening to quarrel, and a challenge to fight on thore appointed, we were in great danger of being called to an account by the magistrates; for, according to their laws, whoever draws a weapon in anger is to be cut in pieces immediately, though he does no hurt; and if he wound another, the whole family or company to which he belongs, fusfers with him.

" The king of Goto, an island a little fouth of Firando, being brought on board by king Foyne to take a view of our thip; I entertained him very ipiendidly, and fired feveral guns on his going afhore, at which he expressed great satisfaction, and invited me and my stiends to his issand. I have seen some executions here, and particularly of two men and a woman for adultery; two of her lovers meeting at her house together, in the absence of the husband, and wounding one another, they were apprehended, and king Foyne ordered all three to be cut in pieces, which fenteuce was inmediately executed, and after the execution, every one of the company had a ftroke at the fulferets with their cuttans (twords) till their fleth was all cut into little bits.

"On the third of August king Foyne furnished me with a galley with twenty-five oars of a fide, and fixty men belides, to carry the king of England's prefent to the emperor. We passed between several islands, most of them emperor. We passed between several islands, most of them well inhabited, and several good towns upon them, parti-cularly the island Finate, defended by a strong castle of freecularly the island Finate, defended by a strong cassile of freestrone; and along the coast, as far as Osaca, were people,
who lived, with their whole families, in vessels upon the
water, and their women catched full, by diving for them
in eight fathom water. These women may be known by
their eyes, which are as red as blood. When I arrived at
Osaca, I had nineteen horse provided for me at the emperor's charge, to carry my people and the present, and
they furnished me with a palanquin (a couch with an
arched canopy) and a led horse; and one run before me
with a pike, to make way; we changed horse at every with a pike, to make way; we changed horfes at every flage; the road was for the most part even, and where a hill happened to be in the road, it was cut through, and the distances were marked at the end of every three miles. Villages and country-houses flood very thick, and the roads were througed with people. Their temples were usually in groves, furrounded by the cells of their piests. When we came near the suburbs of any great town, we saw the bodies of malesactors nailed to crosses, where they law the bodies of maletactors nailed to crofles, where they hang till they are devoured, and caufe an intolerable flink. We ufually travelled about forty-eight miles a day: fix men carried my pelanquin on their floulders, and up-hill they added four more, travelling as faft as I could have done on horfeback. We arrived at Surunga, where the emperor refided, on the fixth of September, and on the eighth I was carried in my pelanquin to the caffle, which is the emperor's court, the merchant's and recole who at is the emperor's court, the merchant's and people who at-tended me, carrying the prefent before me on little tables of fweet-wood, they had provided me. Having entered the castle, I passed over three draw-bridges, on every one of which was acourt of guard; having alcended fome ftone fteps, I was not by the emperor's feeretary and admiral, who introduced me into a large room, and fat down on mats crofs-legged. Soon after I was led between them into the prefence-chamber, where they directed me to bow to the emperor's chair of flate. The prefent being ranged upon the floor, the emperor came in, to whom I paid my compliments after the English manner, and delivered his majetty's letter, which he lifted to his forchead, and dimajetty's letter, which he litted to his forchead, and directed his interpreter to tell hie I was welcome, and that I should rest inyself a day or two after my fatiguing journey, and his answer should be ready for the king of England. I had afterwards an audience of the king's son, at the city of Jeddo, to whom I delivered my presents. On the nine-teenth the king sent me two suits of an our, varnished, as a prefent to his majefty, with a letter, wherein he thanks the king for his prefent of fuch curious things as his country did not produce; neither had he feen the like be fore. His fubjects were welcome to him; he applauded their fkill in navigation, that they could vifit a country fo remote without being terrified at paffing through fo immenfe a gulf and fuch florms, to promote commerce, which he should give them all manner of affiliance in, defiring his majefty to accept his prefent, as a mark of his friendship: and adds, that he had given orders for drawing up articles of trade between the two nations, as his majetly defired.

" By these articles he granted, that Sir Thomas Smith, the governor, and the rest of the East India company, might resort to any of his ports to trade, without paying any duties of import or export : that they might build one house or more in any part of his empire; and if any of their goods happened to be cast by shipwreck on his coasts, they flould be reflored; if any of the merchants died, their effects might be disposed of by the Cape merchant; and all offences committed by the English should be tried and punifhed by him: neither their perfons nor goods fhould be fubject to the laws of Japan; that payment fhould be im-mediately paid for all goods contracted for, without any deductions; and that they should be at liberty to make discoveries on the land of Jesso or Yedso, and his subjects fhould furnish them with provisions.

SECT. IV.

Containing the natural history of Japan in general, and an account of its respective sovereigns, &c.

APAN being fituate between the fourth and feventh climates, the fun rifes there about eight hours before The fea breezes greatly mitigate the heat it does with us, in furniter, but they render the winter exceffively cold, and occasion the seasons to be more inconstant than in any other parts of the Indies. Heavy rains formetimes continue almost the whole year; but in the months of June and July, which are called the water-months, they are al-ways excessive. The country is likewife frequently visit-ed with dreadful storms and hurricanes, thunder, light-

ning, &c.
The foil is rocky, or rather sterile; but the industry of the inhabitants hath overcome the unkindness of nature, and given fertility to a land of itself unfertile. They have rice, of which they make bread, and brew beer; with the barley they feed cattle, convert their fine wheat into cakes, and of two species of beans they grind one to meal to boil for eating, and with the other make a kind of confec-tionary. They have, befides Indian wheat, millet, and many other forts of grain. Even the rocks, and other barren places, have been fo well cultivated, as to produce abundance of fruits and plants. They have good patturage, which feeds great numbers of buffaloes, oxen, theep, horses, deer, &c. and various flowers and herbs, particularly excellent tea. There are great quantities of fish in the circumjacent seas, rivers, and interior lakes. Besides the above-mentioned animals, they have a fine breed of horses that are small, but uncommonly swift and extremely beautiful. Many wild beafts, that yield a great number of valuable furs, and elephants, whose teeth are a very profitabl. article to them, are found here.

The principal rivers are, 1. The Ujingava, whose wafo furious, that no bridge can be built over it; 2. The Corric, that takes its name from the province in which it rifes; and, 3. The Askagava, remarkable for its derth and perpetual fluctuation. The chief lake, called Citz, is one hundred miles in length, and twenty in breadth. It difembogues itself into the sea on the south west side of the island: this extensive large lake is formed by the conflux of feveral rivers, which are in general ex-ceedingly rapid, and many dreadful cataracts defeends from

the mountains.

The feas which incircle this country produce red and white coral, ambergris, admirable pearls, and many curious shells, sea-weeds, &c. but the greatest wealth of the empire refults from its invaluable mines, particularly those of gold. The emperor claims an exclusive right to all the gold and filver mines, as well as all the gold fand, in his dominions. The copper mines are innumerable, producing a fine and coarle fort. The bowels of their mountains are likewife pregnant with fulphur, iron, and fleel; but they have not any quickfilver, antimony, fal-ammoniac, calamy, cinuabar, or borax.

They procure falt by inclofing portions of ground near e fea, covering them with fine fand, and repeatedly throwing fea-water upon the fand, till it is well impregnated with the faline particles: it is then placed in large vessels, with holes in the bottom, for the falt to fall into proper receivers, as it filtres, through the fand: after

which it is boiled, and brought to a proper confistency.

Earthquakes, and the volcanoes, of which there are eight very dreadful ones in the country, are supposed to be effected by the fulpher every-where inclosed in the bowels of the earth. From the fame cause may be deduced their hot baths and mineral fprings, which are extremely nu-nicrous; fome equal the heat of boiling water, and others are even as hot as boiling oil. They have many cold mineral forings, but neither of them are applied medicinally, through the extreme ignorance of their physicians.

A species of white ants is found in Japan: they are exceedingly beautiful, but very mischievous; for they pierce, with their little mouts, through every thing they near, except metal and stone, and greatly damage all kinds of goods, if not prevented from approaching them, by firew-ing the adjacent places with falt, which is abhorred and avoided by these little insects.

There are in Japan some of the finest ducks in the universe for fize, shape, and beauty. The nightingales are likewise some of the most melodious to be sound. The beetles make an agreeable kind of humming noife, which gradually rifes to a pretty high note. The night-fly, however, exceeds all other Japanese insects for its beauty: the body is about three inches long, round, and finely shaped: it has four wings, viz. two close to the body, which make a brilliant appearance, by means of the admirable blue and gold streaks, with which they are tinged; and two above these, whose transparency not only admits of the others being feen through them, but even adds to their finning luftre. This infect is a mighty favourite with the ladies, and has given rife to the belt fable ever written by any of the Japanese poets.

A great number of camphire-trees grow near the hot-fprings: they refemble laurels, and bear purple or black berries. The cedars of Japan are some of the finest in the universe; and many other trees abound in those islands, particularly plantanes, &c. fome of which, when fawn or cut afunder, exhibit admirable figures of birds, beafts, landkips, &c. Many curious pieces of furniture are made of these, which appear very beautiful when polithed.

There are in this empire many useful stones of various

colours; also abundance of excellent marble, which is used in the construction of many of the principal edifices; they have also porcelane earth, &c. With respect to other articles in the animal, vegetable, and mineral systems not mentioned above, Japan abounds in most that are niet with

in the Chinese empire, already described.

With respect to the history of the Japanese, their annals are replete with such inconsistent absurdities and ridiculous fables, that no dependence can be placed on them till about fix hundred and fixty years before Christ, which is their common æra; and according to which, our pre-fent year 1982 is with them the year 2442: it is likewife to be observed, that the Japanese year begins with the nearest new moon which either precedes or follows the fifth day of February. The histories written by the natives take very little notice of the policy, virtues, vices, or transactions of their monarchs, but are filled with an account of their defecut, names, birth, fuccession, length of reign, &c. We shall present our readers with the sol-lowing account of their sovereigns, taken from their own historians

1. Simmu was the founder of the Japanefe monarchy: he began his reign fix hundred and fixty years before Chrift. In the feventieth year of his reign, he inflituted a form of government, established laws, civilized the people, taught them chronology, and feveral arts and fciences; divided time into years, and years into months and days : fecured the crown to his posterity; and, having reigned feventy-nine years, died in the one hundred and fortyninth year of his age; but as nothing particular happened in his reign, or in those of several of his fuccessors, we shall only give a catalogue of their names till a remarkable

reign renders a more ample account necessary.
2. Sui-fei; who reigned thirty-three years, aged eightyfour. 3. Enci; reigned thirty-eight, aged eighty-four.
4. Itoku; reigned thirty-five, ag a feventy-feven. 5. Kofio; reigned eighty-three, aged one handred and fifteen. 110; regned eighty-three, aged one handred and fifteen.
6. Koau; reigned one hundred and oue, aged one hundred and thirty-feven.
7. Korei; reigned feventy-fix, aged one hundred and twenty-eignt.
8. Kowkim; reigned fifty-fix, aged one hundred and fixteen.
7. Kay-kwo; reigned fifty-nine; years, aged one hundred and eleven.
7. Swin-fin; reigned fixty-eight, aged one hundred and thirty-nine; reigned winety-eight, aged one hundred and thirty-nine.
7. Key-ko; reigned fixty-aged hundred and thirty-nine. 12. Key-ko; reigned fixty, aged one hundred and forty-three.
aged one hundred and eight.
13. Sey-mau; reigned fixty,
aged one hundred and eight. aged fifty two.

15. Thauai was succeeded by his empress Sinku-cogu, who was the first female that reigned in Japan, she waged war against the Koreans, and headed her army in person; but finding herfelf pregnant the returned to Japan, and was delivered of a fon, that succeeded her, and who afterwards on account of his military exploits was ranked as a god, and became the Mars of the Japanefe; the empress herfelf, who reigned seventy years, was deemed the Bellona of this

empire.

16. Woosin; who reigned forty-three years, and died aged one hundred and thirteen.

17. Nintoku; reigned eighty-seven, aged one hundred and eleven.

18. Riffu; reigned six, aged seventy-eight.

19. Fansey; reigned eight, aged fixty-three.

20. Inkioo; reigned forty, aged eighty.

21. Ankoo; reigned three, aged fifty-seven.

22. Jurukia; reigned twenty-three, age uncertain. 23. Senet; reigned five, aged forty-two. 24. Gen-foo; reigned three, aged eighty-five. 25. Nin-ken; reigned eleven, aged fifty-feven. 26. Buretz; reigned eight, age uncertain. 27. Kei-tei; reigned twenty-leven, aged eighty-one. 28.

Ankan; reigned two, aged seventy-one; these two last-mentioned were both dessed. 29. Scukva; reigned sour, aged seventy-sour. 30. Kimme; reigned thirty two, aged sixty-three. 31. Fit-atage; reigned sourteen, age uncertain. 32. Joo-mei; reigned two, age uncertain. 33. Sixsum; reigned sive, age uncertain. 34. Syko; an empres, her age not noticed. 35. Disoue; reigned twelve, age uncertain. 36. Kwogozu; reigned three, an empres, her age not known. 37. Kootoku; reigned ten, age uncertain. 38. Sime, an empres; reigned seven, her age not known. 30. Tent-still; reigned ten, age uncertain. in Japan, and put an end to the poffibility of raifing infur-rections. He expelled the Portuguese from Japan, pro-hibited their ever after trading with his subjects, and be-gan the first perfecution against the Christians. He died on the fixth of December, 1598. He was defied after his decease, and called the second Mars of Japan. 30. Quanbacumdono, who was the nephew of Taycho, is accounted the thirtich cubo, as he reigned for some time in conjunction with his uncle, but having disbliged that monach, he was ordered to rin un his own bowle. that monarch, he was ordered to rip up his own bowels; the moth honourable method of fuffering death in Japan.

31. Fide-Jufi: he was the fon of Taycho, and began his relgn at fix years of age: during his munority, the affairs of government were conducted by his failter-in-law Jicias. not known. 39. D. 947, and 1697 of the Japanese year, called together a synod of the clergy, to regulate all that related to the ecclesiastical establishment in Japan, and to prescribe the ceremonials of the modes of worship proper

for every fect.

Thirteen emperors are mentioned, from the death of this monarch, 'ill the reign of Kon-jey, but nothing worth recording happened in their reigns; they occupied the space of one hundred and seventy-four years; after these, the

of one nunared and reventy-rous years, and take, the throne was filled by 76. Kon-jey, who began his reign in the year 1142. In his time was born the celebrated crown general, Jeritomo, who rendered himself fufficiently formidable to thrip the dairos of their fecular power, and to vest it in his own

family in fuccession.

A double chronology commences from this period, in-cluding the reigns of the dairos and of the cubos. The number of dairos, from Kon-jey to Ken-fen, is thirty-eight, who occupied a space of five hundred and forty-five years, that is, from the year 1142, to the year 1687, or from the Japanele year 1802 to 2347; after which period the excludion of all Christians from Japan, the Dutch excepted, and the total filence of the Dutch writers upon every subject but those which relate to trade, and emolu-ments accruing from their commercial affairs, render it impossible to say any thing farther of the Japanese history.

And as the dairos are totally excluded from society, the transactions of that period are not to be connected with their names, but should be recorded in the reigns of the eubos, which are as follows: 1. Jeritomo reigned eleven years. 2. Joriije, five. 3. Tannetomo, feventeen. 4. Joritzne, eighteen. 5. Jorifane, eight. 6. Mune-takafinno, fifteen. 2. Kore-jaffinno, twenty-four. 8. Kume-finno, twenty-five. 9. Mori-kuni-finno, twenty-five. 30. Sonun-finno, two. 11. Nari-jofi-finno, three. 12. Taka-udfi, twenty-five. 13. Jofi-jaki, ten. 14. Jofinitz, forty. 15. Jofi-mori, twenty-one. 16. Jofi-kara, not one. 17. Jofi-nori, fourteen. 18. Jofi-Katz, three. 19. Jofi-Maffa, nihe. 20. Jofi-Mavo, under his father. 21. Jofi-tanne, eighteen. 22. Jofi-funnu, fourteen. 23. Jofi-far, thirty. 24. Jofi-tir, fixteen. 25. Jofi-taki, four. 26. Jofi-aki, five. 27. Nobmaga, ten. 28. Fide-Nobu, three. The Japanese do not mention the ages of these princes; and indeed they have been more remis in this particular in the recent than in the early reigns; pethaps the great length of the former rendered them more remarkable than the latter could be from their general brevity. eubos, which are as follows: 1. Jeritomo reigned eleven general brevity.

20. Taycho; who was of a very mean extraction, but in his youth raifed himfelf to be butler to a tributary prince, and by dint of valour and merit was at length exalted to the cuboship. He was the first monarch who obliged the petty kings and great lords to attend him perfonally, and fuffer their wives and kindred to refide in his palace, as hoftages for their fidelity; by which prudent policy, he firuck at the very root of that rebellious spirit so common daughter of that nobleman, who deprived him of his cre wn and life, after a reign of fourteen years.

32. Jigas-Samma, when he had ufurped the throne, made the following articles the principle objects of his reign: 1. The total extirpation of the Portuguese from Japan. 2. The prolibiting any of his subjects to leave the empire, and the recalling those who were in foreign parts.

3. The publication of several edicts against gaming, luxury, and duelling. 4. The granting a Dutch factory to be established in Japan.

The persecution of the Christians in Japan, both natives and foreigners, was carried on with such horrid cruelty, that in the first four years of his reign twenty thousand sive hundred and seventy persons were massacred. Notwithstanding which in the two succeeding years, after the churches

hundred and feventy persons were massacred. Notwithstanding which in the two succeeding years, after the churches had been shut, and the public professing of Christianity prohibited, the jessies, by their private endeavours, made twelve thousand professes; and when any of these were detected, they not only absolutely resused to abjure the Christian faith, but readily submitted to death, and suffered martyrdom with assonising constancy. And indeed, the persecution continued sorty years, reckoning from its commencement in the reign of Taycho, with unremitting cruelty, before Christianity could be totally exterminated. Jiejas died at about seventy years of age, having reigned Jiejas died at about seventy years of age, having reigned about five years after the death of Fide-Josi.

33. Fido-Tado, who was the grandfon of the above monarch, continued the above perfecution, till at length the Christians, driven to the utmost despair, retired, to the number of thirty-feven thousand to the cattle of Simabara, in the island of Ximo, where they determined to defend themselves to the last extremity. The Japanete army laid siege to the place, which held out for three months; but at length was compelled to surrender on the 12th of April, 1638, when the Christians were all put to the sword. This monarch reigned eighteen years, and was succeeded

by his fon,
34. Jjemitz; who reigned twenty one years, he left
the crown to
35. Tjetznako, who was the fon of the former, reigned

thirty years, and was succeeded by
36. Tsinajos. This monarch was the last prince that
we have any authentic account of, and was upon the throne when the Dutch ambaffador was at Japan, in 1692, being then forty-three years of age, and had reigned thir-teen years; he was a great philosopher, a flrict observer of the laws, exceedingly humane and benevolent, and in all respects studied to promote the true interest and happiness

of his people.

Whether the land of Jesso or Jadso, be annexed to Japan or not, the inhabitants of both countries doubt, because vast and inaccessible mountains interpose, which hinder the communication. It either doth it as yet clearly appear, whether this land of Jesso is a part of Fartary, or whether by any arm of the sea divided from it. The Chincle affirm, that Tartary runs three hundred leagues castward beyond their famous wall; so that if we follow callward beyond their famous wall; so that if we follow thefe, the country of Jeffo and Japan may feem to be an-nexed to Tartary. But those of Jeffo say, that there runs an arm of the sea betwixt them and Tartary; which opi-nion may seem to receive some confirmation from what those Hollanders affirm, who were shipwrecked (some years lince) upon Corea, a peninfula of China; they say they saw there a whale, upon whose back stuck an harp-ing iron of Gascony; and the credit of this affection not better configured by any it is most probably to be combeing queftioned by any, it is most probably to be con-jectured, that this whale passed from Spitzberg through the nearest arm of the sea, rather than through the more remote. He it how it will, we may bence safely conclude. that the fea which lies beyond Japan and Spitzberg is palfable, and that through more, perhaps, than one arm, or channel, by which they communicate.

Sarazakki, that is caught upon its coat, and which is confidered in Japan as a great delicacy; but the natives of Jeso never come to Japan, as they are afraid to cross the straights, though it requires but a day to fail over them.

The people of this country are strong, sierce, and favage; they wear their hair and beards long, and cover themselves all over with the skins of wild beatls, with the fur outwards, fo that upon the whole, they have a most frightful appearance. Those who live on the fouthern coast are faid to be much more civilized than such as refide in the inland parts; and that the emperor of Japan

side in the inland parts; and that the emperor of Japan had a governor, and a garrison in the capital, which is called Matzimai, to receive his tribute, which is paid in sure, feathers, and silver.

The country is rocky, woody, but little cultivated, and in many places barren; it only produces a coarse kind of barley, some roots, and a few fruit-trees. The natives are expert in sishing, hunting, and the use of the bow and arrow, which are their only weapons. They are strong, hardy, and addicted to drinking, when they can procure liquor; they have their cars bored, and have filver ornaments hanging to them. The results working the formatics. ments hanging to them. The people worthip the firmament, but have few religious ceremonies.

A more favourable description of these people is given by stather DeAngelis, a Cicilian jesuit, who went to Jeslo in 1620; and resided a considerable time among them: he informs us, that the natives are stouter, taller, and fairer than the Japanele; that they let their beards grow very long, but shave the fore-parts of their head; that they make a very strong wine, which they drink to excess; and dress themselves in very pretty filk, corton, or linen gowns, which are long, and embellished with needle-work tolerably executed. He likewise tells us, that befides bows and arrows, they use lances, feyinetars, and poisoned darts; that they are quarrelfome, capricious, passionate, and revengeful; but at the same time almost as ceremonious and insincere as the Chinese. Polygamy is allowed among them; and adultery they thus punish: the man pays a pecuniary sire, and the woman is close shaved, which is the greatest difference that can happen to her. If the gallant refuses to pay the fine, the hulband has a right to strip him when-ever and wherever he meets him, and fend him home naked: to effect which, he calls to his assistance all that are near at hand, who are obliged to aid him in plundering the adulterer.

All the particulars mentioned by the above jesuit are confirmed by several Dutch mariners, who have, fince his time, visited Jesso; and farther add, that their boats are made of flight boards sewed together with cords made of the bark of a tire, called coxo, which, when they return from fithing, are unlewed again, and carefully laid up; that many of the natives wear rings on their fingers, as well as trinkets in their ears, and paint their lips and eye-

wen as trinkers in their ears, and paint their lips and eye-brows blue; that the men are very jealous; the women in general modeft; and, the language is a corrupt mixture of the Chinefe and Japanefe congues. Matzimai, the capital town, is a very inconfidentale place. Here the prince of the country, as well as be Japanefe governor, refide, but the former is obliged to go once a year to make a prefent to the emperor of Japan, and do him homage.

Criminals are executed here in a very fingular manner: the culprit is laid flat upon his back, his arms and legs being stretched out, and held tight by two stout sellows to each; then the executioner, who is armed with an iron headed club, dances round him, fings a fong, and at length discharges such a blow at his head as breaks his feull, which is immediately followed by another on the stomach, that

dispatches him in an instant.
We have no other account of the Higher Jesso or Oku, from the Japanese geographers, than that it is nine hundred n.iles in length; but the fouthern part of Jesso, already described, were conquered by Joritimo, the first cubo of Japan, and annexed to the dominions of that empire. SECT. V.

Containing an account of the Philippine and Ladrene or Ma-rian islands.

THE Philippine islands are situate in the Chinesian fea, part of the pacific ocean, between one hundred and fourteen and one hundred and thirty degrees of eastern longitude, and between five and nineteen degrees of north latitude, about one hundred leagues fouth-east of China. There are eleven hundred of them, and several very large. The chief of the most northerly of them is Manila or Luconia, which is the largest of the Philippines, and is fituate in fifteen degrees of north latitude, being about four hundred miles long and above one hundred and eighty

four interest missiong and above one nundred and eighty broad in most places.

The capital of this island, and of all the rest, is the city of Manila, situate on a bay in the south-west part of the island, being two miles in circumsteence, furrounded by a wall and other works, a very commodious harbour, but of difficult access, on account of the rocks and sands which lights for it as a sall and the control of the rocks and sands which

of difficult accets, on account of the rocks and fands which lie before it; a caffle defends the entrance.

The chief buildings are the cathedral, parish churches and convents; one of the religious houses is appropriated to the support of orphans, daughters of the inhabitants, who are provided for during their lives; or, if they chief to marry, have a portion of two or three hundred crowns given them. Their churches, chaptels and altars, are rightly advanted, and the invoccofficus on holidays as splendid. richly adorned, and their processions on holidays as splendid as in Spain. The college of the jesuits here, as in most Popill countries, is more magnificent than any of the

The island of Luconia, or Manila, is esseemed health. ful, and the water in it the best in the world. It produces all the fruits of warm climates, and has an excellent breed of horfes carried thither from Spain. It is well fituated for the Indian and Climefe trade; and the bay and port, which lies on the west side of it, is a large circular bason of ten leagues diameter, entirely land-locked. The city of Manila, which stands on the cast side, is large and conbeginning of the first war with the Spaniards, in the reign of king George II. was an open place, only defended by a little fort; but confiderable additions have lately been made to its fortifications. The port peculiar to the city is that of Cabite, which lies two leagues to the fouthward, and here the fluips employed in the Acapulco trade are fla-

The city is healthfully fituated, and well watered, and has a very fruitful country in its neighbourhood; but it is fome difadvantage to its trade, that it is difficult getting out to sea to the castward, through such a number of islands; here the Spaniards waste abundance of time, and

are often in great danger.

The Trade from hence to China and India confifts chiefly in fuch commodities as are intended to supply Mexico and Peru, namely, spices, Chinefe filks, and manufactures, particularly filk stockings, of which no less than the thousand pair have been shipped in one cargo, with vait quantities of Indian stuffs, callicoes and chints, which are much worn in America, together with other small articles, such as goldimiths work, &c. wrought at the city of Manila by the Chinese, of which nation there are not lefs than twenty thousand residing there, as servants, manufacturers, or brokers. All these articles are transported annually to the port of Acapulco in Mexico: this trade is not open to all the inhabitants of Manila, but is restrained to the convents of Manila, principally to the jesuits, being a donation to support the missions for the propagation of the Catholic faith. The tonage of each ship is divided into a certain number or bales, all of the same size, and the convents have a right to embark such a quantity of goods on board the Manila ship with the tonage of their bales amount to. The trade is louised by royal edicts to a certain value; according to some, it should not exceed fix are much worn in America, together with other fmall ara certain value; according to fome, it should not exceed fix hundred thousand dollars; but it is frequently known to amount to three millions.

The bulk of the people of Manila are of Chinese or Malay, nextraction, and there are some blacks. The Spain their hands. The adjacent country is full of fine plantations, farms, and country-houses of the principal inhabitants. Upon the mountains, in the middle of the country, the people live in tents and huts, under the forcading trees. The plains are overflowed in the rainy foreading trees. The plains are overflowed in the rainy feafon, the houses built upon high pillars; and the people have to communication but by boats during the rains,

which usually fall in June, July, August, and September, and then happen terrible storms of wind and thunder, and then happen terrible florms of wind and thunder. Earthquakes are frequent; the city of Manila has fuf-fered feveral times by them; and from the volcances, which about there, iffue torrents of fire and melted minerais. These are the inconveniences we meet with; but the fall series as for the most part exceedingly pleasant.

The city of I brails contains about three thousand in-

The care of Tunila contains about three thousand in-habitants and during the second war in the reign of king George T. was, in the year 1763, taken by admiral Cor-nith and Sir William Draper. It was, however, flipu-lated to be ransomed; but the ranson-money bath never yet been intirely discharged. The prieffs take prodigious pains to make converts to the Romith faith, and have been pretty successful in their endeavours. The Indians pay a poll-tax; and a considerable sun of money is annually al-lowed for the support of semale orphans, both of Spanish and Indian parents. and Indian parents.

The complexions of the feveral people who inhabit these islands are very different. The blacks are as black as the Caffres of Afric, but differ from them in their features and long hair, and therefore are supposed to be of Indian extraction; and as they possess the mountainous and inacceffible parts of the country, it is conjectured, that they were the original inhabitants, and driven up thither

by fucceeding adventures.

The defeendants of the Malayans (inhabitants of Ma-bred) are very tawny, the Chinek not fo dark, and the Spraiards are pretty near the colour of the Chinek. There is also a nation of sunted people, called Pintados, who colour their Ikins like our anceliors the Picts.

The natives are for the rue I part of a moderate flature, and their features just, the Spranards have taught them to cloath thermfelves, except the black's, who only tie a cloth about their loins, and annote shout their heads, and ufu-

ally go bare-root.

Rice and fifth are most caten by those who live near the fea-coalls, and the mountaineers eat the fifth they take in hunting, and the fruits of the earth, which grow pontane-onfly in great plenty. Their liquor is water, which they ufually drink warm as the Chinefe do. They have also rilm wine, and finituous liquors distilled from the juice of the sugar-came, rice, &c. I hey bathe twice a day in cold water, either for health or diversion, or both: plays are another diversion and they are entertained frequently with dancing and mock fights.

These islands are extremely well situated for trade; all the rich merchandize of India is fent from hence to America, and the treasures of Mexico and Peru are brought

lither annually, by which exchange, it is faid, they make a profit of four hundred per cent.

Few countries enjoy a more fruitful foil; the people in reany places live upon what the earth produces spontane-oufly, and the furface of the ground is exceeding beautiful; the trees are ever green, and feldom without fruit.

Their neat cattle run wild in the mountains, and are

hunted, as well as deer, wild hogs and goats. The mon-kies and baboons found here are very fagacious: during the feason, when there is no fruit to be got, they go down to the fea-fide to catch-oysters; that the fish may not pinch their paws, they put a stone between the shells, to prevent their shutting close. Wax is so plentiful, that they make no other candles, and never burn lamps. Their bees are of feveral kinds, fome of them very large, and make their combs in the woods, producing furth quantities of honey as would almost subsist the natives.

Medicinal and sweet gums issuing from the bodies of trees are part of the produce: ferpents of various kinds are found in these islands; but the fathers who relate that are round in title illands; but the rathers who relate that fome of them are fo large, they will fwallow a flag, horns and all, furely do not expect to be believed, any more than when they relate, that the leaves of trees are converted into infects; but the laft of the flories may proceed from a midtake, for it is certain that fome infects deposit their ears do show do with the control of the state of the their eggs (as they do with at most the leaves of trees, which are hatched there, as is the case of the cochineal fly; and they might ignorantly imagine that those infects proceed from the leaf. The alligators are very dangerous; and the ignana, a kind of land alligator, does a great deal of mischief. Among their birds, are peacocks, parrots, cocatoos, and turtle-doves, which are very beautiful, fowls with black bones, and the bird tavan, which lays a number of eggs in trenches in the fand, and leaves them to hatch there. The faligan failens her nefts to fome rock, as a martin does against a wall, which diffolying into a kind of jelly in wann water, is effected delicious food. Here is also the xolo bird, which cats like a turkey; the

camboxa is a well-tailed fowl peculiar to these itlands. The herrero or carpenter is a fine large green bird. It is called the carpenter, because its beak is so hatd, that it digs a hole in the trunk, or some large branch of a tree,

digs a note in the trunk, or ionic large chances. Occas, in order to build its neft.

Their fruits are mangoes, plantains, bananoes, cocoas, tamarinds, caffia, and the cocoa or chocolate nut, which has been brought over from Mexico: oranges, lemons, and all manner of trophical fruits. The cinnamon and

nutmeg tree have been planted here; but degenerate, and are good for little.

without it.

A great deal of good timber and dying woods grow in these islands; and the calamba, or sweet-wood, a kind of cane, grows in the monuments, which, if cut, vields a

draught of water, and is or great fervice to the natives.

They have one plant that has all the properties of and is used as a liabilitude for opining of the the native are very fond, and frequently intoxicate Premielyes with it.

very fond, and frequently into a sate Prenulelyes with at Flowers and fweet herbs grow wild here, but they do not cultivate them in their gradens, and there are abundance of medicinal, as well as poifonous herbs and flowers, which do not only kill those that touch or tathe them, but for infect the air, that many people die in the time of their biolioming; on the contrary, these instands we pro-dentially well bruilled with antidotes, particularly the bezoar stone, which is found in the belly of a creature much like a deer; and the root dilea, which is like ginger, and heals wounds made by any venione. Lets, being bruised heals wounds made by any venione. heals wounds made by any venomo. . . coft, being bruifed and boiled with oil of cocpas.

The tree cannoideg is 60 estomous, that the pilchards eating the leaves which fall into the fea die; as will the persons who eat the possens difficult from the trunk of this tree serves these people to posion the points of their darts which they blow through the trunks abovementioned: the very shadow of the tree is so destructive, that, as far as it reaches, no hetbor grass grows; and, if transplanted, it kills all the other plants it stands near, except a small shrub which is an antidote against it, and always with it; a bit of a twig of this shrub, or a leaf carried in a man's mouth, is said to be a security against the venom of the tree, and therefore the Indians are never

The make bukey, which fignifies the giver of life, is a kind of ivy which twines about any tree, and grows to the thickness of a man's finger; it has long shoots like vine branches, of which the Indians make bracelets, and efteem them a prefervative against possion. There are many other trees and planes of extraordinary virtue in these islands; among others, there is the fensitive plant, in all respects like a colewort, which growing out of a rock, avoids the tourh, and retires under water: there is another that grows on St. Peter's hill about Manila, which is not very tall, and has little leaves, which whenever it is touched, draws back and closes all its leaves together; for which reason the Spaniards call it la vergin cosa, that is, the bashful.

There grows near Cathalagan, in the island of Samar, a plant of a surprising virtue, discovered by the fathers of the society, as they tell us, of late years: the Dute's have also fome knowledge of it, and, it is faid, will give double the quantity of gold for it. The plant is like ivy, and twines about any tree it grows near: the fruit which grows out of the knots and leaves refembles a melocotoon in bigue. and colour, and within has eight, ten or fixteen kernels as big as a hazel nut, each green and yellow, which when ripe, drop out of themselves.

The ulual dose give a of it is the weight of half a royal,

that is the fixteenth part of an ounce, powdered and mixed in wine or water; For has no effect the first time, the powerful antidote against any us herbs or darts which are dose is repeated, a: poitun, either of ... used by the native acaffar, Borneo, and the Philip-

The general to uge spoken in these islands is the Malayan tong the heates which, every people have a language peculiar to the fives. They write on cocoa-nut leaves, with an iro A tracen ; and arts and feiences have been introduced by the look in ds, the natives having nothing of this kind to both at before their arrival.

All thefe iflands, ager & Mindanao and Paragoa; are unpanish vicetoy, who has goverder the jurifdiction of nors ut ler him in quence; and the like courts are creeted for the trial of civil and criminal causes, as in old Spain. The archbithop of Mauila, the bithops and their commissaries, deter-mine ecclesiastical causes as in Europe; but there lies an appeal from them to the pope's delegate, who refides in one

These favages as the Spaniards call them, worship one supreme God, and their ancestors, as the Chinele do, from whom most of them are descended; they worship alfo the fun and moon, and almost every thing they fee whether animate or inanimate, groves, rocks, rivers, and one particular tree, which they would effect it a facrilege one particular tree, which they would effect it a facrilege to cut down, believing the fouls of fome of their friends may refide in it, and that in cutting the tree they may wound a near relation. Inflead of temples, they have caves, wherein they place their idols, and facrifice to them. caves, wherein they place their idols, and laterifice to them. Some beautiful young wrigh first wounds the wistim with a spear, and then the priests dispatch the animal; and, having dressed the meat, it is eaten by the company. Super-stition prevail among them; they have their lucky and unlucky days; and if certain animals cross the way when nninexy days; and it certain animals cross the way when they are going upon bufines, they will return home, and go out no more that day. The Spaniards tolerate them in their idolatrous worfhip; and fuffer them to game, on paying to the government ten thousand crownsper annum. They are also much given to a detestable vice; and did not imagine it to be a crime, till the Spaniards punished them for it.

The men purchase their wives here as in China; and the marriage ceremony is performed by a prieflefs, who facrifices fome animal on the occasion; after which, the bride is led home, and the whole concludes with an entertainment as at other places. They marry in their own tribe, and with their nearft relations, except the first degree; some of them are confined to one wife, other tribes allow a plurality of women, and divorces for reasonable causes on either side. Children are either named after heroes or flowers, or from fome accidental circumstance that occurs at the time of their birth; but as foon as they marry, they chuse new mames, and their parents are obliged to make use of their old ones.

The dead are washed and perfumed, wrapped in filk, and put in a close cossin, near which a chest is placed that contains the arms of a man, or domestic utensits of a woman: monrners are hired to affift in making a difmal

noice. They bury their dead as in China, and do not burn them: as foon as the body is buried, an enter-tainment is made, and all is converted to mirth and festi-

In general, they mourn in black garments; and there their heads and eye brows.

The next Spanish island to that of Manila is Samar or The next spanish island to that of Manula is Samar or Philippina, between which and Manula is a narrow chanael, called the draight of Manula, the north-east point whereof is called Spirito Sancto; the island is near four hundred miles in circumference, the chief town, Cathalagan, governed by a Spanish alcade. The island of Sebu, which lies in ten degrees fout latitude, is the place where Magellan first feet up the Spanish colours; the chief town, named Nombre de Dios, afterwards made a bishop's see, the interest based of the second of the colour second of the second of has in it a cathedral and feveral other churches and monaf-The island of negroes lies west of Sebu, and was fo named because it is inhabited chiefly by blacks. Min-canao lies the most foutherly of any of the Philippine ilands, and is the largest of them except Manila, being near two steadyed miles in length, and one hundred and fifty in Parado, It is possessed by people of different nations and white or religious; but the Mahometans, who are situate on a sea coasts, are much the most numerous, whose soterrica is filled fultan of Mindanao. Those who possess the and the island are called Hillanoons, and anowas nation filled Solognes, are fituate on the north-west

coast. The air of this island is not so hot as might be expected, being refreshed frequently by the sea brezzes, and the periodical rains, which lay the state country under water. The winds blow from the east, from October to water. The winds blow from the east, from October to May, and then turn about and fet westerly; next month the rains and forms flucced; at fift there are not more than two or three flowers a day; they afterwards come oftener, with violent hurricanes and loud thunder, and the wind continues wellerly until November, during which time they have such storms that trees are blown up by the roots, the rivers are overflowed, and they do not fee the fun or flars formetimes in a week: about August the

air is very cool, the rain and wind are moderate in Sep-tember, and in October the wind blows from the east again, and it continues fair till April, and sometimes May. Mindanao, the capital eity, lies on the south side of the island, in one hundred and twenty-three degrees fifteen minutes of eastern longitude, and fix degrees twenty miminutes of eattern longitude, and its degrees eventy intuition north latitude, near the mouth of a river, and about two miles from the fea; the houfes being built on barning built on barning the firefore of boo pillars, fixteen or eighteen feet above the furface of the ground, on account of the annual floods, when they have no communication with one another but by boats. The city is about a mile in length, built along the winding bank of the river; the Sultan's palace is bupported by one hundred and eighty trees, and has twenty cannon mounted in the front; and several of the nobility have great guns in or before their louses. Large ships cannot come up to the town, their being scarce eleven seet water on the bar, at the entrance of the river.

The natives are held to be men of a sprightly genius, but very lazy, and indolent, and will rather thieve than work; but none are more active when they find there is a necessity for it; and there may be two reasons for their lazy disposition, one from the heat of the climate, and the other from the tyranny of the government, no man being fure he shall enjoy what he acquires by his industry.
The Mindanayans are of a low stature, and very slender,

of dark tawny complexions, black eyes and hair, flat faces, short noses, wide mouths, and black teeth, which they take abundance of pains to dye of that colour; and they wear the nails of their left hands almost as long again as their fingers, feraping and dying them with vermillion.

The men have a liaughty mein, and yet are faid to be very complaifant to foreigners, unless they are insulted, and then they seldom sail to resent the affront, and destroy

their enemy by poifon or a dagger, never hazarding their perfons in a duel.

Their habit is a linen frock and drawers, and a finalt piece of linen cloth tied about their heads; but they go piece of linen cloth tied about their heads; but they go bare-foot: the complexion and features of the women are better than those of the men; but yet they too much refemble the other sex, and cannot be admired for their beauty; they wear a frock like the men, and a piece of cloth round their waist; the sleeves of the frock being large, and coming down to their wrists. Their hair is tied up in a roll at the hinder part of their heads. The men shave their heads, all but a lock that is left in the middle of the crown, like other Mahometans; their beards are very thin. being sulled must the roots with tweezers. Peothin, being pulled up by the roots with tweezers. Peo-ple of figure are cloathed in filk or fine calico; the women go barefoot as well as the men, and adorn their arms and fingers with bracelets and rings. They are not reftrained from converling with their countrymen or foreigners.

The food of people of condition is flesh, fish, and fowl of all kinds, except hogs flesh, which the Mahometans never touch. The poorer fort content themselves with rice or all kinds, except hogs fielh, which the Mahometans never touch. The poorer fort content themselves with rice and sago. Rice is the principal part of the meal with all of them; they take it up with their hands, using neither knives or spoons; and their meat, whatever it be, is boiled to rags, that it may very easily be pulled to pieces with their singers. They usually drink water, but make a pretty strong liquor with plantains; they wash before and after every meal, and bathe several times a day. Swimming is one of the chief diversions of the women, as well as the mean to which they are used from their in. well as the men, to which they are used from their in-

fancy tancy.

Upon joyful occasions the dancing girls, as they are called, are sent for to divert the company; but this dancing consists only in skrewing themselves into lasticious pollures, and addressing their giest men with slattering speeches. They have plays and mock sights also acted before them, and hunting of wild beasts is their principal rural sport, in which their women partake; but their hunting is only driving the deer and other game into an inclosion for the form where they cannot effect, and then shorting fure, from whence they cannot escape, and then shooting

Mindanao is a fruitful foil, well watered with rivers, and their mountains afford excellent timber. Of the and their mountains afford excellent timber. Of the libby, or fago tree, there are large groves; the fago is the pith of a tree which the natives eat inflead of bread, and is frequently brought over to Europe, being fo grained, that it is fornetimes taken for a feed. They have no corn but rice. Plantains, guávas, mangoes, and all tropical fruits, abound here. Cloves and nutmegs have been transplanted hither; and appear fair to the eye; but it fald they degenerate, and the fruit is good for nothing: it these plants were cultivated, possibly they might equal those of the spice islands.

Here are no beafts of prey in this island, but almost every other useful animal, such as horses, cows, buffaloes, and hogs, with bunches over their eyes; here are alfo fnakes, scorpions, and other venomous insects; and the

finakes, feorpions, and other venomous infacts; and the feathered kind are the fame as in Manila.

The Malayan language is generally fpoken here; and the Mahometans have the koran and books of devotion, in the Arabic language. The liberal arts do not flourish here; they are forced to employ the Chinefe to keep their accompts for them; nor have they fo much as a clock or a watch in all the country, but beat upon drums every three hours, that people may know the time of the day. There are fearce any other working trades, except goldfmiths, carpenters, and blackfiniths, who perform their work very well with the tools they have, for the fmiths have neither vice nor anyll, nor the carpenters ny faws, but when they vice nor anvil, nor the carpenters any faws, but when they have fall their planks, plane them with the ax or adze.
Their difeases are fluxes, severs, and the small-pox; and some are affected with a kind of leprofy, or dry scurf, which covers the body, and itches intolerably.
The religion of the sultan, and those who inhabit the

fea-coasts, is Mahometanism, and that of the inland people is Paganism, differing little from the Chinese. In allowing a plurality of wives and concubines, the Mahometans of this island imitate those of Turky, only they allow their women greater liberties, suffering them to converse freely with their acquaintance or strangers; but it is said they are so prejudiced against swines flesh, that one of their great men resused to wear a pair of shoes made by an Eu-ropean, when he was informed that the threads with which they were fewed were pointed with hogs briftles. They look upon themselves to be defiled, if they touch any thing which belongs to a hog; they durft not kill them, left they should be defiled by the touch of the weapon they make use of, which occasions these animals to multiply so fast, that the island is over-run with them. They are very glad to fee the Europeans kill them, but must undergo feveral ablutions or washings, if they should happen to touch a man that had eaten its sless.

She fultan of Mindanao is an abfolute prince, and his throne hereditary; both the persons and purses of his subjects are in his power, and if he knows any of them abound in wealth, he borrows it of them. He has one great minister, in whom he lodges the administration of the government, both civil and military, to whom both natives and foreigners must apply themselves for liberty to trade. Their wars are chiefly with the mountaineers, who inhabit the middle of the island, with whom they are very cautious of coming to a general engagement; but when the armies are pretty near, they begin to entreuch and cannonade each other, and will remain in the fame camp fome months, fending out parties to make incurfions into the enemies country, and furprize defenceless places. Their arms are a crice or thort dagger, and

a broad fword, a spear, and bows and arrows.

The most considerable of the Philippines that have not been mentioned, are Mindora, south-west of Manila: Panay, and Leyte, which lie north of Mindanao; and the

island of Paragoa, which lies very near the north part of Borneo, and is subject to one of the princes of that island. Philippina was the first that was discovered of this cluster of islands, and consequently gave name to the rest. It lies between twelve and fourteen degrees north latitude, and is the most fertile and pleasant of all the Philippines, exhibiting a scene of perpetual verdure; for here the sun is powerful, without being disagreeable.

The Ladrone islands are situate in the Pacific ocean, in one hundred and forty degrees of eastern longitude, and between twelve and twenty-eight degrees of north latitude. Guam or Ignana, the largeft, is fituate in thirteen degrees twenty-one minutes, north latitude, feven thousand there hundred miles west of Cape Corientes in Mexico, according to Dampier. The other inconsiderable islands are, 2 Sarpanta. 3. Bonavista or Tinian. 4. Sespara.

5. Anatan. 6. Sarignan. 7. Guagam. 8. Alamaguan. 9. Pagon. 10. The burning mountain of Griga. 11. Magna. 12. Patas. 13. Difconocida; and, 14. Malabrigo. Guam is about twelve leagues long, and four broad, lying north and fouth. It is pretty high champaign land, floping down towards the coat. The east fide, which is the lighest, is senced with steep rocks, on which the waves constantly beat, driven by the trade wind. The west side is low land, in which are several little sandy bays divided by rocks.
The natives of Guam are of a good flature, have large

The natives of Guan are of a good nature, nave large limbs, a tawny complexion, black long hair, finall eyes, thick lips, and are long vifaged. They are fometimas afflifted with a kind of leprofy, otherwife the country is healthful, especially in the dry featon. The rains begin in June, and last till October, but are not violent.

The island produces rice and most tropical fruits, and one fort, which Dampier has named bread fruit, growa

one nor, which Bampier has named bread fruit, grows upon a tree like apples, and at its full bignefs is as large as an ordinary foot-ball; it has a hard thick rind, and within a foft yellow pulp, of a fweetifit tarfe; the natives eat it inftead of bread, having first baked or toafted it in the embers: it is in feafon eight months in the year, and grows only in the filends. and grows only in thefe islands.

Dampier relates, that when he was there (about the year one thousand seven hundred) there were not above one hundred Indians upon the island, though he was in-formed there had been three or four hundred fome time before : and the reason given why there was no more at that time was, because most of them had burnt their plan-tations, and fled to other islands on their being used ill

by the Spaniards.

Their fwift-sailing sloops, or slying proas, are the admi-ration of all that see them; the bottom of the vessel, or the keel, is of one piece, made like a canoe, twenty-eight feet in length, built tharp at both ends, one fide of the floop flat, and the other rounding with a pretty large belly; being four or five feet broad, with a maft in the middle. They turn the flat fide to the wind, and having a head at each end, fail with either of them foreinoft, and have never any occasion to tack. Dampier computed they would fail twenty-four miles an hour. The tide never rifes above two or three feet at this island.

The writer of lord Anson's voyage relates, that they arrived at the island of Tinian or Bonavista, one of the Ladrone islands which lies north of Guam, on the 27th of August, 1742, being situated in sisteen degrees eight mi-nutes north latitude, and one hundred and sourteen degrees nutes north latitude, and one hundred and fourteen degrees fifty minutes west of Acapulco in America. This island is twelve miles in length, and fix in breadth, extending from the S. S. W. to N. N. E. The foil is dry and fandy, and the air healthful; the land rifes in gentle slopes from the shore to the middle of the island, interrupted by vallies of an easy descent. The vallies and gradual swellings of the ground are beautifully diversified by the encroachments of woods and lawns; and the woods consist of tall spreading trees, celebrated for their aspect. or their fruit; the turf of the lawns clean and uniform, composed of fine trefoil, intermixed with a variety of flowers; the woods, in many places, open, free from buthes, and underwood, affording most elegant and entertaining prospects,

The cattle on this island were computed to amount to ten thousand, (we suppose he means horned cattle) all per-fectly white except their ears; besides which there were logs and poultry without number. The cattle and sowls were fo fat, that the men could run them down, and were under no necessity of shooting them. Their sich is well

tafted, and very eafy of digestion.

About the beginning of the prefent century, this island was faid to contain at least thirty thousand inhabitants, when a dreadful mortality raging among them, prodigious numbers died; and the calamity prevailing with equal violence in the islands of Rota and Guam, the Spaniards obliged those that remained at Timian to remove to Guam, in order to make good the dependency by the number of the fouls that had perished in that island; since which time Tinian as been wholly unimabited. The ruins of the buildings in Tinian, some o. which are of a particular form, evince it to have been once a populous place. The ifland of Rota has not any thing in it that demands particular attention. Its chief produce is rice, which is cultivated by a few Indians, who live there undiffurbed, but are subject to the Spanish governor.

Though the other islands are uninhabited, they are in general exceedingly fertile, the air good, and the climate temperate. They also produce plenty of provisions; but they are feld nience arifin nian is mol it is very un monfoons l Several of

they are feldom vifited on account of the great inconvenience arising from the want of water for anchorage. Tinian is most commodious in this particular, but even there it is very unsafe from June to October, when the western

monfoons blow.

Several other islands have lately been discovered to the eastward of the Philippines; and from them called the New Philippines, of which father Clan, in a letter from Ma-nila (infected in the Philiofophical Transactions) give the following account: that he happening to be at the town of Guivana, in the island of Samar, found twenty-nine palars, or inhabitants of certain newly discovered Islands, who were driven there by the easterly winds which blow in thele seas from December to May. They had run be fore the wind for feventy daystogether, according to their own relation, without being able to make any land till they came in fight of the town of Guivam: they were thirtyfive persons, and embarked in two boats with their wives children when they first came out, but several perished by the hardfhips they underwent in the voyage; they were under fuch a confernation when a man from Guivann attempted to come on board them, that all the people which were in one of the veffels, with their wives and children, jumped overboard; however, they were at length perfuaded to fieer into the harbour, and they landed the 28th of December, 1696. They eat cocoa-nuts and roots which were brought them very freely, but would not touch boiled rice, the common food of the Afiaticks. Two women, who had formerly been cast a-shore from the same islands, were their interpreters; they related that their country con-filled of thirty-two islands, and by the form of their veffels and fails their country feemed to be in the neighbour-hood of the Marianas or Ladrone islands; they related that their country was exceeding populous, and that all the islands are under the dominion of one king, who keeps his court in the island of Lamarec: the natives go half naked, and the men paint and flain their bodies, making feveral forts of figures upon them, but the women and chil-dren are not painted; the complexion and thape of their face is much like those of the tawny Philippines or Malayes: the men wear only a cloth about their loins which sayes: the linet wear only activation and their bodies which they tie before. There is little difference betwixt the drefs of men and women, but that the cloth which the women wear hangs a little lower on their knees; their language is different both from the people of the Philippines and the Ladrone islands, and comes nearest to that of the Arabs: the women that feem most considerable amongst them, wear necklaces, bracelets, and rings of tortoife-shell. They subsisted themselves all the time they were at sea with the fifh they catched, in a kind of wicker basket with a great mouth, ending in a point, which they halled after them; and their drink was rain-water which they happened to be supplied with: they have no cows or dogs in their islands, and they run away at the fight of the one, and the barking of the other; neither have they any horses, deer, cars, or any four footed beafts whatever; or any land fowls but hens, which they breed up, and never cat their eggs they were furprifed at the whiteness of the Europeans, having never feen any people of this complexion, as they were at their manners and cuftoms: it does not appear that they have any religion, nor do they use any set meals, but cat and drink whenever they are hungry or thirfly, and then but fparingly. They falute any person by taking him by the hand or soot, or gently stroaking his sace: among their tools they have a faw made of a large fhell, tharpened with a ftone, having no iron or other metals in their country; and were furprifed to fee the many tools used in building a ship. Their arms are lances or darts, headed with human bones and fharpened. They feem to be a people of much life and courage, but of a peaceful difposition; and are well proportioned, but not of a large

SECT. VI.

Treats of the islands of Formofia, and Hainan, or Aynan, partly subject to the Chinese.

WE have, in the preceding part of this work, (viz. in p. 56.) taken occasion barely to mention these islands, as belonging to the empire of China; but as we now propose to give a general description of the Oriental islands, a fuller account of those above nentioned all be more properly introduced in this place.

The island of Formofa is extreme ertile, and ge-

neral a delightful country; and on that account obtained its name, the word Formota fignifying fair or beautiful. Its longitude from Pekin is from three degrees twenty minutes to five degrees forty minutes eaft; fo that when the fun is almost vertical over it, the climate is rather hot; but this is far from being difagreeable, as the violence of the heat is greatly mitigated by the fituation of the islands

which is so elevated, as to receive the most agreeable ad-vantages from the cooling breezes of the sea. Some parts of these illands belong to the Chinese, to whom the natives are subject; but in the other parts they live independant, and are only subject to their own laws and government. That part of this island possessed by the Chitese is particularly fertile, and produces great quantities of different kinds of grain, especially rice; and its fertility is greatly augmented by numerous rivers, whose streams flow conveniently through it.

There is as great a variety of fruits to be found here, as in any other parts of the indies; particularly oranges, cocoas, bananas, ananas, guavas, papayas, &c. alfo feveral kinds of those produced in Europe, as peaches, apricots, figs, grapes, and chesnuts. They have likewise a fort of melon, which is of an oblong form, and much larger than those in Europe: they have a white or red pulp, and

are full of a fine juice, which is exceedingly grateful to the tafte. Sugar and tobacco also grow here to the greatest perfection; and the trees that produce these are so agreeably arranged, that they appear as if calculated to embellish the most beautiful gardens

They have but few wild beafts in this ifland, and those are feldom feen, as they chiefly inhabit the dittant parts of it, which are very mountainous, and feldom reforted to by the inhabitants. They have fome horfes, fheep, oxen,

goats, and hogs; and but few birds, the principal of which is the pheafant. The rivers are stocked with great which is the pheafant. The riv plenty of fish of various kinds.

They have neither havens nor fea-ports, and the coaffs about the island are very high and rocky, so that it is almost impossible to invade it. Teovang, or Tyowang, is the only bay in the whole island, where ships of any bulk can approach; and this is fituated at the mouth of a river row, and defended by fuch high rocks and forts on each fide, that no enemy could possibly enter it, but must

fail in the attempt.

Those natives of this island, who are under the dominion of the Chinefe, are divided into forty five boroughs or towns, thirty-us of are in the northern part, and nine in the fouth to I hey are in general of a low flature, have a large moun, and are very fwarthy in complexion: they have a very high forehead, and are altogether greatly disproportioned, for the body is very short, the neck finall, and the arms and legs are remarkably long. They go almost naked, their dress consisting only of a rough piece of cloth tied round the waift, and reaching to the knees; but they adorn their bodies with the figures of trees, flowers, animals, &c. in doing of which they undergo fuch violent pain, that only a finall part of the ration must be performed at one time; so that it will take fome months before the whole is completed. These embellithments, however, are only permitted to fuch as have diffinguithed themselves either by feats of activity or cou-I he I be a Cort avoid the punishment of obtaining thefe ornan-· afing the hair of animals intermixed with filk, and embroidered with gold and filver. They have all, however, fiberty to adorn their arms and ears; which they do with the greatest profusion, and on their heads they wear a kind of coronet, the top of which is terminated by a plume made of the feathers of cocks or pheafants.

The inhabitants of the northern part are better cloathed than those of the southern, as the climate is less temperate: their drefs confifts of the fkins of beafts, particularly flags, which they kill in Ironting. This garment is, however, very uncouth, in its form, being shaped like a vestment orn by priefts, and without fleeves. They wear a kind of bonnet on their heads, made of the leaves of bananas; and adorned with coronets placed one above another, in the form of a pyramid: the whole is fastened with locks of hair of different colours; and the top is terminated by a plume of feathers, like those in the fouth.

The houses of those in the fouthern part are mean cottages made of earth and bamboo covered with fran fo close together, that they are only separated by thery flight partition; but those in the north are built are size parts are the fame. They have and ter chairs, tables, benches, or beds; infead of the latter, dray use the barces. of trees, and lay themselves down without any fort of co-

They do not take much pains in drefling their meat, for the lefs it is done, the better they like it; and fome of them relish it nost when it is fo raw as barely to have felt the effect of the fire. They drefs their victuals in a kind of chimney or flove placed in the centre of the room; and are extremely filthly in their manner of cating it; they have the room is the first. cither dilles, fpoons, nor knives; fo that when the pro-vision is drefted it is laid on a piece of wood or mat, and they pull it to pieces with their fingers. Their food con-fifts chiefly of boiled rice, which they are inflesd of bread; the field of theep and goate and gone with he they forme-times catch in the woods, by the thing is running them down; the latter is the most some on method; for fuch is their agility, that the iwife it note will be out-run

Bows and arrows are their principal weapons; they use these with such dexterity, that at the distance of four hun-

dred yards they will kill a pheafant flying.
They do not purchase their wives, as in China; and have little ceremony in their marriages: when a man fixes on any object that he wishes to make his wife, he goes feveral days together with mufic, which he plays for time before the door, but he is not permitted to enter the house. If the object of his affections approves of him, the comes out, and they agree upon terms, which being made known to their parents, the marriage feaft is prepared, and the founds of each party are invited. The feaft confummates the marriage; after which, instead of the wife going home with her husband, he continues in his father-in-law's house, and, during the remainder of his life, provides for him as for himfelf.

They believe in one Supreme Being, and feem to enter-tain wifer notions than the inhabitants of many eaftern countries, though fome writers have described them as more infidels, and perhaps they are confidered as fuch by the Chincie, who acknowledge, however, that they are not fubject to cheat, thieve, or quarrel; but, on the contrary, that they practife all the duties of equity and mutual benevolence. They worthip idols as in China, to which they

offer facrifices of hogs, rice, &c.

Their manner of treating the dead, before interment is very fingular. When a perfon dies, they lay him on a feaffold made of bamboo, which they place over a flow fire reamond made or bamboo, which they place over a flow hre for time days; after which, they wrap the corple in a mat, and lay it on a higher feaffold, covered with a pavilion made of threds of filk, cloth, &c. Here it remains for two years, at the expiration of which, they dig a large hole in the ground and bury it. Each of these ceremonies is accompanied with feating, mufic, dancing, &c. but the fu-

netal ceremonies are very trifling.

The impression which an object of distress strikes on the minds of these people, and the notions of humanity with which they are possessed, are displayed in one custom. which is almost universal, namely, if a person is exceeding ill, or afflicted with any painful dinorder which is not likely to be removed, they think it a kindness to put a period to

his life.

Each town or borough has a diffined government, Three or four of the most antient, who are known to be men of integrity, are appointed as judges over the reit, who determine all differences; and he who refuses to submit to the decision, is banished the town; nor can be either return, or he admitted into any of the others, fo that he i obliged to finith his days, without ever again partic pating of the natural enjoyments of fociety with the re-

countrymen.

The Formofans pay an annual tribute to the which confifts of certain quantities of grain, the tails and fkins of stags, and other productions of the country. In order to collect this tribute, a person is appointed to each town, who learns the language of the natives, and discharges the office of interpreter between them and the man-darins of China. There were formerly twelve boroughs in the fouthern part of the itland, that paid tribute to the Chincle; but, from the tyrannic conduct of their interpreter, or gatherer of the tax, they revolted, drove the interpreter out of the town, and no longer continued to pay

The capital city of this itland, which is called Taiouan-fon, is, with feveral other confiderable towns, in the possession of the Chinese. It is large and populous, and carries on to extensive a trade, that it is little inferior to fome of the most opulent in China. It is plentifully supplied with all kinds of provisions, either of its own pro-duct, or commodities brought from other countries, as rice, cotton, fugar, wine, tobacco, and dried venifon, the latter of which is greatly admired by the Chinefe, and confidered as the most delicious food. They have likewife all kinds of fruits, medicinal herbs, roots, gums, &c. with plenty of cotton of various forts, linen, filk, &c.

The freets are long and fractions, and the buildings on each fide have awnings, that join in such a manner as to cover the freet; but these are only used during the hot months, to keep off the excellive heat of the funof the threats are near three miles in length, and between thirty and forty feet broad; these streets are chiefly occupied by dealers, whose thops are furnithed with all kinds of goods, ranged and diplayed to the helt advantage. Their floop appear very brilliant, and many people walk in the freets merely to gratify themselves with the fight of so great a variety of the richelt commodities. The houses are in general very finall, and are built of clay covered with thatch.

There are neither walls or fortifications for the defence of the city; but it has a good garrifon of horse and foot, confishing of ten thousand men, who are principally Tartars. These are commanded by a ligutemant general, two tars. These are commanded by a lieutenant general, two being generals, and a number of inferior officers, who after having ferred three years, or fooner if they should be found to the foundation. require, are at liberty to relinquish their situation. harbour is tolerably good, and theltered from the winds, but the entrance to it is dangerous for thips of burden, the

bottom of it being rocky, and the depth not being at we ten feet at the highest tides,

The illand of Formofa, according to the most authen-tic historians, was first inhabited by the Japanese, about the beginning of the last century. These people were so the beginning of the last century. These people were so pleased with the appearance of the country, that they built feveral finall towns, and foon fettled a colony; however they were but a thort time on the island before they were interrupted by the Dutch, a thip belonging to whom being accidentally forced into the harbour, the people landed on the itland, in order to obtain refreshments, and repair the damage the vetlet had fuffained by the florm. Pleafed with the apparent fertility of the country, and the wholefomenefs of the climate, they formed a plan for circumventing the Japanefe, by taking the island into their ownpossession. Fearful, however, of offending them, left at might be injurious to their trade, they were very cautions in what manner they proceeded; and though they were the most powerful, yet they were rather defirous of obtaining their withes by artful than violent measures. To effect this, they earneflly intreated the Japanefe, that they would permit them to build a house near the sea-side, which, they alledged, would be of the greatest utility to them in their passage to and from Japan. This request was resused, their passage to and from Japan. This request was resused, which produced a second solicitation with equal success. Unwilling, however, to give up any endeavours they could project, they again renewed their folicitations, and preffet them to give confent, affuring them, that they defired no more ground than what might been compaffed by the lide of anox. The modefly, as well as oddity, of this requeft, had the wished-for effect, and the Japanese at length gave their consent. The Dutch innoclately discovered a piece of cunning little thought of by the Japanefe. They got a large hide, which they cut into a number of flips, and faftening the whole together, covered a very extensive piece of ground, on which infiead of a fingle building, they erected feveral (pacious habitations.

The Japanese were at first greatly vexed at this stratagem, but, from the fingularity of it, they were at length pacified; and were to far from either envying the Dutch, or being any way apprelicative of danger from them, that hey permitted them to do whatever they thought proper;

nd of this indulgence the Dutch were not backward in taking the greatest advantages, for they foon erected feveral flrong buildings, particularly a cafile, which they called Zealand, fituated on fo advantageous a foot, that it was impossible for any thip to approach it in a hostile manner, of whateverforce, without being repulled. But the Japanese, being either offended at the great progress the Dutch had made, or not finding the advantages they expected, foon quitted the illand, and left the Dutch in fole possession of it; after which, they crected other for-tifications opposite to their new fort, and raised such other defences, as made them complete matters of the island. They continued here, however, but a few years; for one of the Chinele generals, a man of an enterprising genius, being defeated by the Tartars, who were then at war with the Chinese, fixed his views on Formola, formed a refolution of expelling the Dutch, and citablifling a new kingdom on the island.

Accordingly, the Chinefe adventurer failed from China with a very confiderable fleet, and arriving near the mouth of the harbour, he landed fome to attack the fort of Zealand. To Dutch not being apprehensive of any danger, were solvided to resist to to attack the fort of Zealand. The Dutch not being apprehensive of any danger, were provided to resist to powerful an en my 1 they had only tour thips in the harbour, and not above twenty men in the fort, exclusive of the natives 1 notwithstanding which they made so gallant an opposition, that the signal which they made so gallant. The Chinese general was so enraged at being thus disappointed, that he at length had recourse to a very desperate effort, which had the desired effect: he converted several of his vessels into fire-ships; and the wind happening to be high, and shown belte, drove them into the harbour, when three of the Dutch ships were intirely destroyed. Thus stuated, the Dutch could not make any farther resistance, and the Chinese general offering them liberty to fillance, and the Chinese general offering them liberty to depart with their effects in case they would surrender, they readily accepted the offer, and putting all their valuables on board the flip that was left, they departed, and left the Chinefe general fole mather of the illand. The conqueror immediately acknowledged fubmillion to the emperor, and feveral other towns were foon built on different parts of the island, the inhabitants of which have ever since been subject to the government of China, and teshify their submission by an annual tribute, as we before observed.

The illand of Haynan (the principal part of which also belongs to the Chincle) is of confiderable extent, and some of the towns are very populous. It is fituated between one hundred and seven and one hundred and ten degrees east longitude, and between eighteen and twenty de north laritude. It is bounded, on the east, by the Chincie lea , on the west, by the coast of Cochin-China; on the needs by needs by the coast of Cochin-China; on the north by part of the province of Quang-tong, to which it belongs 1 and, on the fouth, By the channel of Paracel, which joins the eastern coast of Cochin-China. It is about two hundred miles in length from east to west, near one hundred and tifty in breadth, and about four hundred

in circumference.

Kian-tcheou is the principal city of Haynan, and is fo fituated, that fhips lie at anchor close to its walls with the greatest focurity. The streets are very uniform, and forme of them at least a mile in length, but the houses in general arc low mean buildings. There are several other general are low mean buildings. There are feveral other confiderable cities in the island, besides the capital, all of which are fituated near the fea-fide, and subject to the jurildiction of Kian-tcheou, which is governed by manda-ring of two orders, namely, those of learning, and those

On the fouthern part of the island there is a fine port, the bay of which is near twenty feet deep. There is also snother very convenient port on the northern part, the entrance to which is defended by two small forts, though the depth of water does not exceed twelve feet. Here the barks frequently come from Canton with various commodiries, in exchange for which they take several kinds of minerals, the natural produce of the country; for in fome parts of the island there are gold and filver mines, as also mines that produce the lapis-lazuli, which the natives of Canton use in painting the blue porcelain. Between the two forts that defends the entrance of the northern port, is a large plain, on which are feveral handsome Chinese

With respect to the climate of this island, it is in general very unhealthy, particularly the northern part, though patts are exceedingly mountainous; but the validies beneath are rich, and produce great plenty of rice. There are likewife feveral forts of very valuable trees, particularly the rose or violet-trees, which is 60 fragrant in its seent, that it is purchased at a very high price for the sole to contact the rose of the r the emperor. There is also another tree little inferior to this: it produces a kind of liquid, which by the natives is called dragons blood, and, if thrown into the fire, diffuses a most agreeable feent. Indigo grows very plentifully on this island, as also sugar, tobacco, and cotton; and they have a great variety of the most delicious fruits, some of which we have mentioned before in treating of this illand.

Horfes, theep, cows, and hogs, are the chief animals here. There are prodigious numbers of apes on the mountains and in the woods, fome of which are very large, of a black colour, and the features of their faces to diffine, as to refemble the human species with greater exactness than any others to be found in the universe; but these are very feldom seen; and though the natives have often endeavoured to catch them, yet they are so cunning and alert, that they have bailled every machination they could project. These ages appear to be of the same species with two sent some years ago in a coasting vessel as a present from a merchant of the rajalt of the Carnatic dominions to the governor of Bombay.

There are var. in kinds of game in this island, parti-cularly dece and ho. s; also a great pleuty of hirds, as partridges, wood-cocks, snipes, turthe-doves, and most forts of water-fowls, all which are little inferior to those in Europe. They have likewise most forts of sish in great abundance ; among these is a little blue fith found among the rocks, which is so heautiful as to be essented of greater value than the golden fift; but they will live only a few days out of their natural element,

The natives are thort in flature, of a reddiff com-plexion, and fome of them greatly deformed. The men wear only a loofe garment, reaching from the waift to the knees: it is made of eallico, and the colour is either a deep blue, or quite black. The women wear a garment deep blue, or quite black. The women wear a garment of the same stuff, though different in form: it fornewhat resembles a waistcoat, and reaches from the shoulders to the knees; and they are farther diffinguished from the men by streaks made on their faces with indigo. Both fexes braid their hair, and adorn their ears with rings; their hats are made of firaw or rattan, and tie under the

Bows and arrows are their chief weapons, in the use of which they are not so expert as the inhabitants of Formosa. They have also a kind of hanger fattened with a girdle to

I hey have ano a kind of hanger fattened with a giride to their waift, which they generally use to clear the way in forests or other woody places where they travel.

The natives of this island occupy the centre part of it, which is very mountainous; and here they live independant, being subject only to their own laws and modes of dant, being tubject only to their own laws and modes of government. They are feldom feen by the Chinefe, except when they make an attempt to furprife any of the neighbouring villages. This, however, feldom happens, and, when it does, they are naturally fuch cowards, that a hundred of them will fly from half a dozen Chinefe. Many of them are in the fervice of the Chinefe, who employ them to cultivate their lands, and take care of their cattle.

There are a number of small islands called the Pifeadores, or Fisher islands, between the island of Formosa and the continent of China: thefe are fituated in twentythree degrees north latitude. On the well fide of one of these islands is a large town, with a lort desended by a gar-rison, consisting of three hundred Tartars.

A fet of islands are likewise situated between Formosa and Luconia. These are called the Five Isles, the northern most of which lies in twenty degrees twenty minutes north latitude. The largest of these islands is uninhabited, on account of its being a barren country; but the others are very populous, having feveral good towns in them.

The hills of these islands are rocky, but the vallies are The line of the land are toesy, out the values are very fertile, being well watered with running ftreams. They produce plenty of pine-apples, plantains, bananas, fingar-canes, cottons, pompions, and postores; and there are also great numbers of goats, horned cattle, and hogs.

The inhabitants are of an olive-colour, and are short in the cause flower.

flature, with round faces, low forcheads, and thick eye-brows. They have black hair, which they cut fo thort, that it barely touches their ears. The men wear only a cloth about their middle, and have no covering on their heads. The women wear a fhort petticoat made of coarfe callico, which reaches from the waith to the calves of their legs. Both fexes wear rings in their ears, made of a me-

tal resembling gold, which they dig out of the mountains. The houses are built in rows one above another, on the fides of the rocks, and they afcend to them by the help of ladders. They are very small, and consist only of a few posts bound or covered with boughs of trees. The ire-place is at one end, and here they lay boards, on which they sleep. There is a kind of street to each row of houses, which runs parellel with the tops of the buildings in the row beneath.

The natives of these islands are naturally ingenious: they understand the use of iron, which they work into various forms, and build very neat boats, that refemble those with us called yawls. They have likewise some large vessels, which they tow with twelve or fourteen oars. The food of these people comfits chiefly of vegetables;

but they fometimes make a diffi of locusts, which at particular scasons of the year come to devour their plants, They eatch them with nets, and either broil them on the fire, or bake them in an earthern pan. Their chief drink is water; but they have a liquor that in taffe and colour refembles Englith beer: this is called bathee, and gives

Anne to one of these islands. It is made with sogar-canes, boiled and mixed with blackberries; after which it is put into jars, and when it has worked five or fix days, it becomes very fine, and it for drinking.

becomes very fine, and it for drinking.

The language of thefe idanders bears no affinity either to the Chinefe or Malayan, but is peculiar to themselves.

The only weapons they nie, are lances headed with icon;

when they go on the mountains in purfuit of bealts, they wear a kind of armour made of a buffalo's tkin, which has fleeves, and reachts down to the calves of the legs. It is wide at the bottom, but clofe about the shoulders, and is of fuch folid fubiliance as hardly to be penetrated

or non iona molitance as hardly to be penetrated. In general, these are a very civil people, and will neither ragage in quarrels among themselves, or with strangers. The men are chiefly employed in fishing, and the women in husbandry. Each man is prohibited from having more than one wite, who treats him with great respect. The boys are brought up by their fathers to fishing; and the girls work with their mothers in the plantations, which are in valies, where every person quitayets and elastic. are in vallies, where every person cultivates and plants as much ground as is sufficient to supply the necessities of the family.

They have not any laws, neither have they occasion for any; every family has one fuperior, to whom the reft are fubicivient, and children behave with the greatest respect to their parents. In thort, thefe people appear to enjoy real felicity, by feeking that happiners in their own minds which is not to be found independent of ourfelves, as the mildaken part of mankind fuppofe; they have no ambition, and therefore have no defire to leave their own home to feek after imaginary baubles: they content themselves with the fituation in which providence has placed them, and each fucceeding day contributes to increase their happinefs, while they escape innumerable evils which roving and unfatisfied minds are subject to and experience.

SECT. VII.

Contains a description of the Moluccas, or Spice Iflands.

HE islands of the Moluccas are fixteen in number, and are fituate between five degrees north, and feven degrees fouth latitude, and from one hundred and twentydegrees fouth latitude, and non-one hundred and thirty degrees east longitude. The Banda illands are, 1. Banda; 2. Pulloway; 3. Pulo-sin A. Nerat c. Gumanapi; 6. Guiliaien: these proand Banda manda are, 1. Banda; 2. Fulloway; 3. Fulorin; 4. Nera; 5. Gumanapi; 6. Guillaien: thefe produce nutmegs, &c. The others are, 1. Ternate; 2. Tidore or Tidor; 3. Notir; 4. Machian; 5. Bachian; 6. Amboyas; 7. Bourco; 8. Cerani; 9. Gilolo; 10. Bouton; the produce of most these is cloves, &c.

The Portuguese, in 1511, obtained possession of these islands, but were afterwards driven out by the Dutch, who claim an exclusive right to them. Cloves and nutmegs stanta an excusive right to them. Cloves and numers are not produced in any other part of the univerfe; and the politic Dutch deftroy great quantities annually, in order to keep up the price, and not glut the markets. The numer refembles a peach, and the clove a laurel tree, only the leaves are faulter than sinker. the leaves are imaller than either, the fruit of the former is both nutineg and mace, the nutineg being the kernel, and the mace being a kind of leafy covering that incloses the nutineg-fliell, and the whole is contained in a large coat like that of a walnut: but the cloves appear in clui-ters; the bloffom changes gradually from white to green, red, and brown, which latter is characteristical of its ripenels; but when it is dried in the fun, it receives a blackish hue. The clove is gathered from September to February, and the nutmeg in April, August, and December. The April erop is, however, deemed the best; and in order to prevent the nutmegs from being worm-cateu, they are boiled in lime when gathered.

The Banda, or nutmeg islands, lie near each other. Banda, the principal of them, is about twenty miles long, and ten broad. Befides the large forests of nuting and clove-trees which grow fpontaneously, and require not the least trouble, the foil is settile, and produces a variety of delicious fruits. The island is in the shape of a crescent, and the concavity of it forms an excellent bay, near which the principal town flands. Several brooks flow from a final, mountain, water the whole country, and render it exceedingly pleafant.

The itland is divided into three diffricts: Mahometanism and Paganism are the religions. The natives have fome thips of force, containing a few cannon each, and use bucklers, back and breast plates as desensive, and carbines, darts, lances, feymetars, &c. as offenfive weapons. They are strong in their persons, disagreeable in their features, malicious in their tempers, and melancholy in their dispositions. The men are very lifle, and oblige the women not only to do all the demestic drudgery, but to cultivate the land. They make fruit a principal part of their diet, though they have the barrelle in the year.

diet, though they have the ordered in the year.

The Dutch have a face, y at the wellern part of the island; it is creeked upon the cop, of a mountain, and is afcended to by three hundred and twenty-four four fine fleps.

At the foot of the mountain flaude a negro town, the pringing factory of the Dutch being at Ners, which is well fortified, as are all the landing-places in the Hand; and the whole under the direction and fuperistendance of a newscore and control. governor and council,

governor and council.

Into this, and the other Banda islands, the following articles are imported, via. gold chains, gold coint, enamelled and dannasked fword blades, saver cups gilt, gunz, chinaware, broad cloath, velvets, dannasks, slanuels, rice, &c.

The exports are fruits and spices.

Pulloway is a most delightful country, the nutmeg and other fruit trees being cut into pleasant walks through the island, and form one beautiful garden; but here are neither springs nor rivulets: the rainy season, which lasts some member of the saver, which lasts some beautiful garden; but here are neither springs nor rivulets: the rainy season, which lasts some beautiful savery where, which fome months every year, supplies them with water, which they preserve in cisterns. The Dutch have a fort on the they preserve in cisterns. The Dutch have a fort on the cast side of the island, called the revenge, being one of the

ftrongest fortresses in India.

Pulorin has not much spice upon it, but is fortissed to prevent other people settling so near the islands that have

The other little Banda islands have fearer any thing in them worthy notice, more than what is included in the de-feription of Banda abovementioned.

The island of Ternate is about twenty-four miles in

circumference; but though inferior in fize to fome of the other Moluccas, it is deemed the principal both by the Dutch and natives, as the Dutch make it the head feat of their government, and it is the refidence of the chief prince

Cloves are produced in great abundance in this island r here are also admirable almonds, delicious fruits; a few goats, and fome poultry are to be met with. There is no goats, and tome pounty are to be met with rice, or any other grain; for the excellive heat, which is requifite to ripen spices, and meliorate fruit, parches the earth, fo as to render it incapable of bearing wheat, bar-ley, or rice. The want of the various kinds of grain, however, used in bread, is not selt by the natives; for they have a substitute, which makes the most wholesome and exquifite cakes in the univerfe, that is, the pith of the tree called fago, whose salubrious qualities are well known In Europe. This excellent tree is not only ferviceable with respect to its medicinal virtues, and for yielding thembread; but affords them likewife drink, cloathing, and shelter; for by incision a liquor is drawn from it that exceeds most wines; the leaves being a kind of cotton, the fmaller are converted into garments, and the larger used to thatch their houses. Most of the natives live to an hundred years of age, and their longevity is attributed to

the falubrious quality of this breat.

Every one of the iflands pay tribute to the king, who is the chief of all the Moluccas. The natives flruggled for many years against the incroachments of foreigners, but were totally subdued by the Dutch in 1780; and the for-mer do not entertain the least idea of driving the others

from their country, because they have so many forts and such strong garrisons in it.

Most of the houses belonging to the natives are built of cane; fome few of the wealthier fort, indeed, have wooden ones. A mat ferves them inflead of bed, chair, and table; for they lie, cat, drink, and fit on it. This, and a pot to drefs their victuals in, a hatchet to cut their wood, and a calibath to hold their water, make the whole catalogue of their houshold furniture: their windows are not glazed, nor are their doors fecured by locks. They wear tilk on callico, and all perfons make their own garments, the king and grandese excepted. Their fuel is odoriferous woods, and even the fmiths ule nothing in their forges but almond. thells. The king refides at Malaya, a little town fortified. with a mud-wall; but the fuburbs, in which the Dutch with a midway, but the garden, is pretty large, and well inhabited by blacks. The palace is but a trivial building; but the gardens belonging to it are very pleafant, and contain an aviary filled with a great variety of beautiful birds, whose harmonious notes are extremely delightful. The prince has a cabinet of Indian rarities and European cutiofities : he is attended by a confiderable retinue, and wears a fumptuous garment manufactured by the Dutch. In this island, the waters are remarkably clear, and the fifth extremely delicious to the tafte.

Parrots are pretty numerous in Ternate; they are hand-fomer, and speak more diffinely, than those in the West-Indies; but the most remarkable of the seathered race in this island is, the hird of paradife which is juilty deemed the most beautiful bird in the universe. The head is like that of a fwallow, but the bill confiderably longer; the

body is small, but the pluntage displays such admirable colours, as are inconceivably pleasing to behold.

In this island there is a volcano, which cast out a suphureous fire three months in the year, and sometimes does creat mischief; in the year 1648 it destroyed many houses, and did other considerable damage. The annexed recent account of its dreadful devastations was transmitted to Europe, in a letter from a merchant at Batavia, dated October 18, 1776: "We have the following account of the deplorable fituation of the island of Ternate. On the 4th of July, 1775, there were more than one hundred hocks of earthquakes felt here, some of which were fo violent, that they seemed to threaten the defruction of the whole island; about the zoth of August they were selt again; and the burning mountain, after a dreadful explo-fion, threw out hot flones, cinders, and lava in abund-ance; and on the 5th of November the earth was never ftill for three hours, the mountain feemed all on fire, and the most dreadful form of thunder and lightning fell in every part of the illand, which threw the inhabitants into fuch a conflernation, that they ran from one part to another for shelter; but none was to be found; the sea was fo extremely boisterous, that the destruction was inevitable there, and on the land the earth opened and trembled under them, as if the whole island was going to be annihilated; but by the providence of the Almighty, a calm was reflored, and the inhabitants had time to fee what damage reftored, and the inhabitants had time to fee what damage had been done, when it appeared that the Dutch fettlement had fuffered but little; but it will be some years before the illanders recover their loss. The king has made a report, that a large tract of land on the north side of the island, in the district of Xulla Tacory, has been swallowed up, by which fixteen plantations have been totally destroyed, and one hundred and forty-one persons have been either burnt or drouw it is the fee. or drowned in the sea, where many of them took refuge in their boats. This report has been confirmed by about thirty of the unfortunate inhabitants, who are rendered dreadful objects by wounds and burns in this shocking event. On the 5th and 6th of November, the earthquakes and effusions of fire, stone, and sulphureous smoke from the mountains began as bad as ever, but no lives were lost. The horrors of this night are not to be deferibed, for the thunder, lightning, and most shocking earthquakes continued without interruption for twelve hours, with the most terrible violence, from this ever dreadfully to be remembered night, there were no earth-quakestill July, 1, 1776, when they were again felt for two hours, but not violent.

Tidore, or Tidor, is fituated to the fouth-east; the capital, which is of the fame name, has been flrougly fortified by the Dutch; fo that on account of its natural frength, and the important works they have added to it, the place is deemed impregnable; the harbour is, however, but indifferent, being dry at low water, which fometimes proves very inconvenient to the merchants.

Motir is a very small island, about thirty miles north of the line, and fecured by a strong fortress erected by the Dutch.

To the fouth of Motir is Machian, nearly under the line; it rifes in a conical form to a confiderable height, and feems at a diffence like a fingle mountain. The cloves of this island and Tidor are superior to those of any other of the Moluccas. The Dutch have several forts in this island, which is only twenty miles in circuit. Great and Little Bachian are to the southward of the

line; the first is fertile in fruit, fago, fith, &c. It formerly produced cloves; but the Dutch ordered them to be grubbed up, to prevent their becoming too plentiful. It has a good harbour defended by a firong fort; but there is nothing worthy of ment... ar fepeting Little Bachiau.

Though the above-mentioned are the Molucca islands;

yet those which follow are included under the same appel-

lation as they produce the fame kinds of fpices.

Amboyna is fituate in three degrees eight minutes fouth Amooyna is iteaste in three degrees eight inhutes touth latitude, and one hundred and twenty-feven degrees ten minutes east longitude, lies above seventy miles to the northward of Banda, and is about seventy-two miles in circumference. It contains at prefent above fifty proteftant churches; and many of the natives, who have been fent over to Holland for education, officiate as clergymen and missionaries, by which means profelytes are exceedIngly numerous. The foil is very fertile, producing great quantities of nutmegs, cloves, oranges, lemons, citrons, potatoes, millet, tobacca, fugar, bamboos, &c. but the air is unwholitom; there is a good bay, which penetrates very far into the land, and by that means forms a commodious harbour. The people extract a spirituous liquor and a kind of green oil from green cloves, which are both good in paralytic cases. The men wear only a piece of cloth about the waits, and are very proud of having large whikers: they purchase their wives, but in case of barrenness divorce them, The women are both of a loose and malivoice them, I are women are both of a lone and mag-cious disposition. On account of the earthquakes, the houses are built very low. The strong and important for-trefs, called Fort Victory, is the slaple of the Dutch East India company in these parts. It is defended by four bulwarks, a broad ditch, and a garrison of eight hundred

The Engi fh had formerly factories here as well as the Dutch; but in 1623 the latter massacreed the former, and usurped the dominion of the Spice Islands, which had been ceded to the English by the natives themselves. In putting the English and some Japanese to death, they exer-cised the most horrid cruelties, in order to extort consessions concerning a pretended plot, which they accused them of having formed; and to the shame of king James 1. and king Charles I. no satisfaction was obtained for the villations barbarity. Oliver Cromwell was not, however, fo eafy about the matter, for he frightened the Dutch into the payment of three hundred thousand pounds as forme kind of retribulation.

There are feveral populous villages in the island, in the churches and chapels of which divine service is performed both in the Dutch and Malayan tongues; it contains likewise many mountains with springs of water on their fummits.

Bouro is about feventy-five miles in length, and thirty Bouro is about feventy-five miles in length, and thirty in breadth: it is fituated in two degrees thirty minutes fouth latitude, and one hundred and twenty-five degrees thirty minutes east longitude. The Dutch have here a fitrong fort, though the ifland is perfectly fecure, from the fingularity of its coaft, which rifes in a high ridge, and encompaties the whole as with a wall. It contains fome prodigious high mountains, but is nevertheless very fersible, reaching release, anytherse. tile, producing cloves, nutriegs, cocoa-trees, bananas, piany, green ebony, beans, peas, potatoes, tobacco, Indianwheat, lime-trees, herbs, flowers, &c. Among the beafts, are the civet-cat, and a lingular kind of roe-buck, whole flesh is very delicate. The natives are black, and go intirely naked till they are twelve years of age; at which period they tie a piece of cloth round their waifts, and never wear any other garment. They are Mahometans and Pagans, but up in the whole have very little fenfe of religion. When a relation dies, they appear fad till the corpfe is in the ground, and then they make merry to an excels; but do not forget to provide a kind of fepulchre or stone and clay to cover the grave of the defunct. The next day after the women are delivered of children in this island, they go about their ordinary work; while the men in-dulge themfelves in bed, and pretend to be vaftly ill. In-flead of a cradle, they put their infants in a kind of net-work hammock, which they lang upon a peg whenever they are too bufy to dandle it in their arms. Ceram is a woody and mountainous island; it lies in

two degrees thirty minutes fouth latitude, and in one hundred and thirty-feven eaft longitude, and produces cloves and nutnegs. The Dutch factory, called Ambay, is defended by a strong fort and good garrison; the inhabitants, who are Pagans and Mahometans, have a prince of their own, who refides at Cambello; norwithtlanding which, they own the king of Ternate as their fovereign.

Gilolo is one hundred and ninety miles long, and one hundred and ten broad: it extends from one degree fouth to two degrees north latitude, and from one hundred and twenty-live to one handred and twenty eight eaft longi-tude; the air is unhealthy, and the foil produces rice and lago, but no spices. The inhabitants have an independant fevereign of their own : they are tall and firong, but

Bouton is fituated between four and five degrees foutly latitude, and in one hundred and twenty-one degreees thirty minutes eall longitude. It is feventy miles in length, thirty in breadth, has a good harbour, and contains a large town with tolerable houses, built in the manner of those of Mindano: this town is inclosed by a flone wall, and furrounded by groves of cocoa-trees. The natives are governed by a prince of their own, profess the Mahometan religion, and speak the Malayan language.

SECT. VIII.

Trants of Celebes, or the island of Macaffar.

To the fourthward of the Philippines lies the island of Celebes, or Macassar, extending from one degree thirty minutes north latitude, to five degrees thirty minutes. nutes fouth; having the great island of Borneo on the west, and the Molucca's on the east. The length of it from the fouth west point to the north east is about five hundred miles, and in the broadest part of it, it is near two hundred miles over. The south part of the island is divided by a bay leven or eight leagues wide, which runs forty or fifty bay teven or eight reagues whet, which it is not of the leagues up into the country, and on the eaft fide of the island are several bays and harbours, and abundance of small islands and shoals: towards the north there is some high land : but on the east the country is low and flat, and

high land: but on the east the country we now and hat, and watered with many little rivulets.

This island is divided into fix petty kingdoms or provintes, the principal whereof are Celebes, on the morth well, lying under the equinocital; and Macasiar, which takes in all the fouth part of the island: the reft of the provinces were usually under the dominion of one of thes; whereupon the island fornetimes receives its name from

one, and fometimes from the other.

one, and foundatines from the other.

The air is hot and morit, the whole country lying under or very near the line, fobject to great rains. It is most healthful during the morthern monitons: if they fail of blowing at their accultoned time, the island grows fickly, and great numbers of people are swept away.

They have mines of copper, tin and gold, but we do not find they are much wrought; the gold they have is found chiefly in the sands of their tivers, and at the bottom of this weather down by torgrants.

of hills, washed down by torrents.

In their woods they have ebony, calamba, and fanders, and feveral forts of wood proper for dying; and no place, it is faid, affords larger bamboos, fome of them being four or five fathoms long, and above two foot diameter, which they make use of in building their houses and boats.

Their fruits and flowers are much the fame with those in the Philippines, and therefore we shall not tire the rinippings, and reaction of them, only mention fome of the principal. They have pepper and fugar of their own growth, as well as betel and arek, in great plenty; but no nutmegs, mace or cloves; however, of these they used formerly to import such quantities from the Spice islands that they had fufficient for their own use, and fold great quantities to foreigners. Their rice is said to be better than in other parts of India, it not being overflowed an-mually as in other countries, but watered from time to time by the hulbandmen as occasion requires; and from the goodness of their rice, the natives are of a stronger constitution than those of Siam or other parts of India. Their fruits are also held to be of a more delicious taste

than the fruits of other countries which are exposed to floods: the plains here are covered with the cotton thrub which bears a red flower, and when the flower falls, it leaves a head about as big as a walnut, from whence the cotton is drawn; and that which comes from Macatlar is

accounted the finett in India.

Of all their plants, opium is what they most admire; it is a fhrub which grows at the bottom of mountains, or in ftony ground: the branches afford a liquor which is drawn out much after the fame manner as palm wine, and being Ropped up close in a pot, comes to a confiftency, when they make it up in little pills: they often diffolive one of these pills in water and sprinkle their tobacco with it; and those who are used to take it can never leave it off; they are lulled into a pleafing dream, and intoxicated as with frong fiquor; but it infentibly preys upon their fipirits and thortens their lives; they will take the quantity of two pins heads in a pipe of tobacco, when they enter into a battle, and become almost infentible of wounds or danger rill the effect of it is worn off.

The natives of this ifland are famous for the poilous they compound of the venomous drugs and herbs their country produces; of which, it is faid, the very touch or finell occasions prefent death: their young gentlemen are inflructed how to blow their little poiloned darts through a tube or hollow cane, about fix feet in length; with these they engage their enemies; and if they make the least wound with these darts, it is said to be mortal. Though these weapons would not be much dreaded among people that are well cloathed, yet as the natives engage naked, their skins are easily penetrated, and the poison operates to fpeedily, that it is not easy to cure them: they will ftrike a man with these darts at near an hundred yards distance.

Macassar, the chief city here, is situated on the hanks of the river of the fame name, near the fouth-west corner of the island. Here the Dutch have a very strong fort mounted with a great number of campon; and the garrison consists of eight hundred men.

The streets of the town are wide and heat, but not paved, and trees are planted on each side of them. The palaces, mosque, and great houses are of stone, but the houses of the meaner fort of wood of various colours, which make them look very beautiful, but are built on pillars like those of Siam, and the roofs like theirs alfo are covered with palm or cocoa leaves.

There are fliops along the firets, and large market places, where a market is held twice in twenty-four hours, viz. in the morning before fun-rife, and an hour before fun-fet, where only women are feen; a man would be laughed at to be found among them: from all the villagest you fee the young wenches crowding to marker with fieth, filh, rice and fowls; they abstain only from pork, which their religion forbids.

Upon a computation of the number of inhabitants its this city and the neighbouring villages, fome years ago, they amounted to one hundred and fixty thouland mensible to bear arms; but now are not half that number; many of them having forfaken their country face the Dutch deprived them of their trade. The reft of the towns and villages were note country for the towns. and villages were once equally populous, but are now many of their deferted.

The people of Macassar have excellent memories, and are quick of apprehention, they will imitate any thing they fee, and would probably become good proficients in all arts and sciences, if they did not want good matters to improve

They have also strong robust bodies, are extremely in duftrious, and as ready to undergo fattigues as any people whatever: toor are any people more addicted to a use and hardy enterpriles, informed that they may be booked upon as almost the only foldiers on, the other fide the bay of Bengal; and accordingly are hired into the fervice of other princes and states on that fide, as the Swifs are in this part of the world: even the Europeans frequently employ them in their fervice, but have sometimes suffered by trusting them too far; or rather, our people being too apt to use them like flaves, as they do the poor Portuguese and Mustees in their service; this is a treatment which the Macasfarians will not bear, and never fail to revenge whenever

it is attempted by our European governors.

The people of Macatlar are of a moderate flature, their complexions fwarrhy, their cheek-bones fland high, and their nofes are generally flat; the last is esteemed a beauty, and almost as much pains taken to make them so in their infancy, as to make the Chinese ladies hate little feet.

They have shining black hair, which is tied up and covered with a turbant, or cloth wound about their heads when they are dressed, but at other times they wear a kind of hat or cap with little brime.

They continually rub and supple the limbs of their in-fants with oil, to render them nimble and active; and this is rhought to be one reason there is hardly ever seen

lame or crooked perfon among them.

Their male children of the better fort, it is faid, are al-ways taken from their mothers at fix or feven years of age, and committed to the care of some remote relation, that they may not be too much indulged and effeminated by carefles of the mother; they are fent to school to their prieffs, who teach them to write and read and caft accompts, and the precepts of the koran: their characters very much refer ible the Arabic, which is not ftrange, fince their an-.ors, many of them, were Arabians.

Befides their books, every child is bred up to fome landicraft trade; they are also taught feveral iports and martial exercises, if they are of quality; but the meaner fort are employed in hulbandry, fithing, and ordinary

trades, as in other places,

This people feem to be inspired with just notions of honour and friendibip, and there are inflances of many of them who have exposed their lives even in defence of foreigners and Christians; and of others who have generously reigners and Chrittains; and of others who have generoufly relieved and maintained people in diltrets, and even fuffered them to thate their effates. They retained that love of liberty, that they were the last of the Indian nations that were entiflaved by the Dutch, which did not happen neither till after a long and very expensive war, wherein almost the whole force of the Hollanders in India was employed. The people in general are very much subject to pation; and they will condemn their own raffinels if they are in the wrone; they are in the wrong.

The women are remarkable chafte and referved, at least they cannot help appearing so; for the least finite or glance on any but their husbands, is held a sufficient reason for a divorce: nor date they admit of a vilit even from a brother, but in the prefence of the hulband: and the law indemni-fies him for killing any man he shall find alone with his wife, or on whom she has conferred any mark of her fa-But the inhabitants of this country are in general fo little addicted to infamous practices, or litigious dif-putes, that they have neither attornies or bailiffs among them. If any differences arife, the parties apply personally them. If any differences arife, the parties apply personally to the judge, who determines the matter with expedition and equity. In some criminal cases, such as murder, roband equity. In fome criminal cases, such as murder, rob-berv, &c. he has a right to execute justice himself, by de-

ftroying the offender.

On the other hand, the man keeps as many wives and concubines as he pleafes, and nothing can be more igno-minious than the want of children, and the having but one wife: the love of women, and the defire of children is univerfal; and according to the number of women and

18 universal; and according to the number of women and children the man posselies his happines is rated.

To proceed; though the women of fashion generally keep close, yet upon certain festivals they are suffered to come abroad and spend their time in public company, in dancing and other diversions used in the country; but the then do not mlx with them as in this part of the world, only they have the happiness to see and be seen, which makes them wait for this happy time with impatience.

Their princes and great men wear a garment made of fearlet cloth or brocaded filk, with large buttons of gold, they have likewife a very handfome embroidered fath made of filk, in which their dagger and purse are placed, with their knife, crice, and other little trinkets. People of figure due the nail of the little finger of the left-hand red, and let it grow as long as the finger. The women wear a muslin shift, or rather waistcoat, close to their bodies, and a pair of breeches, which reaches down to the middle of the leg, made of filk or cotton, and have no other head drefs than their hair tied up in a roll, with some curls

hanging down their neck; they throw a loofe piece of linen or mulin over all when they go abroad; nor have they any ornaments but a gold chain about their necks.

They are fond of a fine equipage and a great number of fervants to attend them, and if they have not fo many of their own as their quality requires, they will not fit out, till they have got the ofual number, by hiring or borrowing them. The furniture of their houses confit they for experts and cultious and the couplest they fleen chiefly of carpets and cushions, and the couches they sleep on. They sit cross-legged on mats and carpets, as most Afiatics do.

This island produces most animals except sheep. There are monkeys and baboons in abundance, that will set upon travellers; fome of them are quite black, fome of a fraw colour, and others white, the latter of which are gene-rally as big as maftifs, and much more infehievous than the others. Some have long tails, and walk on all-fours; others are without tails, and walk upright, using their fore-feet as hands, and in their actions greatly relemble the human species. Their going in large companies fecures them from the more powerful beafts of the forefts; but they are fometings conquered by the large ferpents,

which purfue them to the tops of trees, and destroy them.

The natives do not scraple eating any flesh but pork, this no Mahometan will touch; but their food is chiefly rice, fith, herbs, fruit and roots; flesh they eat but little They have but two meals a day, one in the morning and the other about fun-fet; but their chief meal is in the evening; they chew betel and areka, or finoke tobacco mixed with opium most part of the day. Their liquor is tea, coffee, therbet, or chocolate, and they have palm wine, arrae, or fpirits, which they fometimes indulge in, though it is prohibited by their religion. They loll upon carpets at their meals, and eat off of dithes made of China, wood, filver or copper, which are fet on little low lacquer-ed tables; and take up the rice with their hands inflead of ipoous, which they feem not to know the ufe of.

In the celebration of marriage the hufband receives no other portion with his wife than the prefents the received before marriage. As foon as the prieft has performed the ceremony, the new-married couple are confined in an apartment by themselves for three successive days, having only a fervant to bring them fuelt necessaries as they may have occasion for, during which time their friends and ac-quaintances are entertained, and great rejoicings made at the house of the bride's father. At the expiration of the three days the parties are fet at liberty, and receive the con-gratulations of their friends; after which, the bridegroom

conducts his wife home, and both apply themselves to buconducts his wife home, and both apply themfelves to bufinesis, he to his accurationed proefficin, and the to the duties belonging to housewifery, and the management of a family. When a man has reafon to supple his wife of infidelity, he applies to a prieft for a divorce; and if the complaint appears just, there is no difficulty in obtaining it. In this case the security dependent of the accused party guilty, declares her to be divorced, and settles the terms; both parties, after this judgment, have liberty to marry again.

marry again.

The Macassarians had originally strange notions of re-In Macatarians had originally trange notions of religion: they believed there were no other gods but the fun and moon; and to them they facrificed in the public fquarcs, not having materials which they thought fufficiently valuable to be employed in creeking temples. According to their creed, the fun and moon were eternal, as well as the heavens, whose empire they divided between them. These abstractices, however, had not so latting an interpretable to the control of the stand force. influence either over the nobles or people, as is found from the religious doctrines of other nations; for the Turks and apoilles of the koran arriving in the country, the fove-reign and his people embraced Mahometaniin, and the other parts of the island foon followed their example.

They are great pretenders to magic; and carry charms about them, supposing these will secure them from every danger. When any one is so ill as to be given over by the physician, the pricits are fent for, who, attributing the violence of their dit are to the influence of fome evil ipirit, first pray to them, and then write the names of God and Mahomet on finalt pieces of paper, which are carefully living about their necks; and if the patient does not foon recover, his death is confidered as inevitable, and every

preparation is made for his expected departure.

These people perform their funeral ceremonies with great decency; to fecure which, the meanest perform makes provision while in health, by affiguing a certain fum to de-fray the necessary expences attending it. As foon as a person is dead, the dead body is washed, and, being cloathed in a white robe, is placed in a room hung with white, which is feented with the strongest personnes. Here it continues for three days, and on the sourth it is carried on a palanquin to the grave, preceded by the friends and relations, and followed by the priefts, who have attendants that carry incente and performes, which are burnt all the way from the house to the grave. The body is in-terred without a coffin, there being only a plank at the bottom of the grave for it to lie on, and another to cover it; and when this last is placed, the earth is thrown in, and the grave filled up. If the person is of any distinguished quality, a handsome tomb is immediately placed over the grave, adorned with flowers, and the relations burn incense and other perfumes for forty days succes-

This itland was formerly under a monarchical government; and in order to prevent the crown falling to an infaut, the eldest brother succeeded after the death of the king. All places of truit in the civil government were supposed of by the prime ministers; but the officers of the revenue and of the houshold were appointed by the fovereign. The king's forces, when our of actual service, but only their cloaths, arms, were not allowed any pay, but only their cloaths, arms, and ammunition. It is faid, that in former wars he has brought twelve thousand horse, and eighty thousand foot into the field; but the latt war with the Dutch proved the total destruction of both king and country; fince which, this if and has been under the government of three different princes, who are conflantly at variance with each other; which is a favourable circumstance for the Dutch, who might otherwife meet with a powerful opposition, and be deprived of those advantages they have so long posselled on this fide the globe. There princes hold affemblies at par-ticular times on affairs that concern the general interest; and the refult of their determinations becomes a law to each flate.

When any contest arises, it is decided by the governor of the Dutch colony, who prefiles at the above diet. He keeps a watchful eye over these different sovereigns, and holds them in perfect equality with each other, to prevent any of them from aggrandizing themselves to the prejudice of the company. The Dutch have distanced them all, under pretence of hindering them from injuring each other; but in reality only to keep them in a flate of subjection.

Jampadan is another port-town about fifteen miles fourth of Macaffar river, one of the best harbours in India, and the first town the Dutch took from the natives; here they fank or feized all the Portuguese steet when they were in full peace with that mation. The rest of the rowns and

villages lying in the flat country near the fea or the months of rivers, are for the most part built with wood or cane, and stand upon high pillars on account of the annual flood, when they have a communication with one another only

by boats.

About the Celebes are feveral islands that go by the same name, the principal of which is fituated about five leagues from the south-east corner. This island is about eighty miles long, and thirty broad: on the east-fide of it is a large town and harbour called Callacassong, the streets of which are spacious, and inclosed on each fide with cocoa trees. The inhabitants are governed by an absolute rainer, sheak the Malayan tonous, and are Malaymetans. prince, fpeak the Malayan tongue, and are Mahometans. The ftraights of Patience are on the other fide of this island; they are so called from the great difficulty in passing them, which arises from the violence of the currents, and the contrariety of winds.

SECT. IX.

Treats of the fituation, trade, and produce of Bornes, Suma-tra, and Java, commonly called the Sunda islands; and of the manners and customs of the inhabitants, &c.

HE most considerable of the Sunda islands, called so from the straights near which they lye, are Borneo,

Sumatra and Java. Borneo extends from feven degrees thirty minutes north latitude to four degrees fouth latitude, and from the one hundred and feventh to the one hundred and feventeenth degree of longitude, being about feven hundred miles in length and five hundred in breadth, and is computed to be two thousand five hundred miles in circumference. figure of this island being almost round, it probably con-tains a greater number of acres than any island hitherto discovered. To the eastward of it lies the island of Celebes or Macassar, to the fouth of the island of Java, to the west the island of Sumatra, and to the north-east the

Philippine islands.

The air of this country is not exceffive hot, confider-ing it is fituated under the equinoctial, being refreshed almost every day with showers and cool breezes, as all other countries that are under the line; but as those parts of the island which border on the sea-coast lie upon a flat for several hundred miles, and are annually flooded; upon the retiring of the waters the whole furface of the ground is covered with mud or foft ouze, which the fun darting its rays perpendicularly upon, raifes thick noisome fogs, which are not dispersed till nine or ten in the morning, and render those parts of the island very unwholesome. The render those parts of the illand very unwholesome. The multitude of frogs and insects that the waters leave behind, and are soon killed by the heat of the sun, cause an intolerable fleuch also at that time of the year, and corrupt the air: add to this the cold chilling winds and tamps which fucceed the hottest days; from all which, we may conclude it must be very unhealthful at least to European conflitutions: and the loss of our countrymen, who yearly travel thither, fufficiently convinces us of this truth.

As to their monfoons, or periodical winds, they are weflerly from September to April, or thereabouts; during which time is their wet feafon, when heavy rains continually pour down, intermixed with violent floring of thunder and lightning; and at this time it is very rare to have two hours fair weather together on the fouth coalt of the

island, whither the Europeans principally refort.

The dry season begins usually in April and continues till September; and in this part of the year too, they fel-dom fail of a thower every day when the fea breeze comes

The harbours of greatest note, and to which the Europeans usually refort, are Banjar Masseen, Succadance and Borneo, but much more to Banjar Masseen than either of the other; the greatest quantities of pepper growing to-wards the fource of that river, which falls into the fea three degrees eighteen minutes fouth laritude. The town of Banjar formerly stood about twelve miles up the river, and was built partly on wooden pillars, and partly on floats of timber in the viver; but there is now no fign of a tewn there, the inhabitants being removed to Tatas, about fix

The city of Borneo, formerly the refidence of the principal fultan or king of the island, lies on the north west part of the island, in four degrees sitty-five minutes north latitude, and is a very commodious harbour. This city is very large, the fireets spacious, and the houses well built; they are in general three flories high, covered with flat roofs, and the fultan's palace is a very elegant and ex-tensive building. It is the chief feat of commerce in the iliand, and the port is continually crowded with fitips from China, Cambodia, Siam, Malacca, &c. The English and Portuguese have some trade here, though no fettled factory. The port of Succadanca lies on the west fide of the island. in fifteen minutes fouth latitude, and was heretofore more reforted to by the Europeans than any other. Over against this, on the east side of the island, stands another fea-port town, called Passer, in fifteen minutes south latitude, but not a place of any great trade.

One of the most considerable inland towns h Caytonge,

the fultan whereof is now the most potent prince in the island: this city lies about one hundred miles up the river Banjar; and about two hundred miles higher stands the town of Negarce, the refidence of another fultan. The names of the other principal towns are, Tanjongbatoo, Sedang, Tanjongbatoo, Sanbas, Landa, Pilagadan, Cotapanjang, Sampit, Tanjong, Selatan, Gonwarengen and

Their chief rivers are, t. Banjar. 2. Tatas. 3. Jaya.

4. Succadanca; and, 5. Borneo.

Banjar is a fine rivet, rifing in the mountains in the middle of the island, and, running fouth, discharges itself into a bay on the fouth-east part of the island, being navigable for several hundred miles: the banks are planted with tall ever-green trees. The river Tatas falls into the rough of Banks river, and is frequently called the Chima mouth of Banjar river, and is frequently called the China river, because the China junks lie in the mouth of it. The rivers Java and Succadanea run from the north-east to the fouth-west, and fall into the bay of Succadanca in

to the fouth-west, and the island.

The river Borneo falls into the bay of Borneo, in the north-west part of the island.

The tides in the river Bander of the island. jar flow but once in twenty-four hours, and that in the day-time; they never rife more than half a foot in the night (unlefs in a very dry feafon) which is occasioned by the rapid torrents, and the land winds blowing very strong in the night-time. There lie three iflands within the entrance of the river, the first of which is covered with tall trees, that may be feen at fea, and are a good mark for failing over the har. If a fhip be aground, the ebb is fo very ftrong, occasioned by the land floods, that the will very trong, occasioned by the land noods, that he will run the hazard of being broke to pieces; and the trees continually driving down the river, render the navigation full more dangerous. The best anchoring piece is a mile or two within the river; it is best to fail up with the flood, the tide of ebb runs to Arong. There are a great many fine bays and harbours on the coast, but that most refortable like the render of the river Rapis. ed to is at the mouth of the river Banjar.

The natives of Borneo confift of two different people, that are of different religions; those upon the sea coast are stually called Banjareens, from the town of Banjar, to which most nations refort, to trade with them. Banjareens are of a low stature, very swarthy, their features had, refembling much the negroes of Guinea, though their complexions are not fo dark; they are well proportioned, their hair is black, and fhines with the oil with which they perpetually grease it. The women are of a low stature and small limbs, as the men are, but their reatures and complexion much better, and they move with a

good grace.

The lower class of people go almost naked; they have only a little bit of a cloth before, and a piece of linen tied about their heads. Their betters, when they are drested on days of ceremony, wear a veft of red or blue filk, and a loofe piece of filk or fine linen tied about their loins, and a tone piece of their left thoulder. They wear a pair of drawers, but no fhirt, and their 193 and feet are bare; their hair is bound up in a roll, and a piece of mufin or callico tied over it; they always carry a crice or dagger in their fash when they go abroad.

The Byaios or mountaineers are much taller and larger

bodied men than the llanjareens, and a braver people, which their fituation and manner of life may account for, being inured to labour, and to follow the chace for their daily food; whereas the Banjareens use very little exercise,

travelling chiefly by water.

The Byaios have scarce any cloathing, but, not ad-The Syalos have learce any cloating, but, not admining their teamy fkins, paint their bodies blue, and, like all other people that live in hot climates, anoint themselves with oil, which finells very firong; and the better fort, it is faid, pull out their fore-teeth, and place artificial ones, made oi gold, in their fload; but their greatest ornament confists of a number of tygers teeth, which are firing together, and worn about the neck. Some of them are very fond of having large ears; to obtain which, they

make hole; in the foft parts of them when young; to these holes are fastened weights about the breadth of a crown piece, which is continually pressing on the cars, and expand them to such a length, as to cause them to rest upon the shoulders.

The Banjarcens are an hospitable friendly people, where they are not abused, or apprehend foreigners have a design upon their liberties; they seem to be men of good sense, but not being acquainted with the world, are frequently imposed upon in their traffic with the erafty Chimese.

The chief part of their food here is rice, as it is in subset here countries have the property of the chief part of their food here is rice, as it is in the property of the chief part of their food here is rice.

The chief part of their food here is rice, as it is in other hot countries, but with it they eat venifon, fish, or fowl, and almost all kind of meat, except hogs sleth; and men of sigure are served in gold or fisher plate; the common people are content with brass or cartlen dishes, and all fit cross-legged upon mats or carpets at their meals, and indeed almost all day long, chewing betel and arek, or smoaking tobacco, which both sexes are very fond of when it is mixed with opium. The whole company usually smoke out of one pipe; the master of the seath having smoaked first, passes it round the company, and they will sometimes fit smoaking so long, that they grow slupid. At other times they divert themselves with comedies, and the Chinese have taught them to game; their rural sports are hunting, shooting, and sithing. They have such plenty of sish, that they may take as many as will serve them a day at one cast, from their houses, which are built apon sloats in their rivers.

Their ufual fatute is the falam, lifting up their hands to their heads, and bowing their bodies a little; and before their princes, they throw themfelves profitate on the ground: no one prefumes to fpeak to a great man, till he is first spoken to, and required to tell his business: they usually travel in covered boats upon their rivers; but the great men who live in the inland country ride on elephants or horfes.

Befides rice, already mentioned, the produce of this country is cocoa-nuts, oranges, citrons, plantains, melons, bananas, pine-apples, mangoes, and all manner of tropical fruits; cotton, canes, rattans, and plenty of very fine timber; gold, precious ftones, camphire, bezoar, and pepper. There are three forts of black pepper; the first and best is the Molucca, or lout pepper; the fecond is called Caytonge pepper, and the worlf fort is the Negaree pepper, of which there is the greatest plenty. This is small, hollow.and light, and commonly full of dust, and the buyer will be imposed on if he buys it by messure, and does not weigh it. He must take care also, that the pepper be not mixed with little black stones, which are not cassly feen. The white pepper grows on the same tree as the black pepper does, and bears twice the price: it is conjectured to be the best of the fruit that drops of itself, and is gastreed up by the poor people in small quantities, before it turns black, and the scarcity of it occasions it to be so do the fine tree.

The animals here are the fame as on the continent of India, viz. bears, tygers, elephants, buffaloes, deer, &c. but the moft remarkable animal, and which is almoft peculiar to this ifland, is that monftrous monkey called the oran-outang, or man of the woods, near fix feet high, and walks upon his hinder legs. He has a face like a man, and is not fo ugly as fome of the human fpecies, particularly the Hottentots; he has no tail, or any hair on his body, but where a man has hair. Mr. Beeckman, captain of an Indiaman, purchafied one of them, who would drink punch, and open his cafe of brandy to get a dram, if he was left alone with it, drink a quantity, and then return the bottle to the cafe. He would lay himfelf down to fleep as a man does; if the captain appeared angry with him, he would whim and figh till he was reconciled. He would wreftle with the fearmen, and was ftronger than any of them, though he was not a year old when he died; for the captain loft him as foon as he came into cold weather, having hece bred in the hottel climates.

Among their minerals is gold, which the mountaineerget out of the fands of their rivulets in the dry feafon, and
dispose of it to the Banjareens, from whom the Europeans
receive it: there are also iron mines, and the load-flone is
found here.

The principal merchandize imported from Borneo by the Europeaus is peoper, gold, diamonds, camphire, bezoar, aloes, malick and other gums; and the goods proper to be carried thather, befides bullion and treafure, are small cannon from one hundred to two hundred weight, lead, callimaneoes, cutter wares, iron bars, finall field bars, hangers, the finallest fort of spike nails, twenty-penny

hails, graplings of forty pound weight, red leather boots, spectacles, clock-work, small arms with brass mountings, horse pittols, blunderbusses, gunpowder and looking-glaties. The purchasing gold is a profitable article, and diamonds may be had reasonably, though they are generally small ones: they usually purchase gold with dollars, giving a certain number of filver dollars for the weight of one dollar in gold.

Their current money is dollars, but and quarter dollars.

Their current money is dollars, half and quarter dollars; and for fmall change they have a fort of money made of lead in the form of rings, which are ftrung on a kind of dev less.

of dey leaf.

The language of the inhabitants on the coast is the Milayan; but the islanders have a language peculiar to themselves, and both retain the superfittious customs of the Chinese.

They are intirely ignorant of aftronomy; and when an eclipic happens, they think the world is going to be defroyed. Arithmetic they know but little of; and their only method of calculating, is, by parallel lines and moveable buttons on a board. They have likewife little know-ledge of phyfic; and the letting of blood, how desperate foever the case of the patient may be, is to them a circumstance of a very alarming nature, as they suppose, by the operation, we let out our very souls and lives. It is their opinion, that most of their distempers are cansed through the malice of some evil demon; and when a person is sick, instead of applying to medicine, they make an entertainment of various kinds of provisions, which they hold under some conspicuous tree in a field; these provisions, which consist of rice, sowl, sish, &c. they offer for the relief of the person afflicted; and if he recover, they repeat the offering, by way of returning thanks for the blessing received; but if the patient dies, they express their resentment against the spirit by whom he is supposed to have been afflicted.

Pagans and Maliometans both allow a pluratity of wives and concubines; and the marriage ceremonies of both are the fame as in other Mahometan countries. The girls are generally married at the age of ten, and leave child-bearing before they are twenty-five. The women are very conflant after marriage; but are apt to beflow favours with great freedom when fingle; and however indiferent they may have been in this point, they are not confidered the worfe for it by their hulbands, nor dare any one reproach them for what they have committed previous to their marriage. They in general live to an advanced age, which is attributed to their frequent use of the water; for both men and women bathe in the rivers once in the day; and from this practice they are very expert fwimmers.

The Banjareens, in burying their dead, always ptace

The Banjareens, in burying their dead, always piace the head to the north, and they throw into the grave feveral kinds of provitions, from an abfurd and fuperfictious notion that these may be useful to them in the other world. They six the place, of interment out of the reach of the sloods; and the mourners, as in Japan and China, are drelled in white, and earry lighted torches in their hands.

There are feveral petty kingdoms in the inland part of this country, each of which is governed by a rajah, or king. All the rajahs were formerly fooject to the rajah of Borneo, who was esteemed the fureme king over the whole island; but his authority has been of lare years greatly diminished; and there are other kings equal, if not more powerful than himself; particularly the king of Caytonge. The town where this prince resides is situated about eighty miles up the Banjar river. His palace is a very elegant building erected on pillars, and is open on all sides. Before the palace is a large building, consssing only of one room, which is set apart for holding councils, and entertaining foreigners. In the centre of the room is the throne, covered with a rich canopy of gold and silver orocade. About the palace are planted several cannon, which are so old, and mounted on such wretched carriages, that they are neither ornamental nor useful. This prince is effectived the greatest, on account of the customs he receives at the port of Banjar Massen, which are estimated at eight thousand pieces of eight per annum.

The king or future of Negaree is the most considerable entires, next to the above: his palace is situated at a place rance, were the most considerable called Metapoora, about ten miles from Caytonge. There

The king or futan of Negaree is the most considerable prince, next to the above: his palace is situated at a place called Metapoora, about ten miles from Caytonge. There is a handsome armoury before the gates of his palace, which contains a great number of fire-arms, and several cannon. He is always on good terms with his neighbour the prince of Caytonge, and the rest are subordinate to these two princes; great homage is paid them by the natives, and it is difficult for a stranger to get access to them:

the only means to effect this, is, by complimenting them with fome valuable prefent, for avarice is their darling paffion; and the ftranger will be treated with respect in proportion to the present he makes.

Sumatra is one of the Sunda islands, fituate in the Indian ocean, between ninety-three and one hundred and four degrees of eastern longitude, and between five degrees thirty minotes north latitude, and five degrees thirty grees thry limites norm autoue, and new aegrees unry minutes fouth latitude, the equinoftial line running crois the middle of it; having Malacca on the north, Bornes on the east, Java on the fouth-east, and the Indian occan on the west, and is eight hundred miles long, and about one hundred and fifty broad. The air is generally unbehilded the second of the second healthful near the coast, the country being very hot, and very moift, and changing fuddenly from fultry heat in the day-time, to cold chilling winds in the night.

It is the first of the remarkable islands that form the great Archipelago of the eaft, the entrance of which is, as it were, blocked up by this ifland and Java, which form a barrier feparating the Indian from the Climefe ocean; ex-cept that in the center between the two iflands there is an opening, which appears as if purpolely defigned to admit a free passage for the advantages of commerce. This open-ing is called the straight of Sunda, the fouth part of which is the north of Java, and called Java Head; and the north point is the fouth of Sumatra, called Flat Point. Thefe point is the four of Sumarra, called Flat Point. I nete two are about fix leagues afunder, between which fhips pass from Europe directly to Batavia or China, without touching at the Indies: they stretch away cast from the Cape of Good Hope, and make no land till having traversed the whole Indian sea they arrive at Java Head.

There are no physicians in Sumatra, but they rely upon the fkill and experience of four good old women, who are acquainted with the nature of their fimples. The flux is the diftenper that utually carries off foreigners, againft which the fruit guava and the pomegranate are certain remedies, if taken before the diftemper becomes violent ; but most other fruits promote the disease. Bathing in colu water is esteemed another remedy for the flux. water, unboiled, as well as sherbet, is very unwholsome; full meals of fielh ought to be avoided, occasioning a distemper called the Mort Duchin, which is attended with a violent vomiting and purging, and usually carries off the patient in twenty-four hours. Those gentlemen that drink strong liquors to excess, usually avoid the slux, but are carried off by fevers. The choice and small-pox are often text to the strong strong the strong strong strong the strong fatal to the natives, as well as foreigners; but they are feldom troubled with dropties, gout, or ftone.

People that are careful of their health, eat and drink

moderately, and boil their waters nor do they avoid wine or arrack punch altogether, for these drunk moderately in this moift air preferve, rather than dellroy health.

There is a chain of mountains which runs the whole length of the ifland, from the north-west to the fourli-east, and here the air is fomething better than on the coast; but the European factories are generally fituated at the mouths of rivers near the fea, for conveniency of trade; and here three years may be reckoned a long life, the falt stinking oute fends up fuch unwholfome vapours as perfectly poison foreigners that are sent thither.

The monfoons, or periodical winds, shift here at the equinoxes, as they do in other parts of the Indian seas, blowing fix months in one direction, and fix months in the opposite direction; and near the coast there are other periodical winds, which blow the greatest part of the day from the fea, and in the night time and part of the morn-ing from the land; but these scarce extend seven miles from the coaft.

There is also a mountain called Single demond, about forty miles fouth east of Bencoolen, which is a mile in height perpendicular; the rocks near the west coast are generally barren, producing little besides thrubs; but towards the bottom of them grows fome good timber. The country has a great many fmall rivers, but none of them navigable much above their mouths, falling from high mountains, and discharging themselves precipitately into the fea, either on the east or west, after a very short course; the rains continuing here, as they do in most places near the equinoctial, fix months and upwards, every year, and no where with more violence. The waters of the river Indapoora, during rains, look red for two miles beyond the Mouth out at fea, occasioned, it is faid, by the great number of take that grow in their boggy grounds, and are almost covered when the floods are highest. The waters of all their rivers, which overflow the low countries, are very unwholefome, foul, and not fit to be drunk till they are fettled, nor indeed till they have been boiled, and tea or fome other wholefome herbs infused into them and this, no doubt, is one cause of the unwholfomeness of the air, it being a very just observation, that wherever the water is bad, the air is so too.

water is bad, the air is fotoo.

The itand of Sumarta was antiently, and is at prefent, divided into a great many kingdoms and flates, of which Achen is the nost considerable, whole king is the most powerful monarch in the island, the north part of it being in a manner subject to him. Besides this prince, there are several oraneayas, or great lords, in this kingdom, who exercise soverign authority in their respective territories; we show the constant of the property of the constant of the second or th but they all acknowledge the king of Achen their fuperior,

and accept of the great officers in his court.

In former times the kings have exercifed fuch defpotic power as to displace some of these, and depose others; and, on the other hand, inflances have been known where these princes have deposed the king, and placed another on the throne. There have been frequent flruggles between the king of Achen and these princes for sovereign power; and if the former has in some reigns been absolute, he has in others had a very limited authority.

The king has the power of difpoing of the crown, during his life, to such of his children as he thinks proper. whether born of a wife or a concubine : but if the king does not dispose of it in his life time, there are sometimes several competitors for it; and he who is most favoured by the orancayas, or valial princes, usually carries his point; fo

that the crown is elective in these cases.

Achen, the metropolis of the kingdom of the fame name, is fituated at the north-west end of Sumatra, in ninety-three degrees thirty minutes east longitude, and in the most considerable port in the island, It shands in a plain, surrounded with woods and marshes, about five miles distant from the fea, near a pleasant rivulet : it is an open town, without wall or moat, and the king's palace flands in the middle of it, being of an oval figure, about half a league in circumference, furrounded by a mout twenty-five feet broad, and as many deep: and about the palace there are cast up great banks of earth instead of a wall, well planted with reeds and canes, that grow to a prodigious height and thickness, infomuch that they cover the palace, and render it almost inaccessible; these reeds also are continually green, and not easily set on fire. There is no ditch or draw-bridge before the gates, but on each fide a wall of flone about ten feet high that supports a terrace, on which fome guns are planted; and a fmall stream runs through the middle of the palace, which is lined with stone, and has steps down to the bottom

of it, for the conveniency of bathing.

There are four gates, and as many courts, to be paffed before we come to the royal apartments; and in fome of thefe outward courts are the king's magazines, and the flandings of his elephants: as for the inward courts of the palace, foreigners, or even the natives, hardly ever approach them; and therefore a just description of these is not to be expected. But notwithflanding the fortifications of this palace or castle, as it is fometimes called, are very mean and incomiderable, yet the avenues to it are naturally well defended; for the country round about Achen is full of rivulets, marthes, and thick woods of cane or bamboo, which are almost impenetrable, and very hard to cut : there are feveral little forts erected also at proper distances in the marshes, where guards are planted to prevent any furprize. In the king's magazines, fome authors tell us, are found a numerous artillery, and a good quan-tity of fire arms, and that his guards confil of many thoufund men; but that his greatest strength is in his elephants, who are trained up to trample upon fire, and fland unmoved at the report of a cannon; but this we thall examine more particularly when we come to fpeak of the mainte-nance of the prince, both with respect to domestic and mi-litary supplies, for later reavellers do not seem to admire

his power or grandeur.
The city of Achen confids of feven or eight theufand houses, which take up the more ground because they are not contiguous, every perfor forcounding has dwelling with a pullifado pale that flunds forme yards diffant from it; except in two or three of the principal flucts where the markets are kept, and were foreigners inhabit, who chufe to live near one another, to defend themfelves from thieves, robberies being very common here. The harbour, which is fo large as to be capable of containing any number of the largest thips, is commanded by a spacious fortress encompassed with a ditch wall fortified according to the Italian manuer, and mounted with cannon.

n

IT it English, Dutch, Danes, Portuguese, Guzarats, and Chinele, are the chief traders in this city.

The king of Achen has a great number of horses, which, as well as the elephants, have rich and magnificent trappings. He is at no expense in times of war, for all his foljects are obliged to march at their own expense, and carry with them provisions for three months: he only furnishes them with arms, powder, lead, and rice, which is very triffing. In peace, it does not cost him any thing, even for the maintenance of his family, for his subjects fupply him with all kinds of provisions: they also provide him and his concubines with cloaths. He is heir to all his fubjects who die without iffue male, and to all foreigners who die within his territories; and fueceeds to the effates of all those who are put to death. From all which it appears, that the revenue of this prince, though

not paid in money, is very confiderable.

The inhabitants of Achen are more vicious than in other places on the coaft: they are proud, envious, and teacherous, t despife their neighbours, and yet pretend to have more humanity than the inhabitants of any other na-Sume of them are good mechanics, especially in the building of gallies; and they are very dextrous in doing all kinds of fmiths work: they also work well in wood and copper, and fome of them are skilled in making artillery. They live very abstemiously, their chief food being rice, to which some of the better fort add a small being rice, to which fome of the better fort add a fmall quantity of fifth, and their usual drink is water. They are very fond of tobacco, 'hough they have but little of their own raising; and, for want of pipes, they smoke in a bunco, in the same manner as the inhabitants on the coast of Coromandel. The bunco is the leaf of a tree rolled up with a little tobacco in it, which they light at one end, and draw the smoke through the other till it is pearly burst to the little. The fall was reasonable to the same property of the same and the same and the same are consolided.

one end, and draw the moke through the other the its bearly burnt to the lips. These rolls are very curiously formed, and fold in the public markets in great quantities.

They hold a court of juffice sive times a week, for determining all matters of controversy, in which one of the chief orankayas presides as judge. There is also a crichief orankayas prefides as judge. There is also a cri-minal court, where cognizance is taken of all quarrels, robbeties, murders, &c. committed in the city: and there as a third court, in which the cadi, or chief prieft, prefides, who judges concerning all infringements of an ecclefiafti-cal nature. Besides these, there is a court for determining difputes between merchants, whether foreigners or natives. An exact account is kept here of all the customs, gifts, fines, and commodities belonging to the king, with a list

of all the persons who buy of his majesty, pay the duty, or make presents to him.

Offenders are brought to a speedy trial, and the punishment is inflicted immediately after their conviction. the offence be of a trilling nature, the punishment for the first time is the lofs only of a hand or foot, and the fame for the fecond; but for the third, or if they rob to π confiderable amount, they are impaled alive. When the hand or foot is to be cut off, the limb is laid on the edge of a broad hatchet, and the executioner flinkes it with a large mallet till the amputation is perfected; and then they put the flump into a hollow bamboo fluffed with rags or mols, to prevent the criminal from dying by lofs of blood. After he has thus fuffered whether by the king's command, or by the fentence of the judge, all the ignominy of his crime is wiped off; and if any one upbraids him with it, he may kill him with impunity.

Murder and adultery are punished with death; and, in this case, the criminal has many executioners, he being placed amidit a number of people, who stab him with their daggers; but female oftenders are put to death by strangling. The king is frequently a spectator of thete punithments, and fometimes even acts as executioner : and though fuch a spectacle must to a feeling mind, appear extremely flooking, yet to little does he frem effected by it, that inflances have been known of his executing a criminal, and immediately after entertaining himfelf with cock-fighting; a divertion which in this country is more

univertally effectted than any other.

Having given the fituation of the most considerable places on the east tide of Sumatra, we proceed through the thraights of Sunda to the well coall ; and advancing from thence towards the north, the first English fettlement we meet with is Sillabar, which lies in a bay at the mouth of a large river of the fame name, in four degrees of fouth latitude. Here the Englith have a relidence, or a finall detachment from Marlborough fort, (creeked foon after the deftruction of York fort at Bencoolen) to receive the pepper the natives bring hither.

About ten miles to the northward of Sillabar flands the

town of Bencoolen, where was the principal fettlement the English had upon the island Sumatra, from the year 1685

English had upon the island Sumatra, from the year 1688 to the year 1719, when there happened a general infurrection of the natives, who cut off part of the gardion; the rest escaping in their boats to sea.

Bencoolen is known at sea by a high slender mountain that rises twenty miles beyond it in the country, called the Sugar-loas. Before the town of Bencoolen there lies an island, within which the shipping usually ride; and the point of Sillabar extending two or three leagues to the southward of it, makes a large bay: besides these marks the old English fort, which fronted towards the sea, might have been discerned when a ship came within seven or eight nities of the place. The lown is almost two miles in compass, and was inhabited chiefly by the natives, who eight miles of the pace. In a rown is amont two miles in compass, and was inhabited chiefly by the natives, who built their houses upon bamboo pillars, as in other parts of the island. The Portuguese, Chinese, and English had each a separate quarter. The Chinese people built all upon a thoor, after the custom of their country. The nglish houses were after their own model; but they found themselves under a necessity of building with timber, (though there was no want of brick or stone), upon account of the frequent earthquakes.

The adjacent country is mountainous and woody, and in fome parts are volcanoes that frequently vomit fire. The air is very unwholesome, and the mountains are generally covered with thick clouds that burst in storms of thunder, rain, &c. The foil is a sertile clay, and the chief produce is grass; but near the sea it is all a morass. There a fmall river on the north-west side of the town, by which the pepper is brought here from the inland part of the country; but there is a great inconvenience in shiping it, on account of a dangerous bar at the mouth of the river. The road is also dangerous for thips, as it has no other defence from the violence of the fea during the fouthwelt monitoris, than a final place called Rat Illand, which, with the land-point of Sillabar, makes the haven. The pepper brought here comes from the territories of the two neighbouring rajahs, one of whom refides at Sin-

dle-'demond, at the bottom of a bay ten or twelve miles to the north; and the other of Basar, ten miles to the east. There two rajahs have houses in the town, whither they come when they have any business to transact with the English, who pay them half a dollar duty for every five hundred and fixty pounds weight of pepper; and they also pay to the owner for every fuch quantity ten Spanish dollars, weighing each feventeen penny weights and twelve

The English have also other settlements to the northwelt of the above, particularly at Cattoun, fituated about forty miles from Bencoolen; Ippo, about thirty miles farther to the north; Bantall, which is upward of one hundred miles north of Bloncoolen; and Mocho, fituated a little to the fouth of Indrapour.

There are feveral good Dutch fettlements on this island, the most considerable of which is Pullambam, or Pullamban, situated about one hundred and twenty miles north-eaft of Benecoolen. The chief article of trade here is paper, of which the Dutch have prodigious quantities, being under contract with the king of Pullamban, and other Indian princes, to take it at a certain price, one half other Indian princes, to take it as a certain price, one man of which they pay in money, and the other in cloth. All other nations are prohibited from trading except the Chi-nefe, by means of whom the English get a share of their pepper, as our thips pass through the straights of Banca. The Dutch formerly carried on a great trade here in The Dutch formerly carried on a great trace neem opium; but as that was found to impoverith the country, by drawing away its ready cath, the king, in 1708, ordered only three chefts of about one hundred and fixty pounds each, to be imported; and that if any fhould be detected in acting contrary to this order, they should forfeit not only their goods, but their lives alfo.

Pullamham is a very large town, and pleafantly lituated

on the banks of a fine river, which divides itself into feveral branches that run by four channels into the fea. continued to be a confiderable city till the year 1659, when it was destroyed by the Dutch, in revenge for some inju-ries they pretended to have received from the natives. About this time the Dutch reduced the chief of the kingdoms in the fouth part of this island; but several of them were afterwards recovered by the natives, who have ever fince remained independant. The Dutch have feveral other

factories here; namely,
1. Bancalis, which is frunted nearly opposite to Maleca, on the banks of a spacious river of its own name.
The chief articles fold by the company here are, cloth and opium; in return for which, they receive gold-duft. The

country is very fertile, and in the woods and mountains are prodigions numbers of wild hogs, whole field is ex-ceeding fweet and fat. They have likewife fome good poultry, and there are various kinds of fifth in the river. 2. Siack, fituate on the river Andraghima: this is a very inconfiderable place, on account of the unwhole fomenets

of the air, which is attributed to the great number of thads caught in the river at a particular feafon of the year, for the fake of the roes; and the reft of the fish being thrown in heaps, corrupt, and exhale pestilential vapours. These roes the natives pickle, and then dry in smoke; after which they put them in large leaves of trees, and then fend them to different countries between Achen and Siam. They call is Tunbow, and reckon it a great delicacy.

3. Pedang; which is fituated about fixty miles fouth of

the equator, and has a fine river, where large thips may come up, and ride in fafety; but it is the most infignifi-cant fettlement the Dutch have on this island: it produces but a finall quantity of pepper; and the trade in gold is fo trifling, as hardly to defray the natural expences attending it.

Many other places on this island are independent of the English and Dutch; the chief of which are the fol-

Priaman, it lies nearly opposite to Pedang, about one hundred miles north-west of Indrapour. It is very populous, and plentifully supplied with most kinds of provisions. The natives carry on a considerable trade with the inhabitants of Manimeaho. The Dutch had a factorial was a supplied to the provision of the provision of Manimeaho. tory here for many years, but were at length driven from it by the king of Achen.

Another very confiderable place is Ticow, which is fituated about leven leagues from Daffaman, in twenty de-grees fou h latitude. The inland part of the country is very high, but that next the fea is low, covered with woods, and watered with feveral fmall rivers, which render it marthy. There are, however, many pleafant mea-dows well flocked with buffaloes and other horned cattle, which are purchafed at a very eafy price. It like to fairfords plenty of rice, poultry, and feveral forts of fruits, as durians, ananas, oranges, citrons, ponegranates, melons, mangoes, eccumbers, and potatoes: but its most valuable produce is pepper, with which it abounds, and is in quality efteemed superior to that of any other place on the island. The progress chiefts grows at the bettern of the island. The pepper chiefly grows at the bottom of the mountains; for which reason those parts are exceedingly populous. The city stands about two miles from the fea, opposite to a small island. It is but a little mean place, for the city and fuburbs do not contain eight hundred houses, which are chiefly built with reeds, and are neither strong or commodious. The king is subject to the kings of Achen, who appoints a new governor every three years, and without him the king of Ticow cannot execute any business of importance. The governor, execute any business of importance. The governor, therefore, is the person applied to by foreigners in the transacting of business, and even the natives pay him the most distinguished respect. The inhabitants of the city are Malayans, but the inland parts are possessed by the natives, who disown the king of Achen's authority, and have a peculiar language and king of their own. This part of the country produces great quantities of gold, which the natives exchange with the Dutch, or the inhabitants use the coall, for peoper, eth. iron, cotton, red bitants near the coall, for pepper, falt, iron, cotton, red cloth, and Surat pearls. The air here is very unhealthy, particularly from July to October, and the people are very subject to severs, which are so violent in their nature, as teldom to admit of a cure; fo that were it not for the pepper, no firanger would venture to go near them. Every person who trades to this place, must have a licence for that purpose from the king of Achen: and when that is obtained, they cannot be interrupted either by the king or governor of Ticow. They fell their pepper by bahars of one hundred and fixteen pounds averdupois : and the king of Achen has fifteen percent, out of all that is fold, that is, feven and a half for the export of the pepper, and feven and a half for the import of the merchandize given in exchange for that commodity.

Barras, which belongs to the king of Achen, is one of the most considerable places on the west coast, it is fituated the most confiderable places on the well coalt, it is fituated on a fine river near the center between Theory and Achen, and, like the fermer, no perfon must trade here without permission from the king. This place produces great plenty of gold, camphire, and behavinin, the latter of which ferves the natives instead of money. The country is very pleasant, and abounds with rice, and feveral forts of the most delicious fruits. The Dutch and English, as also the inhabitants of the coast, buy up the camphire here, in order to carry it for Surat, and the straights of Sunda.

The province of Andzigzi is small, but remarkable for producing great quantities of pepper; and gold is cheaper here than in any other part of the island.

Jamly is fituated on a river on the east fide of the island, bout fifty miles from the fea, in two degrees fouth latitude Great quantities of pepper are produced in it, which is faid to be much fuperior in quality to that of Andrigri. The Dutch had a factory here, the most confiderable of all their fettlements on the coast, but they withdrew from it in 1710. The English had likewise a factory near it, which alfo quitted on account of the obstructions they met with from the Dutch in their trade.

Pedir is fituated about thirty miles eaft of Achen, and

is a large territory: it has the advantage of an excellent riverr The foil is very fertile, and the country produces fuch quantities of rice, that it is called the granary of Achen. It also produces a large quantity of filk, part of which is wove by the natives into stuffs, that are valued in most parts throughout the island, and the rest is fold to the

most parts throughout the mand, and the letter is took to the inhabitants of the coast of Coromandel.

Passiman, almost under the equinoctial, is a large place, situated at the foot of a very high mountain, but is remarkable only for producing pepper, which is both large

and excellent in its quality.

Cinquele produces annually a large quantity of camphire, which the inhabitants of Surat, on the coaft of Coromandel, purchase for fifteen or fixteen rials the coff, or twenty-

eight ounces. Daya abounds in rice and cattle. In the island of Sumatra, they have a finall breed of horses; they have also buffaloes, deer, goats, hogs, tygers, hog-deers, monkies, squirrels, guanoes, porcupines, alli-gators, serpents, scorpions, muskatoes, and other inscrict from the hog-deer is obtained a species of the bezoar-stone, which is of a dark brown colour, and has two coats; a finall quantity of this stone, dissolved in any li-quor, will remove an oppression of the stomach, sessisies foul blood, and reflores the appetite: it is also very efficaious in other diforders incident to human nature. Here are also hens, ducks, and other poultry; pigeons, doves, parrots, parakeets, maceaws and fmall birds; fea and river fith also are very plentiful, and tuttle or fea-tortoife. They have elephants, but they are supposed not to be nature.

Rice is much the greatest part of their food in all their meals; strong foup, made of flesh or fish, and a very little meat high feasoned, serves to eat with their rice. The Maliometans that inhabit the coast, abstain from swines fleth, and from strong liquors, as they do in all countries of the same faith. The mountaineers will eat any flesh, except beef, the bull being one of the objects of their worthin, and if we could give any credit to their neighbours, the people of Achen, they cat human fleft; but the world is pretty well fatisfied by this time that there are no nations of cannibals.

Their common diest.

Their common drink is tea, or plain water; but they fometimes use the signor of young cocca-nuts, which is very cooling and pleafant. They always fit cross-legged on the floor at their meals. Their falutations are much

the same as in other Asiatic countries.

Learning is not to be expected here. The common language is the Malayan tongue, and the koran and religious books of the Mahometans are written in Arabic, which is now a dead language. They have indeed the use of letters here, as they have almost in every other eastern nation except China; but those gentlemen were so felffufficient, fo much above being taught by people they look upon as their inferiors, that they have now the least pre-

tence to learning of any nation on the face of the earth.

The Mahometans of Sumatra speak and write the Malayan language. The Pagan mountaineers have a language peculiar to themselves. As the Malayans write from the right hand to the left, the mountaineers write as we do, from the left hand to the right; and inflead of pen, ink, and paper, they write, or rather ingrave, with a file on the outfide of a bamboo cane; the Malays, indeed, use ink and a course brown paper. Both nations are poor accomptants, and are forced to make use of the Banisas that reside amongst them as their clerks, when they have any considerable accounts to make up, the Banians being faid to be possessed of great abilities in this particu-lar, and are also some of the sharpest traders in the world. The inhabitants of this island are in general of a mode-rate slature, and a very swarthy complexion: they have

black eyes, flat faces, and high cheek bones : their hair is long and black, and they take great pairs to dye their teeth black: they likewife befinear themselves with oil, as inother hot countries, to prevent being flung by the infoets, an million : fmall pie their hea leaves, re shoes or ches, and loins, an They

icir 48 111feets, and let their naifs grow exceeding long, ferning them till they are transparent, and dying them with vermillion; the poorer fort go almost naked, having only a fmall piece of cloth fastened round the waist; and about their heads they wear a piece of linen, or a cap made of leaves, refeatbling the erown of a hat; but they have no shoes or slockings. The better fort wear drawers or breeches, and a piece of callico or silk wrapped about their losins, and thrown over the left shoulder, and they wear smalled in their feet, when in towns.

ches, and a piece of callico or filk wrapped about their loins, and thrown over the left shoulder, and they wear sandals on their feet, when in towns.

They are very proud and revengeful in their dispositions; and are so indolent, that they will neither endeavour to improve themselves in arts and seiences, or l'husbandry, but l'are their manufactures to be neglected, and their lands to he without cultivation. 'If foreigners, therefore, were not to supply their desets, they would in all probability suffer themselves to be reduced to a savage state, and only preserve their existence, like the beasts of the country, with what the earth spontaneously produces.

The king has no other standing forces than his guards, but depends on his militia, which, as we hinted above, are as numerous as the people in his kingdom, all whoate able tobera rams, are obliged to appear under arms whenever they are summoned. They have scarce any fortified towns and casses, but what are natural; and the country set us to be inaccessible, that the natives boast it has never been conquered by any foreign power; but this must be a mistake, for the present generation, who are masters of the north part of the island and the sea-coast, are not the original inhabitants, but came from Egypt the Arabia, and having driven the Pagans up into the mountains, succeeded them on the sea-coasts.

The religion of Mahomet is prossed.

on the fea-coafts.

The religion of Mahomet is profested at Achen, and upon all the coafts of Sumatra; but they are not fuch bigotted zealots as they are in some other Mahometan countries. Their temples or mosques are but meanly built, some of them no better than cottages. The chief prieft resides at Achen, and has a great influence on affairs of state. Their marriage contracts are made before their contracts are made before their contracts.

fate. Their marriage contracts are made before their priefts, who are judges in cases of divorce, as well as Incivil causes. Their priefts also assist at their celebration of their funeral rites, as in other Mahometan states.

This, as well as the rest of the Indian islands, was, no doubt, first peopled from the neighbouring continent. The Phoenicians, Egyptians, and Arabians afterwards trafficed with them; and we find Solomon defining Hiram, king of Tyre, to find him skilful mariners to pilot his steet into these season and the Optim mentioned in sciptore, is supposed to be this very island, from whence he seatened his gold. The Arabians and other nations bordering on the red-sea, afterwards plance colonies here. dering on the red-fee, afterwards plant? colonies here, and became so potent, that they drove the farmer inhabitants up into the mountains, and posself. d'it coast. The Portuguese found the descendants of those actions fixed on the shores of the indian continent as well as the islands when they arrived there.

when they arrived there.

The Portuguele enjoyed the fole traffic with this and the adjacent islands for near one hundred years, viz. from the year 1500 almost to the year of our Lord 1600, when other nations followed them round the Cape of Good Hope,

other nations to lowed titlen round title pee or Cool Hope, and put in for a fhare of the Indian trais.

Some writers affure us, that this king form has been ever governed by queeens; others affirm that there never was a queen regent here; we may, however, take the middle way, and allow that it has been subject both to kings and queens: certain it is, a king was upon the throne when we first visited this island, because we have his letter which he wrote to queen Elizabeth, and kings have of late years filled that throne.

The inhebitat of the mountains are presented by the chiefs of their respective tribes, who are under a necessity of maintaining a good correspondence among themselves, in order to defend their country against their powerful neighbours; for as they are possessed of all the gold the island produces, there is no doubt but the Mahometan issued produces, there is no doubt but the Maliometan princes that lie round them, would make an effort to subdue those golden mountains, if their princes were at variance: or if they did not, the handle find a way to their gold, if they should find a way to their gold, if they should find a way to the Dutch are possessed for the would find a way to the find the state of the should find a way to the find the should find a way to the find the should find a way to the should find a way to the find the should find a way to the should find a wa

at fifteen pence, which is a secret of a mas, fixteen is one t , as is an No. 18.

imaginary coin, and equivalent to twenty libitings fleyling; dollars and other Spanish coins also are current here. With respect to their weights, five tael, make a buncul, twenty buncals one carty, and one hundred carty one pecul being one hundred and thirty-two pounds English; three peculs are a China balar of three bundred and non-four hundred and twenty-two pounds fifteen outlees, and at Benecolen, and the rest of the western could, a bashar is five hundred pounds great weight, or five hundred and sitely pounds. English. They make their payments at Achen oftener in gold pieces than in coin.

Several other islands belong to that Sumarra, among which is one called by the inhabitants Pulo Lanchakay, and, by the statives of Achen, Pulo Lada, or the island of Pepper. This is a large island, situated in six degrees sistem minutes north latitude. In the centre of it are two high mountains separated from each other by a very narrow valley; and at the foot of these mountains is a plain at least twelve miles in length. Pepper is produced in it: but the island is very thinly inhabited. The foli of the plain is well calculated for all kinds of drugs, fruit, rice, and cattle; and, as it has several good springs and rivers, it might produce excellent pasturage; but the inhabitrants only attend to the cultivation of pepper, that being the article which turns out most to their advantage. The other parts of the island are covered with thick woods, in which are fome remarkable strait and losty trees. The winds are westerly from the beginning of July to the end of October, during which time they have very heavy rains; and the climate, as in other parts of the same latitude, is very unwholesome. The island are present produces five hundred thousand pounds weight of pepper annually, which is faid to be preserable to that of any other place in the Indias. The inhabitants are Malayans, but are naturally better disposed than those of Achen; their habits are much the same in make, but not so elegant; they are very zealous Mahomenta

Java, one of the Sunda islands, is situate in the Indian ean, between one hundred and two and one hundred

ocean, between one hundred and two and one hundred and thirteen degrees of eaftern longitude, and between five and eight degrees of fouth latitude, being feven hundred miles long, and upwards of one hundred broad, having the island of Borneo on the north, the straights of Bally on the east, the Indian ocean on the fouth, and the straights of Sunda (from whence it is called one of the Sunda islands) on the north-west.

The air of Java, near the sea, is generally unhealthful, unless where the bogs have been drained, and the lands cultivated; there it is much better, and in the middle of the island much more so. The worst weather upon the north coast of Java is during the westerly monsson, which begins the first week in November, when they have some rain. In December the rains increase, and it blows sieth, and in January it blows still harder, and the rains continue very heavy till the middle of February, when both the wind and rains becomes more moderate and decrease, till the end of March. Their fair season commence in April, wind and rains becomes more moderate and decrease, till the end of March. Their fair feason corr mences in April, the winds are then variable, and it is sometimes calm, only at the change of the moon there are sudden guts of wind from the west. In the beginning of May the eastern monfoon becomes constant, and in June and July there is a little rain; but in this monfoon they have generally clear, wholsome weather, until the end of September. In Octor the easterly wind blows faintly, and in November the easterly monfoon sets in again; when the westerly wind and corrents are a congest here, namely, in December, January and

and February, there is no failing against them. The estterly winds and currents are more moderate; thips may fail
against this monitoon, and a ship may come from the weltward through the straights of Sunda to Betavia almost as
any time. There is good anchorage on the Java side, in
twenty or thirty fathom water; near the coast of Java
and Borneo, from April to November, they have land
and see breezes from different points; the wind blows
from the land between one and four in the morning, and
continues till those; as one or two in the aftermount it blows
fresh from the sea for they or six hours.

continue this sea for the or fix hours.

A chain of mountains runn through the middle of the fland from east to well, which are covered with fine woods, It is faid these mountains produce great quantities of gold to the natives cone and it from the Europeans. The most dillinguished of these mountains is called the Blue Mountain.

The low lands are flooded in the time of the rains, Along the north coad of Java are fine groves of Cocoanut trees, and wherever we see one of these groves, we do not fail to meet with a village of the natives.

The island was antiently divided into abundance of petty kingdoms and states, and when admired Deute of

petty kingdoms and fates, and when admiral Drake vi-fited this island in his voyage round the globe, in the year \$579, he relates there were five kingdoms in it. We may now divide it into two perts, 1. The north coast, which as under the dominion of the Dutch; and, 2. The fouth es under the dominion of the Dutch; and, 2. In course coath, fublication to the kings of Palamphoan and Mataram. Bantam was, till lately, the most considerable kingdom of Java, but this king is now a vasial to the Dutch. We shall here give fome account of the city.

Bantam, once the metropolis of a great kingdom (till

the Dutch deftroyed it, and deposed the king,) is seated in a plain at the foot of a mountain, out of which issues three givers, or rather one river dividing itself into three branches, two whereof furround the town, and the other runs through the middle of it. The circumference of this city, when the middle of it. The circumsteneste of this city, when is its glory, was not left than twelve miles, and very populous. It lay, open towards the land; but had a very good wall to the fea, fortified with ballions, and defended by a numerous artillery; and the palace, or rather caffe, where the king refided, was no mean fortification; befides which there were feveral public buildings and palaces of the great men, which made no ordinary figure in this country. It was also one of the greatest ports in the eastern feas, to which all nations reforted, but is now become a wretelied poor place, and has neither trade or any thing to render it definable. The paintipal inhabitants are removed, and the buildings tuned their king deprived of his fove-reignty, and become a raifal to the Dutch. Batavia, by the Indian tenned Jacatra, and by the na-tives and Chineir Calacka, or Calappa, as they call the

fruit of the cocoa-trees, (which are very common here, and faid to be superior to any in the Indies) lies in fix degrees fouth latitude, longitude from London one hundred and fix, and flands about forty miles to the eastward of Bantam, it is fituated at the bottom of a fine bay, in which there are seventeen or eighteen small islands, which break the violence of the winds and waves; infonuch that a thoufand full may ride here very fecurely. Two large piers run out Falf a mile into the fea, between which an hundred flaves are conflantly employed, in taking up the mud and foil which is walhed out of the town, or the mouth of the

1

river would be foon choaked up.

The city of Batavia flands in a flat country, and is almost square, and about the bigness of Bristol, regularly built like the towns in Holland, but with white stone. Their streets are wide and strait, and in twelve or fifteen of the principal are canals, faced with flone, and planted with ever-greens: the fides of the fireets also are paved, and over their canals are reckened no lefs than fifty-fix flone bridges: after which description there cannot be much occasion to tell the reader that the place is extremely pleafant, and that travellers are surprized with its beauty. is furrounded with a good wall, and two and twenty baf-tlons well furnished with cannon, and so contrived as to be of equal service against an insurrection in the city, as against a foreign enemy; the guns being casily brought to point down the principal ftreets.

The houses are plain, but very neat, and behind them are large gardens well flocked with herbs and vegetables, and most kinds of fruit. They have faveral handsome public buildings, fuch as the great church: the fadt-house, the hospitals, the fpin house or house of correction, the pest-house, Chinese hospital, the house of artisans, &c. And there are two churches built for the resonned Portuguese, and ano-And there are the for the Malays; but they do not allow either the Pa-pits or Lutherans the public exercise of their religion.

The fort flands upon the well fide of the city, and commands both the fown and road: it is very large, and has four royal bations faced with flone, but has no most except the canals, which lye at fome diffance from the rampart, may have been miltaken for mosts: they are about twenty-five feet broad, and fordable in most place; the inside of the fort is crowded with buildings, there being the principal officers, and empanies fervists: in the Addie of the city there is a large fiquere, which ferves as a parade for the gartifon, on the well fide of which flands the great thurch, on the fouth the fladt-house. On the north a fine The fort flands upon the well fide of the city, and e church, on the foath the state-house, on the north a sine range of buildings, and on the east is one of their great canals; there are also loveral spacious market-places in the city. The fuburthe reach almost half a league into the country, and form a lower larger than the former but not fo compact; being intermixed with kitchen gardens and orchards. Here the Chinefe chiefly live, and here they have their temples and burying places, and the free exer-cife of their religion, which is denied the Lutheran Pro-tessants. In this part of the town also live the Malays, and native Javans, and other nations which the Dutch have transplanted from Banda, Amboyna, &c. There are finall forts crefted every way, at two or three leagues dif-tance from the town, to defend the avenues; the Dutch being confeious that the king of Mataran and the natives would lay hold of any opportunity of repossessing them-felves of their country, and driving the Hollanders from their coafts, however they may feem to acquifee and tacitly eonfent, according to the modern phrase, to be insulted and tyrannized over by the Durch, there is not a nation in India but would gladly throw of the yoke, and declare, in behalf of liberty, and for any prince who should come to their relief.

The people who inhabit the city and fuburbs of Ba-tavia being formed of various nations, who all preferve the drelles, modes, and cultoms of their respective countries, they confequently exhibit a very firange appearance; we shall therefore, for the information of our readers, give a particular defeription of them.

The Chinese do not only drive the greatest retale trade here, but are many of them good mechanies; they also generally farm the fullery, excise and customs, and apply themselves to husbandry and gardening; to manure and cultivate the rice, cotton and fugars which grow in the fields, about Batavia and other great towns; and exceeding the Dutch, it is faid, in their thriftiness, as well as in cozening and over-reaching those they deal with.

They dress in a vest and gown of filk or calicoe, after

the fashion of their country, and wear their hair wound up in a roll, on the hinder part of the head, and fashed with bodkins; for which every one pays a certain tribute

to the Dutch.

The Dutch company, however, allow fome privileges to the Chinele; for they have not only a governor of their own nation, who manages their affairs, but are also allowed a representative in the council. They bring tea and porcelane hither from China; but they who are employed for this purpose, must not continue on the island longer than fix months. They have fingular maxims in the internent of their dead; for they will never open the fame grave where any one has been buried; their burial grounds, therefore, in the neighbourhood of Batavia cover a prodigious space of ground, for which the Dutch make them pay large fums. In order to preferve the body they make the coffin of very thick wood, not with planks failened together, but cut out of a folid piece like a canoe; the coffin, being covered and put into the grave, is furrounded with a kind of mortar about eight inches thick, which in time becomes as hard as stone

A great number of weeping women, hired on purpose, attend the funeral, besides the relations of the deceased. In Batavia, the law requires that every man should be buried according to his rank; fo that if the deceased has not left money sufficient to pay his funeral expences, an officer takes an inventory of his goods, which are fold, and out of the produce he buries him in the manner preferibed.

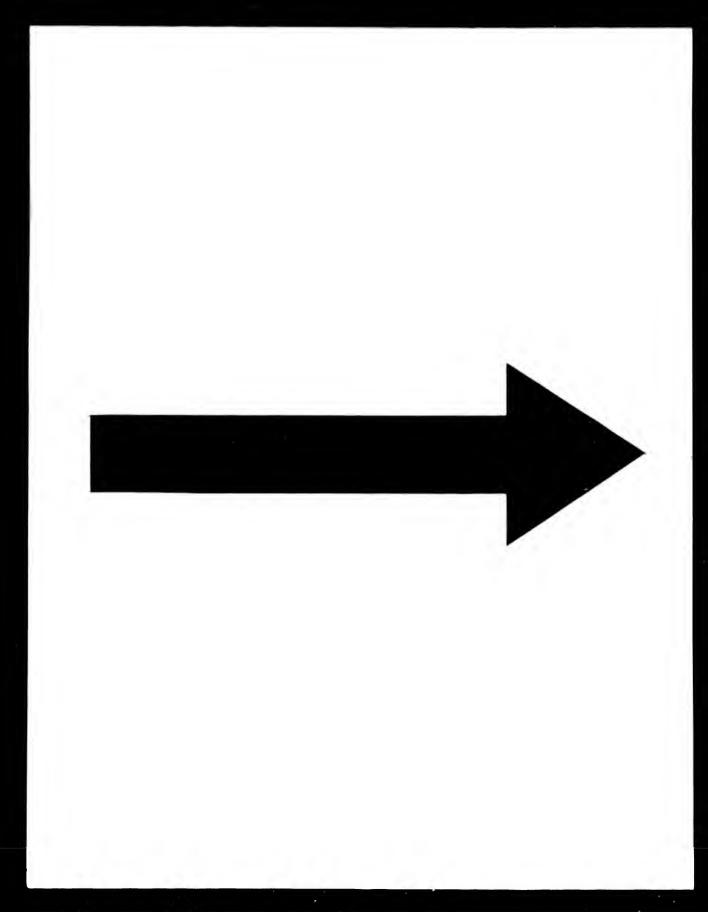

The greatest merchants here are the Dutch, who are also very good mechanics; they keep the chief inns and most places of public entertainment. They pay two reals a mouth for their licence, and feventy for every pipe they fell of Spanish wine: but these inn keepers are far from being obliging to their guests, and particularly to foreigners.

Here are great numbers of Portugue. 1; and in order to

diffinguish them from other Europeans, they are called by the natives Oran-ferante, or Nazarene men. They in general speak the Malayan language, but some of them a

corrupt dialect of the Portuguese; and they have all remounced their religion, by profeffing the principles of Luther. They are chiefly employed in the most service offiees: some of them are handerstiftene, others get their
living by hunting, and the greatest number by washing
linen. They have so closely solle-wed the customs and
manners of the Indiana, that they are only dislinguished
from them by their features and complexion, their skin
being considerably lighter, and their nosea not so flat;
and the manners of adjusting their hair constitutes the only
difference in their drefs. difference in their drefs.

Most of the inhabitants have very tawny complexions: The Malays wear a short coat with strait sleeves, and a cloth about their loins, bluding their temples with a piece of linen, in which they enclose part of their hair, the rest hanging down. The women wear a waistcoat and a cloth about their waist, which reaches half way down their legs, about their wait, which reaches half way down then legs; and ferves infleadof a petticoat; they wear nothing but their hair on their heads, and go bare-foot. The men get their living by fifhing, and have fome retail trade, though not comparable to the Chinefe. They profess the Mahometan religion; but are naturally very profligate, and will not foruple to commit crimes of the most inflamous nature.

· The Amboynese wear vests, and wrap a piece of called several times about their heads, the ends whereof hang teveral times about their heads, the ends whereof hang down. Their women only wrap a piece of calico about their loins, throwing part of it over their breafts and fhoulders, their legs and arms bare; the men are most of them carpenters, and fome of thefe, as well as of the other nations, the Dutch in their troops, being esteemed brave bold fellows, but given to mutiny, as the Dutch relate, by which they probably mean, they are not yet reconciled to slavery. Their houses are made of wood, and covered with branches of trees, their are extent form. conciled to flavery. Their houses are made of wood, and covered with branches of trees; they are pretty losty, and the floors are divided into separate apartments, so that one house will contain several families.

The native Javanese wear a kind of scull cap, but their to the native javancie wear a kind of fcull cap, but their bodies are naked to the middle, wrapping a piece of filk or callico about their loins, which reaches below the middle of their legs, which are bare. The women cover their bodies with a piece of filk or callico, and have another piece wrapped about their loins, and drefs in their hair. The men are employed in hufbandry and fifting, or in building country boats.

There is a mixed beed called Topoffe or Mandikers.

There is a mixed breed, called Topasses or Mandikers, consisting of several nations; incorporated with the Dutch, and have greater privileges than the rest. Many of these are merchants, and differ but little in their habits, or way of life from the Dutch, only the men wear large b or trowfers, which reach down to their ancles. men tie up their hair in a roll on their heads, wear a waittcoat, and a petticoat of filk or calico, which reaches down to their feet. These live both in city and suburbs, their houses are several stories high, built of brick or stone, and very neatly furnished within.

The Macassars, whose aucestors possessed the island of Celebes, and were enslaved by the Dutch, though they went almost naked in their mother-country, wear clothing here. Several of the Timoreans, inhabitants of an island of

East China, having been brought hither by the Dutch, now conflittute part of the people of Batavia. The habits and enfoms of these and of the Macasara, are nearly the same: their chief employment is husbandry and gardening. As many of them profess Christianity, and are conformable to the Dutch in their religion and customs, it is to be prefumed they clothe themselves as the Hollanders do.

ome of the negroes here are pediars, and hawk about the streets glass-beads and coral; others follow mechanical trades; but the most considerable of them deal in freestone, which they bring from the neighbouring islands. These people are chiefly Mahometans. All the inhabitants enjoy liberty of conscience; but they are not allowed to exercise their different modes of worthip. Priests and monks are permitted to live here, but they are prohibited from being publicly feen in the respective habits of their prieftly orders.

As the women of Java are remarkable for their amorous disposition and constancy to the man they espouse, and expect that the man should be equally constant, if her lover goes aftray, the makes no scruple to prepare a dose for him. An old traveller, who seems much enamoured with the Javanese ladies, gives this description of them; he ob-ferves that they are much fairer than the men, have good reatures, little swelling breafts, a foft air, sprightly eyes, a most agreeable laugh, and a bewitching mien, especially in dancing: that they express the greatest submission to their husband, profirating themselves before him when he

enters the house. Polygamy prevails here; the Javanese have several wives besides semale slaves; of whom they make concubines when they see fit:

There besing a searcity of European women, the Dutch are allowed to marry a native, provided she will profess Christianity, which she is feldom averse to, as it gratifies her pride; a Cliristian and the wife of a Dutchman taking place of a native Javanefe, and being allowed a great many privileges, which the natives cannot enjoy; and her huf-band is obliged to confine himself to her bed; and bring no rivals into the family:

no rous into the ramity.

Rice le the principal grain that grows here. They have
also plantations of sugar, tobacco and coffee: their kitchen
gardens are well replenssifted with cabbages, pursain, lettice, parlley, sennel, melons, pompions, portnose, cucumbers, and radishes. Here are also all manner of Indian bers, and radifies. Here are also all manner of indiant fruits; such as plantains; bananas, eccosas, ananas, manages, mangeleens, dutions; oranges of several iorts; limes, lemons, the betel and arek nut; gums of several kinds, particularly benjamin: in March they plant rice, and their harvest is in July. In Odober they have the greatest plenty of fruit, but they have some all the year.

They have good timber, cotton, and other trees proper to the climate, befides oak, cedar, and feveral kinds of red wood. The cocoa tree is very common; which is of univerfal use, affording them meat, drink, oil and vine-gar; and of the fibres of the bark they make them cordates the brunches every their barges, and constructions. have good timber, cotton, and other trees age; the branches cover their houses, and they write on the leaves with a steel stile, and with the tree, and the great bamboo cane, they build their houses, Boats and r vehels.

Here are buffaloes and fome oxen, and a small breed of horses. The sew sheep we find here have hair, rather than wool, and their fieth is dry. Their hogs, wild and tame, are the best meat we find there, or in any any other countries between the tropics; and their vention is good; here are also tygers and other wild beasts, crocodile; porcupines, ferpents, feorpions, locufts, and a multitude of infects. Monkies of various kinds are found here, also flying fquirrels; and a remarkable animal called jackos; it is almost like a lizard, is very malicious, and darts its urine at every thing which offends it: the urine is of such a quality, that it will canker the flesh, and if the part is not immediately cut out, the object on which it falls must immediately perish. Few accidents, however, happen from this creature, as it always gives notice of its fituation from the fingularity of its voice, fo that the natives, as well as animals, have an opportunity of escaping it.

The food, salutations and diversions of the Indians in

this island, are the same as in Borneo and Sumatra, and therefore need not be repeated here. The Dutch travel therefore need not be repeated here. The Dutch travel in coaches, and on horieback, and fometimes in pelanquins, or covered couches, carried on men's shoulders, as e Indians do, with a grand retinue.

None of the nations of Europe are fuffered to trade to Java, but from China fourteen or fifteen junks of two hundred or three hundred ton, used to come every year in November or December, and return home in which furnished the Dutch with the merchandize of China upon easier terms than they could purchase it in that country: and this is the reason the Dutch so seldom visit that kingdom, and permit other nations to trade thither, which they could prevent if they pleafed, by shutting up the straights of Sunda and Malacca, which the squadrons of men of war they always keep in India, enable them to Besides the goods imported to Batavia by the Chinefe; the Dutch themselves import the produce of Japan, the Spice islands, Persia, Surat, Bengal, the coast of Coromandel and Malabar, and all the merchandize of Europe and Africa. Never were fuch magazines of goods laid up in any city, as are to be found in Batavia, except in Amsterdam itself; and as they harter the goods of one country for another, the Indian trade is fo far from dimi nishing their treasure, that it brings them in more gold and filver than any other traffic.

The Dutch governor of Batavia also takes great state upon him, and has in reality the power of a sovereign prince. A troop of horfe-guards precede his coach when he goes out, halberdiers furround the coach, and a com-pany of foot-guards march after it, cloathed in yellow fattin, enriched with filver lace and fringe; and the governor's lady has her guards, and is attended in all respects, both within and in public, with a dignity equal to that of

Next to the governor, the most considerable officer here is the director-general, whose business is to purchase such commodities as are brought to the port, and to dispose of

fuch so ere taken from it. He is fole matter of the the ma-gazines, and has the supreme direction of every thing that relates to the commercial interest of the company.

relates to the commercial interest of the company.

Batevia being a place of the greatest trade in India, the curious sum the very confiderable; more especially as the inhabitanes are in general wealthy, and almost every article is subject to a duty. The taxes are paid monthly; and to save the change and trouble of gathering them, on the day they, become due a flag is displayed on the top of a house in the santer of the town, and all puries are obliged immediately to pay their money to the proper officers appointed to receive the fame. The money current here confides of feveral forts; as dueats, which are valued at one hundred and thirty-two fivers; ducatoons, at eighty fivers; insperial rist-dollars, at fixty, rupees of flataria at thirty; schellings, at fix; double cheys, at two fivers and an half; and dojts, at one-fourth of a fiver. Some of these coins are of two forts, though of the same denomination, namely, milled and unmilled, the former of which it of most value; a milled ducatoon is worth eighty flivers; but an unmilled one is not worth more than seventy-two.

is of most value; a milled ducatoon is worth eighty stivers, but an unmilled one is not worth more than seventy-two. All accounts are kept in rix dollars and stivers which are bere merely nominal coins, like our pounds sterling.

The Dutch, besides their land forces, which are very numerous, have men of war sufficient to engage any sleets they are likely to meet with on the Indian seas i and from their great strength and importance in this part of the globe, they assume the title of "Sovereigns of all the seas, from the Cape of Good Hope eastward, to Cape Horn in America."

Cherebon is fituate about eighty miles east of Batavia; is a place of confiderable extent, and where the Dutch titis a place of confiderable extenty and where the Dutch have a fastory. The country is very fertile, and produces most kinds of provisions, particularly rice. The inhabitants are under the dominion of four great lords, called fultans, one of whom is particularly attached to the Dutch, and for that reason is diffinguished from the reft by the and for that reaton is diffinguished from the reft by the name of the company's fultan. The reft, indeed, may not be undeferving of the like epithet, as they are in alliance with the Dutch, whole friendship they endeavour to preferve, and whom they confider as their fole protefors; for had it not been for them, these petty princes would have been reduced to the subjection of the king of Bantam, who made inroads on their district, but was repulsed by the interposition of the Dutch. Since this circumstance, the fultant have sethised their gratitude by granting many diff.

who made intocal of their durint, but was repaired by the fultant have tellified their gratitude by granting many diftinguished privileges to their protectors in these domainions. The chief person belonging to the Dutch factory here is called the resident, who corresponds with the governor openeral of Batavia, but is folely independant of any other officer. Here is a good fort, where the Dutch have a garrison consisting of eighty men; about a mile and a half from which is a large temple containing the tombs of several of the princes of Cherebon. It is a losty building of variegated stones, and very elegantly ornamented within. The generality of their priests reside near this temple, the whole order of whom are treated with the most distinguished respect by the inhabitants.

We still proceed to the description of Palamboan and Mataram, the latter of which is subject to the Dutch.

Palamboan, the capital of the kingdom of that name, is situate in one hundred and sources degrees of eastern

is fituate in one hundred and fourteen degrees of eaftern is access in one numered and routered agrees of eatern longitude, and in feven degrees thirty minutes fouth lati-rude, on the firaights of Bally, through which the Eaft-ladia ships fometimes pais, when they are homeward bound from Borneo; such ships touch at the town of Pa-lamboan for fresh water and provisions; but the surf ofen-beath with such violence on the shore, that makes it difficult watering there.

This kingdom, which is independent of the Dutch, lies as the fouth-east end of Java, in a pleasant country watered with feveral rivulets, which fall on each fide of the town into the neighbouring straights. The rajah, or king of this country, generally refides either at Palamb or at a fort fifteen miles from the fea. His dominion reaches from the east end of Java, eighty miles along the fouth coast, and about fixty miles from north to fouth; fouth coaft, and about fixty miles from norm to soum, out its extent up the country is not known. This kingdom is fald to produce gold, pepper and cotton, also rice, Indian corn, roots, and garden fluff. Their animals are, horfes, boffsloes, oxen, deer, and goats, and they have great miles of ducks, geefe, and other forts of poultry. The nortet, bonasce, oxen, over, and goar, and they have great plenty of ducks, geefe, and other forts of poultry. The lovereign and his fubjeds are Pagans, but there are fome Mahometans among them, and a few Chinefe.

Mataram, when in its most flourishing state, extended its dominion over the whole island, and even now takes up a considerable part of it: this kingdom was the last in

the island which the Dutch reduced under their govern the iland which the Duch reducad under their government; having continued its flruggles for Independency tillthe year 1704, when the Dutch took the savantage of an
opportunity that offered in a dispute relative to the fueceffion of the crown, between the for and brother of the
deceased fovereign. These two rivals produced an univerfal division in the nation. He who was intitled to the
crown by order of succession had so much the advantage
over his antagonist, that had it not been, for the Dutch,
who declared in favour of his rival, he would certainly
have possessed in favour of his rival, he would certainly
have possessed in the party of pouled by the Dutch at length
prevailed: the young prince was deprived of his succession. prevailed: the young prince was deprived of his fucceffion, and his uncle, who was unworthy of the character, af-

and his uncle, who was unworthy of the character, affumed the fovereignty.

The company, after the death of this prince, placed the
legal heir on the throne, and decated feed laws to him as
they thought best calculated to answer their finisher purpoles. They shofe the place where his tourt was to be
fixed, and fecured his attachment by erecting a castle, in
which a guard was kept with no other apparant view thanto protect the prince. They employed every artifice to
lull his attention by pleasures, made him valuable presents;
and soothed him by pompous embassies. From this time
the prince and his fuccessors have become mere tools of the
company. The necessary protection allowed them by the
company consists of three hundred horse and sour hundred
foot; but the expences the company are at on this account foot; but the expences the company are at on this account are amply repaid by the advantages that acc ue to them.

The herbours afford decks for building all the finally wifels employed in the fervice; and they are inpulsed from hence with the chief part of the timber that is used in their respective settlements. Besides their advantages, they are furnished with various productions of the country at fipu-lated prices, which are fo low as to be sattemely profitable to them.

This country is in general very fertile, and produces great quantities of rice, as also plenty of fruit. There are also various forts of animals, particularly horses, sheep, goats, and remarkable large oxen. The rivers abound with gonts, and remarance sarge ozen. It is ever about with fifth, and the woods produce great plenty of game: out the most valuable articles in this kingdom are, rice, pepper, cadiang, cotten, yarn, cardamum and indigo; the latter of which is esteemed to be as good in quality as any found is:

this part of the world.
The refidence of the this part of the world.

The refidence of the king is usually at Mataram, the capital of the kingdom. His palace is a very handlome spacious sailling adjoining to which are many good houses belonging to his nobles, who continually wait or him, and the greatest homage is paid him by his subjects in general post first being in a great fate as when they were independent monarche; and the orders of the Dutch are always could in their names. They therefore assume cuted in their names. They therefore affume a not inferior to that of the most despotic prince, a subtry go abroad, a very diffinguished mark of loyalty i be-

flowed on them.

Japans is the laft place of importance that remains to be mentioned in this island: it is fituated at the bottom of an eminence called the Invincible Mountain, on the tep of which is a fort built of wood. It is a very confiders or watch is a fort built of wood. It is a very confiderable: town, and has a good road fecured by two fmall iflands: The English had once a factory here, but they were driven; from it by the Portuguese, who at that time were masters of the place. This country produces almost every receffary of life, especially cattle, hogs, and poultry; they have also great plenty efficie, with various forts of the most delicious fruits; and their waters abound with the best of fifth. But the most valuable commodities have fifth. But the most valuable commodities here are pepper; ginger, cinnamon, and indigo. In the woods and mountains are feveral kinds of wild beafts, as buffaloss, flags, tygers, and rhinoceroe's: the latter of these the natives: because they will not contain posion; for they will ammediately break to pieces if any fuch composition is put:

into them.

With respect to the natives of this country, they very much resemble those of other Indian nations, and have the fame kind of customs and ceremonies. They are fond of public diversions, particularly the representation of comedies, which principally consists in finging and dancing; and they are such flaves to cock-fighting, that by the large same they bet, they are frequently reduced to the most abeject differes and poverty.

The Japarane are chiefly of the Mahometan religion, as is also the king, who generally resides at a place called Kattasura, where the Dutch have a fort and garrison.

This very Like wom think they work that the forts and a from make fubic and any of the forts and forts and

This prince reigns absolute among his subjects, who are very faithful to him, and pay him the greatest homage. Like most castern monarchs, he is constantly attended by women, and takes as many wives and concubines as he shinks proper. When his courtiers obtain an audience, they approach him with the profoundeft humility; and even his priefts fo revere him, that foure of them go in

even his priests so revere him, that some of them go in pilgrimage to Mecca, to make vows, and pray for his prosperity, and that of his family and government.

The island of Bally, or the Lesser Java, is only divided from the larger island by the straights of Bally, and essuward of this are the islands Lambock, Combava, Flores, Solor, Timor, and several more, upon which the Dutch have forts and settlements, and take the liberty of governing and even transplanting the natives whenever they please:

from hence they frequently recruit their troops, and this make one nation of Indians contribute to keep another in subsections. Subjection.

imor is the largest of these islands, being abo hundred miles in length, and fifty in breadth, and divided into feveral petry flates, which the Dutch oppose against one another, and by that means govern the whole." It has not any navigable rivers or harbours, but there are feveral comany havigation rivers of harbourt, but there are reverse com-modious bays. The Portuguese had formerly colonies here, whose descendants are now so intermixed with the original natives, that they are scarce to be distinguished from titem, especially as they profess the same religion. The principal kingdoms in this island are Namquimal, Lortriby, Pobumby, and Amaby; each of which has an independent and absolute sovereign; these have several rajahs and other distinguished officers under them; all of whom, with their subjects in general, pay them the greatest homage. Each kingdom has a language peculiar to itself, but the manners and customs of the inhabitants differ but little. There are some Pagans and Mahometans still remaining, and the Chinefe come litther to trade once ayear; the inhabitants are so very swarthy, that they are sometimes taken for blacks, and those that are not under the government of the Portuguese or the Dutch are represented as favages; they wear no cloathing but a little piece of cloth about their loins, and the better fort wear a kind of corone about their temples, adorned with little thin plates of gold or filver; the reft have caps made with palmetto leaves. Their arms are fwords, darts, and lances of fpears, and with these they run down and kill their game. Their animals are the same as in the island of Java, as well as their forest and fruit trees. The Dutch do not feem to make any great profit of these islands; the principal design of their building forts here is to defend the avenues to the spice islands, which lie in their neighbourhood.

There is, on this last mentioned island, a Portuguese fettlement called Laphao: it is fituated by the fea fide, about three leagues to the eaft of the Dutch fort called Concordia. It is a very finall place, containing only a few mean house, and a church made of boards, covered with palmetto leaves. There is, indeed, a kind of platform here, on which are fix iron guns; but the whole are fo much decayed, as to be rendered almost ufelefs. The people in general speak the Portuguese language; and the natives have been so intermixed with the Portuguese by marriages, that it is difficult to know one from the other. Most of shown profess the Rengan catholic registron, but in the fettlement called Laphao: it is fituated by the fea them profess the Roman catholic religion; but in the other parts of the island they are either Mahometans or ouner parts or the Hand they are either Mahometans, or Pagans. The chief trade is carried on at Porta Nova, fituated at the east end of the illand, and where the Portuguese governor usually resides. Some years ago a pirate attacked, plundered, and then destroyed several of the buildings in this town, with that of Concordia belonging to the Dutch.

ing to the Dutch.

Mandura is an illand opposite the easternmost point of Java, the most valuable produce of which, for foreign markets, are deer-skins. Its principal town is Arabia, situated near a deep bay about eight leagues from the wefternmost land of Java. The soil of this island it very fertile, and produces several forts of grain, particularly rice; also several kinds of the most delicious fruits. The chief animals are, busfaloc, loories, sheep, and ozen, the latter of which are remarkably large, and the fish little inferior to those of Europe. Their buildings, maxims, customs, &c. resemble those of other Indian nations: some of them are Mahounetaus, and other Pagans. The men are in acc. retempts those of other indian hatoms: tome of them are in general very robult and courageous, for which reason, when there is any deficiency in the fixed number of the Dutch troops, they recruit from them their forces at Batavia and other settlements.

SECT. X.

Treats of the feweral islands of Nicobar, Andoman, and Coylon,

THE Nicobar islands are fituate in the Indian fes, be-M.E. rescober stands are fituate in the Indian fea, be tween ninety-two and ninety-four degrees of earling longitude, and between feven and ten degrees of north, it it is not the fit of the island of Sumatra. These islands form the clusters: the middle, called Somberro, are well inhabit except one: the northern cluster called Carnicubars, a not to populous. The fouthern cluster of the Nicobar are very mountainous, and the needle much not so populous. The fourthern cluster of the Nicobars, are very mountainose, and the people much more sayage than those of the middle and northern clusters. The pricate of Sombrero, are dreft much in the same manner as we paint the devil, by which they keep the inhabitants in sawe. The largest of these islands, which lies most to the fouth, is forty miles long, and fifteen broad; the south end is mountainous, and there are some steep rocks near the sa; the rest of the island is covered with woods, but not high land. It is sa rich foil, that would produce almost any grain, if it was cultivated, "The stoves of co-coa-nut trees that shand in the flat country wear the sa, are exceeding pleasant; but I do not find there are any sowns; only as we full by, we see clusters of five or fix little houses in every creek and bay, which are built on Samboo pillars, eight or nine feet above the forface of the ground, the roof neatly arched with bended cane, and covered with palm branches."

palm branches.

These islanders are moderately tall, their complexion a seep olive, and have long black hair, and black eyes, their women might be esteemed handsome, if it was not the custom to pull the hair off their cyclrows by the roots.

The men wear no closths, but a listle linen cloth about their loins; that of the women is deeper, reaching below their knees. The country is fill over-run with wood; they neglect to clear it, and cultivate the ground, but live cliefly on fish and such fruits as the country produced; poutaneously; they have little trade or commerce with any other people; but as ships sail by in their way to and from the straits of Malacca, they bring off hogy, poultry and such fruits as the country affords, taking tobacco, linen, and other necessaries in return.

The Andomarrisands lie in the bay of Bengal, north of the Nicobar islands, in ninety-two degrees of eastern longitude, and between ten and fifteen degrees of north latitude. These islands do not seem to differ much from those of Nicobar, except in producing rice, which is cul-

those of Nicober, except in producing rice, which is cul-tivated here and eaten by the natives as well as fish and fruit. The inhabitants are a harmless, inoffensive people,

living chiefly on rice, fruit, and berbs.

Here are alfo the cocoa iflands, fituated thirty-five leagues west-fouth-west of cape Negrais: they produce great abundance of cocoa-trees, but are uninhabited.

The island of Ceylon is fituated between five degrees thirty minutes and ten degrees fixteen minutes north latitude, and between seventy-nine degrees forty minutes and eighty-two degrees forty-five minutes eat, at the distance of about one hundred and ninety miles from cape Comorin. Ptolemy described this island under the name of Taprobane. It is about nine hundred miles in circumference, eing about three hundred in length, and about one hundred and forty in breadth.

It is for the most part a mountainous country, covered with wood; but there are feveral fruitful plains and vallets, well watered by rivulets. The most remarkable mountain, which stands on the fouth-fide of Conduda. mountain, which fands on the fouth-fide of Conduda, the name of the northern division, is by the natives called Hamalel, and by the Europeans, Adam's Peak, being of apyramidal form, only on the top is a little rocky plain, with a print of a man's foot on it, near two feet long, to which the natives come in pilgrimage once a year to worship the impression, having a radition; according to some that their god Buddow afcended to heaven from hence, leaving this print of his foot, which the Portuguese, when they possible the island, called Adam's Foot, and the mountain Pico de Adam, others affirm, that it received its name from a tradition of the natives, that Adam was created and buried here. In this mountain rife the principal rivers, buried here. In this mountain rife the principal rivers, which run into the fea in different directions. The large of these is the Mavillagonga, which runs north-east of the cities of Candy and Alameur, discharging itself into the ocean at Trincomale. These rivers run with such rapidity, and are so full of tocks, that none of them are navigable: the rains, which happen when the fun is vertice 3 B

insrease their waters, and create abundance of torrents, which are not visible in the dry season. The air is for the most part healthful, except near the sea, and the north part of the island, where they have no spelness, or rivers and if the rain fails them, they are sure to be afflicted with famine or fickness. The chief towns are these, at Candy, the capital of the island, and stuppe in the middle of it, in seventy-nine degrees of east longitude, and eight degrees of north latitude; it is an open town with fortifications, and yet almost inaccessible, being sur-

with fortifications, and yet almost inaccessible, being fur-rounded by rocks and thick woods that are impassable, except through fome lanes, which are fenced with gates of tent through lone tailes, which are reneed with gates or frong thorns; and yet it appears that the Portuguefe made themickes mafters of Candy, and almost demolished it, obliging the king to retire to Digligyneur, five miles foutheast of Candy.

a. Columbo, the capital of the Dutch fettlements, is a

a. Columbo, the capital of the Dutch fettlements, is a great port-town in the fouth-well part of the filand, in feventy-eight degrees calt longitude, and feven degrees north factiude, it has a good harbour, defended by a caftle and feveral batteries of guns. In this caftle refide the governor, interchauts, officers, and foldiers belonging to the Eaft India company; and four thousand flaves have their buts between the caftle and the fea. The Dutch have two bofiritals hear one for the felt and seconded and seconded. hospitals here : one for the fick and wounded, and another for the orphans: as the boys grow up, they are entered into the fea and land-fervice; and the girls are narried at twelve or thirteen years of age; and they have a Malabarian school for teaching the Indian language.

3. Negumbo, which is also a port town, lies about twenty-five miles north of Columbo.

4. Chillao, one of the harbours of the coast, is fituate

twenty miles north of Negumbo. 5. Jaffnapatan, the capital of the province of Jaffnatan, the northern division of this island, is regularly

fortified; for though there is no cinnamon in this part of the island, the Dutch have fortified it all round, to prevent

any other nation fending colonies thither,

6. Trincomale is fituate on the east fide of the island, about eighty miles fouth of Penta Pedra, the most northerly promontory of the island.
7. Battadalao is another fortress, fifty miles fouth of the

Befides thefe towns, there are the seven little islands of Ourature, Xho, Deferba, Analativa, Caradiva, Pongar-diva, and Nainandiva. diva, and Naimandiva.

The country villages of the natives are very irregular, not laid out into fireets, but every man incloies a fipot of ground with a bank or pale fuitable to his circumflances, and there are frequently twenty or thirty of these encloand usere are frequently twenty or thirty of these enclo-fures pretty near together. The buildings are mean, the houses of the generality of the people low thatched cottages confissing of one or two ground rooms, the sides are splin-tered with raisns or cane, which they do not always cover with clay, and if they do, it seems, they are not permitted to white-wash them, this being a royal privilege. The better-fort of people have a square in the middle of their houses, and as many rooms on the sides of it as the nouhouses, and as many rooms on the sides of it as the num-ber of the family requires, with banks of earth raised a yard high above this square court, on which they sit crosslegged, and eat or converse with their friends. They have no chimnies, but their meat is dressed in their yards or a corner of the room. Their furniture confifts only of a mat, a sool or two to fit on, a few china plates, and some earthern and brazen vessels for their water and to dressed their water and to dressed the soul of the soul or two the soll of their water and to dressed the soul of the so their meat in, except one, bedflead which, is allowed the mafter of the house to fit or fleep on, and this is corded, if we may life the exprefilot, with rattans or finall caus; and has a roat or two and a first pillow upon it, but no teller and curtains. The women and children lye on mats teller and curtains. The women and children lye on mats by the fire fide, covering themfelves only with the cloth they wear in the day time, but they will have a fire burning all night at their feet, the pooren people never want fuel, wood being to plentiful that no body thinks it worth while to claim any property in it. Their pagodas or temples, which are of any antiquity, are built of hewn flone, with numbers of inages both, on the infide and out, but no windows in them, and in all other refpects like those on the neighbouring continent of India; but their temples of a modern clat are little low buildings with clay temples of a modern date are little low buildings with clay walls, almost ir the form of a dove-house, and besides their public temptes, they have little chapels in their yards, fometimes not more than two feet fquare, which they fet upon a pillar four feet high, and having placed the image. In it they reverence most, they light candles and lamps before it, and every morning frew flowers about the image, and lerform their devotions.

The original inhabitants of whom the body of the peo-ple at prefent conflits, are called Chingulays or Cinglaffes; befides whom there are a great many Moors, Malabars, Portuguese and Dutch in the island.

The natives are effeemed men of good parts and a pretty The natives are effected men of good parts and a pretty addrefts, grave, and of an eafy temper, eat and fleep moderately, but lazy and indolent, which it the cafe in most hot countries. They are not given to tuicving, it is fald, though addicted to lying, which, to me, feeths a paradox; for a man that will lye and deceive, would not make much foruple to cheat. They are far from being jealous, or restraining their women from taking innocent freedoms.

The men are of a moderate flature, and well research.

The men are of a moderate flature, and well propor-tioned, wear long beards, and have good-features; they have long black hair and black eyes, dark complexions, but not black as the natives upon the neighbouring conti-nent of India are. They fit on mats and carpets on the floor, but have a flool or two for frangers of diffinctions the vulgar are prohibited to fit on flools.

Young men of figure wear their hair long and combed back, but in a more advanced age, caps in the form of a mitre are worn. Their drefs is a waitcoat of calico, and a piece of the fame wrapped about their waits, in which they put their knifesand trinkets, and have a hanger by their fide, in a filver feabbard; befides which they walk with a cane or tuck, and a boy carrries a box with their betel and arek nut after them. The betel is a leaf of the shape of a laurel leaf, and the arek nut about the bigness of a numer, which they cut into thin flices, with an infirument made on purpose for it, and this with a pafle made of lime they chew together almost all day long, as most other Indians do; this mixture feems to be a kind of opiate, and renders them perfectly easy while they use it.

They have a perfon to earry a covered filver pot, or one made of fome other metal, to fpit in, for this composition has a nauseous smell, and it would be the greatest affront imaginable to fpit on the carpets of floors in a friend's houfe, and those that class is spit perpetually. It makes their lips very red, of which they are proud, and this may be one reason of their taking it; but there is nothing in the tafte that should invite one to use it, though it be uni-

verfally chewed by all degrees of people, and is the first thing offered a stranger when he makes a visit. The women wear their heir long without any covering and make it thise with occa-nut oil, as they do on the neighbouring continent; though this oil has a very frong imell, perhaps the natives eftern it a perfume, for culton will bring people to like almost any thing. The women are dressed in a calico waiscoat, which discovers their shape, and they wrap a piece of calico about them, which falls below, their knees, and does the fervice of a petticoat; thefe are longer or fhorter, according to the quality of the person that wears it, they bore holes in their cars, in which they hang such a weight of jewels, or something that refembles them, that you may put a half crown through the hole of their ears; they load their necks also with weighty necklaces, which fall upon their breafts, with weighty necklaces, which fall upon their breafls, containing a great many firings or rounds of beads, acc. They adorn their arms with bracelets, and wear a great number of rings on their fingers and toes, and a girdle of filver wire and plate furrounds their waits; when they go abroad, they throw a piece of firiped filk over their heads, which fometimes releables a hood. The people are obliged to go bare-footed, because none but the king is allowed to wear shoes and stockings...

The number of their parts of Ludie, in

The usual falutation here, as in other parts of India, is the Salam, (i, e.) the carrying one or both hands to their heads according to the quality of the person they falute. The nearest relations and friends do not talk much when they visit, but sit filent great part of the time. Talkative

people are in no efteem.

Before marriage, the man fends a friend to purchase the oman's cloaths, which the freely fells for a ftipulated fum. In the evening he carries them to her, fleeps with her all night, and in themorning appoints the day of marriage; on which he provides an entertainment of two courses for the friends of both parties. The feath is held at the bride's house, when the young couple cat out of the fame dilh, fleep to gether that night, and on the enfuing morning depart for the bridegroom's habitation. The meaning of making a purchase of the bride's cloaths, is, that the and her triends may be fatisfied with respect to the man's circum-

and they are fo fond of availing themselves of this liberty, that some of them have been known to change a dozen times. The profession of a midwife is unknown, as the women in general are both qualified and willing on that

occasion to affist each other.

occasion to affift each other.

This island produces rice, the common food of the inhabitants in all hot countries: of this they have feveral kinds; one of them will be foven months before it comes to maturity, fome fix, and others five between the feed time and harvest; that which grows fasted is the best tasted, but yields the least increase; and as all forts of rice tafted, but yields the leaft increase; and as all forts of rice grows in water, the inhabitants are at great labour and expence in levelling the ground they defign for tillage, and making channels from their wells and repositories of water, to convey to these fields: they cut out the sides of their hills from top to bottom, into little level plains, one above another, that the water shall stand in them till the corn is ripe, and these levels not being more that six or eight seet wide, many of them look like stairs to ascend the mountain at a little distance. In the north part of the island, where there are few forings, they saye the rain waisland, where there are few springs, they save the rain water in great ponds, or tanques, of a mile in compass, in the time of the monsoons, as they do on the continent of India, and when their fields are fown, let it down into them gradually, so that it may hold out till harvest.

They do not there have teach they create out their corn with a real.

them gradually, to that it may hold out till narvett.

They do not thrash, but tread out their corn with oxen and bustaloes, frequently in the field where it grows: as foon as it is reaped they lay out a round spot of ground for this purpose, about twenty-five feet over, which they dig a foot and a half deep, and the women, whose bustaless it is, bring the corn in bundles on their heads, after which the cattle are driven round the pit till. they have trampled it out of the straw; then a new floor is laid, and with half a degree over they will trample out forty or fifty.

trampled it out of the traw; then a new floor is taid, and with half a dozen oxen they will trample out forty or fifty buthels in a day. Before they begin to tread out the corn they always perform fonce religious ecremony, and apply to their idols for a bleffing on their labours.

They have feveral other kinds of grain, which they eat of the latter end of the year, when rice begins to be feared, and particularly coracan, which is as finall as multard-feed, which they beat or grind into flour and make cakes of. This grain scows an dry ground, and is rice within three This grain grows on dry ground, and is ripe within three or four months after it is fown. They have another kind, called tanna, as finall as caracan, every feed whereof fhoots out four or five falks, which have each an ear, and are faid to multiply a thousand for one. The women, who do the greatest part of the harvest work, cut off only the ears of it when it is ripe, and earry it home in baskets. This is very dry food, and only eaten when rice is not to be had. They have also a feed called tolla, of which they make oil, and anoint themselves with it.

and anoint themselves with it.

Here are great variety of fruits, but the natives seldom eat them ripe, or cultivate any, but those which serve to make pickles for their soup or curree, and sauces, when they are green, to cat with their rice. The betel-nut so often mentioned, they have great plenty of, which they used to export to the coast of Cormandel to great advantage, before the Dutch excluded them from all trade with foreigness.

The fruit called jacka is part of their food; they grow upon large trees, are of a round shape, and as hig as a peck loat, being covered with a green prickly rind; they have feeds or kernels in them as hig as a chefnut, and in colour and taffe like them. They gather these jackas be-fore they are ripe, and boil them, and they eat much like cabbage: if they let them grow till they are ripe they are very good to cat raw; they roaft the kernel in the embers, and catry with them, when they, take a journey, for their

provision.

There is another fruit called jambo, which is very juicy, and taftes like an apple, it is white, fireaked with red, and looks very beautiful; they have also some fruits which refemble our plumbs and cherries; nor do they want any of the court plumbs and cherries in the samangoes, cocoas, pinethe common Indian fruits, fuch as mangoes, cocoas, pine-apples, melons, pomegranates, oranges of several forts, citrons, limes, &c. They frequently dedicate their fruit-trees to fome dæmon, to prevent their being ftolen; after, which their neighbours dare not touch them, left the dæmon, to which they are devoted, should punish them for the theft; and before the owner eats of it himself, he of-

the then; and before the owner eats of it himself, he of-fers part of it to the idol.

Their kitchen gardens are well flored with roots, plants, and herbs, for the Portuguese and Dutch have introduced almont all manner of European plants that grow in our kitchen gardens. They also abound in medicinal herbs, which they know very well how to apply, and with which they personn many notable cures.

Here are alfo flowers of various colours and a delicious feent, which grow spontaneously, but are never cultivated, with these, the young people of both sexes adorn their hair. Among others, they have white and red roses, as sweet and beautiful as those of Europe, and a white flower refembling jasmine, which the king reserves for his own use, no subject being allowed to wear it. There is another slower, which is observed to open about four every evening, and close again about sour in the mornlag.

Among their trees the taliport is much taken notice of, which grows very tall and strait, a leaf of which will cover sisten or twenty men, and will fold up like a fan; they wear a piece of it on their heads on a journey, to skreen them from the sun; these leaves are so tough, that they make their way with them through the bushes and thickets without tearing them; they serve the soldiers for tents to lie under in the field.

There is a tree called kettule, a kind of palm, as high

tents to lie under in the field.

There is a tree called kettule, a kind of palm, as high as a cocoa tree, from whence they draw a pleafant liquor, but not strong; an ordinary tree yielding three or four gallons a day, and when boiled, makes a kind of brown sugar, called jaggory; the wood of this tree is black, hard; and very heavy.

The tree of modeling the collection of the stree is black, hard;

The tree of most inestimable value to the Dutch, as it was formerly to the Arabs and the Portuguese, is the cinnamon, which is found in no other country, but grows commonly in the woods, on the fouth west part of the isand. This tree is of a middle size, and has a leaf of the form of a laurel leaf. When the leaves first appear, they are as red as fearlet, and being rubbed between the fingers, smell like cloves. It bears a fruit like an acorn, which neither finells nor taftes like the bark; but if boiled in water, an oil fwims on the top, which finells fweetly, and is used in ointment in feveral differences; but as they have great plenty of it, they frequently burn it in their lamps. The tree having two barks, they ftrip off the outlide bark, which is good for little, and then cut the interest have great plenty of the country barks and the cut the interest have great plenty outlide barks. ner bark round the tree with a pruning-knife; after which they cut it long ways in little flips, and after they have flipped these pieces off, lay them in the sun to dry, and they roll up in the manner we see them brought over The body of the tree is white, and ferves for building and other uses, but has not the finell or tafte the bark has, other uses, but has not the intell or tatte the bark has. When the wind sets off the island, the cinnamon groves persume the air for many miles out ar set, of which we have incontestable evidence; probably, it is at that time of year, when the cinnamon trees are in blossom. This island abounds in elephants of a very large size! they have also oxen and buffaloes, deer, hogs and goats; and some wild beafts, with monkies in abundance; but

they had neither horses, assess, or theep, till they were im-ported by the Europeans, nor have they anylions or wolves; and here is an animal in all respects like a deer, but not and here is an animal in an expects like a deer, our not bigger than a hare: the wild elephants feed upon the tender twigs of trees, corn and grafs. The icis growing, and do the hubbandmen a great deal of the back it, by trampling down their corn, as well as eating it, and breaking and poiling their trees. The monkies have black faces, and white have been trees to be refundling their trees. white beards, very much refembling old men. Alligators, or crocodiles, abound here, and ferpents of a monitrous fize: but the flory of the fnake that i wallowed a flag with the horns, does not deferve much credit, especially as Mr. Knox, who relates it, had it by hearfay, and never mer with one above the common fize, though he refided in the

island twenty years.

Vermin and infects are very numerous here, particularly ants, which eatevery thing they come at, except iron and other minerals as hard. Their houses are perfered with them: if a dift of meat is set down, it is immediately full of ants; in the fields they raise hills fix seet high, of a pure waite clay, to hard, that a pick-ax will hardly demo-lish them; and of this clay it is that the priesls frequently form their idols: these insects are not long-lived; when they are full grown they have wings, and fly up in fuch clouds, that they intercept the light of the fun; soon after which they fall down dead, and are eaten by fowls, who de-vour them also at other times, or there would be no living.

at quiet for them.

The common fort of bees build in hollow trees, or in more lively colour, which form their combs upon the high boughs of trees, and at the feafon for taking them, the country people go out into the woods and take their honey. In the feafon when the rains lies in to fell the holes of the rocks; but there are much larger bees, of a

In the feafon when the rains begin to fall, they are troubled with little red leeches, which are not at first much higger than a hair: these run up peoples bare legs as they travel, and, fixing themselves there, are not easily removed

till the blood puns about their heels. The best remedy egainst their bite is, to rub their legs with a composition of ashes, lenon-juice, and falt. The bite of thess creature is so far from being attended with any ill consequences, that this sheeding is ellectmed very wholesome.

Their sowls are geefe, dacks, turkies, hens, woodcocks, partidges, pidgeons, snipes, wild peacocks, parroquets, and a beautiful sparrow as white as snow, all but his head, which is black, and a plume of seathers standing upright upon it, the tail is a foot long.

upon it, the tail is a foot long.

The natives of this island make favoury soups of flesh or fish, which they eat with their rice; people of condition will have several diffies at their tables, but they confift chiefly of rice, founs, herbs, and garden fulfi' they eat but little fleth or filh. Their meat he cut into little fluare pieces, and two or three ounces of it had on the fide of the dish by their rice, and, being feafoned very high, gives a relish to the infipiid rice. They use no knives or fooks, but have ladles and spoons, made of the cocon-nut shell; their plates are of brash or claims ware: the poor people have a boad leaf inflead of a plate, and fometimes feveral leaves fewed together with bents, where broad ones are not to be had. Water is their usual drink, which they pour out of a cruce or bottle, holding it more than a foot above their heads: fome of them will swallow near a quart of water in this manner without gulping once. They draw arrack and spirits from rice; but there is neithey draw arrack and invite from rice; but there is net-ther wine nor beer made in this country. They ne-wer eat beef, the bull and cow being objects of adoration here. Neither the people in high, or low flation eat with their wives. The man fits down by himself, and, when he has done, the women and children are allowed to cat.

In this woody and mountainous country there are no wheel carriages, unless what belong to the Dutch near the fee coast. The baggage is usually carried upon the backs

of their flaves.

Calico ot cotton cloths, which they spin or weave, are the chief manusacture here; they make also brass, copper,

the chief manufacture here; they make also brais, copper, and earthern vessels, swords, knives, and working tools used by smiths, carpenters, and hulbandmen; goldsmiths work, painting, and carving, are also performed tolerably well, and they now make pretty good sire-arms.

We may trace their foreign trade up to the earliest ages. They supplied Persa, Arabia, Egypt, and Ethiopia with their spices, before Jacob went down into Egypt, which is above three thousand years since, as appears by the history of Joseph's being sold to the Islamachie merchants, who were traveling with a carvan across Arabia to Evypt with or Joseph a Beng Joid to the Immacine meteratary, who were travelling with a caravan acrofs Arabia to Egypt with the spices of India, of which the cinnamon of Ceylon, that lies near the coast of Hither India, was no doubt the chief: so profusble was this branch of trade, that all the nations above-mentioned sent colonies hither, whose defeendants were planted here when the Portuguese first vifited thefe coafts.

The Portuguese language is spoken upon the coast; the natives, however, have a language of their own, which comes nearest to that spoken on the Malabar coast; and there is a dead language only spoken by their bramins or priests, in which the books relating to their religion are

They write upon the leaves of the talipot cut into pieces of three fingers broad, and two feet long, with a feel flyle or bodkin. They have long fludied aftronomy, which they learnt from the Arabian colonies which fettled on these coasts, and foretell eclipses, pretty exactly. They are great pretenders also to astrology, and by the planets calculate nativities, foretell future events, and direct people when will be the most locky days to enter upon any affair of moment, or to begin a journey; and they find men weak enough to be imposed upon, if they have been never to often dispopinted. Their year is divided into three hundred and fixty-five days, and every day into thirty pays or parts, and their night into as many; and they have little copper dith, with a hole at the bottom of it, which being put empty into a tub of water, is filled during one of their pays, when it finks, and then it is put in the water again to measure another pay; for they have neither sun-dials nor clocks.

Any of the male cinglasses may indifferently charge another within hearing (as we do the constables) to aid them in execution of their duty, or upon any emergency; but the women are not permitted to mention the king's name, upon the fevere penalty of having their tongues cut out for the offence.

In Ceylon, the criminals are frequently impaled alive, others have stakes driven through their bodies, some are hung upon trees, and many are worried by dogs, who are fo accustomed to the horrid butchery, that, on the days appointed for the death of criminals, they, by certain tokens, run to the place of execution. But the most remarkable criminal punishment is inflicted by the king himself, who rides an elephant trained up on purpose: the beast tramples the unhappy wretch to death, and tears have limb that the him limb from limb.

him limb from limb.

Some are punished by fines and imprisonment, at the difcretion of the Judges. When the fine is decreed, the
officers feize the culprit, where-ever they meet him, frip
him naked, his cloaths going as part of the payment, and
oblige him to carry a large stone, the weight being daily
increased by the addition of others that are smaller, till

increased by the addition of others that are smaller, tist the money is either paid or remitted.

Sometimes a creditor will go to the house of the debtor, and very gravely affirm, that if he does not discharge the debt he owes him immediately, he will destroy himself this so terrifies the other, that he instantly collects all the money he can, even selling his wise and children rather than be descient, and pays the sum demanded. This is owing to a law, which specifies, that, if any man destroys himself on account of a debt not being discharged, the debtor shall immediately pay the money to the farviving relations, and forfeit his own life, unless he his able to exceede it by the payment of a very large sum to the king.

They have two modes of deciding controverses, the one is by imprecating curses to fall upon them if they do not

They have two modes of deciding controversies, the one is by imprecating curses to fall upon them if they do not speak the truth; and by the other, both persons are obliged to put their singers into boiling oil, when the person who can bear the pain the longest, and with the least appearance of being affected, is deemed innocent. They stave, however, methods of evading both these laws; the sirtly susing ambiguous expressions; and the latter, by certain preparations, which prevent the oil from doing them any uniter.

It is not lawful to beats woman without permiffion from the king, fo that they may thank his majefty for all the blows they get. But they may be made to carry heavy bankets of fand upon their heads as long as the punisher pleafes, which is much more dreadful to them than a hearty drubbing. The circumftances of the children depend upon those of the mother; for if the mother is a free woman, they are free; but if the is a flave, they are always

As to physic, every one almost understands the common remedies, applying herbs or roots, according to the nature of the complaint, and they have an herb which cures the bite of a inake; but there are neither physicians or fur-geons amongst them, who make a profession of this science. As they abound in poisonous herbs and plants, so they have others that are antidotes against them. Their diseases are chiefly severs, sluxes, and the small-pox. They never bleed except when leaches feize them in the wet feafon, as has been mentioned already, from which they acknowledge they have fometimes received great benefit.

The natives worthip God, but make no image of him; however they have idols, which are representatives of flowegreat men that formerly lived upon earth, and are now, they imagine, mediators for them to the fupreme God of heaven. The chief of these demi-gods is Buddow, God of heaven. The chief of thefe demi-gods is Buddow, who, according to their tradition, originally came from heaven to procure the happiness of men, and ascended thither again from Adam's Mountain already mentioned, leaving the impression of his foot on the rock. They are said likewise to worthip the devil, that he should do them no mischief; and another of their favourite idols is the tooth of a monkey. They worship also the sun and moon, and other planets. Every town has its tutelar demon, and every family their houlhold god besides, to whom they build chapels in their courts, facrifice and pay their devotions every morning; but to the supreme God they erect no temples or altars. There are three classes of idols, and as many orders of priests, who have their sevethey erect no temples or altars. There are three classes of idols, and as many orders of priests, who have their several temples, and to which effates in lands are appropriated. The god Buddow already mentioned, is the chief of these subordinate deities, and his priests in the greatest esteem, being all of the highest cast or tribe in the nation. They being an of the inglett can be repeated in the hardon. They wear a yellow veft and mantle, their heads fhaved, and their beards grow to a great length. Their disciples fall down on their faces before them; and they have a flool to fit on wherever they vifit, which is an honour only shewn to their princes and magiltrates.

These priests have no commerce with women, drink no

ftrong liquor, and eat only one meal a day, but are debarred from no fielh except beef. They are filled fons of the god Buddow, and cannot be called to account by the temporal power, whatever crimes they commit.

god hero There is a focund order of private that calleins in the temples of other ideas, there are allowed to profes any fecular employment; and are not disinguished from the latty by their habit, but have, however, a certain revenue. Every morning and evening they attend the fervice of their, temples, and when the people factifier the smileture, the prieft prefents them before the ideal, and that delives them to the finging mos and women, and other fervants the belong to the temple; and to the poor that come to perform their devotions, who as the provides a not feel is ever factified to the ideas of this class.

The third order of priefts have no evenues, but build temples for themselves, without any alection we confermation, and bog money to maintain themselves. They are prohibted by law from touching the waters in wells or farings, and must not use any, but what is procured front rivers or ditches. They are confidered in so despicable a light, that it is held differential to have any connections with them.

them.

Wednetdays and Saurdays are the times they refers to the templer; and at the new and full meon they offer facilities to the god Buddow; and on a new-year's day, in the month of March, they offer a foleram facrifice to him on a high mountain, or under a foreasing tree which is deemed facred. The principal fettival of the Chingulays is observed, in the month of July, in honour of the new moon, when a priest goes in pompous procession with a garland of flowers, to which the people present their offerings. The ridiculous pageantry attending this fastival was attempted to be abolished in 1664; but the attempt caused an infurrection, so that the kings of Ceylon are obliged to let them continue the folemn munmery.

They have also idols of monthrous shapes and forms, made of filver, brafs, and other metals, and sometimes of clay; but the situose is all addows temples are the figures of menificating cross-legged in yellow habits, like his priests, representing some holy men, who, they say, are teachers of virtue, and benefactors to mankind.

The island of Ceylon was formerly divided into nine

senting fome holy men, who, they fay, are teachers of virtue, and benefactors to mankind.

The ifland of Ceylon was formerly divided into nine monarchies, but at present it is under the dominion of one king, whose court is kept in the center of the island, at a place called Digligy-Neur: the palace is but meanly beilt; though the gates are large, stately; and finely carved; the window-frames are made of ebony, and inlaid with filver: the king's elephants, troops, and fpices are numerous, and bis concubines many. The guards are commanded by Dutch and Portuguese renegado officers. This monarch assumes great dignity, and demands much respect, which his subjects readily pay him, as they imagine that all their kings; immediately on their demise, are turned into gods. He expects that Christians should salute him kneeling and uncovered, but requires nothing more of them. His title is, Emperor of Ceylon, king of Candy, prince of Onva and the four Corles, great duke of the seven Corles, marquis of Duranura, lord of the sea-posts and sinceries of pearls and precious stones, lord of the golden sun, &c. His revenue consists in the gifts and offerings of this subjects; his palaces are built upon almost inaccess and sincer of pearls and precious stones, lord of the golden sun, &c. His revenue consists in the gifts and offerings of this subjects; his palaces are built upon almost inaccess and sincer or the greater security; no bridges are permitted to be erected over rivers or streams, or good roads to be made, to render the country as impassable as possible. None are permitted to approach his palace without a passport samped on clay. The troops are hereditary, and their weapons are swords, guns, pikes, bows and arrows, &c. They are subject, but not courageous, and will mot engage an enemy but by surprise, and when there is some manisfer advantage in their own favour. It is fo difficult to penetrate into the inland parts, and all the passes are some sensuled advantage in their own favour. It is fo difficult to penetrate into

greateth part of the island.

In 1 505 the Portuguese landed in Ceylon, and about welve years after they established factories there, the reigning king permitting them to build forte; she upon his demise, he declared the king of Portuguel his heir; but in precess of time the Portuguese behaving with great cruelty and arrogatee, the young king of Candy invited in the Deeteh, in 1639, who, after a tedious war, at length, in the year 1655, subdued the Portuguese, and became masters of the coast and trade. They drove the king, their ally, into the mountains, and with their wonted gratitude made him their tributary. The Dutch have in subfequent years committed many cruelties, and the natives frequently retaliate by making excursions among them, or sawdering all they meet with at a distance from the forte, and the interior part of the island.

No. 19.

land, not after a street a few a transit of the first bright

Cor diving a destription of the Maldrein islands, Bomboy, and

BOUT five hundred stiles from the company of the co

In these islands the women are fairer than the men, and in general of a very agreeable disposition. They wear a coar of action to fill that reaches from the waist to the ancies, over which they have a long robe of taffety, or fine cotton, that extends from the shoulders to the feet, and is fastered round the neck by two gift bestons. Their hair is black, which he estended a great comment; and to obtain this, they keep their daughters heads shaved till they are eight of nine years of age, leaving only a little hair on the forshead to distinguish them from the boys. They wash their heads and heir in water, to make the latter thick and long, and let it hang loofs; that the hair may dry it, after which they perfume it with an odoriferous oil. Whus this is do now, they froke all the heir backwards from the forehead, and tie is behind in a knoe, to which they add a large lock of man's hair; and the which is curiously ornemented with showers of various colours. The common people have houses built of cocca-wood, and covered withs leaves sewed one within another; but the fuperior fort build their houses of stone, which is taken from under the star and rocks in the following manner: among other trees in this illend, is one called candou, which is exceedingly fort; and, when dry and sawed into planks in much lighter then cock; the natives, who are excellent fwimmers; dive under water, and, having fixed upon a stone for their purpose, they fasten a strong rope to it; after this; they take a plank of the candou wood.

upon a stone for their purpose, they fasten a strong rope to it: after this; they take a plank of the candou wood, which, having a hole bored in it, is put on the rope, and forced down quite to the stone: they then run on a num-ber of other boards till the light wood rifes up to the top, dragging the stone along with it. By this contrivance the natives weighed up the cannon and anchors of a French natives weighed up the cannon and another ago.

thip that was caft away here about a century ago.

The people are in general very polite, particularly those on theiland of Male, but they are very libidinous, and fornication is not confidered as any crime; neither must any person offer insult to a woman that has been guilty of misconduct previous to marriage. Every man is permitted to have three wives if he can maintain them, but not more. The girls are marriageable at eight years of ege, when they wear an additional covering on their necks: the boys go naked till feven, when they are circumcifed, and wear the usual drefs of the country afterwards.

The Maldivians are very abitemious in their diet, their A ne Mandylana are very successor it near diet, their principal food confifting of roots made into meal and baked; particularly those called nell-pou and clas, the latter of which they dress several ways; they also make a pottage of milk, cocoa, honey, and bread, which they essent an excellent diffi; and their common drink is water. They fit crofs-legged at their meals, in the fame manner as in other eastern countries; the floor on which they fit is covered with a fine mat, and they use banana leaves instead of table cloths. Their dishes are chiefly of china, all reficls of gold or filver being prohibited by law: they are made round with a cover, over which is a piece of filk to keep out the ants. They take up their victuals with their fingers, and in fo careful a manner as not to let any fall; and if they have occasion to spit, they rise from the table, and walk out. They do not drink till they have finished their meal, for they consider that as a mark of rudeness; and they are very cautious of eating in the pre-fence of strangers. They have no fet meals, but eat when the appetite demands, and all their provisions are dressed by the women for this bufiness is accounted disgraceful to

Being naturally very cleanly, as foon as they rife in the morning they wash themselves, rub their eyes with oil, and black their eye-brows. They are also very careful in washing and cleansing their teeth, that they may the better receive the stain of the betel and areka, which is red, and the colour they are particularly fond of. They present betel to each other upon occasional falutations, as they al-

ways keep some about them.

ways keep some about them.

They preferre many Pagan customs, though their religion is Mahometanism: when meeting with any disaster at sea, they pray to the king of the winds; and there is in every island a place, where they who have estaped danger make offerings to him of little vessels made for the purpose in which they put fragrant woods, flowers, and other per-fumes, and then turn the veilel adrift to the mercy of the waves. They dare not spit to the windward, for fear of offending this airy deity; and all the vellels which are devoted to him are kept as clean as their mosques. They impute croffes, fickness; and death to the devil; and, in order to pacify him, in a certain place, make him banquets and offerings of flowers.

Each of their mosques is situated in the center of a

fquare, and runtid it they bury their dead: they are very neat buildings, here there doesn; each accorded by a flight of flops: the walls within are wallshotted, and the ceiling is of wood beautifully variegated. The floor is of polithed flone, covered with mate and tapetry; and the ceiling and wainfcotting are firmly joined without either nails or page. Each mosque has its prieft, who, befides the duties of his effice, teaches the children to read and write the Maldirian language, which is a radical tongue; he also instructs them in the Arabic language, and is rewarded for these ferviers by the parents. by the parents.

in the Arabic language, and is rewarded for these services by the parents.

Such people here as are very religious go to their mosque sive times a day, and, before they enter it, they wash their feet, hands, ears, eyes, and mouth: this they never neglect to do. They who do not chuse to go to the mesque, may say their prayers at home; but if they are known to emit doing one or the other, they are treated with the greatest contempt, and every body avoids their company.

Friday is the day on which they keep their fabbeth, which is calebrated with great festivity; and the same is observed on the day of every new moon. They have several other services in the course of the year; the most distinguished of which is one called annulude, and is held in the month of October, on the night of which Mahomet died. On this occasion a large wooden house, or hall, is crecked on a particular part of the island, the inside of which is lined with the richest tapestry. In the center of the hall is a table covered with various forts of provisions, and round it are hung a predigious number of lamps, the smoke of which gives a most fragrant scent. The people assemble about eight o'clock in the evening, and are placed by proper officers appointed for that purpois, according to their respective stations. The priests and other ecclessiation sing till midnight, when the whole assembly fall prostrate on the ground, in which posture they continue till the head priest rises, when the rest follow his example. The people are then served with betel and drink; and when the fervice is intriedy over each takes a part of the The people are then ferved with betel and drink; and when the fervice is intirely over, each takes a part of the provisions on the table, and preferve, as a facred relic, with the utmost care.

When two persons intering into the marriage state, the man gives notice of his design to the pandiare, or naybe, who siks him if he is willing to have the woman proposed; on his answering in the affirmative, the pandiare questions the parents as to their confent: if they approved it, the wo-man is brought, and the parties are married in the prefence of their friends and relations. After the ceremony is over, the woman is conducted to her hulband's houfe, where the is vifited by her friends, and a grand entertainment is provided on the occasion. The bridegroom makes prefents to the king, and the bride equally compliments The man does not receive any dowry with the queen. the queen. In that does not receive any down with his wife, and he his not only obliged to pay the expense of the nuptial ceremony, and to maintain her, but he must likewife fettle a jointure opon her, though if the thinks proper, the may relinquish it after marriage. A woman cannot part from her hufband without his confent, though, a man may divorce his wife; but if the does not affent to the separation, she may demand her jointore; yet as this is considered as a mean est, it is seldom practifed.

On the death of any person the corpse is washed by one of the same sex, of which there are several in each island of the lame lex, or which there are reversal in each infinite appointed for that purpole. After this, it is wrapped up in cotton, with the right hand placed on the ear, and the left on the thigh. Then it is laid on the right fide in a coffin of candou wood, and carried to the place of interment by fix relations or friends, and followed by the neighbours, who attend without being invited. The grave is covered with a large piece of filk or cotton, which after the interment, becomes the property of the prieft. The corpfe is laid in the grave with the face towards. Mahomet's tomb; and, after it is deposited, the grave is filled up with white from the grave, the relations featters cowries for the be-nefit of the poor, and gives pieces of gold and filver to the prieft, according to the circumstances of the deceased. The prieft fings continually during the ceremony; and when the whole is over, the relations invite the company to a feath. They inclose their graves with wooden rails, for they confider it as a fin for any person to walk over them; and they pay such respect to the bones of the dead, that no persons, not even the priests, dare touch

In their habit on these occasion they make, little difference: the mourners only go bareheaded to the grave, and continue so for a few days after the funeral is solemnized. If a person dies at sea, the body, after being washed, is

put into, a coffin; with a written paper mentioning his realigion, and requesting shell who may make with the corpit to give it decent interment. They than fing over it, and, after having completed their ceremonics; commit it to the waves on a planth of candon wood.

The island of Mala, where the king refides, is fitured in the center of the reft; and is about five in life in circumference. The palace is built of stone, and divided into feveral courts and apartments, but life duly oft flory high, and the architecture very infignistant's however it is elegantly furnished within, and furrounded with gaidens, in which are fountetins and eithering of waver. The portal is built like a square tower, and in fettival days the indictions sing and play upon the top of it. The ground slove of the respective apartment are raised thitle five, to avoid the ants, and are covered with filk tapefry, fringed and showned with gold. The king is beds are hung like hammocks between two pillars ornamented with gold, and when he lies down, his attendants rock him to steep.

The drees of the king usually confits of a coat made of sine white cloth or cotton, with white snd blue edgings, fastened with bustons of folld gold: under this is a piece of red embreidered tapefry that reaches down to hit heels, and is fastened with a large silk girdle fringed, and a great gold chain before, with a locker formed of the most precious stones. He wears a fearlet cap on his head, which is a cloud to eltermed, that no other person day presume to use it. This cap is laced with gold, and on the top of it is a large gold button with a precious stone. The grandees and soldiers wear long hair, but the king head is shaved once a week; he goes bare-legged, but wears fandals of gilt copper, which are worn only by the royal family.

The dignity of the king, when he goes abroad, is particularly diffinguished by a white umbrella, which no other persons, except strangers, are permitted to use. He has three pages near his person, one of whom earries his fur, another his swerd and buckler, and a third his box of betaland areks, which he almost constantly chews. He goes to the mosque on Fridays (their fabbath) in great pomp, his guards dancing, and striking their swords on each others targets to the found of music; and is attended, on his return, by the principal people of the island. He sither walks, or is carried in a chair by slaves, there being no beasts of burden.

The guven is attended, when the goes abroad by a great.

The queen is attended, when the goes abroad by a great number of female flaves, fome of whom go before, to give number of winner haves, once or when no before, to give notice to the men to keep out of the way; and four ladies carry a voil of white filk over her head, that reaches to the ground: on this occasion, all the women from the feveral districts meet her with flowers, fruits, &c. She and her ladies frequently bathe in the fea for their health, for the ladies frequently bathe in the fea for their health, for the convenience of which they have a place on the shore close to the water, which is inclosed, and the top of it covered with white cotton. The only light in the chambers of the queen, or those of the ladies of quality, is what lamps assord, which are kept continually burning, it being the gustom of the country never to admit day-light. The drawing-room, or that part where they usually retire, is blocked up with four or five rows of tapestry, the Innermost of which none must lift up till they have coughed, and told their namest. and told their names.

The guards appointed to attend on the king's person con-fift of fix hundred, who are commanded by his grandees; and he has considerable magazines of arms, cannon, and and he has confiderable magazines of arms, cannon, and feveral forts of amminition. His revenues confifts chiefly of a number of ifands appropriated to the crown, with certain taxes on the various productions of others; in the money paid to purchafe titlet and offices, and for licences to wear fine cloatha. Befides these, he has a claim to all goods imported by thipping; for when a vessel arrives, the king is acquainted with its contents, out of which he takes what he thinks proper at a low price, and obliges his subjects to purchase them of him again at what sun he pleases to fix, by way of exchange, for such condities are beful fuit him. All the ambergris sound in this country (which produces more than any other part of the Indies) is also the property of the king; and so narrowly is it watched, that a person would be punished with the loss of his right hand, if detected in converting it to his own use.

Most of the nobility and gentry live in the north parts of this idend, for the convenience of being near the court, and so much is this division effectmed, that when the king banished acriminal, the fending him to the fouth is thought

to be a fufficient penifhment.

Abfolute monarchy prevails in the government here, as every thing depends on the king's pleafure. Each attolon,

or province, has a nityle, or governor, who is both a pristle and a doctor of the lay. He not only predide over the inferior priests, and is veried with the management of all religious affairs, but he is likewife intrusted with the administration of jutice, both is evil and criminal case. They are in fact to many judges, and make four circuits every year throughout their juristicition; but they have a fuperior, called the pandiate, who inside in the isle of Male; and is not only the superior, but case or a superior, called the pandiate, who inside in the isle of Male; and is not only the superior, but does not pass from the governor of each province, but does not pass from tence without consisting feveral learned doctors; and from him appeals are carried to the hing, who refers the matter to six of his privy-council. The pandiate makes a circuit once a year through the listend of Male; (as every governor in his respective province,) and condenned all to be scounged that cannot say their creed and prayers in the Arabic tongue, and construct them in the Maldivia m. At this time the women must not appear in the street unveiled, on pain of having their hair cut off, and their heads shaved, which is deemed very disgraceful.

They have various modes of punishment for crimes. If a man is mustered, the wife cannot 'profecture the criminal, but if the decasted has lest any children, the judge obliges him to maintain them till they are of age, when they may either profecture or pardon the murderer. The stealing any thing valuable is punished with the loss of a hand, and for trilling matters they are banished to the fouthern slands. An adulteres is punished to the fouthern slands. An adulteres is punished to the fouthern slands. An adulteres is punished to the fouthern slands. An adulter is punished to the fouthern slands. An adulter fit is punished to the fouthern slands. An adulter fit is punished to the fouthern slands. An adulter fit is punished to the orders his own toole-fits, and to to be met with in any other plac

coa-nuts, cowries, and cortoice-fhell, the latter of which is exceedingly beautiful, and not to be met with in any wher place except the Philippine islands. The imported articles are, iron, seel, spices, china, rice, &c. all which, as we observed, are ingrossed by the king, who fells them to his subjects at his own price.

They have only one fort of money here, which is silver, called lorrins, each of which is about the value of eight-pence. It is about two inches in length, and folded, the king's name being set upon the folds in Arabic characters. One thousand two hundred cowries make a lorrin; in their own markers, they frequently harter, one thing for

their own markets, they frequently barter one thing for another. Their gold and filver is all imported from abroad, and is current here as in all other parts of the In-

abroad, and is current nere as in an outer patter the and dies, by weight:

These islands are happily placed, with respect to each other, for producing institution are to the respective inhabitants, for though the thirteen attolons, or provinces, are in the same climate, and all of them very sertile, yet they produce such different commodities, that the people in one cannot live without what is found in another. The inhabitants have likewise so divided themselves, as making the part of the produced in a part of the people in the The inhabitants have likewife to divided themselves, as greatly to enhance this commercial advantage; for all the weavers live in one island, the goldsmiths in another, and the like of the different manufactures. In order, however, to render the communication easy, these artificers have small boats built high on the sides, in which they work, sleep, and eat, while sailing from one island to another to expose their goods to fale, and sometimes they are out a considerable time before they return to their fixed habitations.
