Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- ☒ Coloured covers / Couverture de couleur
- ☐ Covers damaged / Couverture endommagée
- ☐ Covers restored and/or laminated / Couverture restaurée et/ou pelliculée
- ☐ Cover title missing / Le titre de couverture manque
- ☐ Coloured maps / Cartes géographiques en couleur
- ☐ Coloured ink (i.e. other than blue or black) / Encre de couleur (i.e. autre que bleue ou noire)
- ☐ Coloured plates and/or illustrations / Planches et/ou illustrations en couleur
- ☐ Bound with other material / Relié avec d'autres documents
- ☐ Only edition available / Seule édition disponible
- ☐ Tight binding may cause shadows or distortion along interior margin / La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure.
- ☐ Blank leaves added during restorations may appear within the text. Whenever possible, these have been omitted from filming / Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.
- ☐ Additional comments / Commentaires supplémentaires:

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- ☐ Coloured pages / Pages de couleur
- ☐ Pages damaged / Pages endommagées
- ☐ Pages restored and/or laminated / Pages restaurées et/ou pelliculées
- ☒ Pages discoloured, stained or foxed / Pages décolorées, tachetées ou piquées
- ☐ Pages detached / Pages détachées
- ☒ Showthrough / Transparence
- ☐ Quality of print varies / Qualité inégale de l'impression
- ☐ Includes supplementary material / Comprend du matériel supplémentaire
- ☐ Pages wholly or partially obscured by errata slips, tissues, etc., have been refilmed to ensure the best possible image / Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon à obtenir la meilleure image possible.
- ☐ Opposing pages with varying colouration or discolourations are filmed twice to ensure the best possible image / Les pages s'opposant ayant des colorations variables ou des décolorations sont filmées deux fois afin d'obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below /
Ce document est filmé au taux de réduction indiqué ci-dessous.

10x	14x	18x	22x	26x	30x
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
12x	16x	20x	24x	28x	32x

The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \longrightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par la seconde plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \longrightarrow signifie "À SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., pouvant être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

D.

THE MINERAL PRODUCTION OF CANADA

During the Calendar Year

1915

General Summary

The term "mineral production" is so comprehensive that there is a wide divergence in methods both in the compilation of quantities of mineral products, and in the adoption of a basis of valuation. Such methods have been the subject of discussion in previous reports which need not be repeated at this time.

It was briefly stated in our preliminary report issued on March 1st, that the metal mining industry had in 1915, as a result of the demand created by the war, shown the highest production ever recorded and that the total value of the mineral production of Canada, had, notwithstanding the greatly decreased production of materials of construction, such as cement, clay and stone quarry products, etc., shown a very large increase over the production of the previous year.

Although military requirements caused restrictions to be placed upon the export of many mineral products, the mining industry suffered no serious loss in respect thereto. Producers were enabled in almost every instance to secure permits for exportation to approved destinations, the restriction serving chiefly as a means to enable the government to control the marketing outside of Canada of products that might be useful to the enemy.

The total value¹ of the metal and mineral production in 1915 was \$137,109,171, compared with \$128,863,075 in 1914, and \$145,634,812 in 1913, the latter being the highest production recorded. The increase in 1915 over 1914 was thus \$8,246,096, or 6.4 per cent, but the output is still less than that in 1913 by \$8,525,641.

The record of annual mineral production in Canada since 1886, shown in the following table, indicates the rapid growth which the mineral industry has made.

¹ In presenting a total valuation of the mineral production as is here given, it should be explained that the production of the metals copper, gold, lead, nickel, and silver is given as far as possible on the basis of the quantities of metals recovered in smelters, and the total quantities in each case are valued at the average market price of the refined metal in a recognized market. There is thus included in some cases the values that have accrued in the smelting or refining of metals outside of Canada.

The total value of the production in 1886 was \$10,221,255, or about \$2.23 per capita. In ten years the value had increased to \$22,474,256, or \$4.38 per capita, more than twice the total in 1886, and nearly twice the production per capita. The next ten years witnessed an increase to \$79,286,697 in 1906, or \$12.81 per capita, about $3\frac{1}{2}$ times the production in 1896. From 1906 to 1913 the total production showed an increase of over 80 per cent with an increase of nearly 50 per cent in production per capita. The decrease of 1914 has been more than half made up by the increase of 1915.

Annual Mineral Production in Canada since 1886.

Year.	Value of production.	Value per capita.	Year.	Value of production.	Value per capita.

1897.....	28,385,023	5.49	1912.....	135,048,296	18.27
1898.....	38,412,431	7.32	1913.....	145,634,812	18.77
1899.....	49,231,905	9.27	1914.....	128,863,075	15.96
1900.....	64,420,877	12.04	1915.....	137,109,171	

The detailed comparative statement here presented shows the production of each important product during the past two years, the production which each contributes to the total production, and the increase or decrease as the case may be of the production in 1915, as compared with that of 1914.

Although the grand total shows a substantial increase it will be noted that 28 items in the table show a decreased production aggregating \$12,381,915, whereas 29 items show increases aggregating \$20,628,011, the net result being an increase of \$8,246,096. The principal increases were in the metals and metalliferous ores and the principal decreases in cement, clay and quarry products. Among the non-metalliferous ores there was comparatively little change, the total increases being \$1,528,027 and the total decreases \$1,821,685, or a net decrease of \$93,658.

The total value of the metallic production in 1915 was \$75,814,841, as against \$59,386,619 in 1914, an increase of \$16,428,222 or over 27 per cent. With a practically unlimited demand and high prices there was an increased production of all metals with the notable exception of silver in which there was a falling off both in price and production. Notwithstanding these important increases however, it was only in the case of nickel and copper among the more important metals that the production in 1915 exceeded the maximum of previous years.

*Short tons throughout. (a) The metals copper, lead, nickel and silver are for statistical and comparative purposes valued at the final average value of the refined metal. Pig-iron, zinc ore, and cobalt oxides are valued at the furnace or spot, and non-metallic products at the mine or point of shipment. (b) Copper content of smelter products and estimated recoveries from ores exported, at 17-275 cents per pound, in 1915, and 13-492 cents per pound in 1914. (c) The total production of pig-iron in Canada in 1915 was 913,775 tons valued at \$11,374,199, of which it is estimated 755,180 tons valued at \$8,683,323 should be credited to imported ores; in 1914 the total production was 783,164 tons valued at \$10,002,856, of which 687,420 tons valued at \$8,863,914 are credited to imported ores. (d) Refined lead and lead contained in base bullion exported at 5-600 cents per pound in 1915, and 4-479 cents in 1914, the average prices in Montreal for refined lead. (e) Nickel content of matte produced and nickel recovered from silver-cobalt-nickel ores valued at 30 cents in 1915 and 1914. (Increasing quantities of nickel-copper matte are now being used in making monel metal which is sold at a price much below that of refined nickel. The value of the nickel contained in matte, as returned by the smelter, from 40 to 15 cents per pound for both years. (f) Silver recovered in bullion and recoverable from ores and smelter products exported at 49-684 cents per ounce in 1915, and at 54-811 cents per pound for Gross returns for sale of gas. (g) In 1915 and 1914 figures as reported by the producers, which differ slightly from those of the Trade and Navigation reports. (h) Included under cobalt in 1915. (m) Included under nickel in 1915.

Metal prices varied within wide limits during the year but with the exception of silver the average price for most metals was higher than the average for many years.

*Quotations furnished by Messrs. Thomas Robertson & Company, Montreal, Que.

The total value of the non-metalliferous production in 1915 was \$61,294,330 as against \$69,476,456 in 1914, a decrease of \$8,182,126 or 11.78 per cent.

The decrease was most pronounced in the case of materials of construction such as cement, clay products, lime, stone quarry products, etc. The total value of the production of structural materials in 1915 was \$17,920,759, as against \$26,009,227 in 1914, a decrease of \$8,088,468 or 31.1 per cent. Amongst the other products showing a falling off in production were coal, corundum, feldspar, grindstones, gypsum, mica and petroleum, whilst the principal products showing an increase were arsenious oxide, asbestos, chromite, graphite, magnesite, pyrites, quartz, and salt.

Coal is still the most important mineral product in Canada in point of value, having constituted 23.4 per cent of the total in 1915. The metals came next in importance with nickel contributing 14.9 per cent, copper 13.8 per cent, gold 12.7 per cent, and silver 9.6 per cent. The production of cement made up 5.1 per cent of the total, clay products 2.9 per cent, stone quarries 3.1 per cent, natural gas 2.7 per cent, and asbestos 2.6 per cent.

The production of pig-iron given in the general table includes only that proportion of the output of Canadian blast furnaces credited to Canadian ores. There is an important production of pig-iron from imported ores (shown in the footnotes of the general table, and in the chapter on iron and steel) and the total value thereof in 1915 was exceeded only by the production of coal, gold, silver, copper and nickel. There is also a large production of aluminium from imported ores, for which no value is included in the general table of production.

EXPORTS AND IMPORTS.

A very large portion of the mineral production of Canada is exported for consumption or refining outside of Canada. On the other hand considerable quantities of mine products, chiefly those which have been refined or subjected to partial treatment, or in the form of manufactured goods ready for consumption, are imported.

The total value of the exports of products of the mine, including direct mine products and manufactures thereof, in 1915 was \$124,157,761, compared with \$75,533,305 in 1914. This value includes for 1915 mine products to the value of \$61,814,582 and manufactures valued at \$62,343,179, as against mine products valued at \$53,781,102, and manufactures valued at \$21,752,203 in 1914.

Practically the whole of the Canadian production of copper, nickel, and silver is exported, also a very large proportion of the production of gold, asbestos, and mica. There are, as well, considerable exports of coal. These products alone contribute about 93 per cent of the value of the mine products exported. Manufactured products exported consist chiefly of iron and steel goods, agricultural implements, aluminium, calcium carbide, acetate of lime, fertilizers, and coke.

The United States is the chief destination of Canada's mine exports, about 72 per cent having been exported to that country during the fiscal year 1914-1915, and about 25 per cent to the United Kingdom.

The principal increases in exports of mine products in 1915 were in coal, copper, gold, lead, nickel, antimony, and pyrites. The exports of manufactured mine products were almost three times the total of similar exports in 1914.

The principal increases were in iron and steel goods, the total value of iron and steel exports in 1915 being \$48,268,148, as against \$14,391,746 in 1914. There were also, however, important increases in the export of aluminium, ferro-alloys, brass, and calcium carbide.

A great variety of mineral products chiefly in a manufactured or semi-manufactured condition are annually imported into Canada, these imports having increased with great rapidity during the ten years preceding 1913. During the past two years, however, there has been a falling off of 19.4 per cent. The total value of such imports during the calendar year 1915 was \$146,323,500, as compared with imports valued at \$181,675,667 in 1914; \$259,299,745 in 1913; \$238,212,835 in 1912; \$181,773,708 in 1911, and \$147,305,012 in 1910.

Of the total imports in 1915 about \$35,000,000 was made up of the cruder forms of mineral products such as coal, diamonds unset and bort, iron ore, asphaltum, ores of metals, alumina, sand and gravel, etc., as against \$46,000,000 for similar products in 1914.

The imports of iron and steel in 1915 included in this table, (see page 11), were valued at \$74,308,983, as against \$80,063,679 in 1914. Imports of the metals aluminium, antimony, copper, gold, silver, lead, platinum, tin, and zinc, and manufactures thereof, and metallic alloys, reached a total value of over \$17,000,000 as compared with a value of over \$30,000,000 in 1914; petroleum and products of, \$7,979,264, as against \$11,072,362 in 1914; clays and clay products \$2,998,465, as against \$4,467,140.

METALLIC ORES AND PRODUCTS.

Antimony.—There was a production of antimony ore in 1915 (all exported) of 1,341 tons valued at \$81,283, and of refined antimony 59,440 pounds valued at \$11,888. There was no production during the three previous years. The imports of antimony or regulus thereof in 1915, were 1,962,101 pounds valued at \$344,918, and of antimony salts 67,956 pounds, valued at \$10,320, or a total value of imports of \$355,238. In 1914 the imports were antimony and regulus 648,516 pounds valued at \$47,498, and antimony salts 34 pounds, valued at \$10,217, or a total value of imports of \$57,715.

Cobalt.—Metallic cobalt, cobalt oxide, cobalt sulphate and other cobalt salts and alloys are produced in Ontario smelters. The production

in 1915 as metal or contained in cobalt oxide or other salt was equivalent to 504,212 pounds of cobalt and was valued at \$536,268. This included 211,610 pounds of metallic cobalt and 423,717 pounds of cobalt oxide and cobalt sulphate. In 1914 the production was reported as 899,027 pounds of cobalt oxide and 242,572 pounds of cobalt contained in residues sold outside of Canada or equivalent to a total of 871,891 pounds of cobalt.

Copper.—The production of copper contained in blister, matte, or ore, which was practically all exported, was 100,785,150 pounds in 1915, valued at \$17,410,635, as compared with 75,735,960 pounds in 1914, valued at \$10,301,606.

The exports of copper in 1915 were reported as 106,891,179 pounds, valued at \$13,076,909, as against exports in 1914 of 77,398,723 pounds, valued at \$8,270,689. The total imports of copper in 1915 were valued at \$3,957,770, and included crude and manufactured copper 19,497,500 pounds, valued at \$3,402,922, and other manufactures of copper valued at \$554,848.

The total imports of copper in 1914 were valued at \$4,256,901, and included crude and manufactured copper, 26,290,815 pounds valued at \$3,983,322, and other manufactures of copper, valued at \$273,579.

Gold.—The total value of the production of gold in 1915 was \$18,977,901, representing 918,056 fine ounces, as compared with \$15,983,007, representing 773,178 fine ounces of metal in 1914.

The Yukon placer production in 1915 was 229,803 fine ounces, valued at \$4,750,450.

Of the total production in 1915 about \$5,524,476 were derived from alluvial workings; \$8,909,170 in bullion from milling ores and \$4,544,255 from ores and concentrates sent to smelters.

In 1914 about \$5,687,501 were derived from alluvial workings; \$6,051,968 in bullion from milling ores, and \$4,243,538 from ores and concentrates sent to smelters.

The exports of gold-bearing dust, quartz, nuggets, and gold in ore, etc., in 1915, were valued at \$16,528,143, as against \$15,242,200 in 1914.

The imports of gold bullion during the calendar year 1915 were \$1,028,405, of gold coin \$19,910,229, and of manufactures of gold and silver \$464,294.

Pig-Iron.—The total production of pig-iron in Canadian blast furnaces in 1915 was 913,775 tons valued at \$11,374,199, of which it is estimated 755,180 tons valued at \$9,658,325 should be credited to imported ores, and 158,575 tons, valued at \$1,715,874 to domestic ores. In 1914 the total production was 783,164 tons, valued at \$10,002,856, of which it is estimated that 687,420 tons, valued at \$8,863,944, should be credited to imported ores, and 95,744 tons, valued at \$1,138,912 to domestic ores.

The exports of pig-iron in 1915 were 17,307 tons, valued at \$231,551, and of ferro-alloys 9,238 tons, valued at \$537,081, or a total of 26,545 tons, valued at \$768,632, as against total exports in 1914 of 19,063 tons, valued at \$486,366.

The imports of pig-iron in 1915 were 47,482 tons, valued at \$624,200; ferro-manganese, etc., 13,758 tons, valued at \$807,312, as compared with imports in 1914 of pig-iron 78,594 tons, valued at \$981,107; ferro-manganese, etc., 22,147 tons, valued at \$549,485, and charcoal pig-iron 86 tons, valued at \$1,082.

The total exports of iron and steel and manufactures thereof, in 1915 were valued at \$48,268,148, as against \$14,391,746 in 1914. The imports of iron and steel and manufactures thereof during the calendar year 1915 were valued at \$74,308,583, as compared with \$80,063,679 during the calendar year 1914.

Iron Ore.—The total shipments of iron ore from Canadian mines in 1915 were 398,112 tons, valued at \$774,427, as compared with 244,854 tons valued at \$542,041 in 1914. The quantity of imported iron ore used in Canadian blast furnaces in 1915 was about 1,314,957 tons, as compared with 1,324,326 tons of imported ore used in 1914.

Lead.—The production of lead in 1915 was 46,316,450 pounds, valued at \$2,593,721, as against 36,337,765 pounds, valued at \$1,627,568 in 1914.

The exports of lead in 1915 were pig lead 2,066,929 pounds, valued at \$79,067, lead in ore, etc., 1,845,100 pounds, valued at \$40,273; the exports in 1914 were pig lead 510,573 pounds, valued at \$19,507, and lead in ore, etc., 246,100 pounds, valued at \$2,681. The total value of the imports of lead and manufactures of, in 1915 was \$2,482,916, as compared with imports in 1914, valued at \$1,042,538.

Molybdenum.—The production of molybdenite in 1915 was equivalent to 29,210 pounds of concentrate, valued at \$28,450, as compared with a production in 1914 equivalent to 3,814 pounds of concentrate valued at \$2,063.

Nickel.—The production of nickel in 1915 including nickel contained in nickel-copper matte and nickel recovered as metal or oxide, etc., from the nickel-cobalt-silver ores of Cobalt, was 68,308,657 pounds valued at \$20,492,597, which included 68,077,023 pounds contained in nickel-copper matte produced in the Sudbury district and 231,634 pounds recovered in Canadian smelters in the treatment of ores from Cobalt. During 1915 there were smelted 1,272,283 tons of nickel-copper ores producing 67,703 tons of matte as against 947,053 tons of ore producing 46,396 tons of matte in 1914, the nickel contents of the latter being 45,517,937 pounds. There were also produced in 1914, 392,512 pounds of nickel oxide.

The exports of nickel contained in ore matte, etc., during 1915 were 66,410,442 pounds, valued at \$7,394,446, being 13,747,991 pounds to

Great Britain and 52,662,451 pounds to the United States. In 1914 the exports were 46,528,327 pounds, valued at \$5,149,427; being 10,291,979 pounds to Great Britain; 36,015,642 pounds to the United States, and 220,706 pounds to other countries.

The imports of nickel, nickel-silver, in ingots, bars, sheets, etc., in 1915 were 710,344 pounds, valued at \$197,168, as against 619,852 pounds, valued at \$155,427 in 1914.

Silver.—The production of silver contained in bullion, or estimated as recovered from mattes and ores, etc., exported, was in 1915, 26,625,960 fine ounces, valued at \$13,228,842, as compared with 28,449,821 fine ounces valued at \$15,593,631 in 1914.

The exports of silver contained in ores, mattes, etc., in 1915 were 27,672,481 ounces, valued at \$13,812,038, as against exports of 28,020,089 ounces, valued at \$15,584,813 in 1914. The imports of silver bullion during the calendar year 1915 were valued at \$337,254, as compared with bullion imports of \$629,279 in 1914.

Zinc.—The shipments of zinc ore in 1915 were 14,895 tons, valued at \$554,938, as compared with shipments of 10,893 tons, valued at \$262,563 in 1914. The total value of the imports of zinc and manufactures of zinc, in 1915 was \$2,775,358, as compared with imports, valued at \$1,210,652 in 1914.

NON-METALLIC PRODUCTS.

Actinolite.—A production of 220 tons, valued at \$2,420 was reported in 1915, as compared with 119 tons valued at \$1,304 in 1914.

Arsenic.—Smelter returns show a production in 1915 of 2,396 tons of arsenious oxide, valued at \$147,830, as compared with a production in 1914 of 1,737 tons, valued at \$104,015.

The exports of arsenic in 1915 were 2,318 tons, valued at \$174,190, as against 1,876 tons, valued at \$132,567 in 1914. The imports of sulphide of arsenic in 1915 were 171,993 pounds, valued at \$5,415 as against 11,494 pounds, valued at \$756 in 1914. The imports of arsenious oxide in 1915 were 14,222 pounds valued at \$657, as against 5,012 pounds, valued at \$249 in 1914.

Asbestos.—The shipments of asbestos in 1915 were 111,142 tons, valued at \$3,553,166, and of asbestic 25,700 tons, valued at \$21,819, as compared with shipments in 1914 of asbestos 96,542 tons, valued at \$2,892,266, and of asbestic 21,031 tons, valued at \$17,540.

The shipments in 1915 consisted of 5,370 tons of crude asbestos, valued at \$1,076,297, and 105,772 tons of mill stock valued at \$2,476,869. The 1914 shipments included 4,147.9 tons of crude asbestos, valued at \$773,193, and 92,394 tons of mill stock, valued at \$2,119,073.

Exports in 1915 were 84,584 tons, valued at \$2,734,695, as against 81,081 tons, valued at \$2,298,646 in 1914. There were also exported in 1915, 25,103 tons of asbestic sand, valued at \$157,410.

Imports of asbestos and manufactures of asbestos in 1915, were valued at \$168,894, and in 1914, \$282,053.

Chromite.—Shipments in 1915 were reported as 12,341 tons, valued at \$179,540, as against 136 tons, valued at \$1,210 in 1914.

The exports of chromite or chromic iron in 1915 were 7,290 tons, valued at \$81,838.

Coal.—The production of coal in 1915 was 13,267,023 tons, valued at \$32,111,182, as against 13,637,529 tons, valued at \$33,471,801 in 1914.

The exports of coal in 1915 were 1,766,543 tons, valued at \$5,406,058, as compared with 1,423,126 tons, valued at \$3,880,175 in 1914. The total imports of coal in 1915 were 12,465,902 tons, valued at \$28,345,605, as against imports in 1914 of 14,721,057 tons valued at \$39,801,498.

The 1915 imports included 6,106,794 tons of bituminous round and run-of-mine coal, valued at \$7,564,369; 4,072,192 tons of anthracite and anthracite dust, valued at \$18,753,980; and 2,286,916 tons of bituminous slack, such as will pass through a $\frac{3}{4}$ inch screen, valued at \$2,027,256. The consumption of coal in 1915 was approximately 23,906,692 tons, as against 26,852,323 tons in 1914.

The 1914 imports included 7,776,415 tons of bituminous round and run-of-mine coal, valued at \$14,954,321; 4,435,010 tons of anthracite and anthracite dust, valued at \$21,241,924; and 2,509,632 tons of bituminous slack, such as will pass through a $\frac{3}{4}$ inch screen, valued at \$3,605,253.

Coke.—The quantity of oven coke made in 1915 was 1,200,766 tons, the quantity sold or used was 1,170,473 tons, valued at \$4,258,580, as compared with 1,017,253 tons, made in 1914, and 1,023,860 tons sold or used, valued at \$3,658,514. The quantity of coal charged to coke ovens in 1915 was 1,856,393 tons, as compared with 1,541,913 tons in 1914. The exports of coke in 1915 were 35,869 tons, valued at \$160,053, and in 1914, 67,838 tons, valued at \$306,117.

The imports of coke in 1915 were 637,857 tons, valued at \$1,608,464, as compared with imports of 553,046 tons, valued at \$1,585,259 in 1914.

Corundum.—The total sales of grain corundum in 1915 were 262 tons, valued at \$33,138, as compared with sales of 548 tons, valued at \$72,176 in 1914. Exports for 1915 were 339 tons, valued at \$37,798, and in 1914 947 tons, valued at \$87,740.

Feldspar.—Shipments of feldspar in 1915 were 14,559 tons, valued at \$57,801, as compared with 18,060 tons, valued at \$70,824, in 1914. The exports are not separately recorded in 1915, but in 1914 were 18,072 tons, valued at \$74,100.

Fluorspar.—No production has been reported during the past three years. Canadian furnaces in 1915 used 13,520 tons of fluorspar and in 1914, 7,845 tons. Imports of hydrofluosilicic acid were 1,117,874 pounds, valued at \$36,085, as against 1,384,087 pounds, valued at \$41,576 in 1914.

Graphite.—Shipments of crude and milled graphite during 1915 totalled 2,635 tons, valued at \$124,223, as against 1,647 tons, valued at \$107,203 in 1914. The production of artificial graphite in 1915 was reported as 249 tons, as compared with 617 tons in 1914.

Exports of plumbago in 1915 are reported as 263 tons, valued at \$12,009, and manufactures of plumbago, valued at \$84,316. Exports in 1914 were: plumbago 919 tons, valued at \$50,528, and manufactures of plumbago, valued at \$72,718.

Imports of graphite in 1915 were valued at \$151,878, and included: plumbago, not ground, \$3,436; blacklead \$6,084; plumbago ground and manufactures of, \$35,597; and crucibles of clay or plumbago \$106,761. Imports of graphite in 1914 were valued at \$100,192, and included: plumbago not ground \$801, blacklead \$6,798, plumbago ground and manufactures of, \$42,680, and crucibles of clay or plumbago \$49,913.

Grindstones.—The production of grindstones, scythestones, and wood pulpstones in 1915 was 2,580 tons, valued as \$35,768, as compared with 3,976 tons, valued at \$54,504 in 1914. The exports in 1915 were: manufactured grindstones, valued at \$35,334; and stone for the manufacture of grindstones 180 tons, valued at \$900. The exports in 1914 were: manufactured grindstones, valued at \$24,113, and stone for the manufacture of grindstones 54 tons, valued at \$294.

The imports of abrasives in 1915 included: grindstones, valued at \$79,391, burrstones \$314, emery in bulk, crushed or ground \$67,067; manufactures of emery, carborundum, etc., \$139,665; pumice stone \$18,814; also iron sand \$3,263; sandpaper \$133,677; and artificial abrasives \$28,921. The imports of abrasives in 1914 included: grindstones valued at \$98,872; burrstones \$16; emery in bulk, crushed or ground \$29,127; manufactures of emery, carborundum, etc. \$88,881; pumice stone \$16,976; also iron sand, \$13,743; sandpaper \$138,415.

Gypsum.—The total shipments of gypsum, crude and calcined, in 1915 were 474,815 tons, valued at \$854,929, as compared with shipments of 516,880 tons, valued at \$1,156,507 in 1914. The tonnage of gypsum mined or quarried in 1915 was 505,989, and the quantity calcined 84,763 tons. In 1914, 579,841 tons of gypsum were mined or quarried and 138,212 tons calcined.

The shipments in 1915 included: crude, lump 346,947 tons, valued at \$375,815; crude crushed 48,735 tons, valued at \$67,007; fine ground 6,455 tons, valued at \$22,767; and calcined gypsum 72,678 tons, valued at \$389,340. The shipments in 1914 included: crude lump 351,729 tons,

valued at \$400,521, crude crushed 49,441 tons, valued at \$61,686; fine ground 6,097 tons, valued at \$14,496; and calcined gypsum 109,613 tons, valued at \$679,504.

The exports of gypsum in 1915 were 292,234 tons of crude gypsum, valued at \$336,380, and gypsum ground or calcined, valued at \$80,933. The 1914 exports were: 345,830 tons of crude gypsum, valued at \$404,234, and gypsum ground or calcined, valued at \$35,490.

The imports of gypsum in 1915 were valued at \$25,819, including: crude gypsum 1,799 tons, valued at \$7,734; ground gypsum 134 tons, valued at \$2,253; and plaster of Paris 2,441 tons, valued at \$15,832.

The imports of gypsum in 1914 were valued at \$75,031, and included: crude gypsum 3,572 tons, valued at \$16,448; ground gypsum, 536 tons, valued at \$4,301; and plaster of Paris 7,739 tons, valued at \$54,282.

Magnesite.—Shipments of magnesite in 1915 were 14,779 tons, valued at \$126,584, and in 1914, 358 tons, valued at \$2,240. Imports of magnesia in 1915 were 182,249 pounds, valued at \$9,695, as against 254,283 pounds, valued at \$16,429 in 1914.

Manganese.—Shipments of manganese in 1915 were reported as 201 tons, valued at \$9,360, as against 28 tons, valued at \$1,120 in 1914. The exports in 1915 were 255 tons, valued at \$6,855, as against 30 tons, valued at \$750, exported in 1914. The 1915 imports included 1,238 tons of manganese oxide, valued at \$46,678, as compared with 1,702 tons, valued at \$42,487 in 1914.

Mica.—The value of the mica production in 1915, as reported by mine operators, was \$91,905, as compared with \$109,061 in 1914. The exports of mica in 1915 were 879,631 pounds, valued at \$236,124, as against 669,163 pounds, valued at \$178,940 in 1914.

Mineral Pigments.—Shipments of barytes in 1915 were 550 tons, valued at \$6,875, as against 612 tons, valued at \$6,169 in 1914. The production of ochres, iron oxides, in 1915, was 6,248 tons, valued at \$48,353, as compared with 5,890 tons, valued at \$51,725 in 1914.

The exports of iron oxides in 1915 were 1,196 tons, valued at \$17,263, as against 1,777 tons, valued at \$22,311 in 1914. The imports in 1915 were ochres and ochrey earth and raw siennas 1,240 tons, valued at \$23,763, and oxides, dry fillers, fireproof umbers and burnt siennas 2,452 tons, valued at \$260,986, as compared with imports in 1914 comprising: ochres and ochrey earth and raw siennas 1,532 tons, valued at \$33,197, and oxides, dry fillers, fireproof umbers, and burnt siennas 4,023 tons, valued at \$244,867.

Mineral Water.—The value of the production of mineral water in 1915 for which returns were received was \$115,274, as compared with a value of \$134,111 in 1914. The imports of mineral and aerated waters in 1915

were valued at \$126,569, as against a value of \$199,153 in 1914. The exports in 1915 were valued at \$3,578, as against \$1,367 in 1914.

Natural Gas.—The production of natural gas in 1915 was 20,124 million cubic feet, valued at \$3,706,035, as compared with 21,693 million cubic feet, valued at \$3,484,727 in 1914.

Peat.—Shipments of peat for fuel purposes in 1915 were 300 tons, valued at \$1,050, as compared with 685 tons, valued at \$2,470 in 1914.

Petroleum.—The production of crude petroleum in 1915 was 215,464 barrels or 7,541,230 gallons, valued at \$300,572, as compared with 214,805 barrels, or 7,518,168 gallons, valued at \$343,124 in 1914.

Exports of refined oil in 1915 were 103,488 gallons, valued at \$14,107, and 2,922 gallons, valued at \$826 in 1914. There was an export in 1915 of naphtha and gasoline of 16,644 gallons, valued at \$4,540; crude mineral oil 35,977 gallons, valued at \$1,789, and also an export of other oils n.e.s. of 1,247,376 gallons, valued at \$290,943, which may have included products of petroleum. Exports in 1914 included: naphtha and gasoline, 43,023 gallons, valued at \$11,607, crude mineral oil 3,996 gallons, valued at \$362, and also an export of other oils n.e.s. of 455,867 gallons, valued at \$107,179.

The total value of the imports of petroleum and petroleum products in 1915 was \$8,047,781, as against a value of \$11,174,763 in 1914.

The total imports of petroleum oils, crude and refined, in 1915 were 236,913,765 gals., valued at \$7,979,264. The oil imports included, crude oil 192,588,487 gals., valued at \$3,678,021, refined and illuminating oils, 6,792,873 gals., valued at \$405,019; gasoline 28,030,972 gals., valued at \$2,693,717; lubricating oils 4,547,179 gals., valued at \$755,535, and other oils, products of petroleum 4,954,254 gals., valued at \$446,972. The oil imports in 1914 were: crude oil 195,207,210 gals., valued at \$5,750,971; refined and illuminating oils 12,833,065 gals., valued at \$970,481; gasoline 24,396,401 gals., valued at \$2,747,360; lubricating oils 5,767,676 gals., valued at \$940,143, and other oils, products of petroleum 6,283,621 gals., valued at \$663,407, making a total of 244,487,973 gals., valued at \$11,072,362.

The imports of petroleum products in 1915 included 980,662 pounds of paraffin and paraffin wax candles, valued at \$68,517, as compared with imports in 1914 of 1,594,236 pounds, valued at \$102,401.

Phosphate.—Shipments of phosphate or apatite in 1915 were 217 tons, valued at \$2,502, as compared with 954 tons, valued at \$7,275 in 1914. Exports in 1915 were reported as 179 tons, valued at \$1,860, as against 247 tons, valued at \$677 in 1914. There was an export of phosphorus in 1915 of 545,050 pounds, valued at \$77,476, while in 1914, 610,350 pounds, valued at \$92,303 were exported.

The imports of phosphate rock (fertilizer) in 1915 were valued at \$14,148; phosphorus 75,900 pounds, valued at \$29,572; acid phosphate 1,964,131 pounds, valued at \$105,035; and manufactured fertilizers, valued at \$734,952. The imports of phosphate rock (fertilizer) in 1914 were valued at \$20,220; phosphorus 20,994 pounds, valued at \$6,760; acid phosphate 1,874,486 pounds, valued at \$97,862; and manufactured fertilizers, valued at \$677,174.

Pyrites.—The production of pyrites in 1915 was 286,038 tons, valued at \$985,190, as compared with 228,314 tons, valued at \$744,508 in 1914. The exports in 1915 were 137,598 tons, valued at \$527,318, as against exports of 89,999 tons, valued at \$377,985 in 1914. The imports of brimstone or sulphur in 1915 were 30,182 tons, valued at \$480,317, as against 41,954 tons, valued at \$870,868 in 1914.

Quartz.—The production of quartz in 1915 was reported as 127,108 tons, valued at \$205,153, as compared with a production in 1914 of 54,148 tons, valued at \$84,583. There were imported during 1915, 402 tons of silex or crystallized quartz, valued at \$5,527, and 4,327 tons of flint, valued at \$48,966, and in 1914, 870 tons of silex or crystallized quartz, valued at \$15,502, and 3,835 tons of flint, valued at \$47,931.

Salt.—The total sales of salt in 1915 were 119,900 tons, valued at \$600,226 (exclusive of packages). The value of the package used was \$280,747. In 1914 the sales were 107,038 tons, valued at \$293,648, and value of packages used \$278,897.

Exports of salt in 1915 were 889,300 pounds, valued at \$5,836, and in 1914, 952,700 pounds, valued at \$5,229. The total imports of salt in 1915 were valued at \$517,526, and included: 34,481 tons, valued at \$135,446, subject to duty; and 103,006 tons, valued at \$382,080, duty free. The 1914 imports were valued at \$540,881, and included: 33,893 tons, valued at \$151,108, subject to duty; and 108,753 tons, valued at \$389,773, duty free.

Among the imports of soda products in 1915 are included: soda ash or barilla 65,566,168 pounds, valued at \$448,845, soda bichromate 467,943 pounds, valued at \$34,692; caustic soda, in packages of 25 pounds or more, 7,737,149 pounds, valued at \$184,468; sal soda 6,833,000 pounds, valued at \$43,312; nitrate of soda or cubic nitre 45,285,220 pounds, valued at \$1,050,648; and sulphate of soda 30,970,231 pounds, valued at \$147,047.

Talc.—The production of talc in 1915 was 11,885 tons, valued at \$40,554, as against 10,808 tons, valued at \$40,418 in 1914. Imports of talc for the year 1915 were 154 tons, valued at \$1,866, as against 584 tons, valued at \$8,983 in 1914.

Tripolite.—There were 317 tons of tripolite, valued at \$12,119, shipped in 1915, as against shipments in 1914 of 650 tons, valued at \$13,000.

STRUCTURAL MATERIALS AND CLAY PRODUCTS.

Cement.—The total sales of cement in 1915 were 5,681,032 barrels, valued at \$6,977,024, as against 7,172,480 barrels, valued at \$9,187,924 in 1914. The exports of cement in 1915 were valued at \$5,161, as compared with exports valued at \$2,223 in 1914.

The imports in 1915 included: manufactures of cement, valued at \$7,410; and Portland cement 98,664 hundredweight (28,190 barrels), valued at \$40,426.

The imports of cement in 1914 included: manufactures of cement, valued at \$12,533; and Portland cement 343,076 hundredweight (98,022 barrels), valued at \$147,158.

The consumption of Portland cement in Canada in 1915 was approximately 5,709,222 barrels, as compared with 7,270,502 barrels in 1914.

Clay Products.—The total value of the production of clay products in Canada in 1915 was \$3,914,488, as compared with a total value of \$6,871,957 in 1914. Brick and tile products alone were valued at \$2,673,048, as against \$2,008,976 in 1914. The value of sewerpipe production in 1915 was \$799,446, as compared with \$1,104,499 in 1914.

The only clay products exported in 1915 were: 1,155,000 building brick, valued at \$9,089; manufactures of clay, valued at \$25,202; and earthenware, valued at \$11,281. The exports in 1914 were 1,486,000 building brick, valued at \$11,871; manufactures of clay, valued at \$26,866, and earthenware valued at \$9,336. The total imports of clay products in 1915 were valued at \$2,998,465, and included: brick and tile, valued at \$1,301,359; earthenware and chinaware, \$1,460,010; and clays, valued at \$237,096.

The total imports of clay products in 1914 were valued at \$4,467,140, and included: brick and tile valued at \$1,986,790; earthenware and chinaware \$2,192,222; and clays valued at \$288,128.

Kaolin.—In 1915 shipments of 1,300 tons, valued at \$13,000 were reported, as compared with shipments in 1914 of 1,000 tons, valued at \$10,000.

Lime.—The total production of lime in 1915 was 5,047,244 bushels, valued at \$1,015,702, as compared with 7,028,582 bushels, valued at \$1,360,628 in 1914. The exports of lime in 1915 were valued at \$15,617, as against exports valued at \$16,927 in 1914. The imports of lime in 1915 were 189,774 barrels, valued at \$98,040, and in 1914, 303,829 barrels, valued at \$211,123.

Sand-Lime Brick.—The total sales of sand-lime brick in 1915 were 17,960,802, valued at \$141,742, an average value of \$7.89 per thousand. The sales in 1914 were 70,650,030, valued at \$609,515, an average value of \$8.63 per thousand.

Slate.—The production of slate in 1915 was 397 squares, valued at \$2,039, and 1,075 squares, valued at \$4,837 in 1914.

The imports of slate in 1915 were valued at \$108,676, and included roofing slate, valued at \$34,528; school writing slate, \$38,874, slate pencils \$4,954, and manufactures of slate, \$30,320. The imports of slate in 1914 were valued at \$213,256, and included: roofing slate valued at \$91,977; school writing slate \$54,723; slate pencils \$6,514, and manufactures of slate \$59,444.

Stone.—The total value of the production of stone of all kinds in 1915 was \$4,244,997, as compared with a value of \$5,469,056 in 1914. The value of stone exports in 1915 was \$72,777, as against \$72,080 in 1914, and the total value of stone imported in 1915 was \$539,173, as against imports valued at \$1,252,869 in 1914. The production in 1915 included: granite, valued at \$1,525,553, limestone \$2,312,081, marble \$158,027, and sandstone \$249,336. The production in 1914 included: granite, valued at \$2,176,602; limestone \$2,672,781; marble \$132,533, and sandstone \$487,140.

Sand and Gravel.—According to returns received, the production of sand and gravel in 1915 was 6,445,717 tons, valued at \$1,624,767, as compared with a value of \$2,505,310 in 1914. The exports of sand and gravel in 1915 were 808,022 tons, valued at \$380,549, and the imports 199,597 tons, valued at \$120,756.

PRODUCTION BY PROVINCES.

A summary of the mineral production by provinces in 1914 and 1915 is shown in the accompanying tables, in the first of which the total production in the several provinces and the percentages of each, are given for the past three years. Ontario continues as the largest contributor to the total, having a production of \$61,061,287, or 44.5 per cent, as against \$53,034,677, or 41.1 per cent of the total in 1914. British Columbia was second, with a production of \$28,689,425, or 20.9 per cent, against \$24,164,039, or 18.7 per cent of the total in the previous year. Nova Scotia, third in importance, had a production of \$18,088,342, or 13.2 per cent of the total in 1915, as against \$17,584,639, or 13.6 per cent of the total in 1914. Quebec, in fourth place, had a production of \$11,619,275, or 8.5 per cent; Alberta occupied fifth place, with a production of \$9,909,347, or 7.2 per cent. The Yukon District, Manitoba, New Brunswick, and Saskatchewan, follow in the order named.

In making these comparisons it should be remembered that Nova Scotia is not credited with the large production of pig-iron and steel at Sydney and Sydney Mines, which is made almost entirely from imported iron ores and is not naturally credited as Canadian mine product. Similarly a large proportion of the pig-iron production in Ontario is excluded from

the total value, because it is derived from imported ores. The Province of Quebec also, is not credited with the production of aluminium at Shawenegan Falls, which is made from imported bauxite.

*Includes a small production of lime from Prince Edward Island.

MINE PRODUCTION.

For a number of years past this Division has endeavoured to obtain from every mine operator in Canada, an annual return with respect to labour employed, wages paid, tonnage and value of ores or minerals mined, treated and shipped, and in the case of metallic ores, the quantities of metals contained in the ores shipped or treated. In the case, however, of gold placer mining and the production of crude petroleum, it has not as yet been found feasible to obtain complete returns from the operators themselves, so that in these cases, while a record of production is available, there is no record of the labour employed, nor of the wages paid.

Statistics covering each of the past six years are shown in the accompanying tables. According to the records shown the total value of the mineral production compiled on this basis was \$115,158,848 in 1915, as against \$114,239,635 in 1914, \$126,444,201 in 1913, \$120,332,966 in 1912, \$91,876,084 in 1911, and \$92,501,244 in 1910. Excluding placer and hydraulic workings and petroleum wells, the total number of shipping mines, clay works, quarries, etc., in 1915 was 1,618 as against 1,661 in 1914, and 1,529 in 1913. The total number of men employed was 56,876 in 1915, as against 66,855 in 1914, and 71,011 in 1913. The total wages paid were \$37,720,762 in 1915, as against \$43,609,696 in 1914, and \$50,368,602 in 1913.

The total number of metalliferous mines shipping in 1915 exclusive of placer and hydraulic workings was 205, as against 187 in 1914, and 183 in 1913; number of men employed in 1915, 12,698, as against 11,994 in 1914 and 12,437 in 1913; wages paid \$11,805,919 in 1915, as against \$11,669,854 in 1914, and \$11,746,400 in 1913; tons of ore mined 6,138,150 in 1915, as against 4,997,406 in 1914, and 4,736,288 in 1913; tons of ore concentrates, or metal shipped from mines 4,259,734 in 1915 as against 3,115,855 in 1914, and 3,423,414 in 1913; total net value of shipments including placer gold \$53,864,518 in 1915, compared with \$44,763,179 in 1914, and \$47,170,740 in 1913.

In non-metalliferous mining, exclusive of stone quarries, clay works, etc., and not including petroleum wells, there were employed in 1915 an average of 30,392 men earning in wages \$20,257,126, as against 33,732 men, earning in wages \$22,058,526 in 1914, and 34,207 men employed and \$25,752,148 wages paid in 1913.

The manufacture of cement, clay products, and lime, and the quarrying of stone, etc., employed in 1915 an average of 13,786 men earning in wages \$5,657,717, as against 21,129 men earning in wages \$9,881,316 in 1914. These operations in 1913 engaged an average of 24,367 men earning \$12,870,054.

It should be noted that these records cover only active shipping mines and do not include the labour employed in prospecting or in developing new properties, nor is there included any record of the labour employed

in the smelting and refining of ores, nor in blast furnace operations. The values of the ores given herewith are in general those furnished by the operators. In certain cases, however, where such values have not been furnished, estimates have been made.

There has been added to the statement of ore shipments in 1915, 1914, and 1913, tables showing the quantities of metals contained in the ores shipped, the record showing the total quantities of metals contained without any deductions or allowances being made for smelter or treatment losses. Comparison of this record of metal contents of ore shipments with statistics of the production of the metals is not in all cases feasible because of the lapse of time between the shipment from the mine and the treatment at the smelter.

SMELTER PRODUCTION.

Statistics of the production of copper, lead, and silver smelters and refineries, showing the tonnage of ore treated, the matte, blister, base bullion, or refined metal produced, etc., have been collected by this Branch since 1908.

The smelting companies in 1915 were as follows:—

Antimony Smelter:—

New Brunswick Metals, Ltd., Lake George, N.B.

Copper Smelters:—

Consolidated Mining and Smelting Co. of Canada, Ltd., Trail, B.C.

Granby Consolidated Mining, Smelting and Power Co., Ltd., Grand Forks and Anyox, B.C.

British Columbia Copper Co., Ltd., Greenwood, B.C.

Tyce Copper Company, Ltd., Ladysmith, B.C. (idle since 1911).

Nickel-Copper Smelters:—

Mond Nickel Co., Ltd., Coniston, Ont.

Canadian Copper Company, Copper Cliff, Ont.

Lead Smelters:—

North American Smelting Co., Kingston, Ont. (idle since 1913).

Consolidated Mining and Smelting Co. of Canada, Ltd., Trail, B.C.

Silver-Cobalt-Nickel Smelters:—

Coniagas Reduction Co., Ltd., Thorold, Ont.

Deloro Mining and Reduction Co., Ltd., Deloro, Ont.

Metals Chemical Co., Ltd., Welland, Ont.

Standard Smelting and Refining Co., Chippewa, Ont.

Zinc Smelters:—

Electro-Zinc Co., Welland, Ont.

Consolidated Mining and Smelting Co., of Canada, Ltd., Trail, B.C.

French Complex Ore Reduction Co. (Experimental).

The antimony smelter at St. George, N.B., was in operation for a short time only, while the zinc reduction had not passed definitely beyond the experimental stage in so far as actual production is concerned. The Consolidated Mining and Smelting Co., had, however, attained a production of about $\frac{1}{2}$ ton of spelter per day and had well under way the building and equipment of works to have a capacity of 45 tons of spelter per day. The zinc refinery buildings include structures for grinding, roasting, leaching, electrolyzing and melting plants, motor generator building, and trans-

former station, together with flue systems, Cottrell dust collecting plant, and a concrete stack 200 feet high and 12 feet inside diameter. The zinc plant at Welland, Ont., has been designed primarily for the recovery of metallic zinc from zinc oxide though it is intended ultimately to equip the plant for the treatment of zinc ore.

With the exception of zinc the total quantity of ores and concentrates treated in these smelters during 1915 was 3,624,582 tons (including 94,688 tons of imported ore), as compared with 2,650,155 tons (including 58,894 tons of imported ores) in 1914, and 3,027,291 tons in 1913.

The largest proportion of the total tonnage (61.9 per cent in 1915) consists as usual of the copper-gold-silver ores of British Columbia, chiefly from the Boundary (Phoenix and Greenwood) Rossland and Coast (Texada Island and Granby Bay) districts. The nickel-copper ores of the Sudbury district, Ontario, contributed about 35 per cent of the total tonnage, the balance being lead ores and other ores treated in lead furnaces and the silver-cobalt ores of Ontario treated in silver smelters. Gold and silver ores treated by cyanide processes are not included in this record.

The quantities of the several classes of ores smelted during the past eight years have been as follows:—

Tons of Ores Smelted, 1908-1915.

Year.	Nickel-copper ores.	Silver-cobalt ores.	Lead ores.	Copper-gold-silver ores.	Totals.
1908.....					
1909.....	360,180	7,182	53,545	1,797,488	2,218,395
1910.....	462,336	8,384	54,539	1,850,889	2,376,148
1911.....	628,947	9,466	57,549	1,987,752	2,683,714
1912.....	610,834	9,330	55,408	1,517,981	2,193,553
1913.....	725,065	8,097	59,932	2,212,316	3,005,410
1914.....	823,403	6,124	74,010	2,119,753	3,027,291
1915.....	947,053	5,681	71,224	1,626,197	2,650,155
	1,272,283	7,526	99,528	2,245,245	3,624,582

The products obtained in Canada from the treatment of these ores include: pig lead, produced at Kingston, Ont. (furnace idle in 1914 and 1915) refined pig lead and lead pipe produced at Trail, B.C.; fine gold, fine silver, copper sulphate and antimony, produced from the residue of the Trail lead refinery; silver bullion, white arsenic, metallic arsenic, metallic nickel, metallic cobalt, nickel oxide, cobalt oxide, nickel sulphate, cobalt sulphate and cobalt alloys produced in Ontario from the Cobalt District ores.

In addition to these refined products, blister copper, copper matte, and nickel-copper matte are produced and exported for refining.

The aggregate results of smelting and refining operations may be summarized as shown in the next table. Unfortunately the figures cannot be taken to represent the total production from smelting ores mined in Canada, since considerable quantities of copper and silver ores are still shipped to

other smelters outside of Canada for smelting, nor do these represent the entire recovery of these metals in Canada in metallic form since there is considerable recovery of both gold and silver bullion as a result of milling, amalgamation and cyanide treatment.

It should also be noted that the figures include the results of the treatment in British Columbia of a small quantity of imported ores.

(1) Includes a small quantity of cobalt sulphate.

(2) Includes a small quantity of nickel sulphate.

(3) Blister copper carrying gold and silver values.

(4) Copper matte carrying gold and silver values.

(5) Bessemer nickel-copper carrying small gold and silver values as well as metals of the platinum group.

(6) Cobalt material carrying nickel and silver values.

Nickel-Copper Ores.—These ores of the Sudbury district, together with a small tonnage from the Alexo mine in the district of Timiskaming, Ontario, are treated in the smelters of the Canadian Copper Company at Copper Cliff, and the Mond Nickel Company at Coniston, formerly at Victoria Mines. In addition to the nickel and copper which will probably average slightly over 3 per cent nickel, and 2 per cent copper, these ores of the Sudbury district contain small amounts of gold, silver, platinum, and palla-

dium. The present metallurgical practice involves the following processes:—

- I. Roasting the ores in open heaps, to remove part of the sulphur.
- II. Smelting in water-jacketed blast furnaces, to produce a low grade matte, containing 33 per cent copper-nickel and nearly all the precious metals.
- III. Converting the furnace matte in Bessemer basic converters, to make a matte containing about 80 per cent copper-nickel.
- IV. Refining the converter matte, separating the nickel-copper, and precious metals.

At the present time the first three processes only are carried on in Canada. The converter matte is shipped to the United States and to England for final treatment.

The Copper Cliff plant, includes: seven blast furnaces, capacity 3,000 tons of ore per day; five basic converter stands; two McDougall reverberatories and four Wedge roasting furnaces.

At the Coniston plant there are three furnaces with a total capacity of from 1,600 to 1,800 tons of ore per day; three Pierce-Smith standard basic converters with an output capacity of 20 tons each of Bessemer matte.

The total quantity of nickel-copper ore mined during 1915 was, 1,364,048 tons and the quantity smelted 1,272,283 tons. There were produced 67,703 tons of Bessemer matte, containing 19,608 tons of copper and 34,039 tons of nickel. This is the largest production since the beginning of operations in 1886.

The total quantity of nickel-copper ore mined during 1914 was 1,000,364 tons and the quantity smelted 947,053 tons. There were produced 46,396 tons of Bessemer matte, containing 14,448 tons of copper and 22,759 tons of nickel.

Statistics of smelter production from these ores since the commencement of this industry are shown in the following table:—

Smelter Production of the Nickel-Copper Ores of the Sudbury District.

IN SHORT TONS.

Calendar Year.	Ore mined.	Ore smelted.	Matte shipped.	Value matte.	Nickel content of matte.	Copper content of matte
1886.....	3,307					
1887.....	567

Silver-Copper-Nickel-Arsenic Ores.—The first shipments of silver ores from the Cobalt district were made in 1904, and in 1906 the first works for the treatment of these ores in Canada were established by the Canadian Copper Company, at Copper Cliff, Ont. This plant was closed down, however, in 1913. Operations have been continuous at the plants of the Cominagas Reduction Company, at Thorold, and the Deloro Mining and Reduction Company, at Deloro, Ont., while during the past two years Metals Chemical Company have operated a small plant at Welland, Ont. In addition to the above there have been in previous years intermittent operations at plants established at Kingston, Ont., Orillia, and North Bay. The products recovered in the plants now operating, include: refined silver, arsenious oxide, metallic arsenic, metallic cobalt, metallic nickel, cobalt oxide, nickel oxide, cobalt sulphate, nickel sulphate and cobalt alloys.

The tonnage of ore treated in these smelters in 1915 was 7,526 tons, as against 5,681 tons in 1914 and 9,466 tons in 1910. The recoveries in 1915 included: 9,885,986 fine ounces of silver in bullion; 4,792,637 pounds of

arsenious oxide; 504,212 pounds of cobalt as metal or contained in cobalt salts, and 231,634 pounds of nickel as metal or contained in nickel salts.

Lead Smelters.—The lead smelter and refinery at Trail, B.C., owned by the Consolidated Mining and Smelting Company, was the only lead smelter operated during 1915. The small plant at Kingston, Ontario, built by the North American Smelting Company, and completed in 1912 was operated in 1913, but remained idle throughout 1914 and 1915.

The Trail plant now includes a new lead ore sampling mill, Wedge roasting furnaces, Huntington Heberlein converters; four lead furnaces with Cottrell dust collecting plant; electrolytic lead refinery, and lead pipe plant. The total capacity of the plant is about 125 tons of refined lead per day.

In the lead refinery, the bullion from the smelter is cast into anodes and re-deposited electrolytically upon cathode sheets of refined lead. The refined lead is cast into pigs or manufactured into lead pipe. The slimes from the tank room carry gold, silver, antimony, arsenic, and copper.

The first two are recovered as fine metals, and the copper as copper sulphate. Antimony is also recovered, though not regularly, and bearing metal is manufactured.

The annual production of refined lead, fine gold and silver, and copper sulphate has been as follows:—

Production of Refined Lead, Fine Gold, and Silver at Trail.

Calendar Year.	Refined lead.	Fine gold.	Fine silver.	Copper sulphate.
	Lbs.	Ozs.	Ozs.	Lbs.
1904.....	7,519,440	4,336	551,450	56,000
1905.....	15,804,509	8,602	1,098,328	77,175
1906.....	20,471,314	9,994	1,263,809	143,135
1907.....	26,607,461	10,395	1,631,422	97,751
1908.....	36,549,273	15,346	1,956,039	203,379
1909.....	41,883,614	18,241	2,003,003	51,405
1910.....	32,987,508	13,298	1,798,060	163,228
1911.....	23,525,050	15,270	1,325,601	197,187
1912.....	37,008,490	12,118	1,896,099	87,110
1913.....	39,663,766	11,977	2,433,002	130,533
1914.....	36,443,706	11,088	2,043,868	152,060
1915.....	43,518,618	17,813	2,362,429	175,579

Amongst the improvements at the lead plant during the Company's first year ending September 30, are included:—

"Purchase of the rights to use the Cottrell patents and the building and the extension of the Cottrell plants for the lead roasters and furnaces. The saving from the use of these plants is very great already and will be greater after some alterations in the electrical equipment."

"An additional lead furnace with the necessary flues and extension to the furnace building."

"An additional crane in the Huntington and Heberlein plant."

"Wash houses for men working around the lead plant."

"New lead sampling mill."

"Rebuilding tanks and alterations to the lead refinery."

Gold-Silver-Copper Ores of British Columbia.—Four copper smelters were active in British Columbia during 1915. These were the Trail copper furnace of the Consolidated Mining and Smelting Company treating the ores of the Rossland camp and other ores of the district; the Grand Forks plant of the Granby Consolidated Mining, Smelting and Power Co.; the Greenwood plant of the British Columbia Copper Company, treating chiefly the low grade ores of the Boundary district, and the Anyox plant of the Granby Consolidated Company, treating the ores of the Hidden Creek mines at Anyox and other coast properties.

On the coast, the Tyee Copper Company's furnace at Ladysmith was idle throughout the year.

The aggregate production of British Columbia copper smelters during the past four years, including the foreign ores treated, was as follows:—

Production of British Columbia Copper Smelters.

	1912	1913	1914	1915
Ore smelted				
Smelter products	Tons 2,212,316	2,119,751	1,612,197	2,215,215
Matte	6,737	5,159	6,291	7,619
Blister	17,069	15,270	13,238	22,263
Metallic content of matte and blister				
Gold	Ozs. 181,845	213,279	170,818	182,051
Silver	686,171	941,601	873,400	855,519
Copper	Lbs. 36,171,185	33,370,176	30,311,191	39,463,286

Trail Smelter.—Statistics of the production of the Trail smelter including both the copper and lead furnaces, have been published in the annual reports of the Company, the figures since 1906 having been as follows:

Production of Trail Smelter

Fiscal Year.	Ore smelted,	METALS CONTAINED IN MATTE AND BULLION PRODUCED.			
		Gold.	Silver.	Lead.	Copper.
	Tons.	Ozs.	Ozs.	Lbs.	Lbs.
1906 (6 months), ending June 30th	157,610	64,590	1,074,255	15,133,683	2,399,161
1907, ending June 30th	122,574	69,168	1,500,271	20,283,083	3,443,410
1908	305,956	121,380	2,221,888	32,157,139	4,004,168
1909	347,417	114,920	2,443,175	33,675,077	4,637,631
1910	487,125	137,614	2,162,106	32,368,816	5,974,959
1911	488,785	119,067	1,458,758	24,026,015	4,421,988
1912	296,458	129,759	1,765,992	26,072,074	2,914,141
1913 (15 mos. to Sept. 30, 1913)	107,124	186,017	3,221,108	48,325,252	3,454,814
1914 ending Sept. 30	374,771	129,083	2,568,301	34,617,318	3,645,997
1915	447,064	148,891	2,230,500	30,177,910	5,306,181
Total 1894 to date		1,372,886	1,610,903	22,917,842	374,091,124
				63,196,978	

The Trail copper smelting plant now includes: five furnaces with a daily capacity of 3,000 tons of ore. There was being installed during 1915,

now recently completed, a converter plant comprising two Great Falls type converters, 12 feet in diameter also an electrolytic copper refinery with an initial daily capacity of 10 tons of refined copper, sufficient to handle the output of the smelters and converters. The slimes from the refinery will be re-treated for the recovery of gold and silver values.

Granby and Anyox Smelters.—The Granby smelter is situated at Grand Forks in the Boundary district, and the Anyox smelter at Observatory inlet, Portland canal; both are owned by the Granby Consolidated Mining, Smelting and Power Company. The ores treated at Grand Forks are those from the Company's mines at Phoenix, together with a small tonnage of custom ore; while at the Anyox smelter the ores from the Hidden Creek mine and other coast properties are reduced.

The Phoenix ores have been of particular interest because of the low tenor of their metal values, their self-fluxing character, and the large tonnage treated. The percentage of metals contained has been decreasing and the recovery of metals from Phoenix mine ores, during the year ending June 30, 1915, as shown in the Company's annual report was: copper 16.12 pounds; silver 0.191 ounces; and gold 0.0382 ounces per ton of ore smelted.

During the first year of operation 1900-1901, the recovery from 172,258 tons of ore smelted was 31.49 lbs. of copper, 0.1406 ounces of silver and 0.1003 ounces of gold per ton of ore stripped, according to a statement in the Company's report for 1910.

The first furnace of 300 tons capacity was completed in 1900 and since that date the capacity of the plant has been increased from time to time until at present there are eight furnaces with a total capacity of about 4,500 tons per day. The converter plant was first installed in 1902, and enlarged in 1909 and includes: 3 stands and 10 shells with a daily capacity of 100,000 pounds of blister.

The ore at the Hidden Creek mines, Anyox, is higher in copper than the Phoenix ores. Recoveries during the Company's fiscal year ending June 30, 1915, when the quantity smelted was 462,310 tons, were 34.58 pounds of copper; 0.3087 ounces of silver, and 0.00796 ounces of gold per ton.

At Anyox "the furnaces, of which there are four (with a total daily capacity of 3,000 tons) are 50 inches wide by 30 feet long, and are the regular type of rectangular water-jacketed matting furnace made by the Traylor Engineering & Mfg. Co.; an agglomerator for handling converter slag and matte has also been installed. The converter room is in one end of the main smelter building, in which are three converter stands. The converters of the Great Falls type are 12 feet in diameter.

The quantities of ores smelted and the total production of metals shown in the accompanying table, are compiled from the Company's annual published reports.

Ores treated at Grand Forks and Anyox, during the twelve months ending June 30, 1915.

ORES OF	Ore smelted. Dry tons.	Lbs. Cu. recovered per ton ore.	Metals recovered and sold.		
			Copper. Lbs. fine.	Silver. Ozs. fine.	Gold. Ozs. fine.
Phoenix Mines.....	611,097	16.12	9,850,302	116,752	23,355
Anyox Mines.....	462,340	34.58	15,895,757	142,725	3,581
Both plants.....	1,073,437	23.99	25,746,059	259,477	26,936

Total.....	525,445	11,022,115	320,829	13,514	11,881,903	587,764	4,395,188	264,906,141

Greenwood Smelter.—The plant of the British Columbia Copper Company, at Greenwood, B.C., includes three large furnaces, having a total daily capacity of from 2,400 to 2,500 tons, and a converter plant of 2 stands and 7 shells with a capacity of about 35,000 pounds of blister copper per day.

The last annual published report of the Canada Copper Corporation, Ltd., which controls the British Columbia Copper Company, covering the year ending December 31, 1915, contains the following references to smelting operations:—

"Average metallurgical conditions were fair during the period of operation. A slightly reduced tonnage per furnace over former operations was obtained, due to running a more refractory charge than formerly. The supply of ore available only permitted the operation of one furnace.

The total amount of ore smelted during the period under review was 122,514 tons, dry weight, and consisted of:—

Company ores.....115,140 tons dry weight.

Custom ores..... 7,374 " "

The coke used represented 14.44% of the total charge and averaged 22% in ash.

The time of actual operation was 158 furnace days and the actual amount of ore smelted per day per furnace was 775.4 tons. The work was performed by an average of 49.2 men per day with an average wage of \$3.48 per day.

There were produced 1,850 tons of matte, averaging 48% copper per ton. The amount of slag made was 105,280 tons, containing 0.0043 ozs. gold per ton; 0.072 ozs. silver per ton; and 0.286% copper.

The balance of the analysis was as follows:—

Silica, 38.5%; iron 23.5%, lime 20.5%.

The production of metals amounted to:—

Copper (fine)..... 1,734.385 pounds

Silver.....23,002.62 ounces

Gold..... 5,417.0839 ounces."

Ladysmith Smelter.—This smelter which has not been operated since 1911 is owned by the Tyee Copper Company, Ltd., and located at Ladysmith, Vancouver island, B.C. The plant includes: two furnaces with a total daily capacity of 500 tons of ore. When in operation the copper matte produced averaged 40–43 per cent copper.
