The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.					L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifie une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

Metropolitan Toronto Library Canadian History Department

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the lest page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Metropolitan Toronto Library Canadian History Department

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents.
Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

Explanations of the Calendar Pages.

At the head or the respective pages for each month are given the ordinary tables of the changes and quadratures of the little of the stand 2nd columns show the mean times of the rising and setting of the little of the quantities are only set down to the nearest minute, the neartainty of the column and times of the rising or sting of heavenly bodies on hand, can be the varying amount of horizontal refinal to determine the description of the restrial objects in such observation, renders a closer approximation unaccessary to ordinary problem purposes. In the 3rd column, marked "souths," are given the times which should be shown by a well-regulated clock or watch when the Sun is on the Meridian. The 4th column shows the Moon's place. The sth column contains the usen times of the rising or setting of the Moon. The quantitie as received to the sun.

HOW TO BOIL POTATOES.

Mr. Cuthill, florist of Camberwell, gives the following directions for cooking indifferent potatoes. Score the skin of the potatoe with a knife lengthways and across, quite round, and then boil the potatoe in plenty of water with salt, with the skin on. The skin readily cracks where it is scored, and lets out the moisture, which otherwise renders the potatoe soapy and wet. The improvement to bad potatoes by this method of boiling is very great; and all who have tried it find a great advantage in it, now that good potatoes are very difficult to be obtained.

PRESERVATION OF EGGS.

t. Eggs may be preserved for any length of time by excluding them from the air. One of the cleanest and easiest methods of doing this is to pack them in clean Dry salt in barrels or tubs, and to place them in a cool and dry situation, Mr. A. G. Cooley says, that he has eaten eggs thus preserved that were a twelve month old, and that had been some months aboard ship in a tropical climate, and yet retained all the peculiar sweetness of new

laid eggs.

2nd. Some persons place eggs which they wish to preserve in a netting, or a sieve or cullender, and immerse them for an instant in a cauldron of boiling water, before packing them away.

3rd. Sametimes eggs are placed in vessels containing milk of lime, or strong brine, or rubbed over with butter, lard, or gum-water, all of which are by available air.

RULE FOR ASCERTAINING THE WEIGHT OF HAY.

Measure the length and breadth of the stack; then take its height from the ground to the caves, and add to this last one half of the height from the eaves to the top: Multiply the length by the breadth, and the product by the height, all expressed in feet; divide the amount by 27, to find the cubic yards, which multiply by the number of stones supposed to be in a cubic yard (viz: in a stack of new Hay, 6 stones of 22 lbs. avoir, each; if the stack has stood some time, 8 stones; and if old Hay 9 stones), and you have the weight in stones. For example, if a stack be 60 feet in length, 30 in breadth, 12 in height from the ground to the caves, and 9 (the half of which is 4½) from the cave, to the top; then $60 \times 20 \times 16\frac{1}{2} = 29700$, and $29700 \times 27 = 1100$, and $11 \times 9 = 9900$ stones of old Hay.

RULE FOR ASCERTAINING THE WEIGHT OF CATTLE.

Measure the Girt close behind the shoulder, and the length from the fore part of the shoulder blade along the back to the bone at the tail, which is in a vertical line with the buttock, both in feet. Multiply the square of the girt, expressed in feet, by five times the length, and divide the product by 21 the quotient is the weight, nearly, of the four quarters, in imperial stones of 14 lbs, avoir du pois. For example, if the girt be 6½ feet, and the length 5½ feet, we shall have 6½ m 6½ 42½ and 5½ m 5=26½; then 42½ m 26½ = 1109½; and this, divided by 21, gives 52½ stones nearly, or 52 stones 11 lbs. It is to be observed, however, that in very fat Gattle the four quarters will be about one-twentieth more, while in those in a very lean state they will be one-twentieth less than the weight obtained by the rule. The four quarters are little more than half the weight of the living animal; the skin weighing about the eighteenth part, and the tallow about the twelfth part of the whole.

[&]quot;A Farmer's Wife" has lately ably and usefully addressed a paper to the "A Farmer's Wife" has lately ably and usefully addressed a paper to the Newenstle Farmer's Club, on "the importance and profitableness of Poultry." She concludes (Barbar's Mag., vol. XXIX. p. 104,) that, "if a systematic plan of rearing and feeding be adopted, and proper houses and yards provided, Poultry may be made avaluable part of the produce of a farm, they always find a ready market, and are produced at little cost. On the farm from whence I write, the Poultry consists of 60 hens, principally of the Dorking breed (but I intend crossing them with the Cochin China), six Ducks, and we generally buy from 70 to 80 Geese in the autumn. The outlay for the year was:

in such a calculation as this, the advantages derived from a farm yard in the

purchase of food and in the number paying for attendance, are considerable.

It is quite certain that there is a great field of usefulness hitherto little explored, to be found in the general introduction into this country of improved breeds of Poultry; of these the Dorking and the Cochin China appear to be the most valuable. This last is described by the lady we have already quoted as "the Prince of domesticated birds." The hens (some of them

The barometer constantly descends in a geometrical progression for equal ascents in the atmosphere, subject to a correction for the decreasing temperature of the elevation.

The barometer at the level of the sea is but slightly affected by the annual or diurnal fluctuations of temperature, but in the higher regions of the atmosphere is, on the courtrary, greatly affected by them.

Between the tropics, the fluctuations of the barometer do not much exceed

one quarter of an inch, while beyond this space they reach to three inches.

In the extra-tropical climates, a fall in the barometer almost always pre-

In the extra-tropical climates, a fall in the barometer almost always precedes a period of rain, and indicates a change or acceleration of the acrial currents.

Barometers situated at great distances from each other generally rise and fall together with great regularity.

Northerly winds almost invariably raise the barometer, while southerly winds as constantly depress it.

The mean height of the barometer varies but little with the changes of the season.

Great falls of the barometer are generally accompanied by a temperature above the mean for the season, and great rises by one below the same.

The mean temperature of the earth's surface increases gradually from the poles to the equator.

The mean temperature of the atmosphere decreases from below, upwards in a regular gradation.

The heating and cooling of the atmosphere by the changes of day and night, take place equally throughout its mass.

The western coasts of the extra-tropical climates have a much higher mean temperature than the castern coasts.

'A wind generally sets from the sea to the land during the day, and from the land to the sea during the night, especially in hot climates.

In the temperate climates, the rains and the winds are variable. As we advance towards the polar regions, we find the irregularities of the wind increased, and storms and calms repeatedly alternate, without warning or progression.

More than two currents may often be traced in the atmosphere at one time by the motion of the clouds, &c.

The force of the wind does not always decrease as the elevation increases, but, on the contrary, is often found to augment rapidly.

In Great Britain, upon an average of ten years, westerly winds exceed the easterly in the proportion of eleven to seven, and the northerly winds exceed the southerly as nineteen to seventeen. orning. vening. orning. orning.

lay, and from

Mean difference in Azimuth for 1 of Latitude	for 1 of L		16	5 6	98	10	- 55	. 16		. 10		08	_===	2	50	Ä	

EXPLANATION—Opposite the given time and under the Latitude will be found the required greatest Azimuthal distance of Polaria.

If there be any odd Minutes of Latitude, not at the head of the Table, take the next lesser Latitude, and add to the Azimuth corresponding thereto, the product of the given excess of Minutes multiplied into the difference for 1, standing below, rejecting the fractions in such product; the sum will be the Azimuth required. The corresponding time from Meridian passage added to, or subtracted from the hour of transit, will show the true mean time of such greatest Azimuth, West or East of the Meridian.

WEATHER TABLE.

The following table has been inquired for by several of our readers. It is said to be constructed from considerations of the attraction of the Sun and Moon, in their several positions respecting the earth, and by experience of many years' actual observations. If it shall be—

	,
	Winter.
Very rainy	Snow and rain
	Fair
Fair, if wind at N. W. Rainy, if wind at S.	Fair and frosty, if wind at N. or N. E. Rain or snow, if wind S. or S. W.
	Ditto
Fair	Fair and frosty
	Hard frost, unless
Rain	Ditto
	Stormy weather
Changeable	Cold rain, if wind
	Cold with high wind.
	Rainy, if wind at S. or S. W

TIMBER MEASURE.

The following is an easy mode of estimating the quantity of timber in any tree, no matter in what form it grows; get to a convenient distance and keep changing your position until the height of the tree seems to be equal to the distance you are from it, then measure the distance —Suppose it to be 20 paces, which will give 60 feet for the height of the tree; then with a string take the circumference of the tree at five feet from the ground, double the string and reject one half; the other half gives the mean or average circumference, that doubled four fold is called the girt or side of a square equal to it, suppose 11 inches, and the height 60 feet, which will give a load of 50 feet.

A VALUABLE TABLE.

The following valuable table was first published in Mr. Ruffin's Farmer's Register.

If there be any odd Minutesof. I string and under one Lattude will be found the required greatest Azimuthal distance of Polaria, ing thereto, the product of the given excess of Minutes multiplied into the difference for 1, standing below, rejecting the Azimuth correspondof transit, will show the true mean time of such greatest Azimuth, West or East of the Meridian.

A hox 24 by 16 inches square, and 22 deep contains a barrel, or 10,752 cubic inches.

11 " half barrel, or 5,376 " 24 66 16 8 " bushel, or 2,150 4–10 8 " half bushel, or 1 075 " 66 16 16 16 8-10 " " " 11 2-10 " " 12 " 8 " peck, or 537 6-10 8 4-10 " . 66 . 66 8 66 66 8 66 4 2-10 half peck, or 268 8-10 " 8 66 4 8-10 half gallon, or 141 4-10 " 4 66 4 2-10 quart, or 67 2-10

These measures come within a small fraction of a cubic inch of being perfectly accurate; as near, indeed, as any measures of capacity have ever yet been made for common use. The difficulty of making them with absolute exactness has never yet been overcome.

.... GOVERNOR GENERAL AND SUITE:

His Excellency, the Right Honorable James Bruce, Earl of Elgin and Kincardine, Knight of the Thistle, one of Her Majesty's Most Honorable Privy Council, Captain General and Governor-in-Chief, in and over the Provinces of Canada, Nova-Scotia, New Brunswick, Newfoundland, and the Island of Prince Edward, and Vice-Admiral of the same, &c. &c. &c.

Hon. Col. Bruce, Secretary, and Principal A. D. C. Lieut. Col. Edmond Antrobus, Provincial A. D. C. Lieut. Col. De Salaberry, Extra A. D. C.

Commissioners Courts abolished at Quebec, Montreal, and Three Rivers.

JURISDICTION.

In cases where the sum of money or value of the thing demanded shall not exceed £50 cy, and wherein no capies shall have issued.

When the amount does not exceed £15, Case to be heard, tried, and determined summarily; when the amount does nor exceed £65, Case to be determined according to equity and a good conscience. But all cases relating to Titles to Land, money payable to the Queen, any Fees of office, Duty, Rent, or where the Rights in future may be bound, or in which a Trial by Jury may be had, may be carried to superior Court for trial and judgment.

A FARMER'S BAROMETER—Take a stick three feet long and attach it to the butt end of a vial, full of air of course and corked tight. The stick is then suspended in a horizontal position on a pivot, where it will readily turn, say on a thread tied near its centre. When the storm is coming on the air outside is lighter than that in the phial; of course the phial sinks and indicates a change in the atmosphere. Such a barometer may be made in ten minutes, and some of our young philosophic farmers, will incline to have barometers of their own manufacture.

A READY RULE FOR FARMERS.—We have been frequently asked to explain the difference between the price of wheat per quarter and per barrel. The simple rule by which every man can ascertain this for himself is this: Multiply the price per quarter by 7 and divide by 12; the result will give the amount per barrel. Thus, 56s. per quarter multiplied by 7, and divided by 12, gives 32s. 8d. per barrel.

DISEASES OF LIVE STOCK.

CALVES.

NAVEL ILL.—The best treatment for this dangerous disease is, 1st, to administer two or three doses (about a wine-glassful) of castor oil (linseed oil does just as well, and is much cheaper); and, secondly, cordials, which can be made of two drachms of carraway seeds, to do of coriander seeds, two do powdered gentian; bruise the seeds, and simmer them in beer or gruel for a quarter of an hour; give these once or twice a day.

CONSTIPATION OF THE BOWELS—For this, doses of castor oil (or linseed oil,) of two or three oz. are the best remedy.

Scouring.—The farmer may RELY on the following mixture. Let him keep it always by him; it will do for all sucking animals:—

Give two or three table spoonfuls, according to the size of the animal, two or three times a day.

HOOSE, OR CATARRH.—Good nursing, bleeding, and then a dose of Epsom salts with half an ounce of ginger in it.

cows.

CLEANSING DRINK.—One oz. of bayberry powdered, one oz. of brimstone powdered, one oz. of cummin-seed powdered, one oz. of diapente. Boil these together for ten minutes; give when cold in a little gruel.

Colic.—The best remedy is one pint of linseed oil mixed with loz. of laudanum.

CALVING:—The treatment before calving is to keep the cow moderately well, neither too fat nor too lean; remember that she commonly has the double duty of giving milk and nourishing the fœtus: dry her some weeks before calving; let her bowels be kept moderately open; put her in a warm sheltered place or house her; rather reduce her food; do not disturb her when in labor, but be ready to assist her in case of need; let her have warm gruel; avoid cold drinks. A pint of sound, good ale in a little gruel is an excellent cordial drink.

A CORDIAL is easily made by one oz of carraway seeds, 1 oz. of aniseeds, \(\frac{1}{4}\)oz. of ginger powdered, 2oz. of fenugreek seeds. Boil these in a pint and a half of beer for ten minutes, administer when cold

SEE CALVES, DISEASES OF -only double the doses.

HOOVE or HOVEN.—Use the elastic tube; but as a prevention, let them be well supplied with common salt, and restrained from rapid feeding, when first feeding upon rank grass or clover.

MANGE.—21b. of black brimstone, 4 pint of turpentine, one pint of train oil. Mix them together, and rub the mixture well in over the affected parts.

MILK FEVER, or GARGET.—two oz. of brimstone, one oz. of diapente, one oz. of cummin seeds powdered, one oz. of powdered nitre. Give this daily in a little gruel, and well rub the udder with a little goose-grease.

MURRAIN.—12lb. of salts, two oz. of bruised coriander seeds, one oz. of gentian powder. Give these in a little water.

PLEURA PNEUMONIA.—The only chances in this disease are the adoption of very prompt measures:—Bleed EARLY, and repeat it if necessary. Then give a drench, composed of 1lb. Epsom salts, 1oz. powdered saltpetre, \(\frac{1}{2} \) a drachm of tartar emetic.—Give it in two pints of gruel, and repeat in six or eight hours. Poisons swallowed by oxen are commonly the yew, the water dropwort, and the common and the water hemlock. \(1\frac{1}{2} \) pints of linseed oil is the best remedy.

Purge, in Poisoning.—Either one lb. of salts in a quart of water or gruel, or 1 pint to 1½ pints of linseed oil.

RED WATER.—Bleeding, says Youatt, first, and then a dose of one lb. of Epsom salts, and ½lb. doses repeated every eight hours until the bowels are acted upon. In Hampshire they give four ounces of AMMONIAC, and two ounces of spirits of turpentine in a pint of gruel.

Scouring.—Give ½ oz. of powdered catechu, and ten grs. of powdered opium in a little gruel.—Sprains.—Embrocation; eight oz. of sweet oil, four oz. of spirits of hartshorn, ½ oz. of oil of thyme.—Sting of the Adder or Slow-worm.—Apply immediately to the part strong spirits of hartshorn; or sting of bees apply chalk or whitening mixed with vinegar. Worms.—Botts: give ½ lb. of Epsom salts with two oz. of coriander seeds bruised in a quart of water. Wounds.—Flesh tincture. Socotorine or Barbadoes aloes in powder 40z., myrrh coarsely powdered 1 oz. rec. spirit of

grs. of

wine 1 pint, water 2 pints. Let them stand 14 days, occasionally shaking; then fit for use: wounds are best without sewing: cleanse from dirt and gravel. If much inflamed, apply a poultice. If unhealthy fungous granulation arises, wash the part with the following mild caustic, wash previous to applying the tincture. Blue vitriol (sulphate of copper) 1 oz. water 1 pint dissolve. Yellows.—Two oz. of diapente, two oz. of cuminin seed powder, two oz. of fenugreek powder. Boil these for ten minutes in a quart of water, and give daily in a little gruel.

SHEEP.

APOPLEXY. -- Bleed copiously; then give two oz. of Epsom salts in a pint of water.

BLACK WATER.—Keep the bowels open with Epsom salts; and give a teaspoonful of elixir of vitriol, or sulphuric acid, diluted with seven parts of water, in an infusion of oak bark.

BLACK MUZZLE.—Mix an ounce of verdigris (acetate of copper,) four oz. of honey, ½ pint of vinegar; simmer them together over a fire for ten minutes in an enrthen pipkin. Apply it to the mouth on a piece of rag. Cough or Cold.—Bleed; give a solution of Epsom salts.

FLY.—Fly powder: two pounds of black sulphur half a pound of helebore; mix them together, and sprinkle the sheep from head to tail with a dredging box.

Sheep Wash.

The farmer will find this an excellent receipt: half a pound of powdered white arsenic (arsenious acid,) four pounds and a half of soft soap. Boil these for a quarter of an hour, or until the arsenic is dissolved, in five gallons of water. Add this to the water sufficient to dip fifty sheep. The quantity of arsenic usually recommended is too large.

Foot Rot.

One drachm of verdigris (acetate of copper,) one drachm of blue vitriol (sulphate of copper,) one drachm of white vitriol (sulphate of zinc,) two ounces of water, two drachms of nitric acid, two drachms of butter of antimony; pare away the horn, and apply the lotion upon a feather to the part affected.

Rot.

To prevent, let the sheep have always a lump of salt to lick in their troughs.

Scab, or Schab.

Apply a lotton formed of one ounce of corrosive sublimate. four ounces of salt ammoniac, dissolved in four quarts of rain water. This is a powerful stimulant, and must be used with Mercurial Ointment for Scab :- quick-silver 1 lb. rancid lard 7 lbs.; rub the quick-silver with a small quantity of the lard, until the globules entirely disappear; afterward add the remainder of the lard; some persons add a little powdered charcoal to make it darker. Scouring.—See diseases of calf.

TICKS .- See Fly.

Wounds.-Wash the part, and apply a lotion formed of vinegar one pint, spirits of wine one ounce, spirits of turpentine one ounce, Goulard's Extract one ounce. If the wound be a recent one it is better to stitch it up with separate ligatures, which can be easily withdrawn, and dress with cold water.

-district to the end to Pigs.

respect to the contract of the contract of the contract of For the common diseases of pigs, the following recipe may be employed; \frac{1}{2} lb. of sulphur, \frac{1}{2} lb. of madder, \frac{1}{4} lb. of salipetre, 2 oz. of black antimony; mix these together, and give a table spoonful night and morning in its food.

HORSES. Ber Strate of the Strate of Coughs, or colds, are best treated by cold bran mashes, with 1 lb. of linseed, and 1 oz. of saltpetre each mash.

GRIPES; or COLIC.—In the absence of a veterinary surgeon in this dangerous complaint, the following is the best remedy for a horse:—13 pint of linseed oil, 13 oz. of laudanum, given in a little warm gruel. Some persons assist the operation of the above with a clyster, composed of \(\frac{1}{2} \) lb. of Epsom salts, \(\frac{1}{2} \) lb. of treacle, dissolved in three quarts of warm water. Mange. - See Cows, for which the remedy is the same.

POWDER ALTERATIVE for diseased skin or surfeit; mix together 1 lb. of sulphur, 1 lb of saltpetre, 1 lb. of black antimony, give a large table-spoonful night and morning in their corn. the sair sair

STRAINS AND WOUNDS .- Mix 1 oz. of Goulard's extract, 1 oz. of spirits of turpentine, 1 oz. of spirits of wine, 1 pint of the strongest vinegar; rub this by the hand, or a piece of tow, gently on the part affected.
