### Agriculture.

#### FAIR CALENDAR--1882.

Secretaries of Agricultural Societies will please furnish us with dates and places of holding their Annual Shows, as we wish to publish the same for general information.

#### The "Peoples' Union" Agricultural Society will hold their Annual Exhibition at Hartland, Carleton Co., on Wednesday, October 4th.

#### The "Wakefield and Jacksonville" Agricultural Society, Carleton Co., will hold their Annual Exhibition on Thursday, October 5th.

#### The "Charlotte Co." Agricultural Society will hold their Annual Ploughing Match on Tuesday, October 10th; and their Annual Show and Fair at Bay Side, on Wednesday, October 11th.

#### The "Aberdeen" Agricultural Society will hold their Annual Show at St. John's, Gloucester, Carleton Co., on Wednesday, October 11th.

#### The "Kincardine" Agricultural Society will hold their Annual Show at their show grounds on Friday, October 13th.

#### The "Carleton County" Agricultural Society will hold their Annual Exhibition at Woodstock, on Saturday, October 14th.

#### The "Stanley" Agricultural Society will hold their Annual Exhibition on the Society's Grounds, on Thursday, October 19th.

#### Salt as a Fertilizer.

Are the fertilizing qualities of salt (chloride of sodium) fully appreciated by the farmer in New Brunswick?

The use of salt for fertilizing purposes is a comparatively new feature in Canadian agriculture, but it has long been employed by agriculturists in Great Britain.

It acts directly upon the stomach, liver, and kidneys. It is a household necessity.

#### In-Door Care of Cattle.

The National Live Stock Journal of Chicago says, that providing comfortable and convenient stable room, training the cows and the calves to go quietly to their places, suitable bedding, and good ventilation, are indispensable as preliminary means for the indoor care of cattle, but they are merely preliminary. It goes on:-

In the stable, where cattle of high value are kept, there are various precautions to be observed.

#### Canning Tomatoes.

A correspondent writes:- In a recent number of the American Agriculturist I read some remarks regarding the preserving of tomatoes;

and a lack of success. The modus operandi is very simple, and why so many fail to do so, I cannot understand.

A man untrained in these things is apt to draw entirely wrong conclusions as to the digestive capacity of the young calf, or the ill-conditioned mature cow.

I have not the space to discuss the matter, but it is a household necessity.

It is a household necessity. It is a household necessity.

#### seeds get under it; put on the cover, and screw down. If a glass top, it should be warmed the same as the jar; the jar cover, put on, and screw down quickly, success will follow.

Peaches I can do differently. I pare my peaches, taking care that they are in good condition, ripe, but not mellow; put in as many whole ones as can, and pack all round the sides with halves and quarters as close and tight as I can, without bruising; then I put in 7 ounces of sugar, and fill up with water. Put on the fire a kettle with cold water, set these jars that have been filled in it, keeping them off the bottom by a grating or something similar, and so they will not touch each other; put on the covers, and screw the ring down a little (but not the rubbers).

After boiling hard for ten minutes, take out and fill up with boiling water, or rubbers, and seal as above. People say my peaches are very nice.

#### Muck--What is Muck.

In England, muck means manure. In "Pigman's Progress," the man with the muck rake" was searching for gold in the gutter's filth; but not finding that for which he searched.

Muck is money, in an English farmer's proverb, the meaning of which is clear enough. When agricultural writers in America talk about muck, they mean swamp muck, and by this a substance of a peaty character, rich in humus, of a dark brown or nearly black color, consisting of the remains of plants which have undergone partial decomposition under the constant influence of water.

This has no constant composition or appearance other than indicated. In peat-beds, the true peat is often several feet deep, and there may be a good deal of similar material which is crumbly, more or less mixed with earth or sand, and unfit for fuel. Other deposits abound in which there is no peat fit to use as fuel, but with an abundance of other material useful to farmers, and properly mixed simply by drying. This is black soil, at least half of which will burn away when dry. It often dries hard, like clay or bricks. It crumbles under the influence of frost and air, and is often simply by drying.

This substance, including all varieties of peat, is or may be made useful in any soil of a peaty nature to begin with. It is often rich in nitrogen, the most costly ingredient of fertilizers, often contains phosphate of lime and other valuable ash-ingredients. By its decomposition in the soil, its fibrous action, its promotion of air, its decomposition, and its change in the soil, its presence is always beneficial. Under some peculiar circumstances, these effects are hindered, probably by the presence of organic acids in the peat.

On such peats and mucks the term "sour" is fitly applied by farmers. They may, however, be neutralized, or, so to speak, sweetened by lime. Fresh-burnt lime rapidly absorbs water, and falls into a fine dry powder. The muck is spread in layers, a few inches in thickness, and lime in this form is spread thinly over it. It is often rich in nitrogen, the most costly ingredient of fertilizers, often contains phosphate of lime and other valuable ash-ingredients. By its decomposition in the soil, its fibrous action, its promotion of air, its decomposition, and its change in the soil, its presence is always beneficial.

When it is desirable to produce action of the bowels by artificial means, there is no better or more speedy way than by an injection of warm water, using the largest syringe to be had, always remembering that an injection of cold water is a most effective and injurious means for the amount of water used, the explanation being, that the water, by its quantity, distends the bowels, and the muscular action, by its quantity, is rendered more vigorous.

Every cattle owner and herdsman should familiarize himself with the condition of the excretions of cattle when housed as it is just as important that refuse should be removed from the manure course common to a healthy digestion, as that the animals should have food.

There is a feature in stable feeding which receives but little attention, and that is the condition of the first impulsion, and should be rigidly observed. We refer to the withholding of feed when an animal shows indigestion, and reducing it when the weather changes from cold to warm, or as winter is on the point of passing away, being supplied by the damp weather of March, referred to above. When these changes occur, it is not necessary to alter the ration should at once be largely taken off. It is necessary that the digestion of cattle fed high on grain or ground food, be carefully watched, as to the amount of feed required, and that when this is observed, through the presence of gas in the digestive organs, evidenced by eructations, bloating, etc., a minimum amount, and simple correctives given. Of these, nothing is better than charcoal. This may be incorporated with a little ground food, or given several times a day, and for habitual use it is better than either.

#### Grasses for Winter Decoration.

It would surprise our readers, could we give the money value of the dried grasses annually imported into Canada for the decoration of American homes in winter. Some of those imported grasses are well enough, but others, which come over in such unnatural colors, being dyed orange, scarlet, and even black, had better be left at home. It seems quite wrong that a large sum of money should go out of the country for dried grasses, when every one of our own could be grown in one or another portion of our wide domain.

The readers of the American Agriculturist mostly live in the country, and are those who do not, for the majority make a choice not for color, but for beauty of form. Those who wish to collect them for winter use, must observe two points: To gather them when they first come into flower, and to dry them in a natural position. The time of gathering is especially important, as most grasses, if collected when approaching ripeness, fall apart in a most annoying manner, and by "making a litter," are a source of annoyance rather than of pleasure. It is not necessary to specify the kind to be gathered. Take whatever appears to be pleasing now, and it will be quite

#### as much so when dried. Watch the grasses and when they seem to be in perfection, cut them. There are some species, not especially graceful, that may be tied in small bunches, and hung up to a shady place to dry. Others, with a graceful, drooping character, if thus treated, will be spoiled. If hung up to dry, their branches will be reversed, and in drying, lose their pleasing habit. Such should be dried in their natural position. One way of doing this is, to have a box, or boxes, of dry sand, and insert the stems in this, either singly or in small clusters, while drying. If sand is not available, any ingenious persons can contrive some other method of holding them in the proper upright position. The drying is best done in an airy, shaded place, as direct sunlight may fade them. After drying, they may be spread, or placed in shallow boxes, but not run many upon one another, and be prevented from making up. Some works give directions for drying, bronzing, and otherwise making grasses unlike themselves, to all of which we object. The only allowable treatment, in our opinion, is to use a dye to restore the green color that faded in drying.--American Agriculturist.

#### Brevity in Speech--Sweetness in Music.

Some one has said that short speeches are most impressive, and simple, sweet music the most touching. If there be anything in the idea, certainly the following from C. C. De Zouche, of De Zouche & Co., Piano and Organ Dealers, 232 St. James St., Montreal, is to the point and convincing: "St. Jacobs Oil has proved of incalculable value to me in a case of rheumatism, having given me almost instant relief." In the same issue of the Montreal Post, I have much pleasure in stating that, from the use of St. Jacobs Oil, the late excellent and I think it a good medicine.

#### The Strawberry Bed.

Good results may be expected from a bed made the usual way (see September), but the sooner the work is done, the better. Those who have post-layered the plants themselves, can procure them of all the principal nurserymen, who have a large stock of plants of the leading varieties. Of course they cost more than the ordinary plants, but any one who is willing to go to the extra expense, will find that a bed of a crop of fruit a year sooner than they could have it in any other manner. Those who raise fruit for market, do not need to be told that good strawberries can only be raised on good soil. In private gardens the plants are rarely properly fertilized. Well decomposed manure is best, and a three-inch coating, three inches thick is none too much, should be spread over the surface and spaded in. In the absence of manure, a good dressing of some of the artificial fertilizers may be used. The plants may be set in rows two feet apart, and eight inches distant in the rows. Some put them only a foot apart in the rows, but in rich soil this does not give such good results. In setting, the soil is turned over, and the plants are put in its place in the bed, without disturbing its roots. At the time of planting, pinch off any runners that may be forming upon the plants. During the growing season, keep the bed clean by use of the hoe, and remove all runners as they appear. The plants thus treated will form fine large stools by the time cool weather checks their growth.

#### The Origin of Blue-Grass.

According to the story of a Plainfield, Ind., paper, now going through the hands of the journals, the Blue-Grass, now so famous in Kentucky, was first raised in Indiana, at a place now called Miami Village, on White River, in Hamilton Co. Some Indians, in 1781, captured two boys, Conner by name, in Western Pennsylvania, and took them to the village of Miami. In due time the boys came "big Indians," and it is through John, the Plainfield paper learns, that "Blue-Grass" was a native which is now Hamilton. It was Gen. Harrison's army that took the grass from Hamilton Co., Ind., to Kentucky, where it spread rapidly. The writer of that article, and those who quote it, do not seem to be aware that Blue-Grass (Poa pratensis) is a native of the north-temperate parts of both continents, and so far from being confined to Hamilton Co., Ind., is a native of a great many places, from Pennsylvania, northward. It finds especially favorable conditions in Kentucky, and that State develops so luxuriantly that the grass was for a time supposed to be peculiar to it, and received the name "Kentucky Blue Grass." It is now well known that his grass is only the old "Jane," "Spear," or "Great Meadow-grass." The grass has been taken from Indiana to Kentucky is possible, but that this theory is right upon the Origin of Blue-Grass, is simply nonsense.

#### If You are Ruined

In health from any cause, especially from the use of any of the thousand nostrums that promise so largely, with long sentences, testimonials, have no fear. Resort to Hop Bitters at once, and in a short time you will have the most robust and blooming health.

The blighting effects of impure blood are said to behold in those who meet day by day. This ought not and need not be so. Purson's Purgative Pills make new rich blood; taken a night for twelve weeks will change the blood in the entire system.

Hard Times scared to Death!

We cannot tell a lie, we did it with our little hands...

A Visit to the Lake George Antimony Mines.

To the Editor of the Maritime Farmer:

DEAR SIR,—A few hurried notes of a visit to the Lake George Antimony Mines, which I lately made, in company with a friend, whom I shall call Mr. Barry, and who was well acquainted in the vicinity of the mine...

The Fair Season.

The Fair season has fairly commenced.

It was fully inaugurated last Wednesday, 6th, by the formal opening of the annual exhibition on Toronto, the capital, as Torontonians take care to observe on every opportunity to remind others of the leading Province of the Dominion.

Utah Defies Congress.

The United States Congress were supposed, by those who did not know the temper of the Salt Lake Saints, to have given the death-blow to Polygamy, by what is known as the Edmund's Law, passed March 23rd, 1852.

Visit of the British Association, 1882.

Not many, comparatively, will feel any interest, in "more the play" in the decision of the British Association for the Advancement of Science to meet in Canada, in 1884.

Tubercular Disease.

A young physician of Breslau, Dr. Koch, has acquired fame and pre-eminence by an address on "The Etiology of Tubercular Disease," which was delivered before the Physiological Society of Berlin.

Great Britain's Decline.

Within the last few years there have been heard ill prophecies, who, taking gloomy view of the future of Great Britain, have sung or croaked a Cassandra dirge.

SKINNY MEN.

"Walls' Health-Brewer" restores health in cases of Curvature, Impotency, Sexual Depletion, &c.

Impotency.

The world in this quarter of the nineteenth century is very enlightened.

Egypt.

If Sir Garnet Wolsey ever said, that the campaign in Egypt would be ended by the 10th of September, he had no forecast of the difficulties in the way of a rapid forward advance.

CURRENT COIN.

Quebec had a \$100,000 fine on the 8th inst. The gross debt of New York city is \$130,000,000.

John J. Weddall.

Quoted in a grand volume review during its exhibition.

Communications.

A Visit to the Lake George Antimony Mines.

To the Editor of the Maritime Farmer:

DEAR SIR,—A few hurried notes of a visit to the Lake George Antimony Mines, which I lately made, in company with a friend, whom I shall call Mr. Barry, and who was well acquainted in the vicinity of the mine...

The Fair Season.

The Fair season has fairly commenced.

It was fully inaugurated last Wednesday, 6th, by the formal opening of the annual exhibition on Toronto, the capital, as Torontonians take care to observe on every opportunity to remind others of the leading Province of the Dominion.

Utah Defies Congress.

The United States Congress were supposed, by those who did not know the temper of the Salt Lake Saints, to have given the death-blow to Polygamy, by what is known as the Edmund's Law, passed March 23rd, 1852.

Visit of the British Association, 1882.

Not many, comparatively, will feel any interest, in "more the play" in the decision of the British Association for the Advancement of Science to meet in Canada, in 1884.

Tubercular Disease.

A young physician of Breslau, Dr. Koch, has acquired fame and pre-eminence by an address on "The Etiology of Tubercular Disease," which was delivered before the Physiological Society of Berlin.

Great Britain's Decline.

Within the last few years there have been heard ill prophecies, who, taking gloomy view of the future of Great Britain, have sung or croaked a Cassandra dirge.
