Mr. DOUGLAS: But that does not affect the price of apples to any appreciable extent. We are still paying $6.75 to $7 a barrel in the prairie provinces. If, in the face of these exorbitant prices, this Government puts on an extra tariff of 50 cents a barrel to that extent it will add to our burdens, while, at the same time, the grower in British Columbia is not receiving a fair price for his apples. There is no question about that. He is getting, as hon. gentlemen opposite have stated, from 22 cents to 80 cents. According to the statement of the Minister of Finance, 80 cents is the average price paid for apples to the British Columbia grower, and that is a very high estimate, because the hon. member for Kootenay says that the price was 22 cents in 1914. I have a telegram from a prominent fruit grower in Salmon arm, who states that in 1914 the price to the grower was 22 cents a box.

Mr. GREEN: That refers to apples on the trees, before they are touched.

Mr. DOUGLAS: Yes; it may be the price before they are picked, but in 1915, his price was 80 cents a box picked. As a matter of fact, I know that the farmer gets no more than 80 cents a box, and sometimes as low as 60 cents a box, when he takes his fruit, not from the tree, but into the exchange. The contention, therefore, that that price is for apples hanging on the tree is not very well founded. With a price of that kind, and a tariff of 30 cents per box, the hon. member for Vancouver is not quite consistent when he says that they are quite willing to submit to a duty of 25 per cent, because, with apples costing around 60 cents a box, to produce or sell and with a tax of 30 cents, the grower would have more than 25 per cent protection. I have figured it out that the tariff at the present time, under the present growing conditions, represents very close to 40 per cent protection. If we could be certain that the producer in British Columbia would derive the benefit from this taxation, and that we, the consumers, would not have to pay any more, I am sure the people of the Prairie Provinces would be patriotic enough to purchase their fruit from British Columbia. But we have had experience in the past that does not bear out that contention. I claim that under the present proposed tariff we would not enjoy the benefit which has been suggested by the hon. gentlemen from British Columbia, and the consumers in the Prairie Provinces would be forced to pay practically the whole of this enhanced duty. I want to warn the Minister of Finance of the effect it may have. To-day the farmers' organizations in the western provinces are looking so seriously on this question of increased taxation that they have passed a resolution pledging themselves to be patriotic to the Dominion of Canada by buying their farm machinery in the United States, and paying the duty, so that the treasury of Canada will be enhanced, instead of paying the manufacturers of Eastern Canada an enhanced price, which goes directly into their pockets, and not into the treasury of Canada. Be very careful lest the same condition arise in connection with the fruit industry.

M. J. G. TURRIFF (Assiniboia): After the discussion we have had this afternoon, the Minister of Finance would be well advised if he withdrew this resolution. I am very much of the opinion that if it was not the intention of the Minister of Finance to use this for the political advantage of the party in British Columbia, it certainly was the intention of some others. As I under-

stand the matter, the bulk of the apples grown and shipped from British Columbia are from the Kootenay country, the southern portion of British Columbia, and naturally it would be very much to the advantage of my hon. friend the Minister of Agriculture (Mr. Burrell), who, we all regret, is not in his seat. I have no doubt that this duty was proposed largely in the interest, and at the request of, the Minister of Agriculture. We have heard a request from my hon. friend who represents Vancouver, for reciprocity between the Prairie Provinces and British Columbia. He pointed out, or some one else did, that large delegations came from British Columbia and asked that this duty be put on apples. The Minister of Finance lent a very ready ear to that demand for raising the duties, but when a much stronger delegation came from the Prairie Provinces, representing one hundred times the interest that exists in the apple-growing districts of British Columbia, and asked that duties be taken off, the Minister of Finance turned his deaf ear towards them.

Mr. GRAHAM: Both ears were deaf.

Mr. TURRIFF: Yes, both ears were deaf on that occasion. If my hon. friends from British Columbia want to develop the apple industry, why do they not follow the example of Alberta and Saskatchewan. When the farmers in these provinces wanted to develop the cheese-making and butter-making industries, what did they do? They did not come to Ottawa and ask for extra duties to be put on. They appointed men, and paid them, to take charge of cheese factories and creameries on behalf of the farmers' organizations, and these establishments were run by the Government for two, or three, or four years. When they had been fairly well established, and were turning out good butter and good cheese, the Governments pulled out altogether; the farmers then ran the creameries and the butter factories themselves, and to-day they form a very important industry in those provinces.

Mr. WEBSTER: Is it not the fact that the butter makers in Alberta and Saskatchewan are protected by a tariff of 4 cents per pound?

Mr. TURRIFF: My hon. friend is perfectly right, but will he point to a single instance where the farmers of these provinces asked for it? The farmers of the Western Prairie Provinces are not asking for higher duties; they are asking to have the duties taken off. They are prepared to face any competition on the face of the earth in connection with the products they have to sell. If my hon. friends from British Columbia want to put the apple industry on a proper basis, let them go to their Provincial Government and ask them to take action along the lines of that taken by the Governments of Alberta and Saskatchewan in connection with butter and cheese. Do you think you are going to develop a national spirit in the Dominion of Canada when you set one province practically against another, or when you attempt to do so? My hon. friend from Lambton (Mr. Armstrong) tried to lead this House to believe that the farmers' organizations of the Prairie Provinces and the apple growers of British Columbia were getting together, and that the farmers' organizations of the prairies were going to distribute British Columbia apples. My hon. friend is very, very much mistaken if he holds that out as the view of the western prairie farmers. The Minister of Finance is treading on mighty dangerous ground when he keeps putting one burden after another on the prairie farmers. Let me read what has taken place within the last few days in this very connection. I read from the Manitoba Free Press of Wednesday, March 8:

Increased duty on applies protested. Canadian Council of Agriculture passes strong resolution—Officers elected.

At the annual meeting of the Canadian Council of Agriculture yesterday, the following resolution was passed unanimously:

"Whereas, at the request of the British Columbia fruit growers, the duty on apples has been raised from 40c. to 90c. per barrel; whereas; this is an enormously high duty—approximating 100 per cent ad valorem of the cost of production of apples in Canada; and whereas, the evident purpose of the imposition of this duty is to force the prairie consumer to pay a higher price for apples; therefore, be it resolved that this the Canadian Council of Agriculture, in meeting assembled declare this to be an unrighteous attempt to exploit the prairie farmer for the benefit of British Columbia fruit land speculators, fruit growers, and middlemen, and we advise the farmers of Alberta, Saskatchewan and Manitoba, that if this becomes law and they are to be taxed in this manner, they pay these taxes into the federal treasury by purchasing imported apples rather than pay the same duty together with profit thereon to British Columbia land speculators, fruit growers and middlemen."

The following officers were elected: J. A. Maharg, Moosejaw, president; R. W. Woods, Carstairs, first vice-president; president U.F.A., Ontario, second vice-president; and R. McKenzie, secretary.

Each member of the council reported a growing bitterness because of the gradual but continuous burden of tariff taxation imposed on them for special privilege without any corresponding relief, and which does not go into revenue.

Then it gives a list of those who were present. I commend it to the Minister of Finance and my hon. friends who represents the apple growing districts in British Columbia. Just as sure as the sun will rise to-morrow, if this becomes law the British Columbia apple grower will sell fewer boxes of apples in Alberta, Saskatchewan and Manitoba than he is selling at the present time. The apple growers have increased their output 400 per cent in the last four years. Is that not going fast enough? Yet, in face of that they come here and demand legislation that puts an added burden on the backs of the people of the prairie provinces. If this were only a money matter I would not take up one minute of the time of the House in discussing it. The money is important in a way, it will amount to $200,000 or $300,000 a year, but the most important part of it is the underlying principle that has actuated the Minister of Finance in putting this duty upon apples. We know what has taken place in the last few days in British Columbia, and I am sure it was for the purpose of helping his friends there that the minister proposed this tariff to Parliament. The hon. member for Vancouver spoke about the small tax this would be and he said that the people he represents are in favour of developing the hinterland of British Columbia. A few years ago I was in Vancouver and I looked around the fruit stalls there to see what the British Columbia fruit was like. I spoke to the fruit dealers and they told me they did not buy very much fruit from the Okanagan Valley. The apples I saw there were principally American apples.

Mr. STEVENS: How many years ago was that?

Mr. TURRIFF: Three years ago.

Mr. STEVENS: It is only in the last three or four years that Okanagan Valley apples have been produced in really large and staple market quantities.

Mr. TURRIFF: That may be perfectly right. I was last there three years ago and conditions may have changed very much since then but they told me when I spoke about the consumption of British Columbia apples in Vancouver and Victoria that freight rates were such that they could not buy them.

Mr. STEVENS: That has been adjusted since.

[Mr. Turriff.]

Mr. TURRIFF: They said they could bring in apples from the United States, pay the freight and duty and get them for less than the Okanagan Valley apples cost. My hon. friend also spoke about the quality of the apples. I want to tell him, as was pointed out by my hon. friend from Strathcona that the poor grades of apples do not come in when our buyers know it, because they do not order poor grades. One reason why complaints have been made in the past about British Columbia apples is that they were not in many cases of the finest quality. They are a fine looking apple, but it is a new industry in that country and the apple growers there have not got to the stage of being able to produce the best apples. They are not producing as good apples as they can produce and as they will produce later on. The reason so many American apples are bought in our part of the country is that for the same money they can get a better apple than they can get from British Columbia. They are getting a better and a cheaper apple, and that is what is going to govern all through the piece. Our people like any other people will buy the apples that they can buy best and cheapest.

The Minister of Finance, in this matter, is undertaking to legislate especially for a very small number of people, because from a statement put before the House it appears that there were about 30,000 acres of land planted with apple trees and only a moderate number of these trees are bearing. Are the people of the whole Dominion to be punished to help the men who are growing apples on let us say 10,000 acres? The hon. member for South Oxford said that it was a shame to see so many American apples sold in Toronto, but no doubt these apples came in at a season when they were not getting Canadian apples. Why should millions of people in Canada, living in the cities and who do not grow apples, be forced to pay a higher price for apples in order to give a little more to land speculators or fruit growers in British Columbia? Is that fair, is that reasonable, is that a national policy in any sense of the word, is it right to benefit a few, a very few, at the expense of the many? It seems to me that if that is the idea of this National Policy the time has about come when there should be a revision of ideas in connection with that policy. To my mind, the way to help the British Columbia apple grower is to make his conditions as nearly right as possible and leave the tariff out altogether.

It was a very favoured argument of hon. gentlemen on the Government side for many years prior to the reciprocity agreement, that we were ready to bring down our duties if the Americans would only do the same thing. What has taken place? At the reciprocity election, as I may call it, there was a certain duty on apples. Since then that duty has been materially reduced by the American Government and to-day, if my information is correct, and if not I am sure my hon. friend's experts will, through the minister, set me right, the duty on apples going into the United States is 10 cents a barrel. The people of Canada were saying to the Government of the United States for many years: If you will reduce your duties we will reduce ours. The United States reduced their duty on apples to 10 cents a barrel three years ago, two years prior to the 6th of October last, and this Government now comes forward and says: We are going to put the rate on apples up to 90 cents a barrel. Ninety cents a barrel on apples is practically 100 per cent ad valorem. I venture to say that the farmers of Canada from the Atlantic to the Pacific do not get more than 90 cents a barrel for all the apples they sell at their farms. My hon. friend the Minister of Finance in order to benefit a small section of the country is forcing every man, woman, and child in the Dominion who eat apples to pay 100 per cent duty on the apples they consume. I leave it to you, Mr. Speaker, I leave it to the members of the House to say whether that is a fair proposition, whether it is a reasonable proposition, whether it is a law that should be put on the statute-books. But apart altogether from the prairie consumers, why should dwellers in the large cities be compelled to pay a large increased price for apples? During many months of the year we import apples from the United States, and if this measure passes we shall have to pay the extra duty.

At six o'clock the House resumed and then took recess.

The House resumed at eight o'clock, and then went into committee.

Mr. TURRIFF: I have a few words to say in the hope that the Minister of Finance will withdraw this particular clause. I do not say that my hope is very lively, but, knowing how fair-minded he is, I think that hope should be well grounded. It has been stated that it costs $1.08 a box to grow apples in British Columbia. That is at the rate of $3.24 a barrel. That is a very high price, and if it costs that much to grow apples in British Columbia, it would appear to me that they are not growing them as cheaply as they might; and if that is the case it is not fair that a few apple growers should be helped to maintain an over-expensive system of growing apples at the expense of the consumers generally, especially the consumers of the Prairie Provinces. There is no doubt that there has been improvement in British Columbia apple culture, and in the handling of the crop. It strikes me that if our apple-growing friends in British Columbia would go on with this good work and arrange for the proper distribution of their crop, as well as the proper packing and shipping of it, instead of coming here and asking for more protection, it would be much better. If I believed that this extra duty would really benefit the apple growers of British Columbia, or even that they would get a reasonable share of it, I would not be so strongly opposed to it. But I do not believe that the actual grower is going to get very much benefit out of this duty.

There is another ground on which we of the Prairie Provinces have reason to complain. Some hon. members, including, I think, the hon. member for Vancouver (Mr. Stevens), pointed out that the apple growers of the states adjoining British Columbia ship their poor quality apples into the Prairie Provinces—that 85 per cent of the apples shipped into western Canada were of No. 3 grade. If we in the West have to eat the poor grades of apples from Oregon, what is to be our position under this duty? This will enable the British Columbia, Ontario, and Nova Scotia apple growers to ship their good qualities of apples to foreign markets, and then, behind this prohibitive duty of 100 per cent, compel us to buy the poor grades.

Mr. STEVENS: Will the hon. gentleman permit me to correct him? What I said was that 85 per cent of the apples imported into the Northwest were of C grade, which is equal to our No. 2. I did not say they were a poor grade. On the contrary, they are a very good grade of apples.

Mr. TURRIFF: I accept the correction; but the argument remains the same. If a duty of practically 100 per cent is put upon apples, the growers will be able to ship those of good quality to outside markets and force the poor qualities on the people of the West who are compelled to import apples either from British Columbia, On-

tario, or the United States. We in that country are willing to pay and we do pay, a good price for apples, but we want to be in a position to command apples of good quality; we do not want the Government practically to take us by the throat and tell us that we must use the refuse apples while the good ones are shipped elsewhere.

As I have stated before, for many of the people in my own constituency this will represent a duty of almost 300 per cent. Carloads and carloads of apples come into the stations south of the boundary line, in an ordinary year when there is a good crop, and my constituents can go and buy apples at 25 cents a bushel shovelled in bulk out of the car. A man will buy 30 bushels at 25 cents, or 75 cents a barrel. Under this clause, he will be called upon for a duty of 90 cents on these apples which cost 75 cents. This is an inducement to the people of that country to smuggle. Why should the Government go out of their way to make it almost imperative for my constituents to do smuggling?

In view of the facts that we have been brought out in this discussion, I would ask the Minister of Finance to withdraw this proposal. If he will not withdraw it on economic grounds, will he not withdraw it on national grounds? It was pointed out by my hon. friend from Strathcona (Mr. Douglas) that the farmers' organizations of the prairies, at their annual meetings or at meetings specially called, had passed a resolution calling on their members not to buy Canadian farm implements, but to buy American farm implements and let the money go into the treasury for the purposes of the war instead of going into the pockets of the manufacturers. We have the same farmers' organizations this week protesting against this duty on apples and calling on their members to buy American apples and pay the money into the treasury. I want to tell the Prime Minister and the Minister of Finance that they are bringing on a most unsatisfactory state of feeling in Canada between the East and the West, and are deliberately driving the wedge home. The action of the Government in this pin-pricking policy—because it does not amount to anything in dollars—is calculated to have far-reaching effects. On these grounds I hold that the Minister of Finance should leave this apple business alone. The duty is high enough, surely. It was stated here this afternoon that in British Columbia a few years ago the farmers got 22 cents a box for their apples. As the duty was 39 cents a barrel, this meant a duty of 13 cents a box. Was not that duty high enough? And even when apples are worth 50 or 60 cents a box, is not a duty of 13 cents a box—with the additional duty of 7½ per cent ad valorem that was added last year—quite enough?

I do not know what the apple growers of British Columbia can be thinking about when they want to have a duty of 100 per cent. It is all right for them, perhaps, but what about the people who have to pay it—not only the people of the Prairie Provinces, but the consumers and workers in every village, town and city in this broad Dominion? Again I ask my hon. friend the Minister of Finance, in the interest of this country and in the interest of the national policy which he is so fond of advocating, to withdraw this item. I am sure that if he does that he will be doing something good for Canada. Throughout the West a feeling of dissatisfaction is growing strongly and rapidly with regard to the efforts that are being made to tax unfairly the people of that country.

Mr. JOHN A. BEST (Dufferin): After hearing this matter discussed for three hours this afternoon, I have come to the conclusion that many hon. gentlemen in this House think that in the western provinces is to be found the only place of any importance in the Dominion of Canada. It is estimated that it costs this country $6 for every minute that the House is in session; therefore the people have to pay over $1,100 for the time which has been lost in discussing this apple question. We are here to legislate the greatest good for the greatest number. I want to tell hon. gentlemen from the West, who take up two-thirds of the time of this House, that we have one city in the province of Ontario that has as great, or almost as great, a population as any one of the three western provinces.

Mr. MICHAEL CLARK: Who is building it?

Mr. BEST: I refer to the city of Toronto. Hon. gentlemen have not heard a protest in this matter from the city of Toronto, where the people have to buy all the apples they consume.

Mr. TURRIFF: Do I understand my hon. friend to say that the city of Toronto has a greater population than the three prairie provinces?

Mr. BEST: Pretty nearly as large a population as any of the three prairie provinces.

Mr. TURRIFF: The hon. gentleman had better look up the census returns.

Mr. BEST: The fruit-growing industry of the province of British Columbia is a new industry, and it wants protection. We have got to aid all new industries. I may point out that more apples are produced in the province of Ontario and in other parts of the Dominion than are produced in the province of British Columbia. Do we want to see the orchards in the province of Ontario that border on the United States go to waste? In the county in which I live hundreds, yes, thousands of barrels of apples rot under the trees simply because we cannot get a market for them. If the people in Western Canada were anxious to get these apples and were willing to pay the price, they would have them sent to the West. I think it was the hon. member for Strathcona (Mr. Douglas) who said this afternoon that he has paid as much as $6 or $7 a barrel for first-class apples. I may tell him that in the city of Ottawa I have paid $6 for a barrel of apples; as much as $7 has been paid in Toronto. I do not see why the people of the western provinces should find fault when they can get first-class apples at $6 and $7 a barrel. We must put on a duty to protect the people who are growing this kind of fruit all over the country. If the farmers of this country can not get protection, who ought to get it? It has been said by hon. gentlemen that the duty on apples will now amount to $1 a barrel, an increase of 50 per cent. If they are going to pay 50 cents a barrel extra for apples coming in here from the United States, I do not see how they would get much benefit from free wheat. Something was said about farm implements. I am one of those who were in favour of the legislation introduced by this Government permitting harvesting machinery to come into this country free of duty—a thing that had not been done during the fifteen years hon. gentlemen opposite were in office. With the exception of the 7½ per cent duty that was put on since the war started, the farmers of Canada get their harvesting machinery free of duty, and the duty on other farm implements has been considerably reduced. Yet these free traders who sit opposite kept up the duty for fifteen years. I say that the Government have a right to protect the fruit growers in British Columbia, in Ontario, and in the rest of Canada, and I believe that the people outside of these provinces are not finding fault with what they will have to pay for their apples.

Mr. GEO. E. McCRANEY (Saskatoon): This increase of the duty on apples is intended purely as a protective measure. I understood from the Minister of Finance that it was not for revenue purposes, so that there is no doubt that it is for the purpose of helping the apple trade throughout the country. Some items of revenue tariff have incidental protection; some items of protective tariff have incidental revenue; but this is one of the cases in which we have a purely protective tariff. If any change is to be effected in the way of revenue, I think the minister will say that it is to get less rather than more revenue. As it has been represented that the apple industry in the country is in a bad way. I am quite willing to admit the advisability of doing something for it. I have been accustomed, as member of a municipal community, to vote for loans, even for bonuses, to manufacturers in my own town, and I am willing to consider the giving of aid to an industry which claims that it is in a suffering condition. I think, however, that before such a proposal is put before us, the minister should make a definite statement—which he has not done—as to how many fruit growers in the country are affected by the adverse conditions; as to the extent of their losses, and the amount necessary to effect a remedy; also as to whether the condition is permanent or only temporary. We should know, further, what is to become of any vote that we make—because we make a vote as assuredly by decreeing that the people shall pay the amount directly to the fruit grower by way of duty, as we do by voting a stated sum of money out of the Consolidated Revenue Fund.

If we are going to benefit the fruit growers I think we should be assured that all the money that we vote is going to the fruit growers—that if there is any information as to how much of it will go to the transportation companies and how much to the commission men and other middle men, that information should be placed before us. But nothing of that kind has been mentioned. Some figures have been furnished to the House. The hon. member for Edmonton (Mr. Oliver) stated the other day that there were some 30,000 acres planted in apples in British Columbia, and

that the value of the apple orchards in that province was in the neighbourhood of $20,000,000; but, as for any information from the Minister of Finance or from this Government, we are only told that representations have been made by the apple growers of British Columbia to this Government. The statement of the minister was wholly in regard to the apple situation in British Columbia, and it only came out incidentally during the discussion that any other part of the country was interested in the item. We from the West had occasion a year ago to come to Parliament because there had been a great drouth in Western Canada, and we were able to tell the minister with some approximation, how many acres would have to be seeded and how many bushels of grain would have to be purchased. We arranged for the security that was to be given, and the minister knew pretty well when he came down to the House how much it would be necessary to vote, and he knew also the terms on which the money would be repaid and the rate of interest. We have been given by the minister no idea whatever what revenue this increase of the tariff is expected to produce.

Something was said by the Solicitor General the other day to the effect that the amount paid out per family by way of the increased price of apples owing to this increase of duty would be from 75 cents to $1 a year. We have been treating that as a very small amount, and when we are talking about war contracts and the great War Budget, perhaps 75 cents or $1 a year per family sinks into insignificance. Perhaps it would be well for us to get back to a frame of mind where we could consider figures that are within the range of our imagination. I confess that millions of money conveys very little idea to me; but I can understand 75 cents or $1 a year to so many families in this country. We have no recent information as to the number of families in Canada; but the Year Book of 1914 shows from the census of 1911 that the number is 1,517,742, and to which, of course, would have to be added the natural increase in the five years which have since elapsed. This would bring the number of families somewhere in the neighbourhood of 1,750,000. If the estimate of the Solicitor General is correct, it means that the 1,750,000 families, approximately, are paying something over $1,500,000. On the amount of investment in British Columbia orchards, which is $20,000,000, if our object was to protect that industry and that industry alone, we would be giving a bonus equal to 7½ per cent. I should like to get some figures from the Minister of Finance to show whether it would not be better to buy annuities for those people and charge them up against the consolidated fund and be done with the matter, than to put on a tax the extent or benefit of which we cannot estimate. We cannot be entirely sure that the money is not diverted to some other purpose than that which the Government intends. I am quite prepared also to give a vote to the apple growers of British Columbia or of all Canada of so much apiece, if it is thought desirable to do that, and we must have the proper information, in order to help them out of this trouble.

But if there has ever been anything to bring us to the point of view that any assistance must be given by way of bonus and not by a protective tariff, it is the very legislation which the minister brings before this House. We have on one side of the Rocky mountains farmers who ask that the duty be taken off a product similar to theirs, wheat coming into Canada, so that they may get a free market. Perhaps the time may come, I hope it will, when the farmers of British Columbia will ask that the United States market be thrown open to them—that their apples will be so much better than those to the south that they can go into that market and command it. But, if I know this Government aright, the Government would say: "Oh, no, there are the barrel men; we have to let them sell their barrels to the apple men, and we cannot permit you to make any arrangement which would enable you to place your apples in the American market." That is what they are doing in the case of wheat. They put it up to us in the West that the flour men must be looked after, and therefore no advantage can be given to the producers of wheat in the way of a wider market. Perhaps my effort to show that a bonus is much better than a protective tariff is foolishness in the eyes of the financiers on the Government side. At any rate, it is the faith in which I have been brought up, and the older I grow the better I like it. I shall be very glad indeed, as instances of this sort come up, if we can discuss them from the bonus standpoint, so that we shall know whom we are helping and to what extent.

I hope that the minister will withdraw this item, which proposes to put $1,500,000 of taxation upon our people, and to hand a

portion of it to the growers of apples. If he wants to help the growers, he should bring in some other scheme which will appeal more strongly to the sensible public, and of the working of which they will have more knowledge.

Mr. J. E. ARMSTRONG (East Lambton): I feel satisfied that the hon. member for Saskatoon (Mr. McCraney) was not present at the previous debate on the Budget or he would not have made some of the remarks he has just offered. During that debate a great many statistics bearing on this question were placed before the House, giving some idea of the extent of the apple industry. Figures were given showing that over $100,000,000 is invested in the apple industry in the provinces of Canada outside of one or two western provinces. I am sure we were all delighted to hear that even in the province in which my hon. friend (Mr. McCraney) lives, it is possible to develop a great fruit area. We all hope that in years to come a great fruit industry will be developed there. But I am sure the hon. gentleman is willing to live and let live, and when he appreciates the enormous amount of money that is invested in the apple growing industry, and the fact that the province of British Columbia purchases from Saskatchewan, Alberta and Manitoba grain, flour, hay, butter and other products of the farms to the extent of over $12,000,000 per annum, he will recognize that the province of British Columbia has some claim to consideration.

There is another statement which I think is worthy of consideration. While the province of Nova Scotia exports several hundred thousand barrels of apples out of a total export of 1,200,000 barrels per annum she will find herself up against transportation difficulties next fall. They are beginning to worry about that in Nova Scotia now. My hon. friend from Halifax (Mr. A. K. Maclean) would do well to revise the statement he made in connection with this Budget, and withdraw a portion of it, because, if he will read the latest number of the Co-operative News, the official organ of the fruit growers of Nova Scotia, dated March 2, he will find this statement:

> We regret to have noticed among our orchardists a pessimistic feeling about the future of our industry should the war continue. We are told that America has not interfered with us on the European market because she had a small crop, but that the reverse is likely to be the case next year. Do not let this matter worry you, for there are two facts that will very effectually handicap American competition. The first is the increased duty on American apples entering Canada. This has at the instance of the British Columbia fruit growers been increased to 90 cents per barrel.

Mr. A. K. MACLEAN: Is that a Nova Scotia journal?

Mr. ARMSTRONG: Yes, this is the Co-operative News, published in Halifax, N.S., the hon. gentleman's own riding. Surely he must know of it. Sixty-five per cent of the fruit growers of the province of Nova Scotia not only recognize it, but assist in editing it. It goes on to say:

> While the duty will be of material assistance to British Columbia, it wi'l a'so be of immense benefit to Nova Scotia, as far as her western trade is concerned, because it will effectually stop the dumping of the American "C" grade apple on the prairie market and will thus give us an opportunity to do considerably more business with the West than heretofore.

Mr. A. K. MACLEAN: What does the hon. gentleman think of that statement himself?

Mr. ARMSTRONG: What can any one take out of that statement but that the Nova Scotia fruit growers are delighted, and that they heartily support the proposition now before the House, whereas my hon. friend said they were not interested and would not support this proposition?

Mr. A. K. MACLEAN: I think the duty is absolutely valueless to apple producers in Nova Scotia, and I think that everybody of any reputation engaged in the business in that province will say so. My hon. friend told us a moment ago that Nova Scotia exports 1,200,000 barrels.

Mr. ARMSTRONG: The bulk of them go from Nova Scotia.

Mr. MACLEAN: It is a fact that Canada's total imports were about 260,000 barrels. If the duty had taken effect last year, it would not have furnished a market for those 1,200,000 barrels that my hon. friend speaks of.

Mr. ARMSTRONG: That may be all true.

Mr. MACLEAN: Is it not true?

Mr. ARMSTRONG: It would be necessary to find a market for the surplus apples that are produced in Nova Scotia, but last year and the year before there were between 300,000 and 400,000 barrels imported.

Mr. MACLEAN: No, 269,000 last year. My hon. friend is arguing that British Columbia should secure the Prairie Provinces as its market. He argued that way a moment ago; now he is arguing that Nova Scotia also should secure the Prairie Provinces as its market.

Mr. GRAHAM: And the Ontario men say the same thing.

Mr. MACLEAN: We cannot all get there.

Mr. ARMSTRONG: It would be folly to expect that Nova Scotia would ship enormous quantities of fruit to the West when she is able to export them abroad; but, in consequence of the shortage of tonnage to-day, it is impossible for her to export her apples at a satisfactory price. I would rather take the word of the fruit growers of Nova Scotia in their official organ than that of the hon. gentleman in regard to the benefits that are to be derived from the increased tariff.

Another statement which I wish to make is this: That one-half of the Fruit Growers' Association in the province of Ontario have already submitted an offer to the Grain Growers' Association and the farmers' associations in the western provinces to supply fruit at very little increase on the actual cost in the East. That offer is made to the Grain Growers' Association and its distributing agencies in the western provinces in order to assist them in obtaining the Ontario fruit at a lower cost than ever before. There is no doubt in my mind that they will be in a position to offer fruit to the western provinces at a cost less than that of years gone by.

Mr. GRAHAM: How will that help the British Columbia fruit growers?

Mr. ARMSTRONG: If the ex-Minister of Railways were in British Columbia to-day, what would he find? He would find Mr. Mussleman, the Secretary-Treasurer of the Grain Growers' Association, interviewing the different fruit growers' associations in the province with the object of entering into just such an arrangement as I have mentioned with the British Columbia fruit growers, so that fruit from British Columbia and Ontario may be brought into the western provinces and distributed by the Grain Growers Association and other farmers organizations at a less cost to the consumer than hitherto. Hon. gentlemen opposite should remember that the United States fruit trust have absolute control of the distribution and sale of fruit in those western provinces and I can not emphasize too strongly that they have been bleeding the people there. Naturally they are using every exertion to discourage the importation of fruit from British Columbia and Ontario into those provinces.

Mr McCRANEY: Does the hon. gentleman say that the fruit trust of the United States is bleeding the western provinces?

Mr. ARMSTRONG: I say it, and I say it advisedly.

Mr. McCRANEY: How do you work that out?

Mr. ARMSTRONG: If the hon. member had been here a few days ago when this matter was up for discussion, he would have heard the statement that over 500,000 acres of apple orchards have been planted in Washington, Oregon, and Idaho, that these trees are fast coming into bearing, and that even now the United States growers are producing apples in such quantities that they are unable to make a reasonable profit.

Mr. McCRANEY: How is that bleeding us?

Mr. ARMSTRONG: The hon. gentleman will find that it is the United States fruit trust who handle the fruit in his own town, and dictate the price to the distributors.

Some hon. MEMBERS: No.

Mr. ARMSTRONG: He will find that every car of that fruit is sent under special instructions, and that special prices must be paid before it is delivered.

Mr. TURRIFF: Will the hon. gentleman allow me to correct him?

Mr. ARMSTRONG: I do not need to be corrected on that score; I know what I am talking about.

Mr. TURRIFF: No, you do not.

Mr. ARMSTRONG: I know what I am talking about, and if the hon. gentleman wants further proof of it I can furnish him with all that is necessary to reasonably satisfy even the hon. member for Assiniboia. I have made the statement and I am prepared to stand by it: that the fruit trust, whose head office is in Winnipeg, have control of the distribution of fruit in almost all of the cities, towns and villages

in the western provinces. If the hon. member for Saskatoon will read Hansard he will find plenty of food for thought on this subject.

Mr. McCRANEY: The statement has been made to-day that the apples which are brought in from the United States are second and third grades. If that is so then we in the West who eat them can say that they compare very favourably with the first grades from British Columbia. I am not going to reflect upon British Columbia apples, but I do say that the men who reflect on the British Columbia apples are those who assert that the apples we get from the United States are of poor grade, because if they are then the first grade apples in the United States must be dandies. The British Columbia and the Western States apples are well packed and even in quality as we get them in the boxes, and that is why British Columbia and United States fruit has a preference over Ontario fruit in the western provinces. I say it with regret, because I come from an apple growing district in Ontario, that Ontario apples are not even, that the best apples are at the top, and that sometimes there are some pretty mean apples in the middle. Perhaps, if we have a few more elections like that which took place in Peel we will in future get better apples from Ontario. In my hotel here in Ottawa the other day I was eating an apple and I asked the waiter if he could find out where it came from, because it was such a good one, and he told me it was a British Columbia apple. Why is it that in this very province British Columbia is supplying the hotels with apples?

Mr. GREEN: Because the apples are better.

Mr. McCRANEY: Of course they are; that is right.

Mr. J. E. ARMSTRONG: I want to say in answer to the hon. gentleman that the most careful inspection of Ontario apples is going on every year during the packing season, and the man in charge of the fruit association is giving his very best attention to that work. I am, therefore, sure that it would not be possible for inferior fruit to be shipped to the Northwest. At any rate, I would hope not.

Mr. TURRIFF: I wish to correct the statement of the hon. member (Mr. Armstrong) that the apple trade of the Prairie Provinces is in the hands of the United States fruit trust. I say that is absolutely not the fact. In my own constituency there are merchants in the different towns who bring in fruit by the carload, who send to Ontario, British Columbia, and the United States and get prices, and they buy whereever they can get the right quality of fruit to the best advantage, and they sell it where they like, and they have no connection with, and are under no control of any United States fruit trust.

Mr. J. E. ARMSTRONG: The hon. gentleman has made the statement that they have not brought in apples from the United States, but merely from Ontario and British Columbia; that is a very different question.

Sir THOMAS WHITE: Listening to the observations of hon. gentlemen opposite, I have been thinking that there has been much cry and little wool. It seems to me we have had a good deal of talk about a very small matter. In order that hon. gentlemen opposite, who have taken part in the debate, and who appear to be really concerned about the imposition of this tax, may sleep to-night, I would like to assure them that even on the basis of the present importation, assuming that the extra duty will have to be paid, which will not be the case, in the very next item which we shall consider, namely, the item in reference to crude petroleum in which the duty on heavy distillates used largely by the farmers in the West is reduced from two and a half to one-half of a cent per gallon, the reduction more than equals, as far as the farmers of the West are concerned, the extra duty upon apples.

Mr. McCRANEY: You had better not mix crude oil and apples.

Sir THOMAS WHITE: You cannot mix them, but I mention that in order to relieve the consciences of hon. gentlemen opposite. While there is a small increase on apples, really inconsequential as far as money payment is concerned, there is a reduction in the next item that will more than equalize it.

Mr. TURRIFF: I would like to ask the minister if there is not also an increase in one of the oil items. While it may not apply so much to the farmers, and while it applies particularly to the railways, if you increase the cost of fuel oil to the railways, you increase the cost to the farmer.

Sir THOMAS WHITE: Perhaps my hon. friend would raise that point on the next

item. I do not believe myself that the Railway Commission would, on that argument, order an increase in freight rates.

Mr. McCRANEY: Perhaps the minister would tell us to what extent crude oil is used in agriculture and in other industries.

Sir THOMAS WHITE: When we reach the next item.

Hon. FRANK OLIVER: When the minister was discussing this increase in the duty on apples in his Budget speech he gave the impression that it was a provision especially for the apple-growing industry of British Columbia, but from the course of the discussion to-day I should incline to the view that instead of this item being specially intended to improve the position of the apple grower in British Columbia, it was simply following out the general line of policy which has been pursued by this Government since it took office, in the way of placing more completely in the hands of their friends the middlemen, an important article of the food of the people. As has been observed by speakers to-day, especially on the other side of the House, this duty applies to the whole of Canada. It affects not only the people of the Prairie Provinces as consumers, but the people of all Canada as consumers, and, according to our friends who come from apple-growing districts in other provinces, it affects not only the apple growers of British Columbia, but the apple growers of the whole Dominion. Therefore we are bound to consider this legislation not as a local, but as a national question. Speaking of this increased duty in his Budget speech, the minister said:

9 p.m.

We regard this duty as indispensably necessary for the preservation of the apple-growing industry of Canada, and particularly that of British Columbia.

So far as British Columbia is concerned, the apple-growing industry has grown from 200,000 barrels four years ago to nearly 800,000 barrels last year.

Mr. GREEN: What was the cause of that increase?

Mr. OLIVER: It does not concern me what the cause was: the fact is what I am concerned with. And the fact is that the apple-growing industry grew from 200,000 barrels four years ago to nearly 800,000 barrels last year. That is not disputed. We also find that the country at large exported over 1,000,000 barrels of apples, and imported only a little over a quarter of a million. Therefore, whether we take it in regard to the industry throughout Canada as a whole, or in regard to the industry as respects British Columbia alone, of all industries in Canada the apple industry seems to stand least in need of special tariff legislation or special tariff consideration. Canada is an apple exporter, and if the course of trade were permitted to go in the natural channels and in the natural way, the price to the producer would be ruled by the export price; and, that being the case, the producer would not expect to benefit, and would not benefit by the imposition of an extra duty. The only purpose of an increase in duty where the article which it is proposed to protect is an article of export rather than of import is for the purpose of enabling those who are in control of the trade to take advantage of fictitious or artificial prices at the expense of both the producer and the consumer. Just as in the Canadian milling industry the miller buys his wheat from the Canadian producer at a less price than his competitor in the United States, and sells his finished product to the Canadian consumer at a higher price, so, by this legislation it is proposed to put those who are in control of the apple trade in Canada in the position of paying what they please to the producer, and charging what they please to the consumer.

This has been spoken of as a trifling matter. But at this time, when the country is compelled to assume ever-increasing and already enormous financial obligations, when the necessity of increasing the efficient production of the people by lightening their burdens is the first duty of the Government of this country, it is no trifling matter to bring forward legislation for which there is no reason or excuse except that it is for the purpose of enabling those engaged in the apple trade still more thoroughly to control both the buying and the selling markets of this country. This is a matter affecting not only the prairies of the West, but every citizen of this Dominion. This legislation affects the citizens of Toronto, and Ottawa, and Montreal, surrounded as they are by apple orchards, just as much as it affects the citizens of the prairies of the West, because its purpose is to put the supply of his requirements under the control of an organization that will take more out of him than it can take to-day.

It is said the consumer will not have to pay more. But it is also said, on this side of the House, and it cannot be denied, that if the consumer does not have to pay more there is no possible purpose in the legislation. For the producer certainly is not going to get more unless either the consumer pays more or there is some readjustment of the conditions intervening between the producer and the consumer, and this latter is neither contemplated nor suggested by this legislation. At the present time, in the province of Alberta, the retail price of apples is approximately $2.25 for a box containing 40 pounds of apples. That is equal to $6.75 a barrel. Anybody must admit that that is a good stiff price for apples, and everybody will say that if the producer got his fair share out of that price he would be doing very well and would not need to ask for beneficial legislation. The apple orchards of British Columbia are situated within between four hundred and five hundred miles of the city of Edmonton. At Salmon Arm, on the main line of the Canadian Pacific railway, during the past season, the apple growers received 80 cents a box for their apples—for which apples we in Edmonton paid $2.25 a box. The year before, these growers received 22 cents a box—and we in Edmonton paid the same, $2.25. At Penticton, last year, the growers of apples got an average of 85 cents a box, and the year before the average was 40 cents a box. Now, Penticton is a hundred miles further from Edmonton than Salmon Arm, and it is not on the main line, and yet the grower at Penticton received a better price than the grower at Salmon Arm.

Mr. GREEN: I think there is a misunderstanding there. The price in one case is for the apples on the tree, and in the other case for the apples boxed and ready for shipment.

Mr. OLIVER: Did the price of 22 cents a box include the box?

Mr. GREEN: No.

Mr. OLIVER: Did the price of 80 cents a box include the box?

Mr. GREEN: Yes.

Mr. OLIVER: Then, we will have to take the opinion of the man in the business, which information came by wire yesterday in reply to an inquiry. His telegram reads:

Salmon Arm fruit ranchers selling through Okanagan United growers, received for No. 1 apples, 1915, 80 cents per box net. In 1914, 22 cents per box, net.

If the box is included in one case it is included in the other, and if it is excluded in one it is excluded in both. The hon. gentleman can have it either way he likes, but he cannot have it one way in the one case and the other way in the other case. I have a telegram from Penticton, dated yesterday, which says:

Apples per box, No. 1, 85 cents last season; year before, 40 cents.

The point I make is that the price we pay at Edmonton, the consumer's price does not govern the price received by the producer, as matters stand to-day. And how it is expected that the addition of 30 cents a barrel to the protective duty is going to better that condition, I cannot understand, when no provision is made for securing any change. If to-day the transportation companies and distributing agencies take the difference between 80 cents and $2.25, are they not going to take the difference if the duty is increased by 30 cents a barrel? There is no manner of doubt that the transportation companies and distributing agencies to-day take an undue toll from the producer and from the consumer. They do that under a protective advantage of approximately 60 cents a barrel. Will the Minister of Finance or the hon. member for Kootenay (Mr. Green) tell us that they are not going to pursue the same course if their advantage is increased by 30 cents a barrel? Will the hon. member for Kootenay or anybody else tell us how the addition to the duty of 30 cents a barrel will make them less likely to take advantage of the producer at one end and of the consumer at the other?

Mr. GREEN: It is going to make this difference, that the producer will have the market to himself, and will be able to make better market arrangements. He will get into direct communication, and will deal direct with the consumer.

Mr. OLIVER: If he can do that with an additional duty of 10 cents a box—for that is what this additional duty will amount to—why cannot he do it without that addition?

Mr. STEVENS: For the simple reason that at any time the growers in the Northwestern States may flood the market with consignment cars at prices as low as 30 cents a box. Hundreds of carloads are

shipped in in that way. So that the grower in the Okanagan valley has not got and cannot establish a market to which he can regularly ship his fruit, because he does not know what moment he will get a wire shutting off his shipments. Nobody can do business under those conditions.

Mr. OLIVER: I can assure my hon. friend that if these remarkably cheap apples came to Edmonton, no Edmonton citizen ever got the benefit of them. We were paying the standard prices for apples, wherever they came from.

Mr. GREEN: Perhaps they came from the American fruit trust.

Mr. OLIVER: The American fruit trust is the Canadian fruit trust, as far as we are concerned; it is absolutely one and the same thing. The fruit trust that is squeezing the Okanagan grower and the Edmonton buyer at 60 cents a barrel protection can squeeze them just as much at 90 cents a barrel protection, and certainly it will do so. Is it not a fact that the year before last fruit was rotting on the ground in the Okanagan?

Mr. GREEN: It is.

Mr. OLIVER: Is it not a fact that we were paying $2.25 for apples at that very time? Yet the Minister of Finance proposes to put 30 cents a barrel additional advantage in the hands of the American fruit trust. They cannot do worse to the grower in the Okanagan than let his fruit rot on the ground, but they can take 30 cents a barrel more out of us; that is the only purpose that will be served.

Mr. J. E. ARMSTRONG: If the producers in British Columbia and Ontario, through their Fruit Growers Associations, make definite arrangements with the farmers' distributing agencies in the western provinces, is there any possibility of any such condition arising in the western provinces as that to which my hon. friend has referred?

Mr. OLIVER: I do not know what may occur as between the apple growers and the farmers' associations. I only know what is occurring now, and what has occurred in the past. The increase of the duty by 30 cents a barrel is not going substantially to change the conditions except to the advantage of the trust. My hon. friend says that if this duty is increased the apple grower of British Columbia will be able to market his own fruit in the West. I do not know whether he will or not, but, according to the figures, it seems to me that he is perfectly able to do that now. We will allow him 80 cents a box for his apples; it is not claimed that he gets any more.

Mr. GREEN: It costs $1.08 a box to produce them.

Mr. OLIVER: That is not our fault. If it costs him so much to produce them, the only answer is that he is not growing apples in the right place. The apples exported from Canada, over a million barrels, are valued at $2.40 a barrel, or 80 cents a box. If the British Columbia apple grower cannot produce apples at the price at which the Nova Scotia apple growers produce for export, then he is working under wrong conditions and has no right to expect the people of the rest of Canada to maintain him in an industry the location of which he has not chosen wisely. As to my hon. friend's suggestion that apples cannot be produced in British Columbia at less than $1.08 a box, I should be out of order if I characterized it as absurd; certainly it is not such as coincides with my view. If there is any place on the North American continent where apples can be grown more cheaply than in the district of Salmon Arm, I have never seen it. There is no reason why the British Columbia apple grower cannot compete on equal terms with the grower of apples in Washington and Oregon.

Mr. STEVENS: They are all going broke in Washington and Oregon.

Mr. OLIVER: My hon. friend says they are all going broke. Well, they are selling apples, and that is what the consumer of Canada wants.

Mr. STEVENS: It is the receivers who are selling the apples.

Mr. OLIVER: The land that these men are growing their orchards on is worth more to-day than the land in the Okanagan valley; my hon. friend cannot buy it for the same money that he can buy land in the Okanagan valley. That is the extent to which they are going broke. I was giving the committee some figures; I shall now proceed with them. We will allow the apple grower eighty cents a box; if he cannot grow apples for that he ought to be doing something else. We will allow 38 cents a box for freight, 15 cents for the cost of the box, 12½ cents for the cost of wholesale distribution, and 12½ cents for the cost of retail distribution. According to these figures, we should be getting our apples in

Edmonton at $1.60 a box, while we are paying $2.25 a box. That is to say, there is a margin of 65 cents between the reasonable cost of these apples at Edmonton and the amount that we have to pay.

Mr. GREEN: The cost of package and packing is 48 cents a box.

Mr. OLIVER: My hon. friend will have to accept my protest against his figures. They are just as far out of the way as his assertion in regard to the cost of growth.

Mr. GREEN: My figures are those of the Fruit Growers' Association of British Columbia, and of Prof. Lewis, an expert of the United States Government.

Mr. OLIVER: If it costs the British Columbia grower so much to grow his apples and so much to pack them, he ought to be in some other business; he has no right to ask the people of Canada to maintain him in a losing industry. As a matter of fact, we are to-day paying 65 cents a box for apples in excess of a fair price, allowing everybody everything to which he is entitled. If that is not a sufficient margin to enable the Fruit Growers' Association of British Columbia to find their own markets on the prairies, it simply argues that they have not enterprise, or that they are under control and management that does them absolutely no credit. They have no right to ask this Parliament to tax the whole population of Canada in order that the fruit combine and the transportation interests, not the fruit grower, shall get more money. I have given the transportation rate at 38 cents a box. That is 38 cents for carrying 50 pounds of freight for 400 miles. Wheat is carried from Winnipeg to Port Arthur over 400 miles, at 6 cents a bushel: that is, 10 cents per cwt. It costs 7½ times as much to bring the same weight of apples from Salmon Arm to Edmonton as it costs to take a bushel of wheat from Winnipeg to Port Arthur, the same distance. Now, admitting that apples should pay a higher rate than wheat, we do not admit that 7½ times as much is a reasonable rate. The fact is that the apple industry has been exploited from start to finish, just as the mining industry and many others have been. The land speculator has expected to make a fortune out of the price of land, the transportation companies have expected to make huge profits out of the transport of freight, and then the fruit dealer comes in and expects, and realizes his expectation, to make more than the transportation company or the fruit grower out of the unfortunate consumer. My friend the Minister of Finance proposes to legislate to add 30 cents a barrel to that tariff condition which enables this robbery to be perpetrated, not by the unfortunate man who is growing fruit in British Columbia, but by the fruit dealer and the transportation companies who handle the transportation and distribution of the fruit.

When the Minister of Finance mentioned this proposed fruit duty in his Budget speech, he spoke of the fruit industry of British Columbia. It is true that there is a fruit industry of British Columbia, but it is in a very small part of British Columbia; and the greater part of that province is in exactly the same condition as the Prairie West in regard to the production of fruit. The miners of Fernie in the constituency of my hon. friend (Mr. Green) the constituents of my hon. friend from Vancouver (Mr. Stevens), the constituents of my hon. friend for Victoria (Mr. Barnard), and those of my hon. friend from Comox-Atlin (Mr. Clements) will all pay this extra price. My hon. friend who represents the miners of Nanaimo (Mr. Shepherd) will have to explain to those miners why he has been instrumental in adding to their cost of living, which already has climbed so high, in the name of the fruit growers of British Columbia—who will not receive the benefit of the duty that is being imposed. This duty is just as much for the benefit of the railway companies and the fruit combine as the duty on flour is a duty on behalf of the railway companies and the milling industry and not on behalf of the farmer who produces the wheat. It is in the last degree objectionable that the attempt should be made to show that one section of the country must live at the cost of all the rest. If that is a fact, it is an unfortunate condition. But it is not a fact and never was a fact. The fruit-growing area of British Columbia is well adapted to the production of fruit. It is well situated in relation to markets, and if it is not to-day prosperous it is not because of a lack of natural conditions for production, or location in relation to advantageous markets, but it is because it is in the same position as the grain-growing industry of the West in relation to the milling industry. It is in the hands of a combine which exercises the advantage that the tariff gives it to levy an unjust toll upon the consumer on the one hand and upon the producer on the other, and every addition that is made

to the tariff increases the power of the combine and its ability to increase its unjust toll.

267a. Crude petroleum in its natural state, ·7900 specific gravity or heavier at 60 degrees temperature, when imported by oil refiners to be refined in their own factories—British preferential tariff, 5 per cent; intermediate tariff, 7½ per cent; general tariff, 7½ per cent.

Mr. A. K. MACLEAN: Would the minister give rather a comprehensive explanation of the effect of this change in the tariff, perhaps discussing both items at the same time. There is a reduction in the tariff, which some hon. gentlemen are at a loss to understand as expressed in the amendment.

Sir THOMAS WHITE: The former item No. 267 read as follows:

Petroleum (crude) fuel and gas oils, ·8235 specific gravity or heavier, at 60 degrees temperature, customs tariff free.
Customs tariff, 1915—British preference, 5 per cent; intermediate tariff, 7½ per cent; general tariff, 7½ per cent.

I think I can state the matter most simply by saying that fuel oil was formerly on the free list; that last year the War Revenue Act was made to apply to it, and that consequently, before the present Budget was brought down, the duty on fuel oil was 5 per cent British preference, 7½ per cent intermediate tariff and 7½ per cent general tariff.

Mr. NESBITT: That means crude oil?

Sir THOMAS WHITE: Fuel oil is the ordinary term.

Mr. McCRANEY: Would the minister say just what he means by fuel oil?

Sir THOMAS WHITE: I understand that after the various processes of refining there is a residue. That residue is known as fuel oil. It is used as fuel. It is in competition with coal. It is used in locomotives and steamboats and by manufacturers, as fuel, and it is used in some provinces for ordinary heating purposes. It is fuel, it is the residue.

Mr. McCRANEY: Does the item include gasolene?

Sir THOMAS WHITE: No. I will tell my hon. friend later what it does not include. The best way to describe the article we are dealing with now, because this oil schedule is quite technical and complicated, is to describe it as fuel oil.

Mr. McCRANEY: There are certain traction engines which are advertised throughout the West as being oil fuel engines; is it the oil for these engines to which the minister refers?

Sir THOMAS WHITE: It will include oil known as heavy distillates used in heavy traction engines, internal combustion traction engines. The duty upon these heavy distillates, which are used in heavy combustion traction engines, was formerly 2½ cents a gallon, plus 7½ per cent war tax. We have reduced that duty from 2½ cents to half cent per gallon, without any war tax. Therefore, the effect of the change, so far as the oil schedule is concerned, is that on fuel oil, which was free but for the war tax, there is now a duty of one-half cent per gallon. The duty on heavy distillates, in which my hon. friend's constituents are interested, and which was formerly 2½ cents per gallon, plus the war tax of 7½ per cent, is now one-half cent per gallon.

Let me now explain what is not the effect of the change, because there has been a misunderstanding about the matter. Illuminating oil—no change in tariff; lubricating oil—no change in tariff; gasolene, naphtha, and benzine—no change in tariff. There are about 1,000,000 gallons of the heavy distillates, to which I referred a moment ago, annually consumed in Canada, chiefly in the Prairie Provinces; so that the tariff reduction from 2½ cents to one-half cent a gallon means a substantial reduction, so far as the tariff duties are concerned, in the matter of distillates. I do not know that I have covered all the ground which my hon. friend from Halifax (Mr. Maclean) had in view, but I think I have substantially stated the effect of the changes which we propose.

Mr. A. K. MACLEAN: Do I understand that the oil used as power by steamships and engines was previous to this tariff subject to the war tax only?

Sir THOMAS WHITE: That is right.

Mr. MACLEAN: What is the difference between the half cent per gallon and what now comes under item 267?

Sir THOMAS WHITE: It is an increase from about one-third of a cent to one-half cent.

Mr. MACLEAN: That is the difference between the 7½ per cent and the half cent?

Sir THOMAS WHITE: Yes. I may say that by way of revenue we expect to get about $500,000 from this tax.

Mr. MACLEAN: What is the quantity usually imported?

Sir THOMAS WHITE: It is difficult to separate the items, to which we have been referring, from other items that are included in the trade and commerce returns. I would estimate the quantity imported at about 100,000,000 gallons.

Mr. NESBITT: The minister is now speaking of oil for locomotives?

Sir THOMAS WHITE: Fuel oil for locomotives and steamships, and for heating purposes; in fact, it is fuel just as coal is. I understand it is also used in the manufacture of munitions.

Mr. A. K. MACLEAN: What is the cost of that oil to railway and steamship companies?

Sir THOMAS WHITE: From 2 to 4 cents a gallon.

Mr. GRAHAM: Do I understand that the duty on gasolene is not changed?

Sir THOMAS WHITE: There is no change as regards gasolene.

Mr. GRAHAM: I understand from what the Solicitor General said that there was a change.

Sir THOMAS WHITE: There have been several mis-statements in the course of the debate. I did not hear what the Solicitor General said, but, for example an hon. gentleman on the other side thought the change referred to illuminating oil, and he made a rather touching domestic reference to the child being deprived of light when going to bed. The child will be able to go to bed as usual, because there is no increase in regard to illuminating oil. Not only will there be additional revenue, but I believe the change will be of some material advantage to the great coal industry in British Columbia.

Mr. A. K. MACLEAN: In what way?

Sir THOMAS WHITE: My hon. friend from Halifax knows how Nova Scotia treasures the duty upon coal, and how important that is regarded by all good Nova Scotians. So this duty will, I think, have an important effect upon the coal mining industry of British Columbia.

Mr. A. K. MACLEAN: Those who have hitherto consumed oil, must cease using as much in the future, if any benefit is to accrue to the coal industry. The minister informed us that this particular oil fuel was consumed by the railways and steamships on the Pacific coast. Which of these two will be consumers of coal hereafter—the railways, or the steamships, or both?

Sir THOMAS WHITE: I think that it is not probable that the steamship companies will discontinue the use of fuel oil; nor do I think that the railways are likely to discontinue its use. But for the future, I think the tendency will be to use coal more than fuel oil; that is to say, there will be more of an equality, so to speak, in the use of coal and fuel oil. I may say that, of late years, the use of coal in the province of British Columbia, to take that province as an example, has steadily declined, while the certificates show, on the other hand, that the use of fuel oil has been on the increase. The figures are rather startling.

Mr. NESBITT: Some people say that the coal of British Columbia is not satisfactory for steamship purposes. Does the minister know whether that is so or not? Why has there been a general increase in the use of fuel oil?

Sir THOMAS WHITE: I think the reason is that they have been able to get the fuel oil so cheaply. It has come in free of duty. My hon. friend knows that in the province of Ontario there has frequently been an agitation by the manufacturers for free coal, but, as I said to my hon. friend from Halifax, Nova Scotia is very much interested in the duty on coal. Fuel oil has been on the free list, and the use of it has greatly increased in British Columbia. On the other hand, as I have stated, the amount of coal used has steadily declined, and coal mining is one of the most important industries of British Columbia. The production of coal on Vancouver Island since 1911 has been:

	Gross tons.
1911	1,443,000
1912	1,250,000
1913	730,000
1914	814,000
1915	786,000

So that in 1915 the production of coal on Vancouver Island was about half that of 1911.

Mr. CARVELL: Would the minister give the statistics as to the importation of fuel oil during these years?

Sir THOMAS WHITE: The difficulty is in separating them, but I will give some figures which will throw light upon it.

Mr. GRAHAM: While the deputy is finding those figures, I might just say that the duty will be quite a heavy tax on the Grand Trunk Pacific and Canadian Pacific, while it will add revenue to the Canadian Northern men who own the coal mines.

Sir THOMAS WHITE: I am told, although I do not know, that the Canadian Northern men do not own the coal mines.

Mr. GRAHAM: I am afraid you were told wrongly.

Sir THOMAS WHITE: However, I may say to my hon. friend that in the last few years we have received a great many memorials from the coal mining districts of British Columbia, boards of trade, and others who are very much interested in this subject. The amount which will be paid by the Canadian Pacific and the Grand Trunk Pacific with respect to this duty will not be large for such corporations. There is another consideration I mentioned at the outset that weighed in a very considerable measure with me, and that is that we shall derive a revenue of $500,000 from this tax.

Mr. MACDONALD: From what particular source?

Sir THOMAS WHITE: That raises a very fine economic question as to who pays the duty. Some would argue that the oil producers in the United States would pay the duty, and others would argue that the railway and steamships companies, and some other interests in British Columbia, would pay it.

Mr. MACDONALD: What do you think about it?

Sir THOMAS WHITE: That would raise another question, such as the question as to who pays for the German navy. But we would get very far afield if we took up that question.

Mr. GRAHAM: Through what medium does the minister expect to get it?

Sir THOMAS WHITE: The customs office.

Mr. GRAHAM: From whom does the customs office expect to get it?

Sir THOMAS WHITE: That is the same question again.

Mr. GRAHAM: It is interesting to consider the effect it will have on different interests. I do not imagine the Grand Trunk Pacific will be specially hit by the new war tax, but the Canadian Pacific will be. I do not imagine the Canadian Northern will be struck very hard by it.

Sir THOMAS WHITE: Do you not think they will have 7 per cent on capital?

Mr. GRAHAM: I am inclined to think not at the present time. But the two other companies that are using oil for fuel in the mountains, for the protection of the forests and possibly for their own benefit, will have to pay an extra price for their oil, or else they will have to buy coal from the Canadian Northern or the interests that own the Canadian Northern. I am not sure it will work out just as the minister expects. If the revenue is to be derived it will be derived from one interest, the Canadian Pacific, which is being pretty heavily taxed for war purposes anyway on account of its position financially. If a revenue is not to be derived from this company it may be because they do not use oil, that they will do away with their oil consumers and use the coal that their competitors have to sell. I am not sure that my hon. friend is not working out a plant for one interest as against another.

Sir THOMAS WHITE: I am quite sure I am not working a plant and that I expect to get $500,000 of revenue.

Mr. GRAHAM Then they will not be burning coal; they will stick to oil.

Sir THOMAS WHITE: I think the Canadian Pacific, the Grand Trunk Pacific and Canadian Northern, if they use oil, can well afford to pay this tax. At all events, I shall not lose any sleep about their ability to pay this or any other tax.

Mr. TURRIFF: Will the minister tell us to what extent a ton of oil compares with a ton of steam coal for power purposes on a locomotive?

Sir THOMAS WHITE: I do not believe we have that information. It is a question that we could hardly anticipate. In answer to the inquiry of the hon. member for Pictou as to the imports, I find that 196,000,000 gallons of petroleum, crude fuel and gas oils were imported last year and about one-half of that would be fuel oil. In round numbers that would be 100,000,000 gallons as I stated.

Mr. MACDONALD: I find in the Trade and Navigation Return for 1915 this item:

Crude petroleum, gas oils, other than napthha, benzine and gasoline, lighter than ·8235 but not less than ·775 specific gravity at 60 degrees. . . . 64,057 gallons.

The duty collected on this importation amounted to $960. If that is correct my hon. friend is not going to get very much money out of it.

Sir THOMAS WHITE: My hon. friend is mistaken. The articles to which he refers are not embraced in this item. It is item 267 that we are dealing with. There is a large consumption of fuel oil in Ontario in connection with the manufacture, among other things, of munitions.

Mr. A. K. MACLEAN: If the purpose of this tariff change is to secure revenue, it would be more favourably considered by the House than if it had another object. I think the minister should instruct the House as to whether this change is to be permanent or whether it is his intention to remit the taxation, and revert to the statu quo after the war, or the necessities as to increased revenue have passed. There are many disadvantages, from the standpoint of British Columbia even, in changing the tariff upon oil. The figures which the minister submitted to us about the coal industry would indicate a gradual falling off in coal production, but I assume that that corresponds to the general decline in business in British Columbia during the past few years. I would expect, although I cannot establish the statement by any authority, that all lines of industry had declined in that province during the past few years and accordingly coal production has fallen off. With the resumption of British Columbia's former prosperity, which I hope will come some time in the near future, we probably will see the coal production back to the old figures. But this particular product, fuel oil, we are informed, is used by steamships and railways and it will be interesting to inquire why they adopt that method of power in preference to coal.

As regards the Pacific coast, I understand that most of the tonnage entering Victoria and Vancouver use fuel oil; at least, a great many of the steamers do, which is not true of shipping on the Atlantic coast. Fuel oil is a more efficient and cheaper power producer than coal. Most of the freighters built in Great Britain during the last few years have been equipped for fuel oil in preference to coal, and we shall see more of that in the future than in the past. Now, if shipping on the Pacific coast uses oil as power because of its greater efficiency and lesser cost, it is not desirable from the standpoint of the ports of British Columbia to compel shipping to use the more expensive power. I understand that a delegation from British Columbia has been, or is coming, to Ottawa to urge the Government to assist in providing tonnage for the Pacific coast, which they are sorely in need of at the present time. If that is true, it is not sound business to increase the operating costs of ships by compelling them to use a power which is more costly than fuel oil, and also less desirable from many other standpoints. I do not think it will be conferring any advantage upon British Columbia to compel them to use coal instead of fuel oil on their ships and railways. The hon. member for South Renfrew (Mr. Graham) has stated, and it has been stated on a great many occasions in the past, that at least the Canadian Pacific railway have been using fuel oil in the mountain region for some years, mainly to prevent fires, which of course

10 p.m.

are more likely to occur when coal is used. I understand that they made this change largely at the suggestion of the governmental authorities of British Columbia, owing to the frequent fires caused by locomotives, and which resulted in great losses to the lumbering industry in that province. If, a few years ago, public opinion in British Columbia compelled the Canadian Pacific railway to adopt fuel oil as its power, I do not think it is fair to do anything which might compel the road to revert to coal, as that would increase its operating costs.

We have had a lengthy discussion this afternoon and evening about apples, and the representatives of British Columbia have claimed the Prairie Provinces as their natural market. They startled the House, and the country I imagine, with the figures they gave off the cost of production of apples. To those figures there is to be added the cost of freight. Now, if this change in the tariff means an addition to the power cost of railways, I suppose that in some way or other this extra cost will be charged against the traffic, and just as likely as not apples will have to bear its share along with the other commodities carried by the railway. So in that respect you would be conferring no advantage on British Columbia, even if this change in the tariff indirectly caused a little increase in the consumption of British Columbia coal. If the minister is proposing this change in the tariff for the purpose of revenue only, I can see that he has established a case, although I do not say that it

cannot be well answered. But if he proposes this change upon other grounds I think it is not reasonably supported by all the facts and circumstances, and I do not think the change he proposes is justified or justifiable. I think we should have a declaration from the minister now, whether or not he proposes this as a revenue measure. It does look as if it were intended as a permanent measure. If so, we on this side of the House should be inclined to look at it from an altogether different angle from what we should if it were just a temporary measure, and for revenue purposes only.

Sir THOMAS WHITE: As I have already stated we should derive a revenue of about $500,000 from this change. That is a substantial amount and it is very desirable that we should obtain it at this time. I also stated that the change would confer an incidental protection which I think is much needed by the coal mining industry of British Columbia. As to making statements whether a tariff change is permanent or otherwise, I think it exceedingly inexpedient for a Finance Minister to make any such statement, and I believe it has never been done. The tariff of this country is revised and changed from time to time, and when changes are made they are announced in the Budget in the usual way. This suggested change will give revenue and will, I believe, be of benefit to the coal mining industry of British Columbia. It seems to me that the two reasons I have given are pretty good grounds for this change and I believe it will meet with public approval.

Mr F. H. SHEPHERD (Nanaimo): The hon. member for Halifax (Mr. Maclean) evidently fears that the proposed tax of half a cent a gallon on fuel oil will be a hardship and have disastrous results. I may tell my hon. friend from Halifax that the imposition of the half-a-cent duty does not bring coal on a parity with fuel oil as it existed previous to the invasion of fuel oil in the province in the year 1910. I will endeavour to treat this matter as impartially as I can. Naturally I represent the industry of my constituency, namely, the coal mining industry of Vancouver Island. The invasion of fuel oil has very seriously affected the industry of Western British Columbia and incidentally of Eastern British Columbia; so much so that if the importation of fuel oil continues on the same scale as for the last five years, the very extensive coal mining industry of Vancouver Island will be seriously threatened. If the committee will bear with me I will give some figures which will throw considerable light on the matter and supply information which from the questions that have been asked I presume hon. gentlemen have not at hand. The production of coal in 1910 was 99 per cent of the total fuel production of the province. In 1914 it had decreased to 76 per cent, or in other words the industry had been invaded to the extent of a quarter of the total.

Going back to the year 1905, the committee will observe, there was a gradual increase in the output of coal in British Columbia, an increase, I may state, which has gone on continuously since the very inception of the industry at a uniform ratio, and which continued until the year 1910, when the invasion of fuel oil commenced. If hon. members will form a mental profile of the figures I shall give, they will have a graphic idea of what the invasion of fuel oil is doing to the coal mining of British Columbia. The following figures show the output of coal in tonnage and value for the years given:

Year.	Tons. (2,240 lb.)	Value.
1905	1,384,312	$4,152,936
1906	1,517,303	4,531,909
1907	1,800,067	6,300,235
1908	1,677,849	5,827,472
1909	2,006,476	7,022,666
1910	2,800,046	9,800,161
1911	2,193,062	7,675,717
1912	2,628,804	9,200,814
1913	2,137,483	7,481,190
1914	1,810,967	6,338,385
1915	1,546,664	5,313,240

The amount for 1915 is the estimate of the provincial minerologist, as the returns were not available up to the time of the issue of the bulletin. These figures show a decrease of over 1,200,000 tons in 1915 as compared with 1910. The corresponding importations of fuel oil during these years, except, of course, from 1905 to 1909, inclusive, were as follows:

Year.	Gallons.
1910	5,941,746
1911	7,299,727
1912	20,454,309
1913	79,233,053
1914	110,547,653

Mr. A. K. MACLEAN: Who were the principal consumers of this oil?

Mr. SHEPHERD: The railway companies, the steamboat companies plying in the coasting service, manufacturers, and, to some extent, for the heating of large buildings. Probably the chief consumer is the

Canadian Pacific railway, which my hon. friend quoted in his remarks. I shall refer to that later. To further show how seriously the invasion of fuel oil has affected the coal industry, I will give a statement of the number of persons employed in the several years:

Year.	Number directly employed.
1910	7,758
1911	6,873
1912	7,130
1913	6,443
1914	5,732

That is, the employees in 1914 were fewer than those in 1910 by more than 2,000. The coal displaced by oil in these several years is as follows:

	Tons.
1910	32,011
1911	46,347
1912	129,869
1913	503,067
1914	701,889

The value of the coal displaced in 1914 was over $2,000,000.

Mr. CARVELL: Does that mean the loss of production in the mines, or the actually reduced consumption on the vessels and in other places?

Mr. SHEPHERD: That is the equivalent of the oil imported during that year. Of course, oil is duty free and pays no royalty. The coal mines of British Columbia paid the following royalties in the years cited:

Year.	Royalty.
1910	$315,220
1911	230,479
1912	285,734
1913	258,736
1914	218,216

The percentage of coal to the total fuel produced in each of these years is as follows:

	Per cent.
1910	99
1911	98
1912	95
1913	83
1914	75

Now, various theories have been put forth as to why the invasion of fuel oil occurred. One of the favorite reasons is that it was largely due to the labour troubles on Vancouver Island. But that is not the case. It is true that the labour troubles in Vancouver Island may have accelerated the use of fuel oil, but by no means is it responsible for the enormous invasion that has occurred. The labour troubles commenced in September, 1912, but one company only was affected until May, 1913, when the strike spread to the other mines. But shortly afterwards the mines where the strike started were working to almost their full capacity, and at no time was the whole of the output cut off. The importation of fuel oil rose from over 7,000,000 gallons in 1911 to 20,000,000 gallons in 1912. The labour troubles did not commence until the year was well advanced; therefore, the output of coal was not seriously curtailed. The true reason for the increased importation was the rapid extension of oil-burning installations, which was in keeping with plans, conceived and determined upon long before the labour troubles of Vancouver island commenced. This is especially true of railway and transportation companies. The operators asked not that the proposed duty should be prohibitive, but that it should be sufficient to place the coal mining industry upon something like a parity with its competitors. It is not intended or supposed that the large consumers, or, for that matter, any of the consumers who have gone to the expense of making oil-burning installations, will return to the use of coal. But we do believe that the imposition of the half cent per gallon duty on fuel oil will act as a deterrent upon those who otherwise would have entered upon the use of fuel oil.

Mr. OLIVER: What is the cost of the imported fuel oil?

Mr. SHEPHERD: The cost of imported fuel oil delivered at the wharf in Vancouver is about two cents per gallon. It requires about three and a half barrels of oil to equal one ton of Vancouver island coal. The cost, therefore, of the oil equivalent to one ton of Vancouver island coal would be approximately $2.80. The cost of the two fuels, one on the wharf at Vancouver, and the other at the pit mouth in Nanaimo, would be $2.80 for the oil and approximately $4 for the coal. Of course, there is the gulf to cross, and that would add a little to the cost of the coal. The committee can readily see, therefore, the enormous advantage that accrues to the railway companies and other users of oil by reason of the cheaper cost. It is no severe impost upon the users of fuel oil to pay one-half cent per gallon, as they were deriving an enormous advantage by the use of fuel oil which they did not enjoy previous to its importation. Had the duty imposed been such as to place the cost of fuel to these users above the original cost of coal, there might, as has been suggested by the hon. member for

Halifax, have been some injustice; but such is not the case. I have reason to believe, of course, that the large users would naturally object even to the imposition of this one-half cent a gallon. When you come to consider that the duty not only is a source of revenue at a time when it is much needed, but also will tend to preserve one of the most important industries in British Columbia; and when you consider how generously these transportation companies have been treated by the Government, you would naturally think that they would accept graciously this increase of duty, especially as it means the preservation of an industry of which they themselves are beneficiaries. Large coal mining centres must contribute to the railway companies by freight, transportation of passengers and otherwise, and it would seem not to be business policy to endeavour by selfish sentiment, if I may use the expression, to prevent an industry like the coal mining industry in British Columbia from enjoying full prosperity. Speaking of the generous manner in which the railway companies have been treated, I believe it is a fact that in British Columbia double freight and passenger rates are charged. There is reason for this. British Columbia is a country of physical and geographical difficulties. The cost of the railway in the first instance was great; the cost of operating is great. In this connection I may say that the railway companies operating from the state of Washington, south of the boundary line, who have railways built across the alluvial flats of the Fraser river, do the very same thing. The moment they cross the international boundary they charge double rates. Their engines are fired with fuel oil, which is probably put on in the state of Washington; these engines come into the province and return to the United States in due course. They will not pay this half-cent duty, although the double charges are imposed. I commend this to the consideration of the minister, because this may be a matter which he has not covered in his proposal to collect a half-cent duty on all imported fuel oil. Of course, you could not collect a tax upon fuel for motive power on board a steamer making a trip into a port and going out again. Still, the fact remains that these engines run into British Columbia with fuel oil and will continue to do so.

Mr. A. K. MACLEAN: Supposing a tariff is imposed against oil used in the locomotive, as the hon. member suggests should be done. Would the railway company continue to use oil and pay the duty, or would they change engines at a divisional point near the international boundary line?

Mr. SHEPHERD: I am not pressing the matter; the revenue would be so small that it need not be considered.

Mr. A. K. MACLEAN: But it would not serve the interests of my hon. friend's constituents at all if they continued to pay the duty. It would do the coal mines of British Columbia no good unless the people of the province ceased using oil for power. To accomplish the purpose suggested by my hon. friend, the railways will have to change engines at the divisional point nearest the international boundary line, and consume coal from that point on to Vancouver.

Mr. SHEPHERD: They might change engines. My object in giving that little illustration is that these railway companies are enjoying the enormous advantages granted to the Canadian Pacific railway for building through rugged countries, while they have built their railroads through comparatively easy country.

Mr. A. K. MACLEAN: I understand all that. But my hon. friend evidently desires the imposition of this duty for a specific purpose, and he is quite frank about it. That purpose is to lessen the importation of fuel oil and to increase the production of provincially produced coal. At the same time he reminds the committee that this duty is not prohibitive. If it is not at all prohibitive, the result will be that we may get a revenue, but oil will be consumed just as usual and there will be no increase in the consumption of coal, and no one will benefit unless it be the Minister of Finance.

Mr. SHEPHERD: I am afraid my hon. friend has a short memory. I shall read again:

> The operators do not ask that the proposed duty should be prohibitive, but the duty should be sufficient to place the coal mining industry upon something like a parity with its competitors.

And I followed those remarks by stating that it would not be a prohibitive duty but would be a deterrent duty that would deter those who had otherwise contemplated going into the use of fuel oil, and would therefore arrest the enormous invasion at this point, and therein the coal miners would be benefited.

Mr. A. K. MACLEAN: All who are now in will stay in, and no more will come in.

Mr. SHEPHERD: Precisely. And the invasion will be arrested at this point. It may be argued that the coal mines are protected by the existing duty. This was referred to by an hon. member this afternoon. But the import duty on coal is really not protective, for this reason, that the coals from the state of Washington belong to a comparatively recent geological period. It is an inferior class of coal, and there is no demand for it in British Columbia. It is only in cases like strikes or labour troubles that the coal from the state of Washington is shipped into British Columbia, and, of course, it then pays a duty of 53 cents a ton. I claim that the 53 cents is of no real practical benefit or protection to the coal mining industry of the island. There is another thing which probably the imposition of this duty will accomplish, and I commend this to the hon. member for Red Deer (Mr. Michael Clark). This duty should give an impetus to exploration for oil fields in the western provinces, and if it accomplished that I think it would be worth while imposing the duty. I understand that the prospects of oil in Alberta and the northwestern provinces are very good, indeed, and I have no doubt the day will come when oil will be found in sufficient quantities to be commercially valuable, and, perhaps, the question of duties then might be reconsidered. If oil was produced in Canada in sufficient quantities, so that we would have no fear of the invasion of foreign fuel oil, then the question of this duty could be reconsidered. But I do maintain that a duty on fuel oil at this particular time should give a stimulus to oil exploration in the northwestern provinces. In conclusion, I submit that this duty will fill the two-fold purpose of giving a good revenue to the Government at a time when it is needed, and protecting an industry which, should the invasion of fuel oil continue in the same ratio as it has in the past, would be threatened with extinction.

Hon. GEO. P. GRAHAM: This seems to be a very hard country to govern, and the people seem to be very difficult people to please. Most of the day one section of the country has been asking for a duty to encourage the production of apples, while another section of Canada has been opposing it because it will tend to make the apples too dear. We find to-night the Minister of Finance and my hon. friend who has just sat down approaching this subject of a duty on fuel oil from different angles altogether. Of course the Minister of Finance admitted casually that it might help the coal industry, but if it helps the coal business it will not help him, because the moment the coal takes the place of fuel oil, the revenue which the Minister of Finance is after ceases. Both of these objects cannot be attained except in the happy way the hon. member from Nanaimo suggests, that the Minister of Finance can have whatever revenue he can get from the present duties, but cannot get any more. There is a difference between Ontario and British Columbia. Only last week the province of Ontario paid over $8,000,000 for the purpose of getting cheap power, while British Columbia is asking for legislation to prevent the obtaining of cheap power. It is most difficult for legislators to know just what to do.

Sir THOMAS WHITE: Hear, hear.

Mr. GRAHAM: The British Columbia coal industry is a great industry. Any person who knows anything about it can sympathize fully with the position of the hon. member for Nanaimo. Once deprive that portion of the province of this industry and you injure it very materially. On the other hand, I think it is going to be absolutely impossible to suppress the more extensive use of oil as a fuel. It is admitted that it is cheaper. My hon. friend is asking the imposition of the duty; but fuel oil is so much cheaper that people are using it in place of coal. It is a serious situation so far as coal is concerned, but I am inclined to think that some other way out of the difficulty will have to be found because, to my mind, fuel oil is going to be used more and more. In this province electricity is becoming the chief motive power and under a provincial arrangement through the Hydro-Electric Commission, this power is being distributed all over Ontario for the use of manufacturers, and is even being carried into the homes of the farmers and small consumers at very reasonable rates. This is necessary. The manufacturers of Ontario find it necessary in order to compete with the cheap power across the line, where coal is produced in abundance and where they have cheap electric power as well. If that be the case, no argument can be advanced in favour of increasing the cost of power to men engaged either in transportation or any other business requiring cheap power, if

we are to make Canada a country capable of producing in competition with other countries.

Even the small consumer of power in his own home, or on his farm, gets the advantage of this cheap power. I suppose my hon. friend from Nanaimo (Mr. Shepherd) knows that the Imperial Oil Company has recently established a plant in the West for the sole purpose of being close to their customers, and, I presume, of supplying this fuel oil at an even cheaper price than it has been supplied at hitherto. I am told that the company expects to do that.

Mr. SHEPHERD: That is not the oil to which I refer. That was explained by the minister. The oil used on the prairies is heavy distillates. The Imperial Oil Company are not distributing fuel oil.

Mr. GRAHAM: They may be distributing the refined article, but I should think they will distribute fuel oil as well when they get properly in motion. At least, I am told it is one of their objects, to bring that fuel closer to the market. It is a difficult problem. While I sympathize to the fullest extent with the wish of those who are rightly interested in the coal industry, I think they will have to be prepared in the future, and before very long, to see oil used as fuel to a very large extent. The Board of Railway Commissioners may insist that all the railway companies shall use oil as fuel. I am not sure, but I think recommendations have been made to them in the past with that object in view, in order to protect the forests of British Columbia from fire, which causes great havoc. Already two of the great transcontinental lines, the Canadian Pacific and the Grand Trunk Pacific, are using oil as fuel. The Canadian Northern railway is not using oil as fuel because that company have some interest in extensive coal mines, and, of course, have their own coal.

Mr. SHEPHERD: I may assure my hon. friend that the Canadian Northern do not own the Canadian Collieries.

Mr. GRAHAM: They own other coal deposits, if not the Canadian Collieries. At any rate, I know that several charters were got to enable them to run to their coal mines in British Columbia.

Mr. GREEN: The Canadian Northern Company, or rather Sir William Mackenzie,

[Mr. Graham.]

floated a company which took over the Dunsmuir colliery. That is the only mine in which, I think, they are interested in in British Columbia, and they are not interested in that to any great extent. That was a personal speculation of Sir William Mackenzie's, and he has turned it over to British investors, and has practically no interest in it now.

Mr. GRAHAM: I was not criticising them at all; I was simply pointing out that the two railway companies which have no interest in coal mines use oil, and that if it is found to be beneficial the Board of Railway Commissioners may make an order to the Canadian Northern to do the same thing. The two railway companies which are using oil are not acting on an order from the Railway Commission. After all, I am inclined to think that this duty will not help the coal industry so much as it will help to get revenue for the Finance Minister. I sympathize with my hon. friend from Nanaimo, but I do not think it will have the effect of stopping the use of fuel oil, because I think that fuel oil will be cheaper in the years to come than it is now and that there will be better facilities for using it, and better means of getting it. It will be apt to become cheaper instead of dearer. Those who use it tell me that it is superior to coal as a fuel, for the purposes to which it is put. I am rather inclined to think that the Minister of Finance will get considerable revenue out of the transportation companies. It may be regrettable that the one transportation company, out of which he expects to get his war tax, is one which my hon. friend from Nanaimo says will contribute the greatest amount of revenue from this new tax.

Mr. F. B. CARVELL (Carleton, N.B.): I want to congratulate the hon member from Nanaimo upon his perfect frankness, and upon the manner in which he has presented his case this evening. From the statements made by the hon. member it appears that this tax has been imposed at the request of the hon. member from Nanaimo, and probably of other gentlemen from his province. It also seems perfectly plain that it is proposed with the object of preventing the consumption of fuel oil, and, to that extent, of assisting or encouraging the consumption of coal. If that is the object, it means that the minister will not get revenue out of it so much as that the people who have

to use power in British Columbia will pay a greater price for their fuel. If the people of British Columbia are satisfied with that arrangement, and if the transportation companies are satisfied with it, possibly no very great harm may accrue, because we can all appreciate the importance of keeping the coal mines in British Columbia going. But the difficulty I see is that people in other parts of the country, who are not so much interested in keeping the coal mines of British Columbia operating, are going to suffer as well. I think the Minister of Finance and the hon. member for Nanaimo will see the force of that argument. If you are going to make power expensive, you are going, just to that extent, to increase the expense of production, of business, of manufacture, and of transportation, and to affect practically every phase of industrial life in Canada. That is the principle involved, it seems to me; that is the almost vicious side of it.

My hon. friend from South Renfrew (Mr. Graham) referred to the province of Ontario. That province probably offers a ground of comparison to some extent, but it is not a good comparison, because in Ontario, unfortunately, they have no coal. But go further east, go down to the Maritime Provinces, where we have both coal and water-powers. What would be thought if the people of the Maritime Provinces and Quebec came to Parliament and asked that a heavy embargo be placed upon the production of water-power? Would you not say that either they were crazy or selfish, or that something was wrong with their mental operations? Yet I do not see any difference between that proposition and the proposition put forward by the hon. gentlemen from British Columbia, who frankly say: It is true we want to make power dearer, but we want to do so in order to help the coal mines of British Columbia. Go down, if you will, to the provinces of Nova Scotia and New Brunswick, or to Eastern Quebec, where Nova Scotia and New Brunswick coal is used practically exclusively; if this Parliament were to say: We are going to put a tax on your horse-power or unit; your water-power is too cheap, so cheap that it is taking the place of coal, therefore we ought to do something in order to prevent you from using this cheap power and in order to develop the coal mines—I do not know what the people of British Columbia would say to a proposition of that kind, but I know what would happen down east. Any man who made such a proposition would meet with a very warm reception.

Mr. SHEPHERD: Water-power is a home product, but fuel oil is not.

Mr. CARVELL: It is partly, but I do not think that that helps my hon. friend much. The effect would be the same as on the coal industry. I do think that this is class legislation, that it is legislation intended evidently—indeed, the thing is admitted frankly—to help put a certain industry in one portion of Canada to the detriment of dozens and dozens of other industries in other portions of Canada. If my hon. friend feels like pressing it through, I presume it will go through, but I want to register my protest against the principle involved. I believe the hon. member for Nanaimo knows a little more of what he is talking about than does the minister. I do not say that offensively, but I wish it to be understood as being complimentary to the hon. member for Nanaimo. I believe the member for Nanaimo is right when he says that the result of this legislation will be an increased consumption of coal and a stoppage of the importation of fuel oil, with the result that we will have protection in its most vicious form, and the revenue will not be benefitted to any extent thereby. If this were put forward purely as a revenue producer at a time when the country needs revenue and we must have revenue from some source, we would all have to bury our principles and our ideas upon many things. The Minister of Finance says this is a revenue measure, but if we are to take the evidence of the gentleman who knows all about it, we must come to the conclusion that this is not a revenue producer, but a protective policy pure and simple in order to boost the production of coal in British Columbia, and to make the cost of land and marine transportation, and the heating of houses, very much higher in Canada in the future than it has been in the past.

Mr. A. K. MACLEAN: I would like to ask the hon. member for Nanaimo if fuel oil is used in the heating of houses in British Columbia to any extent, or is it confined to the larger office buildings and hotels?

Mr. SHEPHERD: Just to the larger buildings, sky scrapers, and very few of them.

Mr. OLIVER: The impression is prevalent that the Grand Trunk Pacific and Canadian Pacific are using oil in the moun-

tains as the result of the exercise of authority either by this Government directly, or by the Railway Commission. I would like to ask the minister if there is any warrant for the assumption that they have not been free agents in the matter of the adoption of oil instead of coal burning locomotives?

Sir THOMAS WHITE: I made inquiry, and I was informed that there is no warrant for such an assertion. There appears to have been no order made on the subject either by the Government or by the Railway Commission.

Mr. OLIVER: Did my hon. friend's inquiries go far enough to find out whether such an order had been made by the Government of British Columbia? I understand that oil burning engines were adopted in the interest of forest protection and I find it hard to believe that both of these companies would introduce oil burning engines at great expense unless they were compelled to do so. Would my hon. friend tell the committee if the Government of British Columbia exercised that authority?

Sir THOMAS WHITE: I am told that no such authority was exercised by the Government of British Columbia, but a request might have been made by the Forestry Branch of that province. I understand that no order has been made. It would appear to me, from the consideration I have given the matter, that the railway companies will continue to make use of fuel oil. It is true they will have to pay this additional duty upon it, but it would not appear to me that the amount which they would be called upon to pay is unreasonable, having regard to the fact that we are in need of revenue—

Mr. A. K. MACLEAN: That is not the point.

Sir THOMAS WHITE: —and that this fuel oil has been on the free list. It is the point in so far as the question put to me by my hon. friend from Edmonton (Mr. Oliver) is concerned. Let me ask my hon. friend from Nova Scotia (Mr. Maclean) a question. He is aware that there is a duty upon coal. I do not know a more important subject, from the tariff standpoint, than the duty upon coal in so far as Nova Scotia is concerned. I do not believe any gentleman from Nova Scotia would advocate taking that duty off.

Mr. A. K. MACLEAN: That is not this case at all.

[Mr. Oliver.]

Sir THOMAS WHITE: That is this case to a certain extent.

Mr. MACLEAN: Not at all.

Sir THOMAS WHITE: Why is the duty on coal valued by Nova Scotia? Because it is a protection given to the coal industry of that province.

Mr. MACLEAN: In the market outside of the province itself. It is not designed as a protection within the province which is producing the coal.

Sir THOMAS WHITE: Does my hon. friend say that the only purpose served by the duty on coal in so far as Nova Scotia is concerned is in respect to the export business?

Mr. GRAHAM: From the province to other provinces.

Sir THOMAS WHITE: Well, this is Canada. It is true we have different provinces. But would my hon. friend say that coal would sell as high in Montreal, or in Ontario, if there was no duty on coal?

Mr. OLIVER: My hon. friend says that the increase in the duty on apples will not make any difference in the price. If that is so it should not make any difference in the price of coal.

Sir THOMAS WHITE: What is the position of the coal mining industry of British Columbia? I thought the statement of my hon. friend from Nanaimo was a reasonably fair statement. He said that this would not prevent the use of fuel oil but that it would tend to put fuel oil and coal upon a parity. He made one or two points of extreme weight. One was that the competition at present is not fair. The coal mining industry of British Columbia pays a royalty to the British Columbia Government. The coal mining industry of British Columbia supports several thousand workmen and their families and plays a very important part in the economy of the entire province. On the other hand, what Canadian labour is employed in so far as fuel oil is concerned? What part does its production play in the economy of British Columbia? What royalty does it pay in which the province of British Columbia is in any way a participator? Is it quite fair that there should be a protective duty which prevents American coal from entering into competition with Nova Scotia coal, in the interest of the coal operatives of Nova Scotia and I am entirely in favour of

that tariff—and that the coal mining industry of British Columbia, equally important, relatively, to that province, should have no measure of protection against the competition described by the hon. member for Nanaimo??

Mr. A. K. MACLEAN: They have the duty on coal.

Mr. CARVELL: They have the same protection that the Nova Scotia coal miners have.

Sir THOMAS WHITE: There is no coal imported into British Columbia.

Mr. CARVELL: Nor into Nova Scotia either.

Mr. WHITE: I should think not into Nova Scotia. But there is no foreign coal imported into British Columbia. It's geographical situation is different from the geographical situation of the East. The effect of this tariff is going to be precisely what I have said. I say perfectly frankly, as I said at the beginning that it will give a large revenue and that incidentally it will give a measure of protection to the coal mining industry of British Columbia. Has my hon. friend ever heard of a tariff policy for revenue and incidental protection? Has he ever heard that expression before? I think he has. There is nothing strange about this proposition at all. It will give the Dominion Government a substantial revenue and it is not going to prevent the use of fuel oil. It certainly will not in the province of Ontario and it certainly will not in the province of British Columbia, but it will have a tendency towards bringing about a greater use proportionately of coal and consequently it will inure to the advantage of the British Columbia coal industry just as the tariff on coal inures to the advantage of the Nova Scotia coal industry, as it should.

Mr. A. K. MACLEAN: If the resolution passes now I suppose we can discuss these matters further when the Bill is brought down. This duty upon fuel oil opens a much bigger question than I think the members of the committee thought of. The tariff item was not explained at all by the minister in his Budget speech, and attention had not been directed to it specifically by anybody in this House until this evening. From the standpoint of British Columbia, it may be very undesirable to impose this duty; I do not say that it is, I do not pretend to know the subject very well.

Mr. OLIVER: The minister has referred to certain oils mentioned or alluded to in this item. Is gasolene subject to this duty?

Sir THOMAS WHITE: Gasolene is not affected in any way by the tariff changes proposed in the Budget.

Mr. OLIVER: What are the oils, calling them by their commercial names, which are affected?

Sir THOMAS WHITE: Fuel oil, and the other oils known as heavy distillates, such as gas oil, road oil, and petroleum tailings. These latter three are known under the comprehensive name of heavy distillates. The heavy distillates are used in what are known as internal combustion traction engines, which are largely used in the West.

Mr. OLIVER: I am sorry to say I cannot agree. Gasolene is what is used in these traction engines.

Sir THOMAS WHITE: Gasolene is also used. I am informed that about 1,000,000 gallons of the heavy distillates are used. The duty on these heavy distillates has been reduced from 2½ cents to half a cent a gallon. That is a very substantial reduction upon about a million gallons of oil.

Mr. OLIVER: That is the point I want to get at. Upon what quantity is the reduction made? My impression is that the minister has entirely over-stated the amount, because I am satisfied that a very large proportion of the traction power in the West is gasolene.

Sir THOMAS WHITE: I may say that gasolene is free, except for the war tax.

Resolution reported.

On motion of Sir Thomas White, the House adjourned at 11.03 p.m.

Thursday, March 16, 1916.

The House met at Three o'clock, the Speaker in the Chair.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

APPLICATIONS FOR PUBLIC WORKS.

Mr. TURRIFF:

Is it the intention of the Government to carry out the suggestion of Sir George E. Foster, that every application for a public work or a public improvement should go before a competent

board of engineers and business men, to be reported upon by them for the information of the Government, before it is passed and put into the Estimates?

Mr. ROGERS: Every application for a public work or a public improvement is reported upon by the permanent staff of the department before it is undertaken. The report in the first instance is made by the district engineer and is submitted by him for the approval and consideration of the chief engineer. Thereafter the application is considered first by the Treasury Board and afterwards by council.

REGINA MILITARY CAMP.

Mr. THOMPSON:

1. When was the military camp established at Regina, Sask.?
2. Who are the medical doctors who have been in charge of camp from commencement?
3. How many men are there in that camp?
4. How many deaths of enlisted men have occurred in that camp?

Mr. KEMP:

1. At the end of June, 1914.
2. The medical officers in charge are: Captains E. E. Meek, W. R. Coles, A. S. Gorrell, and E. B. Alport.
3. 1,320 all ranks, as on February, 1916.
4. Three deaths have occurred since November.

ARISAIG LIGHTKEEPER.

Mr. WILLIAM CHISHOLM:

1. Who is the lightkeeper at Arisaig, N.S.?
2. When was he appointed, and at what salary?
3. On whose recommendation was the appointment made?

Mr. HAZEN:

1. Rev. D. L. McDonald, temporary keeper.
2. February 14, 1916. $140 per annum.
3. Hon. E. L. Girroir and Mr. G. A. R. Rowlings.

CENSORS AND DECODERS AT LOUISBURG.

Mr. CARROLL:

1. What are the names of the censors and decoders at the wireless station at Louisburg, South Cape Breton?
2. What salary is each paid?
3. How much was paid for this service in 1915?
4. What was the occupation of each before being appointed as censor and decoders?
5. Are they to give the whole of their time to this service?

Mr. KEMP:

1. Censor, Joseph Macdonald.

Assistant censors: D. S. Hooper, S. P. Challoner, W. R. Tobin, Neil Ferguson.

Decoding clerks: John J. Bagnell, Charles McDonald, Stewart Macdonald, Frank Cook, Thomas Hayden, Michael J. Dowd.

2. Censor, $9 per diem; assistant censors, $7 per diem; decoding clerks, $3.50 per diem.

3. Joseph McDonald, $3,285; D. S. Hooper, $2,555; S. P. Challoner, $1,519; W. R. Tobin, $210, appointed Dec. 2, 1915; Neil Ferguson, $168, appointed Dec. 8, 1915; J. J. Bagnell, $1,277.50; Charles McDonald, $1,277.50; Stewart Macdonald, $1,277.50; Frank Cook, $959, appointed April 2, 1915; Thomas Hayden, $17.50, appointed Dec. 27, 1915.

4. Joseph Macdonald, barrister; D. S. Hooper, merchant; S. P. Challoner, journalist; W. R. Tobin, barrister; Neil Ferguson, merchant; J. J. Bagnell, insurance agent; Charles McDonald, law student; Stewart Macdonald, medical student; Frank Cook, clerk; Thomas Hayden, law student; Michael J. Dowd, accountant.

5. The entire time of these officers is at the disposal of the Government.

ANNANDALE BUOYS.

*Mr. HUGHES:

1. Did a man named James R. Robertson look after the buoys in Annandale or Grand River east harbour in Prince Edward Island?
2. If so, what did he receive per year for doing the work, and when did his contract expire, or was he dismissed?
3. Who succeeded Mr. Robertson, and what did he get for doing the work?
4. Did he get the contract by tender, or how was he appointed?
5. Who is looking after the buoys at present, what is he getting for doing the work, and how was he appointed?

Mr. HAZEN:

1. Yes.
2. $41.67 per annum. The contract terminated 15th June, 1912, but Mr. Robertson continued to maintain the service until 6th September, 1912.
3. William E. Swallow, of Annandale, $41.50 per annum.
4. The service was transferred to Mr. Swallow upon recommendation of Mr. A. L. Fraser, of Souris.
5. John J. Clarke, of Annandale, $33 per annum. Public tenders were invited last year, and Mr. Clarke's tender, which was the lowest, was accepted.

UNOPPOSED MOTIONS FOR PAPERS.

Mr. A. K. Maclean.—For a return showing how many medical doctors are employed by the Militia Department at Halifax, N.S.; the name of each, and their rank and pay, respectively; whether the entire time of all or any is devoted

to the militia service; when not constantly employed in the militia service, what is their daily period of service.

Mr. Carvell.—For a return showing whether the Government has received any complaints as to the manner of supplying clothing to the Royal Military College, or as to its fit, workmanship or materials employed, or as to any delay in furnishing the cadets with clothing; if so, from whom such complaints have been received; on what grounds were such complaints made; what form was the complaint in; what was the nature of the complaint; whether the Government is aware as to whether or not there has been dissatisfaction as to the fit, workmanship and materials employed, or as to any delay in furnishing the cadets with clothing; whether it is true, as alleged, that the late Commandant of the Royal Military College, Colonel Crowe, before he left, recommended a change of system for the supply of clothing, and outlined the features of such a system; if so, what were the details of the plan suggested; to what extent was the plan suggested by Colonel Crowe adopted, and if not adopted, why not; whether the present Commandant of the Royal Military College has made any suggestions as to a change in the system of supplying clothing to the cadets; if so, what were the changes which he suggested.

SHIPMENT OF SYRUPS FROM WEST INDIES.

On the Orders of the Day:

Hon. J. D. HAZEN (Minister of Marine): The right hon. leader of the Opposition made inquiry of me yesterday with regard to the service being rendered by the line of steamers, subsidized by the Canadian Government, which run from St. John and Halifax to the West Indies and I told my hon. friend that I would endeavour to get the information for him.

The Royal Mail Steam Packet Company is the company that runs this line of steamers between Halifax and St. John and the West Indies. I asked the Deputy Minister of Trade and Commerce this morning to read my right hon. friend's remarks and mine in yesterday's Hansard and send me a statement with regard to the matter. I have the statement here in the form of a letter from Mr. O'Hara, the Deputy Minister:

Ottawa, Ont., March 16, 1916.

Dear Mr. Hazen:

I have read in Hansard of yesterday the remarks of the Right Hon. Sir Wilfrid Laurier upon the subject of the shipment of syrups from the West Indies, and also your reply.

The information you gave to Sir Wilfrid is correct, but, in the absence of Sir George Foster I may add, that the Minister of Trade and Commerce has been aware for some time of the congestion existing in connection with the service of the Royal Mail Steam Packet Company to the West Indies. This congestion exists both ways. Neither Canadian exporters or importers are able to get the space they demand, and Sir George has been doing everything he possibly could to relieve the situation, even to cabling the Admiralty to release some of the ships commandeered from the Royal Steam Packet Company, without success.

The company states that 70 per cent of their tonnage is now in the hands of the British Government. Canadian exporters of lumber, flour, and other foodstuffs have been complaining of the small amount of space available, as have complaints come from Canadian importers and West Indian exporters of their inability to get sufficient space for sugar and molasses.

The difficulties are heightened by reason of the fact that there are no tramp steamers available for the molasses trade, which steamers always largely divide the traffic with the Royal Mail Steam Packet steamers. The Royal Mail Steam Packet Company are giving the best service Canada has ever had to the West Indies. They are performing the service under subsidy, with the vessels required, and so far as we know are doing all they can with the space at their disposal to accommodate the shippers, at either end, to the capacity required.

I may say that the Royal Mail Steam Packet Company have ever shown a sincere desire to meet this department in every request we have made of them, even though such requests at times exceeded the limits of their contract.

Yours faithfully,

F. C. T. O'Hara,
Deputy Minister.

206th BATTALION—SUPPLY OF KITS.

On the Orders of the Day:

Mr. LEMIEUX: I call the attention of the acting Minister of Militia to the following article which appears in this morning's Daily Mail of Montreal:

Made in Germany; Kits supplied to Local Battalion—Col. Pagnuelo expresses indignation over Kitts given the 26th Battalion.

Three hundred kit bags were received this week from the Department of Militia, Ottawa, for the men of the 206th French-Canadian Overseas Battalion, now being recruited by Lieut.-Col. T. Pagnuelo. Each kit was neatly packed and contained the usual soldier's toilet haberdashery, consisting of a military brush and comb, toothbrush, razor, service shirts, etc. But, to the surprise and disgust of the commanding officer, upon examining the articles it was found that many of them were marked. Made in Germany. "I was never more disgusted in my life," said Lt.-Col. Pagnuelo to a Daily Mail representative. "It is either another imposition of graft or the exercise of gross negligence on the part of the militia authorities in permitting unscrupulous manufacturers to unload German-made goods upon the Government, particularly for the use of Canadian soldiers. I only hope," added the colonel, "that my men will be given the opportunity of using these same razors on the despicable Hun, and it cannot be too soon to suit us."

Another prominent officer of high rank said that nothing could be more inconsistent in view of the present agitation to place a boycott on everything of German manufacture. "William the Brutal, by fair means or foul, and mostly foul, is out to place himself as conqueror of the world and as vice-regent of heaven," he said. "This is one way to help him to attain that end."

This paper is friendly to the Government, and I should like to know from the acting Minister of Militia if he can give us any information upon this matter, and what the Government intends to do.

Mr. KEMP: It would certainly not be the intention of the Government to buy anything made in Germany at the present time, and perhaps that policy may be carried out after the war. All razors that have been purchased, so far as I know, have been purchased either in Great Britain or in the United States. There are no razors made in Canada. No razors of German origin have been purchased, so far as we know. I shall have the matter looked into, and try to give my hon. friend some satisfactory answer.

INQUIRY FOR PAPERS.

On the Orders of the Day:

Mr. KNOWLES: I wish to call attention to an evident misunderstanding in the preparation of some papers asked for by the hon. member for Assiniboia. The hon. member asked the Minister of the Interior to lay on the table of the House the papers in connection with the proposals to collect the total amount of seed grain indebtedness last fall, and the subsequent arrangement to collect only 50 per cent of the amount, and also a copy of the instructions to the sheriffs. The papers brought down deal exclusively with instructions to sheriffs. The telegrams that passed between the Prime Minister and myself were dated on the 4th and 8th of September, while this file commences on the 23rd of November.

Mr. ROCHE: If the papers asked for have not been included in any other return that has been brought down, I will see that they are brought down.

PETITION FOR DISALLOWANCE OF ONTARIO STATUTE.

On the Orders of the Day:

Mr. E. LAPOINTE: Has a petition been received by the Government asking the Governor in Council to disallow an Act of the province of Ontario, being 5 George V, chapter 45? If so, has the Government taken any steps in the matter, and what are those steps?

Mr. ROGERS: I personally have no knowledge of such a petition having been received. If it has been received, it will be dealt with in the ordinary course.

MUNITIONS CREDIT TO IMPERIAL GOVERNMENT.

On the Orders of the Day:

Mr. E. M. MACDONALD: I see in various newspapers a statement attributed to the Minister of Finance that certain financial arrangements have been made by the banks with regard to a credit for the money necessary to ensure further orders for munitions in Canada. Would the minister tell the House just what has been done?

Sir THOMAS WHITE: In order to give my hon. friend and the House the information which he desires, it will be necessary for me to refer to a conference which I convened early in December last; I think during the first week of December. This was after the domestic war loan had been made. My hon. friends will recall that the domestic war loan was for a sum of $50,000,000, but that subscriptions were received aggregating over $100,000,000. It was before we had dealt with the matter of those subscriptions that I convened this meeting of representatives of Canadian bankers, in fact, of all the general managers of Canadian banks, for the purpose of taking up what then seemed to us to be a very important question by reason of prevailing exchange conditions, namely, the question of providing in Canada a credit for the Imperial Government for the purpose of paying for munitions and other supplies ordered in Canada.

It will not be necessary, unless my hon. friend especially desires me to do so, to refer to the exchange situation further than to state, as I have indicated, that the conditions were serious, and that it looked as if the Imperial Government, in the absence of such a credit, would not be able to place further orders for munitions, at least upon a large scale, in Canada. At that time the banks were engaged in the task, a very heavy task from the financial standpoint, of moving the western crop. After conferring with the bankers, I stated that, in view of the fact that the Canadian war loan had been made and would of course make demands upon the financial situation, and in view of the fact that further demands were being made upon the banks by the requirements of the crop movement, it appeared to me that public opinion would support the Government in allotting subscriptions to the amount of $100,000,000 of the domestic war loan. It was my view that we should take $50,000,000 for the purposes of our war expenditures, and that we

should set aside $50,000,000 as an Imperial credit here for the purpose of enabling the Imperial Government to finance the requirements of the Shell Committee or the Imperial Munitions Board in making its payments to manufacturers and others from time to time. My hon. friends in the House know that that policy was followed with very happy results, I think very happy Imperial results, because the announcement was received most favourably both in Canada and in the United Kingdom.

I stated further to the bankers at that time that this credit would last for a few months longer, and that, in the spring, I would again convene them for the purpose of seeing whether it would not be possible on the improved financial situation which would then exist, to establish a further credit here, or to adopt some expedient, such as the establishment of what is called dollar exchange, for the purpose of facilitating payments here by the Imperial Government, and getting over the exchange difficulty which still continued serious.

In brief, I may say that we have had several conferences extending over the last two or three weeks, and the result, I was able to announce yesterday that the Canadian Bankers Association, representing the several banks of Canada, had made an offer which I am informed is entirely acceptable to the Imperial authorities to establish a credit of $75,000,000 for the Imperial treasury here. The result will be that any difficulties, so far as financing in Canada is concerned—and when I speak of difficulties, I refer to exchange difficulties—have been overcome for some months at least, and that further orders will be placed in Canada, in due course, to the amount of at least $75,000,000, and, I am hopeful, to the amount of $100,000,000. In anticipation of the arrangement being concluded, because I have had information for some little time past, that it would likely be concluded, orders aggregating some $20,000,000 have already been received by the Imperial Munitions Board from the Imperial authorities.

PRIVILEGE.

On the Orders of the Day:

Hon. T. W. CROTHERS (Minister of Labour): I desire to rise to a question of privilege. On the editorial page of yesterday's Toronto Globe appears the following:

> When the Minister of Labour at Ottawa was reported as telling the House of Commons that "he was not sure Great Britain and her Allies would win the war," that "a German victory would mean a German Canada," that "he did not approve of everything done by the British House of Commons for the relief of disabled soldiers," and that "no one knows when this war will cease or how it will end," there was a general feeling of painful surprise. Mr. Crothers, having had abundant time allowed him for the correction of published reports, and having admitted by prolonged silence that he had nothing to plead in bar of condemnation, may fairly be held responsible for his peculiar point of view and mode of expression.

That is the first statement of the kind which I have seen or heard since the occasion referred to. It is a gross misrepresentation of what I said, although perhaps about as near the truth as the Globe generally gets when dealing with the utterances of political opponents. This statement, referring to me, says, among other things:

> He did not approve of everything done by the British House of Commons for the relief of disabled soldiers.

The intent being, apparently, to convey the idea that I was not in sympathy with disabled soldiers. That statement is entirely without foundation in fact, and is wholly fabricated. I made absolutely no reference in my remarks to the relief provided for disabled soldiers by the British House of Commons, as a reference to the unrevised edition of Hansard would clearly show. Concerning our own soldiers, I said, as appears on page 1709, Hansard:

> I was glad also to hear the remarks of the hon. member for North Oxford (Mr. Nesbitt), and the hon. member for Edmonton (Mr. Oliver) concerning the treatment which we should mete out to our returning soldiers.

Both hon. gentlemen spoke very sympathetically as to the men who might return from the front disabled or wounded, and took the position that we should leave nothing undone to enable them to secure an honourable livelihood, and to re-educate them if necessary; and, as will be noticed, I expressed my pleasure at the stand taken by those two hon. gentlemen from Oxford and Edmonton respectively. I said:

> I am very glad to know that every member of this House, and I believe every person in Canada, appreciates to the full the great sacrifices that our young men are making in fighting our battles on the fields of France and Flanders. They are making the supreme sacrifice there.

I pointed out that everything possible was being arranged for them on their return through the Military Hospitals Commission. I said further:

> We are not unmindful of the soldiers. Nothing is too good for the man who has risked his life for the British Empire... This commission

is composed of some of the leading men in Canada. They are giving their services. . . They are doing their very best for returned soldiers, and will continue to do so regardless of any adverse criticism.

I did not use the words attributed to me: "He was not sure Great Britain and her Allies would win the war." I was pointing out the necessity of our concentrating all our efforts towards the successful termination of the war, and among other things I said:

We are not, as some people say, simply rushing to the assistance of the Mother Country, as, of course, we did, but that we are fighting for the liberties we enjoy as Canadians, which would be sacrificed if Germany should win.

Mr. Pugsley: I think we all agree with you in that.

Mr. Crothers: I thought my hon. friend made some observations to the effect that he did not believe there was any danger in that direction.

The hon. member for St. John did not deny having said something to that effect, but he said:

Mr. Pugsley: I am sure we are going to win, that is all.

Mr. Crothers: I am not so sure.

The word "so" is left out of the Unrevised Edition. I said further:

No man knows when this war will cease, or how it will cease, and while we are in that position it seems to me we should concentrate all our efforts on the successful prosecution of the war, and not divert our strength therefrom in any way whatever.

These remarks were quite in accord with those made by Lloyd George, and many other prominent men in England on many occasions since the beginning of the war. The right hon. the leader of the Opposition on the 19th August, 1914, said in substance that there was danger at the front when he used the words:

We offer no criticism, and we shall offer no criticism so long as there is danger at the front.

Danger of what at the front? The danger now is no less than it was then, and in substance the right hon. gentleman said what I am criticised for saying, and it will now be in order for the Globe to instruct the right hon. gentleman's following in this House to depose him from the high and honourable position he now occupies.

Some hon. MEMBERS: Oh, oh.

Sir WILFRID LAURIER: I thought my hon. friend rose to explain, but he is attacking.

Mr. CROTHERS: I am trying to justify what I said by what was said by my right hon. friend, for whom I have the highest respect.

[Mr. Crothers.]

DOMINION LOAN—$75,000,000.

On motion of Sir Thomas White (Minister of Finance) the House went into Committee —Mr Rhodes in the Chair—to consider the following proposed resolution:

That it is expedient to authorize the Governor in Council to raise by way of loan, in addition to the sums now remaining unborrowed and negotiable of the loans authorized by Parliament by any Act heretofore passed, such sum or sums of money, not to exceed in the whole the sum of seventy-five million dollars, as may be required for paying maturing loans and obligations of Canada, carrying on of public works authorized by Parliament and meeting expenditures for general purposes authorized by Parliament.

Sir THOMAS WHITE: The object of this resolution is to replenish the necessary borrowing powers of the Dominion for the purposes mentioned, the present borrowing powers being only about $10,000,000 due to our large borrowings of the past year. The Appropriation Act of 1915 recites that there remains unborrowed and negotiable of the loans authorized by Parliament, for the construction of public works and other general purposes, the sum of $78,291,206.04. I propose to file, for the information of the House, a statement showing that the balance which can be borrowed under the authority of that Act is at the present time $10,897,425.88.

Sir WILFRID LAURIER: What was the amount authorized last year by the statute?

Sir THOMAS WHITE: The amount last year declared to be the statutory borrowing power of the Dominion for the purposes mentioned was $78,291,206.04. In brief, I might say for the information of the committee, that the £5,000,000 in March, 1915, and the New York loan of $45,000,000, were responsible for the reduction from the amount of $78,000,000 then remaining of the statutory borrowing authority to $10,000,000. I shall file a book-keeping statement showing that the balance I have named is correct:

Statement showing the loans authorized, amounts issued and redeemed and the balance negotiable under the several Acts of Parliament, on January 31, 1916.

Dr.

1915.			
April 1.	To balance		$78,291,206 04
	To amount of debt redeemed.		23,900 00
	To amount of withdrawals over receipts in savings banks.		1,915,653 17
			$80,230,759 21

	Cr.	
1915.		
By receipts from loans:		
Loan 1920-25, £5,000,000. ..	$24,333,333	33
Loan New York	45,000,000	00
By balance negotiable	10,897,425	88
	$80,230,759	21

Finance Department,
February 9, 1916.

The purpose of this resolution, as I have stated, is to replenish our borrowing powers which have become too low for our purposes. Hon. members will understand that financial conditions are unsettled and uncertain, and it is in the interest of the Dominion that we should be in a position to take advantage of favourable opportunities for borrowings as they arrive. I may state that last year the conditions, in their susceptibility to change, were almost kaleidoscopic, that a favourable opportunity would arise for a loan and that a week or ten days afterwards the conditions would be unfavourable. I think it is not necessary to enlarge upon that point. We are simply asking the House to enlarge, to the amount we deem sufficient, the present statutory borrowing powers of the Dominion Government. The House is doubtless aware that for several reasons it is inexpedient to borrow at present in the United Kingdom; if for no other reason the exchange situation, and the large cost of bringing money to this country if borrowed there. We are therefore limited practically in our borrowings to this side of the Atlantic; in other words, to Canada and to the United States. I am going to ask the House, if it will be good enough to do so, to accelerate the passage of this Bill in order that it may have its third reading to-morrow.

Sir WILFRID LAURIER: Will this $75,000,000 exhaust the amount which my hon. friend intends to borrow this year, or will he have to come back to the House again?

Sir THOMAS WHITE: My right hon. friend the Prime Minister will introduce, this year, as he did last year, a Bill to cover the estimated war expenditure of the Dominion for the coming year. My right hon. friend (Sir Wilfrid Laurier) will recall that the Prime Minister introduced a Bill authorizing an expenditure amounting to $100,000,000 last year. I am not quite certain as to the amount which will be asked for by the Prime Minister for that purpose for the coming fiscal year, but I should think it would be in the neighbourhood of $250,000,000, as stated in my Budget speech. The Dominion, for the coming fiscal year, will be confronted, using round figures, with a situation in which, from April 1, 1916, to March 31, 1917, we shall have to raise by way of loans in the neighbourhood of possibly $200,000,000 or $225,000,000. I am unable, of course, to state the amount definitely because the sum will depend upon the number of men who will be under arms by the end of the year, and the times at which they enlist. We have the Canadian market, and we have the American market, but we borrow in Canada for war purposes. This $75,000,000 will be part of the entire borrowing which I have mentioned.

Mr. W. F. MACLEAN: Is that the loan which is mentioned in the evening papers of to-day as being about to be completed by J. P. Morgan & Company?

Sir THOMAS WHITE: For some weeks past negotiations have been proceeding, but they have not yet been concluded, between the Dominion Government and a New York group of financiers looking to the placing of a loan there.

Sir WILFRID LAURIER: I understood the Minister of Finance to say what we practicaly knew already, that the Prime Minister will introduce a Bill providing for the war expenditure. I understand that, according to the arrangement which has been made, this war expenditure will be provided for by the British Government, but what I want to know from my right hon. friend is, if this amount which my hon. friend asks the House for now is all that he intends to apply for and to borrow, apart from what will be borrowed under the Bill to be introduced by the Prime Minister?

Sir THOMAS WHITE: No, this will not complete the entire amount. I think my right hon. friend misunderstood what I stated in regard to the amount which we arranged to borrow from the Imperial Government. In order to give stability to our finances, and to ensure that we should have ample funds for the purpose of carrying on our part of the war during the coming year, I made an arrangement with the Imperial Government whereby an authorized credit of £30,000,000 was provided, but I stated in the Budget speech that it was our object to rely upon that to as slight an extent as possible. We have our expenditures in Can-

ada, in the United Kingdom, and in France. We use a certain amount of that Imperial credit from month to month for the purpose of making our payments in the United Kingdom and in France, but I do not desire to draw upon it to a greater extent than is absolutely necessary because I should prefer that Canada should, as far as possible, pay her own way. Great Britain is labouring with unprecedented financial responsibilities.

While the Imperial Government is willing to give us this credit, should we desire to avail ourselves of it, it is the earnest wish of the Government that we should not avail ourselves of that credit to a greater extent than is indispensably necessary. Answering my hon. friend, then, in the light of what I have said, this will not be the limit of our borrowing, apart from our borrowings from the Imperial Government during the coming fiscal year; at least, in my view it will not, because I think that our expenditures for war will be such that we shall have to provide a total in the neighbourhood of $200,000,000 or $225,000,000. We shall take advantage of the Imperial credit when we find it indispensably necessary to assist in our financing, and particularly in our financing in the United Kingdom and on the continent of Europe. In my view we shall require at a later date—many months from now, possibly towards the end of the year—to borrow further amounts, possibly in Canada. My hon. friend from Rouville (Mr. Lemieux) asked me the other day whether I had in mind a domestic loan. My hon. friend is aware that it is a good maxim not to state what you are going to do in the matter of borrowing. I am sure he will recognize what is an obvious fact, that it was really a wonderful achievement for Canada to subscribe $100,000,000 towards the loan last year, and to me it is a matter of very great pride that notwithstanding the $100,000,000 which we took last year from the people's savings and from the financial institutions of Canada for the purposes of the war, the banks are now able to come forward and furnish an additional credit of $75,000,000. Now, that credit of $75,000,000 is a further reason why for the present at all events, it would in my judgment be inexpedient to bring on a domestic loan.

Mr. W. F. MACLEAN (South York): I do not want to hinder in any way the Minister of Finance in getting through this resolution, and the necessary legislation authorizing this loan. Three different financial propositions have been mentioned here to-day: an advance to the British Government by Canadian banks; the loan now under consideration, and a war loan to be submitted later to the House. I have discussed this question on one or two occasions since the war began, and the only objection I have to the minister's proposal to-day is that to my mind it is not on a sufficiently large scale, and further, under the present circumstances, I think we should adopt what I would call more modern methods of financing. I think we should re-organize our whole financial position. We should nationalize our currency to begin with, instead of having, as we now have, a bank currency. In the next place, we could adopt the system now in vogue in the United States, and in practically all other countries, of a national bank of re-discount. I believe that if we called on the New York market to-day —to my mind we should have done it before this—we could get a loan of $500,000,000 for the use of Canada, and we could get it better now, probably, than later on. We do not know what may happen in connection with the United Sstates market, and that is now the one available market for Canada. I should like to have seen the Finance Minister go to the New York market for a loan of $500,000,000, $250,000,000 of which could be paid to us in gold, and deposited in the treasury as a 25 per cent reserve against a possible issue of a billion dollars of national currency in case we should require that money in connection with this war. I believe that would have been a better way of financing under the present circumstances, and it would not have been over-straining the banks, as we may be doing now, in asking them and the Canadian people generally to finance Canada. At the present time there is a super-abundance of capital in New York. To my mind we should proceed on very large lines, and when the opportune time arrives—and I believe it has arrived to-day—we ought to avail ourselves of it. I should like to have seen the Minister of Finance re-organizing the currency of this country.

Sir WILFRID LAURIER: On what line?

Mr. W. F. MACLEAN: I would withdraw from the banks the privilege they now have of issuing a bank currency, and in place of that I would allow them to draw on the national currency in practically the same proportion. I would let them have money at one per cent, and grade it up. That would give them the same resources they have to-day under the system of bank

currency, and it would enable us to establish a bank of re-discount such as they have in the United States. I believe the Canadian banks would consent to be parties to a bank of re-discount very much on the line of the United States system. Practically every civilized country in the world to-day with the exception of Canada, has a national currency and a system of re-discounting. This method of financing is modern; it is sound; it has been justified by practice; and it gives a nation and a Government an elasticity of credit, and affords greater facilities and larger credit to the business of the country. I am convinced that it is not only sound, but in the interests of the country. Some may say that I am proposing what may be called rag money, but I do not think a national currency backed up by a gold reserve of at least twenty-five per cent would be a dangerous, a soft, or an inflated currency. It would be a currency and a system of banking equal to the growing requirements of the country, and equal to war conditions as they are. To my mind, because of the dislocation caused by the war, we cannot carry out the work of reorganization in Canada without an absolute reform in our system of financing. To do it right we must have a national currency. If we had that, Canada could help finance the Mother Country in her expenditures on munitions, and it would also bring us a lot of business.

We are moving along those lines now, but in a small, picayune way; we are asking the banks to finance a loan of $75,000,000 for the use of the Imperial Munitions Board to pay for orders for munitions. We should put that load, not on the banks, but on the credit of Canada as a nation and as a country having a line of credit, and if we had the courage to have a national currency and a bank of rediscount, we would take a great load off our banks, and we would be able to finance not only our own country, but the Mother Country. Canada's credit to-day is equal, if not superior, to that of every other country in the world, and if to-day we offer a loan on the New York market for $500,000,000, the same amount as the Franco-British loan, the Canadian loan would sell at a better price and at a lower rate of interest than did the Franco-British loan.

Mr. NESBITT: For what purpose would you borrow that $500,000,000?

Mr. W. F. MACLEAN: For the purposes of Canada. That is the very point I am coming to.

Mr. A. K. MACLEAN: Who would lend you money on such grounds?

Mr. W. F. MACLEAN: Who would?

Mr. NESBITT: England was borrowing money to pay for supplies produced in the United States. What excuse would you give for borrowing $500,000,000?

Mr. W. F. MACLEAN: I would borrow $250,000,000 as a 25 per cent reserve against a possible issue of national currency up to $1,000,000,000, if such an issue became necessary.

Mr. A. K. MACLEAN: What excuse would you give?

Mr. W. F. MACLEAN: I would give the same excuse as we are giving now in connection with the $75,000,000 which the Minister of Finance proposes to borrow, that is, for the general purposes of Canada. I am not going to give all the details of the proposal, but I am asking this House to finance on more modern methods and to use the national credit in order to have a national currency, and to lessen the weight on the banks and on our people by improving our banking system. The Minister of Finance speaks of the banks financing a loan of $75,000,000. I am told that orders for munitions of war to the extent of $1,000,000,000 would be placed in this country if they could be financed. Well, we are to have a loan of $75,000,000 now and the banks are to finance it. I do not quite know how they are to do that; I can only imagine, and perhaps my imagination is wrong in the matter; but it may be that the banks will be able to raise the money to pay for those munition orders that we have heard about by issuing a Canadian national currency against the deposit of British bonds with the Minister of Finance. Such a scheme, if it could be carried out, would be all right; but it ought to be carried out on much broader lines. We ought to start with a national currency and the creation of the Bank of Canada, as I would call it, which would be a bank of rediscount and which would rediscount for all the banks of Canada any paper or any securities that they cared to deposit with it. In other words, the Bank of Canada would be an organization for

4 p.m.

the emission of the national currency to the banks as they required it, on rules and regulations to be made by Parliament and by the Department of Finance, and it would also rediscount for the banks any securities that

they had to offer. In that way our banks would be largely relieved from the duty imposed upon them of financing Canada, not only for general purposes but for war purposes, and of helping to finance the Imperial Government in connection with the war.

My proposals may be radical, but I do not think they are, because they have been carried out elsewhere; and in discussions which I have had with gentlemen who have been in America in connection with the financial situation in Europe and the financial requirements of Great Britain, I have been informed that the best way to assist in the finanacing of the Mother Country and of ourselves would be to have the courage to adopt these two modern systems of banking which I am advocating. We have them in skeleton form now, but we do not have them on our statute book as an essential and integral part of the financial organization of Canada. We are to-day rediscounting in a way for banks, and we are using the national currency in order to aid various proposals, but we are doing it in a roundabout fashion. We ought to do it in a broad way, and the time to do it is now if the opportunity has not already passed. We could, however, place a large loan on the New York market; we could use a portion of that loan as a gold reserve for the issue of a national currency, and in that way we could permit our banks to devote all their energies and all their credits to the reconstruction of Canada which must ensue after the war is ended. There are two duties resting on our shoulders at the present moment; the first is to carry on the war and help the Mother Country in every way; the second is to take care of Canada and to see that there is abundance of money for the reconstruction of the country, and the surest and fairest way of providing the necessary money is by an issue of national currency, and by having a bank of rediscount. As long as I am in a position to do so, I intend to present to the people of this country the fact that this practice, which has been the practice in other countries, is the proper method of financing in Canada.

There is a demand in the Canadian West for a system of farm credit, and the same demand is pressing from the other provinces. We must give our farmers a system of credit which will be an improvement on the present system. At the present time we are making petty amendments to the Banking Act allowing our banks to extend their practice in the making of loans to our farmers; but the way to get credit for the farmers of this country and to put money at a cheap rate at their disposal for the development of their farms, the purchase of livestock and things of that kind, is to have a system of farm credit based upon the credit of the nation. The proposal that has been put forward in the United States, and that will be passed in an amended form, is based largely on the authorization of the United States Government to deposit its moneys and its own currency with land banks. No currency in the world to-day is equal to the national currency of the United States. If we had here such an abundant national currency, based, as I have said, on the necessary gold reserve, we could make advances to these land banks by way of national currency, absolutely secured in every case by mortgage. We could create an investment security that would probably run at 4 or 5 per cent; that would give our farmers abundant money at a lower rate. If we reform our currency system and our financial and banking system now, in this time of war we shall finance ourselves better than we are now doing; we shall do more for the Mother Country than we are now doing. Besides, by taking this course, we would help the general business of the country, strengthen the Canadian banks, and assist the Canadian farmers. The only argument that I have ever heard against the suggestion I make now is that it would strike a blow at the banks that now have a bank currency. I say it would not. Provision could be made whereby they would have just as liberal a currency as they have to-day; they would have to get it from the nation, and the nation would have security for it. We cannot succeed in business, competing with the United States, if we have not as good a banking system as they have. They are ahead of us in this respect; the reorganization that was effected within the last two or three years in the United States was the result of most careful inquiry by a commission appointed by Congress a good many years ago. After examining the history and methods of banking organizations all over the world, they came to certain conclusions, which have been embodied in the system now prevailing in the United States. They are carrying the system of re-discounting further now by providing an abundant credit for the farmer. I repeat that we shall not be able to

do our duty by our own country or by the Mother Country until we have as good a banking and currency system as they have in the United States. That we recognize the value of their methods is proved by our imitating them, though only in a half-hearted way: we are rediscounting, through the Minister of Finance, for the banks, but not as they do it in the United States. We are going to have some kind of system of farm credit for our farmers; I am glad to know that the minister has put himself on record in connection with that. To my mind, however, he has not come right up to the full opportunity that is before him, and I hope that he will widen his views in this respect, having regard to the enormous requirements of the country at the present time. We are only beginning to hear of these requirements. We have heard of two requirements of $75,000,000 to-day, an advance to the Mother Country for munitions, and a very large loan, in connection with which the Prime Minister is going to bring down legislation. Why not make a combination of the whole thing on the newest and most approved lines of banking and national finance? If he should do that, the minister would widen his reputation, improve the condition of affairs in Canada, and allow this country to be a still greater help to the Mother Country in the present hour of trial.

Hon. RODOLPHE LEMIEUX: I do not rise with a view to obstructing the adoption of this resolution. I have some confidence in my hon. friend the Minister of Finance; I think he is a well-meaning Finance Minister, and if he were left to his own good self, the administration of the Finance Department would be carried out in a manner satisfactory to the Dominion at large. Unfortunately, he has been frequenting certain company of late, and I fear that in consequence he may become somewhat given to unwise expenditure. I observe that this money is to be applied to public works and to meeting expenditures for general purposes authorized by Parliament. I am not forgetting, in the crisis through which we are passing, that I represent a farming community, where a dollar is a dollar and a shilling a shilling, and where the people have learned the four rules of arithmetic. In view of the fact that so many loans are cropping up, one after the other, the time has come for the Government to curtail expenditure. I repeat what I said the other evening when I had the honour to address the House on the Budget: we should have a round table conference, where the representatives of the two parties could unite in applying the pruning knife to the Estimates. While we are passing through this awful crisis, I think we can easily save to the country at least a quarter of a million dollars. The hon. member for South York is sailing under false colours. He is a radical with a false label. Interesting as his argument is for a change in the national currency, when the Minister of Finance is proposing to borrow more money from the United States I should expect from the hon. member for South York another argument than the one that he has just offered to the committee. I would remind the hon. gentleman of a certain issue of the Toronto World, which appeared at a time preceding the elections of 1911. I remember that it was during the dog days—July, if I mistake not—and, as it was very hot, my hon. friend was represented as addressing an immense meeting on the outskirts of Toronto, not far from his own constituency, with his coat off. He was arguing against that awful reciprocity pact, and he was telling the electors of South York that the Canadian people should not truck or trade with the Yankees.

Mr. W. F. MACLEAN: Never.

Mr. LEMIEUX: He was telling them that we should do nothing with the Yankees.

Mr. W. F. MACLEAN: Never.

Mr. LEMIEUX: To-day he has another theme. He suggests a change in the national currency, but he has nothing to tell my hon. friend, who was one of the leaders of the noble eighteen in Toronto who attacked so vehemently the last Administration because, forsooth, a pact was made between the American Government and the Canadian Government by which there would be the right to exchange certain natural products between the two countries. Nobody was compelled, according to the Fielding-Knox pact, to do business with the Americans. The Canadian people were left perfectly free to sell or to buy from the United States, but in the present instance, to my great horror, I find my hon. friend the Minister of Finance coming before this Parliament asking for legislation by which he will be authorized to borrow the sum of $75,000,000. It is not stated in the resolution that he will borrow it from the United States, on the New York market, but he has just stated in so many

words that he is not going to issue a domestic loan but that he is likely to get this money from the Americans in New York. I am simply shocked to hear my hon. friend, my honest friend, the Minister of Finance, coolly proposing that this Canadian Parliament should authorize him to borrow money from the Yankees. I am sorry that Old Man Ontario is not in the House to-day. I see many of the representatives from Ontario. What would they say if their electors were in this House to-day? Or what would their electors think if they were here this afternoon and heard this discussion, and heard the Minister of Finance proposing that Canada should borrow $75,000,000 from those awful Yankees in New York? We remember how one of the apostles of the Conservative party in the last election stated that with the Reciprocity Treaty the banking accounts of Canada would be transferred from Montreal, Toronto, and Winnipeg, to Chicago and New York, and that Canada would become the backyard of the United States and we also remember——

Mr. WILCOX: It was Taft who said that.

Mr. LEMIEUX: We remember what scorn was expressed by hon. gentlemen when the Taft letter appeared in which mention was made of Canada becoming an adjunct of the United States. Well, Sir, for the second time this fiscal year, Canada is going, by her representative the Minister of Finance, on the New York market to borrow money from the Americans. When my hon. friend made his loan of $45,000,000, I noticed some very harsh criticism in the financial papers of the country because of the way the loan had been underwritten in New York. It was said that the rate of interest was rather high for such a good security as the one offered by my hon. friend. It was stated that this loan would affect adversely other loans made by Provincial Governments or by municipalities in the Dominion. How is he going to underwrite this loan? Of course he may not think it wise to give the House the procedure he is going to follow, but, at all events, I think we should be made aware of this fact, whether or not tenders will be called or whether it is going to be underwritten by one commercial firm without others competing.

Sir THOMAS WHITE: My hon. friend (Mr. Lemieux) has touched on several matters, from reciprocity to the proper method of floating a loan. I have always observed that when a matter is much upon one's mind he frequently refers to it, and I am sorry to think that my hon. friend has not yet got over 1911. Time heals all things, but it does not seem to have been effectual in the case of the defeat on the reciprocity issue. There is nothing further from my thoughts than political controversy. Since this war broke out, I, in common with other members of the Government, have had what I might describe as fairly heavy responsibilities, and I have not had any heart for political controversy of any kind. Therefore I shall not discuss with my hon. friend the reciprocity issue, which has been dead and buried, in my view, for some years now, except to call his attention to this: He speaks of borrowing from the United States. My hon. friend knows, as every hon. member in this House knows, that Canada has bought from the United States for years past much more than she has bought from any other country. Our imports from the United States have been enormous. When we make a loan we simply buy money. We are not doing anything different in buying money from the United States from what we have been doing for many years in buying goods from the United States.

Sir WILFRID LAURIER: Hear, hear.

Sir THOMAS WHITE: My hon. friend says hear, hear? My hon. friend needs enlightenment also; but in the case of a man of the acumen and the discernment of the right hon. leader of the Opposition, it has always been a marvellous thing to me that he has never been willing to admit—although I suspect that in his heart of hearts he knows it—that the really serious feature of the reciprocity agreement was the fact that he was making the agreement at all, that he was fettering Canada in the matter of her tariff arrangements. I have never said, I never heard any one else say, that Canada should have no truck or trade with the United States.

Mr. LEMIEUX: Oh, oh.

Sir THOMAS WHITE: On the contrary, the whole history of Canada has been, as I have stated that we have—

Mr. E. M. MACDONALD: You carried on a bill board campaign.

Sir THOMAS WHITE: I certainly never saw it on a bill board or heard it from any one that we should have no truck or

trade with the United States. The fact is that we have been buying from the United States much more largely than from any other country. Therefore, there is no departure in principle in borrowing—which, as I have stated, is buying money,—nor do we, by borrowing this money, in any way fetter ourselves in respect to our fiscal freedom. There is no interlocking of tariffs, to use the term of the right hon. Prime Minister in what we are doing to-day, nor would my hon. friends have been defeated, if instead of submitting the reciprocity pact to the people, they had made the sole issue such a transaction as I now lay before the House.

Some hon. MEMBERS: Oh, oh.

Sir THOMAS WHITE: I said, "the sole issue."

Mr. GRAHAM: Reciprocity is the only issue my hon. friend fought us on.

Sir THOMAS WHITE: If my hon. friends' other sins had been added, the result would have been as certain as it was in 1911.

Mr. GRAHAM: My hon. friend fought us only on that one issue.

Sir THOMAS WHITE: Reciprocity—

Sir WILFRID LAURIER: He was all right on the others.

Sir THOMAS WHITE: My right hon. friend has a charm all his own. I may say that since coming to Ottawa I have discovered a great deal of the doings of the late Administration that I never even suspected.

Mr. GRAHAM: My hon. friend would learn a good deal about his own Government too, I suppose.

Sir THOMAS WHITE: To get back to our muttons—my hon. friend has asked me a rather leading question as to the methods of financing our loans. I may say to him that in my view, in the public interest, it is not of advantage to discuss that phase of the question at present, but I do think it is fair, in answer to my hon. friend, to give him my views with respect to the matter of asking for tenders. It is perfectly clear to me, and it is the opinion of the best financiers, that for large loans, loans to governments, loans running up to $25,000,000, $50,000,000, $75,000,000, or $100,000,000, good results cannot be obtained by the tender system. It has never been followed in this country by any Government. The policy adopted in the past is the policy which I have continued, and I believe it is the sound policy. We usually negotiate through the Bank of Montreal, and negotiation is carried on for a considerable period, and every precaution is observed to get a proper price for our securities, having regard to the market conditions. The loans are placed in the utmost good faith with the sole idea of doing the best possible for the Dominion. I think that has been proved with regard to all loans placed by this country; at least, I do not know anything to the contrary. The traditions of the Finance Department have been good, and I hope to hand them on unimpaired in that respect. Since this war broke out financial conditions have been most trying; they have been kaleidoscopic, as I have before stated. Transactions in time of war cannot be judged by transactions in the preceding period of peace. The minister finds himself in the position of simply doing the best he can.

My hon. friend has referred to the loan of $45,000,000 which we negotiated last August in New York. There was some criticism in the press, I think rather natural criticism, for this reason: Municipalities and provinces had been borrowing, or were about to borrow, and the community had not really become aware of the changed conditions which existed. I may say to my hon. friend from Rouville (Mr. Lemieux) that in England, when the British Government departed from the 3½ per cent standard, and got on the 4 per cent standard, and departed from the 4 per cent, and got on the 4½ per cent standard, all the municipalities were more or less disturbed, because it established a new rate for loans. Let us take the situation that existed when I placed the $45,000,000 loan in August last. In my opinion, that was one of the most useful loans that had ever been placed by the Government of Canada. It served Canada admirably well, and it served the Imperial Government admirably well, and paved the way for the $500,000,000 Anglo-French loan. The loan which we negotiated last August aggregated $45,000,000: $25,000,000 one-year notes, maturing on August 1, 1917; $20,000,000 two-year notes, maturing on August 1, 1918, coupled with a provision to take Dominion 20-year bonds at par, maturing in 1935.

I do not desire to go into details, except to say this: the rate of commission paid was exceptionally low, being three-quarters of one per cent. I do not know of any transaction that has been negotiated to bet-

ter advantage in New York since the outbreak of the war. It is only fair to say that the commission of three-quarters of one per cent was in respect of one and two year securities. In England, the ordinary rate of commission, as this House has been informed on numerous occasions in the past by myself and by my predecessor, runs from 2 to 2½ per cent upon what might be called permanent borrowing, not upon treasury bills. The situation in England last year was this: The British Government, in June last, was about to place the largest loan in the history of the world on the British market. We had arranged to be allowed to borrow in England, as I stated, I think, in my Budget speech a year ago, a total of—I am speaking from memory—I think, $80,000,000 for public works, and for the general purposes of the Dominion. When I say that we had been allowed to do so, I have in mind the regulation of the treasury department to which I referred in my Budget speech a year ago, and under which the British Government practically took possession of the British market for Imperial purposes. Without the consent of the Imperial Government it would not have been possible for any government or municipality to borrow in England. It was my purpose, at the time I obtained that consent, to borrow in England in the usual way, by issuing securities at such rates as we should be obliged to pay. Coming to April of last year, we had borrowed £5,000,000 of the $80,000,000 which had been placed, and in the ordinary course we should have gone upon the British market again in June and July. We had treasury bills to the amount of £3,000,000 maturing in June which had been negotiated the previous February. Two things happened: In the first place, the British Government were about to place the large loan of $3,000,000,000, and hon. gentlemen will realize what effect that would have upon the British market. The British Government had to go upon a 4½ per cent basis. In addition to that, the exchange situation was more serious than it had ever been, I suppose, since the Civil War. I could have put out two or three or four million pounds of treasury bills in Great Britain at 5 to 5½ per cent; I have the cables from the Acting High Commissioner, Sir George Perley, to that effect. But in order to get the money out here, I should have had to pay in August of last year 5 per cent on the transfer; that is to say, if I had put out treasury bills in London for one, two, or three million pounds, I should have been obliged to pay 10 per cent, because it would have cost me 5 per cent to get the money over here. In view of those conditions in the British market by reason of the flotation of that enormous war loan (which was a most conspicuous success), by reason of the exchange situation, and by reason of the further fact that we did not desire to be selling sterling exchange in competition with the Imperial Government, which was facing the exchange situation, to which I have referred, in making their purchases on this side of the Atlantic, we determined to venture in the New York market. Canada had never before made a loan in New York. I took the matter up through the usual channel, the Bank of Montreal, which acts as fiscal agent for the Dominion, and we carried the negotiation on quietly. No intimation reached the public until the loan was announced. The negotiation lasted for two or more weeks, and I desire here to pay tribute to Sir Frederick Williams-Taylor, the General Manager of the Bank of Montreal, who has acted for myself, as Minister of Finance, and for the Government upon many occasions.

Mr. LEMIEUX: No better man.

Sir THOMAS WHITE: I heartily agree with my hon. friend in that. The loan was negotiated to a point where we felt it was an absolutely fair transaction, having regard to the conditions that there existed. We enlisted the support of the strongest interests in the city of New York. There are two things that must be borne in mind in connection with every loan. In the first place, regard must be had to the terms, and that is a matter of negotiation. The terms should be judged by the prevailing financial conditions. The second feature to which regard must be had is the fact that it is extremely desirable that a loan should be a success, that is to say, that the loan should reach a premium. I need not say to the members of this House that it is very desirable to have a market in which your loans are a success. Therefore, that aspect of the matter must not be overlooked when considering the question of price. That loan was negotiated in New York, and it was one of the most useful loans ever placed by the Dominion Government. It was particularly useful having regard to the exchange situation prevailing last August, it was decidedly in the Im-

perial interest and it paved the way for the Anglo-French loan of $500,000,000.

To come back to the question asked by my hon. friend; it is a fact that a new basis was established for securities; that is to say, a new basis appeared to be established for securities, but in reality, as I stated to the general manager of the Bank of Montreal after the transaction had been concluded, the fact was that the basis had existed but it was not known that it did exist. The market had been an uncertain one. When bond houses would attempt to place securities, there was doubt as to what price should be paid, and there was a certain difficulty in placing securities, but when the true price was established by the Dominion flotation in New York, the air was cleared and people knew what they had to face in the way of interest rates, and they faced them. The result has been that there has been a first-class market in New York for the higher grade of Canadian municipal and provincial securities.

This loan of ours in New York paved the way for the Anglo-French loan of $500,000,000. It is true that there was some criticism in the press in regard to my financing in New York. As I stated, that was natural, because the rate of interest was higher than we had ever paid before, but after all, the sound sense of the community soon realized that the war had entirely altered conditions and that the price was a fair one under the circumstances. Any doubts that any persons may have had at that time were dissipated when, headed by the Lord Chief Justice of England, a man who had had wide experience in finance, and representatives of the British treasury, the Imperial Commission, including a great banker of London, came over to negotiate the $500,000,000 loan. What was the result? The result was that the arrangements which had been made by the Canadian Government through the Finance Minister and Sir Frederick Williams-Taylor were more favourable than the arrangements made by the Imperial Commission. I had forgotten to mention that the gentlemen whom I have named were accompanied by representatives of the French Government. That Commission, representing, as they did, the Imperial Government and the French Government, and pledging their joint credit, were not able to obtain as good an interest rate, or to negotiate on as fair a basis of borrowing, as the $45,000,000 loan was negotiated on. Of course, no reflection whatever is made upon the commission which negotiated the Anglo-French loan. I think they handled that very important matter with great tact and ability, but the facts had to be faced, and among the facts are the interest rate and financial conditions.

It is very illuminating to read, in the financial history of the American Civil War, of the action taken at first by the Secretary of the Treasury in the matter of floating loans. They did not believe, of course, that the war would last so long as it did, and they were naturally reluctant to face market conditions or to face the high interest rates which prevailed. They had in mind that before the war they could borrow money for 3½ or 4 per cent; they were reluctant to place themselves on a 6, 7 or 8 per cent basis, and some short date loans were negotiated, loans which fell due while they required to make further borrowings, and the result was that a very serious condition developed in their finances. The principle which I have been endeavouring to follow since this war broke out is this: I realized that there was a world financial condition which must be faced. You must face the facts. I have believed that this war is going to last a considerable time. I made up my mind that the true policy for the Government to pursue was to face the facts, to face the interest rate, and to avoid, so far as it was possible, short date borrowings. What I mean is this: In the first place, short date borrowings may provide for the time being, but you may need fresh borrowings for the purpose of the war; secondly, after the war there is always a period of so-called reconstruction, in which it may be very necessary that you should have available your full credit resources for the purpose of the nation in that period. No matter who may be the Finance Minister of this country, no matter what the Government of the day may be, it is the duty of the Minister of Finance at this time to face the existing situation and borrow for longer dates rather than for shorter dates in order that these short date loans may not mature during the remaining period of the war, or in the period immediately succeeding the war. I believe that such a policy will meet with the approval of this House and of the financial and business community.

In regard to the $45,000,000 loan, I would very much rather have made a five or ten-year loan, but the conditions at that time were such that I could not make a five or ten-year loan, and the result is that I had to make a one or two-year loan, and I had

to give an option which at the time I would much rather not have given. The transaction was carried out to the best of the ability of those who negotiated it and in the result I think it stands out as rather a notable instance of a loan, negotiated for the first time in a foreign market, on exceptionally favourable conditions having regard to the market situation at that time.

I have dealt sufficiently with the matter of the Canadian loan of $45,000,000 in New York. Now, I come to another matter mentioned by my hon. friend, and I think quite properly, and that is the question of economical administration. Since this war broke out, I do not know what policy the Government could have adopted that would have given better results along that line than we have achieved. As far back as a year ago last June—because this war was casting its shadow before us and financial conditions were very trying before the war broke out,—the policy was adopted of going ahead only with works under contract until conditions should improve. It is not the smaller expenditures that give us trouble, it is not the little wharf here or the little dredging yonder, or the customs house there, that add materially to the expenditures of the Dominion; it is the larger works which have been under construction. It might be asked: Why did you not stop last year the construction of the National Transcontinental railway? It would seem to be that public opinion would not support a Government in stopping that construction. It would only mean grave injury to the line and to all parts of it. We therefore could not shut down on the construction of the National Transcontinental; nor could we very well shut down on the Quebec Bridge. It is true we could serve notice on the contractors, and break the contract. But the plant is there, and the contractors would undoubtedly have an action for damages. Then there is the further fact that the spans of the bridge that are already in place would undoubtedly deteriorate. We therefore decided to continue the construction of the bridge. The Welland Canal was also under construction. The Welland Canal project was embarked upon with the consent of both parties in this House before the war broke out. It is under contract for construction, the contractors have their plant there, and contracts for certain sections have been let; but no contracts for new sections have been let since the outbreak of the war. I have heard both my right hon. friend the leader of the Opposition, and the hon. member for South Renfrew (Mr. Graham), in a discussion in this House before the war broke out, state that they were in favour of the enlargement of the Welland Canal, and also in favour of the Georgian Bay Canal. Therefore, I do not think that this Government can fairly be attacked for not having discontinued work upon these large enterprises, which take the major portion of our expenditures apart from the necessary expenditures on Civil Government. I assume that that is common ground. I do not know how this Government could have been more economical than it has been in regard to public works since the war broke out, for since about a year ago last June we have embarked upon no new works, except possibly some by way of repairs. We have discontinued new works, and gone on with works only so far as it was necessary to go on with them, and if hon. gentlemen opposite can tell me how we could have been more economical than that I should like to hear their suggestions.

There is another point. At the time this war broke out there was a very trying period for general business for many months. There was a profound dislocation and interruption of business in this country, and I say it was a good thing for Canada that we had a fairly large programme of public works under construction at that time, because it minimized unemployment. It seems to me it would have been most unwise for this Government, at that, of all times, to have discontinued expenditures on public works, and further unsettle the entire community. My hon. friend from Pictou (Mr. Macdonald), who I am sorry is not in his seat, referred the other night to increases in the public debt of Canada. I desire to say that no sound conclusion can be drawn from the mere fact of an increase in the public debt of Canada in any one year, or in any period of years. The real question is not whether the public debt has been increased, but whether the money borrowed has been wisely expended. I have never taken up this question of an increase in the public debt, except in defence of the Government when charges have been made, as they frequently have, that we had greatly increased the public debt. But, as the question has been raised, I desire, for the information of the House, and not in any controversial spirit, to lay upon the table the net debt of Canada from 1903 onwards. Speaking briefly, I may say that in 1903 the net debt was $261,000,000. In

1911 it was $340,000,000, or an increase of $79,000,000. I am not making any criticism as to that increase. In 1912 the net debt was $339,000,000. In 1913, the first year this Government was in power, the net debt was $314,000,000, or a reduction of $25,000,000. In 1914 the net debt was $335,000,000. In other words, on the 31st day of March, 1914, (that is to say, at the end of the fiscal year before the war broke out) the net debt of Canada was less than when this Government took office by $5,000,000. Then the war came on.

It is true that the net debt of Canada has increased for 1915 to $449,000,000. It is also a fact that, apart from the war, the national debt has increased by something over $50,000,000. But, the other night, when the hon. member for Pictou was dealing with this question, I referred to the fact that our revenues had been cut in half from August, 1914, the date of the outbreak of the war, onwards. Where we were getting $10,000,000 a month before, we got only $5,000,000 after the outbreak of the war. Maintaining our expenditures as I have already stated we did, for the purpose of minimizing unemployment in this country, and with our revenues decreasing until the tariff was brought down in February, only one result could accrue, and that was an increase in the national debt. But I do not believe that the fact of an increase in the national debt, by reason of conditions brought about by the war, is any just ground for criticism of this Government.

There is another point which, as the hon. member for Rouville has raised it, I may as well deal with now. Hon. gentlemen opposite, when Estimates have been up from time to time, have frequently repeated a statement which was made in the first instance by the hon. member for St. John (Mr. Pugsley). That statement was made in the first instance by the hon. member for St. John on March 3, 1916, and appears in the unrevised Hansard as follows:

> Mr. Pugsley: The hon. gentleman who is in charge of these Estimates (Mr. Hazen) will recollect that the Minister of Finance stated that there were items in these Estimates aggregating about $29,000,000 which the Government thought it would not be called upon to expend in the coming year. If the minister would state the items in this department that go to form part of that $29,000,000, it would facilitate the work of the committee.

That statement has been repeated by hon. gentlemen opposite time and again on the occasion of ministers taking up their Estimates. As a matter of fact, I said nothing of the sort. What I stated in my Budget speech was that it was the policy of the Government not to proceed with works not actually under contract. What the hon. member for St. John adduced from that was this. He said: Your total Estimates are $188,000,000; you say you are going to have an expenditure of $160,000,000; subtract $160,000,000 from $188,000,000 and you have a balance of $28,000,000, which you say you are not going on with; will each minister therefore kindly explain the items that will be embraced in that $28,000,000? I need not say to this House that that is an absolutely fallacious inference. The hon. member for St. John proceeded on the assumption that there was no difference between the Estimates and expenditure; that is to say, estimate of works that are being gone on with, and the expenditure that will be made upon them. It is well known that there are always lapses, and in order that the House may have full information on this point, and that there may be no repetition of a statement which is manifestly erroneously founded, without going back too far, I desire to call attention to the fact that in 1910-1911 the difference between the expenditure and total Estimates was $17,000,000; in 1911-12—the last year that my right hon. friend opposite was Prime Minister—the difference was nearly $30,000,000; in 1912-13 the difference was $35,000,000; in 1913-14 the difference was $41,000,000; in 1914-15 the difference was $46,000,000; in 1915-16 the difference was $32,000,000; and in 1916-17 the difference is $28,000,000, that is to say, the difference between the estimated expenditure and the Estimates actually laid upon the table of the House. Now the Estimates that have been laid on the table represent items which have been adopted by Parliament.

We have placed them in the Estimates because they have been voted before. The war has interrupted the progress of these works, and I laid down the policy of the Government in the Budget speech when I stated that it would not be our policy to go on, during the period of the war, with those works not actually under contract. The reasons, of course, are obvious: Our expenditures for war are so great, and the financial demands upon us will be heavy. Apart from that, there is no necessity today for furnishing employment, because at the present time it is very difficult to get help in this country for our industries.

Mr. LEMIEUX: Why did you keep those items in the Estimates?

Sir THOMAS WHITE: There is, and always has been a difference between estimates and expenditures. I desire to read a statement made by my predecessor, the Hon. Mr. Fielding, with reference to this very matter, because it is clear that the Opposition at that time had a habit, which seems to be followed by the Opposition of to-day, of raising the question of lapses. This question came up in 1907, and I have no doubt it has come up on almost every occasion on which a Budget speech has been delivered. Mr. Fielding, as reported in Hansard of 1907, volume IV, page 7859, said:

> Mr. Fielding: I assume they are. I observe my hon. friend is not content with taking the ordinary appropriations of the year but he takes everything that it is possible to take, everything that is in sight, everything that is not nailed. He takes the appropriations for the ordinary works, he takes the appropriations for capital account, he takes the appropriations for railway subsidies, he takes the appropriations for everything that can be thought of. Well, that is all legitimate enough as a statement of the appropriations of the year, but it is apt to convey a very misleading impression; it is apt to convey the impression that it is proposed to expend these moneys within the year. Now, as respects a considerable part of these moneys they are not expended within the year and are not likely to be expended for several years. There are millions in that vote to which my hon. friend refers, which have been included in his calculation two or three times. Take the railway subsidies. We are voting not one dollar of new railway subsidies this session but a revote of appropriations of former years. They have appeared in the calculations of my hon. friend, they have appeared in his budget of gloom at the close of each session; but they were not expended, they never added a dollar to the obligations of the Dominion of Canada. But now that they are being revoted they afford an opportunity to my hon. friend to include them again in his budget. I am afraid some of them will turn up in future years and he will be able to include them again, because it is quite likely that a number of these expenditures will not be made within an early time, though we would be pleased if they were. If we could be assured that every mile of these railways would be built within the next four years, far from complaining we would be pleased to have it so, because it would make for the general improvement and development of the country.

Now, my hon. friend from Pictou (Mr. Macdonald) happens to be here, and I made a reference to some remarks of his the other night. While I do not desire to repeat, what I said was in substance this.

Mr. MACDONALD: I would like to ask my hon. friend if he regards the remarks of the Hon. Mr. Fielding as being at all applicable to the present situation. Mr. Fielding was speaking about a number of appropriations for railway subsidies which certainly would not be paid until they were earned. If my hon. friend were asking for appropriations for railway subsidies, that would be a different matter; but we are not speaking about railway subsidies at the present time. Mr. Fielding was also speaking about public works in connection with which the amounts were not going to be spent in that particular year, but preliminary surveys were to be made, locations to be determined, etc. Does my hon. friend intend, under the items that he is including in these Estimates, to go on with the purchase of sites for public buildings, to employ surveyors for the purpose of making surveys for public works, and to do preliminary work of that kind? That was what the Hon. Mr. Fielding was referring to, and he pointed out that it was impossible to use the money until the preliminary work was done.

Sir THOMAS WHITE: I am sorry my hon. friend was not in when I was speaking before, because I discussed the matter pretty thoroughly. My hon. friend misunderstood the trend of my argument, which was this: The hon. member for St. John stated:

> The hon. gentleman who is in charge of these estimates (Mr. Hazen) will recollect that the Minister of Finance stated that there were items in these estimates aggregating about $29,000,000 which the Government thought it would not be called upon to expend in the coming year. If the minister would state the items in this department that go to form part of that $29,000,000, it would facilitate the work of the committee.

This statement of the hon. member for St. John has been made on several occasions in Committee of Supply. What I desired to point out was that I made no such statement as that attributed to me. The hon. gentleman (Mr. Pugsley) reached his conclusions in this way: he said: Your Estimates are $188,000,000 and your expenditures for the coming year, apart from the war, will be $160,000,000 or a difference of $28,000,000. Therefore there are in the Estimates items amounting to $28,000,000 which you are not going to expend. I pointed out, before my hon. friend came in, that that argument was erroneous for this reason, that with regard to those works, that are under contract at the present time, and which we are going on with, there will be lapses as there always have been in the past, and I read a statement to the House in which I showed that in 1910-11 there

was a difference between Estimates and expenditures of $17,000,000; in 1911-12, of $29,000,000; in 1912-13, of $35,500,000; in 1913-14, of $41,300,000; in 1914-15 of $46,000,000, and in 1915-16, of $32,000,000.

Mr. MACDONALD: Does my hon. friend then mean to say that in regard to the Estimates this year in reference to which he said:

New works would not be undertaken until the financial outlook became clearer—

he is not going to economize any more and not going to do anything different from what was done by the former Minister of Finance.

Sir THOMAS WHITE: I am sorry my hon. friend was not in the House, because I do not like to repeat all my argument, but I have so much respect for my hon. friend that I shall dwell on it a little.

5 p.m. When I stated the other night that I did not take the remarks of my hon. friend seriously, I said what I regarded was a delicate compliment to his intellect, because his remarks were, to say the least, strange. I stated what was the policy that we followed on account of the outbreak of the war and the enormous additional expenditure devolving upon the Dominion, and, I believe, it is a right policy. We determined that we were not going on with new work until conditions permitted. I stated, in my Budget speech this year, that while the war was on our policy would be not to go on with new works which were not actually under contract.

Mr. MACDONALD: Is that a new policy, or are you only doing what Mr. Fielding did?

Sir THOMAS WHITE: Mr. Fielding gave me nearly all the troubles that I have had during the last four or five years. I was stating before my hon. friend came in, that it has not been the little armoury here, nor the little post office yonder, nor the custom house in the other place that has given us any financial difficulty.

Mr. MACDONALD: You are not answering my question.

Sir THOMAS WHITE: I am answering. The vast expenditure of this Dominion has been the expenditure that we have had to make in connection with the Transcontinental railway, the Quebec bridge, and other public works undertaken by the late Government.

Mr. OLIVER: The Welland canal.

Sir THOMAS WHITE: I do not want to draw all the Liberal skeletons out of the closet and show them up here; I have had my troubles with them.

Mr. OLIVER: That is your own skeleton.

Sir THOMAS WHITE: When my hon. friend from Pictou had the audacity, with a perfectly serene countenance and without a blush, to accuse this Government of being extravagant——

Mr. MACDONALD: I will do it again.

Sir THOMAS WHITE: —when he knew that the great burden that is being placed on us has been in connection with work inaugurated by our predecessors and carried on by us, it is no wonder I said that I did not take my hon. friend seriously.

Mr. MACDONALD: Would my hon. friend explain the marvellous increase in the expenditures in the Public Works, Post Office and Immigration Departments, and in the other departments to which I referred the other night? If my hon. friend is an economist, he is an economist of a new type. My hon. friend might also get away from generalities and tell me whether or not his including these items in the Estimates this year is inaugurating a new policy, or whether it is only doing what Mr. Fielding spoke of doing in 1907.

Sir THOMAS WHITE: I think it is a new policy in this respect: We have stated that until conditions permit we are not going on with certain items that appear in the Estimates. I never knew Mr. Fielding to announce that; I think his policy was to go ahead with all the works in the Estimates.

Mr. LEMIEUX: Does my hon. friend think that the fact of leaving in the Estimates amounts which he says will not be spent does not affect the credit of Canada? Is it a matter of business to say: We ask this year $180,000,000, of which we intend to spend only $160,000,000? The money lenders obtain their information as to the outlay of the Dominion from the Estimates.

Sir THOMAS WHITE: I cannot imagine anything that would tend to strengthen the credit of the Dominion more than the statement that I have made. It is this: Parliament has voted many items in the Estimates the expenditure in connection with which we do not intend to go on with until conditions permit. It seems to me that

this is a strong position for the Government to take; that it makes not for the weakening, but for the strengthening of its credit. The trouble with the hon. member for Pictou is this: He is a man of fine intellectual quality, except when his intellect is clouded by partisanship. He has a temperamental partisanship, which on account of its intensity must be hereditary; I do not believe that he will ever get over it. If he were dealing judicially with a non-political matter, I should accept his conclusions, but when he attacks this Government he throws fairness and logic to the winds. My hon. friend says that we have increased the expenditure since 1911. Is there anything very wonderful in increasing the expenditure since 1911?

Mr. MACDONALD: Yes, when you have no increase in the population.

Sir THOMAS WHITE: Let us observe some of the tests by which national progress is evidenced. When this Government came into power the total trade of Canada was under $800,000,000. It grew to $900,000,000, to $1,000,000,000, and this year it is the largest in the history of Canada, $1,200,000,000. Look at the increase in the bank deposits, and judge the conditions in the country by that. My hon. friend referred to immigration. It is a fact that the immigration into this country in the years 1912 and 1913, until the outbreak of this war, was greater than it had been in the history of Canada. Hon. gentlemen opposite had engaged in great public works; they had engaged in the National Transcontinental railway. The corollary of their encouraging transcontinental railway building was that there devolved upon this Government a great deal of expenditure in connection with the development of ports—Halifax, St. John, Quebec, Montreal, Vancouver. We have had to make large expenditures for that purpose; we have had to meet enormous expenditures upon public works and undertakings inaugurated by the Government of my right hon. friend. The hon. member for Pictou says that our expenditures for 1914 were actually greater than they were in 1911. Well, that is not a very extraordinary matter. What about the expenditures of the Government of my right hon. friend in four-year periods? Could any one have the hardihood to say that the expenditure of the Government of my right hon. friend was no greater in 1911 than it was in 1907, no greater in 1907 than it was in 1903, no greater in 1903 than it was in 1901? That is the argument of the hon. member for Pictou. What are the facts? The total disbursement of the Government of Canada in 1900 was $52,000,000; in 1906, $83,000,000; in 1911, $122,000,000; in other words, an increase from 1906 of $40,000,000, or 50 per cent. I am not at this moment blaming my right hon. friend's Government for that increase, but it is a fact that that increase did take place. Yet the hon. member for Pictou says to us: you are blamable, you are chargeable, you are censurable, because your expenditure in 1914 was greater than it was in 1911. With all the expenditures which we had to meet upon the National Transcontinental railway and upon the other works that I have mentioned, and with the great development that took place in immigration and in all the business activities in this country, to me it would be a most marvellous thing if the expenditure had not increased. In any country the expenditures increase year by year. The hon. member for Pictou the other night challenged me to reply—he knew that he had the floor and that I had not—when he called attention to the growing debt. Well, would it not be a remarkable thing if, from 1911 to 1915, under normal circumstances, there had been no increase in the national debt? What about the increase of the national debt during the period of the Government of my right hon. friend? My right hon. friend would not say that the debt of Canada did not increase during his regime, because the facts would rise up in contradiction. For four years previous to 1911, the national debt of this country increased by about $70,000,000. The largest reduction in the national debt is to the credit of this Government in the year 1912-13. I do not believe it is a fair basis of comparison to say: you increased the national debt so much, and we did not increase it as much. It seems to me that that is not a sound argument, and my hon. friend should not put it forward. The real question is not whether the national debt has been increased; it is, what has the national debt been increased for?

Mr. MACDONALD: Is my hon. friend aware that his own leader characterized that increased expenditure under my leader as being so enormous and unjustifiable that it was evidence of corruption, and that he denounced that expenditure? If that logic was at all correct, and the Minister of Finance went on and increased the expenditure still further, what does he say that increase would be evidence of?

Sir THOMAS WHITE: Did the Prime Minister say it was evidence of corruption, or only prima facie evidence?

Mr. MACDONALD: What is the difference?

Sir THOMAS WHITE: I should think the increase in debt was so large for a few years, from 1907 to 1911, that the right hon. the Prime Minister of to-day (Sir Robert Borden) may have said it was prima facie evidence of corruption. Whether he said it was conclusive evidence of corruption, or not, I do not know; but certainly the fact remains that on the 31st day of March, 1914, the net debt of this Dominion was $5,000,000 less than when this Government took office, and for the four years before we came into office the increase in the net national debt of this country was about $70,000,000.

Sir WILFRID LAURIER: How much was it the following year?

Sir THOMAS WHITE: On the 31st day of March, 1914, the net national debt of this Dominion was $5,000,000 less than when we took office. I have explained to my right hon. friend what happened to the revenues of this country after the outbreak of war. I stated that our revenues had been cut in half, or were divided by three, after the outbreak of the war; that we deemed it a proper policy to maintain our expenditure on public works in order to minimize unemployment in the trying period following the outbreak of war; that it was the inevitable result of this that the national debt of Canada should be increased; and that it was a proper and a justifiable increase.

Sir WILFRID LAURIER: The reduction of the first year was only a prima facie reduction?

Sir THOMAS WHITE: The reduction of the previous year was a real reduction, not a bookkeeping reduction, and we have to our credit the largest decrease in the national debt, namely, $25,000,000, that was ever obtained in any single year in the financial history of the Dominion. But I am the first to say that this argument of: We increased the debt to so much and you increased it to so much is illogical. You can draw no sound conclusion from it, and I never use these statistics except in rebutting attacks of an unreasonable character, such as that made the other night by the hon. member for Pictou.

Mr. MACDONALD: What about the expenditures?

Sir THOMAS WHITE: I think I have sufficiently dealt with that subject, and my hon. friend will have his turn on some other occasion.

I come now to a matter that has been drawn to our attention by the hon. member for South York (Mr. W. F. Maclean). I always listen to the hon. member for South York with a great deal of interest—in a way he is a prophet.

Mr. W. F. MACLEAN: Thank God there are some.

Sir THOMAS WHITE: But there are prophets whose vision is clear and true, and there are also prophets who, as to some matters at least, are not necessarily true prophets—and then there are prophetesses like Cassandra, who was a true prophetess, although nobody believed she was a true prophetess. Whenever I listen to my hon. friend putting on his propaganda with regard to the currency I always think of the rainbow story. When I was a little boy I used to believe, in common with other boys, that there was a bag of gold at the end of the rainbow if we could only get to the end of the rainbow, and I used to look for that bag of gold, but I never found it. The propaganda which my hon. friend preaches in his journal, and on the platform, and in this House, is very attractive. It opens up a golden vista, money, plenty of it, $100,000,000, $200,000,000, $500,000,000, $1,000,000,000—put your arms into it, plenty of money for all national purposes, the purposes of Canada, or the purposes of the Imperial Government. And what is it? National note circulation, reorganization of the currency, an issue of $1,000,000,000 of note circulation with $250,000,000 of gold against it. These are the panaceas of the hon. member for South York. I believe that my hon. friend from South York, for whom I have the greatest respect and admiration, is quite unsound in the financial views which he puts forth. I feel bound to say that, because he has raised, at a critical time—at time when the people consider carefully every proposal put forward—what I regard as an impossible and impracticable and illusory financial proposal. My hon. friend says: Why not nationalize your currency; why not make the banks take Dominion note circulation and call in their notes? Well, if you did that, and it is possible to do it, it would mean that the banks would owe the Gov-

ernment in respect of the note circulation the amount of their present note circulation, and would put out Dominion notes to that amount. The fundamental mistake made by the hon. member for South York, if I may say so, is this: He does not realize that note currency, bank note currency or Dominion note currency, is only useful for circulation purposes; and that you cannot increase that circulation beyond a certain amount without in reality, making a forced loan without interest, either from the bank or from the community.

Mr. NESBITT: Hear, hear.

Sir THOMAS WHITE: The banks have a certain note circulation which varies from time to time according to the commercial needs of the community. It is pocket money in the community, till money, so to speak. If a man gets a thousand dollars or two thousand dollars in bills, he does not carry them in his pocket, but deposits them in the bank and, by the clearings the next day, the several banks that have issued the bills get back their notes and have to pay any balance against them in gold, or the equivalent of gold, viz., Dominion notes. My hon. friend says: Why not go to New York and borrow $500,000,000 or $250,000,000 in gold and then, to the extent of 25 per cent, make that gold a deposit against an issue of $1,000,000,000, and then we will have plenty of money for the needs of Canada, plenty of money for the Imperial Government, plenty of money to purchase munitions and carry on the war. The idea is so apparently feasible, I might ask him: Why does not the Imperial Government gather up a thousand million dollars of gold and issue four thousand million dollars of paper money? Why does not any Government do that. It is very easy to turn on the printing press, even if you have a 25 per cent reserve of gold, but nevertheless, to the extent that the notes are not required for the circulation needs of the community, your paper has been watered; to that extent you have made a forced loan without interest; and the inevitable result will be the depreciation of your currency. Let me give an extreme case. Supposing to-morrow the Dominion Government put out an issue of a thousand million dollars of paper. Who would take it? What would happen? The public would get it. They would take it in payment of services or for commodities, and they would deposit it in the banks. It would not be required for the circulation of the community, and the result would be that the banks of Canada would soon have tens of millions of dollars lying idle, not bearing any interest, and what would be the inevitable result? Why, a bank or a financial institution would say: We will take a bond because it bears interest, but we do not want a note, that is not needed for the circulation purposes of the country, lying idle and unremunerative in our vaults. And what would be the result? Gold would go to a premium and your note would go to a discount, and the inevitable result of a large issue of paper money, an issue of paper money beyond the circulation requirements of a community, would be depreciation in your currency, destruction of your credit, and the loss of the gold that your country has. There is no doubt about that whatsoever. To-day the circulation needs of this country are met by the bank circulation and by the Dominion note circulation. Increase it by $10,000,000 and you get redundancy; increase it by $50,000,000 and yet get a great redundancy, and your notes are at a discount, and your gold at a premium. If there is anything we desire to avoid at this time; if there is anything calculated to damage the credit of the Dominion in New York or anywhere else, it would be to state that we were going to put out an issue of $1,000,000,000 of paper——

Mr. W. F. MACLEAN: I did not say that.

Sir THOMAS WHITE:——against $250,000,000 of gold. My hon. friend suggests the putting out of $1,000,000,000 worth of paper against $250,000,000 of gold on top of the present Dominion note circulation, for the purpose of financing our requirements and the requirements of the Imperial Government. I think the result would be depreciation. At the time of the American civil war, the North had to resort to paper currency, and so had the South. What happened? I may say that Germany is resorting to paper currency to-day. The paper currency of the North went down to between 35 and 40, and it was fifteen years at least after the end of the civil war before the currency of the United States was restored to a parity with gold. What happened to the paper currency of the South? It became absolutely valueless: ten thousand would not buy a plug of tobacco. I stand, and intend to stand for sound finance, and I think that in this country, at this time, we should stand for sound finance, because it means so much to the credit of this country. A propaganda

of that kind at this time is, in my judgment a dangerous propaganda, because it holds out hopes to the people that cannot be realized. Speaking for myself, I do not know anything that would injure the credit of this country, that would prevent us from getting loans at a fair interest, that would impair our standing in the world more than an enormous issue of paper currency.

I come to another matter, my hon. friend's statement about federal reserve There is a great danger in attempting to compare the financial systems of different countries, unless you take all the circumstances into consideration. The United States system, before the establishment of the federal reserve banks, was a system of individual banks, not banks with branches, but individual banks; and on account of the requirements of the banking laws of the United States, the banks could only issue notes against national securities. These national securities were selling on an artificial basis, and the result was that it was not in the interest of the banks to issue sufficient currency to meet the needs of the country. That was the situation in the United States; it is not the situation in Canada. There is plenty of circulation here to meet the circulation needs of this country, but there was not enough circulation in the United States to meet the circulation needs of that country before the federal reserve system was created. For months after the war broke out, I kept in my office a comparative statement of the condition of the banks in Canada, of the British banks, and of the American banks, and I say that the degree of liquidity of the banks of this country was on all fours with the degree of liquidity of the best British banks. In other words, we adopt here the sound banking principles of Great Britain. Last fall, because I had read a good deal of the arguments advanced in favour of the establishment of a federal reserve system, I got a banker of this country to write to New York to ascertain officially whether the federal reserve banks in their discounting of paper of the banks of the United States were using any more currency than was required for the circulation needs of the United States. The answer was precisely what I had expected, namely, that the federal reserve policy is to issue only the amount required for circulation. In other words, the federal reserve banks of the United States occupy the same relationship to those individual banks in the United States, in the several regions, as the head office of one of our great banks occupies to its branches.

Mr. TURRIFF: Was that information obtained from a federal reserve banker, or from the Government?

Sir THOMAS WHITE: I asked for the information through the manager of one of the leading banks of Canada. I asked him to ascertain the facts from New York. There could be no other answer. If, as a matter of fact, the federal reserve banks were isuing more paper than the circulation needs of the United States required, the inevitable tendency would be for their notes to go to a discount. The thing is absolutely commonplace; it has happened frequently in the history of the world, and it will happen in the future.

Mr. TURRIFF: I noticed, just before that law was brought into force, that at a meeting in New York of over 2,000 bankers of the United States, every one of the bankers condemned the innovation of federal banks. But I understand that these banks have worked out well since, so that the views of the regular bankers on that occasion would not seem to have been very sound; not that I am advocating the same system for Canada.

Sir THOMAS WHITE: I think that the establishment of the federal reserve system in the United States was necessary, but, as I have pointed out, the situation there was fundamentally different from the situation in this country, because the United States had a system of individual banks. The head office of every large bank in Canada is, so to speak, a federal reserve bank qua its branches throughout Canada, because the head office takes money from one section of the country, where it is not needed, and transfers it to another section, and loans it out there. The result is that under our system, which is the same as the British system, the head office of the bank is the conduit pipe, so to speak, through which the money flows. Where it is not needed, it is transferred to a place where it is required. In adopting the federal reserve system, the United States adopted the precise principle of the British and Canadian banking system. The idea was to make the currency more flexible, and to take the money from one section of the country where there might be an accumulation, and make it available in another place by way of loans to the banks in that other place where money was needed. That is the underlying principle of the federal reserve

system, but you cannot compare it fairly with the Canadian banking system. You cannot say: we will take a certain system from the United States and transplant it here. In England they have a bank of re-discount. It is very desirable, but it cannot be created overnight; it requires years to build up. The only way to build it up, apart from the ordinary mode of growth, would be to have the banks of Canada take shares in some central bank, just as the banks of the United States take shares in the federal reserve bank in the several districts. But, as I have pointed out, the head offices of the banks in Canada discharge the functions that the federal reserve banks discharge towards the individual banks in their several areas. I do not think that it is necessary, therefore, at this time to consider reorganizing the bank system of Canada. We have a war on our hands; there are extraordinarily trying days both at present and to be apprehended in the future, and it does seem to me that the banking system of Canada is, at the present time, working fairly well.

My hon. friend from South York (Mr. W. F. Maclean) has referred to this credit of $75,000,000. He thinks the credit should not have been established, because it might impose too great a burden upon the Canadian banks. I desire to reassure my hon. friend. The banks of Canada have a very considerable accumulation of money upon their hands, and it is a matter of great pride that they are able to come forward at this time and offer such a large sum as $75,000,000 as credit to the Imperial Government. It is not a small sum; it is a large sum. Having disposed, whether satisfactorily or not, with the question of the issue of paper money, I desire to say this: From time to time plans are put forward for creating credit, or for creating money. I do not know of any way of creating sound credit, or of providing money, except the old-fashioned way of saving it. What we have to learn in this country—this Government does not need to learn the lesson—is the virtue of saving and not putting our faith in panaceas and nostrums. We must put our faith in individual savings, in saving the money that men have obtained for their services, in saving the profits that men have made out of business. That is the only sound, safe, orthodox way of increasing the loan funds of this Dominion. As far as Governments are concerned, the only way to finance them in time of war, is to reduce as much as you possibly can once your military expenditure commences to grow, your ordinary expenditure, just as we are doing.

Mr. LEMIEUX: Oh, well!

Sir THOMAS WHITE: Having gone that far, how much farther could we go?

Mr. LEMIEUX: You might have reduced it by $25,000,000.

Sir THOMAS WHITE: We have gone so far as to reduce the expenditure and to make available all the resources of the country for the purpose of the war and for what is necessary in getting the money for the war. I am not going to use the term "credits." You often hear people say: We do not want any money, but give us a credit. What does that mean? It means money, it means just what you and I mean by the word term "money," and the only way of providing money for the war is by taxation or borrowing and paying interest rates, and not by forced loans from banks and the community.

Sir WILFRID LAURIER: You are on dangerous ground there; think about your Insurance Bill.

Sir THOMAS WHITE: Well, the Insurance Bill is very fair legislation. The point I make is that you must keep up your revenues by taxation or you must keep it up by borrowing and paying the price. If you depart from that principle your policy will lead to evils which may be greater than war. I have spoken at greater length than I intended to on this matter, but in view of the argument of the hon. member for South York, the propaganda which he has put forward in his paper, and the expectations which might be raised by the suggested adoption of a policy which I believe to be unsound, although generally I agree with my hon. friend, I felt it my duty to deal with this question. I have stated the financial faith that is in me. Whether I have carried the judgment of the House or not remains to be seen.

Mr. MACDONALD: I want to say a few words with regard to my hon. friend's reference to me in the course of his speech. My hon. friend ventured to question some remarks which I made in the course of the Budget debate but he has not explained the statement which I made that he was responsible for the debt of the country being increased to the extent of $51,000,000 over and above the cost of the Transcontinental railway and over and above those

other things of which he complains. My hon. friend has always been putting forward as an excuse for these alleged burdens that he had to provide for the National Transcontinental railway. We cleared all that question up in discussing the matter the other day, but it might be as well to remind my hon. friend, and I do not think he has forgotten it, that he was a believer in the National Transcontinental railway proposition in 1904. He did not then find any reason for withdrawing from the leadership of my right hon. friend in front of me (Sir Wilfrid Laurier) in 1904 or 1908. My hon. friend stood behind my leader and the Liberal policy of constructing the National Transcontinental railway right through until he took his position upon reciprocity. When my hon. friend comes and holds up his hands in holy horror about the Transcontinental railway, he should remember that it was a proposition to which he gave his full support previous to 1911. But I do not intend to follow my hon. friend in his desultory discussion of such facts as I have absolutely proven. But, there is another point that he has not explained to the committee and that is why he should persist in keeping in the Estimates sums aggregating $25,000,000 which he says he does not intend to spend.

Sir THOMAS WHITE: They are not in.

Mr. MACDONALD: My hon. friend says: They are there and we are not going to spend them, but I am not going to take them out. Hon. members who are helped by their being in the Estimates have ventured to suggest that the war will come to an end perhaps, that the situation will be cleared and that between now and the 31st March, 1917, it may be possible to spend that money. The Minister of Finance knows that the commitments of this country at this moment absolutely prohibit the possibility of his undertaking any new works or of availing himself of any of these items which are included in the $25,000,000 if he is going to be a prudent Minister of Finance. My hon. friend reads for our edification a statement made by Mr. Fielding in 1907 in which Mr. Fielding went on to point out that the computation was made at the end of the year of the commitments and that it was improper to treat that the whole amount of money contained in the Estimates as being an absolute commitment because they might include a general vote for a project upon which preliminary expenditures, of necessity, had to be made, that these preliminary expenditures took time and that, as a consequence, once a vote was initiated for any particular purpose in a given year of, say, $20,000, or $50,000, that did not mean that that $20,000 or $50,000 would be expended in that year because preliminary work had to be undertaken.

Mr. BURNHAM: If that disproves anything at all in what way does it affect this?

Mr. MACDONALD: Nobody wants to disprove anything.

Mr. BURNHAM: You disprove your own argument.

Mr. MACDONALD: I am presenting an argument founded on the quotation and I am dealing with the Minister of Finance on broad lines. The Minister of Finance puts that forward as a justification for having this amount in his Estimates this year. My hon. friend knows very well that what Mr. Fielding said in 1906 or 1907 with reference to the conditions prevailing at that time could have no possible reference to the conditions that exist in this year, 1916, when you are up against the most trying situation in all our history. Yet my hon. friend for some purpose—and there can be no purpose unless it is political—in the face of this financial situation, as my hon. friend from Rouville (Mr. Lemieux) points out, persists in keeping before the eyes of the money-lenders, and of the parties to whom he has to go to obtain money, the idea that it is necessary for an expenditure of $25,000,000—

Mr. OLIVER: $28,000,000.

Mr MACDONALD:—$28,000,000 more than he says he intends to spend. Why does he keep it in the Estimates when he tells the money-lenders that he is not going to spend it. Can anybody find out why? If he is honest in regard to that statement —and I do not mean to impute any personal dishonesty to my hon. friend—what can it mean? If that amount is there for no particular purpose then my hon. friend should say so. If my hon. friend does not intend to spend it why does he keep it there? He keeps it there in order that political pressure may be exerted under this or the other condition and in order that it may be possible to send a corps of engineers into a particular county to run up and down, plant stakes and do certain things that the electors who perhaps desire to have a public work may have held

before them the alluring prospect that it is to be gone on with. My hon. friend knows it. It is there for no other purpose in the world. My hon. friend knows very well that his attempt to justify himself by a statement of Mr. Fielding is simply begging the question.

Sir THOMAS WHITE: Perhaps my hon. friend did not quite understand what I said. I stated that the hon. member for St. John had reached the conclusion that I had said there were $28,000,000 in the Estimates which it was not proposed to expend. By subtracting $160,000,000, the amount of the estimated expenditure, from $188,000,000, the amount of the Estimates, we get a balance of $28,000,000. Now, the error made by the hon. member for St. John was in assuming that the $160,000,000 of estimated expenditure coincides with $160,000,000 of the Estimates. Now, the point I made, and in reference to which I quoted Mr. Fielding, was that the $160,000,000 of estimated expenditure represents much more than $160,000,000 of Estimates of works actually under construction. There are some items in the Estimates—how many I do not know—which are not under construction, and which will not be gone on with for the present. But it is no such amount as $28,000,000. I think my hon. friend understands what I am driving at.

Mr. MACDONALD: What the minister says is that the amount may not be $28,000,000, but that there are included in the Estimates certain works which will not be gone on with.

Sir THOMAS WHITE: Until conditions permit.

Mr. MACDONALD: My hon. friend knows perfectly well that conditions cannot possibly permit of any new works being gone on with this year; I am speaking of the financial year, which begins on April 1. Will my hon. friend say that he can conceive of financial conditions under which he will be able to engage in new works this year?

Sir THOMAS WHITE: While I am prepared to make a general statement that we should not go on with works under contract until conditions permit, I would say to my hon. friend: that from time to time in the administration of this country it has become perfectly clear that it is in the national interest that a particular work, even at a time like this, should be gone on with. For instance, some work in connection with ports or harbours may be absolutely needed. There were one or two cases like that last fall. I recall the case of Bathurst, N.B., where some work had to be done in order that business might proceed. It would never do for me to say expressly and explicitly that this, that or the other item, amounting to so much, will not be gone on with under any circumstances. I am quite prepared to make a general statement, and I have already done so, but I cannot state explicitly that no single item will be gone on with, and my hon. friend knows it is unreasonable to ask me to do it.

Mr. MACDONALD: I do not think my hon. friend would stand much cross-examination if we had him before a tribunal where we could cross-examine him.

Sir THOMAS WHITE: I have no desire to.

Mr. MACDONALD: He really wants to keep these items in the Estimates. Cases such as he has referred to could be covered by Governor General's warrants, and my hon. friend knows it. Can my hon. friend imagine any supervening public necessity that would justify the erection of a post office at some of the places provided for in the Estimates?

Sir THOMAS WHITE: It is improbable but it is quite possible. Conditions in connection with rural mail delivery, for instance, might make it necessary. But I do not think it probable.

Mr. MACDONALD: If a provincial election were impending, would my hon. friend regard pressure from political friends as a supervening necessity? My hon. friend went out of his way to gratify his political friends in British Columbia, by imposing a duty on apples. Can my hon. friend conceive of his lending a soft ear to representations made by Mr. Bowser for certain public works in British Columbia, supposing he had to face the electorate in June? Does my hon. friend mean to say that he would turn a deaf ear to Mr. Bowser if he came along with any such proposals?

Sir THOMAS WHITE: In all my experience as Finance Minister I have never, in the four years I have occupied that position, had any such request proposed to me. My hon. friend's experience during the preceding Administration has evidently been different. He is altogether too suspicious. I do not believe that any expenditure by this

Government in any constituency in British Columbia——

Sir WILFRID LAURIER: Could save the Bowser Government.

Sir THOMAS WHITE:——or in any other province, would have any effect upon a provincial election.

Mr. E. M. MACDONALD: Other hon. gentlemen might disagree with my hon. friend. If my hon. friend has not had communications from the Government of British Columbia, perhaps his genial friend the Minister of Public Works has whispered in his ear. Perhaps he is the medium through which the Finance Minister is approached on these questions. As I was saying, my hon. friend would not stand a very close cross-examination on the subject of the Estimates. We are bound, however, to take him at his word. He says that he has pledged his word to the people from whom he is going to borrow money that there is in these Estimates a large sum which will not be spent unless a superlative public necessity demands it. My hon. friend forgets what he said to the hon. member for South York a moment ago. Then he preached the doctrine of economy; savings, he said. Is my hon. friend going to moralize in regard to banking and finance and economy, and at the same time not put his theory into practice? My hon. friend will not declare that conditions in this country are such as to require the expenditure of this money in the Estimates which ought not to be there at all. If this money is not to be expended, it should not be in the Estimates. My hon. friend has not given any warrant why it should be there, and I say it is only for the purpose of leading people in different sections of the country to believe that certain works are to be gone on with in their part of the country. Where is the minister economizing? Take the Post Office Estimates, for instance, to which reference has already been made. In 1911 the expenditure was $7,954,000, and in 1915 $15,900,000. This year my hon. friend proposes an expenditure along that line practically the same as last year, if not greater. Is he economizing there? How is he economizing?

Sir THOMAS WHITE: I do not want to interrupt my hon. friend unduly, but does he think that, on a bare statement that there was a post office expenditure of $7,000,000 in a certain year, and that four years after there was a greater expenditure, he has proved anything? My hon. friend compares the post office expenditures of 1903, 1904, and 1905 with that of 1916, and asks: Are they larger or are they smaller? What about the rural mail delivery? What about the multiplied activities of the Customs Department due to our large increase in trade, 50 per cent over what it was in 1911? What about our parcel post system, which was established by the late Postmaster General? My hon. friend is too intelligent not to know that he has no basis of comparison when he puts an expenditure of $7,000,000, in 1907, against a larger amount in 1915, and says that that means extravagance. It does not mean anything of the kind.

Mr. MACDONALD: When I add to my argument the fact that my hon. friend expends all this money and in addition has a deficit of $3,000,000 in the Post Office Department, I think that does mean extravagance. My hon. friend should cut his coat according to his cloth, and he should not spend in the Post Office Department more money than he receives from it. When, in addition to that, we remember that in regard to the Post Office Department it has been shown that there has been no economy at all, but a tremendous increase in the number of employees in the service throughout the country, my hon. friend should cease homilizing to the House about economy. As his leader said in regard to an expenditure, many millions less than what he is purposing to make this year, it is prima facie evidence of corruption. If that argument in reference to the expenditure referred to was true, it is ten times as true with regard to the expenditure which my hon. friend purposes making, and I apply the words of the Prime Minister, who is the leader of my hon. friend, and say that this expenditure which he is proposing to the people of this country to-day is prima facia evidence of corruption.

At six o'clock the House resumed and then took recess.

The House resumed at eight o'clock.

PETITION FOR DISALLOWANCE OF ONTARIO STATUTE.

Hon. C. J. DOHERTY (Minister of Justice): By your leave, Mr. Speaker, and with the consent of the House, I should like to say a word in answer to a question that was put this afternoon when the Prime Minister and myself were not present. The question was asked, I believe, by the hon.

member for Kamouraska (Mr. Lapointe) as to whether a petition had been received asking for the disallowance of recent legislation in the province of Ontario providing for the appointment of a school commission. The Minister of Public Works, who was leading the House at the time, answered that he had not personal knowledge of the petition. I desire to say that the hon. Minister of Public Works was not present when the petition came before Council. Such a petition was received; it came before Council, and it has been referred to the Lieutenant Governor of Ontario for any observations that he may desire to make upon it. That is the course which is followed whenever a petition is made for disallowance of an Act of the legislature of a province.

DOMINION LOAN—$75,000,000.

Consideration resumed in committee of the proposed resolution of Sir Thomas White to authorize the Governor in Council to raise by way of loan an additional amount not to exceed the sum of $75,000,000; Mr. Rhodes in the Chair.

The CHAIRMAN: Before the committee proceeds I feel it my duty to remind hon. gentlemen of the rule which governs the discussion of subjects such as we have before us. It is found in subsection 5 of section 13, and reads:

Speeches in Committee of the Whole must be strictly relevant to the item or clause under consideration.

The discussion this afternoon took a very wide range; so wide, in fact, that the greater portion of it was not, in my judgment, relative to the item under discussion. Various reasons contributed to the wide range of the discussion; I do not know that any useful purpose can be served by referring to them in detail. I trust, however, now that I have brought the rule to the attention of the committee, that greater care will be exercised during the remainder of the sitting to see that the discussion, if not brought within the strict letter of the rule, may be at least brought within the spirit of it.

Mr. W. F. MACLEAN: So far as my remarks this afternoon were concerned, I think they were germane to the question before the committee. I desire now for a few moments to reply to some of the observations that were made upon some of my remarks during the course of the discussion. I am as anxious as you are, Mr. Chairman,

to observe the rules and to further the adoption of the resolution now before the committee, but I think that I am entitled to reply to some of the arguments that came up this afternoon, and to the criticism of the Minister of Finance of some of the views that I expressed. I have the greatest respect for the minister. I have watched his career in this House; it has been a rapid rise; in the eyes of the people of Canada it has been the satisfactory development of a public man. But if there is one thing a Minister of Finance ought to avoid it is the temptation to think that he knows it all; the temptation, I will not say to be egotistical, but to assume the attitude that he is in possession of the gospel of the finances of the country. Above all, he ought not to patronize or to belittle the argument of an opponent.

Sir WILFRID LAURIER: Of a supporter, you mean.

Mr. W. F. MACLEAN: I put forward an argument here this afternoon that was not new, that was not unsound, for a system that has been practised in all the countries of the world; and I simply pleaded for the nationalization of the currency and the banking of the country in order that a proposition of the kind that he presented should be put in a better and broader shape to meet the necessities and conditions of the country. I advocated a national currency and a national system of banking. That is no new doctrine, as I have pointed out. It has been practised in every successful country in the world, and it is being practised to-day. I gave examples. For instance, what did they do in England when they were confronted with the very thing with which we are now confronted? Lloyd George, who was Chancellor of the Exchequer, at once practically nationalized the banking system of the country and made it a paper currency to a very large amount; I do not know how many millions of notes of the nation in denominations of less than £5 were issued. These notes are being used for war purposes, and they are paper money to all intents and purposes. Such a note is only the promise of three officers of the Government to pay the face of the note that has been issued. But this is said to be a doubtful system of financing, and we are told about "soft" paper money in the United States.

The minister talks about setting the printing press to work. If the United

States issued large amounts of paper currency in their time, and those notes went at a discount, it was because the United States, at the time of the Civil War, were not organized on a national basis in respect to banking and currency. They know better now, and the United States to-day has the best banking and currency system in the world. They are both based on the national credit, a national system of banking, a national system of re-discounts in connection with banking, and a national currency. When they experienced difficulty in the United States a while ago in moving the crop, the present secretary of the Treasury was enabled, by reason of the national credit and currency, to move all the crops of the United States and to compel the banks to reduce their rate of interest; and to-day there is plenty of money there. The United States has enacted this national currency and it has to-day the best banking system of any country in the world, because it has adopted a system of utilizing the national credit for the benefit of the nation.

Every nation in Europe to-day is financing in that way. Germany, we are told, is a country of paper money. They have trouble in Germany, not because the system of financing is wrong, but because German militarism and the system of governing the country by an aristocracy are wrong. The German system of financing is one of the best in the world, because it is based on the national credit. It is based on a great national bank, a national currency, and to some extent on a system of re-discount. England has a system of re-discount and it is freely used. Who was it that carried through the business community of Englnad when the war came? It was not the banks. Lloyd George called the banks in and said to them: The national credit is behind you, if you cannot take care of the bills now coming due. The banks were full of these bills, but he told them he was behind them; and while it was given out that the banks of England were enabled to take care of all the bills coming due, this was done on the credit of the Government and on the order of the Government, and partly by reason of the fact that the Government had recourse to the use of a national currency in the shape of those small notes that were issued, and an unlimited amount of which they have authority to issue. There has been no abuse of that power in England or in the United States; there would be no abuse of it in Canada. What I was contending for this afternoon in connection with this question of raising a great loan in this country was that, if we had organized or if we were now to organize a modern system of banking we would be in a much better position than we are to-day.

Sir WILFRID LAURIER: What is a modern system of banking?

Mr. W. F. MACLEAN: A modern system of banking is to nationalize the banking and not to make it a private monopoly. I understood the Minister of Finance this afternoon to say that a monopoly of the currency issue of this country should be in the banks. I say that the monopoly of the currency of this country ought to be in the nation, and it ought to be issued by the nation, and the whole credit of the nation should be used for the necessities of the country, both for the war and for other public needs. So I am not preaching an heretical doctrine, nor am I a false prophet.

The hon. gentleman suggested that perhaps I was like Cassandra, that I spoke something to the Trojans that they did not believe, but that yet proved to be true. The difference between the Trojans and the people at this time is that the Trojans did not know that what Cassandra had prophesied was true, while we do know, and the Minister of Finance knows, that the modern system of banking that obtains in Europe has been tried, is sound, and is in the public interest. And yet if anybody in this country suggests a more modern system of banking for Canada than we have had in the past, he is branded as a false prophet. I take issue with this argument, and I say that we can ourselves as a nation and by reforming our system of banking raise the money we want for the requirements of this war. The Minister of Finance says we should not bring on such a question now, in time of war. But that was the very time that Lloyd George and the British Government put it into practice.

Therefore I say that the Minister of Finance should have exercised a little more care in criticising the method I suggested, because he is practising in some degree every suggestion I made. He is using the national currency of Canada to help him out of the difficulties he has experienced; he is practising a system of re-discounts, and re-discounting for the banks. He issued a proclaimation to the banks of

this country and to others; he has even re-discounted propositions that did not come to him through the banks, although I take it that the law in the beginning was limited in that way. So he relies on a national currency in an emergency and he is relying on a system of national re-discount in order to aid the banks. Do you not see the great and practical result of this system of re-discounting? We think it is a discredit to a bank to re-discount; with us a bank that re-discounts is supposed to be in difficulty. The Bank of England re-discounts whenever it wants money, and so do all big banks, because every bank knows that if it can re-discount it has not to conserve and keep itself strong in reserves and liquid securities. As a consequence our banks cannot do as much for their customers at critical periods, because they say: "We must keep enough to take care of the securities we have out, and of our depositors, should they call for their money." But when a bank knows that in a financial stringency, and in a situation like what we have to-day, they can re-discount the paper they are carrying in a national bank, they have much more money for the use of their customers, for carrying on the trade of the country, and for giving the people money sufficient to carry on their business. That is my argument, and it is not a new argument. It is not a new doctrine; it is not a heretical doctrine. If there is heresy in it, then the Minister of Finance is practising it every day. He has never come forward and said he proposed to stop re-discounting in this country, or that he proposed not to avail himself of the national currency. He uses both. He also committed himself the other day to a promise that he would take up and bring forward in this House a system of credit for the benefit of the farmers. They have that in every other country except the United States, and they are going to take it up there. They have it in France, in Ireland, in Germany, in Italy, and in Russia.

To nationalize the banking system of Canada, and the currency of Canada, as I proposed here this afternoon, is, I maintain, directly along the line of the proposition before this House. I am not to be placed before the country as proposing paper money, as wanting to keep a printing press going. More and more, the world is being financed on credit, and the representation of credit is a document of some kind which comes from the printing press. But the credit is there behind it. Gold is becoming less and less a factor in the credit of a nation, of the individual and of a bank. Banks do not deal in gold; they deal in credit, and the more credit they have and can give to their customers, the better it will be for the business of the country.

Just one other thing, when I am talking of nationalization. Mr. Lloyd George not only nationalized the currency and put the State behind the banks, but he nationalized the railway system of Great Britain. The big thing for a nation in the day of trial is to nationalize things, to mobilize its securities for the benefit of the nation, and to mobilize its resources. If that is heresy it is only heresy in Canada I hope it is not heresy in this House. I hope that it is not a matter for ridicule that a member of this House should propose such modern, and, I think, such sound ideas of finance.

I am going to close with two very short statements. If we cannot have nationalization of our currency and of our banking, and the mobilization of our resources for the benefit of the country, we will be a second rate nation on this continent, for they have more of that in the United States than we have. So far as I am concerned, the day cannot come too soon which puts Canada on an equality with the United States and gives us as good a banking system as they have there. They have improved their system; it is much better than ours, and the proof of it is that there is abundance of money in the United States, the rate of interest is lower, and they are becoming the bankers, not of the world, perhaps, but of this continent. I take issue with any one who says that the banking and currency of the country should not be put on a national basis. If we cannot have it in this House it may be that the time has come to have a national party in this country that will bring about these things. We have a rather serious condition of affairs in this country, which may require to deal with it a national government and a national party, irrespective of old methods and practice. But whether that be so or not, I know that the people of this country, I know that the farmers of this country, whether in the East or in the West, believe in using the credit of the nation, the power of the nation, its resources, and its strength for the solution of the problems that present themselves to-day. The banks of Canada cannot save the Canadian situation; the nation must save itself, and it must do so on the lines I have suggested. The banks were not able to save the situation in England, and they have not been able to do it in the United

States, or anywhere else. But the countries using the national credit and the national currency, well secured by gold, have done so. It is all very well for the minister to represent me as saying here this afternoon that I propose to put the printing press to work and to send out a billion dollars' worth of securities. I did not use an illustration along that line, because I think we ought to have a gold reserve in this country to the amount of $250,000,000. When I spoke of issuing a billion dollars, I had regard for the present Dominion notes and the bank currency which, together, amount to more than $250,000,000, probably nearly $300,000,000. I do not want to misrepresent the minister, but I gather that he thought I was suggesting an inflated paper currency to be issued to such an extent that it would clog up the banks. I made no such proposal, but I ask him if he thinks that is likely to happen. Has it happened in England since they have adopted the system of re-discounting the state issue of notes? Has it happened in the United States? Are the banks clogged up there? I do not think so. They have a better system than we have. We have not got a national currency, nor a national system of banking, nor re-discounting, though perhaps we have made approaches to it. We have improved the situation, and I am urging the minister to go on in the practice he has already introduced, and not to belittle the practice which he has observed. When he talks about a proposal to issue notes of an unlimited amount, which would clog up the banks and reduce the credit of the country, I cannot see the appropriateness of his argument. Now that he has begun the system to which I have referred, I hope he will continue, and that he will come forward yet, not with a proposal to borrow $75,000,000, as in this case, with the Prime Minister coming along with a war proposal of $200,000,000, but to come forward, as the British Government did under the leadership of Lloyd George, with a large system, using the national credit, the national currency, and national banking. Then we would be able to clean the situation up in a much better way than is possible under the proposal now before the House or under the other proposals that are to follow.

Sir THOMAS WHITE: I certainly do not desire to speak in any way as one having authority, but I am, at this time particularly, very jealous as to the credit of this Dominion; and I say that I do not know anything more likely to injure, or to derogate from, that credit than a suggestion to increase our issues of paper money.

Mr. W. F. MACLEAN: Properly secured by gold. I disagree with the minister there.

Sir THOMAS WHITE: My hon. friend refers to the situation in Great Britain, and to the situation in the United States. I therefore think that my hon. friend has not been at the pains to understand the situation that exists in Great Britain and in the United States. Before this war broke out, my hon. friend knows, the currency of Great Britain, that is to say the circulation medium of Great Britain, consisted of Bank of England notes, which were issued only against gold, and gold and silver in the hands of the nation. The essential difference between the situation in the United Kingdom and in Canada was this, that in England so much circulation was coin, while in Canada, on the other hand, circulation was principally paper money—paper money issued by banks secured by their entire assets, and Dominion note circulation secured by gold. If my hon. friend would take the trouble to look up the facts he would learn that Great Britain has not inflated the currency beyond the circulation needs. Great Britain was desirous that gold should not be hoarded and should not be exported, and, to meet the situation which arose at the outbreak of war, the proper expedient was adopted, availed of only to a slight extent—

Mr. W. F. MACLEAN: To the extent of hundreds of millions of pounds.

Sir THOMAS WHITE: Millions is only a relative term, but the point I am making is that the note issue of Great Britain has not been increased beyond the circulation needs of the community. If it had to be so increased, only one result would follow —it does not make any difference whether it is Great Britain or any other country. If circulation becomes redundant then currency goes to a discount, gold goes to a premium and the exchanges of the world begin at once to run against that country. In time of war, if the stress is severe enough, nations are driven to expedients, and it has occurred many times in the history of the past that in order to meet the financial situation created by war—Germany is doing this to-day,—note issues are inflated. But there is only one possible result from note inflation, and that is rise in prices, depreciation of the currency, gold at a premium, and the exchanges of the

world beginning to run against the country which has inflated its currency. This was done in Germany. Germany has over-inflated its currency, and the result is the depreciation of the German mark on the exchanges of the world. Therefore, Great Britain's note issue did not mean that at any time Great Britain had issued notes beyond the circulation needs of the country. What has happened is that notes have gone out and gold has come in. Gold has been conserved. Notes have largely taken the place of gold as a circulation medium.

Mr. W. F. MACLEAN: That is what I propose we should do.

Sir THOMAS WHITE: As in this country, the fact remains that the circulation needs of Great Britain are well beyond the note issue of Great Britain. My hon. friend also speaks about the United States. He states that the banks of the United States, they having nationalized the currency, as he says, are able to extend credit for the movement of crops. The way that the Government of the United States assists in moving the crops is by adopting perfectly legitimate financial means. What are those means? They make deposits, just as the Dominion Government might to-morrow make a deposit in a bank, with the banks of the United States engaged in business connected with the movement of cotton and grain. That is perfectly legitimate finance. The treasury of the United States has a fund on hand.

Mr. W. F. MACLEAN: It issues national notes.

Sir THOMAS WHITE: But these national notes have gold against them. The treasury makes deposits by cheque with banks in the usual way, and these banks, just like any other bank, having large cheques on deposit from the Government, have further facilities, perfectly legitimate, for carrying on this added business during the crop-moving period. But that is a very different thing from the Government of the United States handing out to banks unsecured paper money, or secured only to the extent of 25 per cent. I do not mean to say that there is not some leeway as to the amount of circulation that shall be secured, but that is a question of degree. In this country, for many years, the leeway has been $22,500,000 in connection with Dominion notes; that is to say, that everything beyond that was secured in gold. But circulation to the extent of $22,500,000 was what was called free circulation. Why? Because, as a matter of fact, the Government could always count upon $22,500,000 being out in circulation among the people in one and two dollar bills. But the fact remains that if we in this country were to adopt any such expedient as I certainly gathered my hon. friend had in mind, namely, to issue a large amount of paper money for the purpose of providing credit here for the purchase of munitions, even if secured by 25 per cent of gold, one result must follow, and that is that the currency would become depreciated, gold would go to a premium and the exchanges of the world would begin to run against this country. I am perfectly certain that if $50,000,000 of additional paper money were put into circulation in this country there would be a marked redundancy in our currency. I have no desire to discuss this matter on anything but a fair basis. I submit these considerations to my hon. friend from South York because I am satisfied that he is wrong and that he has not investigated these matters in the other countries to which he refers sufficiently to enable him to understand them. There is a great deal of difference between a Government making deposits in a bank, of funds collected in the usual course of the Government's business, and a Government handing out paper money to a bank if the bank must take that paper money beyond the circulation needs of the country. We did in this country what they did in Great Britain, only we did it very much more quietly. After a war has broken out in Europe, the first action on the part of a Government, in order to conserve its gold, is to suspend the Bank Act. That only means that instead of paying out in gold they are ready to pay out a circulating medium. In this case the situation was met in England by the issue to a reasonable amount, having regard to the circulation needs of the country, of the notes of the treasury. The very fact that this announcement is made at once stops panic and gold is not taken out of the bank to any considerable extent. Action of this kind is only intended to avoid the consequences of panic. I have no possible objection to my hon. friend putting forward his views as to what he believes to be a needed reform in our banking system; nor do I say it is impossible to nationalize the banks of Canada if it is not thought desirable to do so. But my hon. friend has stated that instead of al-

lowing the banks to issue notes, he would have the Dominion Government issue notes through the banks allowing them, I gathered from what he said, one per cent upon the amount so issued. We have to deal with the existing situation. The existing situation is that the banks had notes out in circulation to the amount, last year, of $100,000,000. If it were desired to nationalize the banking system, issue Dominion notes to that amount and require the banks to get in their bank notes, the situation would be that the banks would owe the Dominion Government $100,000,000, representing the amount of the notes which the Dominion Government had deposited with them and they would have to issue those to bring in their note circulation. It is true that the Dominion Government would be owed this large sum of money, but the question arises as to what the effect of that would be.

Now, this is a large question, and as the chairman has observed, it is irrelevant; but it is an important question, and I do not like to leave the discussion in this House and before the country without expressing my views upon it. I stated this afternoon that as Finance Minister I consider it my duty to express the faith that is in me. My hon. friend has talked about world credits. The difficulty is we are apt to become confused in our terms. We hear about mobilizing resources, re-organization of our finances, of commerce and industry, and about establishing rural credits, and it is necessary to ascertain precisely what we mean by these terms. A rural credit does not mean anything more than this: that by legitimate financial methods a certain sum of money is placed at the disposal of the farming community to be availed of by way of loans. The fact that you call it a credit does not in the least alter the fact that what you are dealing with is money in the ordinary acceptation of the term. It would be possible for this Government, as for the United States Government, to establish a rural credit system, but that rural credit system, if sound, would have to be based upon existing sound methods of finance. That is, if rural credit societies or land banks were established, the United States Government could make deposits with those banks, or finance them by other perfectly legitimate methods, for the purpose of extending credits throughout the United States. I do not mean to say they have that in view, but that would be a feasible course, and would not be unsound financing, because the money would be advanced in the ordinary way. My hon. friend seems to have the view that the money would be advanced, not in the ordinary way, but by handing over United States notes to these societies and banks.

Mr. W. F. MACLEAN: I did not say anything of the kind.

Sir THOMAS WHITE: If my hon. friend did not say that, then his argument, as I understand it, is only this: the Government of the United States, or the Government of any other country could establish these credits by the ordinary sound financial methods of to-day. That is a very different thing from issuing paper currency. If I misunderstood my hon. friend, and he says that I did, I am quite ready to make amends, but I certainly did not desire to misrepresent him on this important question. But I say that to finance the Dominion Government in this stress of war, and to finance Imperial purchases here to the extent that my hon. friend has in mind—because he spoke rather slightingly this afternoon of a credit of $75,000,000—by an issue of Dominion notes secured by 25 per cent of gold, could only have the consequences which I mentioned this afternoon: there would be a redundancy in the currency, there would have to be a forced loan without interest, the notes we depreciate, exchanges would run against this country, prices would rise, and it would lead to many evils that are well known to students of economic history.

Mr. W. F. MACLEAN: It did not happen in the United States.

Mr. MICHAEL CLARK: I will only keep the committee a few minutes, and I hope I shall keep well in mind the suggestion which you, Mr. Chairman, with great pertinence have given to this committe. If I may be permitted I should like to say that in doing so you have given one more proof, if it were needed, that at the present time, both as to the speakership and the chairmanship of committees, we are particularly well-officered. I think the committee is indebted to my hon. friend from South York (Mr. W. F. Maclean) for having drawn from the minister a very lucid explanation of what I have always understood to be sound views on currency. I hope my hon. friend from South York will not be offended if I say the minister has at the same time demonstrated that when a minister has a difference with a

follower the minister does not necessarily need to know it all, to know more than his follower.

I should like to be permitted very sincerely to congratulate the minister upon having got this loan, as well as the previous loan, from the United States. I think in doing so he has added another item to the very large obligation which he has placed the country and the Empire under to him since the war began, an obligation which will be recognized not only by the present, but by future generations, for the assiduity and, on the whole, the very great financial ability which he has brought to the discharge of duties which have been very onerous.

The committee will perceive that I am inclined to receive a returning prodigal in a spirit very different than that of my hon. friend from Rouville (Mr. Lemieux). The hon. member from Rouville seemed to be a little resentful towards the minister because he had gone to the United States for a loan. Personally, I feel within me the movings of the parent in Scripture; I would feel inclined to fall on the minister's neck, and if I were a wealthy man I would kill the fatted calf for him, and put a ring on his finger and shoes on his feet, and dress him in the best robes. I am not angry with the minister for doing in his peculiar way what he very much objected to our doing five years ago. The minister knows financial matters so well that he must know he is doing in his way what we intended to do five years ago in a rather different way; and I am bound to say that I think our way was the better one, and I will explain to the minister why.

It is true that there may be a good deal of soundness in the minister's view that the tariff is a domestic matter. He expressed himself in that way the other day, though I am bound to say that I am not sure he is quite clear himself as to what he believes about the domesticity of a tariff. He says at one time that a tariff is a domestic matter, and at another that it should not be interlocked, and in the very speech in which he used both these expressions he showed a disposition to do something very like interlocking with the tariff, because while he objected strenuously to interlocking with the United States through the tariff, he spoke of cuddling up with a whole number of countries. I think that is the verb my hon. friend used. He has a strange choice in verbs, but, as far as I understand the meaning of them, I do not think there is much difference between interlocking and cuddling up. Of course, Mr. Chairman, I am speaking purely about this loan, or some allied subject. So I say quite sincerely I am not quite sure where the minister is on this subject of the interlocking of tariffs.

Just one point further. The minister said that in those loans we were buying money. I think he was a little loose in his expression. He did not mean us to interpret that literally, or we should be exchanging Canadian dollars for United States dollars, and that would not get us very far in the way of beneficial exchange, or in the way of a loan. What he really meant was that we were getting credit. When a man goes to a store and gets goods without money, but gives his I.O.U., he is getting credit. I think the minister agrees with me that he used that expression in a loose way. I know he agrees with me, because so far as I have been able to follow economics and his mind, I know that he has a good deal of sound economic knowledge, but the trouble is he has been a little hurt by his associations of recent years. The minister is getting credit. Now, according to an exposition which he gave last year, equally as sound as that which he has given us on currency to-night, in making this loan in the United States, we are arranging to buy more goods from them. That is what will happen. The minister told us so last year, and he gave another of those expositions which are very much needed, at least by a number of his followers. We are going to increase the quantity of goods that come from the United States to Canada by means of this borrowing, of which I thoroughly approve under the circumstances in which the country and the Empire find themselves at the present time. Now, it comes to this as between the two parties, that we on this side wanted to increase our business with the United States by a treaty, and that treaty would have increased the business both ways; but the minister is increasing our business with the United States by a debt, and he is increasing the business only in one way because he is leaving the debt to go out later with the interest added on. In my opinion, our method is better than his, although I say, in all candour and fairness, that what the minister is doing is necessitated by the condition of war in which we find ourselves.

I did not rise merely for the purpose of making this comparison, nor largely for that purpose; I want to point out to the

minister, what no doubt has occurred to himself, that by increasing the quantity of goods that are coming from the United States to Canada, we are increasing what is already a very large so-called adverse balance of trade as between the United States and this country. I am speaking from memory, but I think I am correct in stating that that adverse balance of trade in the last fiscal year amounted to $123,000,000. The minister is increasing that adverse balance by borrowing in the United States, and that is a serious matter. I do not think I attach as much importance, as do some hon. gentlemen on the other side of the House, to this doctrine of an adverse balance of trade. I am bound to make that concession against my own argument, but the point is a strong one for hon. gentlemen opposite, and one which they ought to recognize. If an adverse balance of trade is a bad thing—and it must be bad when the United States has the balance against us—then that bad thing is being made worse by the present procedure of the minister. Now, I do not blame the minister at all; I simply want to make a suggestion to him. Does he not think that he was a little hasty in leading his party, under those circumstances, to vote once more against free wheat? I put this question seriously, not for party purposes at all, because I am in the same position as the minister in regard to these old quarrels and controversies. I do not care about the thing known as reciprocity; what I want is the thing known as trade. I do not care about treaties—my hon. friend the Minister of Trade and Commerce (Sir George Foster) is always desirous of making treaties, and he made one not long ago with the West Indies. Well, we have done less trade with the West Indies ever since he made that treaty. What my hon. friend the Minister of Trade and Commerce should do is to make trade, not treaties. What is the good of a treaty to any one? It is the trade that is to the advantage of the country. I do not care whether the word "reciprocity" is mentioned again while I am in this House; what I want is the trade, and I would like the trade to go both ways.

9 p.m.

Would it not be a good thing for the minister and the Government to be a little less hasty with this growing adverse balance, which must be breaking the hearts of hon. gentlemen opposite? Would it not be a good thing, under the circumstances, to give the country free wheat, and in that way enable the farmers to sell their wheat to the United States at the same time that the minister is arranging by this loan for the importation of more goods from the United States? I leave that thought with the Minister of Finance and with the Postmaster General (Mr. Casgrain), whose face has assumed a very unaccustomed look of gravity while I have been putting this point to him. Now, Sir, I hope this is all pertinent to the question of the loan.

The CHAIRMAN: I hope so.

Mr. CLARK: While the balance of trade is being aggravated against us from the United States, I have another remark and another suggestion to make. It is a curious fact, if my memory serves me aright, that in the last fiscal year, when we bought $123,000,000 worth more from the United States than we sold to them, we sold to the United Kingdom $121,000,000 worth more than we bought from them. In the language of baseball, we allowed the United States to put one over us in order that we might put one over Great Britain. Well, that is a very horrible state of affairs to have been brought about by an imperialistic and patriotic party such as I see opposite to me, to allow the United States to perpetrate this thing against us so that we might perpetrate a similar horror against the United Kingdom. It ought to give every man on the right side of the House the shivers—but such is the fact. I will repeat the figures for the sake of my hon. friend the Minister of Public Works, because I am not sure that he is very good at figures. We bought from the United States $123,000,000 worth more than we sold to them, and during the same year we sold to the United Kingdom $121,000,000 more than we bought from them. It appears to me a strange course to be followed by a wise Minister of Finance of an imperialistic party, a party which came into power pledged to increase the business of this country with the United Kingdom, and if possible almost to destroy it with the United States. I know the minister did not know about that placard, but the placard was hung over the streets of Ottawa all the same—no truck or trade with the Yankees. This party came into power pledged to increase our trade with the United Kingdom, within the Empire, and to decrease it or at any rate to frown upon it with the United States. They have increased it with the United States, and they have diminished it within the Empire.

Now, what should they have done? A

wise minister—I was going to say an all-wise minister, but my hon. friend does not know it all or I would not have to tell him now what I am telling him; he does not practice what he knows anyway, and this would be a much better world if we all did as well as we know, and my hon. friend the Minister of Finance is one of the greatest sinners in that respect, because he knows a great deal more than he practices, and I want to bring his practice up to what he knows—he knows that at the very time he should have given free wheat in order to increase our exports to the United States, so as to change the adverse balance into a favourable one, he should not have put an extra 5 per cent duty against goods coming from Great Britain, but rather he should have reduced the tariff against that country, or have rubbed it out altogether, so as to get more from them. Then we would have been taking some steps to have prevented the United States from putting one over us, and we should have ceased, especially at this time when the balances are so difficult for the British Chancellor of the Exchequer, to embarrass the Old Country to the extent they are doing by exporting so much more to her than we are importing from her.

I am sure the Minister of Finance will admit that I have not taken up much of the time of the House and I have not spoken in a controversial spirit. I am prepared with him to let by-gones be by-gones about words. If he will never mention reciprocity again, neither will I. But he must meet me half way; while he gives up the word, he must help me to establish the trade; that is the great thing. It is no joking matter, Mr. Chairman, because this money that we are borrowing will have to be paid back. Individuals may escape debts, but a respectable nation like Canada cannot. We shall have to pay this debt back, and we shall have to pay the interest on it. The minister has tremendous problems before him in the immediate future; I do not want to aggravate them by wasting his time. I hope that the minister will not make a long speech in reply to the remarks that I have made. I want him to think very seriously, almost prayerfully, about what I have said, before he makes answer at all, because when his answer comes I want it to be the right kind of answer. I want to bring home to him what is already very close to him, the terrible problems that he has to face in the future of this country in the way of paying these debts and of putting our trade upon a proper basis. Let him become a free trader as he used to be in his youth. They say that a man is very rarely wholly untrue to his early beliefs, and I have great faith in the elasticity and breadth of mind of the Minister of Finance. If ever a national party is formed in this country, with all my respect for the member for South York I do not think he will be the man for that party; I think the Finance Minister will be the man. And, if he will get back to the ideas of his youth and not go on doing this horrible, excessive trade with the United States and do more trade with Great Britain, I shall be one of the most humble of his followers. I hope that he will take into consideration, anyhow, the horrible state of the balance of our trade that has come about since he came into power. I hope that he will consider the matter and adopt as much as he can of my suggestion.

Mr. GLASS: The remarks of the hon. member for South York (Mr. W. F. Maclean) have been very interesting; equally interesting has been the answer of the minister. The hon. member for South York says that the banking system of the United States has been brought to a state of perfection. It is a fact that during the last three years the United States has spent over $50,000 in making investigation of the subject of rural credits. After careful investigation, it has been found that the ordinary banking system of that country fails to meet the needs of the farming community. Last year several Bills were introduced into the United States Congress, but none of them were sufficiently comprehensive to be finally adopted. The matter was left with a joint committee of Congress and the Senate last year to devise and present a Bill for adoption at this year's session of Congress. With all its good features, it would seem that the banking system of the United States does not meet the varied needs of the agriculturalists and of the industrial communities. The minister is to be congratulated on broadening the lines of banking so as to provide a better system of credits for our farmers. I am sure that before thus responding to a popular demand and an urgent need, he must have given the matter a good deal of consideration. As the needs develop, the minister will broaden and extend the banking system in such manner as to provide adequately for all the needs of Canadian agriculturalists. The steps which have been taken will prove a great stimulus to agriculture and its allied in-

dustries. Just in proportion as the desirability of intensive farming is urged upon our farmers, so much the greater will be their need for banking accommodation. The minister, therefore, has made a progressive step in this respect, and it gives me pleasure to congratulate him for doing so.

Resolution reported and concurred in.

Sir THOMAS WHITE thereupon moved for leave to introduce Bill No. 60, to authorize the raising by way of loan, of certain sums of money for the public service.

Motion agreed to and Bill read the first time.

CUSTOMS TAXATION.

On motion of Sir Thomas White, the resolutions reported from the Committee of Ways and Means on March 15 were concurred in.

Sir THOMAS WHITE thereupon moved for leave to introduce Bill No. 61, to amend the Customs Tariff, 1907.

Motion agreed to and Bill read the first time.

TAXATION OF PROFITS.

The House in Committee of Ways and Means, Mr. Rhodes in the Chair.

On paragraph 1—interpretation clause:

Sir WILFRID LAURIER: There is a change in this from the resolution as first introduced. The first resolution read:

1. That, in the following resolution, "Minister," means the Minister of Finance of Canada; "non-Canadian company" means an incorporated company having its head office or principal place of business outside of Canada, but having assets in or carrying on business in Canada—

The minister has added:

—either directly or in the name of another company.

Is any machinery provided for ascertaining if a foreign company is carrying on business in Canada in the name of another company, either directly or indirectly?

Sir THOMAS WHITE: The only machinery will be the machinery of the department in administering the Act. The Act will have to be administered by officials, and it will be the duty of the officials to inform themselves in such manner as they may be able as to the facts in such a case. The object, of course, is to prevent evasion of the terms of the Act through a foreign company, which is not doing business directly in Canada, being permitted to carry on business through another company.

Sir WILFRID LAURIER: Are there any such companies doing business here in the name of other companies?

Sir THOMAS WHITE: Not to my knowledge at present; but I think it is necessary that the Act should cover the case.

Mr. GRAHAM: Does the Copper Company come under this section?

Sir THOMAS WHITE: Not this particular section.

Mr. LOGGIE: The definition of the word "person" is so broad that it would seem to cover an incorporated company, either a limited liability company or any other incorporation.

Sir THOMAS WHITE: The word was so defined in order that it might be used throughout the Act to represent not only individuals, but firms, partnerships, associations, incorporated companies or other corporate bodies.

On paragraph 2:

There shall be levied and paid to His Majesty a tax of twenty-five per centum of the amount by which the profits, earned in any business exceeded, in the case of a business owned by an incorporated company, the rate of seven per centum per annum, and, in the case of a business owned by any other person, the rate of ten per centum per annum upon the capital employed in such business. Such tax shall be levied against and paid by the person owning such business for each and every accounting period ending after the thirty-first day of December, one thousand nine hundred and fourteen.

Provided, however—

(a) that the amount paid or payable by any person under the provisions of part one of the Special War Revenue Act, 1915, shall be deducted from the amount which such person would otherwise be liable to pay, and the minister shall have power to determine any questions that may arise in consequence of any difference in the several periods for which the taxes under the said Act and those proposed herein are payable;

(b) that the dividends received from the stock of any incorporated company which has paid a tax upon its profits under the provisions of any Act based upon these resolutions shall not be included when the profits of any business are being determined; and

(c) that the amount of any tax paid by a person under the provisions of the Finance Act (No. 2) 1915, passed by the Parliament of the United Kingdom of Great Britain and Ireland or under any legislation for raising revenue for the present war in force in France, Russia, Italy, Belgium, Servia, Montenegro, Japan or the colonies or dependencies of any of

these countries in respect of the profits of any business liable to taxation hereunder shall be deducted from the amount of the tax that would otherwise be payable by such person.

Mr. GRAHAM: Did this point ever strike the minister, that the war loan being exempt from this taxation, if the whole $100,000,000 of the war loan were subject to the taxation of 25 per cent, the rate of that war loan would be pretty high. For instance, 5½ per cent is, in round figures, the rate payable on the war loan. Thus there would be about $5,000,000 annual income in interest payments to the holders of these bonds. If the minister will figure that out he will find that in the three years, if this whole amount be exempt, the Government will lose by this exemption in taxation something over $3,000,000.

Looking at it from the other angle, those who are exempt will receive a rate, on account of that exemption and including the 5½ per cent interest of about 6¾ per cent on their money. In other words, taking the exemption, and the rate of interest paid by the Government on the war loan together, the war loan is costing the country about 6¾ per cent.

Sir THOMAS WHITE: I do not follow my hon. friend. I think he is assuming that the war loan is held by the businesses that will be subject to this tax.

Mr. GRAHAM: That is my presumption.

Sir THOMAS WHITE: My hon. friend knows that the war loan is held by some 25,000 individuals, firms, and companies throughout Canada, and it is probable that a considerable amount is held by businesses which become subject to this taxation proposal. But my hon. friend has no doubt observed from the text of the resolutions that we do not impose any tax until the rate earned is 7 per cent in the case of companies, and 10 per cent in the case of individuals. Therefore, it would not immediately apply to the revenue derived from the loan. A company which held a part of the war loan, and whose net profits were estimated, would be entitled to say, so far as the interest upon the war loan is concerned, that it was exempt from taxation, and that it should not be taken into consideration in imposing this tax.

Mr. GRAHAM: Take a concrete example. The banks hold $25,000,000 of that loan. They pay more than 7 per cent, consequently their excess profits would be taxed. The $312,500 which they will save in one year, will, in three years, amount to something like $1,000,000. Perhaps I have not made myself clear. Exemption from this tax will save the banks, on the $25,000,000 of the loan which they hold, $312,500, and in three years, the period for which the loan runs, they will benefit to the extent of over $1,000,000.

Sir THOMAS WHITE: I think my hon. friend is confused, if he will pardon me saying so. The banks hold a certain amount of the war loan. They did hold, I think, about $20,000,000. I doubt if they hold $20,000,000 now, because there has been a good demand for the loan, and it has been gradually absorbed. Let us assume, however, that they hold $20,000,000 of the loan. In estimating the amount that any bank would pay under this proposal, we should have to consider the net profits of the bank, and in estimating the net profits, regard would be had to the gross profits, and to the cost of administration. Among the gross profits undoubtedly would be the interest upon these securities. But, as I pointed out, the interest is less than 7 per cent on the amount invested in them. I do not think that the banks would save in respect of holding these securities, except that it might be said that, if instead of holding these bonds they held some other securities that yielded over 7 per cent, they would be liable to pay a little more. But, after all, if my hon. friend considers the total assets of the banks of Canada, from which they earn their gross profits, the sum of $20,000,000 is relatively a very small amount. My hon. friend knows that it is necessary in floating a loan, in time of war especially, to provide that it shall be exempt from taxation by the Dominion. If we had an income tax in this country, I have no doubt that private individuals would buy the war loan, as they have bought securities in the United States and other countries that are exempt from taxation for the purpose of avoiding the claims of the income tax. But I think it has no real bearing upon the principle of the Bill, if my hon. friend will permit me to say so; nor is it objectionable, so far as I can see, that the banks should hold a substantial part of the war loan because it is exempt, for it is exempt in the case of any citizen as well as of the banks.

Mr. GRAHAM: I was not objecting to it. It makes the loan easier, and more attractive. It might help the loan, certainly it

will not injure it at all. If my point has any influence at all, it should show that the loan is a better investment than it looked on the face of it, particularly to those who come under the clauses of the other tax bill. Exemption, as I figure it out, is practically equivalent to about 6¾ per cent under the ordinary circumstances; that is to say, if the individual were subject to the war tax. Exemption makes a difference of 1¼ per cent.

Sir THOMAS WHITE: I am not able to agree with my hon. friend. However, I do not think it is desirable that we should get into a mathematical argument.

Mr. LOGGIE: Is there not a conflict in this section where it says that incorporated companies are to pay when they have a profit of over 7 per cent, and that persons are to pay when they have a profit of over 10 per cent? In the section, already passed, we have a definition that "person" means an incorporated company. The minister told us that "person" meant an incorporated company. If that is so, is there not a conflict between the two statements in this section?

Sir THOMAS WHITE: If my hon. friend will read section 2 he will see that there is no conflict. The word "other" is there; it says "in the case of a business owned by any other person the rate of 10 per centum per annum upon the capital employed in such business."

Sir WILFRID LAURIER: There has been a good deal of discussion upon the provisions contained in this second section, but it seems to me that the point has never been made clear, at least not to me, why there should be a discrimination between incorporated companies and other persons. The incorporated company is allowed a profit of 7 per cent, and any other business is allowed a profit of 10 per cent. I repeat that the matter has not been made clear to me why there should be such a difference.

Sir THOMAS WHITE: In order to answer my hon. friend, it will be necessary for me to dwell for a moment upon the principle of the Bill. The Bill is not a tax upon all profits, nor upon capital. The idea is this: Since the war broke out many persons, many firms, and many companies have not been able to maintain the rate of earnings which they maintained before the war. In many cases, net earnings have been reduced, and dividends have been passed or reduced. In the case of other businesses, whether carried on by persons, firms, or companies, it is a fact that since the outbreak of the war net earnings have been maintained upon the pre-war basis, or even higher. In many industries and businesses of Canada very large net profits have been made. The principle of the Bill is this: We fix upon a rate of net profits which would be deemed reasonable in normal times and we say, in the case of persons, firms, and companies which have, since the outbreak of the war, or in any accounting period ending since the outbreak of the war, not been able to make that percentage of net profit that they shall not pay because the inference would be that they had suffered somewhat from the war. On the other hand, take the case of persons, firms and companies who have earned in the accounting period since the war broke out more than the normal percentage of profit; the inference is in this case, speaking generally, that they would not be disadvantaged by the war. In many cases they have been greatly advantaged by the war, and the idea is to raise this taxation from these rather than from those of the former class. The idea is that those who have not been injuriously affected by the war, and those who have made profits out of the war, should contribute a portion of those profits to the exchequer of the country for the purpose of carrying on the war; whereas, those who have not been able to maintain their normal rate of returns upon capital shall not be taxed. In answer, particularly to the question of my hon. friend; he does not understand why, in the case of private individuals and partnerships we allow 10 per cent on capital before the tax applies, whereas in the case of incorporated companies we allow 7 per cent only on capital before the tax applies. There are many reasons. The reason which appealed to me particularly when I brought down the Budget was that in the case of many companies—not all, but a large percentage—it is not possible to ascertain the precise cash value of the assets, as can be done in the case of firms and partnerships, because the matter has been complicated by the issue of stock for assets acquired by the company. That is one reason. Another reason is this: An individual who engages in business is responsible to the full extent of his estate for the debts of the business. In the case of joint stock companies shareholders enjoy the advantage of

limited liability. They can be called upon only to the extent of the shares for which they have subscribed or which they have paid up. Men are able to take an interest in many joint stock companies. Men, operating through boards of directors, are able to invest their capital in fifteen, twenty or more joint stock companies. They are liable in each one only to the limit of the shares which they hold in each, whereas, if a man goes into business for himself, or if partners engage in business, they are liable to the extent of their entire estates for the debts of the business. It follows that an individual would expect, and would be justified in expecting, a higher rate of return in the case of a business conducted personally by himself without the benefit of limited liability. Men engaged in business for themselves, or partners engaging in business, expect to make, under ordinary business conditions, a return of at least 10 per cent upon their capital. I think that would be concurred in by business men. Let us take the case of joint stock companies, and particularly industrial companies which we are dealing with just now; seven per cent is the natural rate that occurs to one as representing a fair return upon the par value of stock paid up in a going concern. Preferred stock is usually put out on about a seven per cent basis. Men are willing, by reason of the advantage which they enjoy from the joint stock principle to take a less rate of interest upon their capital. They do not have to give the matter their individual attention, and they have the advantage of limited liability. These are some of the considerations which lead me to say that 10 per cent would be deemed, in a business community, only a reasonable return to a person, firm, or partnership, whereas seven per cent would be deemed to be a reasonable return upon a business conducted by a joint stock company. In England, in applying this tax, their principle is the same. Taking a pre-war standard, they fixed upon six per cent in the case of a limited liability company, and seven per cent in the case of persons, firms, and partnerships. But, so far as we can ascertain, having regard to the conditions of business, we think seven and ten per cent respectively would be a fair rate in this country.

Mr. A. K. MACLEAN: I have never seen the English Finance Act, Bill No. 2, but I read the debate upon it when it was introduced by the Lord Chancellor. I understand that the profits taxed are the profits which are in excess of the peace time profits. They, I understand, establish peace time profits by taking a period of three years, and they only tax the profits which are in excess of the peace time profits, but they tax them 50 per cent. I would like to know if I am correct in that.

Sir THOMAS WHITE: My hon. friend is in one respect correct in his conception of the Act, and incorrect in another. One principle of the Imperial Act was this: they established for a three-year period the net profits of a company which would become subject to the tax. They sought to establish the net earnings, or percentage of net earnings, for the three-year period. They made their legislation retroactive to the outbreak of the war, and they said to a company: If you have made more since the outbreak of the war than that average rate of profit, we are going to take 50 per cent of the excess.

Mr. MACLEAN: That is what I say.

Sir THOMAS WHITE: My hon. friend will understand that there are companies which had not been in existence three years previous to the war. Then they fell back upon this principle; they said: What pre-war standard shall we fix upon? They fixed the pre-war standard at six per cent and seven per cent.

Mr. MACLEAN: That was because they just had that profit.

Sir THOMAS WHITE: This six or seven per cent was what could be regarded as pre-war standard which would be fairly earned upon the capital of these companies. Section 40 of the British Act reads:

(1) The profits arising from any trade or business to which this part of this Act applies shall be separately determined for the purposes of this part of this Act, but shall be so determined on the same principles as the profits and gains of the trade or business are or would be determined for the purpose of income tax, subject to the modifications set out in the first part of the fourth schedule to this Act, and to any other provisions of this Act.

(2) The pre-war standard of profits for the purposes of this part of this Act shall, subject to the provisions of this Act be taken to be the amount of the profits arising from the trade or business on the average of any two of the three last pre-war trade years, to be selected by the taxpayer (in this part of this Act referred to as the profits standard): Provided that if it is shown to the satisfaction of the Commissioners of Inland Revenue that that amount was less than the percentage standard as hereinafter defined, the pre-war standard of profits shall be taken to be the percentage standard.

The percentage standard shall, for the purposes of this part of this Act, be taken to be an amount equal to the statutory percentage on the capital of the trade or business as existing

at the end of the last pre-war trade year, subject, however, to the provisions of this Act as to any alteration in the manner of calculating the percentage standard in special cases.

The pre-war standard of profits was six per cent in the case of companies, and seven per cent in the case of individuals. The English Act is exceedingly complicated, and I desire to draw my hon. friend's attention to a feature in the English situation which does not exist here. My hon. friend knows there is an income tax in England, and that must be borne in mind when instituting any comparison between the English legislation and our own. All companies in England are subject to that income tax. In this country, of course, we have no income tax. If we institute a comparison in our legislation between the profits of a company in Canada since the war, and the profits of a company in Canada before the outbreak of war, in many cases some such result as this would occur: A company might be earning twenty per cent before the war broke out. If it continued to earn twenty per cent after the war broke out, it would not pay anything. On the other hand, a company that was earning, let us say, six per cent before the war broke out might be earning ten per cent after the war. In that case, on the principle of the English Act, we should take half the difference between six and ten. It seems to me that it would be manifestly unfair to tax the company which is making only ten per cent and allow the other company which is making twenty per cent to escape. The principle of the English Act must be considered in the light of the fact that all those companies in England are subject to income taxation, which has been greatly increased since the outbreak of the war.

Sir WILFRID LAURIER: I have listened to the explanation of my hon. friend, but it seems to me that the distinction which he makes between incorporated companies and unincorporated companies is arbitrary and not at all fair. The rule is to be that an incorporated company will be allowed only seven per cent of profits before being taxed; but that an incorporated company, carrying on just the same kind of business, is to be allowed ten per cent. I have in mind in the city of Montreal two large retail dry goods stores. One I know is carried on by an incorporated company; as to the other I am not quite sure, but I believe it is unincorporated. These two stores stand side by side, are doing exactly the same kind of business, running the same risks, and probably making the same rate of profit, but under these proposals one is to be allowed ten per cent, and the other only seven per cent. Now, it seems to me that this example shows very conclusively that the minister's method of selection has not been a happy one, and that an injustice will be done to some companies. It seems to me that the guiding principle ought to be, not whether a company is incorporated or not, but the rate of profit it is making compared with other firms doing the same kind of business. What reason can there be for discriminating between two enterprises doing the same kind of business and making the same rate of profit, just because one is incorporated and the other is not?

Sir THOMAS WHITE: My right hon. friend has overlooked the point I made with respect to limited liability. There is another point which I did not make, but which I desire to draw to his attention—as a general thing, in the case of partnerships comparatively small amounts are taken for administration, but in the case of joint stock companies, still speaking generally, the officials are paid, and the business is carried on by directors and other officers. It seems to me that the two points I have mentioned are of weight in this connection: first, the fact that in the case of many companies, if not most companies, there is a difficulty of ascertaining the precise value of the cash assets of the company; and, secondly, there is this feature of limited liability. As a result and consequence of that limited liability seven per cent is deemed to be a fair profit upon an industrial company, whereas ten per cent would be looked for by a man who pledges his entire estate in the conduct of a private business. No doubt the figures have been fixed arbitrarily in one sense, and yet not arbitrarily in another. In a tax bill you must fix arbitrarily on figures, and in reaching conclusions one should have regard to the general views of the community with respect to the matters dealt with. In the one case we have to consider what would be deemd a fair return upon the capital stock of an industrial or business company, and in the other what would be the percentage looked for by a private individual or partnership engaged in business.

Mr. PARDEE: I agree with what the minister has said so far as limited liability

is concerned, but I can hardly agree that in a joint stock company more officers are required, and the administration expenses are greater. In many joint stock companies the stock is largely held by one person, the balance simply being held in a nominal way to comply with the Joint Stock Companies' Act. I do not think, therefore, that that argument would apply to any very great extent. However, that is not what I rose to take exception to. I have here a letter from a very large manufacturer in the western part of Ontario. I shall read a portion of it, not with the object of making any criticism, but for the purpose of getting information. My correspondent says:

> It would seem to me that there ought to be a distinction made between financial companies and those engaged in manufacturing or business, but there should be no difference in the latter and the exemptions as between a company and partnership.

The instance that has been cited by the right hon. leader of the Opposition bears out the last part of my correspondent's letter, but it appears to me, although my view is subject to be corrected by the Minister of Finance, that so far as financial companies, pure and simple, and manufacturing companies are concerned, there ought to be some distinction made just as is pointed out in this letter. I would therefore ask the Minister of Finance to say whether or not in his opinion there ought to be some such distinction made.

Sir THOMAS WHITE: It would be difficult, under a measure such as this, to make any discrimination as between financial companies and other companies. After all, the proprietors of companies are the shareholders and the tax, of course, falls upon them. Now, shareholders of financial companies need their dividends just as much as do shareholders of industrial or other companies. I would say, that in the selling value of shares upon the market, in the case of a first-class financial institution, such as a bank or loan company, the shares would sell upon a lower interest basis than in the case, let us say, of an industrial company. That is in accord with the argument of my hon. friend.

Mr. PARDEE: Does my hon. friend not think that the risk in an industrial company is very much greater than that in a financial company?

Sir THOMAS WHITE: A good deal depends upon the industry; but, although opinion has changed considerably in that regard in the last few years, owing to the specialization of our industries, generally speaking, I may say that industrial stock is regarded as somewhat more hazardous than the stock of a financial institution. My hon. friend, when he mentions purely financial companies, such as banks, trust companies, and loan companies, will recall that, in my Budget speech of a year ago last February, we especially taxed those institutions; that is to say, we derive to-day out of existing taxation, apart altogether from this Budget, $1,000,000 from the banks, and a few hundred thousand dollars a year from the trust companies and loan companies. Resort was had to them in the first instance, and I think it could have been justified largely upon the idea that my hon. friend has in view. We now come to a point where we are imposing a more general and comprehensive tax. I have been unable, I am sorry to say, to see the question as between the joint stock company and the individual in the light in which my hon. friend from West Lambton (Mr. Pardee) evidently regards it. I think there is a distinction between the two classes, and, in seeking to apply the principle of the measure, namely, to tax profits in excess of what may be regarded as a normal standard, I find it necessary to distinguish between the two classes of business and to give the advantage to the privately-owned company in which a private individual or a firm is responsible for the whole of the estate.

Mr. A. K. MACLEAN: You will find small corporations, owned by the members of one family, who are conducting the business.

Sir THOMAS WHITE: The conduct of the business is practically the same as in the case of a partnership. My hon. friend, as a lawyer, will, I am sure, concede that in legislation it would not be
10 p.m. possible to discriminate as amongst joint stock companies. I agree with my hon. friend that very often a family or a partnership turns its business into a joint stock company and then it becomes what is called a privately-owned joint stock company; but my hon. friend knows that next week those shares could be distributed and sold, and then the company would become what is known as a publicly-owned corporation. There is, however, no distinction in law between the two, and I do not see how it would be possible to discriminate by legislation.

Sir WILFRID LAURIER: You are going to start on a wrong principle.

Sir THOMAS WHITE: I do not see how it is possible to discriminate between joint stock companies, and to say that one is publicly-owned and another is privately owned. A company, with the joint stock principle applied, is an entity different from all of its shareholders, and I do not see how we could discriminate.

Mr. LEMIEUX: Will land syndicates come under this taxation measure? I have in mind several companies which, as my hon. friend knows, have cropped up in the good times under the late Administration.

Sir THOMAS WHITE: You mean just before the war?

Mr. LEMIEUX: For instance, a company has bought a strip of land, say in the suburbs of Montreal, and is incorporated, not to do business for all time to come, but just for the sale of that strip of land. Supposing it has partly sold the land, will it come under this taxation measure?

Sir THOMAS WHITE: If a company has bought a tract of land and has sold part of it and is offering another part of it for sale, it is undoubtedly carrying on a business, and the question would arise under the provisions of this measure: What is its capital, its reserves, its accumulated profits? In other words, what is the amount of capital invested in that company and what are its net profits? No doubt in a case, such as my hon. friend has in view, there would be some difficulty in estimating the profits, but that is only a matter of administration under this measure; and, if it appeared upon a true balance sheet and a profit and loss account, that the company had earned for the accounting period a net profit in excess of 7 per cent, then it would come under this legislation.

Mr. A. K. MACLEAN: The hon. member for West Lambton (Mr. Pardee) raised quite an interesting point. There is no doubt that industrial companies are entitled to a greater profit than the trading concerns. Investments would not be made in industrial companies were there not a probability that very considerable net earnings could be made, for the reason, I suppose, that in prosperous years the profits must be abnormal in order to make up for the years in which substantial losses may be expected. Therefore, I think a distinction might very well be made between industrial companies and trading concerns.

I did not, however, rise to discuss that matter, but rather to ask a question suggested by the remarks of the hon. member for West Lambton. Supposing a manufacturing concern in the year 1914 had been in business for ten years, and that for nine years it not only did not pay a dividend, but actually lost money, which had to be supplied by the company by borrowings or otherwise, and let us say that since the war began these manufacturers—say of leather—had been fortunate enough to make a great deal of money. In computing their liability under this taxation scheme, would the company in this case be allowed to deduct all additions to capital or back dividends before the minister could step in and take his portion?

Sir THOMAS WHITE: I would say no. Here is a company which was earning practically no profits before the outbreak of the war, and by reason of the outbreak of war that company has been advantaged. We are raising this money to help pay our expenditures in the war. We take from that company not all the earnings which it has made as a result of the outbreak of the war; we allow them first 7 per cent free, and then we say: if you make more than 7 per cent we take one-quarter of one per cent, so that if you make 15 per cent we take two per cent.

Mr. MACLEAN: But that company may suffer losses for another period of five years after the close of the war. They may claim that they were entitled to excess profits.

Sir THOMAS WHITE: I think we could not have regard either to a period before the war or to a period after the war. The outstanding fact is that this particular company, in marked contradistinction to many businesses which have lost money as a result of the war, has made money as a result of the war. We say: if you have made money as a result of the war, we are going to take a little of that money from you to help pay our share of the cost of carrying on the war.

Mr. LOGGIE: The minister has said that one of the reasons that led him to place partnership companies on a basis of 10 per cent and incorporated companies on a basis of 7 per cent was the difficulty in getting at the exact cash value of the capital of incorporated companies. I must congratulate

the minister that on reconsideration he has vastly improved the resolution in that regard. As it was originally brought before the House, it certainly was not practicable, but as he has remodelled it, I think it meets the situation very well; it puts incorporated companies on practically the same basis as partnership companies. But the difficulty that led the minister to put partnership companies on a basis of 10 per cent and incorporated companies on a basis of 7 per cent has now disappeared, because he has found a way to get at the proper capital of over-capitalized as well as of under-capitalized incorporated companies. For the life of me, I cannot understand the equity of collecting from the partnership company one dollar and from the incorporated company four dollars. On a basis of 11 per cent earnings, you collect from the partnership company one dollar and from the incorporated company four dollars, or, in the larger number, $10, and $40, $100, and $400, $10,000 and $40,000.

Sir THOMAS WHITE: My hon. friend will permit me to correct him; I am sure that he does not desire to make an erroneous statement. My hon. friend has overlooked the fact that the Bill only takes one-quarter of the excess, so that if the percentage were 11, in the case of a firm, partnership or individual it would be one-quarter of a dollar, and in the case of a joint stock company, one per cent.

Mr. LOGGIE: I quite understand that; but what I say is absolutely true. If the minister will take a pencil and a piece of paper and work it out, he will find that on the basis of 11 per cent, for every dollar that the private company pays the incorporated party pays four dollars. On a 12 per cent basis the proportion is as two to five; partnership companies pay two dollars while an incorporated company pays five dollars. On a 13 per cent basis, the partnership company pays $3 and the incorporated company $6. So that on the basis of earnings of 11 per cent, one company pays 400 per cent more into the treasury than the other company. Is that equitable? I have in mind in a certain district four or five unincorporated manufacturing concerns having a larger capital than $50,000, and right beside them are a number of incorporated companies. Can the minister give me any reason why there should be a spread on 11 per cent earnings of 400 per cent as between the amounts paid to the Crown by these different kinds of companies? The minister has told us that in the United Kingdom there is a spread of one per cent, If the minister had suggested that the difference in this case should be one per cent, I should have been willing to consider it, but it does seem to me that the present proposal is unreasonable. The minister will find that the collection of this money will be attended with great difficulty; that the tax will be paid unwillingly by those who believe that the Government have not placed their company upon a reasonable basis as compared with that of other companies. I instanced a case in Ottawa and the minister has not replied. Can he tell me on what basis J. R. Booth of this city should escape paying any taxation, up to 10 per cent, whereas the E. B. Eddy Company and the W. C. Edwards Company will have to pay on their earnings over 7 per cent? I cannot see the equity of this, and I think that the minister will be well advised if he decreases the spread between 7 per cent and 10 per cent. If he makes it 7 per cent and 8 per cent there will be much less fault found with this measure when it comes to the collection of the tax. I would ask the minister to allow this to stand and to reconsider it. The right hon. leader of the Opposition instanced the cases of two dry goods firms side by side. Will the minister say why he should make it possible for one dry goods man to get his store rent free for three years? That is what it means, because the other man would have to pay the equivalent of his rent into the Crown, although he has the same earnings and stock. Many incorporated businesses are practically the same as though they were not incorporated. Of course in this I do not refer to the very large incorporated companies, such as the Canada Cement Company or the Canada Car Company. In such companies there is, perhaps, a significant difference, but in the ordinary incorporated companies, doing business say on the Miramichi river or in Bathurst or Shediac, the difference is very slight. I have in mind two businesses in Shediac that would probably come under the law, one incorporated and one conducted by a person. In the name of all that is fair and true, why should you ask one man to pay $4 and the other man to pay only $1, assuming the same basis of earnings and the same capital? My hon. friend has referred to the limited liability of the incorporated company and has advanced that as a reason why these companies are incorporated. I can give an-

other reason that is perhaps a greater incentive to incorporation, that is the question of succession; a business is incorporated so that in case of death the business can go on without interruption. Whatever advantage there is in that the companies pay for it when they get their incorporation papers. I think the minister is wrong in making a spread of 3 per cent, making the tax in some cases on one firm 400 per cent greater than on another.

Mr. McCREA: Another reason for not having this inequality against the incorporated companies is that the company pays a provincial tax to the provincial treasury, whereas an individual or partnership does not. For the sake of argument and emphasis, take the case of our citizen, J. R. Booth. If his institution was incorporated at its proper value and his properties capitalized at anything near their actual value, and the business was conducted as a limited liability company, he would be paying many thousands of dollars in taxes to the provincial exchequer, through the provincial collector of revenue, whereas he pays nothing.

Sir THOMAS WHITE: So far as I am aware, there is always, in connection with public taxation, a discrimination against the joint stock company in favour of the individual, for the reason that the joint stock company does enjoy a privilege conferred by the State. This is simply a difference of opinion as to the amount of spread, and it seems to me it can best be determined by our considering again what is the principle of the Bill. The principle of the Bill is to collect a certain amount of excess profit beyond what might be regarded as the normal percentage of return Supposing a private individual is going into business, he is going to pledge his whole estate in the business. If he fails, he loses everything. How large a percentage of return might he reasonably expect upon his capital? I ask the House to bear this further in mind, that in the case of individuals and firms no large salaries are taken out of the business as in the case of joint stock companies. A private individual gives his attention, day and night, to his business; he takes out in most cases only the amount of his living expenses; but in the case of a joint stock company they pay directors, they pay the president, they pay the officials, and they have to compete in engaging those officials with others requiring their services. All of these payments are taken out of the earnings before this tax. That raises a very strong consideration in favour of the private individual as compared to the joint stock company in respect of the rate of return which may fairly be expected. Is there any man in this House who would go into general business to-morrow and give his time to it, day and night, taking out only his living expenses or a very small salary from the business, and accept a less return than 10 per cent upon his capital? That is question number one. Question number two is: In the case of a joint stock company, is it not a fact that the shareholders have the advantage of limited liability, that if the company fails they do not have to pay more than they have put in the company or subscribed upon its shares? Is there not a clear advantage there to the joint stock company which should be recognized in any legislation of this kind? There is no province in this Dominion, so far as I know, there is hardly a state in the union, that does not impose taxation on joint stock companies because they are joint stock companies, because of the privilege they enjoy of limited liability, which is a much greater privilege than people generally recognize. Let us assume two businesses side by side. In one case, A, a private individual carries on business. He fails; he loses everything he has in the world. Beside him B, a more prudent man, who is worth a million of dollars says: I am not going to risk my million dollars. He will subscribe stock in a joint stock company to the extent of $200,000, and will engage in business alongside of A. B does not lose his million dollars; he loses only $200,000.

Mr. ROSS: Does the same difference in liability exist in Great Britain? What is the reason then for the difference in the spread as between 7 per cent and 10 per cent. Why should that spread be made so large in Canada when the spread in the liabilities as between incorporated companies and private companies is so small?

Sir THOMAS WHITE: It does not necessarily follow that the British Act fixes the precise or correct standard in each case; that is open to argument. My hon. friend will hardly lay it down as a principle that we must be solely guided by British legislation. The point my hon. friend has overlooked is this: interest rates are much lower in England and there is a greater stability in an older country than in a new country and investors are content with lower rates of interest. While I do not pretend to know the English situation, I

should assume that a private individual there would be more content with 7 per cent, having regard to the rate of return which can be obtained in the United Kingdom, than an individual in a comparatively new country like this, with no settled situation as they have in Great Britain. In this country they would expect 10 per cent.

Mr. McCREA: I think that if the minister will examine the records, he will find that where men go into partnership concerns with a certain amount of capital—I do not mean men who go into business without capital, but men who go into business on their own account as partners with capital—the percentage of failures is very much less than it is in the case of companies in which the same amount of capital has been invested in the first instance. In the case of partnerships a man handles his own money, but in the case of companies or corporations he has nothing to do with the control of the money, and in many cases the money is lost. The failures of corporations are very much more numerous than they are in partnerships where the same amount of money has been invested at the commencement of the business.

Mr. LALOR: I am not interested in a private company, nor in a partnership; my interest, so far as manufacturing business is concerned, is all in joint stock companies. It strikes me that the spread of three per cent is fair. The advantage of a limited liability company is very great indeed. As every one knows, your assets, outside of your liability, in that company, are entirely free. Let me cite an instance which may bring more clearly before the committee the difference between a limited liability company and a private company or partnership. If there is a partnership, and you want to borrow from the bank say $10,000, $50,000, or $100,000, as the case may be, you go to the bank and endorse that note, and become responsible for it. In a limited liability company you do not do that at all. If you were to ask the directors, or the stockholders, of a company to endorse the notes in a bank for the money borrowed to carry on the business they would absolutely refuse to do it.

Mr. A. K. MACLEAN: I venture to say that 51 per cent of the corporations in Canada have their paper endorsed by their directors.

[Sir Thomas White.]

Mr. LALOR: I quite agree that that is sometimes the case, but it is not always the case.

Mr. MACLEAN: Pretty nearly.

Mr. LALOR: I do not know of any company with which I am connected which has to do that; neither directors nor stockholders endorse individually. Surely the stockholders are never called upon to endorse; they are free entirely from that liability, whereas in a partnership, or in the case of an individual carrying on a business, he has to become responsible entirely for the money which he borrows, and for the capital which he invests. Not only that, his assets are liable as well. There is a very great difference, and although my interests are in stock companies, I think the spread is equitable and fair.

Mr. HUGHES: I want to present one idea to the minister. I presume that the object of this legislation is that it shall reach as many people who should be taxed as possible, and particularly those who have made profits on account of the war. It is pretty well known that there are a number of people in this country who are known as middlemen, and who have made profits by getting contracts, and passing them over to others. I think the usual rate of commission is about 10 per cent in these cases. Under this legislation these people would, apparently, escape altogether. They have taken no business risks; they have, as a rule, provided no capital, and it seems to me that if there is any class of persons in the community who should be reached, it is that class. I have in mind some people who have done business on the percentage basis with the Government direct in purchasing war supplies, and who have received a commission of 10 per cent, and made considerable sums of money, with very little effort on their part, and, as I have stated, with no risk at all, and no capital. If these people escape, I think it would be most unfair.

Mr. HUGHES: If their profit is ten per cent, and does not exceed that, as individuals they would escape. If a company acted in that capacity, and made 10 per cent, they would not escape. I could mention names—they are well known. Take the Ellis Bros. of Toronto, for instance; they purchased binoculars for the Militia Department, and 10 per cent was the commission they received. I forget the total amount which they made, but it was quite a large sum

of money, and it was easily earned. Under the conditions that I have stated, if they were individuals, or were in private partnerships, they would escape.

Sir THOMAS WHITE: I may point out, although I am not quite sure of the facts, that the firm of Ellis Bros. is an incorporated company, and any earnings that they may have made out of the transaction to which my hon. friend refers, would, I should think, be included in the company's earnings, and, consequently, they would become subject to the provisions of this Act. My hon. friend has spoken of middlemen. I inserted a provision in section 4 which I think will meet the case of individuals who have acted as middlemen and made large profits. Of course there will be cases of middlemen in petty transactions whom the Act will not reach, but if my hon. friend will look at subsection (a) of section 4, he will see that the $50,000 limit does not apply to the business of any person who is or has been engaged in manufacturing, or in dealing with munitions of war. I put the words "or has dealings in" just to meet that case.

Mr. HUGHES: I have not the right resolution here then; there is no subsection 4.

Mr. COPP: The Minister of Finance is in rather an unfortunate position in regard to the resolution which he has introduced for the purpose of raising taxation. The principal reason for his taxation proposals apparently is that the minister has realized fully during the present session, and possibly before, that a large number of incorporated companies have made excessive profits out of the supply of munitions of war. I appreciate very much the attempt of the minister to get something out of the parties who have made such excessive profits, but while the minister, by the action he has taken, admits the propriety of the principle of attemptng to recover unjustly acquired profits, he finds himself in this unfortunate position that if he only levied the tax upon those who have furnished munitions of war, he would be admitting the truth of what has been charged against the Government in this respect. To get clear of that dilemma, the hon. gentleman has seen fit to levy this taxation upon all corporations and partnerships doing business in the country. The tax that he is levying upon companies and partnerships for the purpose of obtaining the revenue that he requires is unfair and inequitable. My hon. friends have given illustrations of the manner in which this tax will be applied. One cannot cite illustrations without being sectional, and without referring to matters that are personally known to himself. We have a number of incorporated companies in my county doing business side by side with partnerships, and the inequality of the arrangement as applied to these two classes of businesses was well illustrated by my hon. friend from Northumberland (Mr. Loggie). In my county there are two firms practically side by side carrying on exactly the same business. One business is carried on in the name of an incorporated company; it is purely and simply a family affair, an incorporated company having been formed by the brothers interested in the business. The neighbouring business is carried on under partnership, and if anything there is more money invested in the partnership than in the incorporated company. I happen to know these organizations, as I have done business with both. On what principle of equality is it proposed to tax the profits of the incorporated company exceeding 7 per cent while the partnership can have a profit of 10 per cent without paying anything into the treasury? I do not know whether the minister has absolutely considered all the points raised by hon. gentlemen here to-day, or whether he has fully made up his mind to put this resolution through and levy the taxation on that basis, but I say that it is a most inequitable arrangement, and one which must raise a great deal of dissatisfaction throughout the country. I have had a number of letters and telegrams from my constituents protesting against this great inequality as between partnerships and companies. On behalf of these constituents I beg to draw the attention of the minister and the members of the committee to the matter. I sincerely trust that the minister will see his way clear to reconsider this proposal and put the different organizations which are being taxed on a more equitable basis so that they will pay an equal amount into the treasury whether they are doing business as incorporated companies or as partnership firms. The hon. member for Haldimand (Mr. Lalor) speaking in regard to the status of companies as compared with that of partnerships, said that all the assets of the partnership are at stake. I may say to him that I know that the directors of a number of companies in my province, if they want to borrow money from the bank,

have to go to the bank and endorse notes the same as private individuals have to do.

Mr. LALOR: How about the stockholders; do they have to do that?

Mr. GRAHAM: The directors own most of the stock.

Mr. COPP: It is not customary for stockholders to endorse notes, because a very large amount of the stock is generally held by the directors. One of the qualifications for a director is that he must hold so much stock. They usually go to the bank when they want to borrow money, sign notes as directors, and makes themselves personally liable. I know of some cases where the shareholders of companies have also had to go to the bank with the directors and endorse notes to enable them to borrow money to carry on their business. I felt it my duty to bring these facts to the attention of the committee. They have come to me, not because I have any interest myself; I am in very few companies and in no partnerships. I am not speaking from the personal standpoint, but I am simply trying to voice the sentiments and complaints of a number of my constituents in regard to this matter. I would urge the Minister of Finance to adopt some of the suggestions which have been made by hon. members on this side of the House.

Mr. GRAHAM: I presume the minister will agree that one equitable way to have imposed this taxation would have been to have levied it on income. Might I ask him if he was influenced in any way against that plan by the suggestions of the provinces, or by an intuition that the provinces wished to retain that source of revenue for themselves? I have seen some discussion recently on that point. It is a well known fact that the provinces are having their difficulties, as well as the federal authorities, in finding new sources of revenue. In Ontario, for example, so long as we had our reserves of timber resources, these looked after the revenue fairly well. At the present time the revenue is not coming from that source to any great extent. The provincial treasurer of necessity is looking for new sources of revenue. Some of the incorporated companies that will be taxed under this Act have ben taxed for years by the provinces. A certain rate is also being imposed by the municipalities throughout the provinces for war purposes. I am inclined to think that the treasurer of Ontario at least has his eyes on income taxation as a fruitful source of revenue at a not far distant date.

Mr. LALOR: They will have to stop dividend payments then.

Mr. GRAHAM: The Minister of Finance seems quite shy of an income tax which would reach every person earning above a certain income. I think he had in mind that this source of revenue should be reserved to the provinces. Of course, the principle of direct taxation by the Dominion Government is comparatively new, and when the minister was considering possible sources of revenue he, perhaps, said: I will not impose taxation on incomes, but will leave that to the provinces. The remarks of my hon. friend from Haldimand (Mr. Lalor) are all right, but we are not all on velvet, as the saying is, and in as big a way as he is. War or no war, he goes along with an equanimity which a good many of us envy. But it was the smaller companies I had in mind, where the limited liability does not cut much figure. A large proportion of joint stock companies, at all events in Ontario, are formed for convenience sake. A father may want to get his two or three sons in the business, and as young men nowadays do not like to work with their father if there is nothing coming directly to them, a joint stock company is formed, and the stock distributed amongst the father and his sons. But all of us are not fortunate enough to have sons, I am not referring to myself. On the one hand, then, we may have a father and his three sons engaged in a joint stock company, and on the other hand a man who has no family and is not in a joint stock company. He has only his capital. Now, the inequality comes in because one man is allowed to earn only seven per cent, while his neighbour is allowed to earn ten per cent. I am inclined to think that the spread is a little too great, particularly when we take into account the fact that a very large percentage of these businesses have been formed into joint stock companies, at all events in Ontario, merely for the sake of convenience and for the purpose I have outlined. The larger companies can look after themselves, but it does seem to me that it would be more equitable if some plan could be devised applicable to these smaller companies. In discussing this tax on business, I am not referring to those companies, whether large or small, that

have made big profits out of the war. We all agree that they ought to hand back a good deal of their profits, because we are all being heavily taxed on account of the war. But I am referring to the smaller companies that have been formed as family affairs, and which perhaps comprise seventy-five per cent of the whole. If the minister could include these companies in a separate class—it might not be easy to draw the line—I think it would remove a great many of the objections that some business men have to this legislation, and it would remove the feeling which some of them have that they are not being treated fairly as compared with others. A point was raised by an hon. member a few moments ago that has bothered me considerably. I am sure the Minister of Finance understands that I am not making these suggestions for the purpose of worrying him. Taxation, of course, is not welcome at any time, and we are all of us interested in any taxation proposals. Under present conditions, however, taxation will be more cheerfully borne than under any other circumstances you could possibly imagine, and I want to assist the Minister of Finance so that every one will be satisfied that each is bearing his share of the taxation and no one more than his share. An hon. gentleman speaking a moment ago made this point, and it is particularly applicable perhaps to some of the smaller companies I have mentioned, and perhaps partnerships as well. Owing to the general revival in business on account of the war, many of these smaller companies not directly engaged in producing war supplies are in a much better position than they were a couple of years ago. Then they had their face, you might say, almost to the wall, but now many of them are sharing in the general business revival. Many of these companies may be using a portion of their surplus to pay off a heavy bank over-draft of a couple of years ago. These companies will be taxed on all profits over seven per cent, and I think when the war is over they are going to have a very, very difficult time. We all agree that it will be a miracle if there is not a decline in business in the readjustment period. After the war is over, this artificial business will disappear, and these smaller companies will have to look to their ordinary business. Values are sure to go down, and I think many of these smaller companies will need a respectable part of their surplus to carry them over the readjustment period. I am afraid this taxation will have the effect of driving some of these smaller companies out of business. I am not anxious about the larger ones; they are controlled by men of financial strength who can see their way to finance these companies as they go along. But I repeat that, unless you allow these smaller companies a fairly good reserve, many of them will go into bankruptcy after the war and they will blame it on this taxation. Of course, I know it is easy to make suggestions, but all my suggestions have been made in good faith and with a desire to get an equitable scheme of taxation. I think the minister and his experts might be able to devise some scheme whereby these smaller companies would be enabled to carry themselves through the readjustment period after the war.

Sir THOMAS WHITE: I appreciate very much the admirable spirit in which my hon. friend has approached the consideration of this question. My hon. friend realizes that in any scheme of taxation that can be devised there will be anomalies when special cases are being dealt with. I had a very wide experience many years ago in connection with the Assessment Act of the province of Ontario, and I was struck particularly with the fact that from time to time special cases arose in which there appeared to be anomalies and even hardships, and yet it would appear impossible to draft a measure in which that does not occur.

I will now take up seriatim the points raised by my hon. friend. He speaks of this being a very heavy tax upon small companies. He will observe by the provisions of the Bill that it does not apply at all to companies unless the capital amounts to $50,000——

Mr. GRAHAM: That is a comparatively small amount.

Sir THOMAS WHITE: —unless in the case of companies engaged in the manufacture of munitions, or in furnishing war supplies. I gave very careful consideration to the aspect of it that my hon. friend has very properly in mind, but the figures are not at all large. Take the case of a $50,000 company earning, let us say, 11 per cent. In that case the tax would be one per cent upon $50,000, or $500. Now, take the case of a company with $100,000 of unimpaired capital earning 11 per cent. The tax is only one per cent, or $1,000. A company

with a capital of $100,000, if it makes 11 per cent, is surely able, for the limited period of this measure, to contribute $1,000 towards the war. Take the case of a company with an unimpaired capital of $1,000,000. If such a company made 11 per cent upon its capital it surely would not be a great hardship to ask it to contribute one per cent, or $10,000, towards the war. Therefore the amounts are not considerable.

Taking the comparison between joint stock companies and individuals, I have figures which I think will show that the spread, while it appears to be considerable, is, in reality, not of very great consequence. Take the case of a company with a capital of $100,000 and earning, let us say, 20 per cent, or $20,000, in an accounting period. The tax which that company would pay would be one-quarter of $13,000, or $3,250 a year. Take the case of a partnership with precisely the same capital, $100,000, and earning precisely the same rate, namely, 20 per cent, or $20,000. The tax which that company would pay would be one-quarter of $10,000, which is the excess over 10 per cent, or $2,500. Subtract the $2,500 in the case of a partnership from the $3,250 in the case of a joint stock company and you get a difference of only $750 in the case of a $100,000 joint stock company and a $100,000 partnership, each earning 20 per cent. Having regard to the great advantage to the joint stock company of limited liability, and to the other facts which have been adduced in argument here, I submit that $750 is not an unreasonable spread in the case of those two companies.

Needless to say, any Minister of Finance would like to avoid taxation; but it became apparent, not only to the Government, but to the Parliament and to the country, that in a time like this it is, to say the least, exceedingly desirable that we should pay as substantial a

11 p.m. part as we can of the principal of our war expenditure, especially when it is running into such large figures. And, further than that, as I have pointed out in previous discussions on the subject, I believe it to be indispensably necessary in the preservation of our country that we should show to the financial communities of the world that we are taking measures to meet the exceptional situation with which we are confronted, because it very much strengthens the hand of a minister and of a Government to be able, in issuing loans, to say to those who are to purchase the loans: The Dominion of Canada is facing the situation; it is imposing taxation; it is taking a part of the excess profits which have been earned on account of the war; it expects to raise a revenue of eight or ten or twelve million dollars per year from that taxation this year, and last year it imposed taxation which restored its revenue. Such action strengthens the hand of a minister and of a Government in selling its securities on the money markets of the world. This is a temporary measure, and the operative part of it comes to an end at the date mentioned in the Bill, that is to say, the 31st day of December, 1917. It is true that in the succeeding year there will be a payment in respect of the accounting period falling due during the year 1917, but the Bill is designed to last only three years, and it will not last longer than that.

Mr. LEMIEUX: Did not my hon. friend, when he was introducing this Bill, say that we might expect some further taxation later on?

Sir THOMAS WHITE: No, I did not. Further taxation is possible, but I do not consider it necessary now to make any announcement along that line. Something will undoubtedly depend on the duration of the war, which no one can foresee. If this war should be prolonged for two, three, or more years, we should have to take such measures as the public interest might require; but this measure is a temporary one. It was necessary that we should raise a substantial sum of money for the preservation of our credit and to enable us to pay a part of our war expenditure, and this seemed to us to be the most feasible and least expensive method of raising the money.

My hon. friend from Westmorland (Mr. Copp) declared himself, as I understood him, to be in favour of a tax upon those who had made profits from making munitions and he rather demurred from the idea of taxing any other portion of the community. If my hon. friend had considered the subject carefully, and especially if he had before him the information which we have in regard to the profits of those who are not engaged in the munition business or in the supplying of war material to Canada, Great Britain, or the Allies, I think he would not maintain that position. There are individuals, firms and companies in Canada which have made money directly out of the war; they have manufactured munitions; they have furnished supplies, and their profits might be deemed

to be direct; but is there any difference in principle between those who make money directly out of the war and those who make equally large profits indirectly out of the war? Let me give my hon. friend one or two examples. The outbreak of the war called for a great rise in the price of certain commodities. The effect of that was that business houses, which were dealing in those commodities, derived, through no action on their part whatsoever, enormous profits from the rise in price occasioned by the war. Is it unfair for us to say in cases of that kind: You made profits as a result of the war; we are not going to take them all from you; we are not going to take 50 per cent away from you; we are going to allow you 7 per cent, and, if you made over 7 per cent, we will take one-quarter, if you made 11 per cent, we will take one per cent; if you make 15 per cent, we will take two; if you made 19 per cent we will take three and leave you 16. Is there any great hardship in that? Take the rise in the price of wheat; take the rise in the prices of many commodities which I should not pause to mention. Very large sums have been made indirectly out of the war—directly, in a sense, but I use the word "indirectly" because they did not make it by manufacturing munitions or furnishing supplies. On what principle could I tax a company or a firm that was supplying clothing for the soldiers and had made 11 per cent or 15 per cent upon capital, and pass by companies engaged say in the milling business, or in other industries whose profits have been 20 per cent, 50 per cent, 75 per cent, or 100 per cent? What about shipping companies which have made very large profits by reason of the fact that there has been a shortage of tonnage, and that abnormally large rates have been realised upon cargoes? It is easy to say: confine this tax to those who have manufactured munitions or have furnished supplies. But when a responsible minister sits down to consider the question of taxation, he must have regard to the fact that he must be reasonably just in his measure. I do not see on what principle he can say: we will assess you because you have made some money directly, but pass by another who made larger profits indirectly. The measure must be just in its larger features, and we have sought to make it just. I am sure that this suggestion will appeal to the hon. member for Westmoreland, because I do not believe that he has realised as he should that phase of the situation and what is involved in it. Take transportation companies. If the business of transportation companies has been greatly increased by the war; if they have made large profits which they would not probably have otherwise made, why should they not contribute a fraction only of those profits? I think that the principle of the Bill is absolutely just, and I do not believe that it would have been just if we had passed over those who made abnormal profits indirectly. It would be unfair for me to say that every one who will pay under this legislation has made profits either directly or indirectly out of the war. There will be some cases in which the profits cannot be traced directly or indirectly to the war; yet they have been such that there is no hardship in imposing upon them the small tax involved.

The hon. member for South Renfrew mentioned the question of income taxation. In my Budget of a year ago last February I touched upon the income tax question, because I had given it consideration in connection with the Budget. I pointed out that the British North America Act permitted the Dominion to make use of any mode of taxation that means either direct taxation or indirect taxation. On the other hand, by the terms of the British North America Act, the provisions are limited to direct taxation, and I stated that unless it should become indispensably necessary in the public interest, I thought it would be wise, as the provinces were restricted to direct taxation, that we should not trespass upon their field. It is quite clear that under certain circumstances resort might be had to an income tax by the Dominion. I pointed out, however, that the income tax in the United States, at least upon individuals, had not resulted very satisfactorily. The cost of collection has been relatively very large indeed, and the result disappointing. I think that the income tax on individuals in the United States realized in the neighbourhood of 28 cents a head, or about $30,000,000. If we assume that our income tax on individuals would realise a proportionate amount, we should realize by income tax a gross amount of $2,500,000. But I do not believe that population is a fair basis of comparison. The United States has vast accumulated wealth, and I should think that with a population of 100,000,000 it is altogether probable that a more than proportionate amount would be realized from an income taxation measure in that

country than would be realized in a smaller community.

Mr. GRAHAM: It would depend somewhat upon the rate.

Sir THOMAS WHITE: I should point out that the provinces and municipalities do, for the most part, although there are some exceptions, levy an income tax. That is to say, the municipalities in some provinces levy an income tax under provincial authority for municipal purposes. In one of the provinces, or in some of them, the province itself levies a direct income tax. My hon. friend may be on sound ground in stating that the tendency will be for the provinces to resort more and more to income tax. Without pronouncing at all upon the policy of the Dominion Government with regard to the matter of income taxation—because it is not really before us at the present moment—there are some considerations that I should like to mention. I have given a good deal of thought to the question, not only in connection with Budget, but since I became minister I have reflected a good deal on modes of taxation. It must be borne in mind that this country is one of large area. It is as large as the continent of Europe; it is larger than the United States. As we have a sparse population in the administration of an income tax by the Dominion very heavy cost in proportion to the amount realized would be involved as compared with the cost of administration in the United States, where it is admittedly very high. It is, I think, a sound maxim or canon of taxation that, in considering a tax, regard should be had to the cost of collection. If the cost of collection is very high, it is a sound maxim of taxation that that form of taxation has an objectionable feature. Of course, the object of taxation is to get money for public needs, and if in the collection of money for public needs a very large percentage is necessarily absorbed by collection, the result is that the tax to that extent is imposed for the benefit of the collectors. I submit these considerations because I was much impressed by the speech of the hon. member for Halifax, in which he said that the time would come when a comprehensive system of taxation might be necessary in this country. I am throwing out these observations as showing some of the considerations that would have to be taken under review in considering the question of an income tax by the Dominion Government. I have adverted to the matter of cost, and at this time it would seem to me particularly inexpedient for the Dominion to embark on income taxation. An army of officials would be required in a country like Canada, because the work would have to be done thoroughly or should not be done at all. We should have to establish almost a new Civil Service. I do not desire to exaggerate the magnitude of the service, but it would be very large. We should have to have assessors and their clerks in practically every township, every county, every village, every town, and every city, for the purpose of levying the assessment; afterwards we should have to have machinery for revision and collection. I need not say that that would be a formidable undertaking.

These are some of the considerations which are involved in the question of an income tax. I do not consider it necessary to express any opinion as to whether or not in the future the Dominion would at any time resort to such a tax. I think it would be most inexpedient for me to pronounce any opinion upon that. My hon. friend referred to some smaller privately owned companies. I think that as a legislator of experience he will realize that even though there is some anomaly and some hardship —if such a term may be implied to a Bill which imposes such a moderate measure of taxation unless in case of excessive profits —there would be great difficulty in discriminating between joint stock companies. After all, a joint stock company is a joint stock company, and I do not see how we could treat one joint stock company differently from another. I think I have dealt with nearly all the points raised by my hon. friend from Renfrew (Mr. Graham), and I take the opportunity of again expressing my appreciation of the very fair view he has taken of this measure and his realization that there is room for difference of opinion.

Mr. McCREA: I think the principle of this taxation is all wrong. In my judgment it is imposing a penalty on thrift.

Mr. E. M. MACDONALD: Hear, hear.

Mr. McCREA: For instance, take a corporation or company who use judgment, energy and ambition, and handle their business economically, wisely and prudently, they are punished for doing so. I think it is a bad principle; it is against progress. Furthermore, I think you will find it will have a tendency to drive capital from this country that would otherwise come in and

invest. Immediately they realize that their capital will be taxed 25 per cent of their earnings, they will steer clear of it. I know of one or two firms that were seriously considering erecting plants in Quebec who are now hesitating. They say: This is the beginning of it and we do not know what the end will be. I think that will apply all over the country. The principle itself is wrong, and without any reflection whatever on the Minister of Finance, who comes to this House with a reputation as a clear-headed, clever financier, I think if he had used his own best judgment in working out a system of taxation, if he had not, perhaps, listened to the Minister of Elections, he would have succeeded better than he has done.

Mr. LALOR: I think it is the minister who is hit.

Mr. McCREA: He is perhaps willing to be hit. The Minister of Finance will find that the tax will not touch fifty per cent of the people who are well able to contributure their share of taxation, and who are willing to contribute. This Government are, I think, the most fortunate Government that ever held office in Canada, so far as taxation is concerned—remember, that is as far as I wish to go. Taxation of any kind is never welcome. It is never very much appreciated by the people of Canada. But at this particular time, I think the people of Canada realize that taxes have to be imposed, that they have got to pay taxes, and they are willing to pay them; but, they want to be taxed equally; they want this burden to be distributed so that it will bear equally and fairly on all parties. If that is done, I think there will be no complaint or grumbling about it. It is perhaps easier to make criticisms of this kind than to devise a scheme for obtaining that object. Nevertheless, it is, in my judgment, true that this taxation will not touch fifty per cent of the people who are willing and well able to pay their share of the burdens that have to be borne. I am glad it is only a temporary arrangement. I hope that our Finance Minister will not forget that, and that it will be done away with very soon.

Sir THOMAS WHITE: I am on record.

Mr. McCREA: It has not yet been explained how the tax is to be levied and collected. I should like to know what system of arriving at the taxation to be imposed will be employed. Will the returns or statements made up by large corporations and prepared by proper accountants, be accepted, or will the Government appoint officials to audit the books of the companies and make their own valuations? I anticipate some considerable trouble, which in some cases may be imgainary. For instance, a corporation makes a return to the Government of what they consider their net profits have been. Will the Government accept that, provided it looks reasonable and fair, or will they appoint a set of auditors and accountants to visit every man's plant and take stock and make their own estimate? If they do, I am afraid there will be very great suspicion that the corporations and companies that are favourable to the Government will get special favours, and that those on the other side will not. These are points and facts that I think the minister will be glad to explain to us.

Sir THOMAS WHITE: The matter of administration, of which my hon. friend has referred, might, I think, be more conveniently taken up when we reach section 11, which deals with that phase of the taxation. I shall be very glad indeed to deal with it then, if that will be acceptable to my hon. friend.

Mr. LOGGIE: When I was addressing the committee, the Finance Minister took issue with me as to the rate of taxation on an 11 per cent basis. Does he admit that I was correct in my statement that one company would pay $4 while the other company would pay only $1?

Sir THOMAS WHITE: I am afraid I did not quite follow my hon. friend. I have no desire to challenge his figures, except to say that I think if he will take an example say of the case of a one hundred thousand dollar company and a one hundred thousand dollar firm, and assume that they make 11 per cent or 15 per cent, and then work out the actual result under the Act, he will find that the difference is comparatively small.

Mr. LOGGIE: I have that actually worked out, and I wish to tell the minister and prove to him that what I say is absolutely true. The earnings of $100,000 at 11 per cent are $11,000. In the case of a partnership, there is 1 per cent over. One per cent of $100,000 is $1,000, and 25 per cent of that is $250. In the case of an incorporated company, $100,000 at 11 per cent is $11,000. There is 4 per cent over. On $100,000 that amounts to $4,000. Then 25 per cent of that is $1,000. Thus, in the

case of the incorporated company, the tax will be $1,000, and in the case of the partnership company the tax will be $250, so that the incorporated company pays $4 for $1 that the partnership company pays. I do not think that the illustration the minister gave us was a fair one. He gave the illustration of earnings 20 per cent. That is a most uncommon rate; it is uncommon in the Maritime Provinces to earn even 11 per cent. If we do that we consider ourselves mighty lucky. It is no use to bring up an illustration of 20 per cent. When the percentage is less than 11, a company would pay $750 and the partnership would pay nothing. If they earn 9 per cent, the tax would still be very heavy in the one case as compared with that imposed on the other; I think it would be $500 against nothing. If they earned 1 per cent less, that would mean $250 against nothing paid by the partnership. On the basis of 11 per cent, a company would pay $4 for every $1 that the individual or partnership would pay.

Sir THOMAS WHITE: My hon. friend is a good mathematician, but I am afraid he has not considered how little that really means. He is dealing with a company that has $100,000 of capital, and with an individual or firm or partnership that has $100,000 of capital. That is a fairly substantial capital, but in the case he has given, there would be a difference of only $750. A company with $100,000 capital pays only $750 in the case he has instanced more than the individual or partnership. That is only $7.50 per $1,000 of capital. That is all that this tax penalizes, so to speak, a joint stock company with its privilege of limited liability as compared with an individual or firm or partnership. I do not think that that is a very serious matter at a time like this in a tax which, as I have stated, is for a limited period.

Mr. LOGGIE: The minister tries to get away from the point by saying that the amount is not very large. That is not the question at issue. The question is, why should there be a spread of 3 per cent. Suppose the capital is $500,000; then the payment by an incorporated company will be $5,000, as compared with $1,250 in the case of a partnership. In three years that would amount to $15,000, as against $3,750, an amount sufficient to buy a store in a town of 5,000 or 6,000 inhabitants.

Mr. LALOR: I am almost beginning to feel that I am on the wrong side of the House. The champions of the manufacturers and joint stock companies are our friends opposite. My experience in the House, spread over a good many years, does not bear that out. I find my hon. friend from Sherbrooke (Mr. McCrea) taking the view that the manufacturers and joint stock companies are taxed too heavily. I agree that they are taxed pretty heavily. Then there is my hon. friend from Northumberland (Mr. Loggie) I am quite surprised to hear him take up the attitude he has adopted to-night, because he has always taken the ground that the manufacturers and the joint stock companies were the people who were extorting too much money from the people, in fact, practically robbing them. I should have thought that he would have welcomed the taxing of these companies. It is quite encouraging to find hon. gentlemen opposite taking up this new position. The first thing we know will be that they will say there is not enough protection, and that there should be more. There is one thing that strikes me in connection with this Bill. It seems to me that in place of the limit being fixed at $50,000 it should be $40,000. In the province of Ontario a tax is imposed on joint stock companies with a capital of over $40,000, and the result is that a great many companies are incorporated with a capital of $40,000. I think that very few are incorporated with a capital of $50,000.

Mr. GRAHAM: It is the same way in other provinces; the limit is $50,000, and many of them are incorporated with a capital of $49,000.

Mr. LALOR: The companies incorporated with a capital of $40,000 might escape altogether.

Mr. NICKLE: In so far as I understand taxation, there are only three methods that can be adopted. One is to tax expenditure, the second property, and the third income. If I remember rightly, the Minister of Finance, in his Budget speech of last year, made a raise all through the tariff, and it was bitterly attacked by hon. gentlemen opposite. Certainly that was a tax on expenditure, because the money raised is on the expenditure of the people, on their imports into this country. The second method of taxation is to tax property. That is a form of taxation which was adopted by the province of Ontario last year in levying a rate of one mill on the dollar on property in the province. I remember the drastic criticism to which the Ontario Government

was subjected. The critics said that it was not fair, because the assessment throughout the province was not equal, that the assessment in the cities was higher in relation to value than the assessment in the counties, and that if the Government wanted to adopt such a system of taxation they should equalize the assessments, equalize land values and business taxes throughout the province. Hon. members understand how great a work that would be. Then we come to the Finance Minister's proposition this year. Certainly it is an income tax, but it is an income tax on those who are able to pay, upon the men who have made money, directly or indirectly, through this war. In my judgment, it will commend itself to the people of this country, as it certainly commends itself to me. If I believe in taxation at all, and we must believe in taxation, the man who can pay is the man who should pay at a time like this. I believe that it is the man who is wealthy who should contribute to the maintenance of this war, and I am certain that that is the sentiment of the people at large. I am not going to express any opinion as to whether or not it might be necessary ultimately to establish an income tax on a Dominion basis. Perhaps that time may come, and if it does come, I hope the Minister of Finance will consider carefully the entire scheme, because an income tax is not the simple thing that some people would have us believe. You have to take into consideration the difference in the tax paying power of single men as compared with married men; the capacity of the man with a family to pay as compared with the capacity of the man who has no family, and the question of how great an exemption should be given to the man in the city as compared with the man in the country. All these things cannot be worked out in a minute. I think the Minister of Finance has met the opinion of the country at large in bringing down his measure of taxation, and if it should be necessary at a future time to bring down an income tax, I am satisfied that the people have confidence that he will bring down a well-devised scheme.

Mr. MACDONALD: Has the minister decided to make any further changes in the Bill affecting the mining industry?

Sir THOMAS WHITE: I amended it to provide that the minister will determine the profits. It occurs to me that that would meet the situation. I have not in mind any further amendments to propose, but I need not say that if my hon. friend has any views respecting the matter, I shall be very glad to hear them.

Mr. LEMIEUX: Does not the hon. gentleman think that the same principle might apply as regards land? I was speaking a moment ago of land syndicates which come under this taxation measure. Land will also be exhausted. An incorporated company is dealing in land, as the land is being sold by lots it becomes exhausted, and, therefore, it seems to me that the same principle should apply to that corporation as to the mining corporation. Am I to understand that the same principle applies?

Sir THOMAS WHITE: A proper statement of a land, mining or any other company, would show net profits, and whether the capital was being exhausted or not.

Mr. LEMIEUX: What about timber limits?

Sir THOMAS WHITE: The same principle would apply to timber companies, oil companies, companies holding leasehold properties or any properties in which waste, depreciation or exhaustion of capital is taking place. A proper balance sheet can be made of any business, and it is only a question of ascertaining the facts and using good judgment in regard to them to reach a correct conclusion.

Mr. A. K. MACLEAN: I think there are two very good reasons why the committee should rise now. In the first place the minister has been on his feet the whole day and must be tired, and, in the second place, it is not important if this section is not now passed, because its adoption does not expedite the passage of the resolution, and I think it is desirable that we should have a fuller house, because then the points raised will not have to be repeated.

Sir THOMAS WHITE: I am entirely agreeable to the suggestion of my hon. friend. It is an important clause, but since the committee wishes that it shall stand over till to-morrow, I am quite prepared to agree. I therefore beg to move that the committee rise, report progress, and ask leave to sit again.

Mr. GRAHAM: It wil not impede the passage of the resolution one iota. We would not be any further forward if we passed the item.

Mr. McCREA: I have a word to say by way of suggestion. I think there should be some limit in the case of a partnership. It

the capital invested in a partnership reaches a certain limit the partnership should be put upon the same basis as a corporation. The biggest industry you have in the city is owned by one individual. Is it fair that that industry should be allowed 10 per cent profit on its capital before being taxed as against some of its neighbours, who are probably a good deal harder up and have a smaller investment? I make this suggestion because I may not be here to-morrow and I think it is one that may be worth considering. My suggestion is that if the investment of a partnership reaches a certain stage, say $300,000, it should be placed on absolutely the same basis as a corporation.

Progress reported.

On motion of Sir Thomas White the House adjourned at 11.45 p.m.

Friday, March 17, 1916.

The House met at Three o'clock, the Speaker in the Chair.

DOMINION LOAN—$75,000,000.

Sir THOMAS WHITE moved second reading of Bill No. 60, to authorize the raising, by way of loan, of certain sums of money for the public service.

Sir WILFRID LAURIER: The Bill is not printed.

Sir THOMAS WHITE: I understand that the Bill is not printed. I would ask my right hon. friend to be good enough to facilitate the passing of the Bill. It is founded on the resolutions which were adopted yesterday respecting the raising of $75,000,000 by way of loan. The Bill will be printed by Monday, and I should be glad to have the second and third readings facilitated. The matter is of importance in connection with negotiations now being conducted.

Sir WILFRID LAURIER: Upon the statement of my hon. friend that the matter is urgent and important, I would not raise any objection; but I cannot see, without a more detailed explanation, why it is so urgent. Do I understand that my hon. friend wants to have it at once assented to?

Sir THOMAS WHITE: What I desire is that the Bill should receive its second and third readings and go to the Senate next week.

[Mr. McCrea.]

Sir WILFRID LAURIER: To be immediately assented to?

Sir THOMAS WHITE: To be assented to in the near future. My right hon. friend is aware, as I stated yesterday, that we have been negotiating in New York for the raising of a loan; and it is necessary that this legislation be passed before the issue can be made.

Sir ROBERT BORDEN: We could hardly have the second reading without the Bill being printed.

Sir THOMAS WHITE: Then I shall withdraw my motion.

Motion withdrawn.

TAXATION OF PROFITS.

The House in Committee of Ways and Means on the proposed resolution of Sir Thomas White (Minister of Finance) respecting the taxation of excess profits; Mr. Rhodes in the Chair.

Paragraph 2, 1st sub-paragraph, agreed to.

On paragraph 2, proviso "a":

Provided however—
(a) that the amount paid or payable by any person under the provisions of part one of the Special War Revenue Act, 1915, shall be deducted from the amount which such person would otherwise be liable to pay, and the minister shall have power to determine any questions that may arise in consequence of any difference in the several periods for which the taxes under the said Act and those proposed herein are payable.

Mr. MACDONALD: This is the enacting clause of the resolution, and it seems to be the proper clause upon which to hold any general discussion of the resolution. In view of the fact that last night, before the committee rose, the minister, on being interrogated, intimated that he would consider any suggestions that might be made, I should like to point out the effect of the imposition of this tax upon every person connected with mining or kindred industries, where the enterprise involves the development of natural resources, and where the development cannot take place except by the employment of capital. The situation has been this.

During the past autumn, throughout Canada generally, there were a great many propositions promoted and on the verge of being capitalized through the assistance of foreign capital, and this legislation will seriously interfere with the consummation of any such capitalization. Indeed, the an-

nouncement which my hon. friend the minister made in his Budget speech about a month ago has had the effect of absolutely discouraging any attempt to promote industries of that kind. When a person with a proposition, no matter how good, goes abroad with the idea of obtaining the capital necessary for development, the possible investor inquires whether or not this is one of the companies which would be affected by the Budget of the Government. The person interested would be bound to tell the possible investor that it was one of those companies. It is well that persons should invest with the view of developing coal, silver, nickel, gold or other minerals. The person who invests in an enterprise of that kind, particularly at this stage of the world's history, does so with the hope of making some special profit. He takes bigger chances than are taken in the ordinary financial or industrial company. These deal with settled conditions. Business may vary or fluctuate; dividends may be small or great, but there is always a certain basis on which to proceed. It is the same with an industrial enterprise formed for the purpose of producing some special article used in the country. The production of the article is necessary to meet the needs of the people, and the person who invests in that industry knows that the question of receiving dividends depends upon his being able to produce the article as a saleable commodity, and that the price of the article will furnish him with a reasonable profit. But when a man goes into the mining industry, the conditions are entirely different. There may, or may not, be a large quantity of ore; all that has to be taken into consideration by the person who invests. To a very large degree the investment of capital in the mining industry is a gamble. If my hon. friend is going to throw into the melting pot these propositions, he will create a further menace which will intimate to the outside capitalist that the utmost he can get from his investment, after taking all chances, is 7 per cent, before the Government intervenes to take part of the profit. The minister will see that he is menacing the development of that industry everywhere. In addition to that, the party who is looking for capital is not in a position to assure the possible investor that the Government may not, at a subsequent session, proceed to levy upon that class of industry to a greater degree. The minister may say, as he said last night, that this tax is going to last for only two years. My hon. friend is not taking into consideration, it seems to me, the very serious financial position which Canada is in as a whole when he invites us to believe that this or that or the other tax is going to stop at the end of two years. The question of where taxation is going to end in this country, under our existing financial conditions, is a matter whch my hon. friend cannot determine, and he does well to put in a saving clause in regard to the future. The consequence is that the party looking for investment in a mining proposition cannot give any assurance that the tax will not be increased in the future, or that the percentage which is now taken is to be the limit.

For a moment, I might refer to that situation. It is all very well to be optimistic and to say that Canada will be in this or that position. There is no sign of the war ending. We do not know, even in this House, all the commitments that we are making. We have not the information that we ought to have as to just how much this war is costing us to-day, or how much it has cost us since the last data was furnished to the House. Without that information we are in the dark. The extent of the obligations which we may assume in the future is absolutely problematical and impossible to estimate. It seems to me that this House ought to have that information before taxation Bills and loan Bills are passed. I mention that incidentally to the point which I desire to make, that the party going to look for capital for a mining proposition cannot give assurances of any definite character that the percentage of profit, to be taken from the man whose investment he desires, will be limited to that now proposed. That being so, the effect in regard to that particular industry is that it will be impossible for any one who has a mining proposition in this country to exploit it by obtaining the necessary capital for its development.

My hon. friend has gone so far as to put in an additional clause in the Bill which means that in determining the amount to be paid by a mining proposition the extent of the exhaustion of the ore in the ground will be taken into consideration. That is only so far so good. It minimizes the situation, but to a very infinitesimal degree. Mining is a natural industry in this country, quite as much so as agriculture. We all hope and believe that, particularly in the far northern country, there is an illimitable store of minerals, the development of which will mean a tremendous expenditure for

supplies and the increased prosperity of the country at large. This industry stands apart, as I have said, from the ordinary industrial and financial industries. It requires special consideration. I submit that the minister's proposal menaces the future of this industry, and that the slight amendment which he has made in no wise does away with the possibility of injury.

Sir THOMAS WHITE: I am really obliged to my hon. friend from Pictou for bringing up this matter for discussion. I need not say that I appreciate the benefit of his views upon any subject that may be under debate in this House. He has put forward his representations very temperately, and I propose to answer them as fully and frankly as I may be able. I think that my hon. friend and those connected with the mining industry, or I should rather say some of them, are unduly apprehensive as to the effect of this measure upon their industry. The Government is fully aware of the extreme importance of that industry in the national economy of Canada. It is one of the great natural industries, as my hon. friend has observed, and, certainly, the Government would be the last to take any step unless indispensably necessary in the national interest which might have the effect of in any way injuring the mining industry, or retarding the flow of capital into this country. I think I shall be able to show before I take my seat that there is no ground for apprehension on the part of the mining community. This tax is, as I stated last night, for a limited period. My hon. friend questions whether I was justified in making that statement. I certainly was justified in making that statement, because it represents the intentions of the Government.

Mr. MACDONALD: If you need money, what are you going to do?

Sir THOMAS WHITE: I am coming to that. My hon. friend says that the war may be prolonged for two or three years. For myself, I can scarcely see how that is possible. But it may be possible. But should the war be prolonged for the next two or three years, and the financial responsibility of the Government correspondingly increased, it would then, undoubtedly, be necessary to take such measures as might be expedient in the public interest to meet the situation which we should then be confronted with. That statement is in no way inconsistent with that which I made last evening, namely, that this particular measure is for a period only. The principle of the resolutions, it would appear to me, indicates that. The principle of the resolutions is in effect that those individuals, firms and companies, which since the outbreak of the war have been able to maintain a rate of profit beyond what we have fixed upon as a fair and normal pre-war standard, shall contribute a fraction of that excess for the purposes of the war. It is a fact with regard to many businesses in Canada that the largest profits resulting from the war, either directly or indirectly, have been made, during the 18 months since the outbreak of the war, by reason of the increase in the price of commodities, due to the demand which arose by reason of the outbreak of hostilities, and in supplying of munitions and other requirements in connection with the war itself. I do not mean to say that if the war goes on there will be a less demand for commodities and munitions, but I do not think that, as the country becomes better organized to meet the new conditions, the prices which obtained during the past 18 months will obtain in the future. Therefore, it would seem to me that I am perfectly justified in stating, as I do, on behalf of the Government, that this is a temporary tax. In making that statement, I largely meet the argument of my hon. friend that capital might be discouraged from embarking upon Canadian enterprise. It is hardly conceivable that an enterprise could be established within the next few months, and before the termination of this legislation, earn such large net profits that the moderate tax which we are taking from them would be a serious matter to the individual, firm, or company in question. Therefore, I do not believe, for myself, that when it is realized, as I believe it is now realized, that this is a temporary measure, the effect which my hon. friend anticipates will be produced, or will continue, if such an effect has already been produced.

My hon. friend has, I think, made a statement which, if made by a responsible minister of the Government, would do more to retard the flow of capital through this country than this Budget. But as he is not speaking on the authority of the Government, it will not have that effect. My hon. friend has clearly indicated the view that the war will probably be prolonged for a considerable period. As to that, I do not know that the information of any one is better than that of another. It is not for us to guess or speculate as to the

length of the war. I never believed that the war would be a short war, but, on the other hand, I do not believe that it can be unduly prolonged. It would seem to me that if the war should continue for a period of, let us say two or three years more, civilization would almost be destroyed, and the economic resources of the world would almost disappear. I believe that long before any such date, as my hon. friend has in his mind, the forces at work, making for the conclusion of this war, will be such that it will be concluded, and concluded on the terms we are contending for; because although the German nation has apparently been winning victories on land, it has really been losing the war. This war will be determined in the last analysis by superiority in resources, in men, in munitions, and in money.

Mr. MACDONALD: The Minister of Labour does not think we are going to win?

Sir THOMAS WHITE: I think he does; I know he does. I happen to know that the Minister of Labour is certain we will win. The Government is certain we are going to win; not only that, but we are going to leave no stone unturned to make certain that we shall win. That, among other reasons is my motive in bringing down this budget. I want those who can afford to pay, to pay. There is no one who will be taxed that cannot afford to pay, and I know of no one who is not willing to pay. In fact, I know the people are anxious to pay the tax imposed by this budget.

This measure, therefore, being a temporary measure, it is not conceivable to me, when it is understood, that it will have any effect in retarding the flow of capital towards this country. Let us assume for a moment, however, that it would; let us assume that my hon. friend is right, and that it would have some effect in retarding the flow of capital to this country. I ask this House, would that be a good reason for a Government refraining from taking any taxation action that it might deem indispensible towards the winning of this war. Suppose that at the time of the war between the North and the South, when the United States was torn in twain, it had been suggested for a moment that the proposals of the Secretary of the Treasury designed, and necessary, for the prosecution of the war by the North, would have the effect of retarding the flow of capital into the United States; would such a suggestion have been listened to seriously? In Canada to-day, does anyone consider seriously whether general business is going to be impaired or not? General business is of extreme importance. I yield to no man in my desire that the Government should carry on this war with a minimum of inconvenience to the business of the community. I desire that the war should be carried on, in so far as we can carry it on, with our full power, in such a way as to interfere in the least possible degree with the business activities of this country. I desire that on the grounds of business itself, but I desire it more strongly on the ground that, the more we can promote business, the greater the industrial and commercial activities of the country, the better will we be able to sustain the economic burden of the war. Therefore, in answer to my hon. friend I may say that while I do not believe that the effect of this legislation will be to retard the flow of capital to this country, I am bound to say that the first duty of this country is the conduct of the war, and that business considerations, while of great importance, are really secondary; and I believe the public in this country take that view. I believe that the public takes that view.

What is the object of this taxation? I have been talking, members of both sides of the House have been talking, and with the greatest sincerity, of the seriousness of this war, and there is no divided opinion as to the reality of the menace to the Empire and to Canada. We all have supreme confidence that the issue will be decided in our favour, but we have been alive to the peril, and, so far as I have been able to observe, hon. gentlemen on both sides of the House, my right hon. friend the Prime Minister and my right hon. friend the leader of the Opposition, hold the view that we must put forth the utmost efforts in order to bring about the results which we believe will be brought about, namely, ultimate and conclusive victory. We have been talking about liberty, civilization, and religion being in the crucible, and about the safety of Canada and the integrity of the Empire being menaced by this German peril. We believe that. We are so remote, fortunately in one sense, unfortunately in another, from the scene of the conflict that it is not possible for us, with all the imagination we possess, to visualise what is going on in Europe. You would not hear any

talk in the British House of Commons about a possible danger to business by reason of the imposition of needed taxation. You would not hear any talk of that kind in Germany or in France. How is business in Germany to-day? I need not ask the House as to that. How is business in France to-day? I need not ask the House as to that. The first business of Germany, the first business of France, is the war, and everything else is secondary. What has happened to the export business of Great Britain? Has it been affected by the withdrawal of operatives needed for the purpose of carrying on the war? Has it been affected by taking over factories engaged in manufacturing for export business for the manufacture of munitions? The first business of the United Kingdom, of Canada, of Astralia, of the Empire, is the war, and when I say that I take second place to no one in stating at the same time that we desire to do everything we can, that we shall omit nothing to promote the prosperity of business in this country, and that we appreciate to the full the desirability of taking no measures, not absolutely necessary in the nation's interest, that will have the effect of retarding the flow of capital into this country during and after the war.

But I believe I am on solid ground in saying that the war comes first. Now, the object of this taxation is to assist in the war, and it is for that reason that this Budget has met with acceptance all over this country. It is looked upon as a fair measure to assist the Government in meeting the needs arising out of the war. We are carrying on this war and it fills me with pride to think that this country, which eighteen months ago had practically no military establishment except a very worthy and gallant volunteer force has to-day under arms over 275,000 men. We are fighting for something in this war. We are fighting for the safety of the Empire and for the protection of Canada, or else we have been talking what we do not believe. I am of the opinion that we have been talking, all of us, on both sides of the House, what we do believe. We are fighting to protect Canada, to protect the industries of Canada, including among others the mining industry. I have talked with many mining men during the last few weeks and I desire to pay them the tribute of saying that they are willing, they are desirous, they are anxious to pay, and to pay large amounts towards the conduct of this war. Nothing has impressed me more than the attitude of two or three American gentlemen engaged in the mining business in this country. They said: You are asking for one-quarter of one per cent over 7 per cent; if you want more ask for it and we will give it to you.

Mr. MACDONALD: What company was that?

Sir THOMAS WHITE: I will give my hon. friend the names privately. These gentlemen would not like to have their names mentioned in the House. My hon. friend is apprehensive about the mining industry. I think he has totally miscalculated the effect of the Bill upon that industry. The principle of the taxation is this: If net profits have been made, in the case of companies, including mining companies, in excess of 7 per cent, we take one-quarter of the excess and one-quarter only. Does my hon. friend know that, excluding nickel companies, only twenty-four mining companies in the whole Dominion paid dividends last year? My authority is the Canadian Mining Journal.

Sir WILFRID LAURIER: They are not very prosperous, then.

Sir THOMAS WHITE: The extraordinary thing is that some were exceedingly prosperous.

Sir WILFRID LAURIER: Only the twenty-four are prosperous.

Sir THOMAS WHITE: Others are engaged in the business, but they are not affected by this tax, and many of these are not affected by the tax. The point I am making is that the mining industry has nothing serious to apprehend from this tax. We are fighting for this country, we are fighting for every business in it, including mining. On what principle can I, or can the Government, leave out mining industries from the operation of this tax? On what principle can I tax a manufacturing company, a transportation company, a trading company and pass by the Hollinger mines worth $10,000,000, or $15,000,000 or $20,000,000 and earning up to $2,000,000 net profits? On what principle can I pass by the Nipissing mine earning $1,200,000 a year and worth brobably $5,000,000. How can I pass by copper companies in view of the fact that copper has doubled in price since the outbreak of the war? On what principle can I pass by the nickel companies which are making enormous sums out of the natural resources of the country? I appreciate to the full what the mining industry at Cobalt and Porcu-

pine means to the province of Ontario and I appreciate the importance of the mining industry to British Columbia, but the point I make is that the mining industry is not going to be injured materially by this legislation and I shall show my hon. friend from Pictou that he has misjudged the effect of the legislation upon these mining companies.

I do not believe there is a country in the world in which less revenue is derived from mining than Canada. Take the highly mineralized area in Northern Ontario, Cobalt and Porcupine and other mineralized areas; I was surprised to find the other day that the entire amount of revenue derived by the province of Ontario from its mineral areas was about $300,000. It cannot be said that in so far as Canada is concerned there is anything in the situation that would retard the flow of capital towards this country for the purpose of embarking in the mining industry. The Minister of Mines of British Columbia was here the other day and I inquired of him how much revenue they derived from the mines of British Columbia. He informed me that they got $150,000. I do not know of any country in the world in which such small amounts are taken from the mining industry by way of royalty and taxation as in Canada. I do not believe that the imposition of this moderate tax is going to have the effect, amongst a community as intelligent as the mining community of causing them to slacken their efforts in the development of that great natural resource. We go to the legislation of the United States; the United States is a great mineral country and yet there has been an income tax imposed not only upon the subsidiary mining companies but upon the holding companies. The maximum allowance made by the United States for exhaustion of capital is only five per cent. I think that is too small, and I shall deal with that phase a little later on. Take the nickel companies of Canada. The International Nickel Company, which has its refining plant in the United States and operates, I believe, through a subsidiary company at Sudbury, had earnings of nearly $10,000,000 for the nine months ended December 31, 1915. Now I do not believe that public opinion would sustain the Government in taxing all other industries in Canada and passing by these mining companies.

Mr. TURRIFF: Was it the International Nickel Company or the Canada Copper Company that earned the $10,000,000?

Sir THOMAS WHITE: The International Nickel Company. I mentioned the subsidiary company at Sudbury, which is called, I believe, the Canada Copper Company. I give that as an illustration of the large earnings of these mining companies, and I am going to show later that the amount we shall take from these mining companies is so small that it will have no appreciable effect on the mining industry at all. Only comparatively few mining companies in Canada are subject to the tax, and they will contribute very much less than my hon. friend has in view. The mining companies desire to contribute. Some of them would rather that the tax was on a basis so that they would not have to contribute so much; that is no doubt very natural. I hear there are also a few, but very few, who would rather not pay anything at all. But we should not be justified in acceding to their request and exempting them from the operation of this tax, provided of course that they made large profits. I can say this: that those in the mining industry who do not desire to pay are decidedly in the minority; the great majority do want to pay; they recognize it as just that they should pay, and among these I am happy to say are the Americans.

Let us for a moment consider the principle of the application of this measure to the mining industry. I admit that it is more difficult to apply a measure of this kind to mining companies than to manufacturing, industrial or commercial business. The reason is that mining, as my hon. friend from Pictou has pointed out, is a calling in which there are many disappointments, and in which abnormal profits must be looked for. I think that is generally admitted. A man who might be quite content with seven per cent in a manufacturing business would not invest in a mining company upon the basis of a seven per cent return on his investment. It must be borne in mind that a man who speaks of getting say twenty per cent in a mining company, especially a company that is operating metalliferous mines, knows that in that twenty per cent there is a large return of his capital each year. That is among the reasons why, in mining, a larger return is required than in the case of an ordinary commercial or indus-

trial enterprise. The same remark would apply to other businesses—I do not say that twenty per cent would apply—in which the capital invested is depleted from year to year. The resolution I have brought down relates net profits to capital. I would call the attention of my hon. friend from Pictou to the fact that in the resolution originally brought down we used the term "net profits." I may say that mining had not escaped our attention, and for this reason, among others: We had examined carefully the American income tax legislation, in which provision is made for an allowance for exhaustion or depletion of capital not to exceed five per cent of the gross output in any one year. It did not appear to us that we should place a limit of that kind upon the amount that we should allow for exhaustion of capital. There are some mines whose average life is eight or ten years. I am speaking of metalliferous mines. Then other mines, such as coal mines, last for generations, and the same considerations,except in a general way, do not apply; that is to say, the percentage of exhaustion in a coal mine in a particular year is not so great as the amount of exhaustion in connection with metalliferous mines such as gold, silver and copper mines. We therefore deemed it improper to place any limit on the percentage which we should allow for exhaustion of the capital of a mine. In the administration of this Act it may be necessary for us in some cases to say we shall allow ten, twelve or thirteen per cent; and in other cases five, or two per cent. It all depends upon the character of the mine with which we are dealing. The hon. member for Pictou will, I am sure, concede that if we tax what are known as profits and distributed to shareholders, say under the mining laws of the province of Ontario, but which are really not net profits, and deduct from those profits a proper amount, as we should be entitled to do under the provisions of this Act, for depreciation of plant and machinery, and for exhaustion, in the case of some mines, to the extent of ten, twelve or more per cent of the value of the mine, they take on a very different complexion from what are ordinarily understood as profits in the payment of dividends to shareholders in mining companies. The result of dealing with the profits of mining companies in that way—and it is a proper way to deal with them—will be to make the net profits appear to be much smaller than the apparent profits which are published from time to time. So much for that phase. I have not considered it necessary to place any limit in the Act, because I think in its administration the judgment of the officials should be left unfettered, although, of course, they will have to act on some principle which will be fair to all. I do not, however, consider it necessary to fix in the Bill a limit of percentage to be allowed for the exhaustion of mines. I have dealt with the matter of net profits, and it does seem to me that in dealing with them in that way we are placing the mining industry on a parity with all other industries.

Now we come to another question, which I am sure my hon. friend from Pictou has given attention to: the question of capital, of reserve, rest and accumulated profits. My hon. friend will observe, by an amendment I shall make to the resolution, that "may" will become "shall."

Mr. MACDONALD: In all companies?

Sir THOMAS WHITE: I had great difficulty, I confess, in reaching a conclusion upon that point. I derived substantial advantage in reaching my conclusion from the discussion in this House. I have no small vanities which would make me disclaim the advantages received from a discussion in a House such as this. A minister brings down a comprehensive measure of taxation. He knows that it is more or less rough-hewn, and that he will obtain much more information after he brings it down than he had when it was drafted. As long as the principle of a Bill is correct, inequalities can be corrected in this House, and a minister must be prepared to act in the light of information that he may receive from hon. members. I would call the attention of my hon. friend from Pictou to the fact that, in estimating capital we shall have regard, not only to capital stock, but to rest, reserve, and accumulated profits. These will all be embraced under capital.

My hon. friend from Pictou is a lawyer, and I desire to make this statement to him. If we had proceeded absolutely logically we should have said: We will take the value of all the assets, real and personal, movable and immovable, of every company, firm and individual in Canada, and subtract the liabilities from the assets and the difference will be the capital. I need not, however, tell the House that that would be a Herculean task for the officials charged with the administration of this measure. In the case of most companies the capital, reserve, and accumulated profits are accurately stated in their reports, and one

would feel perfectly safe in taking their statement where the capital stock has been paid in full: capital, so much; reserve and accumulated profits, so much, representing premium on the price of stock sold to shareholders, or profits which have been taken into reserve, or contingent fund, or allowed to remain in profit and loss account. So in the case of an ordinary company for the sake of taxation, you have your capital, your reserve or rest account, and your accumulated profits, substantially representing the capital of the company invested in that business.

Mr. MACDONALD: The gross capital?

Sir THOMAS WHITE: No, the net.

Mr. MACDONALD: What about the liabilities?

Sir THOMAS WHITE: I think I am right. I am speaking of capital, reserve and accumulated profits only; I am not speaking of the total assets. I say that that substantially represents the capital of that company. Just as an individual has invested in a business $100,000 which would represent the value of its assets less its liabilities, so, in determining what the capital of a company logically is, you would say: What is the value of its assets and what are its liabilities? You would then deduct the liabilities from the assets and in that way get the capital. If the business of a company has been conducted properly, if the stock has been all paid in cash, you will find that that will correspond with capital stock, rest, reserve and accumulated profits.

Mining companies present difficulties in ascertaining the capital invested in them, because there is no necessary connection between the nominal capital of a mining company and its real capital, which is the value of its mines. Therefore, you will find these anomalies. You will find a company incorporated some years ago, say, with a capital of $250,000 or $500,000, and you will find that the property to-day may be worth $5,000,000; that a holding company has probably been created, holding the stock in the original company, now the subsidiary company of the holding company, and that the dividends are being paid, say, at the rate of 15 or 20 per cent upon a capital of $5,000,000. Now, this taxation will apply, of course, to the underlying company; but it will be necessary, in order to be perfectly fair to the mining industry, that in considering what its capital is, under the provisions of this Bill, you have regard to the amount of its fully paid up capital and to the values of its reserves, rest and accumulated property, the three together, as I have stated, representing substantially the value of the mine. In my opinion, that is absolutely fair and just, and it is the principle that would be applied to financial institutions, private individuals and firms in business. The first question is: What is the true amount of your capital? The second is: What is the true amount of your net profits? Now, relate your net profits to the true amount of your capital and you will easily be able to make the calculations called for in this measure. Therefore, I think, in view of the statement I have made, that the apprehensions of those engaged in the mining industry that this tax is going to be oppressive, will be allayed, if not entirely removed, because, on the one hand, the so-called profits are cut down to a net basis, and on the other hand, the capital, reserve and accumulated profits are deemed to be the value of the property, less the liabilities, of course, that is, the true capital invested in the enterprise.

4 p.m.

I do not, at the moment, desire to say anything further than this, that, if these resolutions and the Bill which I shall introduce later should meet, as I believe they will, with the approval of this House, it will be our object to administer this legislation, while strictly, in accordance with the legislation, with good judgment and with scrupulous fairness to all parties concerned. The administration will be under the Department of Finance, the tradition of which I believe has been good, and I certainly desire to pass it on unimpaired. It has been suggested here that political considerations might enter into the administration of this measure. I do not believe that that view is shared in by a majority of the members of this House, nor that it is shared in by hon. gentlemen opposite. We are bringing in an exceptional measure under exceptional conditions, and the House realizes the fact that this is a Bill that under normal conditions would not be brought down. I am sure hon. members will have confidence that this measure will be administered fairly and justly to all parties concerned, and most certainly without regard to political considerations in order that the end may be accomplished that we have in view in introducing this measure, namely, that we may raise a substantial amount of revenue to cover our expenditures in connection with the war.

Perhaps I have spoken longer than a minister should in committee; but the hon. member for Pictou, I know, is sincerely interested in this matter; he has a wide interest in mines; he is sympathetic to the mining industry; he is well informed; he has put forward his views; he has raised questions; he has made representations, and I have thought that his desire was that I should deal with this matter, so that those engaged in the mining industry may be reassured as to certain matters about which they have been in doubt, namely as to what net profits mean and as to what capital means in connection with their industry.

There is another thing. My hon. friend has touched upon the question of the certainty of a tax. It is a good principle in taxation that those who are liable to pay a tax should be able, within reasonable bounds, to ascertain what the tax will mean, because in many cases, they make their future arrangements accordingly. Now, this Bill should be through this House in the course of the next couple of weeks—at least I am hoping it will—and once it becomes law, there will be no difficulty whatever, because the legislation will begin to operate at once, if any mining company is desirous of ascertaining what its taxation will be, in making their return and having the officials of the department check it over and make an assessment upon it. I think we should be able to begin making our assessment in May. Returns will be called for in May or June, or, if any are unduly apprehensive about the amount they will have to pay, they can easily ascertain substantially what it will amount to.

Again I thank my hon. friend from Pictou for giving me an opportunity to make this statement.

Mr. TURRIFF: If I criticise some of the points in this Bill, I want it distinctly understood that I am not in any way opposing the taxation of corporations. I do not believe that any hon. member on this side objects to the taxation of corporations, but we criticise the inequality of the taxation. Under this Bill, one man is taxed, while two or three others who should be equally liable are not reached at all. Suppose a man has $100,000 invested in a mercanatile business, he is taxed; but his next door neighbour has $500,000 invested in some other way, and no attempt is made to take a dollar from him. If a man has his money invested in bonds, securities, or real estate, from which he derives a big income, the Minister of Finance does not make the slightest attempt to get at him. And that is the reason why this Bill, in my judgment, when it comes to be understood, will not be popular.

Sir THOMAS WHITE: My hon. friend understands, of course, that this tax applies only to companies making over seven per cent profit; it is a tax, not upon capital, but upon profits beyond a certain amount. I explained that last night.

Mr. TURRIFF: I understand that perfectly. But what I object to is that the man who has millions invested, and is making more than seven per cent on his investment—

Sir THOMAS WHITE: Do they make that?

Mr. TURRIFF: If he is not making more than seven per cent, he is making far more in amount than the man with $250,000 in a commercial business that may be making over seven per cent; yet he is not called upon to pay a single dollar. I was not here last night, but I understand that the objection offered by the Minister of Finance to an income tax was the difficulty of collecting it, and the fact that many would escape. To my mind, it would not be a bit more difficult to collect an income tax than it will be to collect the tax imposed under this Bill. This will be an expensive matter, and you will only get at a certain small proportion of the community, whereas, if the tax were evenly distributed over the wealth of the country, and every man who has wealth, who has an income, were called upon to pay, the tax would not fall so heavily upon our industries.

The Minister of Finance has just spoken about the capitalization of mines. I am not sure that I clearly understood what he said. Suppose that a mining company, organized a few years ago, has a paid-up capital of $250,000. They bought a property for $100,000 and spent $150,000 in plant and in carrying on the business. Between that time and the time when this tax comes into effect they make a fine discovery of ore, so that the mine, instead of being worth $100,000, is worth $1,000,000. In that case, is that $1,000,000 capital, or is it not?

Sir THOMAS WHITE: Assuming that $1,000,000 is a proper valuation in the opinion of experts, then I should say the true position of that company would be this:

Its capital is $250,000, and its reserve, rest, and accumulated profits make up the balance. Its capital, for the purposes of this Act, would be $1,000,000.

Mr. TURRIFF: That is what I was not clear about. Now, the Minister of Finance discussed the nickel companies, and spoke of the readiness of the American owners of mines to pay their share of these taxes. Will he say that the International Nickel Company will pay taxes under this legislation? For my part, I do not see how it is possible for the minister to tax that company. He may tax their subsidiary company, the Canada Copper Company. The minister has just stated that these companies are making vast sums of money, the price of copper having doubled. But the minister will find himself practically up against a stone wall in the case of the Canada Copper Company, for that is a subsidiary company. It does not sell ore, nor does it sell the finished nickel. It roasts and smelts the ore at Copper Cliff, near Sudbury, and turns out a matte which is shipped to the International Nickel Company. It does not make the slightest difference to the Canada Copper Company what it charges for the matte. Our nickel goes into the United States and is refined in New Jersey, and the company is making millions. The Solicitor General (Mr. Meighen) said the other night that it was making $5,000,000, but the Minister of Finance said that a subsidiary company was making $10,000,000.

Sir THOMAS WHITE: No, the main company.

Mr. TURRIFF: Then that makes it very clear. The Minister of Finance says they make $10,000,000, and the Solicitor General the other day said they made $5,000,000.

Mr. HANNA: That was last year.

Mr. TURRIFF: They were talking within a week of each other.

Sir THOMAS WHITE: I read from the Canadian Mining Journal:

> The International Nickel Company, in the three months ended December 31, 1913, earned some $3,423,246; and in the nine months ended December 31, 1915, earned $9,741,828.

—We have not the figures for last year.

Mr. TURRIFF: I would recommend my hon. friend to give that information to his colleague, the Solicitor General, who, in order to turn an argument, stated that their profits were $5,000,000. But the point I want to make is that my hon. friend is not able to tax the International Nickel Company; he cannot possibly tax them. While our own people have to pay the tax, these gentlemen, living across the line, who take our ore over there, refine it over there, keep 2,000 men at work all the year round, and have all their big-salaried men in the state of New Jersey, cannot be taxed one dollar under this legislation. My hon. friend will not make any attempt to tax them, simply because he cannot do it under this legislation. Then there is their subsidiary company, the Canada Copper Company. Copper has gone up, as my hon. friend has stated, to double the price it was a short time ago. Nickel has gone up, in spite of all the Solicitor General has said, to practically double the price it was two years ago. Allied nations in Europe are offering almost fifty cents a pound for nickel, and are willing to make long contracts for it. The price of nickel is practically double what it was before the war. You cannot get at the profits of the Canada Copper Company to tax them to any extent, simply because they are only a subsidiary company, and it does not make any difference to the shareholders whether they sell their matte for five cents a pound or for fifteen cents a pound—the profits are made on the American end.

Sir THOMAS WHITE: I do not at all agree with my hon. friend's conclusion. I think the Bill has a provision that will meet the case in point.

Mr. TURRIFF: I hope that is the case. If we can tax the International Nickel Company, I shall be very much pleased, because if there is any one institution in this country that ought to pay a tax of this kind, it is that particular company, who take our ore out of Canada to the United States, refine it there, sell it to our opponents—not directly, but indirectly—scatter it all over the world, and make huge profits. If my hon. friend can so word his Bill as to tax a company organized in the United States, operating in the United States, whose dividends are distributed in the United States, I shall be most delighted to hear it. But it seems to me he will have quite a contract on his hands to collect the tax from the gentlemen who are now so anxious to say that they want to pay a share of it. I venture to say a good many of them are saying that with the knowledge that they cannot be taxed. At all

events, if they can be taxed it will be a very good thing.

My hon. friend states that this is a war tax. I hope that it is a war tax, and that every dollar of it that will be collected will go to the war funds. But we have to take that statement with a little grain of salt; because my hon. friend last year told us that the direct taxes he then imposed were war taxes. My hon. friend said that the extra cent imposed on letters and post cards was for war purposes, and that every time a man, woman, or child in Canada bought 10 cents worth of stamps during the past year the additional revenue went to the war fund. But what was the result? From what I have heard in the House during this session, the Post Office Department stole it all from the Government.

Sir THOMAS WHITE: That is not true.

Mr. TURRIFF: They did not turn it over to the Government; they kept it.

Sir THOMAS WHITE: They did not.

Mr. TURRIFF: Will my hon. friend say that the Government got, for war purposes, all the extra revenue from the sale of those stamps?

Sir THOMAS WHITE: The entire revenue of the Post Office Department, like that of all other departments of the Dominion, finds its way into consolidated revenue fund; and every dollar of taxation that was collected last year, either by indirect or by direct taxation, was used for the purposes of the war, as well as a very large additional sum.

Mr. TURRIFF: That is no information. I am quite certain that large sums other than those collected as revenue were used for the war. But the extra expenses of the Post Office Department have more than eaten up the extra revenue from the sale of postage stamps.

Sir THOMAS WHITE: Supposing that the extra postal taxation had not been imposed, would the additional expenditure of the Post Office Department not have had to be paid out of consolidated revenue fund?

Mr. TURRIFF: Well, yes. If that had been the case, the deficit would have been double what it is; that is the only difference. The deficit in the Post Office Department, I understand, will be something like $3,000,000 this year. If my hon. friend had not passed this measure last year, exacting an extra 50 per cent postage, the deficit in the Post Office Department would have been about $6,000,000.

Sir THOMAS WHITE: Would it not have had to be paid out of consolidated revenue fund? Of course, it would.

Mr. TURRIFF: If it had not been for the extra revenue from the sale of postage stamps, my hon. friend the Postmaster General would not have been so extravagant. There was absolutely no necessity of expending all the money that was expended. While on that subject, I want to say that if this Government would use the slightest economy, if they would economise in any degree at all, one-half the revenue which my hon. friend proposes to raise at the present time would not be necessary at all.

Mr. HENDERSON: Oh, oh.

Mr. TURRIFF: My hon. friend from Halton laughs, but why should it be necessary this year to spend 50 per cent more in running the country than was expended 4 or 5 years ago? Why should it be necessary? We were not at war at that time, we had a buoyant revenue, and there might have been some excuse for large expenditures; but to-day, when we have the greatest war of history on our hands, when we are called upon to provide tens of millions of dollars every year for interest, and when the ordinary revenue has fallen very materially owing to the influence of the war, the Minister of Finance claps on full sail and goes ahead; he does not try to economise in the slightest degree, judging by the amounts he is asking for at this present session. What is wanted is not so much this tax Bill as some little economy on the part of the Government; if they would economize to any reasonable degree at all, it would not be necessary to have all this direct taxation. If we have got to have more revenue, I quite agree that it is best to raise it by direct taxation. I would like to see my hon. friend take some steps to make that taxation apply fairly equally. I do not suppose that it can be applied with absolute equality, but it should apply fairly equally to those who have money and are able to pay. It is very extraordinary that the Government should adopt a system of this kind when, in this very city of Ottawa, there are over a dozen millionaires, several of them multi-millionaires, walking around with revenues of upwards of $100,000 per annum. Yet my hon. friend does not make the slightest effort to take a single dollar from one of them. It is the struggling man in business who is being taxed, and the wealthy

concerns, in a general way, are going to escape. That is how it will work out to a very large extent. While I quite agree with the taxation of corporations, I would have liked to have seen some system of equality by which all would be taxed somewhat alike.

Mr. GREEN: Mr. Chairman, in my opinion, the Budget is a very fair one. The hon. member for Assiniboia (Mr. Turriff) in his usual—shall I say—reckless fashion—

Mr. TURRIFF: Say what you wish.

Mr. GREEN: Then I shall say reckless fashion—

Mr. TURRIFF: Free speech.

Mr. GREEN: —attempts to show this House that my hon. friend the Minister of Finance (Sir Thomas White) in bringing down this Budget is not taxing the moneyed man. In my opinion this Budget covers very largely the class that we want to get after, the class that is able to pay. As to the individual and the question of an income tax, the reason is apparent why this Government has not undertaken to impose taxation along that line. I am not going to take up the time of the committee this afternoon at any length; but I simply wish to say that when the Budget was first brought down I was of the opinion that the taxation was going to bear very heavily upon the mining industry. Knowing that capital is easily frightened, and especially such capital as seeks investment in the mining industry, I was much alarmed at the thought that it was possible and probable that this Budget as applied to mining companies would have the effect of keeping capital out of our country. The difficulty of mining is not so much to get capital for the mine of known value; it is to get capital for the prospect, for the undeveloped mine, because once you have a mine developed there is nothing in the way of getting ample capital to operate it, because you can always show the profits that can be made. I interviewed my hon. friend the Minister of Finance and discussed the question with him, and he agreed with me that the mining industry was entitled to greater consideration than was an ordinary commercial company. The ordinary commercial company, if it is well managed, is in a better position after it has been operated for a number of years to make money than when it first started in, because it has established a reputation and is in a position to do business appertaining to its particular line much better than when it commenced. The mining company, on the other hand, is producing something from the ground, and every ton of ore that is produced and marketed is just so much depreciation of its capital. The life of metalliferous mines is anywhere from 5 to 25 years; in some districts the life of a mine is much longer than it is in others owing to the geological formation which results in the ore bodies extending to a greater depth. The Minister of Finance has provided for that, and his proposition, as outlined this afternoon to me, is an eminently fair one. I have no hesitation in saying that I believe it will be acceptable to the mining interests of the province from which I come and the mining interests of Canada generally. There has been a great deal of misunderstanding as to just how this tax is going to be applied in connection with mining companies, but from the explanation we have had this afternoon I think that that misunderstanding will be removed. I am further of the opinion that there is no mining company, in the province of British Columbia at least, that would seek to evade taxation for war purposes entirely. I believe they are all quite ready and willing to pay their fair share of the tax. They are just as confident of a satisfactory conclusion to this war as we are and just as ready to pay their proportion of the cost.

While on this subject, might I digress to say that the war has been very beneficial to the mining industry of Canada? I am not speaking now so much of the additional price obtained for the product, but of the fact that it has made the people of Canada and Great Britain, as well as this Government, see the necessity that exists for the reduction and refining of ores within our own community. The Government have arranged for the reduction and refining of zinc. An arangement is being made, I believe, for the refining of copper, and I am going to express the hope that the Government will never rest until they see that every pound of gold, silver, lead, zinc, copper and nickel produced in the Dominion is also refined within our own country and sold as finished products.

Mr. MACDONALD: As my hon. friend comes from British Columbia, could he tell me whether or not we have any actual refining of copper and lead here, or if we produce any of these minerals in a mercantile condition for sale?

Mr. GREEN: I cannot speak for the East, but we have in the West, and have had for some time, a plant that reduces and refines lead and all the silver, copper and gold that may be contained within the lead product. We have in operation in British Columbia the electrolytic process for the reduction of zinc. It is producing electrolytic zinc, which is a very pure form of zinc and does not contain over two-tenths of one per cent of impurities. That plant is in operation to-day and is being extended. It is at present producing 25 tons per day, but they propose to extend it to treat all the zinc ores that they can possibly handle. There is no copper being refined as such within Canada as far as I know. We do not go any further than bringing the copper into matte, or blistering it. I believe arrangements are now being made, and that a plant has been erected to refine in Canada as much copper as the home market will absorb, and I am in hopes that the Government will not rest until all metals produced in Canada are refined in this country.

Mr. CARVELL: Would my hon. friend give us the capacity of the copper refining plant which is now nearing completion?

Mr. GREEN: I think that we produce in Canada to-day something like 60,000,000 pounds of copper. The manager of the works in question told me that their plant would provide for the normal consumption of Canada, which would be nine or ten million pounds a year. I do not think I can add anything further, except to repeat that I am sure the mining industry of British Columbia will be satisfied with this taxation after the explanation given by the minister this afternoon.

Mr. MACDONALD: I am very glad that my hon. friend from Kootenay (Mr. Green) has corroborated a statement which I made early in the discussion to-day, as to the danger that might arise from imposing a tax upon the mining industry. While the minister's explanation, that the value of the metal in the ground is to be considered as a portion of the capital upon which earnings have to be made before the tax is imposed, may relieve in some measure the fears of those who are interested in operating mines, yet it does not remove the fears that exist in the minds of those who may be approached for capital for the purpose of developing a mine whose real value has not been ascertained. My hon. friend the Minister of Finance states that this is a temporary measure only, and not a final solution of the question. He may say that in the Bill he does not propose to make the tax applicable for a longer period than two years; but when I suggested that the obligations imposed as a result of this war might not be concluded at the end of two years, my hon. friend proceeded to indulge in a lot of side-wind talk about the war, which was wholly irrelevant. I made no prediction as to how long this war was going to last. I could not predict that any more than my hon. friend could. It is not the exact date upon which this war will finish that will decide how long this country is to be taxed, but these two things will determine it; first, the extravagance of my hon. friend, and, secondly, the obligations imposed by the war. My hon. friend's extravagance is still going on this year. He said last night that the only way we could get money was by saving. I would point out that the Chancellor of the Exchequer in Great Britain has set an example by giving up his motor car and walking from Westminster to Downing street every morning. My hon. friend's idea of economy is to include in the Estimates $28,000,000 which he says he will not expend unless a supervening necessity—which might be a political question—arises. Whether we should all be in a sound financial position at the end of two years depends in the first place, upon whether the minister practices the economy he preaches; and, secondly, upon the amount of money we spend upon the war. Although we have been sitting for two months the Minister of Finance has not yet given to the House the total cost of the war to date, nor how much it is costing us each day. We agreed to my hon. friend taking power yesterday to borrow $75,000,000, and we have before us now proposals which are intended to raise a very large sum of money. And I say that before my hon. friend should ask this House and investors to believe that this taxation is to be purely temporary, he should give us a statement of how much we have paid on account of the war, and, secondly, he should set us an example in economy.

My hon. friend told us that nobody in England had raised any question in regard to the proposals made in the British House for carrying on the war. I venture to say that if my hon. friend will read the English Hansard he will find that the question how the money should be raised there is a

matter of free discussion. My hon. friend must not think, simply and solely because he and his colleagues happen to be in power while the war is on, that everything the Government proposes must be ratified, and that free people in this House are guilty of lèse majesté if we venture to criticise the Government's proposals, and suggest better methods of meeting our obligations. That attitude is entirely erroneous.

The Minister of Finance says, in an apologetic way, that this taxation is purely temporary, and that for the purpose of raising a certain amount of money this year he is putting a tax on industry instead of on wealth. I say that we have a perfect right to suggest that the tax should be placed upon wealth, and distributed fairly over the whole country. The mere fact of the war being on adds no weight to my hon. friend's argument.

The minister says that political considerations will not enter into the administration of the Act. I venture to say that if the terms of the Bill are the same as the terms of the resolution, the minister is taking into his hands vast power. He is taking power to nose into the private business of every concern of this country whose business comes within the scope of this Act.

Sir THOMAS WHITE: Would not that be the case if we adopted an income tax on individuals and companies?

Mr. MACDONALD: My hon. friend could follow the line adopted in those countries that have adopted income tax legislation, and then he would not be exempting capital as he is doing here. It is gratifying to receive the assurance that political considerations will not enter into the administration of this Act. I am free to confess that I have little complaint to make in that regard so far as the Minister of Finance and his department are concerned, but my hon. friend has little scope as compared with some of his colleagues. I venture to say that the hon. gentlemen who sit around him will at once begin to besiege him in regard to the employment of accountants here and accountants there in each of the provinces of this Dominion where they have friends who have some claim on them for political consideration, and my hon. friend will not resist their importunities. Some ministers have put up before the Canadian people this farce, that there is no patronage in their departments. A ridiculous answer was given to me by the Secretary of State, speaking for the Government, to a question which I put to him as a result of a statement made by the Minister of Trade and Commerce. In that answer the hon. gentleman seriously put forward the idea that there is no patronage and no politics in the administration of this country. The political chicanery of the Militia Department is the disgrace of Canada; and there is no portion of the country in which to-day that sincere and deep feeling which our people naturally have in regard to the war has not been alienated or interfered with as a result of the administration of the Militia Department in connection with war matters. The same is true of every other department; and when my hon. friend says that there will be no politics in the administration of this measure, I venture to point out to him that, while his statement sounds well, if he does not practise what he preaches, in spite of hon. gentlemen who sit around him, he will fall very far short of his protestations. Incidentally my hon. friend undertook to deny the statement made by my hon. friend from Assiniboia (Mr. Turriff), that the money collected last year from the sale of war stamps went into the Post Office Department.

Sir THOMAS WHITE: What I said in answer to the hon. member for Assiniboia was that the proceeds from the sale of stamps go into the Consolidated Revenue Fund of the Dominion.

Mr. MACDONALD: Through the Post Office Department.

Sir THOMAS WHITE: They go into the Consolidated Revenue Fund, no doubt through the Post Office Department.

Mr. MACDONALD: I quite understand the point my hon. friend is making. My hon. friend knew quite well when he was making his statement that he was not meeting the point raised by my hon. friend from Assiniboia.

Sir THOMAS WHITE: He was.

Mr. MACDONALD: Did not the people of this country last year think, when they were buying that additional stamp that went on to every letter and post card they mailed, that they were contributing to the Dominion treasury something that was to be ear-marked as a special-tax and which was to go into the fund that was to be devoted to carrying on the war?

Mr. CARVELL: Why did they mark it "war tax?"

Sir THOMAS WHITE: That was precisely what was done. The proceeds of the entire special war taxation went into Consolidated Revenue Fund, and out of that fund we paid for the purposes of the war very much more than was received from the special and the general taxation.

Mr. MACDONALD: Is the minister—

Sir THOMAS WHITE: My hon. friend is only quibbling.

Mr. MACDONALD: It is my hon. friend who is quibbling, and he knows it, because he knows that, if, in making that statement, he had said that the proceeds had gone into the Consolidated Revenue Fund through the Post Office, his statement would have been correct. I venture to state that the money that was received from the sale of those war stamps was not ear-marked and went into the Post Office Department.

Sir THOMAS WHITE: I consider my hon. friend's statement a mere quibble, and he knows it. There was never any intention of specially ear-marking any fund.

Sir WILFRID LAURIER: Then, you did not ear-mark it?

Sir THOMAS WHITE: Under the financial system of this Dominion all revenues, without any exception, even trust moneys go into Consolidated Revenue Fund. There is only one pocket that the Dominion has, and the point that I make is that last year we paid out of Consolidated Revenue Fund, into which the special and general taxation went, more for war expenditure than we derived from the special and general taxation, and I say that my hon. friend knows it.

Mr. MACDONALD: I say further—and my hon. friend cannot contradict me—that he paid out to the Post Office Department $3,000,000 more than he got from it.

Sir THOMAS WHITE: That is not the point.

Mr. MACDONALD: My hon. friend is a quibbler—let there be no mistake about that. My hon. friend speaks about the Consolidated Revenue Fund of this country. He receives from certain departments of this Government certain amounts. He pays out certain amounts. The net amount which he receives from the Post Office Department, or from the Railway Department, or from the Customs Department, or from any of the other departments in any particular year, is the amount which each particular department has by way of surplus from its administration.

Sir THOMAS WHITE: No, it is not.

Mr. MACDONALD: I beg my hon. friend's pardon. The revenue of the Post Office Department for last year was $13,026,000, and the expenditure was $15,969,000. The money from the sale of those postage stamps, which were intended as a war tax, which should have been ear-marked as a war tax and kept for war purposes, was not so kept, but it went into the Post Office Department, and was absorbed in the general administration of that department, and the department costs more to administer than what it receives from all purposes, including the war tax.

Sir THOMAS WHITE: What is the date of the Auditor General's Report from which my hon. friend is quoting?

Mr. MACDONALD: I am quoting from the last one that has been laid on the table.

Sir THOMAS WHITE: What date is it?

Mr. MACDONALD: For the year ended March 31, 1915.

Sir THOMAS WHITE: And my hon. friend knows that the special taxation did not come into force until April 15, 1915.

Mr. MACDONALD: Will my hon. friend say—

Sir THOMAS WHITE: Does the hon. gentleman want to quibble about that again?

Mr. MACDONALD: I was quoting that simply for illustration. I want to ask my hon. friend a question: Will my hon. friend say that the proceeds from the sale of those war stamps in 1915 have not gone into the revenue of the Post Office Department?

Sir THOMAS WHITE: Your hon. friend will only say that my hon. friend has said more than enough for his own good.

Mr. MACDONALD: That is my hon. friend's ultimatum. My hon. friend has been indulging in the worst kind of quibbling in which I have ever seen any minister indulge.

Some hon. MEMBERS: Oh, oh.

Mr. MACDONALD: Hon. members laugh. I dare my hon. friend to deny that statement.

Sir THOMAS WHITE: You are caught with the goods.

Mr. MACDONALD: Well, my hon. friend is caught in deceiving this House, and I say so.

The CHAIRMAN: Order. I must say to the hon. member that his remark is quite out of order—

Mr. MACDONALD: Not at all.

Some hon. MEMBERS: Order.

The CHAIRMAN: —that the hon. minister is deceiving the House. I would respectfully ask the hon. gentleman to withdraw the remark. I think on reflection he will agree with me that it is unparliamentary.

Mr. MACDONALD: Well, in deference to you, Sir, I will substitute this statement, that the attitude of my hon. friend has the effect of deceiving the House and the country. I make this statement in the committee in the presence of the Minister of Finance, that my hon. friend, instead of appropriating the money received from the war taxes imposed by means of the postage stamps that have been sold throughout the country since the imposition of the tax for war purposes, has allowed it to go into the general revenue of the Post Office Department, where it has been absorbed, and I state that that department has been run at a loss; that instead of economy being practised, the grossest kind of extravagance has been indulged in, and that as the people of this country will realize, my hon. friend has permitted this money, which was collected for war purposes, to be diverted by the Postmaster General to the general business of the Post Office Department. That is the statement I make, and the minister can not controvert it. He can quibble as he pleases with regard to it, but he cannot deny it. I wanted to make that as clear as possible.

Some hon. MEMBERS: Oh, oh.

Mr. MACDONALD: If the Minister of Finance contradicts that statement, I would be glad to give way to him that he may speak now.

Sir THOMAS WHITE: I do not like continually to interrupt my hon. friend. I say that his statement is entirely unfounded—a quibble; and, having regard to the intelligence I know he possesses, I cannot believe but that he knows it to be a quibble. But if he says he does not know it, I withdraw that expression. When he concludes his remarks, I shall be glad to give an expression to my views.

Mr. MACDONALD: I am not asking for an expression of the hon. minister's views; I am asking simply whether this tax is ear-marked for the purposes of the war, or whether he allows it to go into the general revenue.

Sir THOMAS WHITE: I shall be glad to deal with that.

Mr. MACDONALD: And I shall be glad to hear my hon. friend. But I hope he will not deal in generalities about the money going into the consolidated revenue fund. We all know that all the revenues of Canada go into the consolidated fund. But we know also that in the case of the Government railways, for instance, the receipts are used to pay expenses, and only the balance of receipts over expenses, if there is such a balance, goes into the consolidated revenue of Canada at the end of the year. If there is no such surplus, nothing is added to the consolidated revenue fund. Now, as to the Post Office Department, the proceeds of the war tax were collected by the Post Office, and if there is no surplus in that department, the consolidated revenue fund does not get the money. So, my hon. friend cannot say that the money was devoted to war purposes. My statement is absolutely clear, and if he can controvert it he is welcome to do so.

Sir THOMAS WHITE: I certainly can.

Mr. MACDONALD: We will await the hon. gentleman's statement. We were discussing the question of whether this Budget would work injury to the mining industry. My hon. friend from Kootenay (Mr. Green) very frankly tells us of the injury which he conceives these taxes will work to the mining industry of his province.

Mr. GREEN: I spoke of the taxes as brought down.

Mr. MACDONALD: I was not going to misrepresent my hon. friend. When this Budget was brought down he thought that it would work great injury to the mining industry. But he says that, as a result of the amendments which have been made in regard to operating mines, there would be no injury. And he says that the companies of his province will not complain because they are asked to contribute something by way

5 p.m.

of tax to carry on the war. But he cannot claim that the effect of these taxes will not be injurious so far as the prospector is concerned, the man who seeks to get capital into a mining venture.

Mr. GREEN: I do not think the Budget affects the prospector.

Mr. MACDONALD: The hon. gentleman means that there is no tax levied upon the man, but that the taxation is confined to companies. But he knows that, as regards the future company, it will place difficulties in the way of the man who has to look for capital to work a mining claim which he believes to be good.

Mr. GREEN: If the hon. gentleman wants to represent my view, it is, as I said, that when this Budget came down I thought it would be injurious. I interviewed the Minister of Finance on the matter. But, with the amendment, and with the explanation made by the minister, my opinion is that it will not injure the mining industry, nor will it place difficulties in the way of enlisting new capital in mining.

Mr. MACDONALD: The hon. gentleman may be satisfied as regards existing companies, but he must appreciate the fact that the party who goes looking for capital to establish a mine will have to make a great many explanations to prospective investors before he can induce them to invest. We come back to the difficulty which underlies this whole proposition, the inability of my hon. friend, whether he be Minister of Finance or anything else, to give any guarantee to capital that this tax will not last longer than two years. We are at a disadvantage in considering this question, because the Minister of Finance has not laid before the House a statement of the real commitments of this country in this war at the present time. We have dealt with generalities as to the expenditure of hundreds of millions, but we ought to know what we are spending day by day. Only with such information before us can the House and the country know whether or not this tax will be only temporary. Does the Minister of Finance mean to say that if it is necessary for him to continue this taxation after two years he will cut off this method of taxation and revert to some other method? If my hon. friends means to take that position and say that if we need taxation in this country we will not pursue the method we are now pursuing, after the end of two years, then you have some finality upon the question. But I did not understand my hon. friend to say that. He leaves it quite open, to himself, if the necessities of the country, in his judgment, require it, and if he is still in office, to pursue this method of taxation or any other method that seems good to him. Hence the apprehension which many of us felt when this Budget was brought down that the possible investor outside of this country might feel, in fact, undoubtedly will feel, that a tax is being imposed in Canada which may be increased and which may have the effect of rendering wholly uncertain the returns upon such a speculative industry as mining necessarily is.

Mr. THOMPSON (Yukon): My hon. friend has just given expression to some views which to me are very interesting. I do not agree with him, however, with regard to difficulty in getting money for mines in this country. I have no doubt that the Minister of Finance would be glad, if he were able to do so, to announce that there would be some finality to this tax. How can the Minister of Finance, or the Prime Minister, or any other member of the Government, or the hon. member for Pictou, say when finality will come to this war tax? No one knows when the finality of these taxes will come, and so long as we are at war no one expects a cessation of these taxes. We cannot be at war without raising money, and there is only one way a Government can raise money, that is, by taxation.

My hon. friend raises the question of getting money for mines. I represent a mining community, and it may be interesting to this committee to know that the mining industry is the second greatest industry in Canada. It may be interesting to this committee to know also that the mining industry produces more tonnage for our railways than any other industry in Canada; in fact, that it produces more tonnage for railways than all other industries in Canada combined. I have in my hand a statement which is compiled by the United States Interstate Commerce Commission for the period from 1900 to 1906.

Mr. CARVELL: Does that statement cover gross tonnage or ton miles?

Mr. THOMPSON: It is the tonnage that originates as the product of mines.

Mr. CARVELL: That is gross.

Mr. THOMPSON: I am not referring to the mile tonnage, but to the actual tonnage which exists and which the different railways haul. I find in this statement that the products of mines represent 52 per cent of the total tonnage hauled by the railroads of the United States during these 6 years. A similar compilation with regard to the Temiskaming and Northern Ontario railway, which, by the way, is the report I am quoting from, gives a similar statement; but the percentage is not quite so high—not quite 50 per cent, so far as that particular railroad is concerned. The point I desire to make is that in legislating for Canada no Government can afford to overlook the question of our mining industry, because of its tremendous importance.

To revert to the remarks of my hon. friend from Pictou (Mr. Macdonald), we very often have to go abroad for money to develop our mines. But let me ask him to what country we can go to-day for money to develop our mines where there are not war taxes. Can we go to Britain? The British Government does not permit money to leave Britain to-day for the development of mines in Canada. Can we go to France? There are war taxes in France. Can we go to Russia? There are war taxes in Russia. Can we go to Italy? There are war taxes in Italy. We do not want German money or Austrian money or Turkish money. Where else shall we go? To the United States? Are there no war taxes there? Six months before we put a war tax in this country, when we were at war, the United States put a war tax on—and they are not at war. That war tax is still in existence. They have an income tax there. Therefore my hon. friend's argument falls to the ground, because you cannot go to the United States to get money for investment in mines if you are to go to a country that has no war tax. So far as I am concerned and so far as that portion of this great industry with which I have some connection is concerned, there is no great fear about these taxes. So far as the mining industry and mining men in this country are concerned, they are as loyal, we are as loyal, as the hon. member for Pictou; they are prepared to pay their full share of these war taxes, and glad to do it.

Mr. MACDONALD: I take exception to the proposition that the Guggenheimers of New York are as loyal to the British Empire as I am.

Mr. THOMPSON: I have no doubt my hon. friend does take exception to it, because he has no knowledge of the facts. I dare say that the men who are interested in mining in this country, and the mine workers, are as loyal as my hon. friend from Pictou, and just as willing to contribute their share to this tax. There is no question about that. We are at war, we have to get the money to carry on the war, and it is to the Minister of Finance that the country looks to find the money. He proposes this tax; it is not unreasonable, and I know that the mining industry will be satisfied with it. Why, Mr. Chairman, two weeks ago, the body which speaks in Canada for the mining industry, the Canadian Mining Institute, met in this City of Ottawa, and I had the honour of introducing to the Minister of Finance a delegation from that body. They presented to him their views, and they assured him, in my presence, that they were willing and ready to contribute their full share of this taxation. The Mine Owners' Association of Ontario sent a delegation on the following day, and I had the honour of going with that delegation to the Minister of Finance. They presented the same views. We are at one on this question, and I repeat, the mining industry is quite willing, able, and glad to pay its full share of taxation necessary to carry on this great war.

I do not agree with my hon. friend from Pictou when he says that because of this tax we shall not be able to get capital to develop our mines. It is not the investor who is hit; it is only those companies that are making big profits from the advanced prices of materials, which are largely caused by the war, that will be hit. These are the companies that are going to be taxed, and these only. The men making small profits will not contribute. I submit that the mining industry will not be affected more than any other industry. I represent a class of mining that is different from any other section of that industry. We all know that mines have a limited life. Coal mines have perhaps the longest life, nickel perhaps next, copper next, silver, I fancy, next, gold perhaps next, but the shortest life of all is that of placer mining, which is the chief industry in the territory I represent. This was one of the questions which the gentlemen who represented the Mining Institute submitted to the Minister of Finance, and it is

a question of prime importance. The answer of my hon. friend was of great importance to that industry, and the answer he gave satisfied them that he was going to deal with their industry in a fair and equitable way by recognizing the principle which underlies it. He recognized that he was dealing with an industry different from agriculture, railways, lumbering, or any other branch of industry the products of which can be reproduced. But metal once taken from the soil cannot be reproduced. The Minister of Finance recognized that basic principle and assured the delegation that in casting his Bill he would proceed on the principle that a percentage of the capital in the industry is being taken yearly and distributed in profits, if profits are made. That answer satisfied those gentlemen, and I submit it was a fair and reasonable answer. That is why the mining industry will accept this Bill, and will be ready and willing to pay their full share of the tax.

Mr. OLIVER: The explanation given by my hon. friend from the Yukon (Mr. Thompson) puts this proposal of the Finance Minister in a light which I certainly never understood before. Is the committee to understand that the Finance Minister is being granted power under this Bill to fix, according to his own judgment, and without any control on the part of this parliament, the limit of taxation that a mining company shall pay. If that be the fact, it opens up a most startling situation. There is no doubt that the Minister of Finance is a man of the very best intentions, and I would certainly trust him to do what was right in such a case, as much as I would any other man in Canada. But the Minister of Finance to-day may not be the Minister of Finance to-morrow, and, in any case, this Parliament has a responsibility to the people and to the interests of this country which it cannot discharge by simply saying: we depend on the Minister of Finance. If that is the character of this legislation, it certainly has an application which I for one never suspected. I thought it very questionable before, but it is certainly very much more questionable now. My hon. friend from the Yukon said that placer mining was a great source of wealth in that country. He said that the proposition now before the House would not adversely affect the mining interest. I suppose he was speaking particularly of the Yukon. Mining in the Yukon to-day is being carried on as the result of an enormous investment of capital, I do not know just how many millions are represented in that investment, but I suppose it would be perhaps $10,000,000.

Mr. A. THOMPSON: About twice that.

Mr. OLIVER: $20,000,000?

Mr. THOMPSON: About.

Mr. OLIVER: I am speaking of one company—the Yukon Gold Company?

Mr. THOMPSON: Of that company only?

Mr. OLIVER: We will, for the purposes of my argument, assume that the Yukon Gold Company has made an investment of $10,000,000 for the purpose of producing placer gold in the Yukon. Necessarily, the life of a placer gold mine in the Yukon, as it must be everywhere else, is limited. I am not sure that the men who invested their money in that gold field knew what the life of the field was going to be when the investment was made. I do not know that that is known yet. I think it would be proper to say that it is absolutely not known yet. If the men who invested their money in that Yukon gold company's enterprise had had to face taxation legislation of this character, in which it was left, as I understand, absolutely in the hands of the Minister of Finance as to whether they should pay a larger or a smaller rate of taxation; as to whether they might be taxed out of business within a certain period of years, I am here to say that the money would never have been invested. There is no argument on that subject; it would never have been invested under those circumstances and with that prospect in view.

Mr. BURNHAM: Does the hon. gentleman say that there is any discrimination involved in this resolution?

Mr. OLIVER: I do not say there is any discrimination involved in the resolution, and that is what surprises me. There is certainly discrimination proposed, under the explanation as given by the member for Yukon. He tells the House that it is proposed to leave in the hands of the minister the absolute right to vary the taxation on mining properties according to his best judgment. I know that such a proposal must have a most serious effect in preventing the investment of capital in the development of mining in Canada.

Mr. BURNHAM: Is that the text of the resolution?

Mr. OLIVER: No, it is not the text of the resolution; but the House has been informed by the hon. member for Kootenay (Mr. Green), and by the hon. member for Yukon, both gentlemen representing mining constituencies, that the minister has explained that this is to be the course taken. I am taking their explanation, as they have given it, I suppose, in perfectly good faith, and I am very much surprised and alarmed at the nature of the explanation. I would hope that it is not correct, and that the minister does not propose to assume any such unlimited measure of authority in dealing with a question that is so important as the taxation of mining properties. This is a different question from that of the taxation of other business enterprises, because the profits of a mining property exhaust the capital year by year, while the profits of any other enterprise do not exhaust capital in the same way.

Speaking of the proposal as a whole, if I understood the minister correctly, he said that this proposal was strictly a war measure to meet war conditions. Therefore I would assume that it is a temporary measure of taxation not intended to be continued indefinitely when war conditions have ceased. If I am correct in that, and I believe I am, I would take the opportunity of putting this view before the committee. We are not expecting or proposing by this measure of taxation, or any other measure of taxation that we are putting in force, to pay the capital charges of the war. We are only proposing to provide for the necessary interest charges. These interest charges are not a matter of the continuance of the war; they are a matter of the period of the loan which is raised in order to provide for the war during its continuance. Any provision that only contemplates providing for the interest charges for a short period, or during the continuance of the war, is certainly inadequate. We must face the condition that we have when we have incurred a capital obligation of $300,000,000, $400,000,000, of $500,000,000, and interest on that capital obligation must be met for at any rate, we will say, a period of thirty years. It seems to me it would have been the part of wisdom for the minister, in preparing this scheme of taxation, to have prepared a scheme that would be suitable and would be available permanently for meeting these interest charges. It is most unfortunate if we are to have a temporary scheme of taxation imposed which admittedly has so many drawbacks and difficulties to overcome when we have to meet a permanent condition. We should meet that permanent condition by permanent preparation, and not by temporary preparation. My understanding of the position of the minister is that he recognizes that this proposal is not a suitable proposal as a permanent means of raising interest on war loans. Is it because he realizes that this is a tax upon enterprise rather than upon wealth, and that, inasmuch as it is a tax upon enterprise it cannot be successfully maintained during the period of the war loan, while putting an obstacle in the way of the expansion of the industrial and commercial interests of the country?

If I remember correctly, the Minister of Finance, when introducing this measure, laid stress upon the excessive profits of munition contractors, the munition contracts being a war condition. Everybody will agree that a temporary measure, to apply to the excessive profits of munition contractors, would be fair and reasonable. Not to criticise or find fault with the gentlemen engaged on munition contracts, the fact undoubtedly remains that while the business of the country at large is not in a buoyant condition, their business is in a particularly buoyant condition. They are in a position to pay a considerable share of the taxation, and their profits will cease when the war ceases. It is, therefore, reasonable that provision should be made for taxation of war profits as a war measure. That is easily understood, which cannot be said for a scheme of taxation that applies to all business, and is only temporarily a war measure; for general business in some form or another will have to carry the permanent liability resulting from our war obligations.

The hon. member for Yukon (Mr. Thompson) mentioned that the United States have adopted income taxation as a war measure. That is a tax on wealth, and chiefly on accumulated wealth. Now, that is a permanent proposition. It stands to-day, to-morrow, and as long as the taxation is needed. It seems to me that a taxation measure, not necessarily on the exact line followed in the United States, but on the principle of laying down a system which would be as permanent as our war obligations, and which would be a tax on wealth rather than on industry or enterprise, is what would appeal most strongly to the people of this country, and would be more to the advantage of the country than the proposals made by the Minister of Finance.

Mr. H. H. STEVENS (Vancouver): I have listened with a good deal of interest to the numerous arguments made by hon. gentlemen opposite against these taxation proposals. I do not intend to speak at any great length; but one statement has been made which I feel I cannot let pass unchallenged. The hon. member for Pictou, for the second time in this debate, practically charged the Finance Minister with intentionally deceiving the House on the question of taxation, and he based his argument on the expenditure and revenue of the Post Office Department. The hon. member on a former occasion made use of these words:

> The hon. Finance Minister last year, in the most solemn tones that he could command, asked for the imposition of an additional tax of one cent on every letter that went through the mails of this country, for the purpose, forsooth, of meeting war expenditure. Taxes upon patent medicines and upon various things were included, the minister saying that the people should willingly accept the imposition of this taxation in order that we might thereby provide the funds to pay the interest upon the debt that we were contracting in order to fight the battles of old England. I tell you, Mr. Speaker, that the proceeds of not one of the stamps that were put upon letters in all parts of the country were devoted to war purposes. Every cent and every dollar made up from this source was appropriated by the Post Office Department for the purpose of paying the extra clerks in Montreal and Quebec, and of meeting the boundless run of extravagance that was begun by Hon. Mr. Pelletier, and that is being continued by the present Postmaster General.

Mr. MACDONALD: Hear, hear.

Mr. STEVENS: My hon. friend says, "hear, hear." He took up a blue-book and was endeavouring to lead the House to believe that there was a deficit in the Post Office Department this year of at least $3,000,000, when the Finance Minister forced him to acknowledge that he was reading from practically an ancient report, or at least not from a report of the revenue and expenditures for this year; and my hon. friend went on to make a bitter and unjustifiable attack on the Finance Minister. Now, I wish to give the House the actual figures of the revenue and expenditures of the Post Office Department since this tax of an extra cent was imposed in April last. For the nine months from April to December of the year 1915, the revenue of the Post Office Department was $14,019,874, and the expenditure $11,705,370: that is there was a surplus for the nine months of $2,314,504. I submit that in view of these figures, which the hon. member for Pictou cannot deny, he owes an apology to this House and to the Minister of Finance for the reckless and unjustifiable statement he made. The figures show that there will be a surplus of $3,250,000 for the Post Office Department this year, and that will go to assist in the prosecution of the war. The hon. member for Pictou knows perfectly well that under the system of financing we have in this country the total revenues go into Consolidated Fund, and the surplus from that fund is now being used for the prosecution of the war. Certainly now is not the time to suggest that we should have a new system of financing, or that we should ear-mark every dollar from this source and that so as to be sure that it is used for war purposes. Why, in order to keep track of every dollar and allocate it to this or that fund, we should have to double the staff of the various departments.

Mr. CARVELL: You could not find places for them.

Mr. STEVENS: My hon. friend's mind is running back to the time when he was sitting behind the treasury benches.

Mr. CARVELL: I meant that you could not find sitting room in the departments.

Mr. STEVENS: I do not think my hon. friend's remark is very pertinent.

Mr. A. K. MACLEAN: The hon. member for Pictou was endeavouring to estimate the net result of the financial operations of the Post Office Department for the present fiscal year.

Mr. STEVENS: And he made a pretty poor fist of it.

Mr. A. K. MACLEAN: He was urging a more economical administration of that department, and contending that if the department were economically managed it would at least pay for itself, and would not eat up the revenue which the Government was obtaining from war stamps. Will the hon. gentleman tell me what he estimates the deficit of the Post Office Department will be for the year ending on the last of this month, not crediting to the Post Office Department the revenue from the war stamps?

Mr. STEVENS: I will answer that in a minute. My hon. friend says—and I am surprised at the hon. member for Pictou being suddenly struck dumb, as he usually has the last word.

Mr. MACDONALD: My hon. friend will hear from me at the proper time.

Mr. STEVENS: I am glad that my hon. friend has found his tongue again.

Mr. McKENZIE: They can not both speak at the same time.

Mr. STEVENS: My hon. friend says: "I was endeavouring to show what the deficit is this year." He can figure and he can produce blue-books by the ton, but he will not be able to show what the deficit is this year; he will find a surplus in nine months of $2,314,504.

Mr. A. K. MACLEAN: But that is counting war-tax revenue.

Mr. STEVENS: Certainly, and the tax was put on for war purposes.

Mr. A. K. MACLEAN: That is not counting only the Post Offive revenue, but including revenue from other sources. What is the result without the war-tax revenue?

Mr. STEVENS: I will come to that in a second. Let me lay down this as a fundamental principle — and the Postmaster General in the former Government and the right hon. leader of the Opposition will agree with me—that the Post Office Department is not supposed to be a revenue-producing department.

Mr. OLIVER: It used to be.

Mr. LEMIEUX: Not with the Tories in office.

Mr. A. K. MACLEAN: Answer the question.

Mr. STEVENS: I will most assuredly answer the question. The policy originated by the right hon. gentleman now leading the Opposition, when Sir William Mulock was Postmaster General, and when they reduced the postage from three cents to two cents, was this: That they did not want the Post Office to be a revenue-producing department, but they wanted it simply to pay its way. In the year ended March 31, 1914, there was a deficit in the Post Office Department, but 75 or 80 per cent of the business concerns throughout Canada showed a deficit during the first few months after the war broke out, and the Post Office Department was probably affected in its revenue more severely than any other department.

Mr. A. K. MACLEAN: The revenue of the Post Office Department did not fall off. My hon. friend is not answering my question.

Mr. STEVENS: If my hon. friend will not be patient until I come to his question, I will answer it now, even although it makes my remarks disjointed. My hon. friend asks why there was a deficit in the Post Office Department? I say: because the Government carried out one of the most important planks in its platform, namely, the extension of rural mail deliveries throughout this country plus the parcel post system. Will the hon. gentleman or his leader take the responsibility of condemning here the policy of the Government in extending rural mail deliveries?

Mr. A. K. MACLEAN: It is not necessary.

Mr. STEVENS: He certainly will not, and no sane man will condemn it. But my hon. friends from Halifax and Pictou are condemning the Government, and indirectly placing themselves in the position of condemning rural mail delivery and increased postal facilities. I will give my hon. friend an illustration right in my own district.

Mr. A. K. MACLEAN: My hon. friend is not answering my question. He was going to do so a minute or two ago.

Mr. STEVENS: I am answering it as fast as I can.

Mr. A. K. MACLEAN: He will forget about it soon.

Mr. STEVENS: My hon. friend keeps on interrupting with new questions. Let us take the revenue and expenditure of this year. I show here by official figures from the accountant of the Post Office Department, that in nine months we have a surplus of $2,314,504.

Mr. A. K. MACLEAN: Including the war stamp taxation.

Mr. STEVENS: Certainly including the war stamp taxation, and this surplus is going to assist in financing the war, just as the Minister of Finance told the House a year ago.

Mr. CARVELL: What would be the result excluding the war stamp tax?

Mr. STEVENS: Judging from the amount of the war stamp tax, I should say, although I have not the figures before me, that the Post Office Department will come out even, and that is exactly the policy which the right hon. gentleman followed for years and which this House is not prepared to turn down, namely, that the Post Office Department shall break even.

Mr. A. K. MACLEAN: There will be a deficit of from three to five million dollars in that department.

Mr. STEVENS: Then there is all the more credit to the Minister of Finance for his financing. My hon. friend has not at all succeeded in getting over the malicious attack of the hon. member for Pictou on the Minister of Finance when he stated that the minister had a deficit in the Post Office Department, and that he was deceiving the House and the country. The Minister of Finance has, by his method of financing, succeeded in producing a surplus which is being devoted to the prosecution of this war, and a few dollars here or there are not particularly concerning my hon. friends opposite. I repeat that, so far as the increased expenditure is concerned, you have the parcel post, rural mail delivery, and increased postal facilities throughout the Dominion.

Mr. EDWARDS: Over $4,000 in the county of the hon. member for Pictou.

Mr. STEVENS: The hon. member said: "Why did the minister not put on an income tax?" Two or three years ago my hon. friend from Assiniboia (Mr. Turriff), and my hon. friend from Edmonton (Mr. Oliver) and others raged in this House about the trusts, mergers, and combines, about this industrial concern and that industrial concern, as if they had no right to exist in the country. Now they say: "Why does the Minister of Finance tax the industries of the country? why does he not leave those industries free?" Yet many of them are making huge profits out of war expenditures at the present time. They know this, if they know anything, that the people of Canada welcome the proposal of the Minister of Finance as a most radical advance in the system of taxation. The minister has cut the ground from under the feet of my hon. friends opposite, and that is what causes them so much anxiety, because it gives them mighty little to condemn this Government for on the hustings. The people are behind the Government. I would like my hon. friend from Edmonton and my hon. friend from Pictou to stand before the labour element in their constituencies and condemn this Government for the taxation proposals contained in this measure. They will go in a nice, quiet, gentlemanly fashion to the captains of industry and say to them: "You poor fellows; you are paying all this taxation; why do you not get after this nefarious and socialistic Government and put it out of business?" Then when they come to the working men, they will forget to say: "Why did you not ask for an income tax?"

Mr. MACDONALD: My hon. friend spoke about a white British Columbia some time ago.

Mr. STEVENS: My hon. friend will, at least, say that I have been consistent in my opinions. I have a deep regard for the hon. gentleman's leader, yet the right hon. gentleman has not been quite so consistent, perhaps, as I have been in regard to a white British Columbia. In British Columbit he was in favour of it, but down here for fifteen years he drifted, with not very much done, except to disallow 144 Acts of the British Columbia Legislature. If the hon. member for Pictou or the right hon. leader of the Opposition desires to fight out the question of a white British Columbia in British Columbia, taking the stand the hon. gentleman suggests at the present time, I am quite satisfied.

Now, let us have a word as to the income tax. These hon. gentlemen know perfectly well that there is not a province in Canada that does not impose an income tax. This is a system of taxation which is peculiarly adapted to the provinces, and it has always been considered inadvisable for the Dominion Government to invade that field of taxation. I venture the suggestion that these hon. gentlemen would not dare to include that as a definite plank in their platform. My hon. friend says that this system is not permanent. If our present methods of taxation do not bring the result desired, we may have to resort to many other forms. But the system introduced by the Finance Minister last year has been a splendid success, and we know that the system introduced this year has been accepted throughout the length and breadth of the country, and it also will be a success. But if the war continues and the expenditure increases, and if the people of Canada must bear a larger burden of taxation, I think they will be prepared to bear it cheerfully.

I desired to speak on the mining aspect of this question, but I will refrain, except to make one observation with regard to copper, which may be of some interest. I do not know that this is exactly time to introduce this suggestion, but I do not know of a better. Last year, in discussing the Budget, I strongly advocated the refining of copper in Canada. I understand that the Government has given the matter a great deal of attention, and with such success that a copper refinery will be established. To strengthen this idea, let me give a few

figures. Last year, we exported from Canada 221,000,000 pounds of copper. As I understand it, our copper is exported mainly in the form of matte. On the other hand, we imported 115,000,000 pounds of copper—about half the amount of our export. Here is the point to which I would draw the attention of the Government and the House. For the 220,000,000 pounds of copper that we exported, we received $25,000,000; but for the 115,000,000 we imported we paid $19,000,000. In other words we exported copper at 11¾ cents and imported copper at 16¾ cents. That should emphasize the necessity of having copper refineries within our own borders sufficient to supply all Canada. It is poor business to sell copper at 11¾ cents and to import copper—a great deal of it re-imported—at 16¾ cents.

Mr. CARVELL: The hon. gentleman (Mr. Stevens) congratulates the Government on having arranged for the refining of copper in Canada. What has the Government done to bring about this condition?

Mr. STEVENS: I do not think it is my place to deal with that. I leave that to the Finance Minister. I pressed this matter upon the attention of the Government last year, and others have done the same. The intimation is conveyed to me from other sources that steps in the matter have already been taken. Certain gentlemen wrote to me asking for information which I gladly supplied, but that was a private matter, and I do not think it would interest the House.

Mr. MACDONALD: My hon. friend, rushing to the defence of the Minister of Finance, charges me with maliciously attacking that hon. gentleman. I plead not guilty to the charge of malice. I admit that I spoke with some vigour. But if it is necessary, in order to make clear our views on this side of the House, to speak with vigour, I hope the hon. gentleman will not take that as indicating any malicious feeling. Coming to the rescue of the Finance Minister, he produces from somewhere—and in view of all the circumstances one might be pardoned for doubting the authenticity of his figures, a statement the effect of which was to show that the money collected by the post office as war tax did not go to the financing of the war, but went to pay expenses of the Post Office Department. He showed that for nine months' operations, including the money that came from the war tax, there would be a surplus of $2,300,000. In other words, taking the revenues from ordinary sources and adding the revenues that came from the sale of war-tax stamps, you get an amount, which, when all credited to the post office, amounts to $2,300,000 more than the expenses of that department. This proves exactly what I have said—that this money went to the Post Office Department and not to pay war expenses. Then the hon. gentleman said, a little disingenuously it seemed to me, that the policy of all governments was not to have a surplus in the Post Office Department. Well, turning to this report, I find that from 1903 down to 1911, under the administration of my right hon. leader there was a surplus every year, the lowest being $400,000 and the highest $1,100,000.

Mr. BURNHAM: But what is—

Mr. MACDONALD: My hon. friend is usually dreaming about something in the clouds, or something thousands of years or thousands of miles away, and wants to ask a question about it. I do not mind answering a question that relates to the subject.

Mr. STEVENS: The hon. gentleman himself is not backward in asking questions.

Mr. MACDONALD: I have shown surpluses under the Liberal Government. Now, take the policy of this Government down to 1915. In 1911 there was a surplus of $1,100,000; in 1913, $1,800,000; in 1914, $1,177,000. So, the policy of both Governments was to have a substantial surplus in the Post Office Department. As a result of the administration of somebody, they now have a deficit of $3,000,000. The hon. member for Vancouver says we have a surplus of $2,300,000, with all the returns not in. But if he will look at the Post Office Department figures and consider the balance shown, he will see that there are many deductions to be made, which, apparently, are not made until the end of the financial year. Now, what amount of money was collected in the war-tax stamps? In the financial year 1915 the amount collected from the sale of stamps at 2 cents was $14,558,000; in the financial year 1914 it was $14,392,000. That was all as a result of the sale of stamps at 2 cents apiece. Since April, 1915, every letter of the kind that passed through the mails in those two years at 2 cents, cost 3 cents. In other words, if you take the figures of 1915 and 1914 as being any indication, the revenue that would be derived for the year from

these additional war tax stamps would be $7,000,000.

Mr. STEVENS: Has my hon. friend eliminated from that calculation all the 5 cent stamps, the registry stamps, and the 1 cent stamps? Are his figures for 2 cent stamps alone? Has he eliminated the parcel post and the newspaper fees which are paid in bulk?

Mr. E. M. MACDONALD: As my hon. friend, who came here to give information for the Government, failed to give information on the vital point, we can only take the figures here and make an approximation.

Mr. STEVENS: There should be a certain reduction.

Mr. MACDONALD: Suppose we strike off $1,000,000.

Mr. STEVENS: Strike off one-half.

Mr. MACDONALD: Not at all; I do not assent to that. But suppose we say that $5,000,000 was obtained as the result of the sale of this additional 1 cent stamp, then the Post Office Department got at least $4,000,000 in the period my hon. friend has mentioned from the sale of war-tax stamps, and they are including that in their $2,000,000 surplus. The result is that if we cut out of their figures the $4,000,000, which they got from the war-tax stamp, there would be a deficit at the end of nine months of $1,700,000, instead of a surplus of $2,300,000. The result of all this goes to show that my hon. friend the Minister of Finance, instead of taking this money, which the people of Canada paid on the supposition that they were paying it for war purposes, and appropriating it for war fund account, as he should have done, permits the Post Office Department to treat it just the same as the revenue from any other stamps sold in the post office and absorb it into their fund and charge it up in their account; and if there is no surplus in the Post Office Department on the 31st of March, my hon. friend gets nothing for the war.

Mr. STEVENS: Yes, but there is a surplus.

Mr. MACDONALD: My hon. friend does not know whether there is going to be a surplus. He has some figures, but not all of the figures. We are told that there was a surplus of $2,300,000 in the Post Office Department for the nine months, including the war tax, the amount of which my hon. friend cannot tell us. If $4,000,000 was derived from the sale of war tax stamps, then in that particular year they derived their surplus from the sale of the war stamps. Had it not been for this additional revenue there would have been a deficit of $1,700,000—and all the returns are not in yet. All my hon. friend has done is to prove exactly the statement I made. My hon. friend the Minister of Finance, instead of getting a large revenue from the sale of war tax stamps, is not going to get a cent; it will all be absorbed by the Post Office Department, and instead of going to pay interest on the debt, as the people of Canada were led to believe, it is being appropriated by the Postmaster General to run the Post Office Department.

Mr. BURNHAM: Why do you not back up your statements with facts?

Mr. MACDONALD: My hon. friend has wakened up again. He is usually dreaming about——

Mr. BURNHAM: No, it was only a nightmare.

Mr. MACDONALD: My hon. friend has one of these nightmare spells of his every once in a while. My hon. friend has been sleeping so far, he has not followed me when I have shown that the Minister of Finance has allowed the Postmaster General to take away the money derived from the sale of war tax stamps, instead of leaving it in a fund where he could use it to pay the interest on the war loans. The Minister of Finance knows it, and the House knows it. My hon. friend does not want to bear the onus of this situation. I can quite understand that he would not; but there is the fact, and it is useless to deny it.

I wish to refer to a suggestion the hon. member from Vancouver (Mr. Stevens) made with reference to the attitude of hon. members on this side of the House towards labour. My hon. friend is the last member in this House who should talk about labour. So long as the Liberals were in power, he denounced the right hon. leader of the Opposition (Sir Wilfrid Laurier) to the labour men for having vetoed the fake legislation that he and his Conservative friends were passing in the Provincial Legislature. The moment responsibility came, my hon. friend evidently forgot all about a white British Columbia. But the labour men of British

Columbia have found out my hon. friend and gentlemen like him, as was shown in the attitude of the labour leaders in British Columbia towards the Conservative party in the elections held there within the last few weeks. So it does not lie in the mouth of my hon friend to talk to anybody about labour.

Mr. STEVENS: My hon. friend raised the question; I did not.

Mr. MACDONALD: I said nothing about the labour question.

Mr. STEVENS: You certainly did.

Mr. MACDONALD: Not at all. We on this side have no fear of a comparison of records in regard to the treatment of the subjects of the great nation which is one of the most valued allies of the British Empire in this war.

Sir ROBERT BORDEN: A word in regard to what my hon. friend from Pictou (Mr. Macdonald) has said. He seems to have a remarkable idea of the operations of the Post Office Department, or any other department of this Government Apparently, as far as I understand his argument, he imagines that when the Post Office Department has a surplus of $1,000,000 or $2,000,000 or $300,000,000 at the end of a year, it takes that and locks it up in the safe, and appropriates it the next year for the purposes of its expenditure.

Mr. MACDONALD: I took an entirely different view, and my right hon. friend must know it. I said it was the Minister of Finance, because he gets the surplus.

Sir ROBERT BORDEN: All I have to say is that if my hon. friend did not mean that, he meant nothing; because the Minister of Finance has stated over and over again, and every one in the House except my hon. friend knows it, that when there is a surplus in any department of Government, that surplus goes into the consolidated revenue fund and——

Mr. MACDONALD: I said so.

Sir ROBERT BORDEN: —and is available for all the purposes of the country.

Mr. MACDONALD: I said so.

Sir ROBERT BORDEN: Then, if he said that, he argued precisely the opposite to that, because he declared that this surplus was to be used for the Post Office Department and for nothing else, and was retained by the Post Office Department. His argument, outside of that, was absolutely futile If he was under the impression that the surplus was so used, then there was something in his argument; if he was not under that impression then he has simply been wasting the time of the House in what he has said, because there is no point in it, apart from that. The Minister of Finance imposed a tax, which has assisted in bringing about a surplus for the present year of $3,000,000, so far as can be estimated, in the Post Office Department. That surplus goes into the general revenue of the country, and is there available for the purposes of the country, and among other purposes for the purpose of carrying on the war.

Sir THOMAS WHITE: For the payment of interest.

Sir ROBERT BORDEN: For payment of interest on war loans.

Sir THOMAS WHITE: And pensions.

Sir ROBERT BORDEN: Yes, pensions, or anything else. This surplus is simply so much additional assets in the public revenue of this country for all purposes, including the purposes of the war. That is the whole fact about it, and it makes not the slightest difference whether it goes into the account of the Post Office or of the Railway Department, or of any other department; the main, essential fact is that the money is there as the result of certain taxation, and, being there, is available for the purposes of the war.

Mr. MACDONALD: But if there was a deficit in the Post Office Department, there would be no money for the war.

At six o'clock the House resumed, and then took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

THIRD READING.

Bill No. 28, respecting the Kettle Valley Railway Company, and Vancouver, Victoria and Eastern Railway and Navigation Company.—Mr. Green.

CONSIDERED IN COMMITTEE—THIRD READINGS.

The House in Committee on Private Bills, Mr. Rhodes in the Chair.

Bill No. 25, to incorporate the Western Canada Telephone Company—Mr. Green—in committee.

On section 9—acquisition of business of other companies:

Mr. OLIVER: In regard to this section, I would like to understand whether it is contemplated to empower this company to acquire telephone properties within the limits of other provinces than British Columbia.

Mr. GREEN: No, that is taken care of in a following section.

Mr. OLIVER: If it is taken care of in a following section, we might allow the clause to stand until we reach that section.

Section allowed to stand.

On section 9a—sale, lease or amalgamation with other companies; sections of Railway Act to apply:

Mr. OLIVER: What is the meaning of the application of these sections of the Railway Act to this telephone company?

Mr. STEVENS: I have forgotten just now, but this addition was made at the request of Mr. Lighthall, representing the municipalities of Canada.

Sir ROBERT BORDEN: With regard to the use of streets, there are some clauses in the Railway Act making it necessary to obtain the consent of municipalities.

Mr. OLIVER: I would like to be certain on that point. That might stand until we deal with the other clause. I do not wish to interfere with the Bill if it does not apply to the province of Alberta, but if it can be considered as reaching Alberta, I wish to be particular about this point.

Mr. STEVENS: I suggest that you read clause 17, then, Mr. Chairman.

On section 17—restriction as to line in Prince Rupert and in certain provinces:

Mr. OLIVER: I observe that section 17, which is intended as a saving clause, covers the point that has reference to Alberta, in so far as the construction of new lines is concerned; but it does not cover the point of the acquiring of existing lines or rights in other provinces. I think that is important.

Mr. STEVENS: The words "operate and maintain" would cover that.

Mr. OLIVER: I do not think so, because these words are subject to the word "construct." That is the only question I wish to raise in regard to the Bill, and, if it is agreed on the part of the promoters to accept that principle, I would ask that the point be made definite in this particular section.

[Mr. Green.]

Mr. BLAIN: I think this clause would cover it. They could not operate a line in other provinces without first procuring the consent of the legislatures, and, not having the power to operate, there would be no use of purchasing a line in those provinces. Whether it covers the point or not, it was discussed very fully in committee, and the committee decided that the clause did cover the point raised by the hon. member for Edmonton.

Mr. OLIVER: I would be inclined to disagree. I think that the words "operate or maintain" are subject to the word "construct," and it would be so construed. There would be no harm done by making the provision that I suggest. I respectfully suggest that such an amendment be made.

Mr. BLAIN: There would be no objection to covering the point mentioned by my hon. friend.

Mr. OLIVER: While the Provincial Government of Alberta owns and operates a provincial telephone system, the city of Edmonton has a system of its own, which it had established before the province undertook the operation of telephones. There are also other private enterprises occupying territory that the Government has not yet entered upon. It is not desirable that this territory should be occupied by an outside telephone company except with the consent of the Government of Alberta.

Mr. BLAIN: The counsel had that matter before him, and he understands that it is fully covered by this clause. If this company proposed to purchase in the province of Alberta or the province of Saskatchewan any line which is now in operation, they would have to do it subject to this Bill, and the Bill would not allow them to operate the line without first obtaining the consent of the Government. Therefore, it would be useless for them to purchase a line in Saskatchewan or Alberta unless they had the right to operate it.

Mr. OLIVER: I may be wrong, but my reading of the Bill is that it provides that they shall not operate or maintain the line they have constructed, but it does not provide that they shall not operate and maintain the line they have purchased.

Mr. BLAIN: There is no objection on the part of the promoters of the Bill to have that covered if my hon. friend thinks it is necessary.

Mr. STEVENS: This clause was inserted at the request of the hon. member for Strathcona (Mr. Douglas), with exactly the object in view that my hon. friend has, to his entire satisfaction and to the satisfaction of the counsel of the committee, and it was accepted by the promoters of the Bill.

Sir ROBERT BORDEN: I do not think that the words will bear the meaning which my hon. friend from Edmonton puts upon them. They are in the disjunctive—the company shall not construct, shall not operate, shall not maintain, any line of telephone without the consent of the Lieutenant Governor in Council in any of the provinces mentioned.

Mr. OLIVER: I am willing to accept the interpretation of the Prime Minister. There is, however, a further point in regard to section 17 that I wish to draw attention to. The concluding words are:

> But this restriction shall not apply to the construction, operation or maintenance of long distance lines of the company into or through the said city of Prince Rupert or into or through any or all of the said provinces.

The latter words contemplate giving the company the right to construct a long-distance line across the province of Alberta without the consent of the Governor in Council. Now, they cannot construct a line across the province of Alberta without either purchasing a right of way or occupying the road allowances. Therefore, I think it is only reasonable that when we empower them to build across the province of Alberta they should be subject to the consent of the Governor in Council, just as any other telephone line is that is constructed within the province. I do not see why a difference is made between a line that is carried completely across the province, and a line that is carried only into the province.

Mr. GREEN: The object is not to empower the company to build across the province, but to allow them to connect up with the lines in the hon. gentleman's province. They are not looking for local business, but they want to connect their lines up and do a through business. If the hon. gentleman insists, I see no reason why we should not say, "subject to the consent of the Governor in Council." The company is not seeking to construct any new lines, but simply to connect up with the lines already in the province.

Mr. OLIVER: I have no objection at all to the organization of the company, except that when it comes inside the province of Alberta it must in some degree conflict with the conditions existing there. I think that as the principle is recognized in the remainder of the section, we might very well recognize it here by striking out all the words after "Prince Rupert". Then they would have rights within the province subject to the Governor in Council, which is really all that the company requires.

Mr. STEVENS: I should like to point out that at almost every sitting of this House we pass Bills allowing railway companies to operate telephone lines over their systems, and through any provinces. This section specifically prevents the company from operating in Saskatchewan, Manitoba or Alberta without the consent of the Governor in Council. Surely there can be no objection to this company connecting up its lines for long-distance purposes. In the event of their getting consent from the province of Saskatchewan, what objection could there possibly be to their having communication between Saskatchewan and British Columbia, so long as the local business of the province of Alberta is thoroughly protected? We are giving this privilege to dozens of railway companies, and I cannot see any objection to giving it to this company. I think my hon. friend will agree that there has been little danger to the interests of the provinces.

Mr. OLIVER: The situation of a railway company is entirely different. No province is operating a monopoly railway system. Permission to construct a telephone line alongside a railroad is entirely different to permission to construct a telephone line alone. My suggestion was simply to strike out the words after "Prince Rupert." That would leave the matter where it ought to be, namely, that when the company goes into or crosses a province it is subject to the consent of the Governor in Council of that province.

Mr. BLAIN: Perhaps we had better let the section stand for the moment.

Mr. GREEN: The solicitor tells me that section 17 was inserted in the particular shape in which it is now at the express request of the hon. member for Strathcona (Mr. Douglas). It was his opinion that it would be wise to give the three provinces the power to construct long-distance lines. I understand that he is on his way here. As all the rest of the Bill has been put through the committee stage, I think we

had better let this section remain as it is, because the matter was discussed very thoroughly in the Railway Committee. If the hon. member insists, rather than let the Bill stand, I will agree to have the section struck out; but, under the circumstances, I would like to have the Bill go through committee to-night, and, if there is any valid objection, we can deal with it later

Mr. OLIVER: I do not wish to delay the Bill at all, nor to deal lightly with the consideration given to it by the committee, but the greater part of this section clearly contemplates the consent of the Governor in Council of any other province than British Columbia for the extension of telephone lines into that province. That is agreed?

Mr. GREEN: Yes.

Mr. OLIVER: The last line, however, provides that the extension can be made without the consent of the Governor in Council. That is a contradiction in terms, and I may say that I feel very strongly on that point from the fact that the province of Alberta operates its own telephone lines, excepting in the city of Edmonton, which operates its telephone lines. I have been communicated with by the mayor of Edmonton in regard to this Bill. I do not wish to insist too much, but I would withdraw all opposition if the promoter would agree to cut out the words after the words "Prince Rupert": "Or into or through any or all of the said provinces." That would leave the section carrying out its original intent, which I maintain is contradicted by the insertion of those words.

Mr. STEVENS: Would my hon. friend accept this suggestion: Let the Bill go through committee and be reported, and let the third reading stand until he has an opportunity to discuss this section with the hon. member for Strathcona, and then before the third reading that amendment can be made if it is thought desirable. I think the hon. member is really making a mistake in pressing for the striking out of this section.

Mr. OLIVER. I would not feel justified in taking that course. It is as plain as print can make it that the last line of the section contradicts the first part. We want to carry out either the first intent or the last intent, and I certainly suggest that the first intent be carried out and that the words I have read be struck out.

[Mr. Green.]

Mr. GREEN: I have no desire to press this section against the hon. gentleman's views; and, if he is not prepared to let the Bill pass through committee and be reported, and then make an amendment if necessary on the third reading, we will strike the words out now; but I would have preferred to have the Bill go through the committee to-night.

Mr. OLIVER: In the committee is the proper place to make changes of this character, and I would ask the promoter to make the change in the committee.

Mr. GREEN: Perhaps it would be better if we strike out anything at all, to strike out everything after the word " aforesaid," and thus cut out all the restriction part of the section.

Mr. OLIVER: I have no objection to that at all. I am not concerned in that.

Mr. GREEN: I move, then:

That all the words after "aforesaid" in the tenth line of section 17 be struck out.

Amendment agreed to.

Section, as amended, agreed to.

Bill reported, read the third time, and passed.

Bill No. 23, to incorporate the Ontario Niagara Connecting Bridge Company—Mr. German—in Committee.

The CHAIRMAN: There is an amendment, notice of which was given by Mr. Reid, but it does not state whether by addition or in substitution for any section. It appears clear, however, that the intention is to cover section 11, which was eliminated in the Railway Committee.

Mr. PARDEE: I think section 12 of the Bill practically covers the amendment proposed. The amendment is tautological.

The said bridge shall be constructed and located under, and be subject to, such regulations for the security of navigation of the said river as the Governor in Council prescribes.

and so on. Section 12 of the Bill provides:

Notwithstanding anything in this Act contained, the jurisdiction and control of the commissioners for the Queen Victoria Niagara Falls Park in respect to the matters placed under their jurisdiction and control by virtue of chapter ninety-six of the statutes of 1892 of the legislature of Ontario, and the powers of the said legislature in respect of the Niagara Falls Park and River Railway Company, shall continue the same as if this Act had not been passed.

So you see the amendment and the section mean, in effect, exactly the same thing. We as a Parliament pass federal legislation. We must have the power to pass it. I cannot see, then, why we should hamper the Bill with a great deal of verbiage that is not necessary in order to protect the rights of the Niagara Park Commissioners.

Mr. BLAIN: The object of this amendment is to re-insert in the Bill section 11, which was struck out in the Railway Committee. It was stated by the Counsel for the Government that this section was not required, as the point was covered by the Railway Act, and so the committee struck out the section. But on reconsideration it was found that the Railway Act does not cover the point, and so the acting Minister of Railways (Mr. Reid) gave notice of motion to re-insert the clause that had been struck out.

Mr. PARDEE: But does not section 12 exactly cover the point covered by the amendment?

Mr. BLAIN: No, I think not. That point is up for consideration also, and was fully discussed in the committee, and it was decided, in order to protect all the interests concerned, that this clause should be reinserted.

Mr. PARDEE: Did the legal adviser of the Railway Committee take the view that a Bill that is passed in this Parliament being of a Federal character, must have the consent of the provinces, or have we the right to pass legislation here without the censent of the provinces.

Mr. BLAIN: That question was not up for consideration in the form in which my hon. friend puts it. But, I repeat, the minister was quite emphatic, and so was the counsel, that the clause that had been struck out in committee should be reinserted.

The CHAIRMAN: It is intended that this amendment should be the reinstatement of section 11, which was eliminated.

Amendment agreed to.

Mr. T. J. STEWART moved:

That section 10 be amended by adding the following as subsection 2:

"The company shall not construct any of the works mentioned in section 8 in or over any property of the province of Ontario or under the control of the Commissioners of the Queen Victoria Niagara Falls Park without the consent of the Lieutenant-Governor in Council."

Mr. PARDEE: I have the same objection to this as to the other. We are passing Federal legislation, and I do not see why our bills should be cluttered up with words which only have reference back to the provincial legislature. If we have the right to pass this legislation at all, we have the right to pass it wholly.

Mr. T. J. STEWART: The reason the Ontario Government want this amended clause inserted in this Bill is, that they are the owners of six or seven hundred acres of land at Niagara Falls, in that portion of territory that the promoters of this Bill ask the right to construct this railway, 6,000 feet southerly from the northerly boundary of the county of Welland. Now, the promoters of the Bill surely do not expect the Ontario Government to allow them to pass through this beautiful park, which cost the Ontario Government large sums of money, without allowing that Government to have some say about where the road is to be built I might say that the Ontario Government has under consideration at the present time the building of a large power plant in this particular section where the railway is intended to run, and I think the promoters of this Bill should be quite prepared to secure the consent of the Lieutenant Governor in Council to the location of this road. I think it would be ridiculous and most unfair for this Government to allow this Bill to pass without this park land being protected. So far as the bridge is concerned, the regular standard clause will give the necessary protection.

Amendment agreed to.

Bill, as amended, reported, read the third time and passed.

TAXATION OF PROFITS.

The House resumed in Committee of Ways and Means, Mr. Blain in the Chair.

Mr. LOGGIE: If the accounting period of a firm be the 31st January, 1915, will the first accounting period be one year back from that date?

Sir THOMAS WHITE: If the accounting period ends on the 31st January, 1915, the first payment would be in respect of the entire year ending on that date, the next accounting period would be the period ending on the 31st January, 1916, and the next on the 31st January, 1917.

Mr. LOGGIE: The business man would have no option to make it the following year.

Sir THOMAS WHITE: It would be impossible to discriminate, and it is necessary, in our view, that we should get in the period succeeding the war, because large profits are made in that period.

Mr. LOGGIE: A large portion of this period was prior to the war—from August back to the first of that year. The minister has spoken of net profits. I
9 p.m. suppose that means the profits after certain amounts are laid aside for depreciation, and also for bad debts, if there have been any bad debts during the year.

Sir THOMAS WHITE: Undoubtedly.

Mr. CARVELL: Would the minister kindly explain the principle on which depreciation will be allowed in the working of the Act?

Sir THOMAS WHITE: The principle would be the usage in a particular business with respect to the matter of depreciation. My hon. friend, as a lawyer, will know precisely what I mean when I say that the question of depreciation is a question of fact. The depreciation may be more in the case of one class of business than in another; it depends entirely upon the facts of the case. It is obvious that if a business has a certain amount of apparent profits at the end of the year, and on the other hand there has been an ascertainable depreciation in the value of the machinery or plant, that should be deducted in order that the true net profits might be arrived at. Of course, there are elements besides depreciation that enter into the question of net profits; the expenses of the business and interest upon borrowed money are elements as well as depreciation.

Mr. CARVELL: Borrowed money would not be depreciation. If I understand the minister, he proposes to ask the different companies which he imagines would come under the provisions of this Act to submit statements. We all know that companies keep their books in many different ways. Some companies might write off five per cent a year for depreciation; some might write off as much as ten per cent. Take a company like that, and, perhaps, their books would show that their capital was all gone. Of course, it would not be gone, because they would have a valuable plant left. Reserves might be established and used for replenishing the plant. In that case they would take care of the depreciation. In other cases there might not have been enough money around to provide for depreciation. As a matter of good busines, a sum should be set aside for depreciation, but often it is not. It may have been paid out in dividends. In a case like that, would the minister consider that the company was entitled to write off, or reserve, a reasonable amount for depreciation, considering the nature of the business, or would he take the statement as furnished by the company, and the conditions under which the company has been carrying on its business or keeping its books. We know that there are some classes of business that would depreciate to a very much greater extent than others. Take the ordinary manufacturing establishment; probably the depreciation there would not be anything like so much as it would be, say, in the case of public utility corporations. In the case of a telephone company, for example, the depreciation naturally would be very great, because there is a depreciation of pole lines and cross arms, while there is obsolescence of the telephone plant generally. New ideas are coming forward, new switch boards and things of that kind are being introduced. If you take a manufacturing concern, on the other hand, say the Dominion Iron and Steel Company—I am taking that as an illustration—there is not very much depreciation of the machinery for the making of steel rails or steel rods. If I have made myself clear, does the minister feel like laying down any general principles upon which this question of depreciation might be determined in estimatng the taxation payable by a company?

Sir THOMAS WHITE: I draw the attention of my hon. friend to section 5, subsection 3:

> No deductions from gross profits for depreciation or for any expenditure of a capital nature for renewals, or for the development of a trade or business or otherwise, in respect to the trade or business, shall be allowed except such amount as appears to the minister to be reasonable.

Mr. CARVELL: That is the whole question: what does the minister consider reasonable?

Sir THOMAS WHITE: This Act, like any other Act, will be administered by the officials of the Government, the minister of course being responsible as head of the department. No principle can be laid down except this: that depreciation must be considered in estimating the net profits. The question of what is a reasonable depreciation in connection with any business is a

matter to be determined, as the officials may be able to determine, according to good usage in businesses of that character. For example, it may be quite proper in connection with one business to allow 2 per cent or 5 per cent; in others the depreciation may be much larger. It depends entirely upon the character of the business and upon the depreciation which necessarily results from the operation of the machinery and plant. I do not believe that I can give any more definite information than that. My hon. friend knows that depreciation, as I have said, is a question of fact. It seems to me that it is no more difficult to determine what is reasonable depreciation than it is to determine the reasonable value of property. That is determined by assessors all over the country yearly in connection with municipal and other assessments.

Mr. BURNHAM: Is that the principle which the minister is now laying down?

Sir THOMAS WHITE: The principle which I lay down is that the depreciation must be considered to be fair to a business, but as to the precise percentage, I cannot say definitely, because that will depend upon the facts.

Mr. CARVELL: I think that, probably, that is the only answer the minister could give, although I thought that possibly he might have had in his mind some general rules which he could give to the committee, and through the committee to the country, so that companies and persons liable to be assessed all over Canada would have some would have some way of figuring out the matter for themselves. Take two businesses of exactly the same kind; one plant would naturally depreciate to a much greater extent than the other, because it depends upon the degree of permanency with which the plant has been created in the beginning. You might have one plant that would be practically permanent, and another more or less temporary, yet producing the same result in the end. Of course, in the one case, there would be very much less depreciation than in the other. In any case where real depreciation could be shown as the ordinary result of carrying on the business, regardless of what the books showed would he take that into consideration in arriving at the net profits of the concern?

Sir THOMAS WHITE: What we should do is to call upon the companies, such as I think my hon. friend has in mind, for a statement, and in that statement, no doubt, an allowance would be made for depreciation. If that appeared to be too great an amount, it would be within the power of the department to disallow it, and, possibly, to allow a lesser amount. In the first instance we would ask the company or firm to make a return. I fully appreciate my hon. friend's point. Let us take the case, say, of electrical machinery, or of machinery in connection with public utilities; it is subject to very considerable depreciation. Not only that, but the progress of invention has frequently to be taken into consideration. I do not believe I can lay down any general principle, except to say that it is a question of fact, to be determined upon the evidence before us at the time and upon the usage respecting the plants of industrial and other concerns. I think, for example, that a technical expert could inform the department as to what would be a reasonable amount to allow in connection with a certain class of business, or even a particular plant in that business. There might be a greater depreciation in connection with one individual business than in another individual business of the same class; but we would strive to act uniformly.

Mr. LOGGIE: Would the department be willing to accept the last balance sheet prepared by a firm from their books? I do not mean that this should apply to the future, but that it should be taken as evidence of the results of the last year's business. For example, a firm has been doing business in a certain way, and, when it prepares its balance sheet, it writes off what, in its judgment, is the proper amount, and presents its business in the true light to its bankers. If an established business, following its usual practice for years, had written off bad debts and depreciation and given a statement to its bankers, would such a statement for the last year's business be acceptable to the department?

Sir THOMAS WHITE: I would not say that it would be conclusive evidence, but I would say that it would be prima facie evidence, and in all probability such a statement would be accepted; but it would not do for me to say that it must be accepted, because there must be power in the department to say: "We do not agree with what has been done." But, in connection with such a business as my hon. friend has in view, I think I would be justified in saying that there would be a very strong probability of its being accepted.

Mr. LEMIEUX: Would my hon. friend be kind enough to illustrate by example the exact meaning of subsection "c" of clause 2?

Sir THOMAS WHITE: It was brought to our attention after these resolutions were laid before the House that many Canadian businesses, and many businesses such as British, French and Belgian loan companies operating in Canada, are obliged, under taxation measures in the United Kingdom, France, and Belgium, to pay very heavy war taxation in those countries, so much heavier than our war taxation that ours appears trifling by comparison.

Mr. LEMIEUX: Do not be too modest.

Sir THOMAS WHITE: It is a fact. I might tell my hon. friend exactly what was brought to my attention. The amounts which some Canadian companies, and some non-Canadian companies operating in Canada, are obliged to pay in the United Kingdom, France, and Belgium would surprise him. They certainly surprised me. It was felt that, as these companies are taxed in respect to their Canadian business, to add this tax to the taxes they already bear, and whose proceeds go to the same cause, would be to put an oppressive burden on them. Consequently, we thought it would be advisable to insert subsection "c."

Mr. LEMIEUX: How would you do in the case of a transportation company? Suppose the Canadian Northern, or the Canadian Pacific, or any such transportation company having head offices in Montreal, Quebec, St. John, or Halifax, and coming under this measure and having offices in the United Kingdom, France or Italy, were hit there also, how would you arrive at the difference in the amounts taken from them? Would you completely relieve them from the Canadian tax and let them pay on the other side?

Sir THOMAS WHITE: They would be liable under this measure. Let us assume that a transportation company, such as my hon. friend has in mind, were liable here for say $500,000 or $1,000,000; let us assume that they were taxed under the Act that is referred to here for purely war purposes in Great Britain, or in France, to an amount aggregating $250,000, we should deduct $250,000 which they are obliged to pay abroad from the total amount called for by this measure, and they would pay us the balance.

[Sir Thomas White.]

Mr. LEMIEUX: Perhaps I am wrong in my statement of the case, but I have seen in one of the Western papers the statement that the Canadian Pacific would escape the taxation on account of a certain clause in their contract with the Canadian Government exempting them from taxation. Has my hon. friend read that clause and is the Canadian Pacific exempt?

Sir THOMAS WHITE: In my view the Canadian Pacific is not exempt. There is nothing in this measure that is, in my judgment, inconsistent with, or in violation of, the legislation to which my hon. friend refers, and which is contained in the statutes of the year 1881.

Mr. LEMIEUX: What is the exact bearing of that exemption of 1881?

Sir THOMAS WHITE: The section to which my hon. friend refers is section 16 of the Act respecting the Canadian Pacific railway, assented to on February 15, 1881, and it is as follows:

> The Canadian Pacific railway, and all stations and station grounds, workshops, buildings, yards and other property, rolling stock and appurtenances required and used for the construction and working thereof, and the capital stock of the company shall be for ever free from taxation by the Dominion, or by any province hereafter to be established, or by any municipal corporation therein, and the lands of the company in the Northwest Territories, until they are either sold or occupied, shall also be free from such taxation for 20 years after the grant thereof from the Crown.

My view is that this legislation is not inconsistent with or in violation of the section which I have read. I think it is only fair to say that in so far as I am aware the Canadian Pacific Railway Company is not desirous of escaping the obligation of paying this war taxation. Would the committee oblige me by reconsidering section 2? In the second to the last line of subsection "c" of section 2 I desire to ask the committee to strike out three words, "the profits of." We are exempting the parties liable to taxation to the amount of any tax paid under any legislation for raising revenue for the present war, in force in France, Russia, Italy, Belgium, Servia, Montenegro, Japan, or the colonies or dependencies of any of these countries, in respect of the profits of any business. It was pointed out to me that in France, Belgium and England the war tax is not necessarily in respect of profits as this Bill is. If we strike out the three words the section will read,

"in respect of any business liable to taxation."

Mr. A. K. MACLEAN: Subsection "b" of section 2 is for holding companies.

Sir THOMAS WHITE: Yes.

Mr. LOGGIE: And subsection "a" is to provide that the amount paid under the Special War Revenue Act of 1915 shall be deducted if the banks pay more under this legislation. If they pay less, which Act applies?

Sir THOMAS WHITE: The existing legislation still continues to apply.

Paragraph 2, as amended, agreed to.

On paragraph 4:

That the business to which the tax shall apply are all trades and businesses (including the business of transportation), of any description carried on, or partly carried on, in Canada whether continuously or not except:

(a) the business of any person the capital employed in which is less than fifty thousand dollars, other than a business which, or twenty per centum or more of which, is or has been the manufacturing or dealing in munitions of war or in materials or supplies of any kind for war purposes;
(b) the business of life insurance;
(c) the business of farming and live stock raising; and
(d) the business of any company, commission or association not less than ninety per cent of the stock of which is owned by a province or a municipality.

Mr. LOGGIE: In my opinion this will be the most difficult clause of all to enforce. If I understand the minister correctly, his object is to compel firms that are exclusively engaged in supplying war materials to pay a portion of their profits to the Crown.

Sir THOMAS WHITE: That is right.

Mr. LOGGIE: I wish to draw the minister's attention to the difficulties he is going to encounter when he attempts to enforce this clause. For example, in the Auditor General's Report he will find certain war expenditures. I told the House the other day that the patronage committees gave the names of those from whom prices were to be asked for war supplies and these committees practically decided who should furnish them.

Sir THOMAS WHITE: Surely not.

Mr LOGGIE: Surely. I think I shall be able to prove to the minister that certain firms have been paid for supplying war materials, which, outside of that particular business, have no existence as firms. The individuals composing the firm may exist. I hesitate a little about reading names, but I would draw the minister's attention to page 68 of part ZZ, Auditor General's report which shows that $3,935.67 was paid for supplies for army purposes. One of the items of that amount was 10,046 pounds of potatoes, at 4½ cents a pound, which is about $7 a barrel. I do not believe that this firm exists outside of this particular transaction.

Mr. LALOR: What is its name?

Mr. LOGGIE: Armstrong & Ferguson, of Newcastle. There is now, no such firm in Newcastle.

Mr. LALOR: My object in asking was that a mistake might have been made; these might have been evaporated potatoes. The price is ridiculous for ordinary potatoes.

Mr. CARVELL: There is no doubt about them being ordinary potatoes.

Mr. LOGGIE: If they were evaporated potatoes it would be another question altogether. I am not raising this point, though, on account of the price, but to show the minister the difficulties he will have in carrying out his principle that every firm engaged in supplying war materials shall be taxed if it has made a profit. Now, under this legislation, the firm I have mentioned would appear as a business firm, and obviously they have made an exorbitant profit on these potatoes. I should say the potatoes would be worth from $1.50 to $2 a barrel, depending upon the season, and they were sold at $7 a barrel. I am sure that it is not the minister's intention to allow any firm that is supplying goods to the army to escape this taxation; but if this section is left as it is I believe a great many firms will escape, and I would suggest to the minister that a very much more equitable way would be to have a special tax for all war supplies, on a similar basis to the bank tax of last year. In other words, every firm engaged in turning out war supplies should pay a proportion of the total amount they are supplying, but if the firm comes under section 2 that amount should be deducted. In that way you would cover every firm that is supplying war material, and you would do no injustice to any firm that comes under section 2 of this resolution. I think such a scheme would be more equitable and much more easily operated. How is it possible for a firm to go through its books and separate its sales of war

materials from its total sales? As I understand this resolution, it is to the effect that, if a firm sells in war materials, less than 20 per cent of its turnover, it does not pay anything on its sales of war materials provided it does not earn over 7 per cent profit. That is a fact according to the resolution?

Sir THOMAS WHITE: No.

Mr. LOGGIE (reading):

The business of any person the capital employed in which is less than $50,000—

If they sell over 20 per cent in war materials that does not apply, but if they sell less than 20 per cent, they must, to be liable for taxation, have a capital of $50,000. Is that the meaning of the subsection?

Sir THOMAS WHITE: Yes.

Mr. LOGGIE: Then, a great many firms that supply war materials will not pay one cent, while small firms, such as the firm I have mentioned here, that do not do any other business than to supply war materials, must pay. A firm that supplies twenty or thirty or forty thousand dollars worth of war materials will not pay one cent if it does not have 20 per cent of its gross sales in war materials, and if its capital is under $50,000. Am I right?

Sir THOMAS WHITE: I think my hon. friend's statement is pretty clear. Under these resolutions, as brought down, the taxation was to apply to businesses which had a capital of at least $50,000 , and not to businesses which had a capital of less than $50,000. We made an exception, however, in the case of businesses which dealt exclusively in manufacturing war munitions or in furnishing supplies. The idea was that those businesses were making money directly out of the war, and, in many cases, the profits would be abnormal, although I do not say that that would always be the case. It was drawn to my attention that, as the resolutions were drawn, a firm which had received an order for $500 worth of war supplies, or $26 worth in one case, but which was carrying on its business otherwise as usual, that is to say, not manufacturing for war purposes and not furnishing war supplies, would become liable. That, of course, seemed manifestly unfair, because the war business was such a small proportion of the total business. It therefore seemed to us that we might fairly amend the resolution by providing that, if a company with a capital of less than $50,000 dealt in war munitions or furnished war supplies to an amount not exceeding 20 per cent, it should be allowed to come under the provision exempting companies with a capital of less than $50,000. As we had to fix a percentage arbitrarily, we fixed it at 20 per cent. The business of a company with a capital of less than $50,000 is not likely to be very considerable, and 20 per cent of the gross amount did not seem to give them such a large amount of profit as should deprive them of the exemption enjoyed by other businesses.

Mr. GUTHRIE: I would like to call attention to subsection "d" of section 4, which exempts from the operations of this measure:

The business of any company, commission, or association not less than 90 per cent of the stock of which is owned by a province or a municipality.

That amendment, I think, covers a number of cases in the province of Ontario where corporations are practically owned by municipalities, and I understand the intention of the minister is that such corporations shall not be subject to the tax. I do not think that the exemption is quite broad enough in its language to include all corporations that are operated by municipalities. I have in mind at present a street railway company, an incorporated company, all the stock of which is now owned by the municipality, except a few shares to qualify a board of directors. Such a company would be included under subsection "d" because, as over 90 per cent of its stock is held by the municipality, it would not be subject to the tax; but under the Ontario Public Utilities Act there are a number of corporations created which have no capital stock. They have capital, and capital is subject to taxation under section 2, but that capital is not divided into shares. Under the Ontario Public Utilities Act, any municipality may appoint a hydro-electric commission, a waterworks commission, or a light, heat and power commission, for the operation of the public utilities of the municipality, and that Act declares that those commissions shall be bodies corporate. Now, I would fear that, under this section, they might be subject to taxation unless they were explicitly exempted. I would therefore suggest that words of this kind be added to subsection "d":

Or any municipal public utility commission authorized by any provincial statute.

Sir THOMAS WHITE: I think the point raised by my hon. friend is well taken, and I am indebted to him for drawing my attention to the matter. The city of Guelph owns the capital stock of a street railway company, and it did not seem to me expedient that the tax should apply in such a case, and it also did not seem expedient to me that the tax should apply to a public utility corporation owned by a province. There are two points to which my hon. friend referred. As to the first, I have an amendment to propose which I think will meet the situation. I move:

That subsection "d" of section 4 be amended by adding, after the work "stock," the words "or capital."

If that completely covers what the hon. gentleman has in view, I need not deal with any other point. Did I understand him to say that the expression "company, commission, or association," is not wide enough? I think it is wide enough.

Mr. GUTHRIE: I think the amendment suggested by the minister will cover the case. This applies not only with regard to the city of Guelph, but to all places in which the Hydro-Electric is in operation. These commissioners, under the Public Utilities Act become corporations. They have no stock but they have capital. I think the change will cover it.

Amendment agreed to.

Mr. CARVELL: I do not want to oppose the proposition, but I am surprised to hear that under the Hydro-Electric they make profits of seven per cent. I understood that in Ontario they were getting power at cost. Of course, I have always said, that I know places where private corporations sell electric energy at cheaper rates than it is sold for in Ontario. However, that is their affair.

I wish to mention a point which has been called to my attention in three different cases, and I am sure it will be of direct interest to many throughout Canada. Subsection "a" of section 4 refers to:

The business of any person the capital employed in which is less than fifty thousand dollars.

The question I have to ask would not affect a corporation, and possibly it would not affect a partnership, as it would be assumed that all the property that the partnership hold would be employed in the conduct of the business. But take the case of a private individual who runs a business in which he has not $50,000 invested, and who has also property in other forms—other investments. Would the term "business" in that case cover only the business that the men ordinarily carries on, or would it cover his private property as well?

Sir THOMAS WHITE: I would call the attention of my hon. friend to section 10:

The capital employed in the business of any person other than an incorporated company, shall be taken to be the fair value of all assets real and personal, movable and immovable.

I think that presents no difficulty. If a man had $50,000 invested in, let us say, a dry-goods business, that amount could be easily ascertained. But if he had property outside of his business, that would not be "capital" for the purposes of the Act.

Mr. CARVELL: I wanted the minister's opinion because, as I have said, this matter has been brought to my attention on several occasions. I agree with the minister; I think he has given a proper definition.

Mr. LOGGIE: Why should not the rule apply to an individual as well as to a company? If the company were running a business and had a house in the town rented, that would not be counted the same as in the case of similar property owned by a private individual. Why?

Sir THOMAS WHITE: A company is incorporated for the purpose of carrying on a business. What business it can carry on will depend upon its corporate powers. What it would be liable on would be the net profits made in carrying on its business.

Mr. LOGGIE: I do not think it is a very important point, but I cannot see why a corporation should have more power than a person. A person can carry on a grocery and have a house in the town rented, and the house is not counted part of his capital. But the minister says that if an incorporated company has a house that is part of its capital.

Sir THOMAS WHITE: Why should an incorporated company have a house? If part of its business is the holding of real estate for profit, the house would be a part of its corporate enterprise, part of its business. On the other hand, my hon. friend might own real estate in Manitoba, and he might have a business in the East—and I am told he has a very fine business in the East—but the taxation measure would apply only to the amount of capital he has in the business and not to his property holdings

in Manitoba. But if he were to incorporate a company with power to hold, deal in and speculate in real estate, to carry on a hardware business and run electric tram cars—one of these companies whose charters go through here in a few minutes on Friday nights—we would have to deal with that on its merits and count all its operations as part of its business.

Mr. LOGGIE: The minister deals with a supposed company, but I want him to come down to facts. Not only might a company have a house rented outside of its regular business, but it is a common practice. There are two companies in my own town that have several houses.

Sir THOMAS WHITE: Part of their business.

Mr. LOGGIE: I do not see why the minister cannot be consistent. Why apply one principle to a person and another to an incorporated company? I do not think the point is a very material one, but I would like to see the minister consistent.

Mr. A. K. MACLEAN: In the case of an incorporated company, whose sole business is holding real estate, and having capital of $50,000, there would be no question as to its liability. But take the case of an individual, who owns, say, $100,000 of real estate in the form of buildings. He has no other occupation than the collection of rents. Would he say that that person was conducting a business which, under the resolution, would make him liable to taxation?

Sir THOMAS WHITE: My hon. friend has asked a question about a matter that is within the penumbral region of light and shade, on the one side business and on the other non-business. I should think it would be a question of fact. I do not think any practical difficulty is likely to arise. If an individual were engaged in the real estate business or in buying and selling and renting property—

Mr. A. K. MACLEAN: Supposing he was an aged man of 99 years and could not conduct the business.

Sir THOMAS WHITE: If he was an aged man of 99 years, I would be disposed to let him off altogether. I think if it were his business he would be liable to act, but in the case of a private individual holding some real estate here and there throughout the country and deriving some revenue from it, it would hardly be described as business.

Mr. A. K. MACLEAN: If incorporated it would.

Sir THOMAS WHITE: The point is that when a company is incorporated it is incorporated to do business. Every company is carrying on some sort of business in the exercise of its corporate powers.

Mr. A. K. MACLEAN: It might be incorporated merely to hold real estate and not to deal in it.

Sir THOMAS WHITE: Then I suppose the Act might not apply because it would not earn the necessary amount. But if the property appreciated to such an extent that its earnings were sufficient to bring it within the provisions of the Act, then probably the Act might apply.

Some hon. MEMBERS: Carried.

Mr. LOGGIE: I do not want that clause to carry; that is an awful clause. I think the minister ought not to press clause 4, subsection "a", to-night. The minister has not touched on the suggestion I made to him—and I am making this suggestion merely on the strength of what he has told the committee the object of this legislation is—namely, that those who have made large profits from war supplies should pay a portion of the tax. What I urge is that a very, very large portion of the war supplies, in small amounts, will not pay any tax.

Sir THOMAS WHITE: In small amounts.

Mr. LOGGIE: A very large amount in the aggregate will not pay. I see one firm here in Fredericton who have supplied $4,951.59. If their sales are not 20 per cent of the business they do not pay a cent.

Sir THOMAS WHITE: That is not a very large amount.

Mr. LOGGIE: I know it is not, but in the aggregate it will be a very large amount.

Mr. R. B. BENNETT: Will the hon. gentleman tell me why he should pay?

Mr. LOGGIE: If the minister will accept a suggestion of mine he will pay.

Mr. BENNETT: I want to know why he should pay.

Mr. LOGGIE: The minister said he should pay.

Mr. BENNETT: I want to know why.

Mr. LOGGIE: One of the objects of the legislation was to get at those who supplied material for the war on which they made a good profit. Why would the minister not consider taxing the sales, say, a quarter of one per cent, or one-half of one per cent, or one per cent?—tax the war supplies according to the amount sold. He has records of all these sales, and then he could deduct the amount of the tax so collected from the tax collected under this resolution in each case.

10 p.m.

Sir THOMAS WHITE: My hon. friend is very solicitous for the minister. He stated a while ago that I should be surrounded with difficulties. I desire to tell him that that is the normal position of my official life, and therefore he must not be unduly anxious about it. I did consider the proposal put forward by my hon. friend, which only goes to show that intellects sometimes think alike. It would lead to manifest hardship. In some cases, to my knowledge firms supplied goods at cost; and since the War Commission has been established, from inquiry I have made I am quite sure that the profits have been certainly not abnormal; the profits have been normal, reasonable, and in many instances low. The attempt to tax all parties who have been engaged in manufacturing munitions and supplying goods, on a percentage basis, would lead in some cases to actual loss to those supplying the goods. I did give the matter consideration as I said, and for the reason I have now given I came to the conclusion that it would be unfair and unjust to adopt a percentage basis. Therefore, at the risk of some trouble—because we are born and live to meet and overcome trouble—I thought it proper that the section should remain as drafted, rather than that a percentage basis should be established.

I am going to suggest, as this is Friday night and some members are leaving town, that if the committee feel disposed to pass section 4 with the amendment proposed by the hon. member for South Wellington (Mr. Guthrie), and concurred in by the committee, we should adjourn and take up the matter again on Tuesday.

The CHAIRMAN: Shall this clause carry?

Mr. LOGGIE: No, not carried.

Mr. CARVELL: I thought that the motion of the right hon. the leader of the Opposition relating to shells was to come up on Tuesday.

Sir THOMAS WHITE: I do not know that there has been any arrangement to that effect. If that has been arranged by the Prime Minister and the leader of the Opposition, of course the arrangement will be carried out; but I am desirous of getting these resolutions put through, and I would say that it is the intention to go on with them on Tuesday.

Mr. CARVELL: I have no objection; I was only pointing out that when the House adjourned on Tuesday last that was the understanding.

Sir THOMAS WHITE: If there was an understanding between the Government and the Opposition with regard to going on with the resolution relating to the Shell Committee on Tuesday, of course we shall go on; but if that is not the case, the Government desire to go on with the consideration of these resolutions. It is over a month since the Budget was brought down, and the Government can hardly be considered to have acted unreasonably with regard to the resolutions before the House.

Mr. LOGGIE: I would like to ask the minister if he would not allow that clause to remain over until Monday, and think the matter over? I was very much interested in the minister's explanation that war supplies had been given at cost price. That, of course, I did not anticipate; it puzzled me in a way. After all, and over and above it all, I am persuaded that the suggestion I have offered to the minister is the easiest one to meet, and provides the more equitable way of the two in the interest of all concerned. He would get a considerable revenue from it, and I certainly think it is worth considering.

Sir THOMAS WHITE: I would prefer, if the House concurs in the view, that section 4 be passed, and if, on thinking it over on Tuesday, or when the House resumes consideration of the resolutions, I feel myself persuaded by the arguments of my hon. friend, I will ask the House to re-open the matter.

Mr. LEMIEUX: If a contract for war supplies is given to a Canadian, and is carried out by an American firm, would that American firm be liable to taxation?

Sir THOMAS WHITE: If the contract was carried out in the United States by a United States company it is evident that we would have no jurisdiction to reach that company.

Mr. LEMIEUX: Could the Government not keep from the amount to be paid to the American firm a share of the profits?

Sir THOMAS WHITE: My hon. friend is no doubt aware that we have not paid American firms anything. Everything that has been paid, or will be paid, for contracts placed by the Shell Committee, or by the Munitions Board, is, or will be, paid by the Imperial Government.

Mr. LEMIEUX: I know that the Canadian Government has no jurisdiction over American companies, but in the case of a contract which is given to a person in Canada for war supplies, and which is handed over to an American concern, whether it be to Schwab or to any other concern, the payment is made by Canada. Would the Canadian Government not be justified, when making payment under the contract, in retaining a certain amount?

Sir THOMAS WHITE: My hon. friend is a lawyer of renown, and is acquainted with the principles of international law. He would have to consider the locus of the contract. I do not admit that the Canadian Government have made such a contract, but assume that the Canadian Government did make a contract with an American firm, in the state of New York, or anywhere else in the United States—a contract for the delivery of fuses or of munitions of any kind—upon payment under the terms of an express contract would the Government of Canada be authorized to say: We shall not pay that amount; we are going to deduct a certain amount because we need to raise revenue in the Dominion. My hon. friend will see that international questions would at once arise.

Mr. OLIVER: I do not suppose that the minister would object to those members who have views in regard to this section bringing them forward on Tuesday, even if we consider the section to be passed?

Sir THOMAS WHITE: I have so much regard for this committee that any reasonable request will be met readily and with pleasure.

Paragraph agreed to.

Progress reported.

[Mr. Lemieux.]

On motion of Sir Thomas White, the House adjourned at 10.15 p.m.

Monday, March 20, 1916.

The House met at Three o'clock, the Speaker in the Chair.

REPORT.

Annual Report of the Department of Public Printing and Stationery, for the year ended March 31, 1915.—Mr. Blondin.

GOVERNMENT RAILWAYS—SMALL CLAIMS ACT AMENDMENT.

Mr. J. J. HUGHES (Kings, P.E.I.) moved for leave to introduce Bill No. 65, to amend the Government Railways Small Claims Act. He said: Previous to 1910, any action for a small claim against the Government Railways had to be brought against his Majesty the King in the Exchequer Court upon a Petition of Right. It that year legislation was passed enabling any person who lived along side the Intercolonial railway, who had been injured in his personal property, to bring an action up to $200 in any court of competent jurisdiction, which would mean the County Court. That was amended in 1913 to make the amount $500, and amended again in 1914 to enable any person bringing an action, to sue the general manager of the Intercolonial railway instead of the Managing Board. By some oversight, the original Act did not apply to the Prince Edward Island Railway. There is no doubt that the intention was to make it apply to all Government railways, but, in the Act, only the Intercolonial railway was mentioned. An action was brought in the County Court in Prince Edward Island in January of this year, and plaintiff was nonsuited for that reason. I believe the judgment was correct; legal gentlemen of knowledge and experience have informed me that the judgment in this case was sound. The object of this Bill is to extend the provisions of the Act of 1910, to the Prince Edward Island railway,

Mr. A. A. McLEAN: I may inform the hon. gentleman that the Government are taking action in this matter, and a Bill is being prepared by the law clerk.

Motion agreed to and Bill read the first time.

PROHIBITION OR RESTRICTION OF INTOXICATING LIQUORS.

BILL IN AID OF PROVINCIAL LEGISLATION.

Hon. C. J. DOHERTY (Minister of Justice) moved for leave to introduce Bill No. 66, in aid of Provincial Legislation prohibiting or restricting the Sale or Use of Intoxicating Liquors.

He said: The purpose of this Bill is set forth in its title, but it may serve perhaps to make the explanation of its provisions clearer if, without entering at all into any argument on the subject, I should say a word or two with regard to the motives that have led to its introduction. After a careful consideration of the law and the jurisprudence upon the question of the relative powers of this Parliament, and of the respective legislatures of the province to deal with legislation prohibiting or restricting the trade in, or use of, intoxicating liquors, the conclusion was reached that the legislature of each province, in the absence of Dominion legislation, has ample power to secure to the province, within its own territory, such measure of prohibition, or restriction, as in its judgment, it deems it necessary to enact, looking at the question from the provincial point of view, and with the purpose of bringing about an abatement of such local evils as in the judgment of the legislature may result from the traffic in, or the use or abuse of, intoxicating liquors. We are satisfied that such legislation, within the limits of the provinces, would operate effectively to secure a law, binding upon all persons residing within such provincial territorial limits. That being so, it was considered that a law of the nature of one prohibiting or restricting the use of intoxicating liquors, is one whose actual effectiveness as a matter of fact, depends in very large measure indeed upon its having behind it the general or common consensus of public opinion in the community where it is sought to be applied. The provinces, having in our judgment, the power to enact an effective law—effective within their respective territories—it seems to us that a law enacted by the provincial authority would be very much more assured of having behind it the general public opinion of the community for which it was enacted, than it could be hoped Dominion wide legislation by this Parliament would have in the different provinces.

Upon this last question of the great desirability, indeed the necessity, of a law of this kind having behind it a strong public opinion in the community in which it is sought to be enforced, I think it would hardly be rash to say that there is general agreement among those who have given thought to the subject. It appeared to us, therefore, that in the first place, the best way to secure to each of the different provincial communities, constituting this Dominion, an effective law in itself, and a law that would have behind it, when you come to enforce it, the common opinion of those upon whom it was to be enforced, was to leave the legislatures of the provinces, in the exercise of their powers, to enact such measure of prohibition or restriction, either directly, or after having ascertained the views of the people of the province, as they might deem proper; leaving it for this Parliament to protect such legislation and the enforcement of such legislation, against interference by persons outside of the particular province, and who, being so outside, would not be governed by the laws of that province. This Bill therefore proposes to enact a law forbidding the sending into any province —which has adopted a law restricting the sale of intoxicating liquors—intoxicating liquors to be used or dealt with in any manner in contravention of the law of the province. The effect sought to be obtained is that the provincial law within the province shall not be hampered in its operation and its effectiveness by the action of persons outside of the province.

The first section of the Bill contains this prohibition, constituting it an offence on the part of any person knowingly to send into any province—where a law prohibiting or restricting the use, sale or trafficking in intoxicating liquors prevails—intoxicating liquors to be used or dealt with in any way in violation of the law of the province. Whatever may be the measure of prohibition or restriction that a province has adopted for itself, that measure will be protected from outside interference. Each province will decide for itself to what extent it desires to prohibit or restrict the sale or use of intoxicating liquor, and the legislation we now propose is for the purpose of protecting the effectiveness, within the province, of such prohibitory legislation, by preventing persons outside of the province in any manner bringing about or contributing to the bringing about of a violation within the province of the provincial law.

The second section of the Act makes provision in regard to the burden of proof necessary in order to make the prohibition contained in the first section workable and

effective. Provision for the infliction of penalties is made in the first section.

The third section deals with the question of the place of prosecution, making an offence subject to prosecution either in the place whence the liquor is sent from, or in the place to which the liquor is sent.

The fourth section makes provision enabling, or calling upon, the court dealing with a particular prosecution, to take official cognizance of the law of the province into which it is claimed the liquor was sent for the purpose of a violation of the law of that province. This section is necessary because of the fact that a prosecution being susceptible of being brought in another province, without such a provision, the courts of the province, with which the prosecution is brought, would not, or, perhaps, it would be more proper to say, might not—feel called upon to take, or justified in taking judicial cognizance of the laws of another province. The fifth section contains a definition of intoxicating liquor, or, rather, provides that for the purpose of this Act anything shall be deemed intoxicating liquor that is defined to be such by the law of the province into which it is charged that liquor was introduced in violation of this Act.

As I have said, the purpose of the Act is to make effective, as against outside interference, the enforcement within each province of the law which it chooses to make for itself upon the subject of the prohibition or restriction of liquor. We believe that the effect of the Act will be to attain that purpose. We are leaving to each one of the provinces its liberty of action within the field of legislation in which it has concurrent jurisdiction with this Dominion, and we are, therefore, ensuring that such law as is passed will be so passed as an expression of the views of the community about to be immediately affected by it. We, on the other hand, supply what may be lacking in effectiveness by reason of territorial limitations upon the obligatory nature of the provincial law, a limitation, which, of course, restricts that obligatory nature in its operations to the limits of the province whose legislature has enacted the law.

Mr. MACDONALD: May I ask the Minister of Justice what provisions are contained in this Bill in regard to its enforcement? Upon whom is placed the responsibility of enforcing it?

Mr. DOHERTY: There is no special provision as to who shall enforce this law. We have made it enforceable either at the place whence the liquor was sent from in a non-prohibition province, or at the place to which the liquor was sent. As regards its enforcement, in so far as this Bill is concerned, it is left to the operation of the general laws in regard to enforcement.

Mr. MARCIL: I would like to ask the minister two questions. First, is there any provision in the Bill concerning transportation companies carrying liquor, and, second, what is to be done in the case of a province where a municipality has adopted prohibition?

Mr. DOHERTY: The law prohibits anybody sending, taking, carrying, or bringing into a province which has enacted a law, intoxicating liquor to be used in violation of that law. That covers carriers as well as anybody else. The other question, I understand, was regarding a municipality in a province which has adopted prohibition?

Mr. MARCIL: Yes, for instance, in the province of Quebec 900 municipalities have adopted prohibition.

Mr. DOHERTY: In those municipalities prohibition is in force in virtue of a provincial law. The provision of this Bill is intended to be wide enough, and I have no doubt it is wide enough, to cover the case of sending liquor into one of these districts because it is sending liquor into the province to be used or dealt with in violation of the provincial law. It is the provincial law that makes it illegal to sell liquor in those districts, though that law comes into force only by the vote of the people within the district.

Mr. KNOWLES: Is the Bill along the line of delegating our powers to the provinces, or along the line of legislation which will come into effect on the proclamation or otherwise by the provinces?

Mr. DOHERTY: As I understand it, it is not within our power to delegate our powers to the provinces, and we do not propose to endeavour to do the impossible, even though it were desirable. At all events, there is no question of delegating our powers to the provinces in this legislation. The Bill does not provide for any proclamation being necessary in order to bring it into effect. When we enact this legislation it will be in force, and then it will simply remain for the provinces to enact whatever measure of prohibition within the province

they think proper. The moment that a province has adopted a particular measure of prohibition this Act will be operative at once, restricting the sending into that province of liquor for the particular purpose which the legislature of the province may have forbidden, or may have determined to be illegal in the province.

Mr. KNOWLES: Is it not the minister's personal opinion that the first crack out of the box will result in an appeal to the Privy Council? That is my opinion.

Mr. DOHERTY: I do not know whether anybody will question the constitutionality of this legislation. I cannot foresee whether that will be the first crack or the second crack out of the box. I put the legislation before this House with no doubt in my mind that it is quite within our constitutional power to enact, and I do not think we ought to be deterred from exercising a power which, after careful examination we conclude that we have and which we think it will be in the interests of the country to adopt, simply because somebody may go to the Privy Council to find out whether or not it is constitutional. Every law we pass is subject to that risk, and I do not think that this law is in any greater danger of a result unsatisfactory to us from such a proceeding, than any other law in which I have had a share.

Mr. CARVELL: Are the provisions of the Bill broad enough to exclude the importation of liquors from a foreign country into a prohibition province, or does this apply only as between provinces?

Mr. DOHERTY: Perhaps I did not make that clear. It applies to the importation even from places outside of Canada; not absolute importation pure and simple, but importation for the purpose of the liquor being used in violation of the law of the province.

Mr. PROULX: Then the sender would be liable to prosecution?

Mr. DOHERTY: The sender in Canada would certainly be liable to prosecution, but we cannot get at the sender if he is outside of Canada, and we do not intend to try.

Mr. SPEAKER: I think this discussion would be more in order when the Bill is in committee. Rule 21 says:

No member may speak twice to a question except in explanation of a material part of his speech which may have been misquoted.

I would therefore ask the House to postpone this discussion until we are in committee on the Bill.

Motion agreed to, and Bill read the first time.

PRIVATE BILLS INTRODUCED.

Bill No. 62, respecting a certain patent of Harvey Hubbell, Incorporated.—Mr. Cockshutt.

Bill No. 63, for the relief of Mary Phyllis Lasher.—Mr. Nickle.

Bill No. 64, for the relief of Mabel Mills. —Mr. Douglas.

CHIEF TRANSPORT OFFICER.

On the Orders of the Day:

Mr. TURRIFF: I should like to ask the Acting Minister of Militia whether the report is true that Col. McBain has been appointed Chief Transport Officer for the Militia Department.

Mr. KEMP: No such appointment has been made since I have been Acting Minister of Militia, nor have I heard anything about its having been made previously.

Mr. TURRIFF: Would the minister find out and let me know? Is there any truth in the report that the Minister of Militia has gone to the Old Country, and not to Florida?

Mr. KEMP: I will try to let my hon. friend have an answer to his question about Col. McBain to-morrow. Regarding the Minister of Militia, I have no official knowledge of his whereabouts. There was, however, a press despatch to-day saying that he had arrived in England.

MILITARY DISTRICT NO. 12—SASKATCHEWAN.

On the Orders of the Day:

Mr. McCRANEY: I should like to ask the Acting Minister of Militia whether there is any truth in the report in the Ottawa Citizen this morning that the province of Saskachewan has been created into a military district to be known as District Number Twelve, with Regina as its headquarters. I may say that on Saturday I received the following telegram from the Saskatoon Board of Trade:

Am informed that Saskatchewan has been constituted a new military district number twelve, and have wired Sir Sam Hughes urging that on account of geographical strategic location its headquarters be established at Saskatoon. Kindly use your utmost influence to de-

sired end. Saskatoon is surely the logical point for such headquarters.

Mr. KEMP: I will endeavour to let the hon. gentleman have an answer to his question to-morrow.

ILLITERATE SOLDIERS:

On the Orders of the Day:

Mr. BURNHAM: Is the Acting Minister of Militia aware that a considerable number of our enlisted soldiers are illiterate, and that it is desirable, both in their own interest and in the interest of the forces, when they are communicating in the field, that they should be able both to read and to write. For example, in the 146th Battalion, at Kingston, there are no less than seventy-five soldiers in a class learning to read and write for the first time.

Mr. GAUVREAU: And that is in Ontario.

Mr. KEMP: No report has been made to the department with regard to this matter.

PRIVATE BILLS.

CONSIDERED IN COMMITTEE.

The House in Committee on Private Bills, Mr. Rhodes in the Chair.

Bill No. 29, respecting certain patents of the Pedlar People, Limited—Mr. William Smith—in Committee.

Mr. NESBITT: Will some one who has charge of this Bill kindly explain it? This is another Bill for the renewal of patents. Why do they want these patents?

Sir GEORGE FOSTER: As the Acting Minister of Agriculture is not here, and as the real Minister of Agriculture is also unfortunately out of the House, perhaps it might be as well to allow this Bill to remain until another day when the acting minister will probably be here.

Progress reported.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill No. 46, respecting the Algoma Central and Hudson Bay Railway Company.—Mr. Boyce.

Bill No. 41, for the relief of Lena Pearl Potter.—Mr. Wallace.

Bill No. 42, for the relief of Robert Napper.—Mr. Buchanan.

Bill No. 43, for the relief of Sherwood Norman Hill.—Mr. Douglas.

Bill No. 44, for the relief of Ida May Woltz.—Mr. Boys.

[Mr. McCraney.]

Bill No. 45, for the relief of Cecily Ethel Maude Farera.—Mr. Buchanan.

Bill No. 49, for the relief of Lillian May Dent.—Mr. Douglas.

Bill No. 51, for the relief of Harry Lorne White Cunningham.—Mr. Thomas J. Stewart.

Bill No. 52, for the relief of Henry John Thomas Wardlaw.—Mr. Wallace.

SECOND READINGS.

Bill No. 57, for the relief of Nora Louise Jackson.—Mr. Douglas.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

IMMIGRATION—CO-OPERATION WITH THE PROVINCES.

Sir WILFRID LAURIER:

1. Did the Government, in November, 1911, invite the Prime Ministers of the provinces to facilitate the preparation of a scheme of co-operation between the Dominion and provinces, with a view to securing permanency in the flow of immigration?

2. Was a scheme of co-operation submitted to the Government as a consequence of such invitation?

3. Did the Government communicate to the Prime Ministers of the provinces, any of the proposals made in a special report to it as a result of the invitation to them? If so, when, and what was the nature of the proposals?

4. In what year did the Government enter into communication with provinces with a view to greater co-operation between the Dominion and provinces, in furtherance of immigration and land settlement, and what was the nature of the definite proposals of the Government?

Mr. ROCHE:

1. The Minister of the Interior in November, 1911, requested Mr. Arthur Hawkes to confer with the various provincial governments on immigration matters and asked the premiers of the provinces to put Mr. Hawkes in touch with the department concerned.

2. Mr. Hawkes, after visiting the various provinces and the British Isles, submitted a report, which report was placed upon the table of the House of Commons in 1912.

3. A number of copies of the report were sent to the provincial governments on the 29th of May, 1912.

4. 1912. The development of immigration and land settlement has been the subject of formal communication between the Dominion and Provincial Governments at various times since 1912, and the matter is now the subject of careful investigation by the Economic and Development Commission. In addition, at a conference of Im-

migration agents held in the city of Chicago, at which the governments of the three prairie provinces were represented, the subject of immigration was discussed quite thoroughly and steps taken to prosecute a vigorous propaganda in the United States with a view to securing a larger immigration from that country.

PUBLIC WORKS IN YARMOUTH COUNTY.

Mr. DUGALD STEWART:

What amount has been spent in the county of Yarmouth, Nova Scotia, for public works, wharves, breakwaters and blockings, either for new works or repairs to same, during the years 1908, 1909, 1910 and 1911, and what were the respective amounts paid for such works?

Mr. ROGERS: $408,652.20, as follows:

Argyle Head Wharf—		
1909-10, repairs	$ 99 90	
Lower Argyle Wharf—		
1910-11, construction	2,368 48	
Amiro's Hill Wharf—		
1908-09, construction	989 67	
Bourque's Cove Wharf—		
1910-11, construction	939 61	
Bluff Head Breakwater—		
1908-09 construction	2,005 17	
1910-11, construction	2,215 90	
	$ 4,221 07	
Eel Brook Harbour—		
1910-11, construction	649 81	
Chebogue Harbour—		
1907-08, repairs	71 86	
1909-10, repairs	47 75	
1910-11, repairs	6 00	
	128 61	
Cheggogin Point Breakwater—		
1908-09, construction	998 76	
1910-11, construction	1,974 97	
	2,973 73	
Hubbard's Point Wharf—		
1907-08, repairs	1,059 90	
1910-11, repairs	492 75	
	1,552 65	
Kelley's Cove Breakwater—		
1908-09, construction	4,299 99	
1909-10 construction	650 85	
	4,950 84	
Little River Wharf—		
1908-09, construction	2 000 00	
Lower West Pubnico—		
1908-09, dredging	499 97	
1910-11, dredging	1,198 64	
	1,698 61	
Middle West Pubnico—		
1908-09, dredging	500 00	
Morris Island—		
1907-08, repairs	599 88	
Muises Point—		
1910-11, repairs	1,199 48	
Pinckney's Point Wharf—		
1910-11, construction	969 26	
Port Maitland Breakwater—		
1907-08, repairs	199 61	
1908-09, construction	1,840 54	
1909-10, construction	4,000 73	
1910-11, construction	1,872 89	
	7,913 77	
Plymouth Wharf—		
1909-10, repairs	66 41	
Pubnico Head Wharf—		
1908-09 repairs	499 88	
Pubnico West Harbour—		
1907-08, repairs	1,000 00	
Sanford Breakwater—		
1907-08, repairs	200 00	
Tusket Wedge Wharf—		
1910-11, construction	6,001 28	
Yarmouth Harbour—		
1907-08, dredging	26,450 64	
construction	9,098 49	
1908-09, dredging	135,691 88	
construction	1,003 76	
1909-10, dredging	88,972 54	
construction	1,337 46	
1910-11, dredging	92,403 16	
construction	341 90	
	355,299 83	
Yarmouth Harbour (Sallow Rocks)—		
1908-09, dredging	345 39	
1910-11, dredging	620 05	
	965 44	
Yarmouth Buildings—		
1907-08 repairs	177 79	
1908-09, construction	2,847 78	
repairs	72 91	
1909-10, construction	125 00	
repairs	1,053 57	
1910-11, construction	6,114 59	
repairs	472 35	
	10,863 99	

Summary—

	Construction.	Repairs.	Dredging.
1908	$ 9,098 49	$3,309 04	$ 26,450 64
1909	15,985 67	572 79	137,037 24
1910	7,053 65	1,267 63	88,972 54
1911	22,509 08	2,173 58	94,221 85
Total	$54,646 89	$7,323 04	$346,682 27

Totals—

1908	$ 38,858 17
1909	153,595 70
1910	97,293 82
1911	118,904 51
Grand total	$408,652 20

CHARLOTTETOWN MEDICAL OFFICERS.

*Mr. J. J. HUGHES:

1. Who is the Senior Medical Officer in the Charlottetown district of the Militia and Defence Department?

2. (a) How many medical officers are there for the said district, and (b) who is the junior officer?

3. Who is doing the work at present, and what military position or rank does he hold?

4. What salary or remuneration does he receive, and what privileges, if any, are attached to the position?

Mr. KEMP:

1. Lieut.-Colonel S. R. Jenkins (M.O. 4 Bgde. G.A.).

2. (a) Five. (b) Captain J. W. Dorsey, A.M.C., M.O. 105th Overseas Battalion.

3. Lieut.-Col. S. R. Jenkins, Senior Medical Officer, Charlottetown District, and assisting in examination of recruits of anti-typhoid inoculation and vaccination; Capt. J. W. Dorsey, A.M.C., Medical Officer, 105th Overseas Battalion; Civilian Practitioners—Dr. A. A. McDonald, Medical Officer attending troops at Souris; Dr. J. A. McPhee, Medical Officer attending troops at Summerside; Dr. G. A. Stewart, Medical Officer attending troops at Georgetown.

4. The Senior Medical Officer receives pay of rank—$5 per diem. There are no special privileges.

POST OFFICE EMPLOYEES.

Mr. BOULAY:

1. How many permanent and temporary employes were there on the 1st July, 1896, in the following post offices: Montreal, Toronto, Quebec, Winnipeg, Vancouver, Victoria, Three Rivers, Sherbrooke, St. John, N.B., and Halifax, N.S.?

2. How many were there in the same post offices on the 1st October, 1916?

Mr. CASGRAIN:

Office.	On 1st July, 1896.	On 1st October 1916.
Montreal	289	737
Toronto	238	657
Quebec	66	119
Winnipeg	56	273
Vancouver	23	191
Victoria	39	60
Three Rivers	..	8
Sherbrooke	9	20
St. John	56	72
Halifax	47	71

SHERBROOKE POST OFFICE.

Mr. McCREA:

1. How long was the position of postmaster for the city of Sherbrooke vacant?

2. Has a new postmaster been appointed?

3. If so, what is his name? If no appointment has been made, why not?

Mr. CASGRAIN:

1. Since the 12th June, 1914.

2. No.

3. The deputy postmaster being competent to discharge the duties of the office and one of the applicants being on active service at the front, it has been deemed advisable not to make any appointment for the present.

DEEPENING OF St. LAWRENCE CHANNEL.

Mr. McCREA:

1. How many dredges were employed in the deepening of the channel of the St. Lawrence river between Quebec and Montreal, at what is known as Cap à La Roche, in the years 1912, 1913, 1914 and 1915.

2. How many yards of rock, and how many yards of earth were removed each year?

3. How much did it cost per yard for each year, respectively?

Sir GEORGE FOSTER:

1. 1912, 4 dredges; 1913, 3 dredges; 1914, 3 dredges; 1915, 3 dredges.

2. 1912—256,423 cubic yards shale rock cost 32.99c per cubic yard; 92,260 cubic yards hard-pan, containing numerous embedded boulders, cost 38.51c per cubic yard. 1913—366,349 cubic yards shale rock cost 35.28c per cubic yard. 1914—329,156 cubic yards shale rock cost 42.41c per cubic yard. 1915—174,063 cubic yards shale rock; 6,733 cubic yards hard-pan, containing numerous embedded boulders, cost, per cubic yard, for 1915 cannot be given until after the end of the fiscal year.

3. Answered by No. 2.

FARM LABOUR.

Mr. BUCHANAN:

1. Has the Government been asked to assist in securing farm labour from the United States to meet the demand of farmers throughout Canada?

2. If so, is it taking action in that direction and by what methods?

3. Is the Governement aware that the Canadian Pacific railway is said to be offering special inducements to farm labourers to come to Western Canada?

4. Has the Government information as to the number of men required for farm labour in Canada at the present time?

Mr. ROCHE:

1. Representations have been made to the Government in this respect from various sources, but previous to the receipt of these representations the Government had—on account of conditions—undertaken to assist materially in bringing farm labourers from the United States.

2. Yes. Advertising in 5,500 newspapers in the United States and has arranged with transportation companies for a one-cent per mile rate for farm labourers from international boundary to destination. The immigration agents throughout the United States have also been given full instructions in order that they might be able to assist the general movement of obtaining a larger immigration of farm labourers from the United States.

3. In common with other Canadian railway lines, the Canadian Pacific railway is making known the special rates offered to farm labourers from the United States.

4. The Dominion Government is accepting the estimates of provincial governments as to demand for farm help.

UNOPPOSED MOTIONS FOR PAPERS.

Mr. Papineau.—For a return showing whether the Government have taken cognizance of the following article published in the Montreal Gazette on November 1, 1915:

"Canadian help comes from Sale of Gift Flour —Foodstuffs not needed by the English Poor were bought for Belgium Relief Funds to aid East Coast—Hon. Walter Long suggested to Canadian Government that $750,000 be allotted, and latter agreed.

"(Special cable from the Gazette's Resident Staff Correspondent.)

"'London, October 31.—'Canada's aid to the east coast towns of England, which are suffering through the war, is the subject of some misconception,' said Sir George Perley to-day. In a statement in the Commons, Hon. Walter Long said that the necessary funds for a Government scheme of help for hotel and lodging house keepers had been generously provided by the Canadian Government. This gave rise to the idea that the Dominion was taking a new step, but the fact is that no money is coming from Canada. Of the flour sent by Canada a year ago to relieve distress in England very little was distributed, as poverty was in no way abnormal. Some 400,000 bags of this flour were transferred to the American committee for Belgian relief, which purchased them. The money paid for this flour being in the hands of the Local Government Board. Hon. Walter Long, as President of the Board, suggested to Sir George Perley that this might be utilized for the relief of the east coast towns where the season had been ruined owing to the lack of railway facilities and the disinclination of the public to visit the east coast because of the possibiltiy of German naval or aerial raids. The Dominion Government acquiesced in this proposal and the sum of $750,000, part of the proceeds of the sale of the flour, has now been allotted for this purpose. Canada's generosity will therefore go to alleviate the distress of a large number of better-class people, who are direct sufferers from the war, instead of the destitute poor, for whom it was intended, but who, it develops, were not in need of it"; whether the said article is accurate; if not, in what respect is it inaccurate.

Mr. Papineau.—For a return showing whether the Government is aware that the following extract from an article was published on the 12th January, 1915. in the Montreal Gazette:

"Distress caused in England by War is negligible—Comparatively small portion of Colonial Gifts used for National Relief—Much went to Belgians—War Office also took large share. Salvation Army has scheme requiring Canadian co-operation.

"(Special cable from the Gazette Resident Staff Correspondent.)

"London, January 31.—Very satisfactory evidence of the comparative absence in England of any distress caused by the war is furnished by a report of the special work of the Local Government Board arising out of the war, which was issued to-day as a White Paper. The action by Noel Kershaw, dealing with the disposition of the gifts from the colonies, shows that only a small part of the goods allocated has been required for relieving the distress of civilians.

"The following is the disposition of the 940,530 bags of flour received from Canada: to the local committees for the relief of distress; 90,474 to the Belgian Refugees Committee, 1,691 transferred to the War Office, 99,760, further offer to the War Office, 300,000 to the Belgian Relief Commission, 443,886; sold, owing to damage, 4,719."

Who had charge of accepting delivery and the shipping of this flour; whether the Government have any information of the shortage of 59,430 bags of flour. alleged in said article; if not, what became of the flour that was short.

Mr. Buchanan.—For a return showing the number of horses bought for remounts in Alberta, the persons from whom they were purchased, and the amount paid for each horse.

Mr. Macdonald.—For a copy of all letters, recommendations, telegrams, reports of officials and other documents relating to the appointment of A. Kastella as mechanical superintendent of dredges, and as to his resignation from said office, and also as to causes and reasons of his resignation or removal.

Mr. Bourassa.—For a copy of all telegrams, letters, correspondence and contracts between the Quebec Harbour Commission and Benjamin Demers, of the parish of St. Nicholas, county of Lévis, concerning the purchase of the St. Nicolas quarry.

Mr. Macdonald.—For a return showing the names of the 54 Canadian officers employed in the Canadian Pay and Record Office, London, and what amounts per month are paid to each of them.

Mr. Buchanan.—For a return showing the reason for the delay in the establishment of the rural mail routes, reported under consideration, in the constituency of Medicine Hat; when these routes were first applied for; whether the applications possessed the required number of signatures; whether tenders have been invited, and for what routes; why the lowest tenders were not accepted, and the routes established; whether any new tenders are being invited for these routes; whether there is a likelihood of any of these routes being operated immediately.

Mr. William Chisholm.—For a copy of all recommendations, letters, telegrams and correspondence relating to the recent appointment of a lightkeeper at Arisaig, N.S.

Mr. Bourassa.—For a copy of all telegrams, letters and correspondence concerning the appointment of Mr. Alfred Gravel, harbour commissioner of Quebec, and concerning all other candidates for the position of commissioner on the Harbour Board of Quebec, to represent the South Shore.

WAR PURCHASING COMMISSION.

Mr. CARVELL moved:

For a return showing the dates, parties, quantities and values of all contracts made by the War Purchasing Commission, so called, from its formation down to the present date.

Sir ROBERT BORDEN: I have information with regard to this which I have already communicated to the hon. gentleman and to the House. There is no objection to the order passing, but I assure my hon.

friend that unless the work of the department be disorganized, it will take a very long time to prepare the return.

Mr. CARVELL: I can only take what the right hon. gentleman will give me.

Sir ROBERT BORDEN: I am giving the hon. gentleman everything that he has asked for so far.

Motion agreed to.

BUSINESS OF THE HOUSE.

Sir ROBERT BORDEN: It was understood, when the debate on the motion which stood on the Order Paper in the name of the hon. member for Vancouver (Mr. Stevens) was adjourned, that we should resume the discussion. If there is no objection, I would suggest that we proceed to consider that resolution now. I mention this before proceeding to make a motion to that effect, because I understood that some of the hon. gentlemen who had notices of motion on the Order Paper desired to speak to them.

Mr. CARVELL: I have the first notice of motion on the Order Paper; it has been there since the first day of the session. It has been reached at least six or seven times during the session. I was asked first by the Acting Minister of Railways to allow it to stand, to which I consented. Then, I was asked by the Minister of Railways on two occasions to allow it to stand, to which I consented; and again the Acting Minister of Railways asked me to allow it to stand. I always like to be courteous and obliging to the minister, but I do not see any reason why I should be asked to allow this motion to stand until the end of the session. It is a matter of a great deal of importance to the province of New Brunswick. Further, I think I am safe in saying that so far as this side of the House is concerned there was no understanding that the resolution of the hon. member for Vancouver should take precedence to-day. Unless there is very strong reason why this motion should not be proceeded with, I would feel like standing on my rights.

4 p.m.

Mr. PUGSLEY: I hope my right hon. friend will not press the motion to-day. The motion of the hon. member for Carleton is one of great importance, by reason of the fact that the Government of the province of New Brunswick now proposes to change all the arrangements which were thought to have been thoroughly understood with regard to the construction of the St. John Valley railway. And the excuse is being put forward in New Brunswick that this Government has declined to carry out the arrangement which it made some three or four years ago, which was announced in this Parliament, and under which authority was taken by the Dominion Government to construct certain bridges across the St. John river, these being an essential part of the St. John Valley railway. The statement is now being publicly made in New Brunswick that it is by reason of this Government going back—

Sir ROBERT BORDEN: It is hardly worth while to enter into the discussion of the resolution itself—

Mr. PUGSLEY: I am speaking of the importance of it.

Sir ROBERT BORDEN: If my hon. friend insists upon going on with his motion, I will not stand in the way; at the same time, it may be necessary for us to sit late enough to-day to give an opportunity for the further discussion of the motion which stands in the name of the hon. member for Vancouver (Mr. Stevens), and which was seconded by the hon. member for Bonaventure (Mr. Marcil).

ST. JOHN VALLEY RAILWAY.

Mr. F. B. CARVELL (Carleton, N.B.) moved:

For a copy of all letters, telegrams, correspondence and contracts between the Department of Railways and Canals or any official thereof, including the officials of the Intercolonial railway, and any member of the Government of New Brunswick, the St. John and Quebec Railway Company or any official thereof, regarding the operation of the Valley Railway, so-called, in the province of New Brunswick, from the first day of October, 1914, down to the present date.

He said: This motion refers to a subject which has been debated in this House on a number of occasions during the last four or five years, but I think there has been no occasion on which it was fraught with so much importance to the people of my province as it is to-day. I am sorry to say it has been made a political football by my hon. friends opposite and their friends in the province of New Brunswick for the past six years, and now we have reached a stage in the history of the transaction which, I think, calls for a frank and open statement, on behalf of this Government, for the information of the people of New Bruns-

wick, who have incurred a liability of about $5,000,000, or who, purely on account of the promise given by the Federal Government and the Federal Parliament, will have incurred a liability greater than that before the transaction is completed.

I am not going into the history of this matter to any very great extent because it has been discussed in this House on a great many occasions, and the condition existing is of much greater importance than the history of it. Suffice it to say, that away back in 1909 or 1910, an agitation was started in the province of New Brunswick to construct a railroad from the Transcontinental railway at Grand Falls to the city of St. John. The proposition first came from the present Minister of Marine and Fisheries who, at that time, was Premier of New Brunswick and it was that if the Dominion Government would operate this railway as part of the Intercolonial system on a 40 per cent basis, that is, by paying to the Goverment of New Brunswick 40 per cent of the gross earnings with which to secure the interest on the bonds, they would guarantee the bonds. The matter was put up to the then Government, and I think I ought to be frank enough to say that the authorities of the Intercolonial Railway objected very seriously to the proposition. They took the ground that it was a much better proposition for the province of New Brunswick than for the Intercolonial Railway. However, it was discussed on many occasions; large delegations came from New Brunswick and we were able to convince the Prime Minister and the then Minister of Railways, and the Government generally, that it was a proposition which had merit, and which should be accepted officially. The proposition was accepted, and legislation was passed in the year 1911. It will be found as chapter 11 of the statutes of that year, and as it is very short, I shall read the whole chapter.

The Governor in Council is authorized to enter into a contract with any railway company already authorized, or which may be hereafter authorized by law, to construct a line of railway from a point on the line of the National Transcontinental railway at Grand Falls, in the county of Victoria, to the city of St. John, in the province of New Brunswick, a distance of about two hundred and twenty miles, the principal and interest of the bonds of which railway company, pursuant to the provisions of chapter 6, of the statutes of the province of New Brunswick, 1910, the Government of the province of New Brunswick has guaranteed, or may guarantee, to the extent of twenty-five thousand dollars per mile, and with the Government of the province of New Brunswick, for the leasing of the said line of railway when completed, with its appurtenances, and for its operation, equipment, maintenance, upkeep and repair by the Government of Canada, as part of the Governmentment Railway system of Canada, for a period of ninety-nine years and for the payment by the Government of Canada to the said province of New Brunswick, or to the said company, each year during the said term of ninety-nine years, of forty per centum of the gross earnings of the said railway as or in the nature of rental thereof: Provided, however, that the said contract shall be entered into only upon the condition that the said railway be constructed upon plans and specifications to be approved of by the Governor in Council upon the recommendation of the Minister of Railways and Canals, and shall be up to the general standard of the said National Transcontinental railway through the said province; provided further that the Governor in Council shall be authorized to enter into a contract, as aforesaid, for the operation of the said railway in sections, when completed and equipped as follows:

(1) From Fredericton to Woodstock;

(2) From Fredericton, south, a distance of forty miles;

(3) Each twenty-five miles thereafter, until the line be completed from Grand Falls to St. John.

The remaining section has reference only to the directors. That Act was passed, I think, in the month of March, 1911, and the General Elections took place in September, 1911, which resulted in a change of Government. Almost immediately thereafter an arrangement was entered into between the present Government and the Government of New Brunswick for the construction of this road. They changed the legislation in many material respects, but I do not intend to spend very much time over that. The new arrangement was entered into in 1912, and it will be found in chapter 49 of the statutes of that year, the substantive part of the statute reviving an agreement previously made between the Government of New Brunswick and the Government of Canada. I wish to read from section 3 of the agreement, because that is the portion of the statute which made the agreement between the two parties, which we in New Brunswick believed they intended to carry out, and in regard to which we are finding a great deal of fault because it has not been carried out. It reads:

The Dominion hereby undertakes and agrees that as soon as the said railway is constructed and equipped to the satisfaction of the engineer or engineers so appointed as aforesaid, between Fredericton and Woodstock, the Dominion will enter into a lease in accordance with the terms and conditions herein agreed upon and to be embodied in the said lease, and that when a further section of the said railway from Fredericton southwards towards Saint John, a distance of forty miles, shall have been constructed and equipped to the satisfaction of such engineer or engineers, the Dominion will enter into a lease thereof and operate upon like terms

and conditions as above mentioned and so on thereafter as each section of twenty-five miles of railway is constructed and equipped, the Dominion will enter into a lease thereof and operate in manner afore mentioned, and when the said whole line between Saint John and Grand Falls is fully constructed and equipped, the Dominion will lease the said line including the said bridges upon like terms and conditions for the term of ninety-nine years, it being understood and agreed that the Dominion will provide the necessary, suitable and sufficient rolling stock for the operation of the said railway and will maintain, repair and upkeep the said railway at its own expense during the whole term of the lease, such lease to contain all the usual and necessary covenants, provisoes and conditions, and the company hereby covenants and agrees to grant the said leases accordingly.

Provided, however, that the Dominion shall not be required to enter into any lease of any constructed and equipped section of the said railway which is not connected with the completed and equipped railway from Fredericton so as to form a continuous line of railway.

I have taken some time to read that to the House, but in order to make it thoroughly plain and understandable, it is necessary to give some information as to the history of the legislation in connection with this undertaking. The old Government passed a law providing for the operation by the Intercolonial railway of this road, when constructed. When the present Government came into power, they changed the thing, not to a very great extent, but providing also for the operation of this road by the Intercolonial, paying to the province of New Brunswick 40 per cent of the gross earnings therof, and providing also, as plain as the English language could provide, that they would enter into a lease for the operation of this road in sections as soon as each individual section was completed. The first section was to be from Fredericton to Woodstock, 62 miles, the second from Fredericton south 40 miles, and it was provided that whenever 25 miles were completed it should become a new section which the Federal Government agreed to lease and operate on these conditions. In order to understand the matter thoroughly it will be necessary to keep that in mind because that is the very important thing which the present Government or the present Intercolonial management, have neglected or refused to do. It is almost impossible to find out either from the Federal authorities, or from the province of New Brunswick, whether any such lease was ever entered into. I may say that my impression is, from my reading and from asking questions—and I have asked a great many of them both here and in New Brunswick—that no such lease has ever been entered into although the Intercolonial Railway, as a matter of fact, has been operating certain portions of this road since about the first of January, 1915.

There is another statute referring to it which I also wish to cite because it plays a very important part in the matter. It is chapter 52 of the statutes of 1914. In order to carry out this work, as it was provided for, that is the road from Grand Falls to St. John, it was necessay to build three important bridges across the river St. John. The first would be at Andover in Victoria county. That bridge would not involve any very serious difficulties because the river is, I suppose, 500 or 600 feet wide, with high banks and a hard bottom and this would simply be an ordinary piece of railway bridge construction. Two other bridges would be necessary, one across the St. John river, probably 50 miles below Fredericton or in that vicinity, and another across the Kennebecasis river a few miles from Rothesay. We do not deny that these are expensive bridges, but we would like to know what the Government has done, and further, we would like to find out the position of affairs, not the exact, but the probable, cost of these bridges, and the engineering difficulties, if any there be, in the way of carrying out the arrangement. Let that be as it may, in 1914, the Minister of Railways and Canals brought a Bill before this Parliament providing for assistance to the St. John and Quebec Railway Company for the construction of these bridges. You may remember that during that year there was quite a stir in political affairs in the province of New Brunswick over the construction of this Valley railway. Certain charges of a very grave character were preferred against members of the Provincial Government by one of the members of the Legislature. These charges were referred to a Royal Commission which investigated the matter very thoroughly and which found that certain irregularities had occurred; that the contractors had paid money to the then Premier; that something like $450,000 or $600,000 had been added to the cost of this road improperly without authority, and for which they would have received Government bonds of the province of New Brunswick giving no returns for them had it not been for that investigation. I am not going into the details of it because it does not affect this Parliament to any great extent. It was, however, a pretty rotten mess. I was a little suspicious

about granting any further aid to the St. John and Quebec Railway Company, and I protested as vigorously as I knew how against granting any further aid to this company or to any subsidiary company for the construction of these bridges. After about three or four weeks, the Government announced that they would build these bridges themselves and if any hon. gentleman will look up Hansard he will find that I heartily commended the Minister of Railways and Canals. I told him that I believed that his department would be honest, and that these bridges would be built properly, and that both the Dominion of Canada and the province of New Brunswick would get the accommodation to which they were entitled. I shall not read the whole statute although there are only four sections in it; the important section is section 1:

> The Governor in Council may build the said three railway bridges including all necessary approaches and appurtenances; and the said bridges, approaches and appurtenances shall belong to and be the property of His Majesty.

The second section provides that the minister may enter into an agreement with the Government of New Brunswick and the St. John and Quebec Railway Company for the operation of these bridges and that for the first fifteen years the province of New Brunswick and the railway company were to pay nothing in so far as these bridges were concerned. After the expiration of the fifteen years they were to pay a certain proportion of the earnings, but that is not very particular. The main thing is that this Parliament authorized the Minister of Railways and Canals, and this Government, to build these three bridges and we believed in the province of New Brunswick and I am of the opinion that Parliament and the Government did believe it, that it was the intention to have them constructed, and that would end the troubles which have been so rampant in New Brunswick for the last four or five years over this railway matter. I always had some doubts about the bona fides of the Government of New Brunswick with regard to this transaction. I do not go so far as to say I have any doubts about the bona fides of this Government; in fact, I would almost take the opposite view. I believe that the great majority of the members of this Government were absolutely bona fide in what they were doing. I believe that they intended to operate that road when constructed and I believe they intended to build these bridges. But the tempter has been at work very assiduously for the last three or four years and something has happened. What has happened is the very thing that I would like to find out and that is my object in discussing this motion to-day. I only wish that the Minister of Railways and Canals had been here to give us the real history of the transaction and tell us exactly what has taken place. Somehow or other there has always been a feeling in New Brunswick from the beginning, or rather from the year 1910, that the Government of New Brunswick were not sincere in the professions, in the legislation, in the contracts and in the things which they were doing regarding this Valley railway question. That is a very harsh statement to make but I know that I am voicing the sentiments of every Liberal in New Brunswick and I think I am voicing the sentiments of three-quarters of the Conservatives of that province, when I make that statement. We have always said that there was something about this that was not straight, manly and upright; that something was being held back, and that the people had been deluded and deceived from the very beginning. Those sentiments have been voiced in this House by myself and my colleagues on at least one, I should think a dozen different occasions. The Minister of Railways (Mr. Cochrane) and I have discussed this matter on many occasions in this House. I have also discussed it with my hon. friend the Minister of Marine and Fisheries (Mr. Hazen), who I notice is conveniently absent to-day. I voiced my sentiments to him in the House, and I have his pledge on Hansard in language as strong as he could possibly make it. We discussed this matter first in the House in 1912, on an amendment proposed by my hon. friend the member for Victoria and Madawaska. Before the old Government went out of power a subsidy had been voted for the building of this road from Grand Falls to St. John, and in 1912, when the subsidy was being renewed, this Government dropped off the twenty-five miles from Andover to the Transcontinental, and renewed the subsidy only from Andover to St. John. That looked very suspicious to us at the time, and we did not hesitate to say so, and practically every hon. member from New Brunswick in the House at that time spoke in the debate. We discussed it in all its moods and tenses, and told this Government that we did not think they were sincere

when they dropped that portion of the subsidy from Andover to the Transcontinental. I should like to read a portion of the discussion I had at that time with the Minister of Railways, and which is found on page 6384 of Hansard, March 28, 1911-12. After pointing out my fears with regard to the dropping of this portion of the subsidy, and saying that I did not believe they intended to carry out their pledges, I used these words:

> Do you wonder that we are a little suspicious and a little in fear that the declarations of the intentions of the railway company and the declarations of the intentions of the government of New Brunswick up to last May will be carried out.
>
> Mr. Cochrane: Have no fear.
>
> Mr. Carvell: We have our fears.
>
> Mr. Cochrane: Have faith.
>
> Mr. Carvell: Perhaps, if my hon, friend knew as much about this matter as we do, he would not have as much faith as he has at the present time. It is in order to ensure the construction of this road and to put it beyond peradventure, that I am supporting this amendment. We believe that if they are allowed to go on as they are doing, nothwithstanding the good intentions of my hon. friend, the Minister of Railways and Canals the results may not be satisfactory. I give my hon. friend credit for having good intentions, but he is not above temptation and I can assure him that the tempter will be so strong, that I do not believe that he, even with his forcible character, will be able to withstand him, and it is in order to remove my hon. friend from danger of that temptation, that I support this amendment.

Then, on page 6387-8, the Minister of Marine and Fisheries, after referring to these very remarks of mine, used the following language:

> Now, coming to the really important question involved in this, as to the road going to Grand Falls, I am as certain as I am standing here that the road is going to Grand Falls, and I do not believe there is a particle of doubt in the mind of the government of New Brunswick but that that road is going to Grand Falls. The subsidy is voted for a road to Grand Falls, and the Government is authorized to operate the road from Grand Falls to the city of St. John, and the contract entered into in specific terms sets out that such will be the fact. The Minister of Railways has arranged the terms of the contract with the representatives of the government of New Brunswick and the company, and my hon. friend the minister will have no hesitation in telling the House that that road will be operated and built from Grand Falls to the city of St. John, and neither the New Brunswick government nor this government could tolerate for a moment a condition of affairs under which the road would be built to Andover and suddenly stop therewithout having the advantage of a connection with the Transcontinental at some point in the county of Victoria at or near the village of Grand Falls.

If it were possible for a stronger statement to have been made by a minister of the Crown, who also happened to be the former Premier of New Brunswick who had launched this proposition, I should like to know what stronger language he could have used. It may surprise you, Mr. Speaker, that even after that forcible declaration by the Minister of Marine and Fisheries there were doubting Thomases in New Brunswick, who did not believe that the Government of the province of New Brunswick would carry out their pledges. I do not by any means say that the Minister of Marine and Fisheries was deceiving the House, but we had not faith in the Government of New Brunswick. That was before the explosion took place in 1914, but we knew just who they were almost as well before the explosion as after, only they were not exposed to the public till 1914.

Mr. COPP: Then they were caught with the goods.

Mr. CARVELL: From the beginning of this railway project there was nothing but insincerity, delusion, and deceit on the part of the Government of New Brunswick as to what they were going to do and what they were not going to do with regard to the construction of this important railway. I have one more citation to make before leaving that branch of the case, and it is from the remarks of the Minister of Marine and Fisheries in the discussion that we had in the House with reference to the offer of this Government to build the bridges to which I made reference some time ago. You will find these remarks in Hansard of April 28, 1914, page 3018. Mind you, two years had gone by since the declaration of the Minister of Marine and Fisheries that this road would be built to Grand Falls; two years after he had used the words I have already quoted, namely:

> Neither the New Brunswick government nor this government could tolerate for a moment a condition of affairs under which the road would be built to Andover and suddenly stop there without having the advantage of a connection with the Transcontinental at some point in the county of Victoria at or near the village of Grand Falls.

Two years had gone by. The province of New Brunswick, acting through the St. John and Quebec Railway Company, had commenced the construction of the road, and had partially constructed about 120 miles of it. But still we did not believe that they were sincere. Coming back to this House after the charges had been laid in the Provincial Legislature, I again stated that I did not believe the Government of New Brunswick were sincere and intended to

build the road through to the Transcontinental, and the Minister of Marine and Fisheries then used these words (page 3018):

> The speech of the hon. member for Carleton might be read in two ways. To a certain class it could be said: The hon. member for Carleton is entirely opposed to having these bridges built at all. Is the hon. gentleman sincere and candid in the statements which he has made to the House to-day? Is the hon. gentleman not still playing the game that he has played for so many years of trying to prevent the Government from coming to the aid of this road, and to the aid of the province and making provision by which these bridges shall be built and without which the rest of the road is an impossibility? The hon. gentleman has also referred to the question of the connection at Grand Falls. There is no doubt in the world that there will be connection at Grand Falls with the St. John Valley railway. The only doubt about the matter in the mind of the Minister of Railways and Canals is whether it will be necessary to build a bridge across the river and to build twenty-five or thirty miles of railway, or whether the same result can be attained without any such expenditure by obtaining running rights from Andover to Grand Falls over the existing line of railway and which, in large measure, would be paralleled if a new line were built. A year ago there was no doubt, and there is no doubt today, but that the railway known as the St. John Valley will connect at Grand Falls with the Grand Trunk Pacific and be in a position to receive from that railway western freight at Grand Falls to be hauled over the road and shipped out of the port of St. John, and also to carry freight from the port of St. John to Grand Falls.

There, again, Sir, you have the same positive, explicit declaration on the part of the Minister of Marine and Fisheries that this road would go to Grand Falls, but there was just this little difference: Two years had rather undermined the hon. gentleman's assurance because, while in 1912 there was not a particle of doubt that the road was going straight through to Grand Falls and connect with the Transcontinental, in 1914, a little doubt had come over the hon. gentleman's mind because he was not sure whether it would be better to construct a new road crossing the river at Andover or to utilize the Canadian Pacific railway tracks from Perth or Andover up to Grand Falls; but the one or the other would happen without the shadow of a doubt, and I was chided, as I have been chided by my hon. friend for the last five years, and the people of New Brunswick were told, as they had been told for two years before that, that I was trying to throw every possible obstacle in the way, but that, with all my obstruction and with all the obstacles that I was putting in the way of the Government of Canada, they would persevere to the end; they would build that road; they would build those bridges; they would make the connection and they would give to the people of New Brunswick that which they had promised them.

This story has been told in this House, in the New Brunswick Legislature, on the hustings of New Brunswick and in every Tory paper for so long that one would almost be forced to believe that Carvell and Pugsley had horns and hoofs; that they did not belong to the human species; that they existed only for the purpose of preventing the construction of this road and preventing the Government at Ottawa from working out the greatest good to the greatest number of people in New Brunswick. But a great deal is to be said for the prophesies of Carvell and Pugsley and for the way in which they were able to foresee what would happen. We had no faith in the men who had charge of the matter; we did not believe they were sincere or honest; we do not believe now they are sincere or honest. The events of the last three weeks have justified our prophesies and our fears to a greater extent than have the fears of any member of this House been justified in the last quarter of a century. In the first place, the construction of this road was never justified; the province of New Brunswick was never justified in putting a dollar into it nor in guaranteeing a dollar of bonds unless the original arrangement had been carried out to the letter, unless this road had gone through to Grand Falls or some other point on the Transcontinental. My own judgment is that Grand Falls is the proper point, but the road must make connection with the Transcontinental in the neighbourhood of Grand Falls in order to get through business, and, without that through business, this railway is one of the greatest political crimes that has ever been foisted upon a free country, the crime of spending over $4,000,000 of our money, and of giving us nothing but a load of debt around our shoulders in the end.

I do not mean to say that this road is not a great advantage to the country through which it passes. It is a great local advantage, but we forced the Government to build a pretty good railroad; in fact, the mechanical portion of the road, outside of the curves and grades, is very good and the expenditure of a little more money on straightening out curves and eliminating grades would make the road a very good one. But the idea of putting on the province of New Brunswick a debt which will amount to $5,000,000 when the road is completed,

and of not carrying out the general scheme of connecting it with the Transcontinental where through business could be obtained, is unjustified from the standpoint both of the province and of the Dominion.

Under the arrangement, as I have read it from the statutes of 1911 and 1912, the Intercolonial Railway or the Government of Canada was to lease this road and to operate it, in sections at first, and as a completed road, when it was completed, and forty cents of every dollar earned were to go back to the province. We argued that in New Brunswick and our opponents did the same, and the people of New Brunswick finally agreed to the proposition on the distinct understanding that forty per cent of the revenue of that road would go to pay the interest on the bonds, and I have no doubt that, if this road went through to Grand Falls and to St. John and made the through connection as proposed, in a short time 40 per cent of the gross earnings would be enough to pay the interest on the bonds. But instead of building the road to Grand Falls; instead of building it even to Andover and taking running rights over the Canadian Pacific railway to Grand Falls, they have built it to a place called Centreville in my constituency twenty-five miles from Andover, and there they have stopped, and it has been announced in papers supporting the Government that it is not the Government's policy to contruct the railway further. They are breaking faith with a very large section of the people of the province as individuals, and they are breaking faith with the whole province collectively, because they are stopping just when they are in sight of that point at which they could carry on a profitable business not only for the Intercolonial Railway, but for the province of New Brunswick, and that is our greatest concern at the present time.

At the beginning of this session I asked a number of questions of the Minister of Railways, and on the 14th of February I received answers to them. I wish to read the questions and answers, which will be found on page 757 of this year's Hansard:

Mr. Carvell:

1. What amount of money has been paid by the Intercolonial railway or the Government of Canada to the government of New Brunswick as their proportion of the earnings of the Valley railway, so-called, down to December 31 last?

Mr. Cochrane:

1. None, but there is due to the province of New Brunswick, under the arrangement whereby the province was to receive 40 per cent of the gross receipts, $18,733.65, accruing during the nine months ended December 31.

Question:

2. Has the province of New Brunswick received 40 per cent of the gross earnings of said railway since the beginning of its operation? If not, what percentage of said earnings has the province received?

Answer:

2. No. From the commencement of operation, January 1, 1915, until March 31, 1915, the arrangement was, that the provinces and the Dominion each should bear one-half of the deficit, if any. Under this arrangement, the province owes the Dominion $2,977.51.

Question:

3. Was an agreement signed between the two governments around the first of January, 1915, or shortly thereafter, for the operation of the said railway on what is known as the 40 per cent basis?

Answer:

3. There was no formal agreement.

Question:

4. Has a new agreement been entered into between the two governments within the last month or six weeks as to the operation of the said road and the distribution of the earnings thereof?

Answer:

4. No.

Question:

5. Under said new agreement what proportion of the gross earnings are payable to the province of New Brunswick?

Answer:

5. Answered by No. 4.

Question:

6. Did the Department of Railways and Canals in the month of December last order the cessation of the operation of the said road to take effect on the 1st day of January instant?

Answer:

6. Ordered cessation of the temporary arrangement which led to negotiations which resulted in the order to continue operation after January 1, 1916, on terms to be arranged.

Question:

7. If so, what were the reasons for such order?

Answer:

7. The non-completion of the road.

Now, Sir, you will bear in mind that I read from the statutes of 1911 and 1912 that the road was to be operated in sections; that, as each section was completed, it was to be operated. The road from Fredericton to Woodstock was completed before January, 1915. The road from Woodstock north for twenty-five miles, which would make

one section, was completed and was in operation before 1st January, 1915. The road from Fredericton south, the next section, which, under the statute, should have been forty miles, I confess, was only carried to the length of thirty-six or thirty-seven miles. That length of construction brought the railway to Gagetown, a bright little town, the shire town of the county of Queens, quite a large centre. And—would you believe it, Mr. Speaker—the Department of Railways of this Government absolutely refused to run a train over that road for nearly a year, on the ground, as they said, that it had not been completed for forty miles, and so did not comply with the agreement. Here was a road which had cost from $38,000 to $40,000 a mile, completed even to the station-houses and the stoves in them, and yet, because it was only thirty-six or thirty-seven miles long, instead of forty miles long, they said it was not completed and they would not carry it on. But they could not use that argument as to the portion north of Fredericton, for it was completed. I do not say "completed" in the sense that an engineer going over it could say that there was not another spike to be driven. In that sense a railway is never completed. An engineer might go over the Grand Trunk from Montreal to Toronto, the finest piece of road in the country, and find a tie here and there to be replaced, or some other little thing to be done, because of which he might report the road as not completed. But to all practical purposes this road was completed north of Fredericton, and it was completed south of Fredericton. They never signed the agreement which they had covenanted to sign, and on the strength of which covenant the people of New Brunswick had voted for the present Provincial Government in the elections of 1912, so that the Government carried every county in New Brunswick except one, and to-day have the support of every member of the legislature save two, the voting being on the pledge that they would complete this valley railway from Grand Falls to St. John, and on the pledge of the Minister of Marine and Fisheries (Mr. Hazen) in this House, which I have read this afternoon, given only two or three months before the elections, that this Government would take the road over and operate it by sections as completed and finally the completed road, and that this Government would see that the road was completed from Grand Falls, and would build these bridges—no, I am wrong, for that legislation was after the election; but there was legislation in 1912 providing for $1,000,000 to assist toward the building of these bridges. So, when the people of New Brunswick voted confidence in the Provincial Government, as they did in every county save one, they did it on the express covenant of this Government that they would build these bridges, or would see to it that they were built, and that the road should be operated, and the province of New Brunswick should be given 40 per cent of the gross earnings to pay the interest on the bonds.

When the road had been in operation for a year, that is, from 1st January, 1915, to 31st December, 1915, instead of entering into a lease as they had agreed, they signed no lease. They had run a very indifferent service, simply a combination passenger and freight train from Fredericton to Centreville and back once a day. On the lower end, from Fredericton to Gagetown, they had run no trains. Last summer they arranged for a train a week, and that service continued up to Christmas. Now, I think, they are running two or three trains a week from Fredericton south. But they never signed the agreement, and never made themselves liable to pay to the province the 40 per cent, and they have not paid that 40 per cent, nor 30 per cent, nor 20 per cent, nor one per cent. The Intercolonial has been operating that road and taking the receipts, and we poor people in New Brunswick are paying interest on $4,000,000 of bonds, while they are getting all the benefit. They admit, however, that under the "arrangement," as they call it, there would have been about $18,733 due to the province last December.

As if that were not bad enough, two days after Christmas every employee on the road received notice that his services would be dispensed with on January 31. Hundreds of tons of freight had been hauled to the different stations of the railway to be shipped, and business was going on. There was a pretty lively time for a while and the wires were kept busy. I do not know what was done, but such a row was raised that the Intercolonial authorities were afraid to carry out their threat, and on the morning of the 30th or 31st December the order cancelling the trains was itself cancelled and the arrangement went on as in the past. But they say in their answer to me that they agreed to continue it on terms to be arranged later on. And the object I had in discussing this question to-day was to find out what terms had been arranged on which they are going to carry on this work. It is

important in the interest of the province that that should be made clear. In the first place, we know that the province of New Brunswick had guaranteed bonds to the extent of close upon $6,000,000. Possibly I may be a little in error in that, but I will explain the exact conditions so far as we know them. We know that away back in 1912 they guaranteed bonds to the extent of $25,000 a mile for 170 miles, a total of something over $4,000,000. These bonds were sold in London and the money was brought back here before the elections of 1912 and placed in the hands of the Prudential Trust Company, of Montreal, the trustees under the agreement between the Government of New Brunswick and the railway company. The company paid out the money on progress estimates by the chief engineer of the road. When we got through our investigation in the autumn of 1914, there was $1,000,000, in round figures, in the hands of the Prudential Trust Company. I learn, by an answer given in the New Brunswick Legislature on Friday last, that something like $700,000 of this money is still in the hands of the company for constructive purposes. But they claim that they had advanced a portion to the Government, which would mean that something like $400,000 of this money would be in the hands of the Government. In addition to nearly $700,000 or $684,000 to be more exact—there is about $170,000 in their hands for the payment of interest on the bonds. So, we have $850,000 anyway of the proceeds of these bonds supposed to be in the hands of the Prudential Trust Company in Montreal. I have discussed that before in the House and have nothing more to say about it. We in New Brunswick sincerely trust, and almost pray, that when the time comes for the company to be called upon for this money, it will be forthcoming. Further than that, we do not go at this time.

We do know, however, that during the whole of the last session of the legislature in New Brunswick the Opposition attempted to get from the Government a statement with regard to the money that had been deposited with the Prudential Trust Company. We were told that they had securities running up to about $2,000,000 representing the investment, but they positively refused to give us a list of those securities. No one in the province of New Brunswick to-day, outside of the members of the Government, have the faintest idea how or when or where or under what conditions this enormous amount of money is invested. We do know that the Government also guaranteed second mortgage bonds to the extent of $10,000 a mile. Whether they guaranteed the whole 170 miles or only the 120 I do not know. It may be that they guaranteed only 120, because while they have guaranteed 170 miles of bonds of the first mortgage issue, they have built only 120 miles of road. Every bond for the 170 miles was sold in London in the month of May, 1912, and the proceeds were brought back to Canada and deposited with the Prudential Trust Company. You will see, Sir, that the province of New Brunswick has guaranteed bonds in this matter to the extent of about $6,000,000. $4,000,000 of this were at 4 per cent; the rest at 5 or better than 5 per cent. I think we would be safe in saying that the average rate would be 4½ per cent, which would be $240,000 or $250,000 a year for which the province of New Brunswick is liable in respect of this railway transaction. We went into this enormous undertaking and we guaranteed these bonds, on the strength of the covenant of this Government, the Minister of Railways and Canals and this Parliament, that these bridges would be built, that the road would go through to Grand Falls, tap the Transcontinental and become a portion of the through line. On the strength of that agreement we belived that 40 per cent of the gross earnings would be sufficient to pay the interest on those bonds. If these conditions are not carried out, and if the road does not become the business proposition that we were led to believe it would become—and which we know it would become if the conditions were carried out—the province of New Brunswick will become liable to an annual outlay of $225,000 or $250,000, less, of course, the small amount that might be raised from the operation of the road as the Government evidently intend to operate it under present conditions. As at present constructed, the road is merely an ordinary branch line of the Canadian Pacific railway. Twenty-five miles below Centreville, which is now its terminus, the road crosses the Canadian Pacific railway. If a car of freight is going to the United States market, it leaves the road at that point and goes by the Canadian Pacific railway. As it is about 450 miles from Centreville to Boston, which is the distributing point of all freight from New Brunswick to the United States, the amount which this road would receive for carrying the freight over that 25 miles would be merely a shunting charge. The amount received for carry-

ing a car of freight would be so small as to be hardly worth considering, and 40 per cent of the gross earnings would be a more bagatelle. If you had 10,000 cars a year going over that road, you would hardly see what it would amount to in the end. Again, the line goes south to Woodstock for a distance of 25 or 30 miles, picks up the goods and either brings them to Woodstock and hands them over to the Canadian Pacilc railway, or carries them to Fredericton and hands them over to the Canadian Pacific railroad. No matter which way you go, under present conditions this road, so far as constructed, is simply a feeder or a series of feeders for the great Canadian Pacific railway system.

'I now come to the propositions which are on foot in the province of New Brunswick, and which, I presume, are the terms arranged between the Government of New Brunswick and this Government. I know that a delegation from the Government of New Brunswick was here last week or the week before, just before the provincial legislature met. They had several conferences with the Minister of Marine and Fisheries, the Minister of Railways, and, I assume, with the Government. Evidently they came to some sort of agreement, because they went home called together the legislature, and, in the Speech from the Throne, stated that legislation would be introduced to provide for the completion of the Valley railway. The Government have announced that they will not build this road north of Centreville; so far as that end of the line is concerned, it is finished, and there is no possible connection with the Grand Trunk Pacific railway. So far as the lower end is concerned, instead of building the bridges which this Government covenanted they would build, they say: Oh, well, an investigation was made by an engineer by the name of Monsarrat. This gentleman, who, I believe, is an engineer of repute, reported that the construction of these bridges would cost an enormous amount of money, and that there was a poor bottom. I am told—and I believe that I am stating the facts—that Mr. Monsarrat never made a boring in his life in the St. John River, and does not know anything about it; that he took the data given him by somebody else, and said that if those data were correct, he did not believe that these undertakings were feasible. I have no doubt that, as an engineering proposition, taking the data as given to Mr. Monsarrat, the conclusion that he arrived at was justifiable. I am not going to reveal confidences, but I want to tell the Government of New Brunswick that if they will produce a report made to them by their own chief engineer within the last three months, they will find that this is a practicable proposition, and that none of the bugaboos and quagmires and fanciful difficulties exist which they say exist. This excuse is only a scheme to get around carrying out their contract with the people of New Brunswick, to get this Government rid of carrying out its contract and to get
5 p.m. the Intercolonial rid of carrying out its contract. If they will let us examine Mr. Maxwell for ten minutes, I know what his statement will be. They may have compelled the man to put something in a report, perhaps, but if we had a chance to cross-examine Mr. Maxwell we would find out what the bottom of the river is like; we would find out that it is not only possible, but practicable, to build these bridges, and to build them for an amount very much less than that estimated by Mr. Monsarrat, and put forward by the representatives of this Government as the probable cost. I do not know any way of getting at this information, because, so far as I know, this Government has not paid any money in the matter. I suppose we might bring Mr. Maxwell before the Public Accounts Committee, but I do not want to go to that trouble. I am taking it for granted that this Government will bring down the papers and that we shall know exactly what kind of report Mr. Maxwell did make. They say that because of difficulties in crossing the river they are not going to take the line to St. John. They have eliminated the upper end at Grand Falls, making no connection with the Transcontinental; now they are going to eliminate the lower end, and run the line down to a place called Welsford, or Westfield—they talk about Westfield, but I think they mean Welsford—and there they are going to tie on to the Canadian Pacific railway. This line, in respect of which the people of New Brunswick have guaranteed bonds to the extent of $6,000,000, starts in a beautiful little country town called Centreville, one of the finest places I know of on the continent of America, and stops at another beautiful little place called Westfield, a summer resort on the line of the Canadian Pacific railway.

And, Sir, that is the kind of road which the province of New Brunswick has got for its $6,000,000, and it is from the business

of that branch line proposition that we are going to receive the money with which to pay the interest on these bonds. Can you imagine a man from our province, no matter what his political affiliations may have been, who knows the conditions as we know them, discussing this thing without evincing a little heat, or at least a little concern for the future welfare of his province? If we were like some other provinces of Canada, it might not be such a serious matter. If we were like the great province of Ontario with its two and a half millions of people; if we had the enormous resources which they possess; if we had the enormous resources of even British Columbia, or of any other province, excepting Prince Edward Island, then we might not be so concerned. But I am sorry to say that our revenue producing resources are very limited. It is true that we have magnificent Crown lands. These are our principal source of revenue outside of direct taxation and of the subsidy which we receive from the Government here. But these Crown lands are being taxed to their utmost capacity, and have been for the last five or six years; that is, the Government are allowing the operatives to cut more timber from these lands than they should allow, with the result that they are becoming depleted to such an extent that, if things go on as they have been doing for the next twenty-five or thirty years, our Crown lands will not produce one-half of the revenue which they are producing at the present time. We have reached the absolute limit of our revenue which can properly be derived from the production of our Crown lands; we have a small amount of coal mining, but it is not very great and yields very little revenue; and, so far as I know, there are no other resources in the province of New Brunswick, outside of the subsidies which we receive from the Dominion Government, except direct taxation. Our population, I am sorry to say, has not increased very rapidly. I think it has only increased to the extent of about 20,000 in the last ten years, and I do not see any great prospects of any very rapid increase in the near future.

Under conditions like these, I do not think any man in the province could sit still when he considers that $6,000,000 have been added to the debt of the province in order to produce a railroad such as I have described. In making this statement I am not finding fault with the railroad itself. It is true that portions of it, north of Fredericton, are pretty hilly and crooked, but it is well ballasted; it is pretty well drained; it has 80-pound steel rails; the ties are all right, and it runs through a beautiful, fertile, and productive country. But it is only agricultural country, and you require an enormous amount of agricultural products in the vicinity of a road like this, to produce business, forty per cent of the value of which will go to pay the interest on $6,000,000.

If we are to believe what we read in the newspapers of New Brunswick, it would seem that there is another scheme on foot. I hope my hon. friend the Minister of Public Works, who, I assume, is going to answer for the Government, will be able to answer this question definitely and positively. It is announced, and it is beyond peradventure, that the railway will not go farther north than Centreville, and not farther south than Westfield, serving an agricultural country terminating at one end at the village of Centreville, fifty miles south of the Transcontinental railway, and at the other at the Canadian Pacific railway, and making connection with it at two points. They say that if they get the money from the Prudential Trust Company, the proceeds of the sale of those bonds will build the railroad to Westfield. When completed, the liability of the province will be in the vicinity of $6,000,000. Of course, in addition to that, this Government has paid a double subsidy on the whole 170 miles, but the Dominion treasury is rich compared with that of New Brunswick, and we are not finding so much fault with that part of it.

In addition to the plan I have outlined, they also state that they are going to build a road from a point seven or eight miles above Fredericton, to the American boundary line at a place known as Vanceboro. I hope this is not true.

Mr. PUGSLEY: It is said that the engineers of this Government have actually been surveying.

Mr. CARVELL: I have heard of a few wild-cat and unreasonable schemes in my lifetime in connection with railroads and governments,—none of us are perfect, and we do not profess to be—but when it comes to asking the province of New Brunswick to build another railroad from a point near Fredericton to the American boundary line at Vanceboro, which must be at least 40 miles distant—I do not see how you can

get from any point above Fredericton to Vanceboro without travelling a distance less than 40 miles—to build a road like that, well, I think we shall have reached the limit of endurance, and the Government shall have reached the limit almost of political impudence. The Canadian Pacific railway has a line from Fredericton to the International boundary line, and a splendid road it is. They give the people all the service which the people could ask for in that vicinity. If you want to go from Fredericton to St. John or to Boston, or to St. John or Woodstock or Edmundston, or to any of the points in the western portion of New Brunswick, you have all the accommodation on the Canadian Pacific railway, which any person could reasonably ask, in conjunction, of course, with the present Valley railway which goes up the St. John river. If you wish to bring a carload of freight from Nova Scotia or from the eastern portion of New Brunswick to Fredericton, you might possibly use the Intercolonial railway, which they do not use at the present time to any very great extent, but they would be compelled to hand the freight over to the Canadian Pacific railway, which would transport it about 67 miles to Vanceboro where they join the Maine Central or American system of railways. I have indicated that the distance from Fredericton to Vanceboro by the new road would be somewhere about 50 miles, 10 miles by the present Valley railway, and the remaining 40 miles by the newly constructed road. I admit that 40 miles is only an estimate, but I know the location pretty well, and I think I am about right in my estimate. I have talked this matter over with the Intercolonial men, and I know that that is their intention. Suppose that you want to bring lumber or fish from northern New Brunswick, or anything which is produced in Nova Scotia for the American market, to Fredericton; of course they can bring it, if we want to make them bring it, over the Canada Eastern portion of the Intercolonial to Fredericton. In other words Fredericton could be made a central point for Intercolonial business going to the United States, but I do not think it would ever pay. I think it would be cheaper and more economical to bring it to St. John, and hand it over to the Canadian Pacific railway. But the Canadian Pacific railway would get the 90 mile haul of that freight, whereas if they brought it to Fredericton, the Canadian Pacific railway would get only the 67 mile haul. Let us see how that works out. You have only to make a simple computation. I think I can give it to show the utter nonsense of the whole proposition. If you are catering for the trade of the northern part of the province of New Brunswick there is not much traffic outside of lumber and some fish. Do not forget that within the last two years this Government has bought 112 miles of railway running from Campbellton, in the northern part of New Brunswick, across the province and striking the American system of railways at St. Leonard's and Van Buren in the state of Maine. The Intercolonial railway is now connected with the American system of railways, from the northern part of New Brunswick, which would take in Bathurst, Dalhousie, Campbellton, and all the northern lumber region. The distance from Bathurst to the American system of railways at Van Buren would be less than the distance from Bathurst to the American system of railways at Vanceboro. But, of course, the freight rate would be a little greater from Van Buren to Boston than from Vanceboro to Boston. From the Miramichi region, which is the greatest lumber producing portion of that part of New Brunswick, the freight rate down to Boston would be some 18 or 19 cents per 100 pounds. I have not looked into it lately but I think I am within half a cent of the actual rate. It is about 550 miles, I suppose, from the Miramichi, or from Newcastle, to Boston, and Boston, I may tell the House, is the distributing point for all freight emanating from the Maritime Provinces for the American trade. That would give you one-tenth or one-eleventh of the freight rate on a mileage basis which would be less than two cents per 100 pounds. Assuming that it would be two cents per 100 pounds, the average weight of a car of lumber will be, say, 50,000 pounds because 12,000 feet of lumber at 4,000 pounds per thousand is the maximum and that would make 50,000 pounds per car. I may be away above it rather than under it because the great majority of the lumber is seasoned and it will not run more than 3,100 to 3,200 pounds per thousand feet. If you take it at 50,000 pounds, and at a two cent rate, you have only $10 for transporting that car of freight from Fredericton to the international boundary line at Vanceboro, and the province of New Brunswick would get 40 per cent, or $4.40, for transporting that car of freight. Talk of building a railway to give the Intercolonial connection between Fredericton and Vanceboro in order that it may be able to quote rates direct

from the point of shipment to the American railway system when all we get is $4.40 as our share for transporting a car load of freight. I assume that it will cost $1,500,000 to build that road from a point 10 miles above Fredericton to Vanceboro, a distance of forty miles. We cannot at the present moment borrow money for less than 5½ per cent. I doubt very much if we province of New Brunswick could get money at 5½ per cent. It is true that we sold some local bonds during last September, October and November at 5 per cent, but it was not a very large amount, the bonds were exempt from taxation which made them fairly attractive for estates, and they were pretty nearly all taken up by people representing estates in the province of New Brunswick. At the rate of 5½ per cent the interest charge would be $75,000 and at $4.40 per car you would require 17,500 cars of goods in the year to pay the interest on the cost of that 40 miles of road. Seventeen thousand five hundred carloads of goods would more than average 58 a day for every working day in the year. Does anybody believe you could produce 58 carloads of freight in eastern New Brunswick every day in the year for the American market? You could not produce 8 carloads per day in eastern New Brunswick for the American market every day in the year. I do not think you could produce 20 carloads every day in the year if you took in the whole of the Maritime Provinces. There is no doubt that on some days you could do a very large business, but there would be weeks when you would have nothing to do at all. If these were all converted into lumber, and fortunately lumber goes into the United States without paying duty, it would take about 200,000,000 feet of lumber more than is produced to furnish the Intercolonial railway with sufficient traffic to pay our share of the interest on the enormous cost of building that 40 miles of railway.

Does the Dominion Government, or the Minister of Railways or the Intercolonial Railway, intend to drive the little province of New Brunswick into a trade like that? If they do, then I have less respect for the Government of New Brunswick even than I have for the Government of Canada to allow themselves to be be driven into a deal like that. The Government of New Brunswick had the solemn pledge of their political friends in Ottawa, and they had the solemn pledge of their political opponents at Ottawa, that the Parliament of Canada and the Government of Canada would operate this railway on a 40 per cent basis, would connect it with the Transcontinental railway at Grand Falls, would build these bridges and would put us in a position to earn sufficient money to pay the interest on the bonds. Any Government in New Brunswick that would allow themselves to be driven into a deal like that deserves the anathema—I would like to say—of this House of Parliament, but I will not say that because it would not be parliamentary; but it deserves—my hon. friend says annihilation. No, annihilation is not sufficient. Turning a Government like that out of power is no punishment whatever for the sins that they have committed or will commit if they allow this transaction to go on.

Now that I have stated the case as briefly as I could, I do hope that the minister will tell us exactly what sort of a trade they have forced upon New Brunswick, and what kind of trade the subservient Government of New Brunswick have agreed to in order to get them out of some of their difficulties. We are asked to add another $1,250,000 or $1,500,000 to our debt. What is our debt to-day? It is pretty hard to say what the debt of New Brunswick is, because it may surprise you when I say that the present Government of New Brunswick will not tell us what our debt is. The Opposition tried during a whole session of Parliament to find out what the debt was. I should not say the Opposition, but I should say that the member from Northumberland, Mr. Stewart, a gentleman who was elected to support the present Government, tried during the whole session of 1915 to find out what our debt was. Would you believe that the Government would not tell him? The people of New Brunswick do not know how many million dollars they owe. We do not know, but if you will take the Auditor General's report for the year ended October 31, 1914, you will see that there was a bonded debt of $8,175,000 or thereabouts. They claim, which I believe is true, that they have a sinking fund amounting to nearly half a million dollars, and we have a little over half a million dollars to our credit at Ottawa. But that still leaves $7,000,000 of a bonded debt. But we know that that does not really represent the actual debt of the province of New Brunswick. We know that they have been issuing bonds by the millions since October, 1914, and I have no hesitation in saying that the bonded debt of New Brunswick is $8,000,000 and probably $8,500,000. In addition to that, we have incurred a debt of about

$300,000 in connection with the railway in the county of Gloucester, which, I am sorry to say, has been closed down and has become a liability of the province. We have $155,000 of bonded debt which we have assumed in connection with the Southampton railway, the railway from which a member of the local legislature cleaned up $35,000 or $45,000 for himself without having returned one cent to the Government.

An hon. MEMBER: What has become of that money?

Mr. CARVELL: What has become of the money? Pinder has got the money yet. A Conservative lawyer in St. John was appointed some time ago to see Mr. Pinder and get that money back, but it is one of those friendly things that does not amount to very much and no proceedings have yet been started. If they can get through this session of the legislature and this session of Parliament without the suit being started that will be the end of it. I understand that Mr. Pringle, the Royal Commissioner, found the amount to be $33,000 or $34,000. As a matter of fact, it was $50,000 that was swiped out of the construction of that road. But that is a small thing in New Brunswick. The Minister of Public Works (Mr. Rogers) is sometimes told that he is a sinner, but I sometimes think he is not to be compared with them. He ought to watch that crowd. As he was handling millions in Manitoba, the small percentage was not so bad, but when you consider what was taken out of the little amount of money that is handled in the province of New Brunswick you must admire the ability of the people down there along the line of taking what does not belong to them.

Mr. ROGERS: Where do you get the percentage in Manitoba?

Mr. CARVELL: I have not figured it out.

Mr. ROGERS: You had better not make any statement until you figure it out.

Mr. CARVELL: We know it approximately.

Mr. ROGERS: My hon. friend was dealing directly with myself. If he is going to make insinuations, I should like him to back them up with a definite statement.

Mr. CARVELL: I was talking about the Government. I do not want to be unpleasant. I thought I was complimentary in drawing such a distinction between the Minister of Public Works and the party in New Brunswick. That was my intention, anyway.

Mr. ROGERS: You were referring to me personally.

Mr. CARVELL: In addition to the two railroads I have mentioned, we know that the Valley railroad will run up to about $6,000,000. When you add these together, I cannot see where one-tenth, or at all events one-fifth part of the interest on that debt will ever be earned by that road, under present conditions. You have there an indirect debt of $6,000,000 anyway, which brings the total debt of the province of New Brunswick up to something like $13,000,000.

Mr. R. B. BENNETT: $26,000,000 in Alberta.

Mr. CARVELL: That is bad enough, but it is not half so bad as New Brunswick with $13,000,000. My hon. friend knows both intimately.

Mr. R. B. BENNETT: I know there is no comparison between the reckless extravagance that characterizes the Government of Alberta, and the decent administration of the New Brunswick Government.

Mr. CARVELL: I am not going to argue that point just now. I am trying to look after the Government of New Brunswick, and incidentally trying to keep this Government straight, as far as that is possible; but when the two get together it's a pretty bad combination. I have tried to point out the financial situation of New Brunswick, in a very hurried manner of course. I have tried to state as accurately as I could the actual position of railway affairs in our province. I have pointed out what we in New Brunswick know: that the Government of New Brunswick, aided and abetted by this Government, have decided not to build this road north of Centreville, and not to build the bridges that would allow of direct connection with St. John. They have decided to make connection with the Canadian Pacific railway either at Welsford or at Westfield. We are told—and it is currently stated all over the province of New Brunswick—that the local Government, at the instigation of this Government, I believe, are to spend another quarter of a million or half a million dollars in building a road from near Fredericton to the American boundary. That road is absolutely unnecessary. It has not even the virtue of gaining political support for the party, for it does not pass through a country that is inhabited; there are not votes along the

line of railway. There is no business for the road. It runs very largely through that granite region through which the Canadian Pacific railway, from Vanceboro east towards Fredericton Junction, runs; not altogether, but very largely. There might be a little business available in small lumber, but only a very small amount. I do not think that the Government of New Brunswick, in view of their experience with railroads during the last two years, want to go on with this road. Therefore, I can come to no other conclusion than that the Government of New Brunswick have been driven by this Government to enter into the monstrous transaction simply to gratify the whim and wish of Mr. Gutelius, the manager of the Intercolonial railway, who wants to have connection with the American system of railways independently of the Canadian Pacific railway. I think those who have known my connection with railway affairs in New Brunswick will know that I hold no brief for the Candian Pacific railway. I have prophesied for the last five or six years that this road was only intended to be a branch line or feeder for the Canadian Pacific railway. On the other hand, I cannot see what earthly reason there is why the province of New Brunswick, in order to gratify the whim of Mr. Gutelius, should be compelled to rush into debt to the extent of $1,500,000 when the Canadian Pacific railway already have a road from Fredericton to the international boundary; and it is as good a road as any they will build, and gives the people in that territory all the accommodation they could possibly require. From Fredericton to Boston there are two first-class passenger trains a day, and from McAdam Junction for all points south, and all points north as far as Woodstock, two trains a day. The Intercolonial railway could not give a better service than that; not as good, I think. Why on earth the Intercolonial railway and the Government of Canada want to force the province of New Brunswick to go into this expenditure is something I cannot understand. I have given the facts, and have given them truly, as I understand them. I am sorry the Minister of Railways and the Minister of Marine are not here, but they knew that this discussion was coming up to-day. At least the Minister of Railways did, for I told him, and I have no doubt whatever that the Minister of Marine and Fisheries knew about it too. I am sorry they are not here, but I hope that the Minister of Public Works or the other minister who follows me will give us certain definite information which I think we are entitled to have. In the first place, has it been decided that this road will not be built north of Centreville? Has it been decided that these bridges across the St. John and Kennebecasis rivers will not be built? Has it been decided to build the railway from its terminus at Gagetown over to Westfield or Welsford, and if so, which? Has it been decided that the Valley railway, so-called, shall not have an independent connection in the St. John valley farther south than Westfield? And, lastly, has it been decided that the province of New Brunswick is to guarantee bonds in order to build a road from a point at or near Fredericton, or ten miles north of it, to a point on the American railway system near Vanceboro? If the minister will answer these questions frankly and fully he will be conferring a great favour upon the people of the province of New Brunswick, for not only his political friends, but his political opponents in that province are taking a very deep interest in this matter. No question in the public affairs of Canada is causing as much real thought in that province as is this question of the future of the Valley railway. Mr. Speaker, I have taken up much more time than I intended, and the importance of the subject is my excuse for having dealt with the matter at such length.

[Mr. Carvell.]

Hon. ROBERT ROGERS (Minister of Public Works): Mr. Speaker, my hon. friend has been fairly mild in his discussion of this matter this afternoon, although at times he has given some slight evidence that he has been nursing his wrath to keep it warm in respect to the railway situation in the province of New Brunswick. I can quite understand my hon. friend, or any other hon. gentleman from the province of New Brunswick, having very serious complaints to make, both in this House and elsewhere, against railway legislation within the borders of that province. But what I wish to take objection to is that my hon. friend ventures to fasten upon the Minister of Railways or upon the Minister of Marine and Fisheries a responsibility for those conditions, the responsibility for which belongs to that side of the House and not to this. As my hon. friend has stated, the people of New Brunswick have had placed upon their shoulders the very heavy burden of something like $5,000,000, if his figures are correct.

I am not in a position to know whether they are correct or not, but for whatever sum of money has been fastened upon the shoulders of the people of New Brunswick in connection with the construction of the St. John Valley railway, hon. gentlemen opposite are entirely responsible and blameable. The people of New Brunswick have a pride in natural development of their province and especially in the development of the national port in that province. A few years ago, when legislation was introduced in this Parliament for the building of a transcontinental railway to carry the trade of Canada to our great ocean ports, it was naturally to be expected that the location of the road would be such as to give not only the people of New Brunswick, but all the people of Canada the advantage of an outlet at their great national port of St. John. The reason why such a location was not determined upon is probably best known to hon. gentlemen opposite. All we know about the matter is what has been stated in this House and elsewhere. If I am correct in my recollection, the Minister of Finance in the previous Government, Mr. Fielding, dealt very fully with this matter, pointing out that the building of a transcontinental railway to the city of St. John would give that port a special advantage over other ports in the Maritime Provinces, and that therefore the line must be so located as to go to the centre of population in the Maritime Provinces, although he claimed that Moncton was not the centre, but that some point in Cumberland county would probably be the proper point. However, in adopting the course which was then adopted, the Government of that day were only following what has always been their policy—that of hanging up a railroad or anything else before the eyes of two or three or four contending parties and then endeavouring from a political point of view to play every end to the middle. That is what they were attempting to do in connection with the construction of the Transcontinental railway so far as the ports of the Maritime Provinces are concerned, and it is as a result of that condition of affairs and of the misplaced location of the Transcontinental railway as determined upon at that time, that the people of New Brunswick, proud of their national port, and of the resources of their province, have assumed this great liability for the construction of the Valley railway which, undoubtedly, was the line that should have been followed by the Transcontinental.

Mr. MACDONALD: In that case, how was it going to get to Nova Scotia?

Mr. ROGERS: It would get to Nova Scotia just the same as it does to-day. You had the Intercolonial railway then, to to take your traffic to Nova Scotia; you have the same to-day, and what was the good of building a transcontinental railway if it was not for the purpose of carrying the traffic of Western Canada to our great national ports in the Maritime Provinces. We, who are interested in this railway outside of the province of New Brunswick, look to St. John as our closest national winter port for the shipment of goods coming from Western Canada. Those are the circumstances which originally placed upon the shoulders of the people of New Brunswick the responsibility for the building of this Valley railway. My hon. friend has taken up a great deal of time in dealing with the local conditions and circumstances surrounding the construction of that railway. He has reflected to some extent upon the Government of the province in which he lives, and I am sorry he has so reflected on my hon. friend the Minister of Marine and Fisheries as to insinuate or imply that that hon. gentleman is not present here to-day because he wanted to be absent as this question was to be brought to the attention of the House by the hon. member for Carleton. Since when has my hon. friend the Minister of Marine and Fisheries ever failed to meet my hon. friend from Carleton or any other hon. gentleman opposite? I know that the Minister of Marine and Fisheries is absent on instructions from the Prime Minister on business of the country which could not be delayed, and I assure my hon. friend that he should not flatter himself by stating that the Minister of Marine and Fisheries was not in his seat to-day because this matter was to come before the House for consideration.

My hon. friend has asked that a frank and open statement of the policy of the Government on this matter should be made. I may say to my hon. friend that we are always frank and open, and that we always endeavour to supply the House with the full and complete information to which it is entitled.

Mr. PUGSLEY: Always endeavour; do you succeed?

Mr. ROGERS: That is what I hope to do to-day, and I hope I shall satisfy my hon. friends opposite in respect to this matter. My hon. friend was very anxious about the construction of the line from Centreville to Grand Falls. From his interest in the matter I presume that the greater portion of that line is within the borders of the constituency which he represents. When hon. gentlemen opposite failed to construct the transcontinental railway along the route which they should have adopted and when, in view of that, the matter was taken up by the province of New Brunswick, it was undoubtedly the policy of the Government of that day, and so far as I know, it is the policy of the Government of to-day, to have that line extended further north to make a connection with the Transcontinental; but, so far as getting a connection with the port of St. John is concerned, this particular portion of the Valley railway does not concern us so much, because the Grand Trunk Pacific have failed to carry out their agreement to take over the Transcontinental railway, and it is therefore being operated by the Department of Railways to-day, and on that account and because the Intercolonial railway has a connection with the Transcontinental at McGivney junction from that down to Fredericton, the portion of the line in which the people of Canada, outside of the province of New Brunswick are particularly interested in, is from the city of Fredericton and from Gagetown down to the city of St. John, for there is no traffic outside of the province of New Brunswick that could be served by extending the line from Centreville to Grand Falls that could not be served otherwise, because we have a connection by way of McGivney junction that is quite as suitable to reach the port of St. John as would be the connection at Grand Falls. As I understand it, it is the desire of the Government of New Brunswick to have this line extended to Andover where the Canadian Pacific railway crosses the St. John river. Now, there is the extension from Gagetown to the city of St. John, and that is what interests this House and interests the people of this country more than the portion from Centreville north to the Intercolonial railway. The line as originally projected from a point on the Intercolonial railway ran to the Mistake on the northwest side of the St. John river, and then to Andover. That was the original scheme, as has been stated by my hon. friend from Carleton, N.B. This scheme involved the construction, as I am informed, of two very expensive bridges. I may say for the information of my hon. friend that the engineers have found that the crossings would be very expensive, that the water there is sixty feet in depth, and that there is a mud bottom.

Mr. CARVELL: They say a hundred feet, down home.

Mr. ROGERS: I give the facts as I have them before me. The reports of the engineers will be brought down in the return which is now in course of preparation, and which will be ready in the near future. I will read correspondence to show the facts of the case and the cost of construction of the bridges referred to by my hon. friend. I gather from the correspondence that, by completing this railway by a different route, the object can be accomplished without the expenditure of nearly $3,000,000 for the construction of these two bridges.

Mr. MICHAUD: Does the minister know whether or not the Andover bridge will be built?

Mr. ROGERS: That is really not settled, as I understand it. Here is a letter from Mr. Brown to Mr. Gutelius:

Moncton, N.B., February 26, 1916.

At Montreal.
F. P. Gutelius, Esq.,
General Manager,
Moncton. N.B.

Dear Sir:

St. John and Quebec railway—Comparison of Routes between Gagetown and St. John.

In accordance with your request, I beg to submit herewith a report showing a comparison of the bridge route and the Westfield route on the St. John and Quebec railway between Gagetown and St. John.

The line from Fredericton to Gagetown, 31·5 miles long, is now completed.

Bridge route.—The bridge route contemplates the extension from Gagetown to a connection with the Intercolonial railway at Rothesay, crossing the St. John river at the Mistake involving a bridge 0·95 miles long, and the additional construction of 41·5 miles of railway, including the crossing of the Kennebecasis river with a bridge 465 feet long and a rock fill 2,700 feet long. The total mileage from Gagetown to Rothesay is 42·49 miles.

The mileage and estimated cost of this line from Gagetown to St. John, not including the St. John river, is as follows:

	Mileage.	Estimated Cost.
Gagetown to St. John river crossing (Dunham's wharf route)	22·47	$ 929,000
St. John river to Rothesay (not including Kennebecasis river crossing)	18.47	1,047,000
Kennebecasis river crossing	0·6	411,000

	Mileage.	Estimated Cost.
Rothesay to St. John (I. C R.)	8·8	.....
To this should be added the mileage of the St. John river bridge (cost not included)	0·95	.....
Totals	51·29	$2,387,000

Westfield route.—The Westfield route along the west side of the St. John river from Gagetown to a connection with the Canadian Pacific railway at Westfield involves the construction of about 37·5 miles of railway.

The mileage and estimated cost of this route is as follows:

	Mileage.	Estimated Cost.
Gagetown to proposed St. John river crossing	22·47	$ 928,000
Proposed St. John river crossing to Westfield	15·03	751,000
Westfield beach to St. John (C.P.R.)	14·7	.....
Totals	52·20	$1,680,000

In comparing the two routes it will be noted that the mileage is practically the same, as well as the rise and fall and curvature, so that there will be very little difference in the cost of operation of these two routes, except for the heavy maintenance and operating charges of the bridges on the bridge route.

If the bridge route were adopted arrangements would have to be made for the handling of St. John and Quebec railway traffic over 8·8 miles of the Intercolonial railway to St. John, as against 14·7 miles on the Canadian Pacific railway via the Westfield route.

With regard to the export traffic to West St. John, the conditions would be entirely different as the Westfield route would have the distinct advantage as it will be 3·5 miles shorter to West St. John than via the bridge route.

The bridge route will involve the construction of four (4) miles additional railway at an estimated additional cost of $707,000, not including the bridge. The Westfield route can also be constructed in much less time than the bridge route.

The local traffic will not be large in any case, but the Westfield route has the distinct advantage in this respect.

Yours truly,
C. B. Brown,
Chief Engineer.

Mr. Gutelius wrote to Mr. Monsarratt asking his opinion and advice. His letter is as follows:

At Montreal. February 26, 1916.

C. N. Monsarratt, Esq.,
Chairman and Chief Engineer,
Quebec Bridge Commission,
Montreal.

Dear Sir,—I have before me your report on a proposed bridge for the St. John and Quebec railway over the St. John river near the Mistake, and as the question of the final location of this railway between Gagetown and St. John is under consideration, I send you herewith a copy of a report prepared by Mr. C. B. Brown, Chief Engineer, Canadian Government railways, covering two routes, one known as the "Bridge Route," in which the bridge which you examined is located, and the other is the "Westfield route."

In view of your report and your experience as a railroad and bridge engineer, I should be glad if you will make a study of Mr. Brown's report and advise me as to the economies in construction and operations of the two routes, together with a recommendation as to the route you think should be followed.

Yours truly,
F. P. Gutelius.

Mr. Monsarratt replied as follows:

Dear Sir,—I have the honour to acknowledge your letter of February 26th, enclosing copy of report prepared by Mr. C. B. Brown, comparing two alternate routes of the St. John and Quebec railway between Gagetown and St.John, one known as the bridge route, which includes a bridge over the St. John river near the Mistake, dealt with in my report of February 23rd, 1914, and the other known as the Westfield route, and requesting me to advise you as to the comparative economies in construction and operation of the two routes and a recommendation as to the route that should be followed.

Before proceeding, I should like to point out that in my report of February 23rd, 1914, above mentioned, I referred only to the feasibility and relative merits and cost of construction of alternate crossings of the river at this point and made no reference whatever to the relative merits of any projected railway routes.

The estimate of cost of construction of the bridge stated in my report was sufficient to complete it at that time, but on account of the changed conditions, due to the war, I find on investigation that it would be necessary to revise this statement increasing the cost by $100,000.

On studying Mr. Brown's report I find that the Bridge route would necessitate the construction of four miles more of railway than the Westfield line, the cost of which, together with the cost of construction of the large bridge over the St. John river, would entail an additional outlay of $2,870,000 in addition to which there would be the cost of maintenance and operation of the bridges amounting to approximately $12,000 per annum, showing an additional annual charge for interest and maintenance of $115,000 above that of the Westfield route.

I would like, also, to point out that it would take at least two years to construct the bridge over the St. John river, and I am of the opinion that the Westfield line could be put in operation a year earlier than the bridge route. Mr. Brown's report shows that in so far as traffic and operation are concerned any advantage there might be, lies with the Westfield line.

It is always desirable, from an engineering standpoint to choose, if possible, a route which does not entail the construction of heavy bridges with difficult foundations, thus avoiding unforeseen contingencies which might arise in the construction and maintenance of structures of this nature.

In view of the fact that the Westfield route, shows a saving in construction of $2,870,000, an annual saving in interest and maintenance charges of $115,000, and can in all probability be put in operation a year earlier than the bridge route. I would have no hesitation in recommending the adoption of the Westfield route.

Yours truly,
(Sgd.) C. N. Monsarratt

Mr. PUGSLEY: What is the date of that letter?

Mr. ROGERS: It is dated February 28, 1916. It will be seen from this letter, having regard to the argument of my hon. friend with respect to the route of the line from Gagetown to St. John, that there is every reason for the action which is being taken, in view of the fact that, at all events for the present year, the province of New Brunswick and the Government of Canada will be saved the sum of $2,870,000.

At six o'clock the House took recess.

The House resumed at eight o'clock.

Mr. ROGERS: Mr. Speaker, when the House rose at six o'clock, I had just concluded the reading of a letter from Mr. Monsarratt, the chief engineer of the Quebec bridge, in respect to the proposed bridges over the St. John and Kennebecasis rivers. I now desire to read a letter from Mr. Gutelius, addressed to Mr. C. B. Brown, the chief engineer of the Canadian Government railways at Moncton, dated 28th February, 1916:

Moncton, N.B., February 28th, 1916.

C. B. Brown, Esq.,
Chief Engineer,
Canadian Government Railways,
Moncton, N.B.

Dear Sir,—Your letter February 26th giving me comparisons of the Bridge route and the Westfield route for the St. John Valley railway between Gagetown and St. John.

I send you herewith Mr. C. N. Monsarratt's letter of February 28th in which he gives an estimate of the proposed bridge over the St. John river.

I should be glad if you would supplement your letter of February 26th by letting me have the economies of the two routes and your recommendation in connection with the route to be selected now that you have Mr. Monsaratt's estimate.

Yours truly,
(Sgd.) F. P. Gutelius.

In reply to this, Mr. Gutelius received the following letter from Mr. C. B. Brown, dated February 28, 1916:

Canadian Government Railways,
Moncton, N.B., February 28, 1916.

F. P. Gutelius, Esq.,
General Manager,
Moncton, N.B.

Dear Sir:

St. John and Quebec Railway.

Comparison of routes between Gagetown and St. John.

With reference to yours of the 28th instant enclosing letter from Mr. Monsarratt of same date, and supplementing my report of the 26th, I would advise, that based on the estimate, the Bridge route would cost $4,550,000, whereas the Westfield route would cost $1,680,000, or a difference in favour of the Westfield route of $2,870,000.

In view of the heavy interest and maintenance charges of the Bridge route, the additional length of the time required to construct this route, the war conditions, the much larger present expenditure and no apparent advantages, I would not recommend the Bridge route.

I would recommend, however, that a route west of the river be adopted, and that the country, possibilities of traffic, etc., be thoroughly examined so as to obtain the most economical location for the extension of this railway to St. John.

Yours truly,
(Sgd.) C. B. Brown
Chief Engineer.

On receipt of that, Mr. Gutelius addressed the following letter to the acting Minister of Railways and Canals (Mr. Reid), on the same date, February 28:

Moncton, N.B., February 28, 1916.

Dear Mr. Reid,—In response to your request for information as to the status of the St. John and Quebec railways matters, I may say that the matter has been frequently discussed between Honourable Mr. Cochrane and myself with the view to working out an alteration of the arrangement in view of the changes which have taken place in conditions since the inception of the enterprise. I beg to advise that the original objects in the construction of this line were,

1st. To provide transportation facilities for the productive portions of the St. John Valley in that province; and

2nd. To secure an independent direct railway connection between St. John and the Transcontinental railway, which was to be leased to the Grand Trunk Pacific Railway Company.

The first object has been largely attained in the construction of the line between Gagetown and Centreville, which has been in operation for more than a year.

The second object can be attained by the Transcontinental railway which is now being operated as a portion of the Canadian Government railways system, connection being made at McGivney's junction by the Canada Eastern with the St. John and Quebec railway at Fredericton and thence to St. John by such route as it may be decided to construct. Consideration of the extension of the St. John and Quebec railway from Centreville North may well, in view of the financial situation caused by the war be deferred until a more favourable period and in the meantime efforts should be directed to the rapid completion of direct connection with St. John and also to obtaining by means of other connections as much profitable through business as can be secured for the St. John and Quebec railway.

In the matter of the construction of the line from Gagetown to St. John, it was originally provided in the Acts and Agreements that the line should be constructed on the East side of the St. John river, and connected with the Intercolonial in the vicinity of Rothesay. The Dominion Government originally agreed to guarantee bonds for $1,000,000 towards the cost of construction of the bridges over the St. John and Kennebecasis rivers, and later agreed to construct bridges over these rivers if found feasible.

We have gone into the matter thoroughly, and find from the surveys and reports that the bridge over the St. John river alone would cost $2,163,000, which would require the construction of piers in such depth of water and soft material

that would make the success and cost of the construction problematical. Owing to the hazardous construction, the tremendous cost, the cost of maintenance, its interference with navigation on the St. John river, the annual fixed charge of $120,000, which would be made up of interest and maintenance and operation costs, and the length of time required for its construction, it was felt that in the public interest some other route if possible should be found; and after making study of the country between Gagetown and St. John, it is found that we can reach St. John Union depot by remaining on the west side of the St. John river via Westfield, by a route which if following the river, is at most one mile longer than the Bridge route above described, and that this railway can be constructed for $707,000 less cost to the St. John and Quebec railway for their portion and save the $2,163,000 cost of bridges to the Dominion Government, or a saving to both governments of $2,870,000 as compared with the Bridge route, and our engineers are of the opinion that the Westfield route could be shortened considerably when making their final location surveys. This route is not encumbered with the difficulties above recited in connection with the Bridge route, and, besides the large saving in original expenditures, it possesses no disadvantages, and has the advantage of three miles less distance from the Transcontinental to West St. John, which will always be a large factor in the export business at St. John, although Courtenay bay improvements are the ultimate objective for export business at St. John for Canadian Government railways.

In view of the above and the recommendation of Mr. C. B. Brown, Chief Engineer, Canadian Government railways, in his letter of February 26th, Mr. C. N. Monsarratt, Chairman and Chief Engineer Quebec Bridge Commission in his letter to me of February 28th, and Mr. Brown's letter of February 28th, copies hereto attached, it is recommended that the New Brunswick Government be urged to take up and consider a route on the west side of the St. John river, and that a connection be made with the Canadian Pacific railway at a point at or near Westfield where the construction of the St. John and Quebec railway shall terminate. If this is acceptable then the Dominion Government will secure from the Canadian Pacific railway running rights from the point of connection to St. John over the Canadian Pacific railway on some reasonable basis to be arranged, pending final decision as to the best manner of entering St. John by an independant line to reach the Union depot, the main yarrds and Courtenay bay.

To do this may make it necessary to construct a low grade and independent line from Westfield, which could be done by constructing a bridge over the St. John River, making the entrance to the St. John Union depot on a viaduct over Mill street. This would involve the construction of a new train shed on the site of the burned elevator, together with a double track freight line for the business of the Canadian Government railways and the Canadian Pacific railway, which would ultimately be followed up by the construction of a new passenger station and passenger terminal facilities.

It is further proposed that in view of its proximity to the Maine Central railway, a connecting link be constructed between the St. John and Quebec railway and the Maine Central railway.

A connection of this character would give the city of St. John a second independent railway connection with New England; besides it provides a short line to New England points from the central and Northern portions of the province. It would become the Canadian Government railways main line for forest products business destined to New England points from the railways under our charge tributary thereto, and would enable us to secure a better division of through freight and passenger rates than we are able to secure at present by the more circuitous routes.

It is recommended, therefore, that authority for the construction of a branch line under the St. John and Quebec railway charter, be granted, to connect it with the Maine Central railway by the most feasible route.

Yours truly,

(Sgd) F. P. Gutelius.

Hon. Dr. Reid,
Acting Minister of Railways and Canals,
Ottawa, Ont.

In view of this recommendation from the officers of the Transcontinental railway to the acting Minister of Railways and Canals, it became the duty of the acting Minister of Railways and Canals to submit the proposals contained in the letters, which I have just read, to the Government of the province of New Brunswick. This was done in a letter written on 1st March by the acting Minister of Railways and Canals, and addressed to the Prime Minister of that province:

Ottawa, 1st March, 1916.

Dear Mr. Clarke:

Some time ago you wrote Honourable Mr. Hazen and asked him to interview Honourable Mr. Cochrane, Minister of Railways and Canals, in reference to the St. John railway situation. Owing to Mr. Cochrane's present indisposition it has fallen to me, as Acting Minister during his absence, to go into this, and I sent for Mr. Gutelius and took the matter up with him. I have gone into it very fully and I must say that Mr. Gutelius is very strongly of the opinion that the feasibility of building the bridges across the Kennebecasis and St. John rivers is open to grave question and subject to such great risk, and the cost together with maintenance for all time so great that it has convinced him and also me, that the route as originally proposed is not in the best interests of all concerned. In addition to that when your Government first went into this scheme it was with a view of affording a connection between the Grand Trunk Pacific and the city of St. John. Since that time the Government has been obliged to take over and operate the Transcontinental railway, and as the Intercolonial railway already has a first-class connection with the Transcontinental railway at McGivney's, this alters the entire situation, and I believe a reconsideration of the proposal and a re-arrangement of plans will result in much better business to the St. John and Quebec railway, and a much better service to the citizens of St. John and that portion of New Brunswick served by the St. John and Quebec railway.

After discussing the whole matter thoroughly with Mr. Gutelius I had him put in writing a suggested re-arrangement of the scheme. I also had him take up the question of bridges with his Chief Engineer as well as Mr. C. N. Mon-

sarrat, who is in charge of the construction of the Quebec bridge, and both are strongly of the opinion that Mr. Gutelius' proposition is the one that should be adopted.

I asked that you come here or send some one to represent your government to discuss this matter, and I was very sorry indeed to hear that you were ill but was very glad to meet Honourable Messrs. Murray and Baxter to-day. I have gone into the matter thoroughly with them, have explained it fully and am now enclosing you a full copy of the correspondence which has passed recently in connection with the proposal.

Before taking this matter up with the Premier and members of the Cabinet I thought it advisable to submit this to you and your government for their consideration and would ask that after having considered it you would advise me what conclusion is arrived at.

Of course, you can understand that if it is agreed that the proposed re-arrangement is acceptable to both parties then the proposed construction of the bridges across the Kennebecasis and St. John rivers is abandoned, and that you will at once proceed with the new route and have it reach Westfield at the earliest possible date.

It does strike me that if this re-arrangement is carried out, and if the city of St. John by this means secures two routes through Maine to the New England States it is of very great importance to the people of your province.

As soon as you are able to consider this matter and let me have your decision I will then submit the entire question to the Dominion Government, and if it is approved will be glad to submit to the House any legislation that may be necessary for the purpose of giving effect to the conclusions arrived at.

Yours very truly,

J. D. Reid,
Acting Minister.

The Honourable Geo. J. Clarke,
Prime Minister of New Brunswick,
Fredericton, N.B.

Mr. FUGSLEY: What is the date of Mr. Reid's letter?

Mr. ROGERS: The first of March. That letter of the first of March, addressed to the Premier of New Brunswick, was answered on the 7th of March by a telegram as follows:

Hon. J. D. Reid,
Acting Minister of Railways and Canals,
Ottawa.

Government in session last night approved your proposition regarding St. John and Quebec railway contained in your letter of March first addressed to Premier Clarke. Am confirming by letter.

A letter of the same date was addressed to the Hon. Dr. Reid, in the following terms:

Confirming my telegram of this morning, I beg to advise you that the Government of New Brunswick in session last evening, considered very fully and approved by the proposition regarding the St. John and Quebec railway contained in your letter to the Hon. Mr. Clarke, Premier of this province, under date of March 1st. instant.

Yours very truly,

(Sgd.) J. A. Murray,
Acting Premier.

Now we have there the proposal as originally made and accepted by the Government of New Brunswick. Therefore, I am submitting to the House in a frank manner as was suggested by the hon. member for Carleton, all the facts and circumstances as we understand them. It was evidently thought by the Government of the province of New Brunswick that this was a very desirable arrangement, or otherwise I am sure they would not have accepted it. I can appreciate how ready they should be to accept it in view of the fact that they are going to get almost an immediate connection with the city of St. John, or at least during the coming year, for their Valley railway, a consideration that I am sure is appreciated by the people of New Brunswick and especially by the people of St. John. I can understand, as was stated by my hon. friend this afternoon, that there are a great many difficulties incident to the operation of a line of railway which has no direct connection with such a centre as the city of St. John. It was stated by my hon. friend this afternoon that, in connection with the construction of this line from Gagetown to Westfield, it would not have direct connection with St. John and that the trains would go over the Canadian Pacific railway from Westfield to St. John. The original proposition was that the line was to start from some point on the Intercolonial about eight or nine miles from St. John, cross the Kennebacasis and the St. John river at Mistake and then run up the St. John river valley to Andover. The only difference is, running for the present year, or perhaps two years, over the Canadian Pacific railway, a distance of 14 miles, as against running over the Intercolonial for a distance of 8 or 9 miles as originally proposed. It was suggested by my hon. friend that the Government are not keeping faith in the matter of the construction of these bridges for the purpose of carrying out this railway project as was promised by this Government under legislation adopted by this House. But, in view of the fact that it has been discovered that we can get connection with St. John and save the Dominion of Canada $2,163,000, the estimated cost of building a bridge over the St. John river at Mistake, and in view of the saving, as suggested by the report of the engineers which I have just read, to the

province of New Brunswick, of $700,000, I think that the House and the country will agree that the officers of the Intercolonial railway and the Government of the province of New Brunswick are acting wisely and well in the public interest, especially under present conditions, in saving that amount of money, and also in view of the fact that they are going to get practically the same results in the end. That, to my mind, is the important condition. The Government are trying in no way to escape the responsibility for the undertaking which they assumed in connection with the construction of these bridges. The conditions since that time have entirely changed by reason of the fact that the Grand Trunk Pacific have failed to take over the Transcontinental railway and in view of the fact that we have the advantage to-day of a connection at McGivney junction with Fredericton and that with the construction of this railway from Gagetown to St. John, we will have direct connection with that great national port through which our products will be shipped during the winter months.

My hon. friend this afternoon quoted at some length from a statement made by the Minister of Marine and Fisheries in 1912, in which the minister stated very definitely that the line would undoubtedly be built from Centreville to Grand Falls. The hon. member for Carleton also quoted from a speech by the Minister of Marine and Fisheries two years later, when the minister had some little doubts as to the carrying out of this proposal. I would point out that the Minister of Marine and Fisheries was absolutely right in making the statement he did in 1912. Any man knowing the conditions, and the purpose for which the Valley railway was constructed, namely, that of making connection with the Transcontinental, would have made the same statement as the minister made in 1912. At that time he did not know that the Grand Trunk Pacific were not going to take over the Transcontinental, but when he made his statement in 1914 he probably had some intimation of that possibility, and of our having the connection we have to-day. In view of the fact that we have that connection, there is no pressing need at the moment for the construction of the line from Andover to Grand Falls. Though I am not in a position to know, I believe that the Government of New Brunswick are bound to carry out their proposition; they are anxious to do it, and I am satisfied that they will do it as soon as it is possible. In the meantime, their first duty is to make connection between Gagetown and the city of St. John.

My hon. friend also dealt at some length with the terms of the agreements between the province of New Brunswick and the Railway Department. I should like now to place on Hansard a statement I have received from the department with respect to this matter. Much of the information contained in this statement has already been supplied to the hon. member in reply to questions he had placed on the Order Paper. The statement is as follows:

We commenced operations between Fredericton and Centreville on January 1st, 1915, on the understanding that the deficiency in receipts, if any, would be borne equally by the province and the Dominion. This arrangement was terminated on March 31st, 1915, with the Provincial Government owing us $2,977.51—their half of the deficit. On April 1st a service on a new basis was instituted whereby the Railway Company and the Provincial Government were to receive 40 per cent of the gross earnings, and we also on May 31st undertook the weekly operation of the portion constructed between Fredericton and Gagetown. The result of these operations was a deficit of $24,579.40, and in addition there is due the province and the Railway Company 40 per cent of the gross earnings, amounting to about $18,733.65. Thus the total deficit for the nine months, to December 31st, 1915, on account of this transaction amounted o $43,313.05, to which should be added the net deficit to us for the first three months of 1915 of $2,977.51, making a total deficit for the year's operation of $46,290.56.

It was this result of the first year's operation that convinced the Minister of Railways that the operation of the road was bound to be a losing proposition unless it could be continued to St. John and also connected with an American road in order that the line could obtain the benefit of through business West and South.

Due notice was therefore given the Railway Company and the Provincial Government that the forty and sixty per cent arrangement would cease on December 31st. The department's action in this respect was based on a legal opinion of the Department of Justice, a copy of which will be brought down with the correspondence.

Since the first of the present year the Government railways have been operating and retaining the entire receipts, subject, of course, to an agreement which has yet to be reached between the Dominion and the province as to whether any portion of the receipts shall be turned over to the province before the completion of the road and while the road is losing money.

The St. John and Quebec railway has not yet been paid any portion of the forty per cent that is due them, for the reason that during construction we supplied them with rails, train service, track signs, etc., and expended considerable money in constructing local freight facilities, and also assisted them in the construction of their main line westward from the Fredericton "Y". In connection with these items, we have a considerable contra account, but these accounts are in process of adjustment between the parties concerned.

Mr. CARVELL: Did the minister state that since the first day of January the province has not received any portion of the earnings of the road?

Mr. ROGERS: My hon. friend is not correct in that impression. They have not received anything up to date. It is a matter of adjustment between the Railway Department and the province.

Mr. CARVELL: Has the Federal Government or the Department of Railways and Canals refused to carry out the 40 and 60 per cent arrangement?

Mr. ROGERS: They have not actually refused, but my hon. friend will have observed that the statement mentioned a deficit of $46,000 in one year. The Minister of Railways was anxious to have a re-adjustment, and to have the road constructed from Gagetown to St. John in order that deficits might be avoided in the future. That is the proposition which he has so strongly pressed, and which has been accepted by the Government of New Brunswick. In the meantime the 40 and 60 per cent arrangement remains to be adjusted between the Minister of Railways and the Government of the province of New Brunswick.

Mr. CARVELL: And the Government of New Brunswick agrees to that?

Mr. ROGERS: I have not heard that they have agreed to it. The St. John and Quebec railway has not yet been paid any portion of the 40 per cent that is due.

In respect to the operation of the railway from Fredericton to Gagetown, the Acting Minister of Railways was stating the other night that they had been operating that portion of the road, and also the portion between Fredericton and Centreville when the hon. member for Carleton interrupted:

> Mr. Carvell: You had better draw that statement a little milder.
> Dr. Reid: We have been operating it.
> Mr. Carvell: One train a week.

Now, that was an entirely unfair inference. The operation between Fredericton and Centreville (88 miles) has been a daily service since the opening of that portion of the road on January 1, 1915. Between Fredericton and Gagetown (a distance of 31 miles) we commenced operation by giving a weekly service from March 20, 1915, to December 21, 1915. On December 21, 22, 23, 24, and 25, during the Christmas rush, two trips were made over that end of the line each day. Since then a tri-weekly service has been given on Tuesdays, Wednesdays, and Saturdays, and will continue. My hon. friend complained this afternoon of the possibility of connection being made between the Valley railway and an American line. I have already submitted to the House a letter in which Mr. Gutelius speaks of the advantage such a connection would be. My hon. friend pointed out the great expense that would be involved in the building of a line from some place close to Fredericton, to Vanceboro. But there are other points that might be closer than that. Would not a line from Meductic to the American system be—

Mr. CARVELL: Would my hon. friend allow me? The distance from Meductic to any point on the American system of railways would be about the same distance as from Fredericton to Vanceboro, possibly five miles less, but two-thirds of that would be through American territory, and we would be compelled to build a railway through the state of Maine. In addition to that, the Intercolonial railway would have to transport traffic over the present Valley railway to Meductic, a distance of fifty miles. Therefore there would be a loss both ways, a loss in extra transportation to Meductic, that is for goods coming from Nova Scotia, and also a loss in transportation through probably thirty miles of American territory.

Mr. ROGERS: I hope my hon. friend's statement is correct because the American railways are only too glad to make a connection at that particular point, and the distance will be only twenty miles from Meductic to the international boundary. If this connection is made, it will undoubtedly be of great advantage to the Valley railway and give an outlet to American points.

Mr. CARVELL: That idea is more visionary than the other. You had better stick to the other.

Mr. ROGERS: It is not visionary. I am only stating the circumstances as they are presented to me.

I do not know that there is much more that the hon. member has stated that requires any answer. I have covered the ground so far as I understand the situation. The Government of New Brunswick apparently has accepted the proposal as made, and I am sure that it is acting wisely and well in so doing, because a

double purpose is served, namely, a connection is given with the city of St. John to the Intercolonial and the Transcontinental, and it is assured that the Valley railway will, from the day the line is completed, become a paying proposition to the province of New Brunswick, the Dominion Government, and every one who has any connection with it. It is evident that it is running through a very good portion of the province of New Brunswick, and, with the administration that it is certain to receive at the hands of the railway department, I am satisfied that it will be a paying proposition and of great advantage to the province of New Brunswick as well as to the Dominion.

I was a little sorry that my hon. friend was so bitter in his reference to the Government of the province of New Brunswick. As far as I understand the circumstances, and their attitude, they have but one purpose, to serve, and that is, to act in the best interests of the people whom they represent, by giving them the best arrangement possible under existing conditions. It is true, as I stated at the outset, that they had placed upon them the responsibility of building this Valley railway as the result of the incompetence and mismanagement of hon. gentlemen opposite in earlier days. They are, however, doing the best that can be done, and they are doing it in a manner that, I believe, is satisfactory to the people of that province.

My hon. friend told us a long story to-day about an investigation he had held, and about the Prudential Trust and so on, endeavouring to imply that there was something wrong in connection with the administration of the Government of New Brunswick, and although he referred to the investigation which was held and which he himself conducted not very long ago in that province, he forgot to tell us that, after he had held that investigation, there was an election in his own constituency owing to the resignation of the Premier of New Brunswick, who had formerly represented it; that the record of the Valley railway was submitted to that intelligent constituency—I think my hon. friend will agree with me that it is an intelligent constituency—and that their verdict was to give to the Government candidate a handsome majority of something like 700 votes, one of the largest majorities that the Conservatives have had in that constituency so far as I am aware. That is an evidence that that Government of the province of New Brunswick are close to the hearts of their people, and that their conduct and their efforts to secure an extension of a railway system so necessary for the development of their province and of the great port of St. John, are such as to merit the confidence and respect of the people of that province.

There is nothing that this Government can do to assist in the carrying out of that enterprise that we are not prepared to do. We are prepared to assist generously and liberally, if it is necessary, in the extension of the railway that is to be carried on later between Westfield and St. John, and if there is expense in connection with the bridges there we will come to the relief of the people of New Brunswick, believing as we do that it is in the interest of the people of Canada to secure the most direct connection with that national port, and believing as we do that the connection at McGivney Junction gives us as direct connection as would the connection between Grand Falls and St. John. But that is a matter for the province itself, and the Provincial Government are no doubt anxious to carry out that scheme, and they will no doubt do so at the earliest possible opportunity.

I do not know that there is much more to add from the point of view of the Railway Department. I have endeavoured to fulfil the request of my hon. friend and have frankly given the circumstances and all the facts connected with the negotiations that have taken place between the Railway Department and the Government of the province of New Brunswick.

Mr. CARVELL: Has an agreement been reached with the Government of New Brunswick as to the building of the proposed road from a point north of Fredericton to Vanceboro? As I understand it, the hon. minister read a letter from Mr. Gutelius pointing out the advisability of building it, but I did not hear who was to pay for building it in case the road was actually constructed.

Mr. ROGERS: While the Government of New Brunswick have answered definitely in respect to the extension of a line from Gagetown to St. John, they have not answered definitely as to a connection between some point on the Valley railway and the American line. I understand the closest possible connection is from Meductic to some point on the international boundary.

Mr. CARVELL: That is not my point. Who is to pay the expense of building the road?

Mr. ROGERS: I suppose the Valley railway will assume the responsibility of building the road from Meductic to some point on the international boundary.

Mr. PUGSLEY: My hon. friend has not been very definite as to two propositions. One is, as to the connection between Fredericton and Vanceboro or some other point on the International boundary. As I understand it, Mr. Gutelius recommends that that branch be built by the St. John and Quebec railway by enlarging the provisions of the present statute, under which provision would be made for the Government of New Brunswick to guarantee the bonds of the road. That would mean an addition to the indebtedness of the province of New Brunswick by the cost of this connection with the New England system. That is the proposition of Mr. Gutelius)

Mr. ROGERS: That is the proposition.

Mr. PUGSLEY: I do not wonder that the Government of New Brunswick has not signified to this Government its acceptance of such a proposition. I do not hesitate to say that such a proposition would be resisted most strenuously by the vast majority of the people of New Brunswick, because they feel that they have already on their shoulders a sufficiently heavy burden in connection with the Valley railway without undertaking a further obligation of two or three million dollars for the purpose of getting another, and to my mind, utterly useless connection with the New England system. As my hon. friend from Carleton so well put it, the connection between St. John and Fredericton, Woodstock and all other points up and down the St. John river by means of the Canadian Pacific railway is now very satisfactory and answers every reasonable purpose, and for Mr. Gutelius to seek to have the people of New Brunswick undertake this additional burden of something like two or three million dollars is altogether a most startling proposition. I am not surprised that the Government of New Brunswick has been too alarmed at the proposition to say "yes" or "no" to the question of my hon. friend the acting Minister of Railways.

There is another noteworthy point in this matter, and that is the extraordinary haste with which the correspondence seems to have been completed. Here is an undertaking which has involved the province of New Brunswick in a liability of nearly $6,000,000, an obligation entered upon by the people of New Brunswick upon a distinct and positive understanding with both political parties that have the control of the affairs of Canada for a number of years. That understanding was that the road should be built from St. John to a connection with the Transcontinental railway at Grand Falls; that the road was to be built to a high standard, so that it might be used as part of a transcontinental system in bringing the traffic of our western country to the port of St. John. It was upon that positive understanding that the people of New Brunswick agreed to accept the obligation; an obligation of almost staggering proportions for such a small population.

Mr. ROGERS: Where does the hon. gentleman find that agreement?

Mr. PUGSLEY: It is in the statutes. Let me tell the hon. gentleman where it was first found. The Provincial Government, a Conservative Government, recognized the desirability set forth by myself and our supporters from New Brunswick when I was a member of the Liberal Government, and negotiated with us for Government aid towards the construction of a railway up and down the valley of the river St. John. I remember that I insisted most strenuously—and I was backed up by all our supporters from the province of New Brunswick—that the road should form a part of the Transcontinental system. In the Dominion Railway Subsidy Act, we repealed all previous subsidy provisions, and provided for one subsidy for the whole road from St. John to Grand Falls, a distance of about 220 miles. There was found the first agreement, and in that proposition the then Government of New Brunswick heartily concurred. But they felt that before they could be justified in engaging the credit of the people of New Brunswick for the guarantee of bonds to the very large amount of $25,000 a mile, they must ensure beyond all question that the road was to be constructed from St. John to Grand Falls, so as to form part, as I have said, of the Transcontinental system.

There was another proposition, and that was that the Government of Canada should operate the line, when constructed, as part of the Intercolonial, and, no matter what the net earnings might be, should pay over

to the railway company, as protection to the province of New Brunswick, 40 per cent of the gross earnings of the road. I remember that it required a good deal of argument with my colleagues to get them to agree to that proposition. It was said to me—and said with a good deal of truthfulness—that forty per cent was a large proportion for the Government of Canada to pay over to the province, that the net earnings might not amount to so much, and that the amount to be paid to the province should be based on the net earnings. But I pointed out to my associates in the Government, especially to my hon. friend (Mr. Graham), then Minister of Railways, and to my right hon. friend (Sir Wilfred Laurier) then leader of the Government, that unless some liberal arrangement of this character were made, it would be impossible for the company, even with the provincial guarantee, to raise the necessary money to enable the road to be constructed—for it was recognised that a larger amount would be required than the amount of the Government guarantee. After a good deal of argument, my right hon. friend, (Sir Wilfred Laurier) came to the opinion that, as the valley of the St. John river was one of the oldest settled districts in the province of New Brunswick, having been settled for upwards of a hundred years, and yet was still, in many parts, without railway facilities, and as the road was to run through a most beautiful and fertile section of the country, the people of Canada might well undertake the obligation to pay forty per cent of the gross earnings to the company which should construct the road, which forty per cent, of course, would go, in the first place, to meet the obligations of the province in the guarantee of the bonds. The Government finally agreed to that proposition, and, if I remember rightly, a Bill was introduced and passed. I think the Act was passed when the late Government was in power. And that formed the first contract. Then I find that in 1912 a contract was entered into between this Government and the railway company, and also the Government of New Brunswick, providing for assistance towards the bridges in connection with the construction of the line. There were embodied in the statutes the two contracts made by the late Government of Canada and this Government, in which there was a positive and binding agreement upon the Parliament of Canada that a subsidy should be given for the railway all the way from St. John to Grand Falls, that, as the road was completed in sections, the Government of Canada should take it over and run it, and pay to the province forty per cent of the earnings; and that the Government of Canada should aid in the construction of the bridges, and, later, that the Government of Canada should build the bridges with Dominion money. My hon. friend (Mr. Rogers), I think, cannot desire stronger evidence of that being the agreement as between the people of New Brunswick and the people of Canada acting through their Parliament. Yet, notwithstanding that solemn agreement, an agreement upon which the people of New Brunswick undertook these obligations—for it is not Premier Clarke, nor Attorney General Baxter, nor the members of the Provincial Government alone who are committed to these obligations, they are to pay their share as taxpayers, of course; but it is the small population of 350,000 people in New Brunswick upon whose shoulders this enormous, this staggering obligation falls—the Minister of Public Works comes down and lightly tells this Parliament and the people of Canada that this solemn agreement is now to be set aside, and that this road, instead of forming part of the Transcontinental system, is to be merely a branch line of the Canadian Pacific railway—for that is all that it is to be. And in what time, do you think, were all these matters brought to a head? Mr. Brown writes a letter on February 26 of this year to Mr. Monsarratt in which Mr. Monsarratt is asked to give his opinion with regard to the most desirable route to take. Mr. Monsarratt writes his answer on February 28, two days after the date of Mr. Brown's letter. Mr. Monsarratt's letter apparently reaches Mr. Gutelius on the same day, and on that day Mr. Gutelius writes to Dr. Reid, the acting Minister of Railways, acquainting him with the conclusion at which his engineers have arrived. This is the way this matter, the most important from a financial and business standpoint with which the people of New Brunswick have ever been called upon to deal, was considered. You find it considered by Mr. Brown's letter of February 26. You find Mr. Monsarratt has it before him and writes on February 28. On the same day Mr. Gutelius writes to Dr. Reid and on March 1, Dr. Reid writes to the acting Prime Minister of New Brunswick, suggesting that these changes have been recommended and asking what the provincial government think about it. Without taking the people of New Brunswick into his confidence, without waiting for the

meeting of the legislature in order to see what the representatives of the people thought about it, the acting Prime Minister wired Dr. Reid on March 7, approving of the proposed agreement, and followed it by a letter under the same date entirely agreeing with this proposition, which was of such enormous importance and which had its inception in Mr. Brown's letter of February 26, just a few days before. Do you think, Mr. Speaker, that that tells the whole story? Does my hon. friend the Minister of Public Works want this Parliament to believe that this matter had not been thought of and talked about and planned before this correspondence began? Why, Sir, the hon. member for Carleton has told you that there was ground for the suspicions of the people regarding the bona fides of the intentions of the Government of New Brunswick to extend the road to Grand Falls. If all reports are to be believed, the Canadian Pacific Railway Company gave their hearty support to the provincial government in 1912. It is well known that while Mr. Fleming, the then premier, was telling the people of Victoria county, from the public platform, that the road would run to Grand Falls as sure as the sun should rise the next morning, a prominent official of the Canadian Pacific Railway Company was stating that he had the positive pledge of Mr. Fleming that the road would never be built to Grand Falls. And, Sir, the suspicions of the people of that day are being verified by what is before us to-night. The first step toward fulfilling the pledge of the provincial government to the Canadian Pacific Railway Company, in violation of the solemn pledge they were making to the people of Victoria county and the people of St. John, was to do away, as the Minister of Railways got this Parliament to do away, with that portion of the subsidy which was to apply to the railway between Andover and Grand Falls. That was the first step in this outrageous proposition which has been carried on, not openly, but consistently, from that day to this, in order to fulfil the pledge which Mr. Fleming made to the Canadian Pacific Railway Company; in order to carry out the plot which to-night is being consummated by the declaration of the Minister of Public Works that the St. John Valley railway is to begin at Centreville and is to end, so far as the undertaking of the Provincial Government is concerned, at Westfield. Does my hon. friend question what I say? Let him take the letter of Mr. Gutelius. Perhaps it has not impressed itself on his mind; it did impress itself on my mind. Mr. Gutelius says, as clearly as words can state it, that the undertaking of the Provincial Government is to end at Westfield. In other words, so far as the Provincial Government is concerned, this road is to be a branch of the Canadian Pacific railway, beginning at Westfield, running to Fredericton, and extending to Centreville, a small village about twenty-five miles north of Woodstock—in every respect a branch line of the Canadian Pacific railway. And so the obligation to the Canadian Pacific Railway Company is being paid to-day. So are being fulfilled their hopes and their aspirations that the Valley railway, instead of being a competing line, instead of being part of a great transcontinental system, is to be simply a branch, an annex, an adjunct, of the great Canadian Pacific railway.

My hon. friend the Minister of Public Works has quoted figures as to the relative cost of the two lines. But in the one case he has given us the entire cost from Gagetown to St. John by what he calls the bridge route, and in the other case he has given us the cost simply from Gagetown to Westfield. My hon. friend has not told us what it would cost to build an independent line into St. John. If he knows the country he knows that it will cost a very large sum of money.

Mr. CARVELL: From Westfield down?

Mr. PUGSLEY: From Gagetown down to St. John; it would cost a very large sum of money. I know something of the country from Mistake down to Westfield; if the route follows the shore line a great deal of heavy rock-cutting will have to be done. It will also be a very expensive undertaking to build a bridge across the Nerepis river where it empties into the St. John river. That bridge would have to be half a mile long. The Nerepis has a muddy bottom; I know something about it, because when I was in the Provincial Government I had a good deal to do with the building of a highway bridge there. I venture to say that the building of a bridge across that river would cost as much money as the total amount Mr. Monsarrat has put in for the building of the road from Gagetown to Westfield. In order to make connection with the Canadian Pacific railway at Westfield, this bridge would have to be built. Has my hon. friend thought for a moment what it would cost to get from

Westfield to St. John by an independent route? There would be a great deal of rock cutting, the road would cost more than a railroad ordinarily costs. You get down to Fairville; then how are you going to get into St. John east?

9 p.m.

If you are going by an independent line, you will have to build a bridge across the St. John river. Has my hon. friend thought where this bridge will be built? Is it to be across Navy island, or is it to be across St. John river by the falls? May I ask my hon. friend whether the proposal has gone that far—as to which way the line is to come?

Mr. ROGERS: No, it has not.

Mr. PUGSLEY: Let me tell my hon. friend that by either route the cost will be a great many hundreds of thousands of dollars. The right of way alone through the city of St. John would cost hundreds of thousands of dollars. If it is to be built by Navy island, the cost of the approaches would be very large; the railroad bridge alone would cost $750,000.

Mr. ROGERS: I venture to say that my hon. friend did not catch correctly what I read from Mr. Gutelius' letter. He surely wants to be fair, and to have the facts properly placed in his mind. My hon. friend suggested that the cost of the line from Westfield to St. John is not included in this saving of $707,000. My hon. friend is not correct in that statement. Let me quote from the letter from Mr. Gutelius to the Minister of Railways, which I read a moment ago:

It is found that we can reach St. John Union depot by remaining on the west side of the St. John river via Westfield, by a route which, if following the river, is at most one mile longer than the Bridge route above described, and that this railway can be constructed for $707,000 less cost to the St. John and Quebec railway for their portion and save the $2,163,000 cost of bridges to the Dominion Government, or a saving to both governments of $2,870,000 as compared with the bridge route, and our engineers are of the opinion that the Westfield route could be shortened considerably when making their final location surveys.

Mr. PUGSLEY: Did Mr. Gutelius give the minister any statement of what it would cost to bridge the St. John river at Navy island to get right in to and through the city of St. John.

Mr. ROGERS: I understand that that would not be very expensive.

Mr. PUGSLEY: It would be very expensive indeed. The present bridge used by the Canadian Pacific railway is entirely too light. Trains with two engines cross from St. John to Fairville, and there they attach heavy locomotives to haul the trains to Montreal and the West. The bridge was found to be too light altogether for the heavy engines of the Canadian Pacific railway, and very soon they will have to construct a stronger bridge. I am satisfied that Mr. Guetelius has entirely underestimated the cost of bridging the St. John river at the city of St. John, the cost of the bridge's approach by Navy island, and also the cost of the right of way.

There is another objection to be made to this proposed change, and that is, that these things were considered when this agreement was entered into. The Canadian Pacific railway ran from St. John to Westfield, just as it does to-day, and all these things were thought of. The people of New Brunswick wanted an independent line into the port of St. John, and with the same knowledge then that we have to-day, the Provincial Government of New Brunswick, the Liberal Government here, and the Conservative Government here all agreed that the line should not simply go to Westfield but that it should be built into S. John; and after very careful consideration it was determined to build it by the eastern route so as to go into the city by way of the Intercolonial.

Mr. ROGERS: Will the hon. member permit me to give him some more information on that particular point. (Reading):

If this is acceptable, then the Dominion Government will secure from the Canadian Pacific railway running rights from the point of connection to St. John over the Canadian Pacific railway on some seasonable basis to be arranged, pending final decision as to the best manner of entering St. John by an independent line to reach the Union depot, the main yards and Courtenay bay.

Mr. PUGSLEY: That is exactly what I have said; it is proposed to use the Canadian Pacific railway.

Mr. ROGERS: Pending a final decision. It is simply a temporary arrangement.

Mr. PUGSLEY: My hon. friend is wrong in saying it is only temporary.

Mr. ROGERS: It says "pending a final decision."

Mr. PUGSLEY: Will my hon. friend say there is any agreement between the two Governments that the road will be built from Westfield into St. John?

Mr. ROGERS: Undoubtedly; as I understand it, the road must be built from Westfield to St. John. This is only a temporary arrangement.

Mr. CARVELL: Is there any agreement other than that reached in the correspondence which has been read by the minister to-night?

Mr. ROGERS: Not that I am aware of.

Mr. CARVELL: Then we can read it for ourselves, and perhaps understand it.

Mr. PUGSLEY: I find from page 3 of the letter from Mr. Gutelius, which my hon. friend read, that my recollection of what he said was right. He says:

> In view of the above and the recommendation of Mr. C. B. Brown, Chief Engineer, Canadian Government railways in his letter of February 26th, Mr. C. N. Monsarratt, Chairman and Chief Engineer Quebec Bridge Commission in his letter to me of February 28th and Mr. Brown's letter of February 28th copies hereto, attached, it is recommended that the New Brunswick, Government be urged to take up and consider a route on the west side of the St. John river, and that a connection be made with the Canadian Pacific railway at a point at or near Westfield where the construction of the St. John and Quebec railway shall terminate.

Mr. ROGERS: Pending a final decision.

Mr. PUGSLEY: No; if I understand the meaning of language, I take it that that means that so far as the project to be carried out by the St. John and Quebec railway, in respect to which the Provincial Government have guaranteed the bonds and which this Government has guaranteed to operate, is concerned, the undertaking shall terminate at Westfield.

Mr. ROGERS: It is just temporary.

Mr. PUGSLEY: It does not say it is temporary.

Mr. ROGERS: Read on.

Mr. PUGSLEY: I will read on:

> If this is acceptable, then the Dominion Government will secure from the Canadian Pacific railway running rights from the point of connection to St. John over the Canadian Pacific railway on some reasonable basis to be arranged, pending final decision as to the best manner of entering St. John by an independent line to reach the union depot, the main yards and Courtenay bay.

Some hon. MEMBERS: Hear, hear.

Mr. PUGSLEY: Now, if I understand that language, it means this: that so far as the present project is concerned, it shall terminate at Westfield; and that this Government will investigate. In the first place, they will endeavour to secure running rights over the Canadian Pacific railway, and they will investigate as to the best way of getting into St. John. They may determine in the future to go to St. John, or they may not, but if they do, it is to be a project of the Dominion Government. That is what is meant. Now, in view of the present proposition to have the project, so far as the St. John and Quebec railway is concerned, terminate at Westfield, I think that, before the whole scheme is broken up, this Government ought to be able to state to the House whether they are prepared to proceed with surveys and investigations, and within a reasonable time, to construct, as a Government work, the railway from Westfield into the union station in St. John and to the yards at Courtenay bay.

But I object to this change for another reason. All the vast improvements which were outlined and contracted for at Courtenay bay were a part of the undertaking to build a road from Grand Falls to St. John, and to make it part of the Transcontinental Railway system. When the late Mr. Hays was president of the Grand Trunk Pacific Railway Company, he had many interviews with the Government. He considered very carefully the lay-out of the terminals at Courtenay bay, and his company, through the Grand Trunk Pacific Development Company, acquired a large area of land at the head of Courtenay bay. He looked forward with the greatest possible hope and confidence to the very near future when over the Valley railway there would come a vast transcontinental traffic, which would have its terminus at Courtenay bay. There were to be great yards there; there was to be an elevator, and there were to be the usual facilities which are always to be found in connection with great ocean terminals.

It was felt that it would be an infinitely better way to reach the terminals as it would be very much more convenient to operate railway trains than it would be if they came in from the western side. If they came from the western side it would be necesary to cross over from the west to the eastern side of the harbour of St. John in order to get to the docks at Courtenay bay and it would be necessary to have a system of switchbacks which would be inconvenient and add to the expense and delay of operating the terminal system. That is why Mr. Hays pronounced himself

absolutely in favour of what Mr. Monsarratt and Mr. Gutelius call the bridge route but which we speak of as the route coming down the eastern side of the river St. John from Mistake. My hon. friend cannot be unaware of the fact that these officials of the Grand Trunk Pacific the moment it was proposed to change the route and come down the western side of the river, publicly and emphatically declared their opposition to the change of route and said it was utterly absurd to do so it was expected that the road was to form part of The Transcontinental railway system.

But my hon. friend makes the excuse for all this change by saying that the Grand Trunk Pacific have failed to enter into, or carry out, the obligation to operate the Transcontinental railway. I desire to say, in the presence of the minister, that so far as this Parliament is aware, the Grand Trunk has never failed in its obligation to operate the Transcontinental railway. This Parliament has never had placed before it any information from which such a conclusion could be drawn. We do know that this Government, ever since it came into office, has consistently, persistently and deliberately altered the grades and made changes in the terminals of the Grand Trunk Pacific railway which gave the Grand Trunk Pacific an excuse for refusing to operate the road until the specifications were lived up to. That is all the knowledge this Parliament has in regard to the Grand Trunk failing to operate the Transcontinental railway. I would expect that before my hon. friend would make that statement he would give the information to the House upon which he bases it and show that the Grand Trunk Pacific has failed or refused to carry out its obligations.

I, Sir, with all respect to my hon. friend, do not believe one single word of it. My hon. friend may have misinterpreted—no doubt he has misinterpreted—what they have done, but I think it will be found upon examination of the correspondence that all they have done has been to insist upon the specifications of the road being carried out and lived up to by the Government, and I have no doubt that if that is done they will be prepared to enter into the lease which is provided for by the agreement, and which they cannot be expected to do otherwise.

I am extremely sorry that it has come to this. I had hoped that our expectations that St. John would become the great port in connection with the Transcontinental railway would have been realized. The people of St. John have long hoped that this would be the case, but when they read in the newspapers to-morrow morning the statement that my hon. friend the Minister of Public Works has made, they will feel that their hopes are blasted, and a feeling of disappointment will spread not only among the people of St. John but among the people of New Brunswick, who take pride in our great commercial city, and who looked forward to a day in the not very far distant future when St. John would be able to take her place as one of the great Atlantic seaports, and through which a vast deal of transcontinental business would be carried both in winter and in summer.

My hon. friend has talked about the cost of these bridges. I think from the correspondence that Mr. Gutelius had made up his mind that the eastern route shall be abandoned. I learned a year ago that Mr. Gutelius had made up his mind to that. How long ago is it that the Minister of Railways said that Mr. Gutelius had been loaned to this Government by the Canadian Pacific? Three years, was it? During that time Mr. Gutelius has done good work for those who loaned him to this Government, and to whose employ he will go back when his three years are up. He has succeeded in placing St. John as a way station so far as the operation of the Intercolonial railway is concerned. He has arranged it so that any one desiring to go to Montreal will find it intensely inconvenient to go to Moncton to take the Ocean Limited, the best railway train which travels between the Maritime Provinces and Montreal. He will have to stay three or four hours in Moncton, and therefore he will find it infinitely better for his comfort, even if the route is not of as much scenic beauty, to take the Canadian Pacific line rather than attempt to catch the Ocean Limited. In all other respects it will be found that Mr. Gutelius has had an eye—a very open eye—towards Canadian Pacific interests.

Mr. R. B. BENNETT: May I ask my hon. friend, in all his busy life how many times he has travelled to Montreal from St. John by the Intercolonial railway?

Mr. PUGSLEY: I could not tell my hon. friend how many times I have gone to Montreal by either route during my busy life, and, therefore, he is putting to me a hard proposition, but let me tell him that when Mr. Blair was Minister of Railways, and when he placed St. John on the main

line, many of us used to take pleasure in travelling by the Intercolonial to Montreal. While the distance is longer, the pleasure of travelling by the north shore of the province is greater.

Mr. BENNETT: In the winter?

Mr. PUGSLEY: No, the Ocean Limited only runs in summer.

Mr. BENNETT: It runs in winter too.

Mr. PUGSLEY: Perhaps it does, but I do not think it is running now. But, in the summer there was no lovelier trip that one could take than from St. John to Montreal over the Intercolonial railway. The scenery of the Baie des Chaleurs and the Metapedia valley is simply gorgeous. But since this Government came into power it is only with the greatest possible inconvenience that you can go to Montreal via the Intercolonial railway because it involves spending three or four hours at Moncton.

Mr. BENNETT: Is the Mr. Blair to whom my hon. friend refers the same Mr. Blair who resigned because of the same Transcontinental railway to which reference has been made?

Mr. PUGSLEY: The very same gentleman, and it is wonderful, Sir, how many political crimes these gentlemen think they can justify by saying that Mr. Blair opposed something that the Liberal Government proposed to do some years ago. They must think that the people of this country can be humbugged.

Mr. BENNETT: They could until 1911.

Mr. PUGSLEY: If hon. gentlemen opposite think that they can make the people forget accusations of political mismanagement, crimes, and offences by saying that Mr. Blair had a difference of opinion with his colleagues several years ago as to the question of the route of the Transcontinental railway they are greatly mistaken. My hon. friend can take comfort from the fact, as I have no doubt that the Canadian Pacific will, that at last Mr. Gutelius has succeeded in so presenting the matter to this Government that they have agreed to abandon the St. John Valley railway as part of the Transcontinental railway and simply to run it as a branch line of the Canadian Pacific. But my hon. friend says that they will have running rights over the Canadian Pacific from Westfield, whereas, if the railway came over the eastern route, crossing the Kennebecasis at Rothesay, it would run for nine miles over the Intercolonial railway. My hon. friend has forgotten that when they run over the Intercolonial railway they are running over the people's railway, and that the earnings, whatever they are, for that nine miles go into the treasury of Canada. When they run over the Canadian Pacific railway the earnings go into the capacious pockets of the Canadian Pacific Railway Company. That is the difference. In one case it is the people's railway that would be benefited, and that would control the matter, so far as the terms are concerned; in the other case the business would be controlled by a private company, and the benefits accruing from the haulage over that mileage would go into the treasury of a private company, and not into the pockets of the people of Canada. Just a word in regard to the bridges, and I shall not detain the House longer.

Mr. HENDERSON: Hear, hear.

Mr. PUGSLEY: I am glad to see that my hon. friend from Halton (Mr. Henderson) has a vigour that will enable him to bear the duties of a Privy Councillor for many years to come, I trust. I can assure him that I do not object to his crying "Hear, hear." It shows he is awake,—

Mr. R. B. BENNETT: Which you did not expect.

Mr. PUGSLEY: —which has not always been the case in the past. With regard to bridges, when this Government in 1912, and again in 1914, led the people of New Brunswick to believe that they were going to give this generous encouragement to the building of bridges, it was known then, just as well as it is known to-day, that those bridges would be expensive. The examinations which have been made since have not shown that the bridges would be more expensive than it was thought they would be. I know that Mr. Maxwell, who is the Chief Engineer of the Valley railway, and who was appointed by the Provincial Government, has made a further examination at the instance of the Provincial Government, and has reported that he found good foundations at reasonable depths. I am satisfied that his report will show that the cost of these bridges, both the one across the St. John river and the one across the Kennebecasis, will not at all exceed what it was estimated they would cost when this Government entered upon the obligation to

build these bridges, and so aid the Provincial Government to that extent. In 1912 this Government promised aid in building the bridges in order to induce the people of New Brunswick to believe that they were disposed to act generously towards that province, which had assumed these great obligations. The legislation was passed by this Government about the time a provincial election was coming on. It would be grossly unfair for me to insinuate that the provincial election had anything to do with it. I know that my hon. friend who has knowledge of elections—that elections are to be won in only one way—would not include legislative promises in the way he thinks elections can properly be run. Therefore, to use the phrase of the Minister of Finance, I can only say that these two events synchronized in a most remarkable manner.

Mr. ROGERS: I should like to know what is implied in the insinuation that my hon. friend directs to me.

Mr. PUGSLEY: I will tell my hon. friend. My hon. friend has stated in this House that hon. gentlemen on the other side will realize that he knows how to run elections. That is all.

Mr. ROGERS: I have heard that statement repeated very, very often, but I have not taken any notice of it before because I am very good natured. The statement my hon. friend refers to I made in this House when I was dealing with the attitude of hon. gentlemen opposite in respect to the navy question, which was under discussion at the time. I said that I was prepared to submit to the people the record as presented by hon. gentlemen opposite on the floor of this House; that I knew and understood what affected the people of Canada in respect to the winning of elections, and therefore knew that that question would carry.

Mr. PUGSLEY: I am very glad indeed to have my hon. friend throw around his statement the embellishment which he has to-night.

Mr. ROGERS: No embellishment. If you read Hansard you will see it.

Mr. PUGSLEY: My hon. friend has put it in a more ornate form, in which it does not seem so harsh as it did to those of us who heard him make it some two or three years ago. I apologize to my hon. friend if, for a single moment, I drew from the statement which he made the idea that he had reference to those less beautiful and more reprehensible means of winning an election which are sometimes resorted to. I cheerfully accept his statement, and feel that when anybody in the future intimates that my hon. friend knows how to run elections he has in his mind simply those broad and statesmanlike measures relating to the public good, in which the people would be likely to be interested, and which would therefore be likely to influence them in any decision at which they might arrive when they come to cast their ballots. I can assure my hon. friend that his words to-night ought to lift him to a higher plane and gain for him greater respect and esteem among the people of this country. At all events, these two events synchronized in a most remarkable degree.

This generous legislation made by this Parliament was passed just when a provincial election was impending in the province of New Brunswick. This Parliament, at the instance of the Government, authorized the granting of most liberal aid towards the building of those bridges. Well, nothing has occurred to make it less reasonable to build those bridges to-day than when the legislation was passed. Afterwards, in 1914, the Government asked this Parliament to agree to the absolute building of three of the bridges. As has been well pointed out by my hon. friend from Carleton this afternoon, the people of New Brunswick took the word of this Government—I will not say for what it is worth, but for what the word of honourable statesmen ought to be worth. They took the word of this Government, and then entered upon increased obligations to the extent of $10,000 per mile additional. Believing that the road would be built from Grand Falls to St. John, they took these vast additional burdens upon their shoulders. And to-night they are confronted with the statement that the obligations on the part of this Government are to be ignored. They will read the most remarkable statement read to this House tonight, in which the acting Minister of Railways, although this Government had entered into a solemn agreement to pay to the province 40 per cent of the gross earnings, notifies the Government of New Brunswick that that arrangement will have to be modified, that this Government is not prepared to carry out its obligation to pay to the province 40 per cent of the gross earnings, and that the province of New Brunswick must be prepared to bear its share of the losses that might occur from time to time. The

people of New Brunswick are confronted with that absolute repudiation on the part of this Government. To-night, they find that further pressure has been brought to bear. A communication is sent to them asking them to agree to change the whole terms of the obligation which was entered into, and to abandon the idea of a Transcontinental line, and to consent to the building of a line which, as I have said, will simply be a branch line and an adjunct of the Canadian Pacific railway.

I wish simply to say, in conclusion, that I for one, as representing the constituency of the city of St. John, am profoundly grieved to think that the Government is proposing to do an act of such gross injustice to the people of New Brunswick as is now proposed by the course of events which has been outlined by the Minister of Public Works to-night. Let me express the hope that the Government will consider the matter further. Let me express the hope that some time, at all events, will be given to the people of New Brunswick to make their views heard with respect to this matter. They should not be rushed into the transaction. I know how intense is the feeling of the people of St. John against modifying the original contract. I know how desirous they are of seeing that original contract carried out. And if I can hope to attain nothing else, let me express the earnest desire that the Government will pause before they enter into a binding obligation in this respect, and that they will at all events give an opportunity to the people of St. John and of New Brunswick to express their feelings in this matter. And I believe, if the Government will give heed to what is thought, not only by the people of St. John, but by all the people of New Brunswick, they will not act upon the lines which have been laid down by my hon. friend tonight as indicating what this Government has determined upon and what has been agreed to with the Government of New Brunswick.

Mr. PIUS MICHAUD (Victoria, N.B.): As a representative of the county of Victoria, I am very much interested in this debate. The terminus of this Valley railway was to be at Grand Falls, one of the nice little towns lying along the St. John river, a progressive town with a large population and a fine surrounding district. A few years ago I followed, with great interest, the debate on this subject and I listened with great attention to the Minister of Railways when he said to my hon. friend from Carleton in connection with the construction of this railway "Have faith." Well, faith will never build railways in New Brunswick. Faith would never have put the Flemming Government back into power in 1912, a railway had to be built in order to put that Government back into power. I followed also in that same debate the remarks of my hon. friend the Minister of Marine and Fisheries who, on that occasion, stated that he was just as sure as he was standing in the Chamber that the Valley railway would be built up to Grand Falls. That statement was made four years ago. I could quote his words from Hansard, but my hon. friend from Carleton has already mentioned the volume and the page at which his remarks are to be found. The Minister of Marine and Fisheries certainly had a vision that day, because the railway has never yet been built up to Grand Falls, and from what I know of the hon. minister, I am positive that that road will never be built up to that point as long as he has anything to do with the construction of it.

I have listened to-day to the remarks of my hon. friend the Minister of Public Works, and I believe he has the same vision as the Minister of Marine and Fisheries had. He seems to have a positive assurance that the railway will be built up to Grand Falls. Four years hence, if my hon. friend is on this side of the House, I will tell him that he has had his vision just as the Minister of Marine and Fisheries had. Now, it is just as important to-day to build this railroad as far as Grand Falls as it is to build it to St. John, because we want to have a through route from the upper part of the province of New Brunswick down to the best winter harbour in the Maritime Provinces. I am not surprised that this railroad is not built as far as Grand Falls. In 1912, our friends the Tories won an election in my county on the question of that railroad. The two candidates for the present administration stated to the electors of that county that, if they refused to vote for them, they would never have that railroad built as far as Grand Falls. The result was that a little Liberal majority turned into a small Tory majority and the Government elected their two candidates. Another election is coming on pretty soon, probably this year, in the province of New Brunswick, and in the county of Victoria something must be said in connection with this railway, and the people will probably again be called upon to give their vote to the Government

in order to have a terminus of the Valley railway at Grand Falls.

We have had a discussion on the question of a bridge to be built at Andover, and I understand from the reports given to-day that the bed of the river is not very good. There are to-day at Andover two bridges built across the St. John river, a highway bridge and a railway bridge, and I have never heard from any one yet that the bottom of that river is not suitable to support piers for a good railway bridge. We have many railway connections to-day between the province of New Brunswick and the state of Maine; we have connections between St. Leonards and Van. Buren, at Aroostook Junction, at Debec Junction, and at Vanceboro. I believe we have now enough railways from the province of New Brunswick into the state of Maine. To-day we want to build railroads not going too much into the state of Maine; we want, if possible, railroads from the state of Maine into the province of New Brunswick. As far as the cost of building this road to Grand Falls and St. John is concerned, we have been called upon to pay interest on $4,000,000, and the work is not yet completed. It seems as if the present Government will have a deficit as long as that road is unfinished, and it is important that it should be completed from Grand Falls to St. John in order to give a long haul and thus ensure a good revenue to this Government and to the Government of the province of New Brunswick in order to operate the road in the best manner possible.

Mr. A. B. COPP (Westmorland): Mr. Speaker, I would not be doing justice to myself as a representative of the province of New Brunswick if I failed to add a word or two to the subject which is now under discussion and in which every citizen of New Brunswick must be very much interested. During the greater part of the time that this subject was under discussion in the Provincial Legislature, I happened to be a member of that body and therefore I know something about what took place—in regard to bringing down the legislation that finally resulted in the commencement of what is known as the St. John Valley railway. I remember back as far as 1904 and 1905 when this matter was brought up in the House of Assembly in the province and was discussed pro and con by the Government of the day and the Opposition which, at that time, was led by my hon. friend the Minister of Marine and Fisheries. Delegations from different sections of that part of the province waited upon the Government, pressing upon them the great necessity of giving railway communication to that portion of New Brunswick. My hon. friend from the city of St. John, who, at that time, was a member of the Provincial Government, will remember that the whole discussion rested upon the only real proposition that could be considered: that of linking the railway up with some transcontinental system that would give direct entrance into the city of St. John. My hon. friend the Minister of Marine and Fisheries, who was the leader of the Opposition at that time, made in the Legislature of 1907 a speech in which he used these words:

> I am quite satisfied that as a purely local road the railway would not pay, and I have every confidence that as part of the Transcontinental system it would be highly beneficial to the province and would not cost the people anything at all.

These are the words of the Minister of Marine and Fisheries, at that time leader of the Opposition in the province of New Brunswick. Shortly after he uttered these words he came into power as Premier of that province. I was a member of the provincial legislature at that time. As soon as the Government of the hon. gentleman (Mr. Hazen) came into office they took up the question of making some arrangement for building the railway down the valley of St. John. My hon. friend from the city of St. John (Mr. Pugsley) was a member of the Dominion Government of that day, and my hon. friend from Carleton (Mr. Carvell) was also a member of this House, and both of them took great interest in assisting the Provincial Government to arrange some reasonable scheme by which the railway might be built. The proposition put forward was that the province of New Brunswick was to guarantee the bonds of the road from Grand Falls to the city of St. John at the rate of $25,000 a mile, and that when the road was completed the Intercolonial should take it over and operate it and pay 40 per cent of the gross receipts to the company. I know how long and thoroughly this matter was discussed and how anxious every member of the legislature was to give all assistance, so that this old-settled portion of the province, which was without railway accommodation while other portions of the province were well supplied, should be traversed by a well-constructed railway. They realized

that it was doubtful whether there would be traffic enough along that river to pay the running expenses of a railway, yet every person was sympathetic and desirous of doing everything possible to put the road through. Legislation was passed under which the province should guarantee the bonds to the amount of $25,000 a mile. I was then a member of the Opposition in the provincial legislature, and we were very anxious that there should be no question as to this legislation, so that we might be assured of having the entire railway built from Grand Falls to St. John. I state merely the fact when I say that there was grave misgiving in the minds of many people in New Brunswick, including some members of the legislature. as to whether or not it was the intention of the Government to build from Grand Falls to St. John. We urged upon the Government the great necessity of making the legislation clear. One of the members of the Legislature, a member of the Opposition, moved an amendment to provide that the road must be commenced at Grand Falls at one end and at St. John at the other end. And when that amendment was voted down by the supporters of the Provincial Government, great doubt was aroused throughout the province as to the sincerity of the Government in its declared intention to build the entire road. The doubts then entertained have been verified to the letter; for we have to-day the announcement by the Minister of Public Works on behalf of the Government of this Dominion that it is not the intention of the Provincial Government to build the road to Grand Falls. That never was their intention; they were simply playing politics at that time, and they are playing politics to-day. The Minister of Public Works reads correspondence on this subject; but does he expect the members of this House and the people of this country to believe that this whole matter has been worked out in one short week and the conclusion reached within that time to build a railway from Gagetown to Westfield? Let me tell the Minister of Public Works (Mr. Rogers) and the Minister of Marine and Fisheries (Mr. Hazen) what I told the latter when he was Premier of New Brunswick—that I doubt very much if it is the intention of the province even to build a road from Gagetown to Westfield. I venture the prophecy that the road will not be built from Gagetown to Westfield, but from Gagetown to Welsford on the Canadian Pacific railway. Mark my words and see if they do not come true. When my hon. friend (Mr. Rogers) tries to make this House believe that the Government intends to build from Gagetown to Westfield, he is counting too much upon the gullibility of the people of New Brunswick, who know the situation better than he knows it. When, in 1914, the Provincial Government asked the legislature to authorize an additional guarantee of bonds for $10,000 a mile, they deceived the members of the legislature in the statement they made. Representatives of the Provincial Government came to Ottawa for the purpose of getting some assistance to build the bridges across the rivers St. John and Kennebecasis. The delegation was composed of the present acting Premier of New Brunswick and a prominent member of the legislature, Mr. Tilley. At that time the legislation was being held up for a few days while the delegation was here seeking a guarantee for the building of the bridges. These gentlemen returned from Ottawa and brought back a report that they had an alleged promise from the Federal Government of $3,000,000 to aid in the construction of the bridges. But now my hon. friend the Minister of Public Works comes down and shows that on the strength of a letter written by Dr. Reid to the acting Premier of New Brunswick, the latter does not wait overnight, but calls the Government together and wires back that they accept without any question to change the route and instead of extending the road to St. John they intend to run a line to Westfield and thence to St. John over the C.P.R.

Let us see how the members of the House of Assembly treated the guarantee they received from the Government with regard to aid to the building of the Valley railway. The gentleman who is now Attorney General of the province of New Brunswick had very grave doubts as to whether the province should make a further guarantee of bonds to the extent of $10,000 a mile. But, finally, after the delegation had returned from Ottawa, the views of the Attorney General of the province were represented as follows:

> But the road must be build through from Grand Falls to St. John, and he felt justified in voting for a measure which provided for putting it through and putting it through on time.

I ask my hon. friends what the attitude of the present Attorney General of the province must be. I have read the reason that he gave on the floor of the legislature for supporting the increased guarantee of bonds of $10,000 a mile—that the road was going

through from Grand Falls to St. John. Another gentleman who used practically the same argument was Mr. White, from the county of Victoria, who was referred to by the hon. gentleman who has just taken his seat. He had very grave doubts about the extra guaranteeing of these bonds, but he said that he was extremely glad to hear that the line was going to Grand Falls. Referring to his remarks, a report says:

He was very pleased to hear the other night the Premier remark that the road would not be tied up to the Canadian Pacific railway.

What position does the hon. gentleman from Victoria stand in? He accepted the word of the Premier of the province at that time that the road should be built from Grand Falls to St. John. On the statement made by the Government of that day, one of its supporters said that he voted for the measure simply because the road was going from Grand Falls to St. John. The views of another hon. gentleman from the city of St. John, Mr. Grannen, are expressed as follows:

Now that they had the assistance from Ottawa and the assurance that the road would enter St. John from the east, he would give the Bill his hearty support.

According to this evidence, the hon. member of the city of St. John was well within the mark when he said that the people of the province of New Brunswick had been deceived. Not only were the people deceived; members of the legislature supporting the Government, who assisted in passing the legislation, were deceived by these very statements, and voted for the Bill because the road, according to their belief, was going from Grand Falls to St. John. Let me read just a few lines to show what the Premier of the province of New Brunswick said when doubts were expressed as to where the terminus of this road was to be. These are the words of the Hon. Mr. Flemming:

The negotiations are concluded and a contract was entered into on December 6, 1911, and to set at rest any doubt he would say that the contract called for the construction of a line of railway from St. John, or a point on the Intercolonial railway near St. John, to Grand Falls. The Enabling Act is the same, and the agreement to lease and operate the road, which is signed by the Federal Government the Provincial Government and the Railway Company, calls for a railway from St. John to Grand Falls. And yet, he says, there is a disposition on the part of those opposed to the Government to cast some doubt as to whether the railway will go that far or not.

The very idea that hon. gentlemen in opposition at that time should have the least doubt in their minds as to whether this road should be built from Grand Falls to St. John. I remember the righteous indignation with which the then Prime Minister addressed the House and the people on this subject. Then he goes on to say:

He would cite why the country should be assured that the whole line would be constructed from St. John to Grand Falls. First, there was the contract placed before the House, which should be reassuring to the ordinary mind. There was the contract made with the Federal Government for Intercolonial operation from Grand Falls to St. John. Further, the subsidy had been revoted for the entire line. Did the honourable gentlemen opposite pretend to think and say that the Federal Government would enter into a contract to subsidize and operate a railway which it was never intended to construct? The only thing not absolutely settled was that the approval of the Minister of Railways had not been secured for a definite route between Andover and Grand Falls. The engineers had reported upon two or three feasible routes, and as early in the Spring as possible they would make further surveys, when the route would be entirely agreed upon.

This statement was made because an election was pending at that time in the province of New Brunswick, and the hon. gentleman wanted votes from the sections of the county beyond Andover. The Minister of Railways had not really decided what route should be followed from Andover to Grand Falls. (Reading):

In addition to all that, within the last two or three days a bill had been introduced in the Federal Parliament to guarantee the bonds for the construction of the three great bridges across the Kennebecasis, and across the St. John at Andover.

I fail to see the bridge, Mr. Speaker, at Andover. (Reading):

If it were not intended to build the railway between Grand Falls and Andover, why a bridge at Andover? Whethes the Opposition believed that the Valley railway was going to Grand Falls or not was a matter of indifference to the Government and to the members of the Government side of the House. He had given the people of the province every assurance within his power that the railway would be built, and again he reiterated the assurance that, as soon as possible, that portion between St. John and Andover would be commenced; and immediately thereafter steps would be taken to let the contract for the section between Andover and Grand Falls.

That is what the premier of the province of New Brunswick at that time said to assure the people that the line should be built from Grand Falls to St. John, and that it should be connected with the Transcontinental system, for the purpose of giving railway accommodation to that portion of the line which could not pay running expenses unless it had the advantage of drawing through freight coming over the

Transcontinental to the winter port of St. John. What possible excuse can the Government give for taking their present attitude? My hon. friend says that it is going to be cheaper to build the road from Gagetown over to Westfield and on to St. John, than it would to build it the other way.

10 p.m.

That is not the promise that was made to the people of the province of New Brunswick. The promise made by the Government of New Brunswick, backed up and guaranteed by members of the Dominion Government, was that we should have a through line of railway from Grand Falls to St. John. Now we are to have a short piece of road running from Centreville, in the county of Carleton, to Westfield, or, I believe, Welsford, on the line of the Canadian Pacific railway. Upon the promise of the Government of the province of New Brunswick, and also of this Government, that they should have this through line, the province guaranteed the bonds and pledged their credit for at least $6,000,000. What have the province of New Brunswick got in return for the pledging of their credit and the spending of this money? Nothing but a short local line of railway from Centreville to Westfield—if they get it even to Westfield. I contend that the province of New Brunswick has not been fairly treated. With a population of only 350,000 people, they have been forced to pledge their credit to the extent of this large sum of money. It is a sin and a shame that this Government should attempt to assist the Government of the province of New Brunswick to change their course, to continue their deception and their fooling of the people in this matter of railway accommodation, and to pledge their credit for so large an amount. It is putting a load on the shoulders of the people of the province of New Brunswick that they are not able to bear. I sincerely hope that the Acting Minister of Railways and Canals, before giving the assistance proposed, will take up the matter earnestly and deliberately with the government of New Brunswick, and try to work out some arrangement by which the original intention, as regards this road, will be carried out, and so give to the people of that section of the province a railway from Grand Falls to St. John along the route intended, on the east side of the river St. John. My hon. friend speaks of going across from Gagetown to Welsford.

Mr. ROGERS: I did not say Welsford.

[Mr. Copp.]

Mr. COPP: I mean Westfield, but I venture to predict that my hon. friend will say Welsford before this time next year. As sure as the sun rises in the East and sets in the West, he will tell us that it will be from Gagetown to Welsford, on the Canadian Pacific railway. That is what will take place. My hon. friend will come here next year, and if he has the privilege of speaking as Acting Minister of Railways, he will say that things have changed, that Mr. Gutelius, Mr. Montsarratt, and Mr. Brown have told him that there is a better route up to Welsford. That is the excuse they are offering now in regard to the changed route, and they will offer it again next year. Ever since the hon. Premier of the province met Mr. Van Horne at McAdam and rode in his private car to Montreal, as far back as that, it was decided that the Valley railway would be an adjunct of the Canadian Pacific railway, and nothing else. That was the belief then, and it has become stronger and stronger every day. My hon. friend this afternoon, when speaking of the route of the road, gave ample proof of the reasonableness of the doubt that has existed in the minds of the people of the province of New Brunswick. That doubt has not been dissipated, and in my opinion it never will be dissipated. Before many years have passed over the head of my hon. friend, he will find this road being operated practically by the Canadian Pacific railway, as part of their system, and the little province of New Brunswick will be obliged to pay interest on the bonds for all time.

Mr. O. TURGEON (Gloucester): Coming from the northern part of New Brunswick, from the country furthest from the district over which this railroad is to be built, I deem it my duty to say a few words. My hon. friend the Minister of Public Works has asked the people of the province to have faith in the Government. Faith is acquired or lost according to the direction given by the Administration. I believe it will take a great deal of persuasion on the part of the hon. Minister of Public Works to restore faith in the minds of the people of New Brunswick. This question of the St. John Valley railway is an old question in the province of New Brunswick. No local Government attempted to vote money for such a railway, because the other portions of the province, northern New Brunswick and eastern New Brunswick, were always opposed to it. The hon. Minister of Marine and Fisheries, when he was

leader of the Opposition in New Brunswick, declared that a road through that valley, operated as a local road, could never be made to pay its expenses. The people of northern New Brunswick, whom he represented in the Legislature, and whom we represent in this House, were never in a position to give a vote in favour of granting money towards the building of that railroad until it was proposed to make it a part of the Transcontinental railway from Grand Falls to St. John in order to ensure further development of the trade from the West to the maritime port of St. John. It was to be no adjunct of the Canadian Pacific railway, but part of the Transcontinental railway, starting from the proper point at Grand Falls to St. John. But the moment that the promise of the Government at Ottawa and of the Government at Fredericton was not carried out, the people lost faith. The moment that construction was not begun at Grand Falls, which from a business standpoint was the proper starting point, the moment the Government delayed carrying out that part of the contract and Grand Falls was left out, the people of New Brunswick lost faith in the negotiations between this Government and the Government of New Brunswick. To-day the people of the province are called upon to pay an enormous expense in connection with that railway, and in a deceptive way. They were willing to undertake the burden of that expenditure for the further development of Canadian trade, connecting with the Transcontinental railway, but not for a local road to suit the convenience of the Canadian Pacific railway, as has been well said by the speakers who have preceded me. I only wish to express my own feelings and to voice the disappointment and loss of faith of the people of northern New Brunswick in the Conservative Government at Ottawa and the Conservative Government at Fredericton.

Mr. CARVELL: If no other hon. gentleman has anything to say, I wish very shortly to refer to the frank confession made by the Minister of Public Works this afternoon. I thank him for his sincerity in explaining to us the position as, I think, it exactly exists, or at least exactly as it was given to him. If we have accomplished nothing else by this discussion we have cleared the atmosphere, and the people of New Brunswick will now know, not the worst, perhaps, but something about the terms and financial burdens that are staring them in the face, and that are likely to continue for generations to come. Just here I should like to say that, while, perhaps, I am a hard political fighter, I am glad that my hon. friend the Minister of Marine and Fisheries, a gentleman for whom I have the greatest regard, has been saved the humiliation of being present this afternoon and listening to the confession made by the Government through the lips of the Minister of Public Works. I think we can also extend our sympathies, to some extent, to the Minister of Railways, whose illness has saved him the humiliation of coming here and making the confession himself, instead of having it made through the Minister of Public Works, who, of course, has no great personal interest in the matter. From all that has been said by hon. gentlemen this side of the House, I think the Minister of Public Works must have been convinced that a part of the solemn pledge, or contract, between this Government and the Government and people of New Brunswick was that this road should be built from Grand Falls to St. John, and become part of the through line over which transcontinental business would pass. We have the positive statement of the Government of Canada that, so far as they were concerned, they did not want the road to go north of Centreville.

Mr. ROGERS: I did not say that.

Mr. CARVELL: Let us see. I did not take down my hon. friend's exact words, but he read a letter from Mr. Gutelius, in which it was stated that they saw no advantage in building the road north of Centreville. But he thinks he can smooth it over for his friends in the province of New Brunswick and he said that they hoped at some time in the future to carry out the contract and continue the road to Grand Falls. I think I am correctly giving the statement made by my hon. friend. As far as the present is concerned, and the future too, that is the end of it; it goes to Centreville and stops there. No matter what the ambitions and wishes of the local government in New Brunswick may be, without the hearty co-operation and assistance of this Government, without an undertaking that they will take over and operate this road, no government in New Brunswick ever could get the money, or would ever dare try to get the money, to carry on the work. From the time this Government takes the attitude that they

will not operate the road north of Centreville, that is the end of it and it will never be built.

Then the Minister of Public Works has also stated that they are satisfied with the connection through McGivney junction because he states that the great object, so far as the people of Canada is concerned, is to get direct connection with St. John. It makes one laugh to hear the hon. gentleman dilate upon the advantages of that great winter port, about the anxiety of this Government to develop it and how the people of the city of St. John are going to see the business pass through it. I felt I could almost discern tears in my hon. friend's voice when he discussed that question. But in so far as they are concerned, the hon. gentlemen opposite are satisfied to have this business go through McGivney junction. The hon. gentlemen dilated upon the importance of having this road finished at once in order that this great volume of business might go through the port of St. John and that the province might be saved from any further loss. He has no hesitation in making the prophecy that the moment this road is completed down to some point on the Canadian Pacific sufficient business will go over the road to make it possible that 40 per cent of the earnings will pay the interest on $6,000,000. Has my hon. friend considered what that means? Of course, I know he has not, because my hon. friend naturally could not know very much about it. I gave him very great credit for the intelligence with which he discussed the matter this afternoon, not knowing the particular location. But he must remember that there are 52 plus 25 miles which makes 87, or 88, miles of this road from Fredericton down to Centreville which is nothing more than a branch line of, or a feeder for, the Canadian Pacific and over which no great amount of business can ever be hoped for because it simply goes through an agricultural country. It is as rich a country as you will find anywhere in Eastern Canada, but yet it cannot supply sufficient business in order that 40 per cent of it may pay the interest on $35,000 a mile because that is what the province will have to pay for the road. From Fredericton to Westfield, you would have somewhere about 60 miles of line. Let me ask my hon. friend what would be the proper proportion of a car of wheat from Winnipeg to St. John passing over that 60 miles of road and how much does he think that 60 miles would earn out of the 2,500 miles of road from Winnipeg to St. John. Why, Sir, if he had 25 cars a day during the whole year I do not believe he would have enough to pay the interest on this sixty miles of road to say nothing of the interest on the other eighty-seven miles from Fredericton north. While it may look rosy to him, and while his engineers may have painted a bright picture and may have made him believe that this connection from McGivney junction would be all that would be required, and would put the province in a position to pay this interest, all I have to say is that they do not know what they are talking about or that they have refrained from giving the minister the information. I am pointing out now the other side of it because, carrying out this present arangement, there are 87 miles costing $35,000 a mile and out of local business only the railway can never pay interest. Under this present arrangement I have no doubt that with the most favourable conditions the people of the province of New Brunswick will have to pay some $100,000 to $200,000 a year interest for all time to come. That is a very serious question and I do not believe many hon. gentlemen on the other side realize what it does mean. It would not be very much for the province of Ontario, it would not be an awful burden to some of the western provinces having great resources, but it is a millstone around the neck of the people of New Brunswick which will be felt for all time to come. I wish the Minister of Public Works could realize this as we realise it because even now it is not too late to mend, to go back and carry out the original proposal. It is not too late to keep faith with the people of New Brunswick and try to relieve them from the awful financial burden that they see staring them in the face if this arrangement is carried out. Then my hon. friend says they are going to Westfield or, we say, to some other point on the Canadian Pacific. I do not think it makes very much difference because no matter whether they go to Westfield or whether they go to Welsford, it only means that the Canadian Pacific gets a little more of the freight rate. The main point is that if they get to St. John they are not going to have a through connection and they are not going to give us control of the through business originating in the western part of New Brunswick.

Mr. ROGRS: We have running rights over the Canadian Pacific.

Mr. CARVELL: You will get running rights over the Canadian Pacfic, but as far as the people of New Brunswick are concerned, they will end when they get to Westfield.

Mr. ROGERS: That is only temporary.

Mr. CARVELL: I will give my hon. friend credit for being sincere in making his statement, because I think he is absolutely sincere, but he does not know the conditions. You talk of building another road from Westfield to St. John paralleling the Canadian Pacific through those rock cuts. I do not know of a piece of railway in Eastern Canada that is any more expensive, or would be any more expensive to build, than paralleling the Canadian Pacific from Westfield to St. John.

Mr. ROGERS: The engineers say it can be done for $700,000 less than the other.

Mr. CARVELL: That is $50,000 a mile. I do not believe it.

Mr. ROGERS: That covers the line from Gagetown to St. John.

Mr. CARVELL: They can build a line from Gagetown to Westfield for $50,000 a mile, but to say that they can build it for $700,000 is absolute nonsense.

Mr. ROGERS: That is the report of the engineers.

Mr. CARVELL: You could not build that road from Westfield to St. John for $50,000 a mile. You could not build it for $60,000 a mile. If any hon. gentleman will keep in his mind what I am saying and the next time he goes to St. John over the Canadian Pacific, if he will just look out and see the kind of country through which he is travelling, the rock cuts and difficult country for the last ten or twelve miles before getting to St. John, he will realize that what I say is true. I do not care if all the engineers in the country would say so; our ordinary, common sense teaches us that these statements are absolutely untrue and impossible. When you come to cross the St. John river, it will cost $600,000 or $700,000 to bridge the St. John at its mouth. My hon. friend from St. John (Mr. Pugsley) stated a short time ago that the present bridge is inadequate. They have to rebuild the present Canadian Pacific bridge across the Falls. If the Government attempted to build another bridge across there and get a right of way from that bridge into the city of St. John, and to the Union Depot, $50,000 a mile, $100,000 a mile, $200,000 a mile would not pay for the cost of getting from that bridge into the Union Station. When they get to the Union depot, they are still some two or three miles from Courtenay Bay. The whole thing is impracticable, and when my hon. friends talk about it, they are talking about something which they know is not feasible, and which they know cannot be carried out. It simply means that they have decided to join on to the Canadian Pacific railway at Westfield and stop there. That is the end of the whole transaction. It is true that they may get running rights over the Canadian Pacific railway for a consideration, but they will be subjecting themselves to the control of the Canadian Pacific railway, and they will have to pay a pretty big percentage in order to get the Canadian Pacific railway to haul their freight over the fourteen miles. My hon. friends may think I am talking a little severely, but I know conditions down there; so does my hon. friend from St. John, and all our friends from New Brunswick. I wish the hon. member for Charlotte (Mr. Hartt) were here. He knows conditions down there. So does the Minister of Marine and Fisheries. I see some of my Conservative friends from Nova Scotia opposite. They know conditions down there, if they would only speak up and say what they think of this fantastic story that the minister has been narrating, and which was prepared for him by somebody else this afternoon. It is the merest fantasy, with no foundation in fact whatever. The story is absolutely impossible. It simply comes down to this. There are only two schemes. One is to go to Westfield and stop there, and get the Canadian Pacific railway to haul from there in; and the other is to cross the river farther up, by what is called the bridge route, and strike the Intercolonial railway at Rothesay, and from there go to the terminals over their own tracks. Am I to understand from the statement and conclusions of the Minister of Public Works that if this extension to Vanceboro is ever built, it will have to be built by the local Government?

Mr. ROGERS: I did not say that it would be built to Vanceboro.

Mr. CARVELL: I will qualify that: either to Vanceboro or some other point on the American system of railways. But am I to understand that wherever it is built to

it will be built by the Government of New Brunswick, and not by the Dominion Government?

Mr. ROGERS: That is the proposal made by Mr. Gutelius. I do not know whether the Provincial Government has agreed to it or not.

Mr. CARVELL: I want to be fair. I believe the minister told me some time ago that the New Brunswick Government had not accepted the proposal. We want the people of New Brunswick to know exactly what the proposal is, and exactly what the Government of New Brunswick is doing, because we have a lot of difficulty in ascertaining from the Government of New Brunswick the true condition of affairs. We have to adopt these methods in order to get information for the people of our province. That was our object in bringing this matter up, and I thank the Minister of Public Works for being so perfectly frank and honest about it. He has told the whole story, and now we should be able to send the Hansard down to our people in Fredericton, and they will know the story exactly as it is. It is sometimes a great satisfaction to be able to come here and get evidence which has been denied to us at home.

My hon. friend referred to the fact that this road might be built from some point on the Valley railway, other than the point a few miles above Fredericton to Vanceboro. I have heard that idea discussed for the last eight or ten years. The theory is that they would turn off somewhere near Meductic, twelve miles below Woodstock, then go in a southwesterly direction and strike the Maine Central either at Danforth, or possibly as far west as Mattawamkeag.

Mr. ROGERS: Bancroft.

Mr. CARVELL: They might possibly strike it at Bancroft. But the route I have described is the story as I have heard it for the last six or eight years. In fact the Canadian Pacific Railway went so far as to have that line surveyed. I think it was surveyed up to Mattawamkeag. It may possibly be that their object in doing so was to get rid of utilizing any portion of the Maine Central. They have running rights from Mattawamkeag to Vanceboro, and they may have intended to go far enough west to eliminate any portion of the Maine Central system. But there is a great bend in the Maine Central railway, and I think the nearest point would be Mattawamkeag, but whether Mattawamkeag, Bancroft or Danforth you would be compelled to build from 15 to 25 miles of railway through American territory. My hon. friend said this afternoon that the American railways were always out for business. Yes, they are, but I want to tell him that the Maine Central Railway is not out for building any more railways through that country, because there is another railway called the Bangor and Aroostook Railway, the majority of the stock of which we are generally led to believe is owned by the Maine Central, although the company is an entirely different entity. The country through which this road would run would not produce any business whatever. The Maine Central would never build a road through that country.

Mr. ROGERS: They would if they could get a lot of business.

Mr. CARVELL: They can get exactly the same business at Vanceboro, and by getting it there, they get a longer haul. There is no use in my hon. friend talking about the Maine Central building a railroad through that country. Why, if they did it would be a shorter haul for themselves, and they are not such great idiots as to do that. So the gentlemen who have been putting up this story to my hon. friend and the Acting Minister of Railways, of making connections at Bancroft or Mattawamkeag with the American system of railways have simply been fooling them. There is nothing to it, and there never can be anything to it. And even supposing the road was built you would be compelled to haul the freight of Nova Scotia and eastern New Brunswick fifty miles up along the Valley railway before turning it over to this new section. Therefore the whole thing is only a dream, something conjured up. I do not know whether it was conjured up by Mr. Gutelius as a reason for advising this Government to go back on their agreement with the people of New Brunswick, or whether it was conjured up by the Government of New Brunswick as a reason for their going back on their agreement. One is about as bad as the other, and I think it is just the tossing up of a copper whether this nonsensical scheme originated with Gutelius or with the Government. We believe this at least: That if it is left to the Government of New Brunswick to build, it will never be built, and there will never be any harm in it.

There is just one other point, and I hope, Mr. Speaker, you will pardon me if I travel a little out of the line of answering my hon. friend's statements. It is a most remarkable thing to find a Conservative Government, not only of New Brunswick, but of Canada, taking to building more railways in order to get our produce to the United States.

Mr. PUGSLEY: More truck with the Yankees.

Mr. CARVELL: Why, these are the very gentlemen who were tearing their hair out four years ago for fear there would be more trade with the Yankees; the men who were waving the Old Flag about, who said that the lines of communication should be east and west, and not north and south; who said that we should not have any truck and trade with the Yankees, but should trade among ourselves; who said that the manufactured products of Ontario should be sent east to Nova Scotia and New Brunswick. That was the truly loyal way of carrying on the affairs of this country. And now these same people, in the space of four short years, are not simply advising, but compelling, or trying to compel the New Brunswick Government to build a road at a cost of $1,500,000 in order that we may be able to trade with these despised Yankees. Truly, four years have wrought a wonderful change in the feelings of hon. gentlemen opposite. I congratulate them to this extent: that if they are not sound on their railway policy they are a great deal sounder on their trade policy than they were a few years ago, because, so far as we are concerned in my portion of Canada at least, we have no objection, whatever, to all the truck and trade with the Yankees that we can possibly have. It is in the United States that we sell a large part of our produce and where we try to make our money and we have no scruples whatever in trading there. They cannot make the trade too free and too easily accessible so far as we are concerned, but we do object to the expenditure of this $1,500,000 of our good money in order to help Mr. Gutelius work out his scheme or in order to help the Government of New Brunswick out in their troubles with the people, because such a scheme is not necessary as we have now between the city of Fredericton and the American border all the railway communication that can possibly be required. As was pointed out by my hon. friend from Victoria (Mr. Michaud) a little while ago, we have the Canadian Pacific railway running from Fredericton to Vanceboro; you go up sixty miles and there the Valley railway makes a connection with the Canadian Pacific railway which goes into the state of Maine again at a place called Houlton via Debec Junction. You go sixty miles above that and you come to another place where the railway could, if it came up to Andover, connect with the Canadian Pacific railway and go into the United States again.

Mr. ROGERS: Have you a connection at Woodstock?

Mr. CARVELL: Yes, the Valley railway connects with the Canadian Pacific railway, and the Canadian Pacific railway runs into the United States a few miles below Woodstock. Then you go up to Aroostock Junction and the Canadian Pacific railway connects there and runs into the state of Maine, and there is another connection between St. Leonards and Van Buren. With all these connections with the United States, it seems remarkable that my friends want the province of New Brunswick to spend $1,500,000 in order to have another connection paralleling the Canadian Pacific railway, but I hope the expenditure will not have to be made. I again thank my hon. friend the Minister of Public Works for his extreme courtesy and honesty in giving us so much information, and I can only trust that the resolution will carry and that the papers will be brought down before the close of the present session; in fact, if they are brought down within a week or ten days, it will be of great importance in discussing this matter when it comes up in the legislature of New Brunswick.

Motion agreed to.

PROHIBITION OF INTOXICATING LIQUORS.

PROHIBITION BY PROVINCES.

Mr. J. J. HUGHES (Kings, P. E. I.) moved:

That, in the opinion of this House, it is desirable that necessary action should be taken by the Government during this session to secure an amendment of the British North America Act so as to empower the Legislature of any province to prohibit the importation of intoxicating liquors into such province and the manufacture of such liquors within the province.

He said: Mr. Speaker, when the debate on this subject commenced the discussion was widened to include the resolution which stood on the Order Paper in the name of the hon. member for Vancouver (Mr.

Stevens), and also the resolution that stood in my name, because, although the resolutions were somewhat dissimilar, yet they referred to one subject, the prohibition or restriction of the consumption, sale and manufacture of intoxicating liquors, and they were, therefore, alike in certain particulars. The discussion the other day was taken part in by several hon. members, and the hon. member who moved the resolution and the hon. member who seconded it spoke at considerable length. As it would be well, if possible, that as many members of this House as wish to take part in this discussion should have an opportunity of doing so, I will endeavour to make my remarks brief. There would really be no necessity of making lengthy remarks, because I do not think any argument is necessary to convince the great majority of hon. members of the desirability of legislation along the lines proposed, that is, to restrict, and, if possible, to prohibit the large consumption of alcoholic liquors in the Dominion of Canada.

Two speeches were made in opposition to the proposed legislation, one by the hon, member for North Waterloo (Mr. Weichel), who read an article which bore all the marks of having been prepared outside of Parliament by some person or persons interested in the liquor business. As it was, therefore, a megaphonic utterance, I do not think it is necessary to pay any further attention to it. There was, however, a speech delivered by the hon. member for St. Hyacinthe (Mr. Gauthier), which contained some original statements, if not original ideas, and I think his speech ought to receive some consideration. The hon. member for St. Hyacinthe mentioned two countries in which the people were very temperate, but had other qualities that were very much to be deplored, and he wished the inference to be drawn that it was because the people of those countries were temperate that they were not otherwise desirable people. He instanced Turkey, saying that the Turks were very temperate, but that we should not imitate their habits and customs. I do not know much about the Turkish people, and I have not read much of their history; I have, however, spoken to some men who have travelled in Turkey and traded with the Turks, and I have been informed that, apart from their religion, which makes them consider it a meritorious deed to shed the blood of a Christian, they are a pretty good people, and that, for instance, the word of a Turkish merchant is as good as his bond.

Mr. NESBITT: His bond is all right.

Mr. HUGHES: Yes, his bond is all right, and we have seen instances of Turkish magnanimity. It is recorded of them that at the Gallipoli peninsula they showed a magnanimity and a chivalry which the Austrians, or at least the Germans, have not shown in the great war that is now raging, but I am sure that the hon. member for St. Hyacinthe (Mr. Gauthier) would not suppose for a moment that the Turkish character would be improved if they added intoxicating liquors to their national beverages.

Then, the hon. gentleman dwelt at some length upon the character of the Spanish people. His object was quite apparent. He said:

> Spain, where hatred, where vendetta, where the bitterest passions of humanity are in full flame, is the most temperate country in the world.

I have read something about the character of the Spanish people. I have read books by English ladies and English gentlemen who have travelled in Spain, who have lived in Spain, and know the character of the people, and who, not being of the same religious faith as the Spaniards, I suppose, would not be prejudiced in their favour. Yet these authors have borne testimony to the splendid character of these people in many respects. Of course, they have the warm southern blood, they are quickly excited to anger, and apt to resent an insult or injury, fancied or otherwise. Yet they are quick to forgive, and when they forgive they forget. But we are told concerning the Spanish people that they are hospitable to a degree, that their family life is pure and sound, and in many cases beautiful, and that they are not only temperate but honest—bars and locks are practically unknown in that country. In Spain the poor are not despised, nor is wealth worshipped. The beggar in the streets of Madrid, according to the books I have read, does not ask for alms in an abject or servile way, but as a brother in distress would ask his brother for help; and if he has to be refused, the man who refuses him apologizes for not being able to help his brother in distress. Should we not be justified in saying that the temperate habits of the people have much to do with their character in these respects? I think we should. Perhaps the hon. member for

St. Hyacinthe (Mr. L. J. Gauthier) has taken his knowledge of the character of the Spanish people from George Borrow, Ford, and others, who, it is said, dipped their pens in gall and wormwood, who went to Spain strongly prejudiced, and wrote for the purpose of maligning the people of that country. We are told by men who have travelled in Great Britain—and I believe it is unfortunately true—that alongside of great wealth in that country there is abject, degraded, hopeless poverty. Might we not be justified in attributing that condition of things to the unfortunate intemperate habits of the people? It might perhaps take some courage to speak of the Spanish people in the way that my hon. friend from St. Hyacinthe spoke of them, for the Spanish people have practically no votes in Canada; but I did not think my hon. friend from St. Hyacinthe possessed that kind of courage. The hon. gentleman also spoke of the people of his province in no complimentary terms, because at some elections there recently they voted in large numbers for the prohibition of intoxicating liquors. He told us that they were assembled in the churches before they went to the polls and were made to swear how they would vote, and then went to the polls like sheep. I do not think the people of the province of Quebec are that kind of people; I do not think they would be such poltroons as to submit to dictation of that kind. But the other members from the province of Quebec, are quite able to take care of the reputation of their own people. I believe the member from St. Hyacinthe has maligned the people of his own province, and I believe that years hence the statement made by the hon. member may be quoted against the character and methods of the people of that province.

Mr. MORPHY: Has the hon. gentleman made any inquiry to find out whether the hon. member for St. Hyacinthe told the truth or not?

Mr. HUGHES: No, I have not made any inquiry, and I am not denying the statement; but I say that I do not believe it to be true, knowing what I know of the people of Quebec. The hon. member for St. Hyacinthe himself does not seem to be afraid of coercion being brought to bear upon himself, when he openly gave voice to such sentiments as he did in this House. And so I do not think there is coercion of that kind practiced on the people of that province.

The hon. gentleman (Mr. Gauthier) said that prohibition is frequently followed by an increase of intemperance, and that it was so followed years ago in Great Britain. That is a strange statement to make. Why in the world should he oppose legislation of this kind? Why should the distillers and brewers of Ontario be so opposed to it, if it will promote intemperance, if it will promote the greater consumption of alcoholic liquors? The hon. gentleman from St. Hyacinthe, I am inclined to think, proved more than was necessary.

Mr. EDWARDS: Surely the hon. member is not trying to say that the hon. member for St. Hyacinthe wants to see an increase of intemperance? Or is that his argument?

Mr. HUGHES: I am making my own argument.

Mr. EDWARDS: And making a mighty poor fist of it.

Mr. HUGHES: It does not seem to please my hon. friend from Frontenac (Mr. Edwards), and I am sorry for that. I do not know what object he has in view.

We have been told that legislation of this kind is an infringement upon personal liberty. I have read a statement made by Sir Victor Horsley and by others to the effect that a very large number of children are born into the world mentally and physically defective by reason of the intemperance of their parents and grandparents. Investigations were made some few years ago by Dr. MacNicholl of New York among the school children in that city, and he found that a large number of the mental and physical deficiencies of those school children were due to the excessive use of alcohol by parents or grandparents. I saw an article in a magazine a short time ago which had been written by a medical gentleman connected with recruiting in Great Britain, in which it was stated that the number of persons presenting themselves for examination for the army who had mental and physical defects was very large indeed—almost startling. The writer referred also to the large number of persons whose mental and physical defects were such as to cause them to refrain from presenting themselves for examination. Considering also the number of females born under similar conditions, it will be realized that the number of children that are born into the world mentally and physically unable to

take their proper place in life on account of indulgence in alcohol on the part of their parents is exceedingly large. What about the personal liberty of these people? Born under those conditions and handicapped in all the relations of life, are they not to be considered, while the personal liberty of a few must be considered for the sake of the self-indulgence of self-gratification which the use of intoxicating drinks may give them? Should the personal liberty of these last be considered, while a large number who are ruined or injured during their whole lives are not to receive any consideration at all? This is a matter well worthy of the consideration of the members of this House, well worthy of the consideration of the people of this country. This is one of the things that is giving voice to the overwhelming sentiment of the people at this time in favour of legislation along the lines suggested in the resolution of the hon. member for Vancouver and in my own resolution, and embodied, I hope, in the Bill which the Minister of Justice introduced today. I do not know how far that Bill goes; we shall know better when it comes to be considered in committee. It adopts, I think, in part, the resolution which I have on the Order Paper; that will be a forward step in the matter of legislation along prohibitive lines. It would be well, I think, if the resolution introduced by the hon. member for Vancouver were adopted by the Parliament, but if that is not thought desirable, and if we go the length of giving full effect to prohibitive legislation in the provinces, that will do much to advance the cause in Canada.

A good deal has been said about personal liberty in connection with this matter, but we cannot have civilization unless the people surrender a good deal of their personal liberty. The only person I ever read of who had personal liberty in its entirety was Robinson Crusoe, and he did not seem to be very much pleased with it, because he got away from it as soon as he possibly could; he got back to civilization and surrendered a good deal of his personal liberty. It is well known to every member of this House that nearly all legislation infringes more or less upon the personal liberty of the individual. The best legislation is that which has for its aim the greatest good for the greatest number.

11 p.m.

The material side of this question is also to be considered. When this war is ended, a heavy burden will press upon the people of this country—the burden of the interest on the war debt. We have also to make provision for the men who come back from the front maimed and broken in body and in mind. They will have to be generously provided for. The dependents of those who fall in battle—those who have given the full measure of their devotion to King and country—will also be generously provided for, particularly if they are in needy circumstances. Generous consideration must also be had for those who return perhaps not broken in health, but who have gone into the danger zone and offered their lives for the Empire and civilization. This will entail a burden upon the country that will be felt for years to come. It has been proved by statistics that the liquor bill of this country is about $100,000,000 a year. But that is only a part of the bill. The inefficiency that the drink habit causes, the shortening of life and the weakening of the system that it brings about, the prisons, reformatories and jails that have to be supported on account of the trade in alcoholic drinks—all these things add at least another $100,000,000 to the cost. Can the country stand this double burden? If there is any question as to what should be sacrificed, certainly the drink habit should be sacrificed. Even men who indulge in moderation should surely be willing to forego the self-indulgence and self-gratification and to make small sacrifice in order to enable the country to deal generously with those men who have to be considered and who ought to be considered. If anything is to go it should be the expenditure on alcoholic liquors.

Mr. MORPHY: Would the hon. member object to the men in the trenches, up to the knees in water, being furnished with liquor, that is, those accustomed to taking it in peace times?

Mr. HUGHES: If the medical men and others in charge of the troops at the front think it advisable, for the good of the men's health, to take the responsibility, I think they would be justified.

For all these reasons, I think the Government is more than justified in taking into consideration the overwhelming sentiment throughout the country at the present time. It is a step that will meet with general approval, and I trust that the Bill, which was submitted to the House this afternoon by the Minister of Justice, will go far enough to meet the wishes of the great majority of the people. If it does, the

Government will deserve the commendation of the people; if it does not, it may perhaps be improved in Committee. I am sure it is legislation that will meet with the support of a large majority of the members in this House.

Mr. A. A. McLEAN (Queens, P.E.I.): Since the resolution now before the House was placed upon the Order Paper, the question has assumed a new phase, by the introduction of the Bill this afternoon by the hon. Minister of Justice. The Bill is entitled:

An Act in aid of Provincial Legislation prohibiting or restricting the sale or use of intoxicating liquors.

My hon. friend from Kings (Mr. Hughes) asks this House to agree to a resolution requesting the Imperial Parliament to amend the British North America Act, so that the Provincial Legislatures would have the power to prohibit the introduction of intoxicating liquors from outside. Now, my hon. friend has not spoken on his resolution at all; he has simply spoken about the sobriety of the people of Turkey and of Spain, and he has made an attack upon the hon. member for St. Hyacinthe (Mr. Gauthier) who honestly believes that it would not be in the interests of the people of his constituency to pass a prohibition Act. But my hon. friend has not made any remarks as to how he proposes to have the British North America Act amended. Since the referendum in 1898, which was referred to by the hon. member for Bonaventure (Mr. Marcil), public sentiment in this country has changed to a very great extent. The hon. member for Bonaventure stated that he himself voted at that time against prohibition, but that since then he had changed his mind. I think, Mr. Speaker, that from one end of this country to the other you will find that public sentiment has changed a great deal since 1898. Men who then voted against the introduction in this House of a prohibition Bill, and who voted against the resolutions which were introduced from 1882 to 1889, will to-day vote in favour of a prohibition measure. Evidence of that was very amply given by the hon. member for Bonaventure. He read a great deal of correspondence which had taken place between him and the members of the Temperance Alliance and others, and that correspondence furnished ample evidence to this House and to the people that if this question of prohibition was submitted by way of referendum to-day it would meet with the over-whelming approval of the people, and that even in the province of Quebec, which gave a majority against prohibition in 1898, the majority would to-day be in favour of it.

It has been stated by some members who have spoken that this is emotional legislation, that this legislation is being asked for on sentimental grounds. It may be true that the people are asking for it for sentimental reasons, but I do not think that that is any argument against the introduction of such legislation. As I have said, the sentiment of the people throughout Canada to-day is in favour of prohibition. It has also been stated that legislation of the kind proposed would interfere with the liberty of the subject, that the liberty of the individual would be encroached upon; but if you look at the legislation which has been passed in this House, and in the provincial legislatures of this country in recent years you will find that there has been a good deal of encroachment upon the liberty of the subject. Take the several Acts relating to the liability of employers to their employees; these involved a very drastic step. Years ago it would have been considered legislation which a socialist, or an anarchist, would ask for, but to-day it is legislation which the whole of the people agree is proper and in the interest of the workmen and of the employers. Take the case of the province of Prince Edward Island, where, in 1875, a compulsory land Act was passed. Years ago the British Government gave free grants of land to a number of men who hung around the court, giving sixty-seven townships without any consideration whatever, and when the people came out from the Old Country and found that these lands were not their lands, that they were in the hands of absentee landlords, what did they do? They raised an agitation for a compulsory sale of these lands to enable them to hew out homes for themselves. That agitation was kept up for a great many years. We were told in Prince Edward Island that the legislation would be impossible to pass, that it was too drastic, that it was encroaching upon the liberty of the subject and that it was such legislation as never had been passed in any British Parliament. That was the argument, but nevertheless the Legislature of Prince Edward Island took upon itself to pass that legislation compelling landlords to sell their lands. It was enacted into law and

the landlords asked the British Government to veto the Act but the British Government held that the Legislature of Prince Edward Island had power to pass it. The lands were brought under that legislation and the people of Prince Edward Island obtained by virtue of the powers of that Act free lands with the result that there are no landlords in Prince Edward Island to-day. The same thing applies to Ireland. In that country landlordism was virtually abolished. All the land in Ireland was practically owned by a few landlords in England. Following the example given by Prince Edward Island, the British Parliament, in 1885, passed a law taking away the rights of Irish landlords to their lands upon a certain valuation and compensation. The same cry was raised then, that it was an encroachment upon the liberties of the subject, but the highest court in the British realm decided that the Act was constitutional and to-day we have not only in Ireland, but also in Scotland free lands for the people. There are other measures of a similar kind which I might speak of and which are all measures in the interests of the people.

A few years ago a very drastic measure was passed by this Parliament providing that opium should not be sold openly in drug stores, or other places, without a license. To-day, we find that that article cannot be procured except upon a doctor's certificate in any part of Canada. Those people who come here and say that it is against the interests and the will of the people to pass this Act are taking a position against the interests of the people. In 1884 this Parliament passed a resolution in the following terms:

> That the object of good government is to promote the general welfare of the people by a careful encouragement and protection of whatever makes for the public good, and by equally careful discouragement and suppression of whatever tends to the public disadvantage.

That resolution was passed by the unanimous vote of this House. After the resolution had been passed a plebiscite was taken in 1898 and in the province from which I come the great majority of the people voted in favour of prohibition. In consequence of that vote, the Legislature of Prince Edward Island, in 1900, put upon the statute-book a prohibition Act, the first and only prohibition Act in Canada. It has been said, and you will probably hear it said in the city of Ottawa and elsewhere, that the prohibition Act passed in Prince Edward Island in 1900 has not been observed and that it has done more harm than good. I wish to tell you, Mr. Speaker, and this House, that the Prohibition Act passed in Prince Edward Island has done a great deal of good for that province and has been the means of driving out of the province the sale of intoxicating liquor. There is no doubt that in the country parts of the province there is not a drop of liquor sold and in consequence of the passing of that Act I believe that the wealth of the country has been largely added to. Since 1900 we have progressed very rapidly and I believe there is at least three times as much wealth in that province as there was in the year when the Act was passed. As it is I attribute a good deal of it to the fact that this prohibition Act was passed and that it has been properly enforced.

There was only one matter connected with this Act which had a detrimental effect and that is that liquor could be imported into the province; at any rate, it was thought it could be imported into the province. In the first Act passed in 1900 absolute prohibition was provided for, but when the Act came up here to the Governor General in Council, the Government of the province were informed that it would be necessary to amend the Act by providing that it should not interfere with sales made by people in Prince Edward Island or people living outside of the province. Section 37 of the present Act, which has been consolidated since, was then put upon the statute-book in 1901 in the following terms:

> 37. While this Act is intended to prohibit and shall prohibit transactions in liquor which take place wholly within the province of Prince Edward, except as otherwise specially provided by this Act, and restrict the consumption of liquor within the limits of the province of Prince Edward Island, it shall not affect and is not intended to affect bona fide transactions in liquor, between a person in the province of Prince Edward Island and a person in another province, or in a foreign country, and the provisions of this Act shall be construed accordingly.

That was put upon the statute book because the Government of Canada thought that the legislature of the province of Prince Edward Island had no power to deal with this matter. Although the legislature did make that amendment to the Act, I think they had absolute power to deal with the question. You will notice, Mr. Speaker, that the power or authority which the legislature of any province has, is given to them under and by virtue of the British North America Act. When the

provinces entered into Confederation in 1867, they gave up all their rights to the British Government, the British Parliament gave us a new constitution, and that constitution is incorporated in the British North America Act, 1867. Section 92 of that Act deals with the powers of the provincial legislatures, and among the powers which are conceded to the provincial legislatures is the power to deal with:

Shop, saloon, tavern and auctioneer and other licenses in order to the raising of a revenue for provincial local or municipal purposes.

Section 91 of the Act deals with the powers of the Parliament of Canada, and one of the powers which is granted to the Parliament of Canada is that of dealing with "criminal law and all subjects relating to the peace, order and good government of Canada."

I believe that we have power to pass a law in Prince Edward Island to-day that no person living in that province can have liquor in his or her possession without a license. Why could we not pass such a law as well as we could pass a law here that no person should have opium in his possession? As we have power to deal with intoxicating liquors, why could we not pass a law that no person should be allowed to introduce or take into a province intoxicating liquors without a license? Since the Canada Temperance Act was passed—and that was a prohibitory law—several references have been made to the Judicial Committee of the Privy Council. The constitutionality of the Canada Temperance Act came up, and it was decided that the Dominion Parliament had power to deal with prohibition on the ground that it was a matter relating to "the peace, order and good government of Canada," and that the Provincial Legislature had power to deal with licenses because that matter came under the authority conceded to the Provincial Legislatures by section 92 of the British North America Act. The case best known is that of Russell vs. The Queen, in which the decision was as follows:

The general scheme of the British North America Act with regard to the distribution of the legislative powers and the general scope and effect of sections 91 and 92 and their relation to each other, were fully considered and commented on by the board in the case of the Citizens' Insurance Company vs. Parsons appeal cases, page 96; according to the principle of construction there pointed out, the first question to be determined is whether the Act now in question falls within any of the classes of subjects enumerated in section 92 and assigned exclusively to the legislatures of the provinces. If it does, then the further question would arise, viz, whether the subject of the Act does not fall within one of the enumerated classes of subjects in section 91 and so does not still belong to the Dominion Parliament. But if this Act does not fall within any of the classes of subjects in section 92, no further question will remain, for it cannot be contended, and indeed was not contended at their Lordships' bar, that if the Act does not come within one of the classes of subjects assigned to the Provincial Legislature, the Parliament of Canada had not by its general power "to make laws for the peace, order, and good Government of Canada," full legislative power.

According to this decision, then, although the Provincial Legislatures had power to deal with prohibition, the Dominion Government had also power to deal with the question, and on this ground, namely, under the authority given to them under section 91 of the British North America Act. A few weeks ago a question came before the Privy Council in England, dealing with insurance and on the 24th of February last the Privy Council decided that section 4 of the Insurance Act was ultra vires. That section deals with licensing provincial insurance companies, and foreign companies doing business in Canada. In the course of that case the question of the right of this Parliament to pass a prohibitory law came up, and as the decision has not yet been published it might be of interest to the House if I read it:

It must be taken to be now settled that the general authority to make laws for the peace, order and good Government of Canada, which the initial part of section 91 of the British North America Act confers, does not, unless the subject-matter of legislation falls within some one of the enumerated heads which follow, enable the Dominion Parliament to trench on the subject-matters entrusted to the Provincial legislatures by the enumeration in section 92. There is only one case, outside the heads enumerated in section 91, in which the Dominion Parliament can legislate effectively as regards a province, and that is where the subject-matter lies outside all of the subject-matters enumeratively entrusted to the province under section 92. Russell vs. the Queen (7 A. C. 829) is an instance of such a case. There the court considered that the particular subject matter in question lay outside the provincial powers. What has been said in subsequent cases before this board makes it clear that it was on this ground alone, and not on the ground that the Canada Temperance Act was considered to be authorized as legislation for the regulation of trade and commerce, that the Judicial Committee thought that it should be held that there was constitutional authority for Dominion legislation which imposed conditions of prohibitory character on the liquor traffic throughout the Dominion. No doubt the Canada Temperance Act contemplated in certain events the use of different licensing boards and regulations indifferent districts, and to this extent legislated in relation to local institutions. But the Judicial Committee apear to have thought that this purpose was subordinate to a still wider and legitimate purpose of establishing a uniform system of legislation for prohibiting the liquor traffic

throughout Canada, excepting under restrictive conditions. The case must therefore be regarded as illustrating the principle which is now well established, but none the less ought to be applied only with great caution that subjects which in one aspect and for one purpose fall within the jurisdiction of the provincial legislatures may in another aspect and for another purpose fall within Dominion legislative jurisdiction.

The hon. gentleman who moved this resolution has not given any reason why we should appeal to the British Parliament for an amendment to the British North America Act. I think the decisions I have read, and the fact that the legislatures of the different provinces have passed what are practically prohibitory laws without any let or hindrance, is evidence enough that the provincial legislatures have power to pass prohibitory liquor laws. I do not think any man has any doubt of that. I should like to know what doubts are in the mind of the hon. member for Kings (Mr. Hughes). What reasons can he give why we should appeal to the British Parliament for an amendment to the British North America Act? Even if the Bill which has been introduced by the hon. Minister of Justice does not pass, or should not be considered necessary, we could still achieve our object in another way. We could pass an amendment to the Criminal Code, making it criminal for any person to introduce liquor into any province where the sale of liquor was prohibited. I think by virtue of section 91 legislation of that kind could be introduced, and a heavy penalty provided for a violation of the Act. That is in fact what the Minister of Justice is introducing, although in another form. The power by which we can pass such a Bill as the minister has introduced has been conceded by the Privy Council in many decisions. As the hour is getting late, I beg to move the adjournment of the debate.

Mr. GRAHAM: I suppose this means that the two resolutions will be disposed of at one time?

Sir ROBERT BORDEN: Yes, I suppose so, or, as a matter of fact, the Bill which has been introduced by the hon. Minister of Justice will afford an opportunity for any further debate on the subject.

Motion agreed to, and debate adjourned.

CAPITAL PUNISHMENT STATISTICS.

Mr. ROBERT BICKERDIKE (Montreal, St. Lawrence) moved:

For a return showing:

1. All persons, male or female, who have been capitally convicted in Canada, and in each province, for each year from the 1st of July, 1867, to the 1st March, 1916, specifying the offences, and whether and how the sentences were carried into effect by execution, or otherwise; with the name of the convicts, dates of conviction, crime of which committed, sentences passed, judges by whom sentenced, and how dealt with.

2. All convicts, male and female, who have been reprieved from the execution of capital sentences passed upon them during the above-mentioned period, with the name of convicts, dates of conviction, crime of which committed, sentences passed, by whom sentenced, sentences commuted, and to what.

3. Showing all persons in Canada and each province, convicted during the above-mentioned period, of murder or manslaughter, whose sentences have been mitigated, or who have received a free pardon, together with a statement of the offences of which they were severally convicted, with the name of convicts, dates of conviction, nature of offence, sentences and extent of mitigation of sentences and dates.

4. All instances, during the above-mentioned period, in which appeal has been made on behalf of the persons convicted of capital offences, to His Excellency the Governor in Council, for the exercise of the Royal prerogative of pardon, or mitigation of sentences, with the name of convicts, dates of conviction and place, crime of which committed, sentences, dates of appeal, and the result.

Mr. DOHERTY: Does the hon. member intend to speak in support of his motion, because I would like to say a word about it?

Mr. BICKERDIKE: I do not wish to discuss it at all. I presume there can be no objection to furnishing the information asked for.

Mr. DOHERTY: I would like to point out to the hon. member some objections, of which I think he will recognize the force, with regard to the information for which he asks. I may say also that I think it is now two years ago since the hon. member for Laval (Mr. C. A. Wilson) made a very similar motion and, after some conference with him, we brought down a return giving, what he considered to be satisfactory and sufficient information for his purpose. I would point out to my hon. friend that he is asking us now to revive the history of every unfortunate person who may, at any time, have been convicted of a crime of this kind and sentenced to capital punishment. In fact, I think it covers even other sentences, and asks for all the details, the nature of the crime, etc. Well, any one whose sentence has been commuted, and who has served his sentence, or any one who has had a pardon granted to him, has purged his offence, and I cannot see what interest the hon. member can have in having all these names put upon a return and spread

before the public again. There are not only the people who may themselves still be alive, but there are the relatives of those unfortunate people. If the hon. gentleman wants to know the number of people who were so sentenced and what happened and how each sentence was disposed of, I would be quite prepared to give that so far as it may not have been covered, although I believe it was covered by the return on the motion of the hon. member for Laval a year or two ago. I think the hon. member for Laval will remember the circumstances. I believe that a return was brought down which was satisfactory to him at that time, although his original motion asked pretty much for the details asked for here. The hon. member for St. Lawrence will realize at all events the force of the objection to our re-editing now, practically for publication, the history of the misfortunes of all the people referred to in his motion. If my hon. friend would so modify his resolution as to make it a matter of statistics, because it would not seem to me to be a matter of importance that we should know the particular individuals, it would be better, and, if on verification it was found not to be covered by the motion made by the hon. member for Laval, I would have no objection in letting it pass.

Mr. BICKERDIKE: That would be quite satisfactory to me, because I do not wish to go into any details of family troubles. My object was to know exactly how we stand on this question, because I think we have not been hanging as many people as we did in years gone by. If that is correct, I want to know the reason for it, and I think I could get the information from the Minister of Justice. He has stated just what information I want.

Mr. DOHERTY: I shall be very glad to consent to such a return as will cover that.

Motion dropped.

CANADIAN EXPEDITIONARY FORCE.

Mr. A. K. MACLEAN (Halifax) moved:

For a return showing the date when each Regiment, C.E.F., was authorized since August, 1914; when mobilization was commenced, when mobilization was completed in each case, and when each Regiment sailed for overseas.

Sir ROBERT BORDEN: I would like to consult the Chief of General Staff before consenting to the passage of this motion. If my hon. friend will let it stand, I think that any information that can be brought down can be brought down without a formal motion.

Motion stands.

ABOLITION OF CAPITAL PUNISHMENT BILL.

Mr. ROBERT BICKERDIKE (Montreal, St. Lawrence) moved the second reading of Bill No. 2, to amend the Criminal Code. He said: At this very late hour, I will endeavour to be as brief as possible. I am afraid that I have not that sympathy of the Minister of Justice that I had hoped for, and I think that, if I had introduced a Bill having for its purpose the saving of the lives of horses or dogs or even hogs, I might have received more sympathy from some of my hon. friends than I am getting in connection with this Bill which is for the purpose of saving human lives that are not considered very valuable at the present time. There is one feature that I think I did not bring to the attention of the Minister of Justice on the last occasion on which I spoke, and that was this:

There are a number of murderers to-day walking the streets of Montreal and of other cities that should be in the penitentiary, and would have been in the penitentiary if my amendment had been accepted when I introduced it in this House a few years ago. There is no question in my mind—and I think this will appeal to the legal fraternity especially—that a jury will not convict nowadays with the scaffold staring them in the face, unless they believe beyond the shadow of a doubt that the person accused is guilty. I do not wish to be unfair to the Minister of Justice; he certainly has been very fair to me on some occasions. I think he is perfectly sincere. I believe he looks on hanging as a kind of holy sacrament. For I have known the man so long, and know him to be sincere in nearly everything he has undertaken; but I do not think he would be happy unless he hanged a few men every year. That reminds me of a story I read the other day. A sailor was cast away in the South Pacific. He escaped from the wreck alone in an open boat and drifted along. In the morning he found his little boat surrounded by sharks, but he beat them off and succeeded in landing on an island. This island was populated entirely by blacks. He did not understand their language but supposed they were cannibals, and was not sure that it would not have been as well for him

to have furnished a breakfast for the sharks in the morning as to be gobbled by the blacks in the afternoon. But he found that the people were not cannibals. They treated him fairly; they took him to the interior of the island, and there an execution was taking place. When he looked up and saw what was going on, he exclaimed: "Thank God, I have been cast ashore in a Christian land." He looked upon hanging as a sacrament.

I take it to be the duty of this House to deal with all matters affecting the good of the citizens of this country, especially so when the question is not a political one. It is the duty of this House to deal with fundamental questions; and I know of nothing more fundamental than human life. And I know nothing more wicked or brutal than to take life unnecessarily, even when it is done by the state. No matter how much some members may differ with me on this subject, I think I am safe in saying that every member must contemplate with abhorrence punishment by death—I think even the Minister of Justice will agree with me there. The question is, whether the abolition of capital punishment would result in benefit to the country, or whether the retention of the death penalty offers greater security to society. Capital punishment has been abolished in the conscience of the people of Canada; it has been abolished except for the very poor man who cannot procure the necessary legal talent to plead for them. As things work out in practice, we can only convict a few out of the number of murderers, and of those that are condemned, only a small percentage are executed; and these, I regret to say again, are the poor and unfortunate, who have no friends, no pull, political or otherwise, and no money to employ legal talent to defend them. It is a well-known fact that occasionally an innocent man has been hanged—that was admitted by the Minister of Justice on the last occasion when we discussed this matter. I think I am safe in saying that capital punishment is in flagrant contravention of the teachings of our Lord and Master, a usurpation of power that no customs can justify; a rebellious defiance of the good Master who came upon this earth to teach mercy, truth and forgiveness.

There was a time when every lord of any account in England had criminal jurisdiction over the people on his estate, and as evidence of his power the gibbet was erected for the hanging of the men and the pond dug alongside for the drowning of the women, and the whole countryside was decorated with the rotting bodies of the unfortunate peasantry. During the period of the Hanovarian kings, deep distress came which fell with awful severity upon poor folk. A man, if he was a man at all, could steal to keep his loved ones from starving, and the so-called wise ones of that day knew of no way to cope with the evils of the time but to increase the number of offences for which capital punishment was decreed. It grew so bad that there were not less than 200 offences for which people might be hanged. One woman was hanged who tried to steal a piece of flannel in which to wrap her baby, born after the father had been seized by the press-gang—for conscription was in force at that time. The man was seized, dragged away from his home, and the baby was born after he had been taken to fight the battles of England on board a man-of-war. The poor woman undertook to steal a piece of flannel to make a covering for her baby; and she was tried, convicted and hanged. They are still hanging children in England in 1914, they hanged a school boy of eighteen years of age. After the Gordon riots children were hanged; and in 1830, at the time of the agrarian riots, no less than three hundred prisoners were sentenced to capital punishment. A relative of a friend of mine saw seven men pass her house on their way to be hanged for the stealing of one sheep—the lives of seven men for the life of one sheep. The state of the law seems to me so awful that I cannot understand how it can remain for a single day. The life work of a man like Samuel Romilly was unable to effect a change, but that change has been brought about and the hanging of men for stealing has become as obsolete as the thumbscrew, the boot and other instruments of torture. The only survival we have of these cruel punishments is hanging for murder, rape, and high treason—cruel relics of a cruel age. This is the skeleton of the former two hundred crimes, for which the penalty was hanging—and the Minister of Justice must hug that skeleton. Lord Brougham, we are told, "took the devil out of the indictment"; but he did not take the devil out of the criminal law. What justification can there be for the continuation of this brutal punishment, which brutalizes the public as well as the officials who have to carry it out?—brutalizes the public, as was recognized by the fact that

public executions were abolished, and so brutalizing upon officials that the man who acts as public hangman becomes a public outcast. No doubt the House will remember the conversion of Radcliffe, the hangman, which was published in the Maritime Baptist of 9th October, 1912. Criminologists all agree that the certainty, and not the severity, of the punishment is the deterrent of crime. Jurists to-day hesitate to convict; some Ministers of Justice hesitate to recommend that the death sentence be carried out; some Governors in Council to-day hesitate to sanction hanging. Evidence from countries where capital punishment has been abolished shows that murders have decreased, and not increased, as a result. Punishment, I claim, should be reformatory and not vindictive. And how can a man be reformed when he is hurried into eternity without time for repentance. We live to-day under the gentle rule of the Gospel, and I claim that according to that Gospel we have no license to have capital punishment.

Henry VIII of England sought to repress criminal tendencies by prescribing the death penalty for the most trivial offenses, such as theft and poaching, and by making a public spectacle of every execution inflicted in pursuance of law. During his reign of twenty years the death-cart bearing condemned men rumbled almost daily through the public streets to the gibbet, and the total number of executions reached the appalling figure of 72,000. Of this number not less than 70,000 were executed for larceny. Notwithstanding the severity and the publicity of the penalties applied, property rights were never as insecure in England as they were during the reign of Henry VIII, while other crimes flourished proportionately. Instances are recorded, moreover, where many people, who viewed these executions conducted so liberally by Enggland's most bloodthirsty King, were later convicted of capital crimes, notwithstanding their opportunity to witness daily the infliction of the most severe punishment upon other offenders. In fact, the entire abandonment in recent years of public executions in this country, as in others, must be attributed directly to the realization upon the part of the people that applications of the death penalty in city squares, or court house yards, have had the opposite effect from that which they were intended to produce.

During last session, when this question was being discussed, I drew attention to the case of a man who had been hanged in British Columbia for the shooting of a policeman whom he did not shoot. I claim that capital punishment and the Christian religion can no longer march shoulder to shoulder. We have come to the parting of the ways; the death penalty and Christianity can no longer go hand in hand. The hon. Minister of Justice, on the occasion to which I refer, claimed that it was the law of the land; that the man was found in bad company, and, according to the law, was equally liable as the man who did the shooting. The right hon. leader of the Opposition concurred in this view. When two such eminent jurists agree on a question of law, I would not dare to call it in question, but the fact remains that this man was hanged for killing a man that he did not kill. It may be the law, but if it is, it is a bad law, and should be immediately erased from our criminal code. I am sure, Sir, that the world is much better to-day owing to the fact that the law was not always in force. If it had been we would have been deprived of one of the greatest missionary preachers that the world ever possessed. Why, Sir, if such a law had been in force in the early days the great Apostle Paul himself would have been hanged for assisting at the murder of the martyr St. Stephen.

In the British Columbia case the Minister of Justice read the man's heart, searched his soul, pierced the secret chambers of his mind, and says that he went out with murder in his heart. He found the man bad, all bad, and ordered him hanged; and I wish to give the Minister of Justice credit that he is manly enough to take credit for his action in this case, and not only to take credit for it, but to make a boast for having done so. He is evidently proud of it. Nevertheless, this man's soul was ushered into eternity because he was poor. The Minister of Justice will agree with me that if that man had been wealthy he might not have been hanged.

Mr. DOHERTY: Most assuredly not. I am sure that the hon. member has no conception of the gravity of what he is saying. After stating that I did this, he says that it was done because the man was poor. I think that if the hon. gentleman will give the matter a moment's thought, he will surely change that statement.

Mr. BICKERDIKE: There is one thing that I am positive about: that men are being hanged in Canada to-day because they are poor, and for no other reason.

Mr. STEVENS: I happen to know the case to which the hon. gentleman refers. I may say that a lawyer made a trip to Ottawa, pleaded the appeal to the Supreme Court, and never received a dollar for it.

Mr. BICKERDIKE: That was because the man was poor.

Mr. STEVENS: Not at all. The expenses were more than $600 in this very case.

Mr. BICKERDIKE: Will the hon. gentleman tell me if he knows the case of a single wealthy man who was hanged in Canada?

Mr. STEVENS: Plenty of them.

Mr. BICKERDIKE: I challenge the hon. member or the Minister of Justice to give me the name of one wealthy man hanged in Canada during the last fifteen years.

Mr. DOHERTY: Will the hon. gentleman give me the name of one wealthy man convicted of murder and sentenced to be hanged, whose sentence was commuted?

Mr. BICKERDIKE: Yes, if the hon. gentleman wants it.

Mr. W. H. BENNETT: I can give the hon. gentleman an instance from the county of Simcoe. A man named Carruthers was hanged there; he was a well-to-do farmer. Two or three K.C.'s were employed to defend him; an enormous amount of money was spent in his defence.

Mr. BICKERDIKE: The minister challenged me to give one name; I mention the case of a man named Shortis, of Valleyfield.

Mr. DOHERTY: That was before my time.

Mr. BICKERDIKE: I am not blaming the hon. minister for this. I do not think he is a bit worse than his predecessors; perhaps he is not as bad as some of them. In regard to the case to which I was referring, most people at that time thought, and still are of the opinion, that this man's sentence ought to have been commuted to imprisonment for life. The Minister of Justice certainly would not have suffered any loss of dignity if he had done that. But he did not do so. He made doubly sure, and did what was done in some other countries fifty years ago—gave the prisoners the benefit of the doubt and hanged them both.

Capital punishment has been enforced among all nations from the earliest times. The agitation against it, which began in the eighteenth century and continued throughout the nineteenth, led to its abolition in many European countries and in several states of the United States. Michigan abolished capital punishment in 1846, Rhode Island in 1852; Wisconsin, 1853; Maine, 1887; Kansas, 1907; Minnesota, 1911; Philippine Islands, 1911; Washington, 1913; Oregon, 1914; North Dakota, 1915; Tennessee, 1915; South Dakota, 1915. The minister will see, therefore, that the states of the United States are gradually one after the other, abolishing capital punishment. Any country that retains the death penalty on its statute book in this Christian era has simply legislated the word "not" out of the commandments. Public bodies are at the present time passing resolutions all over this country demanding this reform. Bodies of organized labour are passing resolutions all over the Dominion asking that the death penalty in Canada be abolished. Within the last three weeks a gathering of several thousand people in Ottawa passed a resolution asking that capital punishment be abolished in Canada.

12 m.

And they are going further; they are teaching their children to sing the new song, they are hanging men in Canada because they are poor. I know of sheriffs in the province of Quebec who are so conscientious over this matter that, in case they should be called upon at any time in the absence of the regular hangman to perform the duties of executioner, they have their resignations written out and are ready to hand them in to the authorities rather than become legalized murderers.

A very prominent statesman in the New York Legislature on one occasion suggested that Canada might well adopt what he claimed to be their more modern and humane system of getting rid of their criminals by electrocution. Now, Sir, can any man imagine discussing a humane method of taking his fellow man's life? This statesman claimed that the State of New York had adopted electrocution as a result of the onward march of Christianity and civilization, but I pointed out that, after all is said, the final result is much the same. In the olden days, it was true, the State of New York burned their criminals at the stake until dead, and to-day they burn them in the chair until dead, and this is upheld by some of these eminent jurists to be the advancement of Christianity and civilization.

Now, in Canada for three years, 1911, 1912 and 1913, there were sixty-five death sen-

tences. Thirty-seven of these were commuted, and twenty-eight of the really poor unfortunate, unreturned prodigals were sent into eternity. It will readily be seen by the above figures that capital punishment has been abolished in Canada, excepting for the really poor. When the Minister of Justice turned his thumbs up for the 37 cases, why did he turn them down for the poor 28? I think the Minister of Justice would have been better satisfied with himself to-day if he had turned his thumbs up in every case, and granted mercy to the poor pleading mothers and children who begged for mercy. The simple fact is that capital punishment increases the number of murders because of the reluctance of the average citizen to impose an irrevocable sentence upon his fellow man. The responsibility is too great, and the fear of depriving an innocent man of his life is too strong for the average juryman, so he compromises. But under capital punishment there is really no compromise. Either the man accused is guilty and must go to the gallows, or he is innocent and must be allowed his liberty.

Until we can be absolutely certain that the man on trial for his life committed the crime, with which he is charged, there is more of the element of injustice in capital punishment than in its abolition. We are all influenced more or less by our impressions, mental and physical. The occasional story, in the newspapers, which relates the ghastly mistake of justice whereby an innocent man is made suffer the penalty of the guilty, is familiar to everybody. Every error on the part of those entrusted with the carrying out of the law or its administration has its effect psychologically. It is only a few months since the daily press featured the story of the Kingston convict who was released from prison instead of another victim who bore the same name. That incident is impressed on the minds of many who may one day be called to sit in a jury box and hear arguments why the man in the dock opposite them should not be taken out and hanged.

We must admit that in many cases justice is not infallible. Under the life sentence system for capital punishment the juryman realizes that the accused, even if convicted, is still in a position to demonstrate his innocence, if innocent he be. He may direct his campaign for vindication as long as hope holds out. If guilty, the sentence safeguards society, and upholds the majesty of the law as effectively, if not more so, than the infliction of the awful and repulsive penalty of capital punishment. Capital punishment is unjust to the criminal, as it affords him no opportunity of reform; it is unfair to his family; it disgraces them, and robs them of their only means of support. Capital punishment is irrevocable, and makes no allowance for varying degrees of guilt; it is wrong in principle, and does not protect society.

The chief reasons advanced by people who believe that the State should punish murder with murder, just as in olden times it was customary to burn alive a man convicted of incendiarism, may be grouped under four different heads. The first to be considered is the ancient theory of retribution, and, secondly, the argument that the example afforded by the execution of the murderer will deter others from similar crimes. The third reason offered is the necessity of protecting society from its vicious members, and the fourth argument, which is included only by sufferance, is the extirpation of all capital offenders as a class.

That was tried in England, as my hon. friend knows, but did not succeed. There would have been very few Englishmen left if every man who had stolen anything had been hanged.

When the women of Canada get their rights, as they surely will at an early date, and contribute to making the laws; when the mothers of Canada get the right to vote, there will be no more legalized killing, and very many less murders.

It has been conceded by some of the most eminent physicians that any man committing a murder has an unbalanced mind at the moment. At the moment, at least, he is temporarily insane. He may be enraged through a sense of being wronged, or through kindred emotions, and is in no mood to weigh the results of his acts, or to take account of punishments confronting him. It is sad to believe that much of the prejudice in favour of the gallows may be traced to three discreditable sources: First, the spirit of vengeance, which surely does not properly belong to man; secondly, unworthy timidity, as if a powerful civilized community would be in peril, if life were not sometimes taken by the Government; and, thirdly, blind obedience to the traditions of another age. But rack, thumb screw, wheel, iron crown, bed of steel, and every instrument of barbarous torture, now rejected with horror, were once upheld by the same spirit of vengeance, the same

timidity and the same tradition of another age.

Capital punishment, though sanctioned by the letter of the old biblical law, is contrary to its interpretation in the light of Christianity.

During the debate on this question at a previous session, one honourable gentleman quoted from the Levitical law: "An eye for an eye, and a tooth for a tooth." But I honestly believe that that honourable gentleman will admit now that this law was abrogated nearly two thousand years ago. The Pharisees of that day taunted the Lord for not approving of that law, and also quoted the passage to back up their demands: "An eye for an eye, and a tooth for a tooth." But the answer came clear and sound: "Ye say an eye for an eye and a tooth for a tooth, but I say unto you, forgive." We are told to forgive our enemies as we hope to be forgiven. We hang a man at eight o'clock in the morning. That is how we forgive those who trespass against us; strangling a few of them every year; hanging them by the neck until they are dead, and sending their souls into eternity. Then we pray every afternoon in this House at three o'clock to the Father of Mercy to forgive us our sins as we forgive them who sin against us. Just think of it, Mr. Speaker, killing a man at eight o'clock in the morning, sending his soul into eternity, then in the afternoon at three o'clock praying to our Father in heaven to forgive us as we forgive. Sir, I shudder at times to think of what would happen quite a number of us in this House, and myself included, if the Lord would take us at our word.

Quite a number of the honourable members of this House undertook to criticise my amendment, but failed to find any good, sound, legitimate argument in favour of the retention of the death penalty, and they all with one accord began to make excuses. The hon. Minister of Trade and Commerce (Sir George Foster) probably introduced the most valid excuse that was made during the discussion, but after all, he simply said that he was not quite sure whether Canada was ready for this important change at the present time. Well, I am sure that it must now be quite clear to the minister's mind that the time has arrived when capital punishment in Canada must be abolished, and I am sure that no man realizes better than he does that capital punishment is based on revenge, it is dangerous to society, brutalizes human nature, and is not in accord with the modern theory of penology. Capital punishment is

the leprous outcroppings of the dark ages, and while I would not undertake to reply to that eloquent speech delivered by the Minister of Trade and Commerce, I would simply like to place opposite his remarks a quotation from the speech on this question delivered by the late Right Hon. John Bright.

The Right Hon. John Bright, illustrious English statesman and author, who lived and died in the 19th century, gave his valuation of death as a penalty during one of the last speeches he delivered from his place in the British House of Commons, in the following words:

> The real security for human life is found in a reverence for it. If the law regarded it as inviolable, then the people would begin also to so regard it. A deep reverence for human life is worth more than a thousand executions in the prevention of murder, and is, in fact, the great security for human life.
>
> The law of capital punishment, while pretending to support this reverence, does, in fact, tend to destroy it. If the death penalty is of any force in any case to deter from crime, it is of much more force in lessening our chief security against it, for it proclaims the fact that kings, parliaments, judges, juries and Ministers of Justice may determine when and how men may be put to death by violence, and familiarity with this idea cannot strengthen the reverence for human life. To put men to death for crimes, civil or political, is to give proof of weakness rather than strength, and of barbarism rather than Christian civilization.

So long as the state continues to kill its enemies, individuals are going to continue to kill theirs. In other words, by retention of the death penalty, the state sets a precedent for the commission of the very crime which it is trying to extinguish. Far from touching the sanctity of human life by its own conduct, organized government in prescribing the death penalty for certain crimes, declines to uphold the sacredness of individual existence.

Several hon. members delivered very eloquent speeches against my amendment, but all with one accord began to make excuses, and while I find no fault with the criticisms, none of the hon. gentlemen undertook to call down fire from heaven to burn up my Bill, root and branch. There was considerable eloquence against my amendment, but the speeches were entirely devoid of facts or argument.

The hon. member for Frontenac (Mr. Edwards) like all the other members who opposed my amendment, began by making excuses, and claimed that it would be more humane to hang a man than to send him to the Kingston penitentiary. The hon

member was no doubt in perfect good faith when he made that statement, but he must surely realize that if Kingston penitentiary is in such very poor condition as he represented it to be, and I believe his statement was correct, then Kingston penitentiary should be remodelled, so that that deplorable condition should no longer be allowed to exist.

The hon. member for Kingston (Mr. Nickle) also made a fairly good excuse for retaining capital punishment. He said he stood for capital punishment because England always stood for it, a very noble, patriotic and loyal sentiment, and while I wish to compliment the hon. member on his loyalty to the home land, he will surely agree with me that the time has come when this young nation should institute reforms suitable for our own people and our own land.

Capital punishment ranked high among the old barbarities, has been dragged through the centuries, and until now it still remains with us in Canada, and puts our civilization and Christianity to shame. To impose the death penalty is an inhumanity of the first magnitude, and to write the scaffold on to the penal code of Canada is to put on our statute books the black sign of revenge. It is not the age of civilization or christianity that has come into its own. It is the shameful record of the doctrine of retaliation. There is no process that can transform the taking of human life from wrong to right simply because it is done in the name of the State. Every time the State takes the life of a human being, every time the State hangs a man, it dips its finger in human blood, to write the word "not" out of the Ten Commandments. Capital punishment lessens the respect for human life, develops lawlessness in the criminally inclined, and in individuals of low mentality.

The hon. the Minister of Justice occupied some two hours in this House at a previous session when this question was being discussed, trying to find excuses, but was unable to introduce one sound argument in favour of his law as it stands to-day. The only argument, if it could be called an argument, in favour of his contention was, that he retained the death penalty on the statute books of Canada, and hanged men, because our forefathers did the same. But surely, if he has nothing else to back up his arguments than this, then he should burn the criminals at the stake as our forefathers did; he should torture them with rack and thumb-screw, and use all the ancient modes of torture simply because our forefathers did. That, surely is a very poor argument in the twentieth century; but he finally clinched all his excuses by making a statement for which he did not produce the proof, and that was, that he had divine sanction for hanging our poor criminals, and sending their souls into eternity.

I know the minister meant that or he would not have said so. But he did not produce the proof and I challenge him to do so. The minister has no such divine sanction, he has no mandate from Divinity to hang a man in this country. If he has such a mandate I think it should be placed on the table of this House so that members on each side might examine it, so that it may be incorporated in the archives of this country and so that generations yet unborn may realize that in 1916 the Borden Government possessed a Minister of Justice with a divine mandate for hanging a man. I would like to say with all due respect to the Minister of Justice that his extravagant utterances on this subject could only have been inspired by prejudice.

The minister says: for instance, take the case of self defence. Now, conceiving a man has the right under natural instinct and statutory laws to kill another in self defence, can any man establish self defence by shooting another who was known to be as helpless as if hand-cuffed with his hands behind his back? Then it is no better in principle for the state to do this than it is for a citizen. Society has no more right to trifle with the most sacred work of God than the individual has. The minister sends a young man hand-cuffed and guarded by the police, from a modern penitentiary of cement, granite, steel and armour plate, takes him out upon the gallows and hangs him until he is dead, for self defence. To kill a man, overpowered and harmless, is not an act of self defence for either a citizen or the state, but is an act of unrestrained power directed by revenge rather than reason.

What self defence is there in that: seven and a half million people against one poor unfortunate fellow locked up in a penitentiary? I should like very much to touch the heart of the Minister of Justice. I know it is difficult. I mentioned a case last session, and as I think he did not grasp it, I submit again that where the equities are equal, the element of mercy should hold the balance of power in deciding this question,—the awful suffering and remorse of the family of the victim of a homicide. Now, I agree that it is hard on the family of the deceased, and my sympathy goes out

to them. Whether his death was the result of an assassination or a justifiable homicide it is all the same to them. But, for that reason, would you have two widows, two sets of orphans, and two sorrowing parents? Why, the family of the prisoner are just as innocent of an offence as the family of the deceased, and are just as much entitled to compassion and sympathy. For example, a man commits murder. He probably got drunk, or was by environment made a criminal. He has a good wife and also children; a good mother and father, and a large number of relatives, all innocent people, and profoundly grieved that the offense was committed. The accused is tried, convicted, and sentenced to be hanged. The very thoughts of taking the life of the husband, father, brother and son breaks a multitude of hearts. The time has healed the wounds that grief for the victim rent, but as the days roll by and the time approaches for the execution of the prisoner, the heart of the mother and father all but breaks; the affectionate and tender cord of love that stretches from the altar to the scaffold is crushed but not broken, and the heart of the wife is burned to its very socket. She goes to and from the awful death cell. Little innocent hearts of children are crushed like the tender blades of grass beneath the angry heels of cannon on the German battlefield, yet they are all innocent. The brother and sister suffer for his sins, and see his ghost-like form in their dreams of repose. As the day draws near, the father and mother with tottering footsteps visit the death cell, and their minds wander back to the time when a little boy said his prayers at his mother's knee, and they ask God why they have this affliction to bear. The wife, children, relatives and friends all bid him good-bye and leave with breaking hearts, bitterly thinking of tomorrow. With heart-breaking despair, the mother prays God to spare her son, and as the time flies by the height of Heaven could not measure her sorrow. The father's hair turns gray over night, and the very souls are all scarred and forever seared over by the thought of the vengeance visited on their unfortunate relative, son and husband and father. The parents are hurried to their graves by broken hearts; the wife tries to forget, but cannot forgive; and the hearts of the children, relatives and friends are hardened by the harrowing example of killing by the State. Two families are in mourning, and the prisoner's family crushed and heart-broken by a protracted suspense, and that amounts to cruelty to the innocents. Then why make two families instead of one desolate? Then, suppose he was innocent? The State cannot retract what it has done. If life imprisonment would serve the same purpose, would you not prefer it to the death penalty?

I have asked the Minister of Justice to allow this Bill to be referred to a committee. I claim that if I could make good before a committee the statements I have made before the Minister of Justice in this House, this Government would be obliged to abolish capital punishment. If I cannot make good my statements I should be obliged to resign my seat in this House. But every statement I have made I can prove. Now, I appeal to the House to allow this Bill to be referred to a special committee, for I am quite convinced that a change in the law is necessary. I do not intend to say any more on that question.

I can quite realize how difficult it is to succeed in bringing about such a very important reform as I have introduced into this House, especially in these degenerate days, when principles have become subservient to politics; these dark and anxious days when men are rushing to join the Get-Rich-Quick procession; when many are making colossal fortunes out of a situation created by this unfortunate, cruel war.

These are days, Mr. Speaker, when we ask men to raise themselves above any political squabbling, men who will neither bow to capital, nor to-day to aristocracy.

> God give us men a time like this demands.
> Great hearts, strong minds, true faith and willing hands;
> Men whom the lust of power cannot kill:
> Men whom the spoils of office cannot buy;
> Men who possess a conscience and a will;
> Men who have honour; men who will not lie.
> For while this country with our thumbworn creeds,
> Our great professions and our little deeds,
> Wrangle in strife, lo, freedom weeps,
> Graft rules our land while justice sleeps.

Mr. STEVENS: As the hour is late, I move the adjournment of the debate.

Mr. GRAHAM: I presume that means sending this Bill to a place where it will not be revived this session. I have pretty strong convictions on this measure myself, and if the motion means shelving the debate for the rest of the session I will join with the hon. member for Montreal (Mr. Bickerdike) in objecting to that being done.

I should like to see the Government take some stand on it.

Mr. STEVENS: I did not make the motion with any such intention. I think this measure is a vastly important one, but at this hour of the night it is certainly impossible to deal with it in an intelligent and proper manner. I am entirely open to conviction on this subject, but I must confess that I have not been convinced by the arguments of the hon. member. Considering the lateness of the hour, I think my motion to adjourn is quite reasonable. Furthermore—

Mr. SPEAKER: I would remind the hon. member that his motion is not debatable.

Mr. GRAHAM: We could easily dispose of this matter if the Prime Minister would allow us another opportunity for debating it.

Sir ROBERT BORDEN: I am willing to remain here if hon. members wish to debate this subject further, but I cannot promise any further opportunity. A very large portion of the day has been taken up by a long debate of a matter not of general interest. I said then that we should have to sit late to-night and finish some business. If my hon. friend will withdraw his motion the debate can go on.

Mr. BICKERDIKE: I think the Prime Minister has forgotten the agreement he made when I brought this matter up on the day of the fire. I think he suggested that it should be left over until the Minister of Justice came back to Ottawa. I agreed to that on condition that opportunity would be given to discuss the question and that it would not lose its right of way, and I hope that the Prime Minister will agree to let us go on with this discussion on another day.

Sir ROBERT BORDEN: I really cannot promise that, but I am perfectly ready to debate the question now and to stay as long as may be necessary for that purpose. There was one previous occasion when my hon. friend had the right to bring on this debate.

Mr. BICKERDIKE: No.

Sir ROBERT BORDEN: Yes, there was one evening.

Mr. BICKERDIKE: No. I beg the hon. Premier's pardon. I waited until the Minister of Justice came back. I wrote to him stating the arrangement we had come to, and he neglected, or forgot, or mislaid that letter and did not let me know anything about it for three weeks afterwards. During those three weeks the Bill had been called twice.

Mr. DOHERTY: The hon. gentleman will also remember that in that letter of his he mentioned two days upon which he might have gone on and discussed this matter, and he stated that he did not want to go on on those two days. There were at least those two occasions for his convenience and not for mine.

Mr. BICKERDIKE: Yes, there were those two days, but the minister was not here. If the minister will not carry out in good faith what I supposed was the arrangement, then we will go on to-night.

Mr. STEVENS: The hon. member proposes to move that this matter go before a special committee. As such a motion would require notice, I think this debate might be adjourned to give him an opportunity to make his motion.

Sir ROBERT BORDEN: I think we had better go on.

Mr. H. H. STEVENS (Vancouver): Mr. Speaker, I just wish to say a very few words on this subject. The hon. gentleman has to-night submitted two arguments which appeal to me slightly in connection with this very important reform. One is that juries are prone to acquit persons who might be guilty of murder when they are not positive that the accused are guilty, because they know that, if they do find them guilty, they will, in all probability, send them to the gallows and they may not wish to take that responsibility, whereas, if the sentence were merely a jail sentence, they might bring in a verdict of guilty. That is an argument worthy of consideration and it is really the only strong argument advanced by the hon. gentleman.

He also mentioned a case, known as the famous Clark-Davis case, which happened in Vancouver and for which he took the Minister of Justice severely to task. Now, I do not think that the hon. gentleman put a very fair construction upon the action of the Department of Justice in considering that appeal for clemency. The facts are briefly these. Clark and Davis were two criminals who deliberately planned to commit a series of very serious burglaries. They equipped themselves with the usual paraphernalia such as revolvers and the instruments of their craft. They were disturbed in the act of their burglary by a policeman; got out of the building, ran across a vacant lot, and in the discharge of his duty the policeman followed them and was shot by these men. Each one said

that the other one shot the policeman, but of course it is held in law that, where two parties go out to commit a crime which has within its view the doing of violence to the persons of others, and where in the act murder is committed, both parties are equally guilty of the crime, and I do not see what quarrel there can be with an attitude of that kind. In the case of Clark and Davis, it was established beyond any possible doubt that they went out deliberately knowing what they were going to do.

Mr. BICKERDIKE: No.

Mr. STEVENS: Yes.

Mr. BICKERDIKE: Did they know they were going to commit murder?

Mr. STEVENS: Both of them were prepared to commit murder in the carrying out of their design. That is clearly established, and as to the argument that those men were hanged because they were poor, there is absolutely no ground for it. They had the best counsel in Vancouver to defend them, and, in addition to that, their counsel carried their case to the Supreme Court of Canada, one counsel coming here and pleading the case in the most able manner before the Supreme Court.

Mr. C. A. WILSON: On a question of law, a reserved case, not on a question of fact.

Mr. STEVENS: Undoubtedly, but the point raised by my hon. friend was that they had been denied those advantages of counsel which the wealthy have at their disposal. The inference was that, because the men were poor, therefore they were sent to the gallows. Not only do I not agree with my hon. friend, but I think it is a very unfair imputation to lay at the door of the Minister of Justice. Those men had every possible opportunity of having their case reviewed later by the Department of Justice and every point in their favour was taken into consideration.

To follow my hon. friend through all his carefully prepared and written address on this subject would be impossible, especially at this late hour, and I confess that, with some more light on this subject, I might be inclined to support his motion; but so far as I understand this proposed reform at the present time, I cannot see that there will be any great advance made by abolishing capital punishment in cases of murder.

There is also this other point to remember. There were thirty-seven cases in one or two or three years, I think, the hon. gentleman quoted, where the Department of Justice did commute the sentence to life imprisonment; and, as I understand the policy of the Minister of Justice and of the Government, wherever there is any reasonable doubt, or where any extenuating circumstances can be shown in the evidence after careful perusal of it, the sentence is commuted. It is not an uncommon thing, it is rather a common thing to commute a sentence, so that the law of capital punishment is not rigorously or unreasonably enforced. In view of that, I feel it would be unwise for this House at this time and without some more definite reasons and arguments than those advanced by my hon. friend from year to year, to pass this amendment.

Hon. GEORGE P. GRAHAM (South Renfrew): Mr. Speaker, the difficulty is not with the Minister of Justice, but with the law which the minister is compelled to put in operation. There is no situation in which any member of the Government is ever placed that is more trying than the one in which the Minister of Justice is placed in considering cases of capital punishment. For many years I have been opposed to capital punishment. I have had some occasion to study it, and I have read some cases, and, the more I read the more I become convinced that the taking of a man's life, no matter what the crime may be, does not deter the committing of the crime any more than would some other form of punishment.

All great reforms come slowly—I say this in encouragement of my hon. friend from St. Lawrence (Mr. Bickerdike). Even the great question which the hon. member for Vancouver (Mr. Stevens) brought up in this House the other day has made such rapid strides during the last ten years that we find the people of the country in a different frame of mind altogether from what they were in a few years ago. Other reforms that we might discuss also come along gradually. In the province of Ontario, when the question of having prison farms was first discussed arguments just as strong as one would care to listen to were adduced to show that they would have a bad tendency; that the sentence would be too mild; that the prisoners would not respect the privileges they would receive under those new conditions, and that, as a result, the punishment would be so mild that a greater number of crimes would be committed.

That has not worked out at all; and I believe that one of the greatest advances we have had in this country on the line of social and moral uplift is brought about by the more humane and generous way in which these men are treated. Their crimes, of course, are not of as deep a dye as murder is—that must be admitted but they are starting along the pathway of crime, and whether they shall be reformed and become better citizens, or go on to worse crimes depends largely, I believe, upon the way they are treated in the early stages of their criminal career. I just point to that as a reform which seems to me of great significance, and which was opposed very strongly and laughed at, at first. As a member of the Ontario Government—for a very short time, I admit—it was my duty to look into the question of removing the Central Prison from the city of Toronto and placing it somewhere outside. That whole thing has developed, and now we find men who are committed to prison for short terms—I believe that those committed to provincial institutions are sentenced for less than two years—are placed on prison farms and given a good deal of latitude; and I have yet to learn of any bad results from the adoption of that course. It is too late now for any extended remarks, but my point is that the condition of mankind is so different, even criminality is so different, in this age compared with what it was centuries ago, that if we are to obtain the same results, we must change our method of treatment. I believe that the statistics of those states in which capital punishment has been abolished will show that the crime of murder has not increased. It is contended, in fact, and I think with a good deal of accuracy, that murder has decreased. Still, that might be due to other causes, and it is sufficient for my argument if it has not increased, for it means that capital punishment has not proved a greater deterrent of crime than some milder forms of punishment. I believe that life imprisonment is as certain a deterrent as capital punishment, and it has the advantage pointed out by my hon. friend (Mr. Bickerdike) of leaving an opportunity of remedying a possible wrong. I am not prepared to admit that many legal wrongs are committed. I believe that many moral wrongs are committed, but in the vast majority of cases the alleged criminal has a fair trial, and suffers as he should, by statute. But there is something also that appeals to me more strongly, and that is that one object that we must all have in mind is to offer opportunities for the man, no matter how far we think he has fallen, to repent and turn his face towards good-citizenship. With capital punishment, we do not leave any opportunity for that. A man is given so many weeks or so many months, but he is absolutely precluded from the possibility of ever mingling again with his fellow men, and so one great incentive to a reformed life is taken away. The first great object, I submit, is the protection of society. But the second object should be the reform of the individual, and the improvement of society. By the carrying out of capital punishment, we preclude that to a large extent. I have been greatly impressed with the work of societies engaged in the work of reforming men who have not only been accused but convicted and sentenced. There are asociations who take hold of these men after they come out of the institutions and give them an opportunity to make their way back to good-citizenship as rapidly as possible—and all that, as I say, is precluded by capital punishment.

Of course, this is a big question, one upon which great differences of opinion exist. But the subject has been discussed and acted upon by so many states of the American Union and so many countries of the world that I think the time has come for us to refer it to a committee of able men for thorough investigation and report to Parliament. I am fully convinced that before many years we in this Parliament will be united as one man for a great reform along this line, going even as far as the abolition of capital punishment. I would like to see this referred to an able committee, as I have said, who should be given plenty of time to look into the working of the law in those countries in which the death penalty has been abolished, and then let them bring in their mature considerations and recommendations as to what should be done. It is a big question, with many sides, to it, and what we want is the enactment and execution of laws having for their object the best for the people of the entire country.

Hon. C. J. DOHERTY (Minister of Justice): Mr. Speaker, the subject is not a new one in this House; the hon. member for St. Lawrence (Mr. Bickerdike) introduced this measure in a previous session. At that time I had occasion to express at some length the views I entertained upon the proposed Bill. Though I have listened with attention to what has been said by that hon. gentleman and also by the hon. member for South Renfrew (Mr. Graham) I cannot say that the views I then expressed

have altered since, nor have I found in the argument put forward grounds for change of opinion. Under these circumstances, I trust it will not be considered a lack of respect if I do not repeat now the answer I then made to the argument that was advanced. So far as any one may be interested in that answer, it is available in Hansard. I cannot refrain from expressing regret that the hon. member for St. Lawrence should have thought it necessary to suggest that the relative wealth or poverty of a man convicted under the law of this country has even the slightest bearing on the exercise of clemency by the Crown. I regret that he should have said that. I quite understand that there was no particular personal reference to me, but a grave reflection was cast on all of the gentlemen who have occupied the position that I occupy as well as upon the members generally of succeeding Governments. It is to be borne in mind that the action of the Crown in capital cases is taken on the advice of the Cabinet; I do not know that it would be quite safe to say that the reflection of the hon. gentleman does not go to the representative of the Crown itself. I do think it is unfortunate that a gentleman whose words are, generally speaking, entitled to the weight which is rightly given to the words of the hon. member for St. Lawrence should have allowed himself, in his zeal to bring about what I am satisfied he believes to be a most important reform, to commit himself to so grave a statement as that—a statement which, I am quite satisfied could not be supported by him. I do not purpose adding anything further; I really felt that I ought to make some expression with regard to the position taken by the hon. gentleman in this respect. With regard to his argument generally, I adhere to the view that I have already expressed and, adhering to that view, I feel—and my colleagues agree with me—that the Government cannot accept the measure which is now proposed. It has been suggested that we should have a committee to study this question. It is a question that has had a good deal of careful study, not only by members of this House, but on different occasions by commissions and committees appointed by other bodies, and I think the material bearing on the question is fairly available to those who are interested in studying it. I doubt very much whether anything could be added to the material available by the constitution of a committee such as is suggested. Moreover, at the present time so many things

of immediate, pressing urgency call for the devotion of our best intelligence, our best care and our best study to them, that I think the suggestion that a committee should be appointed could very well be deferred until, perhaps, a more favourable period. I do not think that there is call at the present time, at all events, for the taking up of the question in the manner that is suggested.

Mr. BICKERDIKE: I think I have the right to ask for a committee. Committees have been appointed at other sessions for the consideration of subjects much less important than this. I do not think that it is fair to say that I cannot get a committee because I sit on this side of the House; I do not think that even the Prime Minister would want to treat me in that way. I was hoping that the Prime Minister and the Minister of Justice might have agreed to appoint a committee. I do not ask that I may appoint the committee; I ask that the Prime Minister do so. Under the circumstances as one of the oldest members of this House I claim that I have the right to have a committee, and I ask that a committee be appointed. I would move now, seconded by the Hon. George P. Graham:

That Bill No. 2 be now read the second time and referred to a special committee, with instructions to report at the earliest possible moment.

Mr. SPEAKER: Order. The motion before the House is that Bill No. 2, to amend the Criminal Code, be now read the second time. The motion just made by the member for St. Lawrence is out of order; the House will have first to decide on the question before it.

The House divided on the motion of Mr. Bickerdike.

YEAS:

Messrs.

Bickerdike, Carvell,
Graham, Macdonald—4.

NAYS:

Messrs.

Alguire, Papineau,
Bennett (Simcoe), Patenaude,
Blain, Proulx,
Blondin, Rhodes,
Boivin, Rogers,
Borden (Sir Robert), Seguin,
Davidson, Shepherd,
Doherty, Stewart (Lunenburg),
Fisher, Webster,
Gray, Wilson (Laval)—21.
Nicholson,

Motion negatived.

On motion of Sir Robert Borden the House adjourned at 1.20 a.m. Tuesday.
