Mr. CARVELL: I commend my hon. friend. I am glad to commend him when I can. Unfortunately, there are so few occasions when you can commend him and so many when you must criticise him. If the minister will carry out the promises he has made here to-day and see that his ideals are carried out in practice throughout the country, he will revolutionize Canada and will put the militia system on a different basis from what it has been on during the last four or five years; he will stimulate recruiting, and that ought to be the object of every patriotic citizen, regardless of his politics. If the minister will do this, I shall be only too happy to come back here next session, if I am alive then, and commend him for doing so; but he has a big job on his hands; he is surrounded by a number of friends, I see them all around him; I know them all intimately.

Mr. BRADBURY: Lots of friends.

Mr. CARVELL: Yes, lots of friends, who will raise the biggest row that was ever raised in Canada if the minister endeavours to carry out these reforms. While the minister has plenty of go and push in him, plenty of independence, it will take even more independence than he possesses to carry out the reforms he has promised. Conditions, however, are better than they were a year or so ago—the Lord knows they could not be any worse, and if there is a change at all, it will have to be for the better.

Mr. McKENZIE: The department is not paying such high prices for some things.

Mr. CARVELL: No, they are buying things much cheaper in some cases. Of course, there are many notable instances to the contrary. The are buying shells much cheaper.

Mr. McKENZIE: Of course, they have nothing to do with that.

Mr. CARVELL: The minister had all to do with that until the first day of December, 1915, and I must say there was a gradual reduction even before the minister handed over the purchasing of shells to other people, so that we can give him credit for some improvement; but so far as buying goods out in the country is concerned, there has been no improvement at all. But if he carries out the great improvements he has promised and allows Liberals to be placed on the lists and allows Liberals in towns where troops are quartered to tender on the supply of provisions and so forth, he will make a great improvement and the country will not be called upon to pay as much as they have had to do in the past for carrying on the work of the department in connection with the war.

I was telling the Minister of Militia a little while ago that, as Colonel Allison is such a financial wizard that he has saved Canada and the Allies $50,000,000 on war purchases, the Minister of Finance should not fret and worry himself until he is getting grey-haired in his endeavour to raise money; he should send for Col. Allison and he will raise $50,000,000 by merely waving his hand.

Sir THOMAS WHITE: I am very much obliged for the suggestion.

Mr. CARVELL: I will not say any more for the present, but there are a number of special items on which, of course, I will reserve the right to offer some mild criticism if I think it necessary.

Mr. W. H. BENNETT: In November last, some 275 men of the 76th Battalion were sent from Niagara to the town of Orillia to be kept there in the splendid armoury which has been erected in that town. Col. Caldwell, who is in charge of the regiment, asked the mayor of Orillia for the names of all the butchers, bakers and provision dealers so that he could get tenders from them, and the supplies were secured in that way without regard to politics whatever. I cannot speak of any other town than Orillia, but the hon. member for South Simcoe (Mr. Boys) tells me that 500 men were placed in the barracks in the town of Barrie and the provisioning was done in the same way, so that if the remarks of the hon. member as to provisioning of troops are as incorrect in New Brunswick as in the county of Simcoe, he would simply be laughed at if he went into that county.

Mr. CARVELL: He would not be laughed at in the province of New Brunswick.

Mr. WEBSTER: We had 800 men of the 58th Battalion stationed at Brockville, and, when they came there, orders were sent by

the Minister of Militia that all supplies were to be publicly advertised for, and a Liberal in that town is now supplying all the groceries, vegetables, butter, eggs, etc. There are in Brockville four other war contracts, two of which are held by Liberals and two by Conservatives. If the Minister of Militia has divided up his patronage in that way throughout the country, the Conservatives are not making much out of it.

Mr. BURNHAM: I would like also to say—

Mr. CARVELL: Next.

Mr. BURNHAM: I would like to prove the utter fallacy—I will not use the word "falsity"—of the remarks of the hon. member for Carleton, N.B. A leading Liberal in Peterborough is providing 700 troops stationed there with provisions; and in order that there might be no criticism whatever of carelessness on my part in carrying out the instructions of the Militia Department, I inserted in the newspapers, including the Grit organ, a letter addressed to the Liberals, telling them that they could send their names to Major Hamilton of Kingston, who would put their names on the list and that they would be allowed to tender for whatever was required. It is a most shameful procedure to cast these reflections upon the Minister of Militia, especially at this juncture, and to say that such conditions are general throughout the country when, as a matter of fact, they are not by any means general, even if they are particular, and they might happen through carelessness or inadvertence.

Sir SAM HUGHES: I am sure the House will pardon me if I read this little dispatch from the front:

French midnight reports violent fighting resumed on Verdun front, especially Douaumont and Pepper Hill, where German infantry have been repulsed and decimated. British report recapture of 800 yards of trenches lost on February 14 at Ypres and Comines canal, and also taking of a German salient.

Mr. COPP: A few days ago I listened with a great deal of interest to the hon. minister when he delivered a speech in this House telling us that he had not recognized politics nor politicians in any way in the conduct of his department, and I took it that the reports which I had received from other sources were untrue. I left for home a few days afterwards and while I was there a few hundred troops were to be quartered in my town and it was necessary to make some improvements to a building to be used as a barracks. My hon. friend says that all the Liberals throughout the country are being given fair and proper consideration in the provisioning of troops, and in all the work in connection with the carrying on of the war. In the town of Sackville in which I live, a man could not get a job to drive a nail or saw a board in connection with the improvements to the barracks unless he went to the patronage committee in the town, and not only had he to go to the chairman of that committee, but after he went to the chairman and got his recommendation, he then had to go to another party higher up to get his application for work O. K.'d.

Mr. CARVELL: He was lucky then to get it.

Mr. COPP: When such things as this happen, I cannot understand how hon. gentlemen can expect the people to believe that the minister is conducting the affairs of his department without regard to politics. Last year, not in my own town but very near to it, contracts were let for the supply of hay and fodder for horses as well as provisions for the troops, and Liberals were not given an opportunity to tender. I do not find so much fault with that. If these people would tell us that they are running this affair on patronage lines, it would not be so bad. But I certainly do object to any man standing up and telling me that the patronage system is not followed, when I know better, when I have seen it in my own town, and when I have seen the letters that show that the patronage system is followed in the purchase of even the smallest items for the Militia Department. In this contract for hay, not only were the Liberals not asked to tender, but the man who got the contract got it on condition, I am informed, that he he should not even buy his hay from Liberals. These are things that I know. And does the Minister of Militia expect me to sit quiet and listen while he tells the House and the country that there is no patronage in his department? If he has been so fair to the Liberals in his own county, I congratulate him for it. But he thereby declares for a principle, and that principle should be carried out elsewhere. Though that may be the case in his own county, it is not true of my county, nor of the province of New Brunswick, and from what I hear from other hon. gentlemen on this side, it is not true in other parts of the Dominion, especially the Maritime Provinces. If the minister has had a change of heart, and intends

in future to conduct his department on the lines he says, I am sure the country will be glad of it. As has been reiterated in this House, if there ever was a time when every dollar of the public funds should be rigidly safeguarded and honestly and wisely expended, this is that time. If the Minister of Militia has seen the error of his ways and intends in future to give every person that can do so an opportunity to supply goods, I congratulate him. But he can hardly blame us for taking his statement with a grain of salt when we know how he has erred in the past. I think the time has come when hon. members who know that these things are taking place should tell the people the facts as to their own ridings; and I believe that what is true of my constituency is true of most other constituencies in Canada.

Mr. BRADBURY: It is refreshing to hear hon. gentlemen opposite criticising the Government for its purchases in connection with this war. This is not the only war in which Canada has indulged; we had the Boer war when the Liberal party was in power, and perhaps hon. gentleman opposite could tell the House how many Conservatives participated in the supplying of the troops then.

Mr. CARVELL: I could tell the hon. gentleman some in New Brunswick.

Mr. BRADBURY: Very few, I am sure. It is well known that for years, during the reign of the Liberal party, they built up such a system of patronage in connection with the Militia Department that, when this war took place, not a man could make even a pair of trousers for the troops unless he was a Liberal. Practically all the supplies for the first contingent in the present war were furnished by Liberals. My hon. friend (Mr. Copp) talks about his own county and about New Brunswick. Well, I come from the West—the West which has furnished two men for every one furnished elsewhere in Canada—and I want to tell the hon. gentleman a few facts. In the city of Winnipeg we have ten battalions; in the West we have about fifteen battalions. I think I know what is going on in the West, and I believe that there is not an hon. member of this House who comes from the West who will make with regard to his constituency a similar statement to that made by the hon. gentleman. The 108th battalion is stationed at my own town of Selkirk. The barracks was obtained from a Liberal, a member of the local legislature. Every dollar of the money spent in fitting up the barracks went to improve his property. There were other places that we could have got, but there was no intention of making a party question out of it. I often wonder, as I hear such criticisms as that to which we have listened to-day, whether the party, as a party, has been justified in being as fair as it has been to the Liberals, for they get no credit for it. In connection with supplies for the 108th battalion, tenders were invited, and the contract went to one of the strongest Liberals in Selkirk, a man who, to my knowledge, never cast a Conservative vote. Tenders were received from two or three Liberals and from two Conservatives. No attempt was made to limit the opportunity to tender to the Conservatives of that district. Take the commanding officers in Manitoba to-day. I believe there are as many Liberals as Conservatives, if not more. And these men have a good deal to do with guiding affairs, so far as patronage is concerned. I do not believe that in the choice of officers in the West, politics has cut any figure. In my own battalion, I have never asked a man where he stood politically. Some of my majors, captains and lieutenants are Liberals. I never asked what their politics were; I was looking for efficiency. and I am sure that is what every commanding officer in the West has been doing. I believe that the same thing applies all over Canada. I hold no brief for the minister or for his department; if they have made mistakes they are able to defend themselves. It would be strange if they had succeeded in spending the large amount of money that has been spent without making some mistakes, but I say that the criticism which has been made with regard to patronage is unfair and unfounded so far as Western Canada is concerned.

Mr. COPP: I thought that some hon. gentleman on the other side of the House would come to the rescue of the Minister of Militia. In doing so the hon. gentleman who has just taken his seat has admitted exactly what we have been charging, because he attempts to defend the minister and the department by saying that the Liberal party did the same thing when they were in power.

Some hon. MEMBERS: Oh, oh.

Mr. COPP: My hon. friends may say "oh," but that is the first argument that the hon. gentleman offered in answer to the statements made on this side of the House. He talked about what the Liberal party did at the time of the Boer war.

Mr. BRADUBRY: This party is not doing the same, though.

Mr. COPP: My hon. friend did not say that before he sat down. He says that we on this side of the House are not conducting ourselves in a proper and patriotic manner, because, forsooth, we have the temerity to offer criticism in regard to the conduct of the Government respecting certain public matters. Is it out of place for hon. gentlemen on this side of the House to make statements as to how affairs are conducted in their own particular constituencies and provinces? The hon. member for Selkirk took exactly the same ground. The arguments that my hon. friend has made prove that the charges we have advanced are absolutely well founded. He says they are not true in respect of his particular constituency, and he cites proof of this, so far as the province of Manitoba and the city of Winnipeg are concerned. My hon. friend seeks to place himself upon a higher pedestal than that occupied by his colleagues on the opposite side of the House. He says that in the province of Manitoba and in his constituency where he has the patronage, the criticism made by hon. gentlemen on this side has no application. I do not controvert the hon. gentleman's assertion, but I do say that if these charges are not true in the province of Manitoba or in his constituency, they are true in other constituencies. It has been proved that they are true, and I can show in black and white that they are true. My hon. friend says that these things have not been done in his constituency, and, in the next breath, he adds that it is wonderful that the hon. minister did not make more mistakes than he has made. The minister has made many mistakes, Mr. Chairman. I am not here to question my hon. friend's veracity, and, if he has been fair to his constituents in the statement which he has made, I commend and congratulate him for being able to rise above the methods of a party that have traded down to the very last ditch in the matter of patronage and graft in connection with the public affairs of this country. I can say to him, however, that in the great majority of constituencies in Canada they have not been able to rise to that high level that my hon. friend claims to have attained in respect of the patronage in his own county.

Mr. KYTE: I am sure it is a great shock to the hon. member for Peel to hear it asserted over and over again that there is at the present time a patronage list in the Department of Militia and Defence. I remember during the years that the member for Peel sat in Opposition how very strong he was on the subject of patronage lists. The very thought of there being a patronage list in existence for any purpose whatever, in respect even of the most trifling services or the most trifling purchases, was enough to cause him to manifest as much of an ecstacy of passion as his placid temperament is capable of. Even with respect to the advertisements published from time to time in the newspapers of the country, he used to ask the minister day after day whether or not this patronage was accorded by tender. It was disclosed in the Public Accounts Committee last year, and yesterday as well, that there is a patronage list in the Militia Department. If hon. gentlemen will turn to the evidence given in the Public Accounts Committee a year ago, they will find there the statement, made by the present purchasing agent of the Department of Militia and Defence, that there is at the present time a patronage list in that department, containing about 8,000 names. This gentleman also stated that there was a small patronage list previous to 1896, and that it had grown from very small proportions in 1911 to 8,000 at the present time. The same courteous and efficient officer was examined in the Public Accounts Committee yesterday, and he gave similar testimony.

The hon. member for Selkirk endeavoured to score a point against the late Government in respect of expenditures made during the Boer war. No comparison whatever can be made with the circumstances under which the late Government carried on its very moderate part in the Boer war and the magnitude of the interests which are in the hands of the present Minister of Militia and Defence in respect of the present conflict. The total expenditure in respect of the Boer war for supplies and equipment of troops in Canada was defrayed by the British Government. The taxpayers of Canada were under no obligation to provide the money necessary to defray the expenses of our participation in that war. To-day, however, the taxpayers of Canada are deeply concerned in the expenditures of the Government in connection with the present war. Again, the services rendered by the Canadian Government at the time of the Boer war in respect of the number of men recruited and equipped at

that time were insignificant compared with the campaign for men that has been going on in ths country during the last two years. Further, whereas the number of Canadians who took part in the South African war was only a few thousand, I have it upon the authority of the right hon. Prime Minister himself that he hopes to see 500,000 Canadians in the field in the course of the present year. This will involve an enormous expenditure of money—an expenditure which must be defrayed by the taxpayers of Canada. Every city, town, hamlet, and agricultural community in the whole of Canada is concerned in the manner in which our participation in the war is carried out, and how that participation is to be financed. In every section of Canada, from the Atlantic to the Pacific, appeals are being made at the present time for recruits. Every taxpayer, every father of a family, be he Liberal or Conservative, is asked to permit his boys who are under age to join the colours; sons of these parents, irrespective of politics, are being asked to give their services to King and country. They are all responding magnificently to the call. There is no difference of opinion as to what Canada's duty is. The only distinction that has prevailed is that which has been made by the Minister of Militia and Defence in his department in the matter of patronage. While it is the privilege of the sons of Liberals to take their places in the trenches and to suffer and die for the Empire, it is the privilege only of Conservatives to enjoy the patronage which this enormous expenditure involves.

There is another point to which I wish to direct the attention of the hon. member for Selkirk, with respect to the difference between the Boer war and the present war. We do know that the late Minister of Militia (Sir Frederick Borden) was attacked time and again on the floor of this House in respect of the administration of his department with reference to the part Canada took in the Boer war. But it is a fact that the most eloquent, forceful and strenuous defender of the late Minister of Militia (Sir Frederick Borden) was the present Minister of Militia (Sir Sam Hughes). We do know that time and again when members supporting the then Opposition challenged the conduct of the then Minister of Militia in respect of his management of Canada's share in the Boer war, the first man upon his feet to defend Sir Frederick Borden was the present Minister of Militia. Has any such thing happened during this discussion? From the temper of hon. gentlemen sitting on these benches, I do not think there is much danger of any gentleman rising in his place to defend the minister.

Mr. BRADBURY: If the late minister was here he might.

Mr. KYTE: If he were here he would do the right thing, and I question whether he would consider it the right thing to defend the Minister of Militia to-night. I was going on to speak of the recruiting campaign that is going on throughout this Dominion. I have very much pleasure in being able to say that there is no part of the Dominion that in the last few days has contributed more men to the colours than the province of Nova Scotia. I saw in the Montreal Star last night that in two days 1,200 recruits in Nova Scotia had enlisted and taken their places at the different stations where training is going on. The province of Nova Scotia, I venture to say, in proportion to its population, will contribute as much as any other province in the Dominion, and perhaps more. Nova Scotia is a small province comparatively speaking. Her population is less than 500,000 and in order to get 1,200 recruits in two days, and the 13,000 recruits who have come to the colours in the province of Nova Scotia in the last year and a half it was necessary to appeal to men of all classes and of all political parties, and men of all classes and of all political parties have come readily to the colours. I repeat what I have said before, now that the minister is in his place, that the only attempt that has been made to create any political division in this recruiting campaign has been made by the Department of Militia and Defence, which persists in drawing the party line in respect to patronage. In the county of Cape Breton a large number of young men have enlisted and gone to the front. They have borne their part well. There are families in Cape Breton that have contributed not only one, or two, or three, but in some instances four sons to the various Canadian regiments. A very considerable sum of money has been expended in the city of Sydney in respect of the training of soldiers and the maintenance of interned aliens. But I venture to say that up to the present—unless it was by some accident that can not be accounted for—not a single dollar of the large sum of money that has been spent by this Government in the county of Cape Breton has ever reached the coffers of a Liberal. Why the statement the Minister of Militia made to-

night, if it were intended to apply to patronage as it has been distributed in the county of Cape Breton would be laughed at by every sane man in the county. And not only that, but there has been partisanship in the selection of recruiting officers. Last year I remember a very active recruiting campaign was carried on in the Island of Cape Breton. I attended a recruiting meeting which was addressed by a man in civilian clothes. This man had not received any appointment. As a matter of fact the recommendation that he be appointed a recruiting officer was turned down by the Department of Militia and Defence. That man made a speech that night which was the most effective recruiting speech I have heard since the war began. He had only one son, and this young man was among the first to join the colours from the island of Cape Breton. He had been for many months in the trenches and had borne his part well and bravely, and his father had, therefore, warrant to come before the young men of the province of Nova Scotia and ask them to come forward, and to do what his only son had done and what he was proud his only son was willing to do. After the meeting I asked this gentleman if he had been appointed a recruiting officer. He said: No, I am not a recruiting officer; in view of the service I am giving the department and the island of Cape Breton in addressing recruiting meetings it was suggested that I be appointed a recruiting officer, but the gentleman who spoke in my behalf was told that the only way I could be appointed would be upon a recommendation to that effect from the Tory candidate of the riding. Now, Mr. Speaker, this man and the Tory candidate do not happen to be on very good terms, consequently the man did not receive the appointment. But that did not cool his ardour. Wherever he happened to be in the performance of his duty, if there was a recruiting meeting going on he would be the first man there and he always made the most effective recruiting speech of the meeting. During the last couple of weeks I understand that he has been appointed a recruiting officer. Not, however, by the Minister of Militia. but by the chief recruiting officer for the province. He had heard the success this man had had in getting recruits and he came to him and asked if he would continue his services. The chief recruiting officer said: I have no authority to appoint you but I will take the responsibility myself. The man accepted this quasi appointment, and at the present time he is one of the most active and successful recruiting officers in the province of Nova Scotia.

There is one other matter I desire to refer to and that is with respect to the appointment of medical officers. There is a medical man in the province of Nova Scotia who is well known to every member of this House. He has had many years of experience in his profession. His practice has been most successful. I refer to Dr. J. B. Black, of the county of Hants, formerly an honoured member of Parliament. Now Dr. Black was anxious to do his bit in this war. While he is a man up in years he is still active in the practice of his profession, and he felt that the obligation rested upon him to do what in him lay towards the alleviation of the sufferings of Canadian soldiers wounded in the war. He addressed a letter to General G. Carlton Jones, Surgeon General, who is at present in England, and I have here General Jones' reply:

London, W.C., 10th December, 1915.

Dear Doctor Black,—I am very glad indeed to hear from you, but I am sorry to say that it does not lie within my power to cable for you to come over here, but if you can arrange it with Ottawa, I can easily place you for service in England, and would be glad to have your professional services.

We are at present short of medical officers, and we would be only too pleased if you could come and help us.

Yours very truly,

(Sgd.) G. C. Jones,
Surgeon-General,
Director of Medical Services, Canadian Contingents.

Doctor J. B. Black,
Windsor, Nova Scotia,
Canada.

Upon receipt of this letter, Dr. Black wrote the following letter to Mr. E. M. Macdonald, M.P.:

Windsor, N.S., December 29, 1915.

E. M. Macdonald, M.P.,
Pictou, N.S.

My dear Macdonald,—I have been very anxious for some time to do some part of a citizen's duty in this war and more particularly to do some part in caring for our wounded Canadian soldiers.

At the suggestion of Dr. John Stewart of Halifax (Colonel Stewart of the Dalhousie Unit) I wrote direct to Surgeon General G. Carlton Jones, London, of the Canadian Forces. A copy of his answer I enclose. Now why I am writing you is,—I do not feel that General Sir Sam Hughes would receive graciously an application for a commission in the Army Medical Department from me personally, but I have understood that party politics has not

clouded a friendly admiration of each other by you and General Hughes, so I am writing you to ask if you will do the good office of applying for me.

As near as I can analyse my motives I am not selfish in this matter. I am not worrying about pay for I have sufficient private income to meet my needs; besides I have all the practice here that I want to do. It is not a desire for a trip abroad, for I have done Europe more than once, as well as looking over India, China and Japan besides. My wander-lust is fully satisfied. Further, I have had most of the honours that my medical brethren in Canada can give me. I have been president of our Colchester-Hants Medical Association, president of the Nova Scotia Medical Association, and vice-president of the Canadian Medical Association, and other honours. To close a very busy life I would, above all things, desire to give myself for service to our wounded who have fought for the saving of the Empire; and from Surgeon General Jones' letter, there is work for me in England.

Yours very truly,

(Signed) J. B. Black.

The result of this correspondence, and of this offer on the part of Dr. Black, was that he received no appointment from the minister. I would like to get from the hon. minister a statement as to whether or not Dr. Black's offer reached him, and if it did reach him, why some appointment of the kind asked for has not been given him.

Sir SAM HUGHES: Does Dr. Black claim that he made any application to the Department of Militia and Defence?

Mr. KYTE: He claims to have made an application through the hon. member for Pictou to the hon. minister.

Sir SAM HUGHES: I do not remember anything about it.

Mr. KYTE: I have the minister's letter here; I will not read it to the committee, but will pass it over to him.

Sir SAM HUGHES: I have no objection to that letter being read.

Mr. KYTE: If the hon. minister has no objection, and in order to complete the correspondence, I shall put the letter on Hansard:

Minister's Office,
Ottawa, January 10, 1916.

Private.

Dear Mr. Macdonald:

I have much pleasure in acknowledging receipt of your letter of the 30th ultimo, enclosing correspondence from Dr. Black, relative to his desire to be of service in connection with this terrible war.

In reply I beg to advise you that there is a very simple remedy in connection with Dr. Black's case. If he will apologize for what he has done I will be pleased to do what I can for him.

With kind regards,
Faithfully,
(Sgd.) Sam Hughes.

Mr. SINCLAIR: Shame!

Mr. KYTE: Now we have the secret of the minister's refusal to entertain the offer of Dr. Black to serve in this war. He asks for an apology for some fancied offence that Dr. Black has committed. I think the hon. minister should recognize that it was in his capacity as Minister of Militia and Defence, and in that capacity only, that he was approached by Dr. Black for this appointment. Whatever personal pique may exist on the part of the minister, I should have thought that he was too big a man to allow it to influence his judgment in a matter of this kind.

An Hon. MEMBER: You do not know him.

Mr. KYTE: That remains to be seen. I refuse to believe that the hon. minister is not a big enough man to overcome whatever personal ill will he has towards Dr. Black, and I trust that the minister will be equal to the occasion, and accede to the patriotic request made by Dr. Black that he be given an opportunity to contribute his share of service in this war.

Sir SAM HUGHES: Dr. Black seems to have taken a very peculiar line. He applies first to a gentleman in England, and then to a gentleman in Nova Scotia. It would have been a simple matter for him to have applied to the military authorities in Halifax. He is much over the military age, and I may say that we have refused the services of many a good Tory for that reason. Being an old Parliamentarian, Dr. Black should have known that he had a very simple remedy. When I knew of his application, I took the matter up with the proper officers and it was decided that he should comply with the very simple procedure which he will understand. If he complies with that procedure I will remove any objections which I might urge to his being appointed.

Mr. KYTE: Dr. Black wrote to Surgeon-General Jones to know if there was any position in which he could be useful. The hon. minister could not possibly know that. I think Dr. Black took the proper course in writing to Surgeon-General Jones in England, because unless that officer found that there was some position which Dr.

Black could fill, it would have been useless for Dr. Black to have applied to the minister. In regard to Dr. Black's age, every member who recollects him will remember that he was one of the most active members in this House. I desire to say further to the minister that if Dr. Black is over age, he is no more so than Colonel John Stewart, who was sent overseas in charge of the Dalhousie unit. In all the circumstances, I hope the minister will withdraw any objections he may have had, and that Dr. Black will be privileged to place his services at the disposal of the medical staff.

Sir SAM HUGHES: I understand that Dr. Stewart is a very estimable gentleman, and I believe that Dr. Black is also; but Dr. Stewart was selected by the officers of his unit. The officers were given the opportunity to select their own medical officer, and they selected Dr. Stewart. If they had selected Dr. Black, he would have been appointed.

Mr. McKENZIE: When the statement is made in this committee by the hon. Minister of Militia and Defence that the affairs of his department are managed without any partisanship, or without any partisan bias, I do not think it would be fair for any member who knows the facts and the practice, locally at all events, to be different altogether, to allow the Canadian people to suppose that things are as the minister represents them to be. It is indeed a pity that this country has arrived at a stage when, whether wittingly or not, ministers of the Crown stand up in this House and make statements, possibly believing them to be true, that are absolutely wide of the mark. The people of this country have a right to suppose that when a minister representing the Crown stands up and makes a statement of fact, he knows what he is talking about, and that representing his King and country honestly and truthfully and properly the condition of affairs is as he represents them to be.

I have no fault to find with the ordinary patronage practice. If there is a big contract which the statute requires to go out to tender in the ordinary condition of things, I insist that it should go out to tender. Under the ordinary conditions which prevailed before the war, if there were cases in which the interests of the country could be fairly well protected by the discretion of officers, and they gave the preference to the friends of the Government, I have no fault to find. But that was when they were spending the ordinary revenues along ordinary lines. That was the practice when I was in this House supporting the Government. When I had the patronage in the county which I represent I had no fault to find with it, and I am not hypocritical enough to find fault with the Conservative party for doing what we did ourselves. But I do find fault with the practice that exists to-day when conditions are entirely different. There was no war in our time. To-day we are asking every man in this country to pay money towards carrying on the war; we tax him heavily for the purposes of the war.

They go to him for contributions to the Patriotic and other funds, and the money is expended by the ministers of a Tory Government, or by their officials. There is no party line drawn in the collecting of the money, they collect from Grit and Tory alike, and the Grit boys are just as able and patriotic and courageous in the trenches as the Tories, and when there is any profit, or preference, or emolument, to be bestowed, it should be divided equally amongst those who are entitled to it. If that is not done, the minister should have the courage to say boldly: No, we are conducting this thing along party lines; we have done it in the past and we are going to do it in the future. There would be some manly courage in that, and the people would at all events know that they were doing it on party lines and that they were not trying to conceal it. But, we heard to-night the absolutely unfounded statement that the minister did not know about politics entering into the matter at all, that there was no preference in the management of the department, no patronage list, and that everything was going splendidly and beautiful. It has been pointed out by my hon. friend from Westmorland (Mr. Copp), and my hon. friend from Richmond (Mr. Kyte), that it was only yesterday that we had sworn evidence in the Committee on Public Accounts to the contrary. In that committee one of the officials of the department went on the stand and swore that this patronage list existed, that only the names of Tories were on it, and that everything from the smallest to the biggest had to come to the department through that list. That is sworn testimony, and I believe it to be true, notwithstanding what the minister says to the contrary.

Now, I desire to say a word as to Cape Breton and Victoria. As far as Victoria is concerned, there has been assemblage of troops in that county since the war broke out, and we are not complaining of patron-

age, because there was no patronage there. But there was a large body of men at North Sydney and a battery at Sydney Mines which came from Prince Edward Island. They were there for eight or nine months. Large bodies of troops were recruited at both these points. I venture to tell the minister that never did a fifty cent piece reach the pocket of a Liberal in Sydney or Sydney Mines. The only instance in North Cape Breton in which a Liberal received anything at all was when a man, who was building a barracks at Sydney Mines, wanted some nails; he went into a store kept by a Liberal and bought sixty cents worth. About an hour afterwards he came back and dumped the nails on the counter, saying: I am not allowed to buy these nails from you; I told the man

10 p.m.

who is in charge of the patronage that I had bought the nails from you and he stated that he would not vouch for them; here are your nails, I have brought them back. That is a case in point and everything else has been done in the same way. A Liberal in the county of Cape Breton is not given a blank tender. They scorn the idea of giving him a paper on which to put a figure by way of tender, and yet, in the face of that, the minister comes here and says that everything is done in the highest, the loftiest, and most patriotic way. He stands up like a bronze god and says that he knows nothing about it. That is another trick of the department. When we have $73,000 in cash sent down to the county of Kings, N.S., to buy glue pot horses, the Minister of Militia gathers his angelic wings around him and says: I did not appoint the man, I did not furnish the cash and I know nothing about it. I suppose we have to believe him, at all events, in the Parliamentary sense. The right hon. the Prime Minister (Sir Robert Borden) told us on the 15th of April last that it was a boy who had undertaken to buy these horses without any business experience, and that he should never have undertaken the job. I would call the attention of the business men on the other side of the House to the capacity of the Government which they support, as disclosed by this extraordinary transaction. A boy, without business experience, who, according to the Prime Minister, should never have undertaken the job, is able to go into the Militia Department, get $73,000 in cash, put it in his pocket, and run to the country with it, and yet the minister knows nothing about it. That is the way the business of the country is conducted. I want the people of Canada to know that a boy, according to the Prime Minister, without any business experience, and who never should have undertaken the job, was entrusted with this money. I am only repeating what the Prime Minister said, I am not expressing any opinion of my own, or of Mr. Foster. How he got that money the minister does not know because he tells us he knows nothing about it. If anybody can go into the Militia Department and get money, we ought to know it, so that some of us might be able to get some of the money lying around loose there. The people of the country want to know something about the business methods of a Government under which this kind of thing can happen. The money of the Government was taken in that loose way and horses that could be bought for two drakes and a duck were returned to the department.

There is another matter that I think should be cleared up before these Estimates are put through. We heard the speech of the hon. member for North Simcoe (Mr. Currie) the other day and it disclosed a most extraordinary condition of things. He said that the Canadian boys had been hired out in England to build railways and huts for some English contractor or other at 25 cents a day, and that they never got anything out of it except that trifling amount. I call upon the minister to tell the Canadian people, to tell the mothers and fathers of the young men who were sent to the front, as they thought, to fight for their country, to be trained as soldiers and to be instructed in the art of war, why it was that they were put to work to build huts and to become the ordinary navvies of an English contractor at 25 cents a day. That is a statement made by an officer of the Canadian Expeditionary Force to this House. So far it has not been contradicted or explained. As a matter of fact, in the interest of good government and the proper handling of the affairs of this country, the people want to know what has become of the money. Is this another piece of graft, is it collusion between some authority who has control of these men and the English contractor, by which able-bodied men were made to work for 25 cents a day, the balance of the wages going somewhere else than into the treasury of Canada or that of the British Government? In conclusion let me say that whatever the minister may say about the counties in

Manitoba, Ontario, and other provinces, the patronage in my county could not be closer to the lines of party patronage and politics than it is at present, because I have given the only sample where a Liberal sold anything or anything was bought from a Liberal, and that was 60 cents worth of nails, and they were returned.

Sir SAM HUGHES: The hon. member for Victoria (Mr. McKenzie) has referred to the soldiers working in England. That was at a time when huts were very much needed because the huts put up by the war office proved very ineffective owing to the rainy weather. It was in connection with that work that the soldiers were asked to turn in and build those huts. My information at the time, and since then was that it was purely voluntary work and that they were given this additional pay as a bonus by the British Government, and that there was no objection on the part of the men. I objected to the men being taken away to do this work because of bad weather or anything else, and the work was stopped.

Mr. J. J. HUGHES: The other day Col. Currie stated that the contractor charged $1.10 a day and that he paid the men only 25 cents a day.

Sir SAM HUGHES: No.

Mr. HUGHES: That was the statement that was made.

Sir SAM HUGHES: I am afraid there must be some misunderstanding. I have had some considerable difficulty in understanding the political situation in certain spots here and there throughout the Dominion and let me say in all frankness that parts of Nova Scotia are included in that. Politicians on both sides from these districts seem to be very particular about the patronage lists, and I think it would take a Philadelphia lawyer to keep track of these lists. But our orders are explicit and in the early period of the war I learned from time to time that troops have been quartered in certain places in such a hurry that there was no opportunity of calling for tenders, and in such cases recourse was had to the old patronage lists. Possibly that is how some of these grievances occurred, but I know that practically throughout the whole of the Dominion the proper custom was followed.

Mr. CARVELL: I have just received a telegram stating that a new battery of artillery has been ordered to my native town of Woodstock. That means about 150 men and 70 horses. Will the minister give me his pledge to-night that Liberal storekeepers, merchants, men who can supply forage and other provisions will have an opportunity of tendering for the supplies for these troops on the same basis as the Tories? I want to put the minister to the test.

Sir SAM HUGHES: I am willing to be put to any test. The order has gone and will be carried out.

Mr. CARVELL: And Liberals will have an opportunity of tendering?

Sir SAM HUGHES: Public tenders will be called for in every place where troops are quartered. I want that distinctly understood.

Mr. GRAHAM: In regard to the Canadian troops receiving twenty-five cents a day for their work in building the huts, I understood that that was in addition to the pay which they received from the Canadian Government?

Sir SAM HUGHES: Yes.

Mr. GRAHAM: Col. Currie, however, stated that had the men been working for the British Government there would have been no trouble, but his charge was that he had discovered later on that these men were working for a contractor, and not for the British Government, and that the contractor paid the men only twenty-five cents a day, thus making a large profit on their labour, and Col. Currie thought it was the duty of the Canadian Government to see that these men were fully paid by the British Government.

Sir SAM HUGHES: I requested Gen. Carson to take the matter up immediately and have it adjusted in that way, or else we would hold the British Government responsible, charging them $1.10 a day for our men.

Mr. DOUGLAS: There is being raised on the south side of the river in the constituency of Strathcona the 151st Battalion under Lieutenant Colonel Arnott. The senior major is Major Grant and the junior major is Major Lowrie from Lloydminster. I am informed on the highest authority that these officers have no say whatever as to the selection of their captains and lieutenants, and that every one of these men must first of all receive a recommendation

from Mr. Crawford, the local member for South Edmonton.

Sir SAM HUGHES: He has no more to do with it than a child has. If I find that he has, he will not have it any longer.

Mr. DOUGLAS: He did have something to do with it. The colonel was not allowed to entertain any request for a commission in that regiment without a recommendation as to the character of the applicant by this Mr. Crawford or a Mr. Aldridge, the Conservative candidate for Strathcona.

Sir SAM HUGHES: He is a Methodist clergyman, perhaps the man was getting a clergyman's certificate.

Mr. DOUGLAS: Such a condition as this is not at all fair to the recruiting officers in the constituency of Strathcona because, without showing any undue pride, I may say that we in the northern part of Alberta can point with pride to the large number of soldiers who have been recruited in the Edmonton district in particular. I know for a fact that this practice has been going on, although the minister may not know anything about it, during the raising of the last four or five battalions in the city of Edmonton, I am informed on good authority that no subaltern can get a commission either in the 138th, or in the old battalions of the 51st and the 66th, without first of all getting a recommendation from Mr. Percy Abbott, one of the dispensers of patronage in Edmonton.

These are conditions that should be righted, and that is why I call the attention of the minister to them. These things were current talk on the streets of Edmonton when I left, and I have no reason to believe that conditions have changed since then. I know for a fact that men had to get that certificate. I am not saying that no one except Conservatives could get an appointment, for that would not be in good taste, nor would it show good judgment on the part of any candidate. But the fact remains that every man had to get that certificate. In connection with that, I have a letter and some telegrams from Major Thibaudeau, objecting to the minister not allowing him to raise a French-Canadian battalion in the district of Edmonton. I am not prepared to say whether he is justified in attempting to raise a French-Canadian battalion or not, but I desire to read the telegrams that have passed:

Edmonton, Alberta, February 21.

General Sir Sam Hughes,
Minister of Militia,
Ottawa.

Are you going to accept offer to raise from Alberta and Saskatchewan Battalion French Canadians. Freely discussed here that report from G.O.C. District is that it is impossible and impracticable. Notwithstanding I can do it, if no undue interference is placed in my way. Your department has had two months to consider offer and only fair I should receive answer whether my offer to be accepted or not.

DeBlois Thibaudeau.

On the 22nd of February the hon. gentleman sent the following characteristic reply:

Ottawa, Ont., February 22, 1916.

Major DeBlois Thibaudeau,
Edmonton.

Wire received. Have made inquiries. First, find you are not reported upon favourable for command. Second, there are not enough French Canadians to maintain a company much less a battalion in the area spoken of. Third, the great majority of them prefer mixing with English speaking people and are loyally joining other battalions. Fourth, there are not sufficient in the whole northwest of Canada to maintain corps and all details.

Sam Hughes.

I have a statement here of the number of French-Canadians in the provinces of Alberta and Saskatchewan, taken from the census returns of 1911. These show that in the province of Alberta there are 19,825 French-Canadians. In the province of Saskatchewan there are 23,251; a total of over 40,000 in the provinces.

Sir SAM HUGHES: That includes half-breeds.

Mr. DOUGLAS: It may, but I do not think the proportion of half-breeds would be very great at the present time, and I do not suppose that the hon. minister would object to French-Canadian half-breeds joining the French-Canadian battalion.

Sir SAM HUGHES: They talk of raising two or three French-Canadian half-breed regiments.

Mr. DOUGLAS: Has the hon. minister given authority.

Sir SAM HUGHES: For two.

Mr. DOUGLAS: In the West?

Sir SAM HUGHES: Yes.

Mr. DOUGLAS: In Alberta?

Sir SAM HUGHES: I will give full details as soon as I have heard from the office in the West.

Mr. DOUGLAS: I am merely bringing this Alberta proposition to the minister's attention. I am not sufficiently conversant with the details to know whether the minister is justified in sending this telegram or not, but in my own constituency there are 2,300 French Canadians.

Sir SAM HUGHES: Pardon me, there is nothing of the kind; there may be that number including half-breeds.

Mr. DOUGLAS: I am mistaken to this extent, that the exact number is 2,064.

Sir SAM HUGHES: I have gone over it a good many times.

Mr. DOUGLAS: I wish to put myself right with that class of our people, and the statement made by the minister in this telegram, that there are not enough French Canadians in the West to form a company, much less a regiment, is absolutely beside the truth.

Mr. W. M. MARTIN: As the hon. member for Selkirk (Mr. Bradbury) comes from the West, and it might be supposed that in the matter of patronage he speaks for the whole West, I would like to say a few words in regard to what goes on especially in the constituency I have the honour to represent. The hon. member for Selkirk, I think, must have been asleep for the last year or two, if he has found no patronage in the vicinity of Selkirk. I am afraid he occupies a somewhat similar position with reference to the question of patronage as he occupies with reference to the question of the St. Peter's Indian reserve. It is only within the last six months or so that he has awakened to the fact that the people of Selkirk did not approve of his position.

Mr. BRADBURY: They paid $50,000 for the land you gave away.

Mr. MARTIN: I will leave that for the hon. gentleman's constituents to settle with him, and, judging from the newspapers. the hon. gentleman will have a pretty hard task. However, as to the party patronage, it may be possible that the leopard has changed his spots in the vicinity of Selkirk, although I am afraid that the fact is that the hon. member simply does not know what is going on around him. But as to the city of Regina, from which I come, and also Moosejaw, Saskatoon and Prince Albert, I can say that party patronage never ran rife—especially in Regina—as it has since this war began. I do not blame the minister altogether for this state of affairs. I believe he is sincere when he says he tries to put down patronage in connection with his department. But throughout the length and breadth of Saskatchewan, they have got away from the minister. The hon. gentleman tells us that tenders are publicly called for, or, at least, that his instructions have been that they should be called for. We know that the Army Service Corps purchases the supplies for the soldiers at the points where they are stationed. Public tenders have not been asked for in Regina since the 4th of August, 1914, when the war broke out. Not a solitary advertisement, I think, has appeared in the press of either party calling for tenders for supplies. I am informed that the same is true of the other cities of which I have spoken. The hon. minister speaks of a purchasing list. I understand that he means the general purchasing list, and not a purchasing list for each constituency.

Sir SAM HUGHES: Before we handed over the work to the War Purchasing Department, our orders were exactly as I have stated. I think that in one or two cases, where they had no time to get the army service corps ready, they called for a purchasing list from the mayor of the town—as occurred in the case referred to by the hon. member for East Simcoe (Mr. Bennett). I know what our orders were, and we carried them out as far as we could. If any officers are found deviating from it, they would be given to understand that they must obey orders.

Mr. MARTIN: I do not understand that. Was there a general purchasing list in the department?

Sir SAM HUGHES: No, but each locality has its own purchasing list, I understand. It is not my department, but the War Purchasing Department.

Mr. MARTIN: Is there a purchasing list in the department for the city of Regina?

Sir SAM HUGHES: Not in our department; there is in the office in Winnipeg, I presume. I suppose they wire the Mayor of Regina, or something like that.

Mr. MARTIN: They do not wire from there, I can tell the hon. minister that. However, we get back to this position: there is a purchasing list for each constituency.

Sir SAM HUGHES: Grits and Tories alike.

Mr. MARTIN: I fail to see the difference between a purchasing list and a patronage

list. I could have shown the minister a good deal of correspondence last session in respect to purchases in that portion of the country. Business men in the city of Regina who contribute hundreds of dollars to patriotic funds could not get one dollar's worth of business from the Militia Department, or from the Army Service Corps, which represents the Militia Department in Regina: they were not even asked to tender. As I have already stated, tenders were never called for in the newspapers.

Sir SAM HUGHES: They are never called for in the newspapers; they are called for by means of posters.

Mr. MARTIN: That is something new to me. My information is that no advertisement by poster or in the newspapers was ever published since the war began, in or around the cities of Regina, Moosejaw, Prince Albert or Saskatoon, calling for tenders for war supplies.

Sir SAM HUGHES: I do not undertake to say that the hon. member is in error, but I do undertake to say that posters have been put up.

Mr. MARTIN: I should not like to question the hon. minister's information, but I live in that part of the country, and I am in a position to know. If the minister can show me any advertisements that were published in newspapers or in the form of posters in that country, I shall gladly withdraw the statement that I made.

Sir SAM HUGHES: I only know that orders to that effect were given.

Mr. MARTIN: I do not altogether blame the minister for the system of party patronage that exists in connection with the Militia Department. I sat in this House three or four years before the late Government went out of power; I saw that hon. gentlemen opposite, then sitting on this side, were a fairly hungry looking lot, and, after having been in opposition for sixteen years, they could hardly be blamed for wanting a little party patronage. But when war broke out; when party politics were dropped in the House to a very considerable extent, and when men from the Atlantic to the Pacific were stinting themselves in order that they might be enabled to contribute to the Patriotic fund, the Red Cross fund, and other charitable organizations; at that time party patronage should have ceased, at least to some extent. It has not ceased; on the contrary, it has run riot throughout Canada since the war began, worse than it did in any stage of this country's previous history.

Speaking about patronage, hon .gentlemen will remember the correspondence that took place between the Minister of Militia and a high official in the councils of the Conservative party in the city in which I reside. What was the quarrel between these gentlemen? The quarrel was as to who had the right to make certain appointments in connection with the purchasing of war supplies in Regina.

Sir SAM HUGHES: There was no quarrel between that gentleman and myself as to who should dictate the patronage. The trouble was that I found something not exactly square, and I did not care whether he was Grit or Tory, his head came off.

Mr. MARTIN: I do not question the sincerity of the minister in connection with this matter. So far as I could judge from the correspondence, I should say that the minister was absolutely correct in the stand that he took. But that does not alter the fact that the whole difficulty was caused by the attitude of a certain gentleman in Regina who said that he had the right to make certain appointments. The minister did not quarrel with this man; he considered it entirely beneath his dignity to do so. I do not say this sarcastically, for I think the minister acted quite as a minister should. If it had not been for the protest of this gentleman that the Department of Militia had made an appointment over his head, probably the existence of this graft would never have been disclosed. It is quite true that, through the activities of the minister, the stealing of hay and oats in the city of Regina was discovered. It was established before the Davidson Commission that eight carloads of hay had been stolen, and that the way bills of 15 other cars had been forged. I wish to be perfectly fair to the Davidson Commission. I met Sir Charles Davidson on more than one occasion; he is what I would call one of the first gentlemen of the old school in this Dominion of Canada, and I have nothing to say against him. But I do submit that if that investigation in Regina had been pushed a little further, men high up in the Conservative party in that city would have been involved. Moreover, I know that evidence substantiating the charges against these persons was sent to Mr. John Thompson, who acted as counsel on Sir Charles Davidson's Investigation Commission, and that he never made use of the evidence. I may mention also the fact that in Regina

the Government was short-changed to the extent of thousands of bushels of oats. If the investigation had been pushed a little further, it would have been ascertained who was profiting by the stealing of that oats. The investigation disclosed the fact that this Government was paying sixty cents a bushel for oats in Regina, while the city of Regina itself was buying oats at the rate of forty-eight or fifty cents a bushel to feed its own horses. This is one of the results of the operation of that honest patronage committee that exists in the city of Regina to-day. If the investigations of the Davidson Commission had been pushed a little further the man Mitchell, who is serving a sentence of three years in jail on a conviction of forgery, would not have been the only goat. There was a young men by the name of D. D. Bennett who got away before Mitchell was tried. For this young man Bennett I am personally sorry. I have known him a great many years; he ought to have known better than to get mixed up with this crowd, and to have committed the acts that he did in connection with hay and oats in Regina. Why was he allowed to get away? Mitchell's evidence and the evidence produced at Mitchell's trial involves him to the hilt; if he came back, conviction would certainly result for an offence against the Criminal Code of Canada. It is rumoured around Regina that he is out of the way for the reason that if he were tried he would not be the only goat. I know that the Minister of Militia has not time to bother about where Bennett is, but I am sure that the officials in his department can easily get the information that is necessary to bring that man back. As a matter of fact, I should be only too glad to furnish the Minister of Militia or any person designated by him with the names. I do not wish to bother the minister himself for he is a very busy man. He has had his hands full since the war began. I do not wish to flatter him, but I do think we sometimes fail to recognize the weight that has been on his shoulders since the war began. I should not like to have carried that weight myself. The expenditure of such a vast amount of money and the preparation of such a large number of troops for the front is a great responsibility. But there are men in the Government who are paid for seeing that there is honest administration in this country, men whose duty it is to see that those who steal from the Government are brought to justice. I say that there is one man who is away from justice at the present time, and I am prepared to furnish the Government with his address, if they want to get this man back to Regina and try him for the offence he has committed.

Mr. BRADBURY: There are one or two others from Regina that we should like to get.

Mr. MARTIN: I am prepared to discuss that with my hon. friend at any time. What has taken place at Regina is not to be compared with what has taken place in Winnipeg, for that is in a class by itself. The hon. member from Selkirk has supported the Manitoba Government ever since he had a vote. As regards the Government of Saskatchewan they are absolutely innocent, as far as I am concerned, until they are proven guilty.

Mr. BRADBURY: That is a good proviso.

Mr. MARTIN: I am sure my hon. friend will be interested to know that before the investigation in Saskatchewan gets through some evidence will develop which will be not far from a man who occupies a prominent place in this Government, the Minister of Public Works. But I am not going into local politics. I rose to protest against the system of party patronage that exists not only in the Militia Department, but in every department of this Government. We had an address from the Minister of Trade and Commerce a few days ago, which I think was the gravest indictment of the party patronage system I have ever heard in this House. It strikes me that the present Government are long on promises and short on fulfilment. How the hon. Minister of Trade and Commerce can lecture this House on party patronage, and at the same time refuse to raise a finger to stop the riot of patronage in his own department throughout the length and breadth of this country, I cannot very well make out. To bring my remarks to a close, I hope the minister will take steps to clear up the mess in Regina in connection with war purchases during the last year or two.

Mr. MIDDLEBRO: My hon. friend has made a remark which has already been made by many hon. members on the other side of the House, to the effect that during the present war there has been more partisanship displayed in the awarding of contracts than ever before in the history of Canada. I do not know what has taken place in other ridings, but I hope the House will permit me to tell what has taken place in my own. Whatever party patron-

age there is in the county, is very largely in the hands of the local member. In my own riding seven contracts have been awarded during the war. The first contract was to William Kennedy & Son. They are one of the largest iron and steel manufacturers in Ontario. The head of the firm is Mr. Matthew Kennedy, a brother of Sir John Kennedy, of Montreal. Matthew Kennedy was the Liberal candidate in North Grey, and was defeated by Mr. T. I. Thompson, who took the place of the late Dr. Horsey. William Kennedy & Son received a contract—and I think I might say I assisted them in getting it—to the value of $150,000.

Mr. LEMIEUX: Is he a brother-in-law of the hon. member for St. Antoine?

Mr. MIDDLEBRO: No, an uncle-in-law. The next contract was given to the Owen Sound Iron Works, the president of which is Mr. C. A. Fleming. Mr. Fleming is also the president or part owner of the Owen Sound Sun, the Liberal newspaper in my riding, and his son is manager of that paper. This company received an order for 25,000 shells. The next company to receive a contract was the Meaford Wheelbarrow Company, the president of which is Col. Hugh Cleland. He is the son of the Liberal member who represented my riding in the Local House for eight years. The next contract was given to the Owen Sound Malleable Iron Company, the president of which is Mr. J. M. Kilbourn, who also holds the majority of the stock. He was at one time the Liberal candidate in North Bruce, and was an applicant for a Senatorship from the Liberal Government. The next contract was awarded to Breckenridge & Sons for about $5,000. They are Liberals and have never, I think, given a Conservative vote in their lives. The next contract was awarded to the Owen Sound Tent Company, the president of which is Mr. J. B. Straith, a lifelong Liberal. So far as I know he has never voted for me or for any other Conservative in North Grey in his life. The seventh and last contract was awarded to Randall Brothers. They alone are Conservatives. That is the history of the patronage list in my riding. No other firm has got a contract so far as I can recollect.

Mr. H. BOULAY (Rimouski): (Translation.) Mr. Chairman, it comes as a surprise to hear members of the opposition, especially those from the maritime rovinces criticising the Minister of Militia in regard to the distribution of patronage in his department.

So far as I am concerned, I acknowledge that, in this very House, I did in past years complain that the hon. gentleman was rather lukewarm in meeting the claims of Conservatives. I found fault with him for his giving too much to our political opponents, to the exclusion of members of his own party Thus, in my own riding of Rimouski, there was held every second year, under the Liberal administration, a military camp. Since the Conservatives came to power, not a single one has been held. Those camps bring a considerable amount, yet the Minister of Militia thought proper to transfer that military camp to Levis, represented in this House by a Liberal member.

My opinion is that the times are strenuous enough, and the hon. the minister has enough to accomplish in his department, that both sides of the House should agree to smooth his path when he gets his Estimates before the House.

Who will deny that, in the fulfilment of his duties, he has been able to cope with the extraordinary conditions that have arisen; and I say, without fear of contradiction, that the opposition could not find among its adherents in the House a single man to replace him. Of all the men in the Cabinet who have the qualifications and the will rightly to administer their department, the Minister of Militia stands at the top.

Mr. HUGHES: I understand that a number of officers who went over with the first and second contingents have never gone to the front, but are still in England, chiefly in London. Some reasons have been given for this, which may or may not be correct. Would the minister tell us why these men have not gone to the front, and how many of them are still in England unattached to any corps?

Sir SAM HUGHES: Seventeen infantry regiments went over with the first division, whereas there should be only twelve regiments to a division. Consequently, five of these regiments had to stay in England, and the officers had to stay with them. Some of them are in England yet, and that has given rise to some dissatisfaction amongst the men and officers not only in England but in Canada. We have taken the line that as far as possible men who have had actual experience at the front should be considered first by promotion. There are four or five colonels in England.

not in London as my hon. friend says, but at Bramshott and Shornecliffe, in command of their units. We have also sent over senior and junior majors with all the regiments. These juniors are trained in England in the kind of work they would get at the front, and go forward as reinforcements are needed. We have some officers in England who returned from the front wounded, but as soon as they are convalescent they begin training again, and go back to the front attached to other corps. The rule used to be that if an officer was invalided for four weeks, his place was not kept for him in his original regiment. We took the matter up, and his place is now kept for him for three months. There is no such condition of affairs as described by my hon. friend. The five officers who were left behind stayed with the regiment in England.

Mr. HUGHES: I could hardly follow the minister; he gave us so much information that he seemed to get away from the point. Does he say that there are no Canadian officers in England unemployed or unattached? I have seen letters from officers in England stating that they had no work to do, that the regiments to which they belonged had been drafted to fill gaps, I think, in other regiments, and that though they had offered to go to the front in a private capacity, they were not allowed to do so, and they had nothing at all to do. I think that statement is correct, and I would like to know how many men are in that position.

Sir SAM HUGHES: There is no officer in the Canadian service in England who is not on some duty or another. A number lost their places in their old regiments, and a number who went over with the first contingent have returned to England, but every officer is on duty. I know that every officer wants to get to the front, but he has to take his turn. I may say that it is more difficult for a senior officer to get to the front than for a junior officer. They were sending over lieutenants, and leaving the captains and majors out, and these were put on instructional duty in England. A number of lieutenants who entered the service as sergeants and privates are waiting their turn to be attached. A great many officers have come back to Canada, and we have put them in training here.

Mr. HUGHES: I understand that there are some men in Canada serving in the capacity of officers, who, on account of age, or for some other reason, cannot go to the front, who do not intend to go to the front or who are not expected to go to the front. Perhaps they are doing some work in the form of recruiting, or something of that kind. The point I wish to bring out is, if there are in England men unemployed, or men not likely to go to the front, would it not be a proper thing to have these men employed in Canada. They have had some experience and training, and would be more capable probably than the men who are employed here. That would prevent the doubling of the number of men on the pay list. It is very important that the expenses should be kept down to the minimum, because they will be high enough. Any overlapping of officers would be very expensive.

Sir SAM HUGHES: We have taken the matter up and looked into it very carefully. Last year when I was in England I found a considerable number of men hanging around. They were not attached to their old regiments, and they felt that they were supernumeraries. They wanted to go to the front. We took the matter up then, and we brought home a great many of these officers and put them in other regiments in Canada for training. Our reports at the present time are that there are no men in England who are not on duty. However the matter is being looked into.

Mr. HUGHES: There is another matter which I would like to bring to the minister's attention. Since the reply to the address from the throne was disposed of, I have been trying to get information in regard to the purchase of horses in Canada, but I have not been able to get any satisfactory reply. Perhaps the minister might be able to give us some information on that point.

Sir SAM HUGHES: The purchase of horses for the first contingent was, like everything else, done in a hurry, but all in all it was well done.

Mr. CARVELL: Tell us again about these Kings county horses.

Sir SAM HUGHES: To purchase the horses for the first contingent we sent out buyers as rapidly as possible. Like the case in Peel county, however, there were gentlemen behind the scenes. I understand that a certain gentleman there got so much money that he gave it to the Patriotic Fund. I also understand that the gentleman who was instrumental

in showing him the devious ways of horse-dealing had been for years purchaser for the Liberal Government, and was for three or four years purchaser for the Conservative Government until we found out by accident that the farmers were getting low prices and the Government were paying high prices. Then we got on his track. However, he had got behind the scenes with this other gentleman. I do not know whether the prices charged were abnormal or not, but, from the fact that he felt disposed to give money to the Patriotic Fund, I assume that he felt that he had not given enough to the farmers. It was a serious and fatal mistake to give money to the Patriotic Fund when he should have gone through Peel county on the eve of the election and given it back in five dollar bills to the farmers. It showed he was not a very astute politician. My hon. friend (Mr. Carvell) wants to know about the purchase of horses in Kings county. With the exception of 24 or 25, they were the best horses purchased, and they were $25 cheaper on an average than the Sydney horses, and $55 cheaper than the horses from the western counties. When we came to consider the purchase of horses for the later contingents, we came to the conclusion that it would be better to deal directly with the farmers, but we found again and again instances, similar to those I have referred to, in which the farmers did not get full value, and the middleman was getting a rake-off. We felt we were up against men to whom the fellows receiving patronage in Cape Breton or Woodstock could not hold a candle. The buyers did their best however, and we got a splendid lot of horses at very fair prices. Cavalry not being of much service in this war, we thought it would be foolish to maintain a depot for horses in Canada, where we would have to keep up an establishment of veterinary surgeons and other officers, while the British Government were maintaining their depots and had everything ready. The result was, as point pointed out by the Prime Minister, that we adopted the pooling system, under which we put our horses in and draw out what we need, these being placed to our credit as against the number that we turned in.

Mr. OLIVER: From the statement made by the minister it would seem that the system works out in this way, that instead of the Canadian Government buying the horses that are required for Canadian service from Canadian farmers, they are buying horses that have been bought by the British Government in the United States.

Sir SAM HUGHES: The British buyers are buying, and have bought, in Canada, many more horses than we will ever need.

Mr. SINCLAIR: Will the minister explain why they are not bought by the Candian authorities? The minister stated the other day that horses required by the Canadian forces were being purchased by British buyers in Canada. It seemed to me to be a curious thing that horses required by the Canadian forces should not be purchased by the Militia Department of Canada. I have not been able to think of any reason why they should not, and I would like the minister to give an explanation of that if he can. I am not talking about the use or care of the horses on the other side. Is there not some one in the Conservative party who is a good judge of horses and who could purchase these horses in Canada? In the constituency I represent there are a number of horses for sale. The farmers in eastern Nova Scotia have not had any opportunity of selling their horses to the department during the year 1915. Shortly after the outbreak of the war certain purchasers were sent down to Nova Scotia, and they gave the farmers to understand that there would be a good market for their horses as long as the war lasted. They were told to keep their horses and older colts, to break them, and get them ready, because they would be needed in 1915. However, no horses were purchased in Nova Scotia in 1915, and no opportunity has been given to the farmers to sell their horses. If horses were being purchased by the Canadian Government for the use of the Canadian forces the farmer might have a better chance of selling his horses.

Sir SAM HUGHES: We have purchased and have on hand in Canada and England all the horses we will require for two or three years unless we raise some new batteries. With regard to the buying of horses, we found that we were buying, the English Government were buying, and the French Government were buying, and it created confusion.

Mr. OLIVER: The farmer got good prices?

Sir SAM HUGHES: No, the farmer did not get good prices, but the dealers did. Our buyers were dealing direct with the farmers. The others were dealing with the stables. I do not want to take the time to

go into all the details and tell about all the tricks, but we found that the farmer was not being benefited, and that the Canadian Government was not getting the horses. We were being outflanked by the stablemen and the farmers were not getting the high prices they should have obtained. That is why we decided that there should be only one purchasing commission and in coming to that decision we met the desire of both the Canadian and British Governments.

Mr. HUGHES: The minister has made an extraordinary statement. He says that the British, French and Canadian Governments were buying horses, that there was a great deal of confusion and
11 p.m. that the competition reduced the price to the farmers. It appears to me that the Government could have made arrangements with the British and French Governments to avoid this confusion. An embargo was put upon horses so that the farmers could not export them. Then the representatives of the British and French Governments were warned away from Canada and were not allowed to buy horses here. The Canadian Government stopped buying horses and as a result the horses are left on the farmers' hands. The farmer and the stock breeder are the men who will suffer. The minister tells us that not many horses were required in this war. According to the information published in the daily press, coming from New York, the British Government bought over 500,000 horses in the United States and paid for them $125,000,000. Could the minister tell me how many horses are obtainable that would be suitable for military purposes? Probably 100,000 or 200,000 are still left on the farmers' hands. There is no sale for them. The minister told us a moment ago that there was so much confusion that the purchase of horses was stopped. That shows our unbusinesslike methods and incapacity on somebody's part.

Sir SAM HUGHES: The Canadian Government bought 24,000 horses for the Canadian service. These were sent over. There were a good many more than we wanted and we have a number of horses on our hands yet. In these stringent times we felt that it was quite out of place to buy a lot of horses and keep and feed them in England when we might never want them. Therefore, we decided to buy horses only when we needed them. We were ahead of our requirements and an arrangement was made that the British Government should buy the horses in Canada in the future.

[Sir Sam Hughes.]

Mr. PROULX: What is to be done with the horses that the department has on hand?

Sir SAM HUGHES: We are using them from time to time for batteries and that sort of thing. We furnish two or three to each regiment.

Mr. PROULX: It was stated in the papers last spring that a large number of Canadian horses were slaughtered in England; in fact such a large number that a member of the House of Commons there made the complaint that the presence of these slaughtered horses had created a pestilence in his constituency. Can the minister say why these Canadian horses were slaughtered?

Sir SAM HUGHES: I never heard of anything of the kind.

Mr. PROULX: The minister admitted last session that quite a number of Canadian horses had been killed in England.

Sir SAM HUGHES: Never heard of it in my life. I said that at Valcartier we had four or five killed.

Mr. PROULX: Not more than that?

Sir SAM HUGHES: I do not know of it.

Mr. PROULX: The complaint was made by an Englishman.

Sir SAM HUGHES: I never heard of it in my life.

Mr. PROULX: Were any horses bought in Quebec?

Sir SAM HUGHES: Yes, fine horses, too. Were there not any bought in the county of Prescott?

Mr. PROULX: The buyers never came to the county of Prescott. I suppose there were too many Grits in that county. How many horses were bought in Quebec?

Sir SAM HUGHES: I do not know how many by provinces. We bought 24,672 all told.

Mr. PROULX: What proportion in Quebec?

Sir SAM HUGHES: Quebec got more than its proportion.

Mr. PROULX: That is not what I hear. I hear that they never saw any buyers there and that they were not getting their share of the patronage. I do not know why it was except perhaps that the horses were not able to talk French.

Mr. HUGHES: The minister says that the department have all the horses they want and that they do not propose to buy any more. Under these circumstances why put an embargo on horses and prevent the farmers from selling them to the United States, or wherever they could sell them, and why send the French and British buyers out of the country and thus prevent them from buying horses here?

Sir SAM HUGHES: They were not.

Mr. HUGHES: I think they were.

Sir SAM HUGHES: The British and French buyers are still in the country and they can buy where they like.

Mr. HUGHES: If the minister does not know that the British Government are buying horses in large numbers in the United States, he is a very innocent man.

Sir SAM HUGHES: I can assure the hon. member that the British Government are not buying horses in the United States or shipping them across at the present time.

Mr. J. J. HUGHES: But they bought half a million horses in the United States after they stopped buying horses here.

Sir SAM HUGHES: The hon. member has no evidence to that effect.

Mr. HUGHES: What evidence does the minister want? Until a few days ago Major General Benson was buying horses in the United States for the British Government. Further than that, if the Canadian Government had all the horses they wanted for their own use, and if the British Government needed horses, why could not this Government buy horses here for the British Government? Last year the farmers were asked to increase their production, and horses are used in the army, because artillery has not been done away with. As we have horses to sell in Canada, why does not the Government assist the farmers in selling them? There is no local demand for horses, and if they are not sold to the Government they will be left on the hands of the farmers. There appears to be in this respect a dereliction of duty for which there is no reasonable excuse.

Mr. PARDEE: What position did Sir Adam Beck occupy in connection with the buying of horses throughout Ontario?

Sir SAM HUGHES: While he was buying horses, he was employed by the Government.

Mr. PARDEE: Sir Adam Beck, for some reason best known to the Government and to himself, stopped buying horses, and when there were plenty of horses in Ontario that could have been sold, we were not allowed to ship them out of the country. Whilst that embargo was on, and after Sir Adam Beck had told the people of Ontario that he was not buying any more horses for the Canadian Government, ten or twelve carloads of horses were being shipped every day through the Sarnia tunnel on their way to Great Britain, although we have put on the Order Paper questions about the buying of horses both for the Canadian and the British Governments and we have been told by the Prime Minister that for reasons of state these questions cannot be answered. What these reasons are I cannot understand. There are to-day in the province of Ontario thousands of horses that could be bought for war purposes. The minister, however, says that they are not needed. Last summer and the summer before the farmers of Ontario were in exactly the same position in regard to supplying horses, and yet horses were not being bought. I saw Sir Adam Beck and I said to him: "Why do you not come to the county of Lambton where there are hundreds of good horses?" He replied: "Horses from the lake ports are of no use." It is absolutely foolish for a man to make such a statement, whether, as some hon. gentleman says, it is a joke or not. I replied to him that they were just as good horses as could be procured anywhere else in the world, but the horses were bought from other sources and the farmers of Ontario were left with these horses on their hands. If the minister can give us a satisfactory explanation in regard to this matter, the farmers in my constituency will be satisfied.

Sir SAM HUGHES: Not one dollar of Canadian money went into foreign countries for horses; it was all expended in this country, and a large amount of money belonging to the British and the French Governments was also spent in Canada. The Canadian Government have all the horses required for war purposes, and the same is true of Great Britain. I presume that later on more will be required. It must be remembered also that the United States furnish a large number of horses to the French Government, and these might be among the carloads going through the Sarnia tunnel.

Mr. PARDEE: They were horses for Great Britain.

Sir SAM HUGHES: I do not know anything about that, but I know that the French Government bought horses in the United States and shipped them from Canadian ports. Of course I would consider it bad business on the part of the Government to buy horses which were not required. So far as I know, the quality of the horses purchased was all right. I had my officers examine the horses before they were taken over, and I believe that we got good value for the money. I do not think the farmers of Ontario would thank the Government for buying horses for which they had no use. It is no part of the Government policy to buy up all the horses any more than to buy up all the hens in the country.

Mr. ROBB: We on this side of the House are not complaining because the Government are not buying horses that are not required; our grievance is that this Government sent British and French buyers out of this country at a time when they wanted horses, and that the Government arbitrarily fixed the demand and the price for horses. The Prime Minister last session made a statement that for reasons he could not give this market had been left to the Canadian Government, we have the evidence of the Minister of Militia that they have bought all the horses they required, a small number compared with those offered for sale. And he said that the British Government had bought all that they required. The result is that the farmers of Canada are left with horses on their hands at a time when grain and hay are high, and the market is gone. The Government have removed the embargo on horses to the United States, and so far as our part of the country is concerned horses are going daily across the line. It is scarcely necessary for us on this side to find fault with the Government for the manner in which they have handled the horse business, that has been done very efficiently by their own supporters. Only recently at a meeting of stock-breeders in Toronto the Government were severely arraigned on this account by a member of the House who supports them. My friends are asking me why it is that Canada is buying her horses through Great Britain. I think I can understand why that was. When the war broke out the minister sent out letters to the members, asking them to recommend people as horse buyers in their several counties. In my county I recommended my opponent of 1908 and 1911, Dr. Walsh, who is a veterinary surgeon and knows horses. But for some reason he was not allowed to buy horses. Had none but men like Dr. Walsh bought horses for this Government there would have been no thirty-year old horses turned over to them. One reason why the British people lost confidence in the horses of this country was because horses were bought to be sent to Great Britain by men who knew nothing about horses. So they loaded up the department with old plugs that were useless, and naturally the English people said: If these are Canadian horses we can do without any more of them.

Sir SAM HUGHES: The hon. gentleman seems to think that these were purchased for the Canadian Government. General Benson was not buying for the Canadian Government but for the British Government. When I communicated with General Benson, I communicated with him as buyer for the British Government.

Mr. ROBB: That only emphasizes the point I make. Men who were not competent to buy were appointed to that duty, and so they sent inferior horses to Great Britain and our horses were judged by the plugs that were sent over. That is why our farmers have hundreds of thousands of horses on their hands. As to the matter of confusion, why would not the same rules apply to the purchase of flour and oats? I understand that one of the ministers is making flour purchases for all the Governments, and I believe he is doing it pretty well. I believe he is getting the flour at near cost, for I know that many mills are willing to sell almost at cost to these British markets. Our farmers did not ask an arbitrary price for their horses; all they wanted was to sell them. And they do not feel kindly when they realize that as the hon. member for Lambton says, hundreds of thousands of horses were sent through Canada from the United States. And that is not the worst. Some of these horses were inspected in Canada and rejected. Then they were turned on this market to spread disease among Canadian horses.

Sir SAM HUGHES: Can the hon. member give me an instance of any horses so rejected and spreading disease?

Mr, ROBB: My authority is the hon. member for South Ontario (Mr. William Smith) who made that statement at a meeting of stock-breeders in the city of Toronto recently. His statement was published in all the newspapers.

Mr. J. J. HUGHES: There is no manner of doubt that the Government has bungled this horse business terribly.

Some hon. MEMBERS: Oh, oh.

Mr. HUGHES: There is nothing to laugh at; I am stating an actual fact. We have the statement of the minister to-night that there was confusion in the buying of horses. The hon. member for Huntingdon (Mr. Robb) pointed out one result of the early purchases that were made. It is very little wonder that the British Government should turn from buying horses here. Though the Minister of Militia evidently has never heard of it, as a matter of fact there was a discussion in the British Parliament arising out of this matter. One of the members of the British House asked the Ministry concerning a number of horses that had been slaughtered and were becoming a nuisance in some village in England, and he wanted to know what steps the Government would take to abate the nuisance. All this can be seen by a reference to the debates of the British House. The minister in reply stated that the matter had been brought to his attention and that steps were being taken by the Government to abate the nuisance. This was the kind of thing that destroyed the horse trade in Canada to the great injury of our people. They started out to buy horses, appointing every Tom, Dick and Harry as their agents, men who knew nothing about horses. The sworn testimony last year before the Public Accounts Committee was shocking. Horses were bought at $10 and a few days afterwards were sold for the use of the soldiers at $110. A horse that was exchanged for two ducks and a drake, and good for nothing at all, was also bought. Such horses were bought in Kings county, Nova Scotia, yet when they came to Valcartier, the hon. minister tells us he never saw a better lot of horses. A statement of that kind, Mr. Chairman, is simply ridiculous. At all events, the horse trade in Canada has been greatly injured, and the British and French Governments have bought horses in the United States while our farmers have hundreds of thousands of horses on their hands that they cannot sell. It is a serious state of things, for which the Government is responsible.

Mr. A. A. McLEAN: Two gentlemen came to Prince Edward Island to buy horses for the British Government. They bought three or four hundred artillery horses, and they told me they had never sent forward a better bunch. The Canadian Government also sent men to buy horses, and I venture to say that not one of the horses bought in Prince Edward Island were rejected. As to the horses of Ontario, I do not know anything about them. It may be that some of the horses bought in the United States were of a poor class, not being broken, but so far as the horses bought in the Maritime Provinces are concerned, I believe that, except a few sold to some of the buyers, they were as good horses as any country could supply.

Mr. HUGHES: That only confirms my position. I know that the horses purchased in Prince Edward Island were first-class. And a great many of the same kind of horses are there still, and there is nobody to buy them, while the British Government is buying horses in the United States.

Sir SAM HUGHES: No.

Mr. HUGHES: They were a short time ago. While these horses were for sale in Prince Edward Island, the representative of Major General Benson was buying horses in the United States. Is the hon. member for Queens, P.E.I., satisfied with the way the Government is managing the horse business? Our constituents in Prince Edward Island have thousands of horses on their hands for which they have no sale. These horses are the best in Canada, and are quite suitable for army purposes. Notwithstanding these facts, the Government sent the British and French buyers away from the country and would not permit them to buy horses in Canada. Is the hon. member for Queens, P.E.I., satisfied with that condition of things?

Sir SAM HUGHES: As soon as the Canadian Government had purchased its horses, the French and British buyers were let in. Canada has furnished twice as many horses to the British and Canadian Governments as the United States, in proportion to the size of the respective countries. The horses supplied by the Canadian and British Governments are infinitely superior to horses purchased in any other part of the world.

Mr. HUGHES: Our horses are?

Sir SAM HUGHES: Canadian horses are. They are sought all along the line; the British Government seeks Canadian horses.

Mr. PROULX: Why were more horses not bought?

Sir SAM HUGHES: Because they have all they want.

Mr. OLIVER: This country is part of the British Empire; as such, it was entitled to the first call for horses.

Sir SAM HUGHES: And got it.

Mr. OLIVER: It got the first call; then, through the Prime Minister, this Government objected to the British Government buying any horses in Canada last year. As a consequence of that objection, the British Government and the Allies have bought half a million horses in the United States at an average price of over $200 each, while the average price paid for horses in Canada has been less than $175 each. There were plenty of attempts by the allied powers to take over at a good price horses for sale in Canada, and the Canadian farmer was entitled to that consideration, if not at the hands of the allied Governments, at any rate at the hands of this Government.

Sir SAM HUGHES: The hon. gentleman is entirely in error as to the prices. He is quoting, on the one hand, the price delivered in France, and, on the other hand, the price paid in Canada.

Mr. J. J. HUGHES: On the 14th of last month I put a question on the Order Paper, some of which the Prime Minister answered, and some of which he said it would not be in the public interest to answer. He said:

I understand that the French Government is buying horses in Canada at the present time.

I wanted to find out something more about the matter. I wanted to see if we could sell horses to the French Government, because we certainly wanted to sell them to somebody. A day or two later I put the following question on the Order Paper:

Where is the French Government purchasing horses in Canada? What are the names and addresses of the parties representing the French Government in this matter?

The answer of the Prime Minister was: "We are endeavouring to procure this information." The Government of Canada, knowing the number of horses that were for sale in this country, stated that the French Government was buying horses here, but that they did not know where they were buying or what persons were representing the French Government in the matter. The Prime Minister said further, in answer to this question:

I understand that the Hudson Bay Company have purchased some supplies for the French Government, but I am not quite sure as to the nature and extent of these. The officer connected with the purchase of horses, who was recently in Ottawa, is absent at the present time; but the information will be procured as soon as possible.

According to the statement of the Prime Minister representatives of the French Government were in Ottawa, but further than that the Government had no information. Hundreds of thousands of horses were obtainable in Canada, yet the Government, as is apparent from the answer given by the Prime Minister, were taking no interest in the matter. Really, the Government should be ashamed of the way this business has been handled.

Sir SAM HUGHES: The hon. member should know that the Hudson Bay company is agent for the French Government. If he had been anxious to secure the information for which he asked all he had to do was write a letter, put a three-cent stamp on it, and send it to the Hudson Bay company.

Mr. HUGHES: The hon. gentleman says that the Hudson Bay company are agents for the French Government. The Prime Minister did not know that on February 1.

Sir SAM HUGHES: Yes, he did.

Mr. HUGHES: If he knew it he would not give me the information, because he said:

I understand that the Hudson Bay Company have purchased some supplies for the French Government, but I am not quite sure as to the nature and extent of these.

Sir SAM HUGHES: It is not the Prime Minister's business probably.

Mr. HUGHES: I asked the question not of the Prime Minister, but of the Canadian Government. This was a question for the Government, and the Minister of Militia and Defence should have given information on the subject if he had it. Surely the Prime Minister would not undertake to answer a question of this kind without applying to the proper officer or to the proper minister for information.

Sir SAM HUGHES: The proper officer is the Hudson Bay Company.

Mr. HUGHES: I am pointing out to the minister that the answer which I got from the Prime Minister on February 21 was to the effect that the Government did not know that the Hudson Bay Company was buying horses for the French Government.

Mr. MURPHY: If I had known that the hon. member for Kings, P.E.I., (Mr. Hughes) was seeking this information, I could have supplied him with some of it myself and I would not have had to go to the Hudson Bay Company for it. I hold in my hand a bill of sale of some horses sold to representatives of the French Remount Commission by a constituent of mine, at Lansdowne Park, in the city of Ottawa, two months ago. He informs me that he had to sell these horses through a well-known Tory heeler, and that after the price had been agreed on between him and the purchaser of the horses, he afterwards received a memo setting forth the details of the alleged sale, and enclosing a cheque for the amount, which, after it had passed through the hands of the middleman, was considerably less than the price which he had agreed upon with the original purchaser. It might strike you, Mr. Chairman, and the committee as strange that that should have happened, but the man in question is illiterate; he can neither read nor write. I am investigating this particular transaction at the present time. It is a fact, therefore, that horses were purchased at Lansdowne Park in Ottawa for the French Government, and not by the Hudson Bay Company. I can quite conceive that the Minister of Militia would not know anything at all about that. As to the purchase of horses in Canada, I think that the hon. member for South Ontario (Mr Smith) furnished the real reason for the trouble about the purchase of horses in Canada. If my memory serves me correctly, the hon. gentleman attended a meeting of the Horse Breeders' Association in Toronto on February 3, 1915. At that meeting he made the specific charge that there was too much graft in connection with the purchasing of horses that was then going on in Canada. He alleged as the reason for that that the men whom this Government had sent out to purchase horses did not know anything about the business. The exact phrase that he used was that "they might be able to play marbles, but they could not buy horses." The same hon. gentleman furnished us an additional reason only last week, again at the annual meeting of the Horse Breeders' Association in Toronto. At that meeting he referred to the statement that he had made a year ago, and supplemented it with the information that the people whom he was addressing knew that he was a strong party man, and that he had been called to account in Ottawa for the statement that he had made at the meeting of the Horse Breeders' Association last year. Notwithstanding that, he alleged that the additional troubles that had existed subsequent to that were due to the fact that there were too many middlemen between the farmer and the Government. The reason given last year was that the men sent out did not know their business; they could play marbles, but could not buy horses. The reason this year is that there were middlemen between the Government and the farmer. That seems to be the essence of the whole matter.

Sir SAM HUGHES: I have not seen these statements.

Mr. MURPHY: I will send them over to the minister.

Sir SAM HUGHES: If any gentleman in any part of the Dominion makes the statement that after the preliminary buying, middlemen have come between the Government and the farmers in the matter of horse purchases for the Canadian Government, he is making a statement that is absolutely without foundation.

Mr. MURPHY: Then the minister is rebuking the hon. member for South Ontario (Mr. Smith).

Progress reported.

On motion of Sir Sam Hughes, the House adjourned at 11.43 p.m.

Friday, March 3, 1916.

The House met at Three o'clock, the Speaker in the Chair.

PRIVATE BILL INTRODUCED.

Bill No. 49, for the relief of Lillian May Dent.—Mr. Douglas.

CORRECTION.

On the Orders of the Day:

Mr. GEORGE H. BRADBURY (Selkirk): I desire to call the attention of the House to an error that occurred last night. When I was speaking of the patronage in connection with the 108th Battalion, Selkirk, Hansard makes me say:

> The 108th Battalion is stationed at my own town of Selkirk. The barracks were obtained from a Liberal, a member of the local legislature. Every dollar of the money spent in fitting up the barracks went into the pocket of that hon. gentleman.

What I said, or intended to say, was that this money went into the improvement of the property. The money did not go into the hon. gentleman's pocket. I say this in justice to Mr. Parrish, who has done everything possible to facilitate matters in connection with the 108th Battalion. It would not be fair to him to say that the money went into his pocket, and I did not say so, or, if I did, I did not intend to say so.

SUPPLY.

The House in Committee of Supply, Mr. W. H. Bennett in the Chair.

Arts and Agriculture—Patent Record, $30,000.

Mr. PUGSLEY: The hon. gentleman who is in charge of these Estimates (Mr. Hazen) will recollect that the Minister of Finance stated that there were items in these Estimates aggregating about $29,000,000 which the Government thought it would not be called upon to expend in the coming year. If the minister would state the items in this department that go to form part of that $29,000,000, it would facilitate the work of the committee.

Mr. HAZEN: I believe that there are such items among the votes for the Department of Agriculture, but I can hardly indicate them in advance. As each item comes before the committee, I shall be able to tell whether it is in that category or not. The hon. gentlemen will understand that I have not the same familiarity with these Estimates that I have with those of my own department.

Mr. PUGSLEY: It would be convenient if the minister could get from some officials of the department a list of these items.

Mr. HAZEN: As to the item now before the committee, it is the same amount that has been voted for a number of years past. It is for the printing of the Patent Record, and is payable to the Department of Public Printing and Stationery, so that it goes from one department of the Government to the other. Copies of the Patent Record are sent free of charge to members of the House, to 272 libraries in Canada and the United States, to certain Government officials, and as exchanges. The Patent Record is sold at 20 cents a copy, or $2 a year. The amount spent in this service in 1914-15 was $25,199. The amount spent in the current year, up to January 31 last, was $18,118.71. So a greater sum than this will be required.

[Mr. Bradbury.]

Experimental Farms—maintenance of Central Farm and establishment and maintaining of additional branch stations, $846,000.

Mr. PUGSLEY: There is an increase here of $61,000.

Mr. HAZEN: That is made up of the following proposed outlays: Illustration stations, $29,000; exhibitions and extensions, $9,000; cereals, $5,400; tobacco division, $5,700; expenses of central farm, $4,500; flax investigation, $5,000. The item for cereals provides for a wider seed distribution, because more people are asking for seed. The additional expenses for the Central farm are emergency items not chargeable to any division of that work. The rapid expansion of the work and the expenses incidental thereto make it necessary to have this additional sum. It will be noted that there is $5,000 for a flax investigation. Hon. gentlemen will remember that this matter was discussed in the House a few days ago. There is a very general demand throughout the country for the establishing of a branch to deal with the flax question; this item is to cover the expenditure necessary in this connection.

Mr. PUGSLEY: When was the present poultry house erected at the Experimental Farm, and what was the cost?

Mr. HAZEN: It was erected the year before last, at a cost of about $4,000.

Mr. MARCIL: Can the hon. minister give us a list of the additional branch stations to be erected under this vote?

Mr. HAZEN: I understand that no decision has been arrived at with regard to the erection of additional stations during the next year.

Mr. MARCIL: Has the hon. minister a list of the stations that were established last year?

Mr. HAZEN: New experimental farms were established last year at Borden, Manitoba; Summerland, B.C., and Lennoxville, Que. In addition, a large number of illustration stations were established in different parts of the country. In the case of illustration stations, a farmer chosen in a particular community undertakes to conduct a specified portion of his farm according to rules laid down by authorities of the Experimental Farm.

Mr. MARCIL: Could the hon. gentleman name a few of the places in Quebec where these stations are established?

Mr. HAZEN: The illustration stations established in Quebec are at Aubrey, Drummondville, Lac à la Tortue, Nominingue, New Carlisle, Rimouski, Stanbridge, St. Gedeon, Ste. Julie.

Mr. KYTE: How many of these stations are there in Nova Scotia?

Mr. HAZEN: I am informed that there are none in Nova Scotia.

Mr. MARCIL: I understand that there are three experimental farms in the province of Quebec?

Mr. HAZEN: Yes, at Lennoxville, Cap Rouge, and Ste. Anne de la Pocatière.

Mr. MARCIL: I understand that there is no experimental farm in the district of Chicoutimi and Saguenay?

Mr. HAZEN: There is an illustration station, but no experimental farm.

Mr. MARCIL: Can the minister give us a list of applications for stations that are now under consideration?

Mr. HAZEN: A few applications have been received, but I understand that there is no list of them in the department.

Mr. ROBB: In the case of these illustration stations, what is the farmer paid for the use of his land, and for his extra labour?

Mr. HAZEN: The farmer is paid a sum of money that amounts to about $5 an acre, and he is furnished with seed. He carries on the operations under the supervision and instruction of the officials of the Experimental Farm.

Mr. MARCIL: Can the minister give us any information as to the rotation of crops at the stations in the province of Quebec?

Mr. HAZEN: It is a four-year rotation, going in this order: the first year, a hoed crop, such as corn or roots, such as potatoes; the second year, grain; the third year, clover; the fourth year, pasture.

Mr. MARCIL: Would the minister give a report of one of these stations and a statement of the results obtained?

Mr. HAZEN: They were started only last year, and I understand that the reports have not yet been received at the department.

Mr. KAY: There is an experimental station at Stanbridge in Missisquoi?

Mr. HAZEN: Yes.

Mr. KAY: On whose farm?

Mr. HAZEN: Mr. C. Moore.

Mr. CARVELL: Are there any illustration stations in New Brunswick?

Mr. HAZEN: No. The only places where there are illustration stations at present are in Saskatchewan, Alberta and Quebec.

Mr. CARVELL: I suppose the amount of money involved is small, perhaps a few thousand dollars in each case.

Mr. HAZEN: It is much smaller than that. They pay the farmers about $5 per acre for the land used and supply them with seed.

Mr. OLIVER: Who gets the crop?

Mr. HAZEN: The farmer.

Mr. CARVELL: I am not a farmer in the sense that some of my friends around me are farmers, and yet I take an interest in farming. It has always seemed to me that the course the department has recently taken is a great advance on the course pursued in the past. The minister will remember that a year or two ago we had a discussion in this House about an experimental farm which the minister was instrumental in having established at Fredericton and which I criticised very severely. I find in the Auditor General's Report for the last fiscal year that that farm has cost $50,278. There has been a small return, a few hundred dollars, but I think I am safe in saying that its net cost has been $100,000. It may have been of some value; I will not say it has not; but I think that even the minister will have to admit that it is not producing the results along educative lines in agriculture that we would like. I think it is in the wrong location; but we will not go into that. I hope the department will stop spending money by the hundreds of thousands of dollars in one place, and distribute it around the country so that many people will be able to derive advantage from it. I do not suppose that 500 farmers in a year would take advantage of the educative branch of the experimental farm at Fredericton, and I doubt if one-half of 500 a year do. It does seem to be an enormous amount of amount of money to expend for the results attained.

Mr. HAZEN: The gentleman who is coaching me to-day says there are 300 farmers from various parts of New Brunswick visiting that farm to-day.

Mr. CARVELL: My hon. friend knows that is an annual occasion. It is all very well to entertain them there, but that is not a great advantage from an educational standpoint. I am sorry to say that in New Brunswick we are not raising stock to anything like the extent we should; we are not raising one-tenth of what we ought to. Farmers will not derive any advantage in respect to stock raising from visiting the farm. I see by the Auditor General's Report that the department has purchased for that farm cows costing from $30 to $40. At that price they cannot be pure-bred stock or even good grade stock. I have before me an item of the purchase of 5 heifers from W. E. Kirk, New Maryland, for $153. That would be only $30 apiece. What is the sense of buying heifers at $30 apiece to put on an experimental farm? I do not know why things of this kind are done at that farm. The gentleman in charge ought to have knowledge of agricultural matters. He has occupied public positions long enough. It may be that he has occupied them too long, and possibly that it would be better to have a man who had yet to gain a reputation; we might then get better results. I do think it would be better to stop spending money in Fredericton. This $100,000 ought to be enough for that place. In the first place, I think for political reasons, the department bought a farm which is of little value for experimental purposes. While there are a few acres of good land in the front, that is all the good land there is on the farm. They have hired men by the dozen and have employed them in clearing the land and taking out the roots and stumps; and any person going into Fredericton over the Canadian Pacific railway and seeing this farm would not buy any of it for pasturage, let alone experimental purposes, except perhaps these few acres at the front. I would call attention to pages A-24, A-25, and A-26, in the Auditor General's Report. The Acting Minister of Agriculture knows every foot of that land, because it is within three miles of the place where he lived until he was a man; he knows it much better than I do; and I think, if he will tell the honest truth, he will have to admit that we are getting very poor returns for this enormous expenditure.

Mr. HAZEN: I do not want to enter into a discussion as to the details, as my hon. friend and I discussed this farm in the House on a previous occasion. In my opinion the farm is admirably located. It is close to Fredericton, within the city limits, although it is about two miles from the Parliament buildings.

Far from being a waste, I would call this excellent land. Before being bought it was inspected by the Director of Experimental Farms at Ottawa, a gentleman who has been in the Service for a good many years, and who is recognized as an authority, and it was also inspected personally, I believe, by the Minister of Agriculture, and they came to the conclusion to buy that property without the slightest political influence being used. However, that is simply by the way. Of course, the establishment of a new experimental farm costs a certain amount of money. Buildings have to be erected, land has to be cleared, drainage has to be put in, and all these things naturally make the cost of an experimental farm in its earlier stages greater than afterwards. That is the case with the farm at Fredericton, as it has been the case with similar undertakings elsewhere. With regard to the stock, I am informed—I am not speaking as an expert; I am simply occupying the position temporarily during the unfortunate illness of the Minister of Agriculture—that the heifers that cost $30 each were simply grade heifers. What they are trying to do is to show the farmers in the neighbourhood, and the farmers who go there, how to improve their stock, even if they are only grades. In New Brunswick we have some good herds, but as a rule they are grade cattle, and the object on the experimental farm is to buy those heifers, have them covered by thoroughbred bulls, and so improve the general stock of the country, where grade cattle are largely used and there are not many thoroughbreds. To embark at once on thoroughbred stock involves a considerable outlay of money which would be beyond the reach of a great many farmers who do not farm on an extensive scale. Buying grades and having them infused with thorough-breds improves the stock, and in exemplification of what can be done along that line I am told that there has been a general production of good stock throughout the country.

Mr. CARVELL: I hope the minister is right. In addition to what I pointed out, I find this item in the Auditor General's Report: "T. T. Mersereau, Russiagornis, one cow, $30." Just think of an experimental farm buying an old cow for $30. It

takes a lot of faith in the minister's explanation to make one believe that they would buy that cow.

Mr. HAZEN: I am informed that the stock-breeding is managed directly from the Experimental Farm here, and that those purchases have been made under the direction of the Director of Experimental Farms, whose headquarters are at Ottawa.

Mr. CARVELL: I accept the minister's explanation, and I only hope the policy will work out as well as they think it will. I do notice in the Auditor General's Report that they have been buying some good cattle. They bought three Shorthorn cattle from G. A. Jackson, Downsview, Ont., for $820, and five Ayrshires from J. F. Owen, Stonefield, P.Q., for $1,200.

Mr. JOSEPH GIRARD (Chicoutimi-Saguenay): (Translation.) Mr. Chairman, I should like in passing to make a few remarks on the Estimates of the Minister of Agriculture. I have just heard a discussion on experimental farms, and, as I understand, some of my fellow-members find fault with the price of maintenance as being too high, and criticise the purchase of certain cattle at what they deem too low a price.

Experimental farms, I take it, have been established in the country through the expenditure of public funds for the purpose of conducting, on a large scale, experiments covering protracted periods and such as most farmers could not undertake themselves, but which they find of invaluable benefit after the trials are made and the results published.

Naturally, that experimental work entails a large expenditure without any definite financial return, but it is of great financial advantage to the people. Yet we are aware that at Ottawa, the part of the farm which is cultivated for general purposes, gives fair returns, notwithstanding that all the work is done by day labour and the salaries paid are higher than the general run for farm help.

Buying low-priced cattle has been criticised. Everybody knows that. But why were they bought? When low prices are paid for milch cows, the purpose is to demonstrate experimentally that, even with all possible care, buying such cows is not profitable. By means of the official results of a number of experiments, the farmers may be made more easily to understand that cattle of that sort means a loss to them. Ridiculous prices are purposely paid for stock, to prove by official test how utterly unsatisfactory will be the results secured therefrom. Then lecturers are sent throughout the country, meet the farmers and speak to them in a practical way and make use of the statistics supplied by such painstaking experiments.

At other times, cattle are bought in the country to experiment for beef. Of course, some of the stock procured in the country is obtained at a low price, others come higher, and experiments are made year after year with those cattle. They are attended to in the same way and fed the same rations so as to make sure what animals in fattening will yield a profit, and what others will not. Those experiments must cost money to us, but the benefit to the farmers more than warrants the expenditure.

I, for one, urge on the Government to keep on making those experiments as extensively as possible in all branches of the farming industry, because their discontinuance would prevent the farmers from making the good money they now make; and because the Government is indirectly recouped of its expenditure.

I wish to state that when the appointment was made of a general director of the experimental farms of the Dominion to succeed the late William Saunders, it was, as I know, a promotion given to an altogether deserving and capable officer.

I say then, that expenditure on the experimental farms in Canada, controlled of course, by the general director at Ottawa, should not be the subject of criticism from persons without any experience on the farm. It is a well-known fact that, for no possible reason would that official betray his minister's confidence, and that he gives the service all the knowledge, the readiness and the honesty an agriculturist of his standing can command. So, some of those gentlemen who are neither agriculturists, agronomists or farmers, or anything else connected with farming, had better stop entering into a kind of criticism I always dislike to hear. If in the public service there are any higher officers whom the country can trust as being strictly honest and competent, such a one is the official I have just spoken of, as all may certify who know Mr. Grisdale; so that, to dare criticise his acts, one must have qualifications and honesty much above those of the average good citizen.

Speakers have referred to illustration stations last summer. The hon. the Minister of Agriculture was good enough to establish one of those stations in my district. We

hope to see it develop into a regular branch of the Ottawa Experimental Farm. Illustration plots are not very expensive and help to demonstrate the kind of management best suited to the land around. There is nothing in it for the farmer who is in charge, as he receives barely what can pay for his trouble; but the plots are just what is wanted to spread among the farmers of the different provinces the knowledge of practical farming.

I congratulate the Minister of Agriculture on this improvement in agricultural education; his efforts are bound to give good results.

Certain Quebec papers have made violent attacks on the Minister of Agriculture for his providing breeding stock everywhere in the country to societies asking for them; of course there is no political preference shown. The complaint has gone that a great number of animals thus provided were unfit for breeding purposes, that they had been bought at ridiculous prices to help certain political friends, who wanted to get rid of their useless animals. I investigated and am aware of the prices that were paid. In my county the farmers who through their regular organizations, have been provided by hundreds with breeding stock of all races, know that the animals had been well selected. I have looked over those animals; they have been well selected and well bought. Some of those that have been provided throughout the country, may have been unfit, but that comes from the veterinary surgeons improperly diagnosing the health of the beasts and also because it is impossible to foresee the inability of a particular individual.

But even if the complaint were true, the Dominion Minister of Agriculture, would not be more to blame than the Minister of Agriculture for Quebec, who himself, during many years, has imported at a high cost Ardennais stallions which he sold at a heavy cost to the agricultural societies of the province and among which horses were found absolutely unfit for breeding purposes notwithstanding all the pedigrees and health certificates signed by European and Canadian inspectors.

I have had the honour for many years to be president of the Agricultural Society of Lake St. John. We decided to take advantage of these Ardennais stallions to improve our stock. At one time, we had as many as nine stallions, which had cost us $1,000 each, and there was one of them altogether unfit for breeding, so that we had to sell him for $300, the society being out $700. In the Dominion Government scheme, if the animal should prove unfit, the Government bears the loss, as the stock is only lent to the farmers; while in Quebec, the associations themselves buy, pay and have to bear any loss. A man must be quite bold to write to the papers in criticism of the Dominion Government's scheme which has proven so beneficial, for the purpose of preventing its development, and at the same time, keep silent about the defects in the provincial organization. That is mere political agitation. Another great advantage which the farmers enjoy under the plan forwarded by the Dominion Minister of Agriculture, is that once they have selected a particular breed they have to keep on with it, so that every farmer may within a few years by judicious selection have a good stock of thoroughbreds, instead of what we have almost everywhere, a mixed grade which are not at all as valuable as the thoroughbreds. The Quebec Government is absolutely careless as to selection. As proof, we have the well-known want of control exercised over the breeding of the Ardennais horses. Thus it is that if you travel in the province of Quebec, you will seldom meet with thoroughbreds; you may account for it by the fact that the Provincial Government does not keep track of the work in the agricultural societies and clubs, so that the latter buy any breeding stock and go on mixing their stock at will. So that the Dominion department must keep on its good work to remedy the results of the incapacity shown by the Quebec authorities.

I must call the attention of the Minister of Agriculture to the manner in which his agreement with the Quebec Minister of Agriculture respecting agricultural training is carried out. Last year, he paid over $27,000 to the Dairy Society of Quebec and in return the Provincial Government was to divide the whole province into fifty butter and cheese syndicates, the Provincial Government itself paying the inspectors' salaries. Prior to that the province had about seventy syndicates in operation and they did not cover the whole province. The inspectors were paid partly by the Government and partly by the cheese and butter factories, and hired by the farmers, which meant that they were not so independent of their patrons. I was a long time member of the Quebec Society for the Promotion of the Dairy Industry; I was at one time its president, and I can say that we worked long and earnestly to secure this new system of syndicates which was introduced in 1915.

It was a practical reform, but it could

not be carried out without an unfair rider being tacked on to it. The Quebec Government got $27,000 as Ottawa's share of the expense, yet being anxious to levy taxes, though not for the war they turned around and taxed every factory of the province to the extent of $15 each at which the factory owners were so indignant that a number refused to pay. But the Government took proceedings to enforce collection and of course the law had to prevail. I suggest to the hon. the minister to see to it next time that the obnoxious tax be withdrawn.

Hon. Mr. CASGRAIN: (Translation.) Will my hon. friend suggest a means to have it withdrawn?

Mr. GIRARD: (Translation.) In the agreement between the two ministers of agriculture, there should be a way, I think, for the Federal Department to have its say; if it pays over money, it ought to make the payment conditional on the tax being withdrawn. I am no lawyer, but that seems to me the simplest way out.

When fifty inspectors were appointed, the best available men, I suppose, were chosen, without any political bias being shown. Yet here is what happened at Lake St. John and Chicoutimi. The four local inspectors, of several years' experience, who controlled the syndicates, had managed to have their cheese rated as among the best of the province. Two of them were discharged and two strangers appointed in their place. The western section of Lake St. John was so unfortunate as to get one of the new inspectors, with the result that, through his ignorance and the bad quality of cheese he got manufactured, the farmers there lost during May, June and July, $3,500. He was left there three full months and then his place was given to a stranger instead of the appointment going to one of the local men who had been discharged in the spring.

I do not think the farmers should thus be made to suffer through unqualified men being appointed. Although the last inspector was an improvement on the first importation, yet it was unfair to my county. I urge on the minister to see that in this year's agreement the farmers' interests be put out of the reach of the blunders of the Quebec Government. Contesting associations are not very numerous in the province of Quebec; one should be found in every parish; their practical and educational utility is great. There is one operating in my county, while there ought to be at least four. I realize the Government's anxiety in the present frightful crisis to cut down the expenditure everywhere. But for agriculture nothing, in my mind, should be spared; its development is the one great mainstay of the country at large.

It has been mentioned in papers and elsewhere that those associations cost a lot of money with no returns apparent and that their officers were incompetent. In my district, the chief inspector, Mr. Hudon, had fifteen years' experience as inspectors of butter and cheese factories, and the Quebec Dairymen's Association intended to appoint him at some future time as expert to cooperate with Mr. Bourbeau, the chief inspector. To say that he is incompetent is a bold assertion. I am not acquainted with the others, but they all have their certificates as syndicate inspectors issued by the Quebec Dairymen's Association. They should be qualified. The influence brought to bear to minimize the good work being done by those associations was ill-advised, and whoever is responsible is either a fool or a dishonest man.

It has been here stated that a part of this year's Budget would not be spent. Under present circumstances, the Government likely is justified in its stand. But the vote for agriculture should remain as it is, on account of so many interests being involved in that industry.

Every possible means should be taken to keep up the farmers' institutes. The farmers take to them more than ever, and their importance is much greater than a few years ago. For one thing, there has been a better selection of lecturers. With good lecturers the farmers, finding a greater interest in the institutes, spread the good news and more people are anxious to attend.

I think the House ought to be told that the farmer himself is the best judge of the speeches he hears, so that to be of use to him, the lecturers must be men speaking in a practical way, with common sense and in a language that he understands. So the minister ought to be very careful in his appointment of lecturers. The harm done by the appointment of some inferior men, cannot be overcome by the occasional appearance of a well-informed, competent lecturer.

Yearly the Dominion pays over to Quebec $60,000 for agricultural schools. I find that, notwithstanding that large amount, nothing has been done in my district. I would respectfully urge the minister, when the next agreement is entered into, to see that the Provincial Government establish a school of that kind at Chicoutimi, where it is absolutely required by the farmers. With the Seminary at Chicoutimi as a nucleus there

would be no difficulty in organizing the school on the same footing as was done at Ste. Anne de la Pocatière.

I ask the minister to note the number of graduates that come out every year from the agricultural schools of Quebec, who, although they could have gone into the professions, have preferred to take up agriculture. As bachelors, they are unquestionably entitled to consideration and encouragement from the Government. I know a number who speak and write fluently both languages, and I urge upon the minister the necessity of helping on in all possible manner those deserving young men.

Now, as I take my seat, I wish to express to the minister my thanks for what he is doing for the farmers of my county, who, as they are progressive, derive much benefit from his favours. But one question is pressing for immediate settlement. I said a while ago that the illustration farm which the minister has kindly established at Lake St. John last summer will be developed into a branch of the experimental farms. But on account of the special conditions prevailing in my county; of its geographical position at the very north of the province; of its isolation behind the Laurentians which, on acount of their well-known height over a length of one hundred miles, shut off the warmer currents that are felt over the southern slope; on account also of the late sowing, every year a few weeks behind the rest of the province, due to the wide sheet of ice on lake St. John; on account of its particular geological formation; of the dangerous frosts that occur early in the fall and late in spring, on account of all those conditions, and although the industry and intelligence of the people have made our farmers fairly thriving, the Government should not delay any longer the establishment of the branch I have referred to. Note also that the methods in use in the other experimental farms of the province of Quebec cannot be of use in my district, owing to the circumstances I have pointed out.

The hon. the Postmaster General (Mr. Casgrain) and the hon. the Minister of Inland Revenue (Mr. Patenaude) consented, last September, to take a trip to the eastern part of Lake St. John. They visited two parishes; they wanted to see for themselves; now they know, I ask them to exert their influence with the hon. the Minister of Agriculture to have that question settled without delay, 30,000 people would be benefited; they are the settlers of that country. Undeterred by the obstacles then in the way and the privations they had to undergo, they went bravely into the forest, where they have opened up about fifty parishes, well organized, and that are a credit to the country. The time has now arrived for the country to show its gratefulness without more delay.

I should not omit, as I take my seat, congratulating the hon. the Minister of Agriculture and the Government on the great success of their progressive policy toward the farming industry. I heartily wish that success will keep on, notwithstanding the appalling crisis now with us, and I assure the Government of my most effective support.

Mr. E. PAQUET (l'Islet): (Translation.) Mr. Speaker, I wish to make a few remarks concerning the agricultural work of the Dominion Government. I feel thankful to my good friend from Chicoutimi (Mr. Girard) for his always apt references to agriculture.

From 1901 to 1911, the population of cities and towns has increased 62 per cent, while the country population increased by a bare 70 per cent.

In the eastern provinces, the increase in the country has not been normal. The exodus from the farm to the city is much to be deplored. The Conservative Government, in view of the abandonment of farms, the scarcity of labour and the high cost of living, is striving constantly to give to agriculture the high place it should hold in Canada.

The Prime Minister, alive to the necessity of stimulating production, particularly farm production, appointed on the 15th of October, 1915, a Commission of Agriculture.

Economical conditions arising out of the war, impart still greater importance to the business of farming. The commission's special object is to inquire into the best methods of increasing production. The commissioners will seek the best means to obtain a heavier yield, improve the systems of instruction and demonstration, develop new productive areas, induce the immigration of farmers and farm hands, encourage co-operation, improve our transportation systems and find new markets. Allow me to quote the following words of the Minister of Finance:

> Canada's future depends on the development of its immense resources, of which agriculture is the most essential, and that development is itself linked with the increase in the number of producers and in the means that may be given them towards utilizing their intelligence and initiative.
>
> It is very likely that, in the financial stress which may hold for some years to come, the question of the capital necessary to the develop-

ment of agriculture may become of vital importance, and we intend, during the recess, to take up that subject carefully with a view to increasing present resources by the intervention of the Dominion Government, if it should be desirable and for the greatest good of the country. The Government has chiefly in view the creation of an organization to facilitate at reasonable rates loans which may be repayable on the sinking fund principle.

That question has some connection with the scheme of co-operation. Before co-operative societies were established in Belgium, agriculture was not very flourishing.

In 1903, a Belgian economist wrote as follows:

If the principles of scientific farming have now a hold on the country, if the farmers can now get, at a reasonable price, unadulterated manure and fodder for cattle, if they are in a position to secure easily the money they require, if their dwellings, their furniture, their animals can be insured at satisfactory rates, if they have been able to secure from legislation many conveniences, if they have become a power, what has done it all is association.

Denmark's salvation was effected by a complete reform in its methods, brought about by instruction and the application of the co-operative system to the production and diversification of farm produce, instead of by individual efforts.

We here must follow the agricultural policy of Belgium, France and Denmark, if we aim at making rapid though prudent strides in the way of progress.

A Liberal paper on the 27th January, 1916, published the following:

We have organized in certain localities cow-testing associations. For our Ottawa friends, it is indeed a success! In this instance again, the appointments went to good Tories, in most cases ignorant of their duties, who receive salaries of $1,200 a year.

That appreciation of the inspectors of Quebec is absolutely unfair. Hon. Mr. Fisher appointed an inspector in 1911.

Hon. Mr. Burrell has appointed in the province of Quebec nine inspectors, taken among those who had the widest experience in the dairy industry. All the inspectors have received certificates from the St. Hyacinthe Dairy school.

I congratulate the Government on having organized those cow-testing centres each being under an expert who devotes all his time to his duties.

I will now say a few words concerning the live stock branch of the Department of Agriculture. Those who would be fair to the Dominion Minister of Agriculture, are agreed that his policy concerning the live stock industry is a real help toward agricultural progress.

The scarcity of breeding stock is at the present time, one of the main obstacles to stock raising in many parts of Canada. So the Minister of Agriculture has undertaken through the live stock branch an important distribution of breeding stock. The work of that branch assumes greater importance from year to year. The Minister of Agriculture is submitting to the House an estimate of $600,000 for the purposes of stock raising. The expenditure for that industry in 1911-12 amounted to $94,000; in 1912-13, to $100,000; in 1914-15, to $300,000, and in 1916-17 it will reach $600,000.

A very large number of farmers all over the Dominion are now alive to the advantages of the minister's policy.

According to some Liberal newspapers, some breeding stock more or less healthy, were bought by the Dominion Minister of Agriculture without proper care. They claim that the stallions and other sires have been put exclusively in the hands of Conservative friends.

This charge is altogether unfair to the Government. In fact, according to the regulations under which the breeding stock is distributed, the members of the various associations choose their directors, and the directors appoint the person who will have the care of the sires.

According to an article in Le Soleil, the Department of Agriculture has distributed in Quebec thoroughbreds, standard-breds and other light horses.

In reading the report of the Minister of Agriculture, I find that during 1914 33 sires have been lent to farmers' associations. In that number there is not a single standard-bred and only one thoroughbred. There are fifteen breeders of Canadian breeds. In the county of l'Islet, one association asked for a Belgian sire and got it.

The critic in Le Soleil would not go to the trouble of applying for information at the department.

The same critic complains that certain breeding stock was bought without care and indiscriminately from the friends of the Government. The minister declares all the sires were bought by persons of experience, the purchases to be subject to the inspection of a veterinary from the Department of Agriculture.

The records of the department will show that barring a few isolated cases, all the animals received have been found highly satisfactory.

I would ask the officials of the department to be very careful in their method of distribution.

Stock raising has a bright future. At the winter fair in Ontario the Minister of Agriculture urged the farmers to increase their stock, that it was the surest and wisest policy.

Meat production begins to come up to the demand, but we can do better. Australia and the Argentine Republic are suffering from a crisis which has told on stock-raising. War has destroyed the European stock. So that it must be our farmers' care to take advantage of those favourable conditions to develop the stock-raising industry.

The operations of the Experimental Farms branch are constantly spreading. I desire to express my thanks to the hon. the Minister of Agriculture for his efforts to insure the success of the experimental farm at Ste. Anne de la Pocatière. Not long ago, the hon. member for Kamouraska (Mr. Lapointe) asked in the House that an experimental farm be established in the eastern district of Quebec. At Ste. Anne de la Pocatière, although the Government have done what was necessary to make a success of the farm, certain improvements are still required. The minister's well-known appreciation of the importance of the farmer will lead him to improve that farm and make it one to be admired by all agriculturists.

Among the various Acts passed to promote farming, few have more importance than that providing for agricultural instruction, an Act which was passed in 1913 by the hon. minister. Under the wise guidance of the minister, the law was passed and the directors of our agricultural colleges have been put in a position to appoint staffs of devoted, educated and experienced teachers. In the province of Quebec, under that statute buildings have been added to and the equipment improved in all the institutions for the promotion of agriculture. I can speak more particularly of the work done at the agricultural college of Ste. Anne da la Pocatière. Out of the Federal grant, large sums were received to put up new buildings so as to provide better accommodation.

While the religious orders who have charge of our agricultural colleges are working strenuously for the advancement of agriculture, the Provincial and Dominion Governments are co-operating to the same end.

We are making great sacrifices towards the development of our agricultural colleges. Young men who have acquired a classical education have taken to farming. The Federal and Provincial Governments should earnestly see to those young men and appoint them to positions for which their studies and their talent has prepared them. It is the best way of encouraging the agricultural schools.

Writers and orators sacred and profane, are trying to instil a taste for farm life and farm management into the minds of the Canadian farmers and youths. They extol the exalted position of the tiller of the soil, who can do so much for his country's prosperity.

The live stock branch has organized farmers' institutes in French-speaking districts of the province of Quebec, to promote a campaign of patriotism and production. The farmers have taken to them with much earnestness. They showed clearly that their patriotism was responsive to the proposal. The success of the spring campaign in 1915 was due in a large measure to the co-operation of ministers of all denominations, and especially the parish priests. We are indebted to the clergy who have been active in encouraging an increase of production in the province of Quebec.

In concluding I feel bound to recall the name of a former member of this House, the late Mr. G. A. Gigault, Deputy Minister of Agriculture for the province of Quebec. He was the inspirer of the work carried on by our experimental farms. Mr. Gigault had been a pioneer in the field of scientific agriculture and has left imperishable monuments of his industry and zeal.

Mr. ERNEST LAPOINTE (Kamouraska): (Translation.) Mr. Speaker, I fully agree with the views expressed by hon. gentlemen opposite when they commend the work done by the Department of Agriculture, through the experimental farms. I am well acquainted with the institution at Ste. Anne de la Pocatière, which is established in the constituency I have the honour to represent and I realize that, though but a few years in operation, it can already show wonderful results towards the advancement and development of farming in that district.

I remember well that when we petitioned for that experimental station, we enlisted the support of all our friends from other parts of Quebec. I take pleasure to-day in seconding the request of the hon. member for Chicoutimi (Mr. Girard) that a similar establishment be located in the Saguenay and Lac St. John district; which is destined to become a great farming country.

That locality presents climatic and soil conditions altogether different from those prevailing on the south shore of the St. Lawrence. It would certainly be fair to the people of that extensive territory to provide

them with the same agricultural advantages which other parts have been enjoying for years.

I also hold with my hon. friend from l'Islet (Mr. Paquet) that the Government should give preference to the graduates of agricultural colleges in appointments as teachers of agriculture. When the experimental station of St. Anne de la Pocatière was established, a director was not appointed the first year, because the Hon. Mr. Fisher, ex-Minister of Agriculture wanted for the position a man duly certificated and speaking both languages; none were available at the time. Mr. Fisher used to say: The pupils are there, but we shall leave the position vacant until they can fill them.

In the fall of 1911, an event took place, which our friends on the other side of the House remember well. A new minister took charge of the Department of Agriculture, and his first care regarding the farm at St. Anne de la Pocatière was to appoint a director.

I have nothing to say against Mr. Bégin who fulfils his duty to the best of his ability and who is very active in his efforts to develop that experimental station; but Mr. Bégin is not a graduate of an agricultural college.

However, he had a most important qualification in the eyes of the Government; he had been the Conservative candidate for Lévis at the last elections.

Again I would say nothing against him; he certainly does his very best to have this experimental station show actual results. In that he is admirably supported by Mr. Grisdale, the director of the Dominion Experimental Farm, whose knowledge of agriculture is certainly not excelled anywhere. Yet I must point out that the appointment of Mr. Bégin is in direct opposition to the views put forth this afternoon by the member for l'Islet (Mr. Paquet) and I believe that is the only case in the Dominion where the director of an expermental farm is not a graduate of an agricultural college.

I now wish to say a word in reply to the strictures just made against the distribution by the Quebec Government of the Federal subsidy for agricultural purposes. How may the supporters of the Government complain, when they themselves it was who requested that the Department of Agriculture of the province of Quebec be kept in tutelage and receive a separate treatment which is nothing but an insult to the province.

In the other provinces, that grant is handed over, without restrictions of any kind, to the provincial Minister of Agriculture, who uses it as he sees fit and who has the most absolute discretion in its distribution. And after all such should be the relations between governments. But in Quebec, party considerations have prompted the Dominion Government to act differently and an official of the Dominion Department of Agriculture, Mr. J. C. Chapais has been appointed to supervise and superintend the distribution of the federal subsidy. How then can our hon. friends on the other side complain of the manner in which the grant has been spent, when they themselves have requested that its distribution be made under the supervision of a Dominion official? I protest against that guardianship and that kind of protectorate to which our province has been subjected.

The question has been raised, during this debate, concerning the purchase by the Government of race-pure stock. The Minister of Agriculture bought a whole herd for the experimental farm at Ste. Anne de la Pocatière. But I regret to see that the Canadian breed of cattle has been completely forgotten. The minister is fully aware of the well known qualities of the Canadian cow. I am particularly anxious to see the breeding of Canadian cows encouraged in the province of Quebec, and to that end, I should ask the minister to see that a few animals of that race be bought and put with the herd at the experimental farm at Ste. Anne.

I have nothing more to add, unless it be that the Minister of Agriculture and the Government may count on our hearty support, every time the estimates contain items required for the promotion and development of agriculture.

Mr. H. BOULAY (Rimouski): (Translation.) Mr. Speaker, in the few words I have to say to the House, I wish to state that I fully concur in the views of the hon. member for Chicoutimi and Saguenay (Mr. Girard) on agriculture. He has expressed his thanks to the Government for the encouragement the latter has given generally to farming in Canada, and more particularly in his constituency. The hon. member is a practical farmer, who knows whereof he speaks, and it is to be regretted—be it said passim—that there are not more farmers to be found in this House.

I for one wish to give thanks to the Minister of Agriculture for having begun the establishment of an illustration station in the county of Matane. I hope that in the county of Rimouski, which I have also the honour to represent in this House, the same thing will be done next year.

Those illustration farms are established to help the farmers, and they are operated in such a way that they are not too expensive and are bound to give good results.

The hon. member for Chicoutimi has spoken of a tax imposed by the Quebec Government on the butter and cheese factories. It seems to me that the governments, both federal and local, have always endeavoured, for many years past, to promote the manufacture of cheese and butter. That tax, it seems to me, instead of being an encouragement, is a very great drawback to the dairy industry. In the province of Quebec, the Government went to the extent of suing before the courts a factory that had neglected to pay that tax. If any taxation may be ridiculous, that one of all taxes seems to me the most ridiculous; and I think the Government of Quebec should do away with it. The Dominion Government has nothing to do with that impost, but it is nonsensical to make grants to an industry and turn around and collect a duty from it.

As to the complaints made by my hon. friend from Kamouraska (Mr. Lapointe) regarding our criticisms anent the distribution of the subsidy given to promote farming, I think that, if he would take up the report of the Quebec Government on the distribution made of those moneys, he will find that the men who get some benefit from the grant, are all his political friends. I can understand that as a good Liberal the Quebec Minister of Agriculture will favour his friends, but it seems to me he might be a little more generous towards the Conservatives in the distribution of patronage.

Some of his friends manage to reap a big salary out of the Dominion grant; but I should not complain if the Quebec Minister of Agriculture appointed Conservatives equally with Liberals.

I believe without any difficulty that there are in the counties of l'Islet and Kamouraska Conservatives just as competent as the Liberals to fill the positions of inspectors, either agricultural, apicultural or otherwise. After going over the report I have mentioned, I did not find the name of a single Conservative.

As to Mr. Bégin, I am personally little acquainted with him. He may not be a graduate of an agricultural college, but as the hon. member for Kamouraska stated, he seems to be well qualified otherwise and earnest in his work. I may say that very often in farming practical experience is of greater value than theoretical knowledge. A man who has spent all his life in the study of practical farming seems to me better qualified than one who has been through an agricultural college for two or three months only.

Now, I wish to call the minister's attention to some potato inspectors appointed since 1911.

Lately I asked the following question in this House and received the following reply:

Mr. Boulay:

1. Has the Government appointed any potato inspectors since 1911? If so, how many?

Mr. Hazen:

1. Yes. 28.

I am sorry the Government could not have appointed one at least of those inspectors from the county of Rimouski because it grows more potatoes than any other in the province of Quebec. The farmers of the county ship hundreds and thousands of carloads of potatoes, and not one inspector has been appointed from my county out of those twenty-eight. Yet the Minister of Marine (Mr. Hazen), from whom I received the reply, managed to have eight of them from New Brunswick.

Mr. DEVLIN: (Translation.) Did you recommend any one?

Mr. BOULAY: (Translation.) I never knew there were any to be appointed.

Mr. LAPOINTE: (Translation.) What are the names of those from the province of Quebec?

Mr. BOULAY: (Translation.) L. P. Lavoie, from St. Pascal; J. S. Dash and D. E. Lothian, from St. Ann's de Bellevue.

There are eight inspectors from New Brunswick and six from Ottawa. I wonder what those Ottawa people, especially if they come from the city, know about potato growing. I am told that they all have been dismissed except six, but those six are also from Ottawa. Moreover I will call your attention to the fact that out of the six, only one is a French-Canadian. And, as is very often the case elsewhere, the French-Canadian could not be given the same salary as the others who get $100 per month while he goes off with only $75.

There must be an end to those things. The higher officials of the Agriculture Department must be able to understand what we say and the French-Canadian employees must be put on an equal footing as regards salaries as all others; why should one be paid $100 and the other only $75?

The injustice I have pointed out is of long-standing; it has almost always existed; but for every ill there is a cure.

If I draw the attention of the House to such unfair discrimination, it is to prevent the recurrence of the evil in future; then there will no longer be any occasion for me to refer to the matter.

Mr. McCOIG: A year ago, when the Estimates of the Department of Agriculture were before the House, the Right Hon. the Prime Minister (Sir Robert Borden) assured us in the province of Ontario, where hog cholera was prevalent, that experiments would be made with the serum preventative treatment. I understand that the experiment has been carried on to a considerable extent at the experimental farms and also at the experimental stations throughout the different parts of Ontario. Can the Acting Minister of Agriculture give us some idea of the results that have been attained?

Mr. HAZEN: Might I ask my hon. friend to bring that matter up when the item bearing on the question is under discussion, and when I shall have the veterinary inspector, Dr. Torrance, here? It is not pertinent to the item now before the committee.

Mr. McCOIG: Very well. Another matter that I would like to bring up is the question of inspectors' salaries; but perhaps the minister would like to defer that also.

Mr. HAZEN: That will come up at the same time.

Mr. KNOWLES: Last session the hon. Minister of Agriculture (Mr. Burrell) explained at some length that he had in his mind the inauguration of a system of small illustration plots, each situated preferably at the corner of the road where a great many farmers pass, and that arrangements would be made for the land to be cultivated under the direction of the department officials. I believe that has been done in some provinces, and I understand that Saskatchewan is one. Could the minister tell me how many plots there are in Saskatchewan, where they are and how the system is getting along?

Mr. HAZEN: There are 38 of these illustration plots established—15 in Alberta, 14 in Saskatchewan, and 9 in Quebec. In Saskatchewan the following are under way:

Assiniboia	P. J. H. Warren.
Cabri	F. W. Abraham.
Gull Lake	E. H. Thomas.
Herbert	Milton Holmes.
Kindersley	Ottawa Farm Development Co.
Maple Creek	G. L. Hammond.
Pambrun	E. W. Applegrem.
Prelate	Wm. Huxtable.
Shaunavon	Neil McLean.

The stations selected for 1916 in Saskatchewan are:

Biggar	Dr. S. E. Shaw.
Lloydminster	Hugh Hill.
Moosejaw	J. J. Glassford.
Radville	Lewis Kroon.
Weyburn	Edward Meredith.

There will be one also at Conquest, but I have not the name of the farm upon which it will be situated.

Mr. KNOWLES: What has been done so far?

Mr. HAZEN: Some of these plots were under way last year. They pay the farmers about $5 an acre for the land used.

Mr. KNOWLES: How far have they gone in opening this new system?

Mr. HAZEN: The ten plots I have mentioned were operated last year as far as was practicable. They were not in total operation, because the land had to be taken as it was found, and consequently preparation had to be made; but the ten were actually in operation.

Mr. KNOWLES: Every one of these plots that the minister has mentioned as being in operation last year happens to be in my constituency, and I am very well pleased to see them there. If they are any good at all my people might as well have the benefit as anybody else. What steps are taken to give the matter publicity? I go about my constituency quite a bit, and I take all the papers, but I have never learned anything about these plots until this afternoon. If they are to be useful their existence should be made known to the people, and I would suggest to the minister that steps be taken to make the different locations familiar to the public.

Mr. HAZEN: I am told that these are intended as illustration plots for the farmers in the localities where they are situated, and the expectation is that the farmers will very quickly know about them. In addition, there are two signs at the corner calling attention to the illustration plots. It has also been arranged that the superintendent, Mr. Fixter, shall hold meetings throughout the districts and call the attention of the farmers to these plots and the benefits that are expected to result from them. There are eight meetings arranged for in Saskatchewan, beginning on Monday next.

I would like to say a word in regard to the remarks made by my hon. friends from Quebec who have addressed the committee. I understood my hon. friend from Rimouski (Mr. Boulay) to criticise the department because of the appointment in New Brunswick of so many inspectors in connection with powdery scab, a disease affecting the potato crop, and the appointment of so few in Quebec. I am informed by the officials of the department that the reason for that was that there was need for more inspectors in New Brunswick than in Quebec for the reason that the disease was much more widespread in New Brunswick than in Quebec. My hon. friend says that six inspectors were sent from Ottawa. I am informed that these were men who were in the employ of the department here, that they were trained in that line of work, that they had special knowledge of it and were capable of grappling with an emergency of that nature. It has also been pointed out that some of these men receive $100 and others $75. That depended upon how long they had been in the service; the men who received $100 had started at $75 and had worked up to $100. I am told that the gentlemen who are getting $75, if they stay long enough in the service and show their capabilities, will receive increased salaries until they reach $100. There was no intention of making any discrimination at all; but they were simply following the policy of the department as to the salaries that are paid to the people in their employ. My hon. friend from Chicoutimi and Saguenay (Mr. Girard), and also my hon. friend from Rimouski, have referred to the taxing of cheese factories in Quebec. A tax of $15 per factory, I understand, is imposed by the local Government of Quebec upon all cheese factories in that province. I know nothing about the fact at all, and do not intend to discuss the matter beyond saying that I do think that it would be unfortunate, at a time when appeals are being made to the patriotism of the people to produce more in the way of food of all sorts, if they should be hampered by any tax unless this tax would be necessary for the purpose of carrying on the affairs of the country. The suggestion has been made that as the Government of Canada pays to the Government of Quebec about $250,000 this year under the Agricultural Instruction Act, there should be some arrangement made with the Government of Quebec, that it should, in consideration of that fact withdraw the tax from these factories in future. But it is a matter which the authorities in Quebec will have to decide for themselves, as I do not think the Department of Agriculture here is in a position to influence it in any way whatever.

I am sure it will be gratifying to my hon. friend the Minister of Agriculture when I inform him of the terms of praise in which the experimental farm at St. Anne has been referred to by the hon. member for L'Islet (Mr. Paquet). It will be very gratifying to him to know that, in the opinion of a gentleman who lives in the immediate neighbourhood of that institution, it is doing such good work among the farming classes. I shall be very glad to convey to him the suggestion of the hon. member to the effect that some of the young men who are pursuing their classical and other studies at Ste. Anne, while at the same time getting instruction upon agricultural matters, might, in the public interest, be appointed to the Government service. As a matter of fact, I understand that it has been decided for some months that young men graduating from this college shall be appointed to the service of the Department of Agriculture at a very early date. The hon. member for Kamouraska (Mr. E. Lapointe) referred to the fact that at the farm at Ste. Anne there were none of the breed of Canadian cows, or cows which are spoken of sometimes as Quebec Jerseys. This is certainly a very valuable breed of cow and a very economical producer. I remember that Sir William Van Horne, at his farm at St. Andrews, spoke to me of the qualities of these cows in terms of the very highest praise. I understand that they are free from tuberculosis and that they do not contract disease as easily as many other types of cattle do. There is a herd of these cattle at the Experimental Farm at Ottawa, and another herd at the Experimental Farm at Cap Rouge. I understand that it is not thought desirable to have too many kinds of cattle at these experimental farms. They think it better to specialize in one or two varieties.

I should like to make a statement to the committee which I think will be of interest. On the 4th of February a despatch was received by the Minister of Agriculture from the High Commissioner's office in London, stating that King George desired to present to the Canadian Government a stallion from his racing stable for the breeding of remounts, and had selected for the purpose a horse called Anmer, and asking whether the Canadian authorities would undertake the passage of the animal,

and how it should be sent forward. That was replied to on February 5, in a cable stating that the Dominion Government appreciated and would be glad to accept His Majesty's offer, and would undertake the passage of the horse. The horse has been shipped, and is expected to arrive at St. John on Monday or Tuesday of next week. I am not an authority on horse-flesh myself, but I am told that this horse is a regular aristocrat as horses go. He is probably the best bred horse that has ever come to Canada. Other hon. gentlemen in the House who understand more about horses than I do may be interested in the following memorandum about the horse's pedigree:

Anmer was not a forward contender as a two-year old in any race of importance. Had he been, he would have been mentioned as a possible winner of the Derby as a three-year old. It was in that race that a suffragette named Miss Davison ran out and clutched his bridle rein, and was killed; the horse was also brought down and put out of the race. This was in 1913, and he is consequently now only six years old. It is hardly necessary to say that having been bred by His Majesty, his breeding is superb. His sire, Florizel 2nd, was a full brother to Persimmon and Diamond Jubilee, both of which won the Derby and St. Leger for His Late Majesty King Edward VII, Diamond Jubilee also landing the two thousand guineas, for which race Persimmon did not start, being saved for the Derby. He won the Ascot Gold Cup and the Eclipse Stakes. Diamond Jubilee, after his victorious career on the turf, was sold, to go to the Argentines, for $150,000. Guinea Hen, the dam of Anmer, has proved herself a magnificent brood mare. She is by Gallinuile, sire of Pretty Polly, Santry and other great race horses. Indeed Gallinuile was the best stallion of his day, standing at the head of the winning stallion list three or four years in succession. Nightmare, dam of Guinea Hen, was descended from Musket, sire of the celebrated Carbine and Scottish Chief, by Lord of the Isles, son of the celebrated immortal Touchstone. Florizel 2nd, sire of Anmer, was by St. Simon, an unbeaten race horse and the most successful sire ever known. He was by Galopin, winner of the Derby in 1875, that besides St. Simon sired Donovan, winner of the Derby and St. Leger, and of $265,000, and some hundred and thirty or forty other winners. Florizel 2nd's fee in the stud was $1,500, and St. Simon and Galopin each commanded $2,500. Gallinuile was by Isonomy, the greatest handicap winner and cup horse of his time, and Moorhen, his dam, was by Hermit, winner of the most sensational Derby in half a century. Anmer traces directly within five crosses to all the best horses of different breeds, including those two grand rivals, Voltigeur and Flying Dutchman, King Tom, a wonder in many pedigrees, Newminster, Kettledrum, and Stockwell, the emperor of stallions. The best recommendation that Anmer has, apart from his conformation, which it was said at the time of his mishap, was superb, is that he is not only royally bred, but comes through a line of grand producers and exceptional performers. Another splendid virtue that he possesses is that he has not been raced out, and he is only now on the verge of a possible vigorous maturity as a stallion.

I am sure the House will appreciate this splendid gift from His Majesty the King. If the horse arrives safely, as we expect it will, we are sure it will be of great assistance in improving the stock in this country, and in breeding remounts.

Mr. SCHAFFNER: Speaking of illustration farms, how large are they?

Mr. HAZEN: In Saskatchewan and Alberta they are forty acres, and in Quebec twenty-five.

Mr. SCHAFFNER: Saskatchewan and Alberta are being very well looked after, especially the constituency of my hon. friend from Moosejaw (Mr. Knowles). Why has Manitoba been overlooked?

Mr. HAZEN: I feel like making a similar protest with regard to the province of New Brunswick. I fancy we shall all be looked after in time.

Mr. DEVLIN: Are these illustration farms to be established in every constituency throughout the Dominion?

Mr. HAZEN: I can hardly say that.

Mr. KNOWLES: In every doubtful constituency.

Mr. HAZEN: If the results are good, I have no doubt the farms will be very generally established throughout the country.

Mr. OLIVER: Might I ask for a list of the illustration farms in Northern Alberta?

Mr. HAZEN: There are illustration farms in Alberta, but not in the northern half.

Mr. OLIVER: I think there are.

Mr. HAZEN: This is the list: Bow Island, Carmangay, Empress, Foremost, Grassy Lake, Jenner, Macleod. Magrath, Manyberries, Medicine Hat, Milk River, Pincher Creek, Whitla. Stations have also been selected at High River, Stettler, and Manson; Stettler being the farthest north.

Mr. OLIVER: I understand that the Government is interested in a station of some kind at the Beaver Lodge Settlement, in the Peace River district. What class is that in?

Mr. HAZEN: That is not an illustration or experimental farm. There are a few places in Canada where the department

selects a farmer and sends him certain grains and seeds, with instructions how to plant. The farmer carries out the instructions and reports results to the department. The station my hon. friend refers to is one of that kind.

Mr. OLIVER: I think this particular one is very well chosen, and is doing good work.

Mr. SUTHERLAND: How many illustration farms are there in Ontario?

Mr. HAZEN: There are none in Ontario. These farms were only established in 1915, and at present are only in Saskatchewan, Alberta and Quebec. In Quebec the farms consist of 25 acres, and I presume that will be the size of any such farms that are established in Ontario.

Mr. SUTHERLAND: Has any provision been made to establish any in Ontario this year?

Mr. HAZEN: If it is thought desirable to establish them in Ontario this year it could be done out of this vote.

Mr. HANNA: What about the illustration farms established by the Conservation Commission? I understand that the Dominion Government is going to take them over.

Mr. HAZEN: I understand they are all out of commission except the one at Kamloops, B.C. The agreement was that the Conservation Commission should run the farms for two years, and the Agricultural Department for the third and last year.

Mr. HANNA: I think the one at Perth is in its fourth year.

Mr. HAZEN: Third year, I think.

Mr. DEVLIN: As there are nine illustration farms in the constituency of Moosejaw, I think I am entitled now to claim one for my constituency. If these farms are any good at all, I do not see why there should not be one in my constituency. Nine certainly seems too many for one constituency.

Mr. HAZEN: The constituency of Moosejaw is a tremendous one in size.

Mr. DEVLIN: So is mine.

Mr. HAZEN: Apart from that, it is one of the sections that was badly hit by the drought. The Agricultural Department felt that these farms should be established in that district to illustrate the proper methods of cultivating the soil with a view to minimizing to a great extent the results of any drought that the district might experience in the future.

Mr. DEVLIN: In the constituency I represent a large section was badly hit by fire, and has not been able to be made use of since. I did suggest some time ago that it would be a good place for a military camp, but now that illustration farms are on the tapis I think one might very well be established in my constituency. I am referring particularly to the township of Aylmer.

Mr. HAZEN: The hon. member for Moosejaw might lend my hon. friend a farm.

Mr. TURRIFF: I am afraid the minister's explanation as to the large number of farms in the constituency of Moosejaw is hardly satisfactory. I do not think that was the reason at all. The minister is evidently of the impression that the constituency of Moosejaw was the only part of Saskatchewan that suffered from the drought. I may tell him that last year it was not only the southern part of the constituency of Moosejaw that suffered from the drought, but many other parts of Saskatchewan. I think my hon. friend will have to hunt up a little better reason than he has given to the House, and one that is closer to the facts of the case.

Mr. HAZEN: My hon. friend from Assiniboia has a very suspicious mind. I can only give the reason that was given to me by the officials of the Agricultural Department. The director, who is here, tells me that he spent several weeks in the southern part of Alberta and the southern part of Saskatchewan for the express purpose of ascertaining the most necessary places in which to establish these farms. Without any ulterior object whatever, he came back and reported to the minister in favour of the locations where the farms were subsequently established.

Mr. KNOWLES: If these farms are any good, I do not care whether they help the Government politically or not. I know that when this man from the Agriculture Department was in Moosejaw arranging about the location of these farms, the Conservative press of the town announced that he was in consultation with Mr. Ratheell, the man who has the patronage there, and that it was through his influence and instrumentality that such and such a farm would be established at such and such a place. The kudos goes to this party of empire-

savers, flag-wavers, closers of the wheat market, and other things of that kind. To say that it is the officials who determine all this is a very plausible statement for the minister to make—no doubt an honest statement, since he is only the acting minister. But the fact that he is only the acting minister does not make any difference in the facts as they stand. I am not saying all this in the way of objecting to the establishing of these little illustration farms in Moosejaw. They can put one on every corner—they can put four on every corner—before I will raise any objection. But we might as well know that they are being run, so far as the public know anything about it, not by the officials of the Government, but by the Conservative patronage-handlers.

Mr. HAZEN: Governments always claim credit for the good things they do.

Mr. KNOWLES: Let the credit go to whom it is due, and not say that these illustration plots are placed by the officials of the department.

Mr. McCOIG: It hardly seems to me fair that Ontario is not to have one of these illustration plots at all. Moosejaw, as I understand the hon. member, is going to have nine.

Mr. DEVLIN: He has nine already, and is going to get more.

Mr. McCOIG: And yet the whole province of Ontario, which will contribute to the maintenance of these plots, is to be left without any of them. I am a little surprised, when there are so many supporters of the Government from the province of Ontario, that they do not put up a fight for some of these illustration plots for our province. While we talk about the drought in Saskatchewan and the fire in Quebec, in 1914 the crops in Ontario, particularly in barley and oat crops, were practically wiped out by the army-worm, causing a loss to our farmers
5 p.m. of thousands upon thousands of dollars; yet I have never heard of any experiment made, or advice offered, or assistance given, to the farmers of Ontario to enable them to provide against a similar affliction in 1916. In all seriousness, I believe that something should be done to assist our farmers in case of another outbreak of the army-worm pest in the future. Either these illustration plots are good or they are not good. If they are good, they should be distributed without regard to whether the localities support the Government or not. I believe that the members from Ontario should join in urging the Government to do something to assist our farmers, for fear we should be again afflicted with the pest that wiped out our crops before.

Mr. BURNHAM: Let me say, as a farmer from Ontario, or rather as a representative of farmers, that we are not at all jealous because the West is receiving this assistance. We recognize that the Middle West needs more assistance than any other part of Canada. It seems to be unable to develop in the ordinary way; and, since we are bound by Confederation or some other obligation to help them out by lending them money and one thing or another, let us do it without grudging. Do not make it out a sin that we are doing the thing handsomely; do not make it a cause of jealousy; do not throw the apple of discord into the province of Ontario. We are an innocent-minded people, and we are working hard and successfully. No doubt some day a scheme for taking the people from the West and putting them on decent farms in Ontario will be matured. But, until they are able to settle down and farm in the usual way, instead of trying to help themselves by their big puffs in the newspapers as having the most wonderful area in the world, let us proceed in a pleasant way and without casting insinuations that the province of Ontario is being neglected. We do not require treatment of this description. Not being bottle-fed people, we do not suffer from drought.

Mr. TURRIFF: I want to tell the hon. member for West Peterborough (Mr. Burnham) and others, that we in the West pay our share of the public expenses just as well as the county of Peterborough. We do not take a back seat to any other part of Canada; we pay more than our share of the revenue of this country. I venture the assertion that if inquiry were made it would be found that these illustration plots were not asked for. Why were they established in those places? Not for the purpose of demonstrating anything at all, but for the purpose of carrying the elections. They were established when it was supposed that an election was coming on. They are not experimental plots at all; they are political plots, and nothing else.

An hon. MEMBER: Another extravagant statement.

Mr. COPP: I have been looking over the Auditor General's Report of last year, volume 1, page A—24, with respect to the Experimental Farm at Fredericton. I have some knowledge of the objects and work of the Central Experimental Farm, and of the advantage that should accrue to the farmers of Canada as a whole from the work that is carried on there. The experimental branch station at Nappan is but a short distance from my own town. The name "experimental farm" would seem to indicate that it aims to be of assistance to the farmers in the locality in which it is situated. I have had the pleasure of visiting the Nappan and Fredericton farms on a number of occasions. They are splendid places in which to hold picnics and things of that kind, and the farmers do use them for such purposes; they are splendidly located and pleasing to the eye. But what I should like to ask the minister is this: what particular benefit or advantage are these experimental farms intended to give to the farmers of the different localities in which they are situated?

Mr. HAZEN: I think it is a little late in the day to question the advantage of having farms of this kind.

Mr. COPP: I am not questioning that; I simply ask for information.

Mr. HAZEN: The advantage of experimental farms has appealed to governments of Canada for many years past. The Central Experimental farm was established in Ottawa a good many years ago, when, I think, Sir John Carling was Minister of Agriculture. The results of the operations of that farm proved so satisfactory that demands came from the farmers throughout the country—

Mr. COPP: I think the hon. gentleman misunderstands me. I am not questioning the advisability of having these farms; I am asking the minister to tell me if the farmers in these localities can go to the farms and get any advantage from them.

Mr. HAZEN: The establishment of the Central Experimental Farm proved so popular throughout the country that a demand came from farmers in other parts of Canada for the establishment of farms in the different provinces. It was inconvenient for the farmers to travel to Ottawa from many different parts of the country; in addition to that, considering the great diversity of our soil and climate, the Central farm could not carry out all the experiments that would demonstrate what was the best for all parts of the country. The Central Experimental Farm, of course, carries out experiments of all sorts in connection with the growing of crops, the production of stock, the cultivation of tobacco, the rotation of crops, the testing of seeds. Experiments are carried out with a view to determining what varieties of grass or vegetables will do best in certain sections of the country. The Central farm is open to the farmers of the country at all times; the correspondence which it carries on with farmers from one end of Canada to the other is, I believe, of enormous dimensions. The experimental farms in the different provinces work along similar lines, though not on so large a scale. They are branches of the Central Farm. They make all kinds of experiments to determine what crops should be grown and how those crops can be best grown in the particular locality in which the farm is situated. Their work has more regard to special localities than the Central Experimental Farm, which deals more generally with questions affecting the whole of the country. It is open to any farmer to go to the branch farm and get from it any advantage that he can by observing its operations and obtaining such information as may be given by those who are carrying out the experiments. Bulletins are from time to time issued from the Central Farm, with reports from the branch farms, giving the results of these observations and experiments. These bulletins are circulated very generally among the farmers of the country, and many farmers who have never visited the farms get much advantage from their existence by reason of the vast amount of information that is disseminated. There are, I think, two of these farms in Nova Scotia, one at Kentville, which, I suppose, would turn its attention largely to the question of the production of fruit, and another at Nappan, which has been established a good many years. The latter farm is not far from my hon. friend's home in Sackville. An experimental farm has lately been established in New Brunswick, at Fredericton. Previous to the establishment of that farm there had been no experimental farm in the province, and the farmers' and dairymen's associations in that province urged for a long time that New Brunswick should have one of these farms, as they considered that very considerable benefit would result from its

operation. Some of these farmers and dairymen had business at the Central Experimental Farm; others were in the habit of going to the midwinter fair at Amherst, and of visiting the farm at Nappan. It was strongly urged upon the Government that an experimental farm should be established in the central part of New Brunswick, and, accordingly, a farm was established at Fredericton.

The last publication issued from the Central Farm had a circulation of 390,000. These publications are being sent to farmers throughout the country who ask for them. Bulletins are issued setting out the results of experiments in connection with tobacco culture, the growing of winter wheat, poultry production, forestry questions, and many other matters of deep interest to the farmers. I am sure that if my hon. friend, who lives not very far from Nappan, should visit the farm there and see the work that is being carried on, he would be pleased indeed, and would come to the conclusion that the farm is a useful institution and is doing good work for the people.

Mr. COPP: I have had the extreme pleasure of being there many times, and I was very much pleased with the appearance of the farm. But this is what was in my mind. I live in a community of farmers. The farm at Nappan is a very pleasant place at which to spend an afternoon, but the complaint that the farmers in that district make is that they get no benefit from that farm. That is what I was directing the attention of the minister to; I do not at all object to experimental farms if they are properly conducted. I understand that a very large number of reports are being sent from the Central Experimental Farm all over Canada, and these are doubtless of very great advantage to the farmers. I wish to know whether reports are being sent out from these branch experimental farms and whether the farmers in these localities are receiving a benefit at all commensurate with the cost of conducting them. I have been rather surprised at the expenditures connected with the branch experimental farms, and the very small revenues derived from their operation. For instance, at Nappan the cost of operating the farm for the last year was $21,161.38. They sold some live stock for $3,000 odd, and I think they derived $2,000 of revenue from the products of the farm, such as butter, honey, eggs, poultry and a few pigs. From a large farm such as that I should think a very much larger revenue should be derived from the sale of products, unless the products are being distributed among the farmers in the way of seeds, etc., to assist them in carrying on their farming operations. Then, take the farm in Fredericton. I am not here to criticise it nor to argue that there should not be a farm in New Brunswick. If these farms are of any benefit I think that our province is entitled to its fair share. But I find that the expense of operating the farm for the last year amounted to over $50,000. The wages alone paid on the farm for the year were $20,099. Looking at the revenue side, I find that $2,173.74 was the net amount received from the products of the farm, which were sold in the vicinity of Fredericton. There may be a reasonable explanation of that; but, not being a practical farmer, I cannot understand it now. They have apparently been experimenting in the manufacture of butter, a little cheese, and products of that kind. I find that they have sold from that farm $1,209.98 worth of dairy products. Strange as it may seem to the members of the House, a dairymaid was paid during that year $612.90 to manufacture $1,209.98 worth of dairy products. Nearly one-half of the revenue was paid to the dairymaid. Then, in addition, the cows had to be kept; wages amounting to over $20,000 were paid to the men to milk the cows; and the buildings had to be kept in order. I am not here to criticise this farm, but it seems that is a matter that should engage the attention of the Department of Agriculture. They should ascertain whether or not the money is being properly expended. As has been said in this House very often, as was recently said so emphatically by the Minister of Finance, the agricultural industry is the basis of production and wealth of our country. That is true. But I think great care should be taken in regard to our public expenditure for the encouragement of agriculture. We must see that it is made so as to be of the greatest benefit to the agriculturists in this country. I should like to know if the department at Ottawa send inspectors to these branch farms to examine the accounts, to see whether they are properly kept, and to ascertain the explanations of some of these matters which strike one as being rather singular.

In looking over the accounts of the farm at Fredericton, I find that the names of the different men engaged as labourers

show a great similarity. There will be A. Deacon, B. Deacon, C. Deacon and G. Deacon, and then A. Gillies, B. Gillies, C. Gillies and some other Gillies. I do not want to throw out the least shadow of suspicion, but this would appeal to me as being a matter which might well be inquired into by an officer of the department. I have brought this matter to the attention of the acting Minister of Agriculture, and I trust that he will see to it that, even if other matters are extravagantly carried on, the expenditures for the promotion of the great agricultural industry will be made with some degree of care, some degree of supervision, and some degree of economy. I hope the minister will be able to give me a definite assurance on this point.

Mr. HAZEN: Every account in connection with any of these branch farms comes, in the first instance, to the office of the director of the Experimental Farms at Ottawa. There it is examined, and it is then passed on by the director to the Department of Agriculture, where it is criticised and passed upon by the Accountants' Branch. Every care is taken to see that the moneys are properly accounted for. The criticism which my hon. friend has indulged in this afternoon is practically the same sort of criticism that has been indulged in by every Opposition in this House for 20 years past.

Mr. COPP: I was not here.

Mr. HAZEN: It strikes one in Opposition at first glance as very extraordinary that the expense should be so much greater than the revenue. But when you come to consider the matter there is nothing very extraordinary about it. The farms are not run for commercial advantage, but as experimental farms; and a great deal of the work carried on is of an experimental character, and so does not bring five cents into the exchequer of the farms. The farms are not intended to pay directly; they are for the diffusion among the farmers of knowledge and information of an up-to-date, scientific and practical character. As to my hon. friend's criticism about the labourers at the different farms bearing the same names, I do not think there is anything extraordinary about that. Very often these farms are situated in districts where there are not a great many labouring men. There might be three or four in one family living in the neighbourhood, but I do not think there is any occasion for suspicion. If there was anything wrong, it would have been detected long ago, not only by the officers of the Experimental Farm, but by the officers of the Department of Agriculture. I am satisfied that these farms are well run. Generous provision is and always has been made for them, no matter what Government has been in power, but I think they have been conducted in the public interest, and the good work they are doing is greatly appreciated by the farmers throughout the country who get in touch with them.

With reference to one of the questions raised by my hon. friend, I understand that the farmers in the neighbourhood of Nappan are given, on application to Ottawa, samples of grain and other seeds for the purpose of sowing on their farms. A great quantity of the produce that is raised goes to the farmers for the purpose of helping them with their operations. No charge is made for these samples, and of course nothing is credited to the Experimental Farms for them.

Mr. COPP: I thank the minister for the information he has given. I trust he does not think that I was making any criticism; my object was merely to obtain information. The point in which I am particularly interested was touched upon by the minister just as he sat down. The farmers in my locality do not know—at all events, they say they do not know—that they are entitled to receive those samples of grain from the different experimental farms. Where is the information published which would enable the farmers to apply to the management of the experimental farm for those samples?

Mr. HAZEN: The director tells me that a statement is published in nearly every paper in Canada informing the farmers that if they desire samples of this sort they should make application for them. In the district where my hon. friend lives, if a farmer wanted samples, say of potatoes, he would apply directly to the farm at Nappan; but, so far as the distribution of grain is concerned, that is directed from the Central farm here at Ottawa, because they have the organization necessary to carry it out. The grain grown on the Nappan farm and other farms is sent here and distributed in small quantities to any one who makes application for a sample. Of course, the farmers cannot get enough grain to sow a field with; they will get enough to experiment with, and to enable them to ascertain whether the variety they get gives better results than the variety they have been using.

Mr. COPP: Is that information published at a certain time of the year?

Mr. HAZEN: In the fall of the year, after the crop is harvested.

Mr. COPP: Might suggest that it would be an advantage to have a bulletin, copies of which could be distributed among the members, particularly those representing farming localities, so that they could send them out to the farmers in their constituencies? I think it would be very useful, because I can assure the minister that the farmers in my locality are not aware that they can get those samples, and it is the up to date farmers who complain to me that the experimental farms, which are supposed to be carried on for their benefit, are of no advantage to them. Personally, I believe that these farms are of advantage, if properly conducted and the farmers have the opportunity of getting into touch with the managers and obtaining information from them.

Mr. SUTHERLAND: With regard to the remarks of the hon. member for Westmorland (Mr. Copp), I can only say that the farmers in his constituency must live under different conditions from those of almost any other farmers in Canada, because I do not know of any reports which have a wider publicity than those of the experimental farms. You will find them in almost every library in the country. There are publications issued by the Government containing the fullest information with regard to the workings of these farms. The discussion here this afternoon has been rather interesting in that the criticism apparently comes mostly from those members who live in the provinces where these farms are situated. It seems impossible to satisfy every one. I think it was the hon. member for Assiniboia (Mr. Turriff) who, a few moments ago, made the statement that these farms were being established for political purposes. I would not like to say that. I have always felt that no money expended by the Government was giving better results than that expended for experimental purposes. I think it was in 1886 that the Dominion Experimental Farm was established here in Ottawa. The late Sir John Carling was then Minister of Agriculture. Some years previously, the Ontario Agricultural College farm had been located at Guelph. I desire to say this, that the publicity given to the reports of these farms is possibly doing greater injustice to the province of Ontario than people generally realize. I quite understand the necessity of establishing local stations throughout the western provinces, which contain such wonderful agricultural possibilities, but to my mind great injury is being done to Ontario by the publicity that is given to the other provinces, not only in this country, but in almost every country from which we endeavour to get immigrants. Naturally the people of these countries come to Canada with the view of engaging in agriculture, and they get from the immigration offices the publications of the Department of Agriculture. I have here a report which has just been published in connection with the Experimental Farms in Canada, containing 574 pages, and other publications are being issued continually. This one contains a great deal of information, but, looking over the list of contents, I find that the only reference as regards Ontario, is to the Central Experimental Farm here at Ottawa, which in no sense represents the agricultural conditions throughout the province. There are a large number of farms and substations, and there are reports about these in this document. Not only that, but the Department of Trade and Commerce issues a weekly bulletin containing reports received from these various farms, and copies of that bulletin are distributed broadcast. What I complain of chiefly is that the people who contemplate coming to this country and who receive these publications are apt to form a very erroneous idea as to the possibilities of the province of Ontario. If the people lived here and knew the conditions, it would not be such a serious matter. In Ontario we have an immense area of land still undeveloped, and for that reason, if for no other, more attention should be paid to the province. I would like to ask the minister a question with regard to a certain tract of land, which has an unpronouncable Indian name, on the Grand Trunk Pacific railway, in the clay belt of Northern Ontario. I believe that the aliens, belonging to the countries with which we are at war, are interned there, and that a large area is being cleared, or has been cleared. I would like to know whether the Government propose to establish an experimental farm at this place. It could certainly be done very cheaply. I do not know but that it would be better to have one farther north than that, but it would serve the newer districts of Ontario in an admirable way. It is a splendid way to employ these people while the war is going on.

But I want to emphasize the injustice that is being done to the province of Ontario every day of the year through publications being found in the libraries of almost every country in the world which omit to mention the agricultural achievements and possibilities of that province. Agents in Denmark and other European countries, from which we would like to promote immigration, will consult this literature in which Ontario is altogether overlooked. To such an extent is this the case that the province of Ontario is doing work, and has been doing it for years, that the other provinces are having the Dominion Government do for them. I refer particularly to work in connection with the bringing of immigrants into this country. We find that they have had to go as far as to send agents to the continent as well as to the British Islands. An office has been opened in London. At the present time nothing is being done in the old land, but we find agents of the Ontario Government in the United States endeavouring to get help for the farmers of our province. I do not say that the farmers of Ontario are not as loyal and patriotic as those of any other part of Canada, because, as a matter of fact, there is no distinction between any of the provinces in that regard. But the crying need of keeping up production in the province of Ontario is handicapped more than in any other province under the conditions prevailing at the present time. I believe that the first duty of every citizen of this country is to see that this war is brought to a successful conclusion and as soon as possible, and I would not ask or encourage any farmer or any farmer's son to remain here if he was able to bear arms and go to the front. During this year you are going to notice a remarkable falling off in the province of Ontario, as also I believe, in the other provinces. When this war is over we are going to be confronted with a condition of affairs which will require the best energy and genius of our people in order to remedy the injury that will have been done by the war. For that reason, if for no other, these stations should be established in Ontario so that we would be getting our due share of publicity in the reports that are sent out by the Government of Canada, and which are consulted with reference to the agricultural possibilities of the various provinces.

I do not want any one to think that I am taking up time unnecessarily. I feel, and I have felt, that there is no item in these Estimates which is of greater importance than the one now under consideration. I quite agree with some of the remarks that were made by some hon. gentlemen who were criticising the stations that are located in their various constituencies and localities where they have been enabled to observe their operation, and who possibly feel that a better work might be done. Unless you have a practical demonstration and can convince the farmers in these localities that the work that is being carried on is practical you are not going to do any good. If it is a mere theory that you are endeavouring to carry out you might be better without the stations. It is quite noticeable that when you find a first-class, up-to-date farmer, who is making a success of his business, and whose farm is in splendid condition, you very soon find those around him adopting the methods that he is pursuing, and in that way the whole community is benefited. Possibly that is the object that the promoters of these farms have in view; whether they are succeeding or not is another question, because they do not come under our observation in Ontario The province of Ontario is itself doing a great deal in this regard; but its work does not come under the notice of the public through the literature that is being published by the Federal Government, and to my mind the greatest possible injury is being done to Ontario in that regard. I would like to know whether there is any possibility of another of these farms being established this year, and I would ask particularly in regard to one in the clay belt of Northern Ontario. The Ontario Government has established, I believe, two farms in Northern Ontario, but their reports do not appear in the publications issued by this Government.

Mr. HAZEN: In reply to my hon. friend from South Oxford (Mr. Sutherland), I may say that a farm is being established at a place called—I do not wonder that he could not pronounce the name—Kapuskasing, in the clay belt of the province of Ontario, seventy miles west of Cochrane.

Mr. MARCIL: Is that on the line of railway?

Mr. HAZEN: Yes, on the line of the Transcontinental. Work is progressing towards a conclusion, and it is being done by interned aliens—Germans and Austrians. They have been at work there cutting down timber and clearing up, and it is expected to have 100 acres under crop

next year. Another farm is being established at Spirit Lake, Quebec, which is 140 miles east of Cochrane. There is also established there a camp of interned aliens who are doing a very useful work which I trust will be very much to the advantage of both the provinces of Ontario and Quebec. I think it very desirable that experimental farms should be established in that new country. I shall be very glad to convey to the Minister of Agriculture the remarks made by my hon. friend from South Oxford (Mr. Sutherland) regarding the circulation of literature and other matters affecting the province of Ontario. I am sure that the minister, who is now laid up, will read his speech with a great deal of care and will give such attention and consideration to his suggestions as it is possible for him to do.

Mr. BUCHANAN: Since there is an experimental farm in my district, practically in my own city, I would like to make a few observations, not in the nature of criticism, but merely for the purpose of suggesting an experiment that I think could be carried along successfully at that farm. In fact, the experiment to which I refer has been undertaken there, and it has met with a considerable degree of success. I refer to fruit-raising. It may be a surprise to some hon. members of this House to know that in many parts of the irrigated districts of southern Alberta during last year there were remarkable crops of first-class apples. At the farm at Lethbridge the trees that were in bearing yielded plentifully and the quality of the apples was good, fully as good as many of the apples grown in Ontario. I think that this experimental work should be carried on further and that some person should be placed at that particular farm who is acquainted with fruit-growing. The reason I mention that station particularly is this: At a place called Magrath, 20 or 25 miles south of Lethbridge, a man who came from Utah brought with him some seedlings and planted them on his farm. At the present time that man has over 100 apple trees bearing fruit. I was in his orchard last year, and it was a great sight.

Mr. BURNHAM: What is the name of the fruit?

Mr. BUCHANAN: I do not know the name of the fruit; the man himself does not know the name.

Mr. BURNHAM: I cannot find out from the department the name of any seedling fruit.

Mr. BUCHANAN: This man does not know the names of the varieties of apples he is rasing on his place. Last year he got me to help him, and I sent a great many samples to the experimental farm at Lethbridge. They knew the names of some of the samples but not all. This is not an isolated case. There are many farmers in that district growing small fruits, and with a great deal of success, and a ready market is found for the fruit at Lethbridge. I believe that that irrigated district could grow sufficient fruit to supply the needs of Lethbridge and the surrounding country. I would urge the department to appoint some one to the Lethbridge experimental farm to assist the farmers who are making experiments along this line. There is all the more need to encourage fruit raising in the Prairie Provinces because of the new duty that has been imposed on apples, which will have the effect of increasing the cost to the consumers on the prairies.

There is another point I should like to mention. If the farmers are to get full benefit from the experimental farms, they must visit them regularly, and find out the results of the experiments that are being made. Last year excursions were run to the Lethbridge farm, and a great many farmers from all over the southern part of Alberta took advantage of them. But they stayed at the farm only a few hours, and, though impressed with the experiments, they had not time to profit by them. It struck me at the time that it would be very advantageous if some plan were arranged so that the farmers could spend two or three weeks at the farm, and investigate the experiments that were being conducted. Perhaps arrangements could be made to give the farmers their board as cheaply as possible, so that they could stay on the ground all day long for several weeks. A building or some other accommodation could be provided. This, I think, would be of real benefit to the farmers, and they would be able to take advantage of this opportunity, because in the summer of the year they might take a week or more to visit the Experimental Farm.

Mr. BURNHAM: If the apple industry in the district of my hon. friend develops, will he give the credit to the new duty on apples?

Mr. BUCHANAN: No. I believe that those who grow apples in my country want open markets everywhere. They are not afraid of the apple-grower or the grain-grower of Ontario. I may say to the hon. member for Peterborough (Mr. Burnham), who has broken into this debate two or three times, that if it were not for Western Canada the town he comes from would not have the population it has to-day: the development of Peterborough has been due to the development of western Canada. There has been criticism of Western members speaking for their own part of the country; but we speak for the West because we believe its development is necessary not only to Ontario, but to the whole Dominion. I have made these two suggestions to the acting-minister because I believe that if carried out they would be of great benefit to the people affected. I think the fruit-growing industry can be developed to a certain extent, but I would not for a moment say that it could be made a profitable business for the farmer. I think, however, that in the irrigated district there is some prospect ahead for profitable fruit-raising. The other suggestion I made was that the farmer should be encouraged to visit the experimental farms, so that they might get real benefit from the experiments that are being made. The investment in these experimental farms would then be really worth while. The experimental farm at Lethbridge has been of the greatest benefit to the southern part of the province; the experiments have been carried on with great advantage, and the conduct of the farm has been splendid. An experiment was made in wheat in one plot last year—I am not saying this to give the particular district any publicity—and the yield was in the neighbourhood of eighty bushels to the acre. I do not know what kind of wheat it was.

Mr. HAZEN: I think the suggestions of the hon. member are excellent and worthy of every consideration. I am told that at the Lethbridge experimental farm there are now several hundred apple trees, that fifty of those trees are bearing, and that about twenty barrels of apples of very fair quality were gathered from them last year. In addition to that, a lot of small fruits, such as strawberries, etc., are grown at the farm. So my hon. friend will see that some considerable attention is being given to the matter to which he refers. The department is establishing a fruit station at Morden, in the province of Manitoba, and the officials hope to spread the raising of fruit out through the West. They expect the farmers to go in for growing apples and fruit to a much greater extent than at present. I can assure my hon. friend that his suggestion that a fruit department be established in connection with the experimental farms will receive every consideration at the hands of the department.

Mr. BUCHANAN: The name of the man who owns this big orchard at Magrath is Walter Ackroyd. He has four or five acres in fruit trees. He really needs some assistance, because he does not know the varieties of fruit that he is raising. I do not think he is cultivating the land properly, for he is not familiar with fruit raising.

Mr. SCHAFFNER: Has he grown any apples, such as Northern Spies?

Mr. BUCHANAN: I could not say. I know his trees were heavily laden with fruit, and that he supplies the stores of Magrath. I do not think he sent any fruit out of the community. The samples he sent me were very good.

Mr. SCHAFFNER: I think the man who has had the greatest success in growing apples in the three Prairie Provinces is Stevenson. I think his crop averages about 200 barrels.

Mr. KAY: Are any reports published of the experiments conducted at the illustration farms?

Mr. HAZEN: These farms were only established in 1915, and no reports have been published yet.

Mr. KAY: Will they be published in the annual report of the Experimental Farms?

Mr. HAZEN: Next year, yes.

Mr. KAY: Will the hon. gentleman bring down some information to-night about the experimental farm at Lennoxville?

Mr. HAZEN: I might give the hon. gentleman information about it now if he would indicate the line.

Mr. KAY: Are they keeping a dairy herd there? Are they keeping beef cattle? What kind of horses are they keeping? Generally, what are they doing?

Mr. HAZEN: It is a new farm and is not yet fully equipped. They have no dairy

herd yet, but it is the intention to have one. There are from 80 to 100 beef cattle at the present time, and also some Clydesdale horses, and also sheep and swine.

Mr. KAY: What breed of dairy cattle have they?

Mr. HAZEN: Ayrshires and Holsteins.

Mr. J. J. HUGHES: Has the minister explained why this item is larger than that of last year?

Mr. HAZEN: Yes, the hon. gentleman will find that in Hansard.

Mr. HUGHES: The statement made by the hon. minister in answer to the member for Westmorland (Mr. Copp) shows why the expenditure at the experimental farms is so much in excess of the revenue. But there is an opinion in the country, and I think it is growing, that the expenditure is too great in proportion to the revenue. Whether that opinion is well-founded or not is another question. But there is a growing opinion that economy is not practised, and, as has been said, while economy is good at any time it is particularly good at this time. The minister has stated that the reason why the expenditure at the Central Experimental Farm is so much higher than at the branch farms is that extensive experiments are carried on here and a large staff must be maintained. But that would not apply to the branch farms, nor would it justify their method of farming. The farm at Charlottetown, I presume, is as well managed as any other; but we find a condition of things there that is not considered good farming. I understand that the farm has to buy seed oats, seed potatoes, and also hay and fodder to keep the animals during the year. That would indicate a system of farming which, at the very least, requires some explanation. If an ordinary farmer were to run his place in that way, he would soon receive a visit from the sheriff. Such a thing is a poor object lesson in the community. There may be some reason for it, but, if so, it would be well for the minister to give the reason, because it is commented upon, and properly so.

An hon. MEMBER: Carried.

Mr. HUGHES: I had some further remarks to make.

Mr. HAZEN: There are plenty of items yet.

Mr. HUGHES: Might I, on some other item, make some remarks that apply to this particularly?

Mr. HAZEN: Yes.

Mr. HUGHES: Has the hon. minister no explanation to make of the method of farming to which I have referred?

Mr. HAZEN: I cannot give such information at the moment about the farm at Charlottetown.

Mr. HUGHES: But would not the department have some control? Is there not some body in the department who knows the condition of things?

Mr. HAZEN: The director informs me that their control is very complete. If they give things away, it would be for distribution among the farmers.

Mr. HUGHES: But they would not give away hay?

Mr. HAZEN: It may be a poor hay farm, or they may keep more stock than the farm will carry—keep them for experimental purposes.

Mr. HUGHES: That is not good farming.

Mr. HAZEN: Not from a commercial point of view, but these farms are not run on a commercial basis.

Mr. OLIVER: With regard to the farm at Lacombe, are experiments in apple culture, either standard or crab, being carried on there, and, if so, what success has been achieved?

Mr. HAZEN: Yes, experiments have been carried on, but not nearly so successfully as at Lethbridge. They have not produced any fruit at Lacombe yet. But there are hundreds of trees there, and the experiments will be continued.

Mr. OLIVER: Is the non-success in standard apples, or in crabs, or in both?

Mr. HAZEN: Up to the present time they have been more successful with crabs than with standard apples. They have produced some crabs.

Mr. OLIVER: But they are experimenting with standard apples yet?

Mr. HAZEN: Yes, with both.

At six o'clock, the House resumed and then took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

CONSIDERED IN COMMITTEE—THIRD READINGS.

The House in Committee on Private Bills, Mr. W. H. Bennett in the Chair.

Bill No. 22, to incorporate Edmonton and Southwestern Railway company.—Mr. Douglas—in committee.

On section 1—incorporation:

Mr. HAZEN: Will the promoter tell us what this is about?

Mr. DOUGLAS: The only explanation I can offer in connection with this Bill is that this is a legitimate enterprise, the purpose being to build a railway from Edmonto southwest to a point on the Saskatchewan river about seventy miles from the city. The Bill was passed unanimously by the Railway Committee.

Section agreed to, and Bill reported, read third time and passed.

The following Bills were considered in committee, reported, read the third time, and passed, without discussion:

Bill No. 36, respecting the Joliette and Lake Manuan Colonization Railway company.—Mr. Guilbault.

Bill No. 30, to incorporate Seaport Trusts company.—Mr. Stevens.

SECOND READINGS.

Bill No. 46, respecting the Algoma Central and Hudson Bay Railway company.—Mr. Boyce.

Bill No. 39, respecting the Governing Council of the Salvation Army in Canada, and to change the name thereof to the Governing Council of the Salvation Army, Canada East.—Mr. Blain.

Bill No. 40, to incorporate the Governing Council of the Salvation Army, Canada West.—Mr. Blain.

Bill No. 42, for the relief of Robert Napper.—Mr. Buchanan.

Bill No. 43, for the relief of Sherwood Norman Hill.—Mr. Douglas.

Bill No. 44, for the relief of Ida May Woltz.—Mr. Boys.

Bill No. 45, for the relief of Cecily Ethel Maude Farera.—Mr. Buchanan.

Bill No. 41, for the relief of Lena Pearl Potter.—Mr. Wallace.

SUPPLY.

The House in Committee of Supply, Mr. W. H. Bennett in the Chair.

[Mr. Hazen.]

Department of Agriculture—Branch of Entomology, $20,000.

Mr. CARVELL: Before the minister explains this item, I wish to give the information which I was unable to lay my hand on this morning in reference to the amounts expended for explosives on the experimental farm at Fredericton. I now find on page A-24 of the Auditor General's Report that $851.03 was paid to the Canadian Explosives of Halifax, the order including 2½ tons of stumping powder and 12,000 feet of fuse. They must have run fuse all around the place; they must have had a regular carnival of stump-blowing. This firm also supplied 8,000 detonators. That is some experimental farm, I tell you, when it takes that number of detonators.

Mr. BRADBURY: That is forcing things.

Mr. CARVELL: That certainly is forcing things. On page A-25 the minister will find a further payment to J. S. Neil & Sons, Fredericton, of $383, making a total of about $1,232 for explosives alone in clearing land at this experimental farm.

Mr. OLIVER: Are bees kept at the Lacombe experimental farm?

Mr. HAZEN: Yes.

Mr. OLIVER: How long have they been kept there?

Mr. HAZEN: For about one year.

Mr. OLIVER: I did not know that they were kept, and I desired to suggest that they should be added to the establishment, for this reason, that, while bees have been kept in Northern Alberta ever since 1888, the winter conditions there are so different from what they are in most countries where bees are kept that there are difficulties in successfully wintering them. For that reason very few private owners have taken up the industry. Some have, and some have been measurably successful. But, owing to the dangers of wintering, bee-keeping has been a matter of great uncertainty, which has prevented the extension of this industry. Flowers in summer are remarkably abundant in that country and there is a vast natural crop of honey. It is a pity not to utilize it. In addition to the native wild-flowers which are so remarkably abundant, the small white clover, which we sometimes call Dutch clover, has become very plentiful. It has a very short stem and grows in bunches. It only grows long enough for pasture. It is not indigenous, but it has become acclimatized, and it has spread to a marvellous de-

gree. This white clover is a tremendous producer of honey of the very highest quality; therefore, I think that the department would be well advised to take up the question of bee culture at the Lacombe farm with a view of demonstrating the best means of keeping the bees safely throughout the winter. That is the great question, practically the only question, which has to be solved. It can be solved to better advantage by the skill, science and capital available to the Government on its farm than it could be by a private enterprise. Once that question is satisfactorily solved we may look for an enormous production of honey in that northern country, partly because of the wild-flowers, and partly because of the spread of the white clover.

Mr. HUGHES: Before six o'clock, the minister stated that we might return to the item of Experimental Farms. I think the impression is growing in the country that the Experimental Farms are costing a good deal of money, and the question naturally arises, whether some of that money could not be saved, whether greater economy could not be practised, whether there is a close and proper supervision of the expenditures, whether it is not the duty of some official of the Government to watch them, to examine and criticise them. We know well enough—it is human nature—that where a great number of men are employed in connection with a Government work, they are not always so careful as they should be in their expenditures. I notice quite a difference in the prices paid for articles in one province. I have been looking over the accounts, and I find, for instance, that for the Kentville farm, 215 bushels of oats were purchased from Cross and De Wolfe at 50 cents per bushel, while for the farm at Nappan, in the same province, 1,000 bushels of oats were purchased at 59 cents.

Mr. HAZEN: Were they purchased during the same season of the year?

Mr. HUGHES: There might be something in that, but what I want to know is whether the officers on the different farms are allowed to make purchases without regard to price. There is a large amount of money expended, and while we must assume that the department does its best to supervise these expenditures, I think criticism of this kind is useful. After all, it is our money, and we want to see that we get full value.

Mr. HAZEN: The hon. gentleman's criticism is perfectly fair criticism; every effort ought to be made to see that value is received for the expenditures. It is the duty of Mr. Grisdale, the Director of Experimental Farms, to visit every experimental farm at least twice a year, and he does so; some of them he visits more frequently. In addition, all the bills incurred at the different farms come here to Ottawa, are examined by the staff at the Experimental Farm, and are then sent to the Agricultural Department, where they are examined by the Accountant's Branch. I have no doubt that the Auditor General also pays some attention to them. Apparently, therefore, every care is taken to guard against improper prices being paid.

Mr. HUGHES: It appears to me to be a poor system of farming which necessitates the purchase of fodder, cereals, and vegetables in such large quantities.

Mr. HAZEN: It would be farming of a worse kind if the farms were run for commercial purposes.

Mr. HUGHES: There is no doubt that the experimental farms are doing useful work, but whether it is work most advantageous to the farmers I do not know. I know that the farm at Charlottetown, P.E.I., is one of the best farms.

Mr. HAZEN: It is a small farm.

Mr. HUGHES: Yes, but it is as large as the ordinary farm—sufficiently large, at any rate, to do good work. Under ordinary conditions, if a man cannot make a farm like that pay, there is surely something wrong in the management. There may be exceptional conditions on these experimental farms. Some years ago, a gentleman named William Rennie, I think, came to our province to lecture on farming. I happened to be present at his meeting, and one of the first remarks he made was that he had gone on a farm belonging to the Ontario Government, an ordinary farm with ordinary conditions, and had made it pay. As soon as he made that remark every farmer in the audience became interested. They wanted to know how he made it pay, and he went on to tell the story. Now, if we could do things like that, I believe it would do more good to the farming community than running farms at an enormous loss. I am not saying that these farms are not doing useful work, but somehow or other the farmers in my province have the idea that it is easy to farm when the Dominion Government is paying the bills. They would like to know how to make an ordinary farm pay.

Mr. HAZEN: My hon. friend must remember that an experimental farm is an entirely different proposition from a farm run as a commercial undertaking. I do not suppose that any experimental farm, where experiments and investigations are carried on, could be made to pay, so far as dollars and cents are concerned, though it does pay in other directions. I fancy my hon. friend has reference more particularly to the farm in Prince Edward Island. I am told that that is a small farm, only sixty acres in extent, on which stock experiments are being carried on. A considerable part of it is taken up with the growing of crops, cereals, and so on; but if you are carrying on stock operations on any scale at all, if you have not sufficient room in which to produce enough hay for the feed of the stock, you have to buy outside. Perhaps the same state of affairs exists on the island. I do not know what sort of a hay farm it is, but naturally, being an experimental farm, a great deal of the land will have to be taken up for the growth of other things, and there will not be a great deal left for hay.

For the administration and enforcement of the Destructive Insect and Pest Act, $75,000.

Mr. HUGHES: Before dinner the hon. member for Rimouski (Mr. Boulay) stated that there were not as many officers sent to inquire into the potato disease in Quebec as there were in New Brunswick. The minister made the reasonable explanation that there was not as much disease in Quebec as there was in New Brunswick. We are very much interested in that matter in Prince Edward Island. I understood that the department was trying to have the embargo removed from Canadian potatoes entering the United States, and that they were taking steps to convince the authorities of the United States that whatever disease there was in our potatoes was not of a serious character. I would like to know what has been done, and what prospects there are of having that embargo removed.

Mr. HAZEN: The embargo has been removed.

Mr. HUGHES: No.

Mr. HAZEN: There is no inspection of our potatoes going into the United States.

Mr. HUGHES: There must be something wrong about that.

Mr. HAZEN: Our potatoes are admitted to the United States without any Canadian inspection at all.

Mr. CARVELL: While there may not be a Canadian inspection, there is a very severe American inspection, which only takes place at a few isolated points, probably at Boston and somewhere in New York state. The places of inspection are so far away that our growers or merchants dare not take the chance of selling to the United States buyers because their shipments might be rejected.

Mr. HAZEN: My information from the deputy minister and the Entomologist of the department is that it is a matter of mere form in the United States, and that it is not serious in any way.

Mr. CARVELL: That may be so at the present time, but it was not so a month ago.

Mr. HAZEN: My information is that the importer of potatoes in the United States gets a permit for taking them in, and that permit names the point at which they will be inspected. The assurance to the Department of Agriculture here from the Department of Agriculture in the United States is to the effect that the inspection will be of a very ordinary character, and that there will be no shutting out of our potatoes unless it is evident that they are affected with a serious disease. If they are only reasonably affected by disease they will be passed.

Mr. CARVELL: What ports will be available to Maritime Province shippers?

Mr. HAZEN: They will specify them in the permit.

Mr. CARVELL: As a matter of fact, what port do they specify?

Mr. HAZEN: They will consider the convenience of the importer. They do not restrict it to any special port, but they will name the port that suits the convenience of the man, one of their own citizens, who is importing the potatoes.

Mr. CARVELL: Then, as far as the Maritime Provinces are concerned, Boston would be the port of entry in nearly every case.

Mr. HAZEN: Yes.

Mr. CARVELL: Up to five or six weeks ago the conditions of these inspections were so severe that merchants in New Brunswick could hardly take the responsibility of sending potatoes down there because in many cases what they considered to be a perfectly good article would be condemned

when it got to Boston, and, after they had paid the freight and duty, they would have nothing left. In many cases they were called upon to make good a shortage.

Mr. HAZEN: There has not been much movement to the United States lately, because the price has been so high at home.

Mr. CARVELL: No, the price in Canada has been abnormally high and the crop has been very light. Yet the price in the United States is little better than it is in Canada.

Mr. HAZEN: It is now.

Mr. CARVELL: It has been during the whole season except on two occasions and for two or three days at a time. If the road were perfectly open, you could be assured that, if our farmers could get the benefit of the extra 10 per cent, they would do so. One reason why the farmer has not got the extra price is because the inspection has been so onerous that he dare not take the chance. I do not know that this Government could accomplish anything. I am only pointing the situation out to the minister, and I realize that he is not the minister of the department, and I therefore do not expect him to answer these questions readily. But, if something could be done by the department to get them to throw the door a little wider open so as to make it an ordinary commercial transaction, it would be a great benefit to the farmers of the Maritime Provinces.

Mr. HAZEN: The minister took this matter up personally. He went to Washington and saw Mr. Houston, the Agricultural Secretary, at Washington, and as a result the following regulations were promulgated:

Shipment of Potatoes to United States.

On and after the 1st January, 1916, potatoes may be shipped from Canada to the United States, subject to the following conditions:

(1) Potatoes offered for export to the United States must be free from injurious diseases and insect nests.

("Injurious diseases and insect pests" shall not apply to diseases common and widespread in both Canada and the United States, but in the case of even such common and widespread diseases the stock offered for shipment shall be reasonably free from infection with such diseases.)

(2) No shipment may be made until a permit has been issued to the United States importer as provided for in the United States regulations. Each shipment should therefore be designated on the accompanying papers by the number which will be furnished by the United States importer.

Inspection will be made by a United States inspector at the port of entry specified in the permit, and if the shipment be found to be diseased, entry may be refused.

(3) No inspection or certification will be required prior to shipment, but potato growers and shippers are advised that the continuation of such entry will depend on the offering for entry into the United States of potatoes free from dangerous diseases and insect pests.

All persons engaged in this trade should have their potatoes carefully "racked," and any diseased or scabby potatoes removed.

For further information, apply to the Dominion Botanist, Central Experimental Farm, Ottawa.

Published by the direction of the Hon. Martin Burrell, Minister of Agriculture, Ottawa, December 27, 1915.

In the view of the department the restrictions are not onerous in any way. The minister has done everything he possibly could, but if there is any more that can be done I am sure he will gladly do it.

Mr. CARVELL: These regulations may be all right from the point of view of the department. But they are not farmers; they only think they are farmers. They do not know the difficulty of tilling the soil and of trying to make the farm pay the bills. To the practical farmer, however, these regulations seem altogether impracticable. The potato business is handled in carload lots. A man in Boston may wire: "Can you ship me five or ten cars of potatoes to-morrow?" The merchant replies: "I can, or I cannot, at such and such a price." Now, if these potatoes were going from China to British Columbia it would be all right. In that case you would know exactly who was the owner, and who was the consignee, and just where the potatoes were to be inspected. There would be plenty of time. But in the case of this shipment of potatoes to Boston, one does not know at what point the potatoes will be stopped. They may be stopped at Portland, or go on to Boston, or be turned off to Lowell or some other place in the States. If the purchaser has to make all these arrangements before he can get a carload of potatoes, it will absolutely tie up the business. Why, the market may change ten cents a barrel in the meantime, and with a fluctuating market it is impossible to carry on business of this kind. These regulations may look all right on paper, but when applied to every-day business they improve conditions very little, if at all. Our potatoes go not only to Boston, but to all parts of the States. If we had them inspected at the nearest point it would be different. All potatoes from the Maritime Provinces have to go through

Vanceboro. If for some reason the inspector at Vanceboro should not pass the potatoes, they can be sent on to Montreal or Toronto; but, if you are going to have the potatoes inspected at Boston, you may lose the whole shipment if the inspector turns you down there, and they will do it without any reason whatever. The risks are so great that the ordinary merchant will not take chances.

Mr. HAZEN: My hon. friend lives in a district where the potato is a very important item of commerce, and, consequently has a more intimate acquaintance with the business than I have. But I am informed by the officers of the department that these regulations not only read all right, but work all right. In fact, since they were promulgated the department has not had a single complaint, and if there had been any complaints we should have heard of them from our inspectors, who are moving around the country.

Mr. HUGHES: When did these regulations go into effect?

Mr. HAZEN: On the 1st of January, 1916. I can understand that there might be a case in which it would be more convenient for a shipper to have his potatoes inspected at Vanceboro than at Boston, but that is a matter which rests with the Government of the United States, and they have evidently taken the view that they ought to be guided by the wishes of the men to whom they grant the permit to bring potatoes into the United States. I do not see that it would make very much difference to the man importing, whether the potatoes were inspected at Vanceboro or at Boston, except that Boston is a large potato centre, and that might make some difference. But, as I said before, we have not received a single complaint from any of the shippers in the whole country.

Mr. CARVELL: I am speaking from my own personal knowledge. I raise a few potatoes myself. On the 1st of January I had about two carloads of potatoes in the warehouse. I naturally wanted as good a price as I could get for them. I found that the Boston price was a little higher than the price in Montreal or Toronto. I was in touch with a commission merchant in Boston, a friend of mine, who would handle the shipment for me. I went to some merchants in Canada with whom I was well acquainted and they all advised me not to ship to Boston; they said they had tried it themselves, but the regulations were so onerous that it was too risky. The result was that I sold my two carloads in Canada. I got $3 a barrel for them.

Mr. HAZEN: More than you would have got in Boston.

Mr. CARVELL: I am not finding fault with the price. I think I got more than they were worth. But those were the facts in my own case.

Mr. HUGHES: The hon. member for Carleton (Mr. Carvell) has mentioned some difficulties in connection with shipping potatoes by land to the United States. But the man who ships by water has even greater difficulties. When shipping potatoes from Prince Edward Island we usually send them by schooner; whereas a carload takes about 600 bushels, a schooner takes about 6,000 bushels or more; and the larger the quantity of course the greater the risk. The embargo on potatoes has not made any difference in the last two years, because the price in the United States was low and our own price was just about the same level. However, in some year it might happen that there was a short crop in the United States and a big crop in Canada, and then the privilege of exporting potatoes to the United States would be of considerable advantage. If such a condition should arise, the time would be too short to make new regulations, and I think the regulations should be made in advance to provide for such a contingency. I presume that the Agricultural Department at Washington made these changes in view of representations that our potatoes had no disease. It would be a good thing if we could get that fact established and the embargo removed. The risk would then not be so great. Anybody in the shipping business will understand this at once.

Mr. HAZEN: The embargo is removed.

Mr. HUGHES: But the inspection is still there.

Mr. HAZEN: Of course, it is their own inspection and made for their own purposes.

Mr. HUGHES: If that could be removed and we could get back to the conditions that prevailed four or five years ago, it would be much better. Anybody in the shipping business will understand that no person could take the risk of sending a cargo of potatoes from Prince Edward Island, for instance, to Boston, with the possibility of having them turned down. Potatoes are a perishable article and the

cargo would prove a total loss if rejected by the inspector. We should be very little worse off if the embargo were still there. If an arrangement could be made under which the United States authorities would accept the certificate of some official in Canada or at the port of export, that would overcome the difficulty. If that cannot be done, of course it cannot be helped. But unless some such arrangement can be made, no shipper will take the chance of having a cargo of potatoes thrown back on his hands, and no business will be done.

Mr. CARVELL: I am not going to make any recriminations about the army of inspectors that travel around the country. These positions were a godsend to some of the smaller office-seekers. When one of the faithful got a little ugly, they could make him a potato inspector, and thus an easy way was afforded out of a good many political difficulties.

An hon. MEMBER: No responsibility.

Mr. CARVELL: No responsibility, and a good salary; and not only that but no requirement in the way of knowledge—anybody could be a potato inspector. The whole thing was a farce and made no difference whatever except that it cost the country a lot of money. I would like to know how many of these inspectors are still employed. There are two gentlemen at least living in New Brunswick, and holding these positions, and so far as we can see they receive the same salaries as last year and do nothing. We had them by the dozen last year. How many are there left, and what are their names?

Mr. HAZEN: The inspectors employed at present under the Destructive Insect and Pest Act are: J. R. Brownlee, P. R. Cowan, B.S.A., W. O. Johnston, George Partridge, Sydney G. Peppin, and R. Trepanier. These men were engaged during the summer conducting field inspection of potatoes and demonstrating simple control measures for potato diseases, which have caused considerable economic loss throughout the Maritime Provinces. On some 450 farms the removal of diseased hills of potatoes was inaugurated and carried on by the farmers under the supervision of the inspectors, with results that were satisfactory at harvest time. The quality of potatoes harvested by these farmers exceeded anything they had harvested before. In addition, potato spraying demonstrations were held at a large number of farms since it is found that late blight causes incalculable damage. From a careful examination, diseases were found to prevail causing losses as follows: Black leg, 7 per cent loss, 840,000 bushels; Rhizoctonia, 5 per cent loss, or 600,000 bushels; mosaic disease, 10 per cent loss, or 1,200,000 bushels; late blight, 25 per cent, or 3,000,000 bushels; total of 47 per cent, or 5,640,000 bushels. A general statement from Prince Edward Island shows that the losses due to late blight in 1915, when it was particularly severe, amounted to not less than 2,000,000 bushels of potatoes. Both these estimates entirely neglect the consequential loss resulting from diseases during storage, which, on the average, amount to 17 per cent of the tubers in storage. It will be evident that there was urgent need of a systematic educational campaign with a view to the eradication of these excessive losses. The inspectors, under the direction of Messers. Murphy and Cunningham, carried on spraying demonstrations in the farms in their several districts. The result was gratifying. The crop gave a return of 97 bushels an acre on the average over that of the unsprayed fields, while in one case 113 bushels an acre were harvested after being sprayed by inspectors over the crop from neighbouring unsprayed fields. Furthermore, the inspectors carried on experiments at four farms relating to the control of powdery scab. These plots had to be planted, manured, treated and sprayed up to harvest time, and to be harvested in order to collect the necessary data. Already these experiments have revealed that certain chemical substances had a decided beneficial influence on the control of this scab. The inspectors also assisted in the work commenced on the re-establishment of the Garnet Chile industry for the Bermuda market, a problem of much economic importance to Nova Scotia districts. These and other field experiments resulted in the production of a superior grade of potatoes. During winter the inspectors continued seed selections on the farms where experiments were carried on, as well as on those from which diseases were eliminated by demonstrating to the farmers. This preliminary work, essential for the securing of good seed strains, was found very necessary; and the result of this work will surely show up next harvest when potatoes of a quality, purity and freedom from diseases are available as never before. A study of 115 varieties of potatoes grown in New Brunswick was also commenced, and selections are being made of

varieties particularly resistant to certain diseases. The study of these varieties is now being continued under the direction of the Dominion botanist by Mr. Cowan, also an inspector. Up to date, the time for the inspector has not only been very fully and usefully occupied but additional work in other directions is proposed in the coming year which would make the retention of the six inspectors now employed very necessary. The work covers fully the provinces of Prince Edward Island, Nova Scotia, Quebec and New Brunswick. The work on the elimination of potato diseases, already begun, it is contemplated, will be continued next year in order to be prepared for the keeping open of foreign markets of consequence to the growers, particularly under the new agreement with the United States.

Mr. CARVELL: The minister's statement is another statement that looks nice on paper—but that is about all there is to it. The fact is, there has never been a poorer potato crop in the Maritime Provinces in seven or eight years than there was last year, notwithstanding that we had this army of inspectors. All this talk about powdery scab is sheer moonshine. The Government employed an entomologist at a large salary simply for the purpose of going down to New Brunswick and preventing the farmer from getting the price for his potatoes that he ought to get. I say the Government should be condemned for that, and the entomologist should be fired.

Mr. A. A. McLEAN: What does the hon. gentleman call this disease in the potatoes?

Mr. CARVELL: There is no disease.

Mr. McLEAN: What do you call this scab?

Mr. CARVELL: Scab, of course; that is what it has been called ever since you and I were born.

Mr. McLEAN: I suppose it is hereditary?

Mr. CARVELL: You will always find a few potatoes with scab upon them. As for powdery scab, that is all moonshine. The fact that it is all nonsense was the reason why the Unted States Government removed the embargo.

Mr. HAZEN: The result of these investigations caused the United States to do that.

[Mr. Hazen.]

Mr. CARVELL: These gentlemen went around the country a year ago and condemned the potatoes of a large proportion of the farmers in my county, because, as they said, they were full of powdery scab. But I can produce men—by the dozen I was going to say—who planted the very potatoes that these scientific gentlemen pronounced as being badly affected with powdery scab, and you never saw cleaner or better potatoes in your life than were grown from them. I can produce men right in my constituency who will make affidavit to that effect. This talk about powdery scab is just another means of finding places for political friends who want to earn their living without working. This question of spraying potatoes is better known among the farmers of New Brunswick than it is among the officers of this department. At no place on the American continent has potato growing reached as high a state of efficiency as it has along the St. John river in the province of New Brunswick and across the line in the state of Maine. I think it is the opinion of most farmers in the Maritime Provinces that spraying with the Bordeaux mixture is usually productive of good. They claim that it removes the fungus growth, or what is usually called rust. When I was home the last week in January I discussed this matter with a gentleman who told me that he had sprayed his potato plants six or seven times during the summer. The spraying is done with a machine costing over $100; as the machine goes along, the spray is automatically pumped under the leaves and stalks of the plant. He said that he sprayed the whole field of potatoes with the exception of half a dozen rows, and that when he came to dig them he had a better yield from the half-dozen rows than he had from the rest of the field, which he had sprayed. I want to be fair in this matter; I will give both sides of the case. A gentleman from Florenceville told me that he sprayed all but half a dozen rows, and that he got better results from the sprayed portion than from the portion which he had not sprayed; so you have evidence both ways. In my judgment the spraying does good. But the farmer knows that; he does not need any information on that subject from the inspectors or from the Department of Agriculture. Last year I did not spray the plants, and I got just as good a crop as my neighbours did; perhaps I will use the spray next year, because I think it might

do some good. It is an insult to the farmers of New Brunswick for these inspectors to go around the country and presume to teach the farmers how to raise potatoes. This entomologist held a meeting in my town, with the Commissioner of Agriculture in New Brunswick, and they preached that there was nothing in the world but powdery scab, and that it would have to be eradicated. They had some of the men so scared that they would not allow the inspectors on the premises for fear they would poison them over this question of powdery scab. This same entomologist had another meeting down there within the last three or four months, and they say that there is no powdery scab, and never was any. That is what the Secretary of Agriculture for New Brunswick says. There never was any powdery scab; the whole thing was a farce from the beginning. Let us get rid of these inspectors: the farmers do not want them; they are no good. Let the farmers go on in their own way; they know how to raise potatoes. Several thousand dollars will be saved, and there will be an advantage to the minister, because he will not have so many applications from office-seekers.

Mr. HAZEN: I have not been pressed by people seeking positions as inspectors. I do not think that any one ever came to me asking to be appointed to inspect the potatoes of New Brunswick. With regard to powdery scab, an embargo was placed upon Canadian potatoes going into the United States because it was claimed by the advisers of the Agricultural Department of the United States that powdery scab existed very largely in the province of New Brunswick. That impression has been removed, largely through the action of the Minister of Agriculture, who was able to fortify his position by the information that he received from the inspectors who investigated this matter. If we had not had a scientific man to investigate this subject and make report, I doubt very much whether the Department of Agriculture of the United States could have been persuaded to lift the embargo. They have not only removed the embargo, but have admitted that powdery scab did not exist to the extent that they believed it did, and that it was not sufficiently dangerous to justify the placing of an embargo. Our potatoes are now subject simply to inspection by somebody in the United States, whereas, when the embargo prevailed, arrangements were made by which the potatoes were inspected in Canada by Canadian inspectors. I do not see how the Agriculture Department or its inspectors were in any way responsible for the placing of this embargo upon our potatoes. The people in the United States may have been actuated by the best of good faith when they expressed the belief that this alleged disease was dangerous, but they have practically admitted their error since then.

Mr. HUGHES: When was it that representations were made to the United States that there was no disease in our potatoes?

Mr. HAZEN: Representations were made to them from the beginning. I think it was some time last fall, in November, that the Minister of Agriculture got this undertaking from Mr. Houston.

Mr. CARVELL: That, no doubt, is the explanation which has been given to my hon. friend the acting minister. This idea about powdery scab was got up not in Washington, but in the town of Caribou, in the state of Maine. When the potato growers and dealers of the county of Aroostook found that under the Wilson tariff potatoes were practically on the free list, a duty of only about 10 per cent being left on them, they said: "We have got to stop those Canadian potatoes from getting in here." And they started out. I know the man's name, I know the combination, the gentleman who started the proposition. They sent a lot of detectives down to New Brunswick, who claimed they found powdery scab. Then there was a big outcry and the matter was carried to Washington. Delegates from all over the United States went to Washington. I think the Deputy Minister of Agriculture was there. There were 500 delegates, all protesting against the importation of Canadian potatoes because of powdery scab. Then the Dominion entomologist went to Woodstock—it was more of a political meeting than anything else—and met the Secretary of Agriculture of New Brunswick. They decided that the country was full of powdery scab. They appointed their horde of inspectors, who went around the country up till last May, and stopped shipment after shipment of potatoes because they said they were affected with powdery scab. Every officer of this department and of the department in New Brunswick was protesting that this country was simply alive with powdery scab, and these inspectors were refusing the farmers the right to sell potatoes because of it. Then, when the United States Government became ashamed of the trans-

action, these same gentlemen came round and said there was no powdery scab. Now the minister says there is no powdery scab, and the Secretary of Agriculture for New Brunswick says there never was any powdery scab. It only shows the utter nonsense of the whole transaction. The thing has simply been worked—I do not know whether it was for political jobs or not, but it looks as if that was all there was to it. However, we have demonstrated that the powdery scab was only a farce to start with. The potatoes are all right, and if the minister will use his good offices with the Department of Agriculture of the United States I hope he can have these ridiculous regulations removed, so that the trade may go on, subject to the little duty imposed on potatoes entering the United States.

Mr. HAZEN: My hon. friend may be sure that the Minister of Agriculture will do all he can—he is intensely anxious to do all he can—to help the potato growers and all agriculturists.

Mr. J. J. HUGHES: The minister is not acquainted with all the facts, or at least he has not stated them to the committee, with regard to this potato business. When the Wilson Administration came into office in the United States, the duty on potatoes was reduced to 10 per cent, ad valorem, to all countries in the world. Under the reciprocity arrangement proposed between Canada and the United States, we would have had the privilege of exporting potatoes to that country, and no other country would have had that privilege. But in consequence of the Underwood tariff potatoes began to come in freely in the autumn of 1912 from Great Britain and Germany, and, as the officers of the Department of Agriculture well know there is a very dangerous disease in Europe known as canker. The United States authorities became alarmed lest, on account of these heavy importations from Europe, that disease might be introduced into their country, and a convention was called at Washington to take the whole matter into consideration. The department here sent to that convention an officer who stated that Canadian potatoes were diseased, and so he assisted the people of the United States in puting an embargo on potatoes. Since that was done and since it was brought to the attention of the department how serious a mistake they had made and how greatly they had injured this country by restricting the exportation of potatoes, they have been trying to have that embargo removed, and have been telling the people of the United States that we have practically no disease. Well, repentance is better than continuance in error.

Mr. CARVELL: In sin.

Mr. HUGHES: Or in sin. It is repentance. But we have been seriously injured by it, and it will be difficult to get the regulations removed. I quite agree with what has been said by the hon. member for Carleton (Mr. Carvell), that this whole thing was largely a farce, and that the disease existed only in the imagination of these inspectors, for some reason or other. The farmers down in my province have proved that beyond shadow of doubt. The inspectors either did not know their business or they had some object in view that we cannot understand. As a matter of fact, I know the farm to which two inspectors went in the autumn of 1912. That was the farm of a large grower of potatoes. They inspected his cellar, reported that his potatoes were diseased, and told him that under no condition must he use those potatoes for seed; that he must get clean seed or otherwise he would have no potatoes; that he would not only ruin himself but injure his neighbours He was a practical man and knew that there was nothing the matter with his potatoes—that they had no disease. They were the same that year as they had been for forty years. There was some scab but, as my hon. friend says, you will hardly get a field of potatoes without a few scabby ones. He went on and planted those potatoes, he got seed from them for two years, and two years afterwards the inspectors came, inspected his potatoes, and gave him a clean bill of health. He was the only man in the settlement who had no disease in his potatoes. In the face of facts like that, known to everybody in the settlement and in neighbouring settlements, it is absolutely no use for the inspectors to be sent down. I seriously advise the Minister of Agriculture, if he has no use for these men, to see the Militia Department and get them to go to the war. I believe that Artemus Ward wanted to send all his wife's relations to the war. The farmers of Prince Edward Island want to see all these gentlemen go to the war. They might do some good there, but they are certainly an injury to the agricultural industry of this country.

There are a number of other professors or

lecturers who go around telling the farmers how to farm. They may have been in college and have learned the Latin names of vegetables and plants, but they know very, very little about practical farming—and since the present Government came into power their numbers have been increased and they seem to grow less wise. Burns has described men of this kind by saying that they go into colleges stirks and come out asses. There are a great number of them in the Agricultural Department. I shall tell the Deputy Minister of Agriculture, who understands farming, I presume, what I heard one of these men say at a meeting. He was telling the farmers how to farm. A number of farmers attended the meeting—not a great number attend them in my province now. This lecturer invited questions. One farmer asked him how he would bring on some worn-out fields on the back of his farm. He had no manure, and as this was a professor who could give information on any subject, he asked him what he should do. And do you know the answer he got? Sow clover. Now, any practical man who has ever farmed at all knows that you must have the land in good cultivation before you can get a catch of clover. To sow clover in worn-out land—why, you might as well sow it on the seashore. After that, nobody paid any attention to what he said. That was the kind of man who was sent down there to tell the people how to farm. Surely something can be saved by putting these men on to some other work. The number going around the country is very large. I heard one member from the province of Quebec ask the minister to send some one through that province—send them to Quebec, send them anywhere, but do not send them to Prince Edward Island.

Mr. COPP: I was very much impressed by the statement made by my hon friend from Carleton, N.B. (Mr. Carvell) in reference to the inspection of potatoes. I must confess I have not had a great deal of experience in the potato business, although we grow a great many potatoes for export in and around my constituency. But it seemed to me, from what my hon. friend from Carleton said in regard to the inspectors in and around that portion of New Brunswick, that some of his costituents have a reasonable ground for complaint against the Department of Agriculture. A practical illustration will enable the committee to understand the condition of affairs better than anything I could say. This gentleman—I forget his name, I think he came from Victoria county—sold a carload of potatoes last spring to a gentleman in my county—in fact, in my parish. Whether the potatoes were good or bad I am not in a position to tell the committee definitely; but they came to Sackville by rail, and, for some reason or other, whether proper or not, the consignee refused to accept them, declaring that they were not up to the standard of the potatoes he had paid for. He had purchased the potatoes under a written contract, and a clause in the contract was to the effect that the potatoes must be inspected and passed by the inspector of potatoes in that locality. The shipper of the potatoes loaded his potatoes, and the inspector deputed a man to inspect them. The potatoes were given a clean bill of health by the sub-inspector, and, as I have said, they were shipped to the consignee in Sackville. When they arrived there the consignee would not accept them, and they remained on the track for some days or weeks, until eventually the officials of the Intercolonial Railway sold them to pay for demurrage and freight. They were purchased by a number of people around Sackville for as low as eighteen cents, twenty cents, and twenty-five cents a bushel. According to the information which I received from the gentleman who purchased them, they were excellent potatoes. A lawsuit resulted, the gentleman in Victoria country, or Carleton county, suing the consignee for the price of the carload of potatoes. The case was tried in the court at Dorchester a couple of months ago. I was not engaged in the case. Mr. Hartley, I believe, acted for the gentleman from Victoria county, and his client happened to come to my office to get subpœnas for some of the witnesses who had purchased the potatoes, and I heard the story. The seller of the potatoes lost his case, because it turned out that the man who inspected them was a sub-inspector appointed by the real inspector, and a man not legally qualified to inspect. Therefore the bill of health which he had granted was of no use; the judge withdrew the case from the jury, and the Victoria gentleman lost the value of his carload of potatoes because of the neglect and carelessness of the potato inspector in my hon. friend's constituency. I do not know whether the system of inspection is conducted properly generally, but I think that that man who suffered loss by the neglect

and carelessness of the inspector has an equitable claim upon the Government to be recouped.

Mr. MORPHY: Was the inspector himself present?

Mr. COPP: I do not know whether he was there or not; the judge ruled that he had no authority to appoint a sub-inspector.

Mr. MORPHY: The inspector may have been sick, and many have appointed some one to act in the emergency.

Mr. COPP: Why should the inspector appoint a man who was not legally qualified to make the inspection?

Mr. MORPHY: Does the hon. gentleman undertake to say that in other respects the plaintiff's action was well founded? Had he a written contract?

Mr. COPP: Yes, he had a written contract. I do not wish to mislead the committee in any way. I do not know what the jury might have done if the case had gone before them, but the judge withdrew the case on the legal point that the seller had not fulfilled part of the contract because he had not received a proper certificate of inspection from the real inspector.

Mr. MORPHY: Were the potatoes perfectly good?

Mr. COPP: Perfectly good.

Mr. MORPHY: Were they pronounced excellent by those who bought them?

Mr. COPP: Yes.

Mr. MORPHY: And there was no suggestion that the purchasers could have inspected the carload and found the potatoes good?

Mr. COPP: That was the evidence of the people who purchased the potatoes.

Mr. CARVELL: My hon. friend from Perth (Mr. Morphy) does not understand the situation. The whole inspection was a farce; that is the difficulty. It is not as if the Government appointed technical experts from Ottawa or from some of the colleges. There are a few inspectors of that class, but the ordinary inspector is simply some fellow who was out of a job.

Mr. HAZEN: Does the hon. gentleman contend that it is the duty of the inspectors appointed by the Government to inspect potatoes sold by a gentlemen in Carleton county to a gentleman in Westmorland county?

[Mr. Copp.]

Mr. CARVELL: That is the whole trouble.

Mr. COPP: That was part of the contract.

Mr. CARVELL: The whole trouble is that the Government appoint any fellow out of a job who has enough political pull to get the position. The inspectors themselves look upon the whole thing as a farce. They say: "this is a farce anyway; it does not make any difference whether we sign that paper, or get some one else to sign it." The inspector referred to appointed some one else; the matter got into the law courts, and unfortunately there was a condition in the contract which made inspection necessary before the seller could have a right of action. Therefore the two men—the man who was appointed by the Government and the man whom he appointed as sub-agent—had the same knowledge, or, rather, I should say, neither of them had any. Unfortunately, the wrong man signed the document; that was the trouble.

For the development of the dairying industries, and the improvement in transportation, sale and trade in food and other agricultural products, $155,000.

Mr. CARVELL: Is this the item out of which Mr. Ruddick's salary is paid?

Mr. HAZEN: No; Mr. Ruddick's salary is paid out of the Civil Government Estimates of the Department of Agriculture. All the salaries are paid out of the Civil Government vote.

Mr. CARVELL: Well, the staff will be paid out of this?

Mr. HAZEN: No, the salaries are paid out of Civil Government Estimates.

Mr. CARVELL: Would the minister explain, then, just what this $155,000 is to be expended for?

Mr. HAZEN: This item is for the development of the dairying industry and improvement in transportation, sale and trade in food and other agricultural products. The amount spent last year was $215,910. The Estimate is made up this year as follows:

Headquarters	$15,250
Dairy division	97,150
Markets	21,790
Cold storage service	20,800

These items are subdivided again in this way: The expenses of headquarters and branch offices, consisting of printing, stationery, contingencies, unforeseen expenses; Montreal office, rent, water rates, telephone, and incidental expenses; Halifax office,

rent, telephone, etc. Dairy division—inspectors of dairy products, cheese and butter weighing and cow testing, dairy recorders, dairy stations, apparatus for experiments, supplies and repairs and experimental cold storage warehouse at Grimsby. Markets division—inspectors at Montreal, Portland, Halifax and in Great Britain, and temporary employees at Montreal. Cold storage branch—cream cold storage bonus, travelling expenses, cold storage inspector, and items of this sort. I do not suppose my hon. friend wants me to go into all these details.

Mr. SINCLAIR: What is the explanation of the $21,000 for markets?

Mr. HAZEN: These are the items making up the expenditure of $21,790: Permanent employees in Canada—cargo inspector at Montreal, $1,500; cargo inspectors at Montreal, Portland and Halifax—

Mr. SINCLAIR: I am not so much interested in the items, but I would like to have an explanation of what is done in the way of looking for markets for our agricultural products.

Mr. HAZEN: Cargo inspectors are stationed at Montreal, Quebec, Halifax, Liverpool, Bristol, and, in the winter season, at Portland, Maine, to report on the conditions of all perishable goods delivered to and discharged from steamships, and to supervise the handling generally of these products. A large number of self-recording thermometers and thermostats are used, and thousands of records are available. A Canadian shipper may, by application to the Dairy and Cold Storage Commissioner, secure complete records of any consignments from the time the goods arrive at the loading port in Canada until they are distributed in the United Kingdom. This applies also, but not so generally, to shipments to South Africa and Australia. They also supervise the refrigerator car services.

Mr. TURRIFF: A little over a month ago all the members of the House—at least I did—got notice from the department that the report of the Dairy Commissioner had been issued and that we could receive it by going to the distributing office. When we went there we found that the report was not available, and it was not available for ten days, or quite a time after that. My information is that the report that had been issued was called in and that a new report was issued. Perhaps the minister would give an explanation.

Mr. HAZEN: My information is that the report as prepared in the first instance, and before it had been distributed, contained references to certain matters in connection with the war, the publication of which would have been entirely against public policy and public interest at the present time. That was eliminated from the report.

Mr. TURRIFF: Would the minister state what the substance of the report was?

Mr. HAZEN: No; it might as well be printed in the report and circulated as that I should tell it to the House.

Mr. TURRIFF: My information is not exactly the same as the information the minister has. My information is that there were references to the sale of certain articles, but that after something had taken place in the House in connection with the sale of hay, this report was recalled. I notice in the index of the report that the first item is "War Office Agency." There is nothing whatever in the report about a War Office agency. A new report has been issued, but, as is usual in most shady transactions, care was not taken to cover up all the tracks. They forgot to take the index out of the new report. The index contains the reference "War Office agency," but there is absolutely nothing in the report in connection with the War Office agency. We have here a report with the first leaf cut out and another leaf pasted in. Any one can see that it is of absolutely different paper and different type. The sheet has obviously been pasted in. I am afraid the explanation given by the minister is not the right one. My information is that, after the discussion which the Minister of Agriculture and the hon. member for Carleton had in the House over hay about a month ago, it was found necessary to cut this sheet out. I think the minister should give us some better explanation than he has given.

Mr. HAZEN: I have given the explanation that was made to me. It occurs to me that what the hon. gentleman says confirms my explanation. He says that in the second book the index contains the reference "War Office agency," and that there is nothing in the report itself bearing on that subject The index has probably

been overlooked. That bears out the information that was given to me, which was to the effect that it was thought inimical to the public interests to publish what appeared in the first report, with regard to supplies that were being bought by the department for the British and Allied Governments.

Mr. TURRIFF: It would be pretty hard to make me believe that the gentleman in charge of getting out this report did not know what would be inimical to the public interests. He would know perfectly well what to put in the report and what to leave out. The fact is that after certain statements had been made in this House it was thought necessary to recall the first report, and take out this leaf. I feel certain of that.

Mr. CARVELL: The silence of my hon. friend is very ominous. It seems to me that the hon. member for Assiniboia (Mr. Turriff) has put a pretty straight proposition to the minister this evening. He practically says that he does not believe the explanation given by the minister. He does not mean that personally, of course. I also want to add my testimony to the ability and knowledge and good judgment of the gentleman who submits this report. To my knowledge, he has been in the department for thirteen or fourteen years, and I think even longer than that. He has been making reports every year for the department, and I believe has been doing good work for Canada. I have nothing more to say about him. I do not believe he would put in one word that was inimical to the interests of this country, or one word that would help our enemies, or one word that would not be in the interests of the people of Canada who pay for the production of these reports and the salaries of the officials who are producing them. My information is that the only thing that has been taken out of the report was a statement to the effect that the department had purchased large quantities of hay, oats and flour. This was in accordance with the satisfactory method adopted by the Government at the time of the South African war; that is to say, to put in the report just a general statement of purchases. All that is entirely innocent and perfectly correct. But hon. gentlemen will remember that there was a discussion in the House on the 25th and 27th of January last, during which I narrated some of the conditions in the province of New Brunswick in regard to hay purchases by the Agricultural Department. The Minister replied on the 27th, and I am very sorry he is not here to-night. I am not going into this subject now because I hope to have an opportunity of discussing it with the minister when he is in the House again. But as the present Acting Minister of Agriculture was the man responsible for the difficulty, I might address him. I went to the Minister of Trade and Commerce and pointed out to him the iniquity that was being practised in my province and county. I said that if he would give a contract to McCain, who had the only compressing plant in Canada not in use at the time, or anybody else who would furnish some competition, I would be satisfied. That was followed by a letter addressed to Mr. Ruddick, dated December 24, offering to pay for loose hay not less than $15 per ton if they would give a contract for from 3,000 to 5,000 tons. But they would not do it, and the acting minister knows why they would not do it. I had a conversation with the minister, and I am sorry we had a little disagreement as to the exact words used. We did not disagree with regard to the substance, however. I told the minister that if he would give McCain or any other responsible firm a contract, in order to furnish some competition, I would be satisfied and nothing more would be said about it. But instead of doing that, the minister came to this House and read an old agreement which was made with a company with whom I was connected fourteen years ago, when I was a private citizen, not a member of the legislature or a member of the House of Commons. This document, which was public property all over New Brunswick for years, was prepared in the presence of every hay dealer in the county. While there was a clause in the agreement restricting the price to the farmer, my hon. friend should have known that the contract could never have been filled without that clause in it. Smith demanded and was perfectly right in insisting on the clause being put in. He was signing a contract to furnish us with four thousand tons of hay. He said: "I am selling you 4,000 tons of hay at a certain price. If Bohan is allowed to go around the country buying hay and paying more than I can afford, I cannot fill my contract, and I want to be protected against that." Bohan Brothers were members of the parent company and might purchase without profit,

so we put the clause in. Bohan and all the other hay merchants present agreed to it. They knew all about it. It was put in at Smith's request.

Mr. MORPHY: What clause does my hon. friend refer to?

Mr. CARVELL: That the farmer should not receive more than $8 a ton.

Mr. MORPHY: And in case more than $8 a ton was paid he should be fined.

Mr. CARVELL: Sit down, if you please. I do not know whether the farmer was to be fined. This thing has been public in New Brunswick for years.

Mr. MORPHY: Did the hon. gentleman draw up that agreement?

Mr. CARVELL: I helped to sign it. I take my full share of responsibility.

Mr. MORPHY: You have to.

Mr. CARVELL: I do. I never go back on anything I do, and I never say a thing behind a man's back that I would not say to his face. I say that that clause was perfectly right from Smith's standpoint. If it had not been in the agreement, it is quite true that Bohan might have offered a larger price for a few lots of hay in each community, and Smith would then have to pay a greater price than he could afford.

Mr. WILCOX: And the farmers would have benefited to that extent.

Mr. CARVELL: The farmer was getting $1.50 a ton more than he ever got in his life before.

Mr. WILCOX: He must be getting $5 or $6 more at the present time.

Mr. CARVELL: He is, and even then he is not getting within $1.50 of what he ought to get, and when I started into this business he was not getting within $3 of what he ought to get. As I said, the clause was put in at Smith's request and for his protection. I asked the minister to give the contract to Mr. McCain, or some other responsible firm who would give us some competition, and in that case I would have nothing more to say. The minister did not say whether he would or would not, and at a subsequent conversation he said that he thought it was not possible. He said that he had given a contract to the Atlantic Hay company for 15,000 tons of hay, and that it was doubtful whether they could get more than that amount in New Brunswick, and that if a contract was given to somebody else and they paid a higher price the Atlantic Hay company might not be able to fill their contract, and the department might be responsible to some extent. He did not think it would be fair and right. I want to tell this House what the acting minister knows better than any other man in Canada: he knows that he could not keep the lid on any longer; he knows that he had to give in. As the minister from New Brunswick he was compelled, not through my pressure, but through political pressure, to give a contract to another set of men, and I want to tell him that that hay compressing plant is in operation in the town of Woodstock to-day, and the people of my constituency will get the competition which I urged the Government to provide some two months ago. If the Government had acted on my suggestion the matter would never have been discussed in this House, and it would not have been necessary for my hon. friends opposite to mutilate a public document in order to get out of a difficulty in which they found themselves. The acting minister knows that, on account of a political rumpus in my constituency that threatened to rend the Conservative party in two, they were compelled to give a contract. Of course, the minister would not give it to McCain, for McCain is a Liberal, though he promised that he would pay the farmers $15 a ton for their hay. It was given to my hon. friend's friend, Smith, who has been buying at from $13 to $13.50 a ton. It is true that the only compressing plant that could carry on this business was owned by McCain in Woodstock. But he was a Liberal, and no amount of consideration for the public interest would drive the Minister of Agriculture to give the contract to a Liberal—that is a piece of political heresy that he has never been guilty of yet. But when the trouble got so bad that it threatened to split the Tory party in two, and when they came and said: Give us a contract or we will rebel; they gave a contract to a body of Conservatives. One of them is the police magistrate, a splendid gentleman, as the Minister of Militia (Sir Sam Hughes) would say. Another is a lawyer; another a farmer; and two others are merchants. They are all good, responsible men—no fault to find with them. They purchased the McCain press; and they have got a contract, I do not know for how much. It was for 3,000 tons, but perhaps the minister will tell me the amount of it

now. And this concern is doing the very thing that I asked the minister to do two months ago, and which he refused. And, instead of meeting the charge I made, he read an ancient document to try and make a case against me. I notice that he did please some of his followers here, but he only made himself ridiculous in New Brunswick where the facts are known. The fact is, the pressure became so strong that he could not resist it and had to come to the proposition I made and do what I asked him—except that, instead of giving the contract to the man who owned the plant and who had agreed to pay a good price to the farmer, he gave it to political friends who bought the plant and who, so far as I know, did not agree to pay any particular price to the growers of the hay. But natural competition will run the price up, and the farmers will get a better price than they have been getting. This was done at the risk of a fight with Smith. They

10 p.m.

went to St. John and Smith began to tell them: We have got Carvell licked. But these gentlemen said: "we are not here to lick Carvell, but we are here to lick you if you don't give us contracts." They came to Ottawa and saw the minister, and the minister climbed down—not to help lick Carvell, but to save the other from a licking. That is an illustration of how things are being carried on by this department, and by this branch of the department. I find no fault with the officers; they are only the unfortunate medium through whom the dictates of the men behind the minister are carried out. I do not want to go any further now, but when I have an opportunity, later in the session, of discussing this matter with the minister. I shall have a few things more to say to him. For the present I am happy to tell the House and the country that the minister has been compelled to do the very thing I wanted him to do, except he has not done it nearly so well as it would have been done if he had taken my proposition. But my people will get the benefit of competition to some extent, and I hope they will get $15 a ton for their hay. Had I not interfered, they would have been selling to Smith for $12 and Smith would have cleaned up $75,000 instead of about $40,000.

Mr. HAZEN: No one knows better than my hon. friend that this discussion is absolutely out of order; but he has wanted an opportunity to make a statement to the House regarding this hay transaction, and, that being the case, I did not want to raise a point of order, because I think nothing is gained in Committee of Supply by adhering too closely to the rule and confining the discussion to the single item before the Chair. The hon. member for Assiniboia (Mr. Turriff) and the hon. member for Carleton (Mr. Carvell) have talked of the "garbling" of the report. I made the statement supplied by the department as to what occurred, and I think that hon. gentlemen should have accepted that statement. They are not disposed to do so, and so I am obliged to say to the committee that the suspicions of the hon. gentlemen are entirely unwarranted and unfounded. The change in the report had nothing to do with contracts for hay, or with any matters of that sort. That statement I make on the authority of the responsible officials of the department. I believe that statement to be true; I have no doubt of the truth of it.

The matter of the hay contract is pretty fresh in the minds of hon. members. We heard the attack made by the hon. member for Carleton on the Minister of Agriculture and we heard the minister's reply, and every one who heard that discussion knows that the Minister of Agriculture did not come off second best, but that he was able to maintain the position he had taken and to answer completely my hon. friend from Carleton. That hon. gentleman now is posing as the champion of the farmers of his constituency, although the minister showed the House that the hon. gentleman had not been so much the champion of the farmers in the past, but was ready to fine the farmers and punish them if they sold their hay for more than $8 a ton—not a very large sum to get for hay in the county of Carleton. But I do not intend to go into that, more especially as the hon. gentleman has indicated that he intends to bring it up at a later day when the Minister of Agriculture is in the House. But I was not compelled by political or other considerations to take the course he alleges I have taken. The estimate given to the department when the contract was entered into with the Imperial Hay Company—

Mr. CARVELL: The Atlantic Hay Company.

Mr. HAZEN: The Atlantic Hay Company—I say the information in the possession of the department was that about 15,000 tons of the hay that would be required would be available from New Brunswick this year.

They awarded that contract for 15,000 tons. My hon. friend talks about Mr. Smith making from $60,000 to $75,000 out of the contract, but he knows that the final agreement was that Smith's books, or the books of the hay company, shall be open to the inspection of Government inspectors and accountants appointed by them, and that they shall not make a profit of more than $1 a ton on the hay they send out, the limit of which shall be $15,000, not $75,000, as stated by the hon. member for Carleton. The hon. gentleman sometimes talks in the language of exaggeration, but it is inexcusable for him to do so on this occasion, having in regard the statement made by the Minister of Agriculture concerning the agreement which was finally entered into. Every precaution was taken to see that everything was done regularly and in the proper manner. Now, what is the complaint of the hon. member for Carleton? Some gentlemen from the county of Carleton made an application for another contract some weeks ago. They said they thought they could supply 1,500 tons of hay, on the same terms and conditions as were contained in the agreement made with the hay company of which Mr. Smith and the Messrs. Peters are members. A contract was given these gentlemen, not for 1,500, but for 1,000 tons, because before they entered into the contract they said that that was all they would undertake to supply. In regard to my hon. friend's assertion that this is the first time that things were done contrary to the wishes of Mr. Smith, I desire to say that Mr. Smith had advised the department that he had no objection to offer if the contract was entered into with those gentlemen for the amount of hay which they said they were able to furnish. My understanding of the matter is that when it came to making the contract, they were willing to undertake to supply only 1,000 tons, intimating that perhaps at a later date, when they saw better how matters were and to what extent hay should be available in the country, they might be prepared to enter into a contract for the supplying of a further amount. The terms and conditions of this contract were the same as those of the agreement entered into with the other contractors, which provided that they could not make a profit of more than $1 a ton. I was not influenced by fear of schism in the Conservative party in Carleton county. They are good fighting men, as the Liberals in Carleton are, and when a contest comes they are prepared to stand together, more strongly and more determinedly than they ever stood together in the past. The hon gentleman says that the facts are laughed at in New Brunswick. My information is of a very different character indeed. The greatest possible interest has been taken in the matter, particularly in the hon. gentleman's constituency, where it is known that he is connected with the matter. If my information is correct, there is a feeling of indignation among the farmers in the county of Carleton over the publication of that contract which proposed to penalize and punish the farmers of the county for thinking of anything so iniquitous as selling their hay to any operator at more than $8 a ton. However, this is not the time and place to discuss this matter, although my hon. friend no doubt wanted an opportunity of making some reference to the debate that took place in which he and the Minister of Agriculture were the principal participants. I shall say nothing further about it at this time, except to assure the hon. member for Assiniboia and the hon. member for Carleton, speaking in all sincerity, and having regard to the information which I have received, which I believe to be correct, that their suspicions with regard to what was in the report and what was afterwards deleted from it are absolutely without foundation.

Mr. CARVELL: I want to put my hon. friend right: it was not the farmer who might be penalized; it was the merchant.

Mr. HAZEN: He would be penalized for paying the farmer a little more.

Mr. CARVELL: It was not so bad for the Minister of Agriculture to make an argument of the kind advanced by my hon. friend to-night, because the minister did not know what he was talking about. The acting minister talks about this man Smith bringing his books into court, and about allowing him only $1 a ton profit. The minister will do mighty well if he does not pay $25 a ton for that hay instead of $23, because the most glorious set of books ever seen on earth will come before the minister. When you talk to the farmers in New Brunswick about Smith's books being brought before the minister or before a chartered accountant or inspector of the Government—well, my hon. friend is smiling; he knows the circumstances.

Mr. HAZEN: I am smiling at my hon. friend.

Mr. CARVELL: At the time of the South African war, Conservatives could get contracts.

Mr. HAZEN: They say they could not.

Mr. CARVELL: There were a couple of gentlemen in the city of St. John by the name of Peters; I do not think my hon. friend will say they are not Conservatives. My hon. friend made a slip a few minutes ago, when he referred to the Atlantic Hay Company as the Imperial Hay Company. The Imperial Hay Company—that was the Peters' concern—had a contract in 1901-02. They were good Conservatives, and they got the contract on the basis upon which contracts were given to any one else. These gentlemen were quarter owners of the Atlantic Hay Company. B. F. Smith Carleton county, was a quarter-owner, A. C. Smith & Co. of St. John were quarter-owners, the Peters' were quarter owners, and a man named Macdonell of Montreal had a quarter. The Peters' have made up their minds that the company has been badly handled from the political standpoint. There has been such a row that they have withdrawn from the company, and have sent circular notices to the trade to that effect. So you see, Mr. Chairman, that my hon. friend is having his own troubles in New Brunswick over this hay business.

Mr. HAZEN: No trouble.

Mr. CARVELL: There are some things that the hon. gentleman and I know which, perhaps, would not be interesting to the committee; therefore I shall not go into the matter any further. The history of the hay business in New Brunswick has not yet been half told. Possibly before we are a year older the minister and I may have another opportunity of enlightening the people a little on this wonderful question.

Arts and Agriculture—Fruit Branch, $115,000.

Mr. CARVELL: When I was referring to the powdery scab business, I made reference to the Dominion entomologist; I should have said, "Dominion botanist." I want to make that explanation, because, when I come to think it over, I know enough about technical terms to know that it was the botanist, not the entomologist, that I was after.

Mr. TURRIFF: I noticed the following article in the Montreal Herald of Saturday, February 19, 1916:

Apple Growers' Problems.

Mr. F. H. Grindley, of the Fruit Branch, Ottawa, advocates the packing of apples, except Fameuse and Mackintosh, in barrels.... The placing of 50 cents a barrel and 30 cents a box on apples imported into Canada would practically save the fruit industry of British Columbia and would also be helpful to fruit-growers in other parts.

Since when has it been the policy of the Department of Agriculture to send their officials around the country talking politics, discussing questions of duty and how they will affect the people of Canada. It seems to me it is a most uncalled-for proceeding on the part of an official, altogether outside of his duties, and such as should not be tolerated for a moment.

Mr. HAZEN: Under what circumstances did he say that?

Mr. TURRIFF: It was at a dairymen's annual convention at Hemmingford. It is a practice that should not be allowed. That was just before the elections took place in British Columbia, and as the duty was put on not so much to help the apple-growers as to help the politicians and the Government of British Columbia, surely it is enough for the politicians to engage in that class of work. There are enough of them, when you take both sides, to discuss that thoroughly, and if the Department of Agriculture has no departmental work for this official, would it not be a good idea to let him devote his time to politics and save that much money in this time of stress, when we want to practise the utmost economy? Can the Acting Minister of Agriculture, now that the elections are over, and apparently the extra duty has not been of much advantage to the British Columbia politicians, tell us whether it is proposed to take that duty off?

Mr. HAZEN: I do not know the young man to whom my hon. friend refers. I can only assure my hon. friend that he had no instructions from me to go down and make any such statement, and I am quite satisfied that he got no instructions from any official occupying a position of responsibility in the department. It is not always safe, of course, to judge a man by a newspaper report of what he said. We all know that we often see reports of our speeches in newspapers that convey a different idea from what we had in mind. After all, a synoptic report is only the idea the reporter has of what the man says, and frequently the reporter's idea is incorrectly put into type. So a man's

speech is often misunderstood. I do not hesitate to say that no official of the department has a right to go into any part of the country and talk politics, and I will instruct the deputy minister to speak to Mr. Grindley about the matter. I am disposed to think that he may have referred to these duties as being of general assistance to the apple-growing industry, and it is quite likely that when we have the full text of his speech it will be seen that the synoptic report makes it convey a different meaning and that the speech which was actually made may not have been in any sense objectionable. As to the suggestion to change the tariff, I understand the resolutions will be before the House very soon, and that will be the time to discuss them.

Mr. TURRIFF: I quite agree that it would be quite possible that the gentleman was mis-reported, and also quite possible, and I think most likely, that if he did make reference to the tariff, it was without any intention to discuss political matters.

Mr. OLIVER: What is the present annual production of apples in British Columbia?

Mr. HAZEN: The production for the last year was 650,000 boxes, which is equal to 1,000 cars. There are 3 boxes to a barrel.

Mr. OLIVER: I read a report from a British Columbia paper to the effect that 30,000 acres were under orchard in British Columbia ,and that 40 per cent of that area was in bearing to a greater or less degree.

Mr. HAZEN: That is about right, I am informed.

Mr. OLIVER: Has the department any knowledge as to when the remaining 60 per cent will come into measurably full bearing?

Mr. HAZEN: They will all be in full bearing in about ten years.

Mr. TURRIFF: Can the department give any information as to the apple-growing industry in British Columbia, the kinds of apples grown, and whether they are making any advancement?

Mr. HAZEN: My information is that they are growing a very superior class of apples in British Columbia.

Mr. CARVELL: That is a very illuminating answer, and I think we should let the item pass.

Towards the encouragement of cold storage warehouses for the better preservation and handling of perishable food products, $150,000.

Mr. CARVELL: Why is there a reduction in this item?

Mr. HAZEN: That is perhaps because the amount last year was too large. The Cold Storage Act, I understand, covers four years. The first year you pay 30 per cent of the cost of erection, the second year 8 per cent, and then 4 per cent. The Estimate last year was very much over calculated. The amount spent last year was $83,280.

Mr. TURRIFF: Can the minister tell us whether the calculation this year is more nearly correct than it was last year?

Mr. HAZEN: What I am told is that it cannot be accurately estimated from year to year. Within a month or two, some application may come in asking for aid under the provisions of this Act.

Mr. CARVELL: Can the minister say how many companies have taken advantage of this Act? Some years ago, a company in my own town took advantage of it with some assistance from the Government of New Brunswick, and while the warehouse has not been a great success financially, I think the money has been well expended. I doubt whether there ever was a small amount of money spent in my constituency that produced better results than this grant for a cold storage warehouse.

Mr. HAZEN: I have a list of the warehouses erected since 1907. In Alberta, there are Campbell and Hamilton, Calgary and the Edmonton Cold Storage Company, Edmonton.

Mr. OLIVER: Has the grant to the Edmonton company been paid up, or is there something still coming to them?

Mr. HAZEN: There is $6,080 still coming to the Edmonton Cold Storage Company. I think it is due to-day, March 3, 1916.

Mr. OLIVER: That will be paid of course?

Mr. HAZEN: Oh, yes. In British Columbia there are the B. Wilson Company, Victoria; the Canadian Fish and Cold Storage Company, Prince Rupert; and the H. & K. Trading Company, Penticton. In Manitoba there is the Brandon Creamery and Supply Company, Brandon. In New Brunswick, there are the New Brunswick Cold Storage Company, St. John; and the Cold Storage Limited, Woodstock. In Nova Scotia there are the Lockport Cold Storage Company,

Lockport; the North Atlantic Fisheries, Port Hawkesbury, and the Halifax Cold Storage Company, Port Hawkesbury. The Halifax Cold Storage Company's warehouse was burned in 1913. In Ontario, there are Scott and Hogg, Peterborough; the J. D. Moore Company, St. Mary's; Lemon Brothers, Owen Sound; the Chatham Fruit Growers' Association, Chatham; the O'Keefe & Drew Abbatoir Company, Chatham; the Palmerston Cold Storage Company, Palmerston; the Trenton Cooperage Mills, Limited, Trenton; the St. Lawrence Produce Company, Brockville; Flavelles, Limited, Lindsay; Gunn's, Limited, Harriston; the St. Thomas Cold Storage Company, St. Thomas; the Brantford Cold Storage Company, Brantford; the Whyte Packing Company, Mitchell; and the Algoma Produce Company, Sault Ste. Marie. In Prince Edward Island there is the Island Cold Storage Company, Charlottetown; in Quebec, the Dominion Fish and Fruit Company, Quebec, and J. H. Sans Regret, Joliette; in Saskatchewan, the Moosejaw Cold Storage Company, Moosejaw, the City Cold Storage Company, Regina, and H. Gauvin, Vonda.

Mr. CARVELL: Are there many of these warehouses large institutions?

Mr. HAZEN: The Atlantic Fisheries warehouse is a large institution; it cost $200,000. The warehouse at Prince Rupert is also a very large one; it cost $350,000.

Mr. TURRIFF: Are all the cold storage warehouses which are aided by the Government in operation?

Mr. HAZEN: I am informed that they are all in operation.

Mr. CARVELL: I would suggest that the minister consult with the officers of his department as to the desirability of giving a little larger subsidy to these warehouses, and as to imposing more restrictions compelling the owners to accept goods at fair rates. I am not finding fault with the local institution, but the warehouse at Woodstock, was, I think, too small in the first place. It was so small that the owners could not branch out, and could not invite the public to use it, because they occupied practically all the space themselves.

Mr. HAZEN: It received some aid from the local Government, I think?

Mr. CARVELL: Yes, I mentioned that. My view is that if the subsidies were made larger, and the conditions more stringent, we would get better results. In the Woodstock warehouse, if any one wanted to store say a certain quantity of meat, the owners would say: we are sorry, but all the space fit for that kind of storage is occupied. I think there ought to be some better regulations as regards the occupancy of the building, and also some better control of the rates than the department exercises at the present time. However, I heartily approve of the principle, and I hope the Government will establish more warehouses. I am surprised, in view of the results of which I know personally, that more companies have not taken advantage of the Act.

Mr. OLIVER: Is the department satisfied that the cold storage system, as it is operated, has a tendency to improve prices in the case of the producer, and to decrease prices in the case of the consumer? That was the intention of the Government in aiding the establishment of cold storage warehouses, but there are people to-day who have grave doubts as to whether that result has been achieved. I would like to have the opinion of the department on that point.

Mr. HAZEN: I do not think that the officers of the department are willing to commit themselves on that point, but, from what I know about the subject, I think the establishment of these warehouses has increased prices to the producer, though I doubt whether they have reduced prices to the consumer. It may have equalized prices to some extent. In consequence of the cold storage facilities, the producer is able to keep his products until the market is ready, and he is not forced to put them on the market in order to save them from destruction, as used to be the case, thereby causing a glut in the market and bringing the prices down. That of course, meant lower prices to the consumer.

Mr. CARVELL: But there were times when the consumer could not get the products at all.

Mr. HAZEN: On the whole I think the effect has been beneficial in the direction of equalizing prices, and certainly beneficial to the farmers and producers. Of course that is only a personal opinion.

Mr. OLIVER: This is a very important question, probably too important to discuss at this late hour, and I think it is one that might very well be considered carefully. There is the possibility that the owner of a cold storage establishment may use the stocks which he has on hand from the previous season, and which he is able to keep, to hammer down the prices of the producer at the time of greatest as well as of least

production, and at the same time withhold the goods from the consumer and increase the prices to him at the time of greatest production.

Under ordinary circumstances the consumer would get the benefit of a great production as, in other cases, the producer would get the benefit of a small production? My hon. friend has said that the tendency is to equalize prices. There are people who hold the impression that the equalization is an equalization entirely in favour of the owner, or patron, of the cold storage warehouse and not in favour of either the producer or the consumer.

Mr. HAZEN: As a rule the goods in the warehouse are the property of producers, or people who send them there, and not the property of the owners of the warehouse.

Mr. OLIVER: That is quite true. I want to make the argument as short as possible. The people of Canada have put money into these warehouses with the view of reaching a certain result. There are very grave doubts about their having reached the result desired. The theory being right, and the Government having invested the people's money in that theory, it is for the Government to see that the theory is carried into practice by some more stringent regulation and supervision than yet obtains and to compel these people who have been bonused and benefited at the cost of the country to fulfil the duties to the public that they are expected to fulfil.

Exhibitions, $100,000.

Mr. HAZEN: That is entirely for the exhibition at San Diego. Towards the close of the Panama-Pacific Exhibition at San Francisco, requests were made to the Canadian Exhibition Commissioner, as well as to the Minister of Agriculture, by the exhibition authorities to transfer the whole Canadian exhibit from San Francisco to San Diego for display during the year 1916, it having been decided to continue the California Exhibition for another year. This request was accompanied by an offer to pay the freight on the Canadian exhibit from San Francisco to San Diego and to give free electrical current, water and gas. As there was no other International Exhibition to be held in 1916 to which Canada could transfer her exhibits, and as it would cost nearly $50,000 to remove the Canadian exhibit from San Francisco to Ottawa for storage, it was decided, in view of the benefits that might reasonably be expected to result from the presence at San Diego for a whole year of the Canadian exhibit which had attracted so much attention at San Francisco, to accept the offer of the San Diego authorities and this $100,000 is to cover whatever expenses there may be in connection with it.

Mr. CARVELL: Does the minister anticipate that he will require the whole $100,000?

Mr. HAZEN: It is hoped not, but the amount is made $100,000. There may be some other exhibition in the future for which some preparatory work will have to be done. It is not expected that the cost of the San Diego exhibition will run up to $100,000.

Mr. TURRIFF: It seems to me that it will be largely the same people who will see the exhibit at San Diego as those who saw it at San Francisco. In ordinary times I think that would have been a fairly good line of policy. There might be a considerable amount of good resulting from it, but just at the present time people are not coming from the United States to Canada to any large extent. While we are all economizing it would be a good chance for the Government to practise a little economy on its own account.

Mr. HAZEN: We would not economize very much, as it would cost about $50,000 to dismantle this exhibit and bring it back to Ottawa.

Mr. TURRIFF: It will cost that much at the end of the San Diego exhibition just the same.

Mr. HAZEN: But at the end of the exhibition there will be an exhibition somewhere else. I do not think that the same people who visited the exhibition at San Francisco would go to the San Diego exhibition. The people of the United States are very prosperous at the present time. Wealthy people who were in the habit of taking trips to Europe have been cut off from that and a great many of them will avail themselves of this exhibition. It is probable that a good many people will see this exhibition and have the attractions of Canada drawn to their attention. It may not have an immediate effect, but the diffusion of knowledge about Canada must have a good effect in the future.

Mr. TURRIFF: It is close to Mexico, and those people will see it.

Health of animals, $570,000.

Mr. HAZEN: This is a large item and the Estimates for the present year are based on the expenditure of the past year. The Estimates are made up in this way: Salaries and fees, $200,000; travelling expenses, $140,000; general expenses, $15,000; printing and stationery, $5,000; dipping, $10,000. Then there is a large item paid each year for compensation for animals that are killed by authority of the veterinary inspectors as follows: Glanders, $35,000; hog cholera, $100,000; dourine, $35,000; tuberculosis, $30,000. The amount that was spent under this item in 1915-16 was $348,287. The work of this division is limited to the control and reduction of contagious and infectious diseases governed by the Animals Contagious Diseases Act. Fortunately, the only diseases which have necessitated official action in this country are glanders, dourine, anthrax, hog cholera, mange, rabies, and tuberculosis. Any new work which this division has been called upon to perform has consisted of changes in the system of combatting diseases due to modern discoveries. Two-thirds of the cost is for animals that have been destroyed.

Mr. OLIVER: This shows an increase of $30,000; what is the reason of that?

Mr. HAZEN: I am told that the increase has to do with work in connection with tuberculosis in cattle.

Mr. OLIVER: If I caught correctly the figures that the minister read, it would seem that this amount is very much larger than the expenditure last year.

Mr. HAZEN: It is $21,000 larger. The amount actually spent in 1914-15 was $549,288.77. The amount of this item is $570,000. That would be an increase of about $20,000.

Mr. CARVELL: My hon. friend from Huntingdon (Mr. Robb) and my hon. friend from North Oxford (Mr. Nesbitt) could not very well be here to-night, they are very much interested in this matter and I think the minister might let it stand.

Item stands.

Dominion cattle quarantine buildings—repairs, renewals, etc., $15,000.

Mr. HAZEN: This is simply for repairs to quarantine stations all over the country, of which there are a great many.

Department of Agriculture — Publication Branch, $20,000.

Mr. TURRIFF: Why the increase?

[Mr. Turriff.]

Mr. HAZEN: The amount spent last year was $14,145, which came dangerously near the limit. This branch was organized in 1910. The increase is accounted for by the increased issue of the Agricultural Gazette, of which a great many more copies are now being requested. Expenses under this head also include filing cabinets, index cards, stationery, etc.

International Institute of Agriculture—to assist in maintenance thereof and to provide for representation thereat, $20,000.

Mr. HAZEN: It was explained to the House some years ago that practically all the nations of the world had agreed to the establishment at Rome of an agricultural institution, a sort of clearing house for the different nations of the world in agricultural matters. Every country connected with this is assessed $4,560 a year. Then $6,000 is allowed for the bulletin which is issued from time to time. Those are the principal items.

Mr. TURRIFF: Does the minister think it is worth the money?

Mr. HAZEN: Of course I have not studied this question, and cannot say. We entered into this in good faith, and I think we are bound to continue in it.

To enforce the Seed Act, to test seeds for farmers and seed merchants, to encourage the production and use of superior seeds, and to encourage the production of farm and garden crops, $150,000.

Mr. J. J. HUGHES: It is well known that there is a great shortage in the crop of potatoes in Canada, particularly in Prince Edward Island. In some cases the farmers will have difficulty in getting seed. Under these circumstances, would it not be well for the Government to consider the advisability of suspending the duty upon potatoes? Potatoes are very dear at the present time, and will be dearer before the new potatoes are ready for use.

Mr. HAZEN: Does a duty of ten cents a bushel make much difference?

Mr. HUGHES: That is the duty on our potatoes going into the United States. We have to pay twenty-five cents a bushel duty. It will be difficult to obtain potatoes for any purpose in this country before the new potatoes are ready. The new potatoes in the United States will be ready for use a month or two earlier than ours, and I think the duty should be removed so that the people of this country can get potatoes from the United States. There are no pota-

toes for sale in the province from which I come.

Mr. HAZEN: Perhaps you could get them from New Brunswick. There is also a fine crop of potatoes in Alberta this year. I understand that potatoes are scarce in New York state, so removing the duty might not help.

Mr. HUGHES: If we cannot get potatoes from the United States suspending the duty will do no harm. The suggestion is worth considering.

Mr. HAZEN: I am informed that the Department of Agriculture has undertaken to inspect for the Government of Ontario 6,000 bushels of potatoes that are being brought from Alberta for seed purposes in Northern Ontario. I am told that the potato crop in Alberta is excellent, and that the potatoes are clean and absolutely free from disease of any sort.

Mr. HUGHES: I am afraid that coming from such a long distance the price will be pretty high.

Mr. HAZEN: They are very cheap.

Mr. OLIVER: I am willing to support the suggestion of my hon. friend from Prince Edward Island. We had an abundant crop of potatoes in Northern Alberta last year, but nevertheless I should like to see the suggestion of my hon. friend acted upon. I would also suggest to the minister the advisability of securing from the railways such a rate as would enable the surplus of potatoes in Alberta to reach the market in Eastern Canada. I think it is a matter of sufficient importance to claim the attention of the Government. We had a very abundant crop last summer in Alberta, so abundant that I am afraid that in some cases the potatoes were left in the ground as not worth taking up. And it may be that some have been lost in the very severe weather this winter. But even so, there is a large surplus and the price is low.

Mr. HUGHES: Will the hon. minister take into consideration the suggestion of the hon. member for Edmonton (Mr. Oliver).

Mr. HAZEN: That is a matter for the Finance Minister. We will consider it, certainly.

Mr. HUGHES: Do something more—consider it favourably.

National Biological Laboratory, $25,000.

Mr. HAZEN: That item has been in for many years. It never has been used.

Mr. TURRIFF: If we are going to practice economy, it seems to me this is a chance for it. I move that this item be struck out.

Mr. HAZEN: There is no extravagance if the money is not spent. It was put in the Estimates a number of years ago when there was talk of establishing a health department, and it was intended to have a biological laboratory in connection with that department. I do not know whether the amount will be required this year. But it is hardly worth while striking out.

Mr. TURRIFF: I do not agree with the hon. minister. The fact that it has been there for a number of years is the reason why it should be struck out. If it is kept there somebody may find a way of expending the money.

Mr. HAZEN: I think it would be a very good thing.

Mr. TURRIFF: Then the Government has been remiss for the last four years in not spending the money.

Mr. HAZEN: Both Governments have been remiss; there is no doubt about that.

Amendment of Mr. Turriff negatived.

For the administration and carrying out of the provisions of the Agricultural Instruction Act, $25,000.

Mr. OLIVER: What is this for?

Mr. HAZEN: The Act referred to is the one under which $1,000,000 or more is distributed among the provinces. This is for expenses of administration.

Mr. KAY: Would the minister mind leaving this over? The hon. member for Huntingdon (Mr. Robb) wishes to discuss it.

Mr. HAZEN: As hon. members know, I never object to the discussion of any matter relating to the department on any item before the committee. Still, if it is deemed more convenient to let this stand, I will accede to that request.

Mr. CARVELL: The hon. member for Huntingdon asked that it should be allowed to stand. When it comes up, perhaps the minister will be able to explain how in the world he is going to spend $25,000.

Mr. TURRIFF: Does the department charge a commission?

Mr. HAZEN: The hon. gentleman knows that there is a commissioner who administers this fund. I have all the items of this estimate before me, but there is no use taking up time with them now if the item is to be allowed to stand over.

Item stands.

Grant to Dominion Exhibition, $50,000.

Mr. OLIVER: Who gets that this year?

Mr. HAZEN: I do not think any place is going to hold a Dominion exhibition under present circumstances. The last Dominion exhibition was held in Brandon in 1913. Victoria had the grant in 1914, but war broke out on the 4th of August, and they decided to abandon the exhibition. They had incurred certain expenses and were paid $24,166.

Mr. TURRIFF: I move that the item be struck out.

Amendment negatived.

Mr. HAZEN: There are three or four items of quarantine still to be voted. There is nothing contentious about them. I have all the information about them, and I think they might be passed.

Mr. CARVELL: You are spending a quarter of a million dollars for quarantine under the Department of Agriculture?

Mr. HAZEN: Yes, that is about what we have been voting for a number of years. Last year these items amounted to $18,089. They vary little year by year.

Mr. CARVELL: This brings up the whole question of immigration.

Mr. HAZEN: No, the Department of Agriculture does not inspect the immigrants. This relates to the passengers coming in the ordinary ships. The quarantining of immigrants is carried on, as I understand it, by the Department of the Interior which has jurisdiction over immigration.

Mr. CARVELL: Better allow this to stand.

Mr. HAZEN: I have all the information here that hon. gentlemen are likely to want.

Mr. OLIVER: Perhaps the minister would allow the first item relating to salaries, etc., to stand and pass the other two. There will be no contention about that.

Quarantine—Public Works Health Act, $12,000.

Mr. CARVELL: What is this about?

[Mr. Turriff.]

Mr. HAZEN: The Public Works Health Act is a law intended to maintain sanitary conditions to protect the health of the people engaged on public works.

Progress reported.

On the motion of Mr. Hazen, the House adjourned at 11.10 p.m.

Monday, March 6, 1916.

The House met at Three o'clock, the Speaker in the Chair.

PRIVATE BILLS INTRODUCED.

Bill No. 50, for the relief of Raymond Conliffe Savage.—Mr. Douglas.

Bill No. 51, for the relief of Harry Lorne White Cunningham.—Mr. T. J. Stewart.

PRIVILEGE.

HYDRO-RADIAL SCHEME.

On the Orders of the Day:

Mr. JACQUES BUREAU (Three Rivers and St. Maurice): Mr. Speaker, I rise to a question of privilege. I read in the Toronto Star of Friday, March 3, under the heading, "Ottawa Frowns on the Hydro-Radial Scheme," the following:

> Another member of the city deputation talked of the anti-Hydro and anti-Toronto feeling in the Railway Committee. He also criticised the attitude of Col. J. A. Currie, M.P., a Toronto man, who recently returned from the front. "The antagonistic spirit to Toronto is so strong down there that you can put your finger on it," said this man; "the French-Canadian members sit there smoking their Quebec tobacco in their little old pipes, and they vote for the corporations always."

This comes, Mr. Speaker, from a Toronto man, who was a member of the deputation that came to Ottawa. Coming from a Toronto man, it is treated by me with the contempt that it deserves; I shall not say anything about it except that it is a sequel to his brain power, and nothing more. There is something graver in the same paper. The Toronto Star, under date of Saturday, March 4, contains the following, under the heading, "Toronto has Few Friends in the Railway Committee:"

> Even though it comes down to another fight before the Commons Railway Committee, the Hydro stands a good chance of winning out, in the opinion of Capt. Thomas Wallace, member for Centre York, who reached the city to-day. "All the Toronto members who were in Ottawa were at the committee, ready to put up a fight for the Hydro," Capt. Wallace stated, "and I think the Hydro should win out when all the supporters get there. The meeting last week

was poorly attended, but the next one will not be. As it seems to stand now, the most of the Ontario members on the committee will vote Hydro, while the strongest supporters of the Canadian Northern railway were the French members. They always seem to be out to hit anything Ontario wants."

I want to register my most energetic protest against this statement, and to qualify it as absolutely unfounded, unjustifiable, and unworthy of a man occupying a representative position in Canada. Let me tell this gentleman that the French members of the Railway Committee, of which I am one, sit there as representing all Canada. In their deliberations and in their judgments, they know no provincial boundaries, no parochial boundaries, no sectarian motives; to the best of their ability they devote themselves to the interests of their country. I may add that I feel deeply on this question, but at this juncture I shall say nothing more than this: I leave it to the judgment of the well-thinking and broad-minded men of this country to treat this contemptible assertion as it deserves to be treated, emanating, as it does, from a narrow mind.

WINTER COMMUNICATION WITH PRINCE EDWARD ISLAND.

On the Orders of the Day:

Mr. J. J. HUGHES: I call the attention of the Minister of Marine and Fisheries to a telegram which I have received from the Summerside Board of Trade in connection with winter communication between Prince Edward Island and the mainland. The telegram states that efforts are being made to have the steamer Prince Edward Island keep up communication between Pictou and Charlottetown, but that she is not able to do so, with the result that mails are delayed, passenger traffic seriously interrupted, and trains tied up. The telegram asks that in view of the fact that she is not able to keep up communication with Charlottetown, she be transferred at once to the Pictou-Georgetown route. I ask, what action, if any, the minister intends to take.

Mr. HAZEN: The same policy is being pursued this year as in previous years. The service is performed between Pictou and Charlottetown so long as ice and weather conditions permit. When the ice conditions become of such character that the service cannot be carried on between Charlottetown and Pictou, then the service is carried on between Summerside and Pictou. The same instructions have been given to the captain of the boat this year as in previous years, and if the condition is such as has been described by my hon. friend, and the service cannot be carried on between Charlottetown and Pictou, then the boat will be transferred to Summerside.

HILLSBOROUGH, P.E.I., BRIDGE.

On the Orders of the Day:

Mr. J. J. HUGHES: I have received a telegram stating that some time ago representations were made to the Government asking to have a guard placed on the Hillsborough bridge. This is an expensive bridge and people, fearing it may be interfered with by evil-minded persons, are very desirous that a guard should be placed there.

Mr. REID: There is one man in Prince Edward Island who seems to be raising a lot of trouble and agitating to have a guard placed on the Hillsborough bridge, and he has tried to work up some feeling on the matter. The Railway Department have received a telegram from this gentleman, and I have directed that it be forwarded to the general manager of the road, Mr. Gutelius, with instructions to investigate and, if he deems it necessary, to place a guard on the bridge. I received a telegram this morning or Saturday in respect to the same matter and I have forwarded it also to Mr. Gutelius. I find that in some cases railway bridges are guarded by the Railway Department and in others by the Justice Department, through the Dominion police. I have therefore forwarded copies of these communications to the Justice Department, with a request that they look into the situation. Thus the question of guarding this bridge will be looked into by both the Railway Department, through the general manager of the railway, and the Justice Department, through Colonel Sherwood; and if, as the result of either or both investigations, it is deemed necessary to have a guard on the bridge, one will be placed there.

ST. JOHN AND QUEBEC RAILWAY.

On the Orders of the Day:

Mr. CARVELL: I read in the St. John Standard, which is the recognized organ of the Government in that city, that a new arrangement had been made with regard to the construction of the St. John and Quebec railway. The paper states that it has been decided that the road shall not go any farther north than its present terminus

at Centreville, and shall not cross the river St. John, but shall make connection with the Canadian Pacific railway tracks at Westfield. This would involve an entirely new arrangement with this Government. I wish to ask if such a new arrangement has been made, and whether the Dominion Government has agreed to operate the road as part of the Intercolonial on the changed conditions.

Mr. REID: This matter has been under discussion between myself and some of the ministers of the New Brunswick Government, but I have not yet got the matter completed and have not brought it before council as yet. Therefore I do not think I would be justified in making any statement to-day. Probably to-morrow I shall be in a position to make a statement.

COMMANDEERING OF WHEAT.

On the Orders of the Day:

Sir WILFRID LAURIER: With reference to the report which was brought down to-day in answer to a motion made some time ago for the correspondence concerning the commandeering of wheat, I have just taken a cursory glance at the return and I have to observe that it is, on its face, absolutely incomplete. The first document brought down in point of date is an Order in Council bearing date December 18, 1915. The first paragraph of that Order in Council is in these words:

> On a report of the Minister of Trade and Commerce, representing that the Government of Canada has been requested to take into account the supplies of wheat required by the British Government and certain of the Allied governments, and to arrange for a considerable supply to be shipped during the month of December and following months, the Minister of Trade and Commerce reports that it has become necessary and advisable, and within the meaning of section 6, of the War Measures Act, 1914, to appropriate and control the wheat hereinafter described under the conditions hereinafter mentioned:

This first paragraph recites that the action of the Government was taken at the instance of some party, presumably the British Government. This refers also to a memorandum, which has no date but which was made evidently later than the 3rd of March.

> Early in the autumn of 1915, it became evident that Canada, in common with the United States and Australia, would have large surpluses of wheat for export, representations were made to the British Government with a view of interesting it and the Allied Governments in the purchase from Canada of a generous portion of the large quantities they would undoubtedly require. These representations were successful, and, on November 23, instructions were cabled to the Canadian Government by the Secretary of State for the Colonies to purchase a large quantity, delivery to begin in December and continue for the following months:

There is certainly no reason why the instructions of the Secretary of State for the Colonies should not be brought down and they are certainly covered by the Order of the House. That is not all. The next paragraph of the Order in Council to which I have already alluded reads as follows:

> The minister further reports that the action which he has taken for the above purpose is set forth in the telegram, copies of which are hereto appended, and that the instructions given in the messages signed by the Minister of Marine and Fisheries, the Minister of Railways and Canals, and the Solicitor General, were sent after consultation with him and at his request in pursuance of the proposed appropriation and control of the wheat aforesaid.

On the face of this Order in Council it is shown that certain telegrams issued by the Minister of Trade and Commerce, the Minister of Marine and Fisheries, and the Solicitor General, were appended to this Order in Council, and they certainly ought to be brought down. It is an oversight that they have not been brought down, I presume, but they should be before the House.

Sir GEORGE FOSTER: Instructions were given that these telegrams should be brought down. It is an oversight that they are not here.

Sir WILFRID LAURIER: What about the instructions of the Colonial Office?

Sir GEORGE FOSTER: I will think that over. Those instructions involve a great deal of previous correspondence, and I will have to look into that pretty carefully. My object in preparing a memorandum of the case at first was to give to my right hon. friend, and to the House, all the essential information concerning the transaction. I think my right hon. friend will find that information to be pretty full. All the Orders in Council, on which the memorandum is based, have been brought down with the exception probably of the first one; but as the second Order in Council repealed the first, and substituted itself for it on account of some inaccuracies involving no principle, or anything of that kind, I did not think it worth while to include it. However, there is no objection to bringing it down, if my right hon. friend wishes. Meanwhile I will lay this on the table, and bring the other papers down later.

PRIVATE BILL.

SECOND READING.

Bill No. 49, for the relief of Lillian May Dent.—Mr. Douglas.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

OVERSEAS FORCES.

Mr. DOUGLAS:

1. Where was the 22nd Battalion located in Amherst, in the spring of 1915?
2. When did they take possession of buildings, and how long did they remain in them?
3. How much was paid the owners of the buildings in which they were located?
4. How much was expended in fitting up the buildings by the department?
5. Were the fittings in the said buildings torn out when the 22nd Battalion left?
6. Is any battalion located in Amherst this year?
7. Is it located in the same building as the 22nd was? If not, in what buildings?
8. Has anything been spent in fitting up these buildings for this year's use? If so, how much?

Mr. HAZEN:

1. Canada Car and Foundry Company's shops.

2. March 15, 1915; moved out May 20, 1915.

3. No rent has been paid for the use of this building.

4. $21,974.76. This sum included the cost of fitting up barracks for the 22nd Battalion; also for the 6th Canadian Mounted Rifles; also stalls and stable accommodation for the horses of the last-named battalion.

5. Fittings were removed in August, 1915, and were utilized for troops in Halifax.

6. Yes; the 150th Battalion and portion of the 106th Battalion.

7. No; 150th Battalion, located in Winter Fair building, Amherst. The Winter Fair building was used this year because the Canada Car Company required their factory. The same selection could not be made last year because there is no room for the horses in the Winter Fair building, and these had to be located near the men. This condition could only obtain in the shops of the Canada Car and Foundry Company.

8. Nothing has been spent on the shops of the Canada Car and Foundry Company for the use of troops this year. There has been spent on the Winter Fair building approximately $23,000, and owing to the splendid offer of the city of Amherst to give the Government the use of the buildings until the end of the war, also supplying water free, and to avoid constantly refitting rented buildings, of which we only had temporary occupation, the department decided to fit up the Winter Fair building in a permanent manner.

Mr. BUCHANAN:

1. Is an infantry regiment for overseas service being raised at Medicine Hat, Alberta?
2. If so, who is the Commanding Officer?
3. Did he possess any previous military experience?
4. Is he a qualified officer of any rank?
5. What position did he hold in civil life prior to his appointment?

Mr. HAZEN:

1. Yes; the 175th Overseas Battalion has been authorized for Medicine Hat, Alberta.

2. Temporary Lieut.-Colonel Nelson Spencer, M.P.P., 21st Alberta Hussars, has been appointed Commanding Officer of this unit provisionally.

3 and 4. He has all the necessary qualities to become a most efficient officer, and is rapidly acquiring the necessary military training.

5. Merchant.

Mr. GRAHAM:

1. Is it true that E. Taylor, E. Pigeau, Wm. Charnock, Jas. P. Murphy, P. J. Martin, G. Marion, H. Macara and P. J. Pillie have been dropped from the 159th Battalion now on duty at North Bay?
2. If so, was it on account of a difference that arose between the said members of the militia and the department concerning non-payment of separation allowance which the men claimed was due their families?

Mr. HAZEN:

1. These men were discharged, as they refused to be sworn in.

2. Separation allowance could not be paid previous to sworn attestation, and, as these men refused to be sworn in, no separation allowance could be paid. Therefore the men were discharged.

INTERCOLONIAL RAILWAY FREIGHT RATES.

Mr. MACDONALD:

1. Have any changes by way of increases been made in the freight rates on lumber and lumber products on the Intercolonial railway?
2. If so, what were those increases?

Mr. REID:

1. Yes.

2. To make the rates east of Levis uniform with those in effect west of Levis and on the Transcontinental west of Moncton, the mileage tariff rate on line of the Intercolonial railway east of Levis on certain forest products for local consumption short haul was raised:

Distance over 5 to 80 miles, ½ cent per 100 lbs.
Distance over 80 to 90 miles, ¾ cent per 100 lbs.
Distance over 90 to 100 miles, ½ cent per 100 lbs.

IMMIGRATION.

Mr. MACDONALD.

How many immigrants came into Canada in 1915?

Mr. ROCHE: 48,466.

WAR CONTRACTS—BLANKETS, ETC.

Mr. LAMARCHE:

1. Did the Logan Brothers Company, of Renfrew, Ontario, obtain any contracts from the War Purchasing Commission since the 1st June, 1915?

2. If so, at what dates, for what goods or furnishings, at what prices, and how much did they supply?

3. How much were they paid on each contract, and on what dates were such payments made?

Mr. HAZEN: Logan Brothers have not received any orders since June 1, 1915, but as "The Renfrew Woollen Mills," the Logan Brothers have been awarded contracts.

Mr. LAMARCHE:

1. Did the Renfrew Woollen Mills, of Renfrew, Ontario, obtain any contracts from the War Purchasing Commission since the 1st June, 1915?

2. If so, at what dates, for what goods or furnishings, at what prices, and how much did they supply?

3. How much were they paid on each contract, and on what dates were such payments made?

Mr. HAZEN:

1. Yes.

2 and 3.

NATIONAL TRANSCONTINENTAL RAILWAY EMPLOYEES AT QUEBEC.

Mr. PAQUET:

What are the names and salaries of the employees in the offices of the Transcontinental railway at Quebec?

[Mr. Reid.]

Mr. REID:

Name.	Occupation.	Monthly salary.
Dick, Arthur,	division engineer	$ 225
Bradley, T. C.,	secretary	100
Lefebvre, W.,	res. engineer	160

Name.	Occupation.	Monthly Salary.
McGreevy, Frank,	station inspector	$ 125
Beaudet, N. R.,	res. engineer.. ..	160
Laberge, H.,	architect..	170
Legaré, Alphonse,	watchman..	60
C outier, Adjutor,	watchman..	60
Total..		$1,060

GEORGE SKEFFINGTON.

Mr. COPP:

1. Is George Skeffington, of the city of Moncton, still in the employment of the Canadian Government railways?
2. If so, in what capacity, and at what salary?
3. If he is not so employed at present, when did his employment cease, and why?

Mr. REID:

1. No.
2. Answered by No. 1.
3. July 31, 1915. Overstayed leave of absence.

GOVERNMENT ANNUITIES.

Mr. SINCLAIR:

How many annuities were sold by the Post Office Department in the year 1908, and how many in each succeeding year since that date?

Mr. CASGRAIN:

Period	Number of Anuitants.
From Sept. 31, 1908 to March 31, 1909.	80
" Mar. 31, 1909, to Mar. 31, 1910.	566
" " 31, 1910, to Mar. 31, 1911.	1,069

" " 31, 1914, to Mar. 31, 1915.	263
" " 31, 1915, to Mar. 2, 1916.	385

D. T. S. TYRIAN.

Mr. A. K. MACLEAN:

1. Was a contract recently entered into for the placing of bulkheads in the D.T.S. Tyrian, Halifax, N.S.?
2. If so, what are the names of the firms who tendered, to whom was the contract awarded, and at what price?
3. Has the work been completed? If not, what is the cause of delay?

Mr. REID:

1. An agreement was entered into on April 21, 1915.
2. Hogan & Co., offered to perform the work for $650, and their offer, being considered fair and reasonable by the General Superintendent of Telegraphs, was accepted.
3. Yes.

SOULANGES CANAL PIER.

Mr. BOYER:

1. How much money did Philias Doré draw from the Government for stone sold for the construction of the Soulanges canal pier?
2. What amount is still due to him?
3. Was the purchase of that stone made after tenders were called?
4. If so, what are the names of the tenderers and the amount of each?
5. What are the names of the officers and crew on board the tug Carillon, and the names of the other men who worked at the loading and carrying of such stone, with the average daily salary of each?
6. Are these men fed by the Government? If so, what is the average daily amount paid for the feeding of each?
7. What is the name of the dredge to which the tow-boat Carillon was attached?
8. What work was it engaged in, and at what place, when the said stone was transported?
9. Were the employees who unloaded that stone the same who did the loading of it?
10. If not, what are the names of such employees, and what was their average daily salary?
11. Were they also fed by the Government? If so, at what average daily cost?
12. At what place on the Soulanges canal was that stone placed?
13. Did the using of it require a fresh handling?
14. Under the superintendence of what engineers or other officers of the Government was the work of such purchasing, carrying and unloading, performed?
15. Was he a permanent or temporary employee, and what was his average daily salary?

Mr. REID:

1. $6,929.78.
2. Nothing.
3. Yes.
4. J. A. Major, of Montreal and Philias Doré, of Valleyfield.
5. Nap. Bertrand, captain; Nap. Molleur, engineer; Joseph Molleur, fireman; Alex. Menard, deckhand; Joseph Beriault, deckhand; (there was also a cook, Rosanna Bertrand).
6. No (the department supplies the cook) but the men feed themselves.
7. Dredge No. 2.
8. Widening and deepening channel at upper entrance to Soulanges canal, about 700 or 800 feet from the pier in which the said stone was used.
9. No. The stone was placed on the scows by the contractor.
10. Foreman, Adelard Royal, salary 25 cents per hour; Edmond Royal, Benjamin Gauthier, Avila Gauthier, Joseph Lalonde, Daniel Lalonde, Valmore Filiatrault, Wilbrod Legros; Joseph Lefebvre; Isidore Lecompte, Honore Miron, Xavier Dubois, Arsene Beriault; Louis Gagnon; Isaie Leroux, all at 20 cents per hour.

These men did not always work ten hours a day, nor every day in the week, and about one-third of their time was employed spreading and levelling clay brought from the dredge to form the backing of the exten-

sion pier, upon the slope of which the rip-rap stone was to be placed. When a scow load of stone was delivered at the pier the men were turned from the backing work to the unloading and placing of the stone on the slope.

11. No.

12. On the river side slope of the extension to the upper entrance pier.

13. Yes, the stone had to be taken off the scows and placed on the slope.

14. L. S. Pariseau, as engineer in charge and J. T. Lemire, as assistant engineer. Both were also supervising the dredging and the construction of the concrete protection dam at Valleyfield.

15. Permanent employees: L. S. Pariseau, salary, $200 per month; J. T. Lemire, salary $125 per month.

BONAVENTURE COUNTY MAIL SERVICE.

Mr. MARCIL:

1. Has a petition been received asking for the establishment of a rural mail route at Black Cape and Caplan, Bonaventure county?

2. If so, what has been done in the matter?

Mr. CASGRAIN:

1. Yes.

2. A petition was received on the 19th of February, 1916, for rural mail delivery from Black Cape. The matter is still under inquiry by the Post Office inspector, whose report is expected at an early date.

KILLAM, ALTA., MAIL SERVICE.

Mr. DOUGLAS:

1. Has there been an application made for the establishment of a rural mail route out of Killam, Alberta?

2. If so, what action has the Postmaster General taken on this application?

Mr. CASGRAIN:

1. Yes.

2. Tenders were invited for the performance of the proposed service but the prices asked were considered excessive and consequently action was suspended pending further offers.

FAIR WAGE BOARD.

Mr. VERVILLE:

Has the Government received any recommendations of a confidential nature or otherwise from the Imperial Government respecting a fair wage board? If so, of what nature?

Sir ROBERT BORDEN: The correspondence is of a confidential nature at present.

BREEN'S POND BREAKWATER.

Mr. WILLIAM CHISHOLM:

Were tenders called for the construction or extension of a breakwater at Breen's Pond, Antigonish county, in the year 1914? If so, how many tenders were received, from whom, and at what figures?

Mr. REID: No.

CRIBBIN'S POINT WHARF.

Mr. WILLIAM CHISHOLM:

Were tenders called for the construction of a wharf at Cribbin's Point, N.S., in the year 1914? If so, how many tenders were received, from whom, and at what figures?

Mr. REID: No.

TRACADIE HARBOUR IMPROVEMENTS.

Mr. WILLIAM CHISHOLM:

Were tenders called for improvements to Tracadie Harbour, N.S., in the year 1914? If so, how many tenders were received, from whom, and at what figures?

Mr. REID: No.

NEW ZEALAND WHEAT PURCHASE.

Mr. CARVELL:

1. When was the wheat for the Government of New Zealand purchased?

2. When was that portion sent to New Zealand shipped?

3. When was the balance sold, and at what average price per bushel?

Sir GEORGE FOSTER:

1.	250,000	bus.	on November 12, 1914.
	100,000	"	" 27, "
	40,000	"	December 1, "
	16,732.30	"	" 24, "
	1,000,000	"	(for July delivery) from day to day during January and February, 1915.
	1,406,732.30	bus.	
2.	11,920.30	bus.	on December 12, 1914.
	11,112	"	" 23, "
	281,000	"	on January 3, 1915.
	9,000	"	" 3, "
	9,000	"	" 10, "
	93,700	"	" 19, "
	47,491.10	"	July 22, "
	50,000	"	September 22, "
	504,223.40	bus.	
2.	250,000	bus.	on January 7, 1916.
	652,508.50	"	" 10, "

J. H. STEWART—AUTOMOBILE SEIZURE.

Mr. CARVELL:

1. Did the Department of Customs seize an automobile from one J. H. Stewart, of Bathurst, New Brunswick, in the month of May last?

2. If so, was the matter settled, or was the auto sold under the seizure?

3. If settled, what amount was paid by way of duty?

Mr. REID: The Department of Customs made no seizure from J. H. Stewart of Bathurst in May last. His automobile, however, was seized in June last, there having been delay in entering same at customs. The automobile was released on deposit of $375 to cover duties and penalties.

MAX DRAB.

Mr. W. M. MARTIN:

1. Is Max Drab, of Wilkie, Sask., in the employ of the Department of the Interior?
2. If so, what position does he hold, what are his duties, and what remuneration does he receive?

Mr. ROCHE: In so far as the Immigration Branch is concerned:

1. No.
2 Answered by No. 1.

REGINA INLAND REVENUE PREMISES.

Mr. W. M. MARTIN:

1. From whom does the Government rent premises in the city of Regina for the accommodation of the Inland Revenue Department, Weights and Measures Branch?
2. When were such premises rented?
3. What monthly rental is paid for such premises?

Mr. REID:

1. From the J. A. Westman Agency, Limited.
2. From 1st November, 1915, to 1st November, 1916.
3. $100 a month.

R. N. W. MOUNTED POLICE AT REGINA.

Mr. W. M. MARTIN:

1. From whom does the Government rent premises in the city of Regina for the accommodation of the town station of the Royal Northwest Mounted Police?
2. When were the said premises rented?
3. What monthly rental is paid for such premises?

Sir ROBERT BORDEN:

1. Mr. John A. Westman.
2. Leased for five years commencing 1st April, 1915, with a proviso that the lease may be terminated at any date earlier than the first day of April, 1920, in case the Royal Northwest Mounted Police Force is dispensed with by the Saskatchewan Government.
3. $100 per month.

A. A. EVANS.

Mr. W. M. MARTIN:

1. Has A. A. Evans, of Outlook, ever been in the employ of the Department of the Interior or any other Department of the Government?
2. If so, what remuneration or salary did the said Evans receive while so employed, and what remuneration does he now receive?

Mr. REID:

1. Yes. Relief work in October, 1914, five days.
2. No salary paid. Expenses only allowed.

ARCHIBALD TIBBITS.

Mr. WILLIAM CHISHOLM:

1. Is Mr. Archibald Tibbits in the employ of the Department of Marine and Fisheries or Naval service?
2. If so, what position does he occupy, when was he appointed, and at what salary?
3. Who was his predecessor in office, and what was the cause of his retirement?

Mr. HAZEN:

1. He is in the employ of the Department of Marine and Fisheries.
2. A more critical examination of the details of the work of the several Harbour Commissions in Canada, more especially those at Montreal and Quebec, which are receiving large advances on loan from the Government, was deemed necessary in the public interest.

There was, at the time, no officer in the department with the requisite experience and qualifications who could be spared for this work; hence it was decided to appoint a special officer. Mr. Tibbitts was appointed on the 14th October, 1912, at a salary of $2,400 per annum; his present salary is $2,600 per annum.

3 Answered by No. 2.

W. BADGER.

Mr. W. M. MARTIN:

1. Has one W. Badger, of Outlook or Conquest, Sask, ever been employed by the Department of the Interior or any other department of the Government?
2. Is the said W. Badger at present in the employ of the Government?
3. Was the said W. Badger employed by the Government in distributing relief and seed grain?
4. What remuneration or salary did the said Badger receive while so employed?

Mr. ROCHE:

1. Yes. The Department of the Interior, Immigration Branch.
2. No.
3. Yes.
4. Refused to accept any remuneration or salary.

HANOVER PUBLIC BUILDING.

Mr. TRUAX:

1. Who was the contractor for the Hanover public building, and what was the amount of his tender?
2. Was the contract let to the lowest tenderer?
3. Is the building completed?
4. Who was the inspector, and what amount has been paid for his services?

Mr. REID:

1. Anderson, Bath & Patchell; $28,500.
2. Yes.
3. Yes.
4. John Telford; salary, $1,808; disbursements, $2.66; total, $1,810.66.

MEDICINE HAT CUSTOMS BUILDING.

Mr. BUCHANAN:

1. What was the total amount of rental paid for premises used by the Customs Department at Medicine Hat while the federal building in that city was being reconstructed?
2. How many months were these premises occupied?
3. Who owns the premises?
4. To whom was the rent paid?

Mr. REID:

1. $1,980.
2. Twenty-four months.
3. As far as the department is aware, these premises are owned by the lessor, H. W. T. Foster.
4. H. W. T. Foster, Medicine Hat.

IMMIGRATION AGENTS AT MONTREAL.

Mr. LACHANCE:

1. What are the names of the immigration agents appointed since the 1st October, 1911, at Montreal, Quebec, when were they appointed, at what salaries, and what are their present respective salaries?
2. Are there any of them who have a right to travelling expenses? If so, what are their names, and what amount for such expenses have been paid to them?

Mr. ROCHE:

1. No immigration agent has been appointed at Montreal, Quebec, since October 1, 1911. Mr. John Hoolahan has been agent there for many years.
2. Answered by No. 1.

ICE-BREAKER CONTRACT.

Mr. VERVILLE:

1. Has the Government given by contract the erection of an ice-breaker? If so, to whom, and at what price?
2. Has the Government attached a fair wage schedule on said contract? If not, why not?

Mr. HAZEN:

1. Yes. Messrs. Canadian Vickers, Ltd., Montreal, $998,583.00.
2. There is no fair wage schedule embodied in the said contract. The matter is, however, covered by a clause in the contract as follows:

All workmen labourers or other persons who perform labour in the construction of the work hereby contracted for shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there is current rate in such district, then a fair and reasonable rate, and shall not be required to work for longer hours than those fixed by the custom of the trade in the district where the work is carried on, or if there is no custom of the trade as respects hours in the district, then fair and reasonable hours except for the protection of life or property or with the consent of the minister on due cause shown. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the customs of the trade or fair and reasonable hours, it shall be determined by the Minister of Labour, whose decision shall be final.

UNOPPOSED MOTIONS FOR PAPERS.

Mr. Lanctot.—For a return showing the names of the lawyers of the province of Quebec who have been entrusted with certain cases or given other work by the Government since the month of September, 1911; the amounts that have been asked by each of such lawyers for each case; and the amounts paid to each of them?

Mr. Buchanan.—For a return showing the different rural mail routes in the constituency of Medicine Hat, with their location and date of establishment; and also all rural mail routes now being established or under consideration at the present time in the same constituency.

Mr. Buchanan.—For a return showing the amounts contributed from the constituency of Medicine Hat for machine guns and by whom contributed or forwarded.

Mr. Buchanan.—For a copy of all correspondence, letters, telegrams and documents relating to the dismissal or resignation of Dr. W. T. Patton from the service of the Veterinary Inspection Branch of the Department of Agriculture, and his re-appointment and his later dismissal or resignation.

Mr. Murphy.—For a copy of all letters, telegrams and reports in any way connected with the investigations made at different times during the year 1915, in connection with the Toronto harbour works, under contract to the Canadian Stewart Company.

Mr. A. K. Maclean.—For a copy of all correspondence, accounts, vouchers, etc., in connection with the construction of a wharf at Shad Bay, Halifax county, N.S., in 1914 and 1915.

Mr. A. K. Maclean.—For a copy of all correspondence, accounts, vouchers, memoranda, etc., relating to the construction of a launch way and boat house at Bear Cove Beach, Halifax county, N.S., and completed in 1914.

Mr. A. W. Chisholm.—For a copy of all telegrams, letters, petitions and documents of all kinds referring in any way to the application of Mrs. Flora McIntyre, of River Dennis, Inverness county, N.S., for the Fenian Raid veteran bounty of her late husband, Angus McIntyre, late of River Denis.

Mr. A. W. Chisholm.—For a copy of all telegrams, letters, petitions and documents of all kinds in any way referring to the change in the Inverness-Margaree mail route from the west to the east of the Margaree river, from a point at Margaree Forks to Chapel Bridge.

Mr. Wm. Chisholm.—For a detailed statement of the expenditure last year at McNair's Cove, Nova Scotia, giving the names of the workmen, the number thus employed, the

amount paid to each; also the amount paid for supplies and material, and the names of the persons to whom the same was paid.

Mr. Graham.—For a return showing the amounts paid under retroactive clause of the Act providing for an impost of 50 cents per proof gallon on all spirits taken from bond between the date of the outbreak of war and the date of the passage of such Act; and also by whom paid, and the date of payment.

Mr. Boulay.—For a list of the employees in the Dominion police force, with the salary of each of them.

WAR PURCHASING COMMISSION CONTRACTS.

Mr. CARVELL moved:

For a return showing the dates, parties, quantities and values of all contracts made by the War Purchasing Commission, so-called, from its formation, down to the present date.

Sir ROBERT BORDEN: Stand.

Mr. CARVELL: I do not think this should stand.

Sir ROBERT BORDEN: It must either stand or be transferred to the debatable motions.

Mr. CARVELL: I do not want it debated; it is only a small matter, involving, perhaps, 150 pages of typewriting. I think the Prime Minister might furnish the papers. I am not asking for details; just for the names, dates, and quantities.

Sir ROBERT BORDEN: I have no knowledge of the matter except what the Chairman of the War Purchasing Commission told me. He said it would take a very long time, three months, to complete the return, if all the staff were employed on it. The operations of the War Purchasing Commission involve much detail. I think my hon. friend has no real idea of the task he is setting before the Commission.

Mr. CARVELL: Yes, I have. If the right hon. the Prime Minister will look at the resolution he will see that it calls for simply the dates, parties, quantities, and values of these contracts. So, one line across a sheet of paper will give all the information I ask with regard to each contract. Suppose that there were ten a day, that would be only three thousand, or enough to cover one hundred pages. It seems to me that a first-class clerk would get out the material needed in a day, and it could be typewritten in another day.

Sir ROBERT BORDEN: I would be glad if the hon. gentleman would speak to the chairman on the subject.

Mr. CARVELL: I will do so.

Motion stands.

PROHIBITION OF INTOXICATING LIQUORS.

PROHIBITION DURING THE WAR—PROHIBITION BY PROVINCES.

On the notice of motion:

Mr. H. H. Stevens—Proposed resolution—That, in the opinion of this House, at this time, when the Empire is at war, the conservation of the wealth and the resources of the Dominion and the promotion of the efficiency of our nation would be materially aided by the prohibition of the manufacture, importation and sale of intoxicating liquors for beverage purposes, and legislation for this purpose should be enacted forthwith.

Sir ROBERT BORDEN: Before this motion is taken up, I should like to say a word. Some gentlemen interested in the purpose of this motion, and representing the Dominion Alliance and other associations, waited upon the Government some weeks ago. At the request of the members of the Government then present, they undertook to furnish certain information as to the laws within each province, the results attained under those laws, the number of licenses, and other important particulars. The information was received, or at least a portion of it, and, as to the laws in force in the various provinces, it was supplemented by a memorandum from the Solicitor General. We have had these documents printed, and I had expected that they would be ready to lay on the table at three o'clock to-day. Unfortunately, they are not quite ready, but I am informed they will be laid on the table before six o'clock.

Mr. SPEAKER: Do I understand that it is the desire to take up also the next notice of motion on the order paper, that of the hon. member for Kings, P.E.I. (Mr. J. J. Hughes), in favour of a constitutional amendment to empower the provinces to enact prohibition laws?

Sir ROBERT BORDEN: I suppose it will be impossible to vote on both motions at the same time. If the House has no objection, it might be quite proper to discuss both motions in the one debate. I see no objection to having the discussion on this motion so general as to include everything that could be said on the other.

Mr. MARCIL: The motions will be put from the Chair separately, of course, and the debate may be allowed to extend so as to cover the matter of both motions. I sup-

pose it will be understood that the first motion is that which will be voted on.

Sir ROBERT BORDEN: The two motions could not be put by the Chair at the same time.

Mr. HENRY HERBERT STEVENS (Vancouver): Mr. Speaker, in rising to address the House this afternoon on the motion which you have just read, I realize in the first place that it deals with a matter of vast importance, and I am deeply impressed with a sense of my own limitations in discussing it. I feel that the proposed resolution might have been placed in the hands of a member of the House whose experience and influence would have enabled him to deal with the question in a very much better manner than I can hope to. I have particularly in my mind the Minister of Trade and Commerce (Sir George Foster), whose utterances on this question in the past have been of such a character as, in my opinion, to be classics amongst the oratory and literature of Canada. I should very much like to have seen this resolution in his charge. I am somewhat comforted, however, by the thought that the resolution is seconded by an hon. gentleman (Mr. Marcil) whose words in this House are always received with marked respect.

It is clear, I think, to every hon. member of the House that this question, which is of such grave national importance, is being approached from an entirely non-political standpoint. Some have called the proposed resolution revolutionary, and I shall have something to say on that point later. The subject matter of this resolution and the matters I wish to lay before the House are of such importance, that I fear I shall have to trouble the House at some considerable length, even though I do not even then hope to cover all the ground. Some phases of the question I shall touch on in only the most casual manner, leaving it to others to take up any special phase that may appeal to them.

There are two aspects to this question: the moral and the economic or social aspect, and with the moral aspect I do not intend to deal at any great length. Not because I fail to appreciate the moral importance of the question, but, as the wording of the resolution indicates, because I desire to deal particularly with its economic or social aspect. I should like to impress upon the House, however, that it is quite within the rights of any hon. member to bring up the moral aspect of any problem, and I sometimes think that the members of this House are a little too backward in emphasizing the moral aspects of problems pertaining to the welfare of the people of Canada. I think it is just as much the business of this Parliament to look after the moral health of the nation as after its commercial, economic and industrial health. I shall leave the moral aspect of the question with this one observation: A nation's moral character, like an individual's, is developed and strengthened, and beautified, not by the indulgence of its grosser appetites, but by their subjection. As a nation or as an individual, we gain in moral strength by the diligent exercise of the virtues of industry, honesty, and service, rather than by the assertion of so-called personal rights or by satisfying our whims. It is not my intention to go into this aspect of the question at any great length.

With regard to the economic aspect. This resolution, as its terms indicate, is proposed here to-day as a war measure. In considering this question as it relates to the war it is necessary for me to impress upon the House how titanic is the struggle we are engaged in, and what new factors are entering into the settlement of this war. It seems as if it would not be men, strategy, or military tactics that will decide the war, but that all the elements that go to make up a virile nation must be marshalled if we are to prove victorious. A vast army of the citizens of Canada is asking for consideration of this question, and I hold that I need not apologize to any man, nor to this House, for having submitted it for the consideration of Parliament. A great many members dislike it, and friends of mine on both sides of the House claim that it is unwise to introduce a measure of this kind. But I hold that when a large portion of the people of Canada demand consideration of a given problem, this Parliament dare not say nay. I therefore say that the personal opinion of myself or of any other member of this House has little or nothing to do with the question, and that as representatives of the people we are bound to give consideration to this problem, which to-day is demanding and holding the attention of a vast portion of the whole people of Canada. I am not voicing the wish of a few fanatics; I am voicing the opinion of a vast number of our citizens. Some say that the

intoxicating liquor evil has always existed, that the problem has never been solved in the past, and that it will never be solved in the future. For my part, I have greater faith in democracy than to think that a problem exists which democracy is not capable of solving. Let me say that, to-day more than at any other time, democracy is on trial; it is on trial at the battle-front in Europe; and if democracy cannot deal with a problem such as this, then in my estimation democracy will fail on the battle-fields of Europe, and I think the quotations which I shall give to the House in a few minutes will bear out that opinion. What other ages have failed to do I believe that we in this age are capable of doing.

I ask the indulgence of the House while I point to the opinions expressed on this question by various sections of Canada. I will give them, not in any particular order, but just as I have them jotted down from the information I had on hand. Two-thirds of Ontario is dry; or, more specifically, there are 162 municipalities without licenses, 349 municipalities under local option, and 61 municipalities under the Canada Temperance Act, or a total of 572 municipalities dry, and 279 wet. For a number of these so-called wet municipalities in Ontario, the three-fifths clause is responsible. For instance, I find that the city of Belleville gave a majority of 306 in favour of local option, Brantford a majority of 948, Port Arthur 417, Sarnia 315, Woodstock 165 and Whitby 108; all these cities and towns gave a majority in favour of prohibition or local option, but are still wet and are classed as wet by reason of the three-fifths clause. In addition to this, the Ontario Government, recognizing the will of the people as expressed in a huge petition which is about to be presented to them, have introduced in the Provincial Legislature a measure for total prohibition in the province.

Quebec is three-fourths dry: out of 1,143 municipalities or parishes, 906 are dry and 237 wet. The Premier of Quebec has also intimated that the Government is working towards prohibition.

In the province of New Brunswick, 80 per cent of the population are living under conditions known as dry; or, more precisely: of fifteen counties and three cities, nine counties and two cities are under the Canada Temperance Act; about half of the wards in the city of St. John are dry, and a large portion of the six remaining counties are also dry.

In Nova Scotia there are eighteen counties dry and one wet, namely, Halifax, and the Provincial Government have already stated that a measure will be introduced to bring Halifax under the provincial prohibition law.

Prince Edward Island is the only "all white" province in the Dominion at the present time; it is all under prohibition.

In Manitoba there are 38 municipalities without license and 49 under local option, a total of 87 dry municipalities and 71 wet. Moreover, Manitoba will, on the 13th day of March, vote on the question of provincial prohibition, and there is every indication that the measure will carry.

Saskatchewan is practically under prohibition. In the whole province liquor is sold in 23—now reduced to 20—Government shops.

Sir GEORGE FOSTER: Is liquor sold in those shops for beverage purposes?

Mr. STEVENS: Yes. The law in Saskatchewan came into force in June or July last. I would like to give some evidence of the effect of prohibition in Saskatchewan and also of the tendency of the people to close out these Government shops. In eleven cities: Regina, Moosejaw, Saskatoon, Prince Albert, Swift Current, North Battleford, Weyburn, Melville, Estevan, Humboldt and Rosetown, there were, in the months of July, August and September, 1914, 912 arrests for drunkenness; in the corresponding months of 1915, immediately after the new liquor provisions came into force, there were only 247 arrests, or a reduction of 665, an indication of how the province is progressing.

Another indication is this: Four votes, which were taken in January last on the question of whether Government shops should be opened, were defeated on the following figures:

District.	For the opening of a Government shop.	Against.
No. 23	285	1,037
No. 28	289	438
No. 37	165	843
No. 44	555	778

In three districts the following vote to close the Government shops was taken:

District.	For closing.	Against.
No. 21	476	173
No. 45	741	263
No. 46	987	487

In other words, in four districts out of seven where a vote was taken, the introduction of the shops was defeated, and in

three districts the closing of the shops was carried, which shows the tendency of the people of Saskatchewan to carry the prohibition measure to its logical conclusion.

Alberta, so far as provincial jurisdiction will permit, has gone dry.

The Government of British Columbia, on the occasion of the recent opening of the Provincial Legislature, introduced legislation for prohibition in that province.

Thus, we find that every province of Canada from the Atlantic to the Pacific has taken some steps towards the introduction of prohibition.

Some persons, in dealing with the question of prohibition, refer to it as a fad. It is not a fad; it is not the whim of certain fanatics; it is a well-recognized principle in law and practice. I do not wish to debate that point at any length as it would take up a great deal of time; I have only to remind hon. members that two years ago this House passed a law prohibiting the use of white phosphorus in the manufacture of matches, the reason given in the preamble of the Act being that white phosphorus was inimical to the health and interest of the community at large. I ask the House to consider this question of prohibition from the standpoint that it is injurious to the community at large, because a principle which applies to one phase of life should also apply to another. This resolution calls for:

> The conservation of the wealth and the resources of the Dominion and the promotion of the efficiency of our nation.

Prohibition is only one of the ways in which these can be aided, but in my estimation, it is a vastly important way. It will be my purpose to point out the opinions of some of the best posted men in the Allied nations on this subject, but first let me draw the attention of hon. members to the fact that the British Parliament not very long ago appointed the British Savings Committee, which has under its control the business of advising the nation in regard to saving. One of its recent utterances on this subject is a call to the nation to practise economy in connection with certain extravagances, and automobiles are particularly mentioned. I am calling the attention of the House to the utterances of this committee, not because they have so far made any direct utterance on the question of prohibition, because I do not think that has yet come to their attention, but simply to show the necessity of the nation at large economizing along every possible line.

4 p.m

The wealth of a nation consists of the potential value of the things which it possesses, such as its natural resources and the skill and virility of its people, and anything which interferes with the efficiency of the workers, whether they work with brain or with brawn, interferes with or lessens the wealth of the nation as a whole. Energy misdirected becomes a liability instead of an asset, and it is this phase of the question to which I invite the attention of the House.

Certain representations have been made as to the attitude of labour in reference to this problem, and I have observed that certain sections of those authorized to speak for labour have expressed views which might lead us to believe that they were not in favour of prohibition. I should like the House to bear with me while I read what I consider to be some very important letters on that point. On May 24th last a convention was held in Cleveland, Ohio, of Canadian and American railway engineers. At that convention, which represented 90,000 to 100,000 railway engineers, the following resolution was adopted:

> Be it resolved that this Board of Locomotive Engineers go on record as favouring statewide and nation-wide prohibition of intoxicating liquors as a beverage.

The word "Canada" was included in that resolution. The following is a letter written to Mr. Lawrence, who is legislative representative of the Brotherhood of Locomotive Engineers, by Mr. Berry, of Toronto, vice-president of the Order of Railway Conductors:

> Your favour of the 20th instant has been forwarded to me here, and I am indeed sorry that it reached me too late to meet your request in permitting you to say at Patriotic Appeal for Federal Prohibition meeting on the 27th instant, at which you were to represent a deputation as spokesman, that the Order of Railway Conductors as an organization are in favour of the movement.
>
> While it is too late to advise you for use at the meeting above referred to, I assure you, Brother Lawrence, that the undersigned is in favour of any movement that will do away with the manufacture and use of alcoholic liquors, and I am quite sure that the order will acquiesce in my position in this connection.

I quote the last paragraph of a letter written to Mr. Lawrence by Mr. A. E. Barker, the grand president of Maintenance of Way

men, an organization which covers Canada and the United States:

I have pleasure in saying that this organization wishes to go on record as being in favour of the movement; and this letter will be your authority so to state.

Mr. G. D. Robertson, third vice-president of the Order of Railway Telegraphers, has expressed sentiments which should have considerable weight with members of the House. Writing to Mr. Lawrence he says:

I am informed that a deputation of prohibition workers are expecting to meet the Premier on January 27th in connection with the Patriotic Appeal for Federal Prohibition in Canada.

If opportunity offers, I would be glad to have you also speak for me as representing the Order of Railroad Telegraphers.

The undersigned is heartily in favour of the total prohibition of the manufacture and sale of intoxicating liquor in Canada, except in such quantities as may be necessary for medicinal and scientific purposes. While this question has not been specially referred to our men in Canada for an official opinion, I know that the sentiments above expressed voice the opinions of a very large proportion of our members. Our laws specifically deal with the temperance question, inasmuch as they provide that the excessive use of liquor is sufficient to debar any man from membership. Our members have for many years past ceased to look for any protection from the organization if dismissed by their employer for drinking on duty. These two facts pretty clearly indicate the popular feeling of Canadian telegraphers on the subject. The co-operation of railway managers and the various organizations in each doing what they could to discourage habitual drinking among employees has brought greatly increased safety to the travelling public of Canada. The moral, social and financial advancement of the employees directly concerned has been very marked.

For the sake of the men whom he serves, as well as for the good of society generally, the undersigned will be glad to lend such assistance as he is able to bring about the total abolition of the manufacture and sale of liquor in this country.

I have another letter written to Mr. Lawrence by James Thordock, Vice-President of the Brotherhood of Railway Trainmen, and which reads:

I have just arrived home to-day for the first time this year, and find your letter of the 20th advising me that a deputation would wait upon the Premier of Canada on the 27th of January in the interest of a patriotic appeal for federal prohibition.

I have not of course, had opportunity to sound the views of our Canadian membership on this subject, but, knowing them as I do, would feel safe in expressing the earnest conviction that the great majority of our 10,000 members in Canada would be in hearty sympathy with total and effective war time prohibition.

My own personal view is that the Government could do no more effective act at the present time than to authorize prohibition during the continuance of the war, at least so that labouring men and all concerned in the Dominion might at all times feel sure of being sober of thought, of speech and of action, and with determination, be the better prepared to further British Empire interest in the paramount question that we as Canadians and as British subjects have before us.

My further personal view is that if federal prohibition was to be made effective during war time conditions, such prohibition should also prohibit the manufacture.

Would very much like to be with you tomorrow for the purpose of lending my personal support in connection with this very commendable and desirable undertaking.

I have another letter written to myself by Mr. William L. Best, legislative representative of the Brotherhood of Locomotive Firemen and Engineers. I trust that the House will bear with me while I read this letter; it is the last that I shall read upon this phase of the subject. The writer represents the views of a labour union which has been brought to the highest point of efficiency, and which seeks to secure for its members a degree of protection which exceeds that sought for by any union in this or any other country. The letter is:

Having observed, with keen interest, your proposed resolution to Parliament, calling for Dominion wide prohibition of the manufacture, importation and sale of intoxicating liquors for beverage purposes, permit me to convey to you my sincere appreciation of the importance of this proposed measure and to assure you of my unqualified endorsation of the legislation contemplated therein.

Realizing the fact that the vocation of locomotive enginemen involves ceaseless peril, and that it is a duty we owe ourselves, our employers and those dependent upon us for safe and comfortable transit, to guard in every manner against those disasters which frequently overtake us on the railway, the necessity of rendering the highest efficiency of service, of being careful and sober, becomes self-evident; hence the Brotherhood of Locomotive Firemen and Enginemen, an organization of 90,000 members on this continent, has adopted as one of the cardinal principles in its motto, Sobriety. This principle is further emphasized in article No. 28, section 4 of its Constitution, as follows:

"Section 4. (a) Any member dealing in intoxicating liquors shall be expelled from the order.

(b) Any member who shall use intoxicating liquors to excess, or who shall be found guilty of drunkenness shall, upon proof thereof, be suspended or expelled."

The operating rules for use for Canadian railways, which have been approved by the Board of Railway Commissioners for Canada, contain the following rule:—

"Rule G. The use of intoxicants by employees while on duty is prohibited. Their use or the frequenting of places where they are sold is sufficient cause for dismissal."

These are arbitrary rules, but they have been found necessary by experience. As I have already stated, these views deserve

the careful attention of hon. members of the House.

The letter goes on:

If this declaration of policy on the part of operating officials and employees of railways, against intoxicating liquors, is essential to the highest railroad efficiency and the greatest measure of safety to the travelling public, then it would seem equally essential to the highest efficiency in, and conservation of, all other industrial enterprises throughout the Dominion. This being true, it would further seem that, at this time of stress and strain, when every available resource was being taxed to its maximum limit in order to call forth the highest national efficiency in the protection of those high ideals for which our Empire is struggling to maintain, it is an economic folly to further permit the existence of a traffic which has so retarded industrial development, and impaired human efficiency, while making a few men rich and making many thousands poor.

Hundreds of our Canadian railway men were amongst the first to offer their services in defence of those great principles involved in the titanic struggle in which the Empire is engaged, and many of them have already made the supreme sacrifice of their lives upon the altar of loyalty and patriotism.

Therefore, I have the very highest commendation for the splendid results that have thus far crowned the untiring efforts of our military, and other national leaders. But it has sometimes occurred to me that this military spirit engendered by this awful European conflict has had a tendency to cause some of our legislators to, in some measure, exaggerate the need of guns, munitions, money and battleships when the question of national defence is being considered. In my humble judgement, national defence does not altogether depent upon guns, munitions, money and dreadnoughts alone—essential as these are to our liberty—but in the productive capacity, the industrial efficiency, the character and christian fortitude of the men who work on our farms, in our factories, on our railways, and in other industrial enterprises; men who are well equipped for all the duties of the highest type of citizenship. This seems most essential in this great world conflict, and it is equally essential in times of peace.

I feel sure that every Member of Parliament realizes—perhaps more than ever before—that the object and duty of every good Government is to advocate and promote that which will be for the general welfare of the people by the encouragement and protection of whatever makes for the public good, and that it is equally their duty to discourage, suppress, and if possible exterminate, whatever tends to the public disadvantage.

Again complimenting you on your proposed measure, and wishing the contemplated legislation the most favourable consideration and approval by the Government,

I remain,
Very truly yours,
Wm. L. Best.

Canadian Legislative Representative, Brotherhood of Locomotive Firemen and Enginemen.

Those sentiments, expressed by this representative of labour, are worthy of the utterance of the highest statesmen of any land, and well merits our consideration. These letters are the expressed opinions of the men in Canada best able to judge of what is in the interest of labour, and I invite this House to the careful consideration of these words from such a representative source.

The other evening, at a meeting of a labour organization, the question was asked: Why not pay attention first to the elimination of child labour and the betterment of labour conditions for children and women? Mr. Speaker, if we eliminate—and I am not talking cant or nonsense, but sober truth—if we eliminate the liquor business from Canada or from any other nation, we will take the greatest step forward towards the elimination of child labour, or conditions of labour for women that are inconsistent with their position in society, and strike the greatest blow that could be struck at child labour and other deplorable things.

I wish to direct the attention of the House to what our Allies have been doing about prohibition. I feel a little jealous for Canada; I feel that Canadians, a young and virile people, ought to be in the vanguard rather than lagging behind in any problem which is considered of importance in this great war. I find that Russia has done a great deal in connection with prohibition in the interest of the efficiency of the nation, and again I am going to ask the House to bear with me while I quote certain views which will, I think, influence the House a great deal more than any words which I could speak. The right hon. David Lloyd George said in September last:

Russia has enormously increased her resources by repressing the sale of alcoholic liquors. It is hardly realized that by that means alone she has increased the productivity of her labour by something between 30 and 50 per cent. It is as if she had added millions of labourers to her labour reserve.

These are the words of the Right Hon. David Lloyd George, who has given, not only since the war broke out but prior to the war, acute study to the conditions of labour and to industrial problems, and I do not think there is a member in this House who would dare stand in his place and question the opinion of Mr. Lloyd George on these subjects, because his opinion is backed up by accomplishments which were thought to be an utter impossibility before the outbreak of war. Therefore, I quote his opinion with a great deal of confidence. I quote further the opinion of Mr. Bark, the Finance Minister of Russia, as the words of a man who has the responsibility of handling the finances

and directing the financial affairs of 170,000,000 people. Mr. Bark, in May last, said:

Prohibition of vodka has had a wonderful effect on the moral and economic conditions in Russia. Savings banks deposits have been augmented by leaps and bounds. The increase had been from 34,000,000 roubles in 1913, to 84,000,000 roubles in 1914. But the moral effect was even more considerable. The output of factories has enormously increased. Home life has become more beautiful and more secure. Throughout Russia crime has diminished to a dwindling point. Even if I desired to remove this prohibition I should not be allowed to do so. The people would refuse to allow this evil thing to come upon them again.

These are the words of the Finance Minister of Russia, spoken officially and as a result of an experience of almost a year of prohibition. I need not remind the House that the liquor business in Russia, prior to the outbreak of war, was a Government monopoly yielding a revenue of $500,000,000 annually. This huge revenue was wiped out by one stroke of the pen, because it was apparent to the Czar and his advisors that the efficiency of the nation had been so undermined as to make them incapable of doing their part in this war.

I have further statements by Mr. Bark, which I wish to read. On March 1 of this year he again referred to this question. The words I quoted a moment ago were uttered on May 15, 1915, and surely if the prohibition of vodka was of any injury to the nation, it would have been felt during that period of nearly a year. On March 1 of this year, just about six days ago, in introducing the Russian Budget officially in the Douma, he made the following observations:

Bank deposits reached the unprecedented figure of 800,000,000 roubles.

Something that was never known in the history of Russia before.

And a little later on you will see what brought that about. The Finance Minister, explaining the Budget, said it was expected to realize more than 500,000,000 roubles from new sources of revenue created by the state of war. He had such confidence in the spirit of the Russian people to make permanent—

I ask the House to mark this:

—the advantages gained by temperance, he added that he was loading himself with the heavy responsibility of drafting urgent legislation and devising taxes to cover the diminution of receipts caused by the cessation of the sale of liquor, so as to avoid all temptation to return to the past. War expenditure would compel the nation to face heavy deficits, but there existed means of restoring the Budget ballot by strict economy and by development of the nation's production of resources. To this end the Government was devising taxation of such a nature as to give free scope to the economic independence of Russia. The Finance Minister emphasized the importance of the enormous increase in the savings bank deposits, which was observable among all the states of the nation.

In another statement given to the Associated Press by the Russian Minister of Finance—I must apologize to hon. members for wearying them with these quotations, but I think they are of sufficient importance to warrant our consideration—he had this to say of the capability of Russia to deal with the situation:

"Russia's finances rest upon the most solid foundations in the world," said the minister—"the economic prosperity of the Russian people, which is now greater than was ever conceived possible before the beginning of the war. Thus, while the masses of the German people are reduced by war to poverty, every month of the war has enriched the Russians.

"The optimistic statements concerning Germany's financial status have deceived but few. On the other hand, there is nothing illusory or specious about the Russian's prosperity. It rests upon the incontrovertible fact of the Russian peoples' increased earnings and savings.

"This is accounted for principally by the growing thrift and economy of the peasants since the enforcement of prohibition, by their greater earning powers and the higher wages they command."

Let us now give a moment's consideration to the situation in the Mother Country in connection with this problem. Last summer a large deputation of British shipmasters and ship owners waited upon the Government, and particularly upon the Right Hon. Lloyd George. According to the White Paper in which the record is given, not a single member of that deputation was a teetotaller, and yet they made the statement soberly and upon their responsibility as owners of large ship-building concerns, that eighty per cent of the lost time in the ship-building yards was due to drink, and they urged upon the Government the necessity of introducing prohibitory laws. It is well known that the Government of Great Britain did introduce some restrictive measures, but it has been pointed out to the British Government time and again that these measures are not sufficient to deal successfully with the problem. In reply to that delegation the Right Hon. Lloyd George made the famous statement:

We are fighting Germany, Austria, and drink, and so far as I can see the greatest of these deadly foes is drink.

I have the names of that delegation here, but I will not trouble to read them. Representing, as I have said, the leading shipbuilding concerns, they pointed out to the Government that the restrictive measures

which had been adopted were not sufficient, that they were not accomplishing what was desired, namely, efficiency and sobriety, among the workers of the shipyards; and the statement was made, I think with absolute truth, that the loss of time was very largely due to drunkenness. Sir, the increased wages of the workers of Great Britain, which in one sense have been a blessing, were turning out to be a curse, in so far as they were leading the men into the greater use of intoxicating liquors, and consequent increased drunkenness.

In France, the manufacture and sale of absinthe and other strong liquors have been prohibited, and I need not weary the House with further quotations dealing with the problem in that country.

I shall draw the attention of the House to some figures relating to the economic phase of this problem, as it refers to Great Britain and to Canada. In 1913, the last normal year, the British people spent £166,000,000 on intoxicating liquors, while they spent only £80,000,000 on bread, and £74,000,000 on the army and navy. Let us consider these figures for a moment. Prior to the outbreak of war, we heard a great deal of adverse comment on the huge expenditures on armaments, and the British Parliament was urged to curtail these expenditures. The total expenditure on armaments, was, as I have said, £74,000,000, while the annual expenditure on intoxicating liquors was £166,000,000, more than double the amount spent on the army and the navy. In other words, the expenditure on liquors exceeded all the expenditures on the army and navy and on bread by £12,000,000.

As regard Canada, I have some figures which I wish the House to consider. The consumption of liquor for the year ending March 31, 1914, was 67,000,000 gallons, at a cost of $103,000,000. In this House at the present time, we are endeavouring to devise ways and means of providing sufficient funds to enable us to carry on our part in the great war, and our friends of the Opposition have, from time to time, offered suggestions and criticism on that subject. But, Mr. Speaker, here we have a sum spent upon a luxury, or, to put the best construction upon it, upon a whim, the sum of $103,000,000, enough in itself to enable us to contribute a large share towards the conduct of the war.

Let me say a word on the subject from an industrial standpoint. We are told that if prohibition is brought about a large number of men will be thrown out of work, and that capital investments will be destroyed. What are the facts? We find that the capital investment in brewing and distilling in Canada is $43,237,000, and that in other industries the capital investment is $1,204,000,000. When we consider the question of employees we find that the number of people employed in brewing and distilling in the whole of Canada is 4,688, while in other industries the number employed is 466,438. In other words, for every person employed in brewing and distilling there is $9,223 of capital invested, while in other manufacturing industries for every person employed there is only $2,582 in capital invested. I shall have something to say a little later on this question of vested interests.

I come to another phase of the question, which is probably the reason for objection to prohibition more than any other, and that is the cry of personal liberty. I have received, as I presume almost every member of this House has received, sheaves of cheaply printed literature signed by the Personal Liberty League, but giving no names. This literature is circulated with the object of stirring up in the minds of the people of this country opposition to prohibition on the ground that such a measure aims at the sacred personal rights of individuals in this country. I have just this to say: that those persons who talk of personal liberty have mistaken the name; they are asking not for personal liberty, but for personal license. They are asking for the license individually to do things which may be injurious to society as a whole. I hold that there is no such thing as personal liberty apart from a person's social responsibilities. When the practice of an individual right, or an institution founded upon it, becomes a great social problem, or when it directly affects the welfare of the nation, then the whole of society has a right to step in and decide to what extent that institution or practice shall be allowed. Let me give an illustrative incident. Two years ago last Christmas, in Vancouver, I was called to the police station. The chief of police had in charge a woman and her four children, three little boys and a little girl, and he wanted to know what we could do to help these people. I asked him what was the matter, and I ask any hon. member in this House, or anybody out of this House, to say whether he will place his personal liberty before his social responsibility to justify in action in the light of the facts

that I was then given. The husband of this woman and father of the children was a sober and industrious man for ninety per cent of his time, but about once a year he was likely to get off on a spree. He came into town on Christmas Eve to buy his children's Christmas cheer—this is not "sob stuff," as Mrs. Nellie McClung calls it, but is plain, simple fact. I know the man, and know that what I say of him is true. He had not had a drink for over a year; he was a man of provident habits, and had some little savings in his pocket. But the temptation of the open grog-shop was too much for him, and he got drunk, and in his drunken state of incapacity and irresponsibility he struck a policeman, which is a serious offence. He was brought up in the police court and sentenced to six months in prison. The result, of course, was that the family was deprived of its breadwinner, and this in the winter and during particularly hard times. That is not all. The children went to school, and the other children pointed their fingers at Johnny and Tommy and the rest; their father was a jail-bird. Now, I contend that a sober man, capable of controlling himself, has no right to plead his personal liberty—his personal license as I call it—as a reason for maintaining an institution whose operation brings about such a state of affairs for an innocent woman and her children. There is no argument strong enough to persuade me that such a condition is permissible, if it is within our power to obliterate it. And how can we obliterate it? Had there been no grog-shops staring that poor fellow in the face, he could have remained sober, for as I tell you he only got drunk once in a long while, when the temptation was too strong for him.

I have another illustration in connection with this argument of personal liberty. Shortly after the outbreak of the war, His Majesty the King said that so far as he and his household was concerned, in the interest of the efficiency of the nation in time of stress, liquor would be abolished. I do not think we can do better than follow the example of the King. The King made his personal liberty subservient to the social welfare; and I repeat that there is no such thing as personal liberty apart from social responsibility. That is a doctrine that we cannot insist upon too strongly. Another argument put forward is that prohibition should not be advanced when "the boys" are away at the front. I admit that that is a strong argument when looked at in a casual way. But do the boys at the front expect us to suspend our responsibility in dealing with public problems? I think that on the contrary they expect us to concentrate the brain and energy of the nation into practical efficiency for the support of the boys who are fighting our battles. I do not suggest that we should take advantage of the absence of the boys at the front and pass some very far-reaching measure, giving them no opportunity to express their views upon it. Therefore it is that I propose, to the House and to the Government—and I trust they are going to act on this resolution—that the Government shall bring down the necessary legislation to give effect to the well-defined and well-expressed views of the people at this time, making provision in that legislation for submitting it to a vote when the boys come back, so that they can take part in confirming it or repealing it as the case may be. I would not deny to the boys at the front the right of voting on this question as a permanent measure, but I do say that it is our duty to deal with the problem in the interim and as a war measure. They talk about revolutionary measures; but what about the revolutionary measure put into effect by the British Parliament in connection with the English railways. In Great Britain to-day the railways are controlled, directed and administered by a committee of the Government; and I am told on the highest authority that the sentiment is spreading in favour of nationalizing the railways because of the success of the "experiment" undertaken during the period of this war. Why, the very war is a revolutionary war, and everything in connection with it is more or less revolutionary. There is no danger of revolution if you meet a problem and tackle it; what brings about revolution is the accumulation of wrongs and evils. Look back into history, and you will find that it was not one evil, not one action of the Government, but an accumulation of evils and wrongs, that has brought about every revolution. I lay upon this House the responsibility of dealing with this question now and, not seeking shelter in the shadow of the boys who are fighting our battles. They are doing their work nobly; as Mr. Best said in his letter, they are making the supreme sacrifice, while we sit here in comparative ease. It is for us to make our sacrifice, of personal liberty in the interests of the nation, just as the boys at the front are making their sacrifice.

I come now to the question of compensa-

tion, which has been put forward as an insuperable difficulty. We hear of "vested interests"; and these are covered with a cloak which seems to justify putting them in a class with rights and privileges which must not be tampered with and which must hardly be spoken of except in a suppressed tone. But compensation, I think, is not a serious problem. As a matter of fact, the difficulty is largely solved for us. In Britain they are taking over the whiskey distilleries for the purpose of manufacturing denatured alcohol. Furthermore, the British Government for reasons which I shall not dwell upon now has placed a ban upon the importation of barley for the purpose of manufacturing liquor. I suggest to the Government for their serious consideration the abolition of "the booze", while providing reasonable safeguards for vested interests. I propose that this shall be done by the Government taking over the distillleries of Canada and nationalizing them as a new industry for the production of denatured alcohol and spirits for industrial purposes. That may sound like a revolutionary suggestion, but let us consider it for a moment. Here is a new industry, the manufacture of denatured alcohol. It has been demonstrated by science that a gallon of alcohol is equal to a gallon of gasolene in power. I learn that in Great Britain some of the distilleries have been for years manufacturing starch, and the alcohol, which is a by-product, and which costs 8 cents a gallon to manufacture, has been largely going to waste. As the result of the discoveries of scientists in the last few years it has been found that alcohol can be successfully used in internal combustion engines. In Canada, we import petrol, gasolene and other materials for internal combustion engines, whereas there is going to waste upon the farms and in the cities of Canada sufficient refuse of various kinds out of which to manufacture all the alcohol necessary to supply our needs in this line. I hope I shall not weary the House if I read briefly to show how we can take another leaf out of Russia's book:

> The Russian Ministry of Finance is offering a series of prizes for inventions relating to the use of alcohol, and covering a varied field of investigation. The various prizes offered are as follows: Three prizes of 50,000 roubles for a satisfactory method of denaturing alcohol. Three prizes of 100,000 roubles for a new product derived from alcohol. Three prizes of 75,000 roubles for a new method of applying alcohol to the preparation of a product in which it, or its derivatives, constitute a part. Three prizes of 50,000 roubles for new methods for the application of alcohol in an industry in which the spirit, or its derivatives, serve as a transitory dissolving agent, or an extracting or precipitating substance. Four prizes of 175,000 roubles for an apparatus for utilizing alcohol for feeding internal combustion engines. Four prizes of 175,000 roubles for improvements in apparatus relating to utilizing alcohol as fuel. Four prizes of 100,000 roubles for apparatus for applying alcohol to lighting purposes.

I have quoted this to show what Russia is doing, and I lay on this Government the responsibility of developing an industry in Canada for which Canada is peculiarly fitted. There is no reason in the world why the Dominion Government should not take advantage of this opportunity to do two things: To solve the compensation question with regard to these distillers and their vested rights, and, before any more vested rights are established, to nationalize a new industry for this country. If we do not do that, in a year or two we shall be putting Bills through this Parliament incorporating such and such a company for the manufacture of denatured alcohol, and the first thing we know the country will be dotted with factories for this purpose; large vested interests will be created, and the opportunity for the Government taking over the industry will have vanished. I again urge the Government to seize this opportunity to deal with this important question, and to prevent such a happening as I have described. What are other countries doing? France has made long contracts with distillers and brewers for motor spirits. Germany, in 1914, consumed 26,000,000 gallons of alcohol for motor spirits. This means a great deal to the farmer; it means cheaper power, light, and heat, and a larger market for his waste products.

Another suggestion has been made with regard to this question of prohibition, and that is, that we should leave it to the provinces. Some one says, "Oh, this is a matter for the provinces to deal with, not the Dominion Government; let us leave it to them, and they can deal with as they think fit." With all respect for those who hold this view, I submit that it is simply a subterfuge. If I remember rightly, the Government presided over by the right hon. gentleman who now leads the Opposition took a plebiscite throughout Canada in 1898, and the reason why that plebiscite was not given effect to—I am speaking subject to correction—was that one of the provinces, or possibly two, gave a majority against prohibition. I am not questioning the action of hon. gentlemen at that time

at all; I simply wish to point out that the intimation then went throughout Canada, whether authorized or not, that when the provinces got into line it would be time enough for the Dominion Government to take action. That was the sentiment of those opposed to prohibition at that time. Now that the provinces are in line, they say: "Oh, let us leave this question to the provinces." But that is not the whole story. A provincial government has a very limited jurisdiction in the matter of prohibition; it can only prohibit the sale of liquor within its boundaries; it cannot prohibit the importation of liquor into private houses, nor can it prohibit the manufacture of liquor within the province. It is therefore a very meagre jurisdiction that the provinces possess as to prohibition. I am also informed that the Governments of Manitoba, Saskatchewan and Alberta, when they met not long ago, passed a resolution instructing the premiers of those provinces to ask the Government of Canada for Dominion-wide prohibition. Whether they have approached the Government I do not know, and I have not had time to ascertain, but this I do know, that throughout Canada, from the Atlantic to the Pacific, there is a demand for implementing legislation on this subject. "Implementing" is a good word. It was used in this House a few years ago with great effect. There is, I repeat, a demand throughout this country for implementing legislation to give effect to the will of the people in those provinces. I am not wedded to any particular manner in which the Government should solve this question, nor do I stick to the exact wording of my resolution. There is, I think, a desire on the part of those behind this resolution—and they form a very large portion of the population—to give the Government a free hand in framing legislation to give effect to their wishes. At the same time I contend that the argument that we should leave this question to the provinces is not a sound one, nor one that should be given any consideration.

I have detained the House at a greater length than I intended, and I have possibly wearied you, Mr. Speaker, by reading from the opinions of others. But I quoted these for the purpose of reinforcing my own views with the opinions of men in a position to know, and whose voice I think will be heeded by this House. Democracy, I repeat, is on trial at the present time. This war means that democracy will be established or it will fall, and I believe it is up to us in Canada—in my estimation the most democratic of all people—to grapple with this problem, to face it without flinching, to deal with it to the best of our knowledge and ability. I place on this House the responsibility of heeding the call of the people of Canada, as expressed time and again in the votes of the people in different sections of the country. From one end of Canada to the other a vast majority of the people have spoken for a prohibitory measure of some kind. I place on the House the responsibilty of giving expression to these views and the responsibility of making such provision in the suppression of the liquor traffic as will make the nation as efficient as it can possibly be made. I urge the Government to grapple with this problem in connection with the distilling interests. I do not think there is any insuperable difficulty. Problems are solved by grappling with them, not by turning aside, and dodging them. I believe that this House is capable of dealing with this question, and that the majority of the members of this House are anxious to deal with it. I trust that before we adjourn the day's sitting we shall come to some decision in the matter. My proposal, therefore, is that this resolution be passed by this House, and that the Government at this session bring down the necessary legislation to give effect to it; that one year after the war, if desired, provision be made for a confirming plebiscite making the law permanent; that the Government take over all distilleries in Canada for the purpose of manufacturing denatured alcohol for industrial or medicinal purposes, and that the manufacture of such alcohol be made a national monopoly, thus changing a non-productive and wasteful institution into a productive and beneficial national industry.

Hon. CHARLES MARCIL (Bonaventure): Mr. Speaker, I have very much pleasure in seconding this proposed resolution. I wish to thank the hon. member for Vancouver (Mr. Stevens) for his kind words in regard to myself. Coming from the far east I am delighted to have the opportunity of seconding a resolution moved by a member from the far west, thus showing that on this great question Canada is united. The majority of the Canadian people realize that at this moment we are passing through probably the greatest crisis in our history. We are face to face with the greatest problem we have ever had to tackle. We have a Budget this year proposing an expenditure of $425,000,000, and we do not

know what the extent of our obligations next year may be. Within another twelve months we may have 500,000 young Canadians fighting under the flag, and we do not yet know the amount that we shall be called upon to pay, not only in money, which is of secondary importance, but in blood and in the lives of the flower of our young men. This great circumstance calls for great action and great measures. For myself, I voted on the Dominion plebiscite against prohibition in the province of Quebec, but to-day I realize that I have a great duty to fulfil towards my constituents who have taken unanimous action in favour of prohibition, and when I consider the action taken by the various provinces throughout the Dominion, I feel justified in saying that we have to-day a mandate to act upon these questions and that it is our imperative duty to act promptly. We have taken it upon ourselves to assist England in the great struggle in which she is engaged and to vote millions of dollars without formally consulting the people, but we felt from the outset that we had the nation behind us. At the present time I feel equally sure that the people will support us on this question, and I speak freely, as a convert probably to the idea, but I speak in the interest of the country, feeling within me that I have the interest of Canada at heart. During the last fifteen years I have given many votes in this House; I have assisted, along with 150 or more gentlemen who now no longer sit in this House, in passing measures for the framing of new provinces, for the construction and development of transcontinental railways, for the formation of banks and insurance companies, for making the St. Lawrence and other waterways of Canada second to none in the world, and for doing all that we thought was in the interest of the welfare, commercial prosperity and happiness of the nation. But, Sir, I consider that the duty I am now undertaking is probably the most important that I have discharged during all that period. I realize that this is the greatest question that we have before us for solution at the present time, and that not only from its financial aspect, but more especially from its moral aspect. I am glad to know that I represent the feeling of my people, because in 1898 the province of Quebec gave a decided vote against prohibition, to which vote I will refer later on; but I am now in a position to show that there has been in my province a tremendous change of sentiment in regard to this question, and I will produce evidence showing that on this question, as on all other questions relating to the welfare of Canada, Quebec is prepared to shoulder her share of responsibility. We have heard from seven or eight of the provinces of Canada; we shall hear more from the province of Quebec when the time comes.

I have accepted the honour of seconding this resolution on the invitation of members of the Dominion Alliance, which for years has been working for the cause of temperance throughout Canada. Canada, as we know, is inhabited by people of various creeds and various nationalities. We differ on many questions, but prohibition is one upon which we can all agree, because on the solution of this problem rests the efficiency of the nation.

5 p.m. I have been asked to second this resolution by men who belong to various walks of life, men who are of different nationalities and different creeds. The House will pardon me if I read the petition which they have placed in my hands, but it is well worth reading and its language explains the problem better than could any words of mine. This petition is signed by some of the leading citizens of Canada, by some of the great employers of labour, by members of the judiciary, by men who have given this important question years of study. It is a fortunate occurrence, now that the Dominion is brought face to face with this question, that it was in the city of Montreal in 1875 that the Dominion Alliance for the Suppression of the Liquor Traffic was formed, and while Ontario and the other English-speaking provinces have since been taking the lead, it will be well to remember that this movement originated in Montreal.

This petition, which contains all the arguments necessary to impel this House and the Government to take action immediately, reads:

A Patriotic Appeal for Federal Prohibition.

To the Editor:

On the 4th December last a very instructive address was delivered at the Canadian Club, Ottawa, by Hon. R. H. Brand, C.M.G., of London, on "How England is paying for the war and how Canada can help."

The speaker explained the enormous financial burdens which Britain is carrying, and that only by rigid economy and by increasing the wealth-producing powers of the country, would Canada be able to help.

How to attain this end should be the aim of Government and people.

While not directly indicating the manner in which Canada could accomplish this, he referred to the enormous waste from drink, stating that in 1913 the British expenditure on drink amounted to $830,000,000, besides the loss of thousands of tons of barley and the productive employment of tens of thousands of men, "and the final result is that all this drink goes down the people's throat and nothing is left."

Mr. Brand was too courteous to apply this to Canada, but left the application for us.

The expenditure on liquor in Canada runs into many millions. It is not only absolutely wasted, but, as Mr. Brand states, it also takes away from productive employment thousands of men.

What, then, is the remedy?

Pass a prohibitory law to remain in force during the war and for a reconstruction period of three years thereafter, at which time let the question of repeal be submitted to the people.

Russia, France and, to a limited extent England, have acted on these lines with beneficial results.

Prior to the war, in these countries public sentiment was overwhelmingly opposed to any such legislation, but under the stress of war conditions their leaders did not hesitate to act.

Are our leaders in Canada less courageous, less patriotic than the Czar of Russia, the President of France, or the Premier and Lloyd George in England?

In these countries they braved an antagonistic sentiment.

In Canada, even before the war, public sentiment expressed in the plebiscite years ago decided in favour of prohibition. Since then, public opinion has been manifestly growing stronger in its favour.

British Columbia is now demanding the right to restrict the liquor traffic.

Alberta has decided in favour of prohibition. So has Saskatchewan.

Manitoba is ripe for it, and there both political parties are outbidding each other in this direction.

Ontario has now liquor sold in only about 300 municipalities out of 850.

In Quebec, out of 1,143 municipalities over 900 are without a license, and the number is still increasing, as witness the voting in the last few weeks in Lachine, Three Rivers and Argenteuil.

New Brunswick, excepting four or five counties, is, under prohibition.

In Nova Scotia no liquor is allowed to be sold in the entire province, except in the city of Halifax, and none whatever in Prince Edward Island.

What stronger evidence is required?

By one simple act of legislation following the overwhelming sentiment of the country, Parliament can save millions of dollars of waste, can by one stroke enormously add to the productive wealth of the country, and do more to increase the power of Canada to help the Empire than by any other legislation it may enact; in helping the Empire it will benefit our own people.

Two hundred thousand young Canadians have left their homes, friends, and all their business interests, to endure the hardships of war, to fight and if need be to die for the Empire. Shall those left at home not do everything possible to strengthen their hands and help them to win? The little self-denial imposed by such an Act will enable Canada to vastly increase her power to help.

Will our leaders, forgetting party and remembering only Canada and the Empire, support such a measure? Canada awaits with confidence their answer.

Signed on behalf of the committee.

J. R. Booth (Ottawa)
Wm. C. Edwards (Ottawa)
E. Lafontaine (Montreal)

A. W. Fraser (Ottawa)
Chairman.
J. W. Hennessy (Fort Coulonge, P.Q.), Vice-Chairman.
Edward Seybold (Ottawa)
Secretary.

I find in this petition the gist of the whole question. We are told that there is in this country an enormous waste in connection with alcohol, and that the time has come to deal with the question. On this circular we have the names of some of the most competent men in Canada. The first name that I read was that of Mr. J. R. Booth. I have heard Mr. Booth mentioned in this House during the last fifteen years as one of the most enterprising and far-seeing men. He has built railways; he has developed immense industries; he has employed thousands of men; he is in a better position than anybody else to know the injurious effects of alcohol. Senator W. C. Edwards, whose name is second on the list, also is a man who is entitled to particular respect; he also has had opportunities of a similar nature. This circular was accompanied by another, which also was forwarded to all the newspapers in Canada. It reads as follows:

On Saturday last the appeal to the political leaders of both parties in Canada was made to introduce and carry a prohibitory Act during the war and a reconstruction period of three years thereafter when the question of repeal can be submitted to the people.

If, as pointed out on that occasion, a great responsibility rests on the leaders as well as a great opportunity for Empire service, the responsibility of the people is none the less.

The war expenditure in Canada during last year amounted to about $175,000,000. For the present year this expenditure is estimated at $225,000,000 for an army of 200,000 men. But in Sir Robert L. Borden's New Year message the call has gone forth for 500,000 men. What, then, will be the financial expenditure? It must of necessity be much greater than the above

estimate. How is Canada to meet this tremendous strain on her financial resources?

The answer is plain—we must economize. Every wasteful expenditure must be cut out. We must also strain every energy to increase the wealth-producing power of the people.

It is estimated that the annual loss in Canada through the liquor traffic is about $150,000,000. By the passing of such an Act this great loss can be avoided and a saving to the country can be made equal to more than one-half of the estimated war expenditure. Are the free-born citizens of Canada equal to this sacrifice?—a sacrifice cheerfully made by the nobility and peasantry alike in Russia.

Our political leaders may be willing to lead in this great patriotic movement, but they must be supported by Parliament and the people.

What, then, is the duty of the people? Let the citizens call upon the senators and members to grant this legislation. Let every constituency act. Let the churches, the temperance organizations, the boards of trade, Canadian clubs, and other local bodies in each constituency make clear to their member their desire for such legislation.

As soon as the answer of the member is obtained advise our secretary, so that the central committee may know upon whom to rely.

If the people of Canada are in earnest, as we believe they are, on this question, a united effort in every province brought to bear on our public representatives will produce the desired result.

Let the people act.

This, I think, was the inception of the present movement to bring the question before this House. The circular is couched in moderate language; it is supported by arguments which are irrefutable; it is entitled to respect. Even if nothing had taken place since this movement was inaugurated but what has happened in this great province of Ontario, I think those who promoted the movement have every reason to feel proud of what they have done.

The Prime Minister has impressed upon us the urgent need of economy; the urgent need of taking every possible step which will enable us better to bear the burdens laid upon us by our participation in the great cause of Empire. I remember reading some few weeks ago a speech delivered by the Honourable Minister of Trade and Commerce (Sir George Foster), in which he also referred to the urgent need of national and personal economy In speaking as they did both hon. gentlemen gave expression to the views which have prevailed on the other side of the water. When this war was declaraed the destinies of the British Empire were, to a great extent, placed in the hands of Kitchener. When the Republicans of France undertook to combat practically the whole of Europe the organizer of their victories was Carnot. To-day Kitchener fills practically the same position for England. He has been entrusted with the task of organizing the victory, of raising, supplying and equipping the armies, and of maintaining them at the front. Less than a week ago Lord Kitchener delivered a speech at the Guildhall in London. I should like to read a few paragraphs from that speech to impress the House, if possible, with the authority of a great man whose words apply to Canada as they apply to the other side of the water, because they are true, and are based on common sense. Lord Kitchener said:

We want just as many men as we can get as soldiers. We are bound to take all the men that can possibly be spared from industry, agriculture and commerce.

We cannot produce all our ordinary peace time requirements. Either the population must go short of many things or the army must go short of munitions and other indispensable things.

Are civilians prepared to let brothers in the trenches endure hardships while they are not ready to make small sacrifices of harder work, increased effort and increased economy?

Every war problem teaches the same lesson. First, if we employ less labour, meeting the wants of the civilian population, we release more men for fighting. Secondly, if we import less for consumption we lessen the difficulties of sea transport. Thirdly, we relieve serious congestion at our docks. Fourthly, we relieve the congestion of our railways. Fifthly, the general reduction of the consumption of commodities by civilians limits the increase in the cost of living. Lastly, less consumption sets free labour and capital which make what armies need.

Referring to his remarks, the press report says:

Lord Kitchener appealed for economy in everything, particularly in coal, foodstuffs, intoxicating liquors, petrol and oils, tea, coffee and tobacco and clothing of all kinds, especially woollen articles.

In another part of his speech he said:

As a representative of the army in the field, I want to appeal on their behalf to the civilian army at home to play their part strenuously. Whether the army in the field, who are entirely dependent on the civilian army for food, equipment, and munitions, can get those things in sufficient quantities depends absolutely and entirely on whether every man and woman at home shows the utmost energy in production and the utmost economy in consumption. Any failure in this respect helps the enemy to win just as much as the soldier who refuses to do his utmost in the field of battle.

The question is how all these things can be done at the same time, how we can take millions of men from their workshops and farms and yet provide for all the needs of the civil population and the army millions in the field If those left behind only work as hard as they did before and all the consumers consume as they did before the war, our problem will be insoluble.

Hitherto we have filled the gap by vast importations, but the Chancellor of the Exchequer and other financial authorities impress us with the vital necessity of reducing our imports.

The dilemma is that either the civilians must go short of things which they are accustomed to in peace times or the armies must go short of munitions and other indispensable supplies. Which is it to be?

The reading of that simple statement, Mr. Speaker, should place the question in a very fair light. We are in the same position as they are in England; when we realize what the outcome of this struggle may mean to us, we are in practically the same position as they are. Surely we can give up our whisky at a moment when our children, our brothers, our sons, our relatives, are shedding their blood for the cause of Empire. The time has come for the civilians of Canada, even, if necessary, at the cost of great sacrifice, to show that those who, by circumstances of age or for other reasons, have been unable to join the boys at the front, are animated by the same patriotic spirit which is evidenced by those who have gone to the scene of battle.

Permit me, Mr. Speaker, to read a paragraph from a speech delivered by Mr. McKenna at the same gathering. He said:

The only method is the diversion of capital and labour which are now engaged in peace services for the nation to employment for the army and navy.

Every one, he said, ought to take stock of his daily habits and see what he could give up. What was needed now was to teach the people to postpone their expenditures.

And the Right Hon. A. J. Balfour, speaking on the same occasion, made this statement:

The question of personal expenditure was a difficult and delicate one. It was easy to lecture other people, but what was important was to make every man understand that he should examine his own expenditure to see how much in the national interest he could cut it down. It was for the man who benefited from additional income derived from the war to show why this expenditure should not be postponed until the war was ended.

The time has come for Canada to economize, not only in public matters but in the daily routine of every day life. There is no man within the sound of my voice who will not admit that drinking is a luxury and of course if we were to stop at that argument there would be a great argument in favour of doing away with the liquor traffic. But the moral consequences that have followed in the train of liquor are well known to every member. One of the last things I did in the old House of Commons —and I am sorry that the book was destroyed by the fire—was to spend an evening reading the admirable speech made by the Minister of Trade and Commerce (Sir George Foster) in 1884 when he introduced a resolution in this House in favour of prohibition. That effort was a classic masterpiece which I read with the greatest delight and in which I found the inspiration for many of the arguments I am advancing to-day. If he failed in those days there is no reason why to-day, under war conditions and changed public sentiment, he should not succeed. If no action is taken now, I am satisfied that by the close of another twelve months the people of Canada will take such a determined stand on this question that action will have to be taken because our economic circumstances and our realization of the necessity for saving every dollar, would make us blush if we continued to waste $100,000,000 or $125,000,000 a year on a luxury. When we are preaching economy to the people and asking our boys to enlist for the war and to risk their lives, if we have not the courage to do away with this luxury I think we are not worthy of the position we occupy. I shall not weary the House by reading all the statistics of the cost of liquor in Canada, but I shall venture to give the totals. The latest report shows that the total quantity of intoxicating liquors entered for consumption in Canada for the fiscal year ended March 31, 1915, was 56,797,704 gallons. After consultation with experienced men, the following prices have been taken as a reasonable basis for a calculation to ascertain the amount actually paid by the consumers for the quantities of liquor upon which duty is collected:

Canadian spirits	$6 00
Imported spirits	8 00
Canadian malt liquors	0 70
Imported malt liquors	2 00
Imported wines	5 00

The application of these estimates to the quantities already quoted will give the following table as the expenditure on intoxicating liquors in the Dominion of Canada for the year:

Canadian spirits	$24,126,540
Imported spirits	23,775,496
Canadian malt liquors	33,569,163
Imported malt liquors	2,122,130
Imported wines	3,938,325
	$87,531,654

The official Government estimate made by the Inland Revenue Department of the quantity of liquor taken for consumption during the year, gives the following as the average for every thousand persons:

	Gallons.
Sprits	872
Beer	6,071
Wine	95
	7,038

If the total expenditure for drink as above stated is divided by the figures for the population of Canada, as shown by the Government's estimate made at the beginning of the fiscal year under consideration, it will be found that the actual per capita expenditure for intoxicating liquor was $10.84 as against $12.72 in 1915.

It is not a very big sacrifice, to ask a Canadian who has at heart the interest of his country and the triumph of this Empire to abstain from this reckless waste of money, money that could be so well used for other purposes in the great cause for which we are fighting. The hon. member for Vancouver (Mr. Stevens) has gone so fully into many of the arguments in favour of this motion that I shall omit many of the arguments which I intended to advance, as I do not wish to weary the House and many other hon. members desire to speak.

We have made efforts of various kinds in Canada to cope with this question. The various provinces, during the last 30 or 40 years, have taken all the measures that could possibly be taken by them for the purpose of putting down this evil. The people in my own province especially have always taken the broad view that in this matter the great change could best be brought about by the inculcation of sentiments of temperance, by persuasion rather than by coercive measures. I am glad to say that to-day an immense change has taken place, that more than 900 municipalities in the province of Quebec have already gone dry, and that 42 out of the 72 constituencies in Quebec have taken that stand. In the provinces we have always had to contend with the fact that as long as the manufacture and importation of liquor is not stopped, it is practically impossible for the provincial authorities to put the traffic down. They can prevent the sale, they can refuse to issue licenses, but they are unable to prevent its importation into the province. In the province of Prince Edward Island, which is the sole province in Canada where they have prohibition for the whole province, they are at the mercy of our Federal Legislation. They can prevent the sale of liquor, they can refuse to issue licenses, but they cannot prevent the importation of liquor and it is imported into the province. The same thing happens in Nova Scotia. The people of Nova Scotia by an overwhelming majority have declared in favour of prohibition. The same thing has happened in New Brunswick, in Ontario and Manitoba, and so on all the way to the coast.

Therefore, the duty of the Federal Government is imperative. If for no other reason than as a war reason, we should act now. We have had liquor for a long time. There is no hon. member within the hearing of my voice who cannot, on a moment's reflection, recall all the evil and all the harm that has been done by it in his own environment, say among the boys whom he knew at school. Let him give a moment's thought to the solution of this great question. If we have tried liquor for many years in this country, why should we not try to abstain from it for three years, at least while we have a death struggle on; and if in three years from now the Canadian people, in their senses, with these boys coming back, covered with laurels, from the field, feel that they must repeal this legislation, then let them do it freely. But my contention is that after three years of prohibition the people of this country would never repeal it. I am not asking for an innovation, for anything of a startling character. I have here statements from two men who represent fairly well the Conservative and the Liberal views, at least of the English-speaking part of the people of this country, and I shall quote them. One is the hon. the Minister of Trade and Commerce who said on September 9, 1915, at the Insurance Underwriters Association banquet:

> I confess to you that every time I see the open bar and see the young soldiers of this country coming out and going in, every time I pass the open bar and see the unemployed who, perchance, have got a day's employment, making a bee line for the bar, I confess that my soul cries out for the closed bar in this great Canada.

Then the leader of the Opposition in the Ontario Legislature, Mr. Rowell, speaking on the same occasion, said:

> If we have in our midst to-day an institution which is demanding sums of money for its perpetuation and is giving no return in value, but is impairing the earning capacity of the men who go there, there is only one patriotic duty for every patriotic citizen: that to the extent of his ability that curse will be wiped out, the curse of the open bar. Russia has had the courage to do it; France has largely undertaken the task; some sections of our own country are doing it; in Great Britain they have cut down the hours to five and a half. Let us have the courage in this supreme hour of crisis to rise to the height necessary in order that this thing shall be done, and done promptly.

I have here an extract from one of the leading newspapers of Ontario, the Toronto Globe, which represents Liberal opinion in that province. The Globe quotes a few lines from the Spectator of London, one of

the most influential of English periodicals, which had said this:

We must economize, and the only great national economy open to us is the cutting off, root and branch, of our expenditure on intoxicants. If we do not, our waste on the non-necessity of alcohol will undo us even more surely than the force and brand of Germany and Austria.

If we mean to win the war, we must prohibit the use of intoxicants in order to save money and get more munitions. * * * The sellers of intoxicants warn the nation off their preserves. Yet the ministers know as well as we do that the only great saving attainable would be from prohibition.

Commenting on these utterances, the Toronto Globe calls for legislation both provincial and Dominion, in a very strong editorial, in which are the following paragraphs:

Let the King's ministers, in Ottawa as at Westminster, note that word. Its meaning is as large, its alternative of failure as perilous, and the imperative of its "must" as uncompromising for Canada as for Britain. What answer has the Dominion Government, what answer can it have, to the protest, in these war times, that last year 275,000,000 pounds of foodstuffs were destroyed in the distilleries and breweries of Canada in order to produce some 66,000,000 gallons of intoxicating liquors with an estimated value of more than $103,000,000? The most authoritative voice in the journalism of British respectability calls out for what? For "prohibition during the war." Will the King's ministers at Ottawa listen?

I shall now quote a few lines from a lecture delivered by Professor Cudmore, the professor of economics in the University of Toronto. This lecture was delivered before the Royal Canadian Institute and in it he described the position of Canada, from an economic point of view, at the present time, and pictured what it would be in a year or two. He said:

Canada should save at least $500,000,000 a year during the war to hold up her end of the financial burden. The economy of the British people will have to be extended to Canada as well. Instead of expecting money from England to finance our munitions industry Canadian capital should be used to relieve the mother country of the additional strain. The $100,000,000 loan raised last November was just a small part of what Canada will have to do. By cutting down the luxuries and by rigid economy Canada's national saving should be increased from $200,000,000 to a sum two and a half times that size.

This great issue has also been summarized very briefly by the Pioneer, the organ of the temperance organizations in the province of Ontario, and I shall give the summary to the House. It reads:

The biggest question in Canadian politics today is the question of the liquor traffic. The remedying of the evils of intemperance would be the greatest boon that any legislative body could confer upon the country.

To set the powers, and purposes, and resources of this country free to grapple with other social problems, the settlement of the liquor question is necessary; because the drink traffic stands in the way of every progressive movement, and while it is approved by law it will be an influence for evil in every department of life with which it comes in contact.

By it religious work is handicapped, domestic happiness is impaired, poverty is induced, crime is promoted, political life is corrupted, honest business is defrauded, and physical and mental efficiency is lessened, to the loss of the nation as a whole, and the ruin of thousands of individuals who otherwise would be self-supporting citizens and a strength to the nation, but who are now miserable parasites, a weakness and a discredit to the community of which they form a part.

Since we are taking up this question chiefly as an economic question, I wish to quote from Canadian Finance, a newspaper published in Winnipeg, a few observations on the economics of prohibition. This paper said:

A question that many are looking at from a new angle in days of war is that of the liquor traffic. Even those who heretofore have held out for non-interference with what the individual puts down his own thoat, are asking whether the community burden of the drink habit should not be sloughed off by the majority's will. That Great Britain has temporized in its dealing with so deeprooted a problem—despite acute experience of its drag upon national efficiency in time of stress—need not necessarily deter a younger country from more radical treatment.

It is not to be denied that many individuals and some lines of trade will be acutely disturbed by ending the liquor trade as an organized business. But the liquor interests attempt an impossible task when they seek to prove that the net economic result of banishing their trade would not be a gain to the community as a whole.

The ending of the war will badly dislocate the business of manufacturing munitions in Great Britain—will leave much plant and equipment idle if not useless, and put thousands of men to the necessity of seeking other work. Yet what manufacturer of munitions, however seized with the importance of war profits, could delude himself by thinking it possible to delude the public into believing its economic weal dependent upon the war's continuance.

From the viewpoint of national economics there are two possible kinds of manufacturing. The first is where the joint employment of labor and capital results in commodities which contribute in turn directly or indirectly to further production—whether they be machinery for factories, partially worked materials for more finished products, food and clothing for workers, or even luxuries contributing to the healthful enjoyment of life. (Happiness has a more real place in economics than some of the schoolmen would have us believe.) The second kind of manufacturing is where the labor and capital together bring forth that which conduces to waste or actual destruction.

In considering the effect to the world of business of making a plow, there are to be

taken into account not merely the direct returns upon the labor and capital employed in its manufacture; there is the sum total of the economic services rendered by the plow as long as it is used in farming. Indeed, it is really by anticipating, or discounting, these in part that the manufacturing process receives its direct return. The plow pays for itself by economic service.

Very different is the case of an instrument of destruction—say, a field gun. It is true that capital and labor get their direct returns in its making; but, the completed article destroys instead of adds to wealth, or to mankind's wealth-producing power. Therefore whatever gain comes to the world of trade from its manufacture and sale must have reckoned against it the later waste directly or indirectly caused —and the net result is apt to be very much minus.

Again, suppose twenty thousand dollars to be spent in building an incinerator for the sole purpose of burning up some thousands of bushels of perfectly good grain each year—the ashes being dumped around the city in such a way as to interfere materially with its cleanliness and the community's comfort. Would it be possible to find final economic justification for this whole process on the grounds that the farmer was duly paid for his grain, the manufacturer for his bricks, the mine operator for his coal, the railroad for its transportation, the bricklayer, the furnace stoker and others for their labour—even supposing the resultant ashes were no worse than merely useless?

In place of the suppositious grain incinerator, consider the economic processes connected with a distillery or brewery. Is its output from use of grain and other raw materials better or worse than ashes—from the whole public's standpoint? It is not necessary to take the extremist's view, that absolutely no benefit or legitimate enjoyment results from the drinking of whisky or beer. But who is bold enough to assert that the harm wrought in a community does not vastly outweigh benefits derived therefrom—and does not overbalance also the trade contributions of the manufacturing and distributing processes? Especially when it is considered that—after some temporary business dislocation—the capital and labour used could be turned ultimately to more productive service.

The last official Dominion census indicates that for every million dollars of capital invested in the manufacturing of intoxicants, under $55,000 is paid annually in wages. A similar amount of capital employed in the making of bread, etc., involves the paying of practically four times that amount in wages—while in the making of clothing a corresponding investment results in wage payments of about $525,000, or a showing almost tenfold that of the liquor business. For every million dollars invested in the making of liquor, Dominion official census figures show 87 employees. For other manufacturing processes the comparative figures are: iron and steel 302, bread, etc., 523, boots and shoes, 684, clothing 1,239.

This, I think, goes far to prove that from an economic standpoint the manufacture of liquor is not an advantage, far from it, that it is more to be considered as a bane to the country.

I come to another phase of the question, to which I alluded a moment ago. Parliament has discussed this question many times—in 1884, on a motion of the present Minister of Trade and Commerce (Mr. Foster), in 1889, and in 1892. Parliament never voted down a resolution in favour of prohibition, but it has adopted that resolution on three different occasions—of course, with a rider added to it; that the resolution should be given effect to only when it had been adopted by the people. The resolution is as follows, and it contains, I think, all the arguments necessary to support its adoption:

That the object of good government is to promote the general welfare of the people by a careful encouragement and protection of whatever makes for the public good, and by equally careful discouragement and suppression of whatever tends to the public disadvantage.

That the traffic in alcoholic liquors as beverages is productive of serious injury to the moral, social and industrial welfare of the people of Canada.

That despite all preceding legislation, the evils of intemperance remain so vast in magnitude, so wide in extent, and so destructive in effect, as to constitute a social peril and a national menace.

That this House is of the opinion, for the reasons hereinbefore set forth, that the right and most effectual legislative remedy for these evils is to be found in the enactment and enforcement of a law prohibiting the importation, manufacture and sale of intoxicating liquors for beverage purposes.

On the motion of Mr. Thomas White, the resolution was amended by adding the following words:

And this House is prepared, so soon as public opinion will sufficiently sustain stringent measures, to promote such legislation so far as the same is within the competency of the Parliament of Canada.

This amendment was adopted by 124 votes against 40. In 1898, the administration of the right hon. Sir Wilfrid Laurier gave effect to the wishes of the people by calling for a Dominion referendum on the subject of prohibition. I am sorry to say that on that occasion the people of Canada did not seem to have attached to the question the importance which they attach to it to-day. But Canada was not then face to face with the conditions which now confront us. Not more than half the voters cast their ballots in this referendum. A summary of the voting on that occasion is as follows:

Ontario—	
For prohibition	154,498
Against prohibition	115,284
Majority for prohibition.	39,214
Quebec—	
For	28,436
Against	122,750
Majority against	94,324

Nova Scotia—	
For	34,678
Against	5,370
Majority for	29,308
New Brunswick—	
For	26,919
Against	9,575
Majority for	17,344
Prince Edward Island—	
For	9,461
Against	1,146
Majority for	8,315
Manitoba—	
For	12,419
Against	2,978
Majority for	9,441
British Columbia—	
For	5,731
Against	4,756
Majority for	975
North West Territories—	
For	6,238
Against	2,824
Majority for	3,414
Total for prohibition	278,380
Total against prohibition	264,693
Majority for prohibition	108,011
Majority against prohibition	94,344
Net majority for prohibition	13,667

The Government of that day decided that, in view of the small majority, and in view also of the decided stand that had been taken by the province of Quebec on the question, it would not be wise to bring in a Dominion Prohibition Act, and so the matter was allowed to stand as it was. But I wish to give to the House some idea of the great progress that has been made in the province of Quebec since this adverse vote was given on the 28th of September, 1898. On that occasion Quebec declared against prohibition by a majority of 94,324. We have in the province of Quebec 72 constituencies in the local House, and of these 44 have "gone dry" as follows:

Argenteuil, Bagot, Beauce, Bellechasse, Bonaventure, Brome, Champlain, Charlevoix No. 1, Charlevoix No. 2, Chateauguay, Chicoutimi, Dorchester, Drummond, Gaspé No. 2, Huntingdon, Iles-de-la-Madelaine, Kamouraska, Lac Megantic, Lac St. Jean No. 1, Lac St. Jean No. 2, Levis, L'Islet, Lotbinière, Maskinonge, Matane No. 1, Matane No. 2, Megantic, Montmagny, Montmorency No. 2, Nicolet, Pontiac, Portneuf, Richelieu, Richmond, Rimouski, Saguenay, Stanstead, St. Hyacinthe, St. Maurice, Temiscaming, Temiscouata, Wolfe, Wright, Yamaska.

This shows that the great majorities of constituencies in the province of Quebec, of their own volition, have adopted prohibition, and have carried it into effect by the action of their county councils or otherwise. This shows a tremendous change in public opinion; and I am satisfied that if there were a referendum to-morrow in Quebec on the subject of prohibition, especially at this moment, the reform would be adopted by an overwhelming majority. In support of this, I desire to give further evidence.

If prohibition has made tremendous headway in the province of Quebec, it is largely due to the efforts of the Roman Catholic clergy. In former days, the Dominion Alliance and other prohibition organizations were recruited largely from those of the Protestant faith. Of course, the Roman Catholic church has always favoured temperance not only in liquor but in everything else. But in the last few years, in the province of Quebec, they have taken a decided stand. At the head of the Roman Catholic clergy in the province is the Archbishop of Quebec, Monseigneur Roy, who is the acting assistant to His Eminence, Cardinal Begin, head of the Roman Catholic church in Canada. I wrote to Monseigneur Roy and sent him a copy of this resolution, asking his opinion upon it. His answer is as follows:

Archbishopric of Quebec,
February 20, 1916.

Dear Sir,—This is about my opinion on the Stevens motion:

1. The prohibition movement is serious, profound and irresistible.

2. The manufacture and sale of intoxicating liquors in the present conditions certainly constitutes one of the worst plagues of the country.

3. Public opinion, properly enlightened and directed, has expressed itself thereon with a clearness and a persistency which can leave no doubt.

4. To establish the prohibition regime in the rural parts and small towns, and have the trade free in the large centres, is a grave error and opposed to common sense.

5. The present war furnishes an excellent opportunity for the Government and Parliament to intervene to deliver us from a public plague, and throw off the degrading yoke of the manufacturers and dealers in alcoholic liquors.

6. The 240 municipalities and towns of the diocese of Quebec have of their own free will voted for prohibition Alone, the city of Quebec stands as the supreme entrenchment of the enemy, driven away from everywhere else. Still, four-fifths of the population of Quebec want prohibition.

Conclusion: The Parliament at Ottawa will meet the wishes of the very large majority of the Canadian people if it places the whole country under the beneficent regime of prohibition. Please accept, dear Sir, with my congratulations, the assurance of my personal esteem and of my entire devotion to the cause which you wish to serve.

(Sgd.) P. E. Roy,
Arch. de Sel.

Hon. Charles Marcil, M.P.,
Ottawa.

Here we have in the Eastern Townships of Quebec a Bishop of the Roman Catholic Church who is in a position to give a judgment on the question from the standpoint of both French and English residents of that province. His Lordship, the Bishop of Sherbrooke, sent me a copy of the following letter addressed to Mr. A. W. Fraser, Chairman of the Committee on "A Patriotic Appeal for Federal Prohibition:"

Sherbrooke, 24th January, 1916.

Dear Sir,—Answering your letter of 17th inst., I beg to say I am one with you and the other members of your committee in believing our Federal Parliament ought to adopt a law of "prohibition during the war and a reconstruction period of three years thereafter."

A powerful, irresistible prohibition wave is gradually sweeping the country. What a blessing, therefore, would it not be if our Federal legislators were to cover the whole field by the single stroke of a law such as proposed by your committee. That such a law with provisions made for industrial, medicinal and liturgy's requirements would prove acceptable to the great mass of the Canadian people, is my honest and intimate conviction.

Hoping our legislators may think as you and I do on this most important question, I remain,

Dear Sir,

Yours in Jesus Christ,

(Signé) x Paul, Bishop of Sherbrooke.

The Bishop of Three Rivers writes the following:

Bishopric of Three Rivers,
January 26, 1916.

Hon. Charles Marcil, M.P.:

Sir,—I have read the Stevens motion, which you have communicated to me, and which you are to second on the invitation of the temperance societies. I do not hesitate to tell you that I would be very satisfied with a law so prohibiting the manufacture, importation, and sale of intoxicating liquors.

It is understood that the wine necessary for the Holy Sacrifice will be excepted.

I have the honour to be, Sir,

Your humble and devoted servant,

x F. X., Bishop of Three Rivers.

The Bishop of St. Hyacinthe writes:

Bishopric of St. Hyacinthe,
January 26, 1916.

Mr. Charles Marcil,
Member for Bonaventure,
House of Commons,
Ottawa, Ont.

Sir,—In answer to your letter of the 25th of this month, I wish to tell you that I am favourable to a law prohibiting the sale of intoxicating liquors in the whole Dominion of Canada. Still, that law should contain the necessary exceptions for the needs of worship, medicine, and industry. The present circumstances seem to demand the adoption of such a law destined to promote the public good. Moreover, in all the provinces of Canada public sentiment is favourable, by a majority, to this wholesome law of prohibition. I have the honour to be, with great consideration, your humble and devoted servant.

x A. X., Bishop of St. Hyacinthe.

The Bishop of Rimouski writes myself and Mr. Fraser the following letter:—

Bishopric of Rimouski,
January 24, 1915.

Mr. A. W. Fraser,
Ottawa.

Sir,—I have read your communication of the 17th inst., as well as the patriotic appeal for a Federal prohibition law for liquor during the time of the war in particular. I desire to inform you that I am favourable to such a project, and that I will give it all the help I can. It seems to me that it is of the highest importance, even under all circumstances, to favour and protect our people against all temptation, the dangers and the incalculable abuses of intoxicating liquors With such sentiments,

I remain, Sir,

Your most obedient servant,

x Andre Albert Blais,
Bishop of Rimouski.

The Bishop of Joliette writes:

Joliette, Que., January 21st, 1916.

A. W. Fraser, Esq., Chairman,
Committee of the Patriotic Appeal for Federal Prohibition, Ottawa.

Dear Sir,—I beg to acknowledge receipt of a copy of the Patriotic Appeal of your committee, with your favour of the 17th inst.

I would cheerfully give my approval to the movement, with the proviso mentioned in your letter regarding alcohol for industrial and medicinal purposes, and including also, in those exceptions, what is necessary for ecclesiastical or ministerial functions.

In the diocese of Joliette, we anticipate, after a plebiscite in every parish, a total suppression of the legal commerce of spirituous liquors, as it is now in the diocese of Three Rivers. We would be glad to see this temperance movement reinforced by an Act of the Federal Government.

I beg to remain,

Yours respectfully,

(Sgd) x Guillaume Forbes,
Bishop of Joliette.

I also wish to give an important testimony as to the disastrous effects of alcohol. This is from the city of Montreal, which by the very nature of things will remain the last stronghold of liquor in Quebec. It is in Montreal that the trade is the most strongly entrenched, and the large firms and the powerful influence in that city will of course combat prohibition as long as it possible for them to do so. The effects of liquor to-day in the city of Montreal is judged by no person better than the sheriff, who is in charge of the new jail which the province of Quebec has erected at great expense at Bordeaux. Hundreds and hundreds of the poor unfortunates of this unholy traffic are kept interned in that jail. The sheriff of Montreal writes:

Office of the Sheriff,
Montreal, February 1, 1916.

Hon. Charles Marcil, M.P.,
House of Commons,
Ottawa.

Dear Sir,—The question of prohibition will soon be discussed in the House of Commons. On this subject allow me to tell you what alcohol has done to people in the Montreal prison.

In 1915, out of 6,288 condemnations, 1951 were for drunkenness. Out of 5,101 sent to prison, 1,642 were sent there for drunkenness or 32 per cent. Three hundred and thirty-nine women were condemned for drunkenness.

What of the other offences for which delinquents have been specifically condemned: 75 per cent of these offences were committed by persons under the influence. The four cases of homicide reported in the statistics in the district of Montreal were committed while under the influence of liquor.

Alcohol plays such a large part in the prison statistics, that once it was removed there would be but few prisoners. My office as sheriff of the largest district in Canada has enabled me to ascertain this.

I have the honour to be yours truly,

L. J. Lemieux, M.D.,
Sheriff.

In addition to the evidence I have submitted, I have received from a large number of municpalities and societies all through the province of Quebec a resolution which is identical in terms. I will read it and then give the names of the municipalities and societies which have declared for it. The resolution reads:

That this council approves the resolution for prohibition of alcoholic liquors in Canada during the war, and for a period of three years after the war is over for the reconstruction of the country, and that a copy of this resolution be forwarded to the Right Hon. Sir Robert Borden, Sir Wilfrid Laurier, Hon. Mr. Marcil, and to the member of our constituency.

The following bodies approve of the resolution:

Council Notre Dame de Mont Carmel, Co. St. John; Cercle Agricole de Maniwaki, Que.; Temperance Society, Maniwaki, Que.; Township of Roxton, Que.; Council of Roxton Falls, Que.; Notre Dame de Mont Carmel, Que.; Village of Yamachiche, Que; Temperance Society, St. Georges de Henryville, Que.; Parish of Ste. Ursule, Que.; Town of Pointe Claire, Que; Town of Megantic, Que; Council of St. Denis sur Richelieu, Que.; Medical Society District of Richelieu, Que.; Council Parish St. Mathieu (St. Maurice), Que.; Village of Massueville, Que.; Village of St. Joseph de Richelieu, Que.; Parish of St. Joseph de Richelieu, Que.; Council of St. Boniface de Shawinigan, Que.; Parish of St. Damase, Que.; Council of Stanbridge Station, Que.; Anti-alcoholic League, Longueuil, Que.; Council Parish of St. Marcel, Que.

In addition to these petitions from my own province, I have been honoured by receiving from the province of Ontario two other communications which were sent to me direct, and which I would like to place upon Hansard, as I believe they agree pretty fairly with the trend of opinion in that province. The first of these petitions is from the town of Renfrew, which is represented in this House by the hon. member for South Renfrew (Mr. Graham). I had the pleasure recently, on the invitation of the citizens of that locality, of visiting Renfrew, for the purpose of assisting that noble work, the Canadian Patriotic Fund. The town of Renfrew, which has a population of 4,250, and from which liquor has been banished for the last five years, has subscribed this year $42,000 to the Canadian Patriotic Fund, thus at one stroke placing itself at the head of the communities of Canada as regards contributions. We were received in a magnificent temperance hotel erected by the citizens, and men and women, young and old, said that the day liquor was banished from Renfrew was a blessing to that community. This is the resolution:

Renfrew, February 23, 1916.

Hon. Chas. Marcil,
House of Commons,
Ottawa, Ont.

At a meeting of the members of the Baptist Church, Renfrew, held on the 31st inst., it was moved by A. A. Wright, and seconded by T. L. Main, and carried unanimously, that in the opinion of this congregation, it was most desirable, in the interests of our fellow countrymen, that the resolution introduced in the House of Commons by H. H. Stevens, M.P., and seconded by the Hon. Chas. Marcil, M.P., looking to the prohibition of the manufacture and sale of intoxicating liquor for beverage purposes, should be adopted.

Resolved, also, that a copy of the resolution should be sent to our Premier, Sir R. L. Borden, and also one to the Hon. Geo. P. Graham, our representative in the House of Commons, urging them to do their utmost to have the resolution adopted.

Signed on behalf of the congregation,

W. G. Draper, Clerk.

Here is another resolution from North Bay, where liquor unfortunately has in the past played a very important part:

North Bay, Ontario,
March 3, 1916.

We, the undersigned ministers of North Bay, Ontario, do hereby express our strongest endorsation of the resolution which is to be brought before the Parliament of Canada by Mr. H. H. Stevens and the Hon. Charles Marcil, namely:

"That at this time, when the Empire is at war, in the opinion of this House, the conservation of the wealth and resources of the Dominion, and the promotion of the efficiency of our nation would be materially aided by the prohibition of the manufacture, importation and sale of intoxicating liquors for beverage

purposes, and legislation of this character ought to be enacted forthwith."

Further, we herewith forward copies of this resolution to the Hon. Frank Cochrane, Sir Robert Borden, and Sir Wilfrid Laurier, with the earnest hope that they may be able to use their powers to have the said resolution most cordially adopted by the House.

Signed on behalf of the ministers of North Bay.

J. G. Bowles, Secretary.

At six o'clock the House took recess.

The House resumed at eight o'clock.

Hon. CHARLES MARCIL: The hon. member for Vancouver and myself have attempted to show that a profound feeling in favour of prohibition prevails generally in the various provinces of Canada. Before six o'clock I tried to give an idea of the immense revolution that has taken place in the province of Quebec in this connection. The more consideration I give to the matter, the more I am convinced that if, especially at this time, an opportunity were given to that province to express itself on the question of prohibition, there would be a majority in its favour. I have given the evidence of some of the leading men in that province to show the great change that has been brought about.

I am glad to be able to say that the effect of prohibition in those parts of Canada where it has been introduced has not been penalizing—far from it. On the contrary, it has been entirely to the benefit of the people; there are few instances in recent years where prohibition, after having been once accepted, was rejected. Take, for instance, the effect of the introduction of prohibition in Saskatchewan. I have here the following statement of Mr. Koepke, field secretary of the "Banish the Bar" crusade:

> The Liquor Act which was passed on the first of July last brought about a great change in this province, doing away with 417 bar licenses, all the club licenses in the cities, and the railroad licenses, and changing the wholesale places, 38 in number, into 23 Government-owned liquor stores.
>
> The province was divided into 67 districts, 19 of these having liquor stores or dispensaries, and the remaining 48 having no liquor stores. The immediate result of this was a great reduction in the bulk of liquor consumed. Government figures for the month of July showed a reduction of 95 per cent over the average amount, and since then figures anywhere from 80 to 90 per cent reduction. It has almost entirely done away with the treating system. It has stopped a great deal of recruiting in the army of drinkers. Great satisfaction is expressed all over the province. The people are delighted with all of the changes, except the dispensary feature. There is dissatisfaction in the centres where these Government-owned stores are established.
>
> According to the provisions of the Act, all liquor stores that were situated in towns of less than one thousand population could be attacked this year by a movement to vote them out. The vote was thus brought on in three districts out of nineteen. Also campaigns could be brought on to put in liquor stores where there were none, but out of the forty-eight only four attempted to put them in. This made campaigns in each of seven districts, three to close the liquor stores, and four to open stores. The election took place on the 13th of December last, resulting in a most decisive victory for the temperance forces. The three liquor stores were put out with large majorities, and the stores were kept out of the four districts by overwhelming majorities.
>
> In one district where there were seven towns in a row, the seven towns gave a total of 22 wet votes. One municipality, comprising 15 townships, gave a total of 14 wet votes, and over 400 dry votes. The results show conclusively that "booze" is in disfavour in this great prairie province, and it is safe to predict that next year the remaining twenty liquor stores will be abolished. The results of the foregoing votes are prophetic of the end of the whole dispensary system.
>
> The work in the province has been very encouraging, but very strenuous. The people are clamouring for a Dominion vote on the entire situation, having in view the total abolition of the intoxicating liquors for beverage purposes. Saskatchewan is ready for this next great step.

I shall refer to the effect of prohibition in the province of Alberta only by reading a despatch, published in the papers of Saturday, March 3, which tells how the second reading of the Prohibition Bill was treated in the Alberta Legislature, showing the unanimous feeling that exists among the representatives of the people. The despatch follows:

> Edmonton, Alta., March 3.—Practically without a word of comment, the Sale of Intoxicating Liquor (Prohibition) Bill was read a second time in the Legislature this afternoon, and now only awaits consideration by the House in Committee before it comes up for third reading and then becomes a law in the statute book of the province.
>
> The Bill, which goes into force on July 1, will effect prohibition in the province in so far as it is within the control of the provincial authorities—that is to say, it absolutely forbids the sale in Alberta, except in so far as it is required for medicinal and mechanical purposes. When the Act comes into force 281 wholesale and retail licenses become inoperative. At the time the referendum resulted in adoption of the Act on July 31 last by 19,500 majority, there were 253 hotel, 13 club and 55 wholesale licenses in operation.

In Manitoba, as the House has been informed, a referendum will be taken on this question on March 13 next. In the meantime, it may be interesting to mention the results of the votes that have already

been taken in Manitoba. On July 23, 1892, the vote for prohibition was 19,637; against prohibition, 7,115, a majority in favour of prohibition of 12,522. On September 29, 1898, at the time of the Dominion plebiscite, another vote was taken, with the following result: for prohibition, 12,419; against prohibition, 2,978, a majority of 9,441 in favour of prohibition. I think that there can be no doubt as to what the result of the coming referendum in Manitoba will be. We have, therefore, the three great prairie provinces arrayed on the side of prohibition.

The province of British Columbia is attracting a great deal of attention just now in this connection. It lies alongside one of the large American states which has just adopted prohibition. In convention at Nanaimo, the Orange Grand Lodge adopted the following resolution:

That this Grand Lodge strongly endorses the principle of the prohibition of the manufacture, sale and importation of intoxicating liquors, and approves of the movement now on foot to have such a law enacted in British Columbia.

They passed another resolution to this effect:

That this R. W. Grand Lodge of British Columbia comply with the request of the Executive Committee of the People's Prohibtion Movement and appoint a committee of three to accompany the prohibition delegates in their conference with the Government at an early date, and to act as a standing committee of the prohibition movement in promoting the interests of prohibition during the year.

I quote the following as an instance of a commercial body favouring Dominion-wide prohibition:

Because the Board of Trade of Regina, Sask., believes that, "conditions prevailing throughout the British Empire and countries allied with it demand the conservation of every available source of power," it has placed itself on record as favouring immediate steps towards federal prohibition.

The board, in a resolution, holds that the manufacture, importation and sale of intoxicating liquors are in themselves to a very great extent an economic waste and tend to lessen the forcefulness, energy and complete fitness of the people of the Dominion. The board urges Parliament to pass a law providing for prohibition and suggests that the measure be not repealed until after the question of repeal has been submitted to the voters.

Many resolutions have been passed by large religious bodies in Western Canada. At a recent meeting of the Session of St. Andrew's Church, Moosejaw, the following resolution was unanimously adopted:

Whereas a campaign has been launched in Ottawa and elsewhere, having for its object the abolition of the liquor traffic in all its branches from the Dominion of Canada, be it resolved that this session records its approval of the same, pledging its sympathy and support, and that the clerk be instructed to forward a copy of this minute to the secretary of the organization which is prosecuting this good work.

We have, therefore, a plain indication of the fact that the feeling in Western Canada is undoubtedly in favour of prohibition. But the most important step taken within the last few days is that which has been taken by Ontario, the greatest and largest province of this Dominion. The Premier of that province has introduced a measure, the details of which we are not familiar with now, but which aims at the introduction of prohibition into the province and the holding of a referendum later. Mr. Rowell, the leader of the Opposition, has come out in support of the proposal, and, according to the present indications, there is no doubt that the measure will carry the House and the province.

We have seen what has been done in Quebec, in Ontario, and in Western Canada. So far as the Maritime Provinces are concerned, Prince Edward Island has prohibition, and Nova Scotia has it, with the exception of Halifax. I understand, however, that a private Bill has been introduced in the Legislature of Nova Scotia having in view the object of doing away with the 46 or 47 licenses in the city of Halifax. That will leave under license in the Maritime Provinces only a portion of the city of St. John, and in respect of which similar steps will likely be taken. If at the present session legislation of this kind is not introduced in this Parliament, at the coming session the whole Dominion of Canada, with the single exception of the province of Quebec, which has not yet taken any official stand in the matter beyond the reduction of the number of licenses, will be in favour of prohibition.

In Quebec, as has been said, we have over 900 municipalities which have adopted prohibition. This shows that there is an immense feeling all through Canada in favour of this great change. Apart from its moral aspect, the economic side of the question has become of immense importance. The ordeal through which Canada is now passing makes it imperative on the representatives of the people to give the country an opportunity of doing its share in the great work we have undertaken of seeing humanity and civilization through in this war.

I wish to glance at the history of prohibition among our neighbours in the great republic to the south. A great struggle on

this question has continued there since 1845. In that year the State of Maine adopted prohibition and has maintained it ever since. It must be remembered that in the United States national prohibition of the manufacture, importation, and sale of liquor has never been adopted by the Federal authority, and under the Interstate Commerce law liquor can be forwarded from one state to another. Therefore prohibition has never had a fair and complete trial in the United States as it would in this country were prohibition adopted by this Parliament, because the root of the whole trouble is the manufacture, importation and distribution of liquor. In the United States on January 1, 1916, no less than 6,800 barrooms were closed and seven states went dry. Those states were Arkansas, Colorado, Idaho, Iowa, Oregon, South Carolina and Washington. The total population of these seven states is 8,253,993. The conditions in these states have been well described as follows:

Arkansas: The new law which goes into force in this State is said to be the most stringent yet enacted in any part of the United States. The penalty for liquor-selling is a year's imprisonment in the State penitentiary. The experience of the people with attempts at violation of county prohibition had made them determined to see that the voice of the people was effectively carried out.

Colorado: It is stated that during the last week of 1915 more than $2,000,000 was expended for intoxicating liquor in Colorado. Besides the saloons set out in the above table there were five breweries in operation which go out of business along with the bars. The city of Denver, which came under the prohibition regime, has a population of 245,423 making it the third largest of the prohibition cities.

Idaho: The Idaho prohibitory law is of unusual stringency. It is being attacked at the present time in a suit which is set down for hearing on appeal in the United States Supreme Court. This law provides punishment for the possession even by private citizens of any kind of malt or spirituous liquors.

Iowa: Notwithstanding the legal restrictions imposed by existing legislation in Iowa, there were in operation sixteen breweries, with a capitalization of $4,236,963. There will be no toleration of these so-called industries, and the buildings in which they are housed must be turned to some other use.

Oregon: Oregon is a very progressive State. Its natural wealth is vast, and its citizens are exceedingly enterprising. In it the city of Portland takes the second in population among the cities in which the traffic is entirely outlawed. Even drug stores will not be allowed to sell intoxicants for any purpose.

South Carolina: As already stated, the dispensary system disappears in this State, in which it practically originated as far as the United States is concerned. The new law allows importation by any person for private use of not more than one gallon of intoxicants per month. There is not much change as authorized dispensaries were very few.

Washington: In the extreme north-west of the Republic, lying just south of British Columbia, this big State will by its dryness, help the enforcement of prohibition when it comes in British Columbia. It contains the city of Seattle the largest prohibition urban area,with a population of 313,029. No other State has closed as many bars by going dry. It had also a number of breweries, some of them extensive and prosperous.

General: There are now eighteen States under prohibitory law, and the people have voted for prohibition in another, namely, Virgina, in which the change will take place on November 1st next. The dry States are now:

Alabama; Arkansas; Arizona; Colorado; Georgia; Idaho; Iowa; Kansas; Maine; Mississippi; North Carolina; North Dakota; Oklahoma; Oregon; South Carolina; Tennessee; Washington; West Virgina.

Five license States will vote on the question this year—Vermont in March, and California, Michigan, Montana and North Dakota in November.

Campaigning looking to State-wide prohibition also going on in New Mexico, Ohio, Texas, Utah and Wyoming. It is possible that other States than those which have already decided may also vote at the November election. Outside the prohibition States that have been named, there is an immense prohibition territory obtained through the local option method. The question of a national constitutional prohibition amendment is now before Congress. Surely this is a mighty sweep, and a prediction of ultimate and complete success.

In describing the results of the coming into operation of prohibition in the seven States on January 1st, the American Issue said:

"Portland, Oregon, has a population of nearly 300,000—about one-third greater than Columbus, Ohio. Portland, along with the State, became dry January 1st. For the twenty-four hours ending last Monday night, following the closing of saloons on Saturday, not an arrest was made for drunkenness or disorderly conduct. No saloons city in the world of equal size has such a record."

The state of Kansas is often mentioned in connection with prohibition. I do not wish to dwell upon it at length, because members who have at all studied the question of prohibition know that Kansas stands as a shining example of what prohibition may do. Will we be penalizing the people of Canada if we impose prohibition on them for at least three years, during the war and the period of reconstruction following it? Let us see what has been the experience of one of the leading states of the Union. This is an official document, signed by the Govener of the state, and dated the 6th of March, 1915:

Kansas people are stronger for prohibition to-day than ever before. At the end of nearly a generation under prohibition, it may truthfully be said that the prohibitory law of this state was never so well enforced as now, and never so generally approved, nor is the reason for this approval far to seek.

As a result of prohibition there are forty-eight counties which did not send a prisoner to the penitentiary and eighty-seven counties that did not send an insane patient to the asylums last year; more than a dozen Kansas counties have not called a jury in ten years to try a criminal case; fifty-three counties were without paupers in their alms-houses.

The Kansas death rate is the lowest in the world—7½ for each 1,000 persons; there are more students in the Kansas colleges and universities in proportion to population than any other state in the Union; the bank deposits in ten years have increased from $100,000,000 to more than $200,000,000. Kansas, with a population of a million and three-quarters, has as much wealth as Chicago with a population of two and one-half million, and the per capita wealth of Kansas is the greatest of any state in the Union—approximately $1,700 for every man, woman and child in the state.

The annual expenditure for liquor has been reduced from $21 per capita, the average in the United States, to $1.25 in Kansas; illiteracy among Kansas people has been reduced to two per cent—the lowest in the United States.

The value of the field, orchard and live stock crops for 1914 was 638 million dollars. I do not claim that the prohibitory law is the sole cause of this great agricultural wealth, but surely this wealth is evidence that prohibition does not destroy business and the property of the state. The state of Kansas has no bonded debt except $370,000 held by the Kansas school fund.

As a matter of fact, there is no sound argument against prohibition, either moral or economic, not even the argument that it increases taxes, which it does not do. The taxes in Topeka are just about the average of cities in the Middle West, many of which get a large revenue from saloon licenses.

The attacks on prohibition in Kansas are simply the false representations of that enemy of the home, the church, and the state—the saloon power.

National prohibition is coming and Kansas and her people are ready to take the lead in the fight.

(Signed) Arthur Capper,
Governor.

I have read Governor Capper's communication and heartily concur in all that he says.

(Signed) S. M. Brewster,
Attorney General.

I do not intend to refer at any greater length to Kansas, but here is a State which adjoins part of our western country, and in which prohibition has been tried; I refer to North Dakota. With your permission, Mr. Speaker, I will read an extract relating to that State in order that Canadians may know what is going on alongside their border. Here is a statement by Judge Charles A. Pollock, in the Christian Advocate, a publication of the highest standing. Judge Pollock has been presiding judge of the district court for nineteen years. This is what he said:

When prohibition was adopted in North Dakota we had a population of about 180,000. It was urged that if the prohibitory system was engrafted upon our statute book the state would not develop. This statement, like others from the saloon source, has been shown to be untrue. We now have a population of about 700,000, and the per capita wealth of our people is approximately $2,000—the highest of any state in the Union. South Dakota, when admitted to the Union, had something like 250,000 inhabitants. After having had prohibition for four or five years it returned to the license system. That state now has a population of less than 600,000.

With us as the saloon interests decrease in a community the banks and trust companies increase. The last reports from our banking interests show a constant and healthy development, the aggregate deposits mounting up into the millions. Statements of the banks in Fargo alone show an aggregate of about $10,000,000. Fargo has grown from a city of 6,000 under the license system to one of 20,000 under the prohibitory. It has all modern improvements—like heat, water works, paved streets, street cars, electric lights and every convenience attendant upon city life.

Many of those who were most bitterly opposed to prohibition have been won over and are now planted firmly upon the side of the present system, convinced, it is true, against their will, but now firm in their new position because they cannot put aside what they see and know to have been fully demonstrated. They have in a large number of cases been manly enough to step forward and give utterance to the unshaken faith which they now possess. They declare that under no considerations ought we to permit the saloon to return to our borders. I have the written statement of most of our leading business men, speaking from their special viewpoint of the beneficial effects of prohibition. Many of them were determined opposers of prohibition when it was adopted.

Under these conditions it is the height of impudence for the liquor men to assert that our law has been a failure, and, therefore, we ought to cause its repeal. If it is a failure it is because liquor has been sold in larger quantities, and if that be true the vendors of such liquor do violence to their own interests by attempting to destroy such a valuable field in which to carry on their traffic.

I do not need to quote any more on that point, because I think that is a very good statement of the case. The United States affords us in some of its States an example of the results of prohibition. These should not debar us from doing what we think ought to be done under the circumstances and for the very special reasons that we have to contend with. Mention was made this afternoon by the hon. member for Vancouver (Mr. Stevens) of what Russia had done. I shall not refer to Russia, because that country has witnessed the greatest change of all time, so far as the liquor question is concerned. The people of this country have a particular interest in the problem outside of what has happened in Great Britain, to which I shall refer in a moment. There is France, the land of the vintage, the land of liqueurs,

the land of the golden spirit. France, of all the countries in the world, was probably the country where it might have been expected that temperance or prohibition in any shape or form, would make the slowest progress, and yet we see the great revolution that has taken place there. When we read in the newspapers of what the gallant French army is doing, we must realize that that army is composed of temperate soldiers, trained under prohibition. Liqueurs, absinthe, and all such liquors have been banished from the French army. I desire to read a couple of extracts to show what France has done in the way of bringing about a change.

Repeated attempts have been made to deal with alcoholism, but with little success, due largely to the electoral power of the enormous number of persons engaged in the vine industry, the making of wine, the distilling of absinthe, and other spirits. In 1910 it was reported that France had one wine and spirit bar to every 82 of the inhabitants as against one to every 246 in Germany, 430 in England, and 9,900 in Norway and Sweden.

In 1906 the Academie de Medecine of France invited its members to collect statistics in reference to deaths, etc., due to alcohol. The reports were appalling. From Normandy it was stated: "The consumption of alcohol has risen steadily and enormously. The number of births has decreased by about one half. The mortality has risen 4 per cent since 1831. Crime has increased over 4 per cent. Lunacy, suicides, and sudden deaths have largely increased, while the number of men unfit for military service is also rapidly increasing." The Government became alarmed and issued white placards calling the nation's attention to the evils of alcoholism. Temperance diagrams anl lessons were introduced into the public schools, and other methods were adopted with a view of staying the curse.

M. Briand and his Government, in 1909, supported a measure in the National Assembly for the prohibition of the spirit absinthe and to limit the number of liquor bars to not more than one to every 200 of the inhabitants. This moderate reform, however, was defeated: The Prime Minister declared: "The Government views the situation with alarm; it is terrible, and it is a question of national interest, for the very life of the nation is at stake." In 1911 a measure simply reducing the number of liquor bars was carried through the Senate by 137 against 132. The Bill was, however, rejected in the Chamber.

Then we come to the change which took place when war broke out:

The Government, on August 11, 1914, issued an official proclamation prohibiting the sale or absinthe during mobilization, and a number of Prefects, including Paris, ordered the closing of all drinking places at 8 p.m. The results were declared to be so satisfactory that the temporary closing was continued until January 10, 1915, when the President issued a decree permanently prohibiting the sale of absinthe, and on February 12, 1915, this action was approved by the National Assembly and a measure passed prohibiting for all time the manufacture, exportation, and sale of absinthe and all similar liquors. The Paris correspondent of the Standard, on January 15, 1915, in a lengthy article said: "Looked at from a broad point of view these decrees are as much a measure of national defence for the future as the operations in the field are at present one. They constitute a declaration of war against the insidious domestic foes, the pests of alcoholism, and all its train—tuberculosis, degeneracy, and diminished nativity. A reduction of 50 per cent in the consumption of cheap spirits would soon make itself felt in an increased birthrate, in a reduction of infant mortality, and in a more vigorous and healthy generation of Frenchmen. It is not only doctors, but economists who have already cried out against the scourge of alcoholism."

M. Ribot in the Chamber of Deputies on February 15, 1915, said:

If the Chamber stops at the suppression of absinthe only, it will not have gone for enough. There must be a reform of the whole legislation on all alcoholic liquors. This question will be forced on all governments consequent on the enormous evils flowing from alcohol.

It was then decided by a vote of 481 against 52 to refer the question of "Alcoholism in France" to the Commission of Hygiene "to consider and report how best to deal with the evil."

I shall make a passing reference to our great enemy, Germany, simply by giving a couple of quotations to show what has been done there. I do not wish to set up Germany as an example, but, as indicating that there was preparedness in Germany on this subject also, let me give a few facts. As far back as 1911, in the report of the Prussian Government, it is stated:

The use of spirits among the wood-turners has practically ceased; beer drinking is growing less and less. Milk is taking the place of beer." A number of labour and Socialistic organizations have also issued recommendations to their members to limit the use of alcoholic liquors. In March, 1912, a Local Veto Bill was for the first time introduced into the Reichstag. The Bill provided that "Every precinct in the German Empire, its colonies and protectorates, has the right to prohibit within its borders the industrial manufacture, importation, purchase, and sale of alcoholic beverages." The measure was supported by a petition signed by over 500,000 electors.

At the outbreak of the war an order was issued by the General Staff prohibiting spirits from being served to the millions of German soldiers and sailors during mobilization. And this prohibition has since been made permanent by special orders. The keepers of beer halls and other places where alcoholic liquors are sold have been rigidly restricted, under heavy penalties, as to the amount of beer which can be supplied to the soldiers and sailors. During seven months' travel as an American citizen, in Germany after the outbreak of war, Mr. Page Gaston, F.R.G.S., Hon. Secretary of the International Prohibition Confederation, says that among the hundreds of thousands of German

soldiers and sailors whom he saw, there was but one soldier intoxcated, and no sailors. To reduce the consumption by the general public and to preserve the grain for food, an order has been issued fixing a 50 per cent reduction in the production of beer.

On the other hand, when the German soldier "prepared" as he was, invaded Belgium, and committed the acts of which we know, alcohol had its place and its influence. The following extract from the Pioneer describes the effect of alcohol upon the German soldiers:

When the German armies invaded Belgium they raided the wine cellars and drink shops of the cities and towns which they occupied, and gave rein to their almost invariably strong drinking proclivities. It was largely because of the heavy drinking that the German soldiers gave themselves up to the wildest orgies of brutal outrage that will be a disgrace to the name of their nation for all time. Bestiality and slaughter, such as we never before heard of, have been proven by witnesses of the highest character and reputation. Every conceivable crime against God and humanity was perpetrated by alcohol-maddened creatures who could not even be called brutes without slander on the lower animals. The utter submersion in these fiends in human form of every vestige of manhood has opened the eyes of the nations to the appalling possibilities of infamy that can be attained only through the influence of intoxicating liquors.

I have said enough on that point, I believe, to convince all those who are open to conviction that prohibition is a good thing, viewed from that standpoint. Let us see now the situation in the large cities where the prohibition problem is probably the most difficult of solution, where liquor has its stronghold, and where great work will have to be done to bring home the lesson of the actual experience of workingmen. The Temperance Society of the Methodist Episcopal church in the United States consulted some of the largest employers of labour in the states of Pennsylvania, Ohio, Illinois, West Virginia, as to how liquor affected their workmen and how they treated the heavy drinker, the moderate drinker, and the total abstainer. I will quote some of the answers given by these great employers of labour:

The efficiency of a man is reduced in exact proportion to the amount of alcohol he drinks. The total abstainer ranks above the moderate drinker in reliability and efficiency in all classes of work nearly as much as the moderate drinker does above the heavy regular drinker.—The Follansbee Furnace Company, Follansbee, West Virginia.

We give bonuses to abstainers among our foremen. Our aim is to keep our organization free from liquor, and we base this upon its commercial value to us.—The Delaware River Steel Company, Chester, Penna.

Moderate drinking is detrimental to efficiency and reliability.—The Penn Steel Castings and Machine Company, Chester, Penna.

Drinking, even moderately, interferes with efficiency and reliability.—The Nicetown Plate Washer Company, Nicetown, Philadelphia, Penna.

No one remains a moderate drinker. They either stop altogether or become heavy drinkers. We discharge without mercy men who report for work under the influence of liquor.—The Harrisburg Pipe and Pipe-Bending Company, Harrisburg, Pennsylvania.

We use every moral force to keep men out of saloons, and we never advance any man who drinks.—The Wyoming Shovel Works, Wyoming, Pennsylvania.

In advancing men the abstainer always gets the preference. We would prevent the use of liquors entirely if we could. The man who does not drink at all stands his work better as a general rule.—The Union Rolling Mill Company, Cleveland, Ohio.

We are opposed to the frequenting of saloons and the drinking of alcoholic beverages, but it is, of course, difficult to dictate what a person shall do after working hours. When promotions are made men are examined physically, and when signs of liquor are noted on their breath they are rejected, even if otherwise O. K. We know from general observation that a man's efficiency is reduced 30 to 50 per cent through the use of alcohol.—The David Bradley Manufacturing Works, Bradley, Illinois.

Any amount of alcohol is injurious. We do not utterly prohibit the use of such beverages outside of working hours, but hope to be able to do so some day. The day will come when no drinker will even expect to get a job.—The American Manganese Manufacturing Company, Dunbar, Pennsylvania.

The men who drink alcoholic liquors, even if they are not known to become drunk, are not advanced to responsible positions.—The A. M. Byers Company, Pittsburg, Pennsylvania.

In our work we cannot use a man who drinks liquor. Men who use it at all are not in a condition to work anywhere in it with the man who lets it alone. We hope the traffic in liquors will soon be voted out of existence.—The McInnes Steel Company, Ltd., Corry, Pennsylvania.

We object to drinking and to the frequenting of saloons at any time, but do not attempt to prohibit it. Alcohol should be cut out entirely. Its moderate use has a bad effect.—The American Steel Foundries, Alliance, Ohio.

We try to encourage abstinence by furnishing oatmeal water, milk during the noon hour, and good running cold water throughout the plant. We have made headway by so doing.—The Chicago Malleable Castings Company, Chicago, Illinois.

Abstinence from the use of intoxicating liquors increases both the efficiency and reliability of employees. In our safety and welfare work among employees attention is called to this fact.—The Illinois Steel Company and the Indiana Steel Company, both of Chicago, Illinois.

The total abstainer produces more work, recovers from accidents quicker and is more regular. We are unable to ascertain whether our employees frequent saloons outside of working hours, but we carry on a temperance propaganda in connection with our safety first movement.—The Upson Nut Company, Cleveland, Ohio.

We employ no drinking men when enough abstainers are available.—The DeForest Sheet and Tin Plate Company, Niles, Ohio.

I could read many more, but I do not wish to weary the House. I commend the opinions I have read to the consideration of those workingmen who imagine they can benefit themselves, their families, or their country by even a moderate use of alcohol. They are only sowing in their own constitutions the seeds of future illness or incapacity, to say nothing of the effect of this indulgence upon those who come after them. Besides, as stated in one of these letters, the moderate drinker does not remain a moderate drinker; he either drops it altogether or becomes worse.

On the moral issue, I wish to give only three quotations from as many leading men, whose names are outstanding in the history of modern affairs—two in the United States and one in England. First, I quote Cardinal Manning, one of the greatest men England has produced in the last hundred and fifty years, a man who stood on the same plane with Gladstone and a very few others in greatness and in fame. Cardinal Manning said:

> The drink traffic is a public, permanent and ubiquitous agency of degradation to the people of these realms. The drink trade of this country (England) has a sleeping partner which gives it effectual protection; every successive Government raises at least a third of its budget by the trade in drink. The drink trade is our shame, scandal and sin, and unless brought under by the will of the people, it will be our downfall. Alas, in America also does the "sleeping partner," for a money consideration, give its protection to the drink trade. Do you know how you will help to break up the unholy alliance between the Government and the greatest fraud of the age? Vote against it.

One of the great churchmen of the United States, Archbishop John Ireland, of St. Paul, Minnesota, says:

> Would God place in my hands a wand with which to dispel the evil of intemperance, I would strike the door of every saloon, of every distillery, of every brewery, until the accursed traffic should be wiped from the face of the earth.
>
> The great cause of social crime is drink. The great cause of poverty is drink. When I hear of a family broken up, I ask the cause—drink. If I go to the gallows and ask its victim the cause, the answer—drink. Then I ask myself in perfect wonderment, why do not men put a stop to this thing?
>
> The Catholic church is absolutely and irrevocably opposed to drunkenness and to drunkard making. In vain we profess to work for souls if we do not labour to drive out an evil which is daily begetting by the ten thousand and peopling hell. In vain we boast of civilization and liberty if we do not labour to exterminate intemperance. Education, the elevation of the masses, liberty—all that the age admires—is set at naught by this dreadful evil. The individual conscience is the first aim in opposing it, but the individual conscience has to be strengthened and supplemented by law. The claim of saloon keepers to freedom in their traffic is the claim to spread disease, sin, pauperism.

Archbishop John J. Keane says:

> Unfortunately for the liquor saloon and for the saloon people, it is not in our power, as Americans, to consider their business as one promotive of public morality and religion, but the very contrary: not as a business tending to the greatest good of the greatest number, but but the very contrary; not as a business that should be fostered and favoured by legislation, but the very contrary; not as one that should be granted special privileges on Sunday, but the very contrary; not as a public work of necessity or charity, but as a public curse and scourge and menace.

Though our relations with the United States are very close, though their influence over us in many respects will be transcendent, yet we are more concerned with Great Britain than with our neighbors to the south. The example set by some of the states of the United States in repealing their liquor laws is having its reflex action in Canada, not only in Ontario and Western Canada, but in the country as a whole. As regards Great Britain, we have had the words of Mr. Lloyd George quoted to-day: that England was up against Germany and Austria, but that her greatest enemy was drink. What has been designated as the "trade" in England has enormous power and influence. Notwithstanding the example set by the King, notwithstanding the example set by the churches and public bodies and public men throughout the United Kingdom, notwithstanding the thousands of lives that are sacrificed upon the battlefield, all the victory that the temperance forces could obtain in England was a reduction of liquor selling hours to five and one-half hours a day, under the Defence of the Realms Act. But the change under that reduction has been enormous. As Cardinal Manning very truly said:

> The time will come when England will have to take up this question and deal with it thoroughly. Otherwise her existence will be at stake.

If England were to be vanquished in this fight—which God forbid—we have it on the very best authority that the great cause of her downfall would be drink. I have here a statement by George B. Wilson, Secretary of the United Kingdom Alliance, from which I wish to quote:

> The licensing statistics for 1914 reveal the fact that for the first time during the last twenty years, with one insignificant exception, the convictions for drunkenness among women have gone up, in a year when the convictions among men have gone down. While the convictions of men have fallen from 153,112 in 1913,

to 146,517 in 1914, the convictions of women have increased from 35,765 to 37,311, or over 4 per cent.

We in Canada have the satisfaction of knowing that the Canadian woman at least has so far been the enemy of the liquor traffic. She is the mother of the family and knows what liquor means; liquor for the offspring, liquor for the present, liquor for the future; she has learned what it meant in the past. Is she not the best judge? The women of Canada have on all occasions stood by an overwhelming majority for prohibition of the liquor traffic, and surely they have reason to be heard. They are in a position to know and to judge. How much better is the position of our women to-day than the position of the poor women in a country where prohibition does not exist; in London, for instance, where the hours have been reduced by five and one-half hours a day. I cite from the official organ of the W.T.A.U.:

Early last year, the Executive Committee of the Women's Total Abstinence Union of Great Britain, undertook to obtain evidence as to the extent of this drinking, by making close observation of certain public houses in London. The work, of course, was mainly done before the new regulations came into force limiting the hours of liquor selling, and some of the evidence obtained was shocking. Here are extracts published in the January 1916 number of Wings, the official organ of the W.T.A.U.:

The first and chief method for obtaining evidence was the watching of public houses. In each case the observations were taken by two workers. The time spent in watching was 149 hours. The number of houses watched, 50. The number of women seen entering these public houses during the above hours was ten thousand six hundred and thirty-one (10,631), an average of over 71 an hour. The number of children left outside was 756.

It is only fair to say that, in a large number of cases, comparatively few women were seen by our watchers to enter public houses, and that many of those who did enter, only remained for a short period. It is cheering to be told by one of our branch secretaries that the women in her town would be ashamed to be seen going into a public house.

But the following facts show that the evil is very great in some parts.

Take the case of a single public house in S.W. London, observed on Nov. 22—a large house with six doors and one bar for women only. In the two morning hours (11.30 to 1.30) 404 women entered; 300 of these with soldiers; 18 women became intoxicated; 13 soldiers treated women; 15 women treated each other; 36 children were left outside.

In four hours on the evening of the same day (5 to 9 o'clock), 325 women entered (182 of them with men); 3 women were intoxicated; 5 evaded the "no treating" order; 14 children wer left outside.

In N.W. London on Nov. 22nd, in 4¾ hours, 894 women entered one public house.

In N. London, in a single hour (9 to 10 p.m.) there went into one house 268 men and 577 women (total 845), many of the women being young.

In a S.W. London suburb, in 35 minutes (11.30 to 12.05 a.m.) 77 men and 82 women entered one house.

In many cases children were left outside, sometimes for long periods—some in prams and mailcarts; some, scantly clothed, on the doorstep, and this on rainy, chilly nights. One baby was left outside for an hour and a quarter. Children were constantly looking in at the doors to find their parents. A child of 6 said she was waiting for "Mummy" and that she was "inside there." One night at 8.45, a group of miserably-clad children stopped a worker and enquired: "Please could you tell us what time they turn the mothers out of the pubs.; we are so cold and hungry."

One Sunday afternoon, five women, mostly young and quite drunk (one incapable of standing alone) amused themselves for nearly an hour by tossing two babies from one to another.

A young woman was seen hopelessly intoxicated on a suburban common. A friend who was with her, but sober, said she was in this condition every Monday, and more or less so every day as long as her allowance lasted.

In this country fortunately, we have at the present time to deal with liquor as it affects the man; but who can say that, if the liquor traffic is allowed to permeate this country and to go on unchecked—it will not do so, because public opinion will not allow it—the day will not come when the same spectacle which is seen to-day in the city of London will not be enacted in some of our great cities? In this time of crisis it is our bounden duty to give prohibition a fair trial, not only on economic, but on moral grounds. I have given a glimpse of what is taking place in the United States, and in the city of London, and let me read a few lines from the pen of a man who has presided in the municipal court of the city of Chicago, one of the largest cities in the United States. In Chicago the consumption of drink is probably more extensive than in any other part of the American Union. This is the judgment of Judge Wm. M. Gemmill, who every morning has an army of wrecks and derelicts brought before him:

Booze is the mother of crime. It gives life and sustenance to slums, dives, brothels, gambling dens and "pay-off joints." It nerves to his deed the homicide, the burglar, the thief, and the thug. It fires the brain of the prostitute and the pander. It feeds and inflames the passions of the weak-minded and the degenerate.

I have tried an army of 50,000 human derelicts, most of whom were booze-soaked. With faces red and bloated, with eyes dull and languid, with bodies weak and wasted, with clothing foul and ragged, this vast army is forever marching with unsteady step to the graves of

the drunkard and the pauper, or to the prison and workhouse.

I have looked into the tear-stained faces of a still larger army of fathers and mothers, brothers and sisters, wives and husbands, as they have pleaded for the miserable wrecks that booze has made. I have seen with this army ten thousand pale-faced, hollow-cheeked, ragged, hungry, and starving children, cursed by booze.

Booze has caused 200,000 divorces in the United States in the last twenty years, and adds 25,000 more to this number every year. It divides more homes, fills more jails and empties more churches than all other influences combined.

Booze never built a park, a playground, a school, or a church, but is the enemy of them all.

War may be hell, but where it slays its thousands, booze destroys its tens of thousands.

I do not intend to speak at any greater length and I must thank the House for the kind and patient attention which it has given me. I have spoken to-day in fulfilment of what I consider a public duty; I am supported in what I am doing by the unanimous sentiment of my own constituency from which, to the great satisfaction of the people, the last license was banished three years ago, and I feel that I have the sentiment of Canada with me. I am sorry that circumstances and my age have precluded me from doing what many of us would like to do, that is, to take our share in the present great task which now lies before Canada of achieving on the other side of the ocean that great victory which we all have at heart. One thing, however, which I can do and which I intend doing, is to give my vote, my influence, my energy, my work, and all that I can do to retrieve what I did in 1898, when in a moment of forgetfulness, when the

9. p.m. country was prosperous, when we had not been brought face to face with the trying ordeals which we have now to face, when the very existence of Canada is at stake, I cast a vote against prohibition. I am glad to say that twenty years have matured my experience and wisdom, and in the face of the present crisis, I feel it is the bounden duty of this Government, and this Parliament, to bring in a measure of prohibition, now. After the war, and the subsequent necessary period of reconstruction, if the people want to repeal the measure, let them do so. But in the meantime, when 250,000 of our boys have enlisted, and many of them are at the front, and when thousands more may enlist and go to the front, let them feel that we are doing something towards getting rid of all that is unnecesary, all that is luxurious, and that we shall do what Kitchener wants the civilian army to do, namely, to do our share in supporting those at the front. Then when victory has been won on the battle-field, the greatest victory will be, not the victory over Germany, but the victory won by the Canadian people over the greatest inherent weakness of mankind.

Mr. W. G. WEICHEL (North Waterloo): Mr. Speaker, at the outset of my remarks, I wish to congratulate the mover and the seconder of the motion under discussion, on the very eloquent manner in which they have presented their case. The liquor problem is as old as the hills; it dates back to the time of Noah because we all know that Noah made a mistake, although probably we may forgive him, because he had seen so much water at that time.

As long as human society has existed, the opinions of men have differed regarding that which is most vitally essential to human morals and human happiness. Opinions so expressed have always had a beneficial effect on the widely divergent views of matters relating to the moral and social uplift of communities, leading, as it should, and always does, to a discussion and interchange of thought wherein, after all, lies the root of all human progress. Our social fabric has not been built up in a day, a year, nor in hundreds of years, nor by the thoughts, opinions or achievements of one man, or one race of men. An interchange of thought has resulted in the compromise of many human minds and views, and has resulted in placing society in the position where we respect the opinion of our neighbour, no matter how much we may differ from him regarding the views he may hold, and besides, giving recognition of that great fundamental principle which is, after all, the foundation of a nation's stability, namely, the equal rights of all men.

We live in an age where the majority rules. If we did not subject that rule to certain limitations, however, by recognizing the rights of the minority, it would prove to be as tyrannous in principle, and as destructive to human rights and human happiness, as the most despotic and autocratic form of government, examples of which are in evidence in this world war.

Startling as the assertion may be, it is nevertheless absolutely true that the limitations so wisely imposed upon our modern form of government by our forefathers are to-day in great danger of being removed

at the instigation of certain men and organizations who are preaching the delusive doctrine that the needs of human society demand the sacrifice of individual human liberty. I consider the danger which threatens civilized society through the growing class of citizens in this country, whose views on prohibition are merely an exemplification of their general low estimate of man's ability to rise to higher things, as very great.

There is to my mind a vital distinction between the advocacy of temperance and the doctrine of prohibition. Temperance, as taught by the Scriptures, means moderation, and goes hand in hand with self-control, whilst prohibition is the direct negation of self-control. In order to save a very small percentage of the human race who do not obey the Divine teachings, and who abuse the law of nature by not being able to resist their animal desires, it aims to put chains and shackles on all, the weak and strong alike, forgetting that the fundamental fact of self-control is, after all, the growth and outcome of civilization. It is the emotional appeal made by speakers from platforms to their hearers that has strengthened the hands of those who preach prohibition, and by which they attempt to usurp that power which will, they hope enable them to dictate legislation at their own free will, and will in time, if the people do not wake up, impose upon a free people laws and restrictions that will be absolutely intolerable. Emotional legislation has never been productive of good results, and prohibitory laws relating to the individual rights of citizenship should never be enacted and placed on the statute books of our country mainly for sentimental reasons. Good, sound, common sense and good judgment is more essential in framing legislation; let us realize, as the representatives of the people, that sentiment should never take the place of the intellect.

Prohibition means that the policeman's club must be behind every citizen to make him good and righteous by law. It is deplorable that we have extremists who preach such a doctrine, and deplorable indeed that the great truth seems to be forgotten that the law must be written in our hearts regarding our personal well-being; and that then no one need teach his neighbour to do what is right, for they will all know it. I deplore as much the intemperate habits of some of our citizens as does the most ardent prohibitionist. There is no excuse for drunkenness; it is sinful and degrading to drink to excess, and certainly has a most demoralizing effect on the community as well as on the individual. The glutton, the gambler, the libertine, the man who talks lightly of womanhood, the person who gossips to the detriment of his neighbour, the man who uses God's name in vain, the spendthrift—all must be placed in the same category, as they surely all disobey the Divine command "Be ye temperate in all things." I hold no brief for any distiller, brewer or hotel-keeper, but intemperate language regarding those who happen to be in this business is all too prevalent at the present time, because there are good men in the hotel business, and there are bad hotel-keepers, and the same can be said of any other business.

I am opposed to prohibition on the ground that it will have a tendency to degrade the public service; that it dulls the public conscience, and will make the nation hypocritical. It has failed miserably in many states of the Union. Level-headed and high-minded men living across the international boundary line, who know from sad experience that the law is a farce and that it does not prohibit, were extremely anxious to return to regulation and license, and did not hesitate to express their opinions in a convincing manner regarding the fallacies of this doctrine. I believe in personal freedom and the right to eat and drink what I please without the interference of so-called moral reformers, who, at so much per annum, try to make people abstemious by legislation.

John Quincey Adams, one of America's great men, once made use of these words:

> Forget not, I pray you, the rights of personal freedom; self-government is the foundation of all our political and social institutions. Seek not to enforce upon your brother by legislative enactment the virtue that he can possess only by the dictates of his own conscience and the energy of his will.

It is pure phantasy to try to make men good by Act of Parliament, as it does not promote either temperance or virtue, and has a tendency to corrupt the morals of the community rather than to elevate them. Temperance means moderation in all things, not in one thing alone, but should be applied to eating, thinking and speaking, as well as drinking. The extravagance of the present age in blindly following the creations of Dame Fashion leads to intemperance of the worst kind. I venture to say that the Committee of One Hundred would be greatly surprised if, for instance,

they gathered statistics showing the percentage of crime, poverty and insanity that should be charged to dyspepsia, to indigestion, over-eating, gluttony, etc. If men learned to eat right, they would not become dyspeptic, and if men would not go to excess in drinking, there would be no drunkenness. Was there ever anything good that was not accompanied by evil? Was there ever a virtue that was not practised to excess, as a certain writer states, that did not turn to vice and crime? Drink temperately and eat temperately, and you will be healthy and strong, virtuous and wise, generous and affectionate. Man loves liberty; it is ingratiated in his very being; he loves personal freedom above everything else, yet it is hard to understand why he will allow a few well-paid agitators to determine for him what he should eat or drink, or to supply him with certain rules of conduct.

We have a great deal of legislation on our statute-books in this country. I have heard it stated on one occasion that the best governed country is the one that is the least governed; yet we have in our midst so-called moral reformers who are to-day popping up here and there, advocating their pet theories for the regeneration of the human race. These men do not even stop at the intemperate use of alcoholic drink. If they could induce public opinion to favour their theories, certain amusements would also be placed out of commission. Card playing, according to their theories, should be forbidden in general, simply because some men or women go to excess and become card fiends. Dancing is looked upon as a sin, because, according to their distorted ideas of morality, dancing has caused the downfall of a few, and therefore all others must abstain from the pleasure of this amusement. The habit of using tobacco, according to their theories, is a vicious practice and must be stopped, because tobacco contains nicotine, which is a poison. Yet they forget that both coffee and tea, if taken to excess, are harmful, because both of these beverages contain a certain amount of caffeine and theine. These are poisons, a few concentrated grains of which would kill a man instantly. These are no arguments, I will admit, but they are just as good as the arguments of some prohibitionists.

Again, people in many towns and cities in Canada say that street cars must not run on Sunday. Yet I have never heard of a law prohibiting a rich man from taking an automobile ride on that day, whilst the poor man, who has worked ten hours a day from Monday until Saturday noon and wishes to enjoy the fresh air and the beauties of nature, is compelled to walk a considerable distance with his family in the hot sun to the distant park. With many it is a crime to have a Sunday sacred band concert, with others it is an absolute sin to allow little children to skate or enjoy the slides on the Sabbath day. Toronto take notice. We have come to this pass: that a stranger cannot even buy a newspaper on Sunday in our large cities, and a cry of horror has gone up because certain well-meaning gentlemen, who had the best interests of the country at heart, have suggested that the libraries and museums be open on Sunday for the general good of the public.

A spectacle was presented a few nights ago when the Lord's Day Alliance actually objected to the holding of Sunday evening recruiting meetings. As this was practically the limit of endurance, their wishes came to naught. All these irksome restrictions, if we do not wake up, may be placed, as a bar to our happiness and comfort, on the statute books of our country by a few well-paid organizers, backed up by men who have seldom or never been up against the real issues of life, who draw weird pictures of misery and degradation about things that never took place, even if there is a semblance of truth in the story, they generally grossly exaggerate it. If one half of the time now devoted by the moral reformers and prohibitionists to this propaganda were given to aid in securing legislation to improve the conditions in factories, where thousands of men are yearly mangled and killed, there would be fewer victims of our industrial machines.

Legislation is desirable to make mines safer, and also to secure safety appliances for railroads and cars that would protect life. A great field is open to these people to limit the scourge of tuberculosis, and though to-day we have many good men and women who are doing noble work for the sufferers from the white plague, yet there is room for more of them, and if half the energy now devoted by these gentlemen to the attempt to prohibit alcohol were devoted to securing legislation to overcome some of the other evils, there would be more happiness and good fellowship in

this country, less friction between capital and labour, and more progress and stability all along the line. There are other evils in this world of a far greater and more pernicious character than drinking a glass of wine or beer. Gossip, the vile abomination so freely indulged in, has ruined more reputations and characters than all the evils for which drunkenness is responsible, and clothed in its puritanical robes of sham and hypocrisy, men and women are to-day hardly safe from its malignant influence. What about the social evil which has laid low many a young and promising life brought ruin and disaster and shame to many a home? Can Governments enact laws that will prevent men and women from going to destruction by legislating for them that they must not do this, or they must not do that? Are these things not a matter of conscience? If the moral reformer has no right to lay down rules and laws of conduct regarding these matters, to men and women, what right has he got to dictate to men and women what they should drink, eat or wear? Let us realize that we are not living exactly in an ideal world but in a practical one. What is God's law? It tells us to be good in ourselves, that we should be moderate in all things; that everything was good that was made in the beginning, and that it is the abuse of things that is wrong and not the use of them, because the laws we enact can only restrain us from doing wrong to others.

Remember that no law ever placed on the Statute books will suppress your thoughts or desires or your appetite. Untold damage will be done if laws are made with this object in view. By one stupendous forward push these well-meaning but over-zealous moral reformers are trying to bring humanity to a state of perfection, and the most distressing spectacle is presented to us by some men who, not having the moral courage to voice their opinions on these important matters, to please others, swim with the tide. In prohibition states across the border many openly professed allegiance to the cause, but made a farce of it when it became law. Bishop Gailor of Tennessee says about prohibition:

> Many people thought state-wide prohibition to be the ideal remedy. Instead of calling to their aid some experts on the subject and having laws framed that could be enacted without force, they passed through the legislature a measure that has led to civic degeneracy. It is impracticable, and this violation is productive of shameful evils. You cannot pass laws that way. The reformer should leave law making to wise experts and be content with educating public sentiment.

Cardinal Gibbons, one of the most eminent prelates who ever adorned the Catholic Church, has this to say:

> The establishment of prohibition in Chicago or other large cities would be impracticable and would put a premium on the sale of intoxicating drinks. When a law is frequently and habitually violated it brings legislation into contempt. It creates a spirit of deception and hypocrisy, and prompts men to do insidiously and by stealth what they would otherwise do openly and above board. You cannot legislate men by civil action into the performance of good and righteous deeds.

I honestly believe that prohibition is not necessary to make the world sober. Economic considerations force a man to be temperate. No one trusts a man who habitually drinks to excess, nor can he hold a job, nor can he get life insurance, and if he seeks the company of idlers he will find that he cannot find much company because the sober men are all at work. I do not believe that anything is to be gained to-day by a drum-beating, bell-ringing prohibition campaign to stir up strife and force divisions among the Canadian people. Is it not enough that we are in the midst of a world war so awful that it is almost terrifying? Is this the time to bring before the people an issue that for the present at least should be shelved? And, Sir, would it be fair to ask Parliament to vote on a measure of this kind without giving consideration to the quarter of a million men who are to-day ready and willing to make the supreme sacrifice if necessary? Even should they be allowed to vote this is no time for dissension. Should we not be better employed in looking after these men at the front who are so valiantly upholding the honour of this country, and who are doing everything possible to end this cruel struggle? We must be united at the present time, and we want nothing to interfere with the unity of purpose that animates the Canadian people to-day. A general election has been averted, thanks to the foresight and common-sense of those in authority, and from the Atlantic to the Pacific the people felt relieved that the Government and the Opposition were one on this matter, as a general election would have been harmful to every interest in Canada. But I also believe that to divide the people on this issue would be more disastrous still.

I place a great deal of confidence in the statements made by eminent men on matters of this kind. Bishop Hall of Vermont expresses his view in the following language:

Prohibition drives underground the mischief which it seeks to cure, making it more difficult to deal with the evil and impossible to regulate the trade, as for instance, in the quality of the liquor sold.

These are words that we should weigh well before committing this country to a law which has proven disastrous in many states across the border. Many eminent men have said that after the law came into force it not only failed to prevent the sale of drink, but led to pernicious drug habits which are a thousand times worse than the drink evil.

No legislation has been more extensively and fairly tested than prohibition. For from forty to sixty years it has been tried out across the border in several states. We must judge it therefore, by its record, by what it has done and what it has not done. What do we find by looking up the records? It can be summed up in three capital "F's" —Failure, folly and farce. It has not abolished the liquor traffic or lessened the consumption of liquor, or lessened the evils of intemperance. There is one service, however, that it has rendered to society—it has furnished a warning example of the supreme folly of attempting to legislate virtue into men's lives. A great many people who oppose prohibition are prone to make the mistake of concluding that all those who are opposed to the moderate use of liquor in any shape or form are fanatics. They are not. There may be one here or there in the ranks, but there are hundreds of others who merely recognize the existence of the same evil, as most of us recognize, that is the moral degeneracy that follows the abuse of liquor, and these same people who see no way of curing it conclude that it is incurable, and that therefore there is no other remedy left but to complete the destruction of the source from which they believe the evil emanates. Many of the states of the Union that voted prohibition years ago have gone back to license and regulation, and have found to their sorrow that they had built on false hopes, and that conditions were not only no better but far worse under prohibition than under license.

A great many moral reformers and prohibitionists claim that even the moderate drinker, or in other words the man who uses God's gifts properly and does not abuse them, is not the equal of the out-and-out teetotaler, and that wine, even in limited quantities, has a tendency to dull the faculties, to impair the strength and aggravate disease.

[Mr. Weichel.]

No doubt many of these good people admire Charles Dickens, and I am sure that only pity must be expressed for the individual who does not find the works of Dickens alluring. That world-renowned author once stated that the cause of temperance was not promoted by any intemperate measures, but that it was intemperate conduct to assert that fermented liquors should not be taken at all, for when taken in excess they did harm.

When reading an article of Colonel Henry Watterson of the Louisville Courier-Journal I was struck by the following paragraph

Any form of prohibition or restriction bears most heavily upon the poorer classes, the rich being always able to secure all the potions they wish.

No one can question the sincerity of Mr. Gladstone's quotation when urged to join in the temperance propaganda. He said:

How can I, who have drunk good wine and bitter beer all my life in a comfortable room and among friends, coolly stand up and advise hard-working fellow-creatures to take the pledge?

Several years prior to his severe illness, the Right Hon. Joseph Chamberlain undertook a trip to the United States, and being a man of keen perception, the following statement by him will no doubt be of interest to those who advocate prohibition for this country:

I have seen prohibition at work in the United States of America, and I rely in regard to it much more upon information I have obtained from impartial intelligent people than I do even on my own observation, and the evidence I have received from such persons, so thoroughly disinterested, is to the same effect that in towns at any rate anything in the nature of compulsory prohibition of drinking is absolutely impossible, and it only leads to drinking in a worse form than under the old system.

The late Justin McCarthy once made the statement that the prohibition law in Canada and the United States was a gross and ludicrous imposture. To think that to take a drink is wrong is to cast doubt and dishonour on the lives of our forefathers, and is, in my estimation, worse than an insult to their memory, because in years past it was considered no crime for a man to use the good gifts of God in moderation. But the things which are now countenanced in this twentieth century, as, for instance, the ill manners of the young towards their elders, profanity, commercializing religion were frowned upon as greater evils. These men who toiled day and night, who cleared the trackless forests, and who laid the

foundation of Canada's future greatness, were men of integrity and honesty, and never thought of putting chains and shackles upon themselves or their fellow creatures to prevent them from enjoying the gifts of nature. They had a greater mission to perform than that of interfering with other people's business, and the results of that great work are apparent to-day from one end of the country to the other.

All laymen do not think alike, nor do all the clergy think alike on this question, and if the prohibitionist feels that he has a right to expound his views and doctrines, he must, of course, allow others the same privilege. But, owing to their own intemperance on these matters, they insult those who desire to express conscientious opinions with which they do not agree.

Talking of the clergy, let me refer to the Rev. Dr. Lyman Abbot, a noted and well-known preacher of the gospel, who once stated:

> I do not know whether the Master would be a total abstainer or not, but I am very sure that He would not confound total abstinence and temperance. He would not think that total abstinence in one form of indulgence is self-control. He would not teach that the man who eats pie until his face is as soft as pastry ought to be called a temperance man because he does not drink beer.

Prohibition will never prohibit; the reform must begin with the individual. I make this statement conscientiously, that if you tear down every saloon, distillery and brewery, and everything that looks like temptation, you can rest assured that you will begin a campaign of destruction that will practically empty the world. The only remedy lies in an organized effort to rid the man of his defects: first, by moral remedies, releasing the weak will from bondage; and, secondly, by educating and strengthening the will to a point where it reaches self-control.

According to the beliefs of those who agitate in favour of prohibition, education and moral suasion are no longer necessary in shaping our lightning course towards perfection. They believe that mankind can be made honest, righteous and sober, moral and what not by a mere stroke of the legislatitve pen. The beautiful theories of these gentlemen are all based on the one fundamental fallacy, that if the manufacture, sale and importation of alcoholic beverages is prohibited, men will cease drinking such beverages. They forget that the destruction and abolition of the sale of liquor can neither destroy the desire of man to obtain these commodities, nor deprive him of the means of doing so, because there is hardly anything that grows in nature from which alcohol cannot be easily obtained in practically unlimited quantities by all who desire it.

Mark Twain, in talking about prohibition, gave utterance to this statement:

> "Since men can get their tipple out of a table leg or a wooden fence rail, what is the use of talking about prohibition?"

I presume that human ambition to exercise power over others will never die out. In saying this I do not wish to be misunderstood. I believe there is no nobler life than that which is devoted to improve the lives of others, to bring greater happiness, greater protection, and greater security to the many who are handicapped in the great battle of life. I am quite prepared to concede that great strides have been made in the past years for the betterment of the human race, but my contention is that if there ever was a time when men required to stand up for their own personal liberty, to assert themselves against an invasion of their personal freedom, that time is now. Though referred to in sneering tones, by those who wish to impose prohibitory laws and restrictions upon our people, it means as much to-day as it did to our wise legislators who framed our laws and constitution in the past. Yes, it means more to-day than at any other time in the past owing to the fact that over-zealous partisans are seeking to take advantage of abnormal conditions, when the public mind is unsettled by war, and not prone to think as normally as in times of peace.

In studying this question I came upon the following paragraph, which to my mind is an answer to prohibition:

> The history of civilization which stripped of its unessential features is largely the record of man's strangely contradictory struggle; on the one hand, to assert his right to the exercise of his individual tastes, opinions, and beliefs, and on the other hand, when he has succeeded in securing that right for himself, to arrogate to himself the privilege of denying the same right to those whose tastes and opinions and beliefs differ from his own.

Again I read:

> A good deal of that which affords pleasure to my neighbour appears to be the rankest folly to me, but if I legislate where my neighbour's freedom to exercise the pleasure he prizes, is concerned, and which I consider foolish, what is to prevent him, in his turn, from legislating where my freedom to exercise the pleasure which I prize and he considers foolish is concerned?

This, I believe, is what we are coming to, and if everybody succeeded in abolishing by law what he considers the foolish exercise and the freedom of everybody else, we shall then have reached the final stage of efficiency according to the ideas of those who advocate prohibition. To my mind it will be the final stage of inefficiency. When anything that has a demoralizing effect on the individual, or, for that matter, on a few individuals, takes place, and when newspapers refer to any sore, moral, social, or political, we see thousands of amateur specialists clamouring to be given an opportunity to inoculate every one with moral reform, with legislative serum, to cure that for which perhaps only a few are responsible; the rest of the people must be inoculated, whether they individually happen to suffer from the sore, or not.

We must agree that pretence of virtue is the most pernicious of all vices, and, unfortunately, of all vices the most prevalent, and that a great deal of cant and hypocrisy prevail to-day regarding the drinking evil. But surely public opinion is of no force or avail unless we, as individuals, uphold the same, by giving expression to it by our own voluntary actions and by the examples of our own daily life. But, Sir, to join in condemning in public what we, ourselves, do in private, or, for that matter, what we condone privately in others, is, to my mind, to reduce public opinion to a farce.

Nothing is surer than that no law should govern a man's thoughts, or his beliefs, or his desires, or his appetites; but it can only so regulate his exercise of them as to prevent him from thereby interfering with the rights or endangering the safety of his neighbour. Some who advocate prohibition, who are wise and honest enough to recognise these facts, say: "Oh, but wait until we have perfected prohibition and have barred the shipment of liquor into our territory and stopped the importation from abroad." Supposing such a thing were possible, and presumably it is, would such a law placed on our statute-books arrest the development of nature? Would the grape and apple cease to ripen, and the corn and rye and barley refuse to lend themselves to the process of fermentation at the behest of the Canadian Government?

We are all desirous of minimizing the drinking evil, and if we are honest we certainly wish to see the improperly-conducted hotel abolished. But the methods of the Prohibitionist are not the remedy for these evils. The only remedy in my estimation is the middle path correction, namely, the sane enforcement of the liquor license law coupled with moral suasion and enlightenment. Some have tendencies to commit crimes, some gamble, some go insane, others spread disease, while others indulge in foolish excesses, and certainly for that reason these men should be placed under restraint; but surely no Government would likewise bring within the law the thousands of other men who are free from the vices and criminal tendencies to which I have just alluded; and when it takes upon itself such an authority, it goes too far, and violates the fundamental rights of constitutional government. Newspapers are the advance agents of progress. The New York American says:

> Realize that education and self control mean temperance. Bigotry, intolerance control of a majority by the minority, will cause secret drunkenness, and never true temperance.

The Rev. Wm. A. Wasson, of New York, an American clergyman, states that nothing is more certain than that every state and local community in which prohibition now obtains will ultimately have to return to the policy of regulation, and just so long as the prohibition law remains on the statute books will the day of reformation be deferred.

Which are to-day the races that are in the vanguard of human progress? Surely not the Turk and Mohammedan, whose religion forbids him to use wine, even moderately. The British soldier is considered the best on earth, and this takes in the Canadian, Australian, New Zealanders and others, while the Jack Tar of the British Navy has no peer; and both are allotted a moderate amount of stimulants by law. Yet it is claimed by men who advocate movements of this kind that wine dulls the faculties and has a tendency to numb and impede progress in communities. Are the works of the great sculptors, painters, musicians, philosophers and statesmen in the past, the works of wine bibbers? Have their works been outclassed in recent years? Surely not. Nor can such an argument be used against the wine-drinking countries of the world to-day who are in the vanguard of progress and who are so valiantly upholding our liberties and institutions at the present time.

The personal freedom and liberty we enjoy, for which men have fought and died

in all ages, is perhaps in greater jeopardy to-day than it ever was before. We talk of freedom and what it all implies, and every patriotic thought expressed in song or verse during these dark days of war produce a sentiment that is truly inspiring. Place no legislation on the statute books of our country that is emotional and is guided by impulse and sentiment rather than by logic and reason. Let us not forget that the customs, the habits, the ideals, the social needs of those who constitute the rapidly growing population of Canada vary as much as does night from day, and legislation governing such a population should bear evenly upon all and not be especially oppressive upon specific classes of the people.

The New York Sun, reviewing the situation not long ago, said:

> There is no escaping the sombre chronicle. Prohibition does not prohibit. Morality fares worse under the new law than under the old, and we must console ourselves with the complacency of a few unthinking zealots.

Possibly the greatest foe to our liberty to-day is the man who in his ignorance defines liberty as license. Laws which are not founded in right and reason can never be inforced, and prohibition, whenever it has been enforced, has tended to create and foster disrespect for all law. The Committee of Fifty of the United States, who investigated the liquor problem, headed by such men as President Eliot of Harvard University, Bishop Potter, Seth Low, Hon. Carrol D. Wright, Hon. Chas. J. Bonaparte, Dr. Felix Adler, Prof. W. O. Atwater, and others, after searching reports came to the following conclusion:

> There has been concurrent evil of prohibitory legislation. The efforts to enforce it during forty years have had some unlooked-for effects on public respect for courts, judicial proceedings, oaths and laws in general, for officers of the law, legislators and public servants. Almost every sorts of liquor legislation creates some specific evil in politics. Legislation to secure the ends of prohibition intensifies political dissensions incites to social strife and abridges the public sense of self respecting liberty. It cannot be positively affirmed that any one kind of liquor legislation has been more successful than any other in promoting real temperance.

But because some men lose self-control regarding over-indulgence and drink, and because perhaps it affords one of the most convenient examples of man's liability to deviate from the path of moderation, this is used today as evidence that many pastimes, appetites and customs should be forbidden, and thus reduce every man to the level of those few who have no power of self-control. Men who openly and defiantly organize to terrorize governments into formulating legislation of this nature are the enemies of personal liberties in our midst, and it has come to this pass that the opinions of those who value their own individual freedom above everything else are no longer respected. Creeds which differ from them regarding these things are of no account, and those who have the temerity to oppose them they attempt to ostracise. The honest man, the sober man, the man who tries to do right, who does not consider it a crime to take a drink, does not count for much in these days. Some men in public life bow to their will, and rather than oppose them they are apt to applaud their aims and methods, even though the idea of doing so is repugnant to them. Let the people of Canada awaken and awaken fast. If it is true that a nation that gives itself over to self-indulgence in certain habits is bound to deteriorate, it is equally true that the same will apply to all people who no longer dare to think for themselves, and who let others do their thinking for them. Our statute books are becoming crowded with laws that have been placed there by men who imagine they can bring about the millennium by depriving men by legal enactment of the right to determine for themselves what they shall drink, and in time what they shall eat, and whether they shall laugh or cry on the Lord's Day. Fight for the defence of these God-given rights and do not leave it all for your neighbour to do, who perhaps is just as neglectful as you are, with the result that everybody's business is nobody's business, and the rights and privileges so loudly proclaimed from the house-tops become a mere sham and a hollow mockery. Will the Canadian people allow a few well-paid organizers to lay down certain rules of conduct for them in the matter of what they shall eat or drink? Will they allow themselves to be stampeded by men of the type of Billy Sunday who has commercialized religion and has become wealthy at the expense of our citizens both here and across the border? In language that is certainly not uplifting but in the opinion of real Christians, most degrading to public decency, appeals are made to the morbid emotionalism of communities, at so much per meeting, always arranged for in advance, by men of his type, and that which is our most sacred spiritual possession, true religion, is abused and used to further the

financial greed of a few who are desirous to reform a man's habits and desires by the enactment of certain legislation and federal laws. Others in this debate have quoted the opinions of eminent men. I suppose I may be allowed a similar privilege. First, I will give the opinion of Archdeacon Farrar, the eminent clergyman of the Church of England.

I have never asserted anything so wrong and so foolish as that it is a sin to drink wine, nor have I ever been so uncharitable, and gone so far beyond my legitimate warrant as to pronounce a syllable of condemnation against those who are called "moderate drinkers." The question of abstinence or non-abstinence is one which can be settled only by the individual conscience.

Pascal, the great ornament of French literature, said:

To go beyond the bounds of moderation is to outrage humanity. The greatness of the human soul is shown by knowing how to keep within proper bounds. So far from greatness consisting of going beyond its limits it really consists in keeping within them.

James Madison, one of the greatest men of the United States:

It is of great importance to a republic not only to guard society against the oppression of its rulers, but to guard one part of society against the oppression of the other. Justice is the end of government; it is the end of civil society.

Dr. Parkhurst, the eloquent preacher, said:

I am decidedly of the opinion that the more wine there is produced in this country and the more freely it is transported from state to state the smaller will be the amount of drunkenness.

When Massachusetts had a prohibition law, conditions were so bad that the following will be interesting—from Jno. A. Andrew, Massachusetts' famous governor:

Do you tell me, however, that all such beverages, in their most innocent use, involve a certain danger; that possibly any one may, probably many, and certainly some will, abuse it, and thus abuse themselves; and by consequence, that all men, as a matter of prudence, and therefore of duty, ought to abstain from and reject it? I answer: That is a question of morals, for the answer to which we must resort to the Bible, or to the church, or to the teachings of moral philosophy. The right to answer it at all, or to pretend to any opinion upon it, binding the citizen, has never been committed by the people, in any free government on earth, to the decision of the secular power. If the state can pass between the citizen and his church, his Bible, his conscience and God, upon questions of his own personal habits, and decide what he shall do, on merely moral ground, then it has authority to invade the domain of thought, as well as of private life, and prescribe bounds of freedom of conscience.

[Mr. Weichel.]

There is no barrier, in principle, where the Government must stop, short of the establishment of a state church prescribed by law, and maintained by persecution.

Do you tell me that the using of wine or beer as a beverage, however temperately, is of dangerous tendency, by reason of its example? Do you insist that the temperate use of it by one man may be pleaded by another as the occasion and apology for its abuse? I answer: That if the Government restrains the one man of his just rational liberty to regulate his private conduct and affairs, in matters innocent in themselves, wherein he offends not against peace, public decorum, good order, nor the personal rights of any, then the Government both usurps undelegated powers and assumes to punish one man in advance for the possible fault of another. The argument that because one man may offend another must be restrained is the lowest foundation of tyranny, the cornerstone of despotism. Liberty is never denied to the people anywhere on the ground that liberty is denied to the good or right, in itself. The universal pretext of every despotism is, that liberty is dangerous to society—that is, that the people are unfit to enjoy it.

Do you tell me that these arguments have a tendency indirectly to encourage and defend useless and harmful drinking, and that silence would have been better; for the sake of a great and holy cause? I answer: That He who governs the universe and created the nature of man, who made freedom a necessity of his development, and the capacity to choose between good and evil the crowning dignity of His reason, knew better than to trust it to the expedients of political society. The great and holy cause of emancipation from vice and moral bondage, is moral, and not political.

Let us learn to speak and hear the truth regarding these things, which so many would like to do, but so many dare not express. Canada is too big, too cosmopolitan, to be enslaved by a few zealots. Let the men who today are fighting for those liberties we love to talk about have the right to vote on this issue to preserve them. Do not disfranchise nor insult them by neglecting to give them an opportunity to express their opinions on this most vital matter. Wait until the struggle is over.

The big issue is the war, and nothing should interfere which might be a detriment to unity. When men dare to make the supreme sacrifice for us who stay at home, when they renounce position, comfort, and everything else that makes life pleasant and worth while in this world, then let us be brave enough to grant to them the privileges of citizenship and to take a common sense view of the situation by appreciating their efforts on the battle front and to such an extent that rather than pass laws regarding their conduct, as future citizens of Canada, let us devote our energies to the final and speedy completion of the war by doing everything possible in men and money to bring about this happy solution.

Think well of the results of Prohibition as they obtained in the United States. It is a farce, has not prohibited, has increased drunkenness, vice and crime, and as surely as it has done this across the border so will it surely work out in Canada.

Mr. LEVI THOMSON (Qu'Appelle): Mr. Speaker, as it is already late and many hon. gentlemen wish to speak on this question, I shall not take up the time of the House in replying at any great length to the remarks of the hon. gentleman for Waterloo (Mr. Weichel). In fact, practically all he has said was answered before it was spoken by the mover and seconder of this resolution. The hon. gentleman seems very much disposed to think that we who are opposed to him are actuated by hypocrisy. I can assure him that I am thoroughly sincere in any remarks I may make on this question. The hon. gentleman seems to be under the impression that we should not interfere with the ideas of the ages; that because our forefathers believed a certain thing we must also believe it. If we adopted that theory, there would be an end to progress. The hon. gentleman is very desirous of educating people along temperance lines. How did he propose to do it? He proposed to educate them by the licensing system. I should like to ask him what the licensing system has done within the last five hundred years towards educating people along temperance lines? I am well aware that it has done a great deal towards educating people along the lines of drunkenness. The open temptation provided through the licensing system has been the greatest incentive to drunkenness the world has ever known. We may not be able, as he says, to legislate virtue into men's lives, but at least we can legislate temptation out of their way, and indirectly make them a little more virtuous. The hon. gentleman was very anxious that we should devote our energies towards preventing accidents from machinery and so on, and towards lessening the social evil.

I wonder if there is anything in the world that has done more to cause accidents and encourage the social evil than drinking, which the licensing system so largely promotes. My hon. friend seems very much opposed to prohibition in any shape; not only such prohibition as is contained in the Lord's Day Act, but prohibitory measures of every kind. It strikes me that the hon. gentleman is living four thousand years after his time. He should have been living at the time of Moses. When Moses was on the earth he gave ten commandments, which were all expressly or impliedly prohibitive. If my hon. friend had been living at that time he would have said to Moses: "That is all wrong; don't do it; your commandments will only make people steal more, lie more and kill more, and do this, that and the other more; the more you legislate along these lines the more evil people will do." I do not think Moses would have paid much attention to my hon. friend; nor need we.

A perusal of extracts from the early English statutes providing for the licensing of the liquor traffic shows that the necessity for regulation and restriction was a reason given for those enactments, but the desire to obtain revenue from the drinking habits of the people is also in evidence. I am convinced that the license system was conceived in sin and shapen in iniquity, and its results are what should have been expected from such parentage. In the early days of agitation for temperance legislation, the main argument against it was the financial argument, the effect on the revenue of the country. That has been met by counter arguments, which have largely convinced thinking people that the gains from such legislation will far exceed the losses. Advanced legislation along temperance lines had a difficult struggle for a time. Progress was very slow at first, and reverses common, but as people were given an opportunity to judge from results their fears decreased, their confidence increased, and progress was more rapid.

I do not purpose discussing the financial effects of prohibitive measures. I think most people who are open to conviction are already convinced that it pays to pass and enforce such measures. And after all, we cannot place a money value on the conduct and habits of the people. We cannot estimate in dollars and cents the value of vigorous manhood. What compensation can we accept for the tears, anxieties and miseries of the wives and mothers of our land, caused by drunkenness of husbands and sons? What is a man profited if he gain the whole world and lose his own soul? Or what can a nation accept in exchange for the moral, intellectual and physical manhood of its citizens? There are profits and losses, the extent of which cannot be set out in terms of dollars and cents. We do not hear so much now about the loss of revenue. We hear more about interference with personal liberty. Well, laws generally define and restrict our liberties. We must

have either interference with personal liberty or anarchy.

We are also told that prohibitive measures are ineffective and that there is more liquor consumed under prohibition and local option than under the license system. If that be true we would naturally expect distillers and brewers to be the most enthusiastic supporters of prohibitive legislation, but their support has not yet been very conspicuous. If we are to judge faith or belief by works, we must conclude that those who are financially interested in the increased consumption of intoxicants believe that their profits will be greater under the license system, and that their trade will eventually be destroyed by prohibitive legislation, should such legislation be generally adopted, and we must also conclude that those friends of prohibition who have no interest in the matter outside of their desire to better humanity and to decrease the consumption of liquors with the evils resulting therefrom, are of a like mind. Surely these people are not all in error. Surely there is some foundation for their practically universal faith as shown by their works.

This question has been before the House on many occasions, and in various forms, but heretofore it seems to have been felt that public opinion was not sufficiently advanced, that the people were not quite ready for complete prohibition for all Canada. That objection can hardly be said to exist now. The advance in public sentiment has been shown by the rapid increase in the number of places throughout Canada where liquor Acts of a prohibitive nature have been put in force, and this advance has been more rapid since the commencement of this great war. The present seems to be a time when this Parliament is in duty bound to enact prohibition for the whole Dominion, because the people of Canada, from coast to coast, are insisting, in tones the earnestness of which must not be underestimated, that we shall now enact legislation for all Canada to prevent the importation, manufacture and sale of intoxicating liquor, at least during the period of the present war, or better still, for all time. Although I intend to vote for the resolution, I do not think that prohibition should be confined to the period of the present war; I believe

10 p.m.

that we should have permanent prohibition and that the people of Canada are in favour of such a measure. If, however, we have prohibition for three years or more, we shall have prohibition thereafter, if we are to depend on a vote of the people, so that there is not much difference of opinion between my hon. friend and myself. I am in the habit of attending the conventions of the Saskatchewan Grain Growers' Association, of which we sometimes hear in this House. At the last convention, which was held recently and at which I made it a point to be present, this question came up and a vote in favour of Dominion-wide prohibition, without any rider attached as to time, was passed unanimously. Further than that, the officials of the three Western Grain Growers' Associations met together a short time ago and passed a similar resolution.

If we are to have prohibition only for the duration of the war, the resolution proposed by my hon. friend from Kings (Mr. Hughes) should also be adopted by the House, because, if we are not establising prohibition permanently, we should give the provinces and municipalities power to go further than they have been able to go under the law as it exists at present. I am not wedded to any particular plan, and, as I understand that there is considerable objection to amending the British North America Act wherever it can be avoided, other means could be devised whereby without amending that Act, we might accomplish the same purpose as my hon. friend has in view. I have no doubt that the Minister of Justice could frame some such legislation. I had my attention called by the hon. member for Saskatoon (Mr. McCraney), who has been heard in this House frequently and always with great attention, to an amendment of the Canada Temperance Act in 1908, and from a careful perusal of that amendment, I believe that the underlying idea and something more might be made use of in this resolution. I refer to section 117 of the Canada Temperance Act which, as amended in 1908, reads:

> From the day on which this Part comes into force and takes effect in any county or city and for so long thereafter as and while the same continues or is in force therein, no person shall, except as in this Part specially provided, by himself, his clerk, servant or agent—
>
> (a) expose or keep for sale, within such county or city, any intoxicating liquor; or,
>
> (b. directly or indirectly on any pretense or upon any device, within any such county or city, sell or barter, or, in consideration of the purchase of any other property, give to any other person any intoxicating liquor; or,
>
> (c) send, ship, bring, or carry or cause to be sent, shipped, brought, or carried to or into any such county or city, any intoxicating liquor; or,
>
> (d) deliver to any consignee or other per-

son, or store, warehouse, or keep for delivery, any intoxicating liquor so sent, shipped, brought or carried.

2. Paragraphs (c) and (d) of subsection 1 of this section shall not apply to any intoxicating liquor sent, shipped, brought or carried to any person or persons for his or their personal or family use, except it be so sent, shipped, brought or carried to be paid for in such county or city to the person delivering the same, his clerk, servant, or agent, or his master or principal, if the person delivering it is himself a servant or agent."

This section of the Canada Temperance Act has accomplished very little; but if this enactment is intra vires, it will be equally so, even if section 2 is struck out, and then it would provide that liquor could not be sent, shipped, brought, or carried into local option territory, and although I have not gone into the matter very carefully, I have not heard that this provision is ultra vires.

I have here an extract from a judgment of the Chief Justice of the Supreme Court, in the city of Fredericton vs. The Queen. The beginning of the report is at page 505, vol. 3, Supreme Court Reports, Canada, but this extract appears at page 530, and is as follows:

If the matter dealt with comes within the class of subjects assigned to the Parliament of Canada, I can find in the Act (that is, the British North America Act) no restriction which prevents the Dominion Parliament from passing a law affecting one part of the Dominion and not another, if Parliament in its wisdom thinks the legislation applicable to and desirable in one part and not in the other.

If these words of the then Chief Justice of Canada are correct, I think there is very little danger of a provision such as I am suggesting being declared ultra vires. The passing of such legislation would be merely applying to one particular portion of the Dominion a power which Parliament undoubtedly has the right to exercise in respect of the Dominion as a whole. So far as I know, no one has ever taken exception to the judgment of the Chief Justice in that respect. I assume, therefore —my hon. friend, the Minister of Justice, will put me right if I am wrong—that Parliament has the power to enact such legislation as I have suggested. If we are to have prohibition merely during the period of the war, we should make such provision as will enable any provinces or municipalities which have adopted legislation looking to prohibition to establish a further prohibition, if you like, than they were enabled themselves to obtain. That is, we should provide that in such places liquor may not be manufactured or imported. The hon. member for Saskatoon (Mr. McCraney) suggested that an enactment of but two sections would be sufficient to make this provision, having in regard the case of provinces like Alberta or Prince Edward Island, which have already adopted prohibition. Let me make another suggestion, if it is not amiss. If the Government should provide that such legislation as I am proposing should not take effect until ratified or confirmed by Order in Council, they would be in a position to go carefully into any restrictive proposals that might exist in counties or provinces, and themselves decide whether or not these counties or provinces had gone as far as they could. Another advantage of such a course would be this: The Government would be enabled to consult the county or province before bringing the legislation into force; they might, if they wished, not pass any such Order in Council until the province in question had requested that the legislation be brought into effect.

It seems to me that the present is the time when this matter ought to be thoroughly dealt with. Notwithstanding anything that may be said, the people of Canada are ready for such legislation as is proposed. They are anxious that we should pass the most stringent legislation in this matter. I believe that the people of Canada will stand by us in the matter of establishing permanent prohibition. The most popular move the Government could make now would be to pass a measure of permanent prohibition for the whole Dominion. If they cannot see their way clear to do that, I hope they will at least see their way clear to giving us prohibition during the war and for a reasonable period thereafter, and that they will see that the license system is not again brought into vogue unless it be approved by the vote of the people. Whether or not we pass legislation for the period of the war, I think it would be well for the Government to consider carefully the advisability of making some enactment, whether by way of amendment to the British North America Act, or by way of prohibitory legislation, applying to the sale, importation and manufacture of intoxicating liquors in all places where the strongest possible measure of prohibition has already been adopted. I trust that I have made myself clear to the Minister of Justice; I submit

these matters for his consideration, and trust that they will receive careful attention at his hands. I hope that, whatever we do, we shall not allow this occasion to pass without showing that we recognize the strong and healthy sentiment that prevails throughout the whole of the Dominion in favour of an effective measure of temperance legislation.

Mr. CHARLES J. THORNTON (Durham): Mr. Speaker, with your permission I should like to discuss some matters which I believe are of importance in connection with this question. I congratulate the mover (Mr. Stevens) and the seconder (Hon. Mr. Marcil) on the ability with which they have presented the case. I take exception to some of the things that the member for North Waterloo (Mr. Weichel) said in connection with this matter. One of the things he said was that we should leave law-making to law experts. I should like to commend to the attention of the hon. member for North Waterloo what has occurred in the legislature of the province of Ontario within the last few days. I would commend to him the words of the Premier of the province and of the leader of the Opposition as well. Each of these gentlemen says that he has the backing of the rank and file of his party behind him. Commenting upon a speech delivered by Premier Hearst last Thursday in the Provincial House in Toronto, a press report has this to say:

> Premier Hearst said there was not now nor had there ever been room for difference of opinion as to the evil effect of intemperance or as to the fact that these evils existed in this province, although happily to a much lesser degree than in most places. The only difference of opinion was as to the best method to adopt, as to the best laws and the most beneficial course to take. He deprecated the branding by temperance workers of men with whom they could not agree as foes of temperance. Notwithstanding the drastic legislation the Government was about to submit he was well aware there were many conscientious men who might disagree with the Government and who honestly thought that a prohibitory measure would not attain the end sought.
>
> There is, I believe, a call now—a most earnest and special one—for service and sacrifice by everyone in this Province and in every part of the Dominion, and every reasonable step should be taken at this time of stress and strain that will add to the strength of the country and conserve our resources in every way possible for the great task. It is surely a time for all of us to abstain from luxuries and extravagance in what we wear and what we eat as well as in what we drink.
>
> In view of the dangers which confront us, which perhaps we do not fully realize here, and after full consideration of the question from every standpoint, the Government has come to the conclusion that the time has arrived when furthur legislation might be enacted with advantage to the temperance cause and without introducing greater evils than those we are attempting to destroy.

This is strong language coming from the Prime Minister of Ontario. In his answer the Leader of the Opposition, Mr. N. W. Rowell, said:

> I want to say this to my honourable friend the Prime Minister, and I want to say it to the members of this House, that while I may have my own view as to method of dealing with this matter, I have already placed myself on record as to what I would do in case the Government would introduce proposals of this charcter. By the statements I have already made in this House and which I have made elsewhere, I am prepared to stand, and I will give my cordial support to the Government in carrying out the proposals they submit if the proposals are, as I understand they are to be, as outlined in the Speech from the Throne.

I think that answers the statement of the hon. member for North Waterloo (Mr. Weichel) that we should leave this question to law-making experts. He says further that cant, hyprocrisy, and deception actuated prohibitionists. He further says—and I commend the statements to the House as the members will know how much weight to attach to them—that the grapes, the apples, the rye, the wheat, the potatoes, are all necessary for making of this luxury that men ought to have. He further states that the men who are pushing this measure are a few well paid organizers. I commend that to the hon. member for Vancouver (Mr. Stevens) and also to the seconder of the resolution (Mr. Marcil). The hon. member says that the more wine that is produced and used the less drunkenness. He says that prohibition is a failure and promotes vice and crime. I have just one answer to make to that: if prohibition does not prohibit, why then do the manufacturers of liquor and the dealers fight it so? The hon. member says that we ought to abide by God's law and that we ought not to say what a man should eat or drink. If God's law says anything, it is full of this: "Thought shalt not"—Prohibition complete.

Prohibitionists have no quarrel personally with the men who are engaged in the liquor business, some of the best men I know are engaged in that trade; their qualities are of the very best and they are men who are needed in the work of the world. Neither these men or their good qualities are to be destroyed, but they are to be put to a better use. In view of something further that the hon. member for North Waterloo said,

I think it would be well to go back a little in connection with the history of licensing, especially in Great Britain. The object of liquor laws is to check the evils arising from the immoderate use of liquor in the interest of morality and public order. We might well ask what gave rise to the necessity of there being any law to regulate the sale of liquor or what created that demand for a law. There are two or three things which we might mention. The more refined people got the more they saw the necessity of checking a thing that was evil. Medical influence had something to do with it, and the growing attention paid to health. One of the causes that prompted the making of license laws was the suffering and want and awful waste that followed in the trail of the liquor business. The evil resulting from the excessive use of alcoholic liquors is greater in colder climates than in warm climates. The tendency to strong drink is greater in northern Europe than in southern Europe, and, to the shame of some of us, the tendency towards strong drink of the people who inhabit the British Isles, English, Irish, and Scotch, is more marked than in almost any other nationality on the face of the earth. I do not like to say that, because there is a good deal of English blood in my veins, but it is the fact, nevertheless. In 1551 and 1552 licenses in England could be obtained only through two justices of the peace. The evil which it was sought to remedy was not only excessive drinking, but idling and disorder. The Act seems to have been of some effect, for no further legislation was enacted for fifty years. Here is something that the hon. member for North Waterloo (Mr. Weichel) would do well to take into account when he is talking of the virtue of the liquor traffic. In 1732 the city of London had a population of 750,000. It contained 95,988 houses, and of these, 15,286 houses were licensed for the retail sale of liquor, or one out of every six houses had a license to sell liquor. The debauchery, the idleness, the vice, the squalor in the city of London at that time is described by those who wrote on the subject as something terrible. A duty of five shillings a gallon was placed on the distiller under the law and the retailer paid £20 a year for a license to sell. In 1736 high license was tried, but it was found to be a failure. And these Acts, and the amendments to them, clearly recognize the connection between public disorder and public houses, and that connection has been close from that day to this. Those older public houses were ale houses, where fermented liquors were consumed. Spirits had not come into general use as that time, and wine could be consumed under this law only by the aristocrat and the wealthy man.

There are four ways of regulating the liquor traffic: First, by license, which is the oldest and most widely adopted method; secondly, the Scandinavian system, which is not carried on for private profit. That system was adopted to remove the temptation to excessive drinking and the profits from it, if any, go to the State. The third is by State monopoly. Under the system of State monopoly, the State controls the business and gets all the profit. That is the system which was in operation in Russia, and that is why it was so easy to enact prohibition in that country. The control of the liquor traffic was not in the hands of the people; hence, when the statesmen of Russia came to the conclusion that prohibition would be in the interests of country, all they had to do was to enact legislation of that kind without any reference whatever to the people who were so subservient to the powers that be that they readily and quietly obeyed the law. The fourth way of dealing with the liquor traffic is by prohibition, which may be general, or local.

In the discussion which has taken place here to-day, it would seem that almost everything that could be said on this question had been said. The economic side of the problem has been fully treated both by the mover and seconder of the resolution, and it would seem that scarcely anything further could be said without repetition. I shall endeavour to avoid repetition. The opinion based on experience of men in authority, not only in Great Britain but in United States and Canada, is that drink is a curse, and that it should be abolished; in other words that we should have prohibitory legislation. Sir Wilfred Lawson was authority for the statement that in Glasgow, the Lord Provost, during a certain number of weeks he had administered relief to the distressed in that city, had asked every applicant whether he was a teetotaller, and he found he had not one teetotaller coming before him for relief. Abraham Lincoln in his time said:

> The most effectual remedy for the drink evil would be the passage of a law altogether abolishing the liquor traffic except for mechanical, chemical, medicinal and sacramental purposes.

William Murray, for nineteen years superintendent of an alms house in Brooklyn, New York, said:

> My opinion is that liquor is the principal cause of pauperism. If there had been no liquor drunk, say for the past one hundred years, there would be almost no pauperism, and there would be no poor houses.

I should like to quote a few statistics that have been gathered in a number of states showing the percentage of paupers caused by drink. In the institution at Worcester, Massachusetts, 90 per cent of the male criminals and paupers, and 70 per cent of the females, were there through strong drink. In the city of Albany, New York, nine-tenths of the pauperism was caused by strong drink; in Meadville, Pennsylvania, nine-tenths of the pauperism was due to the same cause. In Minneapolis at least eighty per cent of the pauperism and poverty and crime was due to strong drink.

I read a statement some time ago to the effect that in Kingston Penitentiary 75 per cent of the inmates were there through strong drink. Dr. Howard Crosby says:

> I have been watching for thirty-five years and in all my investigations among the poor I never yet found a family borne down by poverty that did not owe its fall to strong drink.

Horace Greeley said:

> Most of our paupers have become such through the use of alcoholic liquors—often by themselves, sometimes by their parents or other guardians. We estimate that nine-tenths of the paupers in our country were made so directly by strong drink.

The question may be asked, why is it that strong drink should have the effects charged against it? One thing it does is to divert money from the grocery stores, shoe shops, clothing stores and other legitimate businesses. In the speech delivered by the hon. member for North Waterloo (Dr. Weichel) he quoted to us opinions of men who disapproved of prohibitory measures. I am sorry to find him in what I consider rather bad company. Who are the men in this country that are defending the liquor traffic, and who are the people who are opposing it? How many women whose husbands patronize drinking places are defending the traffic? How many boys and girls who have suffered from lack of food and clothes, because of the waste of money on drink by their fathers, are defending it? Compare to-day the saloon or the places where drink is sold, with the churches in the matter of contributing to the order and well-being of the community.

Does it improve the reputation of a man to be known as a frequenter of a drinking place? Like other members of this House, I have had young men apply to me for positions, and what is one of the first questions that we ask? We want to know at once what the young man's habits are; we want to know whether he is a user of liquor or of tobacco. Tobacco is not included in the resolution before the House, but I class liquor and tobacco together. We see notices posted up in this building by order of the Minister of Public Works that there must be no smoking except in three places in this building. I want to say something which perhaps other members may not favour, but I see men every day in this building violating that order and smoking in different rooms in the building.

Why was that notice put up? It is because there is a lurking suspicion in the minds of men inside and outside of this House that the burning of the Parliament Buildings was due to somebody dropping a match or a cigar stub or cigarette stub, and it is hoped by this rule to prevent a recurrence of such a disaster. Yet every day there are members of this House who violate that rule. I call the attention of the Government to that fact.

We are often asked: why should you be prejudiced in connection with this drink business? The hon. member for Vancouver (Mr. Stevens) related an incident that occurred in his own city, showing that the family of an otherwise reputable citizen suffered untold miseries because of his indulgence in drink. The part of the country in which I live, I presume, is an average country district. Within five miles of the place where I was born and brought up inside of fifteen years there were twelve violent deaths from strong drink. In the township in which I lived there were at one time fifteen licensed hotels, and I presume that a similar proportion held good for almost every township in that part of Ontario. It was impossible to travel those roads a single day of your life without seeing from one to a dozen drunken men. To-day it is a rare thing to see a man drunk in that township, for there is not a license in it nor within twenty miles of the place where I live. Some of the most brilliant men this province has ever seen came from that section of country—professional men, doctors in particular. I know five doctors who were boys when I was a boy, all wonderfully successful practitioners, and all

five went down to premature graves through strong drink. The question, as I say, is asked, why we should object to this, why we are not willing that every man should have his liberty without restriction? I think the facts answer the question.

A great deal has been said about soldiers being allowed to have liquor. There are two sides to that question. When large numbers of men are together whether soldiers or others, there is often a temptation to drink. And I want to say right here that a debt of gratitude is owing to the Minister of Militia (Sir Sam Hughes) by the people of this country for what he has done to prevent drinking among our soldiers. I find on looking over history that the same difficulty has confronted other countries. During the American Civil War, one of the greatest obstacles to the success of the Union troops was excessive drinking. It was found necessary to pass a law during that war to prohibit men from giving liquor to soldiers. Abraham Lincoln was strongly in favour of that reform and signed an Act of Congress on the 5th of August, 1865, providing that the person should be liable to a heavy fine who sold liquor to soldiers.

Something has been said in this debate about the success or failure of prohibition in the United States. Prohibition has accomplished something in that country. A careful estimate shows that after the municipal elections of April, 1915, there were 2,173,819 square miles of territory in the United States in which the saloon is forbidden. There are 32 states in which the combined number of saloons is less than in the city of Chicago. A population of over 46,000,000 of people in the United States, out of a total population according to the last census of 92,000,000, are now living under no license. Of the 2,856 counties in the United States, over 1,700 have abolished the saloon. There are over 500 cities of a population of 5,000 or more, and also 200 cities of a population of 10,000 or more, in which saloons have been abolished. In nine states, with an aggregate population of about 15,000,000, there is state wide prohibition.

I want to say a little, and a very little, on the economic side of this question. The statement has been made by men who have had experience that the drink traffic is the enemy of the factory and of the efficiency of labour. At the closing session of the National Congress of Industrial Safety, in Chicago, on the 15th of October, 1914, resolutions were passed pledging the members to the elimination of alcoholic stimulants in their plants and factories. The National Congress of Industrial Safety represents 500 of the leading manufacturers of the United States, who employ over 1,000,000 workers in their factories. Mr. R. L. Palmer, chief inspector of the Pennsylvania Department of Labour and Industry, stated that 60 per cent of the industrial accidents were due to liquor. He said further:

> It will not be long before the saloon will be as much separated from the industrial plant as it is now from the church. As a matter of business, we will have to pay in cash, to prevent men from going to the saloons to convert their checks into currency.

A proposition was made by Mr. E. K. Pritchett, representing one of the largest manufacturing concerns in America, that, after employees had been forbidden to use alcoholic beverages, milk wagons should call at the factory, at a certain hour every morning. He goes on to say:

> We then permitted the men to stop work, and go out and buy fresh bottles of milk. We find this arrangement has practically solved the drinking problem.

Our attention has been called to-night to the action of leading manufacturers of this city who have endorsed the resolution now before us. Mr. Booth, one of the largest, if not the largest employer of labour in Canada, has had perhaps a longer experience than any other manufacturer, and he is most insistent that the one way to remedy the evils under which his employees suffer is to enact prohibitory legislation.

There is one other thing I should like to mention, and I am sure the other members of the House will be very gratified to learn of it. I asked the Sergeant-at-Arms to-day whether liquor was dispensed in this building, and he said that neither he nor any other man that he knew of could get anything stronger here than Tally-ho water. I am sure honorable gentlemen will be glad to know that. I will go a step further and urge upon the Government that no provision should be made in the new Parliament building for the dispensing of liquors of any kind. I see ladies in the gallery, and I hope that all the influence of the sex will be brought to bear so that never in future will liquors be dispensed in the Parliament of Canada.

Some hon. MEMBERS: Hear, hear.

Mr. THORNTON: There is one other point I should like to mention. Perhaps it may be thought too serious a matter to be intro-

duced in this House, but these are war times and we should be prepared for almost anything. I have left out a good deal of material that I had intended to touch on in the course of my remarks, but what I am now going to mention affects everybody. In every church of the Dominion of Canada yesterday, Roman Catholic and Protestant, prayers went up to the Almighty that He would stop this awful war. In almost every home in Canada prayers go up every day that God will intervene, and by some means stop this awful bloodshed. The question arises almost every day in the thoughts of every man, "Why does God not answer these prayers." This may seem too serious a matter to introduce in this House, but I repeat that these are war times and that nothing is too serious to talk about. The most serious question before the people of Canada and Great Britain to-day is: Are there some things that we and the people of Great Britain, and perhaps of our Allies, are indulging in that prevent God from answering the prayers of His own people? Is the millstone that is around the necks of the people of the whole British Empire this liquor traffic? As sure as day follows night the Scripture is true when it says: "Be not deceived; God is not mocked; for whatsoever a man soweth, that shall he also reap." It is just as true of nations, and it is just as true of nations to-day as of nations in all times of the world's history. We cannot read the history of the children of Israel without coming to the conclusion—the whole world knows—that whenever they did the thing that was right in God's sight they defeated their enemies and prospered; but whenever they did the things they ought not to have done their enemies defeated them. Are we in that position to-day? Is there selfishness, not only in individuals, but in communities and in nations? Perhaps we are not willing to deny ourselves in order that this country may be cured of this evil. Perhaps that is the real reason why God does not answer our prayers and deliver us from this awful scourge of war. Where should there be a beginning towards bettering conditions—a beginning which we know would bring relief? I do not know a better place than the House of Commons of Canada for the movement to start and I believe that we ought to deny ourselves of the things which we know are not conducive to our good and to the good of this nation. We ought to rise in our might and cast this curse of strong drink out, for just as true as we are here to-day, the Scripture I have quoted is true. Further than that, the Scripture tells us "Not by might, nor by power, but by my spirit, saith the Lord of Hosts." When we get to the point where we are willing to forego any luxury and bear any hardship, so that God can help this country, then I believe that victory will come to the Allies, and not till then. Is the liquor traffic one of the evils that is keeping us down and withholding the Almighty from answering the prayers of His people? It looks to me very much like it. If this is so, I believe this Government ought to move in the matter in the way indicated by the mover of this resolution:

Mr. L. J. GAUTHIER (St. Hyacinthe): Mr. Speaker, I have listened with the utmost attention to the speeches that have been delivered in this House this afternoon and evening supporting the motion which is now under discussion. After a careful study of the questions of temperance and prohibition, and after following very closely the trend of the arguments that have been advanced here to-day, I have no hesitation in declaring that I am still of my former opinion. The hon. gentleman who has just sat down (Mr. Thornton) seems to be under the impression that even the liberty of members of this House should be prohibited, if they do not hold the same views as he does. I had expected that the apostles of prohibition would give us some reasons why the trade which has been acknowledged by law should be prohibited; I had expected that the members who wished to create a new state of affairs in this country would appeal to our minds. With a full knowledge of what is in store for those of us who have the courage to express our views against prohibition, I say without fear that I am opposed to this resolution. Let me give my reasons. First of all, those who favour prohibition want to ensure the cause of temperance. In my opinion, which is borne out by the lessons of history, prohibition, instead of promoting temperance is its bitterest enemy. That is one reason why I am opposed to prohibition. Every one admits that the abuse of strong liquor is a danger. If you tell me that alcohol has caused a great deal of evil in this world, I admit it immediately; but, to cure an evil, you must find a remedy which will be a certain cure. The question of pro-

hibition is as old as the world; it was known even amongst the tribes of the Jewish people, because the Essenians and the Rechabites were in favour of prohibition. There has been prohibition in England. My hon. friend (Mr. Thornton) has spoken of England in 1732 and 1736. Why did he not tell us of England in 1734 when a prohibition Bill was passed? After two years' experience, the House of Commons unanimously repealed that law, and the House of Lords voted in favour of the repeal by 84 to 52. Lord Chesterfield, who opposed the Government, was compelled to admit that prohibition in England did not give the results which the English people expected. Immorality prevailed, debauchery was greater under prohibition than before, and intemperance was so rampant that the British Parliament was compelled to repeal the Act.

Some hon. members have spoken of prohibition in the United States. I do not want to speak against the United States, but, according to the lessons of experience, drawn from that country, prohibition is an impossibility. You must stop the distillation, the transport and the consumption of liquor and that you cannot do. Certain of the states tried that cure, but the result was that kitchen stills were started where they used tea kettles and a pint of molasses with which to distill whisky. I have in my hand a treatise written by the bitterest opponent of alcohol, Dr. Bertillon, of Paris, the inventor of the anthropometric system, and chief of statistics of that city. He has studied everywhere the question of prohibition and temperance; he has travelled through all the United States, and through all Europe. The result of his studies is that prohibition is an impossibility in the cities although it may succeed in the rural districts. He says that the only system which has shown any appreciable results is the Norwegian system. The use of alcohol as a beverage is acknowledged by all religions, namely the Hindu, the Jew, the Christian, the Greek, the Roman, the Scandinavian. You can regulate the liquor traffic; you can enforce the law stringently, but prohibition will never prohibit distillation; it will prohibit liberty, it will prohibit the license holder, but it will not prohibit the consumption of alcohol. In Norway the state buys every pint of alcohol that is distilled by any distiller, and that alcohol is handed over to the state chemists by whom it is rectified, and the power to sell intoxicating liquors is sold to a combine which had scalaags where alcohol is sold to the consumer. Every one who goes into one of those establishments knows what he is going to get and what price he will have to pay. If he wants a drink he goes into one of those establishments which are open places and well-kept, and the result is that, since the establishment of that system, intemperance has decreased in Norway.

I have to-day listened with a certain amount of curiosity to the speeches delivered by hon. members. One hon. member quotes the opinion of one man; another quotes the opinion of some one else—you can play with the opinions of men, because this is an open question, and you will find as many men in favour of prohibition as against. Other hon. members are playing with statistics. If you were to listen to all the statistics that have been given here this evening, or if you were to read all the statistics for and against prohibition quoted here, you would be compelled to admit that everything bad was due to alcohol. As has been stated by the hon. member for North Waterloo (Mr. Weichel) the Koran prohibits the use of alcohol; but who will say that Turkey is not a degenerate country where crime after crime is continually committed to the disgust of humanity, and, as the Turks do not drink, these crimes cannot be due to the curse of drunkenness. Spain, where hatred, where vendetta, where the bitterest passions of humanity are in full flame, is the most temperate country in the world.

The climate of Spain does not induce people to drink, but in all countries where hard liquor is used, I say that it is the duty of free men who hold public positions to stand up and defend liberty. When you look at the history of the places where prohibition has been in operation, what do you find? You find that trade in alcohol goes on. In the states of the Union where prohibition has been enacted, and where they boast of having legislation of that kind on their statute-book, they have invented the pocket-pedlars who go from place to place in the city with flasks in their hip pockets, offering drinks to all who want to pay for them. Is that the kind of system you want to establish here? Do you want to have in Canada, where we boast of our liberty, a system under which the home of every free man, the cellar of every free man, will be under the supervision of the policeman? Do you want to have a system which has increased perjury, which has increased intemperance, which has increased immorality? Sir I do

not want to be harsh towards those who do not entertain the same views as I do. They say that in order to have peace we should pray the Almighty to do away with our imperfections. Well, Sir, this would be a nice state of affairs, but I am afraid we shall not succeed in bringing it about this year. There is in the world a tornado of folly which is sweeping over humanity at the present time. If you want the proof of that, look at the war that is now going on. You see the Catholic Austrian combined with the Protestant German, the Mohammedan Turk linked with the unbelieving Bulgarian. What are they seeking to accomplish? They seek to crush liberty, while the Allies are fighting for the preservation of liberty and civilization. At the very time when the Allies are exerting all their power and giving the best of their resources, the best of their blood, the best of their manhood to this purpose, gentlemen get up in this House and seek to tamper with the liberty of the citizen. It appears to me, Sir, that we are subject to a special kind of disease. Every once in a while in this world we come in contact with people who believe that they are redeemers; they want to redeem humanity. They pretend to be a real Christ; they want to redeem; they want to preach. They are willing to follow the path that leads to Golgotha, but, although in this case they would like to crucify the individual liberties of our people, they are not willing themselves to be crucified. When some men, imbued with the real principles of liberty, stand up and plead for the maintenance of that liberty, prejudices are brought to bear against them and abuses are heaped upon their heads. As one hon. gentleman has said: it is easier to go with the crowd; it is easier to drift with the current. But, having studied the question, and having heard from opponents not a single sound argument why the course suggested should be pursued, in my humble opinion it is better for each man to stand firmly by his convictions.

I must congratulate the member for Vancouver in that he went one better than many persons with whom I ever discussed the matter of prohibition in that he dealt with the question of compensation. But, to my mind he did not go far enough. The liquor trade is a legalized trade; it is acknowledged by the law of the land. Men who have invested their capital in a trade that is recognized by the law of the land are entitled to the protection of the law of the land. If you say that in the public interest, you want to get rid of the liquor trade, then, as the first article of your programme, you must state that you are going to expropriate the property of individuals, because they will be forced to make a sacrifice for the benefit of the community. But the apostles of temperance and of prohibition do not think of that. They have decided that they have a mission, that mission being to punish the individual for the benefit of the community without giving the individual so punished any compensation. Is that fair? I say, no. All authorities who have written on this subject state positively that when a measure of prohibition is to be enacted, the people ought to know what they will have to pay for it. The hon. member for Vancouver suggested that the properties of distillers and brewers should be expropriated by the Government. Well, what will he do with the wholesale traders, and with the retail traders? Is it fair to enact a law of prohibition which will deprive the men who have invested their capital in the legalized liquor trade not only of their earning power, but of their capital? I say no. When a measure is submitted to this Parliament providing that there shall be no more distillation, no more importation of liquor, no more consumption of liquor, and that the properties of those who have invested their money in the liquor trade shall be expropriated, then, and not till then, should we discuss the matter.

The hon. member for Bonaventure stated this afternoon that forty-three provincial constituencies in the province of Quebec had gone dry. I should like to tell you, Sir, what has been done in the county of St. Hyacinthe, which was mentioned by the hon. member for Bonaventure. The county went dry by a vote of the county council. The mayors of the different parishes who were present at the meeting were told: "You do not need a license in your parish; you can get all the supply you want in the town of St. Hyacinthe; better vote for prohibition in your different parishes and you will get all the supplies you want in St. Hyacinthe." In the month of January the prohibition advocate came to St. Hyacinthe and wanted to have St. Hyacinthe dry. They said to the people: "We don't want you to stop drinking if you want to drink, but you will get all the supplies you want from Montreal." Do you think, Sir, that men who have a just cause should take such means to arrive at their object? I can say more than this. In certain parishes—and I know that in the

papers of my province and perhaps in other provinces I shall be taken to task for this to-morrow or before the next election—in order to get a vote the parishioners were called to the church, all the parishioners had to swear, and then they started in procession for the poll where the authorities were present to see how the people were voting. And you claim that this is the free expression of the will of the people, in an open vote, in the year 1916, at a time when everybody has liberty to attend to their municipal, their school, their parochial, their parliamentary business with a secret ballot. We still have in the province the open ballot. Such is the case and such was the way the vote was taken in more than one parish. And now that this vote has been procured, we hear on the floor of the House: You have so many counties that went dry, you have so many cities that went dry. In the list of parishes quoted by the hon. member for Bonaventure (Mr. Marcil), there were two parishes in the county I have the honour to represent. I am willing to bear the responsibility of what I say now. I would rather go back to private life, holding the opinion I do, and after having studied the question as I have done, rather than lack the courage to stand up in this House and say: Beware, because you cannot compel me to practice a virtue by a law enacted by any parliament. Charity is a virtue, but do you think that this parliament should pass a law to compel me to be charitable? Should this parliament pass a law compelling me to be temperate if I did not want to be? No, sir, it is an encroachment on the liberty of the people. Consult the people, and if they are willing to have prohibition, give it to them; but enforce the law and see that those who have made the sacrifice of their liberty reap the benefit of this sacrifice. Sir, I hope that every hon. member who has done me the honour of listening to my remarks will admit that, holding the opinion I do, I yet respect the opinions of those who differ with me. They are perfectly at liberty to have their opinions, but I claim for the representative of the riding of St. Hyacinthe the right to have his opinion and to express it in the House of Commons.

Mr. WILLIAM WRIGHT (Muskoka): Mr. Speaker, the question of the prohibition of the manufacture, importation and sale of intoxicating liquors is a very old question indeed. It has been discussed before the public of this country for more years than I can well remember. It has been discussed in this House on many occasions, and in the various legislatures of the provinces which comprise this Dominion. It has been discussed before the county councils, before the municipal councils, in the parishes and in the various churches. It has been discussed in the papers to a very great extent indeed. If all the words that have been spoken and written on this question in the Dominion of Canada were summed up, we should arrive at the conclusion that it has been discussed to a much greater extent than any other public question in the Dominion of Canada. So I do not feel that I am called upon to say anything to elucidate the very great evil that the drink traffic has caused in this great country of ours. The immoderate consumption of intoxicating drink is an evil admitted by every man in the Dominion of Canada. It is only when we come down to the question as to whether there is such a thing as the moderate use of intoxicating drink that there arises a difference of opinion. I have the very greatest respect for those who are accustomed to drinking in what they are pleased to term moderation, for that large class in the community who can take it or leave it alone. Usually they proceed to demonstrate the first part of the proposition, and then they expect us to take their word for it that they can leave it alone. As to the right of this Parliament to deal with this question, I feel that we have that undoubtedly. This evil is so great that I think the people of this country have delegated to us the power to deal with it, and they expect us to take the position of responsible representatives, and to say yes or no to the proposition that is here before the Chair. Personally, I feel like endorsing the position of the mover and seconder of this resolution, because I think the time has arrived that the hands on the dial of the clock have reached that point when something must be done with regard to this great question. How are we to deal with it? It seems to me that there are two methods open, one to deal with it through the various provincial legislatures, and the other to deal with it through this Dominion Parliament. What are the objections to dealing with it through the legislatures? One of the objections that has been raised is that they have not sufficient jurisdiction to prohibit the manufacture of intoxicating liquors. That may seem a serious objection, but to my mind it is not altogether an insuperable objection. I think the powers of the provincial legislation should be supplemented by action or legislation

of this Parliament, or by an appeal to the Imperial Parliament to amend the British North America Act. What is the objection to dealing with it in this House? To my mind there are two, and these are the only things that can be brought forward as of any very great weight in prohibiting us from dealing with the question. First, a plebiscite was taken a considerable number of years ago, and when that plebiscite was taken the province of Quebec rose up in an enormous majority against prohibition. While the hon. gentleman who seconded the motion tells us there has been a reversal of public opinion in the province of Quebec, I do not know that that may be entirely correct. I do not think that at the time that vote was taken there was any more drinking being done in the province of Quebec than there was in any other province in this Dominion. I think the people of Quebec are just as sober as those in any other part of Canada, and I think that the objection that they raised to prohibition on that occasion did not arise from their love of strong drink. I think it arose from another source, and I am not too sure that the objection would not hold good to-day. I believe that the people of the province of Quebec object to the people of other parts of the Dominion interfering with what they consider their own affairs. They feel that they are quite capable of looking after their own domestic matters. I would like to see more proof from the province of Quebec that it would fall in heartily with any measure proposed in this House. We know that to-day there is a burning question as between portions of the province of Ontario and portions of the province of Quebec in regard to the schools, and I would be very sorry indeed to see this Parliament do anything that might lead the people of Quebec to think that the people of other portions of the Dominion were trying to force upon them views to which they might object. If I were satisfied about that matter, I would the more heartily support the motion before the House.

There is one other objection to the Dominion dealing with the matter—I wish to discuss this issue fairly—and that is the disinclination manifested in times past by some of the legislatures to enforce temperance laws passed by the Dominion Government. We know that they refused to enforce those statutes. We know that while the Dominion Government can pass legislation, the local governments provide the machinery for its enforcement. The Dominion Government is without the machinery required for its enforcement. This arrangement works out all right in regard to questions upon which there is no difference of opinion. Take the law in regard to murder, arson, stealing, and so on, upon which the people are unanimous; there is no hesitation in enforcing these laws in any corner of the Dominion. But when you come to such questions as the one before the House, in regard to which there is a difference of opinion, some people feeling that in quenching their thirst they are not guilty of any moral crime, it is a different matter altogether. We must admit that there is not the same moral sentiment behind liquor legislation that there is behind the laws relating to murder, and crimes of that sort. We have only to take the case of a man who stands behind the counter grasping for money at some hour during which the sale of intoxicating liquor is forbidden. He wants to enrich himself, and on the other side of the counter there is a man afflicted with a very great thirst, and having a coin in his pocket. There you have all the inducement to commit a crime.

So I say, it is much more difficult to enforce laws of this nature, than to enforce laws affecting other matters. We need a strong temperance sentiment to enable us to enforce laws of the kind that we are discussing. If we had an assurance from the various provinces that they would take hold of this question heartily and enforce a prohibitory law, I think we would have a complete case, and we might put the law upon the statute-book with a clear conscience, feeling that we had secured all the necessary machinery for its enforcement.

I have not attempted to make a speech to-night upon this question, but two or three things were said which prompted me to make a few remarks. The hon. member who has just resumed his seat (Mr. L. J. Gauthier) has spoken very strongly against prohibition. He told us that Turkey was a prohibition country, and apparently, he attributes the cruelty of the Turk, and the bad character which he possesses, to his sobriety. I wondered that somebody did not suggest trying to improve the Turk by supplying him with strong drink. It would make a very interesting experiment—strong whisky working a cure on the Turkish mind and character. In my limited experience of life, I have never seen strong drink improve the morals of anybody, and I do not think it would have that effect upon the Turk. If he is unspeakable now, I do not know what he would be if he were addicted to strong

drink. I have no doubt he finds something to assuage his thirst as people do in every land under the sun.

As to the desirability of adopting the Norwegian system, I have very serious doubts. All kinds of legislation have been passed to do away with the evils arising from the consumption of intoxicating drink, but success has attained them just in proportion to the prohibitory element in them. In my opinion the evil of strong drink is to be measured by the amount of drink consumed. Looking at it from every standpoint, weighing up what may be said in its favour, and what may be said against it, I have come to the conclusion that a prohibitory law will at any rate do more good than harm, and in consequence I am quite willing to see an attempt made by this Parliament to enact it. Therefore any legislation that the Government may introduce with the view of lessening the evil or of prohibiting it altogether will meet with my hearty support. In the meantime, I support the resolution moved by the hon. member for Vancouver (Mr. Stevens).

Mr. JACQUES BUREAU (Three Rivers and St. Maurice): I want to say just a word. I have been strongly opposed to prohibition in the town of Three Rivers for various reasons: first, as the honorable member for St. Hyacinthe (Mr. Gauthier) said, because I do not believe in encroaching on individual liberty; second, for local reasons, one of them the financial condition of the town since the conflagration of 1908; and third, I do not believe that prohibition prohibits. Some honorable gentlemen have expressed rather queer views. I heard speakers this afternoon express sorrow for the poor miserable drunkard who went home, licked his wife and threw out his children, and their cry was: punish the hotel keeper, however nice he may be, or however well he may educate and treat his children. They say: we want to stop the use of liquor, and to do that we are going to stop the sale; that is, they propose to make it a crime on the part of the vendor, because the article he sells is per se wrong, immoral, or subject to legislation, while at the same time they are going to let the purchaser go scot free, when he is the offender. I will support this resolution if it is amended, but it is up to the Minister of Justice to amend it so that I can support it. If it is the drunkard who does evil, let us punish him. Let us put in the Criminal Code a provision that whosoever shall have in his possession drink, or shall offer a drink, or accept a drink, or otherwise have intoxicants to dispose of, shall be punished by a fine for the first offence. Increase the fine the second time, and put the man in jail the third time. Do that, and I think you will not have to abolish the bar, nor expropriate the distilleries, nor buy out the breweries. And such a law you can enforce. There is a great economic principle that this Parliament, or anybody else, cannot tamper with. The law of supply and demand operates; as long as there is a demand for whisky they will find a way to supply it. Moonshiners and boot leggers will carry on their operations as in those parts of the United States where there is absolute prohibition. Stop the demand and the brewers and distillers which turn out the supply will soon cease.

Some people will say: Bureau is reasoning ad absurdum in that matter. It may be, but my reasoning is no more absurd than the proposal to punish the man who sells an article, on the ground that the sale is an immoral transaction, and to let free the buyer of the article, the man who really does the wrong, who goes home, beats his wife, and turns his children out of doors to starve. On the other hand, here is a man who is running a good hotel, who has a large family of children whom he educates and makes happy, and yet, in the form in which the temperance question is put before the House, this man is represented as a wrong-doer. As the resolution stands, I hold my position on the ground of individual liberty. But we are under special conditions. During the war we are called upon to make sacrifices, and I think the biggest sacrifice a man can make is the sacrifice of his liberty, since that is worth his life. Let us make the sacrifice, but let us make it properly. If you have two parties to an immoral contract, and both have entered willingly into that contract, punish them both. If you are going to punish only one, and that the one whom I consider less guilty than the other, I do not want to support the measure.

Mr. J. J. HUGHES: Would you give the provinces power to pass such laws?

Mr. BUREAU: If they are going to have the same kind of prohibition that they have in the province of Quebec, no.

Mr. HUGHES: Would you give the provinces power to prohibit the manufacture and importation of liquor?

Mr. BUREAU: I would leave that to the Minister of Finance. He already has enough embarrassments, and I do not want to add to them.

Mr. A. A. McLEAN: I move the adjournment of the debate. I suppose that the leader of the House will give us assurance that opportunity will be afforded us to resume the debate.

Mr. HAZEN: Yes, opportunity will be given to continue the debate at an early day.

Mr. GRAHAM: I would suggest that it be not gone on with too soon, as some of the members will take advantage of the Ash Wednesday holiday to remain away for two days.

Mr. HAZEN: I think that quite reasonable. It will be better to fix some day next week, a day to be agreed upon between the leaders of the House.

Motion agreed to and debate adjourned.

On motion of Mr. Hazen, the House adjourned at 11.40 p.m.

Tuesday, March 7, 1916.

The House met at Three o'clock, the Speaker in the Chair.

PRIVILEGE.

FRAUDULENT QUESTIONS.

On the Orders of the Day:

Mr. CARVELL: I find in the Orders of the day a question standing in my name, No. 15, as follows:

1. What are the names, salaries and nationalities of those persons appointed since October 10, 1911, in the Department of Public Printing and Stationery, and the nature of the work assigned to each?
2. How many promotions have been made among those in the inside service of the said department since October 10, 1911, and what are the names of the persons so promoted?

In the Orders of the Day of yesterday the same question appeared, and three others, relating to the Printing Bureau: No. 43, in the name of the hon. member for Dauphin (Mr. Cruise); No. 44, in the name of the hon. member for Prescott (Mr. Proulx); and No. 46, in the name of the hon. member for Mackenzie (Mr. Cash). On inquiry, I find that the hon. member for Mackenzie was not in the city when the notice standing in his name was placed upon the Order Paper. The other two gentlemen state that they knew nothing about the questions standing in their names. For my part, I never heard of this question, never was consulted about it, and never knew of it until I read it in the Order Paper yesterday. I cannot understand it, although I have looked into the matter. I am satisfied that a gross fraud has been practised on members on this side of the House by the placing of these questions on the Order Paper in our names. I have been informed by the Clerk of Records that the questions were simply typewritten, with our names in typewritten characters. I wish to repeat emphatically that I know nothing about this question and never was consulted about it. As I have said, some person is imposing on the privileges of this House. I wish that this question be stricken from the Orders of the Day, and I think, Sir, it is your duty to investigate this matter and to serve out to the guilty party the punishment which he so richly deserves.

Mr. SPEAKER: I will certainly inquire into the matter.

CANADIAN RED CROSS SOCIETY.

Sir ROBERT BORDEN moved the second reading of Bill No. 48, to amend an Act to incorporate The Canadian Red Cross Society. He said: As this Bill is essentially a Bill of a private nature, although introduced as a Government measure at the request of the Council of the Canadian Red Cross Society, it is desirable that it should be referred to some committee of the House. My right hon. friend has suggested that it be referred to the Committee on Standing Orders; but I would suggest that it be referred instead to the Committee on Miscellaneous Private Bills. I do not know that there is any need to send it to the Committee on Standing Orders, because that committee could only report that the ordinary formal procedure had not been carried out. It was introduced as a Government measure in order that there might not be expense, delay and inconvenience in publishing it. If any person connected with the Society, or any other person, desires to make any representations with regard to the Bill, he will have opportunity of doing so if it is referred to the Committee on Miscellaneous Private Bills. I move that the Bill be referred to that committee.

Sir WILFRID LAURIER: I have not read the Bill; can my right hon. friend give an explanation of its object?

Sir ROBERT BORDEN: I did give an explanation upon the first reading. It simply provides for an addition to the membership of the council, and to enable the western provinces to be more effectively represented. It is really of very minor importance, and it does not affect any interest whatever.

Motion agreed to, Bill read the second time, and referred to the Committee on Miscellaneous Private Bills.

WHITE PHOSPHORUS MATCHES ACT AMENDMENT.

Hon. T. W. CROTHERS (Minister of Labour) moved the second reading of Bill No. 37, to amend the White Phosphorus Matches Act.

Mr. GRAHAM: The object of this Bill, which the hon. Minister of Labour explained some days ago, is, I understand, to extend the time of getting rid of white phosphorus matches already manufactured, and also those on hand for sale.

Motion agreed to; Bill read the second time, and the House went into committee thereon, Mr. Blain in the Chair.

On section 1—extension of time within which matches may be used:

Mr. PUGSLEY: This section seems to be worded in rather an extraordinary way. It is declared in the first place by section 13 that the Act shall come into force on 1st of January, 1915. Then, by the second section, it is declared that the provisions of the Act "shall be held to have come into force on, from, and after the 1st day of January, 1916." It would take a Philadelphia lawyer to understand that.

Mr. CROTHERS: Section 13 of the Act as it now stands provides that as to the manufacture of matches made of white phosphorus, the Act shall come into force on the first day of January, 1915.

Mr. PUGSLEY: The Bill does not say anything as to manufacturing.

Mr. CROTHERS: Section 13 of the Act does.

Mr. PUGSLEY: But that is repealed.

Mr. CROTHERS: I am showing why we want to amend that Act. It provides, as to the manufacture of matches, that the Act shall come into force on 1st January, 1915; then section 2 is as to the sale and use, and it says the Act shall come into force on 1st January, 1916, giving the manufacturers a year from the time they have ceased to manufacture the matches to sell the matches already manufactured. They ceased manufacturing on the last day of December, 1914, but during 1915 they did not sell what they had manufactured. This Bill is to enable them to do so for six months longer, and those who buy the matches to use them up to 1st January, 1917. The main object of the original Act, as the committee will remember, was the protection of the employees engaged in the making of white phosphorus matches, and that has been effected by the cessation of manufacture on the 1st January, 1915. As the law now stands, those who have sold any such matches since 1st January, 1916, would be liable to prosecution, and those having the matches in their possession for use would be liable. This Bill is simply for the purpose of giving the manufacturers six months longer to sell, and the people who are using them twelve months longer to use them.

Mr. MARCIL: Is there any danger in the use of those matches, or is it merely in the manufacture?

Mr. CROTHERS: The danger is chiefly but not entirely in the manufacture. The object of the original Act was to protect those engaged in the manufacture of white phosphorus matches. Some few employees had become diseased by inhaling the fumes caused by the use of white phosphorus in the matches. There have been cases in which the injurious effects of these matches have occurred. There was a prominent case in Prince Edward Island where a woman poisoned her three children by using the ends of these matches. Children playing with matches of this kind about the house are very likely to put them in their mouths. It is because of instances of this character that the Act provided that white phosphorus matches should not be used. This proposition is simply to allow for the sale of the stocks which are on hand, and those who have purchased them are given until the first of next January to use them.

Mr. PUGSLEY: A company manufacturing matches at Hampton, N.B., protested very strongly against the proposed legislation, saying that no injury had ever been known to have resulted from the use of white phosphorus in their factory. Have they withdrawn their objection? I understand that they were heard by the minister.

Mr. CROTHERS: There was no serious objection by any of the manufacturers except that the company which my hon. friend mentions and one in Nova Scotia desired that they should not be compelled to cease manufacturing until the 1st of January, 1916. The original Bill so provided, but it was amended in the Senate so as to restrict the manufacture to the 1st of January, 1915. I have no doubt that the manufacturers that my hon. friend refers to did object to the provisions in the Act requiring them to cease manufacturing so early. They thought they ought to have had another year. But, I understand that they all ceased to manufacture on the 1st of January, 1915.

Mr. PUGSLEY: I do not think that the minister quite understands the criticism that I made of the Bill. Would the minister kindly explain why it is provided that the Act shall come into force on the 1st of January, 1915, excepting section 5, while, by section 2, it is provided that "the provisions of this Act shall be held to have come into force on, from and after, the first day of January, 1916." There is a difference of a year in time when, by this Bill, the Act is declared to come into force. Would the minister kindly explain that?

Sir ROBERT BORDEN: As far as I can understand it, the last section fixes the date at which the amendment shall take effect. The first section contains an amendment to the original Act; the second says that the amendment shall take effect on a certain date.

Mr. PUGSLEY: Yes, but it provides that this Bill shall only become effective from the first of January, 1915. Then, there is another section which says that this Act is not to come into force until this year or that it should not have been in force a year ago.

Mr. CROTHERS: No, 1916. The Act referred to in section 2 is this present Act.

Mr. PUGSLEY: Quite so.

Mr. CROTHERS: The original Act. The idea was to prevent any prosecutions for any violation of the Act from and after the first day of this year. Otherwise, any one making, using, or selling these matches up to that time would be liable to prosecution. The Act is retroactive as to that. Any violation of the original Act, either by the sale or the use of these matches, to the first of January of this year, will not be an offence, because it will be covered by this amending Act.

[Mr. Pugsley]

Mr. PUGSLEY: Does not the minister see that this section declares that this amending Act shall not come into force until the first day of January, 1916, and another section declares that the Act shall come into force on the first day of January, 1915. It does not say that it shall be deemed to have come into force, but that it shall come into force. Otherwise, Parliament, speaking from the first of January, 1916, declares that, as to section 1, the Act shall come into force a year previous to this amending Act having become law.

Sir ROBERT BORDEN: It sounds confusing, but I do not think it is. I think the real change in the Act is in the addition of the proviso. There is no change made in the Act in so far as manufacture is concerned. There is the right to manufacture until the first of January, 1915; but section 13, in so far as it differs from the original section, extends the right until the first of January, 1916, in order to cover the period between that date and the date when this Act shall receive the Royal Assent.

Mr. PUGSLEY: But how could the amended section be deemed to have been in force a year ago?

Sir ROBERT BORDEN: Not a year ago.

Mr. PUGSLEY: Yes, on the first of January, 1915. How could it be deemed to have been in force a year ago when this Act, so declared to be in force, does not become operative until January of this year?

Sir ROBERT BORDEN: Because there is no change made in that respect from the original section.

Mr. PUGSLEY: Oh, yes.

Mr. CROTHERS: The first part of section 13 which is amended is in these words:

This Act shall come into force on the first day of January, 1915, except section 5 thereof.

Section 5 is the one that deals with the sale and use. Then it goes on and states in substance that, as to sale, the time shall be extended to the first of July, 1916, and, as to use, it shall be extended to the first of January, 1917.

Mr. PUGSLEY: But you are repealing that section. This is a new law, and you are providing that this new law shall not be operative until after the first day of January, 1916. Would it not be better to have it declared that the provisions of section 13 shall be retroactive and be deemed to have

been in operation from the first day of January, 1915; and then special provision could be made as to section 5. However, if my hon. friend is satisfied with the section and can see clearly what it means, I congratulate him.

Mr. CROTHERS: The first clause of this section as aamended is in identically the same words as the original section.

Progress reported.

THE ROYAL ASSENT.

A message was delivered by Lieut.-Colonel Ernest J. Chambers, Gentleman Usher of the Black Rod, as follows:

Mr. Speaker, the Deputy of His Royal Highness the Governor General desires the immediate attendance of this honourable House in the Chamber of the honourable the Senate.

Accordingly, the House went up to the Senate.

And having returned,

The Speaker informed the House that His Honour the Deputy of His Royal Highness the Governor General had been pleased to give, in His Majesty's name, the Royal assent to the following Bills:

An Act respecting the Canadian Northern Railway Company.

An Act respecting the Calgary and Edmonton Railway Company.

An Act respecting the Central Western Canada Railway Company.

An Act respecting the Quebec, Montreal and Southern Railway Company.

An Act to amend the Railway Act.

SHELL CONTRACTS.

PROPOSED COMMITTEE OF INVESTIGATION.

Rt. Hon. Sir WILFRID LAURIER moved:

That a special committee of members of this House be appointed to inquire into all purchases of shells or other munitions or goods by the Shell Committee formed by the Minister of Militia, as stated to this House by the Prime Minister on the 15th April, 1915, together with all contracts made or orders given by the said committee for any shells or other munitions or goods, with authority to the said committee to examine witnesses under oath and to require the production of any documents, books, letters or papers; and that such special committee be directed to report from time to time to this House in such manner as it may think advisable.

He said: Mr. Speaker, the reasons which have prompted this motion are well known to the House—well known, I may say, even before I state them. For months past those reasons have been set forth in ever-growing emphasis by the press of all political shades and colours. And, speaking of the press, I may eliminate on the present occasion the Liberal press, and confine myself, and the authority upon which I rely, entirely to the press which supports the Government, and especially those newspapers which, while strong in their devotion to the party in office, are perhaps yet stronger in their antagonism to the party out of office. I repeat—and nobody I am sure will contradict what I now say—that the press of all shades of politics have for months past been urging that the Government should probe, and probe to the bottom, the transactions of the Shell Committee, as a duty which the Government owed not only to the country, but to itself.

It may be well at this point to inquire into the cause of this passionate, unanimous and persistent attitude of the press. Does it spring from any unworthy motives, from any prurient curiosity, from any desire to injure the Government? No, all these motives can be at once discarded. The only cause which has prompted the attitude of the press is the conviction, early forced upon the Allied nations as the first lesson of this war, that, if they are to win, they must have without any delay whatever, three things: munitions, more munitions, and still more munitions. No one can forget the agony of suspense through which we on this side of the Atlantic passed when the sound of the first shock of battle reached our ears from across the ocean, and when day after day and week after week the bulletins told us the same sad story, that the forces of the Allies were being compelled to retreat from Belgium into France and from the borders of France far into the interior, until at last the German army had reached almost within sight of the steeples of Paris. We did not know then, but we know now that the Allied armies were forced to retreat, not so much because they had to face an enemy immeasurably superior in numbers as because they were outmatched in guns, shells, shrapnel and explosives of all kinds. And when at last the day came with the cheerful news that the Allied armies had taken the offensive; that they had thrown themselves upon the right wing of the German army and had forced it back in confusion from the Marne to the Aisne, great was the hope entertained by every one on this side of the Atlantic that the retrograde movement of the German army would be compelled to continue from the Aisne to the Rhine. This hope, however, was doomed to disappointment, the reason—which we did not know then but which we know now

—being that the supply of munitions had failed the Allies at the critical moment. We have since learned that amongst those victorious troops there were tears of rage in thousands of eyes because they were forced, at a moment when victory was almost within their grasp, to abandon their forward movement and were not permitted to drive back the German army from the soil of France and Belgium on to the soil of Germany. A cry arose in the armies and reverberated all through the Allied nations for munitions, more munitions, and still more munitions. With the conditions in Russia I am not familiar, but as to what took place in France and in England, I am perfectly cognisant, as is every hon. member of this House. In France the Government was reorganized and a new minister of War, Mr. Millerand, who as Minister of War in a former Government had made his mark as a man of eminent ability and great energy, was appointed, and he at once created a special department which he placed under the control of Mr. Albert Thomas, whose duty it was to at once procure munitions of war.

We are still more familiar with what took place in England, and we know that a new department of the Government, the Department of Munitions, was created and placed under the control of Mr. Lloyd George.

In Canada what happened? We learn now that the Government of Canada undertook to supply the Imperial authorities with munitions; that the Minister of Militia was entrusted with the task, and that he called to his aid a committee known as the Shell Committee, whose especial duty it was to provide for the prompt manufacture and the prompt delivery of munitions of war. Sir, I place myself in the judgment of every man within the sound of my voice when I say that this committee never measured up to the expectations of the Canadian people, who followed its movements with feverish anxiety in the hope that it would promptly deliver the munitions which the Imperial authorities so much needed. The Shell Committee, however, accomplished practically nothing, and great, and keen, and universal was the disappointment amongst the people, Accusations found their way into the press representing all shades of opinions. These accusations cannot be said to have been prompted by party motives, because they were, perhaps, more vigorously pressed in the newspapers supporting the Government than in those opposed to it, and all agreed in calling upon the Government to investigate the matter at once, to see where the fault lay, and to have it promptly remedied.

When this Parliament met for this session these accusations were taken up by hon. members, who gave facts and figures, names, and dates, emphasizing the accusations which had been published in the press, and repeating the urgency for having a prompt investigation. But up to this time the Government has remained deaf to all these appeals, no matter whence they came. Up to this date attention has been paid to this matter by only two ministers, the Minister of Militia (Sir Sam Hughes), who spoke in the debate on the Address, and again some days ago in regard to the matter, and the Solicitor General (Mr. Meighen). I will refer only to the first speech of the Minister of Militia, in which he simply discarded, with a lordly wave of the hand, all the accusations brought against the Shell Committee. He ignored those charges, but to ignore charges is not to dispose of them, and although the minister has spoken, there has been no abatement in the demand for an investigation.

The attitude of the Solicitor General was altogether different. He did not pass over the accusations which had been made; he did not ignore them altogether; but took the attitude that whether the committee had acted rightly or wrongly, it was no concern of his, nor of the Canadian Government, and that the Government were absolutely not responsible for the actions of the Shell Committee. In order not to do any injustice to the Solicitor General, it is well that I should give his ipsissima verba. This is what he said:

> I am not here to attack the Shell Committee; I am not here to defend the Shell Committee; I am here to offer some remarks in regard to what they have done, in regard to their status and character, in regard to their responsibility, and in regard to our duty towards them. The members of the Shell Committee were named by the Government of Canada, and that was at the request of the Imperial authorities. It was done for the purpose of securing the manufacture of shells in this country for the Imperial authorities. The naming of them was done by this Government. They were constituted, on being so named, and having been constituted, they were placed at the disposal of the Imperial authorities and became a committee answerable to the Imperial authorities alone. Now, have I stated that emphatically and clearly? Upon their being named by us at the request of the Imperial Government, they became an Imperial Government committee, responsible to and answerable to the Government of this Empire. They conducted their business directly with the Imperial authorities. Communications passed from the Shell Committee

to the Imperial Government and from the Imperial Government to the Shell Committee. Had they been in a position where we had authority over them, had they been constituted as a committee under a department of this Government, they would have been answerable to this Government; we would have had authority over them and we would have been responsible.

The attitude taken by the Solicitor General here is that he and the Government wash their hands completely of responsibility for the actions of the Shell Committee. Though my hon. friend asserts that the committee was appointed by the Imperial Government, I believe we can all agree that the members of the Shell Committee, whose names I shall read, respectable though those names be, were not selected on their merits by the Imperial authorities, but upon the recommendation of the Government of Canada. I take issue with the Solicitor General upon the point raised. As this Government has given its recommendation to the Imperial authorities, then, notwithstanding his views that the members of the Shell Committee are responsible to the Imperial authorities, I say that the Government that made that recommendation, and that gave that advice, is responsible to this House and to the people of this country. The Government of Canada, having advised the Imperial authorities to select So-and-so, and Such-and-such as members of this committee, it is inconceivable that it should be pretended that, when called upon by the representatives of the peoeple to give their reasons for what they did, they should come before this House, wash their hands of the whole affair, and declare that it is no concern of theirs what these men may have done, or may not have done.

The Solicitor General went further—and, for my part, I was not surprised that he should take in this case the course that has so often been taken before, when the Government is pressed with what we consider a dereliction of duty—and he attempted to seek refuge behind the alleged conduct of the predecessors in office of the present Government. The summing up of this argument on that subject was: This Government is no worse than its predecessors, because it has done exactly what its predecessors did.

Before going further, I must refer to the motion made by Mr. Monk in 1903, after the South African War, which was:

For a return showing:

1. The total amount paid by the Government of Canada for hay and oats, purchased for the Imperial Government, for shipment to South Africa, during the years 1900, 1901 and 1902.

2. The names of the parties from whom hay and oats were so purchased.

3. The prices at which the said hay and oats were so furnished during the said periods, from each of the said parties.

4. The total amount paid to each of the said parties, both for hay and oats.

This motion was refused by the Government of that day, it was pressed by the Opposition of that day, and it was defeated by the vote of the House. The Solicitor General now cites this as a precedent, but I say that there is no parallel between the two cases. This motion presented by Mr. Monk was a motion merely for the production of papers, while the motion now presented to the House is for an investigation for cause shown. Even assuming that the two cases are on all fours, I contend that the denial by the Government of the motion made in 1903 forms no precedent for the present Government refusing the motion presented to-day. The party now in office and responsible to the Canadian people took issue upon this question in 1903. They asserted by their votes that whenever the Government of Canada was called upon by the Imperial authorities to do some act for the Imperial authorities, even after that act had been completed, the members of this Parliament had the right to hold the Government of the day responsible. Upon this they laid down a new code of morals, which they gave to the Canadian people as an earnest of what they would do if they had the power to do it. I ask, is it honourable, is it right, for them to say now: we go back upon our record and will not do what we pressed the Government of that day to do in 1903. I do not hesitate to say that in my humble opinion—and in this I appeal to the judgment of the House—such an attitude would be absolutely immoral and impolitic, to say nothing more of it.

4 p.m.

I go further and say that the case of 1903 as cited is not at all a precedent, as is contended by the Solicitor General. There is all the difference in the world between that case and this. I turn again to this motion made by Mr. Monk. It was presented as a motion for the production of papers, and it was moved without reason given, just like many others that are carried by this House every session. Mr. Monk, I say, made his motion without a word of explanation. He was answered by Hon. Mr. Fielding, then Finance Minister, who spoke for the Government in these words:

I think I am correct in stating that my hon. friend brought this matter before the House a year ago in the form of a question. And my hon. colleague, the Minister of Agriculture, said that it concerned only the Imperial Government, inasmuch as it did not affect the public moneys of Canada in any way, therefore he was unable to supply the information asked for. I think that we ought to take the same position to-day. For all expenditure of the public money of Canada, the ministers are accountable to this House and the House is entitled to every information, but this is an expenditure of Imperial money for which this Government is not accountable to this House.

I took part in the debate on that occasion, a fact of which the Solicitor General, speaking the other day, reminded the House. I then took the position that the motion presented was not within the purview of Parliament, but that if charges of wrong-doing were made against the Government in connection with the purchase of hay and oats for the Imperial authorities, and if a committee of investigation were asked, that investigation would be granted. I take that attitude to-day. Let me quote from the Solicitor General to show how he represented my attitude in that debate:

The motion, however, was pressed, and the late Prime Minister (Sir Wilfrid Laurier) himself took a part in the discussion. Here I shall quote the words of the late Prime Minister:

"I believe that everything in this matter was done fairly and well. We have no complaint from the British Government, and I therefore see no reason why the House should inquire into the expenditure of money which does not concern it.

Mr. Borden: I would like to know whether the right hon. gentleman is willing or not to have these purchases ventilated in the Committee of Public Accounts, as they might be if they were the expenditure of this country.

The Prime Minister: Certainly not.

In the language which I am reported to have made use of on that occasion, certainly there is no justification for the statement which I made a moment ago, that on that occasion I stated that if charges were made and an investigation asked it would be our duty to grant the investigation. But I have not quoted from the Hansard of 1903, I have quoted from the report of my observations in 1903 as given by the Solicitor General in Hansard this year; and there is quite a difference between what I said on that occasion and what I am represented by the Solicitor General as having said on that occasion, because my hon. friend the Solicitor General curtailed my remarks, I should say garbled my remarks, both at the beginning and at the end. My hon. friend shakes his head. Let us go to the authority. Here is Hansard of 1903. After the answer of the Government to the motion of Mr. Monk had been given by Mr. Fielding, the Finance Minister of that day, I intervened in the debate, upon my hon. friend the then member for Victoria and Haliburton, the present Minister of Militia, jumping into the debate with characteristic impetuosity. This is what he said:

Mr. Hughes: The fair name of Canada is at stake. There are very serious scandals in connection with not only these oats and hay purchases but also with purchases of horses. I would like the hon. gentleman to understand that when our Government gives instructions to its officers, who are paid by the Canadian people, the Canadian people are going to inquire into the actions of these men. I hope that the right hon. the Prime Minister will come off his high horse—not one of those horses which were bought for $40 and sold for $150—

Some hon. MEMBERS: Oh, oh.

Sir SAM HUGHES: Might I suggest to the gentlemen who are laughing that this was part of my remarks at that time?

Sir WILFRID LAURIER: Oh, yes, in 1903. It was not one of those horses which were rejected as too old in 1899 and bought in 1914. I continue the quotation:

—and give us the information asked for.

The Prime Minister (Right Hon. Sir Wilfrid Laurier): My hon. friend from Victoria (Mr. Hughes) ought to be more careful than to use such language.

Mr. Hughes: I take the responsibility of my language, and I am prepared, if the Government will give me a committee, to prove what I have said.

The Prime Minister: If the hon. gentleman has charges to make, he knows that there are ways and means of making them. This is not the way to make a charge.

Mr. Hughes: Would the hon. gentleman give a committee of the House or a commission?

The Prime Minister: The hon. gentleman knows how to proceed if he has any charges to make, and if he has it is his duty to make them. Although the money expended was not that of Canada but of the Imperial Government, still, if he has charges to make, if he thinks he can prove any scandal, it is his duty to make these charges, and he should not have delayed so long; but he cannot expect the Government to take notice of vain words thrown on the floor of Parliament. There has been no charges so far as I know, made, and the hon. gentleman has no warrant to speak as he does.

All this I said in 1903; but all this was not quoted by my hon. friend the Solicitor General. I did say this, which was cited by the Solicitor General:

I believe that everything in this matter was done fairly and well. We have had no complaint from the British Government, and I therefore see no reason why the House should inquire into the expenditure of money which does not concern it.

Mr. Borden (Halifax): I would like to know whether the right hon. gentleman is willing or not to have these purchases ventilated in the

Committee of Public Accounts, as they might be if they were the expenditure of this country.

The Prime Minister: Certainly not.

There my friend the Solicitor General stopped—but I said more, and this is what I said:

The Prime Minister: Certainly not; my hon. friend has no reason to speak in that way. The Committee of Public Accounts are bound to investigate the expenditure of the money of the Canadian people, not the expenditure of money by the Imperial Government. But if my hon. friend or any one else has any charges to make that the Government has behaved in the manner suggested, he can have all the investigation he desires.

He could have had all the investigations which he desired. But no desire for investigation was ever expressed, no charge was made, no investigation was asked, and that is the difference between that day and this. To-day charges have been made, and I rise in my place as a member of Parliament to ask for an investigation.

Mr. MEIGHEN: Will the right hon. gentleman now make a charge half as specific as the charge he has just quoted as made by the present Minister of Militia on that very occasion?

Sir WILFRID LAURIER: My hon. friend is an able dialectician, but he knows as well as I do that Mr. Monk's motion was not a motion making charges, but a motion for the production of papers. I said: Make a charge. No investigation was asked for. Ransack Hansard as much as you can, you will not find a motion for an investigation of these purchases in 1903, or of anything else connected with that war. That is the difference between that day and this. I will go further. Do I understand my hon. friend to say that an investigation should have been granted on such an occasion?

Mr. MEIGHEN: I should think that the papers would be much more likely to be brought down than that an investigation would be granted. How would one know whether there should be an investigation unless the papers were brought down?

Sir WILFRID LAURIER: If, Sir, this motion had been based upon charges made an investigation would have been granted. But let us pass from all this. My friend insists that there was no investigation in 1903. If the motion of Mr. Monk had been granted, would he deny my motion to-day, or would he grant it? If, Sir, there was reason for having granted the motion of 1903, is there not ten times more ground for granting the motion I now make? Let us look at the question raised to-day, and let us see whether or not there is cause that we should hold the Government responsible, and upon this I will ask the case to be judged by the language of the Solicitor General himself. In the language which I have already quoted, which he used in the debate on the Address, he stated, in conclusion, speaking of the committee:

Had they been in a position where we had authority over them, had they been constituted as a committee under a department of this Government, they would have been answerable to us, we would have had authority over them and would have been responsible.

Now, Sir, I take this as the basis upon which I proceed to-day, and I say to my hon. friend, and I say to the House, that the Shell Committee was appointed by this Government, that it was appointed as a branch of this Government, that it was acting under a member of the Government, the Minister of Militia, and therefore, according to the code laid down by my hon. friend, the Government is responsible. What is my warrant for stating this? I have my warrant in a speech delivered in this House on 15th April last by the Prime Minister himself. Speaking on this very subject, my right hon. friend on that occasion said:

I return to the question of what may be done by the Government to make it absolutely sure, that there shall be given to the people of this country every possible safeguard as to public expenditure. It is perfectly true that, so far as the investigation of the Public Accounts Committee is concerned, nothing has been disclosed—so far as I am aware and I speak subject to correction—in respect of transactions other than those which occurred during the first six or eight weeks of the war.

But, nevertheless, I realize, and I think all members of the Government realize, the Minister of Militia himself realizes, that the department was not organized to perform the enormous amount of work that is imposed upon it at present. What has been the course taken by the Mother Country under similar conditions? In respect of such matters, the course taken by the Government of the Mother Country has been to call to the aid of the Government the best business ability of the country. The business men of that country have responded and splendid results have been thus obtained. The Minister of Militia himself, it is only just to say, at least two or three months ago brought this question before Council and urged upon Council the advisability of having his department assisted in this regard by a committee of three business men. In respect of some other matters, the Minister of Militia has taken a course along that line which has brought about most excellent results.

If the House will pardon me—my remarks have been extended beyond what I had at first contemplated—I wish to place before Parlia-

ment the record of what has been accomplished by the committee appointed in this country to fill orders which the British Government desired to place here, if they could be placed in Canada, for the supply of munitions. A committee was formed by the Minister of Militia in the early stages of the war, consisting at that time of Col. A. Bertram, Chairman; Thos. Cantley, Esq.; Geo. W. Watts, Esq.; E. Carnegie, Esq., representing the manufacturers; Col. T. Benson, Master General of Ordnance; Col. Greville Harston, Chief Inspector of Arms and Ammunition; and Lt.-Col. F. D. Lafferty, R.C.A., Superintendent of the Dominion Arsenal, representing the Department of Militia and Defence.

I have asked the chairman of that committee to prepare a report of their work for the purpose of showing what can be done by a business organization of this character, through the co-operation of business men in this country.

Then the Prime Minister went on to say that he desired to present that report, and he did present it. He said the report was drafted by Colonel Bertram, the Chairman of the Committee, and this was the heading:

Report on the Formation and work of the Shell Committee by David Carnegie, M.I.C.E., Ordnance Adviser.

To Sir Robert Borden,
Prime Minister of Canada,
Ottawa, Ont.

The report is rather long, and I will not quote it at all. I am sorry that I cannot quote it all. It is not sparing to the modesty of my hon. friend the Minister of Militia, but I think he would be equal to the occasion and accept it. But I will quote some parts which refer to the very thing in issue, and which show whether this committee was part of the Government or was not part of it. The first sentences are in these words:

Soon after the declaration of war the hon. Minister of Militia, General Hughes, was asked by the British Government, if he would place contracts on their behalf, for arms and ammunition, with the United States.

After having arranged certain contracts there for small arms, etc., he received an inquiry for 200,000 shrapnel shells, empty, in equal numbers of eighteen and fifteen-pounders.

The report goes on:

Before actually forming the committee, the Minister of Militia asked Colonel Greville Harston and Lt.-Colonel F. D. Lafferty, to get in touch with all manufacturers in Canada, who they thought could make the component parts for shrapnel shells. He particularly emphasized his desire to have the steel manufactured in Canada.

As a result, the following manufacturers were called to Ottawa to meet General Hughes, on the 2nd of September, 1914:

Col. A. Bertram, of Messrs. J. Bertram Son & Co., Dundas, Ontario; Geo. W. Watts, Esq., of the Can. Gen. Elec. Co., Toronto, Ontario; The Ingersoll Rand Drill Co., of Sherbrooke, Que.; Goldie, McCulloch Co., of Galt, Ont.; E. Carnegie, Esq., of the Electric Steel and Metals Company, Ltd., Welland, Ont.

[Sir Wilfred Laurier.]

At a meeting of the above, the whole question was fully discussed. Lt.-Col. Lafferty described in detail the manufacture of the shells and their components parts, and Col. Greville Harston dealt with the system of inspection. Drawings and specifications were shown and explained, after which the meeting assured the minister that the work could be done in Canada.

On the 8th of September, 1914, at a meeting held by the minister at the Dominion Arsenal, the following committee was appointed to organize the work throughout the Dominion:

Colonel A. Bertram, Chairman; Thos Cantley, Esq., Geo. W. Watts, Esq., E. Carnegie, Esq., representing the manufacturers; Colonel T. Benson, Master General of Ordnance; Colonel Greville Harston, C. I. Arms and Ammunition; Lt.-Col. F. D. Lafferty, R.C.A., Superintendent of the Dominion Arsenal, representing the Department of Militia and Defence.

Another part of the report reads:

When it is recalled that at the time in question, the Minister of Militia was engaged in the colossal task of raising, training and equipping a contingent of Canadians for the "front," it is remarkable that he should have found time to think of the many factories throughout the Dominion which were idle and to devise such an efficient means of helping them and the British War Office. It is somewhat flattering to find that the British Government has recently followed similar plans for utilizing the manufacturers throughout England for the manufacture of shells.

The minister in selecting manufacturers to work with officers of his own department, combined the commercial and technical ability requisite and the results of his choice have proved already eminently successful.

To Colonel Bertram belongs the praise for the harmonious and efficient work of the committee.

It seems to me that this language is quite to the point, and shows conclusively that the committee was working under the Minister of Militia. But if that is not sufficient there is something more. The report states:

The executive work of the committee has been very wisely entrusted to the chairman, Colonel Bertram, who reports weekly to the Minister of Militia and also to the committee when it meets (which is usually monthly) or more often, at the call of the minister.

Now, Sir, that is not all; there is something more to the same point. Here is an additional paragraph:

In adidtion to the foregoing, the Minister of Militia, through his committee, has made several investigations for the War Office in connection with the supply of propellants and high explosives. An investigation was undertaken regarding the supply of nitro-cellulose powder by a large firm in the United States. Other matters have been investigated, such as the supply of rifles and ammunition for the Russian Government.

Sir, that report is certainly conclusive evidence that the Shell Committee was simply an adjunct of the Department of Militia, working under the Department of Militia, and acting within their purview,

as laid down by my hon. friend the Solicitor General; that it was therefore part of the Government, with the Government responsible to the country.

But that is not all. Let me now see how the matter was viewed in Great Britain. I have the statement made by Lord Curzon, a member of the Imperial Government, upon this very point—upon the working of the committee and the working of the Canadian Government. These are the words spoken by Lord Curzon on June 23 last:

In Canada the system adopted by the War Office has been this: They have made their orders from an early date, through the Canadian Government, treating the Canadian Government, in fact, as their agents for the supply of munitions of war. Any requirements from the War Office here are communicated by letter or telegram to the Canadian Government, or rather to the Minister of Militia there. This officer constituted quite early in the day the Shells Committee to which the noble Lord referred. That is a body presided over by a gentleman whose name is mentioned, a General Bertram, and upon it are representatives of the various manufacturing interests in the Dominion, and the function of the committee is to advise the minister as to the contracts which, on behalf of the Imperial Government, he shall conclude. All applications are made to him. They go before the committee, who examine and adjudicate between the claims or the different parties; then the contract is concluded over there, and finally the Canadian Government assume the responsibility of inspecting the munitions for us when they have been produced.

Is it not perfectly clear that it is an abuse of words to tell us to-day that the Shell Committee was responsible simply to the Imperial authorities? The Imperial authorities tell us, by the words of Lord Curzon, that the Imperial authorities did not know the Shell Committee—that the only party they knew was the Minister of Militia, and it was with him that they transacted the business.

We had it the other day from the hon. Finance Minister (Sir Thomas White) that, although the contracts were made by the Imperial Government, it was the Canadian people who, in the last resort, were to pay for these munitions. If the Canadian people have to pay for them, certainly the Canadian people have the right to see how their money is expended and to look into the manner in which this committee had transacted its business and carried out its obligations. My hon. friend from St. John (Mr. Pugsley) asked the hon. Minister of Finance, during the course of the debate on the Address, the following question:

That means, of course, all the ammunition, all the guns, all the boots and shoes, and all the clothing used by the Canadian soldiers at the front?

Sir Thomas White: Our understanding is that the Canadian Government will pay all, but that an adjustment is necessary and will have to take place later.

Here we have conclusive evidence that in this matter we have to look to the Canadian Government and the Canadian Government, of course, is responsible to the people. We have the facts clearly established that the Shell Committee was appointed by the Canadian Government, that it acted under the Minister of Militia, that it reported to the Department of Militia and Defence, that the Minister of Militia had the calling of it whenever he chose, and that it is the money of the Canadian people that is used to pay for the shells ordered by the committee. We have it also in evidence that the Minister of Militia was the author of the committee. He thought his department was not equal to the task imposed upon it and that he should have a committee of business men to advise him. Everybody will agree that that was a wise measure. It would have been a wise measure to have had a committee of business men to advise the Minister of Militia, but the mistake which was made was that he appointed as members of this committee manufacturers engaged in lines of business who, from the very nature of their business, would be tempted to become manufacturers of shells and share in the fantastic profits which were looming up. It would have been the part of wisdom to have done then, what was done later on in the formation of the committee, that is, to select men who were not engaged in that line of business. But I have to charge against this Government, that every one of the members of this committee was a manufacturer actually engaged in the business of manufacturing shells for the Government. The incongruity of the thing is apparent to everybody. General Bertram was a member of the committee, Mr. Carnegie was a member of the committee, Mr. Watts was a member of the committee, and we find these gentlemen contracting with themselves both as sellers and purchasers; or rather not themselves personally but with their firms which were engaged in the making of shells. As for one of them, if he was not actually connected with the manufacture of shells, he was connected with the Nova Scotia Steel Company, which supplied steel and iron. It is, in that respect, interesting to read an interview which was given to the Toronto Globe by General Bertram. In

that interview, published in the Globe at the end of last December, General Bertram, Chairman of the Shell Committee, used this language:

The committee, of which I was head, and for which I was responsible in every way, was composed of manufacturers and military men. I took upon myself to award the contracts. The committee knew nothing of the contracts and the prices until they had been allotted. I did this for a reason. I felt in justice to these men, some of whom were manufacturing shells, that they should be kept in ignorance of the awarding of the contracts. The committee's work, aside from my own, was organization work. I also made up my mind that a great deal of the responsibility rested upon my shoulders in the turning out of shells that would reflect credit upon Canada.

Mark these words. Here, the Chairman of the Committee says publicly, making no ado about it, that he awarded the contracts without the knowledge of the members of the committee. Why was this? General Bertram saw, himself, the incongruity, the impropriety, of members of the committee being contractors with themselves. He awarded contracts to the other members of the committee. One did not know what was given to the other. At last General Bertram ended by awarding contracts to his own firm. Is it to be wondered at, is it surprising, that this committee never gave any satisfaction? We know now,—it is a matter of record, it cannot be contradicted—that there were controversies between applicants for contracts, between applicants within the committee and applicants without the committee. Notwithstanding the denial that has been made, because it is a fact that an investigation will demonstrate, there was a patronage list which was sacrosanct, beyond which no contract could be given, beyond which no contract was given, and it was not until after weeks and weeks that other applicants obtained them. We know that manufacturers were passed over who had plants almost ready to go on with the work. Passed over for whom?—for middlemen who had no plant and no capital and who went about peddling their contracts to whoever would take them. The consequence was—and this is one of the charges I make against this Government—that no work was done and that while the soldiers at the front were clamouring for shells, no shells came from Canada. Am I wrong in making that statement? Am I presuming too much? I have the proof at hand and that proof is supported by the statement of Mr. Thomas who was delegated by the British authorities to look after the work in Canada and see how it was going on. Mr. Thomas came here in the first days of July. He spoke in October, in the city of Montreal, and this is what he said:

In the matter of the efficiency and expedition, by which I mean the delivery of orders in a short time, when I came over first, Canada was inclined to be behind with her orders. I believe Mr. Lloyd George announced that she was only making good to the extent of 2 per cent. But the work has been speeded up much more satisfactorily, and Canada can do much more than she is doing.

In the month of October, then, Canada could have been doing much more than she was doing; in the month of July she was making good only to the extent of 2 per cent. Sir, this is the gravamen of the charge we make against the Government: that under the system which they adopted, the orders were not filled, and the shells were delivered only to the extent of the insignificant proportion of 2 per cent, as stated by Mr. Thomas.

I will not go over all the charges that have been made in the press, for they are familiar to everybody; nor will I repeat the statements which have been made on the floor of this House, for they too are familiar to everybody; but there is a charge to which I wish to refer here and now, and to which reference was not made in the debate on the Address, because the facts I have now to disclose were not then before me. The debate on the Address closed on the first or second of February. On the 31st of January, one of the most eminent papers in this country, a paper whose sympathy is with the Government of the day, and which is edited by a gentleman whose reputation for honour and integrity is well known—I am referring to the Toronto Telegram and to Mr. John Ross Robertson—on January 31 last the Toronto Telegram published the following charge and made a special feature of it. This is the charge made by the Toronto Telegram, and I direct the attention of the Government to it and I invite their answer:

Britain invited the Shell Committee to place an order for 5,000,000 time fuses last summer. The Shell Committee placed the whole order in the United States. The price per time fuse was $4.50. The date of the contract was last summer, and the amount to be paid under the contract was $22,000,000. Sir Robert Borden's Shell Committee advanced $3,750,000 in cash with the order. The Imperial Munition's Board has not yet received one time fuse under this contract.

And this was written on the 31st of January last. The article goes on:

The Americans who received the contract and the advance of $3,750,000 had no previous ex-

perience in the production of time fuses. They are described as having no factories, merely stock promoters and brokers. The result of this frightful bungling is that Great Britain has completely lost confidence in Canada's ability to produce time fuses.

These are grave accusations. Are they true or are they not? They have been before the public for more than a month, and no denial has come from anybody. Is it or is it not true that the Shell Committee, or the Canadian Government who was acting for the Shell Committee, placed this contract in the United States for 5,000,000 shells at a cost of $22,000,000? Is it or is it not true that at the time the contract was given, an advance in cash was made to the contractors by the Shell Committee? Sir, I believe it is true; for if it was not true I believe that the Government would not have hesitated to send out word at once that there was no truth in the statement. But why should we ask whether it is true or not true? The fact was admitted by the Minister of Militia himself on the floor of this House less than five days ago. On the 2nd of March the Minister of Militia spoke as follows:

I come to the question of fuses, and I doubt not that what I have to say on that subject will be startling to some hon. gentlemen.

It will, no doubt.

I do not wish to indulge in personal criticism, or to say anything to make any hon. gentlemen opposite feel aggrieved; but I have here the facts and figures, and I challenge the freest and fullest inquiry into them all. In 1914, we took steps to have fuses manufactured in Canada. Every firm that any one could even dream of as being likely to indulge in the manufacture of these commodities was approached, and not one firm in Canada could be induced by any offer of assistance to go into the manufacture of these fuses. Any one could see that fuses would be needed. Later on, an order came to the Shell Committee from the British Government for 4,000,000 fuses. I had nothing to do with this—as I have had nothing to do with the Shell Committee—

That is not according to report.

—other than to ask the same gentleman to make sure that the lowest possible prices were obtained. I may say that I knew that the raw material for these fuses— time fuses—cost, before the war, $1.90, which included 24 cents royalty to the Krupp firm.

Mark that, Mr. Speaker:

I may say that I knew that the raw material for these fuses—time fuses—cost, before the war, $1.90, which included 24 cents royalty to the Krupp firm.

He goes on:

This is the same fuse that we are making to-day. I realized that under the conditions prices would be almost sure to double, if not more, but still I thought that they should be obtained at that price. Imagine our surprise when Col. Bertram told me that they were asking $6 apiece for these fuses. I sent for Col. Allison and said to him that this price was absurd, that we should get them for easily half that, and so fire two shots instead of one at these gentlemen who are seeking to overthrow the liberties of the British Empire and of the French nation. Col. Allison brought the price down to $5.10; later, to $4.90, which is the lowest price for which I have heard of any company in the United States, the Morgans or any other, making fuses for the British Government. Later, Col. Allison brought the price down to $4.50, and by still further organization, to $4.25. Contracts were made at this price of $4.25 for these time fuses. But, owing at least in part to the fact that a number of firms in the United States had been blown up, and there was more or less of the 'German peril" idea abroad, they refused to take the contract, and it remained at $4.50. Thus there was a saving of 40 cents on each fuse, or a total saving to the British Government of $1,600,000 in that one deal alone.

There you have the admission of the Minister of Militia himself that through the good offices of Colonel Allison—a Colonel who has never been within one thousand miles of the smell of powder on the battlefield, but who I believe has made a profit out of it—this contract for 5,000,000 shells at $4.50 each was given to American firms. The Minister of Militia said nothing as to whether it was true that the Government advanced $3,750,000 in cash with the order to the company who had the contract. I understand that it is true, and we owe it to Colonel Allison that this contract has been given to American firms. But there is something more. The Minister of Militia said in his speech the other day:

I may say that I know that the raw material for these fuses—time fuses—cost, before the war, $1.90, which included 24 cents royalty to the Krupp firm.

So that to-day, under this contract for 5,000,000 shells, we are paying a royalty of 24 cents to the Krupp firm. Under this contract secured by Col. Allison we are going to pay $700,000 of British money to the Krupp firm.

Sir SAM HUGHES: I am a little dense. Will the right hon. gentleman allow me to ask him how he makes out that we are paying that royalty?

Sir WILFRID LAURIER: By the words of the minister himself, who said:

I may say that I knew that the raw material for these fuses—time fuses—cost, before the war, $1.90, which included 24 cents royalty to the Krupp firm.

Sir SAM HUGHES: That is in Britain.

Sir WILFRID LAURIER: That is in the United States; the contract was given in

the United States. If it applies only in England, I have nothing to say, but I doubt very much if England in time of war would pay any royalty to the Krupp firm. What nonsense it would be to suppose that in time of war England would do such a thing.

Sir SAM HUGHES: My statement was distinct, that it was before the war that these fuses cost $1.90. After the war broke out, I presume the British people would not be so foolish as to pay a royalty of 24 cents to the Krupp firm.

Sir WILFRID LAURIER: Then, why mention it at all?

Sir SAM HUGHES: To show the cost of the fuses. I wanted to be honest with my right hon. friend and he would not permit me.

Sir WILFRID LAURIER: Very well, let us take the answer of my hon. friend for what it is worth. Will my hon. friend answer this question?

Sir SAM HUGHES: Any question my right hon. friend chooses to ask.

Sir WILFRID LAURIER: My hon. friend states that these fuses could not be manufactured in Canada. I know for a fact that the present shell committee over which Mr. Flavelle presides has had fuses made in Canada and delivered.

Sir SAM HUGHES: That statement is absolutely without foundation.

Sir WILFRID LAURIER: I have to take the word of my hon. friend for that, and I will say no more as to it, but I have had it on good authority—and I will refer my hon. friend's words to this authority, because the case is bad enough, and I do not want to make it worse—that the committee over which Mr. Flavelle presides gave a contract to the Russell Company and that they are manufacturing fuses to-day.

Sir SAM HUGHES: That statement is entirely devoid of fact.

Sir WILFRID LAURIER: Well then, my informant may be wrong. That is all I have to say. At all events, an attempt was made to make fuses in Canada.

Sir SAM HUGHES: The old Shell Committee did, some time ago, give a contract to Mr. Russell for 500,000 fuses or more.

Mr. PUGSLEY: When?

[Sir Wilfrid Laurier.]

Sir SAM HUGHES: Last June. I do not know whether they were to be made in Canada or in the United States. I know that a large portion of them were made in the United States.

Mr. PUGSLEY: What was the price of those?

Sir SAM HUGHES: $3.50 for some and $4 for others, all detonating fuses.

Sir WILFRID LAURIER: At all events I say that the committee under the chairmanship of Mr. Flavelle gave a contract for the manufacture of fuses in Canada. My hon. friend tells me that the company which got the contract has not yet delivered the fuses. If that be so, that company is exactly on a par with the American manufacturers who have not up to this date delivered a single fuse. My hon. friend has told us that credit is due to the Shell Committee because through its work, there has been no money lost. I am not so sure about that; I think my hon. friend's statement is disputable, but one thing that is indisputable, and that is only too true, is: that if money has not been lost owing to the work of the Shell Committee, time has been lost, and loss of time is ten times more criminal than loss of money. We can pay for shells in money, but we have to pay for the lack of shells in blood; and I say that, owing to dereliction of duty on the part of the Shell Committee time has been lost, and, owing to that time so lost, battles have been lost, thousands of lives have been sacrificed, victories have not been carried to a final issue, the enemy has not been pursued as he retreated, and the war has thus been prolonged. It is upon those facts with their terrible consequences that, from my seat in Parliament, I to-day arraign the Shell Committee, that I hold the Government responsible, and that I ask for an investigation.

Rt. Hon. SIR ROBERT BORDEN (Prime Minister): Mr. Speaker, my right hon. friend, in the midst of the greatest struggle with which this Empire has ever been confronted, has this afternoon, upon scraps from newspapers which he has read to the House, demanded an inquiry into the operation of the committee known as the Shell Committee. I shall refer him a little later to some of his own advice to the House of Commons as to how a member who desires to make a charge should shape his course, a course which has not been taken by my right hon. friend this afternoon. It is one

thing for a newspaper to make observations with regard to public matters, and it is another thing for a gentleman holding such a position as my right hon. friend holds in this House and in this country to adopt those observations and to place them before the House of Commons upon no better foundation than that which he has submitted. Before I conclude my remarks this afternoon, I expect to be in a position to contradict every substantial allegation that he has made, out of the mouths of those who certainly know much more about these matters than he does.

Let me say in the first place that it would have been well for my right hon. friend, a gentleman holding a high position in this country, first as Prime Minister and now as leader of a great party in opposition, to have regard to what is due from public men under conditions such as those which confront the Empire at the present time. Not many weeks ago the Prime Minister of Great Britain had occasion to deal with such a case, although the person to whom his observations were directed was not one who held the position of a party leader or who had been a Prime Minister. This is what Mr. Asquith said recently:

> I am bound to add in that connection, with reference to the speech of the hon. member for Brentford, to which I also listened, about aviation, I cannot at all agree that because those statements have appeared in newspapers that he, as a member of Parliament in a responsible position of authority, should think that is sufficient justification for making those statements here. A statement made in this House goes out to the world with a very different amount of authority from anything that occurs in the press.

My right hon. friend told us that this committee has never measured up to the task which was set before it; that it has absolutely failed in its attempt to organize the industries of this country for the production of munitions; that its work has been a disgrace to the people of Canada; and that it has never given any satisfaction from first to last. Under these allegations, which are about all that my right hon. friend put forward—and, as I have already observed, he rested any charge that he made, upon mere newspaper rumour—I think it desirable to give the history of how that committee was formed and to make clear the appreciation of its work which was entertained by the British Ministry of Munitions after full consideration and examination.

It has been very glibly said by some hon. gentlemen on the other side of the House that the production of shells and the manufacture of munitions is the easiest thing in the world. Why, they tell us that they knew before the war broke out—though they never took the country into their confidence—that these munitions could easily be produced in this country by our ordinary commercial industries. I think it worth while to read to the House a statement which I obtained on Saturday last from a man, who, I believe, ranks second to no man on this continent in ability and experience as a mechanical engineer, a man who from the first has had to do with the production of these munitions in Canada, and whose name, if I should disclose it to the House, would, certainly command the respect and confidence of every hon. member. He gave me this statement with regard to the work accomplished by the old Shell Committee:

> The Shell Committee undertook to introduce an industry that was absolutely novel to the manufacturers of the country, and one which they had all been led to believe involved great difficulties and required long experience before successful results could be expected. Many of these difficulties were real, and much careful work and investigation was necessary before they were overcome. Munitions had previously been manufactured by armament concerns, or Government arsenals, who, in the majority of cases, made every part of the work and controlled all the various processes involved therein.
>
> The Shell Committee, in dividing up the various classes of work between a number of different concerns, each group of which was required to specialize in some particular part of the work, and only required to investigate the methods employed on that part, did more than make a convenient arrangement—it really made a far-seeing and courageous invention. No attempt at subdividing work among a large number of independent factories, and subsequently assembling the completed parts in another group of factories, has ever been attempted on anything approaching the scale on which Canadian munition work has been successfully carried out. Even with the work subdivided into a number of portions, each portion required much study and experiment before it was finally produced in a satisfactory manner and sufficient quantity.
>
> The shrapnel shell, on which the committee originally began work, requires special steel for its construction. This steel requires special treatment in its manufacture, and the various component parts, bullets, sockets, pellet tubes and powder cups, all presented problems in their manufacture in large quantities, and in many cases are required to comply with specifications which were not drafted to obtain a commercial article, but one of specially high quality. There is little doubt that the designs and specifications of English ammunition, in common with those of other nations, were not developed with any idea of its being made in locomotive shops, bridge works or harvester factories in enormous quantities, but represented the refinement desirable for the most efficient results when carefully made by expert workmen in shops with long experience.
>
> Fortunately the Dominion Arsenal at Quebec, although of only a small capacity, had for

years made the various classes of ammunition which the Shell Committee first undertook to manufacture. The information and experience of the arsenal were open to the firms interested, whose representatives flocked there time after time to look into the process of manufacture, and to obtain more detailed instructions when they had failed to successfully produce some result. The existence of this arsenal was a most valuable asset to the Canadian manufacturers; in fact, it is certain that they could not possibly have developed the work with such rapidity and success without its experience to assist them, with all the energy and ability they have displayed. Even with this assistance, the trials and discouragements of the manufacturers were numerous to commence with.

This gentlemen told me of his own experience in the production of cartridge cases for high-explosive shells. The first 4,500 they turned out passed the test, and the next 16,000 had to be scrapped, because the head of the cartridge case had not been made sufficiently hard to pass the firing test, and did not pass it. The statement continues:

Few firms were accustomed to manufacturing work within the limits of accuracy and the various other requirements of shell making. There were many cases where numbers of shells had to be rejected and sent to the scrap heap on account of neglect of some apparently unimportant requirement of the specification or dimension drawing. Gradually these difficulties were overcome; one shop helped another with information, men were trained to work with the required accuracy. Testing machinery and various scientific shop methods were introduced, managers, foremen and men worked away until the various difficulties were overcome, and within a few months the manufacture of shrapnel shells was an established success.

After the shrapnel shell, the committee undertook the supply of brass cartridge cases, which are simple-looking pieces of ammunition material, which had previously only been made by a few munition concerns, and entail numerous difficulties in their manufacture. In this case, again, the arsenal at Quebec had successfully manufactured them, but in very small quantities, and an enormous amount of work was required to develop the methods of manufacture on a large scale. The machinery makers themselves knew very little about the work, and each firm undertaking it was obliged to install a large number of special machines, at great expense and without any guarantee of ultimate success, taking the chance that they would be able to succeed in producing a specially difficult article without any previous experience, in quantities which had never been before reached, on this side of the water at any rate.

The shrapnel shells and cartridge cases were followed by high explosive shells for 18-pounder guns, then by howitzer shells and cartridge cases, and later by large high explosive shells, sixty-pounder, six-inch, eight-inch and nine point two. The shell business had, by this time, become well established in Canada. Experience had been required, and, while each shell presented certain problems of its own, men who had worked over the difficulties of the one, found little trouble in discovering the methods for another. In the earlier stages of the work, however, shells were very generally manufactured on the machinery already installed in the various plants which previously was employed for commercial purposes. As the work increased and larger sizes of shells were required, the machinery was inadequate, and, in almost all cases, it was necessary for the manufacturers to install completely new equipment. Even for the smaller shells, some firms undertook to equip their shops completely, and it would be surprising, were the total amount known that has been spent by Canadian firms for munition machinery, in every case out of their own pockets and without any advances being made to them.

An interesting instance, which shows the growth of the work and the enormous benefit that the country has received from the work accomplished by the Shell Committee, is that of a large manufacturing concern in the East. This company was one of the first to undertake the manufacture of shrapnel shells, and has subsequently installed machinery for making high explosive shells, 18-pounder and howitzer and cartridge cases. The machinery previously used in their ordinary work was taken out of their shops and stored away, their shops were remodelled, new machinery installed, and, in some cases, new buildings erected. This concern, which employs four to five thousand men, has obtained the remarkable output of ten thousand shrapnel shells, twenty-five thousand 18-pound high explosive shells, ten thousand howitzer shells, and two hundred thousand cartridge cases per week.

I think it is right to make that illustrative fact known—one out of many which could be given—as it disposes of the slander which my right hon. friend has passed upon the manufacturing industries of Canada:

5 p.m.

There can be but few munitions works in the world which have equalled or surpassed this, and apart from the assistance of so large a supply of munitions to the success of the war, the advantage to the country of developing the work is enormous. An instance of the energy that this firm has displayed on the work is shown by the rate at which they erected one of their new buildings. This is a machine shop covering about an acre of ground, used for 18-pounder high explosive shell production. From the time they started to clear the ground until the building was completed and every operation in the manufacture of the shell was under way, was only thirty days, and such a record shows what has been accomplished in the development of munition manufacture in Canada.

I have many other illustrations which I could give to the House of what has been accomplished by our manufacturing industries; and I venture to say that no man, not even the most optimistic in this country, could have looked forward in August, 1914, and had an adequate conception of what has been accomplished by the industries of Canada during the past 18 months.

When my hon. friend the Minister of Militia was asked by the British Government to place an order for 200,000 shells, what might he have done? He might have said: Let us send the order, as is suggested, to the United States of America and have the

shells produced there. Did he take that course? No. I confess that when the Minister of Militia came to me and told me of his firm belief that shells could be manufactured almost immediately in Canada, I had a great deal of doubt as to whether that could be accomplished on any large scale, and I told him so. But he had great faith in the ability of the manufacturers of this country to accomplish it, and that faith was justified as the war went on.

There is no mystery about the appointment of this Shell Committee. The Minister of Militia was asked by the British Government to place an order for 200,000 shells, and subsequent orders were also brought to his attention before the committee was appointed. He called some of the manufacturers together, those whom he thought most likely to undertake the work, and after a great deal of difficulty he persuaded certain of them to attempt it. He associated with them, in order that they might have all the technical skill that was available, such of his officers as had had experience in the Dominion Arsenal, and the value of that experience has been detailed in the statement which I read a moment ago to the House. More than that, he found in Canada, upon a casual visit, Mr. David Carnegie, who had had experience in the production of munitions in Great Britain. He commandeered his services, somewhat against the will of Mr. Carnegie, who had intended to employ his energies elsewhere. Thus Mr. Carnegie remained in Canada and was associated with this committee as technical adviser. The Minister of Militia informed the British Government of what he had done, and he received from them an expression of their appreciation; and thereafter the British Government placed its orders in Canada through the Shell Committee. The committee communicated with the British Government through the War Office code, which was in the possession of the Department of Militia and Defence, and all prices which were paid for shells in Canada, from first to last, were either fixed or approved by the British Government. Further than that, as I shall show by the statement of the representative of the British Ministry of Munitions, the Shell Committee succeeded in placing in Canada, orders amounting to $150,000,000 or $160,000,000, at prices considerably lower than the War Office in Great Britain were willing to approve and to pay. As a result of this not less than $15,000,000 was saved to the British Government. The business has developed to such an extent that orders to the amount of nearly $400,000,000 have already been given, and I have in my hand a statement from Mr. Thomas, now Lord Rhondda, who represented the Ministry of Munitions in this country last summer and autumn, that the total amount of orders which will be placed in Canada by the British Government before the end of this war, will probably run up to $500,000,000, an amount comparable with the total value of the great bumper wheat crop of the West this year. I venture to say that, making the most liberal allowances for what has to be and what has been imported from abroad in the production of these shells, the orders already placed in Canada, amounting to nearly $400,000,000, will have added, in labour and material, at least $300,000,000 to the national wealth of this country at a time when that addition was and is most opportune. I have here a statement of the exact amount of orders up to the present time. The total amount of munition orders placed by the British Government, through the Shell Committee and the Imperial Munitions Board, runs up to $380,000,000 at the present time. The men employed number no less than 136,000, and the number of factories engaged is 436.

I have alluded already in a previous debate to the fact that several permanent new industries have been established, such as the production of zinc and spelter, the manufacture of brass, nitrocellulose powder, sabulite, toluene, and tri-nitrotoluene; and the production of many other industries has been greatly increased.

In view of the epithets which my right hon. friend has seen fit, without any more foundation than newspaper rumours, to inflict on the members of the Shell Committee, it ought to be remembered that they undertook their work purely in an honorary capacity and without the expectation of receiving one single dollar for their services. Whatever else may be said of them, this may be said, that they undertook that work as a patriotic duty. I believe they discharged that duty to the best of their ability; and, further than that, in the opinion of the British Government, they have discharged it well, as I shall show by evidence to which I think my right hon. friend can take no exception.

It would be idle to pretend that the Shell Committee, men absolutely unfamiliar with the production of munitions, made no mistakes from the time they undertook their work in September, 1914. The members of the Shell Committee would be the first to admit that they had made mistakes, and doubtless they did; but I will venture to say that you could not select any six men in this House, from either one side or the other, who would have made fewer mistakes in the conduct of gigantic operations such as the Shell Committee were eventually compelled to carry on. I say this further, that I believe as few mistakes were made in Canada as in any other part of the Empire in the organization of commercial industry for the production of munitions of war.

Mr. Thomas arrived in this country shortly after I sailed for England last summer. He had full authority to represent the Ministry of Munitions in this country; of that I was informed by the Minister of Munitions himself. I saw Mr. Thomas for just a few moments in New York on my way to Ottawa. After coming to Ottawa, in September, I consulted with my colleagues as to the re-constitution of the Shell Committee, and as to that there need be no mystery; there is no mystery. The matter has been made perfectly plain by the declarations of Mr. Thomas and of Mr. Hichens, which I shall read to the House in a few minutes. The operations of the Shell Committee had passed out of the experimental stage of September, or October, or November of 1914. The reorganization of the committee had been a matter of discussion between the Minister of Militia and myself before we went to England, and had it not been for the many matters pressing on our attention in June, 1915, I have no doubt it would have been reorganized then. Upon my return I took the matter up with the Minister of Militia and with my other colleagues, and we all agreed that the committee, in view of its very large operations, ought to be re-constituted. I announced that fact to Mr. Thomas, at a personal interview in the first week of September, 1915, and it was arranged then that the committee should be re-constituted. With regard to Mr. Thomas' utterances respecting the work of the Shell Committee, I shall have something to say a little later; but I want all the members of this House to understand that, while Mr. Thomas was here with his assistants—Mr. Carr, General Donaldson, General Mahon, and other experts who were sent out by the British Government to assist him, not only with respect to the supply of shells, but with regard to the possibility of producing guns of large calibre in Canada—the records of the Shell Committee from beginning to end were open to all these experts and were thoroughly examined.

There have been a great many rumours in the public press, and some of them have been mentioned in this House. I do not believe that there was a single rumour about the Shell Committee which did not come to Mr. Thomas's ears. Any that ever came to my ears I at once brought to his attention, and on account of the violent language which appeared in some portions of the press with regard to the Shell Committee, I took upon myself the responsibility of asking Mr. Thomas this: I said, "Having seen the operations of the Shell Committee, having examined its records, knowing what you do of these men, and having met them as you have, is there any suspicion whatever in your mind that these gentlemen have not acted to the best of their ability or that they have not acted in good faith?" and he replied, "Absolutely none." He believed that these men had acted to the best of their ability; he believed also that they had made mistakes, but as to their good faith, their honesty, and their integrity, which have been reflected upon in many quarters in this country, Mr. Thomas, who ought to know in regard to that as much as any man could know, informed me that he had not the slightest doubt, and that he believed them to be thoroughly honourable honest and upright men.

I shall now read to the House, in order that it may be on record, just what Mr Thomas did say. In a public interview which he gave out on the 31st of October, and which was published in the press on the 1st of November, he said this:

> Mr. Lionel Hitchens, who had at his instance, been sent out by his friend Mr. Lloyd George, would now take up Mr. Thomas's duties. Canada was doing fine.

These are the words of Mr. Thomas. The words of my right hon. friend (Sir Wilfrid Laurier) are that Canada was doing, and has done disgracefully. Mr. Thomas said:

> Canada was doing fine, both in her contribution of men and munitions to the needs of the Empire in this great crisis, and with the orders that had already been placed, and the further very large orders that were now being allocated, the capacity of the Dominion, though not fully utilized, would be heavily drawn upon. He estimated the value of these orders would

amount in the aggregate to something approaching $500,000,000, or over $60 per head of the population in Canada. This, with the enormous grain crop that had just been harvested in the West, would spell industrial prosperity for Canada for some time to come. He referred to orders placed for all the supplies and not for munitions only.

Referring to the criticism that had been made on the work of the Shell Committee, Mr. Thomas said his relations with that body had been of a most friendly character and, while it would be idle to deny that they had not always seen eye to eye on questions of policy, their differences have not been in any sense of a personal nature. He considered that the committee had done excellent work under most difficult and trying circumstancs, and that they, and more particularly General Bertram, their chairman, had placed the country under a heavy debt of obligation. General Bertram had worked like a trojan night and day, and given his services freely to the state without fee or reward.

The Shell Committee was doing an enormous business, the size of which was hardly recognized by the public. It was probably the biggest business in the Empire to-day It had grown enormously, almost out of recognition, indeed, since its inception twelve months ago, and when the small orders first entrusted to it were given out. Under these circumstances, the official announcement, made by the Prime Minister on Friday last, that he considered the time had arrived when the committee should be reorganized would cause no surprise.

Further on, speaking in the third person, as throughout the interview, he used this language:

He is bound to say that he considers the criticisms that have been levelled against Colonel Cantley and other manufacturing members of the Shell Committee have been unfair and have been based on a misconception of their functions. The executive work of the committee has been discharged by General Bertram, latterly with the help of Colonel D. Carnegie. These two gentlemen have been responsible for advising the Imperial authorities in the matter of prices, and also for the allocation of orders, after authorization in respect to covering prices and quantities has been received from London. Colonel Cantley and the manufacturers on the committee have acted only in an advisory capacity, and in this way their technical knowledge has been of great service. Further, Colonel Cantley has expended considerable sums in experiments on shell steel, and the results of the experiments have, Mr. Thomas understands, been freely placed at the disposal of other manufacturers. Another fact should in fairness to the committee be made public, and it is this: General Bertram has in the allocation of orders for component parts made very substantial savings on the covering prices for complete rounds, etc., authorized by the Imperial Government. These savings already amount to a little short of fifteen million dollars, or nearly ten per cent of the total amount of the orders to which such savings refer. Another point, which Mr. Thomas would like to emphasize, is that, in his opinion, General Bertram has shown himself singularly free from party bias and has not let himself be influenced by party considerations in the placing of orders. He has distributed the orders for the smaller shells in lesser quantities, and over a wider field, than Mr. Thomas looking at the matter from the British taxpayer's point of view, would have done, but, in that, General Bertram was guided by a wish to relieve industrial depression prevailing in Canada over as wide an area as possible.

The profits of the manufacturers have, in Mr. Thomas' judgment, been higher than they were entitled to. This was perhaps difficult to avoid under the circumstances. Anyway, it is past history, as far as Mr. Thomas is concerned, and under the new system of competitive tendering which has now been adopted by the Shell Committee, or, as he would prefer to call it in the future, the "Canadian Munitions Committee," there would be no cause for complaint in this respect.

Mr. MACDONALD: What is the date of that interview?

Sir ROBERT BORDEN: It was given out on the 31st of October, and published in the press on the 1st of November, the day on which Mr. Thomas left Canada for New York on his way to Great Britain. Before Mr. Thomas left, Mr. Lionel Hichens had arrived, accompanied by the Hon. R. H Brand, a gentleman who is a member of a financial firm in Great Britain and of very great experience in financial matters. Mr. Hichens has had wide administrative experience and is at the head of the great firm or company of Cammell, Laird & Company in England. Both Mr. Hichens and Mr. Brand, as I understand, co-operated with and assisted, Mr. Thomas before he left. All the records of the Shell Committee were open to Mr. Hichens, to Mr. Brand, and to their assistants while they were here. After Mr. Thomas left, his full authority to represent the Ministry of Munitions devolved upon Mr. Hichens, who conferred with me respecting the re-constitution of the committee, which had not been carried out by Mr. Thomas on account of the many duties that had pressed upon him during his visit to Canada and in connection with his work in the United States. Mr. Hichens, of course, received his authority direct from the Ministry of Munitions, to be exercised in Canada as soon as Mr. Thomas gave up his work here. When Mr. Thomas left, Mr. Hichens was invested with the full authority which had previously been vested in Mr. Thomas. So far as the Imperial Munitions Board is concerned, I am at perfect liberty to disclose to the House what I had to do with its constitution.

Mr. Hichens came to me shortly before the Imperial Munitions Board was constituted and submitted the names of certain gentlemen who, as he understood, from a personal interview, were willing to become members of the new board. He proposed to retain, and did retain, upon the board some of the members of the Shell Commit-

tee. He told me that he proposed to appoint Mr. J. W. Flavelle, of Toronto, as chairman of the new committee, which was to be called the Imperial Munitions Board; and he came to me for the purpose of asking whether I would be willing to relieve Mr. Flavelle from his duties as a member of the Economic and Development Commission in order that he might undertake the duties of chairman of the Munitions Board. I was reluctant to have Mr. Flavelle leave the Economic and Development Commission, but at Mr. Hichens' earnest request, I consented that he should give up his duties in that capacity and undertake the duties of chairman of the new Munitions Board. The other gentlemen whom Mr. Hichens suggested were of course perfectly agreeable to me; and he only asked my assistance in one respect. He asked me to give him the name of a gentleman from the province of Quebec, of French descent, and to suggest a member of the board for the province of British Columbia. I made inquiries and gave him the name of Mr. Dawson of British Columbia, a gentleman whom I did not then personally know, but of whom I had the very best possible report. From the province of Quebec I gave him the name of Mr. Vaillancourt, whose name had been submitted to me by my colleagues from that province, and who, as I understand, is a gentleman eminently worthy to discharge the duties which would devolve upon him as a member of the board.

That is the history of the institution of the Shell Committee, and the history of the constitution of the Imperial Munitions Board. As to neither of these matters has the Government anything whatever to conceal. The facts are for the people of this country. Our duty, in so far as the Shell Committee was concerned, was to select men of good reputation, of experience, of ability, men who could efficiently discharge the duties which would devolve upon them, and we believe we did that. Having done that, we left it to them, under the direction of the British Government, to organize as best they could, the industries of Canada for the purpose of producing munitions of war. When my right hon. friend talks about deliveries amounting to only two per cent, may I inform him that I have here the written statement, dated the 14th January last, of Mr. J. W. Flavelle, chairman of the Munitions Board, who uses this language:

> Of the above $300,000,000—
> [Sir Robert Borden.]

That was the amount of the orders at that time.

> —products to the value of $100,000,000 have already been exported and paid for.

I ask him to contrast that with the aspersions which he has cast upon the manufacturers of Canada in saying that they had produced only two per cent of the amount of the orders which they undertook to fulfil. I am informed by a gentleman in whose words I have the greatest possible confidence, a gentleman who has returned from Great Britain within the past two weeks, and who had the privilege of an interview with Mr. Lloyd George shortly before he left Great Britain, that Mr. Lloyd George told him that the shells from Canada were, in deliveries second to none, in price as low as any and in quality as good as any produced within this Empire.

Mr. Thomas made certain observations in the reported interview which I have read to the House about the wide distribution of orders. I had some discussion in regard to that matter with Mr. Thomas whilst he was here. I think it is perfectly conceivable that if Mr. Thomas, or the Shell Committee, or the Imperial Munitions Board, might select three or four of the large organizations of this country, sometimes referred to by my hon. friends on the other side of the House as trusts, and by tender or competition confine the production of munitions to them alone, these large establishments with their enormous plants, with their capacity for turning out a very great production, with their experience and with their organization might be able to shut out all the smaller industries of Canada. I have no doubt the work might have been concentrated perhaps by the Shell Committee, or the Imperial Munitions Board, in the hands of three or four of the very largest concerns in this country. I told Mr. Thomas frankly that I thought it would be a mistake for him, or the Shell Committee, or the Imperial Munitions Board, to do anything of the kind, and I am perfectly prepared to defend the position which I then took either in this House or elsewhere. I thought that to have ignored the communities of this country, which, under the depression brought on by the war, or at all events, very greatly accentuated by the war, had thousands of men out of employment, and which had sent to the front as large contingents of their gallant young men as other communities in Canada, would have

been a mistake on the part of the Shell Committee, the Imperial Munitions Board or the British Government itself. I am prepared, as far as I am concerned, to say that the Imperial Munitions Board and the Shell Committee as well, in distributing these orders throughout the country, were acting wisely and that the British Government were acting wisely in authorising them to do it.

Mr. Hichens, in disclosing to me the constitution of the Imperial Munitions Board, wrote me a letter. It has been partly published in the press. I shall read it to the House in view of the allegations which my right hon. friend has seen fit to make and the aspersions which he has seen fit to cast not only upon the Shell Committee itself, but upon the manufacturing industries of Canada which were employed by this committee. The letter is as follows:

Chateau Laurier,
Ottawa, November 29, 1915.

The Right Honourable
Sir Robert L. Borden, G.C.M.G., etc.,
Ottawa, Ont.

Sir,—I think it may be convenient if I place on record a brief narrative of the circumstances since my arrival in Canada leading up to the changes which are now to be made in the constitution of the purchasing agency for munitions of war in Canada on behalf of the British Government. These changes, which are the logical consequence of the altered conditions, have been approved by H. R. H. the Governor General and your Government, and I am therefore authorized by the Minister of Munitions to announce that they will come into force as from November 30, 1915.

Since my arrival in Canada on October 26, as representative in this country of the Minister of Munitions in succession to Mr. D. A. Thomas, my colleague Mr. R. H. Brand and myself have, at the request of yourself and General Sir Sam Hughes, concentrated our attention upon this problem of adaptation to the changed conditions. That a re-organization was necessary to meet the altered circumstances was generally recognized by all those most intimately connected with the Shell Committee, and General Bertram was among the first to call our attention to the fact, and to suggest that the new problems of administration on a greatly increased scale required for their proper direction an expanded organization

The Shell Committee, which was appointed in September, 1914, by the Minister of Militia and Defence, to deal with the munitions orders placed in Canada by the Imperial Government has, I think, met with remarkable success in dealing with a difficult task.

It is an astonishing thing that the work of the Shell Committee was so satisfactory to both these representatives of the British Government, and yet is so unsatisfactory to my right hon. friend, who probably does not know a hundredth part of what these two men knew who personally investigated the whole matter for several weeks. If we are to place these two opinions before the people of Canada, I wonder which they will choose: that of the men who investigated the work of the Shell Committee from day to day for weeks and even months, or the opinion of my right hon. friend, who rises in this House and bases his aspersions on the Shell Committee upon nothing higher or stronger than newspaper rumours. (Continuing to read):

In the early days the problem was to persuade manufacturers to undertake the work of making shells, which was quite new to them, and presented formidable difficulties that caused many of the leading firms to hold back The orders at that time destined for this country were on a small scale; there was naturally no assurance of continuity in the work, and the prospects of success were doubtful. The readiness with which Canadian manufacturers adapted themselves to a new industry is, I think, remarkable, and although as in England, they have often been unable to live up to their original promises, yet they have nothing to fear from a comparison of the early efforts of firms of the highest standing.

Speaking generally, I think it may be said that the earlier difficulties have now been overcome, and the work of the administering body in Canada has entered upon a new phase. In the first place, it has been realized that shells can be successfully and profitably manufactured in Canada, and, instead of holding back, there is now a keen competition on the part of manufacturers to secure contracts. Secondly, the volume of orders placed in Canada has grown at a very rapid rate, and the output both of shell cases and component parts has increased so largely as to require a more highly organized department to ensure efficient co-ordination and prompt deliveries. Thus, from a small beginning, the activities of the Shell Committee have grown with startling rapidity and now embrace the administration of funds more than twice as large as the annual revenues of the Dominion Government. It is obvious, therefore, that the original organization needs amendment to conform to the actualities of to-day.

I should like to take this opportunity to point out, after a careful inquiry into the facts, that the Shell Committee has been subjected to much unfair criticism. It was, as I have said, appointed to deal with the orders of modest proportions, and from the nature of the case was intended to be educative rather than administrative. It was natural, therefore, that it should contain an infusion of steel manufacturers, whose advice and experience were necessary to the proper development of the new industry. The measure of their success can be gauged by the remarkable results achieved. The facts speak for themselves. There are now some 320 firms in Canada manufacturing shells or their component parts, and in the short space of fourteen months the Shell Committee, with the active encouragement and support of General Sir Sam Hughes, have developed the largest industry in the whole of the Dominion. They have been the means also of bringing into being certain important industries subsidiary to shell making which will have a permanent effect in developing the resources of the country. For example: copper has hitherto been produced in the form of "matte" and sent to the United States for refining. Arrangements have now been made

for the refining to be undertaken in Canada, and a new plant will shortly be in operation which will give an impetus to the copper mining industry of the country. Similarly, Canadian zinc ores which contain about equal quantities of lead and zinc, have hitherto been shipped from Canada in the raw state. Owing to the demand created by the war orders and the encouragement of the Shell Committee, the electric refining of zinc is now being developed in Canada on a commercial scale, and this, together with the derivative industries connected therewith, will, there is good reason to believe, now be established on a permanent basis in Canada. Brass will also shortly be made in the country on a considerable scale. A great impetus has likewise been given to the manufacture of explosives: nitro-cellulose powder, tri-nitrotoluol and sabulite are now being produced on a large scale and at moderate prices. Canadian competition has resulted in keeping down the price of these commodities, and has enabled the Shell Committee to effect large economies. Important fields of industry have thus been opened up in Canada as a result of the activities of the Shell Committee. It would be outside the scope of this letter to suggest that the time has come when attention should be paid to the question how these new industries and those derivative from them, which owe their origin to the great demand for munitions of war, can best be developed and encouraged so as to form a permanent part of the industrial fabric of Canada, but no doubt your Government is fully alive to the situation. As a result of the war industries set in motion under the auspices of General Sir Sam Hughes and the Shell Committee, an army of some 100,000 skilled mechanics and workmen has been maintained and trained up in Canada. They are a permanent asset to the country, and the skill which they have acquired will be of lasting benefit after the war in building up the commercial prosperity of Canada.

These far-reaching and important results have not been achieved without the most exacting and strenuous labour, which has fallen more particularly upon General Bertram and Colonel Carnegie, and which a single-minded enthusiasm for the cause has enable them to sustain. Perhaps I may be allowed to add also that these striking results owe their inception and a large measure of their development to the practical zeal and the active encouragement of General Sir Sam Hughes. To conceive a big idea is hard, but to give effect to it in action demands qualities of a rarer kind. I wish therefore to place on record that the Shell Committee have for the past fourteen months been carrying on a work of the most exacting and strenuous nature, and that they have fulfilled their task well. The changes, therefore, which are now being made are the logical development of their work—the necessary superstructure upon the foundations laid by them.

As explained to me by yourself and General Sir Sam Hughes, it is the wish of your Government that, since in actual practice all munitions orders for the Imperial Government are placed by the British Ministry of Munitions with the Shell Committee, there should be a direct relation between the purchasing agency and that department which, since the establishment of the Shell Committee, has been constituted to deal with munition supplies, and that this logical business connection should be given effect to now that the extended scope of the functions of the committee make a re-organization imperative. In order to carry out your wishes and to make it clear that the purchasing agency is administratively independent of

[Sir Robert Borden.]

the Canadian Government, the members of the existing Shell Committee have tendered their resignations to the Minister of Militia, by whom they were appointed, and a new board entitled the "Imperial Munitions Board" has been constituted by the British Minister of Munitions as from November 30, 1915, to deal with such purchases of munitions supplies as may from time to time be entrusted to it by the said minister. All the rights and powers heretofore vested in the Shell Committee, together with all the moneys at the committe's credit, have been transferred to and vested in the "Imperial Munitions Board," and the Shell Committee has been relieved from all liabilities, which will be assumed by the new board acting on behalf of the Minister of Munitions.

The "Imperial Munitions Board" has therefore been appointed by and is responsible to the British Minister of Munitions. At the same time, however, it is clearly of vital importance that the support and co-operation of the Canadian Government should be maintained, and that there should be some "nexus" between the Imperial Government, the Canadian Government and the purchasing agency. The Minister of Militia will in any case, I know, use all his influence to support the development of munitions supplies in Canada. But it is very valuable that there should be a recognized continuity in the work, and that it should be clearly seen that the new board will receive from him the same encouragement and support that has contributed so materially to the success of the Shell Committee. At the request, therefore, of the Minister of Munitions, General the Honourable Sir Sam Hughes, K.C.B., Minister of Militia and Defence, has accepted the position of Honorary President of the Imperial Munitions Board.

The following gentlemen, with their consent, have been appointed members of the board:

J. W. Flavelle, Esq., (Chairman with executive and administrative powers).
Gen. Alex. Bertram, (Deputy Chairman).
Hon. Colonel David Carnegie.
G. H. Dawson, Esq.
C. B. Gordon. Esq.
J. A. Vaillancourt, Esq.
E. R. Wood, Esq.

Mr. J. W. Flavelle has with great public spirit undertaken to make the work of the board his primary consideration, and he has made the necessary arrangements to this end. I am glad also to be able to tell you that Mr. C. B. Gordon, of Montreal, has kindly promised to devote a great part of his time to the work, and I am confident that his wide business experience and reputation will contribute largely to the success of the undertaking.

I take this opportunity of giving public recognition on behalf of the Minister of Munitions to the valuable services rendered by the members of the Shell Committee in developing the resources of Canada for the production of munitions of war. They have been willing to lend their services during the period of development, when their experience, which has been freely given, has been of the greatest assistance in overcoming the initial difficulties. But these have now been surmounted, and the justification no longer exists for a board of experts. At the same time it would be a great loss if the wide experience they have acquired were not made available to the new "Imperial Munitions Board," and I attach great value to the assurance they have generously given that they

will be willing to afford every assistance in their power to the new board.

I have the honour to be, sir,
Your obedient servant,
(Sgd.) W. L. Hichens.

A good deal has been said about the high prices paid for shells in Canada, and hon. gentlemen in this House and journals in the country have spoken of the exactions of Canadian manufacturers from the British Government through the Shell Committee.

Mr. PUGSLEY: We never put it that way; it was the folly of the Shell Committee we spoke of.

Sir ROBERT BORDEN: My hon. friend is not the only hon. member of this House. He need not take upon himself such a character of universality as he is attributing to himself at this moment. I did not make any particular allusion to him, but was speaking quite generally. I put to Mr. Hichens the same inquiry as to his appreciation of the gentlemen who constitute the Shell Committee as that which I had put to Mr. Thomas, and I received from him precisely the same answer as to the integrity, honour, and good faith of all the members of that committee. He stated in the most unqualified terms that with regard to them he had not one word to say beyond this, that he believed them to be men of the highest honour and of perfect integrity, men who had, to the utmost of their ability, discharged what appeared to them to be a patriotic duty.

After endeavouring to get some comparisons of the prices paid for shells in Canada and elsewhere, I wrote to Mr. Hichens on the subject. Although my right hon. friend has not said very much about this phase of the question, it is my duty to say a few words in regard to it, on account of what has been said here and elsewhere. On the 6th of December, 1915, I wrote to Mr. Hichens this letter:

Dear Mr. Hichens,—I enclose a copy of a letter I have received from the Minister of Finance. Is it possible to get some authoritative statement as to the comparative prices being paid for machining and forging shells in England, Canada and the United States?

Yours faithfully,
(Sgd.) R. L. Borden.

This is Sir Thomas White's letter addressed to myself:

Ottawa, December 4, 1915.

Dear Sir Robert,—I have a letter this morning from the President of the Dominion Steel Foundry Company, of Hamilton, who states, among other things, that prices paid in England for machining and forging are from ten to fifty per cent greater than in Canada and that the present prices here average lower than prices being paid in United States. He states further that the cost of labour and of raw material is increasing daily, while the price of shells is going down. I think it advisable as soon as you have authentic information on the subject that a statement should be given to the press as to the comparative prices being paid for machining and forging shells in England, Canada and United States. Such a statement would go a long way towards meeting adverse criticism of certain of the press and in vindicating the work of the Shell Committee.

Yours faithfully,
(Sgd.) W. T. White.

Mr. Hichens replied to my letter on the 8th day of December as follows:

Dear Sir Robert,—With reference to your letter of December 6th, I regret that I have not got the necessary figures for the purpose of making a comparison between English, Canadian and American prices for shells. I suggest that you write to Mr. Lloyd George asking him to give you a full report in regard to these comparative prices, since there has been a certain amount of criticism of the prices paid in Canada, and since you are anxious to know the real facts of the position. It would be better, I think, that this should come officially from the Ministry of Munitions at home, and I think that, speaking generally, they will be able to satisfy you that Canadian prices have not been unreasonable.

I have seen it suggested in the press that there should be a full inquiry into the doings of the Shell Committee, and I hope it will not be found necessary to give way to this demand. Personally, I am entirely satisfied that the Shell Committee have carried out their work well, and I feel that such inquiry would merely hamper the work of the new Munitions Board. They have a great deal to do, and I should be sorry if their activities were interfered with in this way. There is also perhaps something in the point that the Shell Committee was acting for the Imperial Government, and that any enquiry should be made rather on their instruction or at their request, than by the authority of the Canadian Government.

Yours sincerely,
(Sgd.) W. L. Hichens.

As my hon. friend smiles at that, I may say that that letter was written to me without any suggestion as to the concluding paragraph, which I had never discussed with Mr. Hichens.

Mr. PUGSLEY: What I was smiling at was rather that he should presume to advise the Prime Minister as to the desirability of holding an investigation.

Sir ROBERT BORDEN: I suppose Mr. Hichens, being responsible for the establishment of the Imperial Munitions Board, was desirous, as he expressed it, that its work should not be hampered, and a little later on in the course of my remarks I

shall give in regard to that some information which will, perhaps, commend itself to my right hon. friend.

I sent the letter of the Minister of Finance to Sir George Perley, who made application to the Minister of Munitions, and, as the reply which we received was marked "confidential and secret," we asked for liberty to publish it, and the letter which we received thereupon from Sir Herbert Llewellyn Smith, Secretary of the Ministry of Munitions, is as follows:

January 20, 1916.

Sir,—In reply to your letter of the 13th January on the subject of prices paid for shells, I am directed by the Minister of Munitions to inform you that it is the general rule not to give publicity to contract prices, and that consequently Mr. Lloyd George would prefer that the letter referred to should not be published.

I am, however, to add that there would be no objection to Sir Robert Borden making use of any part of the information so furnished, if in his discretion he should think such a course desirable.

I am, etc.,

(Sgd.) H. Llewellyn Smith.

I have made some extracts from the portions of that confidential letter which do not set forth prices. I am ready to read them to the House; I am also perfectly ready to give to the House, not the prices, but an exact comparison between the prices paid in Great Britain and in the United States and those paid in Canada; doing that, not by stating the actual prices paid, but by fixing the British price at the figure 1 and the Canadian and American prices at corresponding figures.

Mr. CARVELL: The Minister of Militia and Defence, speaking in this House on the 26th of January, gave prices of many kinds of shells and parts thereof as of the 8th day of December last. Will the Prime Minister say whether or not those prices, which will be found on page 301 of Hansard, are the same as those contained in his memorandum?

Sir ROBERT BORDEN: I am not going to say anything about that, because I really have not compared them; but those portions of the letter which do not contain actual prices I am perfectly willing to read to the House, and I am also willing to give comparative prices paid for shells in England, Canada, and the United States. This memorandum gives a general comparison of the prices first when they were high everywhere and then at a considerably later date when they were lower. It is known here, as everywhere else, that the prices paid for shells are very much less now in all three countries than they were at first.

[Sir Robert Borden.]

Mr. PUGSLEY: When I addressed the House on a former occasion I dealt to some extent with the question of prices, and I will do so again, but I do not think that my right hon. friend can properly quote from a letter without laying it on the table. My right hon. friend purposes, not to give the prices, but to make a sort of algebraic comparison.

Sir ROBERT BORDEN: In that case I will not read the letter; but I can at least do this: I can state that I have the best of information, that of the British Ministry of Munitions, that prices in Great Britain were very much higher in the first instance than they were afterwards. It is equally true that prices in Great Britain varied as between different firms and according to conditions on which different contracts were made.

The production of some of these shells was familiar to certain manufacturers in Great Britain, but unfamiliar to others, and the prices accorded to the manufacturers who were not previously familiar with the business of shell-making, were considerably higher than the prices accorded to those who had previous experience, and who, therefore, could make the shells at a smaller cost. I would like, also, to point out that manufacturers in Canada, besides having to equip themselves with plant, had to become familiar with the process of manufacturing. Generally speaking, the prices paid in Canada compare very favourably, indeed, with those paid in Great Britain and the United States, according to the authoritative information which has been placed in my hands by the British Ministry of Munitions. I believe that the prices paid for shrapnel shells in the first instance were a little higher in Canada than those paid in Great Britain to firms who had no previous experience, but they were a little lower than the prices paid in the United States to firms having no previous experience. I have the same authority for my statement when I say, so far as the 18-pounder high explosive shell is concerned, which was taken up by the Canadian Shell Committee after they and the Canadian manufacturers had had some experience with the shrapnel shell, that the prices paid in Canada compared most favourably with the prices paid in Great Britain and

in the United States. Further, the Canadian Shell Committee, in one of the latest contracts which it made, as I am informed on the same unimpeachable authority, succeeded in getting the 4·5-inch high explosive shell, together with the cartridge case and primer, for about the same price that is being paid in the United Kingdom for the shell alone. That result is, of course, regarded as most satisfactory by the Imperial authorities. I say further, that if we take either the highest price paid in Canada or the lowest price paid in Canada for the shells of larger sizes—that is to say, the 6-inch high explosive shell, the 8-inch shell, and the 9·2-inch shell—the highest price paid in Canada is lower than the highest price paid in Great Britain, and is lower than the highest price paid in the United States in one instance, and very little higher in two other instances.

Mr. MACDONALD: Is it not true that one of the objections raised by Mr. Thomas was that the Canadian prices were too high?

Sir ROBERT BORDEN: Mr. Thomas said they were too high. And Mr. Lloyd George has shown, in his address in the House of Commons, that the price of the 18-pounder shrapnel had been reduced 40 per cent in price in Great Britain and the howitzer shells 30 per cent. He said, also, that very high prices were paid in Great Britain in the first instance. I venture to say that if an investigation were ordered it would be found that for the 18-pounder high explosive shell, the highest price paid in Canada was 11 per cent lower than the highest price paid in Great Britain, and very much lower than the highest price paid in the United States. It will be found further that for the 4·5-inch shell the highest price paid in Canada was 17 per cent lower than the highest price paid in Great Britain, and 15 per cent lower than the highest price paid in the United States. One contract given in the United States was very much higher, but I exclude it as it was a single order and given for special delivery. For the 6-inch high explosive shell, the highest price paid in Canada was 17 per cent lower than the highest price paid in Great Britain, and 9 per cent lower than the highest price paid in the United States. For the 8-inch shell, the highest price paid in Canada was 26 per cent lower than the highest price paid in Great Britain, and 2 per cent higher than the highest price in the United States. For the 9·2-inch shell, the highest price paid in Canada was 16 per cent lower than the highest price paid in Great Britain, and one per cent higher than the highest price paid in the United States.

Mr. MACDONALD: I am informed on reliable authority that the position taken by Mr. Thomas was that Canadian prices were higher than those in the United States.

Sir ROBERT BORDEN: I am giving to the House information on my own responsibility as a member of the House and as a minister of the Crown—information which comes to me as authentic and which I believe to be absolutely correct.

Mr. CARVELL: I desire to ask a question for information; I am perfectly honest about this. Can the Prime Minister tell us when the first order was given in Canada for the 6-inch shell, the 8-inch shell, and 9·2 inch high explosive shell?

Sir ROBERT BORDEN: I really do not know. I think it was about six months ago.

Mr. CARVELL: Can the right hon. gentleman get that information?

Sir ROBERT BORDEN: Yes, if it will add to the happiness of my hon. friend, I will try to get that information for him.

Mr. PUGSLEY: The time of the giving of orders would be important.

Sir ROBERT BORDEN: The time of any order, of course, is important. I could go on and give figures for the lowest prices paid. For the 4.5 inch high-explosive shell, the lowest price paid in Canada was 22 per cent lower than the lowest price paid in Great Britain, while the lowest price paid in the United States was 2 per cent higher than that paid in Great Britain. For the 6-inch high-explosive shell, the lowest price paid in Canada was 4 per cent lower than the lowest price paid in Great Britain, and the same as the lowest in the United States. For the 8-inch shell, the lowest price paid in Canada was 6 per cent lower than the lowest price paid in Great Britain, while the lowest price paid in the United States was 14 per cent lower than that paid in Great Britain. For the 9.2-inch shell, the lowest price paid in Canada was 6 per cent lower than the lowest price paid in Great Britain while the lowest price paid in United States was 17 per cent lower than that paid in Great Britain.

Now, considering the industrial development of Canada, considering the absolute inexperience of our manufacturers in the production of munitions of war, I venture to say that under the organization of the Shell Committee, those manufacturers deserve every possible praise for what they have accomplished, and that the aspersions cast upon them, whether by my right hon. friend or the press of this country, are absolutely undeserved in view of the results that have been attained.

At six o'clock the House took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

SECOND READINGS.

Bill No. 50, for the relief of Raymond Conliffe Savage.—Mr. Douglas.

Bill No. 51, for the relief of Harry Lorne White Cunningham.—Mr. T. J. Stewart.

SHELL CONTRACTS.

PROPOSED COMMITTEE OF INVESTIGATION.

Consideration of the proposed motion of Sir Wilfrid Laurier, for the appointment of a special committee to inquire into purchase of shells, etc., resumed.

Sir ROBERT BORDEN: Mr. Speaker, I had been dealing with comparative prices in Great Britain, the United States, and Canada. Not much more remains to be said on this subject. To sum up, our prices at first for 18-pound shrapnel, with which we began in Canada, were slightly higher than the prices in Great Britain and slightly lower than those in the United States. The reason for this is perfectly simple. We had then no experience in the manufacture of shells in Canada, and there were no continuation orders allowed for. At that time it was not believed in Great Britain, here or elsewhere that the war would last so long as it has unfortunately lasted, and so continuation orders were not given. There was no assurance that there would be further orders, and the manufacturers who undertook this work and who had to equip plants with machinery for the purpose necessarily had to demand higher prices than they would have demanded if they had been assured of orders extending over a year or 18 months. Upon information given to me from the highest authoritative quarter I assert that in respect of all other shells produced in Canada such as 18-pound high explosives, 4.5's and all other large shells, the production of which we began last summer, the prices in Canada have been, on the whole, lower than in either of the other two countries I have mentioned. In 90 per cent of the cases the prices in Canada have been at least as low as those paid by the British Government in any other part of the world. I also affirm, from equally authoritative information, that while here, as in Great Britain, the deliveries have not been up to what was anticipated, nevertheless they are at the present time very good indeed, and I am confident they will compare favourably with those made in the United States. I have the warrant of a very high authority, a representative of the British Government in the United States at the present time, for the assertion which I am now making. So, before we begin to belittle our own country in that regard, I think it would be just as well for us to consider what has been done by other countries. My right hon. friend forgets that Mr. Lloyd George, in his speech delivered in the British House of Commons on the 20th day of December last, stated that last spring, when he undertook his duties as Minister of Munitions, deliveries in Great Britain were only 16 per cent of what they ought to be, and that under the Ministry of Munitions between that date and the 20th of December last deliveries had increased from 16 per cent to 80 per cent. They had not reached the high-water mark of anticipation even during the period from March, when he took charge, until December, when he made his speech. There are one or two quotations which I should like to read from that speech. In speaking of prices, Mr. Lloyd George said:

> The prices were fixed for gun ammunition when the need was very urgent. There was no time to bargain, and that is true both of the War Office and of the Ministry of Munitions. New firms were also taken on, but at first the actual cost of production of unaccustomed and inexperienced firms is very considerably higher than that of experienced firms, so that for one reason or another prices were high.

Then, speaking of the effort made by the Ministry of Munitions to reduce prices, he said:

> Therefore it has not yet come to full fruition, but I will just give the House an indication of the saving which will be effected by this means. The cost of the ammunition for 18-pounders, which is a very considerable item, running into millions, has been reduced by 40 per cent, and the cost of ammunition for 4.5 howitzers has been reduced by 30 per cent, since the report of this Committee, and all the new contracts are based on these prices.

Further on he said:

> Contracts are being placed very largely through these local munitions committees. At first it was always necessary to let contracts at fairly high prices, because there were unaccustomed firms coming in, and they would not make much out of it, although the prices were high.

The condition which Mr. Lloyd George here sets out as prevailing in Great Britain at that time prevailed to a more intense degree in Canada, where we had had absolutely no experience in the production of ammunition, except a slight experience in the Dominion Arsenal at Quebec, and it ill becomes any citizen of this country to make an attack on the efforts that have been made in Canada during the past 18 months. I think the efforts have had a splendid success, one of which Canadians on the whole have every reason to be proud. I do not pretend for one moment that the Shell Committee did not make mistakes. I do not believe that any of its members would pretend that that committee did not make mistakes. To say otherwise would be to declare that they were infallible, and they know that they are fallible, as all the rest of us are; but I do say that the enlisting of the manufacturers of Canada, reluctantly at first, to undertake these great operations, and the splendid and conspicuous success which it has proved to be in the past 18 months, deserves commendation and not the condemnation of any man in this House. I have under my hand and could read the record of what one company did in about four and a half months in Canada, since some very large orders were placed with it in October or November last. The record would surprise this House. You would hardly believe that it could have been accomplished in Canada; and yet my right hon. friend says that the object of his motion is to probe and remedy conditions. Does he propose to attack the Imperial Munitions Board? I venture to think that that board is doing splendid service for Canada, as the Shell Committee did. How is he going to probe and remedy conditions in respect to the Shell Committee, since that committee is functus officio, and has handed over its duties to the Imperial Munitions Board, upon which some of the members of the Shell Committee still sit? Probe and remedy conditions, he says. I venture to say that if I handed in this statement of what one company has accomplished my right hon. friend would not say, nor would anyone else, that any board could improve on the record which it contains. It is a remarkable and splendid record; and so I say that, on the whole, my right hon. friend has not made any case for investigation, except on hearsay information which he has derived from newspapers, and upon which, indeed, he does not base any charge on his own behalf.

So far as the Imperial Munitions Board is concerned, the Government of Canada proposes to co-operate with that board precisely as it co-operated with the Shell Committee. If the Imperial Munitions Board comes to the Government of Canada, and desires us to assist them or to co-operate with them, or makes any representation to us, the object of which is to increase production of munitions in Canada, or to give greater opportunities to develop the resources of this country, we shall co-operate with the Imperial Munitions Board precisely as we co-operated with the Shell Committee. In doing that, I am sure we shall be adopting a course to which my right hon. friend, or any other member of the House, can take no exception.

My right hon. friend speaks of the Shell Committee having handed out contracts to middlemen without any effort at all to ascertain whether or not the persons to whom the contracts were handed were in a position to fulfil them. In other words, I suppose my right hon. friend is bringing a charge either of favoritism or of negligence or of political influence against the Shell Committee; his statements in that regard were so vague that I really do not know what it was he intended precisely to suggest. He spoke of a patronage list. If he desires to suggest or insinuate that there was any patronage list in a political sense, or that the members of this Government interfered with the placing of those orders, then I am in a position to give a most emphatic contradiction to my right hon. friend. Never, from first to last, was there the slightest attempt to exercise political influence over the Shell Committee; on the contrary, I have had repeated complaints from political friends throughout the country that gentlemen of the opposite political faith were going to the Shell Committee and procuring contracts for their constituents and friends, which Conservative members of Parliament and other Conservatives throughout the country could not procure. There are gentlemen on

the other side of the House within the sound of my voice who know that I am speaking the truth in that regard, and last but not least among them is my right hon. friend himself. If I am not mistaken, he went to the Shell Committee with a friend or constituent and succeeded in securing a fairly good order for him.

Sir WILFRID LAURIER: I deny that absolutely.

Sir ROBERT BORDEN: Did my right hon. friend not visit the Shell Committee with a friend?

Sir WILFRID LAURIER: Yes I went with a friend, a constituent from Victoriaville, in the county of Arthabaska. I was received by General Bertram, to whom I introduced the gentleman. I said to General Bertram: "I hope there is no favouritism; I have simply come here to introduce this gentleman, and to tell you that he is quite capable to fulfil his contract."

Sir ROBERT BORDEN: I do not suppose that any other member of Parliament, if other members of Parliament went to the Shell Committee, did anything else. I can say to my right hon. friend that, if all reports are true, he was very much more successful with the Shell Committee than some Conservative members of Parliament, because I understand—I speak subject to correction—that the gentleman who accompanied my right hon. friend on his visit to the Shell Committee did succeed in getting a very substantial order .

Sir WILFRID LAURIER: That is not what he told me. He told me that the order was not very substantial. As to what he wanted, I do not know.

Sir ROBERT BORDEN: It might not have been as large as my right hon. friend and his constituent desired, but his efforts were very much more successful than those of a good many Conservative members who went to the Shell Committee and got nothing. My right hon. friend did get something, and it strikes me that, having been so courteously received, and having been so successful on behalf of his friend and constituent, it is, to say the least, a case of black ingratitude that he should cast the reflections upon the Shell Committee which we heard this afternoon. After I had returned from Great Britain, I saw, or at least I heard, that there had been paraded in the Liberal press throughout the country, from the Atlantic to the Pacific, an alleged charge by Mr. D. A. Thomas, now Lord Rhondda, that the Government of Canada were using political influence in connection with the Shell Committee. That statement was published in the Montreal Herald, over which my hon. friend from South Renfrew (Mr. Graham) presides, and it was published I think in every Liberal newspaper from one end of the country to the other.

Mr. GRAHAM: Was that an interview with Mr. Thomas, or a speech by him?

Sir ROBERT BORDEN: It was an alleged interview. These are the words attributed to Mr. Thomas:

> There is more politics in Canada at the present time than there is in England and it is a bad thing for Canada. Big political interests here at the present juncture, who are intimately connected with manufacturing concerns, are out after orders. Orders come first, the making of munitions being a secondary outcome. It is a bad thing for Canada.

This was sent to me by several Conservative members of Parliament, who wrote me indignant letters on the subject. It was particularly trying to those gentlemen, who had been endeavouring to secure orders which would give employment to their constituents, and had been refused, that they should be paraded from one end of the country to the other as using political influence upon the Shell Committee; and so I wrote to Mr. Thomas on the 9th day of September, 1915, this letter:

> My dear Sir,—An interview granted by you to a representative of the Montreal Herald has been and is being widely used throughout the Liberal press of Canada as the basis of an attack upon the Government. A great many indignant letters from Conservative members of Parliament reach me daily on the subject.
>
> Your observations are construed as a declaration that the Government regardless of its duty has permitted political considerations to interfere with the production of munitions in Canada. If you were of that opinion it would seem to me the proper course was to bring the subject in the first place to the attention of the Government. I repudiate in the strongest manner any suggestion that we were in the slightest degree influenced by any such consideration.
>
> As an illustration of the character of the articles which are based upon your observations, I enclose for your information an editorial in the Peterboro Examiner which you will kindly return after perusal.
>
> I venture to bring the subject to your attention as it may be necessary for me in the early future to make public allusion to the subject.

To this Mr. Thomas replied on the 11th day of September, 1915:

> My dear Prime Minister:
>
> In reply to your letter of September ninth, drawing my attention to an editorial in the

Peterborough Examiner, based on a statement alleged to have been made by me to a representative of the Montreal Herald, I have only to say that I never made such a statement as that attributed to me and that had I thought that the Dominion Government had permitted political considerations to interfere with the production of munitions in Canada, I should certainly, as you suggest, have brought the matter in the first instance to the attention of the head of the Government.

My attention had previously been drawn to the statement to which you refer, and I mentioned to Sir George Foster during your absence the fact that it had no foundation.

You are at liberty to make any use that you may think fit of this letter.

In accordance with your request, I return the newspaper clipping in question.

Yours very faithfully,

(Sgd.) D. A. Thomas.

I hope that the journals which used this supposed interview as the basis of an attack upon the Government, and as evidence that the Government were using political influence in connection with the Shell Committee, will be good enough to give equal publicity to the fact that the supposed interview is an absolute fabrication and that Mr. Thomas never used the language which was attributed to him.

Mr. GRAHAM: My right hon. friend referred to the Peterborough Review as having published one editorial article, and in reading the next page he referred to the Peterborough Examiner. Which one was it?

Sir ROBERT BORDEN: The Peterborough Examiner is the name of the paper mentioned in the letters.

Mr. GRAHAM: My right hon. friend in reading one letter quoted the Peterborough Review as wanting an inquiry and in the next breath it was the Peterborough Examiner. Which is it?

Sir ROBERT BORDEN: It is the Peterborough Examiner.

Now I come to a question which my right hon. friend dealt with in his endeavour to make it appear that it is an entirely proper thing for the Government to refuse to bring down papers in respect to matters transacted by a department of the Government for the United Kingdom, whereas it is a highly improper thing to take the same course and to refuse an inquiry in respect to matters transacted by a committee acting directly for the British Government and under its direction. That is the point which my right hon. friend makes. Let us see just what his position was in 1903. The question came up then as to whether or not certain papers should be brought down in respect to business carried on and orders fulfilled by a department of the Government, of which he was the head, for the British Government. My hon. friend says that there is a great difference between this case and that case because that was a motion for inquiry and this is a motion for cause. It seems to be a remarkable position, that, in respect to a matter as to which the papers cannot be brought down, nevertheless an inquiry can be had. That strikes one as a remarkable distinction. If the subject is a proper one for inquiry in this Parliament, one would suppose that it would be a proper thing to have the papers brought down in order that an inquiry might be founded upon them; at least, that appeals to my sense of what is logical and reasonable, although, apparently, it does not so appeal to my right hon. friend. What was the position which my right hon. friend took in 1903? He took this position, first, through his Finance Minister, who spoke for him in that regard, and next through his own lips. Mr. Fielding said:

> For all expenditure of the public money of Canada, the ministers are accountable to this House and the House is entitled to every information, but this is an expenditure of Imperial money for which this Government is not accountable to this House.

Further on:

> If this were the public money of the Dominion, my hon. friend's motion would be a proper one, and we would be bound to bring down a return showing how it was expended.

Further on:

> The matter would be a proper one to be brought forward in the Parliament of Great Britain but not in this House.

Why? For the reason that the money was the money of the United Kingdom for which the ministers were accountable to the Parliament of the United Kingdom and this Parliament had therefore no right to inquire into its expenditure. Further on:

> As the money expended was not that of the people of Canada, there is no ground on which this Government can be called to an account here for that expenditure.

And my right hon. friend himself said:

> We have had no complaint from the British Government, and I therefore see no reason why this House should inquire into the expenditure of money which does not concern it.

Not only in this case have we had no complaint from the British Government, but we have had express statements from representatives of the British Government in this country that they are entirely satisfied with the work which the Shell Committee has done on their behalf.

There is another matter which I would like to bring to the attention of the House and the attention of my right hon. friend: It was not during the Boer war, nor has it been during this war, the practice of the British Government to favour or to grant inquiries into such matters during the progress of the war. The subject came up during the Boer war. An inquiry was moved for in the British House of Commons. The question which arose and which had to be determined by the leaders on that occasion was not as to whether an inquiry should be held, because all agreed that an inquiry must be held, but as to whether or not that inquiry should be interjected into the middle of the war, or whether it should form part of a general inquiry into the conduct of the war to take place at its conclusion. This is what Mr. Balfour said on that subject:

> Then comes the question of the date of the inquiry. It had better begin as soon as the war, to use the phrase of my right honourable friend, is substantially over, and as soon as the necessary witnesses are obtainable. I hope that statement is sufficiently extensive and explicit.

Mr. Asquith, speaking in the same debate, said:

> The Government promise that they will form part of the general inquiry which is to take place at the close of the war, and that the facts so far as they are ascertained, will thus be brought to the light of day. On that distinct assurance I think my honourable friend may be well content with the result he has achieved in initiating the debate and that he should not in accordance with the general feelings of the House proceed to a division.

So the motion for an inquiry was withdrawn not only at the request of Mr. Balfour, the leader of the Government, but at the request of Mr. Asquith, the leader of the Opposition. That had reference to a general inquiry in regard to matters in connection with the war. But later on the question was raised as to an inquiry more like that which my right hon. friend proposes here. A member asked whether an inquiry would be held into the hiring of transports, the prices paid, the length of the passages, the food supplied to the troops on the transports, and the question why the fast mail steamers subsidized by the Government were not requisitioned. Mr. Balfour answered that this would form part of the general inquiry to be held at the end of the war.

Sir WILFRID LAURIER: What date is that?

[Sir Robert Borden.]

Sir ROBERT BORDEN: February 25, 1901. When the war was over and not before, they proceeded with a general inquiry into these matters. I think that is the general inquiry alluded to by Mr. Balfour, and the War Office also started a departmental inquiry of its own. Out of that departmental inquiry certain facts were gathered which, in the opinion of the British Government, justified the issue of a Royal Commissioin in regard to certain matters. They made an inquiry in South Africa in regard to the expenditure of money, and the report of the Commission in the end was that between £750,000 and £1,250,000 had been lost or wasted or misappropriated. But none of these inquiries was held during the war, and no inquiry of a similar character, or one which would disclose the resources of the country to an enemy country, has been held during war so far as I am aware, since the attempt to hold such an inquiry during the Crimean War. My right hon. friend knows that that inquiry was opposed most warmly and most bitterly by Mr. Gladstone, and that in the end it proved an absolute fiasco. What would happen if we undertook to hold a Parliamentary inquiry into the record of the Shell Committee? What is the object of the leader of the Opposition? The Shell Committee, in the first place, is functus officio; its duties have come to an end. But what would you do? You would encumber the time and absorb the energies of the Imperial Munitions Board. You would expose all those matters which the British Ministry of Munitions desire to have kept secret during the war. If there were such deficiencies as my right hon. friend alleges in the production of munitions in Canada, they would be exposed to the enemy; the whole procedure, the entire organization, every confidential information with regard to the production of shells in this country would be laid bare, and it must be perfectly obvious to any hon. gentleman in this House that the Government of Canada could not undertake any such responsibility as that without the direct approval and sanction of the British Government, which must largely control in such matters.

There is one further point in that connection which my right hon. friend makes, and which was made in the first place by the hon. member for St. John (Mr. Pugsley.) He says that we must proceed to make an inquiry into the expenditure of the British Government upon shells because we are receiving our supply of shells from the British Government and must

pay for them. He did not say they were excessive prices, but some of his supporters had said it before him, and I suppose he was alluding to that in the argument he made. Let us look at that for one moment. I say that the prices in Canada are on the average rather lower than those obtained in any other country, and if we are going to proceed with an investigation on the ground—because that is really the ground—that the British Government will charge us too much for shells, we should have to investigate their purchases of shells in the United Kingdom and in the United States as well. We should have to go thoroughly into the whole question if we go into it at all. If this investigation is to be an investigation worthy of the name, it must be a thorough investigation. And if my right hon. friend puts it forward on that ground, then this Parliament must undertake to investigate the price paid for shells by the British Government in the United Kingdom and in the United States of America. And then at the end of the investigation we must go to the British Government and say: "You did not understand your business; you have paid too much for shells, and the Parliament of Canada instructs the Government of Canada to ask you to make a reduction on them." And we are to do that in the midst of this war. That is the position to which my right hon. friend logically commits himself when he puts his motion forward on that ground. Of what advantage would it be to us to investigate the prices in Canada, when higher prices are being paid by the British Government elsewhere? It is perfectly obvious that such an investigation as my right hon. friend proposes would not be thought of for one moment by the British Government during the progress of this war. And if it is not to be thought of by the British Government during the progress of this war, should we proceed to investigate these matters, which admittedly are the subject of investigation by the Parliament of the United Kingdom? Will my right hon. friend deny, or will any hon. gentleman on the other side of the House deny, that it would be a perfectly competent thing for the Parliament of the United Kingdom at the proper time to make an investigation into the expenditure by the British Government for shells whether in Canada, the United States or Great Britain? No man in his senses would deny that such would be a proper function of the British Parliament at the proper time. Well, if this is a function of the British Parliament, how is it also a function of the Canadian Parliament? Will any hon. gentleman opposite explain that to me? And will he venture to explain and justify any such proposal for an investigation by this Parliament into the purchase of shells by the Government of the United Kingdom, not only in Canada, but in the United States and in the British Isles?

Mr. Speaker, when one comes thus to consider and investigate the basis and meaning of this motion, and the proposal on which it is put forward, it would appear that my right hon. friend has not given sufficient reflection to the course which he proposes to pursue and that he fails altogether to realize the scope and tendency of the motion which he proposes. It could not stop where it purports to stop, but it must follow into an investigation of every transaction by the British Government in the purchase of shells; because, for the reason which he puts forward, the people of Canada are just as much interested in the purchase of shells in the United States and in the United Kingdom as they are in the purchase of shells in Canada. But it would not stop there. If we take that step, why should we not go a little further? For the purpose of co-operation with the British Government we arranged with them that they should supply a great many of the necessary articles for our troops at the front. They supply big guns for instance, 18-pounders and others; howitzers, demolition explosives, miscellaneous stores, such as articles and material for repair and preservation purposes, viz, oils, paints, and a dozen other articles; camp equipment, including tents, cooking stoves, tables and seats, etc.; barrack utensils such as bedstead and bedding, furniture, kitchen utensils of all kinds; food for men and animals, such as bread, meat, groceries and porridge; local transport, both motor and horse vehicles; medical supplies, as drugs, instruments, technical equipment, clothing; veterinary supplies; engineers' supplies, as lumber, nails, metals, tools, etc. The British Government provides all these things for our troops at the front because in the carrying on of the vast operations in France it would be absolutely impossible for us to have an organization which would supply these articles for our own troops. They are therefore supplied by the British Government, and an arrangement will be made later on, when the accounts are sent to us, by which

we shall reimburse the British Government for these necessary supplies to our troops at the front. In some cases, perhaps, the prices charged to us may be higher and in other cases lower than the prices which we pay in this country. Does my right hon. friend propose that we should stop in the midst of this war and conduct a Parliamentary inquiry into the cost of all these articles for the purpose of ascertaining whether the British Government is charging us too much or too little? Why, I venture to think that my right hon. friend would not for one moment make a suggestion of that kind, and yet that is the course to which his motion points, if there is really any reason at all behind his motion, and I must confess that in my opinion there is really nothing behind it.

Upon all these considerations I greatly regret that my right hon. friend has seen fit to make the motion, and accompany it with the speech he has made to-day. As far as an investigation into the work of the Shell Committee is concerned, that investigation has been made to the extent desired by the British Government, first by Mr. Thomas, and next by Mr. Hichens. They expressed themselves as perfectly satisfied with the course the Shell Committee had taken and with the work which it had done.

Now, what course does the Government propose to take with regard to the motion which my right hon. friend has proposed to this House? As far as the Shell Committee is concerned—I shall speak afterwards of another matter—our proposal is this: We shall direct the attention of the British Government in detail to every charge, allegation and rumour brought up in this House or elsewhere by my right hon. friend or by any of his supporters with regard to the Shell Committee. We shall further inform the British Government that if an inquiry is thought advisable, we are prepared to co-operate with them to the fullest extent, and to issue any commission, take any proceedings, pass any legislation, and do any other act for the purpose of making that inquiry as full, thorough, and complete as they deem advisable. But without their consent or approval, we do not propose to enter upon an investigation or inquire into such expenditures by the British Government, especially as such an inquiry could not fail to interfere very seriously with the work carried on by the Imperial Munitions Board, which at present conducts a business involving the payment of not less than $5,000,000 per week. Such is our position with regard to that. As a matter of fact, during the last session of Parliament, for six weeks the staff of the Department of Militia and Defence were prevented from carrying on their ordinary duties, and the interest of this country suffered because they were employed in doing nothing but attending the Public Accounts Committee and looking up the papers demanded by hon. gentlemen opposite. The business of this country in connection with the war thus practically stopped for six weeks; and so far as I am concerned, I do not intend, without the express approval and sanction of the British Government, to stop the business of the Imperial Munitions Board. My right hon. friend with one breath tells us that munitions, more munitions, and still more munitions, are required at the front; and with the next he proposes a resolution that, if passed, could not fail to prevent the production of munitions in this country upon as great a scale as would be both possible and desirable.

I have something else to say to my right hon. friend. On many occasions in the past he has laid down in very plain language the rule with regard to making charges. In 1897, when a certain allegation was made in the House, he said to the then leader of the Opposition, Sir Charles Tupper:

> If he will make a charge plain and substantial that we can understand, I will meet him, but I will have no cowardly insinuations in regard to that matter.

—He said on another occasion, in 1897, in reply to the late Mr. Davin:

> If the hon. gentleman wishes to make a charge against any member of the Government, or any member of this House, there is a proper way to do so, and conform to the rules of the House, viz: to make a personal statement on his responsibility as a member of the House, conclude his statement with a charge, and that charge must then be investigated.

And he has used similar language in this House on various other occasions. I have his declarations under my hand, but I do not intend to weary the House with them. If, however, he or any of his followers has a charge to make against any member of the Government with respect to the Shell Committee or with respect to anything else, let him or his follower stand up in his place, and on his responsibility as a member, make that charge, and it will be investigated thoroughly and completely. The

Shell Committee is one thing; the Government's responsibility in connection with it is another. I thoroughly admit what responsibility we had with regard to the Shell Committee, namely, to appoint men of good repute, of high character, of experience, of recognized ability, and to co-operate with them so far as in us lay in order that they might do their best to develop the industries of this country for the production of munitions. But there is something else to be said, and I repeat that, if my right hon. friend, or any of his followers, has any charge to make against a member of the Government in regard to any of these matters let him make that charge in distinct and understandable terms, and he will have the investigation as soon as he so desires.

I regret to have detained the House at such great length with regard to this subject, but it is an important one, and it has been much misrepresented in the press of Canada, and I think in this House to a very considerable extent. I therefore thought it my duty as head of the Government to make absolutely clear to this House and to the people of Canada just what the connection of the Government was with the Shell Committee, and what it is with the Imperial Munitions Board, and to make it clear, also, that, as far as either the Shell Committee or the Imperial Munitions Board is concerned, we have absolutely nothing to conceal and nothing to fear. If any investigation is sanctioned or approved by the British Government in regard to either the Shell Committee or the Imperial Munitions Board, we have not the slightest objection, and we will assist and co-operate in every way. So far as our own affairs are concerned, so far as the actions of the members of the Government are concerned, these stand upon a different basis, and as to these I shall be prompt to accept any challenge that my right hon. friend or any of his followers may see fit to make in this House.

Mr. F. B. CARVELL (Carleton, N.B.): Mr. Speaker, we have all listened with a great deal of interest and attention to the very weighty and sage remarks of the right hon. the Prime Minister, and there is no question whatever that he has made his present position fairly clear, and his followers seem to accept it with the very best of good grace.

Mr. W. H. BENNETT: It is sound reason.

Mr. CARVELL: The followers of my right hon. friend can swallow with wonderful grace anything which means putting on the gag in order to prevent the people of this country from getting the information to which they are entitled. My right hon. friend's followers will gracefully swallow anything which means to put on the lid and keep it shut down tight in order to prevent information from leaking out.

Mr. W. H. BENNETT: Rot.

Mr. CARVELL: My right hon. friend has made it very plain that there will be no investigation and no information given to the public with regard to the Shell Committee or the Imperial Munitions Board. Well, Sir, of course, he is ruler in his own house, and he seems to have a fairly—I was going to say servile; I would not use that word—loyal following.

Some hon. MEMBERS: Hear, hear.

Mr. CARVELL: And then I might use another adjective and say that he has a mighty docile following, because when the right hon. gentleman says, "Put on the lid," every hon. member behind him jumps on the lid and keeps it down.

An hon. MEMBER: Cover it up with hay.

Mr. CARVELL: My right hon. friend says that when the British Government asks for an investigation into the Shell Committee, he is willing to grant it. He says that when the right hon. leader of the Opposition or any other hon. member on this side makes a specific charge against a member of the Government he will grant an investigation into that. He says that when we make specific charges against any member of the old Shell Committee or the present Munitions Board he will grant an investigation into them.

Sir ROBERT BORDEN: I did not say that.

Mr. CARVELL: Am I not quoting my right hon. friend correctly?

Sir ROBERT BORDEN: No.

Mr. CARVELL: Wherein am I wrong?

Sir ROBERT BORDEN: I am sorry if my hon. friend did not understand me. I said that, so far as the Shell Committee or the Imperial Munitions Board are concerned, whenever the British Government desired our co-operation in any investigation which they approved or sanctioned, we would give them that and use the

present powers of the Government, or any further powers conferred upon us by legislation, to make that inquiry complete, ample, and thorough.

Mr. CARVELL: Did not my right hon. friend, just before he sat down, go so far as to say that if any member of this House preferred any specific charge against the Shell Committee or any member thereof—

Sir ROBERT BORDEN: No.

Mr. CARVELL: I will leave it to Hansard. I say that my right hon. friend did say so, and Hansard will tell which is correct.

Sir ROBERT BORDEN: My hon. friend is mistaken.

Mr. CARVELL: My right hon. friend has no intention of allowing any investigation. He does not appreciate the position from which this matter has been approached by hon. gentlemen on this side of the House; or, if he does appreciate it, he will not accede to our request for an investigation. We are not making charges against the members of the Government; we do not say that members of the Government made a million or two or ten million dollars out of the operations of the Shell Committee. No one makes such a charge, and no one says that any member of the Shell Committee stole anything, although I will try, before I get through, to show that they made pretty big profits. I have no criminal charge to prefer against the members of the Shell Committee; but I suppose that unless I can go that far my right hon. friend will tell me that I have not complied with his requirements, and so cannot have an investigation. We stand on our sovereign rights as representing the people and demand an investigation of the expenditure of our money.

Mr. R. B. BENNETT: Name
9 p.m. a dollar that—

Mr. CARVELL: What is wrong with my hon. friend?

Mr. BENNETT: Name a dollar of Canadian money that has been spent.

Mr. CARVELL: My hon. friend has not been here lately, and I suppose he is trying to make up for lost time. Those of us who have been here and attending to our parliamentary duties can take this discussion in a quiet, businesslike way. But I will show my hon. friend a good many Canadian dollars spent before I am through —I'll try to anyway. My hon. friend probably was not here when, early in the session, the Minister of Finance admitted, in reply to a question by the hon. member for St. John (Mr. Pugsley), that we were paying our full proportion of the cost of this war. We are going to pay for supplying the Canadian troops with ammunition, just as we pay for supplying them with clothes. The Finance Minister has stated on more than one occasion that we are paying for these supplies out of the moneys raised in Canada by the internal loan. At the end of the war there will be an accounting with the Imperial Government and whatever proportion is ours to pay will have been paid already, and whatever proportion is not ours will come back from the British Government. Therefore, Sir, we are spending our own money. We have now, in all probability, about one twenty-fifth of the British troops at the front; before the war closes we may have one-fifteenth—and I hope we shall. We have in Canada three hundred munition factories, according to all the evidence, and we are told that there are three thousand such factories in Great Britain. On that basis, we have one-tenth the productive power in munitions that they have, but probably our factories are not so great as theirs. At any rate, we have a fairly large proportion of the burden of supplying munitions—and that is what we are talking about, the purchase by this old Shell Committee in Canada of munitions for the use of the British and Canadian troops. That being so, we are spending our own money, and this Opposition is only asking that which is the right of any Opposition, or of any representatives of the people, to investigate how our money has been expended. When Parliament meets every year a resolution is passed in the House without quibble—it goes through as a mere matter of form—referring to the Public Accounts Committee the accounts of the previous fiscal year. Do we have to lay a charge against any official to have access to these accounts? No, they come to us as a matter of right. All we are asking here is that you give us the right to investigate these munitions accounts. And I submit that the Prime Minister is dodging behind a most unreasonable barrier when he says: You cannot get an investigation, you cannot investigate the expenditure of your own money to the extent of perhaps two or three hundred million dollars, until you lay a charge against some one. His followers may

consider that they are loyal to him when they applaud him in taking a stand like that. But let them go to their constituencies and see what even their own supporters will tell them about that. There is nothing to which the people of Canada are giving so much attention, outside the prosecution of the war, as the question whether the Prime Minister is going to give the people a chance to get to the bottom of this unsavory mess.

I addressed this House something over a month ago and went into certain phases of this matter rather exhaustively. I will try, in my brief remarks to-night not to repeat anything I said on that occasion. It may be impossible entirely to keep away from it all. The Prime Minister waxed eloquent over the question of patronage, and wants the people of Canada to believe that there has been no party patronage in the handling of affairs by this old Shell Committee. No wonder my hon. friends opposite smile when that proposition comes before them, for they know a little better than we do just what they have done and how far they have succeeded. The Minister of Militia (Sir Sam Hughes) says there has been no patronage. I gave a few illustrations of the forming of mushroom company after mushroom company. I named about fifteen of these concerns, including some that had been formed by Conservative heelers and workers, to manufacture shells and rake in some easy money. Take the case I pointed to in New Glasgow, N.S., where the local Conservative committee organized two shell companies. Take the case of the company that sent in 500 shells which were rejected, and afterwards sent them back again—I will not go over that sordid story again. It may be possible that the lives of our men, and not only their lives but the result of a battle may turn on the use of those rejected shells. Yet, though the Prime Minister had knowledge of these facts for the last four or five months, these same people have been allowed to go on and manufacture shells. And yet these hon. gentlemen tell us that there is no patronage. Wherever you go throughout Canada you will find the same condition of affairs. But I discussed that on a former occasion, as I have said, and shall not devote further time to it.

The Prime Minister asks what would happen if we went into an investigation. Well, I can tell him a few things that would happen. He would find that this Shell Committee, instead of buying shells of all kinds in Canada cheaper than they were bought in England, paid in most cases at least 25 per cent more than was being paid for shells of the same kind at the same time in England. I will prove this statement before I am through. And I will not do it by bringing forward documents that I am afraid to read.

Mr. ROGERS: Who is afraid to read documents?

Mr. CARVELL: The Minister of Public Works (Mr. Rogers) was not here, and does not know to what I refer.

Mr. REID: The Prime Minister did not say—

Mr. CARVELL: He did not read them. And I say it is pretty small business of the Prime Minister to bring a document before this House and say: The gentleman who sent this document—Mr. Lloyd George in this case—says he does not think I should read the prices. And then he starts in to read the rest of the document, and when we object to that merely gives certain deductions. I have seen a few pretty sharp tricks in this House but this comes the nearest to that kind of thing that I have ever known to be practised by a prime minister. If he wants to be fair to the House he will lay that document on the Table, and then we can make our own deductions. I have some information on this subject, and I am going to take all the time that is necessary to support the deductions I have made; and I think before I am through I shall have convinced the Minister of Militia anyhow that he had better have that document laid on the Table that we may make our own comparisons and draw our own inferences. I want to tell the Minister of Militia, and the Prime Minister also, that if they will lay that document on the Table they won't be able to substantiate the deductions which the Prime Minister has drawn from it and given to this House.

I state as a fact and I am prepared to prove, I will prove to-night by evidence that I think will satisfy even my hon. friends opposite, and I will prove to the country beyond the possibility of dispute, if my hon. friends will give us a committee, that the prices in Canada are not lower but are higher than they are in Britain and higher than they are in the United States. I will prove that from the lips of the Minister of Militia himself, and from the documents out of his department.

The next reason put forward by the right hon. Prime Minister for not appointing this committee was that the British Government had not demanded it; the British Government say: "We are not asking for a committee." No, of course they are not. But do my hon. friends realize that this Empire is at war? I do not think they do. I listened to the Prime Minister this afternoon for over two hours, and, apart from a slurring remark which he made to my right hon. leader at the beginning of his speech, he entirely forgot the fact that the Empire needed munitions. According to his argument, the prime object of the Shell Committee was to distribute patronage and distribute business over Canada regardless of whether we got shells this year or next year, or any year, so long as we got the money distributed among the Canadian people. I should like my hon. friends to point out any other argument or reason put forward by the Prime Minister for obtaining this business and carrying it on. It makes no difference to the Prime Minister whether the British Empire is supplied with munitions or not.

Mr. WILCOX: Rot.

Mr. CARVELL: What is wrong over there anyhow? A gentleman who has been in Parliament as long as the gentleman who has just said "rot" had better stand up when saying it.

Mr. WILCOX: I will stand up, and I will say you are talking rot.

Mr. CARVELL: I am glad you stand up. No, Mr. Speaker, do not call him to order. He is the last man in the world I would call to order.

Mr. SPEAKER: It is my duty to call the hon. member for North Essex to order, and to ask him to withdraw the expression he has just used.

Mr. WILCOX: I will gladly withdraw the remark, but if I was talking as the hon. gentleman is, I am sure that I would believe that I was talking rot.

Some hon. MEMBERS: Order.

Mr. SPEAKER: Order.

Mr. CARVELL: It is immaterial to me, because if there is a man whom I would not try to answer, or with whom I would not enter into an altercation, it is the hon. member for North Essex. So he is at liberty to talk any way he likes, so far as I am concerned.

[Mr. Carvell.]

Mr. WILCOX: I do not talk very often.

Mr. SPEAKER: Order.

Mr. CARVELL: The Prime Minister took a great deal of credit to the Government over the fact that they had been able to distribute, or rather had been able to receive, orders for $380,000,000 worth of munitions in Canada, and expected to have orders for $500,000,000 before the close of the war. He took a great deal of credit to the Government because the manufacturing establishments of Canada had been kept busy. For about an hour of his time he attempted to show that we on this side of the House were casting slurs and insinuations, and I think I could go so far as to say that we were saying disrespectful things of the manufacturers of Canada. Who has heard any member on this side of the House finding fault with the manufacturers of Canada over the manufacture of shells? No man has ever heard me find fault with them, and I have addressed the House at considerable length on this question; nor has any other hon. member on this side of the House found fault with them. In fact, I went so far as to say that we wanted munitions and I did not care who made them. I even said that if the Prime Minister were the owner of the only industry in Canada that could make munitions and make them quickly the order should be given to the Prime Minister. I say that here to-night. We do not care who gets the orders; what we do care about is to have the business so done that we will get the munitions and get them in time and at reasonable prices. That is all we have to say about it; and our complaint about the Shell Committee is that they did not get the munitions in time and did not get them at a reasonable price.

My right hon. leader (Sir Wilfrid Laurier) made the statement this afternoon that at a certain time not more than two per cent of the shells had been delivered. He did not say that only two per cent had been delivered at the present time but that at the time of which he was speaking, that was last July, only 2 per cent had been delivered. We knew that more than that had been delivered at the present time. In fact, I can tell my friends almost to a shell how many shells have been delivered, and I can inform the House that there has been delivered about one-third of the shrapnel, a little less than that of the 18-pounder high-explosive shells, and around one-third

of the 18-pounders; a good deal less than that of the 4.5's. When you come to the larger shells, practicaly none have been delivered. What we complain of is that the Shell Committee, instead of organizing the industries of Canada for the purpose of turning out a shell that was some good, made it their principal object in life to get business for themselves and their own companies. I complain that in order to keep up the prices for themselves and their own companies they were compelled to allow every other person manufacturing in Canada to get a bigger price than the justice of the case demanded or would allow under the conditions. That is my charge—I should not call it a charge but that is the fault I find with the old Shell Committee, and that is the reason why I want this matter investigated. I want to show how this business has been carried on, and I want to show the people of this country how their money and not British money has been squandered—because I cannot use any milder term—by the Shell Committee, squandered, not by the thousands or hundreds of thousands, but by the million, in taking big contracts to themselves and then, in order to get these big contracts themselves, they were compelled to give contracts to many other people at the same exorbitant prices. I think I will come pretty near proving, before I am through, that I listened in vain to my right hon. friend for any reason other than the one I have given as to why this committee of investigation should not be granted. I am going to give the right hon. gentleman some further reasons, and I hope that I will convince him that he had not all the information under his hand, and that he will admit when I have finished that further light has been vouchsafed to him, sufficient to make him change his mind and admit that the people of Canada, in their sovereign right, have the right to demand an investigation of the expenditure of their money. That is what we are asking for. If there is gross suspicion cast around the expenditure of that money, then I think we have the right to come here and demand that the Prime Minister give us the right to investigate these matters, but not by a Royal Commission. The Parliament of Canada is not running this country by Royal Commissions; it ought not to be anyway. But, Sir, we have the right to ask an investigatioon by a committee of this House, representing the people of Canada, who have the legal right to investigate these matters and pronounce upon them. We have had one illustration of the workings of Royal Commissions. I had occasion to point out something of the way in which this Royal Commission conducted its affairs about six weeks ago, and I am happy to say I think that did them good. I do not think they would have got the evidence of this Mr. Stone, from New York, taken on a Sunday in the Chateau Laurier if it had not been for some things that had been said in this House. I think that did this Royal Commission a great deal of good. But, after all, that Royal Commission did not even get on the fringe of the subject. They never touched the fuses at all, the most nefarious transaction in the whole sordid story. My hon. friend shakes his head? I repeat it—the most nefarious transaction in the whole sordid story. With the fate of the Empire trembling in the balance, with uncertainty as to whether it is going to be victory or failure, and, as my right hon. leader pointed out, with the Allied troops pressing the Germans at the battle of the Marne and having to stop because they had not ammunition, for one long year they were in that position, fighting against horrible odds, without the munitions with which to fight, while the Shell Committee was grinding out shrapnel shells by the millions; yes, by the five, six, and seven millions, grinding out high-explosive shells by the million, grinding out 4·5 shells by the million, and making no attempt whatever to get fuses. A high-explosive shell of any kind, without a fuse, is just about as efficacious against the enemy as if you went up to Parliament Hill and got a lot of those old round iron balls which they used a hundred years ago, and fired them. Without a fuse you cannot explode a shell, and without the explosion it practically accomplishes nothing. And yet, they dilly-dallied and fooled away the time, what for?; in order that my hon. friend's friend, Colonel Allison, of New York, might be able to make his arrangements, get his combinations together, his sub-contractors together, and arrange for his rake-off; in order that Colonel Allison, the only honest man, according to the evidence of the Minister of Militia and Defence, might be able, I repeat, to get together his combinations, to get together his sub-contractors, to arrange where the contracts were to go, to arrange the sub-

contracts by which the shells were to be manufactured, and in order to provide for his share of the profits of the transaction in the end. And this Empire on the brink of destruction because we had not fuses with which to explode the shells that were manufactured.

These are some of the things which I charge against this Shell Committee, a committee which existed almost a year, a committee of experts, with a gentleman so expert as the hon. Minister of Militia at their head, which frittered away ten months and made no attempt whatever to get fuses; a committee which devoted its energies to machining shrapnel and high-explosive shells because it could make one hundred, two hundred, and three hundred per cent on the transaction; a committee which forgot all about the objects for which it was appointed, which forgot the real necessities of the case; and you tell me that we are unpatriotic, that we have no right to come here and ask for an investigation into that condition of affairs. I tell you that it is insulting the intelligence of Parliament, it is insulting the intelligence of the public of Canada, for the Prime Minister and his back-bench followers to make the statement that we are not entitled to an investigation under these conditions.

My hon. friend the Minister of Militia went into a somewhat lengthy description of the constitution of the Shell Committee, and I desire to read from Hansard, pages 296-297, for I think it is necessary, in order to make my argument complete, that I should give in detail the contract which resulted in the formation of the Shell Committee. I am glad I have set my hon. friends thinking over there; it is a good sign when they get on the anxious seat, and I am very glad that they are now giving me some attention.

Sir SAM HUGHES: I must apologize. I do not know one word my hon. friend said, but if he has anything to say concerning me I wish he would repeat it.

Mr. CARVELL: I have so much to say that it is not necessary to repeat it. My hon. friend will be satisfied by the time I get through. The minister says that on 24th August he received a cablegram from the War Office as follows:

> Can you provide or obtain from American trade shell empty shrapnel, Q.F. guns, 18-pr., without cases or fuses. If so, what rate delivery could you promise?

[Mr. Carvell.]

That meant an ordinary empty 18-pounder shrapnel shell. If any one wants a description of an ordinary 18-pounder empty shell, the minister gave it to us; he will find it on page 295 of Hansard. He gave a pretty nearly accurate description of an empty shrapnel shell and I am going to read it. You remember, Mr. Speaker, that the minister had on his desk, not only a shell but a cartridge. I have forgotten whether he had the fuse on the end of the shell or not; I think not. This is his description:

> This is what we term an empty shell (showing the whole shell). This is the steel shell case (showing), with the copper driving band on it fitting into the grooves of the barrel. The brass part which fits on the top of the shell case is called the fuse-plug, and in the shell at the present time is a powder cup empty.

and so on. That was how the minister described the empty shell. The British Government wanted to know if they could obtain a price from the American trade. There was an answer stating that they could get large quantities from their neighbours. On August 26, the War Office cabled the Militia Department again as follows:

> Your telegram August 26. Please cable quotation 100,000 segment shells, Q.F. guns, 18-pr. shells only. Presume you have detailed drawings and specifications. Can you arrange inspection. Am sending specifications of 15-pr. shrapnel shells, quotation required 100,000 of these.

There was another communication on the 2nd September, but it is not important, because it does not form part of the contract, and I am only reading those portions of the correspondence which allude to the contract. On September 2, the minister wired the War Office as follows:

> Have organized committee of manufacturers on shells. They guarantee 20,000 by first November and 300,000 monthly thereafter. May be able to largely increase this amount.

On the 11th of September another cablegram was sent to the War Office, and I hope, Mr. Speaker, that the members of this House will pay attention to this particular communication, because, to my mind, it is one of the most remarkable cablegrams in the whole correspondence: (Reads):

> Regarding shells. Have discovered one firm, Canadian General Electric, which guarantees alone to manufacture by the first of January 100,000, either 18-pr. or 15pr., and 100,000 monthly thereafter. Important to know will you want more than the 200,000 already placed.

As early as the 11th of September, we had a firm of the standing, ability, and reputation of the Canadian General Electric

Company, stating that they could manufacture 100,000 shells by the 1st day of January, and 100,000 monthly after that.

Mr. TURRIFF: What year was that:

Mr. CARVELL: In 1914, right after the commencement of the war. So far as my information goes, the Canadian General Electric Company did not get an order until they lay down in the summer of 1915, and then it was for only 25,000 18-pounder high-explosive shells. That cablegram, I think is one of the most remarkable parts of the whole correspondence. If there is a manufacturing concern in Canada with which I am intimately acquainted, it is the Canadian General Electric Company. I have done business with them for the last 12 years; I know that they are able to manufacture anything that any other firm in Canada can manufacture; they have the money, the organization, the ability, and the plant, and I know that, if they had been given an opportunity, they would have manufactured the shells, as they are doing now. I think, Sir, that if a committee is appointed, that is one of the things that might be inquired into: why the General Electric Company, who were willing to go into this thing, were never given a chance until they got a paltry order of 25,000 18-pounder shells. Take two other great electric companies in Canada, the Canadian Westinghouse Company, and the Canadian Allis-Chalmers Company, who, I think I am safe in saying, have got millions upon millions of dollars worth of orders. I cannot tell why it is. I have not a word to say against them; they are both splendid companies, well equipped, well organized, and both in a position to do business, but it is a most remarkable thing that the company, with its great equipment and organization, which made this thing possible almost, were entirely ignored while these other men were given the work. I have sometimes wondered if the fact that the same gentleman who is manager of the Canadian General Electric Company, is also, I think, vice-president of the Dominion Iron and Steel Company, probably the greatest manufacturing establishment in the whole Dominion, who were anxious for the business, who were willing to devote their whole organization, machinery, plant and business facilities to the manufacture of shells, and who pleaded and begged in vain for an order, had something to do with their failure to get work from the Shell Committee. They never got a chance to do business, never got a look in, until October, or November, 1915. I wonder if the fact that the great business competitor of the Dominion Iron and Steel Company happened to be the Nova Scotia Steel Company, the manager of which happened to be a member of this Shell Committee, had anything to do with it. I throw out that suggestion. It is something which hon. gentlemen opposite might think about, it is something the Minister of Militia might investigate. I make no charges, I only give my opinion. I hope the minister will tell us why the Canadian General Electric Company, the premier company in Canada in so far as the shell business is concerned, which was willing to invest its money in this industry at the beginning, was never given a chance, and in the end only got the paltry order that I have named, while other concerns were given millions of dollars worth of business. Then, the minister says that the following telegram was sent to the War Office:

> Reference your cipher September 17. Committee reports price of 100,000 shrapnel 18-pr. as per your cablegrams and specifications will be $8.55 each delivered at Montreal, 20,000 by November 1, and at least 30,000 monthly thereafter. Usual inspection charges. Shall we proceed? If so, please arrange line of credit through Canadian High Commissioner and in favour of Deputy Minister of Militia and Defence, Canada. Specifications 15-pr. just to hand. Price later. Please answer. Committee wait.

On the 19th September the War Office cabled as follows:

> With reference to your telegrams numbered 132 and 133, we accept the prices as offered for 100,000 each 15-pr. and 18-pr. shells Please proceed. We trust you will ensure punctual delivery.

There is the contract. Any hon. member who listened to the statement of the Prime Minister, and who had not gone into the matter himself, would have come to the conclusion that in some way the British Government had authorized us to pay out a certain amount of money and that we had saved them $15,000,000 by the transaction. You would also have believed that the British Government had cabled them and said: Go on and make shells at a cost of $8.55 apiece. I say that is not true. The British Government cabled them to see if the American trade could supply shrapnel shells and the Minister of Militia very properly said: We will make them in Canada, and they will cost you $8.55 for the empty shells. The War Office said: We will accept your offer; go on and make your shells. There is the contract. The minister says that this is a lower price than the price

existing either in England or in the United States at that time. The Prime Minister said that it was a little higher than the price in the United States or in England. However, I am not going to discuss prices just now. I am going to discuss this Shell Committee. I made the statement some time ago that the thing we objected to in reference to the Shell Committee was that it had given enormous orders to its own members at high prices and that, in order to get these high prices, it was compelled to give contracts to other firms at the same exorbitant prices. I am going to give you the results of my investigation. It is true that sometimes we have a lot of difficulty in getting information and possibly we might not be right exactly to a cent, but I am sufficiently assured of the facts that I am going to read to the House to stake my reputation as a member that if you will give me a committee I will prove them to the hilt or apologize to this House and to the committee and say that I did not know what I was talking about. The chairman of the Shell Committee was General Bertram, a gentleman with whom I have no quarrel, a gentleman who has always occupied an honourable position in the business affairs of Canada and I hope he will continue to do so in the future. I am here to make no attack upon General Bertram, on his private character or business ability; I am only speaking of him here to-night as the Chairman of the Shell Committee and if he had not conducted himself as he has done I would have had no right to drag his business transaction into the limelight of publicity. I am going to give to the House a statement of the business which the Bertram Company got in connection with this whole transaction. I find in the first place that the firm of John Bertram & Sons received fairly large orders from the Shell Committee. Perhaps I had better first of all state who John Bertram & Sons are:

The John Bertram & Sons Company, Limited, Dundas Ont.
James K. Cullen, Hamilton, Ohio, president.
Alexander Bertram, Dundas, Ont., vice-president.
Henry Bertram, secretary-treasurer.
R. C. McKinney, Chairman of Board.
Directors, same and Thos. T. Gaff, Chas. L. Cornell, of Orange, N. J., and Lucius B. Morgan, of Plainfield, N.J.

This firm, of which General Bertram is vice-president and Henry Bertram, secretary-treasurer, received contracts which, when carried out, will amount to the sum of $1,300,000. And here are the details of them:

J. Bertram & Sons.

1914—Oct., 15,000 *M. & A., 18-pr. shrap. at $5.15, $77,250.
1914—Dec., 5,000 *M. & A., 18-pr. shrap. at $5.15, $25,750.
1914—Dec., 25,000 *M. & A., 18-pr. shrap. at $3.75, $93,750.
1915—May, 100,000 *M. & A., 18-pr. shrap. at $3.15, $315,000.
1915—March, 75,000, *M. & A., 18-pr., H. Ex. at $5.70, $427,500.
1915—May, 100,000, *M. & A., 18-pr., H. Ex. at $4, $400,000.—Total, $1,339,750.
* Machining and assembling.

That is the business which the Chairman of the Shell Committee gave to himself. It was said by the Solicitor General and by the Minister of Militia that it was necessary to give the first orders at a high price in order to provide for the machinery.

In October they gave this concern a contract for 15,000 18-pounder shrapnel at $5.15, the highest price. But they were not satisfied with that, so in December they gave them a repeat order of 5,000 at the same price. I do not believe the Minister of Militia can point to another case in the whole business where a company got a second order at exactly the same price as the first. The next thing was that they got a contract in March for 18,000 high explosives at the top-notch price of $5.70 each. I would point out that there is no difference whatever in machining and assembling an 18-pounder shrapnel and an 18-pounder high explosive. I am not a manufacturer, but I have some knowledge of mechanics, and I believe that you can machine an 18-pounder high explosive for less money than an 18-pounder shrapnel

We might as well go into this thing thoroughly now that we are discussing it. The Prime Minister told us this afternoon how timid capital was, and the minister has told us how backward the banks were, and that the manufacturers were living over an abyss and could not be induced to go into the business. The minister said that at Valcartier they would not take his word as it might not be worth the paper it was written on, but insisted on getting assurances from the Premier that he would ask the British Government to make good if they lost on manufacturing shrapnel at $5.15 and high explosives at $5.70. We are told that the manufacturers went into this matter with fear and trembling. And yet the minister knows that a month before the Premier was in Valcartier—weeks before anyway—away back on the 11th of

September the Canadian General Electric Company, one of the greatest manufacturing concerns in Canada and if you include the parent company in the United States, one of the greatest manufacturing concerns on the continent—of their own motion, and without wanting anything by way of advance or bonus, offered to deliver 100,000 shrapnel shells on the 1st of January, and 100,000 monthly thereafter, and the minister cabled the offer to the War Office. And now the minister comes here with this cock-and-bull story about the timidity of capital, and the great difficulty of getting manufacturers to go into the business. What does the machining of shrapnel shells consist of anyway? A shrapnel shell consists of what is called a blank. In the first place it is a lump of steel; it is then put through a big machine, which punches a hole in it, and it then comes out and is known as a forging; it is then pointed at the nose; the walls are straight and are about eight or nine inches long; it is then put in a lathe, and is turned to the exact size, inside and out. You would think that a turning lathe was a new invention in the commercial history of the world, from the way these men talk—that it had not been seen in Canada before. I admit that in order to do this work economically the manufacturers had to get a different kind of turning lathe from the one ordinarily used in a machine shop. But there is not a little foundry in any small town in Canada that was not anxious to go into this business, anxious to invest $15,000 or $20,000 in additional plant in order to get a contract. I know of one plant in New Brunswick, not manufacturing 18-pounders, but 4·5, which is an altogether bigger proposition. They have an order, I think, for 40,000 rounds of 4·5, and it only cost them $12,000 to instal the necessary plant. Gentlemen opposite tell us these fanciful stories about the enormous expense in buying the necessary machinery and carrying on this business, but I am happy to say that even if they can fool some of the people they cannot fool all of us. As I was saying, the shell is put in a lathe and turned to the exact size; and, Mr. Speaker, you would think that the turning of a piece of metal to a certain size to fit a certain gauge, or caliper as it is called, was some mechanical art which should be rewarded by means of a statue and a medal. Why, there is not a little foundry in the country to-day that is not turning every day of its life shafts and bearings, and they are turning these to the one-thousandth part of an inch, doing the work so fine that nothing else has to be done to the metal. And yet gentlemen opposite tell us that these men, who have been doing such delicate work as this for hundreds of years cannot turn a shrapnel shell down to a certain gauge.

Exactly the same process is followed with regard to the inside of the shell. It is turned on the inside until the hole is just big enough, and then a seat is threaded in which to insert a brass socket. The brass socket is threaded on the inside and outside, and on the inside of the brass socket you have simply a plug, which is taken away when the shell is filled, and a fuse put in its place. That is all there is to machining an 18-pounder shell. The work in connection with the machining of an 18-pounder high explosive is even less than that, because the high explosive simply consists of a bar 3 inches in diameter and 15 or 20 feet long. The bar is sawed to the proper length, and is then put in a lathe and turned to the proper size. Then a little hole is bored in the base of the shell. The idea is that as the propelling or firing charge is behind, and as the shell itself is filled with a high explosive or gun-cotton, in case there was a pin hole or sand hole through the base of the shell, the explosive inside the shell might explode before it left the gun and there would be trouble. So in order to make assurance doubly sure, they bore out a little place in the base of the shell about 2 inches across and ⅜ inches deep, and insert in that a piece of forged steel which is threaded on the outside. This is done in order to make sure that the shell will not explode before it leaves the gun. That is all there is to machining an 18-pounder high-explosive. They do not even have to insert a brass socket in the nose of it. A hole is drilled through the centre and a plug put into that, and when they want to load the shell they take out the plug and put in the fuse. These are the operations in which such great mechanical ingenuity has been displayed by the manufacturers of Canada!

I have here a list of companies and the contracts which they were given. The first one is the Chapman Engine & Manufacturing Company, Limited, of Dundas, Ontario. I find that it is an allied company of the John Bertram & Sons Company, Limited, of Dundas, and its directorate is as follows: Stephen H. Chapman, Toronto, president;

Henry Bertram, Dundas, vice president; J. D. Pennington, Dundas, treasurer; Frederick W. Chapman, secretary; directors, S. H. Chapman, H. L. Frost, of Hamilton, and Ed. Fairburn, Buffalo, N.Y. This offshoot of the Bertram Company was awarded the following contracts:

Chapman Engine & Manufacturing Co., Ltd., Dundas, Ont.

1915—Feb.—M. & A., 10,000 18-pr. H. Ex. at $5.70, F.O.B. Dundas, $57,000.
1915—May—M. & A., 25,000 18-pr. H. Ex. at $4, F.O.B. Dundas, $100,000.
Total, $157,000.

Let us follow this a little further. I have already said that J. D. Pennington was the treasurer of the Chapman Engine & Manufacturing Company. Now, I find that this same J. D. Pennington is the president of the Valley City Seating Company. This company in 1914 got the following orders:

Valley City Seating Co., Dundas, Ont.

1914—Oct.—6,250 4 rd boxes at $3.90 each, $24,375.
1915—Feb.—10,000 4 rd boxes at $2.50 each, $25,000.
1915—July—10,000 4 rd boxes at $2.25 each, $20,250.
1915—Aug.—10,000 4 rd boxes at $2.25 each, $20,250.
1915—Sept.—10,000 4 rd boxes at $2.25 each, $20,250.
1915—Sept.—40,000 4 rd boxes at $2.10 each, $80,400.
1915—Sept.—20,000 4 rd boxes at $2.00 each, $40,000.
Total, $230,525.

Thus it can be seen that Bertram gave himself and his allied companies business amounting to $1,500,000. We say that we have a right to investigate these matters, and we have a right to see whether or not the prices paid were fair and reasonable, and whether, because they gave those prices to themselves, they were compelled to keep up the prices to other parties; and that we have a right to know whether they expended more of the public money than they should have expended in order to produce those results.

I pass now to the next member of the committee, Mr. Watt, a gentleman whom I have never met, a gentleman with whom I have no quarrel whatever. He is as modest as any of them; but he seems to be very closely identified with a firm of railway contractors who have been discussed in this House in the past to some extent, and with whom I have no great quarrel. I refer to the firm of Mackenzie & Mann. I find that the Universal Tool Steel Company, of which Sir Donald Mann is the president, the Hon. F. H. Phippen is secretary-treasurer, and Sir William Mackenzie, S. C. Wood, D. A. Cameron, William Clancy and Robert I. Henderson are the directors, received contracts amounting to $1,735,000 from the Shell Committee; and, as the list is not a very long one, I will give it to the House. These contracts are for machining and assembling:

1915—February, 100,000, 18-pr., H-ex., at $5.70, $570,000.
1915—May, 20,000, 18-pr., H-ex., at $4, $80,000.
1915—November, 20,000., 18-pr., H-ex., $2.25 (delivered), $45,000.
1915—December, 30,000, 18-pr., H-ex., at $1.75, $52,500.
1915—December, 50,000, 8-in., H-ex., at $19.75 $987,500.
Total, $1,735,000.

If one goes through the list of firms manufacturing shells, one will find plenty of mushroom companies throughout Canada able to take a contract for 10,000 shells at $5.70 each, and to buy the necessary machinery; but Mr. Watt's company had to have a contract for 100,000 shells at the top-notch price. These contracts show that in about ten months he dropped his price from $5.70 to $1.75. In regard to the last contract I know nothing, but it throws a great deal of light upon a certain line of argument put up by the Prime Minister this afternoon. My right hon. friend read a number of statements about prices which were absolutely misleading, and which were given to the House with the knowledge that they were misleading. That, Sir, is a pretty strong statement, but I make it here. He told us that those big shells were lower in price in Canada than in the United States or in Great Britain. That may be so, but he did not tell us that none of the contracts were let until November and December, 1915, after the whole world had been manufacturing shells for a year, and after the price of the 18-pounder high explosive shells had dropped from $5.70 to $1.75 in Canada; and he did not tell us that not one of those big shells was made in Canada in the first year of the war. That is the reason why I asked my right hon. friend to give the dates of those contracts, and his answer was that he did not have them. I do not doubt his veracity, but it is certain that the gentleman who prepared the comparisons for the Prime Minister did not treat fairly either the Prime Minister or the country—and I do not care which way you take it—because the first orders which the Universal Tool Steel Company got for those big 8-inch shells were in the month of December, 1915, all the contracts for the big shells being placed nearly a year after the war commenced. We have all heard the

story of how Mr. Jones, of the Canada Cement Company, went to the Shell Committee and offered to manufacture shells at a price far below that which they were offering at the time, and they told him he could not do it. He replied that he could do it, but they refused to give him a contract, because they said he would make a failure of the manufacture of shells. Think of the great Canada Cement Company making a failure of the manufacture of a few high-explosive shells! But Mr. Jones was not to be put off in that way; he went to the Prime Minister and told his story to him and to Mr. Thomas, and the Shell Committee were compelled to climb down and give the Canada Cement Company a contract for 9.2 shells at the price at which Mr. Jones was willing to make them; and, having given him a big order at that price, they could not raise the price to any one else. The Prime Minister knows all about this matter, and I would go into it in more detail if it had not been already so thoroughly discussed. The Prime Minister knows that that conversation took place after he came back from England in September; he knows that it was as late as October when it took place; and he knows that the contracts for big shells were not given until nearly a year after the war broke out. Therefore I say that, when the Prime Minister gives us the percentages showing the cost of these high-grade shells in Canada as compared with the cost in the United States and Great Britain, where they were manufacturing shells from the beginning of the war, he did not treat this House fairly; he made a comparison which was not creditable to the Prime Minister of Canada, and I hope the Minister of Militia will give us the exact dates on which those contracts were let, in order that the House and the country may make some comparisons for themselves.

These gentlemen managed to give themselves business to the amount of $1,735,000, but I want to be fair and state that less than half of that was given by the old Shell Committee. These people are probably entitled to less censure than any others, but the point that I want to make is this: If Mackenzie & Mann had an organization, a plant, if they were manufacturers, if they were the proper men to give a contract to for the manufacture of shells, I do not care who they are, I do not care whether the firm consists of the Prime Minister himself, we wanted shells and we wanted them quick. But Mackenzie & Mann did not have any organization nor any plant; they did not have anything at all; they simply organized a mushroom company, called it the Universal Tool Steel Company, and went out after contracts for shells. I am sorry the Minister of Militia is not here, because just at this point I have something to say to him about it, but I will say it to him later on. This firm got those contracts with the assistance of the Minister of Militia.

Mr. J. J. HUGHES: Keep that for himself.

Mr. CARVELL: Yes, I will keep that for himself. I come now to the third member of the committee, Mr. Carnegie, who was a director of and consulting engineer for the Electrical Steel and Metals Company, of Welland, Ontario. This, I think, is a genuine company doing a legitimate business; and if they took the business at proper prices and did not put up the price to anyone else, then I have no fault to find, because they were in the business, and what this Empire needed was shells, and these contracts should have gone to the people who were able to furnish the shells. The Electric Steel and Metals Company, of Welland, Ontario, on August 1, 1914, had the following directors: Robert Turnbull, Welland, president; J. H. Le Fevre, Welland, vice-president; D. Carnegie, London, England, consulting engineer; W. L. Renton, works superintendent, and E. Carnegie, London, England, secretary-treasurer. On January 1, 1916, the directors had been changed. Robert Turnbull was still president; E. Carnegie was vice-president and general manager; F. Birley, secretary. D. Carnegie had retired from the board because he was a member of the Shell Committee.

Mr. PUGSLEY: E. Carnegie was still a member of the Shell Committee.

Mr. CARVELL: Yes, I had forgotten that. He remained a director of this company, though he was a member of the Shell Committee. The directors were: Robert Turnbull, E. Carnegie, Sir Charles Ross, Bart., and W. L. Renton. And here is the business they got from the Shell Committee:

Electric Steel and Metals Co., Welland, Ont.

1914—Oct., *M. & A., 20,000 15-pr. shrapnel, $5 each f.o.b., Welland, $100,000.
1914—Dec., M. & A., 10,000 15-pr. shrapnel, $5 each f.o.b., Welland, $50,000.
1914—Dec., M. & A., 10,000 18-pr. shrapnel, cancelled.

1915—Feb., 90,000 blanks 4·5, $3 each f.o.b., points del., $270,000.
1915—March, M. & A., 65,000 18-pr., high ex., $5.70 each, $370,000.
1915—May, cancelled, 35,000 18-pr. high ex., $4 each f.o.b., Welland, $140,000 (cancelled).
1915—May, 50,000 blanks 4·5, $2.25 each f.o.b., points del., $112,500.
1915—June, M. & A., 100,000 15-pr. shrapnel, $3 each f.o.b., Welland, $300,000.
1915—Nov., M. & A., 50,000 15-pr. shrapnel, $1.70 each f.o.b., points del., $85,000.
1915—Dec., 350,000 blanks 4·5, $1.70 each f.o.b., works at Welland, $595,000.
Total, $1,885,500.

*Machining and assembling.

While the minister was out I was referring to a company which he knows something about, the Universal Tool and Steel Company.

Sir SAM HUGHES: I never heard of the name of the firm in my life until the present moment. The hon. gentleman spoke of Mr. Watt as being connected with some company. Mr. Watt is connected with Mr. Fred. Nichols' company, and I do not know of any other.

Mr. CARVELL: Yes, that is the General Electric, and they got no business.

Sir SAM HUGHES: Then, why condemn Mr. Watt?

Mr. CARVELL: I am not condemning Mr. Watt. I do not say that he was very close to this mushroom company. The hon. minister never heard the name of this company, eh? Well, I will ask him to go back to his office and look up the telegram he sent on the 18th of February, 1915, and then come back to-morrow and tell me if he ever heard of this company or not.

Sir SAM HUGHES: We are not coming here to-morrow.

Mr. CARVELL: Well, then on Thursday. If the minister will not tell me then I will read the telegram to him.

Sir SAM HUGHES: Read it.

Mr. CARVELL: I am going to ask the minister to look it up. Will he deny that he sent this telegram?

Sir SAM HUGHES: I have no recollection of anything about the company. I daresay it is a good company.

Mr. CARVELL: Look up the telegram of which I have spoken. Well, Mr. Speaker, there is a fourth member of this committee. He is connected with one of the big concerns in Canada. If there is a concern that should have received orders when this war commenced it is the Nova Scotia Steel Company. I find no fault with them for getting this business. They were among the biggest people in Canada and were in a position to do the business; and should do the business. All we want to know is whether they conduct the business at proper prices, whether Colonel Cantley, a member of the Shell Committee, conducted its affairs in such a manner that the country got the best results from its expenditure, and whether the Empire got the shells in the quickest time possible. I am not here to attack the manufacturers or to attack Col. Cantley. I never met the gentleman in my life and know nothing of him. But I am going to give the facts in this case. As I have said, Col. Cantley got for his Company $15,000,000 of business from this Shell Committee. I think that when I state that the House will come to the conclusion that we have the right to know whether this enormous amount of business was given at the proper figures or not. It will be a little tedious, but I am going to read the details of these transactions, so far as I have been able to collect them. I have not got them all. The first order I have noted is for discs for shrapnel at 20 cents. This disc is a little piece of steel, two inches in diameter, and three-eighths inches thick, with a hole in the centre. It is placed over the powder-can, and just under the leaden bullets, and the idea is that when the powder explodes this disc drives the bullets out of the top of the cartridge and causes them to spread over the earth like a fan. The price of these was got down to 12½ cents afterwards. This disc is simply a piece of forging. Will any man tell me that our existing industries cannot make this little disc three-eighths of an inch thick and with a hole in the middle.

An hon. MEMBER: Like a shovel.

Mr. CARVELL: Yes, something like a shovel. They have been made before, and made very much in the same way.

Mr. KYTE: They say we can't make shovels in Canada.

Mr. CARVELL: Not with holes in them. The following are the orders given to the Nova Scotia Steel Company by the old Shell Committee:

Nova Scotia Steel Company

1914—October, 50,000 dicsc for shrapnel at 20 cents each, $10,000.
1914—October, 50,000 shell forgings for 18-pr. shrapnel at $1.30 each, $65,000.
1914—October, 25,000 steel discs for 15-pr. shrapnel at 20 cents each, $5,000.
1914—October, 25,000 discs for 15-pr. shrapnel at 20 cents each, $5,000.
1914—October, 25,000 shell forgings for 15-pr. shrapnel at $1.30 each, $32,500.
1914—October, 25,000 shell forgings for 15-pr. shrapnel at $1.30 each, $32,500.
1914—November, 25,000 shell forgings for 15-pr. shrapnel at $1.30 each, $32,500.
1914—November, 21,740 shell forgings for 18-pr. shrapnel at $1.30 each, $27,300.
1914—November, 25,000 shell forgings for 15-pr. shrapnel at $1.30 each, $32,500.
1914—December, 100,000 shell forgings for 18-pr. shrapnel at $1.25 each, $125,000.
1914—December, 25,000 M. and A., 18-pr shrapnel at $3.80 each, $95,000.
1915—January, 100,000 discs for 18-pr. shrapnel at 12½ cents each, $12,500.
1915—February, 100,000 discs for 18-pr. shrapnel at 10 cents each, $10,000.
1915—February, 180,000 blanks for 4.5-pr. shrapnel at $3 each, $540,000.
1915—February, 180,000 shell forgings for 4.5-pr. shrapnel at $2 each, 360,000.
1915—February, 300,000 shell forgings for 18-pr. shrapnel at 80 cents each, $240,000.
1915—February, 300,000 shell blanks for 18-pr. shrapnel at 45 cents each, $135,000.
1915—March, 100,000 discs for 18-pr. shrapnel at 10 cents each, $10,000.
1915—March, 180 discs for 4" Howitzer at 15 cents each, 27,000.
1915—March, 200,000 discs. for 18-pr. shrap. at 15 cents each, $30,000.
1915—March, 25,000 *M. & A., 4·5-pr. Howitzer at $6.70 each, $157,000.
1915—April, 100,000 shell forgings for 18-pr. shrap. at $1.25 each, $125,000.
1915—May, 400,000 discs for 18-pr. shrap. at 10 cents each, $40,000.
1915—May, 100,000 shell forgings for 18-pr. shrap. at $1.25 each, $125,000.
1915—May, 300,000 base plates for 4·5 at 15 cts. each, $45,000.
1915—May, 200,000 base plates for 18-pr. at 15 cts. each, $30,000.
1915—May, 50,000 M. & A., 4·5 shells at $6 each, $300,000.
1915—May, 10,000 M. & A., 60-pr. H. Ex. at $6.96 each, $69,500.
1915—May, 400,000 shell forgings for 18-pr. shrap. at $1.25 each, $500,000.
1915—May, 300,000 shell forgings for 4·5-pr. at $2 each, $600,000.
1915—May, 50,000 shell forgings for 60-pr. H. ex. at $2.25 each, $112,500.
1915—May, 350,000 shell blanks for 4·5-pr. at $2.25 each, $787,500.
1915—May, 50,000 shell blanks for 60-pr. at $3.25 each, $162,500.
1915—June, 100,000 base plates for 60-pr. at 15 cts. each, $15,000.
1915—June, 3,044 shell forgings for 18-pr. shrap. at $1.25 each, $3,750.
1915—June, 200 base plates for 18-pr. shrap. at at 10 cts. each, $20.
1915—June 25,000 M. & A., 4·5-pr. at $6.50 each, 162,500.
1915—June, 20,000 shell forgings for 18-pr. shrap. at $1.25 each, $250,000.
1915—July, 25,000 (*M. & A.) 18-pr. shrap. at $3.15 each, $78,750.
1915—July, 20,000 2-round 4·5" boxes at $1, $20,000.
1915—Aug., 100,000 base plates for 18-pr. shrap. at 10 cts. each, $10,000.
1915—Sept., Weekly shipments of 10,000 shell blanks for 4·5" how. (cancellation effective Feb. 18, 1916, 5 mos.—20 weeks —200,000) at $2 each, $400,000.
1915—Sept., Weekly shipments of 10,000 shell forgings for 4·5" how. (cancellation effective Feb. 18, 1916, 5 mos.—20 weeks—200,000) at $1.75 each, $375,500.
1915—Sept., 160,000 shell forgings for 18-pr. shrap. at $1.25 each, $200,000.
1915—Sept., 100,000 base plates for 18-pr. h. ex. at 15 cts. each, $15,000.
1915—Sept., Weekly shipments of 5,000 shell forgings for 4·5" how. (cancellation effective Feb. 18, 1916, 5 mos.—20 weeks—100,000) at $1.60 each, $160,000.
1915—Sept., Weekly shipments of 5,000 shell blanks for 4·5" how. (cancellations effective Feb. 18, 1916, 5 mos.—20 weeks—100,000) at $2 each, $200,000.
1915—Oct., 400 shell forgings for 18-pr. shrap. at $1.15 each, $445.
1915—Oct., 6,000 shell forgings for 18-pr. shrap. F.O.B. Sherbrooke at $1.25 each, $7,500.
1915—Oct., 1,200 shell forgings for 18-pr. shrap. at $1.15 each, $1,380.
1915—Oct., 100,000 shell forgings for 18-pr. shrap. at $1.15 each, $115,000.
1915—Oct., 200,000 base plates for 18-pr. shrap. at 10 cts. each, $20,000.
1915—Oct., 20,000 (*M. & A.) 18-pr. shrap. at $2.90 each, $58,000.
1915—Oct., 100 shell blanks for 4·5" (for experiment) at $2 each, $200.
1915—Oct., 2,500 shell forgings for 18-pr. shrap. at $1.15 each, $2,875.
1915—Nov., 1,280,000 shell forgings for 18-pr. shrap. at $1 each, $1,280,000.
1915—Nov., 200,000 base plates for 18-pr. h. ex. at 10c. each, $20,000.
1915—Nov., 1,250,000 base plates for 18-pr. shrap. at 8c. each, $100,000.
1915—Nov., 25,000 (*M. & A.) 9·2-in. h. ex. shells at $27.88 each, $697,000.
1915—Jan., 25,000 (*M. & A.) 9·2-in, h. ex. shells at $27.88 each, $697,000.
1915—Jan., 100,000 shell forgings for 9·2-in. h. ex. (including steel billets) at $27 each $2,700,000.
1915—Jan., 150,000 shell forgings for 8-in. h. ex. (including steel billets) at $17.50 each, $2,625,000.
1915—Jan., 20,000 (*M. & A.) 18-pr. shrap. (F.A.S. St John or Montreal) at $1.85 each, $148,000.
1915—Feb., 100,000 forgings for 18-pr. shrap. (delivered) at 90 c. each, $90,000.
Total, $15,355,970.

* Machining and assembling.

I want to say, to the credit of this company, that they did not take their first order for machining and assembling the 18-pounder shells at the highest price; they took it at a much lower price. The others all took their first orders at $5.70, while the Nova Scotia Steel Company took their first order at $3.80. Within one month from to-day the Nova Scotia Steel Company took an order for the forging of 18-pound shrapnel at 90 cents, although they charged $1.25 or $1.30 for the same work when carrying on the business themselves. I have taken a good deal of time in reading this, but I wanted to get it on the record. Before I leave it I wish to point out some things which will bear the closest scrutiny, and I think will require some explanation on the part of the Minister of Militia if he intends explaining or condoning the acts of the Shell Committee. I have tried to make it clear that the Nova Scotia Steel Company were the people in Canada who had a right to be asked to carry on this business, because I think they were in a position to furnish the goods. But the Dominion Iron & Steel Company had as much right to be asked as the Nova Scotia Steel Company, and were in as good a position to carry on the work. I think they were in a better position. It does seem a most unfair thing that a company which had its manager on the Shell Committee could get $15,000,000 of business and a company a few miles away, with no representative on the committee, could get no business until the war had been in progress for one year. I find some remarkable inconsistencies on an analysis of this statement, and these are the things, among others, which I would like to see investigated. I find that on the 15th of May, 1915, the Nova Scotia Steel Company took an order for machining and assembling 50,000 4·5 high explosives at $6. I find by further investigation that down in the province of New Brunswick five contracts were given on the same day, May 15th, at $6 each. But, Sir, one month later, on June 11th, when the prices were supposed to be going down, and when they were going down to everybody in Canada excepting the committee themselves, this same company, the Nova Scotia Steel Company, took an order for 25,000 4·5 shells of exactly the same kind, but instead of $6 they got $6.50. Mr. Speaker, does that not require some kind of explanation from the Minister of Militia? Does that not require explanation from the Shell Committee? But that is not all. I find that on the 28th May, 1915, to be explicit, the Nova Scotia Steel Company got an order for 300,000 shell forging for 4.5 howitzers at $2 each, and on the same day they got an order for 350,000 shell blanks, 4.5, at $2.25 each; that is an average of $4.25 for the blanks and forgings. That was on 28th May, 1915. On 18th May, 1915, ten days previously, the Shell Committee had given a contract for 100,000 4.5 blanks and forgings combined to Drummond, McCall and Company of Montreal, at $2.95 each, or a reduction of $1.30 compared with the price of the Nova Scotia Steel Company ten days later. Drummond, McCall and Company got that order at $2.95 each, and they sub-let it to the William Todd Company of Youngstown, Ohio, at a big profit. I would like to know, Mr. Speaker, if that does not require investigation. The Nova Scotia Steel Company received, or they will receive $400,000 more than they would have received if they had taken the order at the price accepted by Drummond, McCall and Company ten days before. Do you tell me that the members of the Shell Committee can be held blameless when we know that a responsible firm like Drummond, McCall and Company took an order on 18th May for 100,000 shells, both blanks and forgings, at $2.95 each, and that ten days later the committee gave an order to one of their own members for 300,000 shells at an average price of $4.25 each. Does that not require investigation, is that helping to win the war? No wonder that my right hon. friend the Prime Minister did not want to talk very much this afternoon about helping to win the war; no wonder he did not want to go into the question of prices.

But I have a good deal more to say to my hon. friend the Minister of Militia about prices, and I must hurry. I find that the Shell Committee bought from all class and conditions of men, and I find that many of them were the proper people to buy from. I have tried to make it plain that so far as the Nova Scotia Steel Company were concerned, they were the proper people to buy from. The Steel Company of Canada were also proper people to buy from; any business, or firm, or corporation which could turn out the goods in the shortest time were people to whom the Committee had a right to apply, regardless of whether they were Liberal or Conservative, no matter who they might be, because this was a question in regard to which every day, perhaps every hour, might mean

the difference between success and defeat in the titanic struggle through which we are passing.

I find a most interesting account here regarding $320,000 worth of goods which were sold to the Shell Committee by a firm known as the Sheet Metal Products Company Limited, of Toronto. By investigating the financial records, I find that the president and treasurer of this company is the Hon. A. E. Kemp, and that the vice-president and secretary is William A. Kemp. The other directors are W. Scott Waldie, Frederick S. Corrigan and Wellington Francis. I find that the Shell Committee purchased from a member of this Gov ernment $300,000 worth of goods. I do not know whether the prices were fair and reasonable or not, but I do say, Sir, that unless they were the only people in Canada who could furnish these goods, we should have a committee to investigate the matter to ascertain whether this member of the Government, through his company, sold to the Shell Committee goods at prices which were fair and reasonable. I think I can appeal to the fairness and justice of many hon. gentlemen on the other side of the House, because I know that many of them are just as honourable gentlemen as we are on this side, and that they want to see this war won, and to see this country do its duty to the Empire just as well as we do. After I have given them these figures, surely there will be some of them patriotic enough to go to the Prime Minister and tell him that he cannot count on their votes in order to keep the lid on any further investigation.

Mr. MORPHY: Does the hon. gentleman mean that he does not cast suspicion on these gentlemen, and yet would have their transactions investigated?

Mr. CARVELL: My hon. friend is endowed with a fine analytical mind, but he does not know what is coming. After I have told him, probably he will not know a great pile about it.

Mr. MORPHY: Probably.

Mr. CARVELL: I had better go on and read the items, and leave him to worry over it over night, and if he comes back to-morrow or the next day, and wants further information, I will be glad to give it.

Mr. MORPHY: My hon. friend said there was no suspicion.

Mr. CARVELL: I am not making charges; I am giving facts. If my hon. friends sees anything suspicious in the transaction, it will be his duty and privilege to express his opinion upon it after I have read the item. Here is a list of the orders given to the Sheet Metal Products Company of Toronto, with the dates and prices:

1914—October, 50,000 tin cups for shrapnel at $23 per M, $1,150.
1914—December, 100,000 tin cups for shrapnel at $3.50 per C, $3,500.
1915—January, 200,000 clips for 18-pr. cartridge at 18 cents each, $36,000.
1915—January, 100,000 tin cups for 18-pr. shrapnel at $3.50 per C, $3,500.
1915—January, 100,000 clips for 18-pr. cartridge at 18 cents each, $18,000.
1915—February, 100,000 clips for 18-pr. cartridge at 18 cents each, $18,000.
1915—March, 200,000 tin cups for 18-pr shrapnel at $3.50 per C, $7,000.
1915—May, 400,000 clips for 18-pr. cartridge at 20 cents each, $80,000.
1915—May, 200,000 tin cups for 18-pr. shrapnel at $3.50 per C, $7,000.
1915—July, 50,000 steel sockets for 4.5-pr. Howitzers at 50 cents each, $25,000.
1915—August, 200,000 electric galvanized steel clips for 18-pr cartridge at 11 cents each, $22,000.
1915—October, 17,000 electric galvanized steel clips for 18-pr. cartridge at 12 cents each, $2,040.
1915—November, 1,000,000 tin cups for 18-pr. shrapnel at $2.50 per C, $25,000.
1915—15,000 brass clips for 18-pr. shrapnel at 12 cents each, $1,800.
1915—December, 50,000 steel sockets for 6pr. high explosives at $1.45 each, $72,500.
1916—February, 4,000 tin cups at 2½ cents each, $100.
Total, $322,590.

I do not know whether 3½ cents is a fair price for a tin cup or not. I will describe a tin cup and I will ask the members of this House to form their own opinion as to whether the price is reasonable or fair. That tin cup is not so complicated an affair as an 18-pr. shrapnel shell. The tin cup goes in at the base of the shrapnel shell and it is simply a little cup to hold the powder which forms the bursting charge. Shrapnel is supposed to burst in the air and there is a little cup at the bottom that contains the powder which is supposed to ignite and burst the shell at a certain time and after the shell has gone a certain distance. The shell bursts in the air and scatters the bullets over the earth. The cup is about 2 inches in diameter and ¾ to ⅞ of an inch deep. There is no handle on it and no close soldering is required. It is made by simply taking a piece of tin and subjecting it to one stamp of a die. That makes it at the bottom. The top part of the cup is very nearly the same. It is a little bigger at the top

than at the bottom, just big enough to let the one go down over the other, and the upper part is made with one stamp of the die just the same as the bottom part. I do not know whether there is any actual soldering together or not—I think not. It may be sweated on in some way. But it performs no function whatever except to make a little receptacle to hold a handful of powder that bursts the cartridge in the air. If the tin cup were not used I imagine you would get exactly the same result. However, that is what it is, and I leave it to any hardware dealer or general storekeeper in this House to say whether 3 or 3½ cents for a tin cup of that character is a reasonable price or not. I would like to have a contract for a few million of them if I had the machinery to do the work. I think I could manage to make a fairly good summer's work out of it. There were 1,500,000 of tin cups purchased. There is no handle on this tin cup; it is the simplest thing you could imagine.

If there is only one person in Canada who can make tin cups, give him the contract even if it is the Premier himself. But these were not the only people in Canada who could make tin cups because they did not make them all; millions of tin cups have been delivered while this concern only turned out 1,500,000. They are certainly not the only people who can make tin cups if they could not deliver more than one-third or one-quarter of the tin cups that have been delivered to the Shell Committee. Therefore, they do not come within the category of the only people in Canada who can make tin cups in a hurry.

I find that they get an order for 1,000,000 clips for 18-pounders. Let me describe what a clip is. When the breech block is thrown open on the 18-pounder it is supposed automatically to eject the empty case just as in the case of the ordinary rifle. When you throw the breach block open the empty case is ejected. But if the case is not automatically ejected they provide each gun with what is called a clip. This consists simply of two pieces of metal ¾ inches wide, 14 or 16 gauge thickness, and a little more than 3 inches in length. These two pieces of metal are crossed over one on the other at right angles, the ends are bent in to catch the rim of the cartridge and then if the cartridge does not come out with the opening of the breechblock, they catch the end of it with the clip and pull it out. These clips are made sometimes of brass and sometimes of steel and they are fastened together in the centre. I do not know whether 20 cents is a reasonable price for these little clips or not. I would like to make a lot of them at that price if I had the plant, and there must be lots of plants in Canada that can make them. They do not require any special machining. But this member of the Government—

Mr. REID: Of the Government?

Mr. CARVELL: —or I might say the president of the company who is a member of the Government, or the company, whose president is a member of the Government—perhaps that is the more correct way of putting it—got a contract for these goods. I would like to see this investigated. I know there is no hon. gentleman within this House but would like to see it investigated as well. I make no charges as to whether it is right or wrong, I only want to have the white light thrown upon this transaction, and if it is all right, why, it is all right because I am finding no fault. I am only saying that I think the Shell Committee who were appointed by this Government, for this Government, and acting under the instructions of this Government, surely ought to exhaust every means of purchasing supplies before resorting to the members of the Government themselves.

Mr. LEMIEUX: Were there tenders?

Mr. CARVELL: No, you never heard of any such thing as a tender from the beginning, when they were organized, till the time when they were buried. They did not know the meaning of that term.

Mr. GRAHAM: Cremated.

Mr. CARVELL: My hon. friend says "cremated." No, they were just buried. They just gave them a Christian burial. My hon. friend asks why they were buried. I will come to that later on. Mr. Lloyd George had something to do with the killing of them and Mr. Thomas attended the obsequies. The flowers were furnished and everything was done with proper decorum.

Mr. BURNHAM: They are getting the flowers now.

Mr. CARVELL: No, they had the flowers at that time. These are not boquets at all; these are just the plain facts from a country lawyer who is trying to lay before the House a statement of what did occur and who wants the House to take cognizance of it. I have a lot of information here, but I

have talked too long. I must, however, have a few words with my hon. friend the Minister of Militia before I sit down as to the question of prices and I therefore think that I will have to leave some of this material. I have pointed out that the members of this Shell Committee were taking contracts at $5.70 each for machining an enormous quantity of 18-pounder high explosives; they were taking contracts to themselves at $5.15 for machining enormous quantities of 18-pounder shrapnel shells and they were taking contracts to themselves at $6.70 for machining enormous quantities of 4·5-inch Howitzer shells. I do not have to argue with any hon. gentlemen on the other side of the House to get them to understand that when they were giving contracts to themselves at these big prices they had to give contracts to the other 300 men who were doing business with the committee. That is the trouble. Of course, I do not mean to say that there were actually 300 men making shells. There were not more than 100 other people making shells altogether. But they were taking to themselves these enormous orders at big prices and they were compelled to give the same big prices to the other people. I have given the information to the House, and I can almost give it the weight of evidence, that when Mr. Jones, of the Canada Cement Company, wanted to cut down the prices of these goods they would not allow him to do it on the plea that he could not do the work for the price that he said he could do it for. It must be in the mind of every hon. gentleman opposite that the real reason was that if they gave contracts to Mr. Jones at a lower price they would be compelled to take these contracts themselves at no higher prices.

I have another bit of information which I can prove if the Government will give me a committee. In the month of August, or September—I do not know which but I think it was in September—a gentleman whose name I can furnish at the proper time, went to Mr. Thomas, the representative of Mr. Lloyd George in the city of Ottawa and told him that he was going to submit a tender for machining shells—I am not sure whether it was 18-pounder high explosive or shrapnel—at $1.40 apiece. A few days after that he saw in the office of the Shell Committee, a tender to do this work at $1.40. Mr. Thomas was called away to Montreal and was gone for three or four days. He supposed that, as a matter of course, the contract would be given, but when he came back, to his horror and amazement, he found that this Shell Committee, instead of giving a contract at $1.40 had given large contracts, not one, but more than one, at $2.90 each. They gave these big orders to these people because they wanted to keep the price up. At all events they did keep the price up, and I think the fair inference is that they wanted to keep the price up, or they would have given the contract to this other man, who offered to do it for $1.40, and who was an absolutely responsible party. I think I appreciate some of the rights and duties of a member of Parliament. You may call me a Radical or anything else you like, but I ask you, Mr. Speaker, and hon. gentlemen opposite, if I have ever made a statement in this House that I was unable to back up and prove to the hilt. I make that statement here to-night, and if they will give us a committee I will prove it. The man who laughs at that has a pretty low appreciation of the rights and duties of a member of Parliament. He is so far down in the scale of honour and decency that he is not fit to have a seat in this House; he is not fit to represent anything. I am surprised that there is a man in this House who is so far fallen in the scale of decency and honesty, and all that goes to make up the manhood of a nation that in the face of a statement such as I have made we hear nothing but the ha, ha of the empty brain and the dishonest mind.

I have a word with my hon. friend the Minister of Militia about prices. I want to take him back to his famous speech of January 26, 1916, in this House. Early in my remarks I explained how the contract for the first 200,000 shells was made. The minister says that the price arrived at was $8.55. I am not positive whether that was for the shrapnel or high explosive.

Sir SAM HUGHES: It was all shrapnel.

Mr. CARVELL: It was 18-pounder shrapnel. My hon. friend said in his speech on January 26:

> The price of $8.55 was arrived at by the experts of the Militia Department, who made their calculations with the assistance of machinists and large steel manufacturers throughout the country.

The Prime Minister was compelled to admit this afternoon that the price for the Canadian shrapnel was somewhat higher in Canada than in England. Now I want to show my hon. friend the Minister of Militia what information he had in his department about the price of empty shrapnel shells. And

in order that there may be no misunderstanding about what an empty shell is I will describe it, and if I am wrong the minister can set me right. As I understand it, an empty shrapnel shell consists of a blank piece of steel; and at the beginning the Nova, Scotia Steel Company got an order for 300,000 of these blanks at 45 cents each. I do not think this price was paid for the blanks later on, but it was in the beginning. Then there is a forging; the forging of that shell cost $1.25 each. I think it is really $1.30, but the price came down after the first order. Then there is the machining and assembling at $5.55, which I have already explained. Then there is a brass socket. I have not one here, but I can illustrate it with this tumbler. The shell is rimmed out perhaps 2¼ inches in diameter, and there is a piece of metal which is threaded on the outside and turns into the top of the shell. This is also threaded on the inside, in which we find the fuse when the shell is loaded and ready for action. I do not know whether the price paid for these brass sockets was a fair price or not, but I do know from a rather lengthy and somewhat inquisitive investigation that the price which the committee paid for brass sockets was 40 cents. A brass socket, to start with, is a piece of brass about 2½ inches in diameter and about 1½ inches deep; this is turned and threaded on the outside, bored out, and then threaded on the inside. Whether that is worth 40 cents I do not know. I should like to have a chance of investigating it, but it seems to me that a man would not have to make more than three or four million of them at that price in order to make enough money to keep him going for the summer. Next comes the plug. At the beginning of the war this was made of brass. It is a piece of metal which fits on the inside of the brass socket before the shell has been fused. When you insert the fuse, the plug is taken out and thrown away. The price of the plug was 25 cents. Later on they got the price down to 10 cents by using galvanized iron instead of brass, and I think in some cases they are now using wood. At any rate, at the present time galvanized iron is being used in large quantities at 10 cents, and I have heard that the Munitions Board has cut the price down lower than that. But that is only hearsay, and I am only making statements to-night that I can prove up to the hilt if I am given an opportunity of doing so, and I am making them on my responsibility as a member of this House.

[Mr. Carvell.]

Mr. BURNHAM: Has the Imperial Government consented to an investigation?

Mr. CARVELL: What has the Imperial Government to do with the price of a plug?

Mr. BURNHAM: I thought the hon. gentleman was talking about an investigation by a committee.

Mr. CARVELL: I am talking about plugs. Next, there is a little tube about 8 or 9 inches long and ⅜ or perhaps ¼ of an inch in diameter. This extends from the bottom of the brass socket down to the tin cup in the bottom. It passes through the steel disc that I have described, and which goes below the bullets. Below that again is the tin cup. The price of the brass tube is 20 cents, 10 cents for the steel disc, 3 cents for the cup, and about 2 cents for screws, washers and things of that kind. Outside of that goes a copper band, which engages the rifling of the gun and controls the direction and the speed. Altogether that makes $8.05. If there is anything else in an empty shell which I have omitted to mention, I should be glad if the hon. minister would let me know.

Sir SAM HUGHES: The resin and the bullets.

Mr. CARVELL: The resin is not in an empty shell.

Sir SAM HUGHES: Oh, yes.

Mr. CARVELL: My reading is that the resin and bullets are not in an empty shell, but I shall be delighted to add that to the cost. The resin and the bullets cost thirty cents. Am I not about right?

Sir SAM HUGHES: I have never figured out the cost. You are making the speech; I am not.

Mr. CARVELL: I have figured that they cost thirty cents. Can my hon. friend tell me of anything else that goes into the empty shell?

Sir SAM HUGHES: I was not paying very close attention to my hon. friend's remarks, but I noticed that he had not put in the shrapnel nor the resin.

Mr. CARVELL: That makes $8.35. I have now got pretty nearly up to my hon. friend's figures, because he says that the empty shell costs $8.55. Therefore I must have pretty nearly the correct prices.

Sir SAM HUGHES: No one is contradicting my hon. friend.

Mr. CARVELL: I want to call my hon. friend's attention to the fact that he purchased empty 18-pr. shrapnel shells in England by public tender, not more than six months before the war broke out. These documents which I hold in my hand were produced before the Public Accounts Committee, and that is how I got them. My hon. friend, in the month of February, 1914, asked the War Office to furnish him with 2,500 18-pr. quick firing shrapnel shells. The War Office called for tenders, and the lowest tenderer was Armstrong, Whitworth & Co., of Newcastle. I hold in my hand two bills for those 2,500 shells. As a matter of fact, the shells were not to be delivered until January, 1915, and they were never sent to Canada at all, but were kept on the other side. However, as they were purchased by the Canadian Government, the bills were sent to and paid for by Canada. The first bill was for 1,677 shells, and the second for 823 shells, making a total of 2,500, and the total amount which the Canadian Government paid for them was $7,908.33. if my hon. friend will figure it out, he will find that he bought those shrapnel shells in England just before the war broke out for $3.15 each, and yet he says that he consulted the experts of his department, and that they found that it would cost $8.55 to make an empty shrapnel shell. If my hon. friend does not think my statement is correct, I will send these documents over to him; they are taken from his own department. Those shells were bought by competition from the firm of Armstrong, Whitworth & Co., and were not manufactured at the arsenal, and yet with that fact staring him in the face, my hon. friend tells this House and this country that $8.55 was the lowest price for which those shells could be made in Canada. He goes further than that and insults the intelligence of this House; he deceives the people of Canada by telling them that the price for which he bought those shells in Canada was less than the price which he paid for them in England. It is no wonder that the Prime Minister had to admit this afternoon and evening that a shrapnel shell cost a little more in Canada than in Great Britain. I would say that they did cost a trifle more, merely the difference between $8.55 and $3.15.

The hon. minister in his ordinary bombastic manner—bombast is a good thing sometimes, it brings the minister out of many a hole—used these words, as reported on page 297 of Hansard:

> I will show before I have finished that they delivered the goods at a lower price than any other country, not even excepting Great Britain.

Then, on pages 300 and 301, he used these words:

> I am going to make another statement showing that stage by stage the prices in Canada were lower, with one or two exceptions—one of these is called No. 100 fuse—than either the British or the United States Government arsenal prices, or even the United States or British commercial prices, and that despite the fact that Canada got no bonus, and that in both Britain and the United States cash advances were made to enable the dealers to put in the machinery. I am in a position to prove that. The Canadian Shell Committee has formed a model for Great Britain; it has formed a model for the United States and Australia. It led the way in prompt deliveries, in the quantities turned out, in the quality, in low prices, and in driving force. Canada has led the way in the British Empire.

If that statement were true, we should all take off our hats to General Hughes, and I do not think there would be any trouble if General Hughes should take charge of this war and of this country; but when we analyse this statement it is a horrible one. It is a most remarkable thing that the Prime Minister could not give us the prices in Lloyd George's letter of December 8, when the Minister of Militia could give us those prices or what he said were the prices a few days ago.

Sir SAM HUGHES: I did not obtain my prices from Lloyd George; I obtained them elsewhere.

Mr. CARVELL: There is a close similarity in the date. I will read what my hon. friend says:

> In regard to prices on December 8—

The same day.

> —a cablegram came from England giving the recent prices there.

Most remarkable that the Prime Minister got a cablegram about those prices and that the minister got another cablegram about them on the same day. I wonder how many more hon. members got cablegrams about those prices on the 8th of December. Perhaps the minister will try to revive his memory and see if he did not get this information from the same source as the Prime Minister got it from. It looks awfully suspicious.

Sir SAM HUGHES: Honi soit qui mal y pense.

Mr. CARVELL (reading):

The price for 4·5, mark VI, (250,000) made in England 42s. 6d., that is, $10.33. In Canada the first orders were for very small quantities, and we had to pay $10.45.

The minister made the statement and it went forth to this country that at the start of the war, on orders for small quantities of 4·5 shells we paid $10.45 as against $10.33 in England. I will show what we paid in the beginning and I want to see if we have everything that goes into a 4·5 empty high explosive shell. I have read to my hon. friend that he paid the Nova Scotia Steel Company $3 for the blanks.

Sir SAM HUGHES: I did not pay $3.

Mr. CARVELL: Well, the Shell Committee.

Sir SAM HUGHES: Yes.

Mr. CARVELL: My hon. friend is a friend of the Shell Committee.

Mr. GRAHAM: It is his baby.

Mr. CARVELL: It is his baby and he takes the responsibility for it.

Sir SAM HUGHES: It is a fine baby.

Mr. CARVELL: It is a God-send it is buried, and that is all I have to say about it.

On the same day the Shell Committee paid $2 for the forgings. To be sure that there is no question about the matter, I had better tell my hon. friend the exact date. On the 17th of February, they purchased 180,000 blanks for 4·5 high explosive shells at $3 each, and on the same day, they purchased 180,000 4·5 shell forgings at $2 each. Then they paid $6.70 for the machining of those, because all the first orders were at that price, and in the summer, after the prices had dropped to $6, the Nova Scotia Steel Company got a contract for machining 25,000 at $6.50 At the time of which I am speaking, the highest price was $6.70. The brass socket went into the ends, and the price of that socket was 70 cents—they bought them by the million at that figure. Then there is a plug, 10 cents. In the beginning they used the brass plug, but I am talking about the iron plugs. There was the bass plate that went into the 4.5-inch shell and the copper band around it at 70 cents. So, instead of having the first quantity cost $10.45, this commission paid $13.37 for the first three or four hundred thousand of these 4.5 shells. I have given everything in that shell except two or three small screws that would cost two or three cents apiece. But the bare blank of the 4.5 inch shell cost this country $13.37. Yet the minister stakes his reputation as a minister of the Crown that the first order given for these was at $10.45. Then he tells us that the price on December 8 was $7.45. Now, I have taken the very lowest prices I can find. I cannot find anything exactly on December 8, but there are some parts ordered just before and some just after. I find that on December 30 they gave a contract for 4.5-inch blanks at $1.70 to the Electric Steel and Metal Company, and on September 30 they gave a contract to the Nova Scotia Steeel Company for forgings at $1.60. And the machining at that time was $4, which is the lowest price these shells have been machined for, unless the present commission have reduced the price. Then there was the steel socket 70 cents, the plug 10 cents, and the copper band 70 cents. So, on December 8 that empty shell, instead of being produced in Canada at $7.45, cost $8.95—only $1.50 more than the minister said. These figures are accurate. All the minister has to do is to give us a committee and we will prove them, and I will stand by every figure I give you to-night. Now, let me go a little further.

An hon. MEMBER: Oh, oh.

Mr. CARVELL: I have only started. The minister says:

The price for 4·5 forgings was 18s. 6d. in England, that is $4.50, while our former price, the highest price ever paid, was $4.25.

I have told the minister that on the 16th February, 1915, they bought 180,000 of these, not at $4.25, as he says, but at $5. The minister proceeds:

The second price was $3.60 on small lots.

This $3.60 is the latest I have noted, and that is the lowest price quoted by the Nova Scotia Steel Company. The price of the blanks was $2, and the forgings $1.60. That is where the minister got his figures. That was on September 30, 1915. And he says:

—but our price on that date was $2.95.

I do not know what date the minister referred to, but he gave the price at $2.95.

The only contract he can find given in Canada for the 4.5-inch howitzer shell at $2.95 was the contract for 100,000 given to the Drummond, McCall Company and sublet to a firm in the United States. These are exactly the figures the Drummond, McCall Co. got. Ten days after that the same committee gave contracts to one of their members, not at $2.95, but at $4.25. The minister says:

11 p.m.

For 18-pound high explosive shells, machining, the English price is 15s. 8d., equal to $3.81; in Canada, the price is down as low as $1.85 now.

The minister did not go very far in that, and I am not in a position to follow him very much. I can only say that the first price paid in Canada for machining 18-pounder shells was $5.70. I want to show what these 18-pounder high-explosive cost. The minister would try to make us believe that they cost $1.75. At the beginning the blank cost $1, machining and assembling $5.70, plug, 25 cents; copper band, 20 cents; brass plate, 15 cents; steel gaine block, 20 cents; screws, washers, etc., 2 cents. Now, is there anything in that shell that I have not named? There is no brass socket or steel socket, in it, for, as the minister knows, the fuse goes into the body of the shell itself. I have given everything, unless the minister wants to include the steel gaine which is screwed into the fuse, but I understand that that comes with the fuse. It is not part of the fuse, nor is it part of the shell. That makes $7.55 for the shell under the most favourable circumstances.

Then he goes into the 6-inch shells. We have done so little in these—I do not believe that there has been one delivered made in Canada; there may have been a few, but very few. They started in so late that it was nearly a year after the war began before they got them at all. It is not possible to make a comparison. Then the minister comes down to the prices in the United States. He says:

Under the old costs for materials and work the Canadian price of the 4·5 shell was $9.80.

I have answered that already, because I have given details of the 4·5 shells, and instead of $9.80, the price paid was $13.37. Where in the world the minister got his figures is something I cannot tell. I have given him every item, even to the screws that go into the shells, and it makes $13.37, yet he quotes the price as $9.80. And he says: "The present price is $7.35." I think he is a little nearer the truth—I mean he is a little nearer the facts—in that than in any statement he has made with regard to prices. Well, he told the committee about the American prices and compared them to show how the manufacturers in the United States wanted such an awful price from him for the cartridges. I do not know exactly what was included in that offer of the Crucible Steel Company. The minister told us that in September he tried to get a quotation from this firm, and I want to read their offer:

We are prepared to make the following proposition: three weeks after the receipt of order for 200,000 shrapnel shells complete, without explosives, and absolutely in accordance with blueprint already submitted. We can ship 1,000 per day for three weeks; after six weeks we can ship 2,000 per day until the order is completed. Price, $12 each.

I would like to see all the documents in connection with these transactions. I will venture the assertion that that $12 included something more than that blank shell without any explosive in it or anything else. I do not know if the minister will tell us, but if it does not include that, then I shall tell him that in the month of February last—and this I can prove if I get a committee—some of the largest producers of material of this kind in Worcester, Massachusetts, a great manufacturing centre, offered to furnish plenty of these shrapnel for less than $4, entirely complete as far as the shapnel shell is concerned. I am not giving names, but I will produce them before the committee and we will produce a great deal more information from the United States. We do not accept the prices the minister has given us as to the shrapnel in the United States. It is so easy in talking about these things to confound them.

Sir SAM HUGHES: Hear, hear.

Mr. CARVELL: Yes, I know how easy it is. There are four or five articles that may be meant in talking about a shrapnel cartridge. In the first place, you have the shell or the case itself, the steel case; then you have the primer, and then you have the driving charge, that is cordite; and then you have the shrapnel itself. You may talk about a shrapnel shell empty or filled. Then you have the fuse on top of that. You may talk about the cost of this shell complete or you may talk about the cartridge complete, and I am almost sure

that when that firm were talking about an order at $12 they meant the cartridge. Possibly I am wrong. But if I cannot prove what the price of the cartridge complete was in the United States, I can prove what it was in England, and I will prove it by the minister's own documents too. I have not time to refer to many of the accounts on the file before me, but I am going to refer to some of them because the minister has been buying these for some years from Vickers Sons and Maxim, or Vickers Ltd.

Sir SAM HUGHES: It is the same firm, I think.

Mr. CARVELL: I think it is the same firm. I can give a dozen illustrations. I am reading now from original documents, the original bills and accounts furnished to this Government by this firm for complete rounds of 18-pound shrapnel ammunition, excluding fuses and fuse covers. That is a complete round, as I have described it. There are a few extras for sand blasting boxes and lacquering cartridge clips, but I include them all. The price for 7,000 of these was £1,177. 5 shillings. If you figure that out it comes to practically $7.70 apiece.

Mr. REID: What date was that?

Mr. CARVELL: That was back in 1910-11.

Mr. REID: That was long before the war.

Mr. CARVELL: Of course it was, but it is the same article exactly.

Mr. REID: But the prices are higher now than they were then.

Mr. CARVELL: The prices were not higher when the war broke out than they were then. That contract ran right on until last year, and they furnished them at the same price. I have here accounts for them at $7.70 and $7.75, the complete cartridge without the fuse. You take the fuse. They tell you about what an awful thing it is to make a fuse. I come now to what the minister called time fuses, that is time and percussion fuses, and the minister will understand that the British fuse was then call the 85. The 80 is very much the same.

Sir SAM HUGHES: The British fuse is the 85, time and percussion. The 80 is an American fuse which they now accept. There is a little variation, but practically it is the same thing.

[Mr. Carvell.]

Mr. CARVELL: We will get it accurately. This bill is dated 27th February, 1911, and reads:

Fuses, T. & P., No. 80, mark III, 12,000 at 9s. 5d.

Figuring that out it comes to about $2.28 for a T. and P. fuse.

Sir SAM HUGHES: If the hon. member reads my speech he will see that I said that that fuse is made for $1.90.

Mr. CARVELL: I have not found that in his speech yet.

Sir SAM HUGHES: It is right in the speech.

Mr. CARVELL: Then, it is a most wonderful thing that Col. Allison is allowed to go to the United States and make a contract for 5,000,000 at $4.50. No, what the minister said in his speech was that the raw material for the fuse cost $1.90 or $1.95. I am not talking about raw material but about the finished article, and the minister knows that. The minister bought the finished article for $2.28, not a few but thousands of them.

Sir SAM HUGHES: I will tell the hon. member now that the net cost of that fuse was $1.90 before the war.

Mr. CARVELL: The minister told us it was the raw materials.

Sir SAM HUGHES: Not the raw materials.

Mr. CARVELL: The materials of this that cost $1.90. The minister is just like a flea; you think you have him and you have not; you never know where to get him, and you cannot hold him down anyway. I could go on dealing with these prices, but I think I have said enough But I must tell him about his 4·5 shells. He tells us how much more cheaply they were made in Canada than in England and the United States. He bought 4·5 shells—

Sir SAM HUGHES: I bought 4·7 shells.

Mr. CARVELL: The minister did not buy them very long before the war. They were delivered on 27th January, 1914; "shells, Q.F., empty, common, 4·5 howitzers, Mark I, 100." And, Mr. Speaker, what do you suppose they paid for them—10s. 11d., or $2.62. This minister bought 4·5 howitzer shells in England just before the war broke

out for $2.62, not on one occasion only, but on two occasions. I have it here in his own documents. They were a small quantity, only 100 of them, and yet he comes here and tells you that when he or his committee were paying $13.37 for the same article he was buying them cheaper in Canada than they could be bought in Great Britain. I have gone into these things somewhat in detail. I have shown that every statement which the minister made regarding shells and fuses, and everything else, excepting possibly the 18-pounder high explosives, was false in fact; I do not say malicious, but wrong anyway in fact, with no foundation of truth; nothing in the world to give the people of Canada any information or education, but everything in the world to deceive the people of Canada.

Mr. SPEAKER: I think the hon. gentleman is going too far.

Sir SAM HUGHES: It does not make any difference; it is all right.

Mr. SPEAKER: It is my duty to call the hon. member to order, and I ask him to withdraw that statement.

Mr. CARVELL: I will be delighted to do so; I want to keep my remarks within the rules of the House. But I think I am justified in saying that the result of the minister's statements was that the people of Canada were deceived as to the true state of affairs, and that they were led to believe that the 4·5 shells in England cost $13.37, and that he bought them himself for $2.62. And yet the hon. gentleman had not fallen down and given up the ghost. It seems to me, Mr. Speaker, that the narrative in the Acts of the Apostles about Annanias and Sapphira must belong to ancient mythology and not to inspired Holy Writ.

The minister went on and told you about other wonderful things that this Shell Committee had done for Canada. He said:

> Since the beginning of the business the Canadian Shell Committee has turned out in Canada 22,000,000 shells.

I want to say that they have not turned out 8,000,000 shells; they have given contracts for 22,000,000, but they have not turned out half of that quantity, not more, I venture to say, than 8,000,000. The minister can figure it out, and he will find that I am away above the mark when I put it at 8,000,000.

Mr. REID: Where does my hon. friend get his authority for these statements?

Mr. CARVELL: I am just like the Minister of Marine and Fisheries; I get some down in New Brunswick, and some in other places, and some from private individuals. You will remember that when I wanted to know where the minister had got certain information he said he had got it from private individuals. That is where I got mine, and I stand by it, and will prove every word of it if you will give me a committee. The minister spoke of:

> 800,000,000 pounds of steel made by Canadian workmen in Canadian shops and turned into shells by Canadian workmen, brass, zinc and copper, 45,000,000 pounds; copper, over 22,000,000 pounds.

The Prime Minister himself went almost as far to-day as to make the same statement, that 22,000,000 pounds of copper had been used by this Shell Committee. I want to tell you, Mr. Speaker, and the hon. minister that there has not been a pound of copper bought in Canada as the result of this Shell Committee's activities. There is no copper refined in Canada. The best they can do is to get it down to what they call blister copper, which must be refined down to about 95 per cent pure. It is then sent to the United States and refined, and brought back, and we pay duty upon it. If we can establish a refinery in Canada and I understand that a company is to be established well and good; I sincerely hope we will. But I do object to the Minister of Militia and Defence telling this House and the people of Canada that as the result of the activities of this Shell Committee, they turned out 22,000,000 pounds of copper which had been used in the manufacture of munitions.

Sir SAM HUGHES: The minister never made any such statement.

Mr. CARVELL: I have read it, and I will read it again.

> Since the beginning of the business, the Canadian Shell Committee has turned out in Canada 22,000,000 shells; 800,000,000 pounds of steel made by Canadian workmen in Canadian shops and turned into shells by Canadian workmen, brass, zinc and copper, 45,000,000 pounds; copper, over 22,000,000 pounds; lead, 102,000,000 pounds; black powder for shrapnel, 4,000,000 pounds; cordite, 10,000,000 pounds; nitrocellribose powder, 4,000,000 pounds; tri-nitrotoluene, the famous high explosive, 11,000,000 pounds, put into shells in Canada, besides several millions of pounds exported to the British Government.

Who did all this, if the Shell Committee did not do it? Do I understand the English

language; am I not interpreting it properly when I say that the minister said that? Probably he did not mean to say it.

Sir SAM HUGHES: The hon. member said I had made the statement that we had produced and refined in Canada that amount of copper.

Mr. CARVELL: I did not say that; I said that the hon. minister made the statement that the Shell Committee had produced 22,000,000 pounds of copper—

Sir SAM HUGHES: They put it into the shells.

Mr. CARVELL: If they did, they bought it in the United States. But I might give the minister a little more information. They talk of what they have done for Canada, about the enormous amount of business they have brought to Canada. They have given some business, and we are all glad of it, but it may surprise my hon. friend when I tell him that the Shell Committee bought $37,000,000 worth of goods in the United States, consisting of fuses and bands. Take a copper band; it is simply a piece of copper, made like a long tube. For high explosive 18-pounder shells it is about 3 inches in diameter, and they simply saw a piece off that tube about ⅞ of an inch long, and that is put over the shell. It is subjected to heavy hydraulic pressure, and is forced into a place which has been turned in the body of the shell to receive it. That is all there is to it; a piece of copper originally about ½ of an inch thick and about 3 inches in diameter. I do not know what these bands would weigh in the case of an 18-pounder shell, not more, perhaps, than 3 or 4 ounces. It might possibly weigh half a pound; I am not sure, but that is all there is to it. Could these not have been made in Canada? They gave an order to the American Brass Company for 1,270,000 bands; to the American Machinery Company for 1,402,000; to the Baltimore Development Company for 290,000; to the Davidson-Lewis Company for 24,000; to the Eagle Smelting Company for 132,000; to the Phillips Manufacturing Company for 43,000; to the Rome Manufacturing Company for 1,401,000. Could these not have been made in Canada? Where in the world were this great Shell Committee; what in the world were they doing? I will tell you, Mr. Speaker; they were busy getting contracts for themselves. working out these contracts, and making enormous profits.

They were not looking after the business of Canada; they were not looking after the manufacturing interests of Canada; they were not looking after the taxpayers of Canada. No wonder the Minister of Militia seemed sober when I read these figures to him.

As to fuses, if there is anything for which this committee should be condemned, and for which I believe this committee was condemned by the British Government, it was their laxity, their almost criminal negligence, in looking after nothing excepting the machining, assembling and forging of shrapnel and high explosive shells. Without a fuse you might as well have a lump of steel. You have to have something to explode the nitro-glycerin or gun cotton inside the shell, and the only way is to provide your shell with a time or a percussion fuse. The time fuse may be used either as a time or percussion fuse. The shell contains in the centre two pellets, about the size of a hazel nut, one pointing forward and the other backward. These pellets are suspended in the centre of the fuse by springs, and the moment the projectile leaves the gun the force forward causes the pellet to strike back the same as a man falls back when a street car starts. This detonator ignites the cap, the fire is carried by means of the fuse to the powder at the base of the shell and explodes the cartridge at the proper distance in the air —it may be one, two or five miles away— and scatters the bullets over the earth. On the other hand, should the shell not explode but strike the earth, then the other pellet, which is also suspended by springs, immediately rebounds forward and the detonator ignites another cap which immediately causes the explosion of the nitroglycerin, or gun cotton, or whatever else may be in the centre of the shell. I repeat that without that fuse your shell is only a lump of metal. Yet, the committee allowed one year to go by in order that Col. Allison should have time enough to look up and organize his sub-contracting companies, in order to make whatever profit they could out of these things while the nation was crying out for fuses. The British Government was finding fault with the committee, and every man knows that there was a terrible neglect of duty on the question of fuses. The Minister of Militia said this afternoon that fuses had not been made in Canada. Fuses have been made in Canada, fuses are now being made in Canada, fuses are being made in Toronto at the rate of from 3,000 to 5,000 a day.

Sir SAM HUGHES: My statement was made to-day in answer to the leader of the

Opposition, who stated that the Munition Board had let contracts, and that fuses were being made to-day in Canada under those contracts. I again repeat that not one fuse has been made under a Munitions Board contract.

Mr. GRAHAM: Made under a Shell Committee contract.

Sir SAM HUGHES: Not one was made under a Shell Committee contract. I made the statement this afternoon that an order was given in June for 500,000 to the firm of Russell & Co., of Toronto, but that not one of these fuses had ever been made in Canada.

Mr. CARVELL: I am surprised at the Minister of Militia because he is usually a good fighter. If there was anything that I gave the minister credit for it was that he always came out in the open and never got behind a quibble of that sort. He has some colleagues who might be expected to do that but never the Minister of Militia. The minister made the statement that no fuses had ever been manufactured in Canada.

Sir SAM HUGHES: I made the statement in answer to the leader of the Opposition, that not a single fuse had ever been made under the Munitions Board in Canada. I make the statement now that not a single fuse has ever been made in Canada.

Mr. CARVELL: If I am in order, Mr. Speaker, I would say that this is the most contemptible quibble that I have ever listened to in the House of Commons. Nobody is finding any fault with the Imperial Munitions Board. We are not asking for any investigation of their affairs. We are simply asking for an investigation of the affairs of the Shell Committee. I could not tell you whether my leader used precise words indicating that fuses had been manufactured under a contract made by the Munitions Board but there is not a man who would expect the minister to try to crawl out of a hole in that way. I thought the minister was more of a sport than that. I did not believe the minister would get down to that kind of warfare and would try to get out of the hole by saying that he draws a distinction between a contract given by the Shell Committee and a contract given by the Munitions Board.

Sir SAM HUGHES: I gave the date.

Mr. CARVELL: My hon. friend is welcome to all the credit he can get out of it. I see that it is getting along towards twelve o'clock, I have finished one phase of this case, but I have a few remarks to make on another branch. I would like to adjourn the debate.

Sir SAM HUGHES: I want to follow the hon. gentleman to-night.

Mr. CARVELL: We will have to continue sitting into Ash Wednesday if you do. I do not think the minister is serious in that. I would like to move the adjournment of the debate if the right hon. leader of the House would consent.

Sir ROBERT BORDEN: I understand it will be difficult for the minister to speak at any other time, and he desires to follow my hon. friend (Mr. Carvell). Otherwise I would not object.

Sir SAM HUGHES: If the hon. member does not object, I would like just to tackle his address for a short time. Nothing would give me greater pleasure.

Mr. CARVELL: I am always game, you know. I never object to listening to an antagonist.

Sir ROBERT BORDEN: How long would the hon. gentleman require to finish his remarks?

Mr. CARVELL: Probably three-quarters of an hour.

Sir ROBERT BORDEN: As much as that?

Mr. CARVELL: Yes.

Sir ROBERT BORDEN: That is terrifying.

Mr. CARVELL: I have really just covered one or two phases, and I want to take up some other matters.

Sir SAM HUGHES: I certainly do not object, but I would dearly love to get a clip at the hon. gentleman.

Mr. CARVELL: You could get it on Thursday.

Sir ROBERT BORDEN: I think the minister, upon reflection, has come to the conclusion that there is not very much to

answer, and therefore he will consent to adjourn the debate.

Mr. CARVELL: I move the adjournment of the debate.

Motion agreed to, and debate adjourned.

Sir ROBERT BORDEN moved the adjournment of the House. He said: I intended that we should go on with this debate on Thursday, but I understand that some arrangement has been made between the whips on account of which some hon. gentlemen may not be here on Thursday. Therefore I am willing to adjourn the debate until Tuesday, and take up estimates on Thursday and Friday if that will more generally meet the convenience of hon. gentlemen. If we go into estimates, we will take up Labour, Justice and Railways.

Mr. ROGERS: If Railways will suit my hon. friend from South Renfrew (Mr. Graham).

Mr. GRAHAM: If an arrangement has been made, of course we will conform to it, although I understood we were going on on Thursday, with this debate.

Sir ROBERT BORDEN: So did I.

Mr. GRAHAM: However, if the proposal suits the convenience of hon. members we will acquiesce in it.

Mr. CARVELL: I suppose I ought not to ask too many favours, but on account of some personal matters that have cropped up by cable to-day, I think it will be difficult for me to be here the first of next week. I should prefer Thursday.

Sir ROBERT BORDEN: Then we will have the continuation of the speech of my hon. friend on Thursday, one speech in reply, and then adjourn the debate and go into Estimates for the rest of Thursday and the whole of Friday.

Mr. GRAHAM: Railway Estimates will suit me on Thursday, but I am not so sure about Friday.

Sir ROBERT BORDEN: Then we will not take them up on Friday, but on Thursday, if at all.

Motion agreed to, and the House adjourned at 11.38 p.m.

Thursday, March 9, 1916.

The House met at Three o'clock, the Speaker in the Chair.

INSURANCE ACT AMENDMENT.

Mr. BLAIN moved for leave to introduce Bill No. 54, to amend the Insurance Act, 1910.

Mr. GRAHAM: What is the amendment?

Mr. BLAIN: This is a Bill which was introduced at the last session of Parliament by the late Mr. Lancaster. It was simply placed in my hands, and I thought that if it were presented to the House it would, when printed, explain itself much better than I could.

Mr. GRAHAM: Does it relate to life insurance or to fire insurance?

Mr. BLAIN: Life insurance.

Motion agreed to, and Bill read the first time.

WINDING-UP ACT AMENDMENT.

Hon. C. J. DOHERTY (Minister of Justice) moved for leave to introduce Bill No. 55, to amend the Winding-up Act. He said: The purpose of the Bill is merely to correct an anomaly that exists. The Supreme Court of Ontario includes two divisions—the High Court of Justice, and the Court of Appeal. All the rules of practice, generally speaking, are made by the entire court, comprising the two divisions. The provision in the Winding-up Act defines the court in the province of Ontario as the High Court of Justice, and confides to that court the making of the rules. The result is that, whereas all other rules of practice are made by the entire court, comprising the two divisions, the rules under the Winding-up Act are made by only one division of the court. This is anomalous, and it is on the suggestion of the Chief Justice of Ontario, with, I understand, the concurrence of the other judges of both divisions of the court, that we seek to amend the Act, so as to put the rules under the Winding-up Act in the same position as all other rules of practice in the Courts of Ontario.

Motion agreed to, and Bill read the first time.

PRIVATE BILLS.

FIRST READINGS.

Bill No. 52, for the relief of Henry John Thomas Wardlaw.—Mr. Wallace.

Bill No. 53, for the relief of Robert William Thompson.—Mr. J. E. Armstrong.

QUESTIONS

[Questions answered orally are indicated by an asterisk.]

OTTAWA CUSTOMS BUILDING.

Mr. MURPHY:

1. Were tenders invited for the construction of a retaining wall and sidewalks at the Customs building, Sussex street, Ottawa?
2. If so, who were the tenderers, and what was the amount of their respective bids?
3. (a) To whom was the contract awarded, and (b) when is the work to be completed?

Mr. ROGERS:

1 and 2. The P. Lyall & Sons Construction Company, contractors for the Customs building, were invited to tender by the Chief Architect, and the tender submitted, amounting to $22,637.50, was accepted.

3. (a) The P. Lyall & Sons Construction Company; (b) the contract called for the completion on 26th January, 1916. Owing to severe weather work had to be suspended, but the wall will be completed early in the spring.

A. KASTELLA.

Mr. MACDONALD:

1. What position did A. Kastella hold in the Department of Public Works?
2. When was he appointed?
3. Has he been removed from his position?
4. If so, for what reason?
5. Is the said A. Kastella of German extraction?
6. Is he a British subject?
7. If so, when was he naturalized?

Mr. ROGERS:

1. Mechanical superintendent of dredges.

2. May 28, 1914.

3 and 4. No; he resigned on February 15, 1916.

5. Yes.

6 and 7. Yes, by naturalization. Mr. Kastella came to Canada about fourteen years ago, and claimed to have been naturalized in 1904 before a Justice of the Peace. Not having his papers in accordance with the law, he was again naturalized on December 5, 1914.

SUNNYBRAE MAIL SERVICE.

Mr. SCHAFFNER:

1. What is the difference in cost between the railway mail service and the rural mail service actually in existence at or near the place called Sunnybrae, N.S., mentioned by the member for Pictou, pages 1304 and 1305 of unrevised Hansard?
2. What, if any, advantages have accrued by reason of the establishment of the rural mail service in question?

Mr. CASGRAIN:

1. Present cost by rural mail delivery, $901; former cost by railway, $895; increased cost, $5.10.

2. Under the old system, mails were distributed by train running from Sunnybrae to Ferona Junction, leaving Sunnybrae at 9.55 a.m. and arriving at Ferona Junction at 10.55 a.m. This train, of course, carried mails from local points only, and at 3.15 in the afternoon returned carrying all mails from western and eastern points, and the distribution throughout the localities from the side stations was made only from the 3.15 train. Thus these mails arrived at the different post offices on an average between 4 and 5 p.m. Under the present system, all western mails, without exception, and all eastern mails from Sydney up to 8.40 p.m. the night before, representing over 95 per cent of all such mails, are distributed between 12 o'clock noon and 4 p.m., a gain of from two and a half to four hours. In addition, these mails are delivered not at post offices some distance from the houses of the farmers, but at their doors, along the whole route, and the best proof of the usefulness of the service is that rural field officer McLeod reports through the inspector that, upon making inquiries amongst the box holders, they all expressed themselves as well pleased with the rural mail delivery, and under no conditions would they wish to return to the former service.

VICTORIA, B.C., RIFLE RANGE.

Mr. SINCLAIR:

1. Does the Department of Militia and Defence hold a conveyance of the property at Heals, B.C., on which the new rifle range has been constructed?
2. Has payment been made for this property? If not, why not?
3. If the department holds the property, under what terms and conditions did it enter into possession?

Mr. KEMP:

It is presumed that the above questions have reference to the Heal property, which has been acquired as an addition to the new rifle range site, Victoria, B.C. If so, the answers are as follows:

1. The department acquired title under the provisions of the Expropriation Act.

2. Yes.

3. See reply to No. 1.

DR. BOUCHER.

Mr. LACHANCE:

1. During the course of 1915, did the Government receive any complaints against Doctor Boucher, as physician in charge of the medical service for the Lorette Indian reserve, county of Quebec?

2. If so, what were such complaints and by whom were they made?

3. What action has the Government taken regarding such complaints against Doctor Boucher?

4. Will the Government order an investigation into such complaints? If so, when?

Mr. ROCHE:

1. Yes.

2. Moise Gros Louis, of the Lorette reserve, complained, in connection with his wife's confinement, that the child died at the time of birth owing to negligence on the part of Dr. Boucher.

3 and 4. The facts on which the complaint was based did not, in the opinion of the department, show negligence on the part of the doctor, but the matter is being inquired into.

ENLISTMENT OF JEWS.

*Mr. BOULAY:

How many Jews have enlisted in French-Canadian or English-Canadian battalions since the beginning of the war?

Sir ROBERT BORDEN: A large number of Jews have enlisted in the overseas force since the beginning of the war. It would be a work of very great labour to go over the whole list of 275,000 men for the purpose of ascertaining the information asked for in the question. We do not think it is desirable in the public interest to take that course.

Mr. GRAHAM: Hear, hear.

MEMBERS OF PARLIAMENT SERVING WITH THE FORCES.

*Mr. J. J. HUGHES:

Is the Government aware that the British Government has, as reported, decided that no member of Parliament serving with the forces of the Crown may draw both indemnity as member of Parliament and his service pay? If so, does the Government intend to follow the example of the British Government in this respect?

Sir ROBERT BORDEN: The Government is informed that up to the end of the present fiscal year members of Parliament of the United Kingdom serving with the forces of the Crown, draw their sessional indemnity and also their service pay. We are also informed that the Prime Minister of the United Kingdom has announced his intention of introducing a resolution on the subject before the Easter recess. As far as the Government of Canada is concerned, the subject is under consideration.

MOOSEJAW EXAMINING WAREHOUSE.

Mr. W. M. MARTIN:

1. (a) When, (b) at what price, and (c) from whom was land bought in Moosejaw for an examining warehouse?

2. What other properties were offered, by whom, and at what prices?

3. Who appraised the present site on behalf of the Government?

Mr. ROGERS:

1 (a) Order in Council dated 20th February, and certificate of title dated 3rd March, 1914. (b) $60,000. (c) From Mr. Jacob Erratt.

2. No record in the department that any other properties were offered.

3. Mr. W. T. Mollard, Clerk of Works, Regina.

POST OFFICES IN INVERNESS.

Mr. A. W. CHISHOLM:

1. How many families is each of the following post offices supposed to serve: Gillisdale, Kupoch, Kiltarlity, Mount Borden and Scotsville?

2. What is the revenue of each office?

3. What is the distance between each of these offices and the next nearest office?

Mr. CASGRAIN:

1. Gillisdale, 16 families; Keppoch, 7 families; Kiltarlity, 6 families; Mount Borden, 6 families; Scotsville, 33 families.

2. Gillisdale, $27.50; Keppoch, $11; Kiltarlity, $28; Mount Borden, $9; Scotsville, $110.41.

3. Gillisdale, nearest office South West Margaree, 2½ miles; Keppoch, nearest office, Mount Borden, 2½ miles; Kiltarlity, nearest office, Scotsville, 2½ miles; Mount Borden, nearest office Keppoch, 2½ miles; Scotsville, nearest office Kirkwood, 2 miles.

OIL-BURNING LOCOMOTIVES IN BRITISH COLUMBIA.

Mr. OLIVER:

Did the Railway Commission issue an order requiring the Canadian Pacific and the Grand Trunk Pacific to burn oil in their locomotives on lines in British Columbia? If so, when was such order issued?

Mr. REID:

1. No such order has been issued by the board.

2. Answered by No. 1.

CANADIAN OFFICERS IN ENGLAND.

Mr. MACDONALD:

1. How many Canadian officers are employed in the Canadian Pay and Record Office in England?
2. How much is paid out monthly in England to Canadian officers not attached to Canadian units there?

Mr. KEMP:

1. The latest information up to January, 1916, is that there were 54 officers employed in the Canadian Pay and Record Office, London.

2. All Canadian officers in England are attached to some unit.

SUBSIDIZING SHIPS IN BRITISH COLUMBIA.

Mr. MACDONALD:

1. Has any request been made by the Provincial Government of British Columbia to the Federal Government, asking for the subsidizing of British Columbia ships?
2. Has any request been made by said Government for the laying down and constructing or assisting in the construction of twenty-five ships by the Federal Government?
3. What action has been taken in regard to said requests or either of them?

Sir ROBERT BORDEN: Any necessary answer in regard to the matter alluded to in this question will be made in due course.

SMALL ARMS AMMUNITION.

Mr. MACDONALD:

1. Was any small arms ammunition disposed of by the Militia Department since August 4, 1914? If so, to whom?
2. What was the price received?

Mr. KEMP: All servicable ammunition has been issued to Canadian contingents. It would not be advisable to give the details during the present emergency, in the public interest.

P. M. FIELDING.

Mr. MACDONALD:

How much has been paid P. M. Fielding, of Windsor, N.S., for services as recruiting officer and for expenses in that connection?

Mr. KEMP: No payments made to P. M. Fielding, Windsor, N.S., for recruiting.

BAY ST. LAWRENCE TELEGRAPH OFFICE.

Mr. McKENZIE:

1. What was the cost of running the telegraph office at Bay St. Lawrence, Nova Scotia, during the years 1911, 1912, 1913, 1914 and 1915, including salaries?
2. What was the number of messages sent from the above office during the years 1914 and 1915?
3. What was the revenue from the above office during the years 1911 to 1915, both inclusive?
4. On whose recommendation was Vilkren Theriault dismissed from the telegraph office at Bay St. Lawrence, Nova Scotia, and on whose recommendation were the two present operators at that office appointed?
5. What was the salary paid to Vilkren Theriault while in charge of the above office, and was his salary the only one paid in connection with the said office during the years that he was in charge of it?
6. (a) When were new poles furnished for that section of telegraph line between Bay St. Lawrence and Money Point, and (b) who furnished them?
7. Were they examined? If so, by whom, and were any of them rejected, and what was the cost per pole?

Mr. ROGERS:

1. 1911, $1,333.75; 1912, $1,243.35; 1913, $1,210.33; 1914, $1,253.01; 1915, $1,198.30.
2. 1914, 110 messages; 1915, 92 messages.
3. 1911, $46.19; 1912, $20.63; 1913, $39; 1914, $30.70; 1915, $29.49.
4. By order of the Minister of Public Works, for political partisanship; the two present operators appointed on recommendation of Mr. John McCormick.
5. $720 per annum; and Mrs. V. Theriault was paid $420 per annum as assistant agent.
6. (a) In June, 1915; (b) J. R. McNeil.
7. Yes, by C. P. Livingstone, superintendent of construction, a few rejected and replaced by others of proper size and quality, 90 cents per pole.

ANTOINE GOBEIL.

Mr. KYTE:

1. How much money has Antoine Gobeil, late Deputy Minister of Public Works, received from the Federal Government since December 31, 1914?
2. How much of the amount so received was for superannuation allowance, and how much for other services?
3. If any amount was received for services performed for the Government, what were those services?

Mr. ROGERS:

1. $2,756.66 to February 29, 1916.

2. $2,520 for superannuation and $236.66 for services in January, 1915.

3. Preparing a history of the port of Quebec in relation to the St. Lawrence trade, and compiling other information required by the department.

WEST ROCHDALE POSTMASTER.

Mr. SINCLAIR:

1. Who is the postmaster at West Rochdale, Guysboro county, Nova Scotia?
2. When was the present postmaster appointed?
3. On whose recommendation was this appointment made?

Mr. CASGRAIN:

1. Thomas Kelly.

2. January 28, 1916.

3. On recommendation of Mr. G. A. R. Rowlings.

EMPLOYMENT OF DR. HJORT.

Mr. SINCLAIR:

1. Is Dr. Hjort still in the employ of the Naval Service Branch?

2. Has he made his final reports?

3. If so, when will the report be available?

Mr. HAZEN:

1. No.

2 and 3. No. Dr. Hjort is at present in Bergen, Norway, where he is preparing his final report from information obtained during his investigation of the Canadian herring fishery.

UNOPPOSED MOTIONS FOR PAPERS.

Mr. Paquet.—For a return showing: What are the names of the lawyers of the province of Quebec who have been entrusted with certain cases or given work by the Government between the 1st September, 1908, to the 1st October, 1911; what amounts were claimed by each of such lawyers for each case or matter in which he acted; and what amounts were paid to each of them.

Mr. McKenzie.—For a return showing: how much was collected in wharfage on goods landed on Government wharves in the county of Victoria, at Neils Harbour, Ingonish, Englishtown, South Gut, Baddeck, Little Narrows, Nyaiga, and Big Bras d'Or; and how much was collected at each of the above places, by whom collected, and how much returned to the Government in each case.

GOVERNMENT INSPECTION OF HOGS.

On the Orders of the Day:

Mr. McCOIG: Mr. Speaker, I would like to draw the attention of the Government to the market quotations in the London Free Press. The quotation for hogs is as follows:

Hogs, fed and watered, $9.50, less one-half of one per cent for Government inspection.

I would like to call the attention of the Government to the fact that hog buyers throughout the country have been deducting the price of hogs one-half of one per cent for the Government inspectors. As I understand, the inspectors who are employed by the Government are paid by the Government. If these men have been collecting this percentage, have they been returning it to the Government, or have they any right to make this claim upon the farmers who are selling hogs to them?

Mr. HAZEN: I am sorry that I am unable to give my hon. friend the information off-hand. The matter was not called to my attention before. I shall be very glad to get the information and answer my hon. friend's inquiry at question time to-morrow.

SHELL CONTRACTS.

PROPOSED COMMITTEE OF INVESTIGATION.

Consideration of the proposed motion of Sir Wilfrid Laurier for a committee to inquire into purchases of shells or other munitions or goods by the Shell Committee, resumed from Tuesday, March 7.

Mr. F. B. CARVELL (Carleton, N.B.): Mr. Speaker, I crave the indulgence of the House for a short time in order to conclude the remarks which I have to address to the House upon this very important resolution. I had covered, before midnight on Tuesday, the most important points raised by my right hon. friend the Prime Minister (Sir Robert Borden), and most of the reasons given by him why this resolution should not carry. I desire to refer to a few more, and then I shall be through.

Just before adjournment I was discussing the question of fuses. I had described, as generally as I possibly could and yet to make it intelligible, the construction of a fuse and the manner of its operation. On a former occasion I stated in this House that the Shell Committee had given two contracts to firms in the United States. One was to the American Ammunition Company of New York for 833,334 fuses at $4.50 each, and 1,666,666 at $4 each. This, figured out, made a total of $10,416,667. Then, they gave another contract to the International Arms and Fuse Company of New York for 833,334 fuses at $4.50 each, and for 1,666,666 at the same price, making a total of $11,250,000. In other words, we have here contracts for almost $22,000,000 given to firms in the United States. When we find contracts of that immensity given to our neighbours, we naturally commence to ask, why is it that the Canadian manufacturers could not have produced these necessary articles? A fuse is not a very big article; it cannot be the size of it that prevents the Canadian manufacturer from making it. It is only made of brass, a little copper and a few steel springs. The steel springs are so minute that a few thousand pounds of them would be all that would be necessary for the whole 5,000,000 fuses. It cannot be for lack of machinery, because we can get machinery in Canada that will make anything. It certainly cannot be for lack of workmen, because it has been demonstrated during the last year or two that Canadian workmen can make shells and anything else

in the line of warlike supplies, and therefore I believe they can make fuses. Why is it? This Shell Committee was organized away back in September, or October, 1914, and it was not until the summer of 1915, or until pretty nearly a year had gone by, at least nine months, before these gentlemen even commenced, as far as the public are advised, to consider the question of fuses. I pointed out on Tuesday the absolute uselessness of shells unless you had fuses to explode them; and yet these gentlemen sit around taking contracts unto themselves and giving contracts unto their neighbours, friends, and associates, entirely disregarding the whole question of fuses, which is the very life of the transaction, and without which every dollar expended is absolutely thrown away.

When we come to investigate this question, we arrive at some most remarkable conclusions. I have not had time thoroughly to digest all the remarks made by the Minister of Militia, but I think I am correct when I say that he stated very near the close of the debate on Tuesday evening that the graze fuse, or the fuse that he calls the No. 100, is being made in England to-day for $1.95. I proved to him out of his own records—I took no garbled reports or anything of that kind—that from 1909 down to 1914 he bought exactly the same fuse, the No. 100, or graze fuse, from firms in England, from Vickers & Co. on a contract, a quantity of something like 25,000, at $2.26 each. He says that they are being manufactured in England to-day for $1.95 each. After spending nine months of precious time, and taking chances of the British army being annihilated for lack of ammunition, this Shell Committee gave a contract in the United States for 1,666,666 of these fuses, not at $1.95 each as in Britain, not at $2.26, the same as was paid for the same article just one year before, but at $4; that is they paid $3,000,000 more than these fuses could have been bought for in England at that time. I have positive information here as to the price of the T & P fuse, or the time-fuse, as it is called. I find he bought these fuses for $2.26 each in Britain. I see that he gave contracts in the United States for 2,500,000 and 833,000 of these time-fuses at $4.50, although he had bought the very same fuse in Britain a year before for $2.26. I have proof of that right from his own documents. Why is it necessary to pay such an enormous premium as this in order to get these very necessary articles? If the minister said that he could not get them in Britain, that might be an answer. But he has not said so, and he won't say so, because he can't say so. He has not said that they could not be made in Canada, because that would not be true, and I know the Minister of Militia would be the last man to state what was not true. In the month of June last a contract was given to the Russell Motor Car Company, of Toronto—if the contract was not in their name it was given to that company anyway—for 500,000 graze fuses; half of these fuses were to be supplied at $4 each, and the other half at $3 each. So the minister was able to get fuses manufactured in Canada for $3.50 each, and that on a small contract of 500,000. Yet he placed a contract in the United States for 1,666,666 fuses, and paid $4 each for them. Will any hon. gentleman in this House who attempts to defend these transactions say that these fuses could not be made in Canada?

We had an almost unpleasant exchange of compliments across the floor of this House on Tuesday evening last, because in my judgment the Minister of Militia did not do himself justice. He tried to get behind the quibble that no fuses had been furnished the Shell Committee, and no contract made by the present Munitions Board. But it turned out that what he meant to say was that fuses had been furnished to the Shell Committee, and that they had made contracts. The Shell Committee made a contract with the Russell Motor Car Company, and that company have manufactured fuses in Canada, and are manufacturing them to-day. Only yesterday I saw Mr. T. A. Russell, and he told me they were carrying out their contract, and delivering more than 3,500 fuses a day. He said that they would not only be able to fill their contract, but fill it ahead of time, after complying with every condition and requirement. And yet these Americans who got this enormous contract at this horrible price have never furnished a solitary fuse, and the British Empire might have been smashed to pieces by the German armies if it had relied on the Canadian Shell Committee to supply fuses for their shrapnel and high explosive shells.

Why is it that they had to go to the United States? You have to go to New York to find out. I am sorry I have not been there many times myself in the last year, but there are many people in Canada who have. And it all comes back to the same dirty trail—J. Wesley Allison. Every dirty trail in the whole transaction leads to Allison, and there is not a

dirty trail' that J. Wesley Allison has not trodden in the last year and a half. This is the gentleman who is playing sick down in New York; the man who has pneumonia, according to the newspapers; the man who, for the last three nights, including last night, has taken a seat in a Pullman from New York to Canada, and had his grips stowed away on board by the porter, and then just before the train pulled out, has sneaked out by the back door and gone back to his hotel. He thinks somebody is watching him, and he is quite right. He is trying to put people off the scent; he does not want us to know where he is. But we know where he is all right, and we know who will be closeted with him to-morrow morning about eight o'clock. We know there was an hon. gentleman of this House who was very brave here on Tuesday evening, simply dying to jump into the breach. He could not wait until this afternoon to answer the remarks I was making. He is the man who is primarily responsible for all these nefarious transactions, perhaps more responsible than any of his colleagues. This man, who has not the manhood to stand up here and answer these charges, and who, when brought face to face with the untrue statements made by him, and made advisedly and deliberately—

Mr. SPEAKER: The hon. gentleman is certainly going too far. It is out of order to say that an hon. member of this House deliberately made an untrue statement.

Mr. CARVELL: I gladly withdraw that expression. It was this man who told us that the prices of shells in Britain were greater than the prices in Canada, and I have proved that every word he said in that connection was not true in fact. This is the man who is not here to-day to answer these charges, but finds it necessary to go to Montreal to address some sort of a meeting before the board of trade, and then go south for his health. This is the hon. gentleman who will be consorting with J. Wesley Allison to-morrow morning in New York, and they will be consorting with a lot more of their ilk in the next few days, down in the balmy atmosphere of Florida. This hon. gentleman leaves it to somebody else to defend these transactions, and the man who attempts to do it has certainly got a thankless task. This J. Wesley Allison, who the Minister of Militia says has saved this country and the Allies $50,000,000 in the purchase of munitions, is the man who, along with Carnegie, a member of the Shell Committee—and I want to bring him in because he is just as responsible as Allison; he was in New York consorting with these gentlemen just as much as Allison was—these two gentlemen went to the United States, representing the Shell Committee, and made the nefarious transactions I have described with these American firms; firms who had never manufactured a fuse before, who never intended to manufacture a fuse, and who have never manufactured a fuse to this day. These firms sublet the contracts to other contracting firms, of which J. Wesley Allison is a member, at prices which will net millions and millions to them. And then they come back to the Canadian Parliament, and say: "You have no right to investigate transactions of this kind; you are disloyal; you are not good Canadians; if you ask to have these matters investigated and brought out in the light of day, you are not good Britishers."

Mr. Speaker, I repeat that if there is anything in the whole history of Canada which ought to have the light of day shed on it, it is the transactions of the Shell Committee with regard to fuses. I have not told one-half of the iniquity. My right hon. friend the leader of the Opposition gave the beginning of it in his address on Tuesday, when he said that before these contracts were consummated, or even entered into, the Shell Committee advanced to these American gentlemen over $3,000,000. This money was advanced before a blow was struck, and hon. gentlemen opposite say that it was necessary to advance this money in order to get the firms organized and doing business. They did not tell the Russell Motor Car Company of Toronto that they had advanced to these American firms $3,000,000, or nearly 15 per cent of the contract. I am told, however—I did not get this from Mr. Russell—that when the Canadian manufacturers found out that the Shell Committee had advanced this enormous sum to American manufacturers, they went to the Shell Committee and that committee was compelled to give them an advance in order to help to finance the work. The result is that the Canadian manufacturers are furnishing the fuses, exactly as per contract, for $3.50 each, whereas the American manufacturers, who have received over $3,000,000 of good British and Canadian money, have never furnished a fuse, but have simply sublet the contracts

to the friends and confreres of J. Wesley Allison, and I do not think, Sir, you would have to make half a dozen guesses in order to name his principal confrere.

Now, Sir, why could not fuses be made in Canada? A fuse consists simply of between twenty and twenty-five pieces of brass which have to be turned to certain shapes and certain sizes and which must measure up to a certain gauge. Every watchmaker in Canada from the Atlantic to the Pacific, is in a position to do something toward manufacturing these fuses. Of these twenty to twenty-five different parts one is a little ball, another is a little pin, another a disc, another an oval, and so on, and they need not all be made in one factory. The Munitions Board, if they would mobilize the industries of this country, could have, not one factory, not twenty factories, but a hundred, yes, five hundred places in Canada where fuses could be made to-day, and in that way they would be able to give work to thousands and tens of thousands of Canadians who are idle at present and who would be glad to have an opportunity of earning a livelihood. The Minister of Militia is always speaking about the manufacturers. Why does he not do something with the manufacturers in regard to the making of fuses? Why does he not put tens of thousands of people in a position to earn their livelihood in an honest way, by doing something to aid this country in bringing this war to a successful issue? It is no wonder the Minister of Militia is not here this afternoon to reply to these statements.

I was also very much surprised at the attempt made by the right hon. Prime Minister to make the people of this country believe that my right hon. leader and myself and every other hon. gentleman on this side who have discussed this question, were having a fling at the manufacturers of Canada and were trying to prevent them from doing a legitimate business. I would like any hon. gentleman opposite to point his finger at one statement that I have made against the Canadian manufacturers making shells, fuses, clothing, and everything else which could possibly be used in the conduct of this war. I would like him to point his finger at one such statement made by any hon. member on this side of the House. We find fault to-day with the Shell Committee because of the prices which they have given to some of the manufacturers for making these various articles. I have commended them; I do now commend them for many things that they have done. I made the statement a month ago; I repeated it on Tuesday last; I repeat it now: that if the only company capable of doing this work consists of the Prime Minister, let them give the contract to the Prime Minister, let them give it to the man who can do the work quickest and best; let them give it to the company which can turn out the finished article in the shortest possible time.

I have made a list of some things for which I can commend the Shell Committee. By going over some notes that I have been able, with a good deal of difficulty, to prepare, I find that up to the month of January last when the minister made his speech on the Address—and it is as of that date I am now speaking—orders had been given for the manufacture of about 11,000,000 18-pr. shrapnel shells; that at that time there had been delivered to the Shell Committee about 5,750,000, and that the Shell Committee were able to find in Canada fifteen firms capable of doing pretty nearly three-quarters of that work and they did pretty nearly that amount. I find no fault with that because those were the people to whom the business should have been given. These are the names of these fifteen firms, with the number of shells ordered, the number delivered, and the highest prices paid:

Companies.	No. of shells ordered.	No. of shells delivered.	Highest price paid.
Canadian Allis Chalmers Co.	235,000	185,000	$3 75
Canadian Bridge Co.	655,000	141,000	3 80
Can. Car and Foundry Co.	235,000	134,000	5 15
Canadian Fairbanks Morse Co.	775,000	384,000	5 15
Canadian Ingersoll Rand Co.	752,000	400,000	5 15
Canadian Locomotive Co.	160,000	128,000	5 15
C.P.R. Co.	782,000	482,000	5 15
Canadian Westinghouse Co.	480,000	213,000	3 80
Chapman Bdge. Bldg. Co.	202,000	108,000	5 15
Dominion Bdge. Bldg. Co.	675,000	378,000	3 80
Goldie & McCullough.	367,000	187,000	5 15
Massey-Harris Co.	338,000	129,000	3 80
Montreal Locomotive Works	477,000	284,000	3 80
National Steel Car Company	430,000	336,000	3 80
Steel & Radiation Co.	272,000	116,000	3 80
	6,845,000	3,605,000	

I may say, however, that at about the same time the Massey-Harris Company got an order for 100,000 high explosive shells at the top-notch price of $5.70. In the total list there are 57 companies, and the total order for shells was 11,223,000

and the total deliveries were 5,750,000. In other words, these fifteen big companies that were properly equipped to do the business delivered 3,605,000 out of a total of 5,750,000, and the other forty-two companies delivered only about thirty-five per cent of the whole order. Why was it necessary to travel throughout Canada in order to bring in these mushroom companies for the manufacture of shells, when there were real, genuine, honest manufacturing concerns in Canada by the dozen that were willing and anxious to throw their plants open for the manufacture of shells and who did manufacture shells? In addition to the fifteen firms that I have mentioned, there is not an industrial centre in Canada where the committee could not have found firms who had the organization, the machinery, the plant, the money, and the workmen idle, and who would have been glad to have had an opportunity to manufacture these shells. The Shell Committee, however, allowed their political friends to organize mushroom companies from one end of Canada to the other, and these companies up to the present time have hardly commenced to scratch the surface of the business.

As my hon. friend from Calgary (Mr.R. B. Bennett) is going to follow me, I will give him an idea of how these orders were placed, simply to make these companies feel good, and for political reasons. Take for instance the 18-pr. high explosive shell, because the further one goes the worse the business gets. In the beginning, I must confess that the big companies were made use of to a greater extent than they were later on, and the only fault I have to find with those transactions to which I have referred is the question of price. When I am told it was necessary for the Canadian Pacific Railway, or the Canadian Westinghouse Company, or any other of these large concerns to get $5.15 for machining a shell, when they are glad to make them to-day for $1.35, and are hunting for orders at that price, I must say that the percentage of profit was far too great in the beginning. Of course, I know these companies will say: "Oh, but we had to take such terrible responsibility; we had to buy plant; the banks were timid and did not want to advance money; we had to experiment; we went into this thing with fear and trembling, and we did not know but that we were going to be ruined in the process." I described the process on a previous occasion, and I am not going into it again. Occasionally some of these gentlemen come to me—not the big ones, but the small fellows, the mushroom company men, the political friends who go into this thing for what there is in it regardless of whether they furnish a shell or a particle of ammunition or not. I had a very interesting conversation with one gentleman from Toronto. I do not know that I ought to give his name here, but if I did I am sure a smile would go around this House, especially on the faces of members of the Public Accounts Committee. I will only say that he was one of the boys, one of the good boys. He had in his vest pocket a friction tube, which is used for discharging guns up to the 15-pounder—guns above that calibre are discharged by a percussion primer in the base of the cartridge. This friction tube consists of a square block about two inches long, filled with some material like that on the outside of matchboxes. A piece of metal goes inside, with a surface like a file or rasp, and when you pull out the file it lights the match. There is a tube about an inch and a half long that goes down the breach of the gun into the powder; the fire goes down the hole, explodes the cordite, and the gun is fired. This gentleman told me what an awful time he had in working out this proposition. He said he had had his whole organization at it for three or four months. They had wrestled with it day and night, they had worked at it unceasingly, and finally they won out and were able to make the article. He said that when Mr. Thomas was here in the summer Mr. Thomas told him that he had sent representatives from the Woolwich arsenal to India to show them how to make friction tubes, that they had taken seven months, and had not done as well as Canada had done in three months. And Mr. Thomas, he said, patted him on the back and said: "Well done, Canada!" Why, if I had a piece of sheet brass as big as my hand, a hammar, a hack-saw, a file, and a soldering-pot I could make one myself in two hours. The thing does not go inside the gun and does not need to be made to the thousandth part of an inch. It is just a thing that you put into the hole, and hitch the lanyard string into the rasper file, so that when it is pulled it lights the match and the fire goes into the gun and explodes it. But this gentleman toiled and worked until he got an order for 200,000 of these friction tubes at twenty-eight cents each. That was worth working for. But I find on going over my notes that he is not the only one to make friction tubes, because

I see that about one million of them have been ordered. I merely give this illustration of what the manufacturers tell you of the horrible chances they took in trying to get ready to go into this business.

Dealing with the question of shrapnel, I have given the highest price, but not the lowest price, and my objection to this whole transaction was as to the prices paid. Let me tell you, they are manufacturing that same shrapnel at $1.35, and are not only willing to take the business but anxious to get it. At these prices, the present Munitions Board, I believe, could give contracts to manufacture shrapnel shells to the number of 50,000,000 in Canada at $1.35 if they were able to give the orders. And when I tell you that out of 5,500,000 shells delivered, the average cost up to a month ago was $3.50 each, you will have some idea of why we find fault and why we are asking for an investigation.

When you come to the 18-pounder, you find that the thing gets worse. This is just as easy to make as the other—I believe it is easier, for there is less machining about it and less nicety. The only difficulty is that they have to bore the hole in the middle, whereas in the case of the shrapnel the hole is forged beforehand. The highest price paid for these 18-pounders was $5.70. No big orders were given for these—this is where the political part of it comes in. The Dominion Bridge Company got an order for 600,000, and the Canadian Westinghouse Company an order for 400,000. Outside of these, no big orders were given until you come down to the political end of it. I am not going into a long dissertation upon these transactions, but will merely point out some things which will interest my hon. friend from Calgary (Mr. R. B. Bennett). I find that the Dominion Harvester Company, of Medicine Hat, were able to get an order for 10,000, and up to a month ago they had not delivered a single shell. The International Supply Company, of Medicine Hat, got an order for 10,000, and not a shell has been delivered. The Manitoba Bridge and Iron Works, of Winnipeg, got an order for 20,000, and not a shell has been delivered.

Mr. HANNA: What is the date of those orders?

Mr. CARVELL: I could not say exactly; it was during the summer of 1915. I am only giving these to show the political end of the transaction. The Manitoba Shell Company of St. Boniface, got an order for 10,000, and nothing has been delivered. The Medicine Hat Pump and Brake Company got an order for 10,000 and nothing delivered. The Transcona Shell Company of Winnipeg got one order for 250,000 and nothing delivered. It would be interesting if the Government would tell us who are the officials of this company. We know that the company is occupying the Transcona shops in St. Boniface. These shops were erected at public expense, and they were all prepared for the manufacture of shells, but the order came from Ottawa, and these gentlemen stepped in and took charge. We know that they got an order for 250,000 of these shells, and this, after the Minister of Railways (Mr. Cochrane), had promised Mr. D. A. Thomas that the Government would manufacture sheels in these shops and so bring the prices down to a minimum and show how cheaply they could be manufactured. The Vulcan Iron Works of Winnipeg got an order for 20,000, and not a shell delivered. The Western Shell Committee got an order for 300,000 and not a shell delivered. Then we come to British Columbia, and we find that the Vancouver Engineering Works got orders for 340,000, of which they have delivered about 39,000; the Victoria Machinery Depot of Victoria got an order for 220,000, and about 10,000 have been delivered; the Vulcan Iron Works of New Westminster, got orders for 150,000, and about 35,000 have been delivered. I wish to ask my serious friends opposite—I know many of them are serious—if they really believe that they were helping to fight the battles of the Empire by carrying on transactions of that kind. Yet hon. gentlemen opposite object to our discussing the conduct of this committee—the conduct of this Government, really; because, Sir, we know that members of this Government have interfered in the letting of these contracts. Make no mistake about that. We can pick out not only one member, but two, three, four; we can name them; we can tell you when they interfered, how they interfered, and what results followed. It is no wonder that they do not want an investigation. Up to the present time about 1,700,000 of these 18-pounder high-explosive shells have been delivered, of which the average cost has been $4.75. People are tumbling over themselves to-day to get contracts for the machining and assembling of these shells at $1.75; millions of orders have been given

by the present board at the rate of $1.75 and $1.85. I was told a few days ago—I cannot vouch for this, but I think most of the things that I have said have impressed hon. gentlemen opposite as being pretty nearly the truth—that contracts for the 18-pounders have been let at the rate of $1.45 each. But, Sir, let me emphasise the fact that the 1,700,000 shells, which have been delivered, have cost the Canadian Government an average price of $4.75 each. More than that, over one-quarter of all the contracts that were let—and they amount to $4,000,000 or a little over—were let by this committee at the highest price of $5.70 per shell. Is it any wonder that Lloyd George sent some one over here to investigate this matter and to see what was wrong?

When we come down to the 4.5-inch Howitzer quick-firing shells, we find even a worse condition of affairs; we find politics absolutely rampant. Here is where these gentlemen commence to get braver and apparently more brazen than at any time in the history of the whole transaction. Orders for 2,900,000 of these shells were given; only about 700,000 were delivered, and these have cost the country $6.25 each, merely for the machining. I find, according to the documents of the Minister of Militia's Department, that in the month of February, 1914, 200 of these shells were bought at 10s. 11d., or $2.46. Think of it; in the last year and a half the minister and his friends have bought about 700,000 of these shells at $6.25 each, and they have paid from $3 to $5 in addition for the forgings and the blanks. Is it any wonder that we show a little anxiety, perhaps a little heat, over this matter? When we are brought face to face with documents of this kind; when we see the horrible waste of public money that I have pointed out, is it any wonder that we demand an investigation to see whether this thing is all right or whether it is all wrong?

I think that nothing in my whole parliamentary experience ever created as deep an impression on my mind as did the conduct of the right hon. Prime Minister in this House on Tuesday last. He attempted to make the country believe that the Liberal party were asking for an investigation of this matter because they wanted to prevent the Canadian manufacturers from doing business. He played the petty, parish, political game of appealing to the manufacturers and to the labourers. It did not seem to concern him whether this Empire was going to win the war or not; the only thing in which he gloried was the fact that through the labours and influence of the Government, this Shell Committee had already been able to expend about $150,000,000 of the money of the people of Canada. They had orders for $380,000,000, and they hoped that before the end of the war that they would distribute $500,000,000 among the people. According to the right hon. gentleman's argument, it made no difference to him whether or not the shells were furnished in time to be of any use; all he cared about was that $500,000,000 should be circulated among the people of Canada, so that when the elections come round he and his friends can say: Behold the mighty works which we have done. "It is true," he will say, "that we have done nothing to help win the war; it is true that we have allowed this thing to go on while the Mother Country, France, Russia, and the other Allies were making the proper preparations. It is true," he will say, "that we did not care two straws whether we got the shells in time or not, but look at the money that we have left in Canada: look at the money that our friends have made in Canada." It was truly an ignoble spectacle for the leader of a great party to place himself in a position of that kind before this House and before this country.

4 p.m.

I have just a word to say to my hon. friend the Minister of Militia. I notice that he is absent this afternoon, but I suppose that somebody will represent him. I have charged that there were politics in this thing; I go behind no man's back to say so. I charged it six weeks ago; I charged it on Tuesday; I charge it now. When I asked the Minister of Militia what he had done regarding the Universal Tool Steel Company, he said, with characteristic impetuosity and absolute disregard of the facts: "'I never heard of that company in my life." I said, "Did you not? Look up the correspondence that you had with General Bertram regarding this company on February 18 last, and then tell me whether or not you know anything about this company." The hon. minister himself is not here, and, to show the House that I am not bluffing, I will read the letter I hope that the gentleman who is to follow me has been furnished with a copy of that document, so that he will know whether or not I am giving to the House and to the country the facts as they are. The letter is as follows:

February 18, 1915.

Col. Bertram,
Drummond Building,
Montreal, Que.

Universal Tool Steel Company, Toronto, were verbally given order for 200 000 shells. I am assured heavy financial liability incurred, upwards of $150,000. Financial arrangements cannot favourably be completed until definite written order is given. Please look fully into it and complete at earliest date.

Sam Hughes.

The president of the Universal Tool Steel Company is Sir Donald Mann, of the Canadian Northern Railway Company. I am not allowed—I do not know that I should want to do it if I were allowed—to express my opinion as to the memory or the belief of the Minister of Militia in this matter. But, Sir, we can all do this mentally. I think that if every member of the House should write on a piece of paper his private conclusion in regard to this matter, for once the opinions of hon. gentlemen of the House of Commons would be unanimous.

For fear my hon. friends may say that I am giving them an isolated occurrence, I will direct them to something else. I would advise the gentleman who will follow me to look up a letter written to General Bertram on February 21, 1915, in which he refers to Sir Donald Mann in connection with the Universal Tool Steel Company contract. If that is not sufficient I advise him to refer to a letter written to General Bertram on 16th March, 1915, with reference to the contract of Burgoyne, the grocery man in his own constituency who got a contract and sublet it to the manufacturer. I would advise him to refer to the correspondence regarding the Hepburn contract on the 29th May, 1915, and see how Barney appreciated what the minister had done for him. I would advise him to go a little further and refer to some letters regarding the F. R. Wilford & Company, in his own town, on 29th April, 1915. It is not necessary to go further. I have given my hon. friend sufficient light. I hope he will follow it up and see whether or not the Shell Committee, the Minister of Militia, and the Government have had nothing to do with the looking after of contracts, and whether the Shell Committee was entirely an independent body. While I am on this point, perhaps, I should explain that the contract referred to was a verbal contract for 200,000, which, when reduced to writing, was for only 100,000 high explosive shells.

Now, Sir, there is another matter which the people of this country are considering to some extent; another matter which the members of this House are considering, another matter which the Government of this country are considering and must consider pretty seriously. I have no brief to defend the War Munitions Board. I have never had the pleasure of meeting any member of that board; I think I would know one of them if I met him on the street, but as to the others, I would not know them from any other passers by. I have never spoken to a member of that Board in my lifetime; I have had no arrangement with them whatever. But I have tried during the last three or four months to follow the work of that board, and until I have some evidence of wrongdoing on their part I am going to give them the benefit of the doubt, and say they are all right. We know that since they came into office they have reduced the prices of shells enormously; they have reduced them to $1.65 for the high explosives, and to $1.35 for shrapnel. We know that they have given contracts for the big shells, and that they have reduced the prices far below the prices which obtained before they took office. I do not know exactly what they have done, but I am told they have cancelled a lot of those unconscionable contracts, and if they have done so, I give them credit. I realize that they are bound to a very great extent by the contracts of their predecessors. I realize that they are not now, and probably will not be for several months to come, in a position to do what they would like to do; therefore I withhold judgment. I know one thing which the people of this country are trembling over, and that is the question of whether the Government want to take away the work from the Imperial Munitions Board, and put it into the hands of a Minister of Munitions. I saw the advertisement of a big meeting held in the Massey Hall, Toronto, on Sunday last, to which the people were invited to listen to three Cabinet ministers, and among the ministers were: the Hon. Robert Rogers, Minister of Public Works; Hon. J. D. Reid, Minister of Customs, and Hon. A. E. Kemp, Minister of Munitions. Mr. Speaker, I do sincerely hope that the gentleman who wrote that advertisement was not sufficiently in the confidence of the Government to be able to speak by the book. We have had a sordid experience from a quasi-political committee, and the Lord preserve us from the real article in the form of a political Minister of Munitions in a Tory Government of Canada dealing out Tory patronage, as he would do. May we never live to see such a spectacle as that. No

matter how bad the Shell Committee may have been; no matter how bad the Minister of Militia may be, they could not be within one hundred per cent as bad as a Minister of Munitions looking after these things in the present Tory Government. May we be spared from that infamy, and may the British Empire be spared from that shame and disgrace. I have nothing more to say about that, except this: We do have a suspicion on this side of the House that the Minister of Militia is not going to Florida for his health, that he is not going to Europe in order to visit the firing line. We believe that he is going to Britain in order to induce the British Government, if possible, to disolve the Munitions Board and to give the Government the right to appoint one who shall be called the Minister of Munitions to carry out their nefarious schemes.

Some hon. MEMBERS: Oh, oh.

Mr. CARVELL: There is one other matter at least to which I desire to refer. If I was able to understand the arguments of the right hon. the Prime Minister on Tuesday; in the first place, he said there were no politics in the Shell Committee and I have disposed of that. In the second place, he argued that they had succeeded in distributing money among the manufacturers and labouring people of Canada, regardless of whether the war was being won or not, and that he would be satisfied so long as he got the money distributed and that I have also disposed of; in the third place, he said that the prices in Canada, with one exception, were cheaper than they were in Great Britain and in the United States at the beginning of the war. I do not think it is necessary for me to go into that. Surely even the most pessimistic of my hon. friends opposite are convinced, surely I have convinced every man from the dispatches and documents which I produced, that these statements are not according to the facts. Fourthly, if I understood my right hon. friend rightly, the reason given by him why an investigation should not be granted, was, in substance, that in the middle of the war, it was not the proper time to grant an investigation; that it is not, and that it had not been the custom in Great Britain to do so. To avoid being charged with misrepresenting the actual statements of the Prime Minister I will read his own words from Hansard of March 7, page 1589:

There is another matter which I would like to bring to the attention of the House and the attention of my right hon. friend. It was not during the Boer war, nor has it been during this war, the practice of the British Government to favour or to grant inquiries into such matters during the progress of the war. The subject came up during the Boer war. An inquiry was moved for in the British House of Commons. The question which arose and which had to be determined by the leaders on that occasion was not as to whether an inquiry should be held, because all agreed that an inquiry must be held, but as to whether or not that inquiry should be interjected into the middle of the war, or whether it should form part of a general inquiry into the conduct of the war to take place at its conclusion. This is what Mr. Balfour said on that subject.

Then he read a quotation from Mr. Balfour's speech. You will remember, Sir, that the Right Hon. A. J. Balfour, now First Lord of the Admiralty, was the leader of the Conservative or Unionist Government of that day. The Prime Minister further said:

Mr. Balfour answered that this would form part of the general inquiry to be held at the end of the war.

Sir Wilfrid Laurier: What date is that?

Sir Robert Borden: February 25, 1901. When the war was over and not before, they proceeded with a general inquiry into these matters.

These are the words of the Prime Minister. The Prime Minister also referred to the fact—I will not take the time to read it—that they had sought an investigation in the British House of Commons during the Crimean War and that that also had been refused. First, I am going to give the House the facts regarding what took place during the Crimean War and then I am going to give the facts regarding matters during the South African War.

Mr. BURNHAM: Supposing, which would be a large order, that these allegations were found to be true, and that this Government were turned out of office, would that be advisable at this crisis?

Mr. CARVELL: I know of no greater blessing that could befall Canada. There are evils and evils, Sir, but, in my judgment, the greatest evil that ever befell this country, or any portion of the British Empire, is the present Tory Government, which is mismanaging things during this war. First, I want to give my right hon. friend the Prime Minister a statement of what happened during the Crimean War of 1855 and then a statement of what happened during the Boer War. On Jan. 22, 1855, Mr. J. A. Roebuck, who, I think, was a Canadian, gave notice in the House of Commons that he would move for an inquiry into the state of the army in the

Crimea. In consequence of that notice, Lord John Russell resigned the next day, Jan. 23. On Jan. 27, Mr. Roebuck moved:

That a Select Committee be appointed to inquire into the condition of our army before Sebastopol, and into the conduct of those departments of the Government whose duty it has been to minister to the wants of that Army.

Though opposed by the Government, the motion carried by a majority of 157. The Aberdeen Ministry immediately resigned. Lord Palmerston formed a new Government with little change in its personnel. Speaking of the difficulty of getting witnesses to give evidence Mr. Roebuck said:

I feel corruption about me, but I cannot place my hand on it.

Mr. Roebuck did not make charges, he honestly admitted the difficulty of getting evidence, but he said: I feel corruption about me. Even with a statement of that kind Lord John Russell resigned, the British House of Commons voted for an inquiry two days afterwards and the Government was compelled to resign as well. The report of the committee was published in June, 1855. On July 17, 1855, Mr. Roebuck moved a separate resolution. This resolution, I see, was not granted, but the first resolution was granted, an investigation was held and the committee reported in June, 1855. Was not that an investigation during the war? Did not the Crimean War begin in 1854 and end in 1856, and did this not take place in 1855?

Coming down to South African War, in the early part of the session of 1900—the Government was harassed by questions, speeches, motions, etc., regarding the frauds of contractors and the connivance or incompetency of officials. Bad boots, bad hay, the cordite scandal, and other kindred topics were kept before the House and the country by the Opposition until one of its members succeeded, on Feb. 27th, 1900, in getting the House to pass an order for a return.

Showing (1) the names of contractors who have been struck off the Government list for misconduct in connection with the sending of stores for the use of Her Majesty's Field Force in South Africa; (2) the names of the officers no longer employed by the Government who passed defective stores for the use of Her Majesty's Field Force in South Africa.

Having admitted the wrong-doing, the Government was pressed to grant an inquiry, but it put off a reply on the ground that it was consulting with the law officers as to criminal prosecutions, etc.

The Opposition resumed their tactics, and on March 26, 1900, exacted from Mr. Balfour a promise that the Government would grant a Committee of Inquiry in connection with the army and navy contracts. Finally, on May 1, 1900, the House adopted the following motion:

That a Select Committee be appointed to consider and report upon any allegations of fraud and irregularity in connection with War Office contracts during the last twelve months; that the Committee have power to send for persons, papers, and records; that five be the quorum; that Colonel Denny, Mr. Elliot, Mr. Fairbank, Mr. Houston, Mr. Howell, Mr. Jackson, Mr. Herbert Lewis, Colonel Lockwood, Mr. Lloyd, Mr. McKenna, Mr. Patrick O'Brien, Mr. Paulton, Major Rasch, and Sir Robert Reid be members of the committee.

Mr. Balfour also agreed that the committee might extend its inquiry farther back than twelve months, if it desired to do so.

On August 1, 1900, the committee made its report. It was published as Sessional Paper No. 313 in Volume 9 of the Imperial Commons Papers of 1900. Any man can go to our library, get the document, read it for himself, and see that every statement I am making is borne out by the facts. Among other things, the report stated that it was undesirable that the negotiations for contracts should be conducted personally between members of Parliament and the departmental officials. I wonder what they would have said about the financial transactions of the Minister of Munitions. With these facts before me, I wonder if the hon. member for Calgary (Mr. Bennett) is going to argue that this Parliament ought not to grant an investigation. I wonder if the hon. member for Calgary will take the trouble to look into these matters and see if my citations are correct. I wonder if, with this staring him in the face, he will take the ground that there should not be an investigation because it has not been the practice in the Imperial Parliament. I do not believe that all the hon. gentlemen on the other side of the House want to put the lid on and to keep it there. I believe that the great majority of our Conservative friends would like to see the affairs of this country run honestly and uprightly; I believe that they would like to see this war won just as well as we would, and if they do they will only have to assert their independence, force the Government to obey public opinion, and see that this matter is given attention and that it is thoroughly investigated. Under the actual condition of affairs there can only be one possible

result of doing what was done in 1855, and that is that the Government will have to resign. Would that be an unmixed evil? Can you imagine any greater benefit that could be conferred upon the people of Canada under present conditions than that that should happen? Turn the light of day upon these transactions, and there can simply be one result, and that is the result which I have just referred to.

I have taken a little more time than I intended to, but I want for a moment to summarize very briefly the salient points of the situation as it stands to-day. My honoured leader has asked this House to grant a committee to investigate the conduct of the Shell Committee in carrying on the business transactions entrusted to it since the beginning of the war in 1914. The Prime Minister refuses that, because he says it is not in the interest of the public that these matters should be investigated during the war, and it is not following the precedent laid down in Great Britain during the Crimean War and the Boer War of 1899-1902. If you accept the truthfulness of the citations which I have just read, you will see that they absolutely shatter the last contention and common sense, decency and the ambition for honest Government in Canada absolutely shatter the former contention. Because something happened ten years ago, or fifty years ago, is not a good reason why, under another condition of affairs, we should not investigate things here to-day. Are we always to be tied to the apron-strings of somebody, have we no initiative, have we not the right to investigate our own affairs because in past days somebody has done something else? Surely the Conservative party can furnish some better argument than that, in order to show that there ought not to be an investigation into these transactions. Then, I promised you, Mr. Speaker, that I would try and give you some additional reasons why this committee should be granted.

I have now for something like three or four hours been labouring to show these reasons, and as I have watched the faces of hon. gentlemen opposite during that time I have seen that they are convinced that there ought to be an investigation. It is all very well for the Premier to turn his back on members of this House, and appeal to his followers to stand behind him and vote down this resolution, in order to keep the lid on, and keep the country in the dark. They may support him, but the people of this country want more than that, and they will get more than that the first time they have an opportunity of telling the Prime Minister so. The right. hon. gentleman has had a few reminders in the last few weeks; he had a reminder in the county of Peel a week or two ago, and, more recently, in the city of Vancouver, and less than a week ago, in the city of Victoria. But I am not going into that. I tell you, Mr. Speaker, the biggest thing before the people of Canada to-day, outside of the winning of this war, is the conduct of the Shell Committee, and the conduct of this Government in placing the Canadian soldiers in a position in which they cannot help in the winning of this war.

I have shown that the Shell Committee gave orders to themselves. The Bertram Company got business to the extent of $1,339,000 in manufacturing shrapnel shells at an average price of $3.50 each, when to-day manufacturers are tumbling over themselves to get contracts at $1.75. I have shown that the Shell Committee had given contracts to the Chapman Engine & Manufacturing Company (which is a subsidiary company of the Bertram Company), for machinery and assembling the ordinary 18-pounder shell, and one-third of these shells were to be supplied at $5.70, and the other two-thirds at $4; and those 18-pounder shells are being produced by the million to-day at $1.75 each. I have shown that the Shell Committee had given contracts for boxes to another subsidiary company, the Valley City Seating Company, amounting to $230,000 at prices away above and beyond the prices that are being paid for the same article to-day. I have shown that the Universal Tool Steel Company (the company of which the Minister of Militia had never heard in his life), had received contracts for $1,735,000; a company with which was connected Mr. Watts, a member of the Munitions Board. I want to say here that probably Mr. Watts had nothing like as much to do with these transactions as Bertram and Carnegie. However, he is a member of the Board. I have shown that this company got $850,000 worth of contracts for 18-pounder high explosives at an average price of $4.40, when to-day, the same article is being made for $1.75. I have shown that the Electric Steel and Metals Company, with which was connected Mr. Carnegie, another member of the board, had received contracts for $1,885,000 worth of business, at prices three and four times the prices that is being charged to-day for the same article. I have shown that the Nova Scotia Steel Company had received contracts for

something over $15,000,000 from the Shell Committee. I admitted that many of the articles this company was furnishing were things that they should have furnished, and were in a position to furnish, but I claimed that the prices were too great, and I gave two specific instances: one in the month of February, 1915, and the other in the month of May, 1915. Just here let me say that I am always glad to throw light upon a subject when I am able to. Since I discussed this matter before, I have learned that Mr. Cantley was in England at the time these contracts were let, and that he personally had nothing to do with the awarding of the contracts. They were given out by the committee, and it has been stated time and again that Bertram gave out the contracts himself. As I said, these contracts were given on the 15th of May, and the 15th of May seems to have been a regular clearing-house day for the old Shell Committee. On the 15th of May, 1915, Bertram and Sons got an order for 100,000 18-pounder shrapnels at $3.15, and 100,000 high explosives at $4. On the same day the Chapman Engine and Manufacturing Company, a subsidiary company of the Bertram Company, got a contract for 35,000 high explosives at $4 each. On the same 15th of May, the Universal Tool Steel Company got a contract for 20,000 18-pounder high explosives at $4. On the same 15th of May the Electric Steel and Metals Company got a contract for 35,000 18-pounder high explosives at $4. On the same 15th of May the Nova Scotia Steel Company got a contract for machining 50,000 4.5's at $6 each. In addition to that, I have shown that a company controlled and managed by a member of this Government sold to the Shell Committee over $300,000 worth of goods.

As to prices, I have shown that every statement made by the Minister of Militia, and the conclusions drawn therefrom by the Prime Minister, are entirely void of any foundation in fact. I have shown that the Minister of Militia claimed that when the war broke out the experts of the Department decided that $8.55 was a reasonable price for manufacturing 18-pounder shrapnels. The minister stated that that was cheaper than they could be bought for in England at that time; but I have proven by his own records, that a few months before he himself had bought 18-pounder shrapnels in England, not for $8.55, but for $3.15 each. I have shown where the minister stated that at the beginning of the war the 18-pounder shrapnel shell cost $10.33 in England and that in Canada it was purchased at a much lower price, when, as a matter of fact, the first shell produced in Canada cost $13.37. I have shown where he said that the 4.5 shell was purchased for $7.35, and the first price of the Canadian shell was $9.80, which, he said, was lower than the price in England. I have proved by his own documents that only a few months before the war broke out he bought those articles for $2.65 each.

In the face of such facts, in the face of the proofs that I have given, I ask my right hon. friend the Prime Minister if he does not now think that sufficient information has been given to make him change his mind. In the face of the fact that his Minister of Militia, the man who has been advising him, the man who, he says, is responsible for the whole transaction, the man who stands as father and godfather to the Shell Committee, the man who says he is proud of it, the man who gave us the incorrect figures, has not the hardihood to come here and answer these allegations and charges, does my right hon. friend not think there is sufficient justification now for him to change his mind, and grant this investigation, and let the people of Canada learn the truth in regard to these transactions? The conduct of the Shell Committee, the conduct of the Minister of Militia, the conduct of the Government of Canada during the last year and a half has shown that the question has not been whether or not we are going to play our part in winning this war, but how much political and business capital the Government can make out of it from one end of the country to the other. It has been a question of whether or not they can strengthen themselves here or there. It is known that, when a delegation from British Columbia came to Ottawa, they told the Prime Minister there would be the very dickens to pay in British Columbia if they did not get an order. They got the order; but it did not do any good politically, and it has not done any good from a military standpoint, because hardly a shell has been delivered.

The Prime Minister has defended these transactions; he has known of the condition of affairs in New Glasgow; he has permitted men, who sent condemned shells back the second time, to go on manufacturing shells. There is no protest from him against such an occurrence. I ask him again, in the face

of all this additional information, does he want to assist in this war or does he want to play the game of politics? Is he willing, at this date after the war has been in progress for a year and a half and not a solitary completed shell produced, to turn over a new leaf and try to do something better? What has he accomplished so far? He has not produced, in the whole year and a half since the war commenced, as much munitions as were used by the German army during the first four days' battle before the forts of Verdun, and not a single Canadian shell could have been used in any of the conflicts unless the British Government furnished the fuse, which is really the important part of the shell. When one considers these things in the broad light of day, one is driven to ask the question which I have just asked of the Premier, and it is up to the Premier and the Conservative party of Canada to answer the question, either in the affirmative or in the negative.

I am not in tne habit of reading newspaper clippings, and my right hon. friend severely castigated my right hon. leader for doing so, but even at the risk of a lecture from the gentleman who, I presume, will follow me, I am going to take the liberty of placing upon Hansard an editorial which appears in this morning's Citizen and which expresses the true condition of affairs much better than I can.

Mr. R. B. BENNETT: There is one in the Free Press to-night on my hon. friend.

Mr. CARVELL: This article in the Citizen is headed, "The Shell Profiteering," and goes on to say:

> By refusing an inquiry and defending the Canadian shell profiteering, the Government is lending itself to the internal enemies of the nation and the Empire. Nowhere in the history of Canada has there been a more disgraceful and unpatriotic orgy of greed and revolting indifference to human suffering than in this profiteering out of the nation's agony.
>
> Canadian soldiers, for lack of shells, were compelled to hold positions and be mangled and torn and maimed by Germany's artillery and poisonous clouds and flame projectors. While the brave men stood with only their rifles to reply to German terrorism; groups of shell profiteering interests safe at home were wading in the fat of war contracting, and Government shops were being kept in idleness lest they should cause the profiteering game to come to an end by increasing the output of shells and reducing the prices thereby.
>
> It is no defence to say, as the Dominion Government is trying to make out, that in some instances higher prices were paid in the United States or in Britain than in Canada. Some Canadian profiteering interests, with high-sounding patriotic names too, condemn themselves in their own stock boosting circulars. They boast of supplying shell work at a rate of $380,000 when it cost only $180,000, including all expenses, to produce. At such a rate, plainly, the British armies were getting only 100,000 shells where they might have been supplied with 200,000 . . . and still have left a fat surplus for profiteering interests.
>
> What if profiteering did take place in the United States and Britain too? Is Germany excused for the Lusitania crime, because evidence is produced to show that Austria or Turkey committed similar crimes in the Mediterranean? Furthermore there is this difference between the position of national leaders in Canada and in Britain. Profiteering has been roundly condemned by leading public men in Britain. What responsible Canadian public man has expressed himself as the chairman of the Steel Company of Scotland, and other men with ideas above the service of greed, have done? What Dominion minister has spoken out from the treasury bench, as Mr. Bonar Law did in the British Parliament, against the rapacity of the war contractors?
>
> What effort has the Federal Government of Canada made, as the Governments of the Motherland and the Commonwealth and states of Australia and other parts of the King's dominions are making, to apply the principle of national service to the munitions industry? Has the Dominion Government done anything but oppose national service in shell making lest it should interfere with private profiteering?
>
> This is its proud record. While Canada's men were bleeding on the fields of Flanders, Sir Robert Borden delivered a brave oration in London, saying what Canada would do: "The whole power of the nation must be consecrated to the task." Invited by the British authorities to begin consecrating the power of the nation by organizing the National Transcontinental railway shops for national service, the Dominion Government at first consented. Then after being publicly thanked in Montreal by Mr. Lloyd George's representative, Canada's Government failed to live up to its word. Instead of the whole power of the nation being consecrated to the task, the only national shop in use is one placed at the disposal of one more private profiteering group . . . so private that the country is not even told the names of the profiteers in possession at Transcona.
>
> So, the Dominion Government has chosen. Shell profiteering is to be defended and shielded by the responsible leaders in the Federal House of Commons. The whole power of the nation, and all its flowing oratory and sophistry is to be consecrated to the task of defending war loot. But does the Dominion Government truly represent the spirit of the Canadian people?

Sir, that is the question I ask. Does the attitude of the Canadian Government to-day truly represent the spirit of the Canadian people? If this thing was all right, why is the old Shell Committee not at work to-day? What sent Mr. Lloyd George's representative over here in the month of July, 1915, if the British Government were satisfied with the condition of affairs on that date? If this Shell Committee was acting honestly and uprightly and above board, and if this Government was doing its whole duty, do you suppose that Mr. Thomas would have been sent over here? When he came to Ottawa, did he not have-

a delicate mission to perform? Can you imagine a man handling a delicate subject with greater diplomacy than did Mr. Thomas? He had to say in effect to the Government of Canada: "The committee that you have appointed have fallen down; they have not been straight and honest with the Government; they have charged two prices for shells and everything else, and the British Government must kick them out. We want to do it as politely and decently as possible and with the greatest diplomacy." He remained here for three months, and before he went away they were kicked out. Now, what is the use of asking why they were kicked out? What is the use of the Prime Minister reading extracts from letters written to him by somebody whose name he does not give? What is the use of reading extracts from letters which Mr. Hichens wrote to him? Mr. Hichens is not the people of Canada; he does not pay a cent of taxes here, nor does he represent one Canadian voter. Would you expect a representative of the Imperial Government to come here to a government to whom they are looking for favours, whom they are asking to do their duty in carrying on this war to a successful conclusion, and say: "You are a gang of crooks and I am going to put these men out?" Men in high positions do not say such things. But these men were put out just the same. There is no use in trying to argue the thing away, no use in the Prime Mininster reading long extracts from documents, no use in sophistry. The facts are: Mr. Thomas came; Mr. Thomas saw; and the Shell Committee was conquered. That is all there was to it. And the new commission are now in their places, a commission that, I know, is doing infinitely better than the old committee did, a commission which, I hope, will continue to carry on the good work. All I have to say, in conclusion, is this: If the Government will not grant a commission, and will not allow the people of Canada to learn the inside facts of the transactions of this Shell Committee, this political organization of theirs, then, in the name of Heaven, let them keep their unholy hands off the present Imperial Munitions Board.

Mr. R. B. BENNETT (Calgary): Mr. Speaker, I rise with some diffidence to address the House at this time. I believe that the part of an ordinary member in this great crisis of our country is to assist by kindly suggestion those whose position places upon them the greatest responsibility that has ever fallen to the lot of statesmen in this Dominion. I cannot for a single moment believe that the discussion which has taken place can assist in any way towards winning the great war in which we are engaged. When I listened to the hon. member for Carleton (Mr. Carvell)—I say it frankly—I was tempted to reply in kind. But I conceive that I have a larger duty and a greater responsibility; and, although I may do it poorly, I hope to be able to discharge that responsibility in a somewhat different manner from that in which the hon. member has discharged what he believes to be his. I do not usually quote from newspapers, but I am content to leave it to the Ottawa Free Press of this evening to summarize the speech of the hon. member for Carleton. I do not think that any other language could more fitly describe it:

> The speech of Mr. Carvell was of the kind which in recent years have become a habit with him. "We are not making charges against the Government," he said, adding, "no one is saying, either, that any member of the Shell Committee stole anything." Yet, in the next breath, he made the amazing assertion that "the whole trend of the Prime Minister's speech had been that the prime object of the Shell Committee was the distribution of patronage," and that "the members of the Shell Committee had placed enormous orders with themselves at exorbitant prices, and to keep the prices up for themselves they had to give these same prices to all other companies which got contracts."
>
> Mr. Carvell has become a past master in the art of using half truths to make them appear as gospel; but this game, when long continued, grows tiresome, and achieves its own undoing. A comparison of the speeches of Sir Wilfrid Laurier and Mr. Carvell on the same day tempts one to remark that "fools step in where angels fear to tread." If indulgence in reckless and irresponsible condemnation of opponents is an essential to political partisanship, there are not wanting tens of thousands of Canadians, especially just now, who will pray to be freed from political partisanship. Liberalism as expounded by a Carvell in indeed a fearsome thing.

Mr. MACDONALD: Will the hon. gentleman read what the same editorial has to say about the Prime Minister?

Mr. BENNETT: I leave that delightful task to the hon. member for Pictou (Mr. Macdonald), who seems to have been able, since Tuesday evening, to induce his hon. friend from Carleton to believe that Mr. Thomas Cantley's hands at least are clean. For it will be noticed that while on Tuesday Mr. Thomas Cantley was worthy of condemnation for awarding orders to himself, to-day the hon. member has learned that Mr. Thomas Cantley was in England. I hope he has not overlooked that fact.

Mr. MACDONALD: The hon. gentleman need not avoid the question. I asked the hon. member if he would read from the same editorial what is said about the Prime Minister.

Mr. BENNETT: I am delighted to see such a manifestation of temper on the part of the hon. member; it is always amusing and sometimes interesting.

I leave the remarks of the hon. member for Carleton at that, except for one further observation. He has stated that it would be a good thing for Canada if the Government could be changed at this time. I do not believe that the Liberalism of the province in which I reside is represented by an observation such as that. The thousands of young Canadians who have left Alberta, Saskatchewan, and Manitoba to fight for this Empire at this time are not actuated by political motives, and not concerned about what party is in power, but they are infinitely concerned about the conduct of the war and the success of our arms on the plains of France and Flanders. It ill becomes any man to talk about a political truce with one breath, and to talk of the defeat of the Government with another. I do not believe that the genius of Liberalism is reflected by such arrant hypocrisy; I do not believe that such cant adequately expresses the mind of the Canadian people, or of Liberalism, or of the members of the Liberal party throughout Canada. But I do believe that, east, west, north, and south respectable, sober-minded Liberals, whose opinions are not voiced by the scavenging observations of the member for Carleton, believe that our first duty, our paramount duty, our prayerful duty, is to see that this war is carried to a successful conclusion. But when men prate and talk about political "truce" and "neutrality," and then give voice to observations and sentiments such as those expressed by the hon. member for Carleton, it is no wonder that you read editorials such as that in the Ottawa Free Press; it is no wonder that people are praying to be delivered from such hypocrisy and cant as characterizes the observations of that hon. gentleman.

I desire to direct the attention of the House for a few moments to the official attitude of the Liberal party as distinguished from what may be called its semi-official attitude as shown in the remarks of the hon. member for Carleton. I am not one of those who believe that it is impossible for Liberalism to share with us

the responsibilities and the burdens of this war. I have seen enough of the war to be impressed with it as the most serious and solemn thing that a man ever thought about. Nothing has ever made a like impression on my mind; nothing, I believe, will ever make such an impression on my mind.

On August 19 last, the right hon. leader of the Opposition, from his seat in this House, said:

> Speaking for those who sit around me, speaking for the wide constituencies which we represent in this House, I hasten to say that to all these measures we are prepared to give immediate assent. If in what has been done or in what remains to be done there may be anything which in our judgment should not be done or should be differently done, we raise no question, we take no exception, we offer no criticism, and we shall offer no criticism so long as there is danger at the front.

Sir, since this debate commenced, at least 1,000 women have become widows; 10,000 children have become orphans, and before the fortresses of Verdun the greatest danger that has menaced the French Republic since the battle of the Marne, is now imminent. The danger at the front that the right hon. gentleman spoke of is still with us. I ask him, as a great patriot, as one with wide knowledge of our constitution, and having behind him the longest political history of any man who sits in this House, once more to assert that wholesome doctrine, that great truth which he upheld when on August 19, 1914, he made those observations.

I go further. When in December of that year the right hon. gentleman spoke before the Montreal Reform Club, he used these words:

> As soon as war was declared we thought it was part of the duty we owed, not only to our policy, but also to our country, to lay down, for the time being, all party discussions, and to give our whole thought and energy to the new problems which were brought by the war, and not in any way embarass the Government, but on the contrary to facilitate its duty which this new situation created for the Government.

Noble language, lofty sentiments, high ideals of great responsibilities and of splendid patriotism. But how are they being carried out this day by the party that sits opposite? In view of the fact that thousands of men are laying down their lives to-day for the cause of liberty, I ask whether or not hon. gentlemen opposite are endeavouring to embarrass the hands of this Government by the "piffle" they are talking—no other word adequately describes the language of hon. gentlemen opposite.

The right hon. leader of the Opposition, speaking before the Ontario Federation of Liberal Clubs on May 21st last, said:

> Let the Prime Minister and his colleagues say that there shall be no election as long as the war shall go on, and I will pledge myself and the party, that we shall stop all preparations and think of nothing but the war.

An hon. MEMBER: Hear, hear.

Mr. BENNETT: The hon. gentleman says, "Hear, hear," while from the basement of this building tons of political literature are to-day being sent throughout Canada by the Liberal party organization. Already this session 4,000 columns of Hansard have been filled with the bitterest attacks that have been levelled against any Administration since Confederation; the most virulent and violent attacks that, I think, you will find in the pages of any Hansard. Night after night, day after day; in the Address in reply to the speech from the Throne, in the Budget; attack after attack against the Government, the whole forces of Liberalism, with many noteworthy exceptions, have been hurled against this Administration. Then this party ammunition is being sent out to the electors, and for what purpose? It is designed to endeavour to solidify plastic public opinion against this Administration, while the Administration, all through the day, all through the long watches of night, is endeavouring to fight the Huns. While we are being fought from within, the foe is still without. While this Administration is night and day striving to meet the great difficulties that have arisen by reason of this war; while men are assuming responsibilities as large as ever fell to the lot of men, hon. gentlemen opposite are sending out literature, charging, by half-truths and idle insinuations, that the trusted servants of the people are derelict to their trust and guilty of the highest crimes and misdemeanors. Is that a party truce? Is that the kind of truce of which hon. gentlemen opposite speak? Is that the kind of assistance that the right hon. leader of the Opposition purposes to give to the Government of the day? Is that the method he would employ to avoid embarassing the Government? Is that what high-minded statecraft and noble patriotism inspires in any man? I leave the problem with the people of this great Dominion. I believe that at this time the people are not interested in the differences between Conservatives and Liberals. Speaking for the community in which I reside, and the province in which I make my home, I say that men whether they be Liberals or Conservatives have forgotten the signs and nomenclature of partyism. I wish I could visualize to this House the situation as I see it. No language that I can use would picture the gravity of the situation as it appears to me; no words by which I am capable of giving expression to the thought that is in my mind could for one moment present the picture as I see it. We idly discuss fiscal questions, while the real problem is whether it will be in our power when the war is over to determine what our fiscal policy shall be. We talk of woman's franchise; how do we know that the Parliament that sits here will be the Parliament of a British people? We waste our time in dealing with questions upon the Order Paper, resolutions here and there, asking something to embarrass an individual or a minister while, Sir, these ministers may not be the ministers of the Crown of Britain to-morrow.

Mr. PUGSLEY: Have no fear on that point.

Mr. BENNETT: I have no fear of the ultimate end of this great war, but I am concerned as I have never been concerned about anything in my life as to what may happen before that great end is achieved. What is going on in France to-

5 p.m. day? A few months ago I saw Paris in black, as I had never seen black before. I saw the women of France working in the fields tilling the soil, while their fathers, their sons, and their husbands were doing battle in the trenches. I saw 5,000 French horse, foot and artillery march by, going to face death. I saw 4,000 of the very best of my fellow-Canadians salute the Prime Minister of Canada as they went by in the dusk to the trenches. And when I think of the multiplication of the loss to the state of the men that are dying, of the blood that is being spilled, of the economic waste that is going on; when I see the best men of the Empire being drained from it; when I see the population of the province in which I live being lessened day after day by the departure of men who are so willingly, so gladly, so nobly, so patriotically giving their services for the cause of freedom, I ask myself: where will it end? Sir, we may win a great war, and we may lose an Empire. The discussions the dissensions, the talk such as went on to-day from the hon. member for Carleton (Mr. Carvell)—are the things that bring about that very end. He talked to-day in

this House about the war that we were asked to go into, or coaxed to go into. Sir, this is as much a war of the Canadian people as it is of those who live in the city of London or in the city of Paris.

Mr. CARVELL: I made no statement that we were asked or coaxed to go into this war. My hon. friend certainly misunderstood me, because I made no such statement; I think he ought to withdraw the remark.

Mr. BENNETT: If the hon. gentleman did not say it, Hansard will properly indicate what he did say. My understanding of it was that he said we were asked to go into this war.

Mr. CARVELL: I never said such a thing.

Mr. BENNETT: If I thought that I had done my hon. friend an injustice, I should certainly not hesitate to withdraw the remark.

Mr. CARVELL: I made no such statement; on the contrary, I said that it was our duty to go into this war, and to help win it.

Mr. BENNETT: And it is. I should like to make it clear that according to my conception of the situation, there are three lines of defence for Canada. The first line of defence lies out yonder at Verdun; the second line of defence is with the reserves at Shorncliffe and Bramshott; the third line of defence is the reserves in the training camps throughout this Dominion. And just as surely as the freedom and liberty of the men of France and Belgium are at stake, it is my profound conviction that my liberty and my freedom, the institutions under which I live, and the civilization that has been created by the races to which we belong are at issue right here in Canada. When I speak of the noble sentiments of my right hon. friend (Sir Wilfrid Laurier), I know it was not easy for him, or for those who support him, to express those views. It is not easy for a man holding different views from the Government, having intense political convictions in a democracy such as this, to readily give utterance to those noble sentiments, for they were noble sentiments; they breathed the spirit of the purest patriotism; they are the very noblest and highest sentiments that man can hold. I repeat: it was not easy. During the long years in which he has done so much to shape the public thought and opinion of this Dominion, from his youth up, my right hon friend has held a political philosophy that looked, ultimately perhaps to that theory of the great French philosopher who saw in this Dominion a land of new republics or independent states. It was a view that men might properly hold, and yet, with the first blast of war, so spontaneous and general was the response of a great people to the cry of the Empire, to the sob of the mother overseas, that my right hon. friend recast for himself, and for those who sit about him, his political creed and political faith, and declared, as I expected, and, in fact, knew he would: that it was the duty of all men who called themselves Canadians to associate themselves at such a time with the Government, and to do their part in preserving our civilization. It was not easy, I say, to discharge the duty which in such a magnificent manner he discharged for himself and his party.

Let us go a step further, and see what we have now. I cannot possibly think for a single moment that the speech of the hon. member (Mr. Carvell) reflects the opinion or the spirit of the right hon. gentleman (Sir Wilfrid Laurier). By his long and patriotic history, by his long and noble career, I do in all seriousness appeal to the right hon. gentleman to say again in this House that he is content—for the reasons which have been urged upon him so strongly by the Prime Minister in no acriminious or partisan spirit—to say what he would have done in this crisis had he been Prime Minister. I feel absolutely certain that he would say to this House, as he said when the comparatively trifling war in South Africa was on: we can wait a bit for the consideration of comparatively petty things. He would use more graceful language, but that the substance of it would be: we can wait a bit, there is surely no hurry to hold up to shame and execration the names of our fellow Canadians who are suspected by political antagonists of doing wrong. I trust he is not one of those who rejoice in the vilification of his fellows and in the slander of Canadians; I trust that that is reserved for the hon. gentleman from Carleton (Mr. Carvell). Sir, I believe the right hon. gentleman had he been Prime Minister, would have said that when this war is over, great problems must arise for solution; that there must be inquiry into the whole conduct of the war, whether it affects the Australians in Gallipoli, the Canadians at Ypres, the British at Mons,

or the French on the Marne; that there must be by all the Governments, who are taking part in this war, official inquiry that will take cognizance of every action, of the general conduct of affairs, whether in the field or in the office, whether in regard to administrative or to operative affairs. I believe he would say that with the end of the war must come great constitutional changes, a new status for Canadians, for Australians, for New Zealanders, equality of citizenship under the flag, great social and economic problems to engage the best attention of the best minds of this Empire. I feel that that is what my right hon. friend would have said, and gladly said, if he were Prime Minister to-day, and I am certain it is what his followers should join with him in saying: Wait until this war is over, and then we will take stock of all the charges made against individuals and companies, and we will punish them as they deserve.

There has never been a war since the earliest days, in which there were not men who took advantage of their country's necessities to improve their own opportunities. It has been so in the past, and it will always be so. I recall that in the reign of Queen Anne one of the great commanders in chief of the British forces was not beyond doing business for himself at the expense of the public. The military genius of that man made him one of the great men of history, and yet he took advantage of his country's necessities to promote his own financial advancement. It has always been so, and I suppose it will continue to be so. What I suggest is, that had my right hon. friend (Sir Wilfrid Laurier) been leading this House, he would have said: I do not propose at this juncture to enter into inquiries, but I will leave them, quoting the words of Mr. Asquith and Mr. Balfour in the Boer war: until the war is substantially over, until by the proper perspective we can understand the situation, punish where crimes have been committed, and give reward and praise where men have nobly discharged their duties. And, I say, that there are in this Dominion to-day poor men and women who have not been sparing in their activities, and who have honourably discharged duties to the state, without receiving recognition or reward. Think of what men and women have done, think of what mothers have done in giving their sons freely, of what fathers have done, pinching and paring in order to give to the Patriotic and Red Cross funds. We will take more stock of all these things after the war is over. I am not defending the Shell Committee, I am not attacking it; but I am going to make the argument that this is not the opportune time to have an inquiry of this character, and I am going to give reasons, in the light of the experience which I gained the last time I was across the Atlantic. I shall conclusively show to this House that at least one investigation that has been carried on since the war began did not good to the Canadian people, but on the contrary did them incalculable injury.

Some hon. gentlemen opposite speak of ministers of the Crown as though they lived on a bed of roses. Does any man, for a single moment, think that the duties and responsibilities that have devolved upon the Prime Minister since the war began are lightly to be undertaken or easily to be discharged? I have had many differences with the Minister of Militia, but I do say that no man has more energetically or tirelessly discharged the duties of his office than General Sir Sam Hughes. He has been attacked by men who may have had some reason for their attack, but I say, whatever may have been his faults, that he at least has been a dynamo of human energy, and he has been able, by reason of his great and tireless energy, to accomplish that which men of calmer minds, of more equable temperament and less energy, might have failed to accomplish. I state that publicly in this House, because I think it is fairly due to him.

Does this House forget what took place last year? Does this House remember that my right hon. friend the Prime Minister, in the midst of the war, discharged what I believe was the most painful duty that ever fell to the lot of a Prime Minister in Canada? Name me an occasion during fifteen years of piping times of peace when any such duty was discharged by the predecessor of Sir Robert Borden in the office of Prime Minister. Be it an Arctic expedition, a Yukon scandal, a failure to give Parliament the names of the shareholders of the North Atlantic Trading Company, stolen ballots enabling a man to sit in this House who had no right to sit here, or timber scandals, was any punishment ever meted out to those who were guilty? Yet, in the midst of this war, the Prime Minister performed the most painful duty that, in my judgment, ever fell to the lot of a Prime Minister of Canada. And he did it because it was in

keeping with what he thought it was right to do, and it was in line with the principles expressed by him, that if it was suggested that a crime or fraud had been committed, it was his duty to see that this crime was exposed and punishment meted out. If there is one thing more than another, which places the Prime Minister high in the estimation of this House and of the country, it is the part my right hon. friend took, when, regardless of feeling, of sentiment, of all those ties that bind party leaders to their followers, he stood out as the great Canadian that he is, and declared that there would be no graft or corruption within his party during this war. If, there is one thing more than another which will always be a matter of pride to me, it is not the noble achivements of our Canadians upon the field of battle—I knew they would acquit themselves well—but the fact that at this time we have at the head of the Government a man of sufficient moral character and force to stand in his place and repudiate two of his followers, a thing that has never been done before in the Canadian Parliament. I commend the Prime Minister's high conception of duty, as being worthy to rank alongside the achievements of our brave Canadians on the battlefield.

Mr. PROULX: Does the hon. gentleman not think that it might be possible that he sacrificed his followers in order to save the head of the Government?

Mr. BENNETT: The hon. gentleman suggests that possibly the high-minded action of the Prime Minister was taken for the purpose of saving himself, but I have not seen any evidence of cowardice upon the part of the Prime Minister in dealing with questions of this kind. Possibly the hon. gentleman had in mind an episode that happened in his own county of Prescott, and possibly he thought that Mr. Rowell did something of a like kind for the purpose of saving his own head.

May I now point out that as Canadians we have taken part in this war voluntarily and gladly. I am not here to-day to speak of the part that our noble Canadians have taken upon the battlefield. Some of them will unfortunately return no more, but their memories will be blessed down through the years, and their example will lead men to nobler thoughts and higher ideals of public service and public life. I heard it from the lips of the great Commander in Chief of the French Forces, I heard it from every one who was present to judge, that Canada had saved the day in that great battle that took place nearly a year ago, nor is there question as to the noble achievements of our fellow British subjects from Australia. Gallipoli will live as long as history is written and read. What was done by the Guards division will ever live in the traditions of the British service as the embodiment of all that is glorious. We Canadians are sharers in that glory; we are participants in these great achievements.

But, Sir, there is another ground upon which I should like to consider the position of Canadians. What has been our attitude in relation to finance, internal development, and the conduct of the war from the standpoint of administration? Have we less cause to be proud in the one case than in the other? We raised a great internal loan, twice what was asked; and we are now financing the operations of the British Government and stabilizing and adjusting exchange. We have been enabled by an appropriate campaign in reference to production, to ensure the largest crop that has ever been reaped by the tillers of the soil; we have been able to keep our people fairly employed, but more, we have been enabled to show an adaptability, and a skill in invention and achievement, which have challenged the admiration of our Allies, and I doubt not of the enemy as well. I should like this House to understand the greatness of these achievements. I did not realize how great they were until I heard men, who were competent to express an opinion, pay tribute to Canada. It is not a question of munitions alone. It is a question of wheat, of coal, of flour, of barley, of oats, of hay—it is the great question of the production of all those things that make possible the successful carrying on of the war. This House little realizes that after the war broke out the British Government was confronted with a startling shortage of munitions. Our heavy artillery, even obsolete artillery, rifles, even obsolete rifles, were sent across the Atlantic with all speed and haste. Then what followed? England said to Canada: Can you get us 200,000 shells, 100,000 18-pounders and 100,000 15-pounders. They were told we could do it. They said: Get them for us, get them in the United States, get them somewhere, we do not know where you will get them. Then, that spirit of enterprise, that spirit of pride, that spirit of patriotism that manifests itself equally in achievements in times of peace as in war, asserted itself and the Canadian people

said: we will not only produce you 200,000 18-pounder and 15-pounder shells, but we will undertake to produce ammunition on a large scale to enable this war to be carried on with munitions produced within our own Empire. This was the idea of Major General Sir Sam Hughes. You may condemn him; you may not agree with him, but when the authorities in Great Britain realized that they were confronted with a practical difficulty, he rose to the occasion and he said: We will not get this ammunition outside of this country, we will get it right in this Dominion, and you will get not only what you want but so much more that you will be surprised. In December last I was in England and I made it my business to get information at first hand both from Ministers of the Crown and from the head of the High Explosives Committee a gentleman who, as all the members of my profession know, left his place in the Privy Council, and at the direct invitation of the Prime Minister of Great Britain gave his attention, as the supreme authority upon chemistry to the production of high explosives. I refer to Lord Moulton. I was told that Canada had so far exceeded the expectations of the British people as to cause them to wonder whether or not we really made these munitions in Canada. I was proud then of being a Canadian, I was proud of our achievements industrially as I had been proud of the part that Canadians had taken upon the field of battle. Let us view calmly, and not as bitter partisans, what was done.

My right hon. friend the leader of the Opposition on Tuesday last read from the speech of Earl Curzon, Lord Privy Seal, as to what our position was in the matter. I shall not trouble the House by reading it but I shall summarize what he said. He said: "We made the Canadian Government our agents to name a committee to buy munitions; we asked the Canadian Government to name a committee to buy munitions for us; the Canadian Government acceded to the request and gave the British Government certain names."

Did it ever occur to this House that the Hudson Bay Company is the purchasing agent in Canada for the French republic, and that since the war began the Canadian Pacific has purchased no inconsiderable quantity of supplies for the British Government? The Hudson Bay Company has also made considerable purchases for the Russian Government, and, to a more limited extent, for the Italian Government. I do not know, but I doubt not that before the Hudson Bay Company was named, inquiry was made of this Government through the Embassy in London as to whether the Hudson Bay Company was a reputable firm, and that the answer was given in the affirmative. In the case of the Shell Committee the British Government—not knowing Canadians and being unable to tell whether Mr. So and So would be able to do such and such a thing—said to the Canadian Government: "Give us the names of a committee that will serve for this purpose." The leader of the Government, with his Minister of Militia and the Cabinet, said: "We know six, or seven, or ten men of great repute and experience who will admirably suit your purpose." And they named General Bertram, Mr. Carnegie, Mr. Watts, Mr. Cantley—and will the hon. member for Pictou say that his appointment was not a wise one—and other gentlemen; it is not necessary for me to go over the whole list. The British Government said: "We assume that, when you put your imprimatur upon these men, they are fit for the purpose." And so the business was conducted by these gentlemen, in the manner that has been described. Now, that is exactly what happened with reference to the French republic, only that they named the Hudson Bay Company.

Mr. PUGSLEY: Does my hon. friend suggest that the members of the Shell Committee became the appointees of the British Government?

Mr. BENNETT: Absolutely.

Mr. PUGSLEY: When they were called on to resign then, why did they resign to the Minister of Militia and not to the British Government?

Mr. BENNETT: The reason is easily given, and Mr. Hichens gave the reason in his letter. The Minister of Militia was the person responsible in the first instance for the appointment of these gentlemen, and naturally they turned in their resignations to the same source. In other words, the Minister of Militia said to General Bertram: "I have named you, and you now become an official of the British Government." The cable that the hon. member for Carleton read distinctly and positively indicates that the committee was acting for the British Government. I may as well read it again. It is found on page 1598 of Hansard:

Reference your cipher September 17 Committee reports price of 100,000 shrapnel 18-pr.

as per your cablegrams and specifications will be $8.55 each delivered at Montreal, 200,000 by November 1, and at least 30,000 monthly thereafter. Usual inspection charges. Shall we proceed? If so, please arrange line of credit through Canadian High Commissioner and in favour of Deputy Minister of Militia and Defence, Canada. Specifications 15-pr. just to hand. Price later. Please answer. Committee wait.

The credit itself was an Imperial credit, absolutely. The money was the money of Britain, not of Canada. It was arranged through the High Commissioner and transferred in a proper manner, I assume, not to the credit of this Government, but to that person who was persona designata for the purpose of handling the money, namely, the Deputy Minister of Militia. That is the transaction, and I think we should be proud of everything up to that point.

When my hon. friend from Carleton (Mr. Carvell) points out that small orders were given, he is pointing to what was a fact. I interested myself in connection with Western Canada, and I am going to say more about that later on. Mr. David Carnegie travelled to Victoria and back, and investigated most of the machine shops. I myself urged him to give small orders. I met him and his committee together, and pointed out that at Medicine Hat—which I do not represent—there were four very good machine shops which could be utilized for making shells; that there were two small factories in Calgary, and two in Edmonton, that could be used for the same purpose. Mr. Carnegie awarded small orders to each of them. Why? Because he said that these communities had done nobly in the war; they had sent their best sons to the front, and those who were too old to serve on the field should be given an opportunity to help the Empire by making shot and shell to kill the enemy. And so, in Medicine Hat, and in Calgary, and in Edmonton on a smaller scale, and in Vancouver, and in Victoria, men were working during the winter making shells. I leave it to the sense of this House and of the country to say whether it was not just and right that every factory, however small, should be utilized in making munitions, in order that those who were too old to serve in the trenches, but who were skilled mechanics and machinists, could still do their bit for the cause of the Empire.

It ill becomes the hon. gentleman from Carleton (Mr. Carvell) to say that the great manufacturers and the so-called trusts are the only people to whom orders should be given, and it still more ill becomes him while the representatives of the British Government may be satisfied to award those orders to the small Canadian shops, to be so unpatriotic a Canadian as to condemn their action. My hon. friend has said that these orders were given to favourites and even to members of the Shell Committee themselves. I am not going to traverse those statements, I have not the slightest interest in the world in them beyond what I read in the newspapers and why? The hon. gentleman from St. John (Mr. Pugsley) knows why; every hon. gentleman knows why. He knows it is of supreme importance to get something to fight the enemy with, and not ourselves. Does the hon. gentleman from St. John regret that orders were given to the town of St. John? Does the hon. gentleman who represents Medicine Hat (Mr. Buchanan) regret that a few orders were placed there? I am sure that my hon. friend from Red Deer (Mr. Michael Clark) does not regret what Mr. Carnegie said as to what could be done in Red Deer, and my hon. friend from Edmonton (Mr. Oliver), I am sure, will agree with me that he has no regret that a couple of orders were placed in his city, even if only for 10,000 shells each. Not being concerned then as to whether the Shell Committee gave orders to their uncles, their cousins, and their aunts—for I really am not interested, and I do not think this country is interested—

Mr. PUGSLEY: Even at treble prices?

Mr. BENNETT: I will come to the prices presently. This country, if I understand a little of its spirit, takes more interest in the war than as to whether General Bertram gave an order to his brother's cousin's aunt. My hon. friend speaks about the Canadian General Electric and the Allis Chalmers Company, in order to becloud the issue and to throw us off the track. The Canadian General Electric had all the work they could do, and the Allis Chalmers is owned by the Canadian General Electric. If my hon. friend does not know that, he ought to. I have this on good authority. I do not know any reason why David Carnegie should tell me an untruth; his name is a good Scotch name—

Mr. BRODER: He might.

Mr. BENNETT: My hon. friend says he might tell an untruth even though he is

Scotch. He himself being Scotch is perhaps a better judge than I am as to that. All I can say is that I was informed by Mr. Carnegie in all seriousness—and I think he knew what he was talking about—that his sole purpose was to award contracts to every factory in Canada that could make munitions of war. I am not going to discuss the question as to whether or not he was logrolled into giving contracts where he should not; whether political pressure was brought to bear upon him, I do not know. I heard something the other day about the right hon. leader of the Opposition having introduced a friend of his to the Munitions Board—a very proper procedure—and I am very glad his friend got a contract. As a Canadian, I was very anxious that every Canadian who could work, but not serve, should be given an opportunity to make munitions of war and thus do his little bit. Mr. Carnegie, having awarded a certain number of orders, returned to England. Does this House realise that he left this country for the express purpose of getting definite instructions from the War Office? He went to England I think in the early part of December, 1914, and remained there until I think the early part of January, 1915. In my private opinion, Mr. Carnegie, as a stranger to this country and to the way in which business is carried on here, may have done things that I probably would not have done.

Mr. PUGSLEY: What were they?

Mr. BENNETT: Those things in which the hon. gentleman is a past master in; Mr. Carnegie did not take advice from any one and relied upon himself to the exclusion of those who knew better. That is all.

Mr. PUGSLEY: There is not much harm in that. I want to know what those mistakes were.

Mr. BENNETT: I want to discuss that if I am not trespassing too much upon the time of the House. I know, at first hand, that the British Government and the British War Office did not believe what Mr. Carnegie told them as to the capacity of Canada. They could not realize what we were able to do in Canada, and when Mr. Carnegie spoke of the manufacture of shells in a country like Canada, with 7,000,000 people scattered over a wide area, they thought it nonsense to suppose that we could make shells. Mr. Carnegie said to them: "I have travelled from one end of Canada to the other, and I have seen their factories and they can manufacture shells." That statement impressed them, and finally they said to him: "Go back to Canada and see what you can get out of that country in the shape of munitions." He came back to Canada and orders were let for large quantities of shells: 100,000 in one place, 200,000 in another, and so on.

I should like to discuss what I conceive to be an all important question: it is that it is not an easy matter to make shells. I am not a machinist, nor a mechanic, like the hon. gentleman from Carleton. Neither am I a tinsmith.

Mr. CARVELL: I think that is true.

Mr. BENNETT: I do not claim to be as was John Bunyan, a travelling tinker. My hon. friend spoke about what he could do with a soldering iron and pot. I thought he could do much better at that than as a member of Parliament, and when he said that if he were given the brass he would be able to do the work of a tinsmith I was perfectly conscious of the fact that he was taking stock of the only asset he possesses.

Mr. CARVELL: That is very strong language.

Mr. BENNETT: It is not an easy matter to manufacture shells, notwithstanding what my hon. friend says. If it does not give any offence to my hon. friend I really prefer to take the judgment of those mechanics and machinists with whom I have discussed this matter to that of my hon. friend, the barrister member from Carleton. I am told that, first of all, excepting in a very few cases, it was necessary to install special machinery, and that machinery my hon. friend said was manufactured by the Bertrams.

Mr. CARVELL: I did not say so.

Mr. BENNETT: Well, I think some hon. member said so.

Mr. CARVELL: I did not say so.

Mr. BENNETT: Then it was the one thing my hon. friend did not say; he must have overlooked it.

Mr. CARVELL: My hon. friend will pardon me. I had no evidence of it, and therefore I did not make the statement.

Mr. BENNETT: If lack of evidence is the only reason why the hon. gentleman did not make the remark, then he need not have inflicted this House with a speech lasting four hours.

Mr. CARVELL: Give me a committee and I will produce my evidence.

Mr. BENNETT: The hon. member is always very bold about committees that he knows he is not going to get. The committee he is going to get he is never quite so bold about—a certain committee on hay was never a favourite of his. The first requisite was machinery, and the difficulty in getting machinery was very great. I would ask hon. members who have knowledge of the matter—and there are some on both sides of the House—if it was not a known fact that we exhausted every method to get machinery in Canada, and eventually United States manufacturers were called upon to produce it. But unfortunately, or fortunately, the factories of the United States were engaged in producing machinery to enable the large munition firms there to supply the demands of the Allies. Mr. Schwab of the Bethlehem Steel Company, with all the power that money could command, with the greatest organization for these purposes probably that the world has ever seen, was unable to accomplish what he had in mind for months and months beyond the time he himself had fixed. And I say authoritatively, and from first-hand source, that promises were made for the production of heavy artillery, shrapnel shells, high explosives, 9-inch shells, and other munitions of war, promises which those who made them, even with the most earnest, vigorous and persistent efforts were not able to fulfil, and this even in the case of the largest companies and the greatest organizations in the United States. In Canada, with a population of between seven and eight millions of people, inhabiting a great area and confronted with the difficulty of getting machinery by importation, delays were inevitable.

I say frankly that one of the things I fear about this war. is that delay in the delivery of munitions to Russia from the United States may prolong the struggle for another season. There was delay in getting machinery, jigs, lathes, gauges. Now "gauge" is a very easy thing to say, and a gauge itself seems a very simple thing. It is something to adjust work upon shells to the thousandth part of an inch. Some people may say: It is silly to talk of the thousandth part of an inch, but unless you adjust your machinery so as to machine the shell down to the thousandth part of an inch, you run the chance of destroying your gun when the shell is fired; and so the British authorities have insisted upon this nicety of adjustment. Only yesterday a gentleman told me of the difficulties that had met him in endeavouring to get another set of gauges in Canada. He asked when these gauges would be delivered, and was told: we cannot deliver to you another set of gauges before April.

Mr. CARVELL: Why do not they make them in Canada?

Mr. BENNETT: These were being made in Canada. I do not wish to be understood as seeking to magnify the difficulties that confronted the Canadian manufacturer; but we must recognize the fact that this was new work, that it was undertaken by people unaccustomed to it, that it was a work requiring great skill in the final analysis, though upon the surface it looks simple. In spite of all this, we have great factories where three months ago there was nothing but vacant ground. In the city of Montreal, they have a factory that is declared by those most competent to judge —namely the British inspectors—to be the finest factory of the kind that they have ever seen. I only give you these facts as I receive them. I know that in one place where six months ago there was nothing but an old building, to-day they have a factory in which shell cases are turned out at the rate of one every two seconds. That is great work. In Western Canada, they installed the machinery to manufacture shells in Winnipeg, Calgary, Edmonton, Medicine Hat—in a small way—Vancouver and Victoria. A little brass factory in Medicine Hat was able to adapt its machinery so as to make the brass bands and base plates used in the production of shells. I submit with confidence that, if the judgment of the experts of the British Ordnance Department is to be regarded, if the word of the British experts of artillery is to be taken, if the opinion of American manufacturers is to be regarded as worthy of consideration, we in Canada have made more progress and done more work in the production of munitions than has any other country, barring the work of the ordnance departments of the Allies themselves. I take the facts as they are presented to me, together with the dispassionate opinions of men who have no prejudices and no object to serve in misrepresenting the facts. Why should we vilify our fellow-Canadians at this time?

Mr. PUGSLEY: Who is doing that? Nobody on this side is doing it.

Mr. BENNETT: I have a profound regard for the magnificent intellect of the hon. member for St. John. I know that

he has been accustomed to read for at least fifty-five years. If he will read the speech of the hon. member for Carleton, N.B., delivered here on January last, and also his speech delivered on Tuesday and to-day, and if he will then say that that is not a slander upon our fellow-Canadians, then I will be forced to say that he is unable to appreciate the use of the English language.

They tell us that the British Government was dissatisfied with the work of the Shell Committee. Mr. D. A. Thomas came to Canada clothed with all the power of Lloyd George himself. Lloyd George said: I constitute you, Mr. Thomas, my minister qua Canada. And Mr. Thomas came to Canada. He investigated, remaining here for three months. Mr. Thomas is a man of very large business experience; and head of the great Cambrian Coal Association of South Wales. He brought with him Mr. Carr, who is permanently associated with the Education Department in England, and another gentleman. For my part, I do not believe that Mr. D. A. Thomas deliberately wrote what he believed to be untrue. If I must make a choice, I prefer to take the statement of Mr. D. A. Thomas to that of Mr. Carvell, of Carleton. I prefer the statement, clear and straight, of the man who has recently been honoured by his Sovereign, and elevated to the peerage, to the statement of one who has been guilty —not according to what I say, but according to what his own organ says—of dealing in half-truths and insinuations. Now, Mr. Thomas either knew what he was talking about or he did not. Is he a commanding business man in the life of the British Island or is he not? If he is, he knew what he was talking about. Then, either he told the Prime Minister and this Government the truth, or he did not. If he told the truth in the letter which he wrote to the Prime Minister, that Shell Committee satisfied the British Government. If he did not tell the truth, then you are at liberty to believe the hon. member for Carleton. Take your choice. We might as well deal with this matter plainly and fairly. Mr. Thomas was sent here by the Right Hon. Lloyd George to investigate conditions and report. I happened to cross the ocean with Mr. Carr; I was with him for eight days. The gentlemen who came here to investigate conditions say that the conditions did not reflect upon the honesty, the integrity, or the capacity of Canadian manufacturers. They say that the prices paid in the first instance were larger than those paid afterwards; but I should like my hon friend to remember this, and I had it from Mr. Thomas himself—as I had it from Mr. Carr, and as I have had it since from British statesmen—that they paid in the first instance a price to manufacture shells that was sufficient to pay the initial cost of machinery before making a profit. That is the reason for the high prices. The hon. member for St. John (Mr. Pugsley) asks why the prices were what they were, and why present prices are what they are. This statement explains it.

When it was ascertained what these factories were spending for equipment, Mr. Carnegie said he would give them an order and fix the price at $5.50 and supply them with the billet, in order that out of the first revenue that came from the shells they would be able to repay the cost of the machinery, which has but scrap value after the war is over. After that, he said, the prices would be reduced to such a sum as would enable them to make a fair profit upon their investment, and no more. These are the facts about this thing. There is no secret, there is no mystery as to $5.50, $6.75, $7, $10 or $30 being paid. Mr. Carnegie wanted to pay a price of $90 for a certain kind of shell, and when he was told of the possibility of being able to manufacture it at $55, the price then prevailing throughout the length and breadth of Britain, and pay the cost of machinery, he hesitated to believe that it could be done. But the figures were put before him; and ultimately he was convinced that it could be done; and the fact is that we are now making 9-inch shells in Canada at the same prices as that which it costs for the manufacture of these shells in Britain, the initial cost of machinery being repaid. In every factory in Canada—in Edmonton, Medicine Hat, Calgary, Vancouver, Victoria, St. John, New Glasgow, Pictou, Halifax, everywhere in this Dominion, it was the avowed purpose and policy of the British Government, speaking through Mr. Lloyd George, Mr. Thomas, and Mr. Hichens—and it is the policy to-day —to absorb from the revenue from the manufacture of the first shells the initial cost of the machinery, which, as I have said, has but scrap value after the war is over. That is the answer I make to the hon. member for St. John, when he asks me about prices.

At six o'clock the House took recess.

House resumed at eight o'clock.

Mr. R. B. BENNETT: Mr. Speaker, when the House rose at six o'clock, I was pointing out that it was the avowed purpose and intention of the Shell Committee to award contracts at such prices as would enable the cost of the plant to be paid out of the first order. There are circumstnaces in connection with the division of orders that make it rather difficult to determine upon what principle the Shell Committee acted. As to that, I have no observations to make beyond that, which I make with relation to all other matters of business: we are all human; mistakes may have been made, and probably were made by that committee as well as by the other comittees.

We then pass to the question of fuses and their manufacture in Canada. Notwithstanding what my hon. friend from Carleton (Mr. Carvell) has said with relation to the manufacture of fuses, I may point out that there are something over 100 component parts in a fuse, and that it is a very difficult thing to manufacture a fuse. It may be said that notwithstanding the very great efforts that were made to induce Canadian manufacturers to embark upon the production of fuses, those efforts were unavailing in the first instance, and not until after it had been demonstrated that fuses could be manufactured, were they willing to undertake the obligations and responsibilities of their production. What my hon. friend from Carleton said as to the fuses being manufactured in the United States is another matter about which I have no observations to make. As I have said already, I am not for a single moment defending the action of the Shell Committee. It may be that they should not have sent that contract to the United States. Speaking for myself, I have no hesitation in saying that I would not have done so; but in the exercise of business judgment on the part of those men, it does not seem to me to lie in the mouth of the ordinary Canadian to judge them at a time like that,—confronted with responsibilities such as they were faced with,—by the standards by which we would judge a man in the transaction of business in a grocery store or a wholesale business. Has it dawned upon this House, that that Committee was dealing with larger sums of money in a few months than the entire revenue of the Dominion for two years, and I doubt not that men of average capacity, suddenly confronted with difficulties of the character which confronted the Shell Committee would make mistakes. The judgment that we must exercise must be in the first instance the judgment of the average man, applying the ordinary tests of business to conditions that were strange, difficult and novel, conditions about which there was no guiding light of experience to assist them in arriving at proper conculsions.

I do not desire to discuss further the question (a) with relation to the awarding of contracts; (b) the prices; or (c) the fuses. I do not base my argument upon the assumption that I support everything the Shell Committee did; far from it, because I am not fully informed as to all they did. I base it upon the strong and sound principle that no man in this House has risen and said that the members of that Shell Committee were actuated by other than a patriotic desire to serve the State as best they could. And they served it without compensation; they served it in an entirely honorary capacity, and if they made mistakes, I comfort myself as a Canadian with the thought that my fellow Canadians are not infallible.

The right hon. gentleman opposite (Sir Wilfrid Laurier) will agree with me, after his long experience as Prime Minister of this country, when I say that however carefully he might surround himself with capable men, however many safeguards he might introduce to prevent the State from being exploited in any way at the expense of the public exchequer, the fact remains that he ordered and had conducted in the Printing Bureau an inquiry by his minister, which demonstrated that the Printing Bureau had not been conducted with that high regard for business principles which should characterize a business enterprise. Then, the Department of Marine and Fisheries was investigated by Judge Cassels, who found a state of affairs which my right hon. friend would be the last man to condone. Also with relation to the implementing clause in the contract of the Grand Trunk Pacific, he found that however careful he may have been, the fact remained that the court of last resort construed that legislation as indicating that an improvident bargain had been made. Then with relation to the National Transcontinental railway, however careful my right hon. friend may have been, he found abuses with regard to the expenditures made. In every department of public affairs, there is always creeping in, insidiously it may be, but nevertheless creeping in, abuses which it is only possible for men to overcome by taking knowledge from experience. In

other words, let the action of to-morrow be governed by the mistakes of yesterday, and let the mistakes of yesterday be the guiding and beacon lights that will guide you to a safer port, and to a more astute consideration for the public interest.

What did the Shell Committee do? When Mr. Thomas, Mr. Hichens, and Mr. Carr came to this country they wrote in a communication addressed to the Prime Minister that the prices had, in some instances, been high, but acquitted the gentlemen presiding over the Shell Committee of any wrongful purpose, and saying that they were actuated by a strong and honest desire to serve the state. They said: We think the prices in some instances were high, but did they venture to proceed further? With all his large experience, Mr. Thomas said: Those mistakes are always incident to the creation of a new industry under novel conditions, and Mr. Hichens, after investigating the workings of the Shell Committee arrived at the same conclusion. I told the House this afternoon who Mr. Thomas was. Who was Mr. Hichens? He had served the state well in South Africa; he took charge of the great works of Laird & Sons, of Birkenhead, and retrieved the fallen fortunes of that firm, and gave them the place and reputation they had lost by reason of unsound business transactions. That is the kind of man Mr. Hichens is. The gentleman who accompanied him is a descendant of the great speaker of the House of Commons who for many years presided over its destinies. Mr. Carr is on the permanent staff of the Civil Service. Those gentlemen, after the fullest inquiry, after the exercise of the greatest care in endeavouring to determine what the conditions were, unanimously arrived at the conclusions that there was no wrong-doing, no dishonesty, and that at the most large prices had been paid in the first development of the industry.

The right hon. the Prime Minister has pointed out that the prices paid were not greater than those paid in England, and that as a matter of fact, they were less than those paid in the United States. I submit this question to my right hon. friend opposite (Sir Wilfrid Laurier). Is it not a great compliment, is it not something of which Canadians should be exceedingly proud; that less than eight millions of people, without the great advantages that come from the development of industrial activity in centres where are located the works of the United States Steel Company, the Cambrian Steel Company, the Lackawanna Steel Company and other great companies that have grown up by years of progress in the United States; is it not a great compliment that having as against these the Nova Scotia Steel Company, the Dominion Iron and Steel Company, the Steel Company of Canada, and the various electrical enterprises we were able to produce munitions of war at a lower price than was charged in the United States? That is something which I, as a Canadian, am exceedingly proud of, and I feel proud indeed when I find Mr. Thomas and Mr. Hichens giving a certificate of character to a committee of my fellow countrymen as to the manner in which they had discharged their duties and responsibilities, bearing in mind the prices they paid to induce Canadian manufacturers to enter upon so hazardous an enterprise. Let me give an illustration from my own knowledge. In the early days of the munition business one great steel concern in the United States was asked to undertake the production of munitions, and declared that although the prices offered were very high, much higher than those paid in Canada, they must decline, for two reasons; first, they said, it means the introduction of absolutely new machinery; secondly, it is a precarious business at best; there is no permanency in the business, and it must end, as we hope it will end, in a short time. They refused to entertain the proposition, and subsequently some of our Canadian manufacturers undertook it, established plants, erected buildings, and commenced the turning out of finished shells; I do not mean fixed ammunition—in less than three months from the time they broke ground—

Mr. PUGSLEY: Does my hon. friend refer to the plant of the Canada Cement Company?

Mr. BENNETT: That is one of them; there is another.

Mr. PUGSLEY: It took Mr. Jones seven months to get the contract.

Mr. BENNETT: My hon. friend says it took the manager of the Canada Cement Company seven months to get the contract from the Shell Committee.

Mr. PUGSLEY: And at a reduced price.

Mr. BENNETT: My hon. friend says at a reduced price. Let us assume that that was so—I am not going to argue that—but what does it prove? That is the question. Does that prove that they were a dishonest committee?

Mr. PUGSLEY: If my hon. friend asks me for an opinion I will give it. It proves that the Shell Committee would not reduce the price because they were keeping up prices with the little mushroom companies all over the country.

Mr. BENNETT: My hon. friend says that it proves that the committee were keeping up prices for the small companies. I would like to ask him whether or not he gives his dissent to the arguments which I advanced this afternoon that the small companies in various parts of Canada were entitled to some consideration in view of the fact that men who had passed the age for military service were pleading to find employment in the manufacture of shells.

Mr. PUGSLEY: I dissent entirely from that mode of putting it, because as the results show they were giving the same prices to established manufactories that could have produced goods at perhaps one-half or one-third of what they were giving to the small firms; they were giving uniform prices all round.

Mr. BENNETT: I think my hon. friend will admit that that is hardly a correct statement of fact.

Mr. PUGSLEY: It is absolutely correct.

Mr. BENNETT: What is my hon. friend's evidence for saying that Mr. Jones was seven months trying to get an order?

Mr. PUGSLEY: It comes direct.

Mr. BENNETT: From Mr. Jones?

Mr. PUGSLEY: Direct from Mr. Jones.

Mr. BENNETT: Is it in the form of a letter?

Mr. PUGSLEY: If we get a committee it will be shown absolutely.

Mr. BENNETT: I doubt not that the hon. gentleman who is president of the Canada Cement Company, and who occupies a seat in another chamber, may have informed my hon. friend that it took seven months, but I think he is mistaken in that. My information is that Mr. Jones never seriously considered the production of munitions, it being no part of the business of his company and not being authorized by its charter, until six weeks before he actually got the order. It was necessary for him to go to the Secretary of State here and get an amendment of his charter before he could manufacture a single shell or raise a dollar for that purpose.

Mr. NESBITT: Mr. Jones told me that he besieged the Shell Committee for seven months.

Mr. BENNETT: I am bound to accept my hon. friend's word and I am very glad that he has given a definite statement as to that. Mr. Jones may have gone to the Shell Committee and asked for an order but he did nothing to indicate his willingness to undertake a contract, his company had no charter to authorize it to undertake work of that kind, it was necessary for him to get his charter changed, and it was not until November, 1915, that Mr. Jones was serious in wanting a contract.

Mr. NESBITT: Yes, he told them that he was prepared to back it up with all the means behind the cement company and that he would show his bona fides.

Mr. A. K. MACLEAN: He could have got his charter amended afterwards.

Mr. BENNETT: He got supplementary letters patent in November, 1915, or January, 1916—I am not sure which. But let us assume, for the purpose of my argument, that every statement by the hon. member for St. John (Mr. Pugsley), the hon. member for North Oxford (Mr. Nesbitt), and the hon. junior member for Halifax (Mr. Maclean) is true. What does that show? It merely shows one of two things, either that the orders which had been authorized by the Imperial Government had at that time been exhausted; or it shows, according to the contention of my hon. friends opposite, that there was some feeling against awarding the contract to Mr. Jones. My information may, or may not, be correct, but the information I have is that this Shell Committee could only award contracts as they were authorized by the Minister of Munitions and there was no standing order from which millions of shells could be placed, but, from time to time, orders were sent forward. To my certain knowledge, when I was in London in December, certain questions were under discussion as to orders that should be awarded, and they could not award orders to this country until Mr. Lloyd George had decided that further orders would be given to Canada. This question could not be settled until such time as it became clear that this Dominion was prepared to finance to the extent of $50,000,000 for the purpose of stabilizing exchange. Many orders that were ready to be awarded to us were not awarded because the difficulties in connection with exchange were too great. During the last few weeks, to

my knowledge, it would be possible for certain shell orders to be awarded to Canada if we were in a position to absorb the cost and thus stabilize the exchange between the two countries. This war has become a war of enormous monetary proportions, and the question of the power of Canada to finance the orders for shells given by the British Government has become a matter of vital importance. If Mr. Jones of the Canada Cement Company did not get an order, and if he was seven months trying to get it, from what I know of Mr. Jones ,and I know him well, he did not go after it with that persistency that is so characteristic of him and which he manifested for the last seven days before he got it. I know Mr. Jones, my hon. friend from Pictou (Mr. Macdonald) knows Mr. Jones, and my hon. friend from Halifax (Mr. Maclean) knows him, and, from what we know of him, we know that if Mr. Jones had gone after a shell order for seven months with the persistency, perseverance and determination for which he is noted, and if there were any orders to be given, either Mr. Jones would have had one or more shell orders or there would have been no Shell Committee. But he finally got orders and at low prices.

Have any gentlemen conducted any propaganda against what they used to call a trust in this House? Have any gentlemen ever held up their hands in holy horror at capital being directed against the small enterprise and the poor man? Have any gentlemen ever poured out vials of their wrath against watered stock in times long past? The cement trust is a very powerful organization. It is administered by very competent men. It is managed by the most astute industrial manager in Canada to-day—Mr. Jones. It was much to be preferred that small companies in Port Arthur, Fort William, Winnipeg, Edmonton, Calgary, Medicine Hat, Vancouver, and Victoria should be giving employment to men who are best able to serve the state in the manner which I have indicated, and which could take 10,000, 15,000 or 20,000 shells, than that Mr. Jones should absorb the sum total of all the work that should have gone to these factories, even if he got lower prices for it. Let us have no misapprehension about that, because I happen to be in a position to speak with some authority, if I were absolutely free to do it. This I desire to say further: The Imperial Shell Committee was just as fully advised of those facts as I am now, and the view that I now hold was the view of that committee.

[Mr. R. B. Bennett.]

Mr. PUGSLEY: You mean the present committee?

Mr. BENNETT: The old committee.

Mr. PUGSLEY: That is not the Imperial committee.

Mr. BENNETT: My hon. friend is fearful lest the use of the word "Imperial" should jar upon his nerves. It is surprising that the learned and distinguished gentleman representing the loyal city of St. John should have his nerves disturbed by the word "Imperial." If it means anything, it means what I have said. They had no order, for 9.2 shells to award, and in that connection I may say that Mr. Jones has undertaken the production of 100,000 9.2 shells. There is one now over at the Shell Committee offices, weighing 242 pounds. He is also undertaking the forging of a certain kind of steel, being a steel expert. But during the time my hon. friends say he was clamouring for orders, there were no other orders for 9.2 shells to award. Does that explain it? If I have no cotton to sell, obviously an offer of $1 a yard gets no cotton from me; and if there are no shell orders to award obviously the expression of willingness to make shells at $20 a shell will get no shell orders, even if the market price was $55. That is the position. This Mr. Jones' business has been much talked of in the press, and much exploited. I am perfectly cognizant of what he has said; I have, I think, as full a knowledge of that as my hon. friend from St. John. But Mr. Jones has never said, nor could he properly and truthfully say, that the Shell Committee awarded orders for shells that he undertook the production of, to any manufacturer in Canada during the time that my hon. friends say he was clamouring for an order. Let us understand that clearly. If it be true, what does it show? My hon. friend from St. John, like myself, has at times speculated in what we call real estate, and sometimes I think our judgment has not been as sound as it should have been. My hon friend in the early days had great faith in the Northwest Territories of Canada, a faith which did him credit, and he invested largely in farm lands, away out around Regina and along the Long Lake line. Years and years passed, and those lands did not grow in value.

Mr. PUGSLEY: Steadily grew in value.

Mr. BENNETT: They steadily grew out of value. Then there came a change, and they steadily grew in value.

Mr. PUGSLEY: They began to grow in value about 1896.

Mr. BENNETT: About the time my learned friend ceased to be a Conservative candidate in Kings, N.B.

Mr. MACDONALD: That shows he was a shrewd man.

Mr. BENNETT: He is about due for another change now.

Mr. GRAHAM: There were other changes about that time.

Mr. BENNETT: During the years I have had the great pleasure of knowing my hon. friend from St. John, he has occupied many political positions. I have known him as Speaker of the Legislature of New Brunswick, perfectly independent in his views; as a disciple of Liberalism under mugwump politics; as the Conservative candidate for Kings before the election of 1896; as the independent and indefatigable candidate for St. John in 1896; as the Liberal candidate in 1900 and then as Minister of the Crown under the Liberal Government, and I am perfectly sure that after the next election, when we are returned to power, he will say: we must all get together and work for the benefit of Canada, and he will want to come over to us.

Mr. MACDONALD: That is a splendid way of getting away from Jones.

Mr. BENNETT: I have no desire whatever to get away from Jones.

Mr. PUGSLEY: Rather frivolous talk now that the war is on.

Mr. BENNETT: Mr. Speaker, nothing could better illustrate my argument. I have been contending that my hon. friend from St. John has been endeavouring to stir up partisan strife in this country, and I have merely given a little of his political history on the principle that: "while the light hangs out to burn, the vilest sinner may return," and in the hope that he may cease to be the rabid partisan he has been in the recent past. I am quite sure there is nothing partisan in that. It is simply holding out a hope for his regeneration, and there is room for it. I do not want to get away from Jones. I am prepared frankly to concede, for the purpose of my argument, that Jones did not get an order.

Mr. MACDONALD: Why didn't he?

[Mr. Pugsley]

Mr. BENNETT: If I could answer that question I would, and if my hon. friend can answer it I will take my seat for the purpose of enabling him to do so.

Mr. MACDONALD: You knew all about it.

Mr. BENNETT: I have no such encyclopedic knowledge as my hon. friend from Pictou.

Mr. MACDONALD: I thought you had.

Mr. BENNETT: I said that I had perfect knowledge of the circumstances under which he sought an order.

Mr. PUGSLEY: Tell us why he did not get the order.

Mr. BENNETT: If my hon. friend can answer that, I will sit down while he does so.

Mr. PUGSLEY: I have already told my hon. friend—the price at which he wanted to get it was too low in the opinion of the Shell Committee.

Mr. BENNETT: What does that show? Does it show that these men were dishonest? If it does, the hon. member for Carleton is wrong; for he says they are honest. Mr. Thomas had full knowledge of that fact, and he did not condemn; Mr. Hichens had full knowledge of that fact, and he did not condemn; Mr. Lloyd George had the report of Mr. Thomas before him for at least three months, and he did not complain. What I desire to know is this: Do hon. gentlemen opposite say that because Jones did not get an order on the terms they suggest, the Committee was dishonest? And if they suggest that the committee was dishonest, do they suggest also that this Government was dishonest because the committee was dishonest? That is all it means. For my purpose, it may well have been that there was favoritism, and that the prices were higher than they should have been. For my purpose, it may well have been that the orders were not allocated and allotted as they should have been; but at the utmost what does that show? It shows nothing more nor less than possible negligence or the lack of business capacity. Let me see what the right hon. leader of the Opposition says it means. What does he charge them with, and this is important. He says:

I say that, owing to dereliction of duty on the part of the Shell Committee time has been lost, and, owing to that time so lost, battles have been lost, thousands of lives have been sacrificed, victories have not been carried to a

final issue, the enemy has not been pursued as he retreated, and the war has thus been prolonged.

Glorious rhetoric, but without reason; beautiful word-painting, but without facts to back it up; beautiful to read in the country school-house, but no advance as far as argument is concerned. The charge is, dereliction of duty. And this charge should be read in the light of what my hon. friend from Carleton said later on, and which is found on page 1593 of Hansard:

We are not making charges against the members of the Government; we do not say that members of the Government made a million or two or ten million dollars out of the operations of the Shell Committee. No one makes such a charge, and no one says that any member of the Shell Committee stole anything, although I will try, before I get through, to show that they made pretty big profits. I have no criminal charge to prefer against the members of the Shell Committee; but I suppose that unless I can go that far my right hon. friend will tell me that I have not complied with his requirements, and so cannot have an investigation. We stand on our sovereign rights as representing the people and demand an investigation of the expenditure of our money.

I would point out to the hon. member for Carleton and the hon. member for St. John that at the present moment, not one dollar of Canadian money, not even one cent, has been paid for munitions of war in Canada that has not been charged against the British Government itself.

Mr. CARVELL: Bookkeeping.

Mr. BENNETT: Bookkeeping of the kind that the blockers' brigade was accustomed to, but not the kind we are accustomed to.

Mr. PUGSLEY: In the meantime, has there not been an advance by this Government on account of the partnership between the British Government and the Canadian Government?

Mr. BENNETT: Not at all, as I shall show. The next charge of the hon. member for Carleton is:

Our complaint about the Shell Committee is that they did not get the munitions in time and did not get them at a reasonable price.

Further on he says:

What we complain of is that the Shell Committee, instead of organizing the industries of Canada for the purpose of turning out a shell that was some good, made it their principal object in life to get business for themselves and their own companies.

Those are the charges preferred by the leader of the Opposition and the hon. member for Carleton against the Shell Committee. That is a charge of negligence. The Shell Committee is acquitted of dishonesty, acquitted of any fraud, but they are charged with negligence. Since when did a charge against an agent for negligence, by a third party, when the principal is satisfied, ever entitle anybody to an investigation? I read this afternoon from the right hon. leader of the Opposition, quoting the words of Earl Curzon indicating that this Shell Committee was the agent of the Imperial Government. The agent: the principal is the Imperial Government. And we in Canada should be proud that the British Government, instead of sending out men from their own country, selected as their agents men nominated by the leader of this Government.

The principal says: "I want no investigation; I want no inquiry; I am satisfied that my agent has accounted to me for every cent he has expended, and for all the work he has done." But some outsider, some intermeddling busybody says: "No, I am not satisfied, let me investigate the work of your agent." Since when was that the law of the country? Since when is that a principle upon which parliaments act? If that be a sound principle upon which parliaments may act, then all I can say is this: in times of peace the time of Parliament will be mostly taken up in investigating; but in time of war, when the very life of the nation is at stake, does the hon. member for St. John (Mr. Pugsley) say that it is the duty of an intermeddling busybody, representing some people in a remote portion of the King's dominions, to demand an investigation as to how the King has discharged his duty to the country? That is what it comes down to. I appeal to the right hon. leader of the Opposition if, in his long experience, he has ever known under our constitutional system, a principal, satisfied, contented, absolutely demanding no inquiry, and on the contrary, giving a certificate of character to his agent, to find his time taken up by some outside third party setting up the right to investigate the operations of the agent as between him and the principal. Such a practice is unsound constitutionally; it is at variance with all political practice and with the long history of our parliamentary institutions, and every one knows it.

Mr. PUGSLEY: I desire to call my hon. friend to order. He quoted from what he said was a statement made by my right hon. friend the leader of the Opposition, to the effect that Lord Curzon had stated in

the House of Lords that the Shell Committee was the agent of the Imperial Government.

Mr. BENNETT: Yes.

Mr. PUGSLEY: I challenge my hon. friend to read from Hansard where my right hon. friend made any such quotation. The quotation which he made was that the Imperial Government entrusted the purchasing to the Canadian Government, and it was the Canadian Government that appointed the Shell Committee. (Reading):

> In Canada the system adopted by the War Office has been this. They have made their orders from an early date, through the Canadian Government, treating the Canadian Government, in fact, as their agents for the supply of munitions of war. Any requirements from the War Office here are communicated by letter or telegram to the Canadian Government, or rather, to the Minister of Militia there. This officer constituted quite early in the day the Shells Committee to which the noble Lord referred. That is a body presided over by a gentleman whose name is mentioned, a General Bertram, and upon it are representatives of the various manufacturing interests in the Dominion, and the function of the committee is to advise the minister as to the contracts which, on behalf of the Imperial Government, he shall conclude. All applications are made to him.

The Minister of Militia is the gentleman who concludes the contracts.

Mr. BENNETT: I am delighted that my hon. friend has directed the attention of the House to this quotation, because it was only to save time that I did not read it. The minister referred to is the Imperial Minister of Munitions, as the hon. member well knows.

Mr. PUGSLEY: Not at all.

Mr. BENNETT: And what is more, the fact is and the records show, that not a single contract for shells was closed between that Shell Committee and a contractor without the cabled consent and advice of the Minister of Munitions in London. The absolute fact is that General Bertram and his committee, as shown by the documents that are now to be found in Hansard, did not close a contract for shrapnel, high explosives, 6-inch, 8-inch, or 9-inch shells, without communication by cable with the Imperial Minister of Munitions and without receiving from him his o.k.

Mr. MACDONALD: Will the hon. gentleman tell us what Imperial Minister they communicated with before there was a Minister of Munitions?

Mr. BENNETT: The Minister of War, Lord Kitchener, had a branch in his own department over which General von Donlop, I think presided. Before Lloyd George was made Minister of Munitions, the applications were sent to Lord Kitchener.

Mr. MACDONALD: There is nothing of that in Lord Curzon's statement.

Mr. BENNETT: I have read Lord Curzon's statement, and the minister to whom he refers is the Minister of Munitions in London.

Mr. MACDONALD: Such an argument would not stand in any court of law.

Mr. BENNETT: There need not be any discussion as to what Lord Curzon meant. Let us divest ourselves of all these technical discussions and get down to the facts. The Shell Committee communicated with the Minister of War or the Minister of Munitions, whoever happened to be in charge, first Lord Kitchener, with General von Donop, and later, Mr. Lloyd George. Moreover, the facts can be learned by any hon. gentleman opposite by going down to the offices of the Shell Committee and ascertaining them, and my hon. friend from Carleton, who has been so studious in his examination of the papers in the back room of the Shell Committee, could easily have ascertained the facts.

Mr. CARVELL: I want to emphatically deny that I have ever been in the back room of the Shell Committee.

Mr. BENNETT: The front room, then.

Mr. CARVELL: I have never seen the papers, and I do not know anything about them.

Mr. BENNETT: I am bound to accept that statement, but I have it from a member of the Shell Committee that yesterday my hon. friend was perusing the papers of the Shell Committee for the purpose of speaking in this House.

Mr. CARVELL: I want my hon. friend to withdraw that statement because it is not true. I never saw any files of papers; I never went to the Munitions Board to look up files of papers. I went to the Munitions Board to look over shells.

Mr. BENNETT: Yesterday?

Mr. CARVELL: Yes.

Mr. BENNETT: Then you were there?

Mr. CARVELL: I saw no papers; I perused no files, and I will not allow my hon. friend to make a statement like that without challenging it.

Mr. SPEAKER. Order. According to the rules of the House, the hon. member for Calgary is bound to accept the statement made by the hon. member for Carleton.

Mr. BENNETT: I accept his statement gladly. The hon. member says he attended the Shell Committee's office yesterday for the purpose of obtaining information as to the shells.

Mr. CARVELL: Exactly.

Mr. BENNETT: And doubtless he obtained the information he required.

Mr. CARVELL: I did.

Mr. BENNETT: And I am perfectly satisfied that if he had pursued his inquiries to the extent he should, he would have found that the Shell Committee concluded no order for shells without communicating with the Imperial Minister of Munitions, or the War Office, as the case might be. I merely mention that in passing.

I desire to point out just one further fact and I have done with that side of the issue. After Mr. Thomas and Mr. Hichens investigated, they made a report which according to a well-defined policy, will not be brought down until after the war is over; but they named a new Imperial Munitions Committee, and what was the personnel of it? My hon. friend, who descanted this afternoon upon the terrible evils of General Bertram and Mr. Carnegie, and who descanted at equal length upon the personnel of the new Munitions Board, overlooked the fact that both Mr. Carnegie and General Bertram are members of that board.

Mr. MACDONALD: What has General Bertram done since the new board began work?

Mr. BENNETT: He has been doing his share of the work.

Mr. MACDONALD: He has been in Florida.

Mr. BENNETT: He may have been in Florida on account of his health having been injured by the attacks of hon. members opposite. His work has been appreciated by every one else. It may be that, having won the commendation of the British people and having been knighted by his Sovereign, and then denounced by a misguided minority in the Canadian Parliament, he has been compelled to go to another clime for his health, but at the outset he advised the board in their work, and he has gradually got the prices of shells reduced. Mr. Carnegie has been over Canada; he has been to England doing what he could in presenting the claims of the Canadian manufacturers and people to the Minister of Munitions for the purpose of increasing the number of orders to be received by the Canadian people, to give employment to larger numbers of our workmen, to found new factories and to create new industries in this country. That is what he has been doing. Mr. Carnegie, when he first came to Canada, was a doubting Thomas, who did not believe in the potentialities of this country. Returning to England with the accomplished facts to show for his activity, he comes back to us again with fresh orders. So that, now we have four hundred factories with 136,000 workmen ready to resume work to-morrow at the sound of the whistle, where previously less than 36,000 were employed.

This Munitions Board thus reconstructed, the old committee being honourably discharged, is now charged with the responsibility of carrying forward the work. And now that the old committee is dead, the right hon. leader of the Opposition and his followers propose to hold a post-mortem. They know that they cannot in this way usefully serve the state. The hon. member for St. John (Mr. Pugsley) will not say that anything a committee of investigation could do by way of post-mortem could in any way assist or serve the state. They know that the Government to whom the committee were answerable, the Government whose servants they were, the ministry in Great Britain, declare that the committee's work has been done to their satisfaction. I say it guardedly, but I say it emphatically, that these hon. gentleknow that no useful purpose would be served, except one, and that would be described in the language of Beaconsfield when he came back from Berlin—"It might at least serve the purpose of maligning their opponents and vilifying the people of the country in which they live." Let us be frank and fair about this. Not only does it serve no useful purpose, but it causes great harm. When the hon. member for Carleton this afternoon referred to the fact that a Liberal government should be in power, and that it would give great pleasure to the people, I know the people to whom it would give great pleasure—the people who occupy the central empires of Europe. They are the people who would be pleased, who would be delighted. The enemy whom

we fight are those who would rejoice at this demand for an investigation. I have heard at least five responsible ministers of the Crown in England say that they would not hold investigations with regard to similar matters at this time, because nothing could be more inimical to the interests of the state than that the enemy, who read our newspapers and seize upon every scrap of evidence that will make for their advantage should be given such knowledge as some of that given in this House for the first time by the hon. gentleman opposite—knowledge with regard to contracts that should not have been given, prices that should not have been disclosed. I say this is the substitution of partyism for patriotism and the forgetfulness of obligations and duties to the state. These charges are tossed glibly across the floor of this House against this Shell Committee and against this Government, which did nothing more than name to the Imperial Government certain men in whom they had confidence, men of responsibility, men worthy of trust, one of whom had for years been the servant of the Imperial Crown in the great Woolwich arsenal, but who now are charged with dereliction of duty, and of all the offences in the calendar short of breach of trust, short of being criminals.

A post-mortem is demanded. That raises two questions. The first is a lawyer's question, the constitutional question. And this question divides itself into two parts. The first is, whose was the public money that was being expended? And, next, has there been any desire on the part of those whose money was expended to hold an investigation. I hold this point to be fundamental. Money expended by the Canadian Government must be accounted for to the Canadian Parliament and the Canadian people. But on the same principle, money expended by the Imperial Government must be accounted for by that Government to the Parliament and people of the United Kingdom of Great Britain and Ireland. That is my position and on that I stand. I challenge the eminent lawyer from St. John (Mr. Pugsley) to dispute it. Since when has it been part of the constitution of this country that we have the right to investigate expenditures made in this country by another government? If we are to challenge the expenditures made by the Shell Committee—spending, as they did, British money for munitions of war—on the ground that at the end of the war we are to pay our share of the cost, then we must investigate the cost of shells in Australia, the cost of shells in England the cost of shells in the Bethlehem Steel Works, we must investigate every item and every transaction relating to the purchase of munitions of war used by the allied powers against the enemy forces. There is no escape from that. The hon. member for St. John, with that great technical skill for which he is noted, asked the Minister of Finance in the opening days of this session, whether or not we had to pay our portion of all the costs of the war. And the Minister of Finance said, certainly, we had to pay our portion. But, as yet, in the Auditor General's report, not a single dollar has been charged against the Dominion of Canada for the shells bought here by the Shell Committee, and in the Auditor General's report that will cover this current year, ending March 31, 1916, not one sou-marqué will appear as so charged. I challenge the hon. gentleman to name the principle upon which he proceeds when he says that the Canadian Parliament has the right to investigate the expenditures made by the British Government in the purchase of munitions in Canada. If one dollar is entered in the Auditor General's report as charged against the Canadian people, then ipso facto that account goes to the Public Accounts Committee for investigation. In that case, I am prepared for one to assist to the last ounce of energy I have in any investigation that may be desired to see that the money of the people of Canada has been justly and properly expended. I ask these stalwart disciples of Liberalism, who in days gone by have fought for responsible government, to tell me on what principle they will investigate the expenditure of other people's money. There is no getting away from that; it is the fixed principle upon which all Governments are conducted, it is the foundation of responsible institutions.

Mr. PUGSLEY: I rise to ask a question for information. Was the money that was being deposited to the credit of the Shell Committee deposited by the Government of Canada?

Mr. BENNETT: My hon. friend knows that, in the first instance, the credit was wired through the High Commissioner's office, from the Chancellor of the Exchequer to the Deputy Minister of Militia as persona designata, for the purchase of shells. We made the loan of $100,000,000—$50,000,000 more than was asked for—and

that $50,000,000 is being loaned to the British Government to pay for the purchases in Canada. That $50,000,000 is to be lent to the British Government for the purpose of paying for their purchases in Canada—hay, oats, wheat, rye, and various other commodities that are bought here, including munitions of war.

Mr. PUGSLEY: With regard to this loan which my hon. friend says is being made to the Imperial Government to pay for munitions, etc., is the money deposited directly to the credit of the Shell Committee by the Canadian Government?

Mr. BENNETT: My understanding of it is this: the credit is a credit that is arranged for the Imperial Government. Our money is placed to their credit, and then the Imperial Government advises the Shell Committee as to what their expenditures may be, and as to what money they have available for checking against.

Mr. PUGSLEY: I understand, then, that the money is put directly to the credit of the Shell Committee by the Canadian Government?

Mr. BENNETT: No. The right hon. Chancellor of the Exchequer has arranged a special account for the Imperial Munitions Board, not the Shell Committee. The Imperial Munitions Board gets money from one source, the Imperial Government; and the Imperial Government borrows part of it from the Canadian Government.

Mr. PUGSLEY: I am speaking of the old Shell Committee.

Mr. BENNETT: The old Shell Committee went out of business before the Canadian loan was made. On November 20, 1915, the old Shell Committee was superseded by the Imperial Munitions Board, and the credit arranged by the Imperial Government for the old Shell Committee was a credit created by the Chancellor of the Exchequer, transferring the money as such from London to Canada.

Mr. PUGSLEY: Do I understand, then, that no part of the money that was handed to the Shell Committee was placed directly to their credit by the Canadian Government?

Mr. BENNETT: No part of it; that is my understanding. It was all Imperial money that they had; the Imperial Government became responsible for finding the money. For instance, let us say that we owed the Imperial Government $2,000,000, and the Imperial Government owed us $2,000,000 for munitions; book-keeping entries would be made by way of arranging exchange and saving trouble—that is all. But it must be remembered that in so far as the financial side of it is concerned, the paymaster at the present moment is the British people, not the Canadian people. That is what I want to make clear; let there be no getting away from that point.

Mr. PUGSLEY: As the contracts which were let by the old Shell Committee are being completed and paid for, is or is not the payment being made directly by the Canadian Government?

Mr. BENNETT: My information upon that point—and I think it is correct—is this: the Canadian Government is not buying a single dollar's worth of anything so far as the Imperial Munitions Board is concerned. This Board, presided over by Mr. Flavelle, issues its own cheques, and pay their obligations alike for those liabilities that were created before they came into being, but which they assume by reason of their having taken over the responsibilities of the old Shell Committee, and for the new burdens which they themselves have created.

Mr. CARVELL: But the money comes from the Government of Canada.

Mr. BENNETT: It does not in any sense come from the Government or from the people of Canada. We lend money to the British Government and they lend money to us; it is a debtor and creditor transaction from start to finish.

The next point is the constitutional question: should this Parliament ask for an investigation if the principal whose money it has and to whom the agent is responsible not only does not ask for, but says he does not want an investigation?

Mr. PUGSLEY: Has the Imperial Government said that?

Mr. BENNETT: It has.

Mr. PUGSLEY: Through whom?

Mr. BENNETT: Mr. Hichens, representing the Minister of Munitions.

Mr. PUGSLEY: He does not profess to speak for the Imperial Government in the matter.

Mr. BENNETT: He did speak for them.

Mr. PUGSLEY: He speaks personally.

Mr. BENNETT: Then, Mr. Hichens, speaking personally, though representing him-

self as having the power of the Minister of Munitions, Mr. Lloyd George, told the Prime Minister of this country that Mr. D. A. Thomas or his successor had in Canada all the powers of the Minister of Munitions himself. Perhaps he did not know—I suggest that. 9 p.m. Has my hon. friend looked the facts in the eye? Why do my hon. friends desire to make party capital of this matter? Why not be good enough Canadians to be proud of what has been done? I am doing nothing more than reciting the facts as I understand them; I have no prejudices in the matter. I do think, as a student, in a small way, of constitutional principles and the political history of our country, that two propositions are firmly established, namely, that we have no power to investigate the expenditure of other people's money in this country, and that, if the Government whose money it was says that it has no desire for investigation, we should respect its wishes. Tell me this: should we investigate the expenditures of the Hudson Bay Company in Canada for the French Governernment, for the Russian Government, for the Italian Government, for the British Government? Should we investigate the expenditure of the Canadian Pacific Railway Company for the rather large sums that they have expended for the British Government?

Mr. PUGSLEY: We appointed them agents; why not?

Mr. BENNETT: We did not appoint them agents.

Mr. PUGSLEY: We appointed the Shell Committee.

Mr. BENNETT: No, we named them as being the persons who were fit to be agents, and the principal has said that he is well satisfied.

Mr. PUGSLEY: The Minister of Militia appointed them.

Mr. CARVELL: He says he did.

Mr. PUGSLEY: And they say that they reported to the minister once a week.

Mr. BENNETT: Certainly, in order that he who recommended the agent to the principal might know that his faith in the agent whom he had named had been warranted. Suppose the hon. member for St. John said to me: I should like to have an agent out your way to look after some matters for me. I say: I think Smith would make a good man; my hon. friend says, very well, Smith makes no bargain, no sale, no purchases, without telegraphing the hon. member for St. John. I say: I have named you, Smith, as a fit person to be agent for Dr. Pugsley; I want you to report to me every week what you have done, in order that I may know that I have made no mistake in naming you and that my faith in your capacity as agent has not been unwarranted.

Mr. PUGSLEY: Suppose I were to name Smith in Calgary to do my business. Smith says: I will have to employ three clerks to attend to this business—Mr. Jones, Mr. Brown, and Mr. Robinson. I will appoint these gentlemen as my clerks to attend to this business which you have entrusted to me. Does my hon. friend say that afterwards Smith could not investigate the conduct of the three clerks that he appointed?

Mr. BENNETT: Why, certainly; that is the very point I am trying to make.

Mr. PUGSLEY: Let me carry it a little further.

An hon. MEMBER: You had better go back.

Mr. PUGSLEY: Not at all. The Minister of Militia, as representing the people of Canada, appointed this Shell Committee to look after the business with which he, as representing the people of Canada, was entrusted. All we ask is that the people of Canada shall be allowed to investigate the conduct of the eight or ten members of this Shell Committee whom the Minister of Militia appointed.

Mr. BENNETT: My hon. friend has got a little confused, which is indeed rather surprising. I must say that in all my long experience with the hon. gentleman I never saw him muddled so badly.

Mr. PUGSLEY: The matter is quite clear in my own mind.

Mr. BENNETT: Well, it is a matter of expressing it, probably.

Mr. PUGSLEY: Probably so. If I could talk the one-hundredth part as fast as my hon. friend does, I should be all right.

Mr. BENNETT: I am bound to say that my hon. friend can always talk rapidly enough to disguise his real meaning.

I leave the constitutional phase of the matter, and the next point I desire to make is this: is it expedient—from the national, not the political standpoint—that this investigation should be held?

Mr. PUGSLEY: It certainly is.

Mr. BENNETT: My hon. friend says that it is. With that I join issue. He is only saying that in an academic sense to see if I have any reason for the faith that is in me. I urge that it is inexpedient for these reasons, (1) from the standpoint of manufacturing in this country; (2) from the standpoint of our credit; (3) because our energies should all be used for the war; and lastly that nothing will suffer by waiting, which is very important.

Let us see how the manufacturing interests are affected. Last summer I was in Paris, and while I was there, a gentleman representing Canadian manufacturers came to the hotel and asked me if I would endeavour to intercede with the Premier and with the Minister of War to say that Canadian boots were such as might safely be ordered by the French Government and worn by the French soldiers. I inquired, and this was the answer: It was explained to me that because of the damning given to the reputation of Canadian boots by men, such as the hon. member for Carleton and others of that type at the last session of Parliament Canadian boots and shoes were not held in high esteem in France. I say to-day in this House that not less than $10,000,000 worth of boot and shoe business was lost to the Dominion of Canada by the slanderous attacks made upon them by the Opposition in this House. I say that in all seriousness. No statements or representations that could be made were sufficient to overcome the prejudice that had been created in the minds of those people by the attacks made in a committee of this House.

Further, when I was in London I picked up the Daily Chronicle. The Times, and the Morning Post, and the Daily Telegraph had been telling the people of England of the possibilities of Canada, and of how our business men might assist in the conduct of the war, and I read an article signed by a man, whose name I forget, in which he said: what have we to expect from Canada in the matter of help in the war; they are such a corrupt bunch over there that at the last session of Parliament so and so took place. And, Sir, my country, and your country, and the country of the Canadian people was held up to the British people and to the citizens of the great Republic of France as a country which, in this great crisis of the world's history, thought more of dollars than of the fate of the Empire, and more of partyism than of patriotism.

Mr. CARVELL: Is my hon. friend aware that the committee for the consideration of the question of boots was moved for by the Prime Minister himself, and not at the instigation of any one on this side of the House?

Mr. BENNETT: I am aware of the fact that the Prime Minister yielded to the unconscionable importunities and cries and howls of tale bearers. But if I know the Prime Minister, he is not going to see his country vilified and slandered a second time at the instance of the hon. member for Carleton and his friends.

Mr. CARVELL: You are keeping the lid on this time all right.

Mr. BENNETT: My hon. friend talks about keeping the lid on. Patriotism with him spells keeping the lid on. His idea of patriotism consists in advantage to a party; that is all. I say that when you are confronted with a situation such as this war has produced, we can at least afford to wait a day or two. What man in this House whose residence is burning, whose business is being destroyed, and the hose bursts, would stop putting out the fire because the hose bursts, to investigate the town council that bought the hose? I put that to the House and to the country. I ask the fathers whose sons are at the front whether or not they want this war stopped while the hon. member from St. John (Mr. Pugsley) and the hon. member for Carleton (Mr. Carvell) investigate as to who is responsible for the hose. Is it not a lovely spectacle; is it not an elevating spectacle of Canadian patriotism to see the brains and the genius of one party of the State being used in the middle of a great war for the purpose of slandering, vilifying, and holding up to execration their fellow Canadians, lessening the respect with which they are held by the peoples of the world, destroying the proud position which we have attained by the greatness of our troops on the field of battle, and causing the name of Canadians to be a by-word and a reproach in the market places of the world. That is my hon. friend's idea of patriotism, but it does not reflect the genius of the Liberal party as represented by the people of this country, however much it may represent the highest ideal of the hon. member for Carleton.

Let me go a step further. It hurts our credit. Who so avaricious as the money

lender in a neutral state? Who takes advantage of every opportunity to take the last cent of interest out of the country at war so much as the neutral state? I do not know, because I am not sufficiently a student to express a sound opinion, but from the greatest financial men whom I saw in England, I learned that the economic side of this war is transcendently the most important. Some of them said they almost despaired of our ability to meet the great drains made on our financial resources. We are borrowers in the United States; we are borrowers at home. We are part of the British Empire, and our credit must suffer if the credit of the Empire suffers. In floating the Anglo-French loan, they pledged the credit of France and the credit of the British Empire, and here in this Parliament of ours, in this new democracy, there are men so little concerned with the tremendous issues of this war as to fritter away the time of the State and of Parliament by attacking the Shell Committee, which bought munitions of war to the satisfaction of the British Parliament, but which did not please a couple of hon. gentlemen. Is our credit thus to be destroyed? One-quarter of one per cent on our loans, one-half of one per cent more interest on the moneys we must borrow, means a charge upon the people of this country that, measured month by month for five years, will amount to $5,000,000 and, for ten years to a sufficient sum to enable us to complete great national undertakings, or to provide for the readjustment period after the war, or for larger pensions for those who are dependent. Is it a right thing to thus hurt our credit, is it right to thus destroy and injure the reputations of our manufacturers? I should like this to be placed on Hansard; one of the great purchasing agents for the Allies, representing a foreign government, said to me that Canadian manufactured goods were better than any goods he had bought upon the American continent. I was proud of it. Now, I am told that a committee is needed to investigate and hold up to scorn and obloquy the men who are devoting their energies and time to this work for the purpose of assisting in ending this war.

But that is not all. I should like to make this clear. You say: "Why should we not hold an investigation?" I say: Why should you not hold an investigattion later on if you want it? If the constitutional repuirements are met, and a dollar of expenditure goes through the public accounts, you are entitled to an investigation. If we pay out a dollar you can demand an investigation. Who will be injured if an investigation is delayed? Who stops in the midst of a conflagration to investigate who bought the hose? Do I understand it to be the policy of the Liberal party to say to the people of the British Empire: We want to stop war until we find out if the agents of the Imperial Government did their duty? No, no. My right hon. friend the leader of the Opposition says no to that? Surely he says no. With his large experience and his great knowledge of the constitution and the political history of our country, he must say no to that. The position he took on the South African war question was sound absolutely from the constitutional standpoint.

Do you realise what an investigation means? Let us concede that you have it. Over three hundred concerns, large and small, would be affected. With a parliamentary committee sitting at Ottawa men would be brought from Victoria, Vancouver, Calgary, Edmonton, Medicine Hat, Winnipeg, Moosejaw, Saskatoon, Port Arthur, Fort William, St. John, Halifax, Orillia, every little town in the country, to attend this investigation. You, sirs, talk of delay. Are you going to stop the wheels of Government and industry until you can get these little vaporings before the people of Canada? You are going to stop the highly skilled business of the country and these men are going to be dragged away from their businesses and brought here while an investigation is held. That is what is going to happen and you call that statescraft and patriotism. You cannot seriously mean that. Can a man like Colonel Cantley leave the operations at New Glasgow for the purpose of coming here and sitting around listening to learned questions about steel being asked of him? Can the managers of the Dominion Iron and Steel Company come here and attend an investigation of this kind? What is to happen these great businesses while these men are here? Last year we saw the Militia Department disorganized while Parliament investigated boots. What are you going to do now? Not only are you going to disorganize and dislocate industry but, more, you are going to place an intolerable burden and responsibility upon the Government while this investigation continues. I appeal to the patriotism, to the humanity, of the men of this House to say whether or not they are living up to the highest ideals of Canadianism when they say that the Prime Minister, already over-weighted with matters of Government, is to have this added to the burden, if min-

isters of the Crown already overburdened with responsibility shall have this parliamentary investigation thrust upon them for the purpose of making a little cheap glory for a man like the hon. member for Carleton, N.B. Is that the idea that prevails in this House and throughout the country? I think it is not. I should like to say this in all seriousness; there is ample time for this matter to be dealt with when this war is over.

I alluded a few moments ago to the observations of the right hon. gentleman who leads the Opposition. He pointed out that there had been dereliction of duty, that as a result there had been a shortage of shells upon the battlefield, that retreats of the enemy had not been followed up and that great vantages had not been pursued to the full. What does that mean? That means an inquiry into the operations of the war. Why should we undertake an inquiry, in the midst of the war, as to its operations? Does the right hon. gentleman say that, sitting here in all their wisdom, five or seven members of this Parliament can determine whether or not the Gallipoli operations were properly carried out? Can he say that at the battle of Neuve Chapelle the failure of munitions was traceable to the failure of Canadian manufacturers? Can he say that at Loos the attack failed because of the shortage of Canadian munitions? Does he ask for an investigation into the operations of this great conflict? A few days ago Mr. Asquith refused absolutely to consider it. We all know the great discussion that has taken place between Lord Kitchener and Lord French in relation to the failure of munitions at Neuve Chapelle. Mr. Asquith said at Newcastle that he had ample information from Lord Kitchener himself that the supplies of munitions were double the demands that might be made upon them. In terms Lord Kitchener said that he had received this information from General French. It turned out that there were not supplies of munitions sufficient for carrying on the operations for five days. What happened? In Parliament an investigation was demanded and brushed aside by Mr. Asquith as a petty piffling thing which could only be considered when the war was over. Though challenging the operations of Sir Ian Hamilton at Gallipoli, where thousands of Australians made the supreme sacrifice, the Australians, angry though they were, are yet still content to wait till the war is over, till the victory is won. The same is true of New Zealand, and the same is true in regard to operations in France. General Joffre, the great commander-in-chief, has found it necessary to dismiss some of his generals, and he has dismissed them without an investigation, because the investigation can wait until the war is over. The British Government has dismissed and superseded generals who have been in charge of divisions and army corps. It is true that the British Government has wiped out the Shell Committee. It has appointed a Munitions Board, but on that Munitions Board it has appointed to membership two gentlemen who were members of the late Shell Committee. But, Sir, do hon. gentlemen for a single moment say that it is our duty at this time to endeavour to hold a post mortem examination upon their conduct when no crime is charged, when they are said to be free from dishonesty in their conduct, and when all that can be said about them is that they have been negligent?

Sir, I have a profound conviction that when this war is over and when an investigation into its conduct has been held alike in the Mother Country and in the overseas dominions, some reputations that are now looked upon as great will fall. I have a profound conviction, too, that men who have profited by the necessities of the state, who have washed their hands in blood money, so to speak—they and their children's children—will be remembered with execrations and curses by the men who come after. But now is not the time, in the midst of this great conflict, to cease our activities, to wear out our energies beating against the rock. The function and duty of the Opposition is fearlessly to oppose and boldly to criticise; but they can do that constructively as well as destructively. Every thoughtful suggestion offered by an Opposition should be considered, and, if possible, acted upon by the Government of the day. In a great war, where unity of purpose is absolutely necessary, where cohesive and co-ordinated effort is demanded by every father, mother, wife, son and daughter within the state—oh, in such a war as this, let us show to the world the spectacle of a people united; determined that come what will, let it be for good or ill, we may be able to say when history is written that we have neglected no opportunity, and overlooked no possibility; but that we have devoted our energies fearlessly, determinedly, and unitedly for the purpose of making victory assured, that liberty and freedom may continue among the sons of men, and that

our civilization may be preserved to posterity.

Mr. PUGSLEY: Am I right in supposing that an arrangement was made for this debate to go over until Tuesday?

Sir ROBERT BORDEN: We proposed in the first place adjourning the debate until next Tuesday, but continued it to-day for the accommodation of the hon. member for Carleton.

On motion of Mr. Pugsley, the debate was adjourned.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Railways and Canals—Railways—anti-creepers and tie plates, $20,000.

Hon. J. D. REID (Acting Minister of Railways): It has been customary, when taking up the Estimates of the Department of Railways and Canals, for the minister to make a general statement of the work of his department. I am sorry to have to inform the committee that the hon. Minister for Railways and Canals is ill at the present time, and therefore unable to be present. Two years ago it fell to my lot, for a similar reason, to deliver this general statement, and I regret the circumstances which make it necessary for me to do so again. However, I hope his illness will be of short duration, and that the short rest will speedily restore him to health, and that we shall soon see him back again in charge of his department.

Since prorogation last year, the Government railway system has been very materially enlarged. At that time we had the Intercolonial railway, with some branch lines, and were operating the Transcontinental between Levis and Moncton. We have since taken over the whole Transcontinental railway system between Moncton and Winnipeg, and have also leased from the Grand Trunk Pacific that portion of their line between Superior Junction and Fort William.

Mr. PUGSLEY: Temporarily or permanently? I ask this because the part of the Dominion from which I come is intensely interested in the matter. Is there any agreement or Order in Council with regard to the taking over of the road?

Mr. REID: There has been an Order in Council authorizing the lease of that part of the road between Superior Junction and Fort William. In addition to that, under virtue of an Act passed last session, we have taken over two lines in the province of New Brunswick, namely: the International from St. Leonards to Campbellton, and the New Brunswick and Prince Edward Island Railway, running from Sackville to Cape Tormentine. The acquisition of the latter road was necessary in connection with the operation of the proposed car-ferry between Cape Tormentine and Carleton point. We have also during the past year been operating the completed portions of the Quebec & St. John railway between Gagetown and Fredericton and Fredericton and Centreville.

Mr. CARVELL: You had better draw that statement a little milder.

Mr. REID: We have been operating it—

Mr. CARVELL: One train a week.

Mr. REID: —and we are also now operating the Dartmouth-Dean's branch of the Intercolonial railway. The total mileage of the railways operated by the Government at the present time is as follows:

	Miles.
Intercolonial railway	1,457
Prince Edward Island railway	272
Transcontinental railway, Moncton to Winnipeg	1,804
Lake Superior Branch	188
International railway	112
New Brunswick and Prince Edward Island railway	36
Dartmouth-to-Dean railway	67
Quebec and St. John Valley railway	121
Total	4,057

The operation of these roads is, as I explained two years ago, under the direction of one general manager, with two general superintendents, one for the Intercolonial railway and the various branch lines, and the other in charge of the Transcontinental and the Lake Superior branch.

Sir WILFRID LAURIER: Who are the general superintendents?

Mr. REID: Mr. Brady and Mr. McNellies.

Mr. MACDONALD: Are there two superintendents on the Transcontinental?

Mr. REID: Mr. Brady is General Superintendent of the Transcontinental; under him is Superintendent Gorrie.

Mr. MACDONALD: Not Mr. McNeillie.

Mr. REID: Mr. McNeillie is on the Intercolonial, but Mr. Gorrie is at Quebec assisting Mr. Brady.

The arrangement of the staffs as outlined at that time continues, with very satisfactory results.

I will first deal with the Intercolonial railway, and I am pleased to be able to say that during the present year the Intercolonial has received its share of the increased business enjoyed by railways generally, so much so that the result has been that the current year will be the best in the history of the road. The Minister of Railways and Canals has always been of the impression, and I concur with him, that, with the staff at present operating the road, and its good roadbed, increased traction, stronger bridges, and other facilities, if we could get an increased share of freight business, we could handle it successfully and make a much better showing. We have been able to get that extra business, and have been able to handle it with a very slight increase of cost in operation.

To put it in concrete form, our gross earnings at the end of December were increased by $1,191,000, while the increase in working expenses amounted to only $43,000. The particular items of economy which worked together for the above result are as follows: Fuel economy campaign, which covers the cost of coal, loading on locomotives and economy in firing; engine house expenses reduced by improved methods of handling work at round houses; closer supervision of stores and stores accounting; increased tonnage on freight trains due to the use of heavier locomotives made possible on account of strengthening bridges; great efficiency in Moncton and Riviére du Loup shops occasioned by re-organization of staff. To this should be added the economy that is being practised in every branch of the service on account of a desire of the officers and employees generally to make the Intercolonial a railway of which every man connected with its operation may be proud. I am therefore glad to bear tribute to the fact that the various classes of employees on the road have been doing their best to make the operation of the Intercolonial as successful as that of privately-owned roads. Having secured connections from the West, and also enjoying better connections in the other provinces, I believe the Intercolonial will in the future be in a position to show better results than it has done in past years.

Operations.

I will now give a statement showing the results of the operation of the road during the present year. Part of it must, of course, be estimated, as the fiscal year does not close until the end of March; but in making the estimate for the balance of the fiscal year, I feel that we have arrived as nearly as possible at the approximate figures:

Actual earnings to Dec. 31 1915..	$10,613,264 99	
Estimated for Jan., Feb., and March, 1916....	3,800,000 00	
Total..		$14,413,264 99
Actual expenses to Dec. 31st, 1915.	$8,896,754 84	
Estimated expenses for Jan., Feb. and Mar., 1916..	3,360,000 00	
Transferred during year to renewal of equipment account..	600,000 00	
Rail renewal account	400,000 00	
Fire renewal account	100,000 00	
Total..		$13,356,754 84
Showing a surplus of..		$ 1,056,510 15

The sums which have been transferred to the three renewal accounts already mentioned will be used entirely for the providing of new equipment on Government railways, and at no time in the history of Government railways has new equipment been more needed than at present, owing to the fact that we have taken over a couple of thousand miles of railway on which there was very little, if any, equipment, and to which we must add as fast as we possibly can in order to cope with the traffic now being offered.

Mr. MACDONALD: Why should you need a surplus; you are only taxing the people for it.

Mr. REID: This is freight over and above what the railway had before, and the profits are really as stated. However, this surplus will all be used for new equipment.

Mr. MACDONALD: Have you to take that extra earning of the Intercolonial to provide equipment for the Transcontinental?

Mr. REID: Some of the earnings have come from the Transcontinental, but it is now all one system and any profits that there may be on either railways will, of

course, be used on the whole Government railway system.

Mr. MACDONALD: You are going to tax the people of the Maritime Provinces exclusively, for the purpose of providing this equipment.

Mr. REID: We are not taxing the people a cent more; the rates are the same as they were before.

Mr. MACDONALD: My hon. friend, in answer to a question which I put on the Order Paper the other day, stated that the freight rates on lumber had been increased in the last six months.

Mr. REID: That was done in order to equalize the rates, and the hon. member knows it.

Mr. MACDONALD: Before we conclude, I will show my hon. friend that the rates have increased.

Mr. REID: The several accounts mentioned, to which these sums have been transferred, are accounts which I am informed by the officials of the department were opened by the hon. member for South Renfrew (Mr. Graham), while Minister of Railways, and his practice in this regard, which I believe was a very wise one, has been since adhered to.

Capital.

There was in last year's estimates a vote of $9,290,650 for capital expenditure. The estimated expenditure under this head is expected to be about $7,100,000. One of the most important and necessary works undertaken has been the strengthening of bridges to allow the use of the heavier power rendered necessary by modern railway practice. This work of strengthening the bridges will, it is expected, be completed during the coming fiscal year.

Mr. CARVELL: What will that work cost?

Mr. REID: If the hon. member will put that question at a future meeting of the committee, when I have the official of the department with me, I will answer it. I have not a statement before me.

Additional facilities for the economical handling of business have been provided at twenty-seven points.

About five miles of double-tracking between Chaudiere Junction and St. Romuald have also been completed. Diversions of the line between Nelson and Derby Junction, as well as a diversion between North Sydney and Leitches Creek, 4·3 miles have been completed. Pier No. 2 at Halifax is completed and in use. The ocean terminals at Halifax will be referred to a little later on. The subway at Moncton is practically completed. The car ferry Scotia has been delivered and is in use, and the Bathurst spur line has been completed. The Levis coaling plant has been completed and is in operation. New rolling stock has been delivered as follows:

10 Passenger, locomotives, Canadian Locomotive Company.
15 consolidated locomotives, Canadian Locomotive Company.
250 steel gondola cars, Eastern Car Company.
250 flat cars, Nova Scotia Car Company.
6 first-class steel coaches, Dominion Car Company.
6 baggage and postal cars being built in Moncton shops are about 55 per cent completed.
2 Wrecking cranes and one steam shovel delivered.

It has been customary to bring down certain statistical information of interest to many hon members, and for that reason I will include at this point a statement showing the earnings and expenses not only of the present fiscal year, but, for purposes of comparison, similar figures for the three preceding years:

Working Expenses.

Month.	1912–13.	1913–14.	1914–15.	1915–16.
April	$ 823,669 49	$ 962,874 29	$ 952,459 18	$ 870,703 22
May	828,160 13	1,028,549 69	961,539 86	958,223 49
June	889,713 86	1,120,447 84	1,032,303 66	1,027,758 76
July	935,213 10	1,039,044 91	1,070,800 99	1,025,118 01
August	942,655 52	1,133,190 76	991,795 77	964,113 67
September	888,343 38	1,018,324 38	924,552 97	1,011,509 28
October	946,032 26	1,059,886 41	994,743 51	1,018,501 85
November	916,582 96	1,039,563 76	938,999 99	1,034,486 64
December	944,654 35	1,065,849 40	992,654 87	986,339 82

February	918,013 43	1,016,407 87	862,191 30	*1,060,000 00
March	1,931,476 37	1,261,943 16	815,543 73	*1,200,000 00
Total	$11,579,982 69	$12,867,249 00	$11,438,373 14	$12,256,754 84
Average per month	998,331 87	1,072,270 75	953,197 76	1,021,396 24

* Estimated.

Earnings.

Month.	1912–13.	1913–14.	1914–15.	1915–16.
April	$1,025,010 81	$1,160,789 77	$1,069,520 39	$ 938,609 68
May	1,003,083 67	1,098,283 13	952,925 23	949,655 21
June	996,107 63	1,109,795 48	1,035,430 33	1,024,913 86
July	1,028,034 85	1,197,890 24	1,116,668 90	1,179,320 97
August	1,091,985 16	1,177,069 81	1,037,541 63	1,194,990 26
September	1,014,740 58	1,141,244 88	1,070,558 43	1,275,352 64
October	1,051,741 83	1,114,429 07	927,671 68	1,357,879 37
November	1,017,464 14	1,047,987 94	831,162 70	1,312,055 86
December	1,009,003 36	1,094,160 05	871,620 82	1,380,487 14
January	984,016 00	880,322 80	764,447 66	*1,300,000 00
February	806,223 18	809,919 03	820,962 61	*1,200,000 00
March	993,071 48	1,045,656 80	946,362 76	*1,300,000 00
Total	$11,984,482 69	$12,878,549 00	$11,444,873 14	$14,413,254 98
Average per month	998,706 89	1,073,212 41	953,739 43	1,201,105 41

* Estimated.

There was transferred to Renewal of Equipment Account the following accounts:

1912-13	$777,863 74
1913-14	179,362 78
1914-15	36,465 08
1915-16	900,000 00

Repairs.

I also include the following statement of work done so far as repairs are concerned:

	1913-14	1914-15	Increase.	Decrease.
Locomotives	173	392	119	
Freight cars	19,208	14,065	....	5,143
Passenger cars	472	505	33	

Mileage and Revenue.

The following statistical information will also be found of interest:

Tons (revenue) and passengers moved.

	Passengers Number.	Freight Tons.
1913-14	3,983,511	5,287,740
1914-15	3,613,371	4,539,002
Decrease	370,140	758,738

Mr. CARVELL: Would the statement of passengers of 1914-15 include soldiers?

Mr. REID: Yes. But the hon. member knows that this is for the fiscal year ending 31st March, and as the war started on 4th August, 1914, few soldiers would go up to the end of that fiscal year.

Tons (revenue) and passengers moved one ton mile

	Passengers Number.	Freight Tons.
1914-15	176,189,749	1,189,017,914
1913-14	159,843,276	970,395,253
Increase	16,346,473	218,622,661

Locomotive mileage:

	Passengers Number.	Freight Tons.
1914-15	3,234,202	5,893,003
1913-14	2,355,268	4,869,879
Increase	878,934	1,023,124

Prince Edward Island Railway.

Up to November 30 we have succeeded in reducing our operating expenses on this railway $34,200. Our earnings, however, were $8,700 less than for the same period last year.

The deficit on this railway this year, as compared with the same period last year, has been reduced $25,500, and unless winter conditions are severe, the same relation should continue until the end of the year. Last year our deficit in the operation of this road was $182,731.53.

Safety First.

The Minister of Railways, the management and the employees are taking a keen interest in the Safety First movement on these railways. This accident prevention work for the two years ended December 31, 1915, as compared with the two preceding years before Safety First work had been undertaken, shows the following decreases: 30 fewer persons killed, a decrease of 33 per cent; 401 fewer persons injured, a decrease of 27 per cent.

Provident Fund.

The Provident Fund, which is an employees' pension department, to which the railway contributes $100,000 per year, has on its rolls 657 ex-employees, who are receiving pensions which amount to $19,278.03.

Employees' Relief and Insurance Association.

This is a life and accident insurance institution, supported by contributions from employees and $10,000 per annum paid from earnings of the railway.

During the past year 86 death claims and two total disability claims were paid, amounting to $38,750. Sick benefits to employees, medical and surgical attendance and other expenses in connection with the association show a gross expenditure on this account of $91,585.56.

The Minister of Railways introduced an innovation on the Intercolonial and Prince Edward Island railways in connection with beautification in the way of lawns and flowers of its stations, and with the idea of interesting the employees a system has been arranged whereby the agent making the best showing in each district in station beautification receives a cash prize of $50. These prizes last year were distributed to the agents at the following stations: A. Routhier, Routhierville, P.Q.; W. Parsons, St. Germain, P.Q.; Angus T. MacDougall, West Bay Road, N.S.; T. P. Grady, Summerside, P.E.I.

[Mr. Reid.]

Efforts last summer in regard to station beautification were confined to 35 stations. It is expected during the coming season to have this beautification work extended to at least 75 stations.

Owing to the Grand Trunk Pacific Railway Company not having taken over the National Transcontinental railway, the Government was compelled to undertake the operation of this property, and a train service was inaugurated between Superior Junction and Quebec on June 1, 1915.

Mr. PUGSLEY: Would the hon. minister submit to the committee any correspondence or Orders in Council bearing upon the Grand Trunk Pacific Railway Company not taking over the road, the Government thereby being compelled to operate it? There must be correspondence on the subject. I asked for it twice last session and the session before; the minister promised to bring it down, but we have not had it.

Mr. REID: If the hon. gentleman will give me a note of what he wants, I will get it for him.

Mr. PUGSLEY: The minister knows what we want—everything bearing on the subject.

Mr. REID: The hon. gentleman's question will be in Hansard, of course; I will look it up in the morning before we take up that item, and I will try to get the information for the hon. member.

The Lake Superior Branch of the Grand Trunk Pacific Railway Company, extending from Superior Junction to Fort William, a distance of 188·8 miles, was so closely associated with the operation of the Transcontinental railway east of Winnipeg that negotiations were entered into with the Grand Trunk Pacific Railway Company which terminated in the lease of this property to the Government. The property was, therefore, taken over by the Government on the 1st of May, 1915, under the terms of this lease. I shall be glad to bring down a copy of the lease, so that the hon. gentleman may see it. He asked me as to the term of the lease; I have not that in mind at the moment, but I shall be glad to get that information.

Mr. W. F. MACLEAN: Has the Grand Trunk proper had any connection with this lease?

Mr. REID: It was the Grand Trunk Pacific Company only. They owned this portion of the road, and it was absolutely

necessary that this portion should be operated, as otherwise there would be no connection with Fort William. In fact, that was the key to the situation so far as operation from Winnipeg east was concerned.

The Grand Trunk Pacific Railway Company operated the line from Winnipeg to Fort William as agents of the Government for the months of May and June, thus enabling the management of the Canadian Government railways time to organize and equip the same for operation under its own management. On July 1 this change was made, and Grand Trunk Pacific employees were retained so far as they desired or their services were necessary.

The terminals at Transcona were, under the agreement, made joint terminals between the Transcontinental and the Grand Trunk Pacific, and repairs are made to the latter company's locomotives at the Transcona shops at cost plus ten per cent.

10 p.m.

We are operating a tri-weekly passenger service between Toronto and Winnipeg over the Grand Trunk, the Temiskaming and Northern Ontario and the Transcontinental, and the business secured has justified this service. A daily through westbound freight service between Cochrane and Winnipeg was installed in August, which gives us an average of 15 paying loads per day. A daily passenger service is given between Quebec and La Tuque and between Levis and Monk.

Mr. PUGSLEY: I do not think that is correct. The time table shows a service twice a week.

Mr. REID: The information has come to me from my officials; I shall make inquiries in the matter.

Sir WILFRID LAURIER: What is the service between La Tuque and Cochrane?

Mr. REID: Bi-weekly mixed trains are run between La Tuque and Cochrane, and tri-weekly mixed trains between Moncton and Chaudière, and as many freight trains are run as the traffic requires.

Mr. PUGSLEY. The hon. gentleman has just said that there is a daily service between Levis and Monk; now he says that there is a tri-weekly service between Moncton and Chaudière. Chaudière is just alongside of Levis.

Mr. REID: The statement says that there is a daily passenger service between Quebec and La Tuque and between Levis and Monk.

Mr. PUGSLEY: That must be wrong. The time table does not show a service of that kind.

Mr. REID: That is the information which is given to me: if it is wrong, I shall correct it.

Mr. PUGSLEY: There is great complaint about the insufficiency of this service too.

Mr. REID: That is only within the last three or four weeks, owing to the heavy storms that have taken place in the lower provinces. The same has occurred in the western provinces; they say that the storms there are the greatest that they have had in twenty-six years.

Mr. PUGSLEY: I may be wrong, but I think that somebody has misinformed the minister. It is my information that during the whole of the past summer there was a service between Monk and Levis only two or three times a week by mixed train—passenger and freight. It was a very inefficient and unsatisfactory service. Who could have told the minister that the service was daily I cannot imagine. I am speaking now in accordance with my information, and, I think, in accordance with the time table as well.

Mr. REID: These statements were given to me by the officials of the department; they ought to be correct, and I must take them as correct until I find that they are wrong. I must say that I think the statements are correct.

From early in September to the end of the season of navigation we delivered 26,173 cars of grain at Fort William, which is about two and one-half times that handled last year under Grand Trunk Pacific operation. To relieve the grain blockade at Fort William and take advantage of elevator space at Quebec and Montreal, an emergency freight rate which would compare favourably with lake and rail rate was put into effect, under which the Transcontinental undertakes to handle grain from Armstrong, the geographical position of which corresponds with Fort William, to Quebec and Montreal at 6 cents per bushel. A considerable amount of traffic is being arranged for in this way.

Mr. ROBB: How many cars of wheat have been carried on that road from Armstrong to Montreal and Quebec?

Mr. REID: That question was asked within the last week and was answered by me. I have not in mind just at this moment

the answer that I gave, but the hon. member will find it in Hansard. If he wishes, I will give him the information when I have the figures before me. To relieve the Fort William situation further we are now hauling grain from Fort William to Atlantic ports, which requires a back-haul to Superior Junction, and in this way 50 cars of grain a day are being moved.

To organize the initial service on the Transcontinental railway in the limited time at our disposal, 98 locomotives, 33 passenger cars, and 1,300 freight cars were transferred to the West from the Intercolonial. We were able to transfer locomotives from the Intercolonial for the reason that, during the dull times of last winter, we repaired all our Intercolonial locomotives, and were able at the opening of the Transcontinental to utilize 95 per cent of our power on the two railways. Ordinarily, 20 per cent of the locomotives of a railway are out of commission for repairs or other causes. These locomotives, with the assistance of 13 rented from the Grand Trunk Pacific, have enabled us to handle the grain situation as well as we have. In addition to this equipment loaned, much of which will be absorbed permanently by the Transcontinental, we purchased 1,000 steel frame box cars, at a cost of $1,095,000, which were delivered in September.

Mr. MACDONALD: Where did you get these—in the United States?

Mr. REID: I think we bought most of them in Nova Scotia. We bought from the Eastern Car Company and the Nova Scotia Car Company, but I will give the information later.

Mr. MACDONALD: Where did you rent the box cars?

Mr. REID: I said that we rented some engines and cars from the Grand Trunk Pacific, but I have no knowledge of renting from any other railway corporation. On December 1 the gross earnings on the Transcontinental from Moncton to Winnipeg and Fort William were $2,296,113.40. The operating expenses for the same period were $1,975,994.36, to which should be added rental for the Lake Superior branch for seven months, $350,000, which shows a deficit in Transcontinental operations to that date of $30,000.

Our reports indicate that the traffic handled during the month of December will give us a small surplus for that month. For the remaining three months of the fiscal year we may expect deficits, the amount of which will depend upon the severity of the winter and the amount of through traffic which we can secure.

Mr. PUGSLEY: My hon. friend is right in saying that there is a daily service between Moncton and Levis if he means that a train goes one way one day, and goes back the next day.

Mr. REID: That is a daily service.

Mr. PUGSLEY: No, that a tri-weekly service. On Tuesday the train goes from Moncton to Edmundston, stays over night, and goes on to Levis the following morning so that according to this time table it is a tri-weekly service.

Mr. REID: What is the date of that timetable?

Mr. PUGSLEY: 16th January of this year.

Mr. REID: In one sense my hon. friend is right, and in another sense I am right.

Mr. PUGSLEY: It is like a service in the south which is called a by-weekly service; you try to get one way one week and to get back the next.

Mr. REID: That is all I have to say about the Transcontinental railway. I will now deal with the Quebec bridge and also with the ferry that is being used while the bridge is being erected. The car ferry Leonard is now in service between Quebec and Levis and handling very satisfactorily the Transcontinental and Intercolonial railway business at that point. The car ferry was rendered necessary owing to the delay involved in this project because of the collapse of the first Quebec bridge. Work is now progressing rapidly on the construction of the second bridge. On the north shore the entire cantilever arm has been completed, thus practically completing all the steel work on that side. On the south side the steel work has been completed up to and including the main post over the main pier. This year the south cantilever arm will be erected, and the work of erecting the suspended span will be commenced early in the spring at Sillery Cove and will be completed by the time the cantilever arm is ready to receive it. It will then be floated into place and suspended from the two ends of the cantilever arms. Thus, it is expected that all the main members of the bridge will be erected this year, and the

connection from shore to shore made, though it will take another year to finish riveting and painting and to clean up the work. The expenditure on the Quebec bridge to date amounts to $18,257,621, of which amount $10,473,346 has been on the new bridge. The estimate to complete is about twenty-seven millions; that is, the total cost of completing the bridge, taking the old bridge and the new bridge together is estimated at $27,000,000.

There are certain large works in connection with the Government Railway System which, when completed, will form part of that system, and a brief explanation concerning these is, I feel, due to the House. I will first refer to the terminal arrangements under way at Halifax and St. John.

When the improvement of our terminals at Halifax and St. John was first considered by the minister with a view to the necessity of providing for the future increase in the business of the Government railways, we all agreed that it was necessary that some provision should be made to properly take care of the increasing development of the Dominion, and this is more than ever true now that we have the Transcontinental under Government control. My own opinion is that the necessity for this terminal work is much greater than ever before, and the work of providing the required accommodation is being pressed as fast as possible.

The situation so far as Halifax is concerned is as follows: Sections 1 and 2 of the railway from Rockingham to Jubilee House, His Majesty's Lumber Yard and Reid Rock in Halifax Harbour, are under construction for a total distance of 7½ miles. The contract was awarded to The Cook Construction Company and Wheaton Brothers in September of 1913 and work to the value of $1,574,834.71 has been done. Good progress is being made on the first unit of docks. Six thousand five hundred lineal feet of quay walls have been dredged and filled. Also substructures for buildings, sewers, etc., have been completed. The contract for these docks was awarded to Foley Brothers, Welch, Stewart and Fauquier in January 1914, and work to the value of $1,349,119.64 has been done. The work is about 30 per cent completed and the unit should be finished by November 1, 1917.

The St. John harbour work is, I may say, under the direction of the Public Works Department, so that it will not be necessary for me to refer to it in detail here.

Mr. PUGSLEY: What will that unit at Halifax cost?

Mr. REID: I have not a statement as to that before me, but I will give the information when the item comes to be considered.

Mr. SINCLAIR: What is the total expenditure at Halifax?

Mr. REID: The expenditure in connection with the contract awarded to the Cook Construction Company and Wheaton Brothers has been $1,574,834.71, and in connection with the contract awarded to Foley Brothers, Welch, Stewart and Fauquier, $1,349,119.64. On the opposite side of the harbour at Halifax, from the town of Dartmouth, we have completed the construction of a line of railway locally known as the Dartmouth to Deans branch and which at present extends to Upper Musquodoboit, 67 miles. The contract for this work was let to M. P. & J. T. Davis in February of 1912, and was completed in January last. There still remains a number of station buildings to be erected, tenders for which are now being called for by the department. A tri-weekly service has been installed by the Intercolonial Railway since January 1, 1916. The total expenditure to the end of January, 1916, has been $2,189,485.81. This has been on construction and chargeable to capital account.

P. E. I. Car Ferry and Terminals.

The work connected with the provision of a car ferry service to Prince Edward Island has not made such progress as was desired and expected. The New Brunswick & Prince Edward Island Railway has been acquired and is being put into shape to form an adequate link between the main line of the Intercolonial Railway and the ferry landing with the existing system of island railways. The contract with the Armstrong, Whitworth Company was satisfactorily completed, and the steamer Prince Edward Island delivered over to us during the summer notwithstanding war conditions. Its appearance has been the subject of high praise from all those who have examined the vessel. The situation has not been as satisfactory with respect to the terminal works. At the outset a season was lost at Carleton Point through the default of those to whom the contract for this terminal was at first awarded. Further serious delays have resulted from

the stormy weather and exposed conditions under which the work has necessarily had to be carried on. With the advance of the breakwater these conditions improve. At Cape Tormentine the principal work remaining to be done is the completion of the breakwater, the dredging, and the placing of riprap on exposed faces of the pier head. At Carleton Point several more cribs are necessary to complete the steamer landing, some dredging is to be done, and further work done on the breakwater and rock approach pier. The contract for the steel transfer bridges, to connect the deck of the steamer with the pier, has been let, and works are ready for their reception. The total estimated cost of the car ferry and terminals is $2,850,000, of which $1,975,000 has been expended.

Mr. PUGSLEY: The minister started in at Halifax and St. John and then skipped St. John.

Mr. REID: I stated the reasons why I would not go into that; the work there is being done by the Public Works Department and they will have to explain it.

Hudson Bay Railway.

I am well aware that the construction of this railway has been a matter of considerable public debate for very many years. During the time that I have been a member of this House prior to the commencement of the construction of this railway, I believe not a single session passed without a discussion, during which members from the West advocated the construction of this railway. There was at that time, and there are now, possibly, many who doubt the advisability of the construction of this road. However, the construction of the road was decided upon by the late Government, and the hon. member for South Renfrew (Mr. Graham), as Minister of Railways, let the first contract to J. D. McArthur & Company just before the Liberal Government was defeated.

I may say that while I myself may have had grave doubts as to the feasibility of this undertaking, yet I have come to the conclusion, after seeing the reports in the department and discussing the matter with those who are at work in connection with the railway, that this road will be of value to the country in time to come. It will serve a useful purpose in opening up a large extent of territory of considerable agricultural value, and those portions of the country which are not agricultural are believed to contain mineral resources which only await development. There will also be opened for development fisheries which will, it is expected, rank with those that have made the Newfoundland waters famous.

Further, there is no doubt in my mind in reference to the navigability of Hudson bay and straits for several months of the year.

Mr. PUGSLEY: Is that the minister's own opinion?

Mr. REID: That is my personal opinion after having got all the information I could. Perhaps I was of the same opinion as that entertained by some other members in the past and perhaps I did not have the confidence in this project that I have now.

Mr. PUGSLEY: The statement is evidently a prepared typewritten statement, and I was curious to know whether it was the minister's statement or the statement of the acting minister.

Mr. REID: I never discussed anything in connection with this matter with the Minister of Railways.

Mr. PUGSLEY: Then it is the acting minister's statement?

Mr. REID: This statement is my own and it expresses my own opinion and not that of Mr. Cochrane. He was too ill to discuss anything. This statement is one that I dictated to my stenographer, and I am giving it as dictated by me and as representing my own opinion and no other.

Mr. MACDONALD: You are not able to say whether he agrees with it?

Mr. REID: No, I am not, because, as the hon. member knows, he was away for a couple of months ill, and during the time he was here I did not discuss with him anything in connection with his department.

Mr. MACDONALD: You are only speaking for yourself?

Mr. REID: I am only speaking for myself.

Mr. SINCLAIR: For how many months in the year does the minister regard this route as practicable for commercial purposes?

Mr. REID: I had a discussion with my hon. friend the Minister of Railways and Canals just after he returned from Hudson bay a couple of years ago. He went overland to Hudson bay and he came down by steamer. He stated then that he believed Hudson bay was safe for navigation from some time in the middle of June to the middle of October.

Mr. SINCLAIR: How do you explain the report of the expert who went there to examine into this matter and which report has been laid before this House since the commencement of the present session?

Mr. REID: You mean for the Marine and Fisheries Department?

Mr. SINCLAIR: Yes.

Mr. REID: The writer of that report was an officer acting for the chief engineer of the Marine and Fisheries Department, but the Marine and Fisheries operations were more along the shore than through the strait. I would like to give a little more information to show why I believe, and the chief engineer believes, that this route is navigable for a considerable period of the year. I was saying that there was no doubt in my mind as to the navigability of Hudson bay and straits for several months of the year. That is my own opinion. I believe this is not only possible but that it is assured. This has been demonstrated to my satisfaction since the Department of Railways and Canals, for its own purpose, purchased three vessels for use in its Hudson bay service, as well as chartering several others, and so far as these vessels are concerned, they have navigated this route without meeting with any accident of importance. It is true that during the first season two vessels were cast away right at Nelson under circumstances which have never been satisfactorily explained and which have absolutely no bearing upon the practicability of the Nelson route. The vessels that were purchased were not built purposely for this route, and other vessels would perhaps be found safer.

It is not expected, of course, that there will be any great rush during the first few years after the completion of this road and harbour, but the time will come when this road will be of immense value to Western Canada. I believe also that for the amount which it is to cost it will in years to come have a military value which will be well worth while. It is, of course, unfortunate that this great expenditure was commenced only a short time previous to the outbreak of war, but since that time the Department of Railways and Canals has been doing its best to keep the work down to a minimum, so that the burden each year may be as light as possible, with due consideration to proceeding with the work without resultant loss or claims for damages against the department.

The length of this line from Le Pas to Port Nelson, as finally revised, will be 424 miles, and the road has been graded to Mile 378. Steel has been laid, including sidings, to Mile 242, at which point erection is proceeding with the Manitou Rapids bridge over the Nelson river. This work is expected to be completed in April, when track work will be resumed. The track is surfaced to Mile 225, and has had a final lift of ballast to Mile 150. The telegraph line keeps pace with the steel, and has now been laid to Mile 242. This work is divided into three sections, and all three contracts fell to J. D. McArthur & Company, the first having been let by the hon. member for South Renfrew, as Minister of Railways for the previous Government. On section No. 1 $3,229,994 has been expended to date, and on section No. 2 $1,602,300, and on section No. 3 $1,865,795, or a total of $6,698,089. The total value of the work under contract is estimated at $9,629,605. During the coming summer the track will be carried forward to the second crossing of the Nelson river at Kettle rapids, at Mile 332. Here we have a large bridge to construct, and it is not expected that track work can proceed beyond this point until the spring of 1917, but, when resumed, it will be carried through to Port Nelson without further delay.

Port Nelson Harbour Work.

At Port Nelson good progress was made on the permanent work of harbour development. Previously the work done at this point has been of a preliminary character, consisting of the establishment of the camp, construction of plant, shops for repair of plant, temporary wharves, drydock, etc., necessary for the prosecution of the work. The substructure for the bridge approach to the main dock has been carried out half a mile from shore, and the whole of the bridge superstructure will be completed this coming season. The suction dredge was employed excavating the approach channel

with satisfactory results, the remaining dredges, tugs and scows being chiefly occupied in procuring stone filling for cribs and riprap.

The total expenditure upon the Hudson Bay railway and terminals to December 31, 1915, was $15,465,304, made up as follows:

General expenses, engineering, etc....		$ 721,974
Pas bridge and terminals..		388,172
Pas Thicket Portage:		
On contract account.. ..	$3,229,994	
Rails, bridges, etc.	2,680,896	
		5,910,890
Thicket Portage to Split Lake Jct. ..		1,661,291
Split Lake Jct. to Port Nelson..		1,815,869
Port Nelson terminus		4,977,208

Canals.

As is well known, the canal system of Canada includes:

Sault Ste. Marie canal.
Welland canal.
St. Lawrence canals, extending from Prescott to Montreal.
Chambly canal, in Quebec.
St. Peter's canal, in Nova Scotia.
Rideau canal.
Trent canal.
Carillon and Grenville canal.

On the majority of these canals we have attempted nothing during the year in the way of construction, and they merely required the attention of the proper maintenance and operating staffs.

Welland Ship Canal.

We are continuing the construction of the Welland ship canal, which we commenced in the year 1913, and the work under contract at present consists of sections Nos. 1, 2, 3, 4-A and 5, no additional sections having been placed under contract during the past year.

Section No. 1, which is under contract to the Dominion Dredging Company, Limited, consists of the construction, principally, of the new harbour at the lake Ontario entrance to the canal, which covers one and one-half mile of dredging in the lake, and considerable pier work, one and one-half mile of canal excavation inland, and the construction of lock No. 1, with its weirs and entrance walls. This contract is progressing satisfactorily, and a very good showing has been made during the past year on the various works comprised within the contract. The estimated cost of section No. 1, based on schedule rates, is $3,487,725, and $1,529,120 has been paid to date.

[Mr. Reid.]

Section No. 2, which is under contract to Messrs. Bauldry, Yerburgh and Hutcheson, includes, in addition to the excavation of the canal prism, the construction of locks Nos. 2 and 3, with their regulating and waste weirs, the substructure of four bridges, in addition to the one over the head of lock No. 2, and a large amount of watertight embankments, and the contractors have been prosecuting the work vigorously during the past season. Their operations, in the main, have consisted of prism excavation, building watertight embankments, and the construction of the breastwall and upper west entrance wall of lock No. 2. The estimated cost of section No. 2, based on schedule rates, is $5,377,185.75 The amount paid to date is $2,351,970.

The work on section 3 is under contract to Messrs. O'Brien & Doheny and Quinlan & Robertson, and comprises a very large amount of work, aggregating about $10,000,000 in value, and consisting principally of the excavation of 2,700,000 cubic yards of rock and 3,400,000 cubic yards of earth, the diversion of the Grand Trunk railway (Welland division), which was rendered necessary in order to obtain satisfactory location for the canal, the building of a large earth dam with concrete core walls, the building of twin locks Nos. 4, 5 and 6, in flight, and single lock No. 7, which, together with their entrance walls, etc., will contain about 1,200,000 cubic yards of concrete. The contract also comprises the crushing and furnishing of 1,250,000 tons of stone for concrete for sections Nos. 1 and 2. On this contract $2,249,290 has already been paid.

Section No. 4-A is a small contract for certain portions of work which were to have been included in section No. 4, which could not be deferred when it was decided to postpone the letting of the larger contract. This has been completed by the contractors, Messrs. Maguire & Cameron. The work was estimated to cost about $80,000, and did cost $72,731.31. It consisted of the construction of a new supply weir opposite lock No. 25 on the present canal, to supply water to the old canal in place of the one at Allanburg, which is being discontinued as the old canal between Allanburg and the new weir is being filled in with excavated material from section No. 5, also the construction of two reinforced concrete culverts to take the place of open ditches across the area between the present and the old canal, which is also being used as a dumping ground for excavated material from section No. 5.

Section No. 5 is under contract to the Canadian Dredging Company, Limited, and consists of the deepening and widening of the "deep cut," in the present canal between Allanburg and Port Robinson, to the new dimensions. Dry excavation above the waterline in canal has progressed continuously during the past year, with the exception of a short interval last winter. Four or five steam shovels are operating day and night, the material mostly being disposed of on the dumping ground on section No. 4 between the present and the old canal. A long embankment dumped from a trestle has been formed which, with the present canal towpath, encloses a large area of low ground which has to be filled to canal towpath level by the hydraulic suction dredge, thus reclaiming and making it valuable. The balance has been used to fill in low ground near Port Robinson. On schedule prices this contract should cost about $1,945,788, and $903,720 has been paid to date.

Domestic Water Supply.

The construction of the Welland Ship Canal will interfere with the domestic water supply of several municipalities. This has been the subject of negotiations and conferences between the municipal representatives and Mr. Cochrane and his superintending engineer, and a tentative agreement has been entered into between the department and the different municipalities under which the department is to assume the cost of building a pipe line to carry water from Lake Erie to the reservoirs of the municipalities of Welland, Merritton, Thorold and St. Catharines, to supply pure water in place of the polluted water which will enter the canal through the Welland river, when that river is absorbed in the canal system. The department assumes the cost of building the pipe line, and the municipalities are to pay a fixed annual rental for the same. No actual work has been done in connection with the proposed pipe line, although experiments are being made on a three hundred foot piece of thirty-inch reinforced concrete pipe, which is being built at Port Colborne. Should these experiments be successful, this system of construction will be recommended for adoption. It will take about two years to complete the line after active operations on it are begun.

The work in connection with these ship canal contracts and the letting of further contracts is not being pressed by the Government as fast as probably it might have been had war conditions not rendered advisable the keeping of departmental expenditures as low as possible while the conflict continues. Although this may delay the completion of the work for a time, it is felt to be the proper course to pursue.

St. Peter's Canal.

The improvement of this canal, as designed, consists of the construction of a new lock and entrance at the Atlantic end. The contract was let to W. H. Weller, of St. Catharines, and work was commenced in May of 1912 and continued through the seasons of 1912 and 1913. As a result of new borings taken in February, 1913, to more accurately determine the surface of the rock, it was found that the greater part of the new lock, as designed, did not rest on solid rock. It was considered advisable, therefore, to adopt a new location for the lock and make a radical change in the entrance. A supplemental agreement to the contract was accordingly entered into in June of 1914 under authority of order in council, and in accordance with conditions as explained by me to the House on May 29, 1914. (Hansard proceedings, page 4480). The changes decided upon necessitated the closing of the canal to navigation for one year and work was immediately undertaken for the unwatering of the canal. On the outbreak of war, however, it was considered advisable to keep the canal open for navigation, and the contractor was obliged to stop all work in connection with the unwatering. In March of 1915, Mr. Cochrane considered that the time had come when the canal might safely be closed so that the construction work might be completed, and since that time satisfactory progress has been made.

Mr. McKENZIE: Can the minister give us any idea when the work on the St. Peter's canal will be completed?

Mr. REID: I was speaking with the chief engineer about that yesterday and he said it would be open for navigation this spring, but I shall probably be able to give my hon. friend more accurate information when we come to the item in the estimates.

Trent Canal.

This canal is familiar history to most members of this House, having formed a

part of the annual Budget of the Minister of Railways and Canals for a couple of generations. It is very satisfactory to know that our engineers hope to have that portion of the canal between the city of Peterborough and lake Ontario known as the Ontario-Rice Lake division completed and open to navigation by the spring of 1917. The work remaining to be done consists of the dredging out of river channels. All the structures have been completed except the reconstruction of the Grand Trunk railway bridge at Campbellford, the completion of a few sluices in dam No. 10, which have been held back pending the execution of the bridge reconstruction, and the hanging of lock gates between Glen Ross and Healey falls. Upon completion vessels having a draft of eight feet will have access to Peterborough from the Great Lakes. This will be an event of considerable importance to the communities along that section of the canal. The total estimated cost of the Ontario-Rice Lake division is $7,660,000, of which about $750,000 remains to be expended.

Negotiations have been concluded with officials of the railway for an agreement whereby the bridge will be reconstructed as a high level structure instead of a swing span, as originally proposed, and the work will be proceeded with this season.

On the Georgian bay end, of the Severn division, the Port Severn lock and the approaches thereto have been completed giving access to Gloucester pool from Georgian bay. Good progress has been made upon sections Nos. 2 and 3, which provide for the canalization of the upper reaches of the river. Owing to the war we have held back the letting of section No. 1, which will be necessary for through navigation. The total estimated cost of the Severn division is $3,575,000, of which work to the value of about $1,250,000 has been done.

The construction of the Trent canal has resulted in the development of a large amount of water-power, which will be of very great assistance in the industrial upbuilding of Eastern Ontario. In fact, this electrical development is the key to the situation. Unfortunately, some years ago these powers were leased to parties at nominal rentals on the understanding, as I am informed, that they were to be developed and the people would enjoy the benefits of this development. Now these powers have been alienated but the people are not obtaining the benefits they expected. For instance, some of these powers have now been under lease for ten

or fifteen years and no development whatever has taken place. The people of Eastern Ontario must have electric power, and I understand negotiations are on at the present time between the Ontario Government and the lessees of these water powers, and the Ontario Government is trying to arrange that these powers shall be developed. If these negotiations do not succeed, and should it become necessary, I shall recommend that a bill be brought down cancelling these leases and returning these powers to the Crown so that the people may have the benefit of a new deal.

Five hundred and seventy-three employees of the Department of Railways and Canals and Canadian Government Railways have been granted leave of absence to enlist for overseas service under the various Orders in Council dealing with the enlisting of government employees. The list is as follows:

Departmental staff, inside service	5
Hudson Bay railway	14
Dartmouth-to-Dean's branch	4
Welland ship canal	24
Welland canal	4
Rideau canal	5
Sault Ste. Marie canal	1
Trent canal	15
Quebec bridge	2
Car ferry terminals, Cape Tormentine and Carleton point	1
Commissioners of the Transcontinental railway	8
Board of Railway Commissioners	3
Canadian Government railways:	
Intercolonial railway	455
Transcontinental railway	19
Prince Edward Island railway	12
St. John and Quebec railway	1
Total	573

Eight of those who have reached the front have been killed in action, two have died since enlisting, and a number are included among those who are missing or wounded.

The officers and employees of Canadian Government railways have made two contributions of one day's pay to the Canadian Patriotic Fund, amounting to $37,973.64.

In connection with the inside service, I think it is only fair to state that a number of officers and clerks have applied for permission to enlist, whose services it was felt could not be spared at the present time because of their close and intimate knowledge of departmental matters under their immediate charge. I have particularly in mind two officers viz.: Mr. Graham A. Bell, financial comptroller and Mr. L. Sherwood, assistant to the chief engineer. Both are keen military men who have been anx-

ious to enlist for active service, and who would be at the front now but for the fact that they occupy executive positions of such importance that they cannot well be spared.

Before concluding I wish also to add that since war was declared in August, 1914, the work of the Railway Department has been very greatly increased, thus entailing much extra work on our officials, and I desire to place on record here my appreciation of their good service in these trying times. I may say, Sir, that having been only a few days in the department, I collected from the members of the staff the information contained in the statement that I have just made, and I thought it better to put it in this form so that all hon. members could understand it. I thank the members of the committee for listening to me, and I hope the information I have given will be of benefit. As we proceed with the items of Supply, I shall be very glad indeed to give the very fullest information that may be required with regard to the several appropriations.

Mr. GRAHAM: I wished to make some rather extended remarks. It is pretty late now, and I would suggest that we adjourn.

Progress reported.

On motion of Mr. Rogers, the House adjourned at 10 45 p.m.

Friday, March 10, 1916.

The House met at Three o'clock, the Speaker in the Chair.

FEDERAL PLAN COMMISSION.

Sir THOMAS WHITE (Minister of Finance): Mr. Speaker, I beg to lay on the table of the House the report of the Federal Plan Commission on a general plan for the cities of Ottawa and Hull. The members of the House will be supplied with copies by the Distribution Office, and I have inscribed copies for the Prime Minister and the leader of the Opposition. The commissioners are: Sir Herbert S. Holt, chairman; Sir Alexander Lacoste, P.C.; Mr. Frank Darling, F.R.I.C.A.; Mr. R. Home Smith; the Mayor of Ottawa; and the Mayor of Hull. It was the intention to accompany the report with plans and drawings which it was proposed to exhibit in a room in this building, but no such room is available. We have therefore arranged that the plans and drawings shall be exhibited in the City Hall of Ottawa, on and after Monday of next week, and I sincerely hope that members will avail themselves of the oportunity of seeing them.

REPORTS AND PAPERS.

Additional Order in Council and copies of telegrams in reference to the commandeering of wheat.—Sir George Foster.

RELIEF OF GRAIN CONGESTION.

GRAIN ACT AMENDMENT BILL.

Sir GEORGE FOSTER (Minister of Trade and Commerce) moved for leave to introduce Bill No. 58, to amend the Canada Grain Act.

He said: The purpose of this Bill is to amend section 207 of the Canada Grain Act by adding to it a clause which shall be named clause "e." I will read the section so that it may be on Hansard. It is in reference to the powers of the Board of Grain Commissioners:

> The board may in its discretion order cars to be supplied contrary to the provisions of this part (a) to elevators that are in danger of collapse; (b) to places where grain is damp and thereby liable to become damper; (c) for the purpose of distributing seed grain to any point in the western division; (d) in case where the operator of any country elevator reports in writing under oath that some portion of the grain in such elevator is heated and that in order to preserve such grain it is necessary to ship such heated grain to a terminal elevator for treatment, provided, however, that no relief shall be granted in such last-mentioned case as long as the warehouseman has sufficient room in his building for the rehandling of such grain.

Section "e," which it is proposed to add by way of amendment, reads as follows:

> (e) whenever, after due examination, the board considers it necessary and advisable in order to relieve congestion and facilitate the despatch of grain.

It is proposed to give that additional discretionary power to the Board of Grain Commissioners. That amendment was proposed when the Act was last under discussion in the House; it was, I think, passed by the House, but was not passed by the Senate, and so did not become law. With the peculiar condition of things in the West

at the present time, particularly with reference to congested districts, not only where there is a congestion of grain but where a large portion of that grain is unhoused and therefore exposed to danger and deterioration and loss as soon as the warm weather sets in, it is proposed, under this added power given to the Board of Grain Commissioners, to enable them, despite the other sections of the Act, to order in special cars for the relief of that kind of distress. I will not go into an argument with reference to it. I think that hon. gentlemen, particularly from the Northwest, who know the present condition of things, will feel that it is necessary that this added power be given in order to provide for relief in these instances. I would ask hon. members to look into the Bill and, when we come to it the second time, put it through, if possible.

Motion agreed to, and Bill read the first time.

PRIVATE BILL INTRODUCED.

Bill No. 56, respecting certain patents of Stone, Limited.—Mr. Cockshutt.

VANCOUVER HARBOUR BILL.

On motion of Hon. J. D. HAZEN (Minister of Marine and Fisheries), the House went into committee on the following proposed resolution:

That it is expedient to amend the Vancouver Harbour Commissioners Act, chapter 54, of the statutes of 1913, by providing that the corporation may make by-laws for the imposition of tolls, rates, fees and dues, other than pilotage dues, sick mariners' dues and steamboat inspection fees.

Mr. PUGSLEY: Before my hon. friend the Minister of Marine and Fisheries asks the committee to go into the consideration of this resolution, I would like to call his attention to the fact that last evening at the close of business, when the hon. Minister of Public Works (Mr. Rogers) was leading the House, he was asked what would be the business taken to-morrow, and the reply was: "We will go into Supply, taking up the Estimates of the Department of Labour, Marine and Fisheries," etc. If I had known this resolution was coming up to-day I would have asked my hon. friend to be prepared to give the committee a full statement with regard to the work the Vancouver Harbour Commissioners are carrying on. I understand that there is a good deal of dissatisfaction in the minds of the people of Vancouver in regard to this work, and I think it is desirable that the reclamation and other work which the commissioners are doing should be fully explained to the committee.

Mr. HAZEN: We could let the resolution pass, and I would be prepared to give a full statement on the first reading of the Bill.

Mr. PUGSLEY: All right, on that understanding.

Mr. HAZEN: I do not wish to enter into a discussion just now, but my information with regard to the work the commissioners are doing in Vancouver is diametrically opposed to that of my hon. friend.

Mr. PUGSLEY: There have been some differences of opinion among the people of Vancouver recently, as instanced by the election there a few days ago, and perhaps my hon. friend is not correctly informed as to public sentiment with regard to the work of the Harbour Commission.

Mr. HAZEN: I do not think my hon. friend wishes to question the competency of the Vancouver Harbour Commission. If this resolution passes, the Bill founded thereon will provide an amendment to the present Act by striking out a few words. The Vancouver Harbour Commission was created by Act of this Parliament in 1913, and among other powers conferred upon the commissioners was the power to make by-laws for various purposes. Subsection "t" of section 19 of the Act deals with the power of the commissioners to impose tolls, and is as follows:

(t) The imposition of such tolls, rates, fees and dues, other than pilotage dues, sick mariners' fees, and steamboat inspection fees, as would be payable in the case of a harbour to which the Canada Shipping Act applies.

The amendment strikes out this subsection, and substitutes another, which is exactly the same in every respect, except that the words "as would be payable in the case of a harbour to which the Canada Shipping Act applies" are stricken out. The reason is that the words which it is proposed to strike out preclude the commissioners from making any charges for harbour dues, other than those provided in the Canada Shipping Act; or, in other words, tonnage dues in Vancouver harbour should not exceed the rates prescribed by

the Canada Shipping Act, or a maximum of $5 per entry for two entries, but not payable more than twice in any calendar year.

It is necessary that further revenues should be obtained if the Victoria Harbour Commissioners are to carry on their work efficiently, and the amendment will enable the commissioners to raise more revenue. Of course, whatever by-laws the commissioners pass are subject to the approval of the Governor in Council. My information is that this matter has been taken up with the shipping companies whose ships use Vancouver harbour, and who are interested in its development and proper maintenance, and that the amendment meets with their approval. They are anxious that the commissioners should have funds to maintain the harbour properly, and are willing to pay their proper contribution, in order that proper appliances may be obtained for fighting fire along the wharves and docks at the water-front, and that the harbour may be well managed and up-to-date. I shall be very glad to give my hon. friend the information which he desires on the first reading of the Bill.

Mr. PUGSLEY: I shall be glad if my hon. friend will give the committee that information on the first reading of the Bill, and also some information with regard to the work at False creek. I am told that instead of enlarging the facilities for shipping there, the commission are really engaged in filling in False creek, for the benefit, I suppose, of some of the railway companies. Another point on which I should like some information, because it is allied with harbour development work, is the contract which has been given to the Amalgamated Dry Dock Construction Company, for the erection of a dry dock, I am told. I am informed that the company has been allowed to take in the real estate for the building of that dry dock, for what seems to be the enormous sum of something over $500,000, and that they will receive interest from the Government upon that sum in the way of subsidy.

Mr. HAZEN: That does not come under my department, but under Public Works.

Mr. PUGSLEY: It is a Government matter and closely connected with the harbour development. I am told that upon these two matters there is very, very strong feeling among the people of Vancouver, and I have been asked to get all the information I possibly could upon the subject.

Mr. STEVENS: I do not wish to delay the committee at any length, but I am quite certain that my hon. friend from St. John is misinformed on this subject. The work he refers to at False creek is the reclamation of a tidal flat which is bare at every tide. Consequently, the work the commissioners are doing there could not possibly increase the obstructions to navigation. Furthermore, the channel, which was only two feet deep at low tide, is being dredged to 22 feet, and it will be 350 feet wide. This tidal flat is being reclaimed by the Harbour Commission, and is not being leased or given away to railway companies. The Harbour Commission are going to lease it for industrial purposes, and the grant from the Government to the Harbour Commission includes a clause preventing them from subletting the land without the approval of the Governor in Council. So that my hon. friend will recognize the item when the matter comes up again, I would point out that this is the very piece of property in reference to which he had an Order in Council prepared when he was Minister of Public Works, giving the land to private individuals to exploit. At that time I was a member of the city council of Vancouver, and bitterly opposed that proposition. We succeeded in sending down a resolution from the city council, and eventually the Order in Council was not passed.

Mr. PUGSLEY: What was the date of that?

Mr. STEVENS: About 1910. I can give my hon. friend the exact date later. The policy of the city council then—and it always has been the policy of the city of Vancouver as a whole—was to have such lands controlled by public bodies, for public purposes, and not alienated by private interests. A few of those whose interests are affected certainly oppose this policy of public control. With the dry dock the harbour commissioners have nothing to do at all. The dry dock is very badly needed, and would have been under construction but for the outbreak of the war. It was granted under the Dry Dock Subsidy Act, and not one dollar will be included in the Estimates which is not carefully checked over by the chief engineer of the department. I do not think that should be considered in connection with the activities of

the Harbour Board. When the matter, if it is to be delayed, comes up again, I shall be most happy to give all the information I have, and the minister also will have much more information to give.

Mr. PUGSLEY: I shall be very thankful for full information. My hon. friend refers to an Order in Council which was being prepared in 1910 for handing over False creek to private parties.

Mr. STEVENS: The portion to which my hon. friend refers is now being reclaimed by the Harbour Board. It comprises forty-two acres.

Mr. PUGSLEY: My recollection does not agree with that of my hon. friend. I remember that some question came up on an application from the city of Vancouver to be given control.

Mr. STEVENS: That is another portion altogether.

Mr. PUGSLEY: I do not remember any application to give any part of the harbour to the control of private individuals. My hon. friend may be right, because one cannot remember all that took place, but I would be very glad if he would produce a copy of the report in regard to the matter.

Mr. STEVENS: Certainly. There is a copy on file.

Mr. PUGSLEY: There must be a report either from myself or from the then Minister of Marine and Fisheries, and, as my hon. friend has the matter in hand, probably he will be able to produce a copy when the time comes.

Mr. STEVENS: Yes.

Mr. PUGSLEY: With regard to the drydock, which, my hon. friend says has nothing to do with the harbour, I beg to differ from him.

Mr. HAZEN: Nothing to do with the Harbour Commissioners.

Mr. PUGSLEY: Still it has to do with the whole question of harbour improvement; and, if the Government is a party to the payment of the enormous sum of half a million dollars for land in connection with the drydock away over on the northern side of Burrard inlet—and such an amount is very excessive, because, if the Government pays 3½ or 4 per cent on that for 35 years, it is almost equivalent to the Government paying for the land—the Government will not be so ready to give grants of other moneys for the necessary development of the harbour of Vancouver. Therefore, in the interest of my hon. friend, who, I am told, has had a great deal to do in pressing forward the matter of this drydock, it would be desirable to give to the House and to the public generally all information with regard to these matters.

Mr. HAZEN: Certainly.

Resolution reported and concurred in.

Mr. HAZEN thereupon moved for leave to introduce Bill No. 59, to amend the Vancouver Harbour Commissioners Act.

Motion agreed to, and Bill read the first time.

GOVERNMENT INSPECTION OF HOGS.

On the Orders of the Day:

Mr. HAZEN: Yesterday my hon. friend from West Kent (Mr. McCoig) asked a question in reference to Government inspection of hogs, and I told him that I would get the information and give it to him to-day. I find my hon. friend's words reported in Hansard as follows:

> Mr. McCoig: Mr. Speaker, I would like to draw the attention of the Government to the market quotations in the London Free Press. The quotation for hogs is as follows:
>
> Hogs, fed and watered, $9.50, less one-half of one per cent for Government inspection.
>
> I would like to call the attention of the Government to the fact that hog buyers throughout the country have been deducting the price of hogs one-half of one per cent for the government inspectors. As I understand, the inspectors who are employed by the Government are paid by the Government. If these men have been collecting this percentage, have they been returning it to the Government, or have they any right to make this claim upon the farmers who are selling hogs to them?

I called the attention of the Veterinary General of the Department of Agriculture to the matter, and have received from him this memorandum:

> I have been informed that the custom has arisen during the last year or two of deducting from the price paid to drovers or farmers one-half of one per cent on all hogs purchased. This deduction has apparently been agreed upon by the Canadian packers as in their opinion a fair equivalent for the losses which they suffer through animals condemned by Government inspection and pronounced unfit for food.

The money which is thus deducted from the purchase price of the hogs is retained by the purchaser and in no way goes to cover the cost of Government inspectors, their salaries being paid by the Dominion Government. It is misleading to state that one-half of one per cent is deducted for Government inspection; such is not the case. It is deducted for the benefit of the packer and to compensate him for possible losses from condemnations.

ALLEGED SUPPRESSION OF RECRUITING.

On the Orders of the Day:

Mr. BURNHAM: I would like to ask the Acting Minister of Militia if he is aware that a propaganda is about to be established in Canada for at least the partial suppression of recruiting. Pastor Russell, an American gentleman, I understand, is about to invade this country with some conscientious scruples.

Mr. KNOWLES: We will charge him duty on them.

Mr. BURNHAM: The Montreal Evening News of March 9 sets out the matter in detail. To-day I received a telephone message from the colonel of the 93rd Battalion at Peterborough asking me to take some immediate steps to preclude the possibility of Pastor Russell's offending in this way at Peterborough, where he proposes to hold a meeting on the afternoon of Sunday. The commanding officer of the 93rd informs me it is well known that the intention is to inform the people that it is not their duty to enlist, and also to tell them how they may get out of enlisting, and at the same time satisfy their consciences and also the exactions of Holy Writ. Would the Acting Minister of Militia be good enough to take this matter into his immediate consideration?

Mr. KEMP: The Government, so far as I know, are not doing anything to retard recruiting in this country, but are doing everything possible to encourage it. I have not read the article to which my hon. friend has referred.

SEED GRAIN INDEBTEDNESS.

On the Orders of the Day:

Mr. KNOWLES: I beg to ask the Minister of the Interior a question with regard to the collection of seed grain indebtedness which we had under discussion over a month ago. On that occasion the minister was kind enough to promise that he would see that only half of the amounts were collected, even from those who were so unfortunate as to have executions against them. That was done. The minister made a further distinct promise that to those from whom collections had been made in full, he would see that a refund of 50 per cent was made.

The file brought down does not show that steps were taken to fulfil that part of the undertaking kindly given by the hon. minister. I would ask what steps he has taken to see to the refund being made in the cases where one hundred per cent has been collected. And if the matter has unfortunately escaped his attention, will he see to it at once that such a refund is made? I have before me the telegram of February 2, and nothing is said in it on that point.

Mr. ROCHE: I suppose the hon. gentleman refers to a refund where seizure has been made?

Mr. KNOWLES: Yes, where collection has been made through the sheriff.

Mr. ROCHE: What had the hon. gentleman in mind—a refund to whom?

Mr. KNOWLES: To the homesteader.

Mr. ROCHE: I do not think it is the intention to make a refund to the homesteader, I do not think we could legally do that.

Mr. KNOWLES: My hon. friend and I will not quarrel about what he said, but I might say that Hansard understood him as I did. The very distinct understanding that I received from the minister's statement was that he would refund in cases in which the homesteaders, against whom there were executions, were compelled to pay one hundred per cent.

Mr. ROCHE: The hon. gentleman is a lawyer, and I am not; but I understand that where the sheriff has an execution against a man's grain crop, and makes a seizure, all the money is supposed to be paid to the sheriff. If the Government were to collect all their money as a first lien, and then were to hand back a portion, they could not very well hand it back to the man against whom the execution was made, but would have to make the refund

to the sheriff. We have some requests from some homesteaders, who have been thus seized upon, to collect in full and not to hand any back to the sheriff.

Mr. KNOWLES: We are getting away from the point. Did I misunderstand the minister, or did he say, that he would see to it that half the amount was refunded, either to the sheriff or direct to the homesteader?

Mr. ROCHE: That point is now engaging the attention of the department.

WOMAN SUFFRAGE.

On the Orders of the Day:

Hon. FRANK OLIVER (Edmonton): I have received a telegram, and see no better way of having the wishes of the senders met than by reading it to the House:

Edmonton, Alta., March 9, 1916.

Hon. Frank Oliver,
Ottawa, Ont.

As we have had no reply to previous telegram, will you as member for Edmonton present the following to Sir Robert Borden: "The Women's Institute of Alberta and the Women's Industrial Association of Edmonton, at luncheon to-day wish to know if your Government has definitely decided against woman suffrage. Have we anything to hope from you?"

Isabel A. Nobel,
President, the Women's Institute of Alberta.

M. V. Macdonald,
President, the Women's Industrial Association of Edmonton.

Sir GEORGE FOSTER: I hope my hon. friend will be kind enough to send me that telegram. I will convey the wishes of the ladies to the Prime Minister, and if the hon. gentleman will bear the expense of a telegram, I hope he will beg the ladies to keep up their hopes until they get an answer.

COAL SHORTAGE IN NOVA SCOTIA—LACK OF SHIPS.

On the Orders of the Day:

Mr. A. K. MACLEAN (Halifax): Having received a telegram from Halifax on the subject, I desire to call the attention of the Minister of Marine and Fisheries to the fact that the situation there in reference to coal used for bunkering, manufacturing, and domestic purposes is quite serious, owing to the lack of shipping. A great number of steamers owned and operated by the Dominion Coal Company have been commandeered by the Admiralty. Only yesterday, another boat owned by them, the Maskinonge, was commandeered. The effect will be rather disastrous, as it seems that in many parts of Nova Scotia a greater coal supply is absolutely necessary. In Halifax it is particularly important to get bunkering coal for transatlantic and West India boats. I will hand the exact information to the minister, but generally I would impress upon him the necessity of activity in this matter. I am hardly in a position to criticise the action of the Admiralty, but I have heard it stated by shipping men in Canada that there was a lack of method and organization in the manner in which some shipping was commandeered, and I understand that their action in Great Britain has been subject to severe comment there. However, I am not arguing that point; but I wish to urge upon the minister the fact that quite a serious situation confronts us, and that we should have from his department the greatest activity possible in order to meet that situation.

Hon. J. D. HAZEN (Minister of Marine and Fisheries): For some time past this matter has been receiving the consideration and attention of my department, and of the Prime Minister also. The vessels belonging to the Dominion Coal Company which have been commandeered have been taken by the British Government for military purposes. The facts of the case, including a statement of the difficulties that may result, have been placed before the British Government through the acting High Commissioner, Sir George Perley, and are being fully considered by the Admiralty and by the War Office. It is stated by the Admiralty that they regret having to take this course of commandeering vessels in the merchant trade, but are doing so simply because of military necessity made all the greater by reason of the fact that they have to transport not only their own troops but the troops of other countries. I shall be glad to show my hon. friend the correspondence we have had on the subject. There are matters in connection with it that, perhaps, it would not be desirable to make public, but I shall have no hesitation in showing the documents to my hon. friend. I can only say that the matter has been placed before the Imperial authorities, and I think arrangements are being made by

which, I trust, the inconvenience which the people of Halifax and St. John, even more, I think, than the people of my hon. friend's constituency, have suffered, will be remedied.

Mr. E. M. MACDONALD: In this connection, I would call the attention of the Acting Minister of Railways (Mr. Reid), though he is not now in his place, to a situation of a somewhat similar character that arises on land, in my county and throughout the industrial portion of eastern Nova Scotia. Coal consigned by the coal companies to industries, some of them engaged in the manufacture of munitions, has been expropriated by the Intercolonial railway, and the information I have by telegram is that the taking of this coal is resulting in the stoppage of these industries. The necessity weighing upon the railway must be very great if it leads them to the action which produces these results. The hon. member for Halifax having brought the matter up, I shall be greatly obliged if the Minister of Trade and Commerce (Sir George Foster) will call the attention of the Acting Minister of Railways to the fact that the coal situation in my province has become very serious, and it is very important that the railways should not interfere with coal consigned to industries.

Sir GEORGE FOSTER: I will call the attention of the minister to the matter.

SHELL DELIVERIES.

On the Orders of the Day:

Mr. CARVELL: I wish to read a telegram which has just been handed to me; when it has been read, you will understand, Mr. Speaker, why I was anxious to read it at this time. The telegram is dated at Winnipeg, Manitoba, March 10, 1916, and is as follows:

> To-day's press stated, in effect, that you in the House yesterday stated that up to a month ago a number of companies, including Manitoba Bridge and Iron Works, Winnipeg, had not made any deliveries of shells on their shell contract. The Manitoba Bridge Company commenced shipment on thirtieth of July last, completed their first contract in December, their second contract in February, and their third will be completed in April, completing all contracts on time. Your statement being an injustice to this company, please correct in House.
>
> Manitoba Bridge & Iron Works, Ltd.

I find on looking up Hansard that I did make the statement practically as contained in this telegram. While I have had no opportunity of consulting my notes or of verifying the matter one way or the other, I must take it for granted that the facts are as stated in the telegram. It may be that in the large number of documents from which I was reading, and in the multiplicity of statements, I got mixed up in some way. However, whatever the case may be, I gladly read the telegram, because I should not want to do injustice to any person in connection with a matter so important as this.

Mr. ROGERS: I can quite understand my hon. friend's becoming badly mixed, but I am sorry that he included in his statement such a reputable company as the one to which he refers. This company has one of the best reputations in the Dominion of Canada for carrying out its work.

CALGARY ELEVATOR CHARGES.

On the Orders of the Day:

Mr. BUCHANAN: I should like to ask the Minister of Trade and Commerce if any changes have been made in the storage charges at the Calgary storage elevator. If so, what is the nature of the changes, and how long are they to be in effect? I read in the press the other day that the Grain Commission were allowing grain to be stored free in that elevator, in order to relieve the congestion in Southern Alberta. I want to know whether or not that statement is correct.

Sir GEORGE FOSTER: I think that statement is correct. For a period at least, in order to relieve the congestion and to induce people to put their grain under roof and have it well cared for, they are carrying it free of charge—not free of elevation charges, of course.

Mr. OLIVER: Not free of elevator charges?

Sir GEORGE FOSTER: Not free of elevation charges—free of storage.

COMMANDEERING OF WHEAT.

On the Orders of the Day:

Sir WILFRID LAURIER: The other day I called the attention of my hon. friend the Minister of Trade and Commerce to the fact

that the report brought down with regard to the commandeering of wheat was incomplete. I am not aware that the report has since been complete.

Sir GEORGE FOSTER: To-day I put in the Order in Council what had been left out, and the telegrams in connection therewith. With reference to the cablegram mentioned, upon the instructions contained in which we proceeded to purchase the wheat, I am sorry to say that I do not think it is in the public interest that that should be brought down, for the reasons that I have stated; that it is a cablegram which involves practically all the negotiations which were in progress with the Government of Great Britain with regard to sales to the allied Governments. I am quite prepared, however, to let my right hon. friend see that telegram, if he wishes, for his own satisfaction.

PAYMENTS TO H. P. DUCHEMIN.

On the Orders of the Day:

Mr. SINCLAIR: I do not want you to think, Mr. Speaker, that we are too inquisitive on this side of the House, but I wish to draw the attention of the Secretary of State to the importance of seeing that his officers give correct answers to the questions put by members. At the last session of the House I inquired as to the amount of money paid to Mr. H. P. Duchemin for his services in connection with the dismissal of officials in the province of Nova Scotia. The reply that I received at that time was: $6,681.05. But, supposing that he might have been prosecuting his work during the year and that more money might have been paid to him, I put the question again a few days ago, and in the answer the amount given this time was $4,675.50, a difference of $2,000.

Sir GEORGE FOSTER: A difference of exchange.

Mr. SINCLAIR: In order that the Secretary of State may be able to trace the mistakes, I will read the amounts as given in the Hansard of last year and of this year, reading the amounts for 1916 first:

	1916.	1915.
Agriculture	$ 75 00	$ 124 60
Customs	813 70	1,190 00
Interior	15 00	26 31
Marine	1,181 25	1,691 10
Militia and Defence	36 80	36 80
Post Office Department.	817 50	1,242 01
Public Works	371 25	441 63
Railways and Canals	1,365 00	1,928 60

I trust that the Secretary of State will look into this matter and give us the correct figures.

Mr. HAZEN: May I ask the hon. member for Guysborough if he asked for the same information on each occasion? Is it not a fact that in one year he asked for the amount paid Mr. Duchemin for his services, and in the other the amount paid for his services and expenses; and does that not account for the apparent discrepancy?

Mr. SINCLAIR: The questions were not worded exactly alike, but I think that they have exactly the same meaning. In 1915 I asked for the amount paid Mr. Duchemin for services and expenses, and in 1916 I asked:

> That is the gross amount paid to H. P. Duchemin, barrister, of Sydney, N.S., by the present Administration for his services since October, 1911.

Mr. CASGRAIN: Gross amount for his services.

Mr. SINCLAIR: Gross amount paid Mr. H. P. Duchemin, including everything.

Mr. PUGSLEY: That would include travelling expenses.

Mr. CASGRAIN: Not at all.

Mr. SINCLAIR: If that is the explanation, I assume that the Secretary of State will give it to me, together with the particulars of each item.

INSURANCE COMPANIES EXTENSION BILL.

On motion of Sir Thomas White, the House went into Committee on Bill No. 34, to authorize certain extensions of time to insurance companies, Mr. Rhodes in the Chair.

On section 1—extension of time for applying for license:

Sir THOMAS WHITE: The purpose of this Bill is to extend until the end of the next session of Parliament the charters of life insurance companies whose power to apply for license under the provisions of the Insurance Act, 1910, will expire before that time. It is on all fours with the Bill which was introduced and passed into law during last session of Parliament. Its object is to obviate the necessity of the life

insurance companies in question applying for extension by private Bill. The matter was carefully considered by the Banking and Commerce Committee; no objection is made, as far as I can see, to the passing of the Bill.

Mr. A. K. MACLEAN: The legislation is exactly the same as that of last year?

Sir THOMAS WHITE: Yes.

Section agreed to.

Bill reported.

BANK LOANS TO FARMERS.

BANK ACT AMENDMENT.

On motion of Sir Thomas White, the House went into Committee on Bill No. 33, to amend the Bank Act, Mr. Rhodes in the Chair.

On section 2—bank may lend on security of live stock:

Sir THOMAS WHITE: This Bill received very careful consideration by the Banking and Commerce Committee. Some sections were re-cast, and I think that I am safe in saying that the Bill, in its amended form, as now before the committee, meets with the approval of all the members of the Banking and Commerce
4 p.m. Committee who were present when it was under consideration. Some members from the West who took considerable interest in the Bill when it was under discussion on the occasion of the second reading, were good enough to give expression to their views in committee, and I think that nearly all the objections that were suggested have been met.

Mr. MACDONALD: Is the word "horses" in subsection 12 wide enough to cover both male and female species? It might be urged that if you use specific language in regard to any other class of animal, you should use it also in respect of the equine species.

Mr. A. K. MACLEAN: I think the Interpretation Act would cover that.

Sir THOMAS WHITE: I think it would, but my hon. friend calls attention to the context. There is no objection to inserting the words "horses and mares."

Mr. PUGSLEY: I remember that a very distinguished judge, in addressing a jury, gave a definition which may be of interest to my hon. friend. He said that the word "bovine" came from the Latin word "bovus," which means ox, both male and female. Perhaps that interpretation would apply to this case.

Sir THOMAS WHITE: I think it would, but there is no objection to the amendment.

Section, as amended, agreed to.

Bill reported.

LIFE INSURANCE COMPANIES INVESTMENT BILL.

Sir THOMAS WHITE moved the second reading of Bill No. 35, respecting the investments of life insurance companies.

He said: Mr. Speaker, this is a measure referred to in the Budget speech. It provides that life insurance companies, both Canadian and non-Canadian, shall, within a certain period, invest a portion of their assets in Dominion currency debentures or securities. The object we have in view is to ensure a market to that extent for Dominion securities which we may issue during the period of the war.

Mr. A. K. MACLEAN: What will it amount to?

Sir THOMAS WHITE: The superintendent of insurance thinks we will obtain from $15,000,000 to $20,000,000 in addition to the amount which has already been taken up by life insurance companies.

Sir WILFRID LAURIER: How much is that?

Sir THOMAS WHITE: They have taken about $7,000,000 of the domestic war loan and to the extent that they hold the war loan they will have complied with the provisions of this Act. The provision is that:

> Every Canadian company licensed under the Insurance Act, 1910, to transact the business of life insurance shall invest in, and, on the said thirty-first day of December, shall hold and own securities of Canada to the amount of not less than fifty per cent of the increase in the net ledger assets of such company during the year one thousand nine hundred and fifteen after deducting from such increase (a) the amount of increase during the said year in the actuarial reserves held by the company in respect of its policies in force outside of Canada, and (b) the amount of increase during the said year in loans, liens and premium obligations on its policies in force in Canada.

The object of the exceptions will be obvious. Companies must maintain actua-

rial reserves in respect to their policies in force outside of Canada and they are also obliged under the terms of the policy to make loans upon their policies. We are dealing only with the matter of net ledger assets in the case of Canadian companies. In regard to non-Canadian companies, it is provided:

After the fifteenth day of February, one thousand nine hundred and sixteen—

Which was the date of the Budget speech.

—and deposit of securities in respect of the business of life insurance required or permitted by the Insurance Act, 1910, to be made prior to the first day of January, one thousand nine hundred and eighteen, with the Receiver General or with a Canadian trustee or trustees appointed under and for the purposes of the said Act by any company licensed under the said Act to transact the business of life insurance in Canada other than a Canadian company shall consist of securities of Canada.

The securities of Canada are defined in the interpretation clause of the Act as being "debentures, debenture stock, bonds or other securities of Canada payable only in the currency of Canada." We have less hesitation in introducing the measure because life insurance companies, for reasons which I shall go into when the taxation measure is under consideration, have been exempted from its provisions. In addition, under the present conditions, the securities of the Dominion yield a fairly high rate of interest. Of course, they can obtain no better class of investment either for themselves or for their policyholders.

Mr. SINCLAIR: Does it relate to future investments only?

Sir THOMAS WHITE: It relates to the years 1916 and 1917. Every Canadian insurance company must, during the present year, invest, if it has not yet already invested, in the securities of Canada, to an amount of not less than fifty per cent of the increase in the net ledger assets of the company during the year 1915.

Mr. SINCLAIR: Will that involve the sale of some of their present investments?

Sir THOMAS WHITE: I think not. The life insurance companies, as far as I know, raise no objection to the proposed legislation. I think it advisable, unless the House thinks otherwise, to refer this Bill to the Banking and Commerce Committee, so that it will receive full consideration, and so that, if any persons desire to be heard, the committee may hear them.

Mr. PUGSLEY: It seems unfair to municipalities and provinces whose bonds are so largely held by insurance companies that it should be limited entirely to the securities of the Dominion of Canada. I do not see why it is considered desirable to discriminate as between Canada and the various provinces, cities and municipalities in Canada. It would seem to me that if a life insurance company, instead of investing in foreign securities, as many of them have done in the past, should place their investments in Dominion, provincial, or Canadian municipal bonds, that ought to be sufficient. The various municipalities, as are also the provinces, are interested in getting a fair rate for their bonds. They are all carrying on works of importance to the country at large and they are making contributions for the purposes of war. I think I am safe in saying that all of the provinces, cities and municipalities have made contributions for the purpose of assisting the Empire in connection with the war. They have contributed for patriotic purposes to the Red Cross Fund, the Patriotic Fund and other funds. I do not see why, in legislation providing for investments in purely Canadian securities, it should be declared as a condition to these companies doing business in Canada, that they must take fifty per cent at least of the securities of the Dominion of Canada. Unless the minister has information to the contrary, I would suppose that it might necessitate these companies getting rid of provincial and municipal securities. Then, take section 5 in regard to securities which companies may be required to deposit under the Insurance Act of 1910 prior to the first of January, 1918; these securities must be entirely the securities of Canada expressly excluding the bonds of the various provinces or municipalities which might yield a little higher rate of interest, but which would be just as safe a security for the insurance company as the bonds of the Dominion of Canada. There ought to be some pretty strong reasons presented for excluding under this Bill the securities of the various provinces and municipalities.

Mr. A. K. MACLEAN: I suppose one answer that would be urged against the objection made by my hon. friend from St. John (Mr. Pugsley) is, that it is very much easier for the municipalities to market their bonds in the United States than for the Dominion of Canada to sell war issues in the United States or in any other market. When the minister referred to this matter in his Budget speech, I was inclined to inquire whether it might not be wise to take

steps to mobilize foreign securities held in this country, or at least to take power to ascertain the volume of foreign securities held here. I remember seeing some years ago, a statement issued by one of our Canadian banks giving a list of its securities, and I was impressed with the large volume of foreign issues which they held as investments. Doubtless the Government of Canada will have to make further war loans, and it struck me that some arrangement could be made whereby our railways, and banks, and other large corporations could make a disposition of their foreign securities and re-invest in Canadian war loans. Perhaps the minister has given consideration to that point; possibly, there may be very little in it. As the minister knows, the British Government have taken steps to mobilize all foreign securities held in England, and they are disposing of them from time to time in order to stabilize exchange. I think this might be worth looking into in Canada.

Sir THOMAS WHITE: With reference to the observations of my hon. friend from St. John, I should be disposed to concur in his views if times were normal, but if we were not at war, this legislation would not be brought down. It is purely a war measure, and arises out of the necessities of the situation with which we are confronted. I have already explained to the House that our expenditure for the war this year may reach $250,000,000, and we are confronted with a financial situation which will involve finding four hundred and twenty-five million dollars or more. Of course, to meet that expenditure, we shall have our revenues to the extent that they are available; but after we have taken that into consideration we are still confronted with a very serious financial situation by reason of the war, and next year we shall be confronted with an equally serious situation. I do not mean to say for one moment that we shall not be able to meet that situation. I am quite sure that we shall be able to meet it, but at the same time it is not to be disguised that the raising of these large sums of money is not, and will not be, an easy achievement. It is, therefore, necessary for us to avail ourselves of any method of adding to our market. This legislation imposes no hardship upon life insurance companies, for the reasons that I have given, and I do not think that it should be objected to by municipalities, or provinces, for the reason that the Dominion has to bear the heaviest burden of the war. It is true, as my hon. friend has said, that the municipalities and provinces have done admirably in contributing to patriotic and other funds, and that they are manfully bearing their part in the war. But when all that has been said, the fact remains that the chief stress and strain of the war falls upon the Dominion exchequer. I do not think it is necessary for me to cite analogous legislation, but the instance which occurs to one's mind most readily is that of the United States during the Civil War. Hon. gentlemen no doubt know that the American banking system dates back to the expedients adopted during the Civil War, when Congress, in order to provide a market for the securities of the United States, legislated that note circulation should be secured by United States bonds.

Sir WILFRID LAURIER: There is quite a difference between the American legislation and this proposal.

Sir THOMAS WHITE: The American legislation made an artificial market for American securities; it compelled the banks to take securities as cover for their note circulation. I think it would be competent for the Dominion Government, even in ordinary times, to provide that life insurance companies should hold a certain portion of Dominion, provincial or municipal securities; I do not think that would be unsound legislation at any time. But this legislation is frankly a war measure, limited to this year and next. It will be of material assistance to the Government in raising money for war purposes.

Sir WILFRID LAURIER: Have the life insurance companies been consulted with regard to this legislation?

Sir THOMAS WHITE: Not specially, but so far as I can learn they do not object to it. I think they regard it as reasonable.

Mr. PUGSLEY: Which section of this Bill will cover foreign insurance companies?

Sir THOMAS WHITE: Section 5.

Mr. PUGSLEY: Why is that section limited? Why should it not be applied to all foreign companies licensed to do business in Canada? Why should they not be compelled to make certain deposits consisting of Dominion bonds, etc.? We know that foreign insurance companies are doing an enormous "life" business in Canada. Why should they not be required, as a condition of obtaining a license to hold a certain amount of Canadian securities? Take one of the big New York companies, like the

Equitable, a company which I suppose has $500,000,000 of securities, and is doing a very large business in Canada. I am only mentioning the Equitable as one of the big American companies. I think it might very well be provided that these foreign companies should, as a condition of their receiving a license to do business in Canada, invest in Canadian securities to an extent proportionate to the business they are doing.

Sir THOMAS WHITE: The Bill goes further than my hon. friend suggests. My hon. friend is probably aware that, as the business of foreign life insurance companies in Canada increases they must increase their deposits, which are held, either by the Receiver General or by trustees, as security for their policyholders in this country. Now, this Bill has in contemplation that such deposits shall, until the first day of January, 1918, be made in Canadian securities only; that is to say, such companies shall not be permitted to deposit any other securities.

Mr. PUGSLEY: That is only for the increases.

Sir THOMAS WHITE: Yes. It would be rather harsh legislation to compel them to sell the vast amount of securities that are now held by the Receiver General or by trustees for the security of policyholders here, and to invest in Dominion securities, which would take the place of the securities. Under the measure as drafted, we provide that Canadian insurance companies shall deposit a certain increase of their net ledger assets in Canadian securities. Now, in order to be fair to them and also to provide an additional market for Canadian securities, we propose to enact that non-Canadian companies, which are required to make deposits in respect of their increased business in Canada, shall make such deposits in Canadian securities. So that the Bill would seem to put both Canadian and non-Canadian companies on all-fours. It must be remembered that they are in competition one with another, and it would not be fair to deal with one class of companies without at the same time dealing with the other.

Mr. PUGSLEY: I am not able to see that. This section only requires the foreign companies to make those additional deposits that are rendered necessary by the increased business between now and the first of January, 1918, in Canadian securities. But we know that foreign life insurance companies, such as the Equitable Life of New York, which I have already mentioned, the New York Life, the Mutual Life of New York, and the English companies, do an enormous amount of life insurance business in Canada, and they are required to make deposits of securities to be approved by the Minister of Finance. Where would be the hardship in requiring those companies to convert their foreign securities into securities of Canada as a condition of their being permitted to continue doing business? If their foreign securities are good, they can easily be converted into cash in the United States. There is a plethora of money in the United States seeking reasonably good security, and it would be the easiest thing in the world for those companies to get rid of their American securities, and there would be no hardship whatever in requiring them to substitute securities of Canada for such securities. I have always thought that in normal times foreign companies should be compelled to invest in securities of Canada, of the provinces, or of the various municipalities. In these war times, when, as the minister says, there is difficulty in raising money and when we are imposing these exceptional taxes upon the people, there can be no ground of complaint if we require these foreign companies to convert into securities of Canada their foreign securities which are now deposited with the Minister of Finance and for which they can easily find a market in the cities where their head offices are.

Sir THOMAS WHITE: This discussion is out of order; but I should like to say, in answer to my hon. friend, that he has overlooked the fact that the deposits made by foreign companies are largely in Canadian investments, such as securities of municipalities and provinces, and mortgages.

Mr. PUGSLEY: Only partially.

Sir THOMAS WHITE: I think largely in Canadian securities.

Mr. A. K. MACLEAN: What does the Insurance Act require?

Sir THOMAS WHITE: I do not think it confines them to Canadian securities; but, as a matter of fact, the deposits made by these companies are largely in Canadian securities or mortgages.

Mr. PUGSLEY: Surely not mortgages?

Sir THOMAS WHITE: Yes.

Mr. PUGSLEY: Deposited with the Minister of Finance?

Sir THOMAS WHITE: No, with trustees, because the Act provided for the deposit with the Minister of Finance or with trustees. Section 5 covers the case of deposits with a trustee or trustees. The suggestion of my hon. friend would mean that these companies would have to sell out their municipal and provincial securities and realize on their mortgages. That would be quite a serious disturbance; and, having regard to the situation as it exists, and the fact that our companies carry on business in foreign countries just as these companies carry on business in Canada, I think we have gone as far as it would be prudent to go.

Mr. PUGSLEY: I did not mean that these foreign companies should be compelled to sell out their existing provincial or municipal securities. What I meant was that all foreign securities, which are now held by the Minister of Finance as a condition of these companies being permitted to do business, should be disposed of, and for them should be substituted securities of Canada. As a war measure, when we are making these exceptional provisions, there would be no harm in compelling that to be done.

Mr. ROGERS: I really think we should get the House in order. We are not in committee just yet. When this Bill goes into committee, this discussion will be in order.

Mr. SPEAKER: Order. This discussion, although interesting, is absolutely out of order, and I would suggest that it take place in the Committee of the Whole.

Motion agreed to, Bill read the second time, and referred to the Select Standing Committee on Banking and Commerce.

WHITE PHOSPHORUS MATCHES ACT AMENDMENT.

The House again in Committee on Bill No. 37, to amend the White Phosphorus Matches Act.—Mr. Crothers. Mr. Rhodes in the Chair.

Mr. PUGSLEY: Is the minister satisfied that the Bill is all right as to form?

Mr. CROTHERS: Yes.

On section 1—extension of time within which matches may be used:

Mr. A. K. MACLEAN: This section repeals section 13 of the White Phosphorus Matches Act, what is that section?

Mr. CROTHERS: It provides that the manufacture of these matches shall cease on January 1, 1915, and that the sale shall cease on January 1, 1916. The effect of this section is to give six months longer to sell out the goods made prior to January 1, 1915, and also to extend the period within which such matches may be used to January 1, 1917. The chief object of the Bill was the protection of those in factories engaged in making these matches. The manufacture ceased at the date mentioned in the Bill, January 1, 1915, but a longer time is required to sell them, and those who buy require a longer time to use them. As the time allowed has expired, it is necessary to date this Bill back to January 1, 1916, which is done by section 2.

Mr. A. K. MACLEAN: What quantity of matches have they on hand?

Mr. CROTHERS: I was given a statement of the number of cases, but have not it before me at the moment. They have on hand a considerable quantity, but they think they will be able to sell them out, in the usual course of business, within six months. My hon. friend from St. John (Mr. Pugsley) seemed to think there was something objectionable in the form of this Bill, but I cannot for the life of me see anything wrong in it. Section 1 provides that the original Act shall contain the wording here set forth. I think there is no objection to the insertion of these words. Then, section 2 provides that the amendment proposed to the Act shall be deemed to have come into force on January 1, 1916. I cannot see that there is anything contradictory in those two sections.

Mr. PUGSLEY: I have great respect for the view of my hon. friend, but I really would like to have his view confirmed by the Minister of Justice, who is the legal adviser of the House. Section 1 repeals section 13 of chapter 12 of the Statutes of 1914, and substitutes the following:

> This Act shall come into force on the first day of January, one thousand nine hundred and fifteen.

—except a certain section that is named. Then, section 2 provides:

> The provisions of this Act shall be held to have come into force on, from and after the first day of January, one thousand nine hundred and sixteen.

Mr. CROTHERS: Not so far as the original Act is concerned.

Mr. PUGSLEY: It does not say so. The result is that you first have a section of the old Act which is to come into force on January 1, 1915, and the Act that brings that

amending section into force does not itself become operative until a year afterwards, namely, January 1, 1916. If the Minister of Justice (Mr. Doherty) says I am wrong in that, I have not a word to say.

Mr. DOHERTY: The effect of section 1 of this Act is to provide that the Act of 1914 shall read as here provided instead of reading as it now does. It puts these words into the Act of 1914. In that case the words "this Act" apply to the Act of 1914, and in effect they are only a repetition of the words that presently are in the Act of 1914; for, as I understand it, the substantial change is to add the proviso. If the Minister of Labour, instead of repealing the entire clause and substituting a new one, had proceeded by saying that this section of the Act of 1914 is amended by adding the following proviso, then section 14 would have read as it will read after this amendment is passed. I do not know whether I am mistaken or not, but it seems to me that the hon. gentleman's difficulty results from the fact that he takes the words "this Act" in the section it is proposed to substitute in the Act of 1914, and the words "this Act" in the second section of this Bill, as applying to the same Act, whereas, as a matter of fact, in the first place these words apply to the Act of 1914, and, in the second place, they apply to this Bill, which will become an Act if it is passed. I do not see any contradiction here.

Mr. A. K. MACLEAN: It is somewhat confusing.

Mr. DOHERTY: I confess that until the hon. member for St. John (Mr. Pugsley) made the suggestion, though I had read the Bill, it did not create any confusion in my mind.

Mr. MACLEAN: Why are the words "section 1 retroactive" put in the margin of section 2 of the Bill?

Mr. DOHERTY: I understand that to refer to section 1 of this Bill being made retroactive, and the effect of that section is to amend the Act of 1914 so as to extend certain delays therein provided. I understand that the reason for making it retroactive is that under the existing disposition of the Act of 1914 offences have already been committed.

Unless this amendment is read as having dated back from the date mentioned in the second section, people might be affected, although we have changed the law now and extended the time during which it was lawful to do what they did.

Bill reported read the third time and passed.

WINDING-UP ACT AMENDMENT.

Hon. C. J. DOHERTY (Minister of Justice) moved the second reading of Bill No. 55, to amend the Winding-up Act.

He said: The purpose and effect of the Bill is simply to correct an anomalous situation that exists in the province of Ontario by reason of the fact that in the Winding-up Act "the court" is declared, for the province of Ontario, to mean the High Court of Justice of Ontario. To "the court" is committed the authority to make rules. Under the present arrangement of the courts in Ontario, there is one court called the Supreme Court of Ontario which has two divisions, the appellate division and the high court division. The result of the present legislation is that, for the purpose of the Winding-up Act, the power of making rules is conferred upon the High Court of Ontario, and, under the general statute made at the time of the change of name, would pass exclusively to the High Court Division of the Supreme Court of Ontario. All other rules of practice in Ontario are made by the judges composing the entire Supreme Court of Ontario, the two divisions. It is represented by them that it is anomalous that we should have this exceptional case under the Winding-up Act, where the rules are made by the judges of one division only.

Motion agreed to, Bill read the second time, considered in committee, reported, read the third time, and passed.

SHIPBUILDING IN CANADA.

The House in Committee of Supply.

Labour, $68,500.

Mr. PUGSLEY: Before going into the items of the Department of Labour perhaps the minister would not mind if I should speak very briefly on the subject of shipbuilding in Canada to which I know my hon. friend from Pictou (Mr. Macdonald), my hon. friend from Guysborough (Mr. Sinclair), and other hon. members have given a great deal of attention. This industry would, of course, give employment to a large number of labouring people, and in other ways it would prove of enormous advantage to Canada. I want to say, in the presence of the Minister of Labour and other members of the Government, who I

hope will give heed to my words—although the experience I have had in the past has not led me to hope for very much in that direction—that I think it is not only lamentable but is wholly discreditable to this Government that, although Canada has been engaged in this great war since August of 1914, upwards of 18 months, and although this Government has seen gradually disappearing the shipping of the Empire, and the shipping of Canada that in the past had a great deal to do with the carrying trade of Canada being commandeered by the British Government to meet the interests of the Empire; and although Canada was once one of the greatest shipbuilding countries in the world, this Government, so far as the public and this Parliament know, has not taken one single step during those 18 months towards the encouragement of shipbuilding in Canada. The situation is getting worse. Only to-day we heard complaints by different members of the House as to difficulty in regard even to the getting of such a necessary article as coal from one part of our country to another. The situation is rapidly becoming worse, and it is a lamentable condition of affairs that this Government have not been able to see their way clear, up to this date, after the war has been in progress for 18 months, to announce to Parliament any measure which they have decided upon for the encouragement of shipbuilding in Canada. I can remember the time, not many years ago, when in the port of St. John, at the head of Courtenay bay, 1,200 men were employed in the building of ships; and all over the Maritime Provinces it was the same. We have great opportunities for shipbuilding upon the Atlantic and Pacific coasts, and upon the Great Lakes, and all that our people need is reasonable encouragement to start up a great shipbuilding industry to give employment to thousands of our people. I would hope that to-day, in connection with the Estimates of the Department of Labour, the Minister will be able to give to this Parliament and the people of this country some hope that at last the Government has awakened to the necessity of taking hold of this important subject and is prepared to do something to restore to Canada this great industry which, not many years ago, was of such vast importance, and gave employment to so many people.

Mr. BURNHAM: I think the hon. member for St. John is quite right in more ways than one. First of all, I think he is right in expecting great things of this Government, and I think he is particularly right in expecting great things of the Minister of Labour. I am well aware that the Minister of Labour is very highly thought of by the people of Canada, and that he has devoted his great industry and the best of his brilliant mind to the solution of various industrial difficulties in such a way as to meet with the approval of the people in general and of labour in particular. The idea of encouraging industries is, of course, a protectionist idea, and naturally occurs to any reasonable man. It is absolutely in violation of all free trade principles. However, I am not here to chop logic on that question; I am here to agree with the hon. gentleman, and I think that the solution of one of the great difficulties of Canadian trade lies in that very encouragement to which he refers. There is at the present time before the United States Congress, a Bill of massive proportions for the encouragement, or rather the restoration of the supremacy of American shipping. A friend of mine sent me a copy of it, which I promptly forwarded to the right hon. the Prime Minister, as it seemed to me to be not only of very great proportions but to contain within its four corners much that is of prime necessity to this continent in general. That Canada should have a merchant marine is a prime necessity. We cannot hope for the lowering of freights unless we have a marine of our own which we can control.

Mr. A. K. MACLEAN: I noticed a letter from the hon. gentleman in the press of this city a few days ago in which he urged the wisdom of having no imports.

Mr. BURNHAM: I think the hon. gentleman has mistaken the import of the letter.

Mr. MACLEAN: Will the hon. gentleman explain to me now what was in that letter?

Mr. BURNHAM: I cannot offhand because it was a reply.

Mr. MACLEAN: What was the substance of it?

Mr. BURNHAM: It was replying to a specific statement of a newspaper, and I am not aware that the newspaper took it up and repudiated it in the same light that the hon. member for Halifax is anxious to do. I can not recall the letter as having any bearing on an objection to imports. It was a specific statement which, if withdrawn

5 p.m.

from its context and from the facts in dispute, might mean something altogether different. I am not prepared to undergo cross-examination on this point just now without at least having the letter here.

Mr. A. K. MACLEAN: I understood the hon. member to say in that letter that it was very desirable from a Canadian standpoint that we should have no imports; and, if that was the hon. gentleman's view, I was going to ask him what he proposed to do with Canadian shipping.

Mr. BURNHAM: I intended it for exports, that is all. I did not think anything about the imports at all; it was the exports.

Mr. PUGSLEY: So they would do business only the one way?

Mr. BURNHAM: It did not occur to me that we were going to have a Canadian system of shipping for goods coming into Canada at all.

Mr. A. K. MACLEAN: Just for exports?

Mr. MACDONALD: And the ships would come back empty?

Mr. BURNHAM: The point at issue was the matter of exchange, really, or the payment for goods in a particular way. It would be irregular, and I would be called to order by the Chairman if I introduced that question here. As to that, the hon. member for Halifax (Mr. Maclean) is perfectly right. We are working in this country under a great disadvantage, but by our genius and industry we hope to be able to export our goods to all quarters of the globe. We should be provided with the means for export.

Mr. A. K. MACLEAN: How are we going to get paid for those exports?

Mr. BURNHAM: That is a very elementary thing; I should think the hon. junior member for Halifax would work that out for himself if he would just take a little time. That is a matter of political economy of a very simple sort.

Mr. MACLEAN: How are we going to get the ships back? Will the Government have to pay something equivalent to freight to secure their return?

Mr. BURNHAM: How are we going to get the ships back?

Mr. MACLEAN: Yes. Is the hon. gentleman quite content that they should come back empty?

[Mr. Burnaham.]

Mr. BURNHAM: It is not likely that they will come back empty. They may make trips around the globe carrying other people's goods just as British ships do.

Mr. MACLEAN: I can understand British ships doing that, because they carry the trade of every country in the world, and their ships can make trips to and from all parts of the world. It is not only that you are willing to export, but you want to know how you are going to get your ships back to this country under such circumstances.

Mr. BURNHAM: I can only say to the hon. gentleman that the principle of a free exchange of commodities which he is endeavouring to introduce in this debate is entirely foreign to it. What I am arguing is that the preponderance of this country in trade and industry cannot be acquired by doing our manufacturing outside. It must be done here. The superiority of the Dominion is continually being demonstrated and it is an absolute denial of the contention that the hon. gentleman is now endeavouring to make. However, I agree heartily with the position taken by the hon. member for St. John (Mr. Pugsley) that we should aid, by every means in our power, the development of this as of every other industry.

Mr. SINCLAIR: Has the hon. gentleman any proposal to make as to how industries can assist the building of ships?

Mr. BURNHAM: We might possibly imitate the free trade country which subsidizes its vessels and we might possibly develop the industry in that way.

TECHNICAL TRAINING FOR EX-SOLDIERS.

Mr. E. W. NESBITT (North Oxford): We have a great many wounded men coming back from the front and we will have more. While these men have been loyal enough to volunteer to go to the front and fight for their country, I believe that they will be proud enough also when they come back to help themselves as much as possible by working for their own living. A great many will come back wounded and be unable to work at their ordinary vocations. At Lyons, France, they have already established large schools to educate wounded men. They are educating them in trades that they will be able to work at no matter how badly they are wounded, provided they are still capable of doing

something. By that means they will be able to make a living for themselves. I am quite sure, from what I know of a good many of the men who have gone to the front, that they would rather do that and be more or less independent than depend entirely on what they may get from the country in the way of an annuity. Now is the time, before too many of them come back, for the Minister of Labour to try to establish technical schools in various provinces where these men may be taught trades. The expenses will probably be large, but not nearly so large as it would be to maintain the men in idleness. It is a step in the right direction, and now is the time to undertake it. I do not think we should wait until the war is over, because it always takes time to get anything of this kind properly started and under way. I would urge the minister to take up the question with his department at once, and try to work in conjunction with the various provinces to get the schools started. We have nothing of the kind in Canada as far as I know. The minister can easily get a description of the schools in France, and this would be of very material assistance to him in establishing them here. I understand that they are working admirably there and that the men are learning trades so that they will be in a position to help themselves which otherwise they could not do.

Mr. OLIVER: I want to support what my hon. friend from North Oxford has said in regard to the desirability of technical training for men partially disabled who have returned from the war. I had the honor of bringing that matter to the attention of the House on a former occasion and I can not allow the present occasion to pass without reinforcing what my hon. friend has said. I would like to ask the minister what department has charge of the care of returned soldiers. There is what is called, I think, a Hospital Commission, or something of the kind. Which minister is supposed to have charge of that commission?

Mr. CROTHERS: Senator Lougheed is the chairman of it.

Mr. OLIVER: But I suppose it must be under some department answerable to Parliament.

Mr. CROTHERS: I suppose it is under the Militia Department.

Mr. OLIVER: That is not the main point I want to speak of. Certainly, the education of partially disabled men is as important, not only to the men themselves, but to the welfare of the state, as anything else that we can consider in connection with the war. We are going to have an enormous number of broken men, men who were able to engage in the most active life before their enlistment. Otherwise, of course, they could not have enlisted. They are drawn from all walks of life. Some have had educational opportunities; others have a trade; but a large proportion have not had any of these advantages. If these men are so disabled as not to be able to continue in the vocations in which they were previously engaged, they may still be physically and mentally capable of engaging in other occupations suitable to their partially disabled condition; and it seems to me that we are not fully discharging our duty to these men unless, besides giving them their pensions, we give them an opportunity to acquire knowledge of one kind or another which they will be able to turn to advantage. A pension, let it be as liberal as you please, can never replace to the man himself the liberty and ability he had before he became disabled. Again, a citizen who is living on his pension and engaged in no productive work, is not producing wealth for the State, or taking the part he could take if he were made competent according to his physical ability. It is only men who are entirely disabled, so to speak, or not of the brightest intellect, who cannot, by some form or other of education, be made efficient in some industrial or educational line. I think that this is a work that might very well be taken up by the department over which my hon. friend presides. I can think of no other department of the Government within whose sphere it could more naturally or properly fall, and I therefore desire to support the suggestion of my hon. friend from North Oxford, and urge as strongly as I can that this is a duty which rests upon our country; an obligation which we can never fully discharge, but which, so far as we are able, we certainly should discharge, not only in the interests of the man himself, but in the interests of the state as well.

When the Prime Minister was discussing something in this connection on a previous occasion, I had the honour to mention to the House that at the present moment

there is a technical school in the city of Edmonton fully equipped for this kind of work. The equipment is paid for by the Provincial Government, and the school is maintained at the cost of the tax-payers of the city, with some assistance from the Provincial Government. Here, right at hand, we have an institution that would cover the case in a very considerable measure. There are men in the school for teaching quite a number of trades. The school is conveniently situated for taking care of a large number of returned soldiers. I did not urge this upon the Government when I mentioned the matter before; but I do urge upon the attention of the Minister of Labour now, and through him upon the attention of the Government, that this school be utilized. Already we have a large number of partially disabled soldiers in Edmonton and Northern Alberta; men who have served their country to the best of their ability, and are now broken men. Owing to financial conditions, there is a possibility of the school at Edmonton being closed, or at all events, of its scope and efficiency being largely reduced. And I would very strongly urge that instead of waiting any longer, the Government might very well begin to experiment in this matter by taking cognizance of this particular school, and adopting means whereby co-operation can be secured between this Government and the school authorities; or, if the Government thought fit, they could take entire charge of the school with a view to the education, in such trades and callings as the men are physically fitted for, of those partially disabled soldiers who have returned from the front and are willing to engage in those callings.

It will be understood that the disabled man who is desirous of attending such a school must have means of support while he is receiving instruction; that is a matter that would have to be considered, and if it were taken care of, it would have to be at the expense of the Dominion Government. That would be supplementary to the soldier's pension, which, of course, would not be sufficient to enable him to attend the school and support himself. I would not advocate that men should be put in this school to learn trades that they are not mentally fitted for, or that they should be forced into any school. But a labourer, for instance, who has had no opportunity of learning a trade, and has lost a leg, we will say, might learn at this school some trade that he could become absolutely efficient in without his full complement of legs. But in order to enable him to do that somebody would have to supplement his pension. If the man were ambitions and mentally fitted for the work, I think it would be a most excellent investment for the Government of the country from every point of view. Besides, I maintain that it is a legitimate obligation that properly rests upon us to see that everything that can be done is done to make up to those men the loss that they have suffered and the loss which the state has suffered by reason of the reduced efficiency of these citizens. I therefore take this opportunity of urging upon the Government, and upon the Minister of Labour, in whose department this matter most properly falls, and who has in a large measure the organization at his disposal, the necessity of giving effect to the suggestions I have made. I hope that it will be possible for him to see the matter as I have tried to present it to the House, and that he will present it to his colleagues successfully, so that we may have results, and I wish particularly to put in a word for the technical school at Edmonton, which stands there to-day ready and prepared to do this work.

Mr. E. M. MACDONALD: The question of technical education comes home acutely to a great many people on account of the situation presented in Canada by the lack of occupation for our returned soldiers. That situation naturally calls for sympathy and attention of an unusual kind, but that does not in any way lessen the general importance and necessity of Canada taking some forward step in regard to the whole question of technical education. When we contemplate, as we have been doing during the past few months, the return to Canada of men who might be classed as broken men with all their old affiliations and associations, formed previous to their going to the front, broken off, and a new phase of life opened up to them, it is natural that we should look to the state to provide some certainty of occupation for those men on their return. In regard to the whole question of pensions, I have on the Order Paper a motion on which I hope to address the House in a few days, but in regard to the duty of Canada to our returned soldiers, I wish to make some remarks now, because last summer in my own province the attention of the Government was called to its duty in this connection. The Hospitals Commission, which was appointed by the Government and over which Senator Lougheed presides, is composed of a large number of estimable gentlemen throughout

Canada not directly connected with the Government, who are anxious to serve in some way and who have, no doubt, given a great deal of service on that commission. It occurred to a number of people in our province that what is known as technical or vocational training in connection with our returned soldiers was the fundamental solution of the problem after they had been brought through the stages of illness and convalescence. That problem was presented last summer in my province to the commission, and a large amount of correspondence was carried on with Mr. Scammell, secretary of the commission; and, although I am not making any announcement on the part of the commission, I understand they appreciate to the full the desirability and the necessity of some action being taken in that regard. At a conference held between the members of the commission and the representatives of the different provincial governments, a plan for vocational training was submitted by Professor Sexton, who is at the head of the technical schools at Halifax, and the method of training under provincial and federal control was adopted and approved by that body. I have under my hand a letter from the head of one of the technical schools, and, as it is interesting in this connection and shows what has been done, I will read it to the House:

> We have already admitted several returned men to this school, and, as I intimated to you in conversation when you visited the school last December, we find ourselves well equipped to give just the help the men need. These men have been admitted without fee on the expectation that the ultimate arrangements made by the Dominion Government will include a sufficient grant to relieve our Board of Education from the additional expenditure.

That, I think, is the crux of the matter at this stage.

> The expense connected with this work will be greater for each indiivdual than that required for the care of the average pupil in regular attendance at the school. The classes for soldiers will of necessity be smaller, a greater variety of work will be presented, and the work itself must be more intensive, requiring the highest grade of skilful industrial teachers. However, I am confident that with the co-operation of our Advisory Industrial Committee and the Board of Education, which is assured, and with a sufficient grant to cover the additional expense, we can provide in our new building for the teaching of several hundred of these men. There is no doubt in my mind as to the necessity of providing this work. Let me give you two examples:
>
> 1. A young man, not yet 19 years of age, who had formerly been connected with this school, has returned with loss of one eye and with a badly maimed left arm. He is now being prepared for matriculation into the Faculty of Applied Science of the University of Toronto, and will ultimately become a civil engineer.
>
> 2. A young Scotchman, age 27, who has had some experience in railroad work, and whose right arm is partially paralysed, is being taught railroad telegraphy. He has had a fair elementary education, and will become, I expect, a proficient man in the line of work chosen.
>
> Several have been inquiring about taking work with us, and I find it a little early yet for them in their period of convalescence. But now that the men are returning in large numbers, it seems desirable to formulate some definite plan, and to make it widely known.

That illustrates the practicability of the proposition suggested, and the way in which it is being worked out. It is recognized by the different bodies who have been consulted that the situation is this: Technical education being under the control of the provinces, there are already in Nova Scotia, Quebec, Ontario, Manitoba, Alberta and British Columbia, technical schools with varied equipment depending on their age and the conditions in the respective provinces, which are prepared to take in pupils for vocational training. In my province there was established a few years ago by the Provincial Government a magnificent school, which is doing splendid work and by which the soldiers from the Maritime Provinces may be fitted for new vocations in place of those for which their experience at the front has totally unfitted them. In Toronto, there is a magnificent school which was opened only last year, and which is equipped as well as almost any technical school on this continent.

Mr. KYTE: Under whose control is it?

Mr. MACDONALD: It is under the control of the city of Toronto. In Montreal the technical school is equally well equipped.

Mr. CASGRAIN: There are two of them in Montreal.

Mr. MACDONALD: And my hon. friend from Edmonton speaks of the conditions in that town. It seems to me that assistance in vocational training must come from the Dominion Government and that it ought really to form part of our war expenditure. I do not wish to enter upon any controversial subject in regard to a matter of this kind as to which there is no party feeling, although I realize that there are items comprising millions of dollars which are to be included in our war debt, which certainly deserve to be investigated; but I feel that it would be proper to include in our war debt any sum necessary to provide vocational training for our returned soldiers and to equip the young men of this country

to aid in the industrial development of Canada. That money has to be found, and I realise the difficulty of finding it out of the ordinary revenues of the country; but I submit that the proper place to find it is out of the war debt of the country, because the necessity for this work is a direct consequence of the war. Tentative arrangements have been made, in certain provinces at least, under which men who have returned, and who are in a convalescent stage in some of the homes which exist in certain of the different provinces, are being trained, and in my province the provincial authorities are preparing to provide technical instruction in the vicinity of those homes in order that education along technical lines may be given to those men as soon as they are able to receive it.

That cannot be done without money. The Provincial Governments provide the schools and the instructions; it is the duty of this country to assume, as part of the burden imposed by the war, the responsibility of providing education for these men. In the working out of this problem, the necessity suggested by my hon. friend from Edmonton (Mr. Oliver) would be provided for. But I go further and say that this is a duty imposed upon this country as a whole as a direct result of the war and because of the conditions which will exist in Canada by reason of the war. I find the following in the report of the Department of Labour:

> While the importance of the whole subject of technical education is unquestioned, the pressing urgency of other matters consequent on the outbreak of war has not made the past year opportune for further action.

I say that the duty of increasing the opportunities of technical education falls upon us as a direct consequence of the war; it is just as much the duty of those responsible for the direction of Canada's affairs as is the sending of men to the front.

Mr. NESBITT: More so.

Mr. MACDONALD: My hon. friend is more emphatic on the point than I have stated. The duty is imperative and the necessity for action equally so.

What is the situation? We are taking men between eighteen and forty-five years of age, wherever we can find them; asking them to go voluntarily and fight the battle of the Empire and of civilization. The Prime Minister has intimated that the aim of Canada is to send half a million men. Realizing the situation and the necessity, the president of the Canadian Pacific Railway, speaking yesterday in Montreal in the presence of the Minister of Militia (Sir Sam Hughes) pointed out what it means to the industrial life of this country to take away half a million men. He spoke as one enthusiastic and sympathetic for Canada performing her full duty in the war. In my own province, in the great coal industry, from 1,500 to 2,000 men engaged in mining have gone to the front. These are men in the most active period of their lives. They are leaving the old men, who were loaders of the coal, and the boys, who have been doing boys' work. The consequence is that coal production is seriously interfered with. To-day we heard the complaint made by the hon. member for Halifax (Mr. A. K. Maclean), and I have myself voiced the complaints of industries in Nova Scotia, including those engaged in the manufacture of munitions, that the reduced coal production is impairing their efficiency. This is only one line of industry, but in every other line something of the same result is seen by reason of the fact that the men in the prime of life have been taken away, leaving the older men and the boys. A large percentage of these men will come back, as the hon. member for Edmonton has said, broken men. How are you going to prepare the boys to handle the technical work that these men have been doing?

But that is not all. When you look at what Canada is to be, when you hear our optimists talk about the great immigration that will come to Canada from other countries, the question is, how are we to equip ourselves to build up the industrial prosperity which Canada must have if she is to fulfil her high destiny? You are taking away the very flower of our industrial army. The only way to supply the places of those who have gone is to fit the boys early to fill the places of the others. This is a necessity resting upon the Dominion as a whole, as a direct consequence of the war. Consider what was done in Germany. I do not often quote at length, but I have a statement here which puts the case so clearly, and with such emphasis, that, perhaps, I may be pardoned if I read it:

> When industrial evolution progressed to such a state that the apprenticeship system began to seriously weaken, Germany bethought herself of providing trade instruction in the schools. The master workman was so busy maintaining themselves against the competition of others and in keeping up with the scientific advancement of his trade that he did not have time to teach the apprentice. The latter found that his branch of industry was being so minutely specialized by the division of labour that he did not have a chance to acquire all the fundamentals of his vocation in his master's workshop. Schools were started which offered prac-

tical training suitable for various trades in the evenings and on Sundays. At first attendance at these classes was voluntary, but when it came to be recognized that the instruction was immensely valuable to both wage-earners and employers, compulsory attendance was introduced and has become almost universal in Germany. It became evident that evening and Sunday classes were too great a strain upon the young workers, so that later developments have made it necessary for employers to allow their apprentices free time in working hours to attend school for six to eight hours a week and pay them at the same rate as if they were working in the factory. Some manufacturers opposed these regulations for a year or more and then supported such measures because they found the training and increased intelligence of the workers was more advantageous to their output than if the young men were kept all the time in the factory. Thus it is seen that the state has the boy under its control in the schools after he has gone to work and almost up to the age of maturity. If he goes to work at 14 he has to continue in the special industrial schools for either three or four years more until he becomes a journeyman. The extent of these schools may be judged from the number who attend in the kingdom of Prussia. In 1884 there were 58,000 pupils enrolled in these industrial schools, and in 1909, the number had increased to 360,000.

The extent of the instruction in different trades may be comprehended when one realizes that in the city of Munich 52 different trades are provided for by separate teachers and schools. There are classes for such apprentices as hotel waiters, chimney-sweeps, plasterers, blacksmiths, bakers, saddlers, and men in other callings which we consider do not need any theoretical training to learn their trade. This city of 580,000 people spends nearly $250,000 a year on this kind of teaching alone.

Besides training competent mechanics Germany provides schools for preparing bosses and foremen. Men who have been through the industrial schools and have worked at their trade for two or more years may go to institutions where they spend most of their time for two or three years in receiving instruction to prepare themselves for positions of industrial responsibility lower than those of manager. These thoroughly trained men superintend and direct the operations of journeymen in Germany's factories.

This progressive country also provides splendid technical colleges for the training of engineers, commercial universities for the preparation of men who shall direct the business and industry of the empire, navigation schools, mining schools, industrial art schools, leather schools, textile schools, etc. There is some sort of education offered for every kind of human activity and every grade or worker. The older traditional education is not slighted and generous provision is made for classical education in public schools and universities. There is an absolute faith among all the people in the power for good education and everywhere honour is accorded to any kind of trained man commensurate with this degree of learning.

Is it any wonder that Germany has forged to the forefront of civilized nations in the last 30 or 40 years? In 1870 the manufactures, the inventions and the foreign commerce of the separate German states were far below those of England and France. To-day united Germany stands in the front rank of the nations of the world in industrial production and she clearly leads all other nations in the application of science to the industry and to the arts. Her position is all the more remarkable because this result has been achieved in a country in which the agricultural and mineral resources are not great and in the face of the burdens due to long and costly wars, to maintenance of a great army and to the draining of a large part of its population through emigration. Where the emigration in the 80's was 200,000 a year, it is now only 25,000, who go mostly to South America and Africa, where German industrial projects are being carried out. The Germans themselves are proud to proclaim that the greatest single instrument in accomplishing their wonderful industrial growth has been technical education.

A few years ago, a number of prominent German manufacturers, educationists and public men made an extensive tour in the United States with the idea of finding out how serious a competition the latter nation might prove in the future struggle for world trade. Their concensus of opinion was that the United States possessed greater natural resources, a superior factory system, workmen of greater energy, industry, and mechanical skill and cheaper railway transportation. Notwithstanding all these advantages, the German experts thought that even the existing grip of America on international trade would tend to weaken. They commented on the absence of any adequate system of special education for commerce, banking or foreign trade in the United States. The meagreness of technical education, the trifling annual contingent of chemists, engineers, trained foremen, educated dyers, weavers, electricians, and mechanics as compared with the throng of lawyers, physicians, dentists and unspecialized graduates of colleges seemed shortsighted and improvident. The foreign investigators concluded that on the whole the "American danger" had been greatly exaggerated, and that a steadfast adherence by Germany to the technical educational policy and commercial methods now in practice will leave the fatherland little to fear in future competition with American manufactured goods.

This condition in Germany, the existence of which is conceded on all sides, is the result of thirty years' development along the lines of technical education. Why is it that Germany to-day possesses so many trade secrets? The processes connected with dyeing trades are known only to Germany. Large amounts of money are being expended in some parts of the United States for the purpose of inquiring into these processes with a view to establishing the dyeing industry in that country. Why is it that Germany possesses these secrets? Simply because their young men were educated along scientific lines. Why is it that ordinary German soldiers are able to manipulate the instruments by the use of which they employ what we are inclined to call nefarious and inhuman systems of warfare? Simply because the common men over there learned all these things as part of their early training and education.

Our newspapers keep pointing out to the people in an optimistic way the benefits that will come to Canada after the war. There are people who say, "We are going to have so many people on the land." All right; let us have the people on the land. But our country will not develop as enormously as is hoped for if the population is confined to the land. We must have those who till the soil and produce the wheat, but we must take steps along these other lines as well if we hope to obtain the development in this country that we want. During the last fifteen years there has been a tendency on the part of the people to go from the country into the towns. It is just as important to Canada that the people who come to our cities shall be trained to be useful, producing citizens, as it is to have men on our farms producing wheat.

The necessity of some action in this regard seems to me to be absolutely imperative. I am not speaking in a partisan way; I simply desire to impress upon the minister and upon the Government the necessity for some action. I might make complaints; I might indulge in unfavourable criticism; but I do not purpose doing that, because I think the subject ought to be dealt with along broad lines.

It may be said that education is a matter that should be looked after by the provinces. What has been done in this regard? A few days ago we voted an immense sum of money to be used over a period of ten years for the education and instruction of young men along agricultural lines. Schools have been erected in provinces where formerly they did not exist; arrangements have been made with the provincial authorities for the expenditure of this money every year with a view to extending the facilities of agricultural instruction. Assistance is given to two schools interested in subjects connected with navigation. My hon. friend the Minister of Marine and Fisheries has made provision for navigation schools in connection with the technical schools in our province; these navigation schools are doing good work. Assistance has been given to McGill university for a transportation course and for a forest-products laboratory; assistance has been given in a number of other ways. The constitutional question, therefore, does not present any difficulty at all; the Provincial and Federal Governments have worked together in the expenditure of this $1,000,000 which we give every year to agriculture.

[Mr. Macdonald.]

It may be said that a proposal of this kind involves extravagant expenditure at a time when we ought to economize. But, hon. gentlemen, remember the old scriptural saying, "there is that scattereth, and yet increaseth; and there is that withholdeth more than is meet, but it tendeth to poverty." It is a peculiar thing to me if hon. gentlemen cannot find in the Estimates that have been brought down to Parliament any sum of money which could be taken out and a substitution made therefor of a sum to be devoted to the assistance of technical education. In our province some of the citizens have offered bursaries to stimulate educational competition among the younger men, with the result that during the last year or two young men have been able to take up short courses at the technical schools and fit themselves for active industrial work. But necessarily that comes within the scope of the duty of the State. The results are by no means so broad or comprehensive as could be obtained or as ought to be obtained by that generous assistance which this Government should be able to give. It seems to me that satisfactory results could be obtained by the application of federal assistance to the organization that we have in Canada to-day in the matter of technical education. No grants should be made or assistance given for the purchase of sites or the erection of buildings; provision for these should be made by the provinces. But supplementary assistance ought to come from this Government for maintenance, for development, and for the special equipment which is necessary in order to provide for the soldiers who will return from the war and for the men who must take the places of those who have gone to the front. With some support of that kind, having the educational facilities in all the towns where we have manufacturing interests, there is no reason why the local boards of education should not provide for technical instruction along certain lines. Certain cities in Ontario, I understand, are now taking steps towards beginning this work.

Mr. BURNHAM: Night schools are the germ of that.

Mr. MACDONALD: Night schools in the cities. Hamilton and London are two cities—

Mr. NESBITT: But they do not go far enough with the type of education that will suit the returned maimed soldiers.

Mr. MACDONALD: The returned maimed soldier is only the smallest part of the problem. He can be and will be provided for. My argument is that the public are only beginning to appreciate the serious necessity of grappling with this problem on seeing the object lesson of the returned soldiers. I can understand that the public are apt to be quiescent upon this problem. I think the minister will agree that arrangements have already been made for some institutions to deal with the returned soldiers. But where you have the technical institutions in the particular provinces, and where you have the provincial authorities in sympathy with you, the problem can be worked out.

I was advised by Prof. Sexton, only a week ago, when he was here in attendance at the meeting of the Mining Institute, that they were proceeding to send two or three instructors to a convalescent home in my province to begin instruction in the different trades which these men might be suitable for. He thought the first thing to do was to have experts who were accustomed to training people to vocations, to determine what the men who had come back from the front could do, and what lines of usefulness they could be trained in, so as to supply education along that particular line. We are only beginning to awaken to the necessity of action on the question of technical education generally, by reason of the fact that we see these disabled men coming back from the front. We know that they have nothing to do, and the question is, what are we going to do with them? Hence technical education comes to the front.

At six o'clock the House resumed and then took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

CONSIDERED IN COMMITTEE—THIRD READINGS.

The House in Committee on Private Bills, Mr. Rhodes in the Chair.

Bill No. 6, to confirm certain agreements made between the Canadian Northern Ontario Railway Company, the Canadian Northern Railway Company, and the Canadian Pacific Railway Company—Mr. Morphy—in Committee.

On section 1—agreement confirmed:

Mr. BLAIN: This agreement has been sanctioned by the Board of Railway Commissioners. It was gone into pretty thoroughly by the committee, and I think it is satisfactory.

Bill reported, read the third time, and passed.

Bill No. 23, to incorporate the Ontario Niagara Connecting Bridge Company—Mr. German—in Committee.

On section 14—time for commencement and completion of bridge:

Mr. REID: This section provides that the agreement must be approved by the Governor in Council. I am not sure whether that includes the plans. It is a very important point, and I would ask that the Bill stand for the present.

Progress reported.

Bill No. 28, respecting the Kettle Valley Railway Company, and Vancouver, Victoria and Eastern Railway and Navigation Company—Mr. Green—in Committee.

On section 1—extension of time for construction:

Mr. ROGERS: I do not see the member here in whose name the Bill stands. The amendment provides that the company may start the railway within two years and have five years to finish it. This is an important matter. If the railway is not finished at the end of five years, our legislation is null and void. I would ask that the Bill stand until the hon. member for Kootenay can be present.

Progress reported.

Bill No. 26, respecting the Corporation of the City of Brantford—Mr. Cockshutt—in Committee.

On section 1—extension of the Grand Valley Railway authorized:

Mr. MACDONALD: What amendments have been made in Committee?

Mr. COCKSHUTT: The Bill is intended to confer upon a commission, to be elected by the city of Brantford, power to run the Grand Valley Railway, which the city has acquired by purchase. It embraces not only the street railway of the city of Brantford, but a spur that runs to Paris and Galt, partly through the county of Brant and partly through the county of Waterloo. The Bill is not granting any powers beyond those already contained in Acts and amendments that have been passed on behalf of the Grand Valley Railway Company, which

was incorporated by this House in 1900. This is merely an enabling Bill to bring the railway under the jurisdiction of the city of Brantford. The commission is elected from time to time, annually, I think, as provided in the Bill. The matter has been thoroughly threshed out before the Railway Committee, and the Provincial Government have signified their satisfaction with the Bill. The municipalities concerned are satisfied, as are also the members of the two districts. I may say that the city solicitor of Brantford was advised by the Railway Commission of Ontario to come to this House. They said that as the original charter had been granted by this House, and as the railway had been declared to be for the general advantage of Canada, it was a matter for this Parliament to deal with.

Mr. MACDONALD: Would the hon. gentleman state briefly what amendments were made in committee?

Mr. BLAIN: A considerable number of amendments were made. As the Bill will have to stand over on account of some clerical errors, I move that the committee rise and report progress.

Mr. MACDONALD: I do not want the Bill to stand over. I was interested when this Bill came up for a second reading, and I just wanted to know what amendments had been made in committee.

Mr. REID: I was in the committee when this Bill came up. It is merely to allow a commission appointed by the city of Brantford to take over the Grand Valley railway. The railway will become a municipal enterprise. When the matter came before the railway committee, the only point raised was that the Bill should be amended so that the commission would be in the same position as the Grand Valley Railway Company in respect of paying taxes to the several municipalities through which it passed. In other words, under the Ontario Act, a municipal railroad does not have to pay taxes to other municipalities through which it passes; but in this case the railway committee felt that, as the Grand Valley railway passed through a number of municipalities and at present paid taxes to them, unless this section was inserted, the municipalities would lose the taxes which they had been receiving and the city of Brantford would get the benefit. Therefore, they decided that it was better to insert this section, so that the city of Branford, if it took over this railway, would pay the taxes just as the Grand Valley Railway Company had been doing previously. That left the matter in this position, that the city, to be relieved, under the Ontario Act, of paying the taxes, would have to apply to the Ontario legislature. I think that, with the exception of a few clerical errors, that was the only amendment that was made.

Mr. COCKSHUTT: There are only a few clerical errors and some clauses that have been left out of the Bill, and I think that we might as well go on.

Mr. MACDONALD: I was not speaking with any idea of opposing the Bill.

Mr. BLAIN: I beg leave to withdraw my motion.

Progress reported.

SECOND READINGS.

Bill No. 52, for the relief of Henry John Thomas Wardlaw.—Mr. Wallace.

Bill No. 53, for the relief of Robert William Thompson.—Mr. J. A. M. Armstrong.

REPORT.

Report of the International Waterways Commission, pertaining to St. John river.—Mr. Rogers.

TECHNICAL TRAINING FOR EX-SOLDIERS.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Mr. E. M. MACDONALD (Pictou): Speaking of the duty of the Government in regard to technical education, it was quite understood that the question of the care of the returned soldiers is to be in charge of the Hospital Commission; and, as was said before dinner, the understanding is that the provinces will provide the facilities for the educational training of any of these men, with assistance to be given by the Federal Government through the Hospital Commission. But I have already pointed out that the arrangements for carrying this into effect have not been perfected. I assume, however, that they will be perfected. Should this not be accomplished, the responsibility for failure will rest upon the Government.

That, however, is only one of the phases of the larger question. In regard to that larger question, Canada seems to be living very much in the present. We are concerned, indeed obsessed, with the task that has come to us of taking part in the war, and

of enlisting all our people within the ages when volunteering could be expected. Occasionally, an optimist like the Minister of Public Works (Mr. Rogers) tells us of the many thousands of people who are coming here after the war, and this very splendid condition of affairs is expected as a matter of certainty simply because many of our people do not stop to think about the real question, the question whether we are equipped to achieve the results that we desire. The Minister of Trade and Commerce (Sir George Foster) spoke some warning words in regard to the situation and reminded us of our duty, a duty which I am attempting in some small way to recall to the attention of the House and the country. The hon. gentleman said:

> It would be a great mistake if we put away from us all care, all investigation, all fronting of what will be the real difficulties of the future, and that when the supreme economic struggle comes find ourselves not well prepared, light-heartedly and without thorough examination entering into the greatest contest in our history, the greatest in the history of the world.

And in concluding his remarks upon that portion of the subject he said:

> Looking at the matter in that light, we cannot look forward to the end of the war and keep ourselves up until that period on the false assumption that peace will bring with it unexampled prosperity.

I think the Minister of Trade and Commerce was not too pessimistic. Thousands, and hundreds of thousands, of the very flower of our country's life will come home disabled, with their ambitions of life gone, many of them unfitted for the occupations in which they were engaged before the war. This will impose upon the rest of the Canadian people the task of caring for these men. Our population, in proportion to our area, is a comparatively sparse one, and when you take the spirit and ambition of the energetic men between 18 and 45 from the life of this country, and impair the usefulness of many of these men, the problem that awaits the Canadian people is seen to be a very serious one. And that problem is not helped by declaring that we are to have a tremendous immigration upon our agricultural lands. After the battle upon the plains of Europe and the East is over, will come the great industrial contest, in which the maintenance of our interests will depend upon our being in a position to grasp a portion of the world's trade. Where are we to find the men to fill the places of those who have been taken from the industrial life of this country—and not merely the places that are now empty, but those that must be created if Canada is to become the nation she ought to be? Today our eyes are blinded to the real industrial situation by the fictitious prosperity created by the injection into the business life of the country of an expenditure of three or four hundred millions upon munitions of war. Many industries which were absolutely in a state of quiescence before this expenditure began are now active. We do not realize the conditions which the Minister of Trade and Commerce has shown as inevitably coming. But the question of how to prepare for this coming condition is one worthy the most serious attention of this House. We might well lay aside many of the petty squabbles in which we engage to devote ourselves to this question.

Some hon. MEMBERS: Hear, hear.

Mr. MACDONALD: That is not to say that the loyal Opposition in this free Parliament should allow hon. gentlemen opposite to assume a Kaiser-like attitude. It does not mean that, because the Minister of Public Works (Mr. Rogers) and his associates come to Parliament and indicate their will, we, the representatives of a free people, are bound to accept it, nor that these hon. gentlemen are to be above criticism.

Mr. ROGERS: Who is objecting?

Mr. MACDONALD: The hon. member's method of objecting may take one form or it may take another. If I am to understand him as agreeing that we should devote ourselves to the consideration of the great question which I am discussing, I would accept his position frankly. What I complain of is that the Government has not devoted itself to the question of where Canada is to find herself at the end of this war. The hon. Minister of Public Works knows that. He knows that the president of the Canadian Pacific railway found it necessary, only yesterday, to raise objection to certain methods of the Government in that regard.

Mr. ROGERS: Was it only yesterday that he raised that question?

Mr. MACDONALD: So far as I know from reading the papers, he made a public utterance on that question yesterday. Of course, he may have been talking to my

hon. friend privately; if so, I suppose my hon. friend can tell us all about it.

Mr. ROGERS: Oh, no; he never talked to me privately.

Mr. MACDONALD: I do not want to be diverted from the consideration of the matter which I am in all seriousness endeavouring to present to the House, solely with the idea of attempting to convince hon. gentlemen of its importance and of the necessity of dealing with it along big and broad lines. The consideration of the question as to where Canada is to be after this war may well occupy the larger share of our attention, because it is the supreme question affecting the Canadian people at this time. The future destiny of Canada is not to be solved simply by declaring that immigration is to take place, or that this, that, or the other thing is to occur. We must deliberately, clearly and calmly analyze the economic condition of the country, see what changes are necessary, see what preparation should be made, and endeavour to meet the condition which we know is to come. To-day in Canada we have colleges for the education of our professional men; we have schools where our boys and girls are taught the rudimentary elements of education; we have agricultural schools, which receive encouragement and assistance from Federal and Provincial Governments. With the exception of the action taken in the matter of technical education by the provinces, which have strained their revenues to the limit in dealing with the problem, no action has been taken to provide for the training of our artisans in such manner that we in Canada shall be able to make things that we do not now make, and to make better those things which we do make at the present time. If we in this Parliament can do anything to attain that end, we shall be fulfilling in some measure our duty in this respect. In the province of Nova Scotia the advantages derived from assisting technical education have been demonstrated. Some twenty years ago mining schools were established in the province, in which men who worked in the mines could study in the evenings those things a knowledge of which would make them more efficient in their work. The result is that to-day it is our proud boast that the managerial positions in all our mines are filled by the sons of Nova Scotia, who were trained in these local technical schools. But outside of the local technical schools that are to be found in one or two places in the country, no organized attempt has been made to follow out a systematic method of technical education. I hope that it will be possible for the Minister of Labour to initiate at this session of Parliament some comprehensive and systematic method of training, in the application of technical education, the younger men of this country who are not going to the war. The marvels of the science of chemistry have been a potential factor in the development of this country; they should be put in the possession of the intelligent young people of Canada so that they may deal with them, elaborate them, and derive from them the results which have been obtained in Germany. Now is the time to begin. It will not do to begin this work after the war—that will be too late. The advantages which may be obtained in the way of trade, business, and other conditions, will all be pre-empted by other countries when the world gets right again, unless we begin now. The report of my hon. friend's department intimates that during the war a barrier to progress in this respect is encountered in a financial sense. I submit that that is not a barrier. If you deal with the problem of the vocational training of the soldier who returns from the war, you will take the money out of the war debt. Assistance to technical education in the different provinces would be just as much a charge upon the war debt as any expenditure for munitions or anything else that you buy for war purposes. You do the one thing in order that the Canadian boys can go out and win; if you do the other, you provide for a situation for which the war is directly responsible. I trust that I have not pressed this question along lines which will prove unacceptable to my hon. friend the minister. Canada's duty in this matter has always appealed to me as being one of the very highest importance. I have offered these remarks in no spirit of partisanship or of hostility to the Government; I present them as opening up a line of action for this Government upon which they should embark without delay.

Mr. J. H. BURNHAM: I think the committee will agree that the hon. member for Pictou (Mr. E. M. Macdonald) has presented the case of technical education with a great deal of honest fervour and enthusiasm. The speech that he has made is one of those series of observations which go a long way in encouraging those people who have so vast an undertaking as this in their

hands. There was a time when the universe at large, more particularly what we understand now by nature, was a closed book. It is only one hundred years since it was first known that there was a mysterious substance called phlogiston in wood and in other combustible substances, which, when warmed to a sufficient degree of heat, liberated itself and caused the consumption of the wood. When it was discovered that it was the combination of oxygen with the constituents of the wood—or fuel, or whatever it might be—at a certain temperature which provided this astonishing result, the natural cause of the phenomenon burst upon the world at large, and the science of chemistry was founded. That was one hundred years ago. Since that time there has developed every conceivable form of natural and scientific curiosity. Each has rewarded the sons of men with the most extraordinary results, not the least of these being the science of hydrostatics or the dynamics of electrical science. All these things now provide the casual reading of men who a few years ago did not know anything about them. Our libraries now contain books of so clear and specific and definite a character that any man or woman who has a reasonable degree of curiosity can take those books and read the romance of nature, which in terms may seem to be a contradiction, but which, as a matter of fact, is the most wonderful thing in the history of the universe. It is only a few years since people, some, indeed, now lingering upon the scene, looked up at the skies without knowing what they meant. It is only a few years since the matter of discovering the constituent elements of sirius, the dog-star, flashed upon the world; when Kirkhoff and Bernstein, following up Sir Isaac Newton's wonderful discovery of the spectroscope, produced the sprectrum analysis, when at once all those materials which go to make up this globe were discovered to be in the stars and in the suns that fill the vastness of space. The consequence was that mankind learned to realize the wonderful unity that exists, not only according to the laws of gravitation and movement, but according to the copernican law, in all of those wonderful things connected with what might be called particularly the science of mechanics. As soon as all those wonderful things were seen, the unity of the qualities and constituents of the stars, the riddle of the universe was read. We have come down now to the time when the electron, that single vortex of force which so long ago was foreshadowed by Newton and later on by Lord Kelvin to be the ultimate constituent of matter, has been ascertained to be the necessarily ultimate constituent of matter. The unity of force and matter has been established. Force and matter for many a long generation were considered to be two things; in fact, it was a great discovery when force was defined to be a condition of matter; but now they are ascertained to be one and the same thing. So that we have at last got down to the basis of all things, and when people at large understand this and are able to grasp the simple, great, overpowering and overwhelming fact that law, comprising a variety of laws, is the basis of the method and the matter of the universe, all the rest is comparatively simple, a matter of detail, and immediately becomes within the sphere of general knowledge.

Mankind was a wonder until the cell was discovered; and when the whole of the living world was discovered to depend on the ultimate constituent of the cell, when the cellular theory was outlined, humanity and all of nature become somewhat different. The inorganic and the organic world might then be related, and it was found that they were. At last it dawned on some inquiring mind that the crystal was alive—and then was bridged the apparent chasm between the organic and the inorganic worlds. This inquiring spirit has raised the enthusiasm of mankind. Those men who for long years worked for an insufficient amount of money from early morning till late at night in a vague and precarious and hazardous endeavour to maintain their families and bring them up intellectually, are appealing to the world to be at least provided with the means of acquiring knowledge—not with the mere reward of toil, with wages. There is not a workman, an artisan, a mechanic, in the world who at the present time is not a professional man in the highest and the most dignified sense. These men are now working with an understanding of the principles of knowledge and the principles of construction, and doing this, there is no finer body of intellect or occupation in the world. Such a work as we are engaged in—mere administration, stained frequently by the vehemence and sins of politics—fades into insignificance beside their works. These men are the apostles of the great future, built upon their understanding of an infinitely great past. That in my opinion

9 p.m.

is why the Classics have gone. At one time they ruled the world. If a man could jabber a little bit of Latin,

he was a wonder. If a man had a son who knew the difference between amo and canto, or some simple thing like that, he immediately proceeded to edify his neighbours by bragging about it, and frequently quoted a lot of Latin that never existed and that was forbidden by all the rules of syntax or prosody. But that made no difference,

And still the wonder grew,
That one small head could carry all he knew.

But that day has gone by. People are not frightened a bit now either by the sound of a dead language or by stupidity and superstition. They have worked their way into the uncommon nature of things and they have become imbued with this lofty spirit of knowledge. When I meet a man who understands what he is doing in the construction or the manipulation of steel, I, being only a lawyer, take my hat off to him. There was a time when I would have thought, not knowing any better, that if anybody was going to take off his hat he would be the man; but not now, that day has gone by. The mere cut-and-dried professions are nothing; it is the inquirer after knowledge to whom we have to look; and therefore, when we conduct ourselves in so sordid and mean a way as to pay vulgarly low and insufficient wages for the knowledge that these men have acquired and for the highly spiritual manner in which they apply it, and when we consider that their families are entitled to the best and are ready to take the best and ready to develop the best that we can afford, it becomes indescribably mean when we pay large sums to the grafters and vulgar manipulators of ordinary every-day life. The sin then becomes vastly greater, and, to tell you the truth, I can quite understand why it is that a man has written a book in which he says it is a sin and a shame to die rich; and the time will no doubt come when it will be considered a reproach to a man not to know enough to employ his money in the spread of knowledge—that such a man has not acquired the first element of knowledge, and we may rest assured that his mind and his taste are both equally vulgar and uncultivated.

Mr. NESBITT: And what about these schools?

Mr. BURNHAM: If I have failed to show you why it is that these schools are necessary, and why it is that their time has arrived, then my remarks have been in vain. I had hoped that I would have imbued gentlemen like yourself with that enthusiastic spirit which I at this moment feel for the acquirement of knowledge by one and all. That is why I introduced the subject in this way. I will leave its further discusion to other men, like the hon. gentleman from Pictou (Mr. Macdonald), who has so ably demonstrated the necessity of pursuing this matter with all industry and skill, and to the minister himself. I felt that perhaps there was something incumbent upon me to say which might induce or develop in us all that spirit of enthusiasm which itself is the very spark of freedom and of knowledge.

That it is which drives us on to higher and nobler things, for I am thoroughly impressed with this idea, that once your son or your daughter has acquired a taste for real knowledge, there is nothing under God's heaven that can stop them except their last breath. It is a habit. It is a wonderful thing; but it is a habit that once acquired can never be given up. It is the only good habit I know of that is like that. But it is a fact, and therefore, if we can do anything, by word of mouth or in any other way, to induce others who are less skilled perhaps than we are to enter upon this way of knowledge and pursue it but for a short time, we can rest assured of one thing, and that is that they will never be able to forsake it. There is no going back; there is no apostasy. Disease, physical corruption, may overtake man or woman, but the spirit—the divine spirit— of knowledge, and love of knowledge, the breadth and singleness of purpose which true knowledge gives, which we see every day exemplified in scientific men who give up their priceless discoveries to the world at large without qualms or self-seeking, endure forever. If these men were politicians they would start dickering over every little thing—the invention of some contrivance to latch a door, or something of that sort; but that is not the divine spirit of knowledge. Once the divine breath of knowledge enters a man, he is spiritually regenerated, and, if at any time, fit for the Kingdom of Heaven. I know that the minister is imbued with this spirit of enthusiasm, and I pay him no idle compliment to-day when I say I know that, because I know many of the leading representatives of labour in this country, and they feel that he has their interests at heart. If I did not think he had their interests at heart I frankly would not pay him the deference of saying this,

but I think it, and I believe they think it too. There are other people, no doubt. I do not wish to derogate from the good qualities of anybody who has gone before. I know that the hon. member for Rouville (Mr. Lemieux) was a man inspired with the desire to benefit the working men and develop their knowledge. It does no man any good to deprive another of his just meed of praise. Before I sit down let me say—and I cannot express myself too strongly in this regard—that we must devote ourselves more than ever to the enthusiasm which underlies the acquirement of knowledge, and we can rest assured that if we do the people will be only too glad to acquire it.

Mr. S. FRANCIS GLASS (East Middlesex): Mr. Chairman, I desire to make a few observations on this subject. There is in the House and in the country very little difference of opinion as to the desirability and need of lending our assistance to education in all its branches. I do not think that I go astray when I say that last week this House committed itself in a sense to the principle of technical education in accepting my resolution and approving of the methods that this Government has adopted to develop the flax industry of this country. I do not think that we have any reason to look farther for an example of the results to be obtained from technical education than the work which has been accomplished under the direction of the Department of Agriculture in the different counties throughout Ontario and, I understand, in other provinces. I think no better evidence of the interest which this Government has taken in the question of technical education could be afforded than the fact that in the distribution of the agricultural grants authorized by this Parliament provision was made that a liberal proportion of the money should be expended in the further development of agricultural education and instruction. Prior to the time when this system of imparting agricultural instruction in the various counties was adopted, we had our agricultural colleges in the provinces and our experimental farms in the Dominion, and young men from the farms were getting the benefit of the instruction that the teachers at the colleges and farms could impart. What was the result when they had acquired this knowledge? In only a very limited number of cases did the men who had taken advantage of these educational opportunities go back to the farm to apply their knowledge to useful purpose in their own districts, but, on the other hand, the brightest and best of the men graduates from these colleges became instructors in the colleges and on the experimental farms of foreign countries and sister colonies. We would be in exactly the same position, from a medical point of view, if our doctors and medical men, after graduating from the universities and colleges of our country, ceased to prosecute their profession in our midst and gave to other lands the benefit of their study and experience. Under such circumstances, of what earthly use would they be to us? I may be drifting away somewhat from the subject before the committee at the present time, but I refer to this for the reason that our Government has awakened to the fact that if we let the brightest of our men get away from us, instead of devoting their education to the upbuilding of their own country, the money spent upon their instruction will have been practically wasted. I remember that when the opportunity came a few years ago of making this new departure to which I have referred, the Government said to the gentlemen representing the county council of Middlesex: "We will send an expert up there who is trained in all the different branches of agriculture, and who is able to solve the various problems that confront the farmer in the carrying on of his operations. The Department of Education will pay his salary, the Department of Agriculture will pay all the expenses of sending this man through the county, and if any farmer has any particular problem, such as the analysis of soils, the spraying of his orchard or otherwise, let him apply to this man and he will help him." The Department of Agriculture paid his expenses, and the Department of Education paid his salary, and he was maintained there practically at no expense to the county. To promote the principle of co-operation the Ontario Government suggested that the county council should contribute $500 per annum for equipment, whatever that might be, but I understand that in almost every case this $500 was paid back in premiums given at county fairs to encourage the development of agriculture. Technical or scientific education applied to the agricultural industry has been the means of largely increasing the value and amount of the production of agricultural communities in all parts of the different provinces.

I do not think there is any difference of opinion in this House or in the country as

to the desirability of this Government giving, as far as circumstances permit, assistance in the matter of technical education. In the English House of Commons on the 10th of January last, a resolution was introduced dealing with a similar subject. It was a resolution which provoked considerable discussion, and in many respects applied just as much to conditions in this country as to conditions in England. The resolution, moved by Mr. Hewins, was as follows:

That, with a view to increasing the power of the Allies in the prosecution of the war, His Majesty's Government should enter into immediate consultation with the Governments of the Dominions in order with their aid to bring the whole economic strength of the Empire into co-operation with our Allies in a policy directed against the enemy.

Mr. Hewins then proceeds to make the following observations, which I think are peculiarly applicable to conditions in Canada:

I should like to explain that I have no intention in connection with this motion of discussing questions which have become of public interest during the war. The first is what is called "Capturing German Trade." There is, I think, only one object at the present time, and that is successfully to finish the war, and I myself deprecate very much any presentation of issues at this time as an alternative between pressing on with the war and trying to achieve any trade advantage.

Further on he says:

My second reason is a very simple one—this war is of so gigantic a character, affecting every possible relation of our social and economic life, that it is really impossible to say at the present moment what will be the economic, industrial, or financial situation with which we shall have to deal after this war. It seems to me, therefore, that in laying out the great broad scheme of policy which we may pursue after the war, we are likely to be involved in discussions which are to a certain extent academic and may even become controversial.

That is exactly our position to-day. Much as we may appreciate the need, the first and most important consideration is the war itself. Mr. Hewins then proceeds to make the following observations, which, however, seem to have been contradicted later on. Speaking of Germany's power in trade and commerce, and her control of very many raw materials, he said:

Let me take one important question which plays a very important part in the whole scheme of German finance—I mean the control of our raw material and especially of the shipment of the ore produced in the British Empire. I do not wish to go into any lengthy details about this important scheme, but whether you take the zinc concentrates in Australia, nickel in Canada, or the whole series of metals, I am really giving away no secret when I say they are virtually controlled by German syndicates, and have been for years.

[Mr. Glass.]

In the same debate, Sir Alfred Mond said:

There has been a great deal of reference about German control of the metal industry, some of which is true and some of which is exaggerated. The hon. member referred to the nickel industry of our Dominions, particularly in Canada. I happen to be interested in that industry so I know something about it, and I may state what is the absolute fact. To my knowledge no German syndicate, no German firm, and no German capital has ever had any kind of interest, much less to speak about control, in the large nickel deposits of the Dominion of Canada. Those deposits have a curious history. They were first offered to the British Admiralty by the Ontario Government as an important matter of Imperial defence, and promptly rejected, which is usual with a Crown department. The next exploit was made by a well known firm of metallurgists in Swansea, who took up some of the deposits there and were unsuccessful with them. A third attempt, a successful attempt was made by an American gentleman in the metallurgical trade in New Jersey, who managed to find a process, and the fourth attempt, and the only British attempt, was made by the company of which I happen to be chairman.

Speaking of metals in Canada, he goes on:

Although Germans have at various times looked about prospecting, I think I am quite right in saying that there is not a single man, much less to speak of a refining or smelting works, in that part of the world that is in any way owned by a German firm. When you come to the Australian smelting field, you come to a serious problem. Why did the Germans get control of the Australian smelting industry? Because they were the only people to work out a process which made those ores any use at all. No amount of legislation, no amount of tariff jugglery, and no amount of treaties will ever assist you to deprive the Germans of those advantages unless you will technically improve your methods for metal trade and utilize your ordinary resources. Those resources in Australia have been developed by German ingenuity and German chemists, and if they had not been so developed the ores would simply have remained lying in Australia as they had lain for years before. Therefore you must realize that fact, and the Government must devote much more attention to it in future than they have done in the past. It is no use occasionally paying a little lip service to the development of technical industry or science. The amount of money that we have devoted to scientific education compared with Germany is perfectly ridiculous. Three-quarters of the German success in export industries, I am convinced, is not so much due to clever arrangements of tariffs and schedules, or to the negotiations of their diplomatists, as to their technical and financial skill.

Similar statements were made throughout the course of the debate. It is well known that Germany's great commercial success has been due more to her development of technical education than to any other one cause. Now that we realize our shortcomings in that respect in the past, the proper thing seems to be to profit by the experience of other countries. Only last

week we adopted this very principle with respect to the flax industry. We have also adopted the same principle with respect to the distribution of the agricultural fund, which is apportioned amongst the provinces. We are told by the Minister of Finance, and by economists who we have reason to believe are giving us good advice, that the duty of this country is to produce. That has been instilled into the minds of our agriculturists, and aided as they were by the free technical assistance they received from those who were prepared and able to give them advice, they increased production, not only by the bounty of Providence, but also because they went about their farming scientifically; and in proportion as they acquired and applied their scientific knowledge, so the agricultural wealth of the country increased.

We believe that after this war is over, the industries of Germany, which represent a very large proportion of the world's trade at the present time, are going to be paralysed and stagnant for many years to come. I do not know whether, under the arrangements we may be able to make, we may expect to get very much of that trade; but I know that, prior to the war, Great Britain and her Allies controlled 50 per cent of the total trade of the world and Germany only 18 per cent. After the war is over there will most assuredly be a restriction in the development of the industries of Germany and her Allies owing to their exhausted condition, and France, Italy, and Russia will certainly require large quantities of machinery for manufacturing purposes. This country should appreciate these facts to their fullest extent; and, if we are to take advantage of this opportunity, we must, so far as lies within our power and as is compatible with our resources, endeavour to assist Canadian industries by developing technical education. It is not within the province of this Government immediately to take over the direct control of technical education; but, having accomplished so much in co-operation with the departments of education of the various provinces with reference to technical education so far as it applies to agriculture, this Government is looked to for support in the matter.

In the city of London, Ont., some two or three years ago, technical education was considered of sufficient importance to give it a trial in a small way in the basement of one of the public schools, and only night classes were held. The interest taken in it and its usefulness to the community were so quickly established that other portions of the school were used, and day as well as night classes were devoted to technical education. A few days ago I saw in a London city paper that, having acquired there a suitable plot of ground on which to build a school, the council of the city authorized by by-law the issue of bonds to the extent of $165,000 in order to build a technical school in that city. When such communities assume responsibilities of that character, I think it is the duty of the Dominion Government, through the provinces, to assist as liberally as possible in technical education.

I have here an item published in the January Agricultural Gazette which shows what an incentive technical education in agriculture has been to the province of Ontario. There have been established in the rural schools classes for instruction in agriculture, in order to hold the young men on the farms. In connection with this work prizes are distributed and the children are encouraged to grow various crops, and school fairs are held, where the products of their toil are exhibited. The following statement is given by Mr. C. F. Bailey, B.S.A., Assistant Deputy Minister of Agriculture for the province of Ontario:

> The following statement will serve to give some idea of the development of the school fair movement in Ontario. These figures are for 1915 and have been secured from the records kept by each district representative throughout the province; Number of fairs, 234; number of schools, 2,291; number of pupils, 48,386; number of plots, 51,243; number of settings of eggs, 6,868.

These eggs are taken from thoroughbred stock from the Experimental Farm at Guelph.

> Number of children, 72,860; number of adults, 84,406; number of entries, 116,236.

This method of encouraging interest in agricultural education has been established in the province for only a few years, but it shows what a great interest is taken in the work both by the Department of Education and the people.

Technical education is necessary also, because it will mean production of things that we did not produce prior to the war. If we increase our range of products it necessarily follows that we must employ more labour; because, as we develop new industries and train men to carry them on, we give employment to a larger number of people. That, from an economic standpoint and from the standpoint of our duty to our country, should commend itself to us, because at the conclusion of the war we shall doubtless have a large quantity of unemployed labour, which we must put to

productive effort. Our experience in this respect is similar to that of England. Mr. Runciman, speaking of industrial enterprise and technical education in Germany, and its production of many useful articles prior to the war, says:

One of the most striking that is known to nearly all of us is that of optical glass. We have been placed under grave disability owing to the fact that optical glass was made almost entirely in Austria and Germany, and so little of it was made in this country. It was one of the first articles in which the Board of Trade took an interest in the autumn of 1914. We gathered together all the information we could on that subject of optical glass. We gave every possible assistance to those in this country who were prepared to undertake its manufacture, and already they are producing optical glass which never before had been equalled here. We trust that the monopoly which was held by Germany before the war will never go back to her.

He goes on to say:

In chemicals we have produced to a remarkable degree a large number of articles which before the war were almost entirely in German hands. Take the case of dyes. Not only the company which, by leave of this House, was assisted out of our national funds, but also other concerns, have produced an enormous amount of dyes during the war. They have increased their output by extending their plant and improving their process.

That would indicate that even during the war England has found it necessary to apply technical education to industry, because none of these articles were made in England before the war, and the people had to be educated in their manufacture. (Reading):

They have increased their output by extending their plant and improving their process. They have naturally been fostered in that by the enormous demand and the high prices they have been able to obtain from their customers. Electrical apparatus, in some particulars, was almost entirely in German hands. Every one of these articles, glass, chemicals, dyes, electrical apparatus, and I could name about a dozen others, were industries of vast importance not only to us as a great commercial country but as a fighting country. Without these glass articles, without some of the porcelain articles which are essential for electrical construction, without the best type of magneto, without some of the best of our chemicals, and without a great range of dyes, which used to be manufactured in Germany, we were placed at a great disadvantage. Never again should that happen.

This is more than a mere matter of competing with Germany. It ought to be part of our national organization. There should be no essential article, either for the arts of peace or for the arts of war, upon which we cannot within the Empire lay our hands. Such progress as has been made in these directions cannot be made purely with Government assistance. When we had a short discussion on this subject on the adjournment some weeks ago I observed it was suggested that at the Board of Trade we had the idea strongly fixed in our minds that merely by assistance given in Government departments it would be possible for us to foster that notion. Government departments can do a great deal, and I believe they ought to do more, but without the personal ability, without the training, skill and industry of the individual nothing can be done by Government departments. I therefore put down, as one of the first necessities of this country if she is to hold her own during times of war and when war is over, that we must improve our research methods, the education of our people, and the training of our young men. We should not attempt to economize on the money we now spend on technical colleges and modern appliances. There are other directions in which we can cut down expenditure with less national damage.

[Mr. Glass.]

There is another speech reported in this volume which I think of peculiar interest. It is the speech of Mr. Montague Barlow, which is in part as follows:

The President of the Board of Trade, in a speech made a few weeks ago, on the occasion, I think, of the adjournment, gave a few instances, known to very many of us, of the way in which Germany had her hand on the throat of British industries in more directions than one. He mentioned finance, he mentioned shipping, he mentioned the question of company law, and he mentioned what is even more serious and startling, the ownership of British land by German companies, including the ownership of coal mines. He did not on that occasion mention the ownership of the metal industry. He went into that fully to-night. The control of the whole metal industry of the world, exercised from Frankfurt, by that enormous octopus the German Metal Company, is one of the most extraordinary fables, if it were not so terribly real, of modern industrial life. Take so small a thing as wolframite, and the manufacture of tungsten steel for machine tools. Every one knows that the manufacture of machine tools, in which at one time this country was pre-eminent, has largely passed out of this country altogether into the hands of Germany and America. The manufacture of steel tools depends on tungsten, and the manufacture of tungsten depends on wolframite. We had the only source of wolframite in the world in this country and in the Allied countries. The main source for us was in Cornwall. Twelve years ago wolframite was a waste product in Cornwall. Its utility was discovered and a company was started for the treating of it, and at the same time, or almost immediately afterwards, a company was started in Hamburg, also for the purpose of treating it. The Germans captured the wolframite supply of Cornwall. They cut down the normal price of 5s. 6d. to 2s. 6d. They killed the English company, which had sunk some £20,000 of capital, by lowering the price, and when the English company was put out of business they, of course, raised the price to 7s. 6d. That is only a small instance, but that is the kind of process which has gone on and the process which will go on, and which Germany means shall go on, after the war, unless proper steps are taken to prevent it.

Facts could be cited by the hour to show that the adoption of technical education and its wise application to the industrial needs of the country made Germany stand out prominently in the commercial life of the world. Opportunity is now knocking at

our doors. It is our duty to look ahead and to make ample provision at the earliest moment for the development and spread of technical education in all parts of Canada. I am entirely in sympathy with this idea, and I believe that the members of this House are in sympathy with it also. While I re-echo the sentiment expressed by Mr. Hewins in the speech I have read, that there is only one object at the present time, and that is successfully to finish the war, yet I believe it is also the duty of the Government, and that the Government will apply themselves to that duty, to keep ahead of the need of technical education in this country.

And when technical education is attempted, it should not be in a small or paltry way. We have appropriated for agriculture $10,000,000, to be given over a period of ten years. I believe if we had given twice that sum it could have been spent profitably and with advantage to the country. But the question of technical education is such a broad one and means so much in the development of this growing country, that no sum in reason appropriated for its development will be objected to by the people. I hope that the Government, at the earliest moment possible, will see their way clear, as I am sure they will, to lend most liberal aid in this direction.

Mr. D. D. McKENZIE (Cape Breton North and Victoria): Coming as I do from one of the large industrial centres of Canada, I cannot allow this subject to pass without speaking a few words in support of the views so ably presented by the hon. member for Pictou (Mr. Macdonald), and supported by the other gentlemen who have spoken. This question of technical education is not new to us; we have listened to speeches upon it every session for the last ten or twelve years. The hon. member for Pictou is to be congratulated upon having been able to infuse new life into this question. I suppose that the war situation has stirred us up to attention to this matter as nothing else could have done. That being the case, the public mind being alert upon this matter, I think that the Minister of Labor on behalf of the Government might well take advantage of the opportunity to do what he can, in co-operation with other authorities, to put technical education upon a better footing than that upon which it now stands. We shall never do anything in this matter unless we make a start. The old saying is that the man who would play the violin must play the violin. The thing for the minister to do is to make a start. I submit that he will never find the Canadian people in better frame of mind to stand behind him in taking the forward step than he will find them to-day.

Technical education is a question of many sides, many degrees, having many phases. But, considering it in its simplest form, technical education is learning how to do things; how to make a great many things better than anybody else can make them, and how to make plenty of them, so that we shall have an abundance for ourselves and be able to sell to other countries. In this way, we would grow to be a great manufacturing country, as they did in England. We can never manufacture largely if we manufacture and produce only for our own population. There is no reason in the world why eight or ten millions of people should not produce an abundance for themselves and also be a great manufacturing and transporting country.

I believe that technical education will teach us to value things; to know what can be made out of things. I would point out to the hon. Minister of Marine and Fisheries, who comes from a lumbering province, that in the forests of New Brunswick the greatest ravages and the greatest plunderings take place. When a tree is cut down in the lumber woods of England, it is used from the roots to the last twig on the top; something is made from every part of the tree. This is done because they know how to use everything: they bind up the smallest twigs, which cannot be used for anything else, and put them up in bundles to be used as kindling wood. In Canada we have an abundance of raw material, but we do not value it; we waste it. Technical education would teach us what can be produced from these things; it would enable us, with less labour and with less destructiveness, if I may use the term, to produce results of which we little dream. Perhaps I can impress the mind of the committee, and, perhaps of the minister, better than in any other way, by repeating an expression used by one of the Armours, the Chicago pork packers. Speaking about his own industry, Mr. Armour said: "Nothing in the hog escapes utility with us but the squeal." Of course, they have not found anything that they could make out of the squeal, but nothing else escaped. That conveys to the minister my idea of the proper utilization of the raw materials which are to be found in this country. If we make the most of

what we have—and we cannot do that unless we know how to do it—our country will be very different from what it is. I have always deplored the fact that we send out of this country so much raw material. Why should so much raw material go out of the province of New Brunswick in the shape of lumber? Why should it not be manufactured in that province and afterwards exported to other countries? As it is now, the raw material goes to the United States; our best, men, boys and girls, follow it and work in a foreign country moulding our own raw material into the manufactured state. I see no reason why what is being done with raw material in other countries should not be done with that material in Canada.

A great deal has been said about our copper, nickel, and other minerals. Is it not a pity that we have to send our nickel out of the country to be manufactured? Is it not a pity that our copper must go out in a semi-raw state to be manufactured in another land? Evidently our people have not been educated to know how to deal properly with this raw material. In my part of the country we are producing steel and iron in large quantities. There is no reason why that steel should not be manufactured in this country into the finer articles which are made of steel. Why not produce knives, razors, and mechanical tools in this country? Why not make locomotives and engines, when we have the raw material? The reason is that we have not been educated to do it; orders have to be filled in a hurry, and they are given to firms in other countries. The steel that we produce should be manufactured down to the finest article which is made of steel. If we have not the technical men to assist us in making a start, we can bring them in and educate our own boys; the development will be remarkable. Only a few years ago, the site of the present magnificent steel plant at Sydney was an empty field. I suppose nobody in the island of Cape Breton knew anything at that time about the making of iron and steel; the company had to import new men. To-day in those steel works you will find Canadians, Nova Scotians, mostly Cape Bretoners, doing the technical work in that immense plant. This condition was brought about by the operations of the technical school in Nova Scotia and the night schools to which the hon. member for Pictou referred. I think we have a splendid opportunity at this time of taking steps to make the people of this country dependent on themselves and independent of others. We should take such steps as are necessary to develop the vast wealth of raw material which is in our country, to convert it into the finished article, and to make the most of the opportunities that are within our reach. I must repeat that I am much pleased that the hon. member for Pictou has put this subject so forcefully before the committee, and I trust that his efforts and the efforts of other gentlemen who have addressed the committee will bear good results.

Mr. CROTHERS: Mr. Chairman, in the first place, I wish to express my deep appreciation of the hon. member for St. John's earnest appeal for the restoration of ship-building at Courtenay bay.

Mr. PUGSLEY: I said in Canada; I did not limit it to Courtenay bay.

Mr. CROTHERS: His observations revived my great admiration for the facility with which my hon. friend changes his mind. His pathetic appeal for the restoration of ship-building on Courtenay bay almost brought tears to our eyes.

Mr. A. K. MACLEAN: He did not speak about restoring the industry on Courtenay bay; he was speaking generally.

Mr. CROTHERS: He did speak about Courtenay bay. He said there was a great ship-building industry there. I have been there, and I think it is within sight of the place where my hon. friend spent his life from boyhood up. During the time that ship-building was disappearing from Courtenay bay, my hon. friend was a very influential statesman in the province of New Brunswick, and had great influence in the legislature of that province. During a portion of the time he had a very great influence in the Parliament of Canada. I have yet to learn that during any of those years he did the first thing towards the restoration of ship-building on Courtenay bay.

Mr. PUGSLEY: I am afraid the minister has not been studying history very much.

Mr. CROTHERS: I had the honour of sitting in this House with him for three or four years while he was in power, and I do not remember his having urged upon his party or the Government of which he was a member the necessity of doing anything towards establishing or re-establishing ship-building in Canada.

Mr. PUGSLEY: We shall have to refresh the minister's memory.

Mr. CROTHERS: If he did make any effort in that direction, it would only show that he had not influence enough with his party to carry them with him, because nothing was done. Although he accomplished nothing during those years, I want to say that I sympathize very keenly with the idea of establishing a ship-building industry in this country.

Mr. PUGSLEY: The minister has been in power now for nearly five years and has done nothing.

Mr. CROTHERS: I am quite favourable to applying to that industry the principle of protection that we on this side of the House have advocated for many years, and I am pleased to think that, from his observation, my hon. friend is becoming a convert to that principle. He desires that that industry should be assisted from the treasury of this Government.

10 p.m.

Mr. PUGSLEY: By granting a bonus. Does my hon. friend take that to be a recognition of the protective system?

Mr. CROTHERS: I should think so; I think that is one form of protection. I understand that when this Government contributes public funds to any industry, it is protecting that industry to the extent that it applies public funds to it.

Mr. PUGSLEY: I thought that protection meant keeping out competition.

Mr. CROTHERS: I listened with great interest to the instructive and eloquent observations made by the hon. member for Pictou (Mr. Macdonald) on the question of technical education, and also the similar observations made by the hon. member for Peterborough (Mr. Burnham), the hon. member for East Middlesex (Mr. Glass), and the hon. member for Cape Breton (Mr. McKenzie). But, as hon. members will observe, there is on the Order Paper a notice of motion by the hon. member for Rouville (Mr. Lemieux) on the question of technical education. I understand that that motion is to be taken up on Monday next, and I prefer to reserve any observations I desire to make on this matter until that occasion.

Mr. MACDONALD: It is not arranged to our knowledge. There are a number of motions on the Order Paper that will come before it.

Mr. CROTHERS: It frequently happens that motions are taken out of their order. That has been done several times this year. I was also glad to hear the remarks of the hon. member for North Oxford (Mr. Nesbitt), and the hon. member for Edmonton (Mr. Oliver) concerning the treatment which we should mete out to our returning soldiers. I am very glad to know that every member of this House, and I believe every person in Canada, appreciates to the full the great sacrifices that our young men are making in fighting our battles on the fields of France and Flanders. They are making the supreme sacrifice there. I sometimes wonder whether the people of Canada fully realize what we are fighting for. It strikes me we are fighting not only for the integrity and honour of the Empire, for the liberation of Belgium and for the crushing for all time to come of Prussian despotism from the face of the earth, but over and above all things else we are striving for the independence and freedom of Canadians themselves. I firmly believe that a German victory would mean a German Canada, and that we are not, as some people say, simply rushing to the assistance of the Mother Country, as, of course, we did, but that we are fighting for the liberties we enjoy as Canadians, which would be sacrificed if Germany should win. That is the way I regard the war.

Mr. PUGSLEY: I think we all agree with you in that.

Mr. CROTHERS: I thought my hon. friend made some observation to the effect that he did not believe there was any danger in that direction.

Mr. PUGSLEY: I am sure we are going to win, that is all.

Mr. CROTHERS: I am not so sure.

Mr. CARVELL: Oh ye of little faith!

Mr. CROTHERS: From my experience I have come to the conclusion that the man who is always cocksure he is always right is generally wrong, and the man who admits he is sometimes wrong is generally right. No man knows when this war will cease, or how it will cease and while we are in that position it seems to me we should concentrate all our efforts on the successful prosecution of that war, and not divert our strength in any way whatever. We do a good deal of talking about economy, and about thrift, and about saving, and yet it seems to me that we are spending months here in doing business that could be done in weeks, and spending many thousands

of dollars a day that might better be spent in the prosecution of this war—and we are doing some talking which I do not think contributes to the successful issue of this war.

Mr. PUGSLEY: As for instance?

Mr. CROTHERS: As for instance? Every word that is uttered in this House or out of this House that tends to shake the confidence of the people of this country in the capacity and honesty of this Government, to that extent encourages our enemies and discourages our friends in this country, and should, so far as possible, in my humble judgment, be avoided. I am speaking as sincerely as possible for me to speak on any occasion or on any subject.

I was glad to hear the hon. member for North Oxford and the hon. member for Edmonton speak about the manner in which the returned soldier should be treated, especially in the direction of technical education. I am not aware whether it has been stated in this House before—if so, I am going to repeat it now—that the Government have not been unmindful of these things. They have considered them. A good deal of the time has been taken up in this House, months instead of weeks, that they should be devoting to a consideration of the best way of bringing this great war to a successful ending. But, they have thought a good deal about returning soldiers. Many months ago the Military Hospitals Commission was appointed, it is presided over by the Hon. Senator Lougheed, and it is composed of leading men from Vancouver to Halifax. They meet in different places. They have met in Quebec, Toronto and Montreal, and they are meeting in this city to-morrow. Shortly after they were appointed the Prime Ministers of the several provinces were invited to come to Ottawa and attend a conference to consider what should be done for the disabled soldiers. The Military Hospitals Commission, of which I have the honour to be a member, was sitting at the same time. The representatives of the various provinces held a separate meeting and then held a joint meeting with the commission afterwards. Of their own motion, they proposed to undertake to find employment for all disabled soldiers returning to this country as far as it was possible to do so. With the view of carrying that out a commission has been appointed in each one of the provinces; at least, I know there has been one appointed in Ontario. That commission has established a local committee in each town in Ontario. When a soldier returns to the town they are supposed to meet him at the station, to look after him until some other provision is made for him and to do everything possible to secure him a position suitable to his ability.

We all perhaps could do something in that direction. If you will pardon a personal reference, I would say that the most important public office in my constituency was vacant a short time ago? I had a great many applications for it as you may readily understand. I looked around among those men eligible for the position. I found a man who, I thought, was eminently qualified to discharge the duties of the office. I knew that his only two children were in the trenches in France and, although he made no application for the position, I wrote and asked him if he would accept it, telling him that I would recommend him if he would. He accepted it and was appointed, greatly to the disappointment of many political friends who desired it. I have succeeded in placing two others who returned disabled from the front, one in my own department in Ottawa and another as a mail clerk on the railway. We all can do something in that direction. If we could locate one, two, three, four, or five, it would amount to something.

Mr. PUGSLEY: Will the minister undertake on behalf of the Government that he will allow members of the Opposition to have the same chance of placing returned soldiers in these positions?

An hon. MEMBER: Abolish patronage.

Mr. PUGSLEY: This is a good opportunity for the minister.

Mr. CROTHERS: I can only speak for myself, and all I have to say is that I shall be very glad indeed to receive from any member of this House, whether on the Government or the Opposition side, any suggestions with regard to qualified men to fill any vacancies I have control of.

Mr. PUGSLEY: That is a diplomatic answer.

Mr. CROTHERS: That is just our position towards both parties.

Mr. PUGSLEY: You might give us a little more encouragement.

Mr. CROTHERS: I want to give my hon. friends a little encouragement. I was in my own town a few days ago, and

called at the house of a gentleman who has been a Liberal for a long time. He had three sons fighting in the trenches in France. Immediately across the street lives another Liberal, 85 years of age. He has only four sons, and all four are at the front. The last one was going to England with a nurse and his mother said to him: "Archie, when you get over there, if you find you can do anything for the Empire, don't come back; your father and I will get along some way without you." I went to the next corner and came across a Tory who had only two sons at the front. There was another Tory across the street who had three sons at the front. When one of these people gets a letter he goes around to the others to read it; they sympathize with each other, and they are being drawn together in bonds of friendship and affection by this war as they never were before. They are all doing their best, and it is up to us to do our best here. We must not squander our time or money, but we must put our whole effort into the winning of this war, and we must keep at it until the war is over. We realize the great questions that will have arisen when this war is over; but I do not think we should squander or waste our time in speaking of subjects that are not directly connected with the prosecution of the war.

Mr. A. K. MACLEAN: In the British Parliament, and in the Parliament of France, the greater portion of the time is occupied with matters not directly connected with the war, but rather with the future interests of the country and with conditions which are likely to arise after the war. My hon. friend takes a very peculiar view about this. It is a very peculiar thing for the hon. gentleman to say: I think it would be a great misfortune if the conduct of the war were left directly to Parliament. It would be a very dangerous thing to leave the conduct of this war to Parliament.

Mr. CROTHERS: My hon. friend has a perfect right to his opinion in that respect.

Mr. MACLEAN: But my opinion is apparently the opinion of the world.

Mr. CROTHERS: That does not make any difference.

Mr. MACLEAN: Do you want to be all alone?

Mr. CROTHERS: I want to have my own opinion.

Mr. PUGSLEY: The minister is up on a lonely pedestal. He is reading us a lecture.

Mr. CROTHERS: No, I am not reading you a lecture.

Mr. MACLEAN: Did not the hon. member for East Middlesex (Mr. Glass) read copiously from debates in the British House of Commons, and did not the minister congratulate him upon that magnificent and illuminating speech?

Mr. CROTHERS: I am not speaking for the British Parliament or the British House of Commons; I am stating my views as to what we should do in the prosecution of this war, and I say we should devote our attention to things that are connected with the war, although not perhaps directly. I do not expect that we should all put rifles on our shoulders and use them, but we should ask ourselves what we can do to contribute to the success of the war. I believe there are many men in this House who do not approve of everything that has occurred in England. There has been a good deal of dissention in the British House of Commons, and I do not think it has contributed to the strength of the English people in this war. I think it has tended to weaken them and to encourage our enemies. But I do not think that should occur either here, or in England, or in France, or anywhere else. I am asserting my own opinion in regard to it.

But, to return to the matters upon which the hon. member for Edmonton and the hon. member for North Oxford were speaking in connection with the education, or re-education, of those who have come back from the war disabled. As I have said, the various provinces have undertaken to place these men, as far as possible, in suitable positions. They undertook, further, to allow us to use any provincial institutions for the re-education of disabled soldiers, so far as that might be considered proper. For instance, if a soldier returned to Ontario blind, we could send him to the blind institute for the province, paying the province a certain sum for his maintenance and education while there. If a soldier returned insane, we could send him to one of the public lunatic asylums of the province, and pay his keep while there. We could send any number of returned soldiers to the technical

schools in Ontario, paying the Ontario Government for their keep.

Mr. A. K. MACLEAN: Is that being done now?

Mr. CROTHERS: I do not know if it is actually being done. It has been considered by the Military Hospitals' Commission.

Mr. PUGSLEY: Do I understand that soldiers who return to Canada after having been rendered temporarily insane, by reason of their experience in the trenches, are sent to the ordinary public asylums?

Mr. CROTHERS: I did not say they were. Each case would be considered on its merits.

Mr. PUGSLEY: I think these cases ought to be given special consideration and treatment.

Mr. CROTHERS: Of course. I am not going into details, but am simply pointing out what arrangements have been made with the provinces. The provinces undertook to get employment for these men as far as possible, and to use the provincial institutions. We agreed to pay a certain sum for the education and care of disabled soldiers. There will be some soldiers, of course, who will be permanently disabled and never again in a position to do work. Probably homes will be provided for them. That has been discussed by the commission. Then there are Convalescent Homes. There is one in Ottawa, in which thirty-seven soldiers are convalescing to-day. The soldiers who are sent to these homes will probably all be restored to health. We are not unmindful of the soldier. Nothing is too good for the man who has risked his life for the British Empire. This Government and the Provincial Governments, municipalities and commissions, are all co-operating to bring about satisfactory results. In individual cases the results may not be satisfactory. Cases of that kind always occur. One can only do his very best. This commission, barring myself, is composed of some of the leading men in Canada. They are giving their services.

Mr. McKENZIE: You are too modest.

Mr. CROTHERS: They are doing their very best for returned soldiers, and will continue to do so regardless of any adverse criticism. I think that is all I desire to say on that question.

Mr. PUGSLEY: I am very sorry the minister has made some remarks which certainly demand a reply from me. If I did not reply, it would seem as if I was doing an injustice to myself, and treating without due consideration the references of a personal character that the hon. minister has made. Before referring to the question of ship building, I should like to say that I do not wonder at the frantic efforts which not only he but other members and supporters of the Government have been constantly making to induce the people of this country to believe that this Government ought not to be criticized for their conduct while the war is on; that anything that would tend to create a feeling of want of confidence in the judgment or integrity of the members of the Government would be injurious to the public interests during this terrible conflict. Well, Sir, I wonder if the minister proposes to bring in a Bill of a retroactive character to restore Messrs. Garland and Foster to their places in this Parliament. They have been compelled to resign their seats in this House because of the investigations before the Public Accounts Committee last year in connection with the purchase of horses, drugs, bandages and things of that kind. If the doctrine of the minister and the Government be true, the Public Accounts Committee were exceedingly remiss in their regard for the welfare of the Empire when they presumed to investigate these matters, because necessarily the disclosures which were made tended to weaken the confidence of the people in the administrative ability of this Government.

Mr. CROTHERS: Oh, no, the Government took an active part in the investigations.

Mr. PUGSLEY: If it had not been for the action of the Liberal members of the committee in forcing those investigations, Messrs. Garland and Foster would still be occupying seats on the floor of this House. Therefore, upon the theory that the matters that have been disclosed ought not to have been inquired into for fear public confidence in the Government might be weakened,—upon that theory an apology is due to these two gentlemen, and some steps ought to be taken to give them back their seats in this House.

Mr. CROTHERS: You are misrepresenting what I said.

Mr. PUGSLEY: Another thing. A commission has been appointed by this Government called the Economic Commission, and it has been considering the whole question of what is to be done after the war is over. Of course, it may be that this

Government did not think it would be in the public interests to appoint that commission, but, impelled by the mania they have for appointing commissions, they found it impossible to resist the bend of their minds in that direction. That may be the case; I do not know. But this Government has certainly got the habit of appointing commissions, and perhaps they no longer fight against it. Let us say to my hon. friend the Minister of Labour that the unfortunate thing is not that the members of this Parliament have criticized the conduct of this Government and the conduct of their appointees, including the Shell Committee; the unfortunate thing is that there is ground for criticism. It is the fact that there is ground for criticism that weakens the confidence of the public in this Administration. That is the lamentable thing. We have the spectacle presented to the people of this country by incontrovertible evidence, that through the appointees of this Government there has been lost to the people of Great Britain and Canada at least $80,000,000 in connection with contracts for shells. The whole of that amount might have been saved if proper business methods had been pursued.

Mr. CROTHERS: Was not the action of the people of this country in forcing an extension of the term of Parliament for another year an expression of their confidence in this Government?

Mr. PUGSLEY: Let me say to my hon. friend that it was distinctly understood—and I for one wish it to be understood most emphatically—that the extension of the term of Parliament was not, and was not intended to be, an expression of confidence in the Government either by this Parliament or by the people of this country. It was a question of two evils: a question of continuing in power a Government in which many members of this House, and, I think, a large majority of the people of this country had no confidence, or forcing the people of Canada into the turmoil of an election while the war was on. Of the two evils, many of us, to our deep regret, felt obliged to choose what we thought was the least, so far as the interests of Canada and the interests of the Empire were concerned. Do not let the minister take any comfort to himself that the extension of Parliament means a continuance of confidence in this Government.

Do not let him think for a moment that it means that we are not to reserve our right to criticise. When the right hon. leader of the Opposition supported the resolution for the extension of Parliament he made it distinctly understood that the Opposition reserved the right to criticize wrongdoing whenever it should appear.

Mr. CROTHERS: You are wandering from my question.

Mr. PUGSLEY: What was my hon. friend's question?

Mr. CROTHERS: If the fact that the people had expressed the desire that there should be no election for another year, and that this Government should be allowed to carry on the work of the country for that period was that not an expression of their confidence.

Mr. PUGSLEY: Not at all. It was a choice between two evils, just as it was amongst hon. members on this side.

Mr. CROTHERS: You were probably moved to act as you did by the feeling of the people throughout the country.

Mr. PUGSLEY: When the people of this country, as my hon. friend will find, if he reads the newspapers, expressed the opinion that the term of Parliament should be extended on account of this war being in progress, there was announced everywhere in the public press an earnest hope that the Opposition would insist upon the strictest economy in the expenditure of public monies and upon the exercise of the very greatest degree of honesty in the administration of public affairs. My hon. friend thinks he has a right to lecture us, and, perhaps, he has, but it will not have any effect. No matter what my hon. friend says, we will still endeavour to discharge our duty, as we see it, to the public.

Mr. CROTHERS: I am only repeating in substance what the right hon. leader of the Opposition said more than a year ago, and what the hon. member for Calgary (Mr. Bennett) quoted yesterday.

Mr. PUGSLEY: Nothing of the kind. My right hon. friend, in his speech on the Address, said that that was giving a distorted interpretation of his remarks. He said that he never intended to shut his eyes to wrongdoing or to improper expenditure of the public money. What he meant was, that, with respect to the Government's method of raising money for war purposes and of the actual carrying on of the war, even though the Opposition might not approve of the methods pursued, there would be no opposition. Have we not

shown our earnestness in that regard? Whatever money the Government has asked for war purposes, we have freely granted. While we might differ as to the method of raising the money, and while we endeavoured to impress the Government with our views, and to point out a better path which they might pursue, yet in the end we voted the money freely, and we leave the responsibility with them. But so far as wrong-doing is concerned, we would be most neglectful of our duty if we were not to bring before the House the matters which we have, in the public interest, brought to its attention during the present session of Parliament. Let me again assure my hon. friend, even although he may think that the time of the House has been improperly taken up in our pointing out the negligence of the Government in allowing their appointees, the Shell Committee, to pursue those irregular and wasteful methods by reason of which vast sums of money have been lost to the people of this country and of Great Britain, that we take an entirely different view from his, and believe that we are simply discharging our duty in the manner in which it ought to be discharged in the public interest.

Now, my hon. friend has said, notwithstanding the remarks made by the hon. member for East Middlesex (Mr. Glass), and by hon. gentlemen on this side of the House with regard to technical education, that he does not think it proper to give any attention to that subject at the present time, but that we should wait until the war is over. At the same time he tells us that he is not confident that we are going to win in this great struggle, and perhaps that is a reason why he wants to let all these matters stand until the war is over. We on this side take a different view; we believe that the Empire is going to win, and we think that we ought to be taking into account questions of importance which, if solved properly, will be to the advantage of the people of Canada when the war is brought to a successful issue. Why did my hon. friend as Minister of Labour not do anything in the way of developing technical education during the four years that this Government was in power before the war broke out? The Technical Education Commission was appointed by the late Government; it went into the whole subject most exhaustively; it is now several years since it submitted its report; and yet this Government simply pigeon-holed that report and took no action with regard to the matter; and in these estimates which are before us to-night for consideration, while we find that, for work of no practical importance to the people of Canada, such as the item which we were discussing the other evening for astronomical surveys, investigations and demarcations of the exterior boundaries of Canada, the triangulation, levelling and topographic work of the Geodetic Survey of Canada, there is the sum of $260,000 presented for the consideration of Parliament, when we come to industrial training and education, there is the magnificent sum of $1,000, bearing striking testimony to the importance which my hon. friend the Minister of Labour and his colleagues attach to technical education. Notwithstanding the fact that has been so well presented by the hon. member for East Middlesex (Mr. Glass), who supports the Government, and by hon. members on this side, that there is no subject of greater importance to the people of Canada than industrial training and technical education, although this Government has been in power since October, 1911, a period running now well on to four and a half years, not a single step has been taken in the direction of acting on the report of the Technical Education Commission or of giving any encouragement to industrial training or technical education. I do not forget that the provinces have done a good deal in this connection. They have all spent a great deal of money and devoted a good deal of effort towards the education of the young men and women of our country, and as a result of what has been going on during the last thirty or forty years, to-day, man for man, and woman for woman, there is not a more highly educated people on the face of the globe than the people of Canada. When during this war the Canadian people were called upon to undertake a great industrial work, we saw with what intelligence they applied themselves to their duties; we saw how quickly inexperienced young men became trained in the technical work of manufacturing munitions of war, and the results have caused the surprise and admiration of the world. This Government, during the years they have been in power since this report has been published, ought to have taken active steps to give financial assistance to the governments of the different provinces in extending education along industrial and technical lines.

My hon. friend, moreover, apparently desired to-night to give as little information as he could when he was asked with regard to the attention which the Government had paid to ship-building, a subject which one

would think would be impressed upon the Government day and night, if they had any intention of giving proper assistance to the industries of this country from the Atlantic to the Pacific. Knowing that the cost of ocean transportation has increased a thousandfold since the world began, knowing the inconvenience to which our people have been put by reason of the decline of shipping in Canada, my hon. friend comes down to-night, and, without disclosing any policy of the Government, without telling the committee that the Government has any policy or intends to do anything, tries to make light of what he calls my "yearning" for the development of Courtenay bay and says I never did anything for the development of shipbuilding, and therefore it does not lie in my mouth to bring the subject before this Parliament. The hon. gentleman does not do his intellect or his memory justice when he makes that statement. As a member of the late Government, I was the first minister to give a contract for the building of a wharf in the harbour of St. John to assist in the development of the winter port business of that city. I carried out in a very extensive way the work of dredging that harbour, realizing that through such ports as St. John, Halifax, and others in the Maritime Provinces, we ought to offer facilities for traffic in order to draw away from the American cities the traffic of the Canadian West which properly belongs to us and should be carried by Canadian channels through Canadian ports.

As to Courtenay bay, let me tell the hon. gentleman that I, in co-operation with my colleagues, took up with the Grand Trunk Pacific Company, through Mr. Hays, its late president, the question of bringing the Transcontinental railway down to the port of St. John. The Grand Trunk Pacific Railway Company were willing almost immediately to engage in the operation of its road from the ports of Halifax and St. John right through to the Pacific Coast, operating it as a great transcontinental railway ought to be operated, in such a way as to draw the traffic of Canada through Canadian channels to Canadian ports. I had Courtenay bay surveyed from end to end and from side to side, and was able to demonstrate from the borings made that there was opportunity to create there another splendid harbour and give accommodation for shipping at the port of St. John. With the consent of my colleagues, I had a large appropriation put in the Estimates for the development of the harbour, and called for tenders for that work, including the building of a dry dock, the dredging of Courtenay bay and of the channel, and the building of piers. At the same time, my colleague, the Minister of Naval Affairs in that Government, called for tenders for the building of ten war vessels in the Dominion of Canada. For the Courtenay bay works, including the dry-dock, the lowest tenderer was the Norton Griffiths Company. For the building of the ten warships the lowest tenderer was the great firm of Cammell, Laird & Co., who have the magnificent shipyards upon the Mersey river near Liverpool. We were defeated in the election of 1911, and went out of office. We left behind, among the records of the Executive Council, the statement that we thought it was best, in view of our having been defeated, to leave the awarding of these contracts to our successors. But my colleague, the Minister of the Naval Service, had returned the deposits on all the tenders for the building of the ten war vessels, and the establishment of a ship-yard in Canada, with the exception of the one of Cammel, Laird & Co., whose tender covered the establishing of a large, up-to-date and most complete ship-building plant at the port of St. John, and to proceed with the building of ten war vessels at that port.

Mr. ROGERS: I thought they were to be built in Montreal.

Mr. PUGSLEY: If the hon. minister will take the trouble to examine the tender of Cammell, Laird & Co., he will find that they say that after a careful examination of the ports upon the St.Lawrence and upon the Atlantic coast, they came to the conclusion that the port of St. John was that at which it would be most advantageous for them to establish ship-yards and build war vessels, and their intention was to build them there.

Mr. ROGERS: The hon. gentleman has probably forgotten the facts. Was not there a difference of opinion between the hon. member for St. John (Mr. Pugsley) and the leader of the Government of that day (Sir Wilfrid Laurier) as to where these vessels were to be built, and was not that the cause of delay?

Mr. PUGSLEY: While the tenders were under consideration, questions arose as to who were the lowest tenderers. The offer of Cammell, Laird & Company was to build at Courtenay bay. There was a tender of the Vickers Maxim Company to build at Mont-

real, another tender to build at Halifax, and others at other places—six or seven tenders in all. But before we went out of office, the then Minister of Marine and Fisheries decided that the tender of Cammell, Laird & Co. was the lowest and returned all the deposits of other tenderers, leaving it with his successor to complete the awarding of contract, and leaving also the deposit of $100,000 of a guarantee. The Minister of Labour says that he never heard of my doing anything.

Mr. CROTHERS: The hon. gentleman has not told us anything about ship-building.

Mr. PUGSLEY: I said that the plans covered the establishment of large ship-building yards at St. John.

Mr. CROTHERS: The hon. gentleman talked about the building of a wharf.

Mr. PUGSLEY: It included also the building of ten war vessels, and there is something else that the hon. gentleman may not know but that the people of St. John do know—

Mr. CROTHERS: There was no contract for the building of war vessels so far as I have heard.

Mr. PUGSLEY: Does the hon. gentleman say there were no tenders?

Mr. CROTHERS: No, but the Government of that day kept them for six months and did not either accept them or reject them.

Mr. PUGSLEY: I have already said that when we went out of office, my colleague, the Minister of Marine and Fisheries, decided that the tender of Cammell, Laird and Company was the lowest, and left that tender in his office, together with a deposit of $100,000 as a guarantee for the carrying out of the contract. When the present Minister of Marine and Fisheries (Mr. Hazen) took office, instead of acting upon that tender and awarding the contract for the establishment of a shipyard and the building of these war vessels at the port of St. John, the hon. gentleman, although representing that constituency, returned the deposit of Cammell, Laird and Company and allowed the whole matter to lapse.

Mr. CROTHERS: Why did not that Government accept the tender?

[Mr. Pugsley.]

Mr. PUGSLEY: Had we done so, we should have been charged with having entered into a contract of enormous importance after we had, for the time being, lost the confidence of the people. We did not think it would be proper.

Mr. ROGERS: Why did not the Government accept them before that?

Mr. PUGSLEY: The tenders were taken home to England by the then Minister of Marine and Fisheries, Mr. Brodeur, for examination by the Admiralty. The specifications were examined by the Admiralty and approved. And when the hon. gentleman returned to Canada, almost immediately thereafter there was a dissolution of Parliament, and there was no opportunity to act upon the tenders before that dissolution took place. It resolves itself into this: that I as Minister of Public Works called for tenders for the building of the works at Courtenay bay—my colleague the Minister of the Naval Service called for tenders for the building of war vessels, which involved the establishment of a great shipyard and ship-building plant. When the present Government came into office these tenders for the shipyard and shipbuilding plant were abandoned and the deposit was returned. The hon. Minister of Public Works acted upon the tenders which I had invited, and simply let the contract for the Courtenay bay works, involving the dredging, the docks, and the building of a dry-dock. I am quite prepared at any time to allow my conduct in connection with the development of ship building in Canada to be examined into and to be subject to all possible criticism. I desire to thank my hon. friend the Minister of Public Works for the efforts that he has made to have the work of developing Courtenay Bay carried on under the plans which I had prepared, and upon which I had invited tenders. I regret that he has not found it possible to proceed more rapidly; I should like to have seen the work of the dry-dock much further advanced than it is. While I am on my feet, let me say one other thing in this connection—the Minister of Labour is responsible for my rising to my feet at all, which is, perhaps, an unhappy circumstance. In my judgment it is deplorable, after the effort that was made to have a transcontinental line built and operated from the Atlantic to the Pacific, that this Government has tried its very best to defeat the whole project. The road is completed between Moncton and Cochrane and

all the way on to Winnipeg. The road is a magnificent one; the road-bed is the finest upon the American continent. They have a car ferry at Quebec, yet, Sir, they are practically operating only that part of the road between Cochrane and Winnipeg. Not long ago—

The CHAIRMAN: I regret very much to have to bring the attention of the hon. gentleman to the fact that we are discussing an item of the Department of Labour, $35,000. When the item was read this afternoon, the consensus of opinion in the committee seemed to be that there should be a general discussion of the question of technical education. This discussion was carried on during the better part of the day. It then seemed to be the desire of the committee to discuss shipbuilding, although, strictly speaking, the discussion of that subject was out of order. I must respectfully ask the hon. gentleman not to enter into a discussion of the Transcontinental railway; I hope he will confine the rest of his remarks to the item under consideration.

Mr. PUGSLEY: I was wondering whether there really was any ground upon which I could continue my remarks. I must concur absolutely in your ruling, Mr. Chairman. My only excuse was that the Minister of Labour departed from the rule, and that seemed to justify my following what I am bound to say was his pernicious example.

Mr. CROTHERS: The hon. gentleman himself began this discussion about shipbuilding.

The CHAIRMAN: Order.

Mr. PUGSLEY: I was never more earnest about anything in my life when I say that the Government ought immediately to bring down a policy of encouraging the building of ships in Canada. A great many people would thus be given employment; enormous advantage to Canada would result. If the Government do not do that without further delay, they will be guilty of a crime against the people of Canada. That is a strong word to use, but in view of the decline of Canadian shipping, and of the great demand there is for ships, I may say that it is a crime to delay longer the building of ships in Canada and the establishment of a Canadian mercantile marine on a large scale.

Mr. MACDONALD: Unless we sit very late, it will be impossible for us to dispose of this item concerning the Conciliation Act, because it involves consideration of all the matters that pertain to the labour troubles throughout the Dominion last year. Speaking on behalf of those who have discussed without party bias the important matter that has been dealt with, I must say that the ungracious manner in which the minister dealt with the question was rather surprising. It appears that the hon. Minister of Labour does not want hon. gentlemen on this side of the House to discuss questions in a non-partisan way. I leave it to the judgment of this committee as to whether any of my remarks in dealing with the question justified the minister in making the reply that he did. He took the ground that by virtue of the fact that this Opposition agreed to extend the life of Parliament for a year, we should sit here like a lot of automatons and register the decrees of gentlemen who happen to be in power for the time being. Hon. gentlemen opposite seem to think that by agreeing to the extension of the term of Parliament we gave them a certificate of character. That is a ludicrous proposition.

Mr. CROTHERS: Nobody suggested that.

Mr. MACDONALD: My hon. friend did not know what he was talking about if he did not try to say that the people of Canada, speaking through us, expressed their confidence in the gentlemen who happen to be members of the Government for the time being. He even flattered himself that we on this side of the House had any confidence in the Government when they agreed to the proposal to extend the term of Parliament. Hon. gentlemen on this side of the House were dealing with these matters in an absolutely fair way, without trying to embarrass the Government or to delay the consideration of public business. We want to get through in reasonable time, but when important matters require consideration, we want to discuss them fairly. If we are to take these items up in order, I think I am in the judgment of hon. gentlemen on this side when I say that we are willing to let certain items pass and then adjourn. But in regard to the Conciliation Act—

The CHAIRMAN: The first resolution covers item 278 only.

Mr. MACDONALD: That deals with the Conciliation and Labour Act, in regard to which I should like the minister to make a statement as to whether or not he intends to introduce any amendments during the session.

Mr. PUGSLEY: Let that stand and take No. 281.

Mr. ROGERS: Put them all through except one item, and let that stand.

Mr. MACDONALD: No; if we do that, we will not see the minister again until just before the session closes, and there are very important matters connected with this item. There is the matter of fair wage officers in connection with munition contracts, and there is the Conciliation Act. Other important matters are germane to this item.

Mr. CROTHERS: Has not the hon. gentleman in mind item 279, Industrial Disputes Investigation Act, rather than the Conciliation and Labour Act?

Mr. MACDONALD: What does my hon. friend mean by the Conciliation and Labour Act?

Mr. CROTHERS: That Act refers specially to railways. It is different from the Industrial Disputes Investigation Act.

Mr. ROGERS: My hon. friend will appreciate the fact that hon. gentlemen opposite are not limited to the discussion of any question connected with any department at any time. No member on this side of the House has suggested that. With one item left, it will be quite open to hon. gentlemen to discuss anything they like.

Mr. MACDONALD: There is very important discussion to take place, which will be participated in by hon. gentlemen on this side, some of whom are not here, on the position which the Government takes in regard to fair wage officers in munition plants.

Mr. CROTHERS: That will all come under 279.

Mr. MACDONALD: I would be willing to agree to allow 280, 281 and 282 to pass, the understanding being that the minister will next week, if the hon. member for Rouville makes his motion on technical education, give us a statement in reference of the Government's policy at that time; but the other two items are of importance and call for immediate discussion at the earliest opportunity.

Mr. PUGSLEY: We might allow those two to stand and the other three to pass.

Items 278 and 279 stand.

Industrial training and technical education, $1,000.

[Mr. Macdonald.]

Mr. MACDONALD: I understand that the minister will be prepared to announce the policy of the Government in regard to technical education, and that an opportunity will be given to the hon. member for Rouville to discuss it on his motion.

Mr. ROGERS: The opportunity will be given if hon. gentlemen opposite will let him reach that motion on Monday. It is an understanding between the hon. member for Rouville and the Minister of Railways.

Progress reported.

On motion of Mr. Rogers, the House adjourned at 11 p.m.

Monday, March 13, 1916.

The House met at Three o'clock, the Deputy Speaker, Mr. Rhodes, in the Chair.

PRIVILEGE.

SHELL CONTRACTS—THE SHEET METAL PRODUCTS COMPANY.

On the Orders of the Day:

Hon. A. E. KEMP: Mr. Speaker, I rise for the purpose of discussing for a moment or two a personal matter. In his remarks to this House a few days ago, the hon. member for Carleton (Mr. Carvell) referred to me as being connected with a concern known as the Sheet Metal Products Company of Canada, Limited. I am connected with that concern. I desire first to read to the House a letter I received from that company:

Toronto, March 10, 1916.

Hon. A. E. Kemp, M.P., P.C.,
Ottawa, Ont.

Dear Mr. Kemp:

We are in receipt of a marked copy of Hansard of the 7th instant, in which we find certain references made by Mr. Carvell to this company.

The facts in relation to our transactions with the Shell Committee, briefly, are as follows:

All of the business offered has been through regular channels. No one, except a regular official of this company, has either directly or indirectly, had any negotiations whatever in connection therewith.

Shortly after the war broke out we were asked to make certain articles which were particularly in our line of business, and which we understood were component parts intended for use in making shells for the British Government. We congratulated ourselves on being able to be of some service in this connection, and as opportunity offered we rendered what assistance we could by giving information to other manufacturers, whose experience in a similar class of work was not as broad as ours, resulting, we believe, in increased production on their part, which was most desirable.

We co-operated with the Inspection Branch of the Shell Committee in affording facilities for training inspectors, whereby they familiarized themselves with their work, thus enabling them to inspect similar work which was being done in many other places, and this service was publicly acknowledged. It was also stated that this plant had been of immense value in overcoming difficulties in connection with the manufacture of articles referred to.

The total amount of business received from the Shell Committee, to which reference is made by Mr. Carvell, is considered small from two standpoints. First, in respect to the total amount of the class of articles required by the Shell Committee, which were distributed through many factories in different parts of the country, and second, it is also unimportant from the standpoint of the volume of our regular business, being approximately but three per cent in the years for which delivery was expected.

We do not know that any useful purpose can be served by making reference to that part of the speech which assumed to deal with the technical side of the question, as those who have not an intimate knowledge in respect to manufacturing processes would scarcely appreciate this phase of the subject. Suffice it to say that what are commonly called "tin cups" are made from twenty-two gauge steel tinned. The articles called "clips" are made from either brass or steel, in respect to both of which the combined operations, before completion are not less than thirty, all of which require to be of the most precise and exact character, and which fact, as those who know will understand, is common to the manufacture of all classes of ammunition.

The foregoing has reference to two articles. The third article, to which reference has been made, is what are known as "sockets". We accepted this business for the reason that the information which came to us was that the production of shells was being considerably retarded for lack of this particular part.

The execution of the Shell Committee orders necessitated special concentration and attention of our chief mechanical experts and factory executives, and, to a large extent, impeded operations in connection with our regular business, which under other than war conditions we should have viewed from a different standpoint, being always convinced that breaking into the manufacture of new and intricate articles tends to a condition of affairs which gives unfavourable results.

We remain,

Yours very truly,

The Sheet Metal Products Co.
of Canada, Limited.

F. S. Corrigan,
General Manager.

So much for that. So far as the personal remarks of my hon. friend are concerned, I wish to quote from Hansard. On March 7, Hansard, page 1606, my hon. friend from Carleton, referring to me, made this statement:

I find that the Shell Committee purchased from a member of this Government $300,000 worth of goods.

And on Hansard, page 1607, he made the following statement:

I think the Shell Committee who were appointed by this Government, for this Government, and acting under the instructions of this Government, surely ought to exhaust every means of purchasing supplies before resorting to the members of the Government themselves.

Then, on page 1634, my hon. friend, still debating the same subject, on his responsibility as a member of this House made the statement that I was the manager of, or managed, this company. In the first place, I desire to say that I have never at any time in my life received any favours from this Government or from any other Government of Canada. Secondly, for many years before becoming a member of this Government, I had taken no active part whatever in the management of this company. If all the time that I have given to the consideration of the affairs of this company since the war broke out was added together, I am quite sure it would not amount to as much as half a day. I have not even been in the works of this company since the war broke out. The first specific information I had in regard to these shell contracts, so-called, was when I read the remarks of my hon. friend from Carleton in Hansard. I do not want anything that I am saying, or shall say, to be considered in any sense as an apology because this company accepted this business. If they had refused to accept this business because I was a member of this Government, such action on their part would have received my condemnation. I want to say further, that if I had been the means of having this company refuse to assist in making munitions for the British Government, I would consider myself an object of contempt in this country, and I would not, I believe, be considered a decent Canadian or a decent British subject.

PRIVATE BILLS.

CONSIDERED IN COMMITTEE.

The House in Committee on Private Bills, Mr. Rhodes in the Chair.

Bill No. 23, to incorporate the Ontario Niagara Connecting Bridge Company—Mr. German—in Committee.

Mr. REID: Section No. 11 was struck out by the Railway Committee, and I would like to have it reconsidered. The section reads:

The said bridge shall be constructed and located under, and be subject to, such regulations for the security of navigation of the said river as the Governor in Council prescribes,

and to such end the company shall submit to the Governor in Council, for examination and approval, a design and drawing of the bridge, and a map of the location, giving the soundings, accurately showing the bed of the stream and the location of other bridges, and shall furnish such other information as is required for a full and satisfactory understanding of the subject; and until the said plans and location are approved by the Governor in Council the bridge shall not be built or commenced, and if any change is made in the plans of the said bridge during its construction, such change shall be subject to the approval of the Governor in Council, and shall not be made or commenced until it is approved.

This is the standard section which is to be found in the Railway Act. I believe it was the late Mr. Blair who first had it inserted, and I do not know why it has been struck out of this Bill, because the committee will understand that, with this section in the Bill, before the company can build their bridge, they must submit their plans to the Governor in Council and have them approved. As I understand, they intend to build a bridge across the Niagara river, and there is a possibility of their wishing to go through a beautiful park owned by the Ontario Government. I therefore give notice that I shall move to have section 11 reinserted.

Mr. NESBITT: The section which the minister has read is not the same as section 11 in my copy of the Bill. The section, as I understand it, makes the company refer the matter to the Railway Board, whereas the section which the minister has read makes them refer it to the Governor in Council.

Mr. GRAHAM: Section 11 in my copy refers to the amalgamation or agreement with a United States Company. Section 9 begins as follows:

The company shall not commence the said bridge or any work thereunto appertaining—

Mr. REID: My hon. friend has a copy of the original Bill, but the copy which I have is the reprinted Bill as it came from the Railway Committee, and section 11 in this Bill is the section that has been struck out.

Mr. NESBITT: It has been the custom for the last two or three years to refer these matters to the Board of Railway Commissioners.

Mr. REID: No, to the Governor in Council. The section which I have read compels the company to submit their plans for approval to the Governor in Council before they can commence work. That is the point I wish to cover.

Mr. GRAHAM: Perhaps the Chairman of the Railway Committee can tell us why the changes were made.

Mr. BLAIN: Section 11 of the Bill as it left the Railway Committee was struck out because an official of the department said that the section was covered by the Railway Act and therefore unnecessary. I think that is correct. I do not, however, wish to interfere with the minister if he desires the Bill to go back to the Railway Committee for reconsideration. The Bill was very generally discussed in the committee.

Mr. REID: I have given notice that I shall move to have section 11 re-inserted.

Progress reported.

Bill No. 28, respecting the Kettle Valley Railway Company, and Vancouver, Victoria and Eastern Railway and Navigation Company—Mr. Green—in Committee.

On section No. 1—extension of time for construction :

The CHAIRMAN: Section 1 has been amended at length, and I read the amendment to the committee at the last sitting. Is it the wish of the committee that I shall read it again to-day?

Mr. ROGERS: I think it would be well to have the amendment printed and distributed.

Mr. CHAIRMAN: It is printed.

Mr. ROGERS: It is not in the copies of the Bill that we have.

Progress reported.

Bill No. 26, respecting the Corporation of the City of Brantford—Mr. Cockshutt—in Committee.

Mr. GRAHAM: Was this Bill explained?

Mr. BLAIN: The sections were all carried, except section 3. On consideration, this Bill has been found to be correct. The law clerk of the committee went into the matter thoroughly, and finds the Bill to be in correct form. In my opinion it should pass.

Mr. GRAHAM: This seems a rather peculiar Bill. It seems to take the authority in a municipal matter into the hands of this Parliament. What is the real reason for having the Act passed in this form?

Mr. REID: As I understand it, the Grand Valley Railway Company was chartered by Act of this Parliament. The city of Brantford is taking over and operating this railway, which is the road running around the city of Brantford. The city is appointing a commission to operate the road. The authority of this Parliament is necessary for the transfer of the road from the Grand Valley Railway Company to this commission. The commission, of course, must operate the road upon the same conditions as those which governed the company. For instance, the company was obliged, under the Act, to pay municipal taxes to the several municipalities through which the road passes. When the Bill was before the committee these municipalities were protected by inserting a clause to oblige the commission to carry out these conditions. The hon. member will see that the only way in which the commission can get its title is by an Act of this Parliament.

Mr. GRAHAM: I understand that the company having been chartered by this Parliament, it would be necessary for this Parliament to give it power to perform acts not authorized by its charter. But whether this Parliament can give, or should assume to give, the city of Brantford power to do certain things is another matter. The corporation of the city of Brantford obtains its powers from the Ontario Legislature, and if those powers are to be altered one would think that the Ontario Legislature would be the proper authority to make the alteration.

Mr. REID: As I understand it, legislation has been passed by the Ontario Legislature under which the municipality may take over this railway. But, if no provision were made by this Parliament, it would be free from the obligation to pay taxes to the other municipalities through which the road passes. It seems clear that this Parliament is the only authority that can empower the Grand Valley Railway Company to transfer its road to the commission appointed by the city of Brantford.

Mr. NESBITT: I understood from the hon. member for Brantford (Mr. Cockshutt) that they had applied to the Provincial Legislature for the powers required from that authority. I do not think we have anything to do here with the by-laws of the city of Brantford.

Sir ROBERT BORDEN: I think the Bill was submitted to the Department of Justice, and the department gave the opinion that it was within the jurisdiction of this Parliament. It may be necessary to apply to the Legislature of Ontario also. As it is a railway subject to the jurisdiction of this Parliament, it would seem that the authority to own and operate it must come from this Parliament. In the case of a municipal corporation, it might be necessary also to obtain authority from the Provincial Legislature before legislation of this kind would be absolutely effective.

Mr. GRAHAM: I think an Act has been passed by the Ontario Legislature, giving the city of Brantford the necessary powers in this case. My contention was that as the city of Brantford gets its powers from the Ontario Legislature, we scarcely have the right to give it any authority. If this Bill means that the federal authority will accept the city of Brantford as owner and operator of a federal road, in place of the company incorporated by this Parliament, that would be reasonable enough. But if it proposes to confer powers upon the city of Brantford, that seems to be a matter for the Legislature of Ontario. In section 1 I find these words:

> The Corporation of the city of Brantford, hereinafter called "the Corporation", may own, equip, operate, alter, maintain and manage the railway of the Grand Valley Railway Company.

I think this wording is a little awkward. If it means that Parliament merely substitutes the words " city of Brantford " for " the Grand Valley Railway Company," I suppose the Bill is all right; but we have no right to give the city of Brantford any authority or to take any authority away from them.

Section agreed to.

Bill reported.

Bill No. 25, to incorporate the Western Canada Telephone Company—Mr. Green—in Committee.

On section 2—declaratory:

Mr. GRAHAM: Where is this telephone line?

Mr. REID: The whole of the line of this company is in British Columbia.

Mr. ROGERS: An amendment has been introduced providing that the company may not operate in any other provinces without the consent of those provinces.

Mr. NESBITT: When these amendments are reprinted, I suggest that they be distributed so that we may consider them in an intelligent way. This Bill was reprinted.

as were several others, but the original Bills are still on our files.

Mr. GRAHAM: Some of the western provinces have their own telephone companies. Was any question raised by the province of British Columbia as to its right to grant this charter?

Mr. ROGERS: That matter was taken up, and an amending section put in.

Mr. GRAHAM: I am afraid we do not know much about it.

Sir GEORGE FOSTER: I think we are all at sea, and wasting much time by not having these Bills printed.

Mr. GRAHAM: If a Bill of this kind were introduced with reference to Ontario, a protest would come from Ontario members that these franchises ought to be granted by the provincial authorities.

Mr. REID: This is the new section:

15a. Notwithstanding anything contained in this act, the Company shall not construct, operate, or maintain lines of telephones other than long distance lines in the city of Prince Rupert without having first obtained the consent of the municipality of the said city, or in the provinces of Alberta, Saskatchewan and Manitoba without first having obtained the consent of the Lieutenant Governor in Council of the provinces in which it is proposed to construct, operate and maintain a line of telephone as aforesaid; but this restriction shall not apply to the construction, operation or maintainance of long distance lines of the Company into or through the said city of Prince Rupert, or into or through any or all of the said provinces.

Mr. GRAHAM: That hardly meets the point I had in mind. What I ask is: has it been suggested on behalf of the province that this charter should be granted not by the Federal authorities, but by the provincial authorities? If it were definitely stated that it was the intention to run lines through other provinces, I should recognize the necessity of a federal charter; but in view of the fact that the operations of the company are evidently to be confined to the Province of British Columbia, I am surprised that some member from that province has not suggested that the charter should be dealt with by the provincial authorities.

Mr. REID: This is not a new company; it is an old, established company that has been doing business in British Columbia for some years. I think the company controls practically the whole telephone service in that province. It is getting a Federal charter because the company wishes to connect with the United States, and with the long distance services in Alberta and Saskatchewan.

Mr. OLIVER: I notice that the amendment provides for an extension of long distance lines through any of the prairie provinces. There may be no objection to that, but, having regard to the fact that the telephone lines in the three prairie provinces are practically under local government control, I think that the Bill should be reprinted with the amendment as agreed to in the Railway Committee, so that the Governments of these provinces may have an opportunity of seeing what the Bill says, and, what it does not say.

Mr. REID: There is no objection to that.

Mr. BLAIN: The Bill was reprinted and distributed among members of the House; subsequently these amendments were presented to and finally passed by the committee. It was suggested that the Bill be further re-printed, but the committee decided otherwise because it had been once re-printed for the consideration of the members. There is no objection to its being reprinted.

Mr. OLIVER: I would urge very strongly that the Bill be re-printed and that it be held in committee until the Governments of those three provinces have at least had an opportunity of expressing an opinion as to whether it would in any way interfere with the management of their provincial telephone systems.

Mr. REID: As the Bill now stands it does not in any way interfere with the provincial systems. It is not likely that any of the three prairie provinces would object to the construction of these lines right through their province without the company doing any businss in the province, in order to connect, say, with an Ontario line, or one in the United States. Perhaps the hon. member would wire to the Government of his province and ascertain whether there would be any objection. Every precaution is taken to protect the Provincial Governments' telephone systems.

Progress reported.

SECOND READING.

Bill No. 56 respecting certain patents of Stone, Limited.—Mr. Cockshutt.

QUESTIONS.

Questions answered orally are indicated by an asterisk.

POST OFFICE EMPLOYEES.

*Mr. LEMIEUX:

1. How many post office employees were actually on the pay-list, both permanent and temporary, on the 1st October, 1911, at the following offices: Montreal, Toronto, Quebec, Winnipeg, Vancouver, Victoria, Three Rivers, Sherbrooke, St. Johns, N.B., and Halifax?

2. How many new appointments, both permanent and temporary, have been made since 1st October, 1911, in each of the above named offices?

Mr. CASGRAIN:

1. Montreal, 737; Toronto, 657; Quebec, 119; Winnipeg, 273; Vancouver, 191; Victoria, 60; Three Rivers, 8; Sherbrooke, 20; St. John, 72; Halifax, 71.

2. Montreal, 1,865; Toronto, 2,427; Quebec, 252; Winnipeg, 473; Vancouver, 346; Victoria, 232; Three Rivers, 32; Sherbrooke, 55; St. John, 144; Halifax, 123; total, 5,949.

The 5,949 new appointments are accounted for as follows:

Men employed temporarily at Christmas season	2,948
Men employed for periods of less than two months to replace regular employees absent owing to illness	231
Men employed in place of employees who dropped out of the Service by death, resignation or superannuation between October, 1911, and January, 1916	693
Number dismissed	142
Number who retired after completion of time of temporary service allowed by the Civil Service Act	245
Substitutes for men absent on military duty	268
Additional permanent employees 1,353 Temporary employees 69	1,422

POST OFFICE SALARIES.

*Mr. LEMIEUX:

1. What was the total sum paid as salaries to the post office employees, both permanent and temporary, on the 1st October, 1911, at the following offices: Montreal, Toronto, Quebec, Winnipeg, Vancouver, Victoria, Three Rivers, Sherbrooke, St. John, N. B., and Halifax?

2. What was the total paid as salaries to the Post Office employees, both permanent and temporary, at the above named offices on the 1st February, 1916?

Mr. CASGRAIN:

	Amount of yearly salaries as on 1st October 1911.	Amount of yearly salaries as on 1st February 1916.
Montreal	$542,918 28	$1,118,964 00
Toronto	506,311 56	963,415 68
Quebec	91,186 20	236,244 48
Winnipeg	237,470 88	402,006 96
Vancouver	161,818 20	310,213 08
Victoria	55,618 32	116,507 88
Trois-Rivières	5,537 00	12,105 00
Sherbrooke	16,485 72	25,226 84
St. John	63,881 64	99,866 40
Halifax	64,453 08	79,904 28

POST OFFICE REVENUES.

*Mr. LEMIEUX:

1. What was the total revenue of the following Post Offices respectively, for the fiscal year 1910-11: Montreal, Toronto, Quebec, Winnipeg, Vancouver, Victoria, Three Rivers, Sherbrooke, St. Johns, N.B., and Halifax?

2. What is the total yearly revenue, respectively, of the above named offices for the fiscal year 1914-15?

Mr. CASGRAIN:

	1910-11	1914-15	1915-16 (11 months).
Montreal	$1,152,177 27	$1,590,395 44	$2,151,346 05
Toronto	1,963,065 28	2,905,391 54	3,458,937 46
Quebec	160,968 62	213,563 15	268,020 57
Winnipeg	836,931 15	1,376,433 65	1,751,956 66
Vancouver	348,780 88	455,338 56	519,567 26
Victoria	108,344 85	158,715 22	182,708 39
Three Rivers	14,225 49	20,150 75	28,370 78
Sherbrooke	35,214 58	44,639 58	62,496 34
St. John	119,607 43	148,316 51	195,624 04
Halifax	119,561 78	154,499 29	213,710 95

MOOSEJAW MILITARY CAMP.

Mr. THOMSON:

1. When was the military camp established at Moosejaw, Sask.?

2. Who are the physicians in charge of the said camp since its establishment?

3. How many men are in said camp?

4. How many enlisted soliders have died in said camp?

Mr. KEMP:

1. No military camp has been established at Moosejaw, Sask.

2. The following medical officers have been connected with the troops quartered and billeted in Moosejaw, Sask.: Capt. T. M. Leask, who transferred to 10th Field

Ambulance on February 1. Major R. Gibson, medical officer 128th overseas battalion. Capt. G. A. Gray, medical officer 128th overseas battalion. Lieut. W. Brown, has been examiner of recruits and medical boards. Lieut. C. F. Knight, has been examiner of recruits and medical boards. G. F. Seaburn, has been examiner of recruits and medical boards.

3. 1,539 officers, n.c.o's. and men quartered and billetted in Moosejaw on March 1, 1916.

4. Only one soldier has died in Moosejaw since mobilization.

REGINA ARMY SERVICE CORPS.

Mr. W. M. MARTIN:

1. From whom has the Government rented premises in the city of Regina, since the commencement of the war, for the accommodation of the Army Service Corps?
2. What monthly rental has been paid for such premises?
3. What do such premises consist of?

Mr. KEMP:

1. The Western School Company, Regina.

2. $100 per month, on recommendation of district officer commanding.

3. One storey corrugated iron building, 45 feet by 100 feet.

KITSILANO INDIAN RESERVE.

Mr. MACDONALD:

1. Has any arrangement been made between the Federal Government and the Government of British Columbia, by which the Federal Government is to pay the Provincial Government a greater amount than three hundred thousand dollars for the Kitsilano reserve, and to hand it over to the Harbour Board?
2. If so, when was the arrangement made?
3. What is the exact amount to be paid?

Mr. REID:

1. The Board of Harbour Commissioners of Vancouver applied for expropriation of the Kitsilano Indian reserve for harbour purposes, and the expropriation was allowed by the Royal Commission on Indian Affairs for the province of British Columbia. An arrangement has been made between the Dominion Government and the Government of British Columbia that the quantum of the reversionary interest of British Columbia, if any, in the amount received from the Board of Harbour Commissioners of Vancouver shall be paid to the province.

2. The arrangement was made in July, 1915.

3. The exact amount to be paid is not yet known; it will be decided by arbitrators.

[Mr. Kemp.]

LIEUT.-COL. TREMAIN, M.P.

Mr. PROULX:

1. When was H. B. Tremain, M.P., made a Lt.-Colonel?
2. What amount has he drawn for such services to date?
3. What amount has he drawn for expenses?

Mr. KEMP:

1. 3rd November, 1915.

2. Same rates as paid to all officers commanding overseas battalions, i.e., $922.25 from 3rd November, 1915, as officer commanding 112th battalion.

3. $150.

FISH FOR CANADIAN TROOPS.

Mr. SINCLAIR:

1. What description of fish is being purchased in Canada by Major Green for the Canadian Army Service Corps?
2. To what address can parties having fish to sell apply?
3. Have any contracts been made with parties in the Maritime provinces? If so, with whom?
4. Have the purchases, if any, been made on account of the Imperial or Canadian authorities?

Mr. KEMP:

1. A limited quantity of fish was purchased with a view to ascertaining whether or not Canadian fresh fish could be delivered in good condition to our troops in England. From Maritime Provinces: Smoked haddie, smoked fillets, fresh codfish, fresh soles, tinned haddie. From British Columbia: Fresh salmon, halibut, lake herring. From Manitoba: Fresh whitefish. Fish was purchased by the Department of Militia and Defence through the War Purchasing Commission. Major Green made no purchases, but his services were utilized to give expert advice.

2. No further supplies of fish are required at present. If the experimental shipment is a success, and it is decided to ship further quantities of Canadian fresh fish, those who desire to tender should apply either to the Department of Militia and Defence, or to the War Purchasing Commission.

3. No. A contract was made with the Maritime Fish Company, Limited, of Montreal, representing Maritime Province industries.

4. On account of the Canadian Government.

INTERCOLONIAL RAILWAY—RATES ON FOREST PRODUCTS.

Mr. MACDONALD:

1. What are the forest products for local consumption, short haul, on which the mileage tariff rate on the line of the Intercolonial rail-

way east of Lévis, was raised, as stated in the answer to question by the Acting Minister of Railways, on page 1505 of Hansard?

2. What was the date of those increases?

Mr. REID:

1. Fence posts and rails, laths, logs and bolts, lumber (common), pulpwood, ties.

2. November 15, 1915.

A. A. EVANS.

Mr. W. M. MARTIN:

What amount of money was paid by the Department of the Interior by way of expenses to A. A. Evans, of Outlook, Saskatchewan, for relief work performed in the month of October, 1914?

Mr. ROCHE: $58.

T. M. RICHARDS.

Mr. MICHAUD:

1. Was T. M. Richards, of Edmundston, N.B., appointed a recruiting officer in the county of Madawaska during the year 1915?

2. If so, how many days did he work?

3. How much did he receive for his services?

Mr. KEMP:

1. Mr. T. M. Richards, of Edmundston, supervised recruiting in Madawaska county, N.B.

2. He carried on this work for seventeen days, from August 20, 1915, to September 6, 1915.

3. Mr. Richards carried on the work of recruiting without remuneration.

COMMERCIAL AGENTS IN SOUTH AND CENTRAL AMERICA.

Mr. DELISLE:

1. How many commercial agents represent Canada in South and Central America?

2. What are their names and addresses, and the name of the country for which each of them has respectively been appointed?

3. Is it the intention of the Government to increase the number of the South and Central America countries covered by its commercial agents?

4. Is it the intention of the Government, in view of the new commercial situation created by the war, of which several nations are
4 p.m. already preparing to take advantage, to appoint commercial agents for the following countries: Argentine, Brazil, Nicaragua, Peru, Chili and Venezuela?

5. Are the Canadian commercial agents in South and Central America regularly reporting to the Government, and is it the intention of the Government to publish their reports for the information of the prospective Canadian importers and exporters?

Sir GEORGE FOSTER:

1. One Canadian trade commissioner. No commercial agents. Arrangements have been effected by which British commercial and consular officials act for Canada, receive and answer inquiries from Canadian business men, and report to the department on special subjects when so requested. The names and addresses of such consular and commercial officers are as follows:

Brazil: D. R. O'Sullivan-Beare, H.B.M. Consul General, Rio de Janeiro; Edward M. de Garston, H.B.M. Consul, Bahia.

Chile: Allan Maclean, H.B.M. Consul General, Valparaiso.

Colombia: Percy C. Wyndham, H.B.M. Consul General, Bogota.

Ecuador: Lucien J. Jerome, H.B.M., Consul General, Quito.

Panama: Percival Helyar, H.B.M. Vice-Consul, Panama; Harry O. Chalkley, H.B.M. Consul, Colon.

Peru: Henry Francis Hammond, H.B.M. Vice-Consul, Lima.

Uruguay: Harry C. Ricardo, H.B.M. Vice-Consul, Monte Video.

Venezuela: Thomas I. Rees, H.B.M. Vice-Consul, Caracas.

2. H. R. Poussette, Canadian Trade Commissioner, Reconquista No. 46, Buenos Aires, Argentine Rupublic.

3. Yes, as circumstances and conditions render it advisable to do so.

4. Answered by No. 3.

5. Yes. The reports have always been published in the Weekly Bulletin issued by the department.

POSTMASTERS AND MUNICIPAL ELECTIONS.

Mr. MARCIL:

Is there a rule in the Post Office Department forbidding postmasters from taking part in municipal elections as candidates, and from sitting as councillors and mayors?

Mr. CASGRAIN: An Order in Council was passed in 1893, prohibiting postmasters of incorporated towns from accepting appointment to representative positions as mayor, aldermen, or trustee of public or separate schools. It may be stated, however, that this Order in Council has only been strictly enforced as regards the larger cities. As regards the smaller incorporated towns and villages the department has not pressed the point, except where it was considered that the municipal duties might conflict or interfere with the duties of the postmaster.

NEW RICHMOND POST OFFICE.

Mr. MARCIL:

1. Is the post office at New Richmond West, Quebec, said to have been lately closed, to remain so closed, or is it to be re-opened?

2. Are rural mail boxes locked or do they remain open?

Mr. CASGRAIN:

1. The post office of New Richmond West, Quebec, was lately closed, following the

inauguration of rural mail delivery in that locality. Requests have been received that the closing of the post office be reconsidered, and the same are now under investigation.

2. Not locked, as it might impede the efficiency of the service, especially in winter. However, to insure the safety of mail matter deposited therein, a penalty is provided by law for depredations on rural mail boxes or their contents, and the department undertakes to protect the boxes as much as possible and to inquire minutely in all cases of such depredation reported to them.

MURCHIES CHANNEL PIERS.

Mr. MARCIL:

1. Has a petition been received from the smelt fishermen of Pointe à la Garde, Quebec, asking for the erection of piers in Murchies channel, of the Restigouche river, for the safety of the fishermen and the protection of property?

2. If so, was anything done in the matter, and what was done?

Mr. ROGERS:

1. Yes.

2. The district engineer reports that it would require six piers, costing $3,000, to hold the ice, but as the work is not in the interests of navigation, no action has been taken.

ST. ALPHONSE DE CAPLAN MAIL SERVICE.

Mr. MARCIL:

1. Has the Postmaster General received any request to improve the mail service at St. Alphonse de Caplan, Quebec?

2. If so, has any action been taken, and what is it? If not, why not?

Mr. CASGRAIN:

1. Application was made to change the base of supply from Caplan River to St. Charles de Caplan.

2. The post office inspector having reported that the change would make no difference in the efficiency of the service, and would, moreover, involve a considerable increase in the cost, it was not possible for the department to grant the request of the applicant.

UNOPPOSED MOTIONS FOR PAPERS.

Mr. McKenzie.—For a return showing the names, dates of appointment, post office addresses at time of appointment, and former occupations of the censors employed by the Militia Department at Louisburg and North Sydney, Nova Scotia; the names of all the said censors who are also decoders, and the names and addresses of all who are employed in the censorship service at the above points; the amount paid to each censor or decoder since the 4th of August, 1914, up to the 1st February, 1916, or to any party or person in connection with the censorship or decoding services at the above places.

[Mr. Casgrain.]

Mr. Macdonald.—For a return showing a list of all Canadian officers employed in England, not attached to any particular unit, the amounts paid monthly to each, the nature of duties performed by each, and a copy of all correspondence in relation to their employment.

Mr. Macdonald.—For a copy of all letters, telegrams, petitions, memorials and other documents relating to the subsidizing by the Government of the construction of ships in British Columbia, or of ships when built; or as to the laying down or constructing or assisting in the construction in British Columbia of twenty-five ships by the Government, or as to assisting by subsidies or otherwise in the construction of ships in the Dominion.

Mr. Macdonald.—For a copy of all petitions, letters, papers, telegrams and other documents relating to the establishment of the Rural Mail Route No. 2, Scotsburn, county of Pictou, and as to the closing of post offices along said route.

Mr. Macdonald.—For a copy of the affidavit of David W. McLean, Windsor, N.S., to whom Warrant No. 25737 was issued for Fenian Raid Bounty, and also a copy of all correspondence and other documents relating to the payment of the same.

Mr. McKenzie.—For a copy of all the evidence taken by the commission appointed to inquire into claims for damages made against the Militia Department in the town of Sydney Mines, Nova Scotia and of the report made upon each claim or case, said claims being for damages to lands and other property.

Mr. Sinclair.—For a copy of all letters, petitions, recommendations and other documents in the possession of the Post Office Department relating to the appointment of the postmaster of West Roachdale, Guysboro county, Nova Scotia, to take the place of J. H. McGuire, deceased.

Mr. Macdonald.—For a copy of all instructions, letters, telegrams, and of other documents relating to any action taken, or to be taken, against the firm of Jas. W. Cumming by the Department of Railways on account of the disclosures made in regard to irregularities in the weighing of freight, as appears in Return No. 25, dated February 29, 1916.

Mr. Nesbitt.—For a return showing the names of all the medical examiners of recruits appointed since the war started to date.

Mr. Bureau.—For a copy of all correspondence, memoranda, reports, telegrams, recommendations, orders, etc., between the Department of Railways and Canals and the officers of the Ste. Maurice Fire Protective Association with reference to fire protection on the Transcontinental railway line between Hervey Junction and the Western Boundary of the province of Quebec.

SOLDIERS' PENSIONS.

Mr. E. M. MACDONALD (Pictou) moved for:

A copy of the pension list in force in Canada for disabled soldiers and of all petitions, letters or other documents relating to the amendment readjustment of the same.

He said: Mr. Speaker, I am moving this motion for the purpose of urging upon the Government the desirability of making some changes in the pension list which was brought down at the last session of Parlia-

ment. Hon. gentlemen will recall that the pension list at present in force for disabled soldiers was fixed by the terms of an Order in Council which was laid on the table of the House some two or three weeks before prorogation last year. These provisions went into effect without the subject having been referred to a committee of this House, or without it having come before the House for consideration in any formal way.

There are certain anomalies in connection with this pension list which have attracted attention throughout the country. I suppose that hon. gentlemen, including members of the Government, have received a copy of a pamphlet which a committee of the Toronto Board of Trade has prepared dealing with this subject and which points out anomalies and makes recommendations which have been adopted and approved by the Toronto Board of Trade. I think hon. gentlemen will agree that one of our essential duties in connection with the war is the establishment of a fair pension list. A careful examination of the present arrangement reveals a number of anomalies which require remedying. In the first place, I think that the four distinctions or degrees contained in the present pension list are anomalous. The first degree is applicable to those who are rendered totally incapable of earning a livelihood by reason of wounds contracted in action, or in the presence of the enemy. The second degree is applicable to those who are totally incapable of earning a livelihood on account of injuries received on active service, in drill, or training, or who are rendered materially incapable as a result of wounds or injuries received, or illness contracted, in action, or in the presence of the enemy. I do not think there is any real reason why we should distinguish between these men who have been so unfortunate as to be rendered totally incapable. If a man volunteers in good faith to serve his country, and receives wounds which render him absolutely incapable, it does not matter to him in after life whether he received those wounds in the presence of the enemy or in training at home, and it ought not to make any difference in his pension. Only the other day there was a case in Toronto of an officer being rendered totally incapable for life as the result of an accident while teaching his men how to throw bombs. That man is entitled to just as much consideration as if he had received his wounds in the presence of the enemy, and I submit that we should make no distinction at all between men who are rendered totally incapable on active service and those who are rendered totally incapable by reason of injuries sustained on service in Canada.

It is also pointed out in this pamphlet that the present pension allowed to the men of the rank and file is too low, and a little later on I shall draw attention to the distinction that is made between the rank and file and the officers. The difference is in my opinion entirely too great. The pamphlet points out that while there is a difference in the pension allowed to privates and officers in Australia, the difference is not nearly so great as it is in Canada. We all know that in the Canadian expeditionary forces there are men in the rank and file of just as good social position, and just as intelligent, as are the officers. While I concede that we must make some distinction between a private and an officer, I submit that the difference in pension allowed under the present arrangement is entirely too great, and that the pensions to these two classes ought to be brought closer together, as in Australia.

Sir ROBERT BORDEN: They have been brought closer together in Australia by a reduction in the higher ranks, have they not?

Mr. MACDONALD: I am unable to say at present, but I know the difference is not nearly so great as in Canada. Not only is there a great difference between the pension allowed to the private and the pension allowed to the officer in Canada, but I submit that the pension allowed the private is entirely too small. A man who loses both legs, or both arms, or the sight of both eyes, or is paralysed—a man who is rendered incapable from any of those causes is allowed a pension of only $22 a month, subject, however, to the condition that the authorities have the right to grant him an additional $7.33 a month to provide for a constant attendant. A man in that class would receive, then, a pension of only $29.33 a month or $351.96 a year. That is the pension paid to the first degree pensioner who receives his accident in active service and in the face of the enemy. The second degree pensioner, who may have received just as extensive injuries, receives only $21.33 a month, plus an allowance of $5.33 for a constant attendant, which it is assumed he would have on account of his inability to do anything for himself. Again, the distinction made between single and married men is one that

is deserving of the attention of the House. All that a single private can get by way of a pension under the conditions I have mentioned is $29.33 per month; whereas it is possible for a married man to receive for himself and his wife $40.33. The question is, is it sound policy to make so great a distinction between the single and married man? A single man who has lost his arm or his leg and become absolutely incapable, may have lost both parents, and have nobody to look after him, and all he gets is a pension of $29.33 a month. But what is he going to do with that, when he has no kith or kin in the wide world to interest themselves in him? On the other hand, the married man, who gets a pension which with his wife's allowance amounts to $40.33, would have his wife to take care of him. The single man who has no one to look after him gets $11 less a month than does the man who has a wife.

Take the case of a married man with three children; if he comes under the first degree of pensions he will receive $55.33 per month or $663.96 per year. If his wife dies, leaving him with three small children, he loses the allowance given to her, and thus, although he is absolutely incapable of doing work, his pension is reduced, whereas under such conditions he should be entitled to an additional allowance. This, of course, may be one of the anomalies likely to arise out of the working of any pension system, but the House will readily see that such a condition ought to be remedied.

If a married man comes under the second degree of pensions, he will receive for himself, his wife and three children, only $47.33 or $567.96 a year. The Minister of Labour, in his report on the cost of living, estimates that $61.33 a month is the minimum amount necessary for such a family to procure the necessities of life, so that the allowances under these two degrees of pensions are away below the minimum amount estimated by the Minister of Labour.

There is another anomaly that may arise. While a soldier is at the front, it is possible for his wife to get payments of $45 a month from the various sources recognized by the Militia Department. Whereas on his return, and with the additional burden imposed upon her as a result of his incapacity, the amount which she receives may be as low as $32.33 or as high as $40.33, according to the degree in which the pension scheme places him. It is suggested by those who have studied the matter that the minimum amount which a soldier should receive as pension, where total incapacity exists and all possibility of being able to earn a living under ordinary conditions is taken away, should be as much as he received while serving in the ranks, which is $33 a month. I think that is a very fair suggestion. In the discussion which took place a few days ago in Toronto before the board of trade, the recommendation made by Archdeacon Cody and Mr. Darling, who had especially to deal with the report of the committee, was that the minimum amount to be paid to the incapacitated soldier on his return should be $12.50 a week or $50 a month. That, however, would be a matter for consideration when the pension list is revised, and I think the necessity for a revision of the list is apparent in the light of the facts which I have submitted.

I have mentioned the fact that there is a disparity between the pension allowed to a private and that allowed to an officer. The highest amount that a private can draw under this pension list is $484 a year, whereas the highest that a colonel can draw is $2,370 a year. From the information which I have at hand, a colonel in Australia under their pension law receives only two and three-quarters times as much as does a private soldier, whereas in Canada a colonel receives five and one-half times as much. Considering the democracy of this country, and the class of men who are serving in the ranks, and as officers, no such disparity exists in their position as would warrant the man who happens to be a colonel—and we have many colonels in this country—receiving five and one-half times as much pension as the sturdy fellow who has fought in the ranks.

The minimum amount paid to a private in Australia is 69 cents a day or about $21 a month. Under the English pension law, there is no distinction between married and unmarried men, and the minimum amount paid there is $26.32 a month, there being an allowance for the first child of one dollar extra, for the second child 65 cents extra, and for the third child, 45 cents extra. Under the American system $100 per month is allowed in these classes for totally disabled men. In a report of the discussion which took place at Toronto I find the following :

Mr. Darling said that the amount paid in Canada was considerably lower than elsewhere. He quoted the following figures: United States,

$3.28 a day; England, 87 cents a day; Australia, 69 cents a day; and Canada, single men, lowest $16 a month; highest $29.33 a month; married men, lowest $27 a month; highest $40.33.

That statement by Mr. Darling puts the comparison between the different countries in a very compact form. I would also like to urge upon the Government the desirability of having the whole question of pensions dealt with by a permanent pensions board. We have 270,000 men under training, and the moment that any one of them, after enlisting for overseas service, is injured, whether at home or abroad, he comes under this pension law and is entitled to compensation under one of the various classes set forth in the provisions of this Order in Council. A very large percentage of those men will have to be pensioners of the Government, and, as the situation is so well put in the memorandum prepared by Mr. Darling:

All matters pertaining to pensions should be decided by a permanent Pension Board, the appointments to the board being kept free from political party control, and so regulated that a definite form of continuous policy shall be followed. Only by such means can the efficiency of the organization and economy in its working be secured and maintained.

There ought to be such an organization to deal with this question as that the pensioner would know that he had an absolute, certain and definite right to his allowance, that he would find that his pension was paid to him as a right and not as a favour, and that that right was unassailable.

If the right of these men to receive pensions is by any possibility to be made to depend upon the influence of party or political friends, one can hardly conceive of more unfortunate conditions as existing for any country. Without elaborating the suggestion, which seems to me so apparent that one does not need to argue it, I leave it with the hope that in making permanent arrangements the necessity of acting along the line I have suggested will be kept in view.

Last session, there was no discussion upon this question, though the Prime Minister frankly invited discussion when the pension provisions were laid on the Table. But sufficient information was not then in the possession of hon. members generally, and consequently it was not possible to give the attention to the matter which it required.

In the intervening months much attention has been given to the subject by the people generally. I trust the Government will take into consideration the suggestions I have made, with a view to rectifying the anomalies that exist. When one thinks of the tremendous efforts in beneficence put forth by patriotic citizens, in connection with the war, it is not to be wondered at that it is only within the last few months that close attention has been directed to the necessity of having a clear and equitable pension law. But, now that attention is directed to it, I hope the Government will be able to work out an effective plan.

I desire to call the attention of the right hon. the Prime Minister to correspondence which I have received respecting action which the Government may take in assisting what are called Soldiers' Homes, which it is proposed to establish in different parts of Canada. There ought to be a definite policy announced on behalf of the Government for dealing with matters of this kind. I am aware that fear has been expressed that the energy of many good people may be misdirected, and I do not know whether the plans for the establishment of soldiers' homes meet with the full approbation of the Government, or whether it is in the line of their policy that federal assistance should be given to homes of that kind.

Sir ROBERT BORDEN: Are these homes established by or in connection with the associations in the several provinces acting with the Military Hospitals and Convalescent Homes Commission?

Mr. MACDONALD: I am not referring to convalescent homes. I understand that convalescent homes have been established by philanthropic people at different points, simply for the purpose of looking after the soldier, in the period of his convalescence, and before his future course is finally determined. But I am advised that in Winnipeg, for instance, an organization has been perfected, and a charter obtained from the Provincial Government, to incorporate a number of very worthy gentlemen as a body corporate under the title of the Manitoba Soldiers' Homes, for the purpose of acquiring and operating homes for soldiers throughout Manitoba, with a view to providing residence for returned and disabled soldiers, either members of the British army or members of the Allied armies, and this body has received powers which would naturally be given to such a corporation for the purpose of operating soldiers' homes such as exist in many parts of the United States, where men who have engaged in war and are totally disabled are cared for in old age. This, of course, is a phase of the whole question of what we are to do with the soldiers who return.

Another suggestion has been brought to my attention, the working out of which, perhaps, may be difficult so far as company railways are concerned, but which might be applied to the Government railways. The suggestion is that men enlisted for overseas service be granted, when leave is given them to visit their homes, a rate of one cent a mile on the Government railways. Of course, it would be a matter of certificates on the part of the officer granting the leave. It is suggested, also, that where soldiers are travelling on the Government railway, going to or from their homes for recruiting purposes, or to visit their families before going overseas, they should be given concessions upon the dining-cars of the Government railways. It certainly seems anomalous that we should coax and plead with the young fellow in the country town to go and fight for his country, and then when he consents, take him to a camp a hundred or two hundred miles away from his home; and, that when he wishes to return to his home to visit his mother or his relatives under leave of his commanding officer, the Government railway should demand from him the last cent by way of fare. The Minister of Railways announced a very handsome surplus the other night. Here is a matter which would mean a great deal to the boys who have enlisted, and who wish to return to their homes. Some consideration should be shown them by the Government railways. This, of course, is aside from the main subject I desire to deal with in the resolution.

I bring these suggestions in regard to the pension law to the attention of the Government, feeling that the desire of us all would be to deal in an absolutely fair and equitable way with the unfortunate soldiers who return wounded. I trust the suggestions I have made will meet with favourable consideration by the Government, and that the anomalies which I think exist will be removed, and the whole pension system be placed upon a permanent basis by the establishment of a non-partisan pension board.

Hon. FRANK OLIVER: I will not go over the ground so well traversed by my hon. friend from Pictou (Mr. Macdonald). As to the general question of the scale of pensions, it will be generally agreed, I think, after reading the careful memorandum prepared by the Committee of Citizens in Toronto, that the scale provided last summer needs revision. No doubt it will receive it. A general revision upward, as well as a general equalization according to the suggestions made by the committee, will, I feel assured, receive adequate support in the House.

The matter of dealing with the pensions through a pensions board should, I think, receive the immediate attention of the Government. This question of pensions is one of such tremendous importance to the individual affected, and to the country at large, that it cannot be placed upon a permanent foundation, and cannot be put into fully accredited and non-partisan hands too soon to meet the needs of the case or the views of the people. If I were to offer any criticism, it would be that we have hardly appreciated how deeply we are engaged in this war and how terrible are the effects of it that have already been felt. I read that our losses up to the present time have been 20,000 men in killed, wounded and missing. That means the provisions of the pension law are in urgent demand at the moment, not only for the well-being of those who have suffered, but for the purpose of assuring those whom we are calling upon to offer themselves in our service, and their relatives and friends as well, that the country is absolutely behind them and will see that, whatever happens to them, they will be cared for, so far as the country can care for them, along certain well recognized and approved lines, and by means that will leave no room for question. It seems to me that we have been slow in appreciating how urgent this matter is, how far-reaching it is, and how tremendous the interests are that depend upon it being adequately and promptly handled.

I wish to allude in particular to two features of the care of returned soldiers. Some time ago I asked for certain Orders in Council which were brought down, and which I have before me. One is dated December 25, 1915, and makes provision for a gratuity of $100 in case of the discharge of a soldier only slightly disabled. I can quite appreciate that there are conditions under which such a payment would be proper and adequate. But I wish to point out that, having regard to the memorandum attached to the Order in Council, this provision gives to a board which is not endowed with the fullest responsibility, and which, perhaps, has not the fullest knowledge of the facts, an opportunity to do less than justice to the discharged soldier. I do not like the wording of the

memorandum of information upon which the Order in Council is based. The suggestion, as it appears to me, is that this provision offers a ready means of getting rid of a troublesome man and a troublesome question. I may be wrong in putting that interpretation upon this memorandum.

Sir ROBERT BORDEN: What is the language?

Mr. OLIVER: The memorandum is very long, and it would be necessary to read the whole of it in order to get the idea. I may be giving an improper interpretation of it; I hope I am. At any rate, I want to emphasize the point that to give the discharged soldier a gratuity of $100, unless it is with a thorough appreciation of the case, is not properly to discharge the country's obligation to him. If he were permanently disabled, he would be entitled to permanent consideration; the payment of a simple gratuity would not be a fair and proper consideration to give him.

Sir GEORGE FOSTER: That gratuity does not settle his case permanently.

Mr. OLIVER: Unfortunately, as I understand the memorandum, it does. The President of Pensions and Claims Board, in recommending this matter to the Government, uses these words:

> We feel, however, that if this man once gets his name on the pension list, it will be very difficult to cease paying him a pension of a small amount, and therefore we feel that if we had the power to grant a man a gratuity in lieu of the pension, and if the Treasury Board would waive its rights in the case of the gratuity only, to say whether it would confirm our recommendation, we would be in a position to close the matter up without delay, whereas, under the present regulation, if we had the power to grant a gratuity, the whole matter has to be left open until a reply comes back from Ottawa.

The intention evidently is to close the man out with $100 for the convenience of the present Pensions Board. If I have misinterpreted the memorandum I will be glad, but that is the impression it conveys to my mind, and I take the liberty of drawing the attention of the Government to it, and of voicing my views that that is not a proper attitude of mind in which to approach this question.

The next point that I wish to draw attention to is an Order in Council, dated December 16, 1915, making provision for men who have become insane in active service. I had occasion to mention this matter once before in the House, and I take the liberty of referring to it again, because it seems to me that the intent of this Order in Council jars upon the sensibilities of the people at large. In this war, carried on with weapons such as are now used, it frequently occurs that men come out of the fight with their minds shattered, although physically they have not suffered injury. These men were physically perfect before they went in, and presumably they were mentally perfect as well. They have suffered such shock to their nervous system as has unbalanced their minds. It is a reasonable probability that such men, given favourable conditions, would make complete recovery of their reason and again become useful citizens, each one an asset to the state, and a benefit to himself and to his relatives. It was with a feeling which jarred upon my mind that I read in the newspapers that men in such cases were being committed to the ordinary asylums for treatment and consideration. I find that provision is made, under an Order in Council of December 16, for committment of such men to lunatic asylums. I wish to urge upon the Government as strongly as I can that this is not proper treatment to give to men in such circumstances. Their condition demands certain treatment, and the best that the country can find for them, in the hope of recovering their intellects for the benefit of the country and the advantage of their relatives. I hope that special provision will be made, that institutions will be organized immediately, if they have not been organized already, for the special care of such cases as these. These men, in the perfection of physical health, have had their intellects unbalanced by reason of physical shock, and it is not unreasonable to hope that with proper care and treatment they may recover their intellects. I assure the Government that the public look, may I say, with horror, upon the fact that a young man who has volunteered as a soldier and who has suffered in this way is committed to an ordinary insane asylum where the surroundings naturally tend to militate against his ultimate recovery. In any case there is a certain amount of sentiment in these things, as there ought to be, and we can surely better afford to spend a reasonable sum of money in making special provision for this new class of cases that has arisen in this war, than to be considered guilty of an insufficient regard for the sacrifices these men have made or the possibility of their recovering from the result of these sacrifices.

Sir ROBERT BORDEN (Prime Minister): The subject of pensions has been under the consideration of the Government for

some time past, and probably it would have been taken up at an earlier date had it not been that I thought it desirable,—as this motion has been standing for some time upon the Order Paper,—that we should hear the views of hon. gentlemen before the Government took any definite or final action on the whole subject. My hon. friend from Pictou (Mr. Macdonald) has brought the subject up in a very considerate and reasonable way. It is perfectly true that before the Order in Council which establishes the present scale of pensions was passed, we placed a draft of it upon the table of the House last session, and I requested an expression of the views of hon. members, in order that the Government might take it into consideration before the subject was dealt with by passing the Order in Council. Not a great of attention was given to it during the session, and perhaps it might have been better if the draft Order in Council had been printed and circulated among the members, in order that the subject would thus more fully engage their attention. I shall have these papers brought down at once; I have been gathering them together. Then if opportunity for further debating the matter is desired, the Government will be very glad to afford that opportunity, because the papers as brought down will embrace some suggestions and reports which have not yet been made public. Among these there is a report, in the form of a letter to the Minister of Militia, from the chairman of the Pensions and Claims Board, Canadian Expeditionary Force, of which Sir Montague Allan is the chairman.

It is perfectly true that the scale which was submitted to the House last session, and which was authorized by Order in Council, does not proceed precisely upon the lines of the Australian pension list, but it follows that list very closely, except in one respect, to which I shall allude later. For totally disabled soldiers who have become incapacitated in active service, the scale for an unmarried soldier in Canada is $264; in Australia, $253; and in Great Britain, $316. The scale in Canada is slightly higher than that of Australia, and is about $50 lower than that of Great Britain. For a married soldier and wife, without children, the scale in Canada is $396; in Australia, $380; and in Great Britain, $316. The British scale makes no allowance for the fact that a man has a wife dependent upon him. For a soldier with a wife and one child, the scale in Canada is $456; in Australia, $443; and in Great Britain, $348. There is an allowance made in Great Britain of $32 for the support of a child, but no allowance is made for the support of the wife. For a soldier totally incapacitated who has a wife and two children dependent upon him, the scale in Canada is $516; in Australia, $506; and in Great Britain, $380. That is to say, the scale in Canada is $10 more than in Australia, and $136 more than in Great Britain.

For a soldier, totally incapacitated, with a wife and three children dependent upon him, the scale in Canada is $576; in Australia $569, and in Great Britain $412. The Canadian scale, in this respect, is slightly higher than that in Australia, and $164 a year higher than that provided in Great Britain. For a soldier with a wife and four children dependent upon him, the scale in Canada is $637; in Australia $633, and in Great Britain $444; the Canadian scale being slightly higher than that of Australia, and nearly $200 greater than that of Great Britain. So it runs all through, except that, in Great Britain, and Australia, there is a difference in scale for the higher ranks.

My hon. friend from Pictou (Mr. Macdonald) has alluded to the fact that there is less difference in Australia than there is in Canada between the rates fixed for privates and officers. That is true, but it does not arise by reason of the rates for the private soldier being lower in Canada, but by reason of the rates for officers in Canada being higher than in Australia. On the other hand, the pension rates for officers in Great Britain are on a considerably higher scale than they are in Canada, and on a very much higher scale than they are in Australia. For example, an unmarried lieutenant colonel in Canada, who has become totally incapacitated receives $1,200 as a pension; in Australia he receives $638, and in Great Britain $3,000. A major, totally incapacitated, receives in Canada, if he is an unmarried man, $960; in Australia $565, and in Great Britain $2,000. A captain who is unmarried, and becomes totally incapacitated on active service, receives in Canada a pension of $720; in Australia $492, and in Great Britain $1,000. For a lieutenant, totally incapacitated, and unmarried, Canada provides $482; Australia $443, and Great Britain $700. A warrant officer, unmarried, and totally incapacitated receives in Canada $480; in Australia $377, and in Great Britain $506. For a sergeant totally incapacitated, and having no wife, Canada provides $336; Australia $340, and Great Britain $366.

My hon. friend from Pictou also adverted to the very considerable disparity between the provision made for single men and that for married men in this country, and he pointed out, I think with some force, that a married man who has a wife and three children, and who has become totally incapacitated, would, upon the death of his wife, receive a smaller pension than when his wife was living, although it might be very much more difficult in that case for him to take care of his children and to support the family than it was before. I think that that ought to be taken into consideration. Of course, unless the wife undertakes some work for the purpose of assisting in the support of her family, it is necessary to make provision for her maintenance. The wife, as well as the children, must be provided for in some way, and in fixing the pension scale, as we have established it in Canada, we proceeded very much along the lines which have been followed in Australia. We adhered much more closely to what has been done in Australia, than to what has been done in Great Britain, because it seemed to us that the conditions of this country were in that respect more similar to those of Australia than to those of Great Britain. Therefore, we thought we would be safer to follow the Australian than the British precedent.

5 p.m.

It is said, I believe, in the report of the committee, of which Mr. Darling is chairman, that the Canadian rates for totally incapacitated single men are lower than elsewhere. That is not strictly accurate, when baldly stated in that way. I have already read the rates fixed in this country, in Australia, and in Great Britain. The rates in Canada for married men are larger than they are in Australia, and considerably larger than they are in Great Britain. It is true that for unmarried men, totally incapacitated, the rate in Canada is lower than in Great Britain, but it is not lower than the rate in Australia.

My hon. friend alluded to the necessity of a pensions board. It might be just as well that I should explain to the House how the Pensions Board was established, and who composes it. The present Pensions and Claims Board was authorized by a Militia Order, as were the several similar boards which preceded it, and it is now acting in virtue of Militia Order No. 366 of 2nd August, 1915, which reads:

The Pensions and Claims Board is reconstituted as follows: President—Col. J. S. Dunbar, Assistant Adjutant-General, Militia Headquarters; members,—Lt. Col. C. W. Belton Permanent Army Medical Corps, and Honorary Lt. Col. C. L. Panet, secretary of the Department of Militia and Defence.

Lt.-Col. Belton is a medical officer who is attached to the board in that capacity, and he has been for a number of years in the permanent corps. After being passed upon by the board, the pension claims come in the form of a recommendation to the Governor in Council, and are taken into consideration by the Treasury Board in the first instance. The Governor in Council, under the provisions of the Order in Council which was passed last year, has the power to consider individual cases, but these individual cases are only considered upon a report first made by the Pensions Board. The section of the Order in Council to which I allude is:

597. Individual cases, for which the regulations do not provide or sufficiently provide, may be specially considered by the Governor in Council.

The procedure is, to have all such claims submitted, in the first instance, to the Pensions Board, and to have the report of the Pensions Board thereon come before the Treasury Board. The Treasury Board may ask for such further information as it may desire, and may refer the case back for further consideration to the Pensions Board. In the end the recommendation of the Pensions Board, as adopted by the Treasury Board, comes to the Governor in Council and is passed in that way. The very fact that the Treasury Board had several cases of that kind early last autumn, seemed to impose upon it duties of so onerous a character, and to consume so large a portion of its time, that the question was mooted as to the establishment of a permanent Pensions Board, which would receive a report from the Departmental Pensions Board, and upon whose report the Governor in Council would be authorized to act. Some inquiry into the desirability of that method of procedure was made, and a document which will be brought down amongst the other papers was submitted to the Government; but as the session came on shortly afterwards, and as it was not only desirable but apparent that the subject would be debated in this House, no action has been taken up to the present time.

As to securing a method by which political influence of any kind, or pressure of an undesirable character might have no scope or effect, I am entirely at one with my hon. friend from Pictou, and I think that it is eminently important. I do not

think that anything of the kind has taken place under the board at present constituted. No minister of the Crown or member of Parliament, so far as I am aware, has interferred in these matters in any way whatever. If anything of the kind has taken place it has not come to my knowledge. I am informed that Lieut.-Colonel Dunbar, who has been for a very considerable time in the permanent service, is a gentleman with legal training in the first instance, and that he is capable of discharging, and does discharge, the duties of Chairman of that Board very efficiently and very impartially. One of the other two members is a medical officer who has been for some time in the permanent service, and the other is Honorary Lieut.-Colonel Panet, who has also been a considerable time in the permanent service.

I endeavoured to get information as to the precise methods by which pensions are dealt with in the United Kingdom, but it was apparent to me that the various bodies which there deal with this subject had not been thoroughly co-ordinated up to that time, and that perhaps we could not derive benefit from any example which they could give us. A desirable thing, if we could accomplish it, would probably be to have a pensions board to deal not only with military pensions, but with naval pensions, and to have it established under the conditions outlined by my hon. friend from Pictou.

With respect to soldiers' homes, I really have not had that matter brought very much to my personal attention. My knowledge of what is being done in this country, and indeed on the other side of the ocean, is almost wholly confined to the so-called convalescent homes. I do know, however, that the Military Hospitals and Convalescent Homes Commission have been making a pretty thorough study of conditions in Canada and in the United Kingdom, and I was informed a few days ago that Mr. W. M. Dobell, of Quebec, who has been making a study of this subject in the United Kingdom and also in France, had embodied certain views in a report that he had submitted to his colleagues of the Military Hospital and Convalescent Homes Commission, and that these views were now under consideration by that commission. On the whole, I gathered the impression that Mr. Dobell was of the opinion that too much had been done in the way of convalescent homes along certain lines; that perhaps some improvement might be made not only here but elsewhere, and that the view he expressed in the report was entirely in consonance with the view taken by the military authorities of Great Britain and of France. However, it is rather premature to speak of that.

My hon. friend from Pictou also spoke about the desirability of making special rates for soldiers who are enlisted in the overseas forces, and who might from time to time desire to visit their families. I should be very glad to commend that suggestion to the Minister of Railways and to see whether it cannot be carried out.

My hon. friend from Edmonton (Mr. Oliver) spoke of an Order in Council, which had not come to my attention until recently. I think it was passed when I was unwell. I am not aware of its exact phraseology, but it hardly seems to me that it would bear the construction which he puts upon it. I observe that the concluding paragraph of the report on which that Order in Council is based is expressed in these words:

> We have a very good precedent before us, as the Imperial Service grants such gratuities.

It is, I think, the practice of the Pensions Board here to recommend a gratuity in addition to the pensions, in occasional cases of destitution or urgent need. In any case, if I understand the military regulations—I am always a little apprehensive about expressing an opinion with regard to them—the acceptance by any man of a gratuity would not debar him of the right to have a board called subsequently to consider his case, if it was apparent that his injury or disablement was greater than had been thought at first. I believe it is competent to any man to have a board called at any time for that purpose, and I think that a board can also be called at any time to have it established that a man to whom a pension has been granted has recovered his health, and that the pension to which he was entitled during the period of his disablement should no longer be continued.

With regard to the whole question, I entirely agree with the view that we must give reasonable and even generous consideration to the claims of those who have gone to fight the battles of the Empire in this war, and who have shown their willingness to make the supreme sacrifice; reasonable and generous consideration to the dependents of those who have gone to the front and made that sacrifice, in

order that this Empire, the ideals which it represents, and the institutions we enjoy, may be preserved for us and for future generations.

The report from the Pensions and Claims Board in Great Britain suggests a more elaborate scheme of analysis of the degrees of disablement. I think they divided them into six degrees by percentages: a man totally disabled would be classed 100 per cent; then they endeavoured to estimate those who have been disabled to the extent of 80 per cent, 60 per cent, 40 per cent, 20 per cent, and under 20 per cent. Then they lay down this principle:

> All pensions to members of the Canadian Militia disabled on active service should be awarded in direct proportion to the impairment of capacity for earning a livelihood in the general market for untrained labour.

The note which they attach to that is this:

> Men enlisting for active service in the Canadian militia as privates bring to the service of the country a healthy body. The previous occupation of the recruit is not recognized as having any reference to the service which the soldier could give the State, unless it secures for him a higher rank than that of private, in which case the return made to him by the State in pay and pension is proportionately increased. The private soldier then is looked upon as offering merely a healthy mind and body to the public service. For practical purposes the market for healthy bodies is said to be the "general market for untrained labour."

It is to be noted that the amount of pension depends upon the impairment of capacity for earning a livelihood without reference to the former occupation and income of the soldier. That view will form part of the return to be brought down for the consideration of hon. gentlemen opposite.

There would be the case of men who, while incapacitated for performing the duties which they had hitherto performed in the community in which they live, might become capable, through vocational training, of performing other duties so that they could, at least in part, earn their livelihood. One of the duties which the Government ought to undertake in connection with any pension scheme is to make it possible, so far as we reasonably can, for men who have been disabled from taking part in any occupation in which they had been previously engaged, to take up some other occupation by which they may assist in earning their own livelihood. It is not in the interest of any citizen, who has served in the overseas forces and who is still capable of filling an active and useful part in the national life, to be placed in such a situation as to have no incentive whatever to do that work for which he may be fitted either through his own efforts alone or with assistance from the state. I have been impressed all along with the importance, in connection with this whole question, of doing the utmost that we can, by investigating methods on the other side of the ocean and by thinking out methods for ourselves, to evolve a system by which all those who are not absolutely incapacitated but who are incapacitated to such an extent as to make it impossible for them to earn their livelihood in the way in which they formerly earned it, should be afforded the opportunity I have indicated. I believe that a certain committee of the Military Hospitals and Convalescent Homes Commission is studying that question very carefully, and that committee will probably be able, in the early future, to make some recommendations to the Government. I entirely agree that any appropriation that might be necessary for the carrying out of a scheme of that kind in a reasonable and effective way, would be money well spent by this country, first, in making the men to whom such an opportunity would be afforded, better citizens than they otherwise would be, and secondly, in the contribution which it would make to the general welfare and development of the country by increasing that much the earning capacity of the whole nation.

I shall be glad, as I have said before, after these papers are brought down, as they will be without a moment's delay, to move at once that they be printed for the information of hon. gentlemen, and after that is done, if my hon. friend from Pictou (Mr. Macdonald) or any other gentleman should desire to have further debate, we would welcome it. Indeed, if a debate were not started otherwise, I think we should initiate it ourselves in order that the views of hon. gentlemen, which certainly must be of some assistance to the Government, might be elicited, and the Government be thus placed in a better position to deal with the whole subject.

Mr. E. W. NESBITT: (North Oxford) I am very glad to hear the Premier say that he believes in vocational training, and I am sorry he was not here the other day when that question was under discussion. It was argued that these men be assisted by the Government educating them in such trades or callings as they might be fitted for, so that they would do something at least towards earning their own livelihood. I am also pleased that the

Premier will afford an opportunity for further discussion of this subject. I do not think I am giving away any secret of the Hospitals Commission when I say that Mr. Dobell told me that, in France, 80 per cent of these classed as totally disabled were, through vocational schools, being taught at least partly to earn their living. His statement only corroborates what I thought myself and what I had read in regard to those schools in France. I have been studying the question very carefully, and I am glad that the Premier endorses my views and that the Government will do everything possible to assist in the establishment of schools of that character.

In reference to the pension scheme, I think the pension for the unmarried man who is totally disabled is slightly too low, and I would suggest raising it to a dollar a day, or $30 a month, and allotting the other pensions in proportion. I think the differences in the pension list are fairly well arranged. After the Premier has the information which he says he will bring down, it would be a good thing to appoint a small committee of members from both sides to study the question carefully and to report to the House, because the question is very important and means the expenditure of a great deal of money. I am sure the Government appreciates the fact that the question is of great importance and one that should not enter into politics at all.

I would also like to make a recommendation to the Government as to the personnel of the Pension Board. I do not say that the gentlemen now acting are not absolutely non-political; I do not know anything about them. But, no matter who the Pension Board may be, in my judgment the matter must be taken out of politics, for there is no telling how far the evil might extend otherwise. I am not speaking from a partisan standpoint; I am not suggesting anything against this Government or any government. I can quite believe that both parties, perhaps, would be equally guilty of using the pension vote, if it were in any way associated with politics. Therefore it is that I say pensions should be taken out of politics absolutely. The Pension Commission should be appointed in such a way as to make them as independent as the members of the Railway Commission. And my suggestion is that, after the Prime Minister has given us all the information in his possession, a small committee, representing both sides, might sit down, thresh out the matter, and make a recommendation to the House.

[Mr. Nesbitt.]

Mr. ALFRED THOMPSON (Yukon): I am glad to hear from the Prime Minister that the Government intend to deal with this question in a comprehensive way, because, though the war will end sooner or later, it will be a long time before the problems relating to the pensioning of our soldiers will end. I was interested particularly in the remarks of my hon. friend from Edmonton (Mr. Oliver) with regard to the treatment of insane soldiers. I gathered that he thought it would be better if these unfortunates were treated in some separate institution. The treatment of the insane is becoming more and more specialized as scientific knowledge accumulates and the results of different methods of treatment are studied. In all civilized countries the treatment of the insane is engaging the attention of some of the ablest members of the profession to which I have the honour to belong. In Canada the insane are treated in asylums or hospitals established and administered by the several provinces. In these hospitals you will find specialists who are studying the vagaries of the insane mind, and applying treatment that brings about wonderful curative results. The question of environment for the insane has been discovered to be very important—perhaps the most important element in their treatment. The insane are given cheery, sunny, comfortable surroundings and congenial company. Specialists are employed to keep the patient's mind occupied and to direct the current of his thoughts in wholesome channels. Another important item is food, and the nursing of these patients is a specialty in itself. Therefore in the majority of cases, you will find our hospitals for the insane in salubrious locations with most favourable surroundings and those in charge are trained specialists in the care of the insane. There would be great advantages, for the present at any rate, in sending our insane soldiers to these hospitals, because of the special care that they can receive there. As my hon. friend from Edmonton has said, we have had more insanes in this war than in any previous war, because we have had more nerve-racking battles and more nerve-racking experiences in connection with this war than have been known in previous wars. I gather from the remarks of the hon. member for Edmonton, that he believes that there is an idea throughout the country that a certain stigma attaches to the individual who has been confined in an insane asylum. Perhaps he is right.

There should be no such stigma, but possibly there is. I understand him to say that for this reason it would be better to have some special hospital for the treatment of our insane soldiers. That is a very worthy suggestion. This would mean that we would have a Federal hospital for the insane; a military hospital for the insane, if you will. I assume that at the present time—though I am not sure, for I have not investigated the matter—the insane soldiers are being cared for in the existing asylums of the several provinces. It may be that they have been segregated in these hospitals, possibly in each hospital a military ward has been established, but that, I take it, would not meet the suggestion of my hon. friend from Edmonton. It would ensure for our boys who have come back from the front the attention of highly-trained medical specialists and nurses, but it would not meet the views of the hon. member for Edmonton which is that we should have a separate hospital for our soldiers. That is a suggestion, I think, which is worthy the consideration of the Government. If this war continues, as we have every reason to fear it will, if these awful bombardments go on, as we have every reason to fear they will, there will be an increasing number of insane soldiers returning from the front. I rose merely to support the argument made by the hon. member for Edmonton.

Mr. FRANK S. GLASS (Middlesex East): Like my hon. friend from the Yukon (Mr. Thompson), I noted the remark of the hon. member for Edmonton (Mr. Oliver) that there might be a stigma attaching to the soldier sent for treatment to one of the existing provincial institutions for the care of the insane. It would be presumption for me to attempt to discuss scientifically, from a medical standpoint the benefit of these institutions in my own province, but I do say that if the institutions of that kind in the district from which the hon. member for Edmonton comes are anything like those that we have in Ontario, there could be no objection to sending patients to them. In Ontario the word asylum has been almost entirely dropped so far as these institutions are concerned; they are called hospitals for the insane. If they are all of the character of the one very close to the district in which I live, they might well be called sanitaria for the insane. The institution in London, which is supported by the Provincial Government, is one of very long standing. The treatment of patients there is now entirely different from that which prevailed some years ago; medical science, electricity, bath treatments, and so on, have contributed materially to improving the efficiency of the treatment accorded the patients. The percentage of recoveries in these institutions has during the last few years been very much larger than ever before. Similar institutions in all parts of the world have adopted improved methods of treatment. I cannot agree, therefore, with my hon. friend when he says that the congregation in one institution of a large number of persons whose mental condition has been disturbed by the war would be as desirable as their going to the different hospitals of that character that we have throughout the country. These institutions have no longer the character of a prison. The whole surroundings have the character of a sanatorium, of an institution to which one might well go for the recovery of health. Provision is made whereby the patients may indulge in various kinds of sports and amusements; those who may be allowed their liberty have considerable freedom, and, in a sense, may roam about at will. Having regard to the commodious nature of the grounds, the provision for sports and amusements, and the general improvement in methods of treatment at these different institutions, it is reasonable to suppose that more recoveries would be effected by sending the patients to different institutions than by gathering them all into a single hospital. As to the cost of maintaining and treating these patients, I have not the slightest doubt that it would be a privilege and a pleasure to the provinces to take care of our brave boys who have been or may be so afflicted. A great deal can be done for the comfort and happiness of soldiers who have been wounded or incapacitated in various ways, by a system of technical training that will enable them to be useful in some vocation. The man who may have lost an arm may be trained to do something by which he can use his other arm and the rest of his powers in earning a living. I believe that the man who feels that he is, in a measure, contributing to his own support is far happier than the man who feels that he is dependent upon the state. Again, if we should deem it necessary to establish a separate institution for those persons whose minds may have been afflicted while at the front, would not the same principle apply to those whose eyesight has been destroyed? I think it is generally agreed that the very best

thing that can be done for those who suffer loss of eyesight is to send them to institutions where for years the care and education of such persons has, under the surveillance of the Government, been carried out according to the best methods that science and skill can provide. Much can be done to contribute to a man's happiness in life, even though his sight be gone, and I think that the proper place to take care of such men is in the institution provided especially for that purpose. While I do not know what the needs of the future will be—they may vary according to the number of men who may be so afflicted—it seems to me that for the time being those institutions which for years have specialized in the treatment of subjects of this kind are best fitted to take care of those of our sons who may be so unfortunate as to be afflicted by loss of reason during the course of the war.

Mr. MACDONALD: I am very glad indeed to have the assurance of the right hon. Prime Minister that the papers in this matter will be brought down and printed for the information of members of the House, and that the matter will be further taken up in some other form. The subject is one which is well worthy of careful study. I have endeavoured in a small way to devote attention to the matter, and I am surprised to find that I have arrived at a conclusion different from that of the right hon. gentleman in regard to the comparison between the Canadian and the Australian and English pension lists. There is, of course, difficulty in getting authoritative statements from England and Australia as to the amounts paid to the different ranks under the different degrees of disablement, in order that comparison can be readily made. Where different degrees are set forth, the matter becomes somewhat complicated.

Sir ROBERT BORDEN: I do not think there was any difference in our views.

Mr. MACDONALD: There was practically no difference in our views, but my conclusions in regard to the difference between our position and that of Australia were different from those of my right hon. friend. Of course, the right hon. gentleman speaks from authoritative documents which I did not have at hand; I have no doubt that he is correct.

The right hon. gentleman spoke of the great difference between the amount paid to the English private and that paid to the English colonel, and of the difference existing in that respect between Australia and Canada. In England this condition is, of course, evidence of the recognition of classes and masses, which we do not have in this country and which do not exist in Australia. We cannot help being struck by the fact that every day Canadian men are going into the ranks who are just as good, socially, intellectually and every other way, as the men who hold command. In fixing the pensions this fact should be recognized, and the wide distinction that exists in England should be totally disregarded here in apportioning pensions to the respective ranks. It is the duty of the Militia Department to see to it that the men who are accepted for service are carefully scrutinized medically before they are allowed to go overseas. It is beyond question that there has been laxity in that respect and that unfit persons have been allowed to go. If you visit any convalescent home to-day you will find some men who should never have gone to the front. The burdens of this country, which we will all assume with the greatest possible feeling of fulfilling our duty, will be sufficiently great in looking after those who were fully competent and fit to go, without having any additional burden imposed upon us by the accepting of men who are not physically fit for service. If there has been any laxity in the past, it is to be hoped that greater care will be taken in the future in the examination of recruits. Then, too, care should be exercised in regard to the age of those who are accepted. You will find men bubbling over with enthusiasm and military ardour who have long passed the age when they can give that vigour and real, practical work which is required in this war, because a man may be enthusiastic, but may have a lack of physical vigour which will render him susceptible to conditions which will make him a pensioner more quickly than others. There is no reason for that man going or any man who is not physically fit and strong. The privations in this war are greater than they have been in any other war, and it is better for us to exercise care now than to have to deal with this problem later on.

I have no reason to find any fault with the gentlemen now fulfilling the duties of the Pensions Board; but their duties hitherto have been comparatively light, and have not been at all commensurate with the burdens which will be placed on such a board before the close of the year 1916. I do hope that, both in regard to the board and to the question of the pensions to be paid, before

the close of this session the matter will be put on such a clear, definite, and certain basis that the man going out will know what his rights are, and that he will feel beyond all question that when he comes home those rights will be recognized, if unfortunately he should fall within the class of people entitled to receive pensions. We will await the bringing down of the papers. I feel assured that the Government, as their views have been stated by the right hon. gentleman, will join with those upon this side of the House in endeavouring to put the question of pensions to be paid to our returning soldiers on the very best possible basis.

Motion agreed to.

At six o'clock the House took recess.

The House resumed at eight o'clock.

CANADIAN NAVAL SERVICE.

Mr. E. M. MACDONALD (Pictou) moved:

For a return showing a list of vessels, belonging to the Canadian Government which are on service under the provision of the Canadian Naval Act, and of all vessels not now in service and their present condition and suitability for service, and also for a copy of all letters, petitions or communications had by or with the Government in regard to the establishment of a Canadian Naval Brigade.

He said: Mr. Speaker, we are now in the twentieth month of the war, and I am sure that it must have struck every hon. gentleman who is at all reflective, in relation to our own position, and our position in the Empire, that, while we have heard a great deal about what Canada is doing upon the land, we have heard absolutely nothing about what Canada is doing on the sea, or about what she ought to do on the sea. Whether it is that the hon. gentleman who fills the position of Minister of Militia has a greater faculty for playing, in the centre of the stage than the hon. gentleman who is Minister of the Naval Service, or whether the lack of aggressiveness of the one accounts for his total abstinence from remark as regards our service on the sea, is a matter upon which I do not purpose to comment particularly. The fact remains that up to date no one has heard of Canada doing anything or attempting to do anything on the sea. This motion which I have submitted to-night is for the purpose of drawing the attention of the House and of the country to the fact that the time has arrived when something ought to be done.

The evening papers contain the announcement that the German fleet is proposing to come out at last to give battle to the British Navy. It is an object of interest as to what our position in Canada might be if half a dozen or so of German ships succeeded in escaping from the conflict around the north of Scotland, and in making their way across the ocean to our Atlantic seaports. It is an object of interest to inquire what, in that event, our position would be. The situation is that, for the last three months the North Atlantic squadron of the British Navy has been engaged in cruising around in what might be called the South Atlantic, with its headquarters at Jamaica, and has been continually on watch for the purpose of intercepting any vessels which might be engaged in carrying munitions or other aid to the Germans and their associates. Like a bolt from the blue there came the announcement about a month ago that two or three German raiders had succeeded in capturing quite a number of British merchant vessels, and that the Appam had succeeded in passing the cordon which is supposed to surround the south Atlantic coast, and found her way into Hampton Roads. Hence it is that the Appam had succeeded in passing the cordon which is supposed to surround the south Atlantic coast, and found her the United States and the ports of Central America. Where is Canada to-day in means for her defence? We might look to Australia. Australia has not only her own defence provided for, but she is able to send the Sydney and the Melbourne on service, both of these warships having, during the past six or seven months, formed part of the British squadron which is at present in the southern Atlantic. Canada is in this humiliating position, that apparently we have no vessels of any kind, and that, if any German ships made their escape from a conflict in the North Sea, and came across the Atlantic, we would be absolutely defenceless.

It may be said that the information which I ask for should not be brought down because it would indicate our absolutely defenceless position, but with that theory I do not for one moment agree. Where you have a situation which, in the interests of the whole country, requires to be remedied, there is only one way of dealing with it, and that is to face it squarely. No hesitation has been shown in the Imperial Parliament in criticising to the full and in the most severe manner the actions both on sea and on land, and the administration in regard to the movement of the forces, and the direction of ships.

Why, only a week ago Winston Churchill left his command in France for the purpose of coming to London to discuss fully and frankly the naval situation, and to point out the imperative necessity of recalling Lord Fisher to the Admiralty. So I have no compunction whatever in bringing up this subject. I say that in the month of January—only two months ago—there was on the Atlantic coast only one vessel belonging to the Department of Naval Service that was fit to go to sea, and that was the very small ship, the Canada, which has only two small guns. There were other vessels attached to the naval service: the Grilse for instance, which is attached to the North Atlantic squadron and in January she was at Bermuda, and is now between Bermuda and Jamaica. Then there was the Stadacona, which was purchased last summer and which has cost this country $104,585 to put in shape. Any one who visited the Halifax dockyard last January could see that she was not in condition to go to sea; in fact, it was freely stated in Halifax that her captain had said she was in such a condition that he would not venture to put her out to sea. She is only a small vessel, purchased in the United States, and she was never built and never intended for that service. Then there was the Hochelaga, which has cost Canada $92,642; she arrived at Montreal on August 21, and remained there until September 11. She was on duty off the coast from September 11 to December 22, and on February 19—the last date on which I have information regarding her—she was lying in the dockyard. She was therefore not available for any purpose whatsoever from December 22 up to the 19th of February. Then there was the Florence, which Sir John Eaton presented to the Naval Service Department. She is a very pretty steam yacht, but any one who has seen her would realize that she was not intended for our stormy Atlantic coast. She was not available for winter service at all. Then there was the Tuna, which was being repaired, and is still undergoing repairs. Then there was the Starling, a tug boat; and the Margaret, a small boat; I don't know where she was, but any one who has seen her would realize that she was not fit for Atlantic service. With the exception of the Niobe, these were the only vessels that the Canadian Naval Service had at Halifax in January, 1916. The Niobe was tied up at the wharf, with her guns dismantled, and she was being stripped. A house had been built over her for winter, and there was a large number of men going up and down her decks, apparently doing nothing. I think about seven hundred men were on board, and apparently they were there without any purpose whatever. So the only vessel we had on the Atlantic coast in January, 1916, was this small vessel the Canada. Is that a proper position for a self-respecting country like Canada to be in? What has Australia done? She adopted a naval policy such as we on this side of the House believe in, she built the Australia, the Sydney, the Melbourne, and other vessels; and she was able not only to protect her own shores, but to send these boats into the Atlantic ocean. The only available boat we had was being dismantled; for what purpose I do not know, and I would like the Minister of the Naval Service to tell us. Going around the coast of Nova Scotia as I did in different vessels and steamers last summer, I met many officers of the British Naval Service, and each and every one of them bore testimony to the value of the Niobe as a first-class vessel in every way. They told the story of how a month after the war began she had her crew on board and was on duty off the coasts of Canada and the United States performing her work just the same as every other vessel that came out from England. But this vessel which was bigger than any of the five vessels that came out and formed the North Atlantic squadron, and which had a heavier armament, was dismantled. That was the situation then, and, as far as I am informed, that is the situation to-day. When any of our transports cross the ocean, certain vessels are detached from the Atlantic squadron, and escort them part way across. Last summer our transports which went from Quebec did not even depend upon these vessels for escort, but were escorted down the gulf of the St. Lawrence to Newfoundland by the Canada and the Grilse. For the last three months, then, and at this moment, with the exception of the British squadron, whose particular duty is off cape Hatteras and along the West India Islands, the only protection Canada has had on the Atlantic coast was the Canada; except for a stray British ship that would come in for coal or supplies. One of the anomalies in this connection is that the ships of the British squadron cannot, or do not, burn coal that is produced on this side of the Atlantic. Day after day you will see in

Halifax harbour half a dozen steam vessels laden with coal, which have been sent out from England with coal supplies for the ships of the squadron. When these warships are not taking in supplies and coal at Halifax, they are off New York or cape Hatteras, or along the West India Islands. It is well that the House should understand the exact situation. If the Minister of Naval Service can inform me that we have any greater protection than I have stated, or can assure the House that our coasts are adequately protected, I shall be very glad to hear from him.

The other portion of my motion calls for:

A copy of all letters, petitions or communications had by or with the Government in regard to the establishment of a Canadian Naval Brigade.

In the Naval Service Act of 1910, there is a provision under which this Government can form a naval reserve, or naval reserves. Provision is also made in the Act for placing men who enlist in these reserves at the service of the Admiralty. In British Columbia a reserve was formed by some enthusiasts who were interested in the protection of Canada from attack by sea, and service in this organization was purely voluntary. I have under my hand the Naval Service reports from 1912 to date, and I cannot find in them anything about the existence of anything like a naval reserve of any kind whatsoever, until I come to the report for 1915, which has been laid on the table of the House during the present session.

I am informed that no official recognition of that purely volunteer naval reserve was given until just before or just after the war broke out. I am informed also that in 1914 Sir Richard McBride communicated with the Premier of Great Britain, with the Right Hon. Winston Churchill, who was then Secretary of the Admiralty, and with Lord Fisher as to this naval brigade, and as to furnishing recruits from Canada for the British Navy. He received favourable replies from all those sources; but as this Government was not as favourably disposed as was the English Government, no encouragement whatever was given to recruiting, and it was not until after this organization had been in existence for some time that anything was done in the way of recognition. What took place then? It has often been said in this country that you cannot get sailors to serve in the navy. While I speak with some trepidation in regard to the resources of Canada in the presence of gentlemen who come from the central provinces where there are such magnificent resources, I will not defer in my opinion to those gentlemen in regard to matters affecting ships and those who go down to the sea in ships, because those of us who come from the seacoast see the conditions there, and know something about them. The men who have spoken in this House in days gone by of the impossibility of recruiting men in Canada to serve in the navy have utterly misapprehended the conditions, as is proven by the fact that from this voluntary naval reserve in British Columbia 200 men are already serving in the British Navy.

Let us see what the public records say as to what can be done in Canada. It will be interesting to hear the explanation of the Minister of Naval Service (Mr. Hazen) as to why he has not attempted to recruit men in Canada for the navy. The necessity of getting men for the navy is quite as great if not greater than getting men for the army. Speaking upon this question in the debate on the Address I read from official sources as to the necessity of recruiting men for the navy. When the English Parliament a few months ago passed the compulsory measure which provided for all men serving under the British flag, they attached an amendment by which the navy on account of its necesities was to have the first right to select from those who were conscripted, and if one studies the English newspapers, one will see that the attempt to get men for the navy is pushed with the greatest possible keenness and energy all through that country. They go to the public schools and get the young men who have never seen an ironclad to serve in the navy, and they recruit in the cities. The necessity at Gallipoli was so great and the conditions in that peninsula so terrible that the older men, who had been reservists and who had retired from the sea, were found manning the great vessels of the Mother Country there. Yet the Minister of Naval Service has never asked the people who lived down by the sea in the Maritime Provinces to rally around the old standard and to proffer their services in fighting England's naval battles. Why has he not done so? I find in the first report which my hon. friend laid before the House the following statement as to what might be done:

On the arrival of the ships—

The Niobe and the Rainbow.

—at Halifax and Esquimalt respectivly, recruiting was started. By arrangement with the Post Office Department, postmasters were appointed recruiting officers in seventy-five cities and towns in the Dominion; posters were exhibited throughout the Dominion and a recruit-

ing pamphlet was widely distributed. As a result recruiting has been satisfactory, and the complement of the Niobe is practically complete whilst there are still a few vacancies in the Rainbow. As the advantages of the service become more widely known, it is anticipated that there will be no difficulty in obtaining recruits.

That was in the year 1912. Then we come to 1913 when my hon. friend laid another report on the table explaining why men were not asked to serve at sea. In that report my hon. friend made himself responsible for this statement:

Owing to the uncertainty of the future naval policy, and the limited accommodation available, no special efforts are being made to obtain recruits for the navy; eligible candidates presenting themselves to the various postmasters detailed as recruiting officers, were sent to the Niobe and the Rainbow for training, the total number of recruits entered during the year being 126.

Then my hon. friend, in another part of the report, stated:

Up to the present the fishing population has not been exploited and it is anticipated that recruits can be obtained therefrom who are inured to a sea life and who would find themselves in congenial surroundings in a man of war.

Why was it that the men who lived by the sea were not exploited? Why did the Government not ask the men in the fishing counties of Eastern Canada to serve in the navy? Beginning with the county of Yarmouth from which our late lamented friend Mr. Law came, and going to the counties of Queens, Guysborough, Richmond, and Cape Breton, there are thousands of men whose sole occupation from one end of the year to the other is life upon the sea. They have not, with the same enthusiasm that men from other portions of our country have, offered their services to the Empire on land because the sea is their home, and they have never been asked to serve in the navy. My hon. friend said in 1913:

The fishing population has not been exploited.

Why has it not been exploited if the nation needs men for the navy? Again I take my hon. friend's report of 1914:

No recruits have been entered in the ships since October last.

Sometimes we hear about the wonderful pressure in certain departments on account of the war, yet this report indicates that there was no pressure in the Naval Service Department because no recruits have been entered since October last. The report goes on:

H. M. C. S. Niobe is now in an efficient seagoing condition, her repairs having been completed in December, but on account of deficient complement, however, the ship is not able to undertake prolonged cruises.

In other words, this first-class cruiser sent out by the British Government and which was declared by this report to be in first-class condition in April, 1914, was, according to the report of my hon. friend's own officials, unable to go to sea because they had not enough men to man her and because they were not endeavouring to get the men. My hon. friend, in this report of March 31, 1914, further says:

The Government having decided not to continue H.M.C. ships "Niobe" and "Rainbow" in full commission, no recruiting was carried on during the year, and the programme of exercises and training laid down for these ships was not continued. During the year free discharge was given to those Canadians who entered the service as boys and wished to avail themselves of the offer; in addition, many of the ranks and ratings lent from the Imperial service have completed their engagement under the Canadian Government, and returned to England, without being replaced.

This is the official report of the Department of the Naval Service for the year ending March 31, 1914, and it shows clearly, as I have already stated, not only that they are not keeping men enough on these vessels to enable them to go to sea, but that no attempt is being made to get the men.

I have searched these reports carefully, and I can find no reference to the organization of a naval brigade or reserve. It was not until the latest report was laid on the table of the House this year that the first mention was made of a naval reserve in Vancouver. The reference is as follows:

The R. N. C. V. R. chiefly recruited at Esquimalt have been actively and usefully employed both ashore and afloat and have shown, both officers and men, commendable zeal in the performance of their duties.

I am aware, however, that from this purely voluntary brigade, which was not recognized until the war began, there have been drafted men now stationed on vessels in the North Atlantic squadron and elsewhere. I am aware of a notice which appeared in a Vancouver newspaper about ten days ago which read:

A recruiting officer will be at room 25 Canada Life building, 640 Hastings street west, Vancouver at 10 a.m. on Monday and Tuesday next, 6th and 7th March, to secure recruits for the Royal Naval (Canadian) Volunteer Reserve stationed at Espnimalt, B.C., to replace the men of this force discharged recently for "active service" on the Atlantic.

This force, (which was called out on "active service" at the outbreak of war) has now over 250 men serving in ships of the Royal Navy and the Royal Canadian Navy on the Atlantic and

Pacific ocean, besides supplying the guards for H. M. C. dockyards at Halifax, N.S., and Esquimalt, B.C., and patrols at these and other points.

Then follows a statement of what is required of recruits.

Now, why is it that the Minister of the Naval Service has not made any attempt on the Atlantic coast to provide for a naval reserve, or a naval brigade, or even to get recruits of some kind? Since the German vessels were driven off the Southern Pacific, there is nothing to menace our western coast. In March, for the first time, the hon. minister asks for recruits, but in doing so he keeps away from the Atlantic coast. At no time has there been any request for recruits on that coast. Yet, that is where the necessity arises. I do not comment on this with undue severity; I simply call the attention of the House to the fact that we have no protection whatever on the Atlantic coast;—the Niobe is dismantled at the wharf, the Canada is the only vessel of any consequence that we have, and she is of very little consequence, and no attempt is made to recruit men for the navy. Yet there is no reason why they should not be recruited. The minister's own reports negative all the arguments put forth elsewhere against recruiting. I would like to know from the Minister of the Naval Service why Canada has no determined to do her part with men on the sea, as she has done with the men on the land.

Hon. J. D. HAZEN (Minister of the Naval Service): The resolution of the hon. member for Pictou really relates to two different subjects. The first part is:

For a return showing a list of vessels belonging to the Canadian Government which are on service under the provisions of the Canadian Naval Act, and of all vessels not now in service, and their present condition and suitability for service;

The other part is as follows:

—and also for a copy of all letters, petitions or communications had by or with the Government in regard to the establishment of a Canadian Naval Brigade.

With regard to this portion, there can be no objection to bringing down all the correspondence. As to the first part about which I have already spoken to my hon. friend, I do not think it would be in the public interest to give to the world a statement of the Canadian vessels, their present condition and suitability for service, and a general statement of what they are doing. However, the hon. gentleman and I will agree about the matter, and I am confident we shall be able to afford him all the information he wants. For, listening to my hon. friend, I cannot but think that his resolution is moved, not so much for the purpose of gaining information that would be of value to the country, as for the purpose of making a partisan attack on the Government of the day. This is not the first occasion this session when my hon. friend has referred to this subject. Speaking in the debate on the Address, on the 4th of January last, my hon. friend told of a visit he had made to the navy yard in Halifax on the 2nd of January of this year; and, while he complained that there did not seem to be a great deal of work going on in the navy yard at that time, the principal subject of his complaint was of the way the navy yard was guarded. He said:

Again, here in this dockyard, built by the money of the Imperial Government, which the Imperial vessels use but very rarely and to a very slight extent, anybody who looks honest to the Dominion policeman who stands at the gate of the dockyard can walk in and go anywhere he pleases. I say the Minister of the Naval Service should have that dockyard under the control of men who are there attached to the Niobe.

Later, he said:

There was nobody guarding the dockyard gate except a Dominion policeman. If this Naval Service is not the most awful farce that any Government ever intended to carry through in any country, do you not think that they would have some of their men detailed to guard the gates of this dockyard at the city of Halifax, which is supposed to be the great centre of the Atlantic squadron on this side of the ocean? Yet that was the situation. It seems to me surprising, I am bound to say I was astounded.

He also said:

I bring this matter to the attention of Parliament not from any desire to be partisan in placing the matter before the House; but I believe that these conditions are such that Parliament should know of them, the Government should be informed of them, and the matter should be dealt with accordingly.

According to the hon. gentleman's statement, it was the 2nd of January when he visited the dock-yard and was surprised at the lack of activity there. But he did not tell the House that the second day of January was a Sabbath day, nor did he remind the House that it was the day after New Year's Day.

Mr. MACDONALD: It was not the Sabbath.

Mr. HAZEN: The hon. gentleman may have given the wrong date, but the 2nd of January was certainly a Sunday, and the rule of the navy yard is that there shall be no Sunday labour if it can be avoided. The hon. gentleman naturally finds the dock-

yard a quiet spot on Sunday, especially on a Sunday succeeding a holiday so generally observed as New Year's Day. It is hardly fair for the hon. gentleman to represent the condition he found on Sunday as being the ordinary conditions prevailing in this dock-yard. As a matter of fact, since the war broke out, the dock-yard has been an extremely busy place.

A large number of warships have been based upon Halifax, and the work of repairing these ships and keeping up their supplies, filling vacancies in their crews, providing for their sick and finding accommodation for the crews sent out to recommission them has proved quite a tax on the small staff maintained at the yard. The staff of the Naval Service Department at Halifax has also been obliged to undertake many services in connection with the war, and to do its share in the defence measures which have been adopted on the Canadian coasts. It is not possible, it is not politic or wise, to describe these measures in detail, but the Halifax yard staff has certainly not been idle; it has, not only in our opinion, but in the opinion of the Lords of the Admiralty as well, been doing extremely good work.

That the hon. gentleman was extremely anxious to find ground for criticism was shown in the remarks that he made about the way in which the dockyard was guarded. The hon. gentleman comes before this House posing as a man who has made a study of naval matters. Will he be surprised when I tell him that the measures taken for the protection of the Halifax dockyard are in line with the measures taken for the protection of the dockyards of the Imperial Government? The dockyard was guarded by Dominion policemen. My hon. friend says that is all wrong; that the dockyard ought to be guarded by men taken off the ships, who should be used as a patrol in the yard. But, as I say, the systems in force at Halifax and Esquimalt are exactly the same as the systems in force in the yards of the Imperial Government. In those yards it has been found advantageous to have the policing in the hands of a force entirely distinct from the naval organization, and we have been following that policy in connection with our dockyards on the Atlantic and the Pacific. The outside discipline of the yards is maintained by members of the police force; these men are in a more independent position than men belonging to the ships, who might have a tender feeling with regard to their comrades on shipboard.

It has been found by the Imperial authorities that an independent land force of policemen exercise stricter supervision, and that better results are obtained in this way. The Canadian navy yards have followed the example of the British authorities, and the employment of Dominion policemen as guards in these establishments is giving the most satisfactory results, as is shown from the fact that there has not been the slightest trouble in the yards in Esquimalt or Halifax, from outside interference since the war began. I do not think my hon. friend should complain because the policeman at the gate allowed him to pass. My hon. friend is well known in the province of Nova Scotia; few men are better known. The policemen at the gate knew him; knew that he was a member of Parliament; knew that he was a man who had a right to visit the dockyard if he saw fit; therefore he allowed him access to the yard without challenging his right to enter. Complaints are continually being made by persons who are refused admission to the dockyard—who are stopped by the policeman when they attempt to enter. They claim that the policeman ought to have known who they were and should have allowed them to enter without having a pass from the proper authorities. This is an indication of the fact that in moving for those papers my hon. friend is desirous of making political capital, of making a little picayune criticism. His chief criticism in this connection is that the naval authorities of Canada are pursuing exactly the same course so far as guarding the dockyards is concerned as is followed in the Imperial dockyards of the United Kingdom.

My hon. friend has sought to attack the Government by saying that Canada has no defence upon the Atlantic or upon the Pacific coasts. If Canada has no defence; if we are not contributing as much as we should to the splendid defence that is given to us by the British Navy to-day, I ask this House and this country whose fault is it? In view of the way my hon. friend and the members of his party in 1913, by every method known to parliamentarians, obstructed the passage through this House of a Bill designed for the purpose of giving assistance to the Navy in the Mother Country; in view of the emergency that was then threatening us; in view of the cloud that was then hanging over our heads; in view of the fact that my hon. friend's party induced their partisan majority in the Senate to throw out the Bill providing for

the building of three of the largest ships of war that science could devise and that money could buy—in view of these facts, I ask my hon. friend if it is not a matter of courage on his part to attack this Administration because Canada is not in a better position to defend her coast to-day, and because she has to rely, as she has in the past, upon the protection of the British Navy? Previous to the elections of 1911 the hon. gentleman's party made a certain pretence of naval defence in this country. They asked for tenders for certain cruisers and torpedo boat destroyers. Tenders were received, but they were put in a pigeon-hole, kept there for about six months, and did not see the light of day again until after the present administration came into power. If hon. gentlemen opposite were honest in their desire at that time to strengthen our naval defences, how was it that the contracts for the construction of these ships were not awarded? Was it, as appears to be the case, that they wanted to play politics with these ships at the coming election, and to make the people of Montreal, St. John, Halifax and Cape Breton believe that it was the intention of the then Government to construct a Canadian navy, and that the ships would be built at each of these places? The hon. member for St. John time and again has suggested that if the contracts had been awarded by the late Government, these ships would have been built at St. John; yet the right hon. leader of the Opposition told this House in most emphatic language that had the contracts been entered into, these ships would, at the time that he was speaking, be under construction at the city of Montreal. Everybody who knows anything about the election of 1911 knows that these statements were allowed to play a considerable part in the attempt of hon. gentlemen opposite to obtain support for the party then in power in the constituency of Halifax and the constituencies of Cape Breton. Did the hon. gentlemen neglect to award the contract for these ships, the tenders for which they had had in their possession months before the general election, simply because they were playing the game of politics with the whole naval question? When we came into power, and when these tenders were taken out of the musty pigeon holes in which they had been allowed to remain for months, indicating the absolute lack of sincerity on the part of my hon. friend and the party opposite in regard to this matter, we found awaiting us reports from Commander Roper and Admiral Kingsmill stating that to proceed with the construction of these vessels would be a mistake; that when completed they would have passed their time and would have to be included with those vessels that were obsolete or in a state of obsolescence. These are the facts with regard to the action of my hon. friend opposite.

What was the action of the Conservative party in regard to the matter? The present Prime Minister, then leader of the Opposition, told this House and told this country that if he were returned to power he would consult with the Admiralty as to what was the best thing to be done with a view to assisting the navy of the Empire in the event of war being declared. After the right hon. gentleman came into power, in the year 1912, he, with certain of his colleagues, went to Great Britain, and there had consultation with the Prime Minister, Mr. Asquith, with the Lords of the Admiralty and with other naval authorities, as to what was the best thing that Canada could do to assist the British navy in the event of war taking place. After my hon. friend came back to Canada, at the next session of the House in 1913, he laid upon the table of the House a state document received from the Lords of the Admiralty, which, after reviewing the situation—showing to any man who could read between the lines—that an emergency was apprehended, that war was to be feared—concluded in these words:

> The Prime Minister of the Dominion having inquired in what form any immediate aid that Canada might give would be most effective, we have no hesitation in answering, after a prolonged consideration of all the circumstances, that it is desirable that such aid should include the provision of a certain number of the largest and strongest ships of war which science can build or which money can supply.

And, acting upon the advice of the Admiralty, my right hon. friend, with the concurrence of the Government of which he was leader and of the party which supported him in this House, introduced a Bill to provide for the construction of three capital vessels in accordance with the recommendations of the Admiralty. We believed then and we believe now that the Admiralty were the best judges of what was required for Empire defence under the circumstances that then existed. When my right hon. friend placed his proposals before Parliament, they were met with every possible ridicule, they were met with every possible method of obstruction that parliamentary skill in obstruction could devise. We were

told that there was no emergency. The idea of war then or in the near future was ridiculed, laughed to scorn, by the hon. members on the opposite side of the House. They, not content with ridiculing the idea that there was danger of war, that there was any war cloud hanging over the Empire, that there was any emergency that would have to be met; they were not content with making these utterances in the House, but when the resolution had been carried in this House they followed it into the other House and got their partisan majority in the Senate to throw out that measure designed for the protection of the British Empire. So, if my hon. friend wants to know why Canada was not better prepared for the defence of the seas, why she was not contributing more to the British Empire, I advise him to go and consult his friends in the Senate who, at the suggestion and dictation of the members of his party in this House, threw out the Bill designed and intended for that purpose. But my hon. friends were not content with the attacks which they had made in Parliament upon this proposal; they followed it up in the literature which they issued to the people of this country. No emergency, they said; they laughed at the idea of an emergency. The idea of war with Germany was the most impossible thing, and the right hon. gentleman who leads the party on the opposite side took the occasion in one of his speeches to point out what a splendid man the German Emperor was and how he might be relied upon to maintain peace under all circumstances. Hon. gentlemen then, as to-day, flooded this country with pamphlets for partisan purposes. I hold in my hand a pamphlet issued by the Central Information Office of the Canadian Liberal party in Ottawa in 1913, known as publication number 6. It is entitled "Is there an emergency, conflict of opinions examined in the light of the facts." And this pamphlet of 24 pages is devoted to

9 p.m.

argument to the effect that there was no more arrant nonsense in the world than for any body of men to contend that there was any danger of war between Great Britain and Germany, and that the idea of an emergency was simply the purest sort of nonsense, the result of the imagination of people who were anxious to stir up strife in the country, and that there was not the slightest foundation in fact for it. And yet, scarcely 12 months after this publication was written, the world was at war, the Empire was engaged in a fight for its very existence, which has been continuing ever since and which may, unfortunately, continue for many months to come. Let me quote a few passages from this pamphlet. I find on page 5:

> Here then is the difference between Sir Wilfrid Laurier and Mr. Borden. Sir Wilfrid Laurier denies that there is an emergency. Mr. Borden will not say that there is an emergency, but to avoid bringing down a permanent policy, either the same as or different from that to which Parliament unanimously agreed, has thought it necessary to make it appear that an emergency exists and that Canada should present to Great Britain the three largest ships of war in the world at a cost of $35,000,000, and then work out a permanent policy. Who is right?

Is there a man in Canada to-day who will not say that the right hon the leader of the Government was right and foresaw what was going to happen in his policy of desiring to have three capital ships of war, even if they had cost $35,000,000 or more, so that when war came those ships, flying the flag of Canada, might be found on the seas, protecting not only Canadian commerce, but the commerce of other parts of the Empire as well, was right, and that the right hon. gentleman was taking a proper course and one which every patriotic man in this country now regrets was not followed, so that Canada might have taken a more active part in the defence not only of this country but of the Empire than it is able to take to-day, owing to the unfortunate and unpatriotic attitude taken by hon. gentlemen opposite on that occasion. But, Sir, this pamphlet goes on for page after page to support this contention. I find this paragraph on page 8:

> The relative strength of British and German fleets is evidence of no emergency, since the supposed emergency is in referenec to Germany. What is the relative strength of the German and British fleets? Here is the statement of the Right Hon. Winston Churchill, First Lord of the Admiralty, given in the House of Commons at Westminster, on Monday, July 22, 1912, in the course of an explanation of the scope and character of the new German navy law and its effect.

Then, they quote Mr. Churchill's words, concluding as follows:

> I hope it will be sufficient for me to say that the arrangements proposed will, in the opinion of the Admiralty, be adequate for the needs of 1914 and 1915.

Then, the editor of his pamphlet, issued from the bureau of the Canadian Liberal Party at Ottawa, goes on to say:

> In the face of such a statement as this, how can Mr. Borden and his followers, with any pretense of justification, contend that there is

an emergency at the present time, or even a likelihood of one in the immediate future? Elsewhere in the same speech Mr. Churchill refers to what could be done "at any time when the Admiralty consider that there is an emergency," clearly indicating that the Admiralty has no belief in any emergency at the present time.

Not only did they argue that there was no emergency, but they argued that Mr. Winston Churchill and the Lords of the Admiralty had no belief in the existence of any emergency at that time. They go on and quote declarations by responsible ministers to prove the non-existence of an emergency in face of the fact that those same responsible ministers or Lords of the Admiralty informed this House and this country that it was desirable that any aid Canada should give and the aid that would be most effective would include the provision of a certain number of the largest and strongest ships of war which science could build or money could supply. But they were not content with issuing one pamphlet on the subject to show that there was no emergency; they issued a second pamphlet from which I wish to read a few quotations. It was published in 1913, and was also issued from the central information office of the Canadian Liberal Party at Ottawa, on the memorandum prepared by the Board of Admiralty on the general naval situation. In it they proceeded to criticise the statement prepared by the Admiralty and said:

There is therefore nothing in the memorandum with respect to the German situation which has not already been given to the British public and the world, and which was not before the British Parliament at the time the Naval estimates were under discussion and Mr. Borden and his colleagues were in England. With these facts before them the British Government saw no existence of an emergency.

Why, therefore, should the Canadian Government draw inference of any such existing? The statement of British ministers in the debates when those facts were laid before the British Parliament are significant, and should be read in Canada when considering the inference to be drawn from the memorandum.

Again it stated:

Could any policy be given under these circumstances than that suggested by Sir Wilfrid Laurier in his reply to Mr. Borden? Referring to the Admiralty Memorandum Sir Wilfrid said:

This document shows that there is no emergency, that England is in no danger whether imminent or prospective. But the document discloses a condition of things, of which, indeed, we knew, but upon which has now been placed the sanction of official correspondence.

Therefore I say that my hon. friend from Pictou, and hon. gentlemen of the party to which he belongs, have not read that memorandum from the Admiralty. Having had the assurance given to this House by the Prime Minister, after consultation with the Lords of the Admiralty and with the naval authorities and the Government of Great Britain, that, from the information imparted to the House and from other information which he could not impart, the condition of affairs was such that there was need for strengthening the British navy in view of the emergency which, it was believed, was coming; with these facts before the House, hon. gentlemen opposite declined to believe that there was any emergency, declined to believe that there was any danger of a war in Europe, declined to believe that the institutions of the British Empire and of Canada were at stake, or were in danger in the prospective future, to quote the language of the right hon. gentleman (Sir Wilfrid Laurier) opposite; they refused to accept any of these statements, obstructed the Bill in its passage through this House, and then got their partisan majority in the Senate to reject it when it went to Upper Chamber. Therefore, I say to my hon. friend from Pictou that when he asks why this country is not doing her duty in the matter of defence upon the seas, I say: ask your leader and your party, and ask the Liberal majority in the Senate. That is the answer I give.

Mr. MACDONALD: My hon. friend had better ask Mr. Bourassa.

Mr. HAZEN: My hon. friend from Pictou need not get cross; he need not display temper in regard to this matter, and talk about asking Mr. Bourassa. My hon. friend asked a question, and I am giving him the answer, which is the answer that nine-tenths of the people of this country would give. The people of this country, who are not blinded by partisan considerations will, I venture to say, declare that it is the correct answer to the question asked in this House to-night by the hon. member.

My hon. friend from Pictou has gone further. He has said: why has not the Government of Canada enlisted men to form a naval brigade, to go over to assist the navy on the other side of the ocean. While I have a very great regard for the learning and ability of my hon. friend, I am disposed to think that he does not understand what the purposes and duties of the naval brigade have been in the present war, or what part they have served. Perhaps my hon. friend will be astonished to learn that the naval brigade on the other

side is formed of the surplus of men available after the ships of the navy have been manned. When war broke out, they were formed into regiments, and fought in the trenches, at Antwerp and in other parts, just as the men enlisted for military service fought. In not enlisting men to form a naval brigade we acted not on our own judgment, but on the jugment of the British authorities. I would ask my hon. friend whether, if these men were going to serve in the trenches, at Antwerp, and other places, as the soldiers have served, there was any reason for having two different bodies organized for the same service, one under the Militia Department and the other under the Naval Department.

Mr. MACDONALD: Does my hon. friend say that Great Britain did not require any recruits for her navy?

Mr. HAZEN: I say that at the time when war broke out, Great Britain not only did not require any recruits for her navy, but she had about 20,000 men enlisted for naval purposes who were not required to serve in the navy, and who were formed into naval brigades to fight just as the soldiers fight at the front. When war broke out, or soon afterwards, a statement was issued by Mr. Graham Green, the permanent Secretary of the Admiralty, relating to the formation of a Royal Naval Division. Our attention was called to this, and on September 22, the department called for information as to the formation of a Naval Brigade. On September 25 the information was forwarded to us, with a statement that the list of candidates for commissions was closed, and that no further officers were required. It said nothing whatever about the necessity of enlisting men for the ranks.

The Press Bureau published a statement which was signed by Mr. Winston Churchill, then First Lord of the Admiralty, and part of which I will read to the House to show the correctness of the statement I have made. On September 6 the Press Bureau published the following statement:

The Press Bureau has received the following communication from the Secretary of the Admiralty:

After providing for all present and foreseeable future needs of the fleets at sea, there remained available a large number of men belonging to the Royal Marines, Royal Naval Volunteer Reserve, Royal Fleet Reserve, and Royal Naval Reserve. A portion of these have been organized into one marine and two naval brigades, the whole comprising the infantry of one division, to be called the Royal Naval Division. The marine brigade, for the organization of which all preparation had been made before the war, has been for some time in being at a strength of 3,000, and has already been employed at active service at Ostend. The two naval brigades have been organized in the first instance at a strength of 3,750 each, and have been in camp since August 19. The cadres of their eight battalions have been formed from the Royal Naval Reserve men forming on these as they were despatched from the ports. The three brigades were fully constituted by the 24th August and entered at once upon a period of field training to fit them for service abroad if required in the New Year.

Just as the military are trained in the camps for service abroad, not for service on the sea.

In the meanwhile they will be organized and trained under the Admiralty and will remain available for service afloat should any unexpected needs arise.

There follows a statement as to how they would be made up, into different regiments and brigades. Then it says:.

The Royal Naval Division will be completely equipped in all respects by the Admiralty with field hospitals, transport, ammunition column, signal companies, cyclists, motor cars, and machine guns. An aeroplane squadron from the Naval Wing, complete with transport, etc., will be available when required. If at any time the naval situation becomes sufficiently favourable to enable this force to be definitely released by the Admiralty for military duty, it will be handed over intact to the Army for general service. The training, discipline, experience and quality which the personnel already possess should, after five or six months' special instruction in field duties, enable units of high quality to be produced.

And so on, showing distinctly that the surplus of men that they had after manning the ships and providing for the Naval Service, was being formed into a naval brigade to be trained in the field for field service, and to perform, as they have performed since the war broke out, exactly the same services which the military have performed in the trenches, at Antwerp, and other places on the Continent.

I now wish to submit to the House a memorandum on the subject, showing in plainer language exactly what that means:

At the beginning of the war the Admiralty called out the Royal Naval reservists, composed of men engaged in Mercantile marine but trained to a certain extent in the Royal Navy.

When these men responded to the call the Admiralty found themselves with a large body of trained seamen, from which they manned the ships ready to put to sea and still had a considerable number of men over. To utilize the services of these keen eager men, a Naval Brigade was organized, and at the same time the inrush of Naval Reserve men was checked, and instructions were received in Canada that only men specially needed by the Admiralty should be sent forward. The Naval Brigade thus organized, while formed of reserved seamen, was partly officered by Naval Officers and partly by Army Officers. The men were trained as a military unit, given the uniform of the land force, were armed and equipped in exactly the same day as the infantry regiments, and

took their places in the trenches alongside of the latter. The exploits of this Naval Brigade have been noted at Antwerp and elsewhere; they have served as infantry regiments throughout the war. The only hold retained on them by the Admiralty was that these men having received preliminary training as seamen, should be available for service on shipboard when required.

The organization of this Naval Brigade is, therefore, exactly similar to that of the land regiments, and there would be absolutely no reason for Canada organizing two different systems of forces. There does not exist in this country a sufficient number of naval officers to undertake the training of naval regiments, and it seemed far wiser to enlist all the willing men under the army organization, instead of duplicating that organization and administering part of it under the Militia Department, and part under the Department of the Naval Service. This would mean added expenditure without any increase in efficiency. The Canadian Government therefore, decided that no possible object would be gained by dividing their organization, and advised the few men who wished to enlist in Naval Brigades to enlist in Overseas Forces.

At the beginning of the war a number of Royal Naval reservists residing in Canada left for England to join the forces at their various headquarters, but this movement was stopped by the Admiralty as they felt they had a sufficient number of men on hand. The men who went from Newfoundland were men belonging to the Royal Naval Reserve who had been already trained in the Royal Navy, which maintains a training station at St. Johns.

I therefore ask my hon. friend what object would have been served in organizing a naval brigade, and giving it exactly the same training as was given to the men organized in the militia regiments, and then sending them across the seas to do exactly the same work and stand side by side in the trenches with the overseas military forces? Would it have been prudent to divide our forces? Would it have been economical? Would it have made for greater efficiency? No, Sir, it was far better to have all the men organized under one department. That was the course we decided upon after conference and consultation with the British army and naval authorities.

On August 2, having received a notice that the Admiralty had called out the Royal Naval Reserves we gave notice from the Naval Department to that effect to all the collectors of customs in Canada, and asked them to arrange wide publication ashore and afloat. I have here a copy of the telegram sent to the collector of customs at Sydney, N.S., on August 2:

Admiralty have called out Royal Naval Reserve. Please arrange wide publication ashore and afloat.

Naval.

On the 7th of August we wired to Admiral Kingsmill, who was in Toronto:

Public advertisement is being inserted in papers that R.N.R. men desiring information as to transportation should apply direct to Naval Service Department, Ottawa. They are then being informed to apply to station agent at their respective towns, presenting their papers and telegrams. Arrangements are being made with the Canadian Pacific railway, Canadian Northern railway, Grand Trunk railway, and Intercolonial railway passenger officers to authorize the necessary transportation on adoption of this procedure.

Naval.

On the 18th of August we received this despatch from the Admiralty:

London, August 18, 1914.

Naval, Ottawa.

R. N. R. officers, seamen, stokers, not to be called out unless services required locally.

(Signed) Admiralty.

Which showed that the British Admiralty had more men than they required for the manning of their ships. Shortly after the outbreak of war, members of the Royal Naval Canadian Volunteer Reserve offered to proceed to England to join the Royal Naval Brigade which had been formed there. The number available was 120 men and 9 officers.

In view of the length of training which the Naval Brigade in England had already had (over two months), and the necessity for the services of the Royal Naval Canadian Volunteer Reserve men in British Columbia; in view also of the absence of all officers on active naval service, who were qualified to train the applicants sufficiently, and finally on account of the inadvisability of sending totally untrained men to England for service in the Naval Brigade, it was decided not to grant the request of the members of the Royal Naval Canadian Volunteer Reserve. As the Naval Brigade is recruited for service ashore, and as applicants for entry in Canada could perform equally good service with the overseas forces recruited under the Militia Department, applicants were advised to enlist with the Canadian Overseas forces.

An offer under date of November 8, 1915, was received to recruit a "Special Pioneer and Water Transportation Corps" to consist of 200 men comprising four units, from Mr. P. E. Scharschmidt. This was submitted to the Department of Militia, and thence to this department by Hon. Sir Richard McBride, Premier of British Columbia. This corps was not considered by the Department to be of a naval character.

A further submission from Mr. R. H. Swenerton for the formation of a battalion

among naval volunteers for overseas military service to be given naval training, but later to be attached to the Expeditionary Forces, was given consideration. It was considered that time and expenditure would be saved if these men were to enlist with the battalions being recruited for active service.

Suggestions for the formation of a naval brigade in Nova Scotia were forwarded from Mr. Charles Archibald to the Prime Minister, and thence to this department. Mr. Archibald's suggestions were considered, but the same objections which the department met in other cases obtained. The Admiralty were, however, on a later date, requested to inform this department if they required recruits from Canada for service in the navy, to be trained in the Imperial Navy. No reply has been received from the Admiralty, and the question is therefore being held in abeyance.

Mr. E. M. MACDONALD: What date is that?

Mr. HAZEN: Some time in the last few months. Had the British Admiralty evinced the slightest desire that we should send men from this country for the purpose of serving in the British Navy, or had they, in response to our inquiry, intimated that they would like us to send men forward to assist them in their naval warfare, we would have been desirous to organize, to the best of our ability, forces for that purpose. Not only was no such information given, not only was no such request made, but, on the contrary, the documents which I have read to the House show that the British authorities had more men for the naval service than they actually required, and the despatch sent us in August, 1914, showed that they did not want us to call out the naval reserve men in this country to act as stokers, etc., in view of the large number of men in the Old Country available for the naval service. I think I may leave that question as it is at the present moment, and I think my hon. friend, when he charged us with not doing our duty in this matter, really did not understand the functions and duties of a naval brigade. Had the hon. gentleman understood that the naval brigade in Great Britain was the surplus of men organized after the navy had been fully manned, after all the ships ready for sea had been called out; had he understood that those men were formed into battalions, that they were drilled as the militia are drilled and that they fought side by side with the militia regiments—the only difference being that they were available to be called upon should their services be required for the navy—had my hon. friend comprehended all that, I do not think he would have made this attack on the Naval Department.

My hon. friend has referred to the vessels that we have at present in the naval service of the Dominion. In a few minutes I will give the House a very full statement, without going into details which should not be made public, of the work that the Naval Department has done since the outbreak of the war, and I think the hon. gentleman will see that his attack is neither well justified nor well founded. The hon. gentleman says that we to-day have no means of defence. To-day not a single troopship has, while crossing from Canada to the Mother Land, met with disaster although troopships have been going and ships have been coming ever since the thirty ships with over 30,000 men from Valcartier, the greatest armada that ever crossed the water, sailed from Quebec. Ever since our troops have been going until at the present date over 100,000 Canadian troops have been sent across the water, and there has not been a single disaster, nor a single casualty. During the same period the trade routes across the sea have been maintained in safety and not a single Canadian vessel carrying munitions of war, or goods for the British Government or for any of the Allied Governments, has up to the present met with misfortune, because we have had the protection of that navy which alone stands between us and disaster, a navy to which we have never contributed a single dollar and which the hon. gentlemen opposite prevented us from contributing to most substantially in 1913.

Mr. MACDONALD: Does my hon. friend think that, if we had sent that money over, Canada would have been in a better position than Australia is?

Mr. HAZEN: If we had equipped those three capital ships of war, we would have been doing what the British Admiralty, the best authority on the question, said was the most effective way of assisting in the naval service of the Empire. My hon. friend has gone out of his way to attack what we have done. While we have not been able to do very much in the way of actual defensive operations—

Mr. PUGSLEY: Hear, hear.

Mr. HAZEN:—we could have done a great deal in the way of defensive and offensive operations if we had had those three capital ships of war; and more than that, my hon. friends opposite, when they were in power, might have done something if they had not held up their tenders for six months in order, in the elections of 1911, to get the votes of people in certain localities by making them believe that each of those localities would be the place where the ships would be built when the contracts were finally entered into. My hon. friend opposite says that we are doing nothing; that we have only had vessels for patrol work and mine sweeping purposes. All that work has been entered upon by the Naval Department after careful consultation with the authorities of the Admiralty, with their full approval and in some cases at their request.

My hon. friend has referred to the Niobe, and he says that we have laid her up in Halifax harbour, and that she is dismantled. I will give the House the facts with regard to the Niobe and I do not think any public interest at the present time will suffer by my doing so. The Niobe was completed in 1897, and is, therefore, some eighteen years old, which in these days is a very respectable age for a warship. She was purchased by Canada in 1910, and was used as a training ship on the Halifax station. It was found difficult to keep the crew of the Niobe up to full strength, and in 1913 it was decided to reduce the crew and most of the ratings lent by the Admiralty to the Canadian Government returned to England. In the spring of 1914, when the Rainbow was commissioned for service in Behring sea, most of the Canadian ratings still on the Niobe were utilized to make up the complement of the Rainbow, and, therefore, at the opening of the war only a very few men were on the ship. A crew was enlisted made up from the Imperial ratings from the Shearwater and the Algerine, which were laid up at Esquimalt, from a few Canadian ratings, from a number of ex-naval ratings residing in Canada who were enlisted as volunteers for the war, and from Royal Naval Reserve ratings from Newfoundland.

In the spring of 1915, the Niobe, having been at sea and in continuous service for some nine months, began to show signs of wear in her machinery. It was reported that the funnels would need renewing at an early date. On examination of the machinery it was found that the boilers would very soon be in need of very large repairs, and, as the vessel had been due for a general refit for some time, it was realized that it would be necessary to lay the vessel up for a long period of time, and spend a large sum of money on repairs and refit.

It would have been necessary to have this refit made in the Imperial dockyards, which, at this time, are filled with more important work. It was considered that it would not be advisable to spend this money or devote so much time to repairing a ship which would be of little value as a fighting unit. On the other hand, it was necessary to provide at Halifax a depot for the many Imperial ratings who are continually passing through this station, and it was a matter of convenience to have a ship in which the various auxiliary services centred at Halifax could be accommodated. It was, therefore, decided to lay the ship up with a nucleus crew sufficient to keep the ship in proper condition, and with a staff of men sufficient to provide for the transient ratings. This was done after consultation with the Admiralty and with its approval.

While the number of men and officers at present entered on the books of the Niobe is about 800, only 337 of these are attached to the service of the ship; the other men compose the crews of various auxiliary ships or are engaged in the various auxiliary services at Halifax, St. John, Sydney, or elsewhere, and are borne on the books of the Niobe for purposes of discipline and of accounting. During the month of November some 450 Imperial ratings were accommodated on the Niobe. The vessel is, therefore, discharging her duties as a depot ship, and is being made useful within the limits of her present capacity. And that, at the present time, is about all she is fit for. It would not be wise policy, in view of the fact that the shipyards of Great Britain are crowded with important work, to send her across for repairs, to wait the months required to repair her, and spend the enormous sums of money necessary in order to put her in shape to enable her to go to sea again in connection with the purposes of active naval warfare.

The hon. member has referred to the Hochelaga and the Stadacona, bought last year by the Naval Department for patrol work in the gulf of St. Lawrence. These vessels have discharged most admirably the work for which they were intended. Certain repairs have had to be placed upon

them, as is the case with all vessels; but the experts of the Naval Department, on whose advice they were purchased and whose reports were submitted to me before I authorized the purchase, are thoroughly satisfied that they have done their work well, that they are good boats for the work for which they were purchased, and that they will do good work for another summer and probably to the end of the war. The statement that the captain of one of these vessels refused to go to sea in his vessel, is, as far as our department knows, an absolute misrepresentation. There is no foundation for it in fact, and not the slightest justification for any one making the statement made by my hon. friend from Pictou.

Since the war broke out the Naval Department has done a great deal of work in connection with other matters. Certain men were sent by us to England, and of these I will give a brief statement

All officers on the retired, resigned and emergency lists, with certain specified exceptions, were sent to Great Britain, their number being estimated at 50.

A considerable number of Royal Fleet Reserve, Royal Naval Reserve, and prisoner ratings, and ex-naval ratings, other than the above (i.e., men who had taken discharge at the end of the first period of 12 years' service, who had bought their discharge, etc.). There is no means of ascertaining their number, even approximately, but it probably amounts to several hundreds and may possibly have exceeded 1,000.

Two hundred officers for the Royal Naval Air Service all entered in Canada. Up to the present time, 176 have been sent to England, and are engaged in the Air Service of Great Britain, bringing credit to Canada, and doing their work well, so far as we know.

As many engine-room artificers and electrical artificers as could be obtained after considerable press publicity were obtained, and only twenty of that class of men were willing to go.

We have been asked to have lists made of the men willing to serve in the Royal Naval Reserve Motor Boat Patrol. We called for applications, and several hundred applications have been received up to the present time. We are informed by the Admiralty, who asked us to prepare a list of these men, that an officer is coming to Canada to look over the men who have applied, to examine them for their fitness and make selections from their number. In the Naval Department, we have had a great deal to do in connection with the transportation of munitions and goods for the British Government and the Allied Governments. At the present time there are seventy-five transports on the Atlantic, which are sailing under instructions from us. Between July and November fifty ships, not including timber ships, sailed from Montreal, and were given sailing orders from us. Since November 30, up to March 13, thirty-six store ships have sailed from St. John and twenty-nine from Halifax. The sailings for the near future will be two or three a week from the port of Halifax, and four or five a week from the port of St. John.

In the store and contract branch, the department has been very busy, carrying on work, not only for ourselves but for the British Navy and the navies of the Allied nations. This work has been carried on at the dockyards at Halifax and Esquimalt, and elsewhere as required. Contracts for naval stores entered into to date exceed $1,000,000 in value, and cover a very large variety of material, including provisions, clothing, naval stores of all kinds, ordnance and torpedo stores, fuel, etc. Contracts have been made on both coasts to provide supplies of fresh provisions at a moment's notice for Canadian and Imperial ships. In addition to supplies for the Canadian services, large quantities of provisions, clothing, and naval stores have been supplied from stock at the dockyards and by direct purchase to Imperial ships, and also to His Majesty's dockyard in Bermuda. The value of stock held at the dockyards has averaged well over $600,000, and the total issues, not including fuel or fresh provisions, are about three-quarters of a million to date. Supplies, not including fuel, have been made to the Admiralty for various services, including His Majesty's ships and Bermuda dockyards, to the value of approximately $200,000; to the Japanese Government to the value of approximately $30,000, and smaller quantities to the French and Russian Governments and ships of the Royal Australian Navy. Very large quantities of coal have been handled both at Halifax and at Esquimalt, amounting in the case of Halifax to approximately 150,000 tons, and in the case of Esquimalt to about 40,000 tons. Charters have been entered into with the owners of 18 vessels on the Atlantic coast for various services, including mine-sweeping, patrol and examination services and harbour defence services. In addition 14 large motor launches have been chartered

for patrol service in the gulf of St. Lawrence and on the Atlantic coast, and five for similar work on the Pacific coast. Supply depots have been arranged as necessary at convenient points on the coast for the use of patrol vessels. The arrangements entered into with the Admiralty and the acting Director Overseas Transport have been continued in force and considerably enlarged. There are now in the Canadian transport service about 75 fine modern ships carrying supplies. Up to the close of navigation at Montreal over 300,000 tons of freight had been handled by this service, and the monthly tonnage exported will reach, it is expected, 150,000 tons per month in the near future. In the month of February alone, at the ports of Halifax and St. John, 138,000 tons of freight was shipped. The Canadian Transport Service is maintained on the following basis: The Admiralty supply the necessary tonnage and advise the department from time to time of contracts entered into for delivery at Canadian ports by the Imperial Government.

This department is a medium of communication in all matters affecting the service. The acting Director of Overseas Transport has immediate charge of the organization of the loading of the ships, and the arrangements by which the material reaches the seaboard. He reports to the department the cargoes loading in each ship, which are in turn communicated to the Admiralty. These arrangements have worked smoothly and without friction. There has been little or no delay occasioned any of the ships. Contracts for coal have been maintained on favourable terms and up to December 31st, coal to the extent of over $400,000, had been purchased on behalf of this service in Canada.

In addition to the export work of the Transport Service, this department has arranged for the shipment of over forty cargoes of timber, aggregating about 125,000,000 feet, from the ports of Quebec, Gaspe, Chatham, St. John, Halifax, and from British Columbia ports, to European ports on behalf of the Imperial Government. And whereas, at one time, it was feared that it would be impossible to obtain tonnage enough to carry across the sea the munitions of war and goods required—hay, oats, and other products of Canada—that idea has been absolutely dispersed. There have been plenty of transports during the winter for these purposes, and they have been able to handle all the cargoes that the railways have been able to deliver for them at the different ports. I am sorry to have to inform the House that last night a vessel at St. John that was loaded with a cargo for Australia was burned. There were no munitions of war in the cargo and no goods for the Allies. The vessel was loaded with motor cars, carbide, paper, and other articles of commercial value. The fire which broke out some time early Sunday was supposed to have been absolutely extinguished, but early this morning an explosion occurred in the vessel, with the result that the captain was killed and the vessel sank to the bottom of the water at the face of the dock. I understand that the explosion was caused by the water that was poured into the vessel for the purpose of extinguishing the flames coming into contact with the carbide. This generated gases and caused the explosion. While the loss of life and the loss of the vessel and its cargo are unfortunate, one of the most unfortunate results is that for the rest of the season the dock, which was sorely needed for the loading of vessels to go across the seas, will be practically useless. The dock is controlled, I believe, by the Canadian Pacific Railway Company. The difficulty will be to remove the vessel before navigation opens on the St. Lawrence in order that vessels may lay at the dock and receive cargoes. The occurrence is one which is very much regretted, particularly at the present time. No injury was done to the dock or to the sheds upon it; all injury was confined to the vessel itself.

Mr. PUGSLEY: Will the minister kindly state to the House the rates of freight for merchandise which is carried upon vessels under the control of the Admiralty? How do the rates compare with what they were before the war broke out?

Mr. HAZEN: As I understand the matter, the goods to be loaded on these transports are delivered at the dock; they are then carried across the ocean for the British Government. I do not think that the rate of freight is an important consideration, because it is paid by the British Government in respect of all munitions of war and other goods sent across the water. I am speaking of transports carrying munitions of war, of which there are seventy-five, and all goods required for the British Government and for the Allies for the purposes of the war.

Mr. PUGSLEY: Do I understand that all these vessels which are under the control of the Naval Service, are owned by the British Government?

Mr. HAZEN: They are not owned by the British Government, but they have been requisitioned or commandeered by the British Government for this purpose. Vessels belonging to our own people in Canada have been requisitioned; vessels owned by companies in St. John and by the Dominion Coal Company have been requisitioned. Vessels owned all over the country, not only in Canada, but in other parts of the Empire, have been requisitioned for similar purposes.

Mr. PUGSLEY: You have nothing to do with the rate of freight?

Mr. HAZEN: No. There are vessels, too, for carrying lumber requisitioned by the British Government. I understand that in New Brunswick there is a great deal of lumber on the wharves that has actually been paid for, but which has not yet gone overseas. In due course that will be sent for and taken away. Lumber will be sent from Chatham, and from other north shore ports. During the winter large quantities of lumber are sent from St. John and Halifax for the British Government. The lumber is sold to be delivered on this side of the water—payable on delivery at the wharf—and the freight is paid by the British Government.

I did intend to-night to make a statement of considerable length to the House, in more exact terms than the statement that I have made, regarding the activities of the Naval Service Department in relation to the war since the war broke out. As the hon. member for Pictou has seen fit to attack the Naval Service and to say that it has done nothing in connection with the war; as he has seen fit to complain because we had policemen instead of naval men to guard the dockyard at Halifax, in which respect we followed the example of the Imperial dockyards; at the risk of being somewhat tiresome, perhaps I had better make this statement to the House. Perhaps no better opportunity of doing so will present itself than is presented on the present occasion. I presume that my hon. friend in making this motion was actuated not so much by a desire to have the correspondence brought down as by a desire to have the opportunity of expressing his views with regard to the sins of commission of the Naval Service since the war broke out.

[Mr. Hazen.]

Mr. MACDONALD: I did not assume that my hon. friend was going to make the statement to which he refers; I had thought that he would do that when in Committee of Supply. I did not make this motion for any other purpose than that which I stated in the few remarks that I made when I presented the motion to the House. My object was to see all the correspondence that can be brought down between this Government and the Imperial Government in regard to the reason why we are not sending men to the navy, as Newfoundland, South Africa and Australia are doing; also to ascertain the exact position of Canada on the sea today.

Mr. HAZEN: I accept at once the statement of the hon. member for Pictou, but perhaps this would be as good an occasion as any to give the House a very frank and somewhat comprehensive statement of what the Department of the Naval Service has done in relation to the war since it broke out. I may say that preparations having previously—

Mr. PUGSLEY: I should like to have Your Honour's ruling upon the question of how a general statement of what the Naval Service has been doing has to do with the motion of the hon. member for Pictou, which is:

> For a return showing a list of vessels, belonging to the Canadian Government which are on service under the provision of the Canadian Naval Act, and of all vessels not now in service and their present condition and suitability for service, and also for a copy of all letters, petitions or communications had by or with the Government in regard to the establishment of a Canadian naval brigade.

I am unable to see how the matters with which my hon. friend purposes dealing are relevant to this motion. I think it would be very much better if my hon. friend would not insist upon our exercising the courtesy which, perhaps, we should be glad to extend under ordinary circumstances, and make his statement when going into supply on the Naval Estimates, when the matter may be fully discussed. I am sure that if any private members were to proceed along the same line as that suggested by the hon. minister, you, Sir, would at once feel it your duty to call us to order; to rule that we were going too far afield in attempting to deal with the various matters that my hon. friend now purposes to deal with under this motion.

Sir ROBERT BORDEN: The hon. member for Pictou went fully into the whole

scope of the Naval Service and its alleged deficiencies. I think the minister, under the circumstances, would be quite in order in making a statement as to what the Naval Service has done.

Mr. MACDONALD: I said nothing about the commandeering of vessels, or about dockyards.

Mr. PUGSLEY: When we were discussing some matters the other day several members spoke, and my hon. friend the Minister of Labour departed from the motion before the House. I followed him, and all at once my hon. friend the Minister of Public Works, not improperly at all, suggested that we had better confine ourselves to the subject before the committee. The Chairman, although two or three members had been allowed—as no objection had been made—to discuss irrevelant matters, deemed it his duty to round us up, so to speak, and bring us back to where we belonged.

Mr. ROGERS: The hon. gentleman is entirely in error in the statement that he has just made. I called the attention of my hon. friend to the fact that he was dealing with Estimates of the Labour Department as if we were in committee, while as a matter of fact the Speaker was actually in the Chair. I simply suggested that the House be put in order; that the Speaker leave the Chair, and that we go into Committee of Supply, so that the hon. gentleman could make the five, six, seven, or eight speeches that he attempted to make and did make on that occasion. It was only to put the House in order that I made the suggestion.

Mr. PUGSLEY: Perhaps I am wrong then in saying it was the Minister of Public Works, perhaps it was the chairman who did it. At all events I know I was brought to book, even although I was following alone the lines of the Minister of Labour; the chairman thought the discussion had gone far enough and he called me to order. I could not argue that the matter was relevant to the motion before the committee, and had to yield to the ruling of the chairman. I am sure that if any private member were to follow along the lines indicated by the Minister of Marine the Speaker would feel bound, very early in the discussion, to call him to order.

Mr. HAZEN: I have no desire to violate or even to trespass on the rules of the House. But in this House I have always observed that on an application made for papers relative to any particular subject it has been open to any one speaking to the motion, to deal generally with the subject to which the papers related, and the statement I purposed making to-night as to the activities of the Naval Service would have been no more than an answer to the attack of the hon. member for Pictou (Mr. Macdonald) upon the Naval Department for its alleged lack of activity. I would submit that I am quite in order, although at the same time, if there is any doubt about it, I shall at once take my seat without dealing with that branch of the subject, as I have no desire to infringe upon the rules of the House. Perhaps, Mr. Speaker, (Mr. Blain), as you are occupying the Chair only temporarily, it would be better not to put you to the necessity of ruling on a point of this sort on which there might be some difference of opinion. I have never seen such a point taken in the House before. As a rule there has been a wish on the part of the House to allow members to deal fully with any subject before it, as long as they confined their remarks to matters pertinent or relating to the particular subjects involved in the resolution. In this resolution the subject involved is undoubtedly the activities of the Naval Service, and so I think I am strictly in order; but as the point has been taken, and as I have already occupied a greater time than I intended to I shall not press the matter at this stage. My reason for speaking at such length was the unfounded attack of the hon. member for Pictou upon the work of the Naval Department since the breaking out of the war. I will only say, on behalf of the Naval Department, that I am prepared now or at any other time to fully justify what it has done, and to demonstrate to the people of this country that that department has faithfully discharged the onerous duties imposed upon it, and that what it has done has been in the public interest, and has been done, in most cases, with the full co-operation of and after consultation with the Admiralty; and that the Department is prepared to continue to the end of the war to do all it can under existing circumstances to bring the war to a successful termination and to assist in maintaining the supremacy of the British navy upon the high seas.

Mr. PUGSLEY: When I ventured to point out to the Minister of Marine that I thought he was proposing to depart from

the resolution before the House,
10 p.m. it was not, I can assure him, and I can assure you, with any idea of permanently preventing the minister from making the fullest statement he might desire to make to the House. But it occurred to me that the proper time for such a statement would be when he comes to submit his Naval Estimates to the House, and then we would have a field day upon it. I would like to be able to talk for some little time upon that question, and I think it would not be very difficult to convince the people of this country, if we cannot convince the majority of the members of the House, that the Naval Department had absolutely fallen down so far as giving effective aid to the Empire or to Canada in connection with the war is concerned. In making his motion the hon. member for Pictou very properly called attention to the fact that when the war broke out the Niobe was out of commission. It is a fact which is known to the whole nation that at that time the tubes of the boilers had actually been filled with some sort of material to prevent them rusting, with the idea that the vessel would not be required at any time in the near future, and that all of this material had to be extracted after the war broke out, an operation which took weeks to accomplish. Thus, while, if the Niobe had been in commission, she might have performed most useful service in capturing valuable German prizes, she was absolutely of no value to the Empire. My hon. friend knows also that, in the year 1913, a report was brought down to this House having reference to the men who were on board the Niobe, and making it public that they had been, by tacit consent, permitted to discharge themselves and to leave the vessel and go out of the service of His Majesty, and that no effort was made to retain them in the service. In the report of the Department of the Naval Service for the year ending 31st March, 1914, signed by the director of the Naval Service, Vice-Admiral Kingsmill, I find this extraordinary statement, which is not at all in harmony with the statement of the minister to-night:

> The Government having decided not to continue His Majesty's ships Niobe and Rainbow in full commission, no recruiting was carried on during the year, and the programme of exercises and training laid down for these ships was not continued.

Is there there a suggestion that the Niobe was laid up because she had to go into dry dock or because she was not fit for service? There is no suggestion of that kind by Vice-Admiral Kingsmill. Yet, in the face of that report, my hon. friend said to-night that this Government knew, and had known almost since they came into office, that danger was imminent.

In 1913, the naval discussion took place in this House, and my right hon. friend the Prime Minister stated that in imagination he heard the distant booming of cannon, and the roaring of guns; that he almost felt that a great Empire war was at hand. Notwithstanding the fact that during the three years since he has pretended to this House—I do not use the word pretended in a harsh sense at all—that the Government had had for a time reason to believe that danger was imminent, we find that in respect to those two ships, one upon the Atlantic, and the other upon the Pacific, the Director of the Naval Service says that the Government having decided not to continue them in special commission, no recruiting had been carried on during the year. The result was that when war broke out, the Niobe was unfit for service. Had she been fit for service, German vessels of great value might have been seized by her, and she might have done most effective work for Canada and the Empire. But she was not in condition to go to sea, and so it was with regard to the Rainbow. From this statement, she was not fully equipped, because recruiting had not been continued, and no effective efforts had been made to keep her in full commission. Sir, had it not been for the presence in the Pacific Ocean of a Japanese cruiser which was prepared to guard the western coast of Canada, it is just possible that very serious damage might have been done to the cities upon the coast of British Columbia. Fortunately, it happened that the prediction of my right hon. friend, now the leader of the Opposition, made some years ago and when he was so strongly criticised because he attempted to come to a friendly understanding with Japan, that the time might come when the ships of Britain and the ships of Japan would be found side by side in the harbours of Victoria and Vancouver, was practically realized. It was, I believe, because a Japanese cruiser was there that we are in a position to-day to be thankful that the cities on the British Columbia coast were not attacked by German cruisers.

This report of Admiral Kingsmill proceeds—and you will see how it varies from the statement by the hon. minister to-night.

During the year, free discharge was given to those Canadians who entered the service as boys and wished to avail themselves of the offer; in addition, many of the ranks and ratings lent from the Imperial Service have completed their engagement under the Canadian Government and returned to England, without being replaced, with the result that at present the ships are only manned by sufficient crew to keep them in good order and such state that, should they be required for sea service at any time, they could be placed in full commission without undue delay.

There is no suggestion there that the Niobe was not fit to be placed in commission; no suggestion that, if properly manned, she would not be able to do effective work. My hon. friend the Minister of Marine and Fisheries has, most unfairly, I think, and in the most partisan spirit that I have seen displayed during this session of Parliament, accused the Liberal party of deliberately preventing Canada from doing her part in the defence of the Empire by providing ships of war. He has charged, most unfairly, that not only did the Liberal party do what it could to prevent the Government's naval measure from passing in the House of Commons, but that the leader of the Liberal party exercised his influence in the Senate to prevent the passing of the Naval Bill which the Government by means of the closure had forced through the House of Commons. I say that that statement is absolutely unfounded. I do not believe that either my right hon. friend the leader of the Opposition, or any other member of the Liberal party ever exercised, or sought to exercise, the slightest influence upon any member of the Senate in respect to that Bill. I venture to say that my hon. friend the Minister of Naval Affairs has not a tittle of evidence upon which to found the extraordinary statement which he has made to-night, and here, as a member of the Liberal party in this House, I challenge him to produce his authority for the statement he has made that the Liberal leader, or Liberal members of this House, went to the Senate and sought to induce the members of that body to prevent the passage of the measure referred to. The statement, Sir, is unworthy of a gentleman occupying the high and honourable position of minister of one of the most important departments of this Government. In the presence of the minister, who was not present when I made the statement a moment ago, I again challenge him to give to this House the authority upon which he made the extraordinary and unfounded statement that the Liberal leader, or any member of the Liberal party went to the Senate and used the slightest influence of any kind or description, directly or indirectly, upon members of the Senate in the action which they took upon that measure.

As my hon. friend has made a campaign speech to-night, in the most unfair way, and, as I have said, in the most partisan spirit, to influence the people of this country during this time of war and stress against the Liberal party by reason of its action with reference to the Naval Bill, let me remind him that what the Liberal party did was to propose and to support an amendment in this House which left the Government free to establish a naval unit, both upon the Atlantic and the Pacific, which would be available for the defence of Canada, and which would be at once placed at the service of the Empire in time of war. In 1913 the Bill, which this Government introduced, was defeated by the Senate, which simply adopted a resolution that before the country should make a contribution to the Imperial Government, contrary to what had been the understanding among public men on both sides in this country, the question should be submitted to the people. It would not have taken long. If hon. gentlemen upon the other side believed that the Empire was in danger, and that the granting of three dreadnoughts would be a means of saving the Empire, why did they not act upon the request of the Senate and submit the question to the people of this country? It would not have taken more than six weeks to decide the question; and yet they say that they thought it was of vast importance to the Empire that these dreadnoughts should be given. They did not dare to trust the question to the people of this country. There was something else that they did not dare to do. They did not dare to keep the promise which they had made to their Nationalist supporters in the province of Quebec. They had promised them that they would repeal the Naval Service Act. In the province of Quebec, from platform to platform, they went declaring that if the Conservative party were returned to power, almost the first step which would be taken would be the introduction of a measure to repeal the Naval Service Act. Sir, the Naval Service Act is upon the Statutes to-day, just as it left the hands of the Liberal party in 1910. As my hon. friend from Pictou (Mr. Macdonald) says: The department over which my hon. friend presides could not do anything to-day were it not for the Naval Ser-

vice Act of 1910. The Minister of Marine and Fisheries could not have done those great things which he wanted to detail to us to-night, and which I presume he will take an early opportunity of detailing to the House, if it had not been for the Naval Service Act, which he and his party declared they would repeal, and in respect to which they broke their promise to the Nationalist party, a party which has hung like a millstone around their necks, and around the necks of the people of this country from that day to this. In 1909 what did Canada agree to do? As my hon. friend has referred to the matter to-night, we might as well have it out. In 1909, at an important Imperial conference, at which were present representatives of Canada and all the other overseas dominions, it was unanimously agreed with the approval of the British Admiralty, as representing the British Government, that the overseas dominions should proceed with the creation of local navies which would serve for the defence of the overseas dominions, and of course be available for the service of the Empire in time of Imperial danger. That was the agreement to which the good faith of Canada, the good faith of Australia, the good faith of New Zealand, and the good faith of the Mother Country were pledged. Australia kept her pledge. After this war broke out, Australia's ship, the Sydney, to the credit of Australia and the glory of the Empire, won that great victory over the Emden, the terror of Asiatic waters. Does not my hon. friend know that even during the past season the two warships of Australia: the Sydney and the Melbourne, have been sailing in Atlantic waters, and have visited the ports of Halifax and St. John, guarding our coasts and guarding our trade routes. That is the part which Australia, noble, faithful Australia, is playing; Australia, which has been faithful to her Imperial pledge. That is the service which Australia has been able to render, not to her own country alone, not to the dwellers on the Pacific ocean alone, but to the Empire at large. Would that Canada was in the happy and glorious position that Australia stands in to-day. And, Sir, we should have been in that position if this Government, when it came into power in 1911, by reason of its being tied hand-and-foot to the Nationalist party of Quebec, had not made up its mind that there should be no Canadian Navy. This Government's pledge to the Nationalist party has prevented the Government from responding to the demands of Canada and the demands of the Empire, and has placed this Government and Canada in the humilitating position she is in to-day, of being far and away behind Australia in providing for Imperial defence.

Mr. ROGERS: Owing to the action of the Senate.

Mr. PUGSLEY: My hon. friend knows very well what took place with regard to the building of war vessels. I was surprised to hear him say that our Government had kept the tenders for the building of the ten war vessels dangling before the people of this country, making people of different constituencies believe that the vessels were to be built at different places in Canada, in order to secure their favour and support.

Mr. ROGERS: That is what you told us yourself.

Mr. PUGSLEY: I did not.

Mr. ROGERS: It is a matter of public record .

Mr. PUGSLEY: My hon. friend is entirely wrong. He does not know the meaning of language when he says that. What I said was that the Naval Department called for tenders for the building of ten war vessels on the Atlantic coast. The only condition attached to the tenders was that the vessels were to be built so that there would be no violation of the compact which exists between Canada and the United States. Tenders were called, and the tenderers were allowed to select their own port for building. Some tenderers were in favour of Halifax, some in favour of Sydney, some in favour of Montreal, some in favour of Quebec, and one at least was in favour of building at the port of St. John. I am referring to Cammell, Laird & Company. What I said the other night—and I am surprised that the Minister of Public Works did not take a correct view of the statement which I made—was that these tenders were necessarily under consideration for quite a period. I told him that the Minister of Marine and Fisheries took the tenders to England and consulted the Admiralty with regard to the whole question, including the reliability of the various tenderers. Almost immediately after he came back, Parliament was dissolved. We did not deal with the question, of course, during the general election, but after the election the question came up as to what action should be taken. The Minister of Marine and Fisheries, who

had the tenders under consideration and had gone over the whole matter very carefully decided that the tender of Cammell, Laird & Company was the lowest. Their tender was to build the vessels at St. John, and my hon. friend knows it well. The records prove absolutely the truth of what I say. When my hon. friend came into office he found in his department the tenders of the various companies. He found that the deposits of all the tenderers, with the exception of Cammell, Laird & Company, had been returned; their deposit being still on hand as security for the performance of the contract.

Mr. HAZEN: How does the hon. gentleman reconcile that with the statement made by his leader in Parliament; that if the Government of which my hon. friend was a member had continued in power, those vessels would have been under construction at the city of Montreal?

Mr. PUGSLEY: I beg my hon. friend's pardon, the right hon. leader of the Opposition never made that statement.

Mr. HAZEN: I beg my hon. friend's pardon, he did.

Mr. PUGSLEY: I say he did not.

Mr. HAZEN: I say he did.

Mr. PUGSLEY: I say he did not, and I can say it with a far greater appearance of truth than my hon. friend can.

Mr. HAZEN: I think those who know my hon. friend will accept my statement as truthful quite as readily as his.

The SPEAKER: Order.

Mr. PUGSLEY: When my hon. friend so far forgets himself as to tell me or any hon. member of this House that he is not telling the truth, I think he ought to be asked to sit down until he gets in a calmer frame of mind.

Mr. HAZEN: I am in as calm a frame of mind as my hon. friend. I asked him how it came that his right hon. leader made that statement and he said that his hon. leader did not make it.

Mr. PUGSLEY: He did not.

Mr. HAZEN: I say he did. I have heard him make it, and it is on the record that he made it.

Mr. PUGSLEY: My hon. friend is entirely wrong. What the right hon. leader of the Opposition said was that if this Government had gone on with the Naval Service Act there would have been war vessels built at the port of Montreal. He was referring to this Government entirely. Let me say this, further, to my hon. friend: when the minister had decided that the Cammell, Laird & Company tender was the lowest, and that they were to build at the port of St. John, no leader of mine would have been sufficiently strong or have had sufficient influence to prevent my resenting such an injustice as passing over the lowest tenderer. In that event, I would have had but one duty to perform, namely, to have gone back to my constituents and surrendered to them the trust which they had reposed in me, and said that I could no longer support a leader who could do such a rank injustice to any part of this country. Therefore, if I had been in my hon. friend's place, coming into office as Minister of Marine and Fisheries, the man who must initiate proposals to his colleagues, if I had submitted that proposal showing that Cammell, Laird & Company were the lowest tenderers proposing to establish a great shipyard and to build warships in my own constituency, if my leader then had said to me, as his leader must have said to my hon. friend the Minister of Marine and Fisheries: "Oh, we cannot go on with the building of warships because we are pledged to the Nationalist party of Canada not to do it; Mr. Minister, you must return to Cammell, Laird & Company their deposit"—What would have been my duty? It would have been to have left the Government, resigned my seat, and told the people of St. John that my constituency had been treated with rank injustice by my leader, and that I could no longer support him. Cammell, Laird & Company proposed to build at the port of St. John ten war vessels, four of them cruisers, three, I think, torpedo boat destroyers, and three of another class. My hon. friend knows that they were, because he has in his department all the papers, including the tender of Cammell, Laird & Company, from which he will see that every word I state is absolutely true. A considerable time before the war broke out, they would have had, under the contract, at least two cruisers afloat prepared to do their part for the defence of Canada and of the Empire, because they were to have had two cruisers completed in three years and the whole contract completed in six years, Even although it would have been in the comparatively small city of St. John that the shipyard would have

been established, would it not have been a glorious thing for Canada that we would have had the vessels afloat; that we would have been in the same position as Australia is in to-day, that we would have been taking our part in the defence of our trade routes, protecting our transports and doing that work which Great Britain and Australia are to-day compelled to do for us? Would it not have been a glorious page that Canada would have written? And perhaps if we had had two of those cruisers afloat, they might have performed deeds just as magnificent as those which the Australian ship Sydney performed on the Pacific ocean.

Mr. GRAHAM: What about the submarines?

Mr. PUGSLEY: The Government would also have been saved the necessity of buying those submarines, in regard to which my hon. friend made to the British Government a statement which must disturb his conscience whenever he thinks of it, and which Mr. Plaza, the naval expert of the Chilean Government, said had not a tittle of foundation. My hon. friend will find on record that he sent a cablegram to the British Admiralty stating that the Chilean Government found themselves unable to take over those ships. I do not say that he deliberately misled the British Admiralty, but he was misled by that astonishing statesman who, for so many years, ruled the destinies of British Columbia, and who left that fair and rich province which, a few years ago, was supposed to have boundless resources, on the very brink of poverty and bankruptcy. It was that statesman who sent my hon. friend that telegram which caused him to mislead the British authorities. Had he not been so misled, he would have been saved the necessity of going through that experience of buying for $1,150,000 two submarines which were to be built for the Chilean Government at a contract price of only $818,000, which were obsolete and incapable of passing the examination, and which the Chilean experts had rejected.

Mr. HAZEN: I thought those cruisers were for use on the Atlantic.

Mr. PUGSLEY: Those cruisers would have been available at whatever part of the coast of Canada it was thought desirable to place them; they would have belonged equally to all parts of Canada and they could have been sent wherever the Canadian Government or the British Admiralty thought well to send them. What position would Canada have been in were it not for what the Liberal party had done when it was in power? I called attention the other day to the entire failure of this Government to do anything to encourage the building of mercantile ships in Canada. They have seen, week after week, and month after month, since this war began, the shipping of Canada declining and the rates of transportation upon our wheat, cattle, and lumber going up by leaps and bounds, until to-day they are a thousand per cent greater than when the war broke out. My hon. friend knows what opportunities there are for building ships upon both the Atlantic and the Pacific coasts, and yet this Government are not taking a single step to encourage the building of ships. What have they done so far as war vessels are concerned? Were it not for the ship-repairing and shipbuilding plants established at the port of Montreal by Vickers, Maxim & Company, under a contract which I made with that firm when I was Minister of Public Works, there would not be a single war vessel constructed in Canada since the war began. But owing to what we did there, Vickers, Maxim & Company have been able to repair war vessels as well as mercantile ships, and under a contract amounting to $10,000,000 given by the British Government to that much despised Fore River Shipbuilding Company, which my hon. friend three years ago said was in bankruptcy, that firm came ever, and, through Mr. Schwab, the millionaire, made an arrangement with Vickers-Maxim, under which a number of submarines were, within six months, constructed at the port of Montreal. I am proud that I, as Minister of Public Works in a Liberal Government, was the means of creating that magnificent establishment, which is an honour to the port of Montreal and a credit to the people of Canada, and which has been doing effective work for the Empire since the war began. We have a pretty good record in that respect, whereas the record of this Government could be shown upon one page, which, after you had written the whole record, would be absolutely blank. It is no pleasure to me to refer to these matters; but just before I take my seat I want to say that it is not a pleasing spectacle to have gentlemen on the other side, one after another, saying: "Oh, this is a time for party peace; this is a time when no one should criticise the Government, when no one should seek to create amongst the people of this country any want of confidence in this Government," and then to have my

hon. friend, one of the most influential members of the Government, make the most partisan speech which I have heard in this House for a number of sessions, raising the old issue of the naval question, charging us, as I have said, with improperly influencing the Senate and preventing that most extraordinary, and, shall I say, most iniquitous measure from becoming law. But let me tell the hon. gentleman that if he and his Government are determined to make these attacks upon us and upon our action in the past, which action we believe was influenced by patriotism and a sense of the duty we owe to this country and the Empire, we shall be prepared to meet them. He tells you, Mr. Speaker, that his Government could not have been wrong in 1913 because what they proposed to do had the full approval of the British Admiralty. And who was the spokesman for the British Admiralty at that time? Mr. Winston Churchill, the gentleman who is supposed to have brought disaster upon the British forces at the Dardanelles, the gentleman who is held by many of the best-thinking people in England to be largely responsible for many of the disasters that have befallen the British Empire since this war began. He is the gentleman who actually thought that we could not build ships in this country because a firm foundation was required upon which to lay the keels—a statement that seemed to be approved by the Prime Minister, because he read Mr. Churchill's letter to the House, and apparently with approval. The right hon. gentleman (Sir Robert Borden) also read to this House, apparently with approval, the statement of Mr. Churchill that we could not build ships in this country because, forsooth, we required rivetters, and he did not know that there were any rivetters to be got in Canada. Then too—ye gods! think of it, Mr. Speaker—this gentleman, upon whose statement the Minister of the Naval Service relies, said that we could not build war vessels in Canada because cranes would be required lifting as much as a hundred and fifty tons. Why, even in the railway shops at Moncton you can find cranes that will lift the 90-ton locomotives as I would lift an envelope, and put it wherever it is required. Yet, the insuperable objection to building warships in Canada, according to Mr. Churchill, was that we had not heavy enough cranes. He is the gentleman who asked this Government to go back upon what Canada and Australia had agreed upon in 1909, and to reverse the naval policy of the Empire. And this is the infallible statesman upon whose judgment they felt safe in relying, and so placed the country in the humiliating position in which it stands to-day. I regret it, and I think all the best people in this country regret it also.

Sir ROBERT BORDEN (Prime Minister): I do not purpose to follow the hon. gentleman (Mr. Pugsley) in his attack upon Mr. Churchill. That right hon. gentleman is eminently capable of speaking for himself, and his record of accomplishment for the naval defence of the Empire will dwell in the memory of men, long after the futile and inconsiderable efforts of my hon. friend from St. John, shall have passed into deserved oblivion. I would like to correct him, however, in saying that the memorandum which was placed before this Parliament in the autumn of 1912 was from Mr. Churchill. It was not from Mr. Churchill but from the Lords Commissioners of the Admiralty, and the Lords Commissioners of the Admiralty consist of the First Lord and at least four or five Sea Lords. They are technical men who are supposed to know, and who I have no doubt do know, probably as well as my hon. friend, the needs of naval defence throughout the Empire, and the best course to be taken by any dominion of the Empire for giving the assistance which was then suggested. My hon. friend has endeavoured to pump up a little enthusiasm about the course he and his friends took in 1912 and 1913. He found it very difficult indeed to create any enthusiasm in his own mind, and still more difficult to create even the semblance of enthusiasm among the hon. gentlemen who sit behind him. But I think this may at least be said for the hon. gentleman that he is entitled, perhaps more than any other of them, to the glory, or whatever it may be, of preventing three Canadian dreadnoughts from flying the British flag to-day and assisting in the defence of the Empire. If he is still disposed to take pride in this—as apparently he does, for he said that the measure proposed by this Government for that purpose was one of the most iniquitous measures ever presented in this House, thus glorying in the defeat of the attempt to enable Canada to participate in the naval defence of the Empire—he is entitled to all that glory if it is any satisfaction to him. It is a remarkable spectacle for an hon. gentleman on that side to rise and ask why Canada was doing so little at the present time in

the naval defence of the whole Empire. If the measure which my hon. friend from St. John (Mr. Pugsley) so deliberately and persistently obstructed, had passed the Senate, there would have been, a year ago, three ships, as powerful as any in the world, ready to assist the rest of the Empire's Navy in preserving the common rights and institutions and liberties of the whole Empire. That there is no such ship to-day is due to my hon. friend from St. John and to is friends, and to no one else. And when he suggested there was an alternative proposition from the other side of the House in amendment to the Government measure, he conveniently forgets that the amendment proposed to postpone any action whatever until after a general election should be held in Canada.

Mr. PUGSLEY: I do not think I proposed that, nor that any one else proposed it.

Sir ROBERT BORDEN: Does not the hon. member remember the terms of the amendment?

Mr. PUGSLEY: I do not think that was in it.

Sir ROBERT BORDEN: He may not think so, but that does not alter the fact that it was in it. His memory is not so good on this as on some other points. I have a distinct recollection that the proposals offered by hon. gentlemen opposite involved the postponement of action until after the general election.

Mr. PUGSLEY: Has the right hon. gentleman the record there?

Sir ROBERT BORDEN: No, but I will get it.

Mr. TURRIFF: Did not the Prime Minister say that if his proposition was not accepted by the House, he would appeal to the country on it?

Sir ROBERT BORDEN: I had said before, in the autumn of 1910, that I would do precisely what I did, that is, invoke the advice of the Admiralty and bring their advice to Parliament as a temporary measure. I went to the Admiralty and obtained their advice; that advice was given to the Parliament of Canada by the Lords Commissioners of the Admiralty in these words:

> The Prime Minister of the Dominion having inquired in what form any immediate aid that Canada might give would be most effective, we have no hesitation in answering, after a prolonged consideration of all the circumstances, that it is desirable that such aid should include the provision of a certain number of the largest and strongest ships of war which science can build or money supply.

I brought that proposal to the House not as a permanent measure, but as a temporary measure. I told the House at that time that before the Government of Canada brought down a permanent measure for the co-operation of Canada in the naval defence of the Empire, we would submit a proposal to Parliament and to the people of Canada in order that they might know what the proposal was, and in order that they might exercise the right which they undoubtedly had of passing upon that proposal. That was a very clear, definite and plain proposal; one which we endeavoured to carry out so far as we were enabled to do so in the face of the opposition of hon. gentlemen on the other side of the House. Further than that, in 1914, immediately before the war broke out, we had made arrangements, in connection with the formulation of a permanent policy that Admiral Sir John Jellicoe, now commander in Chief of the British Fleet, should come to Canada for the purpose of consulting with us. Everything was arranged as to his visit here except the exact date, but the breaking out of the war in August, 1914, prevented him from coming to Canada, as he had immediately to assume the responsible duties of Commander in Chief of the British Navy, which otherwise he would not have assumed until the following November or December.

Hon. gentlemen on the other side of the House may very properly desire to recede somewhat from the attitude which they took in 1912 and 1913. The hon. member for St. John showed a disposition to do that to-night. Hon. gentlemen were very merry in 1912, 1913, and 1914 at the idea that any danger confronted this Empire. If any hon, gentlemen on this side of the House, having regard to the conditions, which were pretty well understood in Europe, and fairly understood, perhaps, on this side of the Atlantic as well, ventured to address a word of warning to the people of this country as to the necessity of Canada's doing something to aid in the common defence of the Empire, his remarks were the subject of merriment and of jest on the part of hon. gentlemen on the other side of the House, and by no one more than by the hon. member for St. John, who vigorously applauded his leader when only six and a half months before the outbreak of the war the policy

and the view of the Liberal party were expressed by the right hon. Leader of the Opposition in these words:

I do not charge any intention of deceit on the part of the Prime Minister in this regard, but I will charge deceit if, in the face of this evidence, we again hear of such a thing as an emergency.

That was six and a half months before the thunderbolt of war came upon this Dominion and this Empire. The right hon. gentleman continued in these words:

The German peril has disappeared, if, indeed, there ever was such a thing.

An absolute assurance to the people of this country, given upon what evidence I do not know, that there was not the slightest danger of war between our Empire and Germany. Then he continued:

We know now how much the country and the Empire and the civilized world has been deceived upon that question of so-called emergency.

My hon. friends on the other side of the House are not prepared to cheer these words now as they did cheer them at the time that they were uttered. I well remember the thunderous applause which greeted every line that I have read when these words were uttered by the right hon. gentleman who leads the Opposition. Then he continued as follows:

The Bill which was brought in last session, the Naval Aid Bill, was not even a measure of emergency, although it was so-called. They introduced it upon the shallow pretence of emergency.

Tremendous cheers from hon. gentlemen on the other side of the House at that time —but a depressing silence at present. Then the right hon. gentleman continued:

Emergency? Who speaks to-day of an emergency? Twelve months have passed since my right hon. friend the Prime Minister introduced his measure. Twelve months and more have passed since that time when he saw the German peril. He saw Germany almost ready to jump at the throat of Great Britain.

And when my right hon. friend the leader of the Opposition reached that point in his remarks, his speech was interrupted by deafening applause which prevented him from continuing for some moments. Then, referring to myself, he continued as follows:

He saw clouds on the horizon, rent by lightning, and heard the murmurs and rumbling of cannon. But my right hon. friend to-day may live in peace. The climate is moderate and the sky is clear.

And within six and a half months after these words were uttered and that vain assurance had been given by the right hon. gentleman who leads the Opposition, this Empire was involved in the present struggle. The right hon. gentleman continued his remarks in the same strain. On many other occasions during that session the leader of the Liberal party and almost every hon. gentleman on the other side of the House used similar language. They jested at the idea that there was any danger, that there was any emergency, that there was any need. More than that, they said that the navy of Great Britain did not need any assistance. But the hon. member for Pictou this afternoon was greatly distressed because, as he asserts, the navy of the British Empire, although it has been increased beyond measure since the war broke out, is unable to discharge adequately the task of maintaining control of the seas and of protecting our commerce and our shores.

Let me give another illustration of the views of the hon. member for St. John, as expressed at that time by his leader. On March 15, 1913, hen the debate upon the Naval Aid Bill of 1912 had proceeded for several months in the face of unparalleled obstruction, this was the language of the right hon. gentleman who leads the Opposition:

When, some few months ago, in the earliest days of this session, members who support the Government were told that there was an emergency in the affairs of Great Britain, and that Great Britain should receive the assistance of this country, they did not suspect, I am sure, that before the last vote would be taken they would have in their hands absolute evidence of the falsity of the assertion which was then made.

That is a fair statement of the attitude which hon. gentlemen took on the other side of the House. I observe that the hon. member for Rouville is in his seat. I wonder if I could find an extract from his observations at that time. Perhaps they might be more productive of cheers and applause than those which I have read from the speeches of his leader. This is a very pregnant utterance of the hon. member for Rouville; I particularly invite attention to the closing sentence:

There seems to be at work, not only in England, but in Great Britain, silent forces with the object of subduing, or reducing if possible, the greater freedom of the self-governing countries. Those silent forces have been at work very insidiously for the last fifteen or twenty years, never so actively as during the last five or ten years.

The present policy of the Government is said to be the outcome of an emergency.

My hon. friend was endeavouring to bring up the ghost of autonomy, and this

was an attempt to prove that the building of three dreadnoughts by Canada to aid in the common defence of the Empire, the placing of those warships at the disposal of His Majesty the King for that purpose, subject to recall by the people of Canada whenever they chose to recall them, was in some way a destruction or an impairment of our autonomy. The word autonomy was greatly in the mouths of the hon. gentlemen opposite at that time—and I do not wonder that the hon. member for Rouville (Mr. Lemieux) smiles now at the folly of the words which he then uttered. He goes on to say:

> That emergency was invented by those silent forces in order to obtain what they have been aiming at during the last twenty years.

You understand the suggestion. There was not any emergency, there was not any danger, there was not any peril. The assertion of danger and peril were due to the influence of those silent forces in Great Britain and in Canada which were aiming to destroy the autonomy of this Dominion. But the last sentence of all is really the gem of that particular utterance:

> If you read the press to-day you can scent, so to speak, an alliance between Great Britain and Germany.

I do not think that my hon. friend, with all the olfactory powers which he possesses, is able to scent very much of such an alliance to-day. Then, again, the hon. member for Rouville devoted himself to the question in one of the numerous debates which took place:

> The so-called emergency has petered out.

Mr. LEMIEUX: Is it not a fact that at that time, or shortly before, Lord Haldane and Mr. Winston Churchill himself went to Berlin for the purpose of getting a closer alliance with Germany?

Sir ROBERT BORDEN: Yes, it may be so, and in connection with that visit to Berlin it ought also to be remembered that the British Admiralty, consisting of the First Lord and of those technical and naval advisers with him who knew what the conditions were, had asked us to

11 p.m.

provide three of the most powerful battleships in the world for assistance in the common defence of this Empire. My hon. friend said:

> The so-called emergency has petered out. I am afraid that the right honourable gentleman is under the influence of the scare-mongers of Great Britain—Well, after all, there is no danger.

[Sir Robert Borden.]

My hon. friend was perfectly ready, without money and without price, to give this assurance to the people of Canada.

> We have the panic-mongers of to-day trying to agitate the dominions; but the papers of yesterday give us the information that, far from fearing a war with Germany, His Majesty the King of Great Britain is sending the Prince of Wales to spend the Easter holidays at Berlin. The emergency and the panic are good for the children, but they will not appeal to the true Britisher or the stout hearted Canadian. All this is being engineered by some interests who control a certain press.

And we have had some information since the outbreak of war as to the message which Lord Haldane brought back from Berlin and as to the view which impressed itself upon the statesmen of Great Britain as the outcome of that visit. My hon. friend has no doubt seen some utterances of the Prime Minister of Great Britain on this subject, made in Wales more than a year ago. I have not the slightest doubt that the message which came to us from the British Government, through the Admiralty, was to some extent influenced by the very fact that the British Government knew more than they thought it discreet or prudent to reveal to the public of Great Britain, but which they did partially reveal to us, not only in the document laid on the table of the House, but in a certain other document which was communicated to some other hon. gentlemen on the other side of the House and which said far more than the document which has been made public in this country. And it was with that knowledge that certain hon. gentlemen on the other side of the House took their stand upon this question with a view of preventing the people of Canada, the Parliament of Canada, the majority of the Commons of Canada, from carrying out a proposal which as I believed then, and believe now, was undoubtedly in the best interests of this Empire, and which constituted a duty that the people of Canada at that time owed to the whole Empire for the purpose of its common defence. Then my hon. friend (Mr. Lemieux) on the 9th day of June, 1914, a little more than a year before the war broke out, said this:

> Last year he (Sir Robert Borden) brought forward his contribution policy to meet an emergency which did not exist, and which has burst like a bubble. That policy made Canada the laughing stock of Great Britain and of all the other Overseas Dominions.
>
> Who thinks of his emergency to-day? I dare say that not one of his blatant jingoes of the city of Toronto believes in that emergency to-day. It was a scare-line policy to recoup the

jingo capitalists of Winnipeg, Toronto, and Montreal, who had financed the Tory party in 1911 against the farmers, the taxpayers of Canada.

No more mention is made of the $35,000,000; the Admiralty does not want our gold any more, the trick has been played out.

These are samples of the manner in which hon. gentlemen opposite met a proposal which was made in absolute good faith by the present administration to the Parliament of Canada. We went to Great Britain asking fairly, definitely, carefully, for the best opinion of the experts of the Admiralty and of the British Government as to the course which Canada ought to take, having regard to the possible necessity of some immediate steps being necessary for the common defence of this Empire. We came back with that document exactly as they had handed it to us and placed it before Parliament, and based our measure on it. I could give a great many more extracts illustrating the position that hon. gentlemen opposite took with regard to it. Those I have given are, I think, enough. I venture to say that in these circumstances it does not lie in the mouths of hon. gentlemen opposite to reproach this Government at least with the fact that we have not been able upon the ocean to play the part that Canada, in common with Australia and New Zealand, ought to have played in this great war. When war broke out, or very shortly after, in 1914, I communicated with the British Government as to what they desired us to do in this respect. Sir John Jellicoe was not able to come to Canada by reason of the fact that it was necessary for him to assume at once the command of that great fleet which has kept its vigil in the North sea, and which has maintained so close a guard that, with very infrequent exceptions, the whole German navy has been shut up in the Baltic or in the Kiel canal. As I say, Sir John Jellicoe was not able to come, but I did communicate with the British Government. I asked them this question: We are proposing to give you every assistance in our power for the purpose of bringing this war to an honourable and triumphant conclusion; is it your desire that we should endeavour to assist in naval affairs, or do you desire that we should confine our efforts to raising forces in order that we might assist you in that way. The answer which I received from the British Government was this: They preferred that the effort of Canada should be devoted to the raising of military forces, to dispatching them across the ocean, to sending them with the other forces of the Empire to meet the enemy at the front. And for that reason, since the opening of the war, we have not embarked upon any proposal to acquire ships, or to do anything in a great way in the naval line. We have devoted our energies and our efforts to raising military forces according to the expressed desire of the British Government.

So, we have a very clear conscience as to our efforts in this war; a very clear conscience as to the effort which we made in 1912-13 to assist in the naval defence of the Empire by the provision of the three ships. That effort, unfortunately, was not successful, for the reasons which I have mentioned. But in the line along which our efforts in this war have been directed, I venture to think that, during the past 18 or 19 months, we have accomplished very much more than any one of us would have believed possible on the 4th day of August, 1914. We sent, in the first instance, within six weeks after the outbreak of the war, 30,000 men, and, within about two months of the time when hostilities broke out, they were across the Atlantic. Since that time, the total enlistments in Canada have run up to 275,000 men, and the troops have gone forward, fully armed and equipped and in most cases, organized in every branch of the service. More than that, when they have gone to the front, they have shown themselves worthy, both of the great cause for which they are fighting, and of this Dominion which sent them forth to do battle, not only for the liberties of Canada and of the Empire but for the liberties of the whole world.

Mr. W. F. CARROLL (South Cape Breton): It is perhaps rather unfortunate that at this stage of the session, this particular question should have aroused such partisanship in this Assembly. I am not going to say who may, or who may not have been in fault in promoting this partisanship. My hon. friend from Pictou has moved a resolution asking:

For a return showing a list of vessels, belonging to the Canadian Government which are on service under the provision of the Canadian Naval Act, and of all vessels not now in service and their present condition and suitability for service, and also for a copy of all letters, petitions or communications had by or with the Government in regard to the establishment of a Canadian naval brigade.

The most of us know fairly well what that list of vessels is, and the most of us also know that that list of vessels is too small for Canada at the present time. The

right hon. leader of the Government has made a very serious charge against the hon. member for St. John. He has charged that hon. member with having obstructed the promotion by the Government of its naval policy. He said further that had it not been for the hon. member for St. John, this country would, at the present time, be represented in the British Navy by three dreadnoughts, which would be of great assistance to the Motherland.

May I make a charge against the Government? May I charge the Government with being remiss in their duty in not having this country defended at the present time by seven fast cruisers, with the usual auxiliaries to cruisers? May I charge this Government with negligence in this matter, because if they had followed the programme laid down in the Naval Act, and by the Liberal Government in 1911, we would have had our coasts guarded at this present moment by seven fast cruisers and the necessary auxiliaries? My hon. friend the Minister of Marine and Fisheries has spoken of emergencies, and from the hand-book which he held in his hand, and which, I have no doubt, was intended for the use of Conservative speakers during the campaign which it was thought would probably take place some time ago, he quoted from speeches of hon. members on this side of the House to the effect that there was no emergency. What did all this talk of emergency mean? Where did the emergency exist? In the naval debate in this House, and I watched it very carefully, the emergency was supposed to be in the North sea, and this Government proposed to meet that emergency by giving three dreadnoughts to the British navy. Has there been an emergency in the North sea since this war commenced? Is there an emergency in the North sea to-day? Are the dreadnoughts and cruisers of Great Britain not quite capable of handling any emergency that exists in the North sea to-day? At the present time, the battle ships of Germany are imprisoned in the Kiel canal, thanks to the efficiency and capability of the British Navy in the North sea. If there is an emergency at the present time in regard to the navy of the Empire, that emergency exists off the coasts of Canada, because it is a notorious fact that, since the war commenced, the coasts of Canada have not been defended.

My hon. friend spoke of the British Admiralty having prepared a memorandum which had been brought down in this House. But that was not the first memorandum from the British Admiralty that had been brought down with regard to the Empire's defence on the seas, and to the defence that would be contributed to the Empire by the overseas dominions. In 1910 or 1911, there was a conference in Great Britain, and a memorandum was drawn up. My hon. friend from Pictou in the session of 1911, asked this question:

> Has there been any change made in the terms of the memorandum of the Conference between the British Admiralty and the representatives of Canada and Australia as set out on page 461 of the Minutes of the preceding Imperial Conference of 1911?

And the answer is, "No." That answer was given in this House on November 29, 1911. What was that conference? I am not going into that question, but I want to say that the naval policy of the late Liberal Administration was recommended by the British Admiralty. For proof of that, I have to go no further than the words of the Minister of Marine and Fisheries. In the session of 1911 I put certain questions on the Order Paper with regard to the Naval Service Act. Question 3 was: "Were the plans for these proposed vessels submitted to and approved by the British Admiralty?" And the answer was: "The plans were prepared by the British Admiralty." And, that was the policy of the Liberal Administration in this country. If there is an emergency in the British Navy to-day, the emergency is for young men to take the place of those who have been in the service for years, whose heads are hoary and bodies weak from length of service. The British Admiralty are calling for recruits to fill up vacancies in the British Navy. What is the Minister of Marine doing to fill that need? What did the Naval policy of this Government in 1912 do towards meeting that emergency? We are not giving men to Great Britain for the Navy, not a single one. The urgent need of Great Britain to-day is not ships in the North Sea, but men for her navy, and fast cruisers to protect the coasts of Canada. This perhaps is not a very fitting time to enter upon a discussion which in years past has been of the most partisan character ever seen in this House, but the subject is up and it is just as well for us to have a heart-to-heart talk about it. If the Liberal policy had been carried out--and there was no change in it, there is no change in it to-day, except that the present Government refuses to build ships under the Naval Service Act—

it would not have been necessary for this Government to buy two submarines which were refused by the Chilean Government, to protect the shores of British Columbia. This Government would not have been in the humiliating position of having to depend upon the cruisers of Japan for the protection of our Pacific coast, or of having to accept the services of private individuals in this country to fit out the only cruisers we have in this country which are capable of escorting Canadian troops overseas to fight the battles of the Empire. Canada's great need to-day is cruisers to convoy our troops across to England, and if the Liberal policy had been carried out by the present Government as it should have been carried out, at the present time we should have cruisers on both our Atlantic and Pacific coasts, and we should be able to escort our troops across ourselves. Nor should we have to depend upon the cruisers of Japan for the protection of our Pacific coast. But, apart altogether from these two different naval policies, I charge that this Government has not done its duty since the war began. I charge it with not having undertaken to get from the ship-building firm in Montreal submarines which would have guarded our coast, instead of buying submarines which, in the opinion of men in this and other countries who are in a position to know, are no good. At the present time there is in the city of Montreal a ship-building firm which is turning out submarines good enough for Great Britain to buy. Does the Minister of Marine think that he is doing his duty as a responsible minister of the Crown in this crisis, by sitting idly by and not getting that ship-building concern in the city of Montreal to build submarines for the defence of our coast? This firm is perfectly capable of building first-class submarines. The submarines they turn out are so good that they can travel from Canada to the Motherland under their own power.

The assistance which this Government proposed to give under their naval policy is not the assistance which the Mother Country requires to-day. We need no more dreadnoughts in the North Sea or on the coasts of France and England; but we do need fast cruisers on the coasts of Canada, to do for this country what the Sydney and the Melbourne are doing for Australia. It must have been a matter of pride to the Australians when, after a search of weeks and weeks by the cruisers of the British Admiralty, the Sydney—the fulfilment of the policy outlined and approved by the British Admiralty in 1910; located and destroyed the Emden, the greatest scourge to British commerce in this war. Do not my hon. friends on the Government benches believe, in all seriousness, that it would have been better for Canada and the Empire if they had carried out the policy that was agreed upon at the Imperial Conference in 1910? We should then be in the position of Australia; our coasts would have some protection, which they have not at the present time.

I am not aware that this Government has asked our Canadian boys to enlist in the British Naval Service. My hon. friend from Pictou put a question on the Order Paper some time ago asking what has been done in that regard, but I have not noticed that any answer has been given up to the present time. If this Government does not ask for recruits to fill up vacancies in the British Navy, I say they are not doing their duty in the present crisis. New Zealand has done it; Australia is doing it with regard to her own navy, and South Africa has sent from 8,000 to 10,000 naval reservists to the British Navy. But Canada has done nothing. It is true that Canada is doing a great deal in the way of raising military units, and that Canadians are doing well as regards recruiting. But I venture to assert that there are along the coast of the Pacific, and along the shores of the Maritime Provinces, thousands of people who do not care to enlist in the Canadian Expeditionary Forces, but who would jump at a chance of getting into the British Navy, and serving the Empire in that way. The British Navy needs them, and I say that the Minister of Marine and this Government will not be doing their duty until they help supply this need. I do not say that they do not want to do it. I do not say that they are disloyal, or that they the unaware of the fact that these men are needed; but to one who has followed the political history of this country for the last four or five years, it does seem passing strange that nothing has been done in that regard. Is it to fulfil an engagement that the Government, previous to 1914, had with the Nationalist party of this country that there would be no recruits from the province of Quebec or elsewhere to fill vacancies either in the Canadian navy or in the navy of Great Britain? I am not going to make the charge, but people, who have studied this question and who have watched events in connection with our naval policy, may well be suspicious that such is the case.

My hon. friend from Annapolis (Mr. Davidson) said the other day that the

Niobe and the Rainbow were dismantled because they were of no use. But, I think we have it from the lips of the Minister of Marine and Fisheries, in an answer which he made last session to a question, that the Niobe was doing splendid work guarding the coast of Nova Scotia; that she was in splendid condition, thanks to himself and his department; and that she was one of the best cruisers on the Atlantic coast. It must strike Canadians, and certainly Nova Scotians, as passing strange to see this same Niobe, which the minister said last year was doing splendid work in patrolling our coasts, tied up to-day at a wharf in Halifax with some kind of a house built on her deck with sleeping rooms for landlubbers. If the Niobe was a good ship and performed splendid work a year ago, why is she thus relegated to the scrap heap at the present time? I did not have the pleasure this evening of listening to the speech delivered by the Minister of Marine and Fisheries, and I do not know whether he has given any explanation; but if he has not done so, the people of Sydney, Halifax and of every other port in the province of Nova Scotia are demanding an explanation and will bring him to an accounting for having thus relegated the Niobe to the scrap heap in Halifax harbour.

There is one thing which my hon. friend the minister has excelled in. While he has allowed the nucleus of the Canadian navy to go to the dogs, he has not neglected those people along the shores who had motor boats fifteen or twenty feet long; he has sent those boats down to the coast of Newfoundland for what purpose I do not know, unless for the purpose of drawing salaries for the crews' and day's wages for the boats, because they could not be of any benefit in the world for defence or offence, unless it be offensive to see them run around our shores, with their crews coming occasionally into the harbours and having a good time. It is current gossip—I do not know how true it is—that the owners of these motor boats are each receiving $75 a day. The people of Nova Scotia are looking at this matter with ridicule. What earthly good could a motor boat be in Newfoundland, of all places? If the minister had allowed those boats to run in and out of Sydney or Halifax or some of the other harbours, it would not have been so bad. Those boats were not able to cross to Newfoundland under their own steam, but were taken across on the little ship Margaret. Yet, the minister has those vessels on his list for the defence of Canada! Mr. Speaker, you should have seen them and you would certainly rest secure in your home down in Cumberland county to know that there were being carried back and forth between the city of Sydney and St. John last summer on board the little cruiser Margaret, two motor boats, one about fifteen feet keel and the other about eighteen feet keel. What they did after they reached Newfoundland I know not, but it must have been a source of great relief to yourself and to other loyal Nova Scotians to know, that for at least two months those two boats were carried back and forth on three occasions on the deck of a snug little cruiser called the Margaret. It must have been a great relief to the British Government to know that this Government had made such wonderful strides in the defence of our Canadian coasts and I have no doubt that the names of these boats, with the names of other valuable assets, which the Minister of Marine and Fisheries made to his naval brigade last summer, will appear on the list if this motion passes for the production of the names of those vessels.

The question as to who was right and who was wrong in 1911, whether or not the Government knew that there was going to be a war, and whether the Opposition did not know there was going to be a war, is one that perhaps will never be decided during the lifetime of the present generation or of the next, but the fact is that we have in this country to-day to meet conditions which confront us. The fact is that our Canadian shores are undefended, and while the Premier has charged the Opposition with being responsible for the absence of three dreadnoughts from the Imperial navy, I want to charge this Government with having our coasts on the Pacific and on the Atlantic undefended, owing to the fact that they did not carry out even partially the policy of the late Administration. If the Government saw war clouds; if they knew that war was coming, they were making very little preparation for it. The Niobe, to which the minister a year ago gave a good character as being one of the best cruisers on the coast was then, as she is now, tied up to a wharf in the port of Halifax, and I understand that the Rainbow is in the same position on the Pacific. If they saw the war clouds; if they knew the war was coming, and that there were German cruisers along our coasts, they were remiss in their duty if they did

not at that time—without waiting until the war was on, to buy two submarines that were worthless—provide a shipbuilding firm to build and equip submarines which could be of use in defending both the Atlantic and the Pacific coasts of this country.

Mr. OLIVER J. WILCOX (North Essex): My hon. friend from South Cape Breton during the course of his remarks stated that he did not hear the speech of the Minister of Marine and Fisheries. I feel sure that had he had the privilege of listening to that speech, he would never have been guilty of making the speech he did because the minister answered every allegation put forward by my hon. friend. It is to be regretted that at this time in the history of our country when we are involved in a gigantic struggle, this Government and its supporters, who are burdened with responsibility—

Mr. MACDONALD: What is worrying my hon. friend?

Mr. WILCOX:—such as no Government has been burdened with since Confederation, or probably ever will be again after this war is over, should have, day after day and night after night, to defend most vicious partisan attacks, that are entirely uncalled for. I do not propose—though I suppose I could make as great a noise as some of our hon. friends opposite—to enter into a lengthy debate on this question, but I do want to answer a point or two that have been raised in this discussion. My hon. friend from Cape Breton South (Mr. Carroll) and my hon. friend from Pictou (Mr. Macdonald) raised the old bogey of the Nationalists again. They do love to try to associate this Government with the Nationalists. Well, whatever else may be said, one thing about the Nationalists is absolutely sure, and that is that in the naval measure the Nationalists allied themselves with the members of the Opposition. The Government side committed themselves to a policy of strengthening the naval defence of the Empire, and the Liberal party said that should not be done, and that was the position that the Nationalists took also. So, on this question, they sleep in the same bed.

My hon. friend from St. John (Mr. Pugsley) stated that the right hon. leader of the Opposition had never said that the Canadian navy, as proposed by the late Government, would be built in Montreal Here are the words of the right hon. gentleman as reported in Hansard of 1913, volume 1, page 1034:

> Yes, we thought as the general elections were coming, that it would not be fair, in a matter of this kind, which was at issue between the two parties, to award the contract, in case there might be, as there was, a change of government. I say now that the Government in power would have been better advised if they had awarded the contracts, and, had they done so, we would at the present time have under construction on the stocks in Montreal, four cruisers and six destroyers.

Here is a very distinct statement by the leader of the Opposition that the total number of ships embodied in his Bill would be constructed at Montreal; and this, notwithstanding the fact—and I am surprised to think that the Liberals would do this—that in practically every constituency where there was water the prospect was held out to the electors that these boats would be built in that constituency. So far was this carried that in a meeting in Collingwood the opponent of the hon. member for North Simcoe (Mr. Currie) alleged to the electors that these boats would be built in Collingwood. When the hon. member spoke after his opponent, and told the electors that the Welland canal was not large enough to let the boats out of Lake Erie, his opponent was on the horns of a dilemma It all goes to prove that the thing was a political scheme from beginning to end.

Mr. ROGERS: Does the hon. gentleman mean to say they were not going to build even one in St. John?

Mr. WILCOX: Not one, they were all to be built in Montreal. But during the election they were to be built where the most votes were to be had. So the statement of the Minister of Marine and Fisheries was absolutely right, and the hon. member for St. John was wrong, as he generally is. Now, it is getting late, and I move the adjournment of the debate.

Mr. MACDONALD: I desire to say a word or two before the motion is carried.

Mr. ROGERS: Does the hon. gentleman want to go on?

Mr. MACDONALD: Yes, I would like to say a few words.

Mr. WILCOX: I withdraw my motion.

Mr. MACDONALD: When I presented this motion it was with the idea that this country was entitled to do something to assist the navy of the Empire in this war,

and I felt that in so far as the results of the Naval Service Department's efforts in this matter on the Atlantic seaboard were concerned, they were entirely inadequate. My hon. friend the Minister of the Naval Service (Mr. Hazen) proceeded to raise the old question of the naval policy which was so thoroughly threshed out three years ago. He even ventured to make the statement, which is made by the unthinking in this country, that if Canada was not doing anything for the navy in this war the fault lay with the Liberals. He entirely overlooked the point raised by my resolution. The speech of the right hon. the Prime Minister was enough to surprise any old member of this House who can remember the speeches of the right hon. gentleman in 1909, when he declared that it was time for Canada to begin the construction of a Canadian navy. He went up and down that province justifying that position, and telling the people of Nova Scotia that this was the hour of destiny for them, that because of the adoption of a policy of speedy construction of a Canadian navy there was to come to them once more the maritime supremacy which they formerly enjoyed. That was the declared policy of the Opposition of that time, when the gentlemen representing the Liberal Government went to Great Britain in pursuance of the resolution which the right hon. gentleman had supported. Those representatives made the arrangement with the Admiralty, and that arrangement was made by Australia at the same time. The Australians went back to enter upon the carrying out of the policy which was agreed upon, just as Sir Wilfrid Laurier came back to Canada to enter upon the policy agreed upon with him.

When I hear these flambuoyant speeches from the Minister of Naval Service and the right hon. Prime Minister, I wonder if they spoke to the Right Hon. Mr. Hughes, Premier of Australia, who went through this country a month ago, and whom they made a member of their Privy Council, in regard to the question as to whether or not a policy of contribution, so far as naval matters are concerned, is the correct one. I am afraid that if hon. gentlemen admit the Right Hon. Mr. Hughes to their conferences on the naval question very often, there will be a very marked division of opinion amongst them, because the Right Hon. Mr. Hughes glories in the fact that he was the father of the Australian navy idea. If these gentlemen who thought that Australia was no good, that she could not send any men, that she could not build any ships, had asked the Right Hon. Mr. Hughes as to what is the proper policy for Canada and as to what was the proper policy in 1911, he would have expressed an opinion which would cause hon. gentlemen to realise that the speeches of the Minister of Naval Affairs and of the Prime Minister this evening were entirely beside the mark; he would have said that he, at least, did not believe in the policy of contribution. The Prime Minister of this country does not believe in a policy of contribution. He will not stand up in this House and say that when he pronounces what he always calls his permanent policy, that policy is bound to be a policy of the construction of Canadian ships, built right here in Canada and manned by Canadians. In the absence of the Prime Minister, I say to the Minister of Marine and Fisheries that I defy the right hon. gentleman, since this question has been raised by him and his minister to-night, to stand up when the Naval Estimates are under discussion, and say that he is opposed, as the permanent policy in Canada in the matter of naval affairs, to the policy which Australia and every other overseas dominion has adopted. If he will not do so, what is the use of hon. gentlemen trying to wave the flag? What is the use of their beating tom-toms and going round the country talking about what they would have done? In 1910 the right hon. gentleman who leads this House discovered that some political fruits might be gathered through the assistance of the hon. member for St. Antoine and one or two other gentlemen who could, by money and other methods, make a deal with Mr. Bourassa, the Nationalist, in the province of Quebec, to continue the propaganda against Sir Wilfrid Laurier. That hon. gentleman, so far as the policy of construction is concerned, has laid low. He never attacked it, never denied it at any time during all his career; nor has he ventured to do so to-night. There are sitting behind him in this House to-day twenty-six men who are opposed to all kinds of naval assistance to Great Britain. The right hon. gentleman in 1911 took into his Cabinet three men who were pledged to this same thing. He has been juggling with that Nationalist combination ever since, trying to placate them, trying to keep the tail from wagging the dog. The right hon. gentleman says we should play the part that Australia played, while he

knows in his heart as well as anybody does that the reason why we did not play the part that Australia played may be attributed solely to him. He is the man who prevented us from playing the part that Australia played. When history is written on this question; when men look at these things with clearness and certainty, entirely apart from political prejudice, the attitude of the right hon. gentleman will be made clear. Why, he was in the hole after 1911 in respect of this Nationalist combination, to whom it is said he pledged himself against doing anything in the way of a Canadian navy—which was the objectionable thing in their minds—although he had voted for it in 1909; and he had to get up something to take its place. From the remarks of hon. gentlemen opposite, one would almost think that the right hon. gentleman, with the vision of a seer, had known that this war was going to come about— that there was to be an assassination in Serbia, and that events were to follow in the Balkan countries by which the war should be commenced.

Mr. LEMIEUX: They knew it all.

Mr. MACDONALD: Of course; they had heaven-born inspiration which gave them knowledge of all these things. Yet some months after the war began there was a good deal of talking about whether Great Britain was right in taking part in this war; reams of documents were written and printed to satisfy British people the world over that Britain was right in entering upon this war. All that was done to convince the public mind as to what we should do in regard to this matter. Speaking in the City Temple in London on November 10, 1914, Mr. Lloyd George made this declaration at a time when there was matter of argument in Great Britain with reference to the war:

> When this war broke out, we were on better terms with Germany than we had been for fifteen years. There was not a man in the Cabinet who thought that war with Germany was a possibility under present conditions.

Lloyd George, of course, knew what he was talking about. If the British cabinet did not think that war with Germany was a possibility, then the hon. Minister of Naval Service and the right hon. Prime Minister of Canada, if they knew about all these things, knew more than the people in Great Britain. If that be the case, they must have had a wonderful second-sight. Yet they say to the people: we knew this war was coming; hence it was that our policy of contribution to please the Nationalists, based on an alleged emergency, was the right policy. I was absolutely surprised at the right hon. Prime Minister to-night when, the question having been raised by the hon. member for St. Johns as to what the Liberal policy was in 1913, he said: we had included in our resolution the condition that anything that was to be done was to be subject to the approval of the people of Canada. I am going to put on Hansard the amendment submitted at that time by the right hon. gentleman who leads the Opposition, so that there will be no question about the matter. It is to be found on page 1038 of Hansard of 1913, and is as follows:

> That all the words after the word 'That' be struck out, and the following be substituted therefor:—
>
> 'This House declines to concur in the said resolution and orders that the same be referred back to the committee with instructions to amend the same in the following particulars, namely, to strike out all the words after clause (a) and substitute therefor the following:
>
> The memorandum prepared by the Board of Admiralty on the general naval situation of the Empire and communicated to this House by the right hon. the Prime Minister on December 5th shows that several of the most important of the foreign powers have adopted a definite policy of rapidly increasing their naval strength.
>
> That this condition has compelled the United Kingdom to concentrate its naval forces in home waters involving the withdrawal of ships from the outlying portions of the Empire.
>
> That such withdrawal renders it necessary that Canada without further delay should enter actively upon a permanent policy of naval defence.
>
> That any measure of Canadian aid to Imperial naval defence which does not employ a permanent policy of participation by ships owned, manned and maintained by Canada and contemplating construction as soon as possible in Canada, is not an adequate or satisfactory expression of the aspirations of the Canadian people in regard to naval defence and is not an assumption by Canada of her fair share in the maintenance of the naval strength of the Empire.
>
> This House regrets to learn the intention of the Government to indefinitely postpone the carrying out by Canada of a permanent naval policy.
>
> It is the opinion of this House that measures should be taken at the present session to give effect actively and speedily to the permanent naval policy embodied in the Naval Service Act of 1910 passed pursuant to the resolution unanimously approved by this House in March 1909.
>
> This House is further of the opinion that to increase the power and mobility of the Imperial navy by the addition by Canada under the above Act of two fleet units, to be stationed on the Atlantic and Pacific coasts of Canada, respectively, rather than by a contribution of money or ships, is the policy best calculated to afford relief to the United Kingdom in respect to the burden of Imperial naval defence, and in the words of the Admiralty memorandum to re-

store greater freedom to the movements of the British squadrons in every sea and directly promote the security of the dominions; and that the Governement of Canada should take such steps as shall lead to the accomplishment of this purpose as speedily as possible.'

That was the policy of the Liberal party in 1913. That is the resolution which we debated in this Parliament during the long session. And to-day, if that resolution had been adopted and if this Government had been true to the statements made by their own leader and by the Minister of Trade and Commerce, whose impassioned utterance in 1909 as to Canada's duty to enter actively upon the line of naval assistance will always be remembered by those of us who were here, had they been true to themselves and followed that policy of ours, which was the Australian policy, we would not need to have the Sydney and the Australia defending our Atlantic coast to day; we would have had ships of our own doing it. But what had these hon. gentlemen to do? All they had to do was to go on under the provisions of the Canadian Naval Act placed on the Statute book in 1910. All they had to do was to ask Parliament to vote $35,000,000 to be expended under its provisions and not by way of contribution. But my hon. friends were afraid of the Nationalists and did not venture to do that. Had they, in 1913, asked Parliament for a sum of money to be spent under the provisions of the Canadian Naval Service Act of 1910, the money would have been voted. They knew that but they did not do it. What did they do? They did nothing in 1913.

12 midnight. Now, in 1916, we learn for the first time that the Premier of this country asked Sir John Jellicoe, in 1914, to come out to Canada. Mark you, this gentleman who knew all about the war coming on, who was certain about it, was proceeding with such leisurely haste in regard to the matter that, doing nothing at all of any kind in 1913, not buying or building submarines, not buying or building vessels in any way, he leisurely suggested to Sir John Jellicoe, on the eve of this war, which he knew was coming on, to come out to Canada and talk over the question of what? Of an emergency assistance? Not at all, but of the permanent naval policy of Canada which he was going to enter on in 1914! If hon. gentlemen, in view of these facts, which cannot be denied and which are simply a repetition of history, expect to be able to presume on the credulity of the people of this country,

[Mr. Macdonald.]

to such an extent that they will believe that the Premier had any information in 1914 that this war was coming on when he was leisurely going to talk over the situation with Sir John Jellicoe as to the permanent naval policy, they overestimate the credulity of the Canadian people.

My hon. friend says that if their resolution had been passed there would have been three dreadnoughts in the North Sea. Would there? We would have had to go to England and borrow the $35,000,000 and hand the money over to the British Government and say to them: Please, Mr. Government, we are entirely an inadequate people in every way, we are not to be compared with the overseas Dominion of Australia which has gone ahead and done its own financing and its own business, but please lend us $35,000,000, Mr. Britisher, and then take it and build our ships for us! That was the proposition, when they could have voted the money and built the ships themselves for the common defence. But they were playing to the Nationalists on that proposition. If they had laid down the keels of the vessels in 1913, under the provisions of the Naval Service Act, we would have had vessels that would have been of some use as coast defence vessels in this country to-day, and we would have had something of real value in the present situation. One does not need to follow in this House the story of this naval question in order to arrive at a clear view of the situation. When I hear the Prime Minister of this country stand up in this Parliament and declare that the position he took in 1909 was incorrect when he stated that what we should do was to stand for a speedy construction of a Canadian navy, when I hear him doing that frankly as a public man, then I will believe he has changed his opinion. But he has never done it up until to-day. He has talked about contributions and about emergencies and all that, but he has never expressed this change of opinion, because he is expecting some day, when he has a permanent policy, to adopt the policy of the Liberal party to this matter.

This expression was entirely beside the proposition which I submitted to the House. My right hon. friend, through juggling with words, attempted to make the House believe on the question of whether we should recruit men in Canada for a naval reserve, that Great Britain did not want men to be recruited in Canada for the navy. If that was his idea he was trying to lead this House along lines which were incorrect. What did he do? He took 250 men from the

Royal Navy Reserve out in British Columbia and he put them on these vessels on the Atlantic. They were on the Niobe two months ago. To-day he is calling for recruits out in Vancouver in order to fill up that reserve. Why is he calling them if they are not wanted? What is the meaning of this statement, for instance, that was made by Dr. Macnamara on the floor of the British House of Commons? Dr. Macnamara was asked by Mr. Bellaire, the well known naval writer, who was in the British House of Commons, as to what South Africa was doing and he said:

> The offer of the services of a number of the South Africa Royal Naval Volunteer Reserve was gladly accepted by the Admiralty, and the men are now attached to the Royal Naval Division in this country. It was understood that they wished to serve as a unit representing their corps.

Did the Prime Minister ever make to Great Britain the offer which was made by Cape Colony in that respect? What does it mean that Australia has sent so many men to serve in the British Navy? What did it mean when Newfoundland, the colony adjacent to my province, sent 1,600 men to serve in the navy? These men are not reservists, as my hon. friend says. Some of them were reservists, but numbers of them came from the outports, who were simply sailors, fresh from the sea, who went over and enlisted in the navy in preference to enlisting in the army. And why did they want to go into the navy? Simply because the sea appealed to them. The navy proposals in regard to pay and allowances were not as attractive as those of the army. My hon. friend will tell me that Cape Colony made an offer of men which was accepted. Australia made an offer of men which was accepted, and so did Newfoundland. Does my hon. friend the minister mean to say that if we had offered the same kind of men for the vessels of the British Navy that our offer would have been refused? I will wait to see the papers which my hon. friend has promised to bring down before I believe anything of the kind.

We have heard a great deal about the Niobe. I want to say just a word or two in regard to that vessel before I conclude. In the first place, let me say that the Niobe is a first class cruiser of 11,000 tons. She was built in 1909, and her armament consisted of 16 6-inch guns, 12 12-pounders, 3 3-pounders, and 2 machine guns. We are told that she is old and obsolete. My hon. friend the Minister of Naval Service (Mr. Hazen) rolled like a sweet morsel on his tongue the statement made by Commander Roper that these vessels, the plans of which had been prepared by the British Admiralty in 1911, and for which the contracts could have been let in October, 1911, by the minister himself, would be obsolete before they could be constructed. If that statement is true, then nearly the whole British navy is obsolete. It is a statement which could be made in regard to every vessel that is over two or three years old, to every vessel, that is to say, that was constructed prior to 1910 or 1911. That is the proposition of the hon. minister.

Mr. ROGERS: The ships which the British Admiralty built to take the places of our three dreadnoughts are not obsolete.

Mr. MACDONALD: They have been built within the last three years, and they were not built to take the place of my hon. friend's dreadnoughts at all.

Mr. ROGERS: Yes, they were.

Mr. MACDONALD: The British Admiralty simply proceeded in the ordinary course to construct those vessels.

Mr. ROGERS: Will my hon. friend permit me to put him right? A question was asked by Mr. Arthur Lee in the British House of Commons on 5th June, 1913, and in reply Mr. Churchill said:

> The situation created by the rejection of the Canadian Naval Aid Bill requires immediate action in order that the margins of naval strength necessary for the whole world protection of the British Empire may be adequately maintained for the autumn and winter of 1915, and in the spring of 1916. In these circumstances, the Government have determined to advance the construction of the three contract ships of this year's programme, and orders have been issued by the Admiralty which will ensure their being begun at the earliest possible date instead of in March next.

Mr. MACDONALD: My hon. friend knows what that meant. It simply meant that the Admiralty intended to build three ships after my right hon. friend the Prime Minister went over there and said: We will give you three ships, or rather we will borrow the money for you; and, when the British Admiralty found that he was not going to borrow the money, they had to build three ships in order to carry out their original programme.

Mr. ROGERS: They built them, and they are not obsolete.

Mr. MACDONALD: What I was pointing out was that the theory of my hon. friend the

Minister of Marine and Fisheries that, because Commander Roper told him that the vessels, the plans of which had been drafted by the Admiralty in the winter of 1910-11, would be obsolete before they could be constructed, would apply to every vessel which was constructed previous to three or four years ago.

Mr. GRAHAM: If he told the truth.

Mr. MACDONALD: I was speaking of the Niobe, and I have some figures here which I have taken from the Naval Annual. Take first the first and second class cruisers. How many of these do you suppose, Mr. Speaker, there are in commission in the British Navy that are older than the Niobe? There are 35 of them. How many naval vessels of the same class as the Niobe, and built in the same year, are now in commission in the British Navy? Seven, all built in the same year, and of the same class exactly. How many armoured ships older than the Niobe are there in the British Navy? There are no less than ten built at dates running back to 1895. They are as follows:

Caesar, 14,900 tons, completed in 1897; Hannibal, 14,900 tons, completed in 1897; Illustrious, 14,000 tons, completed in 1898; Jupiter, 14,900 tons, completed in 1897; Magnificent, 14,900 tons, completed in 1895; Majestic, 14,900 tons, completed in 1895; Mars, 14,900 tons, completed in 1897; Prince George, 14,900 tons, completed in 1896; Renown, 12,350 tons, completed in 1896; Victorious, 14,900 tons, completed in 1897.

There are 47 ships as old or older than the Niobe in the British Navy to-day. Taking cruisers, there are :

Arlus (3,600), completed in 1893; Astraea (4,360), completed in 1894; Barham, completed in 1890; Brilliant, completed in 1893; Cambrian, completed in 1894; Charybdis, completed in 1895; Crescent (7,700), completed in 1894; Diana (5,600), completed in 1898; Dodo (5,600), completed in 1898; Doris (5,600), completed in 1898; Eclipse (5,600), completed in 1897; Edgar (7,350), completed in 1893; Flora, completed in 1895; Forte, completed in 1895; Fox completed in 1897; Gibraltar (7,700), completed in 1894; Grafton (7,350), completed in 1894; Hawke (7,350), completed in 1893; Hermione (4,360), completed in 1895; Hussar, completed in 1895; Iris (5,600), completed in 1898; Juno (5,600), completed in 1898; Minerva (5,600), completed in 1897; Pelonis, completed in 1897; Philomel, completed in 1892; Royal Arthur, (7,700), completed in 1893; Sappho, completed in 1893.

One of these cruisers is the Hawke, which distinguished herself in one of the few naval battles which took place in the British Channel. She was built in 1893 and she is only 7,350 tons, or more than 4,000 tons less than the Niobe. As far as armament and equipment are concerned, she did not begin to compare with the Niobe.

Then of vessels of the same class as the Niobe, all of 11,000 tons, built between 1896 and 1898, there are the following:

Amphritite, 11,000 tons, launched in 1898, completed 1900; Andromeda, 11,000 tons, launched in 1897, completed 1900; Argonaut, 11,000 tons, launched in 1898, completed 1900; Ariadne, 11,000 tons, launched in 1898, completed 1900; Diadem, 11,000 tons, launched in 1896, completed 1899; Europa, 11,000 tons, launched in 1897, completed 1899; Spartiate, 11,000 tons, launched in 1898, completed 1902.

These vessels were built about the same time as the Niobe, and have the same armament, and all of them are sailing the seas while some of them have been in action during the present war. The only trouble about the Niobe was that she was sent out here while a Liberal Government was in power in Canada. The fact is that in the British Navy to-day there are 47 vessels older than she is.

With regard to size, there are 87 first-class vessels set out in the Naval Annual as having a smaller tonnage than the Niobe and they are all in commission to-day in the British Navy, though older than the Niobe.

Let us compare her with one or two of the vessels which defended our coasts last summer. Take the Berwick, 9,800 tons. She has smaller guns than the Niobe. The Carnarvon is of 10,850 tons, or some 250 tons less than the Niobe, and, with the exception of four 7.5 guns, she had not as heavy an armament. Then there are the Cornwall, the Cumberland, the Essex and the Suffolk. These names are all familiar to those who have read the newspapers All of them are cruisers of 9,800 tons; all are of the same armament as the Niobe, or even lighter, and nobody has ever heard of them being called no good. The Glory, for instance, the flagship that was out here last year, was 12,000 tons, or a little more than 1,000 tons bigger than the Niobe. Her armament was practically the same as the Niobe's, except that she had in addition four 12-inch guns. The Leviathian was a 14,100-ton boat; she had a couple more guns than the Niobe. The fact is, then, that the Niobe is larger than five of the vessels which comprise the North Atlantic squadron defending our coast to-day. Furthermore, when hon. gentlemen came into power in 1911 the Niobe was larger than any vessel in the navies of Denmark, Greece, Holland, Norway, Sweden, and Portugal, and yet hon. gentlemen opposite

who claim to be the repositories of everything that is patriotic in this country, have done nothing since the Niobe came to Canada except to declare that she was of no value whatever, and that it was a disgrace that she was ever sent out here by the British Government. Well, I have given the Niobe's history. My hon. friend says that her boilers were bad. I wonder what has become of the boilers of these other eight or nine vessels that were built at the same time and which are now fighting the battles of the Empire.

It does seem to me that I had very ample grounds for calling the attention of the House to the situation to-day with regard to our Naval Service. If hon. gentlemen opposite had this wonderful prescience in regard to the war, if they knew it was coming, why did they sit down and do nothing after the verdict of Parliament in 1913? Parliament rose in the spring of 1913. These gentlemen who had it in the back of their heads that war was coming on did nothing at all to prepare for it, either on land or on sea. Was it that they wanted to play politics? Because they wanted to act upon the suggestion which seems so gratifying to the Minister of Public Works, that because the proposition had been turned down, they need do nothing but play politics with it? What were they doing from the spring of 1913 to August 1914, and what have they done from August 1914 down to the present? As the hon. member for South Cape Breton (Mr. Carroll) has said, the only vessel in Nova Scotia that is any good to-day is the one that was given to this Government. Does it mean that because the policy of contribution of hon. gentlemen opposite was turned down and they did not wish to adopt the alternative policy of construction in Canada, they decided to sit down and do nothing; that no matter how long this war is going to last they will not initiate some method of building ships in Canada to protect our coast? As the hon. member for South Cape Breton has pointed out, when the British Government wanted ten submarines last summer, they bought them from Vickers-Maxim, Montreal, and we in the Maritime Provinces saw them floating across the ocean to the other side. Why do not hon. gentlemen opposite do something of that kind? Why do they not encourage conditions in Canada under which we could construct vessels of some kind to defend Canada on the sea? They have not done anything. And that is why I moved the resolution. I moved it to call the attention of the people of this country to the failure of the Minister of Marine to do anything in the way of providing a defence for Canada upon the sea, and for the purpose of calling attention to the fact that while Australia, Cape Colony and Newfoundland are sending men to take part in the naval battles of the Empire, the best the Minister of Naval Service can do is to send word around to the boys who run motor boats that in a while, when somebody comes out from England to make the necessary arrangements, they will be given a chance to recruit. There are many young men in Canada just waiting for an opportunity to recruit. I submit that that is the situation to-day so far as Canada is concerned. The question as to who was right in 1913 in regard to the whole problem will be settled, and settled right, before many years are over. When ever the Prime Minister of this country has the nerve and temerity to propound a permanent naval policy in this country, that permanent policy will be the adoption of the Liberal policy in 1913. We on this side of the House are perfectly prepared to await the judgment of the people on that question; we know what that verdict will be. But to-day, when my hon. friend from Cape Breton is going away to take his part in the battles of the Empire, as he has decided to do in the past ten days, and when all our other young men are coming forward to bear their share, let us forget the old struggle for a moment, and consider whether we have done our part on the sea since 1913. I think this discussion has disclosed the fact that we have not done our part and that it is time the Minister of Naval Service began to realize that we should be doing something in this direction.

Motion of Mr. Macdonald agreed to.

On the motion of Mr. Rogers for the adjournment of the House:

Mr. GRAHAM: What business to-morrow.

Mr. ROGERS: We shall take up any Bills that are on the Order Paper, and then go on with the Shell Investigation resolution. I hope we shall make more progress to-morrow than we have to-day, which we might consider as a day wasted. Otherwise we shall have to sit much later than in the past if we are ever going to get to the end of the session.

Mr. GRAHAM: I think this can hardly be called a day wasted. For instance, the Minister of Marine and Fisheries has had an opportunity to make that speech of his over again, and we like it. It is not a day wasted. The people of the country like to know the mind of public men on these great questions. I do not belong to that class of people who do not like these discussions. I am sure I enjoyed the discussion immensely, particularly the speech of my hon. friend from Pictou, and I think if the Minister of Public Works will revise his view, he will come to the conclusion that a day like to-day has not been wasted.

Mr. ROGERS: Let us hope that to-morrow will be better.

Motion agreed to, and the House adjourned at 12.27 a.m. Tuesday.

Tuesday, March 14, 1916.

The House met at Three o'clock, the Speaker in the Chair.

SOLDIERS' PENSIONS.

Sir ROBERT BORDEN laid on the Table, in accordance with an order of the House passed on March 13, 1916, a copy of the pension list in force in Canada for disabled soldiers, and the petitions, letters and other documents relating to the amendment or readjustment of the same.

On motion of Sir Robert Borden, the said papers were ordered to be printed forthwith, and were referred to a committee composed of Messrs. Green, Hazen, Lemieux, Macdonald (Pictou), Macdonell (South Toronto), Oliver and Scott, to consider and report upon the rates of pensions so authorized, the establishment of a permanent Pensions Board, and other matters relating thereto or connected therewith.

PRINCE EDWARD ISLAND FERRY SERVICE.

On the Orders of the Day:

Mr. J. J. HUGHES: I am in receipt of a number of letters and telegrams in regard to transportation between Prince Edward Island and the mainland. These letters and telegrams, which are pretty strongly worded, are to the effect that the efforts made to bring the car ferry steamer Prince Edward Island to Charlottetown are not successful; that the steamer is being injured by the strenuous work to which she is subjected in going through the ice; that the mails are delayed; that travelling is hampered; that trade is tied up, and that apparently a few people in the capital are the cause of the trouble. Charlottetown is the centre of population in Prince Edward Island, and, if the steamer can make trips to that point, that is the place where she ought to call; but if she can not and can make daily trips to Georgetown, it would be wise to have her call there. I would like the minister to consider the matter, because the people are greatly inconvenienced. They allege that the steamer is being injured, and that by some means or other pressure is being brought to bear upon the department to have the steamer call at Charlottetown.

Mr. HAZEN: The same instructions have been given to the captain of the car ferry Prince Edward Island that have been given in previous years to the captain of the Minto or whatever boat was maintaining the winter service. Those instructions were to continue the service to Charlottetown so long as it was practicable to do so, having regard to weather and ice conditions, and if it was found impossible to maintain that service, then to have the vessel go to Georgetown. Thus the matter is left, as I understand it, in the hands of the captain of the boat. It may be that the steamer now goes less frequently to Georgetown than in previous years; but this, I suppose, is owing to the fact that the Prince Edward Island is a stronger ice-breaker than the boats formerly engaged in this service. I understand that the Prince Edward Island has missed only one daily trip during the present winter, and that by reason of a heavy snowstorm which prevailed, and it has missed the railway connection only on seventeen days. I will make inquiry into the statement that has reached the ears of my hon. friend, that the ice conditions being encountered in going to Charlottetown are so serious that the boat is being somewhat damaged. If that is the case, it would be a strong reason why the boat should be diverted from her present route and put upon the Georgetown route.

Mr. HUGHES: I suppose, Mr. Speaker, I should be in order to state the information I have received, which does not agree with that received by the minister. I have been informed—

Mr. SPEAKER: I would call the attention of the hon. member to the rule.

Mr. HUGHES: The point I wish to state is not controversial.

Mr. SPEAKER: If it is the desire of the House that the hon. gentleman should speak, I have no objection; but I would call the attention of the hon. member and of other hon. members to the practice as explained at page 476 of Bourinot:

> Questions have been asked, when the orders are called, relative to the state of public business or other matters of public interest: but no discussion should be allowed when a minister has replied to a question, nor after a member has made his personal explanation.

Of course if no objection is taken to the hon. member speaking, I shall raise none.

Mr. HUGHES: It is a personal explanation.

Sir ROBERT BORDEN: Could not the hon. member give the information to the minister?

Mr. HUGHES: I would rather give it now, if I am permitted.

Some hon. MEMBERS: Order.

Mr. HAZEN: If my hon. friend will send me a memorandum stating the information he has, I will have the matter looked into at once.

INTERCOLONIAL RAILWAY CAR SHORTAGE.

On the Orders of the Day:

Mr. LEMIEUX: I would like to call the attention of the acting Minister of Railways to the car situation on the Intercolonial railway. Yesterday I received from a large firm dealing in lumber and pulpwood in Quebec City a letter, from which I will read two or three lines:

> We thought we would drop you a line in regard to the car situation on the Intercolonial railway. For the past two months we have been supplied with very few cars for our pulpwood shipments to the States and when we have received cars, in some cases they have remained on the sidings where loaded for several weeks waiting to be moved.
>
> The Intercolonial railway officials give as their excuse that the weather conditions were very unfavourable and that they are very short of power to move both empties and loaded cars, and in consequence it is impossible for them to do anything.

Can my hon. friend give me some information with regard to the car shortage and can he alleviate it in any way? Because I understand from this letter that the situation is very serious and that the lumbermen especially are very much hampered in their shipments on this account.

Mr. REID: I am aware that there has been a little trouble on the Intercolonial, but not more, perhaps not as much as on the other railways throughout the Dominion. The hon. member knows that during the last month or six weeks, not only the Intercolonial, but almost every other railway in Canada has been tied up by the great snow storms. The Intercolonial as done good work in pushing traffic through as well as it has done in spite of the snow blockade. The motive power has been used largely to get the passenger trains through, and the trains conveying troops. In addition to that, munitions and war supplies have been given the right of way. It is absolutely necessary to get that freight through to load the transports waiting at Halifax and St. John. For these reasons, local freight has had to be delayed a little more than would have been the case otherwise. In Montreal the yards, not only of the Intercolonial but of the Grand Trunk and the Canadian Pacific, have been filled to their utmost capacity with cars held up by the blockade. I received a telegram yesterday from the general manager of the Intercolonial, and have asked for one to-day, dealing with the situation. In yesterday's message it was stated that the Intercolonial was clear, was running 175 cars a day, and anticipated no more trouble. I feel sure that the trouble with regard to local freight will soon be overcome. The people along the line must have a little patience on account of the absolute necessity of moving war supplies. I think the hon. gentleman will agree that war supplies and munitions must take precedence.

LOCAL FREIGHT AT CHATHAM, N.B.

On the Orders of the Day:

Mr. LOGGIE: As a matter of importance, I would like to draw the attention of the Acting Minister of Railways to a letter I have received from my home town, Chatham, N.B., to the effect that the station-master there has instructions not to receive freight for local points. One of the important shippers there required to send supplies to Blackville, a town twenty-five miles away on a branch line, but the station-master refused the freight. The grievance that this letter expresses is that freight is being received at Newcastle station billed to the same point, Blackville. The shipper claims that he is at a disadvantage. I would ask the minister if he would give instructions that the town of Chatham be treated in this regard as liberally as other towns.

Mr. REID: I will have the matter looked into. The same reply that I gave to the hon. member for Rouville (Mr. Lemieux) applies to this.

Mr. LOGGIE: Chatham is on a branch line.

Mr. REID: We will try to have it put on the main line, so far as freight is concerned.

HOUSE OF COMMONS READING ROOM.

On the Orders of the Day:

Mr. J. J. HUGHES: I desire to call the attention of the Government, or whomever is responsible, to the use made of the reading room by members. It is quite a common practice for members to take away newspapers and keep them in their rooms. Those in charge of the reading room have no means of knowing who have possession of any newspapers so taken. If the reading room is for the benefit of a few members, I suppose this method is all right, but if it is for the benefit of the members generally, the newspapers ought to be there at all reasonable hours, at any rate. I believe that those who want newspapers in their rooms should subscribe for them. I merely call attention to this matter, as the evil seems to be growing. It has become worse since we moved to this building, notwithstanding that the facilities for reading in this reading room are better than in the old building.

Mr. SPEAKER: Orders will be given to the curator which will put a stop to the practice complained of.

Mr. OLIVER: I find that a number of the newspapers in the reading room have important articles clipped from them. That is something that does not reflect credit upon the members of the House who are guilty of it.

RELIEF OF GRAIN CONGESTION.

GRAIN ACT AMENDMENT BILL.

On motion of Sir George Foster, Bill No. 58, to amend the Canada Grain Act, was read the second time, and the House went into committee thereon, Mr. Rhodes in the Chair.

On section—1 power of Board to order supply of cars:

Sir GEORGE FOSTER: I explained the purpose of this Bill to the House the other day, and asked the members from the northwest who were particularly interested in it to consider it in order that, if possible, it might be passed with expedition when next taken up. It is a matter of moment; quick action upon it is necessary. Those members who heard my explanation the other day will understand the purport of the Bill. In a few words, its purpose is this: a large amount of grain in the West, particularly in some of the most congested districts, has not the benefit of warehousing or of elevator storage; it is simply lying in the fields. A great deal of this grain is in bins without floors. As long as the weather continues bright and cold, even if snowy, the grain will suffer practically no injury, but as soon as a thaw takes place the snow which is upon the grain will melt, and the grain will be liable to speedy damage. Car-order arrangements are matters of enactment. In section 207 of the Grain Act, after what you may call the standard arrangements for car-ordering are set forth, certain discretion is given to the Board of Railway Commissioners. That discretion is contained in four lines. The present Act says:

> The board may in its discretion order cars to be supplied contrary to the provisions of this part, (a) to elevators that are in danger of collapse; (b) to places where grain is damp and thereby liable to become damaged, (c) for the purpose of distributing seed grain to any point in the western division, and (d) in cases where the operator of any country elevator reports in writing under oath that some portion of the grain in such elevator is heated, and that in order to preserve such grain it is necessary to ship such heated grain to a terminal elevator for treatment.

The provision (b) allows discretion to the board in cases where grain is damp. The purpose of this amendment is to give the Board of Grain Commissioners discretion to order cars for the carrying of this grain in cases where it is liable to damage.

Mr. GRAHAM: Will that work in harmony with the amendment to the Railway Act which was passed the other day?

Sir GEORGE FOSTER: Yes, except that the Railway Act refers to large sections, and to the operation of different lines of railway as to carrying points. This goes into detail, while the other was a matter of more general application. I may say that this amendment has been very strongly urged upon the Commissioners and upon the department by the Minister of Agriculture of Saskatchewan. I have a long letter from him to the commissioners in which he makes a very strong plea for the immediate enactment of such legislation.

Mr. OLIVER: I imagine that anything that I can say will not affect the decision of the minister in regard to this provision.

My view is that every purpose that is ostensibly to be served by this amendment is already covered by subsection "b". The grain lying uncovered in the fields is in danger of destruction only from dampness, and if the point is taken that at the moment it is not damp, and, therefore, does not come under subsection "b", my view would certainly be that we should adhere to the principle of the Bill and provide specifically for that particular case, rather than, by a provision such as this, simply destroy that feature of the Grain Act which has been most strongly held to by the farmers of the West, in season and out of season and under all circumstances. The principle of compelling the distribution of cars according to priority of order has been fought by every interest opposed to the farmer in the West. I am compelled to say that my hon. friend has to some degree already listened to these opposing interests, and in this section he proposes absolutely to place the grain at their disposal so far as the principle of the car-order book is concerned. If this section passes, in my humble judgment, we can consider that that feature of the Grain Act is eliminated, and that the right that the farmers have stood for during so many years, the right for which they have fought so hard, and which they have maintained so strongly, is taken away from them without good or sufficient reason.

Mr. KNOWLES: At whose suggestion did the hon. minister say that this legislation is introduced?

Sir GEORGE FOSTER: The Minister of Agriculture of Saskatchewan, Mr. Motherwell.

Mr. KNOWLES: Is there correspondence about it?

Sir GEORGE FOSTER: Yes.

Mr. KNOWLES: Could we see it?

Sir GEORGE FOSTER: I can read a portion of it, if that would satisfy my hon. friend.

Sir WILFRID LAURIER: Hear, hear.

Sir GEORGE FOSTER: The correspondence began with a request by Mr. Motherwell that discretionary power should be given to the Board of Grain Commissioners in order to meet this very pressing difficulty during the present season. The board replied to the Minister of Agriculture of Saskatchewan that whilst they were entirely in sympathy with the purpose that he had in view, they were devoid of power, because they could use their discretion only in certain specific instances. They pointed out to the Minister of Agriculture of Saskatchewan that the very discretion which he wished to be granted to the Grain Commissioners in order to alleviate this trouble had been applied for when the Act was being amended some two or three years ago. That provision had been passed by the House of Commons, but had been thrown out by the Senate. This reply was sent to Mr. Motherwell, who, after looking up the facts of the case, wrote to the effect that he found that the Board of Commissioners was entirely right in that matter. He urged then that that discretionary power be applied for.

Mr. Motherwell, in a letter to Dr. Magill, Chief Commissioner, says:

> It would take Parliament possibly an hour to pass this subsection through its various stages, including the Royal Assent, and I am strongly of the opinion that it should be done. We cannot afford to fiddle over this business much longer as spring is rapidly approaching. It has been thawing here all week and in western Saskatchewan the Chinook has caused the streets of towns like Swift Current to run with water. A few more days like this, and the damage to the grain in question will begin. Surely, we are not to stand helplessly by indulging in further speculation as to what should be done and wait until the wheat actually is damaged so that it can be shipped out under subsection "b" of section 207 of the Canada Grain Act.

The Grain Commissioners do not believe that they have the power to act until the grain is actually proved to be damp. It may be that it is not damp under present conditions, but if it is left until it becomes damp, so that the Board of Grain Commissioners have power to act, the damage will have been done and it will be too late to salve the grain. Very gratifying reports come from the vicinities of Saskatoon, Moosejaw and Calgary with reference to the usefulness of the Government storage elevators in these different sections. Quantities of damaged and damp grain have been brought in. We have the finest cleaning and drying arrangements that are possible in connection with these elevators, and thousands of bushels have already been salved and cleaned. A despatch this morning from the elevator at Saskatoon says that pretty nearly 3,000,000 bushels have been passed through that elevator and some 2,000,000 bushels are now in storage. That is a point at which the railway arrangements particularly effect the quick passage of grain. The Canadian Northern

railway is bringing out grain on short hauls from the congested districts and storing it in Saskatoon. The Grand Trunk is carrying it to the East; so that the transfer through the elevator is continuously going on; farmers get their certificates and their weights and are able to make their financial arrangements. They also have the advantage of having clean grain if they wish it, and they have it dried if it becomes damp. If subsection "b" covered the case, we would not want to ask for extra legislation. But in the opinion of the board and of the Minister of Agriculture of Saskatchewan, it does not cover the case,

Mr. KNOWLES: The trouble is that the amendment is addressing itself to the solution of a problem that perhaps should not be solved. The minister says that wherever there is congestion they can order this to be done. It is not congestion that is going to be the reason or justification for favouring any particular point. The congestion might be ever so great, but the principle that car orders should be given to people equitably should still prevail, and the congestion be left to be relieved in the ordinary course of events. If the minister provided that this board should have the exceptional power, not because there is congestion, but because the grain is damp or in real danger of becoming damp, he would be addressing himself to the state of circumstances that the Minister of Agriculture of Saskatchewan seems to dwell upon. The subclause under section 207 of the Grain Act which is involved is:

> The board may, in its discretion, order cars to be provided contrary to the provisions of this part.... (b) to places where grain is damp and thereby liable to become damaged.

Why should not the minister, in the wording of his amendment, continue to confine himself to the kind of grain that is to be handled, and not open up the whole thing and give the board discretion to favour certain places because there is what, in the board's opinion, constitutes congestion? Would it not be better for the minister to have his amendment read: "To places where grain has become or is in real danger of becoming damp." Or better words which the minister would find on reflection Why break in on the principle of equitable car distribution simply on account of conjestion?

Sir GEORGE FOSTER: If there were no congestion there would be no necessity for this clause. These men have grain lying in the fields, sometimes eighteen or twenty thousand bushels, without any covering, and liable to these processes as soon as the weather becomes mild and the snow begins to melt. If there were no congestion there would be no call for this, because there would be plenty of cars and the grain could be carried away. The trouble is that there is congestion and that car orders are in in advance of the orders of the man who has grain which is in a perilous position, and, unless there is something to step in between the general rule and that pile of grain, that grain is almost certain to be seriously injured. I think that where a man has grain stored under such conditions that it is not likely to be injured, his car orders ought to wait until the man alongside of him who has grain stored without the advantage of cover of any kind has had his grain moved.

Mr. KNOWLES: There may be and has been congestion at many shipping points where the wheat is not in any danger. If the minister reads Mr. Motherwell's correspondence, he will see that Mr. Motherwell treats it largely as a geographical matter, referring to the fact that in the older districts, such as eastern Saskatchewan and all of Manitoba, although very often there is congestion there, yet the people are provided with facilities for storing grain on their farms; and so, although there might be congestion, there would be no peril or danger of the grain being lost, whereas in the newer places farther west the homesteaders, under more pioneer conditions, might be exposed to much greater danger of loss, even although the congestion were less. I do not think the minister should put upon us the grave responsibility of defeating this legislation, or of refusing it. We explained to him that all we ask is that the Board of Grain Commissioners attend to the condition of affairs it is sought to relieve. We have congestion all through the winter at some of those points, but the danger does not come until the spring. The board might exercise that discretion at points where there was no danger of any dampness damaging the wheat, and relieve the situation at other points, as they are empowered to do. I do not think that the minister should place us on the horns of a dilemma in that way. All we ask is that this amendment be again amended to meet the condition of affairs. Many farmers would not object to letting the congestion remain, or to letting the wheat lie for a while until their brother

farmers in the pioneer districts had got relief, because the danger of damage to the grain is a great deal more pronounced there than in the older districts where they have granaries. I think my hon. friend the minister will see that our quarrel is not with the principle but with the wording of his amendment.

Sir GEORGE FOSTER: My plea would be this: Provide for the known and uniform cases by actual enactment, and then leave this matter in charge of the Board of Grain Commissioners. They know the circumstances better than any of us can here, and if it is wise to give them discretion to go beyond those points, I do not think the House will make any mistake in just leaving the matter to their discretion. The point of urgency for the legislation comes just from the circumstances that my hon. friend has mentioned, that in those districts at which we are looking at the present time there is a congestion of grain which is not housed. It is not a question of a man having his grain where it would not be damaged, and being able to wait for his cars. He is not being injured so far as the quality of his grain is concerned, but it is a case where a very large quantity of this grain is piled up on the open prairie, and if it remains there a month longer it will probably be very much damaged, if not absolutely spoiled. Whilst we are at it, we might just as well have some faith in human nature, and trust to the Grain Commission to do what is fair in the matter, as try to tie them down to every small detail of what may occur to us here in the House. I do not think my hon. friend will be injured by that stretch of magnanimity.

Mr. OLIVER: The minister has asked the House and the country to trust the Grain Commission. The whole purpose of the Grain Act is to depend on legislative enactment, rather than on official discretion. If his point is right, there is no reason why the Grain Act should remain on the statute book. Now that we have a Grain Commission, which is supposed to know more about the grain business than anybody else, we might just as well, if we are to follow his argument, trust them in everything, and say: The matter of the control and handling of the western grain is in your hands; do with it as you please, and for the best, and wipe the Grain Act off the statute. That is the logic of the minister's argument. I do not think that he will be prepared to-day to carry his argument to its logical conclusion. I do not think he will be prepared to ask this House to wipe the Grain Act off the statute-book, and yet if there is any provision in the Grain Act that the farmers lay store by, and lay stress on, that they demand shall be kept away from anybody's discretion as far as possible, it is this provision in regard to car distribution. Wipe that out and you might just as well wipe the Grain Act off the statute book; there is no protection in it so far as the farmer is concerned. I maintain that the provisions of subsection " b " as they stand cover the case that has been presented to the House by the minsiter. I take issue with the Grain Commission if they hold a contrary view, and I call upon the minister to interpret for them the proper meaning of the Act and their duties, and to see that they carry them out. My hon. friend the minister has said that the grain is going to be dampened when the warm weather comes if it remains piled up on the prairie. Has he not read the papers? Does he not know that warm weather has been experienced there for the past four or five weeks, that in the town of Walsh in the dry belt of the Canadian Pacific railway the people have been flooded out. Southern Alberta has been subject to a chinook. The snow has gone and the grain is damp. It must always be so. Thousands and tens of thousands of bushels of damp grain have been taken into the elevators. The condition of dampness is already great, actual dampness and damage, and therefore subsection "b" is in full effect, so far as the grain of Southern Alberta and Southern Saskatchewan is concerned. I say again that if, when grain is piled on the prairie and covered with snow, the Grain Commission, with the purpose and intent of subsection "b" staring them in the face, deny that that grain comes under the discretion granted by that subsection, that Grain Commission, I will say here on my responsibility as a member of this House, is not honest in the discharge of its duties, and requires to be disciplined by the minister in the interest of that industry which he and they are in their positions to protect.

Mr. KNOWLES: Does the minister not think himself that that clause covers it?

Sir GEORGE FOSTER: I do not, and I would not take the responsibility of saying that the Grain Commission should remove the grain which is now piled on the open

prairie, where the weather has not turned soft, even if it may be covered with snow. I would not ask them to read into their instructions under that subsection the power to remove that grain if it is not damaged. They have evidently had the subject under consideration, and they do not think they have such powers, and they have not exercised those powers. I am not going to instruct them to do so. My hon. friend from Edmonton (Mr. Oliver) says if they have not that discretion, we might as well repeal the whole Act. We have given them discretion in four points already. There is no business man in the world, no corporation, no legislator in the world, no business anywhere which does more than provide for general policy, and general principles, leaving in the hands of the management certain discretionary powers. You have to do it; you cannot get along in business without doing it. Something turns up that no legislator thought of, that no director had provided for, and you have to have a certain amount of discretionary power. In regard to the Grain Commission, the House acknowledge that, and gave them discretionary powers. It is now asked that these discretionary powers be extended so as to cover these cases. That is all we ask, and I did not suppose that the House would offer any objection.

Mr. KNOWLES: I am sorry that the minister feels so surprised. The last time I referred to the subject—I do not think the minister was present—the Minister of Railways said that he would have a statement made up to date as to how much grain they had taken into the Government elevators.

And I understand that there is what we call an embargo until the fifteenth of this month. As it affects the question of this hauling of grain, it is more particularly under the Railway Department. But the embargo has the effect, as I understand it, that priority is given to cars that are used only for the purpose of hauling grain to the elevator as against the cars which may be tied up for two or three weeks going all the way to Fort William. That is something that concerns the grain trade very much although I rather question if it is not technically a matter which the Railway Commission, under Sir Henry Drayton, has under its jurisdiction. I understand that it has worked out very well and that, whereas when I referred to the matter in the House late in January or early in February, there was a very small percentage of the capacity of the internal elevators filled. I understand that since a very much greater quantity of grain has gone into the elevators. If my information is right, that it is proposed to take that embargo off at the middle of this month, I would ask the minister whether it would not be well to continue it until these elevators are filled right up.

Sir GEORGE FOSTER: I think I might suggest to my hon. friend that this is a matter which does not directly affect the passage of this amendment.

Mr. KNOWLES: I think it has a great deal to do with it

Sir GEORGE FOSTER: Perhaps my hon. friend thinks so. If he does it is a matter for himself.

Mr. KNOWLES: It relieves the same situation that this relieves.

Sir GEORGE FOSTER: It does relieve it, because it enables more grain to be carried out than otherwise would be. Do what you can, you get by the short hauls a large amount of this grain hauled out at this period of the year, or about the first of March, but you still leave a very large quantity of grain which will not have been moved even when March, or April, is done. The usual effect of the short haul business has been to increase the efficiency of the service by the railways. Instead of making the trains carry the grain from distant districts all the way through to Fort William, or to eastern elevators, it is carried by means of the short haul to the central elevator and then the cars go back and get other loads. They probably make half a dozen hauls where they would only make one haul to the eastern, or lake head, elevator. That is working very satisfactorily. I cannot give my hon. friend the exact number of bushels that have gone to each elevator, but all the elevators are filling up and the Saskatoon and Moosejaw elevators are emptying out as well as filling up and thus the grain is kept moving. But the point now is as to this particular amendment. I do not want to press the committee at all but I am obliged to go away a little past four o'clock and I would like that we should confine our remarks as nearly as possible to the amendment in hand so that if possible I may get the Bill through before I have to go away.

4 p.m.

Mr. KNOWLES: The minister runs a good department and he keeps the grain administration very free from politics and I shall not say anything unfavourable to him. If there is one part of the Administration that is run in a very high class way, it is the minister's conduct of the grain business and I do not want to cross him at all. But the question of the equitable distribution of cars is the lock, stock and barrel of the Grain Act. While the minister does not see it as I do, I am sorry that I feel it to be my duty to place myself on record as to the amendment that the minister introduces and I therefore propose that the following be adopted:

That we amend clause "b" of section 207 of the Canada Grain Act, chapter 27, by adding, after the word "damp" in line 4, the words "or unhoused."

It would then give the Board power to order cars to places where the grain is damp, or unhoused, and thereby liable to become damaged.

Sir GEORGE FOSTER: This matter has been brought to my attention by the Board, which has given it very careful consideration. The Board has asked for the powers of discretion which I have provided for in the amendment, and I would rather stand behind the Board and give them that discretion and thus restrict the matter by two details, or one detail, in addition to what is given in subsection "b" than to provide other means for discretion being used by the Board under equally pressing circumstances and with results which would equally imperil in some degree the grain left uncarried. I would like to ask the committee to pass the legislation which has been asked for by the Board and which I have submitted to it.

Mr. LEVI THOMSON: I trust the minister will still make up his mind to accept the amendment proposed by my hon. friend from Moosejaw (Mr. Knowles), or something to that effect. I feel very much as other western friends do, that I do not want to throw anything in the way of the minister in this matter. But I have to ask the minister to remember that he is getting back to the old fight that we have been carrying on for the last twenty years or more, and the western farmers feel that a great deal is at stake in connection with the passing of such an amendment as this. We have fought our fight, a very bitter one, not only against the elevators, but also against the railway companies and other institutions of that kind. The railway companies in the early days insisted that all grain must be shipped through elevators. We had a hard time, as my hon. friend knows, to get the right to ship out cars on order. This question has been up in the House before, and some discussion has taken place. The farmers of the West realize that if you pass such an amendment as this it will mean that the commission, or some other body, will have the power to say that the regular order shall be deviated from when there is grain damaged or in danger of being damaged, or when the elevators want more cars than they are entitled to according to the strict provisions of the Act. I know very well that the feeling that the farmers of the West will have in regard to this matter is that it is simply a way of getting back to the old elevator monopoly. I share very largely that suspicion with the farmer, and I would be very glad indeed if the minister could see his way to accept the amendment of my hon. friend from Moosejaw, or something of the like effect, and not get us up against this important question that we have been up against so often. It is a very serious question, and one that we should not be put up against any more.

The CHAIRMAN: It does not appear to me that the proposed amendment of the hon. member for Moosejaw (Mr. Knowles) is an amendment to the Bill under consideration. As I understand it, the Bill is for the purpose of adding subsection "e" to section 207 of the Grain Act. The proposed amendment of the hon. member for Moosejaw is to amend subsection "b" of the Grain Act, so that it is not, in my judgment, an amendment to the proposed amendment. In other words, the proposed Bill could be passed and it would still be open to the hon. member to move a further amendment; but his motion is in no way an amendment to the Bill before the committee.

Mr. PUGSLEY: I understand that my hon. friend suggested to the Minister of Trade and Commerce that this amendment be substituted for the one now before the committee. In order to put it in proper form, all that would be necessary would be to say that section so-and-so be struck out and so-and-so be substituted therefor. I assume that the Minister of Trade and Commerce will not take any advantage of the point, because it is so easy to correct it.

Sir GEORGE FOSTER: I have no intention of taking any advantage. What I want is to have the best legislation possible; but

I have a conviction that the proposed amendment of my hon. friend is not the best legislation, and that this House would be wise to stand by the recommendation of the Board of Grain Commissioners, backed up as it is by the Minister of Agriculture of Saskatchewan. My hon. friend (Mr. Thomson) referred to the old fight; but we are no longer back on the ground of that old fight. The conditions were very different then, as my hon. friend knows, and he would have to imagine that the Grain Board would join hands with the railway companies and the elevator men to get the position of the last few years reversed. I assure him that is not the wish of the department, nor is it the wish of the Board of Grain Commissioners. I still think my hon. friend will sleep well at night even if this section is appended to the Bill.

Mr. SCHAFFNER: So far as Manitoba, and even so far as that part of Saskatchewan which my hon. friend represents, is concerned, this makes very little difference; but farther West there is no doubt that it does make a difference. If my information is correct, the Board of Grain Commissioners are already using, but in an illegal way, the discretion which they are asking for in this proposed amendment. I understand that from conversations with the Grain Commissioners.

Mr. TURRIFF: In my judgment, the amendment of the hon. member for Moosejaw covers exactly the point that the hon. minister wishes to cover, that is, to look after grain that is liable to be damaged. I think it is a very praiseworthy and necessary action to take; but if the amendment of the hon. member for Moosejaw covers the point sufficiently, why amend the Act in the way proposed by the minister? While I have every confidence that the Board of Grain Commissioners would carry out the proposed amendment properly and fairly, and use it only with regard to grain likely to be damaged, at the same time there is a great deal in what my hon. friend from Qu'Appelle (Mr. Thomson) has said. The farmers are very jealous over the privilege of equal distribution of cars, and there has been all along a desire and an attempt on the part of the railways to get away from it; and if you have the railways and the Grain Commissioners working together, with the law giving them power to send cars wherever they wish, you will put the farmers in the position that they will never be sure of getting cars when they want them, and even if they are getting fair play in many cases, they will feel, when they do not get the cars they want, that it is owing to this amendment now proposed by the minister. There would be nothing more objectionable to the farmers than to have to go back to the old position where the railways and the Board of Grain Commissioners would have the say as to the distribution of cars.

Mr. KNOWLES: Mr. Chairman, since you ruled my amendment out of order I have been trying to put it in order—or is that point waived?

The CHAIRMAN: Not at all.

Sir GEORGE FOSTER: My hon. friend will have to put himself in order and move an amendment which is germane to the Bill. He has a perfect right to do that.

Mr. KNOWLES: Bill 58 says:

> Section 207 of the Canada Grain Act, chapter 27 of the statutes of 1912 is amended—

It is section 207 that we are proceeding by legislation to amend. The minister proceeds to amend it in one way and I proceed to amend it in another, and, with all deference to you, Mr. Chairman, it seems to me that my amendment was in order, because it was an amendment to section 207 by way of substitution.

The CHAIRMAN: The amendment as proposed by the hon. member is an amendment to section 207 of the Canada Grain Act, but it is something entirely foreign to that portion of the section which is proposed to be amended by this Bill. My hon. friend, in his amendment, which I ruled out of order, proposed:

> That we amend clause "b" of section 207 of the Canada Grain Act, chapter 27, by adding after the word "damp" in line four, the words "or unhoused."

This Bill does not propose to amend subsection "b" of section 207 at all; it proposes to add a further subsection to the existing section.

Mr. KNOWLES: I take the view that we are not amending any particular subsection, but that we are amending section 207. I will put it in this way.

Sir GEORGE FOSTER: Will my hon. friend allow me to make a suggestion in order to facilitate matters and ease the conscience of hon. gentlemen opposite? Suppose we amend the section in this way:

> Whenever after due examination the board considers necessary and advisable, in order to relieve congestion and facilitate the despatch of grain which is insufficiently housed and liable to become damp—

I am willing to make that amendment, and I think that is as far as I can possibly go.

Mr. PUGSLEY: Would not the minister just transpose certain words and say:

Whenever after due examination the board considers it necessary and advisable, in order to facilitate the despatch of grain which is insufficiently housed and liable to become damp, and to relieve congestion in respect thereto—

Sir GEORGE FOSTER: I read it in this way. It is advisable in order to relieve congestion—in what respect? In the facilitation of the despatch of grain which is insufficiently housed or liable to become damp or injured.

Mr. PUGSLEY: In the way my hon. friend has it, the commissioners will be likely to read "or" in place of "and." By transposing the words you would make the amendment clear to every one.

Sir GEORGE FOSTER moved:

That the following words be added after the word "grain": "that is insufficiently housed and liable to become damp or injured."

Mr. TURRIFF: That may limit it to grain not housed and liable to be injured; but it seems to me to divide the provision into two, which would give the commission authority to send cars where there is congestion and the grain is not liable to injury.

Mr. KNOWLES: I do not wish to impose on the minister, but I am going to try him with this:

Whenever after due examination the board considers it necessary and advisable, in order to relieve congestion in respect of grain which remains unhoused and is by reason thereof liable to suffer damage—

Sir GEORGE FOSTER: I am afraid that is so involved that the Grain Commissioners would not understand it.

Mr. OLIVER: Would the minister say that in his judgment the amendment he proposes does confine the discretion of the Grain Commission to grain that is unhoused?

Sir GEORGE FOSTER: I find it easier to legislate, or rather to propose legislation, than to give a judgment as to how the legislation will be interpreted. But I think that is very largely the way I would interpret it. If there is any extra discretion, that is provided for. I do not think it would militate against the operation of the Act.

Mr. PUGSLEY: It would seem to me that the Minister of Trade and Commerce wishes to meet the views of the members from the West, but he is afraid to interfere with the phraseology of the Bill as sent to him by the Grain Commission.

Sir GEORGE FOSTER: You can put it that way if you like.

Mr. PUGSLEY: How does the hon. gentleman want to put it?

Sir GEORGE FOSTER: Any way that will suit you.

Mr. PUGSLEY: No, I will put it to suit the hon. gentleman. He says he does not undertake to interpret the law. I think he did study law once.

Sir GEORGE FOSTER: I found out what it was like and left it.

Mr. PUGSLEY: Like the student who was in the lawyer's office for two days and left saying he had learned enough to disgust him with the whole business. In this section the minister has the words: "To relieve congestion and facilitate the despatch of grain which remains unhoused." If he does not know, the very excellent lawyer who occupies the position of Postmaster General (Mr. Casgrain), than whom there is no better lawyer in Canada—

Mr. CASGRAIN: I stuck to it.

Mr. PUGSLEY: —and wisely, too; the Postmaster General will tell the hon. gentleman that courts very often interpret "and" as "or," and vice versa. And the Grain Commission, which may be called a court, may interpret this "in order to relieve congestion 'or' facilitate the despatch of grain." Now, the hon. gentleman does not mean that. Why use the word "congestion" by itself? Why not say, "congestion in respect of grain that remains unhoused and is thereby liable to suffer damage?" That is so plain that it could hardly be misunderstood.

Mr. SCHAFFNER: Does not the commission wish to go further?

Mr. PUGSLEY: No.

Mr. SCHAFFNER: I understand they do.

Mr. PUGSLEY: The Minister of Trade and Commerce thinks not. If he leaves this as it is, the commission will say: "Some stupid person has put "and" there when he means "or." It does not mean anything unless it was intended to give the commission discretion with respect to other grain than that which remains unhoused. The minister has said he intends it to apply

to unhoused grain which by reason thereof is liable to damage. If he does mean that, why does he not say that in express words, so that there will be no doubt as to the meaning?

Sir GEORGE FOSTER: I think my hon. friend went a little further than my words would justify. I did assume that there might be a modicum or discretion which might be directed towards points which were congested, even if the element of damp or injured grain was not involved, and I wish that to form a part of the amendment itself. Now, we have pretty well discussed this matter; let us express our minds about it and go on with further business; otherwise, I shall be obliged to ask the committee to rise, report progress, and ask leave to sit again; and probably the point between us is not sufficient to make that necessary.

Mr. KNOWLES: I will place my amendment on record. I move:

That all the words after the word "amended" in the second line be struck out and the following substituted: "By inserting the words 'or unhoused' after the word 'damp' in the fourth line of said section 207."

I move that specially because the minister has said that the purpose is to give the Grain Commissioners discretionary power to relieve congestion where there is no danger of the grain suffering, and, for my part, I am absolutely against that. If I understand the minister's purpose, then there is a great difference between the way he looks at it and the way I look at it.

The CHAIRMAN: I have only this moment seen this proposed amendment, but, as I understand it, it is not an amendment to the amendment that is already before the committee. It must be the desire to substitute this for the amendment of the Minister of Trade and Commerce; and the point would be met, it seems to me, by putting the amendment of the Minister of Trade and Commerce, and if it carried, this further amendment would be unnecessary. On the other hand, if it failed, the hon. gentleman would have an opportunity to move his amendment.

Mr. KNOWLES: I would submit, Mr. Chairman that this proposed legislation is to amend section 207 of the Grain Act, " by adding thereto."

[Mr. Pugsley.]

Amendment to amendment negatived, amendment agreed to, and section as amended agreed to.

Bill reported.

Bill No. 34, to authorize certain extensions of time to Insurance Companies.—Sir Thomas White.

Bill No. 33, to amend The Bank Act.—Sir Thomas White.

SHELL CONTRACTS.

PROPOSED COMMITTEE OF INVESTIGATION.

Consideration of the proposed motion of Sir Wilfrid Laurier for a committee to inquire into purchases of shells or other munitions or goods by the Shell Committee, resumed from Thursday, March 9.

Hon. WILLIAM PUGSLEY (St. John City): My right hon. friend the Prime Minister, toward the close of his speech on this resolution, made a very important statement, which will be found in Hansard, on page 1592. Referring to the right hon. leader of the Opposition, who moved this resolution, the Prime Minister is reported to have said:

If, however, he or any of his followers has a charge to make against any member of the Government with respect to the Shell Committee or with respect to anything else, let him or his follower stand up in his place, and on his responsibility as a member, make that charge, and it will be investigated thoroughly and completely.

Later on he says:

But there is something else to be said, and I repeat that if my right hon. friend or any of his followers has any charge to make against a member of the Government in regard to any of these matters, let him make that charge in distinct and understandable terms, and he will have the investigation as soon as he so desires.

The hon. member for Carleton, N.B., in supporting the resolution, presented to this House an array of facts in reference to purchases which were made by this Shell Committee of, I think you will agree with me, Sir, a most startling character; facts given with circumstantiality and detail, which must have convinced hon. members of this House, as I know they convinced the country, that the hon. member for Carleton had definite and positive information of the matters of which he was speaking. In view of the statements made by my right hon. friend the leader of the Opposition in moving the resolution; and in view of all the information which has

been given to the House, I should have supposed that the charges made were sufficiently definite and of a sufficiently grave character not only to justify but to demand an immediate investigation by a committee of this House. But, Sir, my right hon. friend has stated that he desires that some member of the House shall put these charges in direct and understandable form. I suppose he means that they should be put in concrete form; that some member of this House should rise in his place and take upon himself personally the responsibility of making a charge against the Government or some member of the Government in respect to the matters with which the Shell Committee has dealt. The reason for that is, as you know, to prevent the time of Parliament being taken up with the investigation of charges with regard to which a member of the House is not prepared to take responsibility as such member. You know, Sir, as well as I, what are the consequences which fall upon a member of the House if he is found to have made charges of a character which cannot be substantiated. He will not only be treated with contempt in the House, but the consequence which falls upon him ordinarily and almost necessarily is that he is obliged to forfeit his seat. Well, Sir, speaking as a member of this House, and realizing as I do the gravity of the charges which are made against the Shell Committee as the appointees of this Government, and also necessarily against the Minister of Militia as a member of this Government who made the appointments of that committee and was constantly in touch, as he says, with that committee, and to whom that committee reported from week to week, as we have had it in evidence; I, Sir, knowing the facts and knowing how grave they are; knowing how grave was the charge which, as I have said, was made against the Shell Committee and the Minister of Militia; knowing what vast sums are involved; knowing, Sir, that the evidence has disclosed to this House that in connection with the $300,000,000 and upwards of contracts given by the Shell Committee there has been, beyond the shadow of a doubt, absolutely wasted upwards of $80,000,000—somewhere between $80,000,000 and $100,000,000 of the money of the people of Great Britain and the people of Canada—Sir, I feel that I would be derelict in my duty, I would be acting the part of a coward and of one unworthy to occupy the position of a representative of an important constituency of this Dominion, if I were to hesitate to take upon myself the responsibility of accepting the invitation which my right hon. friend the Prime Minister has given, and of putting these charges in concrete and understandable form, and bringing upon myself the responsibility which will devolve upon me and which will properly devolve upon me if I should, in case a committee is granted, fail to make good the charges which have been presented to this House. I accept the responsibility; and now, Sir, (reading):

I, William Pugsley, a member of this House, in support of the motion now under consideration, standing in my place in this House and on my responsibility as a member of this House, declare and charge that the Shell Committee, appointed by the Minister of Militia and referred to in said motion, fixed excessive and unreasonable prices for shells and for other munitions and goods to be furnished to the British Government (which by arrangement between the British Government and the Canadian Government were to be paid for in part by Canada.)

That such prices were fixed without competition and were far in excess of what would necessarily have been paid if ordinary business methods had been pursued, thereby involving an unnecessary excessive expenditure of many millions of dollars, conservatively estimated at at least eighty millions, which will be improperly taken from the people of the United Kingdom and Canada.

That said committee gave large orders at such excessive prices and without competition to companies in which members of the committee were largely interested, and of some of which companies members of the said committee were the directing heads.

That there has been great and wholly unnecessary delay in furnishing the completed shells for use of the Canadian and British forces at the front.

That the said Shell Committee neglected and delayed for an undue period of time to provide the fuses necessary to render the shells effective, and, failing to endeavour to provide for their construction in Canada, as they might have done, proceeded to give and award, through J. Wesley Allison in the United States, contracts for fuses amounting to $22,000,000, on which they made an advance of $3,750,000. That the making of the said contracts through said Allison was unwise and improvident and was entered into with the knowledge

and connivance of the Minister of Militia, and the said Shell Committee failed to obtain delivery of said fuses for an unreasonable time.

And I do also charge that the Government of Canada had, through the Minister of Militia, to whom the said Shell Committee reported weekly, knowledge of such irregular and improper methods and acts of the said Shell Committee, and while having the power at any time to put an end thereto the said minister improperly consented to such irregular and improper methods and acts and permitted the same to continue.

Having read this charge, I submit it for the consideration of my right hon. friend the Prime Minister and the consideration of the members of this House. I shall deal with it a little later on, and for the moment I shall devote attention to some remarks which were made by the hon. member for Calgary (Mr. R. B. Bennett). I am bound to say, Sir, that I do not find much to answer in the speech of that hon. gentleman. His speech was a very eloquent one; it was a very interesting one. That speech stamps the hon. gentleman as one of the most forceful and able and eloquent members on the other side of the House. That gentleman has had many opportunities of getting inside knowledge of what has been going on in connection with the purchase of munitions for the Canadian and British Governments. Ever since that most valuable and honoured member of this House broke away from this Government on an important occasion when this Parliament was asked to ratify an agreement made with one of the important railroads of this country, and which that hon. gentleman denounced in the strongest possible terms, this Government, Sir, have shown a very conciliatory course towards the hon. member for Calgary. They are determined that he shall not get away from them again. If I am correctly informed, the Prime Minister scarcely ever takes a trip abroad without inviting the hon. member to accompany him. He even accompanied the Prime Minister as far as the trenches, and I saw by the papers that he had gone as the personal attendant and personal adviser of my right hon. friend the Prime Minister. Well, Sir, that hon. gentleman has not ventured to challenge the accuracy of the figures which were presented to this House by the hon. member for Carleton (Mr. Carvell). Need I argue that it was because it could not be done? The hon. member for Calgary is industrious and is most able and most intelligent, and if it had been possible to question the accuracy of the figures or statements presented by that hon. member, you may depend, and I am sure this House will agree with me, that the hon. member for Calgary would have devoted himself to that task. He did not do so. He did not discuss whether or not excessive prices had been paid. He said he had nothing in the world to do with the question whether or not orders for shells had been given to members of the Shell Committee or to companies in which they were interested, or to cousins or uncles or aunts or other relatives of themselves. That was a matter of no interest to him. All that he was concerned about was that while the war is on we should not investigate these matters, no matter how horrible they might be, and no matter how much might be shown against the Shell Committee. He compared the position of those of us who wanted an investigation to that of a man whose house was burning and who wanted the firemen to cease their operations while he began to examine into the cost of the hose that was being used for the purpose of extinguishing the fire. My hon. friend went further and said that the boots ought never to have been inquired into by this House, and he rather found fault with my right hon. friend the Prime Minister for granting the boots inquiry. He said he had been pressed unduly from some quarter, what quarter he did not say, to have the investigation; but he ventured to say that the Prime Minister would not repeat the experiment and have an inquiry into matters concerning the Shell Committee.

What was the argument used by my hon. friend? Why, he said, the result of that investigation was to prevent Canadian boot manufacturers from getting very large orders in France, because the people of that country had become convinced that Canadian boots were not as they ought to be. With those patriotic gentlemen on the other side of the House it is all a question of money, apparently. It did not seem to impress the hon. gentlemen's mind that there was complaint with regard to the boots which were furnished to the Canadian soldiers—that letters were coming from the front stating that the boots were unfit to wear. My hon. friend was not impressed with the fact that the newspapers of Canada were clamouring for an investigation before that inquiry took place, claiming that a great injustice was being

done to the soldiers by providing them with defective boots. That did not seem to impress my hon. friend from Calgary at all. It did not seem to make any difference to him that, as a result of that inquiry, there was a great improvement in the class of boots furnished to the soldiers. My hon. friend said that the Canadian boot manufacturers had lost large amounts of money by reason of that investigation, and that therefore it ought never to have taken place. When my right hon. friend the Prime Minister proposed that investigation, and himself moved for the committee in this House, it is a wonder that my hon. friend from Calgary did not rise in his place and tell the Prime Minister that, in moving for an investigation while the war was on, he was like the owner of a house whose house was on fire stopping to inquire as to the cost of the hose. The same argument would have been as applicable to that case as to this.

When the inquiry was being held by the Committee on Public Accounts with reference to the purchase of horses, why did the hon. gentleman not rise in his place in the committee and say: Now is not the time to investigate with regard to horses; if it goes abroad that poor horses have been bought for the use of the British or Canadian soldiers, the impression will be entertained across the water that Canadian horses are no good, and money will be lost to the farmers of Canada. Better, according to the hon. gentleman, that they should go on selling those old horses at prices in many cases three times what they were worth, than that there should be an investigation, and that the facts should become public. I wonder what my friend the former member for Kings, Nova Scotia, thinks of the speech which my hon. friend made. His regret must be that the hon. gentleman had not spoken out a year or more ago, when it was proposed to investigate the purchase of horses. He might have saved the former member for Kings his seat in this House, and the right hon. the Prime Minister the painful duty, as the result of the investigation in the Public Accounts Committee, of reading the member for Kings out of the party.

And what about binoculars and bandages? They are necessary for the carrying on of the war. When the committee began to investigate the question of binoculars and bandages, why did my hon. friend from Calgary not get up, and, in eloquent and stentorian tones, such as he and only he can use, say: "Stop, the war is on; you are like the man whose house is burning, and who stops to inquire into the cost or quality of the hose; stop, the Empire is at war, thousands upon thousands of young men are sacrificing their lives upon the battlefields in the defence of the country, and all the energies of our people ought to be directed towards bringing this war to a successful issue; why stop to investigate boots, binoculars, horses and all such trivial matters? leave these questions, for Heaven's sake, leave them till after the war is over, and do not allow any investigation for fear that the good name of Canada will in some way be brought to the dust." That is the argument which my hon. friend used, the only argument which he presented to this House.

What about the Davidson Commission? What a dreadful thing it must have been in the opinion of my hon. friend from Calgary, to have the evidence brought out in regard to the purchase of horses in Ontario, which had the deplorable result that a member of the legislature was compelled to resign his seat, and, when he went back to the people for re-election, they refused to declare their confidence in him and elected his opponent by a very large majority. What a grave injustice, in the eyes of my hon. friend, was done to that gentleman, and what a grave wrong was done to the country because that investigation took place when the war was on.

Then, with regard to submarines, with regard to those great war vessels which, according to the cablegrams from the Minister of Marine and Fisheries, the Chilian Government found themselves unable to accept and take over? What about those great war vessels for which thirty or forty per cent more was paid than ought to have been paid? What a terrible wrong was done by my right hon. friend the Prime Minister when he appointed Sir Charles Davidson to investigate the purchase of the submarines. Word might go to England, and even to Germany, to our enemies, according to my hon. friend, that we were really questioning, that we in Canada had found it necessary to question, the utility of those submarines, and the interest of those who had been engaged in the purchase of them. What a terrible injury, according to my hon. friend, was done to the people of Canada and to the Empire by the investigation which Sir Charles Davidson conducted.

What did my hon. friend from Calgary, in the very height of his eloquence, and with the most profound seriousness, say? What statement did he make to this House, based upon his inner knowledge, upon his trips across the Atlantic, upon his close association with the members of this Government? He said:

> Sir, I have a profound conviction that when this war is over and when an investigation into its conduct has been held alike in the Mother Country and in the overseas dominions, some reputations that are now looked upon as great will fall. I have a profound conviction, too, that men who have profited by the necessities of the state, who have washed their hands in blood money, so to speak—they and their children's children—will be remembered with execrations and curses by the men who come after.

Serious words, these, Mr. Speaker. It seems to me that when my hon. friend used these words he either said too much or too little. If my hon. friend, with his close and intimate knowledge of what has been going on since the war broke out, with his close association with ministers, knows of men now standing high in the councils of the country, or having a high reputation, whose reputation will fall when the war is over—if my hon. friend knows of men who have taken advantage of, and profited by, the necessities of the State, who have "washed their hands in blood money, so to speak," and who, "with their children's children, will be remembered with execrations and curses by the men who come after them," surely it rests upon my hon. friend as a member of this House, as one who represents the people of this country, to disclose to this Parliament what he knows with reference to those men who are profiting by the war, and "washing their hands in blood money, so to speak." My hon. friend ought not to wait until the war is over in order to expose the wrong-doing which he has reason to know exists to-day. He should come out in the open, and tell this House and the people of this country what he knows with reference to those wrong-doings.

Now, my hon. friend has made a most serious statement which he would not have made if he had not had knowledge of that whereof he speaks. He says:

> But now is not the time, in the midst of this great conflict, to cease our activities, to wear out our energies beating against the rock.

I am not able to see any reason why we should wait until the war is over. I do not see why we should not investigate these matters now, and I think the people expect us to investigate them now. No harm was done to this country, no harm was done to the Empire, military activities were in no way interfered with, war preparations were in no way impeded, when the investigation into boots took place. When the investigation into charges concerning binoculars, bandages, drugs and submarines took place, no harm was done to this country, and military activities were in no way impeded. I am not able to see what injury would possibly be caused to Canada or the Empire by an investigation into the matters which have been brought before the House with respect to the purchase of shells and other munitions of war.

How could any injury be done? There would be no stoppage of the manufacture of munitions. The manufacture of munitions has now been entrusted to the Imperial Munitions Board. The old Shell Committee did not die a natural death; it was put to death by representatives of the British Government who came to Canada to investigate its conduct. The new Imperial Munitions Board can go on with the work just the same whether this investigation takes place or whether it does not.

Then, my hon. friend says, that the managers of factories and of various industrial establishments would be brought to Ottawa and be kept dancing around for weeks perhaps, and that their industries would be neglected. There is no need of that. It is proposed that a small committee shall be appointed, a majority of whom would be representative of hon. gentlemen opposite. That committee, I take it, would carry on its work in a reasonable and proper manner, and in such a way as to suit the convenience of the various witnesses who would be required. The inquiry would not take a very great while and I am unable to see how there would be any great inconvenience to those who would be summoned as witnesses, or how the work of manufacturing munitions, or the work of the Imperial Munitions Board, would be interfered with. But, surely, when these charges have been made, charges which have startled the people of the country who are not able to believe it possible that the business of the Empire, which has been entrusted to the Government of Canada, is being carried on in such a reckless and improper manner, and that these vast sums of money are being taken out of the taxpayers of the United Kingdom and of Canada, the fact that a few people may be temporarily inconvenienced by being brought here as witnesses, ought

5 p.m.

not to prevent this Parliament from doing its duty and having an investigation into these important matters.

I do not think I need answer more fully the arguments which my hon. friend from Calgary has made, because, as I have said, he does not pretend to question the accuracy of the figures presented by my hon. friend from Carleton. He simply puts his argument against an investigation upon the ground that it in some way or other might interfere with the work of the Imperial Munitions Board and with the military operations to which the Government is attending. I had almost forgotten that the hon. gentleman said that this Government were overweighted with great responsibilities and that it would be a cruel thing to place this extra burden upon them. I admit that the right hon. the Prime Minister has grave responsibilities resting upon him, and I admit that the Minister of Militia and Defence has grave responsibilities resting upon him and that his work would necessarily be increased. I think probably also that the Minister of Finance has added responsibilities of a grave character; but how about the others? How about my genial friend the Minister of Public Works? No matter how much he might pretend to be worried by responsibilities connected with the war, he could not make me believe that he really was worried in the slightest degree. His work has not been added to. His work is not one-tenth what it was before the war. If what he says is correct, and I do not desire to question what he says, he is only carrying out existing contracts as to which everything of a preliminary character has been done, as to which the plans and specifications were all prepared long ago, and as to which the contractors, under the supervision of the department, are simply carrying out the works to completion. What is to hinder the Minister of Public Works, able man as he is, from giving attention to an investigation of this important subject? What about the Solicitor General? Has the fact that he has been recently elevated to cabinet rank added to his duties, burdens, or responsibilities? I do not think so. What about the hon. Minister of Justice (Mr. Doherty) who has lately added a large number of lawyers to his staff to enable him to attend to the law business of the country? If any additional burdens have to be borne, the Minister of Justice takes care to bring lawyers from a distance to Ottawa for the purpose of bearing them, and he pays them good fat retainers at the expense of the people of this country. I cannot imagine that the war would prevent him from giving personal attention to the examination of these questions. What about the members of the Government without portfolio who belong to the class that we down in the province of New Brunswick call the forecastle members of the Government? They have no important duties to attend to. What about the Secretary of State. He is an able lawyer, or an able notary public; I have no doubt that he would be able to give some attention to this investigation, to see that matters were considered properly, and that the truth was fully and plainly brought out by the committee without any bad feeling or any inconvenience to anybody. What about the hon. gentleman who occupies the position of Minister of Mines and Inland Revenue? His work has not been increased by reason of the war. Then, there is the Minister of Labour, who says in the most positive way that while this war is on he has a feeling of uncertainty as to whether we are going to win or not, that we ought not to consider any social questions, and that we ought not to consider the question of whether we should engage upon a system of technical education because, I suppose, the benefits of these things might pass over to the Germans in case they should conquer the Empire and take Canada. The Minister of Labour says: Hold, stand still, while the war is on. Surely, under those circumstances he would have plenty of time for an investigation into these questions. There may be other members of the Government in the same position. Oh, yes, there is the Minister of Marine and Fisheries. He has not had grave responsibilities, because, very early in the war, he took all the pains he could to put all his war vessels out of commission so that he would not have anything to do, and so that there would not be any responsibility resting on his shoulders. He thought the best thing to do was to leave the trade routes to be guarded by the warships of the Mother Country, and of Australia, and of Japan. Certainly it was the easier way, and it relieved him of a great deal of responsibility, so that I think he will agree with me that he would have plenty of time to work on this committee if it should be appointed. Surely the argument raised by my hon. friend from Calgary that we ought not to add to the burdens and respon-

sibilities of this Government in war time is not a very strong one, and is not calculated to impress this House or this country, and surely the appeal, which the hon. gentleman made to us that, above all, we should not obtrude into public questions at the present time what might seem to be partisan matters, ought not to prevail. Let me say to my hon. friend from Calgary that we do not approach this question in any partisan spirit; but if criticism on the part of an Opposition of wrongdoing or improper expenditure of the public money is an evidence of partisanship, we plead guilty, because ever since the commencement of the war, we thought we had a right to take the Prime Minister at his word when, upon the occasion of his asking us to vote to the Minister of Finance all the moneys he might require for the purpose of carrying on the war, he told us that he would afford us an opportunity of investigating into all public expenditures while the war was on. When he have taken him at his word, and when, confronted as we are with the fact—may I not truly and properly say the disgraceful fact—that at least $80,000,000 have been improperly taken out of the pockets of the people of Canada and of the Empire, and when in the discharge of our duty we have determined that this matter should be investigated, we ought not to be charged with partisanship. But if that is to be the dividing line between us and hon. gentlemen opposite; if they say that the lid must be kept down until the war is over; if they are to be allowed to say that there will be no examination into public expenditures until then, we, on the other hand, say that we, as the representatives of the people, have a right to demand an investigation into the expenditure of public money. If that is to be the dividing line, then we are willing to admit that we cannot agree with hon. gentlemen opposite, and we are content to be classed as partisans. My hon. friends opposite, taking the position which they do, must, of course, choose for themselves the word which will properly describe their attitude, but the people of this country will have no difficulty in finding language which will fittingly describe it.

My hon. friend from Calgary also urges that there is a grave constitutional question involved in this resolution, and that we cannot properly or constitutionally investigate the expenditure of these moneys until an item appears in the Public Accounts; in other words, until the Minister of Finance and the British Government make an adjustment of the accounts as between the two countries and the amount that we pay appears in the Auditor General's Report. That was not the view taken by the Prime Minister when, in 1903, he voted for a resolution proposed by the Hon. Mr. Monk, one of the greatest constitutional lawyers Canada has ever produced, a gentlemen who occupied a high position at the bar in his native province, and who was also a distinguished professor of law in Laval University. He took the view and pressed it home strongly that this Parliament would not be discharging its duty if it did not investigate the purchases made for the British Government during the Boer war, and, when the question came up for decision, the Prime Minister, who is also a very able constitutional lawyer, felt constrained to vote for the resolution, as did all his followers, and when the general elections came the charge was made by the right hon. gentleman's friends that the Liberal party had sought to prevent an investigation into the purchases which were made for the British Government at that time. The people, in 1911, took the view that the Liberal party was no longer worthy of the confidence of the majority of the people and the present Prime Minister and his party were returned to power. Are they to go back now on the record which they made for themselves in 1903? They are in charge of the affairs of this country to-day; are they to be allowed to say: Although we believed in the position which we took in 1903, yet to-day, because we are in office; because we want to keep the lid down and prevent the people from knowing what is taking place, we are going to vote against any investigation and against the facts getting before the public. That apparently is the position which my right hon. friend is taking; it is the position which my hon. friend from Calgary has pressed him to take; but now that I have complied with his request and have submitted this charge in a form which certainly my right hon. friend can understand and which every man in this country who can read will understand, I hope that he will not adhere to the views which he has presented to the House, or act upon the request of the hon. member for Calgary.

But, the hon. member for Calgary says: Oh, this was not Canadian money at all and we have no right to investigate the expenditure of it. I think we may deal with this question from two standpoints:

one that these shells are being purchased with Canadian money by a partnership consisting of the United Kingdom and of Canada. We have the statement made by my hon. friend the Minister of Finance early in the session in answer to an inquiry which I presented to him, that under an arrangement come to between the British Government and the Canadian Government, every dollar expended in connection with the Canadian Expeditionary Forces shall be paid by Canada. This is the statement of the Minister of Finance as reported on page 42 of Hansard:

> In a general way, I may say to my hon. friend that the Government of Canada is bearing the entire expense of Canada's participation in the war. There will necessarily be certain accounts which cannot be adjusted until the war is over, or until a later date....
>
> Mr. Pugsley: That means, of course, all the ammunition, all the guns, all the boots and shoes, and all the clothing used by the Canadian soldiers at the front?
>
> * * * *
>
> Sir Thomas White: ... In other words, we desire to pay the entire cost of the Canadian Expeditionary Force abroad.

That includes the cannon, the rifles and the shells which are used by the Canadian soldiers. Therefore, so far as Canada's money is concerned, though the United Kingdom pays for these shells in the first place, a proportion is charged to Canada, the adjustment of the exact amount Canada is to pay being postponed to a later date. What difference does it make whether we pay ten millions or twenty millions now or whether we agree to pay the Mother Country as soon as the accounts are adjusted. From the statement of the Prime Minister it further appears that for the purpose of carrying out this arrangement in good faith, Canada to-day is financing the British Government during the purchase of these munitions of war in Canada. The Prime Minister's statement, on page 30 of Hansard, reads:

> I believe that of all the payments to be made during the present month of January, the Canadian Government is providing at least one-half so that we are not only doing our part in producing these munitions of war, but we are also doing our part in temporarily financing for the British Government about one-half of the payments.

The effect of the statement of the Minister of Finance is that these purchases are made and from time to time there will be an adjustment of the accounts as between the British Government and the Canadian Government, and Canada will recognize her liability for her portion. I defy any hon. gentleman to show that there is a difference between the case as it is and the case as it would be if Canada were to give her own cheques immediately upon these shells going into the possession of the British Government.

But even if that were not the case, the members of this Shell Committee are the appointees of the Minister of Militia, a member of this Government, for whose actions the whole Government is responsible. I notice a disposition on the part of some hon. members to dissociate the Minister of Militia from other members of the Government. I notice especially that when they speak of Colonel Allison, they try to associate the Minister of Militia with Col. Allison. But if the Minister of Militia is associated, rightly or wrongly, with Col. Allison in the purchase of munitions, every member of this Government is equally associated with him. That is the constitutional principle; that for every act of every member of the Government every other member of the Government is responsible just as if he performed that act himself.

I submit, and I shall be able to prove it, if it is not already proven to your satisfaction, Sir, and to that of members of the House: that the members of this Shell Committee were the appointees of the Minister of Militia. I was indeed surprised when the Prime Minister sought to convey the impression that all that the Minister of Militia had done was to name eight or ten men and to submit those names for the approval of the British Government. I was surprised that my hon. friend from Calgary (Mr. R. B. Bennett) should follow the Prime Minister in that idea. There is not one word in the record, or in the correspondence, or in the testimony available to the House, to show that the Shell Committee were the appointees of the British Government; but there is evidence of an overwhelming character to prove that that committee were the appointees of this Government, and of this Government alone. As evidence on that point, we have first the statement made by the Minister of Militia and reported at page 295 of Hansard:

> I now come to a very interesting part of the discussion, namely, the Shell Committee. And here let me frankly admit to the House that it is my baby; I am the father of the concern, be it for good or be it for bad, and I purpose sticking to it as long as it has a button left on its jacket.

I would like to say to the Minister of Militia that the place in which to stick to the Shell Committee is not on the sunny

beaches or in the shade of the sheltering palms of Florida, but it is in this House, in this Parliament of the nation, and in sight of the people of this country—that is the place in which the Minister of Militia should stand by his "baby;" he should not have gone away and left his "baby" to the fate which will befall it. As further evidence, we have the statement in the report prepared by Colonel Carnegie to be signed by General Bertram, and read by the Prime Minister in this House, as appears at page 1570 of Hansard. The Government cannot repudiate that report, because they themselves submitted it for the information of this House. In that report it is stated:

> The executive work of the committee has been very wisely entrusted to the chairman. Colonel Bertram, who reports weekly to the Minister of Militia and also to the committee when it meets (which is usually monthly) or more often, at the call of the minister.

There you have the official statement that the committee reports weekly to the Minister of Militia and that it meets subject to the minister's call, as at the call of an honorary chairman. We have also the letter from Mr. Hichens, who represented the British Government, and who was entrusted with what, I suppose, must have been the unpleasant task of disorganizing this Shell Committee and providing for the appointment of an Imperial Munitions Board to take its place.

I ask hon. members to listen to the words of Mr. Hichens in the letter written to the Prime Minister and by him submitted to this House on the 7th instant, for the purpose of giving it knowledge of the position in which matters stood. In his letter to the Prime Minister, which may be found on page 1581 of Hansard, Mr. Hichens says:

> In order to carry out your wishes and to make it clear that the purchasing agency is administratively independent of the Canadian Government, the members of the existing Shell Committee have tendered their resignations to the Minister of Militia, by whom they were appointed.

Consider for a moment what was desired. When Mr. Thomas and Mr. Hichens came to Canada it was desired that this purchasing agency should be kept administratively independent of the Canadian Government. Is that not a statement, as strong as a statement can be, that the old Shell Committee was not administratively independent of the Canadian Government? Is that not a statement as strong as language could make it, that the old Shell Committee was in reality a branch of this Government, appointed by the Minister of Militia, and acting for the Minister of Militia and for this Government? In order that the administration of the purchasing agency should be separated from this Government it was required that the Shell Committee should resign and that a new board, to be called the Imperial Munitions Board, and to be appointed by the Imperial Government, should take its place. Mr. Hichens says that the object of the change was to make it clear that the administration of affairs connected with purchases should be altogether independent of the Canadian Government. Listen to the words of Mr. Hichens:

> The members of the existing Shell Committee have tendered their resignations to the Minister of Militia, by whom they were appointed, and a new board entitled the "Imperial Munitions Board" has been constituted by the British Minister of Munitions as from November 30, 1915.

In other words, this committee, which was administratively a branch of the Canadian Government; which was administratively attached to the Department of Militia; which reported weekly to the Minabout once a month or oftener at the call about once a month or oftener at the call of the Minister of Militia—this Shell Committee, as Mr. Hichens says, resigned to the Minister of Militia, by whom they were appointed, and a new committee called the Imperial Munitions Board was constituted by the British Minister of Munitions as from Nov. 30, 1915. This shows as clearly as it can be shown, that in order that the Shell Committee appointed by the Minister of Militia should be done away with and a new board appointed by the Imperial Minister of Munitions, the members of the Shell Committee were required to resign. They promptly resigned to the Minister of Militia, and a new board was appointed by the Imperial Minister of Munitions to take their place. I do not see how it is possible for me to present any stronger evidence than that that the Shell Committee was the appointee of the Minister of Militia and, accordingly, of the Canadian Government.

Sir, what further argument is there for an investigation, altogether apart from the question of the appointment of the Shell Committee? It is said by gentlemen opposite that the British Government requested the Minister of Militia to name a committee. Granting for a moment that that was all that the British Ministry did, surey that was entrusting an important matter to the

Canadian Minister of Militia. Surely in a most important matter the British Government were relying on him to select the men to do this work. The Minister of Militia names these men and they go on and make purchases. They waste the money of Great Britain to the extent of millions of dollars; waste it to an amount not less than $80,000,000, as we allege, and more likely to upwards of $100,000,000. Surely the Minister of Militia has the right to investigate the manner in which these men whom he named have discharged their duties. But, Sir, the Minister of Militia was asked to name this committee not because he was Major-General Sir Sam Hughes, but because he occupied the important position of Minister of Militia. He was in that respect, as in all other respects, the trustee of the people of Canada. The honour of the people of Canada was entrusted to his keeping and to the keeping of his colleagues in the Government. The people of Canada to-day demand an investigation as to how these men named by the Minister of Militia have discharged the sacred trust which was vested in them. It is no use trying to balk this inquiry by technicalities. The people of Canada are saying to-day, that in respect of this vast expenditure of money they have a right to know the facts. Hon. gentlemen on the other side say: Oh, the British Government have not asked for an inquiry. Sir, there is something else besides the mere wish of Mr. Hichens or of other gentlemen who are connected with the British Government. As I have said, the honour and the good name of Canada are involved in this matter. In view of the facts which have been presented by the hon. member for Carleton, the people have the right to have this matter investigated by Parliament; they have the right to ascertain the facts with reference to these grave charges; they have the right to be informed by sworn testimony as to whether any answer can be made to these apparently unanswerable charges. If any answer can be given they have a right to know what that answer is.

The hon. member for Calgary says: you are seeking to besmirch the honour and good name of the manufacturers of Canada. Sir, I deny that. We have not on this side of the House made a single charge against any manufacturer in this country. It has not been suggested, and it cannot be proved that the manufacturers of Canada have combined to raise the prices to the Shell Committee; it has not been suggested and it cannot be proved that they ever demanded any fixed price for the manufacture of these munitions of war. The evidence is that the Shell Committee themselves voluntarily fixed the prices and gave to the manufacturers the prices which they so fixed. The simple question for the manufacturers was as to whether, at the prices fixed by the Shell Committee, they were willing to fill the orders offered to them. I repudiate, therefore, as absolutely without a shadow of foundation the statement that we are seeking to besmirch the good name of the manufacturers of this country, or to impeach their honour in any way.

In answer to the charges made, the Government talk about what has been done by our soldiers who have gone to the front; they talk of the splendid bravery which our men have displayed, the noble manner in which they have been willing to lay down their lives for the Empire. According to these hon. gentlemen, the braver our boys are on the battlefield the greater can be the bungling and boodling at home. That is apparent from the argument of these gentlemen, because that is the only excuse they offer for this dreadful waste of public money. You will remember, Sir, that when the Minister of Militia addressed the House that was the only answer he had to the charges which the hon. member for Carleton (Mr. Carvell) and I ventured to put before the House in the debate on the Address. We have made grave charges against the members of the Shell Committee and against the Minister of Militia, and necessarily against the Government by reason of the Minister of Militia being a member of this Government. Putting the charges in concrete form, what is alleged? In the first place it is alleged:

> That the Shell Committee fixed excessive and unreasonable prices for shells and other munitions and goods to be furnished to the British Government, which by arrangement between the British Government and the Canadian Government were to be paid for in part by Canada.

Is that not absolutely true? Is it not absolutely true that these munitions were to be paid for partly by the British Government and partly by Canada? Can anybody doubt that it is true that the Shell Committee fixed excessive and unreasonable prices for shells and other munitions, and goods to be furnished to the British Government? Sir, I say it is true. I defy any member in this House to combat the figures, and the arguments resulting from them,

which have been submitted by the hon. member for Carleton. They are absolutely unanswerable. The Minister of Militia did not—shall I say dare not—venture to remain here in this House for the purpose of answering them. He knew what the charges were before he left, and he did not venture to remain in this House for the purpose of attempting to give an answer. The hon. member for Carleton gave the dates of these various orders and he showed beyond question that at the very time that this Shell Committee were giving orders to small companies, mushroom companies, at prices which the hon. member for Calgary (Mr. Bennett) says were sufficiently high to cover the cost of the plant, they were giving large orders at the same prices to established concerns which had already been paid many times over the cost of their plant, and which received in that way enormous profits from the orders which were so given to them. That is the statement we make. We not only make it, but we substantiate it by the facts; and, Sir, upon my responsibilty as a member of this House, and knowing the grave consequences which would necessarily fall on me if I should fail to make good the charges which have been made, I declare that this charge is true. I declare that the Shell Committee did fix excessive and unreasonable prices for shells and other munitions. The next charge, put in concrete form, is:

That such prices were fixed without competition and were far in excess of what would necessarily have been paid if ordinary business methods had been pursued.

Is there any doubt about that? Did any one of the hon. gentlemen opposite, from my hon. friend the Minister of Militia down to the hon. member for Calgary, pretend that the Shell Committee asked for competitive prices?

Mr. R. B. BENNETT: Was not every price, in every instance, for every class of munitions, fixed by the Imperial Government before the contracts were awarded?

Mr. PUGSLEY: I would say, no.

Mr. BENNETT: That would settle the whole question.

Mr. PUGSLEY: I have no information that it was. But suppose it were so—and I have yet to learn it was so—but suppose it were so, is that any justification for these men who were upon the spot allowing the British treasury to be robbed by the giving of these excessive prices? We have heard it said that these British officials had no idea of the possibilities of manufacturing shells and other munitions of war in Canada. We have been told stories of the amazing stupidity and want of knowledge of Canada on the part of officials of the British Government. I do not wonder at that when we find that the Prime Minister never, apparently, had sufficient faith in the resources of Canada to stand up and tell some of these British officials that they had a very inadequate knowledge of the resources of Canada when they put forward their statements as to what Canada could do and as to what Canada could not do. I say, Sir, we do know that the Shell Committee, in many cases, gave to these big firms—many of them companies in which they were largely interested, and of which they themselves were directors, in some of which they were the managing heads and the controlling factors—practically the same enormous prices which they gave to other small companies engaged in the manufacturing business. And when we show that these companies have made millions and millions beyond what would naturally have been paid if ordinary business methods had been pursued; when these prices were fixed not by the British Government, but by the appointees of this Government through the Minister of Militia, are we to be told that because the British Government officials, 3,000 miles away, having no knowledge of the industrial possibilities of Canada, knowing nothing of our great factories, or of our skilled workmen, not believing it was possible that Canada could do as much in the way of manufacturing as the people of any other country in the world, and do it as quickly; is it any excuse or answer to the charge we make as to these enormous prices being paid, to say: Oh, well, the British Government did not complain; they did not object to the prices which the Shell Committee fixed, and, therefore, no matter what was paid we have no right to investigate.

Mr. MEIGHEN: Will the hon. member be good enough to specify what company he refers to whose managing head and controller was on the committee and which got large contracts at excessive prices?

Mr. PUGSLEY: If my hon. friend desires to know, I will tell him. There was the Nova Scotia Steel Company.

Mr. MEIGHEN: That is what I wanted to know.

Mr. PUGSLEY: There was the company at Welland, of which Mr. E. Carnegie was

the managing director, and of which for a time Colonel David Carnegie was also a director; and there was also another company in which Mr. Watts was largely interested, and then there was—

Mr. MEIGHEN: Which one was that?

Mr. PUGSLEY: I do not remember exactly, it was given by the hon. member for Carleton. In addition to that there was the Bertram & Sons Company of which General Bertram was vice-president.

Mr. MEIGHEN: And does the hon. member state that General Bertram was largely interested in controlling that company?

Mr. PUGSLEY: Mr. Bertram was in that company; he was the vice-president.

Mr. MEIGHEN: How much?

Mr. PUGSLEY: He has not chosen to tell us how much.

Mr. MEIGHEN: One share.

Mr. PUGSLEY: He said he had one share in that company, but he has not told us whether that one share was for $1,000 or $50,000.

Mr. R. B. BENNETT: He says the shares are $100 each.

Mr. PUGSLEY: He has not told us that. My hon. friend knows there are companies and companies, some with shares of $100, some with shares of $1,000, and some, in small syndicates, with shares of $50,000.

Mr. MEIGHEN: Does the hon. gentleman not think that he should find out, before he says that Mr. Bertram manages and owns that company?

Mr. PUGSLEY: I said that the members of the Shell Committee were largely interested in companies, and that in the case of some of them, the members of the Shell Committee were the directing heads. That is the statement which I have made, which I am prepared to stand by, and which we will prove, if the Prime Minister permits that a committee be appointed.

It is also charged that the unnecessary and excessive expenditures of the Shell Committee amount to at least $80,000,000. Hon. gentlemen opposite may think that is of no consequence. I think my hon. friend from Calgary said it was only a sort of piffling matter.

Mr. R. B. BENNETT: I said the charges were, not the sum.

Mr. PUGSLEY: The extra charges were $80,000,000. Mr. Lloyd George has said that the time may come in this war when the battles will be won by silver bullets. Sir, here are 80,000,000 silver bullets that have been thrown away, and improperly and wrongfully taken from the pockets of the people of Canada and of the Mother Country.

Mr. MEIGHEN: Did Mr. Lloyd George ever say that the war would be won by investigations?

Mr. PUGSLEY: It does not require Lloyd George or anybody else to tell the people of Canada that they have a right to investigate the conduct of the men who are the employees and appointees of the Government. The good judgment, good sense, and conscience of the Canadian people tell them that. It does not require Lloyd George to tell the people of Canada that they know their duty to the Empire in this war. It does not require any one to tell the taxpayers of Great Britain, and the taxpayers of Canada that the British Government, and this Government, are charged with certain duties and responsibilities in connection with the purchase of munitions. It does not require any one to teach the people of Canada that they have the right to know in what manner that trust has been discharged. They have the right to know whether it has been discharged in such a manner as to bring disgrace upon the good name of Canada, or to bring honour and respect to the people of Canada. They have the right to know that, and a portion of the people of Canada through me, as their representative, have the right to know whether there has been mismanagement, whether there has been bungling, and whether, what hon. gentlemen opposite call mistakes, have been made on such a vast scale that they become crimes, through which this enormous sum of $80,000,000 has been taken from the pockets of the taxpayers of Great Britain and of Canada. And yet, hon. gentlemen opposite say: Oh, you must not investigate these matters while the war is on for fear that in some way the reputation of Canada will suffer. So says my hon. friend from Calgary. If the reputation of Canada suffers, it will be because of the disclosures made when the investigation takes place. If my hon. friend has regard solely for the good name of Canada, if he believes that these charges are unfounded, he should welcome an investigation, and have the

facts brought to light; if the Shell Committee and the Minister of Militia are blameless; he should have their good name and good reputation made to shine before the world, and so prevent Canada from standing in the position, in which she would otherwise stand, of having deliberately wasted this vast sum of money, while the Government of the country, whose duty it is to have an investigation, shut down the lid and call upon their followers to sit upon it, to prevent any facts from coming to light. That is what will injure the good reputation and character and standing of the Dominion of Canada.

At six o'clock the House took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

THIRD READING.

Mr. BLAIN moved the third reading of Bill No. 26, respecting the corporation of the city of Brantford, and to change the name to "an Act to enable the corporation of the city of Brantford to own and operate the Grand Valley railway."

Mr. GRAHAM: I want to take the same objection I did yesterday to this Bill; that is, that we in this House have no authority to enable the city of Brantford to do anything. It gets that authority from the Legislaure of Ontario. We have authority in this House to enable the Grand Valley Railway Company to do something. The title ought to read about this way: "To enable the Grand Valley railway to be operated by the corporation of the city of Brantford."

Mr. REID: Does the hon. gentleman suggest that the title should be changed?

Mr. GRAHAM: I am not sure that my hon. friend can change the title of the Bill, because he did not change the Bill at my suggestion; but to be consistent, I say the title should so read. We are not giving the city of Brantford any rights to anything, my contention being that that power comes from the Ontario Legislature, under whose jurisdiction the municipalities are. The railway is under our jurisdiction, and the object of this legislation is to allow the operation of the railway by the city of Brantford. My hon. friend did not accept my suggestion, and therefore he will have to allow the Bill to go through in this way; but my objection is well taken.

[Mr. Pugsley.]

Mr. REID: I know the objection that the hon. gentleman raises, but I cannot see that that will make any difference so far as the Bill is concerned. It is the corporation of the city of Brantford that is making application to have this Bill passed transferring the Grand Valley railway to the operation of the city of Brantford. If the suggestion made by the hon. member had been taken in committee—

Mr. GRAHAM: I raised the same objection, but it was not acted upon.

Mr. REID: I mean in the Railway Committee. Personally, I do not see that it makes much difference; if we change the title now we will have to make the rest of the Bill fit in with it. I do not think anything will be gained by the change, and we might as well let the Bill go through.

Mr. GRAHAM: I am not objecting to the Bill going through, but my opinion, although I am not a lawyer, is that as a matter of law we have no right to enable municipalities to do things. That right comes from the province. We have the right to give power to the railway company. This Parliament incorporated this railway company, and we are really giving the railway the right to be operated by the city of Brantford.

Mr. REID: Sometimes a layman's opinion is a good deal better than a lawyer's.

Mr. GRAHAM: I have made myself clear anyway.

Mr. ROGERS: You will not be held responsible.

Mr. GRAHAM: I think that in future we ought to be careful to have Bills worded properly, so that no question can arise as to a municipality exercising powers that it does not possess. If the province of Ontario did not give the city of Brantford this power this Bill would be of no use to the city.

Mr. COCKSHUTT: There is one precedent for this, and that is the case of the city of London, which runs the Port Stanley road.

Mr. GRAHAM: I have no objection to it at all. I am objecting only to the technical wording of it.

Mr. COCKSHUTT: I understood that the hon. gentleman was objecting to the city having power to run the railway.

Mr. GRAHAM: No.

Motion agreed to, and Bill read the third time and passed.

CONSIDERED IN COMMITTEE.

The House in Committee on Private Bills, Mr. Rhodes in the Chair.

Bill No. 23, to incorporate the Ontario Niagara Connecting Bridge Company—Mr. German—further considered in Committee.

Mr. PARDEE: I will have to ask that this Bill stand. There has been an amendment proposed, it was handed to me only to-day, I have not had an opportunity of communicating with the promoters of the Bill, and the hon. member for Welland (Mr. German) is not here.

Mr. REID: I proposed that amendment. When this Bill was before the Railway Committee I thought that the clause I had proposed had passed, and the solicitor of the Department of Railways and Canals told me that this clause as I had suggested it was to be inserted in the Bill. He cannot understand why it was left out. It is in every railway Bill.

Mr. GRAHAM: That is the standard clause?

Mr. REID: The standard clause; that is the reason I proposed it. The hon. member for Hamilton (Mr. Stewart) has handed me an amendment which he wishes to have inserted in the Bill. He tells me that he has mentioned it to the hon. member for West Lambton (Mr. Pardee). As the Bill is to stand, I will give notice of the amendment. It is proposed to amend section 10 by adding a subsection to be known as subsection 2 and to read as follows:

The company shall not construct any of the works mentioned in section 8 in or over any property of the province of Ontario or under the control of the Commissioners of the Queen Victoria Niagara Falls Park without the consent of the Lieutenant-Governor in Council.

I suppose there is no objection to giving the notice and we can discuss it when the Bill comes up again.

Progress reported.

Bill No. 28, respecting the Kettle Valley Railway Company, and Vancouver, Victoria and Eastern Railway and Navigation Company—Mr. Green—further considered in committee.

On the schedule:

Mr. GRAHAM: Is this to confirm an agreement?

Mr. GREEN: This is for the ratification of an agreement between the Great Northern Railway Company and the Canadian Pacific Railway Company for running rights over the Kettle Valley railway. The Vancouver, Victoria and Eastern railway is a branch of the Great Northern.

Mr. GRAHAM: And the Canadian Pacific controls the Kettle Valley?

Mr. GREEN: Yes.

Bill reported.

SHELL CONTRACTS.

PROPOSED COMMITTEE OF INVESTIGATION.

Consideration of the proposed motion of Sir Wilfrid Laurier, for the appointment of a special committee to inquire into the purchase of shells, etc., resumed.

Mr. PUGSLEY: Mr. Speaker, I purpose devoting a very short time to some remarks on the question of shells, and then I will proceed to discuss the question of fuses, and in connection with that I purpose reading to the House a communication which I have received from Colonel Carnegie, a member of the Shell Committee, and which I deem it only right and just to him to read to the House, because he has expressed a desire that I should do so.

With regard to shells, there has been an effort made by the Minister of Militia and others to convince the House that the making of shells was a matter attended with very great difficulty and that it was almost impossible to induce Canadian manufacturers to engage in the work. It is interesting to compare the statements which the Minister of Militia and other hon. gentlemen opposite have made at different times. I find on page 305 of Hansard the following report of a statement made by the Minister of Militia:

On the 24th August, 1914, the War Office sent us a letter, asking if we could procure for them a small order for shells in the United States. On reflection, it struck me that the highly equipped industries of Canada, which were standing idle at the time, could readily manufacture shells. I had seen shrapnel shells being made in the arsenal at Quebec, and it is merely a blacksmith's job. Accordingly we called a meeting of the Canadian manufacturers.

The Minister of Militia says that the making of shrapnel shells is merely a blacksmith's job. In another part of his speech the minister sought to convey the impression that the manufacturers were timorous about engaging in the work, and he gave the idea that there were great difficulties attending it. That statement conflicts with the statement made by

Colonel Carnegie in the report of the work of the Shell Committee which was submitted to the House by the Prime Minister, and the portion of which I am about to quote will be found on page 1569 of Hansard. After referring to the meeting of certain manufacturers with the Minister of Militia, it goes on to say:

> At a meeting of the above, the whole question was fully discussed. Lt.-Col. Lafferty described in detail the manufacture of the shells and their component parts, and Col. Greville Harston dwelt with the system of inspection. Drawings and specifications were shown and explained, after which the meeting assured the minister that the work could be done in Canada.

Yet the minister would have us believe that it was a number of days after that meeting before any manufacturers could be induced to engage in the work.

Now, with regard to the Minister of Militia being in constant touch with his appointees, the Shell Committee. I will give some evidence in addition to that which I have already given, and which I think should be convincing to the House. I find that the Minister of Militia made this statement, as reported on page 308 of Hansard:

> I felt that, having got the British Government into the scrape, it was my personal business to see that the thing was run right, and I have yet to learn that it was not run right; and therefore I am at General Bertram's back morning, noon and night in this business.

That statement is confirmatory of all the evidence we have, that the Minister of Militia was in constant touch with the Shell Committee and is responsible for what that committee did. It appears that they reported to him every week; he regarded the committee as his particular baby, and he said that, as he had got the British Government into the scrape so far as the appointing of the Shell Committee was concerned, it was his personal business to attend to it, and to see that things were run right.

It was said by my hon. friend from Calgary that the representatives of the British Government, Mr. Thomas, Mr. Hichens and another gentleman whom he named, raised no question with regard to the actions of the Shell Committee, and that Parliament would be acting as a busybody if it sought to inquire into the matter. I am not impressed with that argument, because, as I have said, this is Canada's business just as much as it is the business of the British Government. The gentlemen who made these purchases were the appointees of Canada—for the Minister of Militia is merely the trustee of the people of Canada—and the moneys which were being expended and the debt which was being incurred were as much the moneys and the debt of Canada as of Great Britain, except that the share of Canada would not be so large as that of Great Britain.

But let us see if this hon. gentleman was right in saying that the representatives of the British Government were entirely satisfied. Reading the reports of interviews which Mr. Thomas gave from time to time, we find that he was far from satisfied. On one occasion he spoke of "lifting the veil," —a singular expression for a man to use who had found everything satisfactory and who felt that the veil could be lifted without injury to anybody's feelings and without disclosing anything wrong. The report of an interview with Mr. Thomas was submitted to the House by the Prime Minister himself, and I take it that the right hon. gentleman is satisfied that it is an authentic and correct report. In that account are these words:

> He—

That is, General Bertram.

> He has distributed the orders for the smaller shells in lesser quantities and over a wider field than Mr. Thomas, looking at the matter from the British tax-payer's point of view would have done. But in that General Bertram was guided by a wish to relieve industrial depression prevailing in Canada over as wide an area as possible.

Mr. ROGERS: Hear, hear.

Mr. PUGSLEY: "Hear, hear," says the Minister of Public Works.

Mr. ROGERS: That is right; quite right.

Mr. PUGSLEY: I could understand, if this Government was paying these extra charges out of the treasury of Canada, that it might be justifiable for the appointees of the Government to give encouragement to industries throughout the country, and to pay higher prices than they otherwise would for that reason. But what right had these appointees of Canada to take the money of the British treasury, not for the purpose of helping the Empire to win the war, but to encourage the industries of Canada and relieve industrial depression? There is no doubt this Government was anxious to give to their favourites in different parts of Canada orders for shells. I give them credit for being desirous, and honestly desirous, of relieving industrial depression in Canada. But what they ought to have done, if they thought that

desirable, was to give a bonus out of the Canadian treasury, instead of taking the money out of the pockets of the British tax-payers. Would not that have been the fair and honest course? To-day, the Government stand in this position: that their appointees have taken from the British taxpayers the enormous sum of upwards of eighty millions of dollars; and these gentlemen say: We were seeking to encourage industry in Canada and to relieve industrial depression. Is it not a shame and a disgrace that gentlemen should be called upon and compelled to defend the action of the Shell Committee upon such a ground as that?

Mr. ROGERS: It is a greater shame to make the reckless statements the hon. gentleman is making.

Mr. PUGSLEY: In his heart, my hon. friend knows that the statement I make is absolutely true.

Mr. ROGERS: Absolutely reckless.

Mr. PUGSLEY: And if he reads the records, he will be the first to agree that I am stating what is true. He will make these charges without the evidence, without knowing the facts. But let him learn the facts, and he will hesitate to make statements of this character. He knows, or ought to know, and will know if he reads the evidence submitted by the hon. member for Carleton, N.B., that I am stating what is true. Let him compare the excessive prices paid for these shells with what they could have been made for, allowing a reasonable profit to the manufacturers, and he will agree with me that when I put the sum at eighty millions of dollars, I am putting it below the amount at which it might well be put. This account of Mr. Thomas's views goes on:

> The profits of the manufacturers, in Mr. Thomas's judgment, had been higher than they were entitled to.

Is that the evidence of a man who is satisfied that business methods have been pursued? Mr. Thomas comes out from England upon a very delicate mission. He comes because of the dissatisfaction existing at the centre of the Empire, and his mission is to look into the question and get rid of the source of the evil by which the British taxpayer is being mulcted to a large amount. He goes to work diplomatically; for he necessarily must be very cautious in what he says. There is every reason why he should speak as favourably as he can of the actions of the Shell Committee; and he must have every desire not to quarrel with the Government whose appointees the Shell Committee are. Still he feels compelled to say that the profits of the manufacturers have been higher than they were entitled to. And he goes on:

> This was perhaps difficult to avoid under the circumstances.

And what were the circumstances? One important circumstance was that the Shell Committee was endeavouring, not to fulfil primarily the demands of the war, but to relieve commercial depression throughout Canada; and to this end they were giving small orders and encouraging the creation of these mushroom companies in different parts of the country. Under these circumstances, it was difficult to secure shells at fair and reasonable prices. The account proceeds:

> Anyway, that is past history, so far as Mr. Thomas is concerned.

He had spent three long months looking into this matter, to see how he could get rid of the Shell Committee, and he succeeded at last. He saw the Imperial Munitions Board in sight, but in leaving the country he tells the people that prices have been higher than they ought to have been, and also, that he would not have distributed the orders over a large area and in small quantities, as the Shell Committee had done. But he recognizes that the object is to relieve industrial depression in Canada, and, under all these circumstances, he says, perhaps the high prices could not have been avoided.

This Shell Committee, influenced by somebody—influenced probably by the gentleman to whom they reported every week; influenced by the gentleman who appointed them, influenced by the gentleman who would recognize as well as any one else what benefit it would be to this Government—was desirous to get something started which would relieve the industrial and commercial depression which had come to Canada, which had spread from the Atlantic to the Pacific a year before the war started, and for which the inactivity and want of progressive ideas on the part of this Government were largely responsible. Under these circumstances the Shell Committee was obliged, under its non-competitive policy of having fixed prices at definite times, to give the same price to the large manufacturers with established plants as they gave to the small companies. In the latter case an order for, say, 10,000 shells

would embrace the first cost of the plant as well. It is no wonder, Sir, that under these circumstances profits to those having large orders ran to enormously large amounts. It is no wonder that Mr. Thomas was amazed when he came to Canada and found that these high prices had been paid. It is no wonder that although he desired to smooth over all difficulties as well as he could, he was obliged to say that he would not have done as the Shell Committee had done; that, while higher prices prevailed under all the circumstances, this, perhaps could not have been avoided. Then he said that under the new system of competitive tendering which has now been adopted by the Shell Committee—he preferred to call it the Canadian Munitions Committee—there would be no cause for complaint in this respect. What stronger condemnation can you have than that?—that Mr. Thomas came to Canada and found the state of affairs to which I have referred—which has been proved conclusively to this House, and which no one has questioned. He found that the Shell Committee were not asking for tenders; that the prices which they were fixing covered the cost of the plant, thus giving the advantage to the big manufacturers whose plants had already been paid for two or three times over He immediately put a stop to this. When he succeeded in making arrangements for the new Munitions Board it was provided that they should call for tenders. I say that that was a strong condemnation. Hon. gentlemen say that this was a mere mistake. The right hon. the Prime Minister says that no doubt the Shell Committee made mistakes; the hon. member for Calgary (Mr. R. B. Bennett) says the same thing. But, in view of the fact that these mistakes have cost Canada and Great Britain the enormous sum of $80,000,000, a man would be very tender in his feelings towards the Shell Committee if he did not think that these things amounted to more than mistakes; that they ran into such misconduct and such malfeasance as would justify one's characterizing them by a much harsher name.

The right hon. Prime Minister made an extraordinary statement with regard to the manufacture of shells. He has told this House that almost ever since he and his colleagues came into office they had the feeling that there was danger of war between Germany and the British Empire. He stated probably a year ago that as long ago as January, 1914, owing to secret information which was received from the British Government his Government took action to organize a service which would be devised by the deputy ministers of the different departments, and a committee was formed, at the head of which was Sir Joseph Pope. Yet as late as August 24, nearly a month after war had been declared—when the Minister of Militia, observing the manufacture of shells at the Quebec arsenal, had seen that it was only a blacksmith's job—the Prime Minister had grave doubts as to whether shells could be made in Canada in any large quantities, in the immediate future. When the Prime Minister and his far-seeing businesslike colleagues, gentlemen with business acumen, heard that there was likely to be war, would you not have thought that, if they had a reasonable regard for the interests of the country, they would have looked into the question of what Canada could do in the way of making munitions? Did their vision never go beyond the sending of our men to take their places in the battle line? Did they not think of shells, guns, rifles, explosives? If the Prime Minister and his colleagues had visited the Quebec arsenal they would have found them manufacturing shells there. True, the manufacture of shells at the Quebec arsenal is carried on only in a small way; but one would have supposed that, if hon. gentlemen saw this great danger to the Empire, they would, months before the war broke out, have taken steps to enlarge the arsenal and equip it with proper machinery, so that if the day of battle should come Canada could be in a position, through her own arsenal, to turn out munitions of war for the assistance of the armies of the Empire. Does it not seem incredible to you, Mr. Speaker, that a month after the war had broken out the Prime Minister had doubts as to whether shells could be made in Canada in any large quantities? One would almost think that the Prime Minister had been asleep during the fifteen or eighteen years of Canada's wonderful prosperity, One would think that he was oblivious to the fact that great industries had been created during those years; that marvellous strides in the way of industrial development had been made, and that, when war broke out, as has since been demonstrated, Canada, in proportion to her population, was better equipped for carrying on manufacturing of any kind or description than any

other country in the world. These gentlemen express themselves as amazed at what Canada did, and at what the Canadian manufacturers did, as if they were surprised to learn that Canadian manufacturers are just as skilful, just as energetic, just as resourceful as the manufacturers of any part of the British Empire or of any other country. They seem to have been amazed to find Canadian workmen as skilful and intelligent as the workmen of any other country. We on this side of the House have nothing but praise for the manufacturers of Canada. What we are astonished at is that gentlemen on the other side of the House should be so amazed to find that the Canadian manufacturers could do as well as the manufacturers of any other part of the British Empire. We are not astonished that they were able to do as well as they did. We should have been astonished and amazed if they had not done as well as they did, because we knew of their capabilities, their energy, their intelligence; we knew of the skill with which the workmen would apply themselves to the task of turning out these munitions.

Before dealing with the question of fuses, I wish to say that I received a letter from Col. David Carnegie which I think it is only just to him that I should read to the House and place on Hansard. I am sure that that is his wish, because he requests that I should give publicity to his repudiation of the charge which he thinks I preferred against him. The letter is as follows:

Imperial Munitions Board,
Ottawa, February 26, 1916.

Dear Sir,—A few days before leaving England I received a cutting from the Toronto Star of January 20, in which the following statement was made purporting to be an extract from a speech made by you in the House of Commons, Ottawa, January 19:

"What did General Bertram do after receiving his knighthood which I believe must have been given him as a handy way to get rid of him? General Bertram declared that he himself and he alone fixed the prices. But he hasn't stated the whole facts. Col. Carnegie was associated with him and these two men distributed favours to their friends and themselves. This was entirely irregular. Millions of dollars have been taken from the British taxpayer by reason of the system."

I should have passed the matter over as unworthy of notice had it not been raised in Parliament by a responsible member such as yourself with a decided intent to reflect upon my integrity. Whatever prompted you to associate my name with irregular practices I care not, but I cannot allow such statements to pass unrefuted as you have personally attacked me. I not only resent with my whole soul the charges it is reported you made, that I with General Bertram placed contracts with friends and favourites, but I deny them absolutely.

I have the charity to believe that you have given utterances to allegations about which you had no ground for proof and that you have no knowledge of the man whose character you have impeached. Confident of this I give at some length an account of my connection with the committee and demand a public explanation and apology.

If you are in doubt about the character of the man against whom you have launched such charges I would refer you to my records for fifteen years in the Government service at Woolwich Arsenal, for four years at Hadfield's Sheffield, and for four years at Samuel Osborn's, Sheffield, and latter to my career as private consulting engineer in London.

If you will inquire at the various learned societies in England and Scotland; if you will inquire into my social and public work for my fellows in the cities in which I have lived; if you will closely investigate every act of service I have rendered to the Shell Committee since September, 1914; if you will examine the records of all transactions with which I have been engaged; if you will discuss with manufacturers minutely my dealings with them and also inquire of the gentlemen who visited Canada from England with the object of investigating the work of the Shell Committee, I defy you or any other man to find the slightest trace of any irregular practice of conscious wrongdoing in any work with which I have been connected and with any part of the committee's work I have handled.

I have received words of appreciation from Lord Kitchener and the personal thanks of Mr. Lloyd George in connection with my services on the Shell Committee.

I came to Canada at the beginning of the war a comparative stranger. I have laboured incessantly not only in connection with the work of the Shell Committee but with a view to the industrial development of the country and I believe I have the confidence of the Prime Minister, Sir Robert Borden, and the Minister of Militia, General Sir Sam Hughes, who have closely followed the work I have done in connection with the committee.

Reference has been made to my connection with a Welland company. About four years ago I visited Canada with the object of investigating how far the steel manufacturing industry could be developed in the country and I ultimately decided with other friends to start steel manufacture in Welland by utilizing the cheap electric power obtained in the district. I invested my own capital and induced others in England to invest theirs. Being an expert in steel manufacture, I was appointed a director of, and consulting engineer to the company, and at my office in London designed the works which were ultimately completed just before the war broke out. Instead of taking the usual consulting fees such as I received from clients for whom I was doing similar work in Britain and the continent, I decided to accept payment over a period of five years so that the company would not at the outset be taxed unduly. I did this because the company had difficulty in raising capital in Canada which the Canadian directors fully expected to obtain.

I arrived in Canada towards the end of September, 1914, with the object of starting up the new works. Before my arrival the Shell Committee was formed, an order was placed with the Welland Company for shells, and the first price to be paid was already fixed.

I had no knowledge whatever that a Shell Committee had been formed or that shells were to be made in Canada, until after I arrived. I wish to emphasize this fact as it has been stated that I was party to the placing of shell contracts with the Welland Company at the high price originally given by the War Office.

Having a thorough knowledge of shell manufacture, being for many years in charge of the various branches in the shell department at Woolwich Arsenal, the attention of General Hughes was drawn to this fact and my services were commandeered right away for three months to instruct Canadian manufacturers in the art of shell making.

As the Welland Company with which I was connected had received an order for shells and my brother, Mr. E. Carnegie, was general manager and also member of the Shell Committee, I placed my resignation in the hands of the board and also suggested the withdrawal of my capital, notwithstanding the fact that General Hughes and the members of the committee knew my connection with the Welland Company before my appointment as Ordnance Advisor. My fellow directors would not at first accept my resignation as they stated it would jeopardize the interests of the shareholders who had been induced to place their capital in the company because they knew me and depended upon my expert help in making it a success. They also referred to the agreement I had with the company to give them my services as consulting engineer. Financially it would have been inconvenient at the time to pay me out, but I persisted in resigning immediately from the directorate, stating that I should give to them the same assistance as to any other company engaged in the manufacture of munitions. I stated also that I should withdraw my capital immediately I saw the company was in such a position that I could sell out without interfering with its success. The company ultimately consented to liberate me from my obligations as their consulting engineer, and I have had no financial or other interest in the company since last September.

That was September, 1915, a year after the first order was given.

As my term of service with the Shell Committee as Ordnance Advisor was for three months only, I was advised by many of my friends that I was making a needless sacrifice in resigning my directorship of the Welland company. The committee at that time understood that no more shells would be required, and only a few companies were willing to undertake the work even after a guarantee had been given that any loss would be made good in the event of the work not paying.

The Welland Company with which I was connected received the orders because of my brother's knowledge of shell manufacture, he being one of the few men in Canada who knew anything about the work.

At the end of three months I returned of England, saw the officials of the War Office, informed them of Canada's ability to produce shells and obtained their permission, after much discussion, to use basic steel in Canada for high explosive shells. This had never been previously granted and meant a very great deal to Canadian steel manufacturers who produced only basic steel. I also induced the War Office to place additional orders for shells in the Dominion.

I was asked by the Shell Committee if I would continue my service as Ordnance Advisor

[Mr. Pugsley.]

without stating any definite period, it being expected that the orders then placed would be completed in the spring. I threw in my lot not knowing how long I would be required to act, and on my return to Canada I had most attractive offers made to me by private companies, the remuneration from which was very many times more than that paid to me by the committee. I mention this fact simply to show that it was not a matter of money with me at all, but the highest sense of duty which impelled me.

While in England it was suggested to me by Lord Moulton that we should try to manufacture trinitrotoluol in Canada. This was quite a new departure for Canada, and I urged that the matter be taken up with earnestness. Through the efforts of General Hughes and Mr. Plummer, of the Dominion Iron and Steel Company, Sydney, N.S., plants were erected in less than four months for the production of toluol from the coke oven waste gases which were subsequently trinitrated and shipped to England. To-day several plants are now producing T.N.T. and approximately eight hundred thousand pounds are being produced.

At the suggestion of General Hughes, with the support of Sir Robert Borden, a commission was appointed to investigate the feasibility of refining copper in Canada and producing metallic zinc. I had the honour to be chairman of the commission on which Professor Stansfield, of McGill University, and Dr. Wilson, of the Mines Branch, gave most valuable assistance in accomplishing the end we had in view, and to-day both zinc and copper are being refined in Canada. I have striven to encourage the development of Canada's manufactures to include every possible material required for the complete round of ammunition. At the beginning of the war we were dependent entirely upon the States or England for many of our materials. To-day all classes of material required are now being manufactured in Canada. Some of the new industries established will become permanent in the supply of domestic requirements hitherto imported These facts alone are of more value to me than all the thanks and praise that man can give.

I just pause here to remark that the Minister of Militia led us to understand that the use of basic steel was entirely owing to his original thought on the subject; but Col. Carnegie appears to claim that he is entitled to credit for that suggestion.

Last April General Sir Sam Hughes added my name to the list of members of the committee, an honour which I esteemed highly, particularly as it was unsought. During my whole connection with the Shell Committee, before I was a member and since I was appointed a member, it has always been a pleasure to work along with General Bertram and the other members of the committee. General Bertram and I were virtually the executive for many months together, until latterly when the work of the committee increased Mr. Riddell was appointed financial advisor.

During these months of incessant work from early morning until midnight, I have had the pleasure of meeting many talented Canadians, whose ability, energy and charms I have coveted. I can say without the shadow of doubt that in all my associationes with the Canadian Shell Committee and the many manufacturers

with whom I have had the pleasure of doing business, I have not detected any sugestion of what is known in Canada as "Graft" or crookedness. Had I, as a stranger to Canada, believed that the men of business were soaked in habits contrary to the laws of morality such as some writers to the press would suggest, I would despair of seeing Canada that great and industrial asset of the Empire which I have not only dreamed it will become, but to which end I have worked with my whole strength.

While in England, from which I have just returned, I have been on Canada's business working with constant diligence in securing additional orders for shells and materials, the details of which are well known to the ministry there.

I have written at length as a strong protest and an emphatic denial of the imputations made upon my integrity. I shall be the last to admit that in an organization such as the Shell Committee, which in the course of a year grew from a small institution to one of the most responsible in Canada, no mistakes were made in dealing with the many-sided problems which faced us. The wonder to me is that many more mistakes were not made. When the mistakes of the Shell Committee are compared with the mistakes made by similar organizations at home one is amazed to find anywhere in Canada a discordant note regarding the work rendered by a body of men who gave their services so willingly during the Empire's struggle.

I remain, sir,

Yours very truly,

David Carnegie.

The Hon. Wm. Pugsley, M.P.,
Ottawa.

To that letter I replied as follows:

February 29, 1916.

David Carnegie Esq.,
Imperial Munitions Board,
Ottawa, Ont.

Dear Sir,—I am in receipt of your valued favour of the 26th inst., which I have read very carefully and with much interest.

As a considerable portion of your letter is based upon what purports to be a condensed newspaper report of my remarks made in the House of Commons in criticism of the Shell Committee, I take the liberty of enclosing you herewith a copy of Hansard containing a full report of my speech. If you will be good enough to point out any portions of my remarks which were not correct, or of which you complain, it will afford me much pleasure to read your letter in the House at the first convenient opportunity. I should be very sorry to do you or any one else an injustice. You will please bear in mind that that part of my criticism to which you appear to give special attention, was directed against, what seemed to me, the improper and unbusinesslike methods pursued by the Shell Committee which resulted in greatly excessive prices being paid, and that companies of which members of the committee were either the directing heads, or in which they were largely interested, participated in these excessive prices so fixed by the committee.

I am,

Yours very truly,

William Pugsley.

To that I received the following reply:

Imperial Munitions Board,
Ottawa, March 3, 1916.

Dear Sir,—I thank you for your letter of the 29th February, received yesterday afternoon together with copy of Hansard containing a full report of your speech of the 19th January.

The condensed newspaper report of your speech (extract of which I gave in my letter of the 26th February) differs little from your statements on pages 79 and 80 of Hansard, which are as follows:

"This Shell Committee fixed the prices which one company, of which the Shell Committee's chairman was vice-president, and another company of which Mr. Carnegie, another member of the Committee, was manager, were to receive for shells. In other words, the Shell Committee fixed the prices in the benefits of which some of its members were to share."

It is quite clear to me that you thought I was manager of the Welland concern, and as manager was fixing prices for shells ordered from that company.

Let me pause here to remark that I did not mention the name of Col. Carnegie in that connection. Perhaps I did 9 p.m. not draw a clear enough distinction between Col Carnegie and Mr. E. Carnegie. I knew that Mr. E. Carnegie had been a member of the Shell Committee almost from the start, and I was informed that that gentleman was the managing director of the Welland company, which got a very large order at what Col. Carnegie himself says was a high price. That is what I had in mind, not intending to reflect on Mr. Carnegie's personal integrity, but as evidence of the unbusinesslike methods which this Shell Committee had pursued. I say that it is wholly contrary to good business principles for men engaged as trustees in work of this character to be both buyers and sellers. It is entirely contrary to good business methods, and in ordinary business it would never be admitted. If a trustee bought for his trust estate property in which he was interested, the courts would rip up the transaction without looking into the merits of the case, because they would say that no man in that position had a right to occupy the dual position of buyer and seller. That is what I complained of, that a member of the Shell Committee was the managing director of the Welland company, which got an order running up to millions of dollars. That is not denied by Col. Carnegie; he only says:

"When you made that statement you gave Parliament to understand that it was Col. Carnegie, myself, who was the managing director of the Welland company, and that

statement is an imputation upon my honour; that is a charge made before the world that I did something I ought not to have done." By Col. Carnegie's judgment as to what is an impeachment of a man's honour, let other members of the Shell Committee be judged. Let his brother, who is the managing director of this company, and who was on the Shell Committee from the start, be judged by the standard which Col. Carnegie lays down for himself; and let Col. Cantley and the other gentleman—I forget his name—who was on the committee also, and who was interested in some of the companies in Toronto which got large orders, be judged by the standard which this high-minded gentleman lays down as the standard which ought to influence and guide gentlemen placed in their position. He says:

It is quite clear to me that you thought I was manager of the Welland concern, and, as manager, was fixing prices for shells ordered from that company.

That is not what I meant at all. I did not say that he, as manager of that company, fixed the prices. It was the Shell Committee who fixed the prices, neither the Welland company nor any other company in Canada had anything to do with the fixing of the prices. It was the Shell Committee who fixed the prices which applied to themselves, to their companies, and to the other big industrial companies which had, as I have said, already established plants, and to all the little mushroom companies which were given small orders at excessive prices, which include the first cost of the plant as well. That, as I have said, was entirely improper conduct, and conduct which every business man would condemn. He proceeds:

You state on page 80: "I am told that Mr. Carnegie, whose company was receiving a large number of orders, was the only member of the committee who was acting with General Bertram; that it was these gentlemen who, in large measure, distributed these favours, as I have said, to the amount of a vast sum of money distributed them among themselves.

I wish to particularly emphasize that my brother Mr. E. Carnegie who does manage the Welland concern had no more to do with fixing the prices than any of the other manufacturers outside the membership of the committee. The prices were fixed by General Bertram alone, during the early part of the committee's work, and later by General Bertram and myself. I deny that at any time I distributed favours to manufacturers or to myself. It is gross libel and I will allow those who to know the work I have done and who are not led by misstatements in the press, to judge as to the integrity of my character.

Your references in your letter to the improper and unbusiness like methods pursued by the Shell Committee give me not the slightest concern. I am quite happy to allow those who are in a position to know and who have already expressed opinions worthy of consideration, to judge of the valuable services rendered to the Empire by the members of the old Shell Committee.

I repeat my request for a public apology.

I, am, Sir,
Yours very truly,
D. Carnegie.

Hon. Wm. Pugsley, M.P.,
House of Commons,
Ottawa, Ont.

I have nothing for which to apologize to Colonel Carnegie. I am very glad indeed to do him full and complete justice as far as I can by placing upon Hansard the two letters which he has written to me. They state his position and it will be for the public to judge whether or not there has been any intentional slandering of him or any intentional impeachment of his honour on my part. I am not conscious of having done anything for which I should apologize, and I have nothing to retract from my remarks in my speech on the Address. There is nothing in Colonel Carnegie's letter to detract from the statement I then made, and which I repeat: that the members of the Shell Committee were directors, and in some instances the directing force, of companies which received orders for vast quantities at prices far and away beyond what was reasonable and fair. That is the important statement which I made in the debate on the Address and that is the important statement which I make to-night; that these gentlemen were in effect both buyers and sellers, and that as buyers they fixed the prices at which they would buy from the companies of which they were themselves the directors, which prices were far and away beyond what was fair and reasonable, that is the criticism which I make with regard to members of the Shell Committee. I do not charge them in that respect with fraud, I do not charge them in that respect with criminal intention, but what I do charge is that there was a duty devolving upon them, a duty devolving upon the Minister of Militia and upon the members of this Government which appointed this committee, to see that they discharged the trust reposed in them in a reasonable and businesslike manner. When it is proved in this House—as it is proved by the figures presented by the hon. member for Carleton —that in the giving of these orders in a short period extending over some fifteen or eighteen months, there was unnecessarily taken out of the taxpayers of Canada and

of the United Kingdom the enormous sum of upwards of $80,000,000, we have the strongest possible ground for complaining of the unbusinesslike and improper methods that were pursued. I have already said that if the Government of Canada in the exercise of their judgment thought it wise to encourage industry throughout the country and to relieve industrial depression, the aid for that purpose ought to have been taken out of the Canadian treasury and not out of the pockets of the British taxpayers.

But, Sir, the Minister of Finance has been made very comfortable by these enormous war profits. I can well understand, whenever the Prime Minister would hear of these excessive prices, the Minister of Finance saying to him: My dear Premier, don't you worry. The Finance Minister is far-sighted; he is looking forward to the revenue. He said: Don't you worry over the $80,000,000 of excess profits which these war munitions manufacturers may get; I am going to take twenty-five per cent of it back and put it into the Canadian treasury; don't you worry, Sir Robert. I can imagine the Minister of Finance looking towards the heavens with that beatific smile which covers his face when he is evolving some great and beautiful thought, and I can imagine him saying to the Prime Minister: Don't you worry. The Finance Minister has now come down with his taxation measures along these very lines and he proposes to take back twenty-five per cent of the profits which have gone to the manufacturers, and which are to be paid jointly by the British treasury and the Canadian treasury. If, as I suppose, the British treasury pays about ninety per cent and the Canadian treasury ten per cent, the Minister of Finance will be in the happy position that while Canada is only paying ten per cent of these excessive profits, he will get back twenty-five per cent and the Canadian treasury will be fifteen per cent to the good when the matter is finally closed. No wonder the Minister of Finance has been during all these months looking forward with happy anticipation to this means of supplementing the revenue. My hon. friend has also made the fact that he is going to impose taxes upon the manufacturers of munitions of war, an excuse for presenting it as a system of taxation and exacting taxes from the general business interests. He thinks he will be able now to say to the people: You cannot complain, because, as you see, we are taxing the war profits.

I would have supposed that there were two or three plain duties devolving upon this Government and upon the Shell Committee. One, to get munitions of war at the lowest possible price, and another to carry out in good faith the assurance which my right hon. friend the Prime Minister had given to the people of Great Britain, that Canada was prepared to consecrate her resources to the service of the Empire. If the Government wanted to relieve industrial depression throughout Canada by establishing small manufacturing concerns and giving them small orders for munitions, they should have said to these concerns: You must take these orders at reasonable and fair prices. If the Government found it necessary to bonus them by paying them a price that would cover the cost of plant, they should pay it out of the Canadian treasury, and not out of the pocket of the British taxpayer. I would have thought that that would be the view which the Shell Committee would have taken.

I shall now, in concluding, make reference to the purchase of fuses. There is no question about the truth of the statement which was contained in the speech of my right hon. friend the leader of the Opposition, that there was great and unnecessary delay in the production of the finished shell which has greatly hampered the work of our armies at the front. If hon. gentlemen need any further proof of that, let them read the statement which was published by the Imperial Munitions Board, through Mr. J. W. Flavelle, the chairman, and in which he said that the Shell Committee had gone on making empty shells, and had paid no attention to the question of procuring fuses. He said that it would be a waste of money to continue turning out the empty shells until they could catch up with a supply of fuses. This is the statement, in concrete form, which is made: That the Shell Committee neglected, delayed, and failed to endeavour to provide for the construction in Canada of an adequate supply of fuses; that it proceeded to award to Mr. J. Wesley Allison, on behalf of a foreign corporation, a contract amounting to $22,000,000, and made an advance of $3,750,000; that the making of the contract through Colonel Allison was unwise and improvident, and was entered into with the knowledge and connivance of the Minister of Militia, and that the Shell Committee failed to obtain delivery of the fuses within a reasonable time. That is the charge which I

make and which we can prove if the motion of my right hon. friend (Sir Wilfrid Laurier) is granted. And, Sir, is not that a serious charge to make against this committee and against the Minister of Militia? It is that that committee went outside of Canada to the United States for the purpose of obtaining an article which they could just as easily have obtained in Canada; that they negotiated there through Colonel Allison, giving through him an order for the enormous amount of $22,000,000. Think of it, Sir, $22,000,000 given to two companies who, as I charge, had no plants to enable them to manufacture fuses, and to whom the Shell Committee advanced the enormous sum of $3,750,000 in order to enable them to equip their plants so that they could engage in the manufacture of fuses. Why did they not do that for Canada? Is there any hon. gentleman opposite who will justify the Shell Committee and the Minister of Militia in respect of the giving of this vast order for fuses in the United States under the circumstances which I have mentioned? I pause for a reply. The Minister of Militia has gone away, and he has left here an hon. gentleman who, he says, will represent and defend him. I ask that gentleman to rise in his place to-night, if he will venture to do so, and say if he justifies the Shell Committee for giving this order for fuses in the United States. Sir, it cannot be done. The same advance of $3,750,000 to Canadian manufacturers would have secured the manufacture of fuses in this country just as well as such an advance could secure their manufacture in the United States. When I tell you, Sir, that not very long after this, upon the urgent request of a manufacturer in Canada, an order was given at a lower price and for only about half a million fuses, as was shown in the figures presented by my hon. friend from Carleton, N. B. (Mr. Carvell), you will see how utterly unjustifiable was this transaction. While in my speech on the Address I referred to this matter of fuses being ordered in the United States and made some very severe charges against the Shell Committee in respect of them, yet Colonel Carnegie, in the letters which he addressed to me, did not think it worth while to refer to the question of fuses at all, although I am told that Colonel Carnegie, the high-minded gentleman who wrote those letters, is the member of the Shell Committee who is largely responsible for the making, through Colonel J. Wesley Allison, of this improvident contract in the United States. I am told—I do not know how true it is, but I believe it is the case; I shall be corrected if I am wrong—that those companies have not yet delivered a single fuse, notwithstanding the fact that the order was given a considerable time ago and that the enormous sum of $3,750,000 was advanced to them.

Now, Sir, I have taken a somewhat longer time than I expected to take; but the matter is of such importance that it seems to me it is worthy of the time which has been occupied. When in the debate upon the Address I made remarks of a general character, but remarks which I knew would, if necessary, be followed up by the evidence when my hon. friend from Carleton came to deliver his speech, I hoped that in a matter of such grave importance, and one in which the people of Canada were so deeply interested, the Government would at once have said that the matter should be investigated; and then it would not have been necessary to make these statements to the House, and the facts would not have become public until they were presented before the committee of investigation. But, although I endeavoured to present, in a somewhat cursory way, the evidence which I had, so as to give to the House an idea of what would be proved in case a committee were formed, not treating the matter in any partisan spirit at all, what was the immediate result? My hon. friend the Solicitor General made one of the bitterest speeches which I have ever heard him make—and the hon. gentleman, although he may not feel any bitterness, can assume it. By his speech he sought to arouse all the worst passions existing in the bosoms of hon. members on the other side of the House; he depicted me as everything that was unpatriotic and unworthy of commendation; and my hon. friends opposite, who usually have a somewhat friendly feeling towards me, seemed on that occasion to be exceedingly changed in their demeanour and almost to feel that I had done something very unworthy of a member of this Parliament.

Some hon. MEMBERS: Oh, no.

Mr. PUGSLEY: In the press of the country, the course of the Solicitor General was followed, and my hon. friend from Carleton was also charged with doing what was unpatriotic and unworthy.

Some hon. MEMBERS: Oh, no.

Mr. PUGSLEY: We come now to the consideration of the resolution of my right hon. friend (Sir Wilfrid Laurier), for whom every one has the highest praise, and we ask, in all candour and in all sincerity, that this expenditure of $380,000,000, in which the people of Canada and the people of Great Britain are interested in proportion to the men whom they will have engaged in battle before this war is over, shall be investigated by a committee to be appointed for that purpose. We do not think that the people of this country will be content to wait, as my hon. friend from Calgary has asked us to do, until the war is over. If there is any member of this Shell Committee, or any member of this Government, or any one who has been employed by the Shell Committee, who, in the language of my hon. friend from Calgary, has washed his hands in blood money, the people of this country have a right to know that fact now. They ought not to be asked to entrust their business longer to men who are guilty in the way my hon. friend from Calgary has described; and it is not to the interest of the people of this country that our only redress shall be that, as my hon. friend says, their children and their children's children shall be remembered with execrations and curses for the advantage which they have taken of the necessities of the people in this terrible war. We think the investigation ought to be now, because the people are demanding it and will be satisfied with nothing less. But, Sir, I cannot believe that hon. gentlemen opposite will be so unwise in their own interest as to refuse so reasonable a request. As I stated at the opening of my remarks, while I think that the charges already made were sufficiently definite, yet, in deference to my right hon. friend (Sir Robert Borden), who wanted some member of the House to rise in his place and take the responsibility of putting these charges in concrete form. I have taken upon myself that responsibility. The Solicitor General (Mr. Meighen), I understand, is likely to follow me. If he does, he may take the technical ground that this motion ought to be dropped and the charge presented in connection with a new and substantive motion. But that would be an objection of the most technical character. The only object of requiring the charge to be made by a member is to relieve the House from frivolous charges being made for which no member ventures to take the responsibility. Let us deal with matters of substance and not with matters of form. We have heard the evidence presented by my hon. friend from Carleton; we have the resolution of my right hon. friend the leader of the Opposition, demanding in the name of the people of this country an investigation into the transactions of the Shell Committee; and you have myself, a humble member of this House, rising in my place in support of the motion, and taking upon myself the full responsibility, as a member of the House, of undertaking to prove these charges.

Mr. Speaker, this Government may ask their supporters to vote down this resolution. They may say to the people of Canada: "No matter what mismanagement, no matter what waste of money there may have been; no matter how improperly this Shell Committee may have acted; no matter how much knowledge the Minister of Militia may have had of these improper and irregular practices; no matter what the evidence may be, yet we are prepared to vote against allowing the light of day to shine upon these transactions; we are prepared to call upon our supporters to prevent an investigation of this matter." But let me tell you, Mr. Speaker, that, although many things have happened during the months which have gone by since we last assembled in Parliament that have tended to weaken the confidence of the people in this Administration, no administration that ever existed in this country ever took a course more likely to be universally condemned by the people than will be the course of this Government if they vote against the passing of this resolution.

Hon. ARTHUR MEIGHEN (Solicitor General): Mr. Speaker, I approach the discussion of this resolution convinced, first of all, that it has not the zealous support even of hon. gentlemen in the minority in this House. I am convinced, furthermore, from observation of the course of the debate, that the heart of the mover himself, the leader of the Opposition (Sir Wilfrid Laurier), is by no means behind the course he has taken. I am not one who can assume, having some knowledge of hon. gentlemen opposite, that there are going to be defections when the formal vote comes. But I am convinced of this, that there are hon. gentlemen on the other side of the House, not a few, who realize the position we are in and what this resolution means, and who, if they had the slightest

fear that this resolution would carry, would step out and themselves help to vote it down. I cannot help but observe the absence from the Chamber, during much of the discussion, of those stalwarts of the Liberal party in this House who have been the backbone of the debates in other days. I cannot but observe the lack of interest on the part of those who mean what they say when they take part in the discussions in this House. Consequently the conclusions my own mind has arrived at are firmly established, and I should not be at all surprised if there were visible, tangible evidences of their correctness before this debate is finished.

It was suggested by the hon. member for St. John (Mr. Pugsley) that I might take the technical ground in regard to a certain paper which he read at the opening of his address—and which he calls a formal charge against the Government of the day, against the Militia Department, and against the Shell Committee and everything else—that, this charge, as alleged, having been made, the resolution should be withdrawn and a committee appointed to investigate the charge. I hasten to assure the mover of the resolution that I have no intention of treating the alleged charge half so seriously.

Though the mover of the resolution may have been animated in some degree by a desire to keep his bargain with the malcontents of his party who voted, or at all events acquiesced, perhaps against their will, in the extension of Parliament, still the only purpose he has in view from the partisan standpoint is to endeavour to place upon the Government of the day the responsibility of voting down an investigation.

Now, I make no novel statement when I say that the Government now in office has not, during its tenure of power, assumed a hostile attitude toward investigations. The rules under which investigations are granted in parliaments in British countries are well established. We have not only in every case complied with these rules, but we have gone, I believe, beyond what has ever been done in any British Parliament. We have, in advance of the times, when the expenditures of the departments of government are entitled to be investigated by the Public Accounts Committee, moved, at the instance of the Prime Minister himself, that the rules of the House and the country in that regard be abandoned, and that the expenditures for war purposes be placed before the Public Accounts Committee. In case any fraud or irregularity of any kind is alleged with respect to war expenditures, we have established a standing commission before whom any man in this country may go and have his complaint investigated. In regard to expenditures of this Government over which we have power of disposition, there is this standing commission now open to hon. gentlemen opposite, or to any others, and before that commission they can go and get at the truth and get a verdict. Has that been done in any other country? Is there a precedent in the British Empire for a wide-open door like that? In the face of that policy, a very strong presumption exists against what the mover of this resolution seeks to establish against this Government.

In this case we are asked not to review the work of the Government of the day, not to investigate a charge of fraud or irregularity even against the appointees of the Government, but to investigate alleged charges of mismanagement by appointees of the Government who, after they were appointed, dispensed the money under the Government of Great Britain. The resolution should be read, because it is some time since it came before the House. I will read it now in order that hon. gentlemen may know the extent of the responsibility they are taking in asking the Government of Canada to establish the precedent that the passing of this resolution would establish. It follows:

> That a special Committee of members of this House be appointed to inquire into all purchases of shells or other munitions or goods by the Shell Committee formed by the Minister of Militia, as stated to this House by the Prime Minister on the 15th April, 1915, together with all contracts made or orders given by the said committee for any shells or other munitions or goods, with authority to the said committee to examine witnesses under oath and to require the production of any documents, books, letters or papers; and that such special committee be directed to report from time to time to this House in such manner as it may think advisable.

Speaking to the resolution, the hon. member for Carleton (Mr. Carvell)—who, after all, is at the bottom of this movement, and whom it is expected to glorify—stated that his purpose was to show that the prices paid in Canada were in excess of the prices paid in United States and in Great Britain. He even thundered forth the awful pronouncement that if we would only give him a committee of investigation he would show that in most cases the prices were 25 per cent greater than in Great Britain. What a catastrophe, what a

fearful state of affairs, it would be if he showed such an awful thing as that. His own leader stated to Parliament not very long ago that it would cost 33⅓ per cent more to build ships of war in this country than it would cost to build them in Great Britain. In the face of that, he demanded that this Parliament and this country do it, and not Great Britain. What I am driving at is this: the purpose of this resolution is to expose to the Canadian people and to the people of Great Britain, to blare to the enemies of this country and the enemies of our Allies, to flare before the face of enemies far and near, all the resources that go to make up the strength of the Allies in this war, whether in Canada, in the United States or in the British Empire. The purpose of the resolution could never be served unless the fullest inquiry were made into the conditions of every factory in the United States—yes, and in Great Britain—competing with the factories of Canada. The purpose of the resolution could not be served unless in Great Britain facts were disclosed which the Government of Great Britain have denied to the British people, but which we are asked to expose not only to the British people but to the world at large at the behest of the hon. member for Carleton. Is it the solemn desire of this House to fly in the face of the war policy of the British Government? In a letter to the Prime Minister himself Mr. Lloyd George has said that it is the policy of the British Government—he has repeated this over and over again in the Commons in England—neither to expose documents of state that bear on the resources of Canada in regard to the supply of munitions, nor to give the prices that the British Government are paying for munitions in their own country. Are we to deny wisdom to David Lloyd George and accord it to the hon. member for Carleton? I bow the reverential knee to the hon. member for Carleton in some matters. He is evidently a mechanical genius; when it comes to tin cups and plugs, brass sockets, and friction tubes, he can tell the House a good deal; but in the matter of the management of the war he will please excuse me if I cling to Lloyd George for a little while yet. Can he tell me how the purpose of this resolution could be served except by the exposing of these facts which the British Government deny to the British people?

I have stated that in so far as charges of fraud or irregularity are made in respect of the conduct of this Government, there is a court for their investigation. I do not know that the British Government has ever gone that far; indeed, I am convinced that they have not. The hon. member for Carleton set out to show that the British Government, during the war in the Crimea and during the war in South Africa, had undertaken investigations, and he endeavoured to bring home a false statement to the Prime Minister of Canada in regard to both these instances. Well, I have observed the conduct of the Prime Minister of Canada for seven or eight years in this House. I have listened to his speeches, and read a great many of them, and if there is one habit which he always follows, if there is one virtue which he possesses more than any other, it is that he never makes a misleading or false statement to the House. I have never heard hon. gentlemen on the opposite side or anywhere else bring into Parliament two sentences or two paragraphs attributable to the Prime Minister and make them clash; nor can they bring one into Parliament and make it clash with the actual facts. The hon. gentleman tells the House that the Prime Minister stated that there had been no investigation and no inquiry in the Crimean War—that inquiry had been refused. The Prime Minister told the House nothing of the kind. He told the House that during the Crimean War there had been in the British House an attempt at an inquiry, which had proved a fiasco. Those are the words of the Prime Minister. What is to be thought of the member who, in the face of those words, tells us that the Prime Minister told this House and the country that there had been no inquiry at all during the Crimean War? Any time my hon. friend wants to challenge an assertion that I make, he is welcome to do it; I will produce proof from under my hand, out of Hansard, or out of the document in which it is contained. There was an inquiry during the Crimean War. It was moved for by Mr. Roebuck on the date stated by the hon. member for Carleton. Inquiry was made as to war contracts and as to the conduct of generals in the field. A general inquiry was moved for. When it was moved for first, Lord John Russell, the leader of the Government, resigned; the Government remained intact. The resolution was moved again a few days later, and, after one of the strongest protests ever made on the floor of Parliament by Mr. Gladstone, the motion carried

against the Government, and the Government resigned. Consequently, an investigation, or an attempt at investigation, followed. Those who have read the words of Mr. Gladstone at that time will realize the wisdom and prescience of that statesman in regard to the policy against which he protested and in respect of which he went out of office. He told the Commons of Great Britain that there could be no effective investigation; that any investigation that would be attempted would necessarily prove a farce; that it would do harm at home and produce disaster abroad. He rejoiced that his last words as a member of the Cabinet of the Earl of Aberdeen embodied a solemn protest against a proceeding which in his judgment meant weakness to his own country both at home and abroad. An investigation followed, and if ever there was a fiasco, if ever there was a farce pure and simple—except possibly the speeches to which we sometimes listen in this House from the hon. member for St. John—if ever there was a fiasco, it was the work of that investigating committee. Now, to prove just what that committee did and to enter a warning as to what would result should we follow the behests of hon. gentlemen opposite, let me read this from its report:

> The difficulty of the task has been enhanced by the impossibility of bringing some persons as witnesses who could have furnished important information. From the same cause some persons are left under imputations in regard to which your committee regret that they can pronounce no conclusive opinion. The fullness of the inquiry has been restricted by considerations of state, so that at the outset of this report your committee must admit that they have been compelled to end an inquiry which they have been unable satisfactorily to complete.

Here we have the admission of the men most favourable to the inquiry, the men who themselves accepted appointments on the committee, that they were unable to produce any adequate results. That was the last time the Government of Great Britain—even although serious charges of a certain nature were made—ever launched a general inquiry such as would expose to the enemy the resources of their country during a war. Do I hear the hon. member for Carleton say they did it in the South African war? He tried to show the House that they did something, but what they did was not at all as he described. It was a different thing entirely, in its character and kind, from the resolution we are asked to adopt. It was an entirely different thing in character and kind from the resolution which carried in 1855, during the Crimean War. What was it that they did during the South African War? According to the hon. member for Carleton they passed in May, 1901, a resolution in the following language:

> That a select committee be appointed to consider and report upon any allegations of fraud and irregularity in connection with War Office contracts—

Does the House get the words? "Any allegations of fraud and irregularity." This was passed in May, 1901. Everybody knows what an irregularity is, especially when associated with the name of fraud.

> Fraud and irregularity in connection with War Office contracts during the last 12 months. That the committee have power to send for persons, papers, and records, and that five be a quorum.

At the same time a general inquiry was asked to be set on foot, an inquiry into the entire management of affairs connected with the war, an inquiry into purchases and the like; and that inquiry was refused by the Government of the day and postponed until the conclusion of the war. Why? Because you can inquire into a specific allegation of fraud or irregularity and not expose to the enemy any of the resources of the country. You could not set on foot a general searching inquiry and fail to do harm to the interests of the state. Consequently anything in the nature of a general inquiry was refused, and refused in the public interest, until the war was over.

Is there any charge of fraud or irregularity here? Even were this shell committee, our committee, acting under our instructions, subject to our disposition and our supervision, a committee whose every act we supervised and were responsible for; even were it such a committee there is nothing brought forward and nothing urged to bring it within the purview of that British resolution and make it the duty of this Government to grant an investigation. The hon. member for St. John, not five minutes before he sat down, made it clear to the House that he charged nothing in the way of fraud or irregularity even against the Shell Committee; yet who will ever forget the demeanour and the language of horror, yes, of tragedy, with which he opened that address? He was going to meet the Prime Minister of the day, and from his place in Parliament take the whole responsibility for the grave and serious charges he was going to make; he was going to expose himself to the abdication of his seat in Parlia-

ment, and to the ignominy of his fellow members and the whole of Canada; he was going to make such charges against the Shell Committee and the Minister of Militia, and to take the full responsibility therefor. I congratulate him that he has not lost his sense of the dramatic. His knowledge of stage effect would compare with that of Sheridan himself. But I am afraid he does not judge aright the intelligence of this House, if he thinks that any member of the Parliament of Canada is going to call a thing a charge because he so denominates it. One may, of course, charge the Government and the Conservative party with being inferior in intelligence to the Liberal party and to the Government of the Liberal party, and he might clothe that charge with all the habiliments, all the trappings of great importance, and so endeavour to convince the public that he was making something in the nature of a charge involving the honour of a minister of the Crown. But surely he cannot so deceive the Commons of this country.

What has he done? Let us throw off some of the dressings; let us throw off some of the verbiage, and get down to the meat. Let us see what "charge" he actually does make against this Government, in respect of which he takes such a fearful responsibility on himself, a responsibility almost unprecedented in the history of Parliament, occurring only once in ten or twelve years, and by making which "charge" he places his own seat and his own reputation at stake.

He charges that we have a Shell Committee appointed by this Government. Surely it is appointed by this Government. In that respect the charge is true; he takes no risk in making that statement, because we have plainly stated so for over a year.

He charges that prices were fixed without competition, and were far in excess of what would necessarily be paid if ordinary business methods had been pursued, and, therefore, there have been wasted large sums of money, conservatively estimated at at least $80,000,000, which will be improperly taken from the people of the United Kingdom and of Canada. That is a charge all right; but I have sat in Parliament, I think, almost every day for seven years, and I do not think I ever sat here a day when I did not hear that charge, or some exactly similar charge, made on the floor of this House, that the Government had expended money where they should not have expended money, that they had paid too much for this or for that or for the other thing. Who ever heard of an Opposition that was not charging that every day of its existence?

Then, he says that they gave large orders at excessive prices and without competition to companies in which members of the committee were largely interested, and of some of which companies members of the said committee were the directing heads. Is that a charge of fraud? He knows better than to call it so himself. He knows that, under the law of this country and of every country, even if what he says has a vestige of truth, you can deal with an incorporated company entirely irrespective of whether or not you yourself hold stock in it.

Furthermore, he charges that there has been great and unnecessary delay in the furnishing of completed shells for the use of Canadian and British forces at the front. Why, the Minister of Munitions in Great Britain admits that on behalf of the British Government. Is that a charge involving the honour of a Government?

Let me go a little further. Here is the most amusing thing of all: that the Shell Committee neglected and delayed, for an undue period of time, to provide the fuses necessary to render the shells effective. One would really think that we were firing off our shells in France without any fuses in them. One would think that we did not know that there had to be a fuse to fire a shell. As if those could not be made anywhere else than here, and as if in the arrangement at the War Office, involving, as it did, the whole of the Allies and the Empire as well, there was not some policy as to the distribution of the manufacture of the various parts of a shell. He charges that the Shell Committee,

> —failing to endeavour to provide for their construction in Canada, as they might have done, proceeded to give and award through J. Wesley Allison, in the United States, contracts for fuses amounting to $22,000,000 on which they made an advance of $3,750,000.

That is the charge that is made. Call it whatever you like: call it a charge, or mere fault-finding, as the hon. member for Carleton denominated part of his own address, it involves nothing in the way of the honour of a member of the Shell Committee, let alone a member of the Government.

Then he goes on, and here is where what I might call the Pugsleyism of the hon. member for St. John comes in:

> That the making of the said contracts through said Allison was unwise and improvident, and was entered into with the knowledge and connivance of the Minister of Militia, and the said Shell Committee failed to obtain delivery of said fuses for an unreasonable time.

How artistically that last remark sounds to us, especially in face of the pronouncement of the hon. member for Carleton, yes, and of the right hon. the leader of the Opposition, both of whom solemnly and repeatedly assured the House that there had never been a shell delivered at all. The hon. member for St. John says they had not been delivered in a reasonable time. What he says is this: The Shell Committee, in that contract, made an unwise and improvident expenditure, and the Minister of Militia had knowledge of it, and connived at it. The language is very skilfully drawn, but what does it mean? It means no more than if he had said that the minister had made an unwise and improvident expenditure. Surely conniving at some one else's unwise and improvident expenditure is no worse than being guilty of it oneself. Assuming there was knowledge and connivance—and he has not a tittle of evidence to show it, no suggestion of evidence from a single man—assuming it is correct, is to connive at what some one else does any worse than to do it oneself? Suppose, then, that he says that the Minister of Militia made an unwise and improvident bargain. What a charge! Why, they have been charging that against him ever since he has been in office, and when they charged it most loudly and most emphatically, who thundered loudest of all? Before the war, when he was preparing against an emergency in this country, when he was building drill sheds and armouries throughout Canada, there was not a speaker on the opposite side who did not charge him with unwise and improvident
10 p.m. expenditures. And the hon. member for St. John is doing nothing more to-day. He is just repeating the old-time allegation, and putting on it a few frills, in order, if possible, to impress the gallery and the House. When you want to get at the real character of an animal throw off the blanket first. The hon. member for St. John trots out something here, puts a long mane on it, a tuft of tail, and a few whiskers, and says: "Look at this; it is a great lion, which will kill you unless you do what I say." But just take the mane off and lift the blanket, and you find the same old wooden dog that he has been trotting out for years.

The course pursued by the British Government in cases of special allegations has been not to permit of general investigations in war time. That has always been their policy, at least since 1855. In defiance of the specific request of the British Government itself, through its representative here, Mr. Hichens, and through its Minister of Munitions, Mr. Lloyd George, by letter, we are asked to throw open the doors of investigation, and to expose to the enemies of Canada the very information which the British Government deems they and they alone should have.

I pass from that phase of the subject. The Prime Minister has stated the policy of the Government, and I will repeat it, because I think it is well that it should be emphasized, and it is only just to the Government that the people should know what we are prepared to do. We resist nothing which those responsible for its effects approve or sanction. Those who are responsible for the effects of what we do in this regard are those responsible for the conduct of the war on the part of the Empire. If we undertake to diverge from or to reverse their policy, we had better get into their shoes and do their work. But, while they are responsible, it is for us to follow the principles they lay down, and, no matter at whose behest, no matter how animated by partisan frenzy others may be, we propose to follow them, and we will follow them to the end. We shall lay before the British Government all the allegations made. I have some sympathy with its members who will have to read the nine-hours' speech of one member, and the speeches of many hours of others; but they will have to do so. We will lay the allegations before them and ask for their judgment. If they are prepared to have us investigate, we are ready to do so; we are ready to give them every facility; we are ready to conduct the investigation ourselves if they approve of it; we are ready to pass legislation if it is necessary to make that investigation effective. Moreover, unless it is authorized by them, and the doors are thrown wide enough open at their will, it never can be made a real investigation which would serve the purpose that all investigations should serve.

While that is the policy that we choose to adopt in deference to sound principles that are laid down for us by the constitution of this Empire, and by the practice both of the Empire and of Canada, it is important at this time that the public of this country and the hon. members of this House should get at least some idea of the real facts in respect to which they have heard certain allegations from hon. gentlemen opposite. It is well, and it is in the public interest,

that the people of Canada should know whether or not these allegations made by the hon. member for Carleton, sometimes in quite specific language, are correct or not. It is due to those public servants who through long weary months did this work to at least place on record what we are able to put on record, without violating the policy of this country or exposing secrets of state. It is well to put on record the actual facts in that regard, and I propose to do so. But I shall exercise every caution not to follow the example of the hon. member for Carleton, who, through some source, I know not what, gathers up a whole lot of data, and comes to this House and, in defiance of the specific request of the British Government, exposes it to the world. I will try not to follow that example, and I think I shall be able to refute what he says without doing so. Where he has given facts, where he has given statements which he says are facts, it will be necessary in some cases, in order to refute them, to give information that would otherwise not be given; but no information will be given that will add one iota to the harm he has already done in exposing to the House and to the country what he had no right to expose.

There is a difference between the hon. member for Carleton and the hon. member for St. John. The hon. member for Carleton always delves into such sources of information as are available to him, delves rather recklessly and carelessly, it is true, but at all events he digs and hunts around and always brings something into the House that he alleges to be actual fact. He is not wanting in industry. He is wanting in accuracy, in correctness and in a sense of responsibility as to the statements that he makes in this House, but, at all events, he is industrious. The hon. member for St. John, on the contrary, does not seem to think that there is any duty devolving upon him to make any inquiry whatever. He does not need to make any inquiry as to the circumstances concerning anything, or any event, or any alleged statement. So long as he has heard or read it somewhere, it does not matter where, he is justified in imparting it to the House and giving it all the circulation he can if perchance it will bring any party capital to himself or his friends. Take his whole speech to-day? It opened with that dramatic incident, which one hardly knows whether to describe as comic opera or not, and then from that on it was mostly an attempt at humour. The whole was a curious mixture of counterfeit tragedy and farce. I am afraid it will not add to the impressiveness of the speeches that have gone before when they reach the British Government and when this manifesto with which he started out brings to their attention his idea of what is a charge on the part of one member against another in a House of Parliament.

The hon. gentleman rests his case on the facts, as he calls them, adduced by the hon. member for Carleton. He does not attempt to bring any more of these alleged facts to the attention of Parliament. They stand, he says, these "irrefutable" facts established by the "irresistible" evidence, and he cannot understand how any hon. gentleman can deny an investigation into them. So that, if we expose these alleged facts presented by the hon. member for Carleton—yes, all of these alleged facts—and I will undertake if given time just to lay bare the whole of them—there will not be much foundation left of the speech of the hon. member for St. John. He perhaps will realize that he has been leaning on a broken reed, hewing out a broken cistern, in relying on the alleged "facts" presented by the hon. member for Carleton. It is stated by that hon. gentleman that very grave irregularities have taken place, first, because these men gave huge contracts at large profits and there is the assertion that these men distributed contracts to themselves and to companies in which they were interested, allied companies—subsidiary companies he calls them—and he goes through the whole list of the manufacturing members of the Shell Committee in order to establish this allegation. I wonder if he has looked into the facts since; I wonder if he looked into them before he made that statement. Did he inquire to find out whether the statement he made was true? He started with General Bertram. He said that General Bertram was connected with three companies and that therefore the Shell Committee gave contracts to General Bertram. One was the John Bertram & Sons Company, Limited, the other the Chapman Engine & Manufacturing Company, and the other the Valley City Seating Company. He said that contracts given to these three companies the amount of $1,500,000 were given to General Bertram himself. Does the hon. gentleman believe there was any connection between any one of these companies? Does he believe that General Bertram has any interest

in any one of these companies? I ask him if he believes so.

Mr. CARVELL: Does the hon. gentleman want an answer?

Mr. MEIGHEN: Certainly.

Mr. CARVELL: I made the statement that he is an officer of one, and certainly I believe he is.

Mr. MEIGHEN: I ask the hon. gentleman if he thinks he had any interest in any one of the three.

Mr. CARVELL: I say I do believe it.

Mr. MEIGHEN: Will the hon. gentleman tell me where he inquired to find out?

Mr. CARVELL: You go on and give us your side of it. You say you are going to give us the facts; let us hear them.

Mr. MEIGHEN: He inquired where he inquires for everything; that is, he has resort to any newspaper that he can find, chiefly to the Liberal monthly, and if he fails to find support for his belief in any of them, he has resort to the fathomless entity known as his imagination. Yes, I will give the facts. First of all I want to give the statement made by the hon. gentleman to show what he relied on and what he expected the House to accept as sufficient foundation for his assertion that when this committee gave contracts to any one of these three companies it gave contracts to General Bertram. He said that General Bertram is vice-president of the John Bertram Company. That is correct. Then, he said that Mr. Henry Bertram is a director of the Chapman Engine and Manufacturing Company, and that it is an allied company. He named all of the eight other directors but because Mr. Henry Bertram is a director of the company he claims that it is an allied company and consequently Sir Alexander Bertram is interested. Then he traces up the directors of the Chapman Engine and Manufacturing Company and finds that Mr. Pennington is a director of the Valley City Seating Company. Mr. Pennington is a director of the Valley City Seating Company and he is on the Chapman Engine and Manufacturing Company board. Then Mr. Henry Bertram is on the directorate of the Chapman company as well as on that of the John Bertram company, and therefore that is sufficient support in the mind of the hon. gentleman for the statement to this House that because the Shell Committee gave contracts to each one of these three companies it gave them to the chairman of the Shell Committee. Did anybody ever hear of an allegation against a man, public or private, resting upon a foundation like that? Does the hon. gentleman think that that was sufficient to found an allegation on before the Commons of this country? If everything he said was correct, it established no such conclusion, no part of such a conclusion, and it did not absolve him from putting himself in the position of being a reckless slanderer of public and private men. I make the assertion, which I have proof here to establish, that Sir Alexander Bertram has no beneficial interest in even the John Bertram Company, that he has no interest whatever in either of the other two, and that not one of the three has any relation to the other. I will weary the House to read the affidavit of Mr. George Williams with regard to this matter:

Province of Ontario, County of Wentworth, to wit:

I, George W. Williams of the town of Dundas, in the county of Wentworth and province of Ontario, make oath and say:

1. That I am the manager and director of the Chapman Engine and Manufacturing Company, Limited, Dundas, Ontario, and have knowledge of the matters and things herein deposed to.

2. That at the time the old Shell Committee placed with us orders for machining and assembling 18-pr. H.E. shells neither Sir Alexander Bertram nor any other member of the Shell Committee had any connection with our company whatsoever, neither is he nor any other member of the committee connected with our company at the present time nor have they been at any time during the fulfillment of the orders above referred to.

3. That at the time of receiving above mentioned orders our company was practically controlled by the Ontario Wind Engine and Pump Company, Limited Toronto, Ontario, who owned 500 shares preferred and 400 shares common stock of the total issue of 1,783 shares of the capital stock of the company.

4. That at the time of the organization of our company Mr. Henry Bertram and Mr. J. D. Pennington were asked to become shareholders and officers of the company in order to make a convenient directorate and to give the company a certain amount of local standing.

5. That Mr. Henry Bertram of the J. Bertram & Sons Company, Limited, Dundas, Ontario, in order to qualify as a director and officer of the Chapman Engine ond Manufacturing Company Limited purchased with each one share of the capital stock of the company.

6. That Mr. J. D. Pennington of the Valley City Seating Company Limited, Dundas, Ont. in order to quality as a director and officer of the Chapman Engine and Manufacturing Company Limited, purchased with cash one share of the capital stock of the company.

7. That the Chapman Engine and Manufacturing Company, Limited was not at that time nor is at the present time in any way connected with the J. Bertram & Sons Company, Limited, or the Valley City Seating Company, Limited.

Geo. Williams.

Sworn before me at the town of Dundas, in the county of Wentworth, this 13th day of March A.D., 1916.

John S. Fry,

J.P. in and for the county of Wentworth.

So Henry Bertram, the brother, is the owner of one share in the Chapman Engine and Manufacturing Company, Limited.

I read the affidavit of Mr. Pennington, who, I am informed and believe—the source of my information is the hon. member for Wentworth (Mr. G. C. Wilson)—is a prominent Liberal of that constituency:

Province of Ontario, County of Wentworth, to wit:

I, John D. Pennington, manufacturer, of the town of Dundas, Ontario, make oath and say:

1. That I am president of the Valley City Seating Company, Limited, of Dundas, Ontario, and have personal knowledge of the facts herein deposed to.

2. That Sir Alexander Bertram, late chairman of the Shell Committee, has not nor has he ever had any financial interest in the said Valley City Seating Company, Limited.

3. That none of the stock of the Valley City Seating Company, Limited, nor any securities of the said company are held by the John Bertram & Sons Company, Limited, of Dundas, Ontario, or by any of its directors or officers.

4. That neither the Valley City Seating Company, Limited, nor any of its officers or directors hold nor have they ever held any of the capital stock or other security of the John Bertram & Sons Company, Limited.

5. That there is no financial nor any other connection existing between the said Valley City Seating Company, Limited, and the said the John Bertram & Sons Company, Limited, nor have the said companies ever been in any way financially or otherwise connected.

J. D. Pennington.

Sworn before me at the town of Dundas, province of Ontario, this 13th day of March, 1916.

W. H. Moss,
J.P. in and for the county of Wentworth.

Then, I read the affidavit of Henry Bertram, which is the last:

Province of Ontario,
County of Wentworth,
To wit:

I, Henry Bertram, manufacturer, of the town of Dundas, Ontario, make oath and say:

1. That I am secretary-treasurer of the John Bertram & Sons Company, Limited, and have a personal knowledge of the facts herein deposed to.

2. That Sir Alexander Bertram is vice-president of the John Bertram & Sons Company, Limited.

3. That the said Sir Alexander Bertram sold in the year 1905 his entire holdings of stock in the said company.

4. That since the said year he has had no financial interest in the said the John Bertram & Sons Company, Limited.

5. That the stock book of the John Bertram & Sons Company, Limited, shows the said Sir Alexander Bertram to be holder in trust of I share only of the capital stock of the John Bertram & Sons Company, Limited.

6. That this one share of stock is issued in the name of Sir Alexander Bertram for the sole purpose of enabling him to act as a director of the John Bertram & Sons Company, Limited.

7. That no arrangement or agreement exists whereby any financial or other gain accrues to the said Sir Alexander Bertram from any of the profits of the said the John Bertram & Sons Company, Limited.

Henry Bertram.

Sworn before me at the town of Dundas, province of Ontario, this 13th day of March, 1916.

John S. Fry, J.P.

Mr. PUGSLEY: Did my hon. friend see the report of the interview which Gen. Bertram gave before he left the country, in which he said he had an interest to the extent of one share in John Bertram & Sons, Limited, which share, as he said, he would not part with for all that the Shell Committee could give him?

Mr. MEIGHEN: I presume he is going to keep that one share in the Bertram family.

Mr. PUGSLEY: He said he did not own any share but had one in trust.

Mr. MEIGHEN: Might he not hold it in trust for his family?

Mr. PUGSLEY: He does not say that.

Mr. MEIGHEN: He says he holds it in trust—this one share of stock.

Sir ROBERT BORDEN: That is enough to justify the investigation.

Mr. MEIGHEN: That is enough to justify the investigation. In the opinion of the hon. member for St. John, that share might be worth $1,000, or $10.000, or $1,000,000—who can tell?

Mr. PUGSLEY: I said we do not know what it is worth.

Mr. MEIGHEN: Time would be wasted to go any further in order to expose the utterly ridiculous, the almost insulting, character of the foundation upon which these gentlemen base their alleged charges. A million and a half of dollars went to those three companies, they say, and, by reason of this fatal one share in one of the companies, there ought to be an investigation into this very unpatriotic conduct

on the part of Sir Alexander Bertram—$1,500,000 out of what I believe is $380,000,000.

Well, we are not through with all of them yet; but I think that is Sir Alexander Bertram's family disposed of. I think the right hon. leader of the Opposition will admit that.

Sir WILFRID LAURIER: No.

Mr. MEIGHEN: We come now to Mr. George W. Watts, and, of course, some vicious misdemeanour had to be brought home to him; he had to be put in the same position as the others, of distributing favours to himself. The hon. member for Carleton set about to see how best he could do it. He finds, of course, right away that Mr. Watts is, I think, works manager of the Canadian General Electric company, but in his look at the data that he got his eyes on somewhere, he finds, as he believes, that this Canadian General Electric company did not get any contract, and he says: "Well, that is hardly in line with my argument; I wonder how I am going to get over that great difficulty;" and he devises a way to get over it, and this is his scheme. "Why," he says, "it is true that the Canadian General Electric company did not get any contract but one small one, although Mr. Watts was connected with it, but the trouble is that it should have got them. "The Canadian General Electric Company" he says "is one of the largest and best companies in Canada; I have been doing business with it, and this is one of the companies that should have got contracts, and I arraign the Shell Committee because this company did not get any contracts." That is the charge he made in regard to the Canadian General Electric company. "Why," he says, "here is a company, not only one of the finest companies in Canada, but one that can make anything that any one in the world can make, one of the largest companies, including its parent company in the States, on this whole continent," and he finds serious cause of quarrel with the Shell Committee for daring to deny a contract to the Canadian General Electric company. That is how he undertook to get over the great difficulty that he thought he faced when he discovered that the Canadian General Electric company got practically no contracts, although Mr. Watts was works manager. But he had to bring guilt home to Mr. Watts; and here is his language, as reported in Hansard:

[Mr. Meighen.]

I pass now to the next member of the committee, Mr. Watts, a gentleman whom I have never met, a gentleman with whom I have no quarrel whatever.

Just as he had no quarrel with any of them.

He is as modest as any of them; but he seems to be very closely identified with a firm of railway contractors who have been discussed in this House in the past to some extent, and with whom I have no great quarrel. I refer to the firm of Mackenzie & Mann. I find that the Universal Tool Steel Company, of which Sir Donald Mann is the president, the Hon. F. H. Phippen is secretary-treasurer, and Sir William Mackenzie, S. C. Wood, D. A. Cameron, William Clancy and Robert I. Henderson are the directors, received contracts amounting to $1,735,000 from the Shell Committee; and, as the list is not a very long one, I will give it to the House.

So he gives the list of contracts. Then he says further:

If one goes through the list of firms manufacturing shells, one will find plenty of mushroom companies throughout Canada able to take a contract for 10,000 shells at $5.70 each, and to buy the necessary machinery; but Mr. Watt's company—

This apparently becomes Mr. Watts's company at once, although he is not a director, and my hon. friend does not even allege him to be a shareholder; but, as he is closely connected with Mackenzie & Mann, therefore, according to my hon. friend, this is Mr. Watts's company.

—but Mr. Watt's company had to have a contract for 100,000 shells at the top-notch price.

Well, I have a letter from Mr. Watts, which I will read if the hon. gentleman wants it, in which he states that he has no connection, and never had any connection with Mackenzie & Mann, and he says that he has no connection with the Universal Tool Steel Company and never had. Sir William Mackenzie happened to be in the city to-day, and I asked him, and he said that Mr. Watts had never had any connection with Mackenzie & Mann in any character whatsoever. Nevertheless, according to the hon. member for Carleton, he is the man of the Universal Tool Steel Company, and consequently he gave himself $1,735,000 worth of orders. But let us inquire a little further. The Universal Tool Steel Company is the only example the hon. gentleman gave in the course of his speech of these "mushroom companies." He may know what a "mushroom company" is better than I do, but let me tell him what the Universal Tool Steel Company is. The hon. gentleman is on record as saying that it was organized to get these contracts and went right in for the shell business. As

a matter of fact, if he had gone to the Secretary of State's Department, he would have found out that this company was organized and got it's charter on 17th April, 1914, some months before the war began. If it was organized for the purpose of getting contracts for shells, at least those who organized it had a better knowledge of the position of the British Empire in regard to war than had the hon. member for Carleton. But this company was organized to take over the Canadian Tool Steel Company, Limited, which had been doing a steel business for years. The capital was enlarged to take care of some process that had been discovered for the hardening of steel. Here was this old-time company, doing business for years, whose name was changed on 17th April, 1914, months before the war broke out, and this is the best example the hon. gentleman can give of this hideous nightmare of his, a " mushroom company."

Oh, but this General Electric Company—what a pity it did not get any contracts I thought I would make some inquiries. I knew this was a good company; we all know the Canadian General Electric, as a company long established in this country. one of our strongest industrial enterprises. I myself wondered that it had not got contracts, and could not see any reasons why it should not have got them if it wanted them. And I saw he quoted a communication from the Shell Committee to the British Government, to the effect that the Canadian General Electric would undertake to deliver 100,000 shells by 1st January. 1915. That undertaking was given about the end of September, 1914. The hon gentleman laid stress upon the fact of this Canadian General Electric being ready to deliver 100,000 shells in the course of two or three months. They were not people to undertake what they could not do, and this showed that the shells were a very simple matter, and we should have had them earlier than we did. I made inquiries, and —will the House believe what I found to be the fact?—will the hon. member for Carleton believe it?—so far from not getting any orders, this Canadian General Electric got orders from the Shell Committee, or from the Munitions Board—mostly from the Shell Committee—amounting to $10,749,440. Here is the Shell Committee, under the chairmanship of Sir Alexander Bertram, that commits the crime of giving a million and a half to three companies in which General Bertram has one share in trust, and the hon. gentleman complains of failure to give business to a concern which in fact received orders for over ten millions of dollars. One would think, and I must say, after investigating this matter—and the facts I bring before the House are from the Imperial Munitions Board, who, the hon. gentleman says, are all right—I actually came to the conclusion that the hon. member for Carleton had made it his ambition, if he did get access to these papers, to winnow out every grain of truth, and bring into this House only the dust and chaff.

Mr. CARVELL: Does the hon. gentleman allege that I got access to any documents belonging to the Munitions Board of the Shell Committee?

Mr. MEIGHEN: I do not know what the hon. gentleman got access to.

Mr. CARVELL: I want my hon. friend to answer my question.

Mr. MEIGHEN: Did I say so?—no; if he had got access to the right facts he would not have said what he did. But I charitably assumed that he did get them somewhere else. I think the man who gave the hon. gentleman the data he brought into this House must have had some grudge against him.

Mr. CARVELL: Would the hon. gentleman give the dates of the orders?

Mr. MEIGHEN: I have the whole string here—they are thirty or forty in number.

Mr. CARVELL: It would be interesting to have them.

Mr. MEIGHEN: I do not wish to encumber my speech by reading them.

Mr. PUGSLEY: Members cannot see the dates.

Mr. MEIGHEN: They start on 6th October, 1914.

Mr. CARVELL: I gave one.

Mr. MEIGHEN: The hon. gentleman said they got one single order for 25,000 shells, and that before they had hung around for a year. As a matter of fact, they got the third order given by the Shell Committee, or it may have been the fourth. And, just while I am on that point: Here is a company that, according to the hon. gentleman, could manufacture anything and never fall down; the hon. gentleman has done business with them and knows all about them; they should have gotten orders. Why did they not get a chance to make

100,000 shells? Well, they got an order for 15,000 shells on 6th October. They had undertaken to deliver 100,000 by 1st January. How long did they take to deliver 15,000? They took just seven months. This, of course, indicates that they have not anybody in their employ as skilful mechanically as the hon. member for Carleton—he could make this shell with a little brass, a soldering-pot, and a hammer; all it is, he says, is a lump of steel with a hole in the middle and tapering at the nose.

I must not omit to read the letter of Mr. Watts. It is addressed to Mr. R. B. Bennett, M.P.:

I notice in to-day's papers Mr. Carvell is reported to have stated in the House of Commons yesterday that I "was associated with Mackenzie & Mann interests." This statement of his is incorrect, as I am not and never have been associated with Mackenzie & Mann interests.

There was another company which drew tears of sympathy from the hon. member from Carleton. The Dominion Iron and Steel company. Here is a company, he said, that should have got some business, and "they could not get a look-in." It is at page 1598 of Hansard that he wails bitterly at the treatment accorded this poor corporation:

I wonder if the fact that the great business competitor of the Dominion Iron and Steel Company happened to be the Nova Scotia Steel Company, the manager of which happened to be a member of this Shell Committee, had anything to do with it.

They never got a chance to do business, never got a look-in, until October or November, 1915.

I do not think the House would be surprised to know the facts in this matter. I am not sure whether the hon. member for Carleton will be surprised; he may have ascertained the facts since. At any rate, the facts are that the Dominion Iron and Steel Company had orders amounting to $4,100,000 in February, 1915. Does the hon. gentleman dispute that? I do not know what they got afterwards, but on February 20, 1915, they had orders to the amount that I have stated, about three times what the Bertram Company got altogether.

Mr. CARVELL: What was it for?

Mr. MEIGHEN: $600,000 was for shrapnel shells—not for the whole shell, I think; simply for the steel of the shell. The rest was for some other part; I am not familiar with these mechanical terms. At all events, they were contracts from the Shell Committee; they were contracts just the same as others. The Nova Scotia Steel Company got similar orders until February, I think. That is all they got till then; then they got orders for some shells.

Mr. CARVELL: Oh no.

Mr. MEIGHEN: That is what the hon. gentleman put on Hansard; perhaps that is wrong, too. The presumption is that it is, although I had not time to go into all these things. I assumed some of them to be unimportant.

Mr. CARVELL: On December 17, 1914, $100,000, machining and assembling.

Mr. MEIGHEN: That is what I thought; they did not get it at the first either.

Mr. CARVELL: $25,000, machining and assembling.

Mr. MEIGHEN: The Dominion Iron and Steel Company got orders of $600,000 and $3,500,000 in February, 1915. It has been suggested to me that perhaps we ought to reserve our policy. We have now arrived at the startling discovery that the Nova Scotia Steel Company got its complete shell contract in December and that the Dominion Iron and Steel Company got theirs in February; surely that is a sufficient ground for investigation!

Complaint has also been made with regard to fuses. If there is one thing upon which hon. gentlemen on the other side of the House are unanimous, it is that we have had awful treatment in the matter of the supplying of fuses. One could scarcely refrain from weeping in listening to the right hon. leader of the Opposition, who rallied all his eloquence in order to depict to the House the distressing condition of the British soldiers at the battle of the Marne. They were compelled, he said, not to follow up the victory; later they were compelled to stand still because, forsooth, we did not get fuses; we were making only these empty shells. In the first place, it is correct that the American Ammunition Company got a contract for fuses in June, 1915, for 1,666,666 of the graze fuses and 833,334 time fuses. One would think, listening to hon. gentlemen opposite, that just as soon as the Shell Committee was appointed they had carte blanche from the British Government to buy anything that they wanted in the way of munitions of war. One would think that all they had to do was to write cheques on the British treasury and buy munitions of war at any time, of any kind, quality and description they liked. Does it not appear to hon. gentlemen that it is altogether likely that the British

War Office exercised some control over what this committee bought? Have hon. gentlemen any evidence that this committee had power to buy fuses before June? Oh, they say, they did not try; there is no evidence to show that they even tried. I tell hon. gentlemen that there is. The Minister of Militia is on record in the House some time ago—and this was read to the hon. member for Carleton by his own leader—as saying that as early as 1914 he or the Shell Committee had tried to impress upon the British Government the fact that we could make fuses in this country. They endeavoured to do this, but without success, and it was not until the end of the month of April that they were able to persuade the British Government that we could make fuses successfully in Canada. Up to that time I do not know whether the United States had made any fuses or not. The battle of the Marne, if I remember rightly, took place in August or September, 1914, so that it would be pretty hard for the Shell Committee, having obtained authority at the end of April, 1915, to help out the soldiers of Britain at the battle of the Marne in August, 1914. What did they do after they got that authority? Mr. Carnegie, who was over there at Christmas, 1914, endeavoured to impress them with the fact that we could make fuses here. They let the first contract the first or second day of June, 1915. Shortly afterwards, early in August, they let another contract for 500,000 fuses to the Russell Company of Canada. They let the contract to the American Ammunition Company on the basis—I think my figures are correct—of $4.50 for the time fuse and $3.72½ for the graze fuse. The hon. gentleman says that the price of the latter was $4, but a deduction for loading, which was not done by the holder of the contract, makes the price $3.72½. Two months later they let a contract to the Russell Company at a price averaging $3.50 for the graze fuse or $3.36 without loading. The Russell Company did not until recently contract to make the time fuse. The British Government have always maintained that the making of both fuses, the time fuse particularly, is a matter of great technicality and of great difficulty and responsibility. However, it will be seen that there was no more than what was in all probability necessary delay in conducting the negotiations preparatory to entering into these contracts. I do not know that it is surprising that in a few months the prices dropped. I do not know but what the first prices may have been too large. It may have been that some mistake was made. I should be surprised—yes, I should be amazed, for it would have been utterly incredible—if any committee conducting operations of so colossal a character in so brief a time—operations of a business character, which were entirely or for the most part new to them—and not commit errors, not make unwise and improvident expenditures. There never was a committee on the face of the world, there never was a business enterprise on the face of the world that under such circumstances would not make unwise and improvident expenditures, just as is charged by the hon. member for St. John.

It is complained—at least, this is the burden of the charge of the right hon. leader of the Opposition—that while others fight we lag; that no fuses were delivered. The right hon. gentleman arraigned the Shell Committee and the Government because the Empire suffered on account of the awful delay in the delivery of fuses. No fuses, he says, were delivered or have yet been delivered by this American company. The hon. member for Carleton was not satisfied with making that statement once; he came along with it every time he got on the fuse subject. Why, he said, they never could make fuses; they did not intend to make fuses, and they have not delivered any; so far as the delivery of fuses by the American company was concerned, the British Empire might be smashed to pieces. We still wait, the hon. gentleman says, and we have not the fuses. Then, he says, the Russell company got a contract of 500,000 fuses in August and they delivered about 50,000 fuses. I have considerable confidence in the Russell company. I have a great deal of confidence in Mr. Russell, and I should be the last to say a word against the Russell Company or against its management. However, I do recollect that the very men who are now holding the Russell Company up as a paragon of business virtue—these very men, when it suited their political purposes, lampooned Mr. Russell and the Russell Company and held them up as to be avoided in the business world, as men who were profiteering at the expense of the country. I am consistent in my belief in the integrity of Mr. Russell and his company. Mr. Russell and I were boys together, and I think my admiration for him is as genuine and perhaps a little more consistent than that of the hon. member

for Carleton. They have delivered about 50,000 fuses on their 500,000 contract. They are delivering now; I see they are doing very well. The contract in respect of which they have made deliveries was given to them by the Shell Committtee, not by the Munitions Board. They have got one from the Munitions Board, but in respect to that they have made no deliveries. However, they are delivering, and I believe the fuses they are delivering are for the very substantial part made in this country. Of that I am glad and proud. But where are these hon. gentlemen when they make their comparisons? On what authority do they tell this House that the American company have made no deliveries? They should have made inquiries. It was stated in the House some weeks ago, at all events back in the old Parliament chamber, that they had made no deliveries. That was stated by the hon. member for South Renfrew (Mr. Graham), and I disputed it and told him that deliveries had been made. Consequently they were put on their guard. Why did they not make some inquiries and secure information that would warrant them in making a statement of the character they did on the floor of this House? As a matter of fact, the American Ammunition Company have delivered 417,000 fuses in pursuance of that contract, and are delivering right along.

Mr. CARVELL: Would the hon. member tell us how many fuses the American company delivered, say in the third week in January, when the matter was under discussion in the old House of Commons?

Mr. MEIGHEN: I cannot tell what they delivered in the third week of January; but I do know that they delivered practically 400,000 fuses when the hon. gentleman spoke in this House on the 9th of March, and when he stated that they had never delivered any fuses. One would think that the ambition of the hon. member was never to be satisfied until he reached the very perfection of error in all that he stated to this House on that subject. I have not yet got to the worst. There was not a phase of the subject that the hon. gentleman discussed in reference to which he did not, one would think almost of intent, tumble into every pitfall and every blunder that lay along his path. Then he comes to this House and says: "These are specific facts," and he so thunders it out that one can scarcely fail to have a pallor pass over his cheek; and on the authority of the hon. member for Carleton the hon. member for St. John makes these heartrending "charges" on the floor of Parliament to-day. In regard to fuses, it may just as well be stated here that not only have the American Ammunition Company delivered 417,000 graze fuses, of the kind they are assumed to make, but also some thousands of time fuses as well. They have manifested their ability to deliver both. They have not delivered very many of the time fuses yet, and I have reason to believe there is complaint as to the speed with which they are fulfilling their contract, that they are behind, and that some of the contracts have been cancelled. But I have absolute confidence in the present Munitions Board, believing that the interests of the Empire will be well guarded by them, and that this company will be held to their contract, so far as the interests of the country can be served by doing so.

Mr. PUGSLEY: No doubt they will do much better than the old Shell Committee.

Mr. MEIGHEN: No doubt they will do much better than the old Shell Committee? I am now coming to a phase of this question which is very amusing in relation to that remark. My hon. friend from Carleton complains bitterly of the politics that entered into the actions of this Shell Committee; and yet every single fact that he adduced in support of this charge was an act committed by the Imperial Munitions Board. So the hon. member for St. John is now authority for the statement—if I establish what I have undertaken to establish—that the Imperial Munitions Board have been guilty of the politics charged by the hon. member for Carleton against the Shell Committee, but that the Board are doing much better than the Shell Committee. For myself, I not only believe, but I am thoroughly convinced, and I believe hon. gentlemen opposite are also, that there was no politics either in the Shell Committee or in the Imperial Munitions Board, and that it would take them a long while to establish in the mind of any hon. gentleman on this side of the House who came in contact, just as hon gentlemen opposite did, with the Shell Committee, that there was any favouritism shown there—at all events to friends of ours.

I can remember, when I was on my feet before on this subject, that I threw a challenge out to the hon. member for Carleton. I told him that for every company or person

associated with the Conservative party who got a contract from the Shell Committee that he would name, I would name one associated with the Liberal party. He has talked nine hours on the subject since, but he has kept strictly away from that phase of the question, or even from attempting to answer that challenge. Now he tells us that members went there and interfered—that he is ready to name two, or three, or four who went to the Shell Committee and interfered. I challenge him again, and I undertake to say that for every one he will name of our friends who went there I will name, not one of his, because there are not as many of his, but I will go to the length of his number, and I will name members of the Liberal party who went to the Shell Committee and interfered in just the same way as did anybody on this side of the House.

While on this phase of the subject let me make a recommendation to the right hon. leader of the Opposition. He has heard all these discourses of my hon. friend from Carleton—how much he can do with a hack-saw, a hammer, and a piece of copper. I recommend that the leader of the Opposition take the hon. member for Carleton to the Imperial Munitions Board and introduce him to that board, and tell them of the great services this hon. gentleman could render to his country if they would only put him to work making shells or munitions. I recommend his just doing as he did for his constituent from Arthabaskaville; and he could say to the Munitions Board that the great value of the services he would render would consist, not in what he was going to do so much as in ceasing to what he has already done, to the great disservice of his country.

Now I come to these alleged political acts. The hon. member has not so much objection to the large contracts given. He thinks it is all right to feed the Dominion Iron and Steel Company, the Nova Scotia Steel Company, and the Canadian General Electric. These are great big companies and they are, according to him, the people who ought to get the business. He is quite satisfied of that. He has fixed on the Liberal party, so far as he can fix it on them, the policy of giving the munition business to the trusts of Canada and failing to take into consideration that we need the support and co-operation of the whole people of this country, and not just of the large concerns of the Dominion, in this war. He does excuse one of them. The Nova Scotia Steel Company got $15,000,000 of orders. He has no complaint to make on that ground, and it is really amusing as he runs over his charges. Mr Bertram is the hardened sinner, of course, and Mr. Watts next in order; but when he got to Mr. Thomas Cantley, did any one notice the soft pedal he turned on? Mr. Thomas Cantley's Company, he says, got $15,000,000 worth of orders, but the hon. member has nothing to say against Mr. Cantley. He has had an interview, I rather suspect with the hon. member for Pictou (Mr. Macdonald), and as a consequence he comes here, and says: "Cantley is not to blame at all; Cantley was in England all this time, and had not a thing to do with the orders to the Nova Scotia Steel Company, so we may as well eliminate Cantley from the discussion—although he was pointed out to-day by the hon. member for St. John as the chief sinner, because, forsooth, he was manager and had the control of the company that got the order. In this investigation, what are we to assume—that the hon. member for St. John is right, or the hon. member for Carleton? The hon. member for St. John says that the hardened sinner is Mr. Cantley, and the hon. member for Carleton says that Mr. Cantley is not to blame at all. Whose charge are we to investigate? I have no criticism to make of Mr. Cantley. There has not been a tittle of evidence brought before me that Mr. Cantley took any undue advantage of his position to benefit his company. There has not been a suggestion of evidence of that by hon. gentlemen opposite. I have believed Mr. Cantley to be an honourable man; I believe his company to be a credit to Canada, but he is just in the same position as the other men lampooned by the hon. member for St. John and the hon. member for Carleton.

As to Mr. Carnegie, and the company of which he is a director, it has not been shown that he has any substantial interest, and I have not had the time to find out whether he has or not, though one would suppose he had some interest in the company of which he is a director; but Mr. E. Carnegie is perhaps the only man in Canada who had previous experience of shell making, and Mr. Cantley was a member of the committee that was initially formed to provide, through the companies with which they were connected, in one way or another, those first orders of shells for the Government.

These are the men who were formed into a committee for that purpose initially. They made themselves financially responsible for the delivery of those shells; they were appointed because they knew the shell business, because they were the best men that appeared to be available for the purpose of acting on behalf of the British Government in the purchase of shells in Canada. "Oh," says the right hon. leader of the Opposition, "what I charge against you is this: It was right that you should appoint a committee; that was all right; but you should not have appointed men engaged in the steel business; you should not have appointed men who knew the steel business; there is where you made your great blunder, because they would likely be competitors for the business afterwards." I think they were the only men we would have been justified in appointing. The committee was appointed to supply the goods, and to deal with other men who would undertake to supply them. Who would be competent to deal with steel men, and to drive bargains with them in regard to supplying steel for munitions, if not men who knew the steel business, and knew all the secrets and tricks of the trade. My right hon. friend says: "You should have appointed somebody else." If we had done so, we could have shielded ourselves behind the example of the right hon. gentleman himself when he was head of the Government; we could have appointed lawyers and politicians and members of Parliament and every other class of men except those who knew the business which they were appointed to do. We could then have justified ourselves by the precedent which he established. He appointed a commission to build the Transcontinental railway, and he chose a lawyer to build it and a politician out of the House of Commons and a box maker. We should not, he says, appoint a man who makes steel as a member of a committee who are to produce and supply steel to the British Government; we should follow the example of the leader of the Opposition and appoint a man who makes corsets instead.

11 p.m.

Sir WILFRID LAURIER: Whom did you appoint on the Munitions Board?

Mr. MEIGHEN: On the Munitions Board there are still manufacturers of steel.

Mr. PUGSLEY: Who is the chairman?

[Mr. Meighen.]

Mr. MEIGHEN: The feature that was most in mind necessarily at first is no longer the most prominent feature of the work. They are now experienced in the work they have to do. It has become a great business which has to be presided over by a man of large financial grasp. It is on longer a business where the only work is to deal with steel men, and to have the expert knowledge necessary to deal with them. But there are steel men on it still. Most of the men my hon. friends are complaining about are on it still. How comes it that on the first committee, the Shell Committee, they were all wrong, but on the Munitions Board they are all right? Mr. Bertram is on the Board, Mr. D. Carnegie is on it still, and I think there are one or two others who were on the old committee that are on the Munitions Board, but I am not sure. At all events those I have mentioned are there still.

I now come to deal with the political end, and I am going to quote, as I deal with it, a paragraph from the speech delivered by the hon. member for Carleton on March 9. He said he had come to the worst feature of the whole thing, namely the attempt to use politics, the political end of the game which the Shell Committee had played; and here is the way in which he exposed the iniquity of the political end to the House. He went over a list of ten companies, and I ask the House to approach this phase of the subject with care. The hon. member for Carleton read a list of ten companies which he said had got orders. First, he described them as mushroom companies, but throughout the whole of his nine hours' speech he did not show that a single company was a mushroom company, nor has he shown that there would have been anything wrong or detrimental to the public interest in men who knew the work getting together to do the work to provide munitions for the War Office, even though a company was formed for that purpose. At all events, he has not shown that a single company belonged to that class. He opens his paragraph on the political end thus:

> I find that the Dominion Harvester Company, of Medicine Hat, were able to get an order for 10,000, and up to a month ago they had not delivered a single shell. The International Supply Company, of Medicine Hat, got an order for 10,000 and not a shell has been delivered. The Manitoba Bridge and Iron Works, of Winnipeg, got an order for 20,000, and not a shell has been delivered.

I ask the House to note this interruption:

Mr. Hanna: What is the date of those orders?

Mr. Carvell: I could not say exactly; it was during the summer of 1915. I am only giving these to show the political end of the transaction.

There is no doubt as to what he was trying to say; he was trying to bring home to the Shell Committee the guilt of utilizing their office to distribute patronage among manufacturers for political purposes, to the detriment of the nation, in that they never supplied the goods. That was his object. I have read the names of three companies that he enumerated, and I am going to go through the whole ten in order to see how he brought home this charge of guilt to the Shell Committee.

There was an order given to the Dominion Harvester company. It will be recalled that the Shell Committee went out of office on the 30th day of November, 1915, and that since that date the Munitions Board has been in control, and the Shell Committee is no more. It is necessary to keep that in mind, because the hon. member for Carleton rested his attempt to bring home to the Shell Committee, who were all wrong, not, of course, to the Munitions Board, who are, he said, all right, the guilt of distributing political patronage to people who never supplied shells at all. The Dominion Harvester company, to which he refers first, got an order, he says, for 10,000, and none had been delivered up till a month ago. Does he know when they got the order? The hon. member for South Lanark (Mr. Hanna) asked him that question on the floor of the House, and he said it was in the summer of 1915. The fact is that they got that order on the 12th day of January, 1916, from the Munitions Board. Does he complain that the shells have not been delivered? Was his charge anything but a libel against the Dominion Harvester Company? If he does complain, how does he come to blame the Shell Committee, who were out of existence for a month before that order was given?

We pass from the Dominion Harvester Company. The International Supply company got an order, he says, for 10,000, and not a shell had been delivered. Here is another example, according to my hon. friend, of the political end of the business of the Shell Committee. The International Supply Company did get their order for 10,000 shells, but it was on the 12th day of January, 1916, from the Munitions Board, and not from the Shell Committee at all. The Shell Committee had nothing to do with it. One of these companies—I will not say which, because I would not like to be wrong—has had its order cancelled since by the Munitions Board for failure to deal fairly with its employees.

Then we come to the third one. We have passed the other two, and I am sure the hon. member is proud of the charges he is levelling against these business concerns in Canada and against the Shell Committee, that had nothing to do with them. The Manitoba Bridge and Iron Works are next. The hon. gentleman says that they got an order for 20,000 shells and that not a shell has been delivered. He had hardly taken his seat until the answer to this libel was hurled at his head in a telegram from the Manitoba Bridge and Iron Works themselves and he was compelled to admit on the floor of Parliament next day that so far from having stated the truth, the actual truth was that that company had had three orders, that the first two they had delivered in full and on time, that the third was only given recently and that it would be delivered on time as well. That company has already delivered 47,880 shells, and that is the company which, he says, has not delivered any. Its last order for 20,000 shells was given on the 28th January, 1916, and therefore he brings home guilt to the Shell Committee which went out of office on the 30th November, in the year before, because in giving this contract to the Manitoba Bridge and Iron Works, they were distributing political patronage. The hon. gentleman made a statement in the House—he had often made it before—as to what he was ready to do and to be interesting I am going to read that statement. He was going to apologise. Here is what he said:

It is true that sometimes we have a lot of difficulty in getting information and possibly we might not be right exactly to a cent, but I am sufficiently assured of the facts that I am going to read to the House to stake my reputation as a member of that—

I congratulate the hon. gentleman that he did not make the stake any higher.

—if you will give me a committee I will prove them to the hilt or apologize to this House and to the committee and say that I did not know what I am talking about.

In fulfilment of that contract, it is the duty of the hon. gentleman, in respect to these three companies to which I have already alluded, to admit that he did not know what he was talking about and to apologize to the House and to the country. I wait with considerable interest, but with

more interest than hope, to see whether he does so. Well, I pass on to the other seven.

Some hon. MEMBERS: Get up; get up.

Mr. SPEAKER: Order.

Mr. CARVELL: Give us the committee and we will show you.

Mr. MEIGHEN: Now he wants a committee so that he will have a chance to apologise. Having got through with the Manitoba Bridge and Iron Works, I come to the Manitoba Shell Company of St. Boniface. He says they got an order for 10,000 shells, and that none of them have been delivered. They got an order for 10,000 shells, and when did they receive it? —in December, 1915, almost a month after the Shell Committee went out of existence. That is the position of that company, and of course this is another nail in the coffin of the Shell Committee, and a bringing home of the charge that they used their position to distribute political patronage. Now I come to No. 5. The Transcona Shell Company of Winnipeg, he says, got an order for 250,000 shells and nothing delivered. The Transcona Shell Company did get orders for 250,000 shells, but, so far from having delivered nothing, they have delivered 28,530 shells, and the order for 200,000 shells was not received until the 4th January, 1916. Perhaps there should be an investigation, but it is not into the Shell Committee. The hon. member for Carleton possibly knows where the investigation is most required. Then, the Vulcan Iron Works are the next offenders. The Vulcan Iron Works Company is a firm, I do not know how large, but of long standing in this country, doing business in Winnipeg when I went there in 1898, and I believe for many years before. That is the next company that comes in for castigation and lampooning at the hands of the hon. member for Carleton. They got an order for 20,000 shells, and nothing delivered. Well, they got orders for 50,425 shells, and they have already delivered 46,416, and the 20,000 order was not given until the 4th January, 1916. Another apology from the hon. gentleman!

These facts were just as accessible to him as to me. He could get them to-day or to-morrow or any other day, and he has been told that by members of the Government repeatedly. The members of the Munition Board are ready to give any member of Parliament these facts. They do not feel justified in exposing to the country prices and other matters connected with the resources of the country, but they are ready in regard to these matters to take any member of Parliament into their confidence and reveal to him any facts to which he feels that as a member he has a right.

Mr. CARVELL: I wish to state to the hon. gentleman that within a month I received from the hon. the Minister of Marine and Fisheries (Mr. Hazen) a copy of a letter purporting to be from the Chairman of the Munitions Board—I do not have it with me—practically refusing me all the information which my hon. friend is now speaking about .

Mr. MEIGHEN: I do not fully know the contents of that letter. I am disposed to think—I may be wrong—that the letter stated that if the hon. member would go to the committee he would get the facts.

Mr. CARVELL: I will go to the committee.

Mr. MEIGHEN: But they do object to stating it in writing. At all events, the hon. gentleman can go and get such facts as he desires. He has just as much right to those facts as any other hon. member of this House and will have just as little difficulty in getting them. The Western Shell Committee, he says, got an order for 300,000 shells and not a shell delivered. The fact is that the Western Shell Committee has delivered 198,178 shells. I am of opinion that this Western Shell Committee is a committee of the different factories out there who are doing the work, and while I do not wish to say positively, I have been inclined to believe that this represents other orders, and that to count these with the others would mean to count the others twice. However, of the orders for 300,000 shells, 198,178 have been delivered.

That concludes the hon. gentleman's allegations as regards the three Prairie Provinces. The hon. member for Carleton, of course would not give any contracts to those provinces at all. He would confine his operations to the big trusts in the East. He would ignore the smaller factories everywhere. That is the inevitable conclusion from his argument. He said so in so many words: "Here is the way they have done; here is the way they have lived up to their contract!"—and on the strength of that he libels them before the people of this country and before the world. The Vancouver Engineering Works, he says, got an order for 340,000 shells, of which they have

delivered 39,000. They got orders for 30,000, for 15,000 back in the summer, and for 40,000 in October, 1915. Instead of their only having delivered 39,000, they have delivered 66,442, and finally the last two contracts were only made, one on October 8 and one on October 18. These contracts were made under the eye of the British representative, Mr. Thomas, made while he was here, and in fact directing the work of the Shell Committee. Was Mr. Thomas a party to the distribution of political patronage? Over and over again the hon. member for Carleton says in his address: "Is it any wonder that the British Government sent out a representative to investigate those things?" It seems never to have occurred to his mind that the very things of which he was complaining were done after the British Government had sent out their representative.

Victoria Machinery Depot of Victoria. I think this is in the same position as the Western Shell Committee, that is to say, an organization representing those that supply shells. They got an order, he says, for 220,000 and only about 10,000 have been delivered. There have been 12,684 delivered, but the point of the thing is this, that the order for 200,000 shells was obtained on the 18th day of October, 1915, just a little while before the Shell Committee went out of existence, while the British representative himself was here and while every contract was made under his very eye and with his approval.

The Vulcan Iron Works of New Westminster is the last of the ten. He complains because they got orders for 150,000 and only about 35,000 have been delivered. He is wrong as to that, because they have not delivered that many, but it would, of course, be inconsistent on the part of the hon. gentleman to be right, even were the correct figures in his favour. He seems to have made up his mind to have the facts all wrong on one side or on the other. I do not know whether that company has delivered any—my note is not complete in that regard—but they obtained an order for 150,000 on the 19th day of October, 1915; that is to say, they too obtained their order while the Shell Committee had the British representative amongst them, and while he himself was supervising and approved all the work and all the orders.

Mr. CARVELL: Will my hon. friend state now the number of the deliveries that have been made up to a month from the time that I was speaking? because, if he will refer to page 1628 of Hansard, the first reference I made to those ten companies was as follows:

> I find that the Dominion Harvester Company, of Medicine Hat, were able to get an order for 10,000, and up to a month ago they had not delivered a single shell.

Mr. MEIGHEN: That is exactly what I read, as said by the hon. member for Carleton in respect of the Dominion Harvester Company, but he did not say that in respect of a single other company. But here is the point of the whole affair: the Dominion Harvester Company got its order on the 12th of January, 1916. In the name of common sense how much would my hon. friend expect them to have delivered a month ago?

Mr. CARVELL: Will my hon. friend give the information as to what deliveries had been made up to a month ago?

Mr. MEIGHEN: In almost all the cases the orders were given only a few weeks before a month ago. My hon. friend does not, except in respect of that one company, use the words "up to a month ago" when he says that they had not delivered any shells. Why does he seek to modify his language now? but, modify it now as he will, it does not substantiate to the millionth part of a minute any single charge he has made. If they had not made any deliveries up to that time, is that a charge against the Shell Committee, which did not distribute 75 per cent of the orders of which he complained, and which, in regard to the other 25 per cent, distributed them under the eye and under the supervision and approval of Mr. Thomas himself? I was going to say that is a narrow hole to try to get out of, but it is not a hole at all; it is closed absolutely. If the hon. gentleman wants to comply with his contract, he has nothing left to him to do but to apologize to the House at the first opportunity. Why, he says, nothing delivered up to a month ago! The Dominion Harvester Company got a contract on the 12th day of January, 1916—it is an awful thing that they had not delivered anything up to a month ago! "The Canada Cement Company," he says, "is the company that you should have dealt with and that could have delivered shells." Is my hon. friend aware that the Canada Cement Company took a contract on the 2nd day of November, 1915, and, in respect of part of the contract has not even the plant in yet and has not delivered a shell in respect of any part of the contract?

Mr. CARVELL: Does my hon. friend want an answer to that question, because he put his remark in the form of a question? I

am aware that the Canada Cement Company did not agree to furnish the forgings for the first part of their contract; they did agree to furnish the forgings for the second part.

Mr. MEIGHEN: That is right.

Mr. CARVELL: They are and have been for some three weeks ready to go on machining shells, but the parties who are responsible for producing the forgings have not done so, and that is the reason why the Canada Cement Company has not furnished shells.

Mr. MEIGHEN: All the same, why does the hon. gentleman not tell the whole of the truth while he is at it? The Canada Cement Company, when they put in their tender for those shells in relation to which they did not have to supply the forgings, stated that they expected to have the plant ready by the 15th of January, or two and a half months after the contract was let, and, as a matter of fact, they got it ready to commence work in February; that is to say, it took them—I am not making any complaint against them because it is a large plant and would necessarily take a long time to make ready—three months to get ready one plant in relation to one part of the contract, and in relation to the other part they have not the plant ready yet. Nevertheless, my hon. friend complains that the Dominion Harvester Company had not delivered a month ago shells for which they got the contract on the 12th of January of this year, and he holds up the Canada Cement Company as the company that we ought to have dealt with, and that would have saved the lives of the soldiers at the front.

Mr. CARVELL: They are making 9·2 shells, while the others are only making 18-prs.

Mr. MEIGHEN: No, they are not making any at all; they will be making 9.2's later, and doubtless their plant is heavier than that of the other companies. I have not the slightest doubt that the Canada Cement Company are putting the plant down as fast as possible; I believe they have a careful manager; and, further than that, I know it is a fact that, in relation to this order, the Shell Committee were not in a position to let it until very shortly before they did, and, in relation to the other, the correspondence will show that no complaint was made by them against the company at all, but complaint was made because they were not in a position to get orders of the size and extending over the period for which the Canada Cement Company wanted orders in order to deliver the shells at the price quoted. Any one who has the slightest conception of business knows that a large concern, provided that they can get a large contract extending over a long period of time, can undertake to deliver at a much cheaper rate than can a smaller concern which has not so large a contract; and a small concern, if it could be arranged with them that they would have all they could make within a year or two years, could make the prices considerably lower than they could in the absence of such an agreement. But the Shell Committee were not in a position to deal without reference to the British Government. They did deal after reference to the British Government, and they gave their contracts under their direction and every price in every instance was approved before a contract was let. Yet we are asked by the hon. member for Carleton and the hon. member for St. John to sit in arrogant judgment over the work of the British Government and to tell them that they know nothing about the price they ought to pay for shells.

I had no thought of detaining the House to so late an hour. I think I have pursued the assertions made by the hon. member for Carleton from end to end of his remarks. I do not know of anything that I have omitted.

Mr. CARVELL: You have not referred to prices yet.

Mr. MEIGHEN: I think I have referred to prices, have I not?

Mr. CARVELL: I have not heard it.

Mr. MEIGHEN: I think so, but I did set out to say this, that I was not going to add to the injury that the hon. member had done to this country by exposing to the people of the world what the British Government do not want revealed. I am going to keep my contract whether the hon. gentleman keeps his or not. I do not propose to share with him the guilt that he already has brought upon his own head.

Mr. CARVELL: The hon. gentleman is not likely to talk prices.

Mr. MEIGHEN: I will talk prices with the hon. gentleman at any time he wants to, as soon as we get the proper authority to do it.

Mr. CARVELL: Go on now.

Mr. MEIGHEN: I have said where I will go and where I will stop, and the hon. gentleman shall not persuade me to go further. What does the hon. gentleman care? He is ready to sit in judgment on the British Government or any other authority so long as he can bring a little of this counterfeit glory around his own head, and rail and rage and rant before the House of Commons or make a pyrotechnic display before a committee of the House. These hon. gentlemen do not want a commission. The hon. member for Carleton is on record more than once as saying they do not want a judge looking into this thing, but what they want is a committee. Why do they not want a commission? I will tell you—it is because they do not want a verdict. All these hon. gentlemen want is a chance to do what they are doing and have been doing for the last month, under cover of a supposed truce—they want to take stray portions of the evidence, leaving out the contradictions, qualifications, modifying explanations, to take stray portions of the evidence, though these may have been demonstrated to be false, and scatter broadcast throughout the provinces this poisonous political garbage. That is the policy of these hon. gentlemen.

Mr. CARVELL: With the permission of the hon. gentleman I would ask one question before he leaves the point about these western companies. I would like him to look over his notes and see if it is not a fact that the Dominion Harvester Company, of Medicine Hat, received an order for 20,000 shells early in 1915 of which they had not delivered a shell when they got their second order in 1916.

Mr. MEIGHEN: I presume that somebody has sent that to the hon. member. It is not in my notes; there is a note that the Dominion Harvester Company delivered some through the Alberta Foundry and Machine Company as sub-contractors. I do not know whether or not that is what he refers to. At all events, the order of which he complains was given at that later time.

The hon. gentleman is very anxious about the matter of prices. I know enough about that matter to know that for the House of Commons to pass the resolution he supports would be as manifest and blazing folly, having regard to the interest not only of Canada but of this Empire, as was ever perpetrated in a deliberative assembly. I know that whatever prices were made were made by the British Government, without dictation, without suggestion, without supervision, and, consequently, without responsibility, on the part of this Government. I know that the responsible Government for the prices is the Government of Great Britain; and if it is felt by the British people or the British Government that errors were made, and if they will either make an investigation themselves or ask us to make it, we will hasten to comply with their request in whatever form it takes. And no one would be more pleased than myself to receive that request. For, one thing it will do is to remove imputations from the heads of men in this country who have no right to bear those imputations at the hands of hon. gentlemen opposite; and another thing it will do is to bring home to the hon. member for Carleton and the hon. member of St. John the fact that they stand, and have stood since they made these charges, as profligate and abandoned slanderers.

Sir WILFRID LAURIER: Order.

Mr. SPEAKER: Order.

Mr. CARVELL: Let him go on, Mr. Speaker; it does not hurt anybody.

Mr. SPEAKER: I would remind the hon. member (Mr. Meighen) that such language is offensive and unparliamentary.

Mr. MEIGHEN: I do not think I am unparliamentary in using the word, for I think I can show that it has been used. But I bow to your ruling, Mr. Speaker, and withdraw the expression.

I have no complaint to make as to the tone of the speech made by the right hon. leader of the Opposition (Sir Wilfrid Laurier); but I have to complain of one phase of that speech. Perhaps the matter is not of sufficient importance to delay the House, but I do not wish to be charged with omitting it. In the course of his address, the right hon. gentleman stated that in the quotation I had made from a previous speech of his I had not done him justice; in fact, he went so far as to say that I had "curtailed" and he should say "garbled" his remarks. He went on to state that I had left out certain portions at the beginning and at the end, and that as a consequence, he said, I had conveyed a wrong idea of what he intended to say to the House. I know it is quite possible, by leaving out portions of a speech or of a paragraph, to allow a wrong impression to

be conveyed, and I know that if I did that I should be guilty of an offence of which I should not like to be guilty. I have found the leader of the Opposition a very fair debater. I did not intend to convey a wrong impression of what he said, and I did not do so. I did leave out something at the beginning and something at the end. I do not know of any way of making an extract except by leaving out something at the beginning and at the end. But I did not leave out anything which modified the view expressed by him in what I quoted. The view he expressed was that, in regard to the motion for the production of papers bearing on transactions made by departments of his Government with the British Government, he would not be justified in granting it, nor would he be justified in referring it to a special committee. He said he would not refer it even to the Public Accounts Committee. He went on to say that if charges were made against the Government, then he would give an investigation. The charges he referred to were charges involving the honor of a minister of the Crown. If such charges had been made here, then it would have been my bounden duty to quote that portion of his speech, because it would have modified the view he expressed in relation to the point I was arguing. But no such charges were made then, as no charges are made now, against the Government, of the nature he meant—and he will not deny he meant charges of that nature, for if he does I can show that that is what he must have meant. Consequently, the remarks I left out had no relation to the point discussed either then or now. He refused in that case even to produce the papers, because he said they related to the conduct of a department of his Government acting for the British Government. I stated that he could not consistently refuse that then, and now say that we should grant an investigation in regard to the conduct of a committee, not a department of the Government at all, nor could he argue, even if they were a department of the Government, that we should grant an investigation. For, even had they been a department of the Government, we would have been in exactly the same position as he was in at that time. I think he was wrong at that time, and that the present Prime Minister (Sir Robert Borden) was right. The war being over, and the work having been done by a department of the Government, he should have brought down papers. But he refused to do so. I did not then try, and I do not try now, to shelter myself or the Government behind the precedent he then established. I think that precedent was wrong. I say that he certainly could not consistently take that position then, and take his present position now. In quoting what I did I quoted everything that bore in the slightest degree upon the argument that I had or upon the argument that was sought to be made by the hon. gentleman himself. I quoted everything that bore in the slightest degree upon the point that was under discussion; the rest bore on another point altogether, upon a subject which did not enter into consideration of the facts at that time and does not enter into consideration of the facts now. I make these remarks only because the leader of the Opposition went pretty far when he said that I had garbled what he said. He did not, however, go so far as certain newspapers have since gone in endeavouring to interpret his remarks. I do not want to be guilty in this House of garbling the remarks of any hon. gentleman; if I cannot argue fairly, I prefer not to argue at all. I may have spoken very strongly with regard to the conduct of the hon. member for Carleton and of the hon. member for St. John, but they have repeatedly in this House of Commons made assertions in regard to the truth of which they had made no adequate investigation. On the basis of assertions of this kind they have hurled recklessly at the head of various citizens in this country and at the heads of members of the Government—which is not so important a matter—charges of the most reckless and most damaging kind. I do not believe that such practice comports with the dignity of Parliament, and I propose whenever it is done to use language as strong as I can, within the rules of Parliament, to rebuke it. I have no personal animosity against these hon. gentlemen; I do believe that I have done no more than my duty as a member of this House in describing, in the only fit language that can be used, the conduct of which they have been guilty in regard to the motion that is before the Chair.

[Mr. Meighen.]

On motion of Mr. F. F. Pardee (West Lambton), the debate was adjourned.

Sir WILFRID LAURIER: What business to-morrow?

Sir ROBERT BORDEN: The Budget.

Mr. A. K. MACLEAN: The Budget resolutions?

Sir THOMAS WHITE: The tariff resolutions and the new taxation resolutions.

Motion agreed to, and the House adjourned at 11.41 p.m.

Wednesday, March 15, 1916.

The House met at Three o'clock, the Speaker in the Chair.

INTRODUCTION OF PRIVATE BILL.

Bill No. 57, for the relief of Nora Louise Jackson.—Mr. Douglas.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

COAL FROM HALIFAX TO HUDSON BAY.

Mr. A. K. MACLEAN:

1. Was any coal shipped from the port at Halifax to Hudson Bay in the years 1914 and 1915?
2. If so, what quantities were shipped, what was the price per ton, and by whom was the same supplied?
3. Were tenders asked for the said supply of coal? If so, what persons tendered, and what was the price stated in each tender?

Mr. REID:

1. Yes.

2. In 1914: 960 tons of anthracite in bags at $8.50 per ton net, and 41 tons of blacksmith coal in bags at $6.50 per ton net, supplied by the Dartmouth Coal and Supply Co., Ltd., they being the lowest. Tenders for the 1913 supply were called for and the lowest tenders were accepted. The department being unable to secure sufficient tonnage for all shipments in 1913, part of the 1913 supply of coal was held over until 1914, and shipments for 1914 were completed by contractors for the 1913 supply and at the same prices. In 1915: 700 tons of anthracite coal, in bags at $10.25 per ton net, supplied by the Dartmouth Coal and Supply Co., Ltd., the lowest tender. 41 net tons of blacksmith coal supplied in bags at $8 per net ton by Hugh D. McKenzie Co., Ltd., Halifax, the lowest tender.

3. Tenders for 1913 supply were:

Name.	Anthracite.	Blacksmith.
S. Cunard & Co., Halifax, N.S.	$9 00	$7 00
Angus Young, North Sydney, N.S.	9 24	.....
Dartmouth Supply and Supply Co., Dartmouth, N.S.	8 50	6 50

Tenders for 1915 supply were:

Name.	Anthracite.	Blacksmith.
S. Cunard & Co., Halifax, N.S.	Could not quote.	
Dartmouth Coal and Supply Co., Dartmouth, N.S.	$10 25	$8 25
Hugh D. McKenzie Co., Ltd.	10 50	8 00

D. D. BENNETT.

Mr. W. M. MARTIN:

1. Has the Government made any attempt to locate one D. D. Bennett, of Regina, who was said to have been implicated in the hay and oats scandals in that city, and who, as alleged, left the city before the trial of one Mitchell on a charge of forgery, in connection with the purchase of hay and oats by the Militia Department?
2. If so, what success has attended the efforts of the Government?
3. Does the Government intend to prosecute the said D. D. Bennett?
4. Will the Government receive information, if offered, as to the whereabouts of the said Bennett?

Mr. DOHERTY:

1. Yes.

2. The agent of the Department of Justice at Regina states that Bennett was taken into custody by the American authorities for the purpose of being deported to Canada as an undesirable and that he was to be handed over at Pembina on the 4th March instant. His deportation has, however, been deferred by reason of habeas corpus proceedings which will come on for hearing on the 15th March instant.

3. The agent of the Department of Justice at Regina has been instructed to institute prosecution proceedings against Bennett as soon as he is deported back to Canada, or, failing deportation, to take extradition proceedings.

4. Answered by No. 2.

MR. AURELE GELY.

Mr. BOURASSA:

1. Is Mr. Aurèle Gely of Lévis, employed by the Government in the Excise office at Lévis?
2. If so, (a) since when, (b) on whose recommendation, and (c) what is his salary?
3. Is the Government aware that the same Aurèle Gely, while an employee in the excise office at Lévis, is said to have held the position of traveller for the Chinic Company, of Quebec?

Mr. PATENAUDE:

1. Yes.

2. (a) 11th Sept., 1913; (b) nothing on record; (c) $1,000 per annum.

3. No.

GOVERNMENT OFFICIALS IN MUNICIPAL ELECTIONS.

Mr. MARCIL:

1. Is there a rule in the Department of Inland Revenue preventing an inspector of Weights and Measures from taking part in municipal elections as a candidate, or acting as a councillor or mayor?

Mr. PATENAUDE: There is no rule, but the practice is not encouraged.

OTTAWA MILITARY CAMP DOCTORS.

Mr. ALFRED THOMPSON:

1. Who are the medical doctors who have been in charge of the military camp at Ottawa since the commencement of the present war?
2. How many men are there in that camp?
3. How many deaths of enlisted men have occurred in that camp?

Mr. KEMP:

1. Records show the following medical officers have been employed in Ottawa with units as shown against their names, since August, 1914:

Capt. L. C. E. Beroard, 2nd Div. Engineers, C.E.F., from Nov. 14, 1914, to Jan. 13, 1915.

Lt.-Col. T. W. H. Young, 2nd Div. Engineers, C.E.F., from Jan. 14, 1915, now overseas.

Major F. W. McKinnon, Engineers Training Depot, C.E.F., from June 28, 1915, still on duty in Ottawa.

Lt.-Col. J. W. Shillington, Engineers Training Depot, C.E.F., from Feb. 22, 1916, still on duty in Ottawa.

Capt. J. H. Munro, 38th Overseas Battalion, C.E.F., Jan., 1915, now in Bermuda.

Capt. A. R. Farrell, 7th Bgde., C.F.A., C.E.F., from March, 1915, now overseas.

Capt. J. H. Jones, 8th C.M.R., C.E.F., from Sept., 1915, now overseas.

Capt. J. H. Laidlaw, 77th Overseas Battalion, C.E.F., from Aug. 18, 1915, to Aug. 31, 1915.

Capt. N. M. Halkett, 77th Overseas Battalion, C.E.F., from Sept., 1915, still on duty in Ottawa.

And in the base hospitals caring for these troops, the following medical officers have been employed:

St. Lukes—Major G. S. MacCarthy, Major F. W. McKinnon, Capt. A. F. McLaren.

Protestant General—Lt.-Colonel D. A. Whitton, Major A. F. Argue.

Water Street—Major J. L. Chabot, Major R. Law, Lieut. R. H. Ells.

2. 2,019 all ranks as on the 1st March, 1916.

3. Of the men treated in hospitals, the hospital records show three have died.

STONE FOR SOULANGES CANAL.

*Mr. BOYER:

1. What was the amount of the tender submitted by Messrs, J. A. Major, of Montreal, and Philias Doré, of Valleyfield, for the supply of stone for the construction of the pier on the Soulanges canal?
2. Were the tenders called publicly?
3. If so, in what newspapers?
4. What are the daily salaries of the officers and crew of the tug Carillon, of Napoléon Bertrand, Napoléon Molleur, Alex. Menard, Joseph Beriault and of Rosanna Bertrand?
5. What salaries were received during the past season by Adélard Royal, Edmond Royal, Benjamin Gauthier, Avila Gauthier, Joseph Lalonde, Daniel Lalonde, Valmose Filiatrault, Wilbrod Legros, Jos. Lefebvre, Isidore Lecompte, Honoré Miron, Xavier Dubois, Arsène Beriault, Louis Gagnon and Isaïe Leroux?
6. What was the character of the work given them to do?
7. Under whose superintendence was such work done?
8. From what date to what date did the carrying of the stone last?
9. What quantity in tons of stone did a scow contain?
10. How many scows were used in the transportation of the stone?
11. How many scows did the tug Carillon tow at each trip?

[Mr. Patenaude.]

Mr. REID:

1. Under date February 3, 1915, the superintending engineer of the Quebec canals forwarded tenders for the stone to be furnished at the head of the Soulanges canal from J. A. Major & Co., of Montreal, Quebec, at $1.60 per cubic yard, and Phileas Doré, of Valleyfield, Quebec, at $1.90 per cubic yard. Owing to these prices being high, and there being some difference as to the basis of the tenders so that a proper comparison was difficult, neither tender was accepted. Under date the 23rd of July, the department asked for tenders by circular letter from J. A. Major & Co., Montreal, Quebec, and Phileas Doré, Valleyfield, Quebec, specifications being prepared calling for tenders on a per ton basis. The only tender received was that of Phileas Doré, Valleyfield, Quebec, at $1.29 per ton of 2,000 lb., delivered on Government scows at point directed by the contractor, according to specification. This tender was recommended by the Chief Engineer of the department, and accordingly was accepted. It now appears that the letter addressed to J. A. Major & Co., of Montreal, Quebec, asking them to tender, was later returned to the department, marked "Opened by mistake, A. J. Major," after the tenders had been dealt with.

2. Tenders were invited by departmental circular letter.

3. Answered by No. 2.

4. The salaries of the officers and the crew of the tug Carillon are: Napoleon Bertrand, $85 per month; Nap. Molleur, $85; Joseph Molleur, $60; Alex. Menard, $50; Joseph Beriault, $50; Rosanna Bertrand, $40.

5. Salaries received during the past season as follows: Adelard Royal, $232.75; Edmond Royal, $84.20; Benjamin Gauthier, $105.80; Avila Gauthier, $101; Joseph

Lalonde, $128; Daniel Lalonde, $77; Wilbrod Legros, $98; Jos. Lefebre, $140.20; Isidore Lecompte, $27.80; Honore Miron, $12; Xavier Dubois, $1; Arsene Beriault, $42.20; Louis Gagnon, $4; Isaïe Leroux, $41.80; Valmose Filiatrault, $141.

6. Levelling top of bank, forming slope, unloading scows and placing stone on slope.

7. L. S. Pariseau, C.E., and J. T. Lemaire, C.E.

8. From the 25th August to 25th November, inclusive.

9. Average 113 tons.

10. Three.

11. One, except one trip with two scows.

SOULANGES CANAL DREDGING.

Mr. PAPINEAU:

1. What quantities of material did the Dredge No. 2 raise during the summer or 1915, for the enlargement and deepening of the channel at the entrance to the Soulanges canal?
2. Who were the officers and men of the crew, what were their respective daily salaries and from what date to what date did the said dredge work at that place?
3. Did Dredge No. 2 do any other work at any other place on the canal?
4. If so, where, and what quantities of material was raised, and the number of days occupied?
5. Did the Government pay the board of the men on such dredge?
6. If so, how was such board procured, and how much per day for each man did it cost?

Mr. REID:

1. 25,190 cubic yards, scow measurement.

2. William O'Brien, superintendent, $150 per month; Alf. Leger, engineer, $90 per month; Alph. Paradis, craneman, $90 per month; H. Voisard, assistant craneman, $55 per month; R. Danis, fireman, $60 per month; R. Belanger, deckhand, $50 per month; Ed. Montpetit, deckhand, $50 per month; Victoria Seguin, cook, $40 per month; J. B. Deschamps, night watchman, $2 per day. Dredge No. 2 worked at channel upper entrance from May 1 to November 19, except from the 9th to the 13th of June, when she was working at Valleyfield.

3. Not in the canal, but at Valleyfield preparing foundation for protection to dam.

4. Quantity of material raised at Valleyfield, 4,130 cubic yards, scow measurement; number of days occupied, 19.

5. No. None of our crews are boarded by the department.

6. Answered by No. 5.

FOX RIVER BREAKWATER.

* Mr. LEMIEUX:

1. What sums of money were spent by the Public Works Department on the Fox River breakwater, county of Gaspé, since the 1st January, 1912?
2. Who has been appointed superintendent of the works?
3. How much has been paid up to date to said superintendent?

Mr. ROGERS:

1. $10,525.55.

2 and 3. Alexis Dufresne, as foreman, $723.25; Ernest Lapage, as foreman, $171.

PICKLED FISH.

Mr. SINCLAIR:

1. How many barrels of pickled fish have been inspected and branded by the Government inspectors during the year 1915?
2. In what localities, and what number of barrels were inspected in each place named?

Mr. HAZEN:

1. 1,328 barrels inspected, 1,211 branded.

2. St. John, N.B., district, 899 inspected and branded; Miramichi and Caraquet districts, 319 inspected, 302 branded; Halifax district, 10 inspected and branded; Prince Edward Island district, 100 inspected, none branded.

ENLISTMENT OF POST OFFICE EMPLOYEES.

Mr. BEST:

How many Government post office employees from each city in the Dominion have enlisted for overseas service since the war started?

Mr. CASGRAIN: Charlottetown, 4; Halifax, 14; Sydney, 3; Amherst, 2; Truro, 1; Moncton, 3; St. John, 19; Fredericton, 1; Quebec, 5; Sherbrooke, 5; Montreal, 43; Ottawa, 53; Cornwall, 1; Brockville, 2; Kingston, 3; Belleville, 2; Peterborough, 7; Lindsay, 1; Toronto, 164; Galt, 3; Guelph, 5; St. Catharines, 2; Hamilton, 16; Brantford, 7; Woodstock, 1; Berlin, 1; London, 21; St. Thomas, 2; Chatham, 6; Windsor, 2; Niagara Falls, 1; North Bay, 1; Port Arthur, 5; Fort William, 8; Winnipeg, 126; Portage la Prairie, 2; Brandon, 10; Regina, 35; Moosejaw, 36; Saskatoon, 32; Prince Albert, 10; Medicine Hat, 6; Edmonton, 40; Strathcona, 3; Calgary, 76; Lethbridge, 14; New Westminster, 6; Vancouver, 74; Victoria, 26; Nanaimo, 2; Prince Rupert, 2.

WAR SUPPLIES—BAYONETS.

Mr. CARVELL:

How many bayonets, with the bulge removed, as described by the Minister of Militia on page 1413 of Hansard of this present session, have been manufactured and delivered to the Canadian Army?

Mr. KEMP: It is impossible to give the correct numbers, but it is understood that these changes were made in England, as far as the bayonets which have been sent overseas are concerned. As regards those now being manufactured, negotiations are under way to have the alterations made in Canada.

SHELBURNE CUSTOMS DUTIES.

Mr. KYTE:

What was the amount of customs duties paid at the port of Shelburne, N.S., for the month of December, 1915, respectively, on imports from the United States of America, and on imports from other countries?

Mr. REID: United States of America, $3,478.07; other countries, nil.

UNOPPOSED MOTIONS FOR PAPERS.

Mr. McKenzie.—For a return showing the names of those who have been furnishing food, clothing and other necessary supplies to the soldiers at North Sydney and Sydney Mines, since 4th August, 1914, to 1st February, 1916; the names and amounts paid to each, and amounts due to each on 1st February, 1916, over and above what has already been paid; whether the said supplies of all kinds were obtained or called for by public tender, and if so, how the tenders were called, and who were the tenderers; whether the contract for such supplies was always given to the lowest tenderer; the names of those who tendered and the figures of the tenders in each case; and the different methods by which tenders were invited, and for what classes of merchandise or supplies.

Mr. McKenzie—For a copy of all letters, telegrams and petitions in the possession or under the control of the Post Office Department having reference to the dismissal of Postmaster McRitchie at North River Centre, Victoria county, Nova Scotia, and to the appointment of Neil McLeod in his place.

Sir Wilfrid Laurier.—For a copy of all correspondence between the Government and the provinces, regarding increased co-operation in the promotion of immigration and land settlement, commencing with a letter of the Minister of the Interior to the provincial Prime Ministers, in November, 1911.

SHIPMENT OF SYRUPS FROM WEST INDIES.

On the Orders of the Day:

Sir WILFRID LAURIER: I wish to call the attention of the Minister of Marine and Fisheries to the fact that merchants in Quebec doing business with the West Indies have written to me that they cannot get space for molasses and products of that kind on board the subsidized steamers plying between the West Indies and St. John. Their correspondents in the West Indies tell them that these steamers refuse to take syrups, the whole of the space being taken up by sugar, which, they say, is more paying freight. These merchants say that for some months past they have not been able to obtain any molasses. In view of the fact that these steamers are subsidized by the Government, this matter ought to be inquired into. I would ask the good offices of the Minister of Marine, or of the Minister of Trade and Commerce if he were here, to look into the matter and tell me what answer I may give to my correspondent in Quebec.

Mr. HAZEN: I shall be very glad to do so, although the matter is one that comes more within the jurisdiction of the Department of Commerce which controls questions of subsidies to steamboats. I understand that these West Indian steamers during the present winter have been carrying very large cargoes. Although they are much larger boats than were on the route a few years ago, the development of business this winter has been so great that they have been unable to carry all the cargo offered. I presume it is necessary for them to bring the sugar to Canada for the purpose of affording work to the employees of the sugar refineries. I understand from the Minister of Railways that an attempt is now being made to relieve the situation, and it is probable that a boat belonging to the Railway Department, the Durley Chine, may be sent to the West Indies to help relieve the congestion. I shall be glad to make inquiry and to communicate such information as I may obtain to my right hon. friend.

INTERCOLONIAL RAILWAY—ALLEGED EXPROPRIATION OF COAL.

On the Orders of the Day:

Hon. J. D. REID (Acting Minister of Railways): I wish to refer to a statement made by the hon. member for Pictou (Mr. Macdonald) on the 10th instant, when I was absent from the House. He said:

Coal consigned by the coal companies to industries some of them engaged in the manufacture of munitions, has been expropriated by the Intercolonial railway, and the information I have by telegram is that the taking of this coal is resulting in the stoppage of these industries.

When my attention was called to this, I telegraphed the manager at Moncton, and received a reply stating that the hon. mem-

ber's information was wrong, and that no coal had been expropriated by the Intercolonial.

PERSONAL EXPLANATION.

On the Orders of the Day:

Right Hon. Sir ROBERT BORDEN (Prime Minister): I rise in order to make a personal explanation. In the course of the debate the other evening, I used this language:

> And when he suggests there was an alternative proposition from the other side of the House in amendment to the Government measure, he conveniently forgets that the amendment proposed to postpone any action whatever until after a general election should be held in Canada.
>
> Mr. Pugsley: I do not think I proposed that, nor that any one else proposed it.
>
> Sir Robert Borden: Does not the hon. member remember the terms of the amendment?
>
> Mr. Pugsley: I do not think that was in it.
>
> Sir Robert Borden: He may not think so, but that does not alter the fact that it was in it. His memory is not so good on this as on some other points. I have a distinct recollection that the proposals offered by hon. gentlemen opposite involved the postponement of action until after the general election.

My hon. friend from Pictou (Mr. E. M. Macdonald), at a later stage in the debate, expressed surprise that I should have made the statement to which I have alluded; and he read the amendment which was offered by my right hon. friend the leader of the Opposition (Sir Wilfrid Laurier) on the 12th day of December. I should like to say, in explanation and support of my assertion, that on the 13th of February, 1913, as reported at page 3103 of Hansard, the hon. member for Maisonneuve (Mr. Verville) moved a sub-amendment in these words:

> That the following words be added at the end thereof: "and the consent of Parliament should not be given to this resolution until it has been submitted to and received the approval of the electors."

That amendment was undoubtedly accepted by my hon. friends on the other side of the House because when it was voted upon on the 13th of February, as is recorded at page 3239 of Hansard, the right hon. leader of the Opposition and all his supporters either voted for or were paired in favour of that sub-amendment. Then, at a later date, on the 18th day of February, as reported at page 3482 of Hansard, 1913, the hon. member for Assiniboia (Mr. Turriff), upon the second reading of the Bill, moved the following amendment:

> That the said Bill be not now read a second time, but that it be resolved:
>
> That it is the constitutional duty of the Government, under the terms of the British North America Act, immediately to introduce a measure for the readjustment of the representation of the provinces in the House of Commons, according to the population of the said provinces as established by the census of 1911, and that this House do not proceed further with the Bill until such readjustment has taken place, and the people have been duly consulted on the said Bill.

The leader of the Opposition and his followers voted also for that amendment. To give a perfectly correct statement of the record, I should, in fairness, say that my right hon. friend the leader of the Opposition and those who supported him voted also for the resolution proposed by my hon. friend on the 12th day of December, although they had previously voted for the amendment of the hon. member for Assiniboia. It is an absolute fact that they voted for the sub-amendment and for the amendment on the same day, the one proposing to postpone any action until after the people had been consulted and the other proposing immediate action. Hon. gentlemen on the other side supported by their votes both these propositions. And then, further, I find also that when the Bill reached the Senate, Sir George Ross, the Liberal leader in the Senate, moved the following amendment, which was carried by a vote of 51 to 27:

> This House is not justified in giving its assent to this Bill until it is submitted to the judgment of the people.

Sir WILFRID LAURIER: That was not an alternative policy, but, having failed in one thing, try something else.

Sir ROBERT BORDEN: The policy of my right hon. friend succeeded very well, because his amendment carried in the Senate and the Bill was defeated on that ground. I am giving it as an illustration of the proposals to which I alluded in my reply to the hon. member for St. John.

VICKERS-MAXIM WORKS, MONTREAL—LABOUR TROUBLES.

On the Orders of the Day:

Mr. VERVILLE: I wish to call the attention of the Government to the fact that there will be a great meeting of protest on Friday next respecting the strike at the Vickers-Maxim Works in Montreal; and if the Government does not do something I would not be surprised if there were a general strike there.

Sir WILFRID LAURIER: Is there no reply to my hon. friend?

Sir ROBERT BORDEN: The Minister of Labour informs me that he has given a great deal of attention to an endeavour to bring matters to a more favourable situation in respect of the labour conditions in Montreal. He informs me that a meeting was held on Monday last between some members of the Government, the mayor of the city, and some of the labour representatives. It was believed at that time that the differences which existed were in a fair way of being settled. The Government will, of course, give its attention to the suggestion which my hon. friend has put before us, and to the view which he has expressed as to the danger of the strike extending, if these differences are not removed.

Mr. DOHERTY: I had the pleasure of being present at the meeting to which the Prime Minister has referred. At that meeting the workmen were represented, and likewise the employers. There were present His Worship the Mayor of Montreal, the hon. Minister of Inland Revenue, and myself. Different suggestions were made, and when we parted I was under the impression that there was every reason to believe that an understanding would be come to. A few moments before the hon. member (Mr. Verville) rose to ask his question, I was shown a telegram very much to the effect which he stated. I have been in communication with some of the gentlemen connected with the Vickers establishment, trying to impress upon them the suggestions made at our meeting, and I had in mind to suggest to the Minister of Labour that he call their attention to what has been said, with the view of doing anything it may be possible to do to meet the situation.

CUSTOMS TAXATION.

On motion of Sir Thomas White (Minister of Finance) the House went into Committee of Ways and Means, Mr. Rhodes in the Chair.

1. Resolved, that it is expedient to amend Schedule A to the Customs Tariff, 1907, and to strike thereout tariff items 92 and 267, the several enumerations of goods respectively, and the several rates of duties of customs, if any, set opposite each of the said items, and to provide that the following items, enumerations and rates of duties be inserted in said Schedule A:

Tariff Items.	——	British Preferential Tariff.	Intermediate Tariff.	General Tariff.
92	Apples, per barrel	60 cents.	90 cents.	90 cents.
267	Oils, petroleum (not including crude petroleum imported to be refined or illuminating or lubricating oils), ·8235 specific gravity or heavier at 60 degrees temperature, per gallon	⅓ cent.	½ cent.	½ cent.
267a	Crude petroleum in its natural state, ·7900 specific gravity or heavier at 60 degrees temperature, when imported by oil refiners to be refined in their own factories	5 p. c.	7½ p. c.	7½ p. c.

Provided, however, that the goods hereinbefore enumerated shall be exempt from the rates of duties of customs specified in section 3 of the Customs Tariff War Revenue Act, 1915.

Sir WILFRID LAURIER: Are you taking up the amended resolutions?

Sir THOMAS WHITE: No, I propose that we take up the resolutions relating to the tariff, namely the duty upon apples and upon fuel oil. Tariff item 92, which it is proposed to strike out, provides a tariff of 25 cents, British preferential tariff; 35 cents intermediate tariff, and 40 cents general tariff per barrel of apples. There has also been a special customs tariff under the War Revenue Act of 1915 which amounts to 5 per cent British preferential; and 7½ per cent each in the intermediate and general tariff; that is an ad valorem duty. The new rate is 60 cents per barrel, British preferential, and 90 cents in the intermediate and general tariffs.

Mr. MICHAEL CLARK: Before this duty passes, I would like to say a word or two. I have not troubled my hon. friend (Sir Thomas White) much this year. An unrepentant free trader could not pretend to be altogether dissatisfied with a Budget in regard to which the Minister of Finance and the financial critic of the Opposition are contending with one another as to the best form of direct taxation to impose. That is

a condition of affairs which is eminently satisfactory to one who has been preaching that doctrine in this House for many years. But I do not know why the Minister of Finance, when he was making so courageous and so noble a departure, from my point of view, should not have made it whole-heartedly. Nobody knows better than he that he should not have introduced this duty on apples. He told us last year that the customs tariff was the mainstay of the Finance Minister in the course of twelve months he has managed either to lose or to break his mainstay pretty badly. I wish he had thrown the old thing away altogether, and not bothered the people of the prairie with this trifling miserable little duty on apples. I do not know why he did it; perhaps he will favour me personally with the information. It is a very miserable little duty, Mr. Chairman, in a Budget that has many good points about it, and it is such a splendid concrete example of the general evils of protection that I feel I am entitled to take up the time of the committee for a minute or two about it.

Speaking on another subject the other day, the Minister of Finance said he was inclined to look at free wheat from the national standpoint. That was a very good sentiment coming from the Minister of Finance of a party who on tariff matters profess always to hold a policy which they call national. How can he defend this tariff on apples from the point of view of a national policy? He did not attempt to do so. The Minister, in his Budget statement, said this is done specifically to help a given industry in a certain province, so that, so far from having anything national about it, it bears the earmark of class, provincialism, or any other word that constitutes narrowness and opposition to what is in the national interest. It sets the province of British Columbia, if my hon. friend likes to look at it in that way, against the Prairie Provinces; and coming from the Prairie Provinces I should not be true to the best interests of the nation, which are represented very largely in those provinces, if I did not make an emphatic protest to my hon. friend. Why should he put another burden on the Prairie Provinces this year? What have they done? I know that two of the provinces are very Liberal in their complexion, but surely that would never actuate my hon. friend. I know something else about all the Prairie Provinces; I know that the people inhabit a part of Canada which perhaps needs fruit more than any other part of the Dominion. They suffer from the cold climate of Canada's winter in such a way that fruit is an absolute necessity of their existence, and very essential to their health and to their prosperity. Does my hon. friend say he is helping the nation in hurting the health of the sturdy farmers who have given you a crop this year upon which the prosperity of the whole nation depends? I am very much in earnest about this thing, and I hope my hon. friend will listen to me, because I think that before I have finished I shall have pretty nearly moved his distaff or mainstay or whatever he calls it. My hon. friend is a good-hearted man; I know that. He cannot have any internal spite against the people of the prairies. But does he ever think seriatim of the things he has done and is doing to those people? He took an hour and forty minutes to speak against their being allowed to sell their wheat where they want to sell it; and last year he put on a tariff that fell very largely upon those people. Now he comes along, and, after doing his best to prevent them from making money by selling their wheat, he tries to take a portion of the little money they do get for the apple growers of British Columbia. Is it fair or decent to the people of those provinces? I recall to my hon. friend's attention a statement in which we have the true national outlook of a man of vast financial responsibility, who understands this country very well, and who represents West Toronto. At the beginning of last year he said: "Everything in Canada this year depends upon this year's crop." Yet, when Canada depends so much upon those men on the prairies, why should these successive burdens be placed upon them? Pharoah was not in it for a cruel heart with my hon. friend. He set the Israelites to make bricks without straw, but my hon. friend wants the prairie farmers to pay high rates for their apples without selling their wheat. He is a modern Pharoah, and I am ashamed of him, much as I think of him in a great many ways, as I may tell him before I sit down. There is no end to the injustice he is going to mete out to the people of the prairies if I do not get him checked in some way or another. It is a positive sin against the health of the people, and nobody can say that a sin against the health of the people is a very good feature of a national policy. There is nothing national about it; it is very local indeed. It is much more local even than setting up British Columbia against the prairie provinces. It is much worse than

that because the great majority of the people of British Columbia are not apple producers; they are apple consumers. The people of Vancouver do not grow any apples, not at all events on the streets that I saw when I was there. You have 100,000 people in Vancouver who are consumers of apples, so that my hon. friend, in pursuance of this broad national policy that he has produced, is not only setting a portion of British Columbia against the Prairie Provinces, but he is putting a very small portion of British Columbia against the rest of the province. I would like my hon. friend either to give up this or give up professing that he is following the National Policy in tariff changes. The people of Vancouver and Victoria are just as important as the people who produce apples. In regard to the prairies, we find our market for beef to some extent in British Columbia, but we in Alberta do not ask my hon. friend to protect us in the raising of beef. We should be ashamed to do it. I do not care where you bring beef from to compete with the steers that we are raising in Alberta, they would never be looked at, they would never get across the line. But why should my hon. friend penalize the men who are raising beef in Alberta? Our beef speaks for itself; why does he not make his apple producing friends produce fruit that would speak for itself?

I have no objection to the men who raise apples, but I have an objection to their economic policy, and I want to point out to my hon. friend that in helping this industry he is following a very false line of economic policy. Does he not know—I am sure he does, because his knowledge is encyclopædic—that these gentlemen whom he now seeks to protect paid far too much for their land in British Columbia? He is going to help out these people with their dear lands. A great many of them are not apple growers at all; I am sorry to say it, but in British Columbia there are a great many of my own fellow countrymen, and there is nobody so keen to take advantage of another Englishman as an Englishman who has been in the country for two or three years and who is holding land until he can get some other Englishman to come out and give him more than he paid for it himself. I would be sorry to say that about the apple growers of British Columbia as a whole. All I want them to do is to raise apples on the same principle that we raise beef in Alberta,and that the grain farmers raise wheat in the other provinces.

I remember that the Minister of Trade and Commerce last year, when tariff taxes were being objected to as bearing too heavily upon the farmers of the West, said that he felt quite sure that the farmers of the West would bear their proper share of the war expenses. I wonder if I could not place similar confidence in the raisers of apples, because there are two sides to the loyalty business. The Minister of Trade and Commerce was appealing to the farmers of the plains very broadly, and indirectly, and he was putting it in a very complimentary fashion when he sai : I am quite sure that the farmers are such good patriots that they will stand by these impositions for the sake of the Empire and pay them gladly. But that has two sides to it. Some people's loyalty consists in asking the other fellow to pay, and that is the kind of loyalty I do not believe very much in. I do not think there is much loyalty on the part of those men who raise apples and who say to me that I have to be loyal enough to pay them more for their apples in time of war than I pay in time of peace. I have not much use for the loyalty that consists mainly in putting such a sacrifice on other people.

Talking of one portion of British Columbia being supported at the expense of the great consuming portions of that province brings me to make an inquiry that I would much rather not have to make. I have always had the very greatest regard for my hon. friend the Minister of Finance. He knows it; his psychology has been a continual and interesting study to me, and there is not a man who has taken more pleasure in observing that the Crown very rightly, as I think, has recognized his very great abilities by giving him a well-earned knighthood. I have the highest appreciation of my hon. friend, and I was delighted when this honour was paid him. We have all been pleased to see the rapidity with which he has fallen into the ways of this House, and the certainty with which he has advanced in the ranks of statesmanship after having been picked up just a little precariously at the last election. Having this great regard for him, I am just a little sorry that he should have stooped to this miserable piece of politics, or tariff legislation—economics he rather likes to call it. I would suppose he would like to pass it off as good economics, but if he is going to do that I wish he would tell me what he is going to get from it because the farmers of the plains will want to know what revenue he is getting from it. If the

revenue does not justify it, he will have difficulty in justifying it on the ground that he is going to help these men who have given far too much for their land. I am not at all sure that my hon. friend was not actuated by a motive that I would rather he should not have been influenced by in introducing this legislation. I am not at all sure that he was so much concerned about the troubles of the apple growers when he introduced this legislation as he was about the troubles in the local administration of British Columbia. I am very suspicious upon that point. If that was his motive, I am bound to say that the charge of shortsightedness which I brought against some of his tariff legislation last year has much more justification even in regard to this legislation because in regard to this he has been extraordinarily shortsighted. He did not see that Victoria and Vancouver people could not possibly take any interest in the raising of the prices of apples except to resist it. He should have seen it because these were places where his apple tariff was going to have the very first chance of producing political effects. They produced effects beyond anything which was looked for by the hon. gentleman. But my hon. friend confusing his economics in that way, I cannot help saying that I can hardly be sorry for him. What he wants to recognize in dealing with economic questions is that they must be put upon a broad principle and the broad principle in regard to production in Canada is that it is not necessary to produce apples at all. What is necessary is that we should eat them. There is nothing in producing apples. My hon. friend, on general principles, goes too far in regard to production. Production is not the great thing that we want in this country; consumption is the great thing. If you undertake to consume plenty you will produce plenty. A man who does not produce anything gets no wages and his consumption is pretty low. If you look after the consumption of a thing you will never need to be afraid of the production. Consume plenty and production will go on. That is the principle that my hon friend should have gone upon. He has a great sense of humour. If he had not had this sense of humour he would have rejected this course as suicidal because he would never have gone into this thing at all for the purpose of restoring the falling fortunes of Sir Richard McBride. We have read in our Shakespeare of another Richard exclaiming under rather hard stress of circumstances: A horse, a horse; my kingdom for a horse. That Richard, unfortunately, did not get a horse. This Richard did not get a horse but he got a ship and fled from the scene. My hon. friend comes to his rescue a little late and says: There is a little duty on apples for you. I do not think it will do much for Mr. Bowser either. I want to warn my hon. friend solemnly against ward-heeling economics of that kind, for the future of his reputation as Finance Minister of this country. This duty was a paltry miserable duty to bring in at this time, and one which cannot be justified on any sound ground whatsoever. In another speech the other day my hon. friend said that he and the rest of us were looking forward to different things after the war. I am quite sure things will be different, but I do not think that on this question of tariff and economics, things will be different in the sense in which my hon. friend is looking for them to be different. War is the greatest of human re-actions; this is the greatest of all wars; and I personally would die of despair if I did not think that the rebound of the wave towards progress will be the greatest the world has ever seen. And progress is not achieved by going further along the lines of tariff legislation. I cannot help thinking that Providence has taken a very apt pupil in hand in my hon. friend the Minister of Finance, and he took him and the rest of us in hand in rather a vigorous manner when he burned down the old Parliament building. He sent the Minister of Finance down to the Museum here for a special purpose, I am quite sure; and the special purpose I would commend to him is that he should look for progress after the war, and he could not help that progress in any better way than by finding the fossil remains in this building, and putting as much tariff in that part of the building as he possibly can, and leaving it there when he and the rest of us are spared leave here for the new Parliament building. Meanwhile, I would not wait till we make the shift, but I would advise him to find out where the fossil remains are and put this little apple duty among them before it ever has an existence.

Sir THOMAS WHITE: My hon. friend from Red Deer (Mr. Michael Clark) has been so complimentary in his remarks towards myself that he disarms antagonism, even political antagonism. He and I are good friends, and I know we should con-

tinue to be so. My hon. friend has spoken of fossils, and it is curious that while he was speaking I should have been thinking of our being housed in this museum. I was throwing my mind forward to the period after the war in which, along with the other changes that will have taken place, my hon. friend from Red Deer will either have reformed or be one of the few remaining free-traders, in which latter case the museum might be an appropriate place to house him as a specimen of an extinct race of economists. All that is quite within the limits of the possibilities of this war. The trouble with my hon. friend is that he got started wrong; he was caught young, and he has never got over it. He can see no good whatever in protection. Well, I look forward to the conversion of my hon. friend. He has spoken of himself as an unrepentant sinner, but some of the greatest sinners in the world have been converted.

Mr. MICHAEL CLARK: I said an unrepentant free-trader.

Sir THOMAS WHITE: And the conversion of a hardened sinner is usually sudden and frequently lasting. I recall the case of John Bunyan, and of Saul of Tarsus, who was converted when a great light suddenly burst on him on his way to Damascus. When this war is over and my hon. friend sees what free trade has meant as between Great Britain and Germany, and realizes the advantages of a self-contained country and a self-contained Empire, I should not be surprised if almost as great a light bursts on him as fell on Saul of Tarsus on his way to Damascus. And I look forward to most eloquent speeches from him, in this House, if he should be here, in favour of protection as the true economic policy of this country.

My hon. friend has spoken of the National Policy, and has asked what relation this duty on apples has to the National Policy. Well, it seems to me that the basic and most important industry in Canada to-day is agriculture. A part of agriculture is the growing of apples, and it does seem to me that it would be a most desirable thing if Canada should, as she undoubtedly can, not only raise all the apples required for the people of this country, but have a large surplus over for export. There is no reason in the world why Canada should not raise all the apples consumed in this country. It is simply a matter of distribution.

[Sir Thomas White.]

Before I come to the matter in hand, my hon. friend from Red Deer repeated a remark I made last year, that the tariff was the mainstay of revenue. That is quite correct. I should like to see my hon. friend as Minister of Finance endeavouring by any other means to provide the amount of money that we require to meet our expenditures and increased interest charges due to this war.

Mr. McCRANEY: Is the proposed increase in the duty on apples for the purpose of revenue or to protect the farmers of British Columbia?

Sir THOMAS WHITE: As stated in my remarks on the Budget, this duty is in my view indispensably necessary for the safeguarding of the apple industry of Canada, and particularly of British Columbia. It is frankly for that purpose. My hon. friend spoke of loyalty, and he was rather unhappy in his remarks because it chances that no district in Canada has evinced its loyalty in more striking fashion than the fruit growing district of British Columbia.

Mr. MICHAEL CLARK: Is my hon. friend quite fair? I was talking purely of loyalty to taxation. The last remark I would wish to make is that one section of the country is giving more soldiers than another; we had better leave that out. My hon. friend will admit that I have never indulged in talk of that kind at any time.

Sir THOMAS WHITE: My hon. friend did not make it quite clear in his remarks to what he was referring when he spoke of loyalty. However, I accept his explanation.

Coming to the matter in hand, there is a very extraordinary situation in British Columbia. I deprecate very much the references made by one or two hon gentlemen opposite to the British Columbia political situation, a question to which this duty on apples has absolutely no relationship whatever. The question of raising the duty on apples has been before my department for not less than three years. Every year there have been deputations, and the fruit-growers of British Columbia have made the strongest kind of representations as to the serious situation that exists there, and have asked for some kind of relief. So no question possibly arises as to this duty on apples being connected with the British Columbia political situation. The Government have acted with no haste in the matter. Representations have been made to us for the last two or three years, and we finally came to the conclusion that unless some kind of tariff were granted—

Mr. A. K. MACLEAN: What were the representations made by the delegations from British Columbia in regard to the apple industry?

Sir THOMAS WHITE: The British Columbia fruit grower is in competition with an abnormal condition of affairs that exists in the states of Washington, Oregon and Idaho. In these states there has been a very great over-production, and my hon. friend knows that, with the planting that has been going on for the last few years, over-production is likely to greatly increase in the future. The fact of the matter is that apples produced in these states have been selling on the American side as well as in Canada at much less than the cost of production.

Mr. A. K. MACLEAN: What is the quantity of British Columbia's export of apples in carloads?

Sir THOMAS WHITE: I have not that before me, but I desire to read, as showing the situation existing in the fruit growing industry, an extract from the report of Mr. D. Johnson, fruit commissioner, Ottawa:

> It has been shown at the Experimental Station that it costs $1.08 per box, equal to $3.24 per barrel, to produce apples in British Columbia, yet the average price (f.o.b.) obtained for this fruit in 1914 was 80½ cents per box, equal to $2.41 per barrel.

And here is an extract from the report of Mr. A. H. Flack, chief fruit inspector for the Dominion, one of the most able and conscientious officers of the Department of Agriculture:

> Many Washington growers are unable to continue with the low prices realized for their fruit. Foreclosures, I was informed, were quite common. It has often been asked me, "How is it that the Washington growers can sell so cheaply and make money and the British Columbia growers cannot?" My observations were that the Washington grower is not making money and cannot survive the low prices. The British Columbia situation reminds me of a merchant endeavouring to compete with a bankrupt stock.

It is a fact that cannot be controverted, that the British Columbia fruit grower has been competing with a situation in which apples have been sold below the cost of production. British Columbia is a community geographically cut off by the Rocky Mountains.

Mr. TURRIFF: Is it not true of every apple-growing country that many apples are sold at less than the cost of production?

Sir THOMAS WHITE: That may be true. But in British Columbia this has been a standing condition for a considerable time past, and such a condition has been reached that unless this tariff measure is granted the consequence for the British Columbia fruit-growing industry will be most serious. Apart from British Columbia, it is to be remembered that two years ago we had in Canada a condition in which it was almost impossible to dispose of the apple crop. It looked as if apples were to be left to rot under the trees. The Minister of Trade and Commerce embarked upon a campaign and assisted in relieving the situation. All the signs point to a large increase in the apple crop for this year, and, for that matter, for many years to come, on account largely of the extensive planting that has taken place in recent years. It comes down to this: Is there any reason why the Canadian fruit grower—not confining the argument to British Columbia, but taking the fruit industry from the Atlantic to the Pacific—should not be given the benfit of the Canadian market? It does not necessarily mean that the price of this fruit will go up; it means that the Canadian grower will have a better opportunity in his own market, and that, I believe, is the true national policy.

Mr. A. K. MACLEAN: What is the good of it if it will not put the price up?

Sir THOMAS WHITE: Then the hon. gentleman's argument is that no matter how high the tariff may be, even if prohibitive, foreign goods will still come in?

Mr. MACLEAN: Not necessarily.

Sir THOMAS WHITE: My argument is, that with this increase in the duty, the Canadian market will be reserved more for the Canadian grower. It does not necessarily mean--

Mr. MACLEAN: The hon. gentleman is getting away from the point, and I want to hold him to it. He tells us that the British Columbia apple producer is engaged in a losing industry because he cannot obtain a price which will yield him a profit. The hon. gentleman proposes to improve that condition by increasing the duty. But how will the increase in the duty improve the situation, unless it enables the producer to get a bigger price. And how can he get a bigger price unless he gets it from the Canadian producer?

Sir THOMAS WHITE: The greater market for his product in Canada.

Mr. MACLEAN: We only imported 269,000 barrels of apples last year in all Canada; that would not help very much.

Sir THOMAS WHITE: The British Columbia fruit-growing district is not a very large one, but it is a very important and growing section in British Columbia, and the effect of this, we hope, will be to give them a larger market in Canada for their product.

Mr. MACLEAN: What does their yearly production amount to?

Sir THOMAS WHITE: The British Columbia yield in boxes has been as follows:

	Boxes.
1910	210,000
1911	250,000
1912	430,000
1913	477,000
1914	685,000
1915	787,750

My hon. friend will observe that the production in 1915 was nearly four times as much as in 1910.

Mr. TURRIFF: Were they not doing well enough?

Sir THOMAS WHITE: No, they were not doing well enough; they have not been doing well at all. As I say, unless this tariff change is introduced, the future of the British Columbia fruit-growing industry is of a most precarious character. I do not believe that any hon. gentleman would like to see an important section of the community most seriously affected by a condition of affairs that can be remedied by legislative action in this House, and such action not taken.

Mr. A. K. MACLEAN: There might be some other way.

Sir THOMAS WHITE: I would be glad to have suggestions as to a way. I do not know of any other way to assist the situation.

Mr. MACLEAN: The Minister of Trade and Commerce (Sir George Foster) promised a couple of years ago to find a market in Australia.

Mr. KNOWLES: The position of affairs, as I understand it, is one of only this year.

Sir THOMAS WHITE: No.

Mr. KNOWLES: I thought the first excuse given was that the condition of affairs is serious because of the great over-production in the United States. But the minister says that that is not correct, that this is a permanent tariff that he hopes to have remain as long as he is in power. He says that is correct?

Sir THOMAS WHITE: I make no statement as to how long a tariff condition will continue; it would be most improper to do so.

Mr. KNOWLES: Rightly or wrongly I had the impression, either from what was said in the Budget or from some other reliable source, that it was on account of the condition of affairs this year—a great overproduction in Washington, Oregon and Idaho—that this action was necessary. If I am incorrect in that—

Sir THOMAS WHITE: It has been for the last three years.

Mr. KNOWLES: Therefore, the thing is more serious than we thought. The seriousness of it has been growing, and we shall be lucky if it does not get worse. It is remarkable that under this adverse condition of affairs the apple industry of British Columbia in four years multiplied itself by four. Our contribution on the prairies to encourage an infant industry may be made in a spirit of charity, but I will be dashed if we want to help people who quadruple their wealth in four years —we are not doing that well ourselves. I have not heard the minister say: We will take something out of other parts of Canada and give it to the poor homesteaders in Saskatchewan, because they are not increasing their wealth 100 per cent every year. But if you apply that principle to British Columbia, why not apply it to Saskatchewan as well? My view of this whole protection business—I do not know whether any one cares about it or not; I do not know whether it is worth five cents or not—is that if this Parliament wants to make pets and favourites of the apple growers of British Columbia, it ought to be done at the expense of the people of Canada, not at the expense of Saskatchewan and Alberta only. If the minister wants to help the apple growers of British Columbia, why does he not vote some money, fifty cents a barrel if he likes, check it up carefully and pay it out to these people? Let the people in the Annapolis valley pay a share of it; let the people of Quebec pay a share of it; let the whole people of Canada pay a share of it. That would be

more like a national policy; that would be putting the expense upon the nation as a whole, instead of piling it all on the Saskatchewan and Alberta prairies. These prairie districts are a mark, not a market.

Sir THOMAS WHITE: Was there any tariff on apples during the tenure of office of the late Government, of which my hon. friend was so ardent a supporter? If so, what does my hon. friend say about that?

Mr. KNOWLES: I am afraid there was a tariff.

Some hon. MEMBERS: Oh, oh.

Mr. KNOWLES: Since the minister has raised that point, I may say what I said in this House eight or ten years ago; I support the Liberal party not because of their tariff, but in spite of it. There is nothing on which my mind is clearer than on this point: in the interests of my people, in the interests of the Dominion of Canada, as between the two parties in this country I shall continue to support the Liberal party.

Mr. MEIGHEN: Did not my hon. friend, when in opposition support a tariff policy? Did he not frequently say from his place in Parliament that a tariff policy was right?

Mr. KNOWLES: I do not recollect that.

Mr. MEIGHEN: What about farm implements?

Mr. KNOWLES: I repeat that as between the two parties I would not do anything to put the high protection party in power, and to put the Liberal moderate tariff party out. But if there were a real, genuine free trade party in this House, I would have to support that free trade policy. No person by any political knavery or fakirism or anything of that kind, can convince me that I ought to support the greater of two evils—because I look on tariffs altogether as an evil. I am just as clear on this point before my constituents as I am in this House. The people of the Prairie Provinces would be very foolish if of the two parties they did not support the Liberal party at this juncture. Let us take this case as a case in point. It is not a large matter; it is a little measly matter, as measly as some of the apples that come from British Columbia. This duty on apples is the thin end of the wedge. Hon. gentlemen opposite want to see how the people of the Prairie Provinces will stand a little touching up along the line of duties. Perhaps another tariff commission will be suggested to us before long. In his speech the other day the Solicitor General said: "How could we give you an open market for wheat? If we give you an open market, the first thing we know you will want free trade in something else; one thing will lead to another, and it may come to the point that the protection business will be knocked on the head." The hon. gentleman said in effect: "We cannot give you an open market, because if you get a taste for it, you will be anxious for more." The hon. gentleman did not use these words, but that is what he meant. This matter of a duty on apples is not a large matter, but it is all the meaner and all the more unfortunate that this miserable, measly, picayune, small business should come from the Minister of Finance at a time when people ought to be great and big in financial matters. I do not think any one cares a great deal about the money part of it, because the amount involved is not very large; it is the principle of the thing that we object to. Why put it all on the people of Saskatchewan and Alberta? If you want to encourage the apple growing industry, why not do so by providing better storage facilities? Why not assist the industry at the expense of the federal treasury? Surely hon. gentlemen could do something that would make it advantageous for our people to buy British Columbia apples. Surely the brains of the Government could devise some means by which the industry could be encouraged if hon. gentlemen want to encourage it. I think there is a great deal in what the hon. member for Red Deer said: that a great deal of the trouble comes from the fact that these lands in British Columbia are held at such outrageously high prices. The Creator intended that these lumber fields and fruit gardens should be used by the people, but they have got into the hands of speculators Favourites of the McBride Government got them as pap, and they have so shuffled them that a grant of land which they got for practically nothing, after changing hands a few times, was worth millions of dollars. Then the people of the Prairie Provinces are told: You have got to pay a price for your lumber which will pay interest on the absurd capitalization of the timber limits; you must pay a price on your fruit which will cover the interest on the absurd capitalization of the British Columbia fruit fields. The minis-

ter has remarked that this duty will not increase the cost of apples. Even after having been subject to the sobering influence of the last year or so since the war commenced, the minister could not help laughing when he made that statement. To say that it will not make higher prices to the apple growers is a joke—a pretty serious joke, because of the principle that is involved in it. The Minister of Finance is a great statesman in some respects, but even great statesmen sometimes make childish statements, and I think the statement that this duty will not mean larger prices to the people who raise apples is one which is unworthy of the man who fills the position of Finance Minister of Canada. I hope that the minister will rise in his place and withdraw that statement.

Mr. SUTHERLAND: I have followed this discussion so far with considerable interest and some amusement. One would almost infer from the remarks which have been made with regard to the proposed duty on apples that Canada was a rather small country in which apple growing was confined to a very small area, and that this duty is really going to affect only the people of the prairie provinces. I protest against any assertion of that kind. I would like to remind the House that this duty has been asked for, not only by the people of British Columbia, but by the people of other provinces as well.

Mr. MICHAEL CLARK: May I point out that the hon. minister, in his Budget speech, said the exact opposite of what my hon. friend says? He used the words "especially British Columbia;" therefore our criticism is directed against the statement of the minister.

Mr. SUTHERLAND: I am dealing with the arguments advanced in committee this afternoon; I trust that the hon. gentleman will grant me the privilege of confining my remarks to those arguments. This has been a very live question in Canada for quite a number of years; the situation has not been more acute during the past year than it was for many years previous. Any one who has followed the fruit-growing industry in the Dominion of Canada will readily understand that the past year was not the worst year in the history of our country so far as the importation of American fruit is concerned.

But we do know that there is in the United States a combine among the wholesale fruit dealers which practically forces the retailers in Canada to take so much of the American apples and similar fruit, that we can very well grow in this country, whether they want to or not, if they are to receive a supply of such fruit as oranges which we do not produce. It is nothing new to the people of this country to see the fruit stores in our large cities at this time of the year practically filled with fruits from the western United States, Oregon, and Washington territory. The importations in the last five years have been very large. In 1911, they were 150,000 barrels; in 1912, 195,000 barrels; in 1913, 320,000 barrels; in 1914, 331,700 barrels, and in 1915, 269,000 barrels. Thus we did not suffer so very much from American importations in the past year as in the two previous years. British Columbia undoubtedly has great prospects, there is a great future in store for it as a fruit producing country; but in the province of Ontario there are even greater posibilities for the growing of fruit than in any other province. These possibilities have been overlooked, but we find at present there is at least $50,000,000 invested in apple orchards in Ontario, which is more than double the amount in any other province. This question is quite a live issue in Ontario. If we are ever going to make of Canada a great nation, we have got to give and take a little among ourselves. Some parts of Canada may not be adapted to a certain industry while other parts are, and if we are going to build up and develop these parts that possibly have advantages, then we must suitably regulate our tariff. The hon. member for Moosejaw (Mr. Knowles) could not but hark back to the wheat question this afternoon, and it is only a few days since I heard hon. gentlemen opposite admit that the wheat from western Canada commands from 7 to 8 cents more on the Liverpool market by reason of the fact that it retains its own identity. That is surely something to be proud of. If you attend the meetings of the apple-growers associations in the city of Chicago, where they have the greatest exhibit of fruit that is to be found in the world, you will invariably find that the quality of the apples grown in Canada is better than that of those grown in the United States.

Mr. TURRIFF: Then why so much duty?

Mr. SUTHERLAND: It is true that the American apple has a better appearance. The apples grown in Oregon and Washington territory, with their dry climate, develop a beautiful colour; they have a wax-

like appearance, but they have not the quality of the Canadian apple. That is evident to every one. A few years ago, when the Festival of Empire exhibition was going on in London, the apples selected for exhibition by the Department of Agriculture of Canada were not grown in British Columbia, or in the Annapolis valley, but in a section of Ontario that a few years ago was shown on the map as being outside of the apple-growing district, in the inland counties of Western Ontario; the apples which were shown were selected by the Government of hon. gentlemen opposite from apples grown in the county of Oxford, from which I come. The apple growing industry in Canada is practically in its infancy, and under proper conditions there are great possibilities for its development. It will frequently be found that the Americans are dumping their surplus stock into Canada at times when, in order to keep up the market at home, they can afford to dispose of their surplus in this country at a low rate to the injury of our fruit growers. If you are going to have a stable industry you cannot permit it to be subjected to competition of that kind, and I say the Government are entitled to a great deal of credit for having placed this item in the tariff at this time in order to enable that great industry to be developed as it ought to be. It will redound to the credit of this Government in years to come, and I am satisfied the people of Western Canada are not going to suffer as a result of the increase in the tariff. They will be purchasing apples from the people of British Columbia, and of Ontario, and of the Maritime Provinces, and the people in those provinces will be purchasing from them many things that they will be able to raise; a reciprocal trade will be carried on between the various provinces, which will be much better than a trade carried on with people who are prepared to take every possible advantage in dealing with us. That question was settled, and settled for all time, in 1911. The people of Canada spoke at that time and stated emphatically where they stood with regard to any arrangement of that kind. It is simply a waste of time for us to hark back to anything of that nature to-day because we may as well face the issue fairly and squarely, as I am satisfied for one that if there is any part of Canada that feels there is not a sufficient area in Canada to grow enough fruit for the people of Canada, they are making a great mistake. We are an exporting people as far as apples are concerned.

Mr. A. K. MACLEAN: Nobody would deny that. There is no necessity of the hon. member making an argument that we can produce sufficient apples for our own consumption, because we do that to-day and much more; we export. The question is, where are you going to get the market?

Mr. SUTHERLAND: Yes, we export to-day, and so do the Americans, by reason of the conditions that exist, they are prepared to unload their surplus stock on Canada in order to reduce that stock—

Mr. MACLEAN: Only 200,000 barrels.

Mr. SUTHERLAND: It was 269,000 barrels last year, 331,000 the year before, and 320,000 the year before that. This is not a small amount to be coming in each year under those conditions, and when you see in our large cities in Ontario, such as Toronto, that the fruit stores are largely supplied with American apples, then I say there is something wrong and it is time for the Government to take some action with regard to the matter.

Mr. DOUGLAS: Will the hon. gentleman explain just why Canadians buy Oregon apples to-day?

Mr. SUTHERLAND: I thought I made that quite clear, it is not a matter of to-day but a matter of years.

Mr. DOUGLAS: Is it a matter of price?

Mr. SUTHERLAND: Apples have been sold in Ontario much lower than in United States for years past. Just for the very reason that the Apple Growers' Association in the United States are bound to get rid of their surplus stock in some way in order to keep up the prices in their own markets.

Mr. GREEN: The question of national policy and national preference is no new question in this House. The principle has been in operation for many years past. During that time the various Ministers of Finance who have had tariff matters to regulate have tried from time to time to make the burdens bear equitably upon the whole people of Canada, and at the same time protect certain manufacturers and certain industries that needed protection in this Dominion. When hon. members opposite saw fit to attempt to find in the British Columbia provincial by-elections the reason for the Finance Minister dealing with this question at this particular time, they were very

unfair, and had no knowledge apparently of the facts. Delegation after delegation has come to the Capital city during the last four or five years, not only from British Columbia, but from the other fruit-growing districts in Canada, and have sought to have a duty placed upon apples that would enable them to supply our own markets. At this particular time in the history of the Dominion, a delegation from British Columbia arrived, and again pressed the claims of the apple-growers of Canada upon the attention of the Minister of Finance. They pointed out that, so far as British Columbia was concerned, we were not a manufacturing country. We were being taxed under a tariff for almost everything that we used. The few things that we could supply to the balance of Canada were not in the happy position of being sufficiently protected to enable us to retain that market.

The question has been asked this afternoon as to how we are going to keep this market without materially increasing the prices. If we could get the whole of the market of Canada, we would be in a better position to deal directly with the consumer. We would practically have a market for the whole of our product, or the greater portion of it, and we would be able to supply a better class of fruit than we have been supplying in the past. The hon. member for Moosejaw (Mr. Knowles) seemed to be surprised because apple growing in the province of British Columbia had increased from 210,000 boxes in 1910 to 787,750 boxes in 1915. Surely he knows that in British Columbia this industry is practically an infant industry. The increase in production is not because of the prices, and not because of the money that is being made out of the sale of apples, but because the trees are coming into bearing. The apple growers of the Western States, particularly those of Oregon, Washington and Idaho, have planted apples over something like 550,000 acres of land. Their production is so great that 75 per cent of their trees will have to be uprooted, and the acreage put to other purposes; and then when those remaining trees are in full bearing, they will have sufficient to supply their own markets. So far as British Columbia is concerned, we have not as yet any over-production, and we are not likely to have any. The cost of producing a box of apples to-day is, on the average, about $1.08, and that is not based on any extravagant value for the land. The Fruit Growers Association representatives who were here told me that the estimated value of apple growing land was $125 per acre, and any one knows that that is not an exorbitant price for land in the valleys of British Columbia.

The situation at present is that there is such an enormous over-production in the three western states which I have mentioned, that, when the growers there have graded their apples, they make the price on the prairies and sell their lower grades in Canada, they having far more than sufficient of the better grades to supply their ordinary market.

Mr. DOUGLAS: Has the hon. member any idea as to the price the grower in Washington and Oregon receives for his apples, say for No. 1 Fancy?

An hon. MEMBER: Forty cents a box.

Mr. GREEN: It is not 40 cents a box. Time and time again they have flooded the prairie districts with apples at from 30 to 70 cents per box. Occasionally they get as high as $1 and $1.20 for some of the better grades, but these apples very seldom come into our prairies.

Mr. DOUGLAS: I meant apples comparing with your No. 1 grade.

Mr. GREEN: The better grade do not come in at all to the Prairie Provinces.

Mr. DOUGLAS: I know differently.

Mr. GREEN: They do not come into the Prairie Provinces in any quantities. The apples that are being sold to-day are the lower grade apples, as the returns will show, and that is the apple we have to compete against. The position is this: They have these apples that they have to feed cattle with or dispose of in some other way. When they are packing the apples, they naturally pack what is saleable, and they consign some of them to the Prairie Provinces at a price in some cases hardly sufficient to pay the freight and duty when sold. When the British Columbia producer is ready to sell his apples, he finds the price being made all the time by the American producer. He must meet that competition. They tell him that they can get apples from the Oregon country at a certain price and ask him if he can compete with it. If he can, he can get some of his apples in. This duty will enable us to send our fruit to the prairie provinces. It will enable us to do away very largely with the middleman because we will be in a position to deal directly. We can make arrangements to sell; the producer will get

a little more by being able to deal directly with the consumer, and the consumer will pay very little more for the apples.

I am not going very much into figures. The hon. member for Red Deer (Mr. Clark) said we should put our fruit on the same basis as their cattle and beef. Our fruit is exactly on that basis to-day. The fruit of Canada will compare very favourably with any fruit produced in the world, particularly apples; and we are prepared to put our fruit in competition with any fair market that we have to enter. But it is not fair that all the surplus of the American producer should be allowed into our markets to the exclusion of the apples grown by our own people.

The patriotism of the fruit growers has been referred to this afternoon. As the Minister of Finance pointed out, the fruit growers are only one branch of the farming or agricultural industry, and I am sure the fruit gowers of Canada will compare favourably in patriotism with those engaged in any other branches of farming. Whole communities in the fruit-growing districts of British Columbia have left to fight the battles of Canada and of the Empire, and I have no doubt that that remark applies to other parts. I do not think that in helping the fruit growers of British Columbia we are going to injure any one. The producer will undoubtedly get more by coming into direct contact with the consumer, and the consumer will have to pay very little more for the product.

Mr. BUCHANAN: I had occasion to make some remarks about the apple duty when I spoke on the Budget. I want to express the opinion again that I expressed on that occasion, and it is that this increased duty on apples means an increased cost to the consumers on the prairies. I am not relying upon any gift of prophesy which I may possess for that assertion, but I have read a statement made by a Vancouver wholesale fruit merchant, and his statement is that it means an increased cost to the consumer. He presents the usual protection argument, and he says the duty could not have any other effect, and that the more protection there is on fruit the greater will be the price demanded by the distributor.

Mr. J. E. ARMSTRONG: Is the hon. gentleman aware of the arrangement which is about to be consummated between the large co-operative apple growers of Ontario and British Columbia and the Grain Growers Associations in the western provinces whereby the Grain Growers Associations will distribute all the apples required by the western country instead of allowing the fruit to be handled by a trust?

Mr. BUCHANAN: During last year the United Farmers of Alberta were distributing apples on that basis. But that does not make any difference practically in regard to the matter and that does not mean that the fruit growers of British Columbia will not take advantage of this increased duty when they will be without competition from Washington and Oregon. They will charge more to the men who distribute the fruit and the price will go up; there is no question about that. The hon. member for Kootenay (Mr. Green) argued that deputations have been coming here and pressing this matter upon the Government and that finally the Government has yielded to the argument that they have put up and granted this increase of duty. I understand that these deputations have been coming for the last three or four years. My hon. friend from Red Deer (Mr. Michael Clark) dealt with the political side of this assistance to the fruit growers. An expression frequently used by the hon. the Minister of Finance (Sir Thomas White) is that certain things synchronize with certain other things, and if that be true is it not peculiar that this year, when there is a possibility of an election in British Columbia and when there are by-elections in that province, this Government grants this request and gives the apple growers this increased duty. The argument of my hon. friend from Red Deer holds absolutely good on that question. The request is complied with in 1916 when the life of the British Columbia Legislature is expiring.

Another point. Deputations have been coming to this Government, since it came into power in 1911, from the grain growers of Saskatchewan, Alberta and Manitoba asking for free wheat, and their requests have not been complied with up to the present. The Finance Minister tells us that he is assuming a national position. The national position he takes is that of a supporter of one industry in this country—the milling industry. While he takes this attitude in connection with free wheat he comes to the assistance of the fruit growers of British Columbia; or at least he says he is coming to their assistance. This means a further increase in the cost of apples to the consumers of the prairies. If the Minister of

Finance had investigated fruit conditions in British Columbia he would have found that there were other reasons than the competition from the states of Oregon and Washington for the condition of that industry. The statement was made in 1911 by a gentleman who was opposed to the reciprocity measure that reciprocity, in so far as it affected the fruit industry, would be a good thing for the fruit growers of British Columbia. His argument was that if they were compelled to feel the effects of real competition from across the line they would box their fruit better and they would go out and hunt for a market and get it. That is about what will happen to the fruit growers of British Columbia. The British Columbia Department of Agriculture carried on an extensive advertising campaign in Alberta last year and there were fine window displays of British Columbia fruit in the stores of my city. I am satisfied that the increase in the sale of British Columbia fruit in Lethbridge amounted to at least fifty per cent. They advertised and appealed to the people to buy British Columbia fruit, they displayed it in the windows and they gave the people some idea of the kind of fruit they were able to produce. That is what they had failed to do in past years. When Alberta has a surplus of butter to sell it does not come to this Government and ask to have an increased duty on butter. It goes to British Columbia and develops a market. It produces a good article and therefore it is able to dispose of its surplus butter. The fruit growers of British Columbia should cultivate a market in the neighbouring provinces and not come to this Parliament for an increased duty to stifle competition and cause an increase in the cost of fruit to the people of the prairies.

The Minister of Finance is interested in the development of Canada. He wants to see imigration into this country, he wants to see the Prairie Provinces, as well as the other provinces, prosper, and he wants to see an inflow of population after the war. My judgment is that as long as people come to Western Canada, investigate the conditions there and find that the cost of living is high and is increasing, he is going to interfere with immigration by such legislation as this. What will follow in connection with this duty on fruit? The people who come over to Western Canada from the United States are accustomed to getting fruit and getting it fairly cheaply. When they come to the West and find that apples are expensive, when we put an almost prohibitive duty on American apples coming into this country, and when we increase the cost of apples so that ordinary people will not be in a position to buy them, do we not interfere with people coming and settling on the western prairies?

My hon. friend from South Oxford (Mr. Sutherland) says that this duty will help the apple industry in Ontario. All well and good, but it does not help the farmers of Western Canada who have to buy fruit and who have to pay high prices for it. They do not raise fruit to any extent, nor will they do so for many years to come in those provinces. They have to import it from other provinces, and why should they not be in a position to get that fruit at the best possible price? We will buy British Columbia fruit when the fruit raisers produce that fruit, box it and get it to us in good shape as they have been doing during the past year. They have made a step in that direction, they have created a demand and that demand will increase. But I am afraid that if this Parliament increases the duty on apples and puts the fruit growers of British Columbia—if not the fruit growers, the middlemen—in a position to charge an increased price for their apples, it will do a great deal of harm to their present market on the prairies and will consequently do harm to the fruit growers themselves. That statement was made in a paper published in British Columbia which I have read only recently. The statement was made that this duty might interfere with the present market of the British Columbia fruit grower on the prairies because the fruit grower might take advantage of the high protection and increase the cost to the consumer. I would like the Minister of Finance to consider seriously the objections which have been made by the Prairie Provinces to this increased duty on apples, especially, as he says it is according to his own statement, for the benefit of only one province.

Sir THOMAS WHITE: I said for the benefit of the whole apple industry but especially that of British Columbia.

Mr. BUCHANAN: I read in the report of the minister's speech a statement that it was particularly for British Columbia.

Sir THOMAS WHITE: I spoke of the apple industry generally and of that of British Columbia particularly. What is the whole sentence?

Mr. BUCHANAN: I will read it:

We regard this duty as indispensably necessary for the preservation of the apple growing industry of Canada and particularly that of British Columbia, which has been most seriously affected since the outbreak of the war.

I still contend that this duty is directed principally to the province of British Columbia. I do not think the war has had any effect on the apple industry of that province, except to increase the market for British Columbia apples in the Prairie Provinces. I am satisfied that there has been an increase in that market during the last year.

Mr. ARMSTRONG: Are we to understand that the Grain Growers' Association and the other farmers' associations, who will act as middlemen in distributing amongst the Prairie Provinces the output of the apple industry of British Columbia and Ontario, will charge excessive prices to the people in those Prairie Provinces?

Mr. BUCHANAN: Leave the middlemen out of the question altogether, and say that the fruit is bought direct from the fruit growers in British Columbia. I am satisfied that the fruit growers will demand a higher price for their product by reason of the fact that under this tariff competition will be got rid of. There is no question about that. These fruit growers are only human, and they will take advantage of this increase in the tariff.

Mr. ARMSTRONG: Not necessarily.

Mr. STEVENS: I desire to make a few brief observations on this question, and to deal with one or two points raised by hon. gentlemen opposite. Taking the last point first, the main objection of hon. gentlemen opposite seems to be that this duty will mean an increased price to the apple consumers of the Prairie Provinces.

Mr. TURRIFF: All over Canada.

Mr. STEVENS: I am glad my hon. friend has taken in the whole of Canada. That puts the question on a broader and a much better basis. However, I was referring to the statement that had been made by my hon. friend from Red Deer and others that the duty would mean an increased cost to the consumers of the Prairie Provinces.

Mr. MICHAEL CLARK: I beg my hon. friend's pardon. I mentioned particularly the city which he represents in this House.

Mr. STEVENS: But with reference to something else. I will deal with that in a moment. Any student of production will admit that in order to sell at the lowest figure you must produce a large quantity, and that if production is limited the cost will be proportionately higher. The difficulty with which the fruit growers of British Columbia have to contend is that the fruit crop of Washington, Oregon and Idaho comes on the market a couple of weeks earlier than the British Columbia fruit. The best fruit of these states is sold in the United States, and when the American demand is supplied the surplus is dumped on the Canadian market and sold at a loss in competition with the fruit of British Columbia, the Prairie Provinces and Ontario. Eighty-five per cent of the fruit that is shipped in here from America is of "C" grade. All their No. 1 grade is marketed in their own country. The British Columbia growers, whose production is limited, cannot compete with these American prices; they cannot get a fair and reasonable price for their product. This increase in duty will enable them to market a larger portion of their crop, and in that way sell their products cheaper than at the present time. I will not say cheaper, because their fruit is being sold at a loss at the present time; but at least the price will not be dearer by reason of this duty. I consider that an answer to the contention that the price of apples will be increased if this measure passes.

The hon. member for Red Deer has something to say about the political situation. He made the point that the minister, in bringing down this measure, was seeking to help the political situation in British Columbia, but in his very next breath he made the rather contradictory statement that this measure was against the interests of the people of British Columbia. He said that only a small section of that province would be benefited. Both these statements cannot be sound. My hon. friend laughs.

5 p.m. Mr. MICHAEL CLARK: Of course, I pointed out that the minister was short-sighted because he could not see that that would be the effect.

Mr. STEVENS: My hon. friend did not see it.

Mr. CLARK: The people of Vancouver saw it.

Mr. STEVENS: My hon. friend never saw it at all. He tried to make the argument that this was a political measure. As a matter of fact, it is a measure—I am speak-

ing of the local and not of the national aspect—to save an industry in British Columbia which at the present time is not over-producing, and which for the next five years will not produce to the extent of its natural market's demand. It has also been argued that one of the reasons that the apple industry in British Columbia is in hard straits is because of the high price of land. That has not been demonstrated by any figures, or been attempted to be proved by hon. gentlemen opposite. As a matter of fact, it is not the reason at all. In the first place the land in British Columbia upon which the fruit is grown is perfectly useless—I am referring to the Okanagan valley and the Dry Belt—unless it is irrigated, and irrigation works demand a large investment of capital. Once this land is irrigated it produces and becomes valuable. But there must be a large and a long investment before the apple industry becomes a paying proposition. It is, perhaps, six, or eight, or nine years before you get a crop off your trees. The trees have to be sprayed and fertilized in this non-productive period; you have to cultivate the land, keep up the fences, and put in irrigation works. All these things enter into the cost of production of apples. In the Western States I have referred to, it can be demonstrated conclusively that they have over-produced. Large areas of land have been planted in apple orchards and other fruit, and the trees are now coming into bearing at a very rapid rate. A very large percentage of these fruit growers are going into liquidation, and the British Columbia fruit grower is faced with the competition of a bankrupt community. Now, that is not a fair competition. My hon. friend from Medicine Hat (Mr. Buchanan) used the butter illustration. As a matter of fact, he and the hon. member for Red Deer, and others engaged in the butter business, have a protection for their own market.

Mr. DOUGLAS: Apples are protected to about 25 per cent.

Mr. STEVENS: This will make it about 25 per cent.

Mr. TURRIFF: This will make it about 100 per cent.

Mr. STEVENS: Not at all. This will make the duty about 25 per cent of the actual market value of the apples. That is clear and beyond question. The butter argument is not reasonable. If the farmers in the Western States of the United States were shipping their butter into Alberta at a lower price than the Alberta farmers could produce butter at, the farmers of Alberta would be down here 1,500 strong, howling for protection.

Mr. MICHAEL CLARK: No.

Mr. STEVENS: There is no question about it. And in such a case my hon. friend from Red Deer would be a convert from free trade.

Mr. McCRANEY: What price does the apple grower get in British Columbia, so that we can compare it with this duty of 90 cents a barrel?

Mr. STEVENS: They get about 22 cents a box in the orchard.

Mr. DOUGLAS: And the duty is 13 cents.

Mr. STEVENS: My hon. friend (Mr. Douglas) will not argue that 22 cents a box is a reasonable price to the grower. Does he make that argument?

Mr. DOUGLAS: No.

Mr. STEVENS: No,—no more than he will make the argument that 30 cents a bushel is a fair price for wheat or 15 cents a pound a fair price for butter. He must grant to the grower in one department of agriculture what he claims for another. All we ask for the grower is a reasonable price—a living wage, if you like that term.

Mr. DOUGLAS: The hon. gentleman has misinterpreted my meaning. I was trying to get at the relation of this duty to the price. If the grower is selling at 22 cents a box, would not the customs authority be justified in taking that as a basis for duty?

Mr. STEVENS: That is the price to the producer, in the orchard. I think the fair price to consider for duty is the wholesale price in the market.

Mr. McCRANEY: At what price can the fruit grower of British Columbia raise a barrel of apples profitably?

Mr. STEVENS: About $1.08 a box for No. 1.

Mr. BEST: Is that $1.08 per box or per barrel?

Mr. STEVENS: Per box. That is for the No. 1 apples. Of course it would be less for the No. 2 grade, or the No. 3 grade which is equal to the "C" grade imported from the United States, which is our keen competitor. Give us a fair chance in the market of Canada, so that we shall be

assured of marketing a reasonable quantity of our crop, and we will be able to sell that apple at a very little increase, if any increase at all, over the cost at the present time. My hon. friend should remember that the chief cost of the apple as it comes on the market is transportation and distribution.

Mr. A. K. MACLEAN: The transportation charges would be in addition to the cost that the hon. gentleman gave a moment ago?

Mr. STEVENS: Certainly. The main difficulty in the marketing of apples to-day lies in the cost of distribution. The distribution has been greatly improved within the last few years. I understand from the chairman of the Railway Commission that transportation has been brought down to the lowest possible figure, so that that consideration can be eliminated from the argument. We come down to the wholesaler or commission merchant who handles the freight. This is a perfectly legitimate business, and I have no complaint to make of the men in the business. But it seems to me that in connection with the fruit business, what we require is that the grower should get into direct touch with his market. There is no business which lends itself better to that method of distribution than apple growing, for you have the apples in packages which can be handled and distributed easily. As stated by my hon. friend from East Lambton (Mr. Armstrong), efforts have been made, and with a measure of success, to bring the grain growers' organization of the Prairie Provinces—a very fine organization—into co-operation with the western fruit growers, so as to save the cost of distribution. I suggest to my hon. friends who have been putting up this, as I consider it, rather bitter objection to this clause—a very strong objection at least—that they had better facilitate the co-operation between these two great agricultural bodies, whose interests are common, and endeavour to overcome this economic loss or wastage occasioned by distribution. My hon. friend spoke a little while ago about the importations into Vancouver, and he expressed the opinion that this legislation would be against the interests of the people of Vancouver which is the chief centre of population in British Columbia. I must thank my hon. friend for his solicitude for the people of Vancouver. On the other hand, I think I know a little about Vancouver, and I would say to him that the people of that city realize that the development of the hinterland of British Columbia is to their advantage. My hon. friend was in Vancouver in 1911, and I listened to him with a great deal of interest in his discussion of the reciprocity proposals. He and his friends pointed out what an immediate advantage reciprocity would be to the people of Vancouver. There may have been some truth in some of these statements, but the people of Vancouver were far-sighted and they realized that their best interest lay in the development of the whole country rather than in the immediate reduction in price of some of their food commodities. I am quite satisfied to go before my constituents on the basis of supporting the development of the agricultural sections of British Columbia, knowing that the development of these sections will tend to benefit the city of Vancouver and other centres of population.

The hon. member for Red Deer pointed out in rather eloquent terms that this was a very reactionary war, that all wars were reactionary and this particularly so.

Mr. MICHAEL CLARK: I did not say that this war was particularly reactionary. I said this was the greatest war in history, and I said that generally war was reactionary.

Mr. STEVENS: That seems to me to be splitting hairs. The hon. gentleman said that war was reactionary and that this was the greatest war in history, and the inference is that this is the most reactionary war. But I would point my hon. friend to the action of the people of Manchester —the home of his idol, Richard Cobden, a man whose memory I also revere and honour—who, the larger majority of them have already declared in favour of a policy of protection.

Mr. CLARK: Surely my hon. friend is not serious. He would not suggest that a majority of the Chamber of Commerce constitute a majority of the inhabitants of a place of three-quarters of a million people.

Mr. STEVENS: I presume that the Chamber of Commerce represents the views of that great commercial city, which was the cradle of free trade, and has been its home at least, since 1841.

From that time until within the last six months they never uttered a word that could lead one to think that they were in the slightest degree departing from the

policy of free trade. They had weeks of debate on this subject, and a majority which threatened to be almost overwhelming declared in favour of the policy of protection. Just as sure as the sun will rise to-morrow, a policy of protection within the Empire is coming. I do not apologize for defending a measure of protection. My right hon. friend the leader of the Opposition for fifteen years stood solidly by the policy of protection, and if he came into office to-morrow he would stand solidly by protection again. He dare not go before the country and say that he would not. The hon. member for Red Deer is consistent; so far as I know, he has always stood for free trade. I always admire a consistent man, but I certainly do not agree with the views of the hon. member for Red Deer. I do not think that any member on the other side of the House would go as far as he does in standing by free trade. Views similar to those which he entertains have now been abandoned by the people of Manchester, represented by the Chamber of Commerce, which has been the birthplace, the cradle, the home of free trade.

Sir WILFRID LAURIER: Is the Manchester attitude that of free trade within the Empire, or protection within the Empire?

Mr. STEVENS: They have changed their whole ideas as to trade; they have abandoned free trade as it has been in England. I would tell the hon. member for Red Deer, the champion of free trade in this country, that to a large extent the preparedness of Germany and her success in prosecuting this war as she has up to the present time have been the result of the policy of free trade in England.

Mr. MICHAEL CLARK: Does my hon. friend refer to Germany's preparedness on sea?

Mr. STEVENS: I do.

Mr. CLARK: She has scarcely been been heard of on sea.

Mr. STEVENS: It was not the policy that my hon. friend advocated in 1912 that made Great Britain prepared on sea. If it had not been for the bull-dog policy of Winston Churchill, in my estimation there would be no Canada to-day. My hon. friends opposite laugh, but I say further, that whatever be our judgment of Winston Churchill's action in connection with the Dardanelles or with other matters, we must admit that the policy which he followed for years before the outbreak of war made it possible for Great Britain to control the seas as she does, and as she did within twenty-four hours after the outbreak of war.

The CHAIRMAN: I feel it my duty to direct the attention of the committee to the fact that we are discussing a proposed resolution to amend an item in the tariff. I would respectfully suggest that hon. members refrain from discussing the naval issue.

Mr. STEVENS: In justification of my dealing with this subject, I may say that I was simply referring to a suggestion made by the hon. member for Red Deer. I say this to hon. gentlemen from the Prairie Provinces: give us a fair chance to market a larger quantity of our crop, and we will keep down the prices. That is a sound economic argument. If hon. gentlemen will bend their efforts towards encouraging the co-operation of these two branches of agricultural industry, they will do greater service to the country than they can do by fighting this proposed amendment to the tariff.

Mr. LOGGIE: Will the hon. gentleman tell the committee what he considers to be a fair average price to the British Columbia grower for average grade apples, delivered in Vancouver?

Mr. STEVENS: We do not handle our apples just as they are handled in my hon. friend's part of the country. We put them up in boxes, and handle them in very carefully selected grades, under severe inspection laws and regulations. The usual grades on the market are the first, second, and third grades.

Mr. LOGGIE: What price does the wholesale merchant pay for the average grade?

Mr. STEVENS: I should judge from 90 cents to $1.75 a box. Of course, I do not speak authoritatively.

Mr. LOGGIE: The hon. gentleman says that this is a measure to save an industry. If that be the case, the consumer pays to that industry an amount sufficient to save it. For one barrel of apples that we import into Canada, we export four. I think it would be found that a very large proportion of the total importation of 267,000 barrels was brought in between seasons, that is, in the months of May, June and July, from the southern portion of the United States. I cannot understand why the producers of British Columbia cannot compete, when they get or ought to get a reasonable price.

Apples imported into Canada during last year cost, at the point of production, $2.41 a barrel. Added to that would be duty at the rate of 40 cents a barrel; and the cost of transportation from the orchards to the wholesale dealer would make the average price over $3 per barrel. In view of this fact, I do not see why these who have orchards in suitable districts in this country cannot engage in successful competition. I suppose that the effect of this measure will be that the producer in British Columbia will endeavour to raise his price to the producing centres near by. I suppose the hon. gentleman is right in saying that the measure is designed to save an industry; but is it good economics for one portion of the community to help another portion of the community to live? There is such a thing as carrying a national policy to extremes. There is at present a duty of 40 cents a barrel on apples.

Mr. OLIVER: Plus 7½ per cent ad valorem.

Mr. LOGGIE: The total duty then would be 90 cents a barrel plus the 7½ per cent special war duty, which is a very heavy rate on a commodity of this kind. It hardly seems businesslike to tax the consuming community to that extent. Why is it done? Simply to enable the producing sections of Canada to obtain a higher price for their apples than they would be able to secure if the consuming portions of the country were permitted to get them from an adjacent country at a lower cost. While we must have revenue, and it is not unreasonable to have incidental protection, it is very doubtful if we should impose a protective duty simply for the purpose of assisting any industry.

Mr. STEVENS: The hon. gentleman is arguing against imposing a burden on one part of the community to help another. Would he favour the removal of the duty on coal, which would affect his own province?

Mr. LOGGIE: Allow me to answer my hon. friend in this way. The duty on coal now is a very, very small percentage of the cost. When you impose a small duty, in view of the fact that we must have a revenue, it becomes a tariff for revenue purposes. But when you come down to the principle of protection,—and the hon. gentleman has admitted that this is a measure to save an industry and not a measure for revenue purposes—

Mr. STEVENS: The duty on coal is just about what we are asking on apples, between 25 per cent and 30 per cent.

Mr. KNOWLES: Two blacks do not make a white.

Mr. STEVENS: Not at all.

Mr. LOGGIE: I would be very glad to see the duty on coal reduced to a reasonable rate. On such a commodity as apples, I certainly do not think that such a high rate of duty should be imposed as is now suggested. I believe that all commodities of this class, such as coal, in fact all natural products, ought to come into this country as far as possible free of duty. We might well say that coal is one of the products that should be brought into this country at the lowest possible rate of duty.

Mr. DOUGLAS: I wish to say a few words on the question of duty as it effects the Prairie Provinces. We in Alberta in particular, and it applies equally to the people of Saskatchewan, are forced to pay extremely high prices for our apples. Apples, it is generally recognized, are an essential article of food to-day, and anything that tends to increase the price naturally effects every one of the inhabitants of those provinces, because they all use apples. I have been dealing in apples for many years and know something about the prices. The statement made by hon. gentlemen opposite that the United States export their poor grades of apples and that we in Alberta buy them is absolutely beside the truth, because in my experience I never bought a box of apples that graded under No. 2 if I knew it; I have always bought No. 1 stock. We have to pay heavy transportation charges, and we cannot afford to pay freight on poor stuff, and that is the reason we cannot afford to buy apples from Ontario, although we have tried to do so year after year. I consider that we are an extremely patriotic people when in the face of the quality of fruit we have had to put up with from Ontario we still have faith to keep on trying year after year. We have been bitten so often that our patience is exhausted, and we are now forced to buy our fruit from the neighbouring states of Oregon and Washington.

Mr. LEMIEUX: You should try Quebec. That is where the best apples are grown; right in Rouville county.

Mr. DOUGLAS: We are not all millionaires, and to buy apples from Quebec would entail a cost of nearly $8 a barrel, which is

prohibitive. We have to pay, year in and year out, an average of $2.25 a box for apples.

Mr. GREEN: Do you buy direct from the grower or from the jobber?

Mr. DOUGLAS: I have bought both ways. It is almost an impossibility to buy direct from the grower.

Mr. GREEN: That is what I thought.

Mr. DOUGLAS: The growers in British Columbia and the American growers are all marketing now through exchanges, which is an especially good way of marketing fruit. But to my mind the real crux of the situation, so far as British Columbia is concerned, is their very poor marketing facilities. The statement of the hon. member for Lambton was rather grotesque, when he said that the growers of British Columbia and the growers of Ontario were uniting to have the products of British Columbia and the products of Ontario marketed by the grain growers of the three prairie provinces. The farmers might supply their own wants, I can quite conceive that, by buying direct from the exchanges in British Columbia, or in Ontario.

Mr. WEBSTER: They are doing that now.
