House of Commons Debates

OFFICIAL REPORT—REVISED EDITION

HOUSE OF COMMONS.

Speaker: Hon. Albert Sévigny.

Monday, February 21, 1916.

The House met at Three o'clock, the Speaker in the Chair.

REPORT.

Report of the Militia Council for the year ended March 31, 1915.—Sir Sam Hughes.

DISTURBANCES AT CAMPBELLTON.

On the Orders of the Day:

Mr. MARCIL: On the 14th of February I inquired of the Prime Minister, in the absence of the Minister of Militia, as to disturbances among the soldiers at Campbellton, which I understood, from a paragraph in the Campbellton Graphic, had taken place. The right hon. the Prime Minister replied that he would have the matter looked into, and on the 16th instant the Minister of Militia said:

The hon. member for Bonaventure (Mr. Marcil) brought up a matter concerning Campbellton to which I referred yesterday. I have the facts, as stated by the officer in command, Colonel Mersereau, who says that on no occasion since the troops have been in Campbellton have there been more than four men locked up or impounded, or under supervision, in any one day, out of 290 men present. I merely add without comment that we hear all sorts of stories about the volunteers.

I have now before me a copy of the Campbellton Graphic of the 17th instant, containing an apology for the statement it made, and, as a matter of justice to the soldiers, and in the interest of fair play, I think I should read this to the House, as well as a letter from the Mayor of Campbellton on the subject. Campbellton has done very well in recruiting; several hundred men have enlisted, not only from Restigouche, but from the adjoining counties of Gaspé and Bonaventure, and practically every parish has supplied men.

The apology in the Campbellton Graphic reads:

We wish to apologize to the large majority of the members of "A" Company of the 132nd Battalion for a statement which appeared in our columns last week. This was to the effect that over twenty members of the Company had been lodged in the guard room for disorderly conduct. We may state that the information was given us, and was general about town at that time.

We are glad to learn from Capt. McKay that only four men were in the guard room at one time and these were the ones which made all the trouble. The members of "A" Company as a whole, are considered a fine lot of boys, but as we stated last week, there are always a few who forget themselves. We are glad to know that the number was less than reported, and cheerfully make this correction. We hope "A" Company will keep up its good reputation of being the best soldiers in the Battalion, and that the unruly ones will be shown that it is an insult to the whole company to create such disturbances. It is also the duty of the sober boys to give every assistance to the officers and police in bringing to justice the parties who are supplying the soldiers with liquor.

The letter from the Mayor of Campbellton reads:

Campbellton, N.B.,
February 16th, 1916.

Hon. Charles Marcil,
Ottawa, Ont.

Dear Sir: The St. John Telegraph of the 15th instant quotes you as having made the statement that you were informed that some twenty-five soldiers in Campbellton, N.B., had caused a disturbance similar to that in Calgary.

It affords me considerable pleasure to be able to inform you that there is absolutely no truth in that statement. At no time since the 132nd Battalion began to recruit have there been any disturbances of any nature whatsoever, and to say that there has been rioting or other similar disturbances is an utter absurdity and a grave injustice to the young men whom we all should honour.

The members of "A" Company of the 132nd Battalion are as orderly a body of men as you will find in any barracks in Canada, and Campbellton is proud of them.

I trust, therefore, that in all fairness to these young men, you will, on the floor of the House, inform the members that you were mis-informed in regard to the soldiers in Campbellton, and that there is no truth in the report to which you gave publicity on the above mentioned occasion.

Thanking you in anticipation of a compliance with my request, and trusting that I may have the pleasure of reading in the papers that you have righted a wrong which you had unwittingly done, I am,

Yours very truly,
A. A. Andrews, Mayor.

PRIVATE BILLS.

CONSIDERED IN COMMITTEE.

The House in Committee on Private Bills, Mr. Rhodes in the Chair.

Bill No. 15, respecting the Pacific Northern and Omineca Railway Company—Mr. Green—in Committee.

On section 1—time for commencement and completion:

Mr. PUGSLEY: The time for the commencement of construction and for completion seem to be one and the same—the company may begin the construction and complete the road in five years. I do not recall having seen such a provision in any railway Bill before. Is there a special reason for this peculiar provision?

Mr. GREEN: This is simply the renewal of a charter granted last session.

Mr. PUGSLEY: Then there is no need of this Bill, for if the Bill of last session granted five years, the company has still four years of unexpired time.

Mr. GREEN: If there is any question on the part of the hon. member, I see no reason why it should not be changed. I move that the Bill be amended to provide that construction shall begin in two years and the road completed in five years.

Bill stands.

Bill No. 4, respecting the Canadian Northern Railway Company—Mr. Bradbury—in Committee.

Mr. BRADBURY: This is simply an extension of time in relation to a charter granted to build a piece of road between lake Winnipeg and lake Manitoba from Grosse Ile to Grand Rapids. The Canadian Northern is the successor to an amalgamation of companies.

Mr. PUGSLEY: What is the object of the road?

Mr. BRADBURY: To give railway accommodation to the people at the head of lake Winnipeg. We have wanted it for years and we want it badly now. A part of the road was built—the Grosse Ile part—and this is an extension.

Mr. PUGSLEY: Does this road go up by Crooked lake where the lumber mills are?

Mr. BRADBURY: No, there is no Crooked lake on this line. It runs from Grosse Ile between lake Winnipeg and lake Manitoba, in a northerly direction to the head of the lake. It touches lake Winnipeg at Sturgeon bay, about half-way between Grosse Ile and the head of the lake.

Bill reported.

Bill No. 5, respecting the Canadian Northern Ontario Railway Company—Mr. Northrup—in Committee.

On section 3—limitation:

Mr. PUGSLEY: Can the promoter of this Bill state whether these lines come under the general security held by the Government?

Mr. MORPHY: I think this matter was mentioned in committee and an answer given in the affirmative by the persons promoting the Bill.

Mr. PUGSLEY: I think it ought to be provided in the Bill itself that these lines, when constructed, should be included in and covered by the securities which the Government holds. A mere verbal understanding would not accomplish that; it would have to be done by express legislation. I understand that the chairman of the committee is not present; perhaps the Bill had better stand in order that the matter may be considered.

Section stands.

Bill stands.

Bill No. 11, respecting the British American Nickel Corporation, Limited—Mr. Northrup—in Committee.

Mr. MACDONALD: The question of nickel is a matter which is discussed very frequently in the country. I should like to know what corporation this is, where it operates, and by whom it is controlled. Is it a Canadian corporation, operating with Canadian capital?

Mr. NORTHRUP: This is a company which has been in operation for years. The Bill merely gives it the right to have twenty directors, and provides that the majority of the directors shall be British subjects, and that they may appoint an

executive committee. If the hon. gentleman wishes any further information, we had better let the Bill stand. I will give him full particulars later.

Mr. MURPHY: Is the company incorporated by statute, or by letters patent?

Mr. NORTHRUP: I cannot tell my hon. friend that.

Mr. MURPHY: Let it stand.

Bill stands.

The following Bills were considered in Committee and reported, without discussion:

Bill No. 3, respecting the Burrard Inlet Tunnel and Bridge Company.—Mr. Stevens.

Bill No. 7, respecting the Farnham and Granby Railway Company of Canada.—Mr. Douglas.

Bill No. 14, respecting the Central Western Canada Railway Company.—Mr. Green.

Bill No. 16, respecting the Quebec, Montreal and Southern Railway Company.—Mr. Lemieux.

SECOND READINGS.

Mr. COCKSHUTT moved the second reading of Bill No. 26, respecting the corporation of the city of Brantford. He said: This Bill seeks to transfer to the corporation of the city of Brantford, under commission, rights granted by this Parliament to the Grand Valley Railway Company in the following statutes: 1900, chap. 73; 1902, chap. 91; 1906, chap. 102; 1907, chap. 90. The facts are that the Grand Valley Railway Company, which operated the street railway of the city of Brantford, and the radial railway extending to Paris and Galt, went into liquidation and the railway was sold under the hammer. The city of Brantford acquired its own street railway and the adjunct just outside the city, and it has been operating it for the past twelve months under license. It is now sought to transfer to the commission, to be elected in the manner set forth in the schedule, the rights granted by this Parliament to the Grand Valley Railway Company.

Mr. PUGSLEY: For some years the Ontario Government has been continuously represented before committees of this House contending that Parliament had no right to interfere with the operation of purely local railways. I should like to know whether any such point has been raised on behalf of the Ontario Government in respect of this line, which is essentially a local line, as I understand—simply a street railway having connection with one or two adjoining towns. Not even by the highest flight of imagination can it be supposed to be a work for the general advantage of Canada.

Mr. COCKSHUTT: The line has already been declared a work for the general advantage of Canada in the Acts I have enumerated. No question has been raised of any infringement of provincial rights, and I cannot see how one could be raised, because this is an old charter given by this Parliament long before the Ontario Government took that stand. We are now asked simply to confer on the commission powers that have been vested in a railway board, subject to the Railway Commission.

Mr. PUGSLEY: I understand that the city of Brantford is not proposing to operate under the old Grand Valley charter, but has acquired the property itself, as it might acquire any other property; and it owns that property and also owns what is known as the Brantford Street railway. I assume from what my hon. friend says that it would be proper for the city of Brantford to go to the Provincial Legislature to get authority to operate this purely local railway. We in this Parliament ought to have some rule which would guide us in respect to all these matters. I doubt very much if this Parliament has authority to confer upon the city of Brantford the right to operate the street railway. I think that right should be granted by the Provincial Legislature. But if the Government of Ontario has not raised any question I do not see why I should press the matter.

Sir ROBERT BORDEN: I suppose that, whether the Ontario Government has any objection or not, we ought to be careful not to exceed our jurisdiction. The point of view put forward by the hon. member for Brantford (Mr. Cockshutt), as I understand it, is this: that, inasmuch as those undertakings have been declared by the Parliament of Canada to be works for the general advantage of Canada, they are therefore subject to the jurisdiction of this Parliament, and that Parliament has exercised its jurisdiction accordingly. He puts forward the view, and the Bill puts forward the view, that if the city of Brantford wishes to obtain power to operate those street railways, so declared to be works for the general advantage of Canada, it must come to this Parliament. I should think it proper, under the circumstances, that

the Bill be given the second reading, and that the committee to which it is referred should examine the question of jurisdiction, and ascertain the opinion of the Department of Justice with regard to the jurisdiction of Parliament, which might be reported to this House. I agree with the suggestion of my hon. friend from St. John (Mr. Pugsley) that notice should be given to the Attorney General of the province of Ontario in order that he might come before the committee and urge the objections, if any, which the Government of the province might offer to any action on the part of this Parliament in respect to the matter.

Mr. NESBITT: Just to clear this matter up, may I ask the hon. member for Brantford if the Grand Valley railway was chartered by the Dominion, or was the Brantford Street railway chartered by the Dominion?

Mr. COCKSHUTT: The Grand Valley railway was chartered by the Dominion, and the company acquired the street railway as well as the radials, taking over the running powers as well as the construction.

Motion agreed to, Bill read the second time, and referred to Select Standing Committee on Railways, Canals, and Telegraph Lines.

Mr. MORPHY moved the second reading of Bill No. 31, to incorporate the Eastern Canadian Union Conference Corporation of Seventh Day Adventists. He said: The Bill is more or less like the ordinary Bill to incorporate, by way of a merger, several branches of a religious denomination, under the name of the Eastern Canadian Union Conference Corporation of Seventh Day Adventists. The parties who are to be the heads of the corporation are named in Section 1, and the corporation itself is for the purpose, not only of constituting the branches of this particular religious denomination into one consolidated body, but of giving them the usual power of holding lands and disposing of them.

4 p.m.

Motion agreed to, and Bill read the second time.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

REVENUE FROM SPECIAL TAXES.

Mr. A. K. MACLEAN:

1. What was the revenue for the present fiscal year to January 31, 1916, from special taxes?

[Sir Robert Borden.]

2. What was the revenue received for the same period from stamps, proprietary drugs and from liquors, respectively?

3. And from all other sources exclusive of the ordinary postal revenues?

Mr. BLONDIN:

1. Customs: from additional customs duties (war tax), $19,466,035.65.

Finance: from tax on circulation of chartered banks, under Section 3 of the Special War Revenue Act, 1915, $1,028,707.28; from tax on income of trust and loan companies, under Section 4 of the Special War Revenue Act, 1915, to February 11, 1915, $258,973.40; from tax on insurance companies, under Section 5 of the Special War Revenue Act, 1915, $352,423.39; total, $1,640,104.07.

Inland revenue: $1,166,156.09.

2. Inland revenue: proprietary medicines, $223,038.60; war tax (estimated), $56,076.30; total, $279,114.90. Liquors, $6,115,412.29; war tax (estimated), $266,163.29; total, $6,381,575.58.

Inland revenue: stamps, $617,096.85; railroads, steamships, embossed cheques, $549,059.24.

3. Customs: customs duties, not including war tax, duties on drugs or liquors, $56,003,500.43; customs storage charges, $7,292.88; proceeds from sales of unclaimed goods, $3,259.96; seizures, $217,028(60; casual revenue, $1,364.22; total, $56,232,-446.09.

CIVIL SERVICE APPOINTMENTS.

Mr. SINCLAIR:

How many appointments of civil servants have been made by the present Administration under the provisions of section 21 of the Civil Service Act?

Mr. BLONDIN:

	Competition	Without Competition.
Agriculture	3	29
Commission of Conservation	..	5
External Affairs	..	1
Governor General's Secretary	..	1
House of Commons	21	2
Indian Affairs	..	3
Interior	15	11
Inland Revenue	1	17
Justice	..	12
Labour	..	1
Library of Parliament	1	..
Mines	18	13
Marine and Fisheries	2	4
Militia and Defence	..	9
Naval Service	4	2
Post Office	1	5
Privy Council	..	1
Public Works	13	28
Printing and Stationery	..	1
Railways and Canals	2	2
R.N.W.M. Police	..	1
Senate	..	1
Secretary of State	1	7
Trade and Commerce	..	3
	82	159

It will be seen from the above statement that eighty-two of these appointments were made after the position had been thrown open to public competition. It was found necessary, however, to resort to Section 21 in order to make the appointment by reason of the successful candidate being over age or not resident in Canada for the required period of three years.

MEMBERS OF PARLIAMENT IN MILITARY SERVICE.

*Mr. J. J. HUGHES:

Do the members of the House of Commons and the Senate, who are officers of the volunteer forces, draw their pay as officers and their indemnity as members of Parliament at the same time?

Sir SAM HUGHES: Members of Parliament, the same as all other citizens, on appointment as officers of the Canadian Expeditionary Forces, are entitled to the pay and allowances of their rank. Many of them do not draw pay, and others contribute it to the various Patriotic and Red Cross funds, but all that is according to their personal wishes.

CANADIAN OFFICERS IN ENGLAND.

Mr. CARVELL:

1. How many officers are there in England to-day at Shorncliffe, Bramshott and other camps where the Canadians are located, and who are drawing pay from the Canadian Government, but are not attached to any regiment, battalion, battery, or other branch of the service?

2. How much did the Government pay for the use of land on which the camp at Vernon was located this summer?

3. To whom was the money paid?

Sir SAM HUGHES:

1. All officers of the Canadian Expeditionary Force serving in England either belong to a unit of the Canadian Expeditionary Force or are attached thereto.

2. Nothing.

3. Answered by No. 2.

MAX LASOSKI.

Mr. DEMERS:

1. Has the Immigration Department at Quebec had a German named Max Lasoski in its employ?

2. If so, is he still in the employ of the Government, or has he been transferred elsewhere in Canada?

3. What was his salary, and does he still receive such salary in full or in part?

4. Has the department received complaints that the said Max Lasoski took photographs of the port of Quebec, and of the vessels that carried soldiers across the ocean?

Mr. ROCHE: Max Von Laszewski, born in Germany and naturalized in Canada in 1896, entered the service of the Immigration Branch at Quebec as an interpreter on April 30, 1911, at a salary of $700 per annum, which was increased to $900 per annum from November 15, 1912. On September 14, 1915, he was allowed to return to his home at Moose Creek, Ontario, upon the understanding that from September 1, 1915, and until he was again on active duty his pay would be $50 per month. On February 10, 1916, he was notified that owing to the necessity of curtailing expenditure his services would be discontinued from February 28, 1916.

MRS. BERLINGTON HAM.

Mr. DEMERS:

1. Is there a lady named Mrs. Berlington Ham employed at Quebec, as an Immigration Agent?

2. If so, what are her duties, and has she anything to do with the civil inspection of immigrants?

3. Has the Minister of the Interior received any complaints regarding the said Mrs. Berlington Ham?

Mr. ROCHE:

1 and 2. Mrs. Berlington Ham is national ports secretary of the Young Women's Christian Association of Canada, but is not an employee of the Government, and has nothing to do with the civil inspection of immigrants.

No. 3. No.

LIEUT-COL. SABOURIN.

Mr. MICHAUD:

Is N. A. Sabourin, M.D., of St. Johns, Quebec, an officer on full pay of His Majesty's Army? If so, what is the amount of his pay?

Sir SAM HUGHES:

Lieut.-Colonel Sabourin has been detailed for duty at the Military hospital, St. Johns, Que., with the pay of his rank in the Active Militia, i.e., $5 per diem.

MR. DE WITT FOSTER.

Mr. LANCTOT:

1. Is Mr. A. De Witt Foster, former member for Kings, N.S., employed by the Government or by this Parliament in any capacity?

2. Does he enjoy any privileges in the present Parliament building, and has he a box in the Parliamentary post office?

3. By whom was he recommended to be allowed access to the Parliament building?

Sir ROBERT BORDEN: The answer to the first question is no. The answer to the others is that Mr. Foster enjoys the same privileges as any other citizen of Canada who is not a member of Parliament. He has no box in the parliamentary post office.

MR. J. E. LAREAU.

*Mr. L. J. GAUTHIER:

1. Is there a person named J. E. Lareau employed by the Government as purchaser or inspector of hay at Montreal?
2. If so, since what date, and what is his salary?

Mr. HAZEN: There is no person of the name of J. E. Lareau in the employment of the Government as inspector of hay at Montreal. There is a person of that name employed by the British Government as inspector at Montreal.

PURCHASE OF SS. HOCHELAGA.

Mr. MACDONALD:

1. From whom was the steamer Hochelaga bought by the Government?
2. How much was paid for her?
3. How much was spent on improvements?
4. When was she purchased?
5. How long has she been laid up since her purchase?

Mr. HAZEN:

1. Dropped.
2. $70,000.
3. $22,642.18.
4. 31st July, 1915.
5. The fitting out took 18 days. The vessel was in service all fall; not being required during the winter months she was laid up in Halifax on 20th December, 1915.

WAR SUPPLIES—HORSES FOR FRENCH GOVERNMENT.

*Mr. J. J. HUGHES:

1. Where is the French Government purchasing horses in Canada?
2. What are the names and addresses of the parties representing the French Government in this matter?

Sir ROBERT BORDEN: We are endeavouring to procure this information. I understand that the Hudson Bay Company have purchased some supplies for the French Government, but I am not quite sure as to the nature and extent of these. The officer connected with the purchase of horses, who was recently in Ottawa, is absent at the present time; but the information will be procured as soon as possible.

REMOUNTS FOR CANADIAN FORCES.

*Mr. SINCLAIR:

With reference to the statement made by the Prime Minister on February 14, inst., unrevised Hansard, page 795, referring to the purchase of remounts, why does not the Canadian Government purchase in Canada such horses as are required for the use of the Canadian Forces?

Sir ROBERT BORDEN: As already explained to the House, the Canadian Government made an arrangement by which the British Government should purchase all horses required in the future for the Canadian forces, as well as for the British forces. Up to the time that this arrangement was made the Government of Canada had purchased in this country more horses than were required for the Canadian Expeditionary Forces. The horses in excess of those actually required up to that time were handed over to the British Government under the arrangement already explained to the House, and these will be accounted for by the British Government. The arrangement already made, and to which allusion has been made in the House, provides that the British Government shall in future purchase horses for the Canadian Expeditionary Forces as well as for the British forces. In addition to that, however, there will be required in Canada from time to time, for the training of our artillery and for other purposes, a certain number of horses which are not included in this arrangement, and these will be purchased by the Canadian Government. Furthermore, it is understood between the British Government and the Canadian Government that, in respect to future purchases, the British Government will purchase in Canada at least as many horses as may in the future be required for the Canadian Expeditionary Forces. Looking to the necessities of the British Government in that regard, I have no doubt that a very much larger number of horses will be purchased in the future by the British Government than would be required to be purchased by the Canadian Government under the arrangement which was carried out during the first year of the war.

OPEN SEASON FOR LOBSTERS.

Mr. MACDONALD:

1. What is the the date of the open season for lobsters in Northumberland straits, between Cape George and Malagash?
2. Why is the season shorter in this particular district than in the district to the west of it?
3. Have any requests or petitions been received asking for the lengthening of the season?
4. Has any action been taken in regard to these requests?

Mr. HAZEN:

1. April 26 to June 25, both days inclusive.
2. This season applies as far west as River Philip.
3. Yes, one such petition was received over a year ago.
4. The petition was carefully considered; but as the existing fishing season was that recommended by the Atlantic Committee

of the Advisory Board, after consideration of the report and recommendations of the Shellfish Commission of 1912-1913, it was not regarded as desirable to make the change asked for.

POTATO INSPECTORS.

Mr. BOULAY:

1. Has the Government appointed any potato inspectors since 1911? If so, how many?

2. What are their names, their places of residence, and the salary paid to each of them?

Mr. HAZEN:

1. Yes; 28.

2. Not now in the employ.

UNOPPOSED MOTIONS FOR PAPERS.

Mr. Boulay.—For a return showing the number of soldiers of English origin and the number of French origin in the Patricia Regiment; how many soldiers of English origin were comprised in the first contingent, and of the number, how many were of Canadian birth; how many soldiers of French origin there were in that contingent, and how many in the Patricia Regiment.

Mr. Verville.—For a return showing how many persons have been employed by the Department of Militia since the beginning of the war in the examining, appraising or testing of materials, such as clothing, harness, etc., purchased for military purposes; and how many of such employees are practical trades people, experts, or otherwise experienced persons in the respective callings connected with the various materials so purchased.

Mr. Lemieux.—For a copy of all letters, telegrams, memos, Orders in Council, reports, and of all and every document concerning the construction of the dam at Grand'Mère, county of Champlain, province of Quebec, by the Laurentide Co., Limited.

Mr. W. M. Martin.—For a return showing the amounts of money paid by all departments of the Government to the Regina Province and Standard, the Moosejaw News, and the Saskatoon Star, respectively, in each of the years 1914 and 1915.

Mr. W. M. Martin.—For a return showing the different rural mail routes in the constituency of Regina, their location and date of establishment and all rural routes under consideration at the present time in said constituency.

Mr. Macdonald.—For a copy of all letters, papers, telegrams and other documents relating to the survey in the harbour of Pictou, for a proposed new bridge, by the Railway Department, and also a statement showing the amounts paid in connection with said survey, the names of the persons to whom paid, and the purposes for which they were paid.

Mr. Macdonald.—For a copy of all papers, agreements, letters, telegrams and other documents relating to the proposal to purchase, lease, or use of, the railway known as the Vale railway, county of Pictou, and to the operation of the same by the Railway Department.

Mr. Gauvreau.—For a copy of all letters and correspondence between A. Bellemare, Esq., M.P., and the Government or any member thereof in connection with the construction of the post office at Louisville.

Mr. Lanctot.—For a return showing the amounts spent for the furnishing of the office of the Hon. E. Patenaude, Minister of Inland Revenue; with a copy of all invoices. And also a statement of the amounts spent for the furnishing of the office of Hon. W. B. Nantel, when Minister of Inland Revenue; with a copy of all invoices.

Mr. Lemieux.—For a detailed statement of all the wrecks which have taken place on the St. Lawrence River from 1867 until 1916, inclusive.

Mr. Macdonald.—For a copy of all letters, telegrams, investigations and reports relating to the dismissal of Joseph Fleming, conductor Intercolonial railway, and in regard to his reinstatement.

Mr. Kyte.—For a return showing the names of all corporations, firms and individuals who tendered or offered to supply clothing to the Department of Militia and Defence since the 1st day of August, 1914, and the prices submitted by each.

2. The names of all corporations, firms and individuals to whom contracts were awarded, together with quantities and prices, and a copy of all such contracts.

3. Also a copy of all correspondence with corporations, firms and individuals seeking such contracts.

4. And a copy of all complaints against the quality and character of the clothing supplied.

Mr. Lemieux.—For a detailed statement of all war orders obtained by the Daminion Steel Corporation of Sydney, Nova Scotia.

Mr. Fortier.—For a copy of the war orders given to the Montreal Street Railway Company.

Mr. Verville.—For a copy of all correspondence and telegrams exchanged between the Labour Department and the working men at Thetford mines prior, during, or after the last strike in that vicinity, and of all other papers relating thereto.

Mr. Gauvreau.—For a copy of a petition from the citizens of Louisville, requesting that L. F. Sanfaçon be not dismissed from his position of postmaster of that town; also of all letters sent by A. Bellemare, M.P., in connection with the dismissal of said L. F. Sanfaçon and asking for such dismissal; and of all letters from the same A. Bellemare, M.P., recommending Chas. Ed. Lasage as postmaster in the place of the said L. F. Sanfaçon.

PICTOU-PRINCE EDWARD ISLAND STEAMERS—HANDLING OF FREIGHT.

Mr. E. M. MACDONALD (Pictou) moved:

For a copy of all tenders, offers, letters, telegrams and other documents relating to the arrangements for the handling of freight and coal at Pictou, in connection with the boats engaged in the winter service between Pictou and Prince Edward Island during the year 1914-1915, and during the present season.

He said: I am making this motion for the purpose of bringing to the attention of the House certain circumstances in connection with the handling of freight on the Government steamers which ply in winter between Prince Edward Island and Pictou. I bring this matter up on behalf of the organized labourers' union known as the International Longshoremen's Association of Pictou, local No. 894. Hon. members are probably aware that during the winter season communication is maintained between Nova Scotia and Prince Edward Island solely and only by means of certain boats which are controlled by the Government of Canada and which operate between Pictou and Charlottetown and Georgetown. All the freight which passes between Nova Scotia and Prince Edward Island has to pass over that route, and the boats utilized in connection with this service have to be supplied daily with coal. This service naturally involves the employment of a large number of men, and in the city of Charlottetown for some years past the men who have been engaged in attending to this work have been members of a longshoremen's union, and a contract or arrangement, as I am instructed, exists between the Government and this union in the city of Charlottetown in regard to the handling of freight and coal. In Pictou the system has not been the same; there the question of patronage is involved, and last year great dissatisfaction was occasioned locally among the longshoremen owing to the way in which the work was handled by the person who got the contract from the Minister of Marine and Fisheries. During the past summer an immense quantity of lumber was shipped from Pictou to Great Britain, and there was also a large traffic in war material coming and going from the Nova Scotia Steel Company, and other industries. As a consequence there was organized this union to which I have referred, which dealt with and handled all lumber shipped from Pictou and, in addition, engaged in the shipment and handling of the war material coming from these large industries. This union, in October, 1915, sent, through its secretary and business agent, the following letter to the Deputy Minister of Marine and Fisheries:

Dear Sir,—On behalf of the International Longshoremens' Association of Pictou, Local No. 894, as their secretary, I desire to ask the department to arrange to give us the work of handling the freight and coal which is placed upon the winter boats at Pictou by the Government steamers. The men comprising the union include practically all the freight handlers in Pictou. We are willing to undertake to discharge and load freight on the steamer Minto for forty-five cents a ton. We are also willing to undertake to discharge and load freight on the steamer Stanley for forty-five cents a ton. We should be willing to undertake this work at the beginning of the winter season and to continue during all the time that the winter boats are in operation. We understand that in Charlottetown, the work of dealing with these boats is performed by another local of our order, and we feel that we are entitled to the same consideration here. We will be obliged for a favourable consideration of our request and a reply at an early date.

(Sgd.) Joseph Veniot,
Secretary and Business Agent I.L.A.,
Local No. 894.

As I am informed, no reply was received from the department to this offer, and the matter drifted along until the eve of the inauguaration of the winter service, when it was rumoured that the contractor who had handled the service in the winter of 1914-15 was to receive the contract. A little later on it was announced that the work was to be done by a combination of three men who had formed themselves into a combination for that purpose. Now, we have heard of the curious combination of the butcher, the baker, and the candlestick-maker; but this combination, which was formed as a matter of pure politics in order to prevent this union from dealing with the freight in Pictou, was equally grotesque, because the men to whom the contract was

given had never in their lives had anything to do with the handling of freight of any kind, or with any work of that description. One man made his living by pressing clothes in the town. The second man was engaged in the making of monuments. The third man was a mason who did not work in the district at all, but who had been working for quite a number of years in the town of Sydney. These three men formed a company, and in some way the Department of Marine and Fisheries gave them the task of handling this freight and coal in the town of Pictou. No tenders were called for, and no attention was paid to the Longshoremen's union, which had formally made an offer to the department. The secretary of the Longshoremen's union, on hearing that these three men were to do the work, telegraphed to the Department of Marine and Fisheries offering to handle the work at five cents a ton less than their original offer. For a day or two it was uncertain what was to be done in regard to the matter, and then the Conservative candidate who has the patronage in my county called up the secretary of the union and arranged for an interview with him for the purpose of discussing the matter. It was rumoured among the labour men that they would be offered this work, and to be paid five cents a ton less for the freight and the coal than they themselves had offered to do the work for. These five cents per ton were to go to the trio I have mentioned. The appointment was never kept with the labour union, and when the boats went into operation these three gentlemen, who had never had anything to do with the handling of freight, took charge of the task. The new boat, Prince Edward Island, came and she was delayed several days in connection with the handling of freight. These three contractors were unable to get workmen in town so they went out into the highways and byways and brought men in. I submit that where you have organized labour in connection with such work as that of longshoremen, an association made up of men of both political parties, and where these men have given satisfaction to the community, they are entitled to consideration and to be asked at least whether or not they would make some lower offer in the matter. But nothing of the kind was done, as I am instructed. For no other reason than that the local political dignitaries supporting the Government in that riding wanted to oblige three of their men, this labour union was ignored; and consequently a large number of men, simply because they are labour unionists, are walking the streets and have no work to do, while men, not resident in the town, and boys are engaged in the work, taking the places of men who could work ten times as effectively because this is work in their own calling.

These are the facts, and I trust that the minister will see to it that the wrong that has been done is righted. I appeal to him whether it is either good business or good policy to absolutely ignore organized labour under the conditions I have mentioned. I am in a position to say that this union comprises practically every able-bodied man in the community who is capable as a freight handler. It is associated with the general organization of longshoremen throughout the country. There is no possible reason that I can see why they should not be recognized when they were willing to do the work at as low a figure as it could be done at, and as low as the figure at which it was given to these three contractors.

Hon. J. D. HAZEN (Minister of Marine and Fisheries: There can be no objection whatever to bringing down the papers moved for by my hon. friend from Pictou (Mr. Macdonald). The system of loading the boats at Pictou, adopted this winter is practically the same, I understand, as that followed for many years past under different governments. Previous to the year 1912-13 the coal and freight handled by the winter steamers on the Pictou-Charlottetown route was attended to by day labour employed by the agent of the department. For the year 1912-13 a contract was entered into between the department and Messrs. John K. Murdoch and Harry Shultz for handling freight and coal. The terms of the contract were that the department was to pay 50 cents per ton for freight and baggage, and 60 cents per ton for placing bunker coal on board the vessels. For the year 1913-14 the contract was renewed with the same contractors and for the same figures. For the next year, 1914-15, a contract was entered into with David A. Morrison for handling freight and baggage on the Minto and the Stanley for 50 cents per ton, while bunker coal was to be placed on the Minto for 60 cents per ton and on the Stanley for 75 cents per ton. The contract for the two previous years applied to the Earl Grey and the Minto. The Earl

Grey was taken off the route, having been sold to the Government of Russia, and she was replaced on the Charlottetown-Pictou route by the Stanley. The facilities for bunkering on the Stanley were less adequate than those on the Earl Grey and the Minto, and consequently it was necessary to pay a larger figure. The Minto having been sold to the Russian Government, before winter navigation last season commenced, her place was taken by the Prince Edward Island, the steam ferry that will run between Cape Tormentine and Cape Traverse. Under arrangement with the Railways and Canals Department this vessel is being operated by the Marine and Fisheries Department for the present season. Last fall a contract was entered into with Messrs. W. T. Gilchrist, Hugh A. MacMillan and Z. Cook, for handling freight and baggage on the Stanley and the Prince Edward Island for 45 cents per ton, while bunker coal was to be placed on the Stanley for 55 cents a ton and on the Prince Edward Island at 70 cents a ton, which figures out at 62½ cents as against 67½ cents paid in previous years. So, my hon. friend will say that so far as prices are concerned a lower price is being paid this year than last year or the year before both for baggage and freight and for bunker coal.

In October of last year, an application was received from Mr. Joseph Benoit, Secretary of the International Longshoremen's Association of Pictou, to be awarded the contract of handling freight and coal at Pictou during the present season. That, I think, was the first intimation that the department had that an international union had been organized in Pictou. My hon. friend has stated that a letter addressed to the Deputy Minister had been left without reply. The Deputy Minister is most punctual in attending to correspondence, and my own instructions are that all letters are to be answered as promptly as possible. So, if my hon. friend is correctly informed, there must have been some accident, misunderstanding, or oversight. When this offer was received, it was felt that as the association had only been organized and the department had no positive information as to its ability to successfully carry out the work, it might be better for the present season that the arrangement to which I have referred should be completed, especially in view of the fact that the contract prices were, as I have pointed out, lower than during the two previous years, and were reported on by the officers of the department as being reasonable in every respect. My hon. friend has suggested that the work has not been successfully carried out by these contractors. But the information which he has received is not in keeping with that which we have received. Complaint was received at the department, subsequent to the commencement of the winter service, that freight was not being promptly handled at Pictou by the contractors. This complaint was investigated and it was ascertained that there was nothing to justify it. My information from the officials of the department, I think, is correct, that freight and coal at Pictou this winter are being handled with the usual promptness, as it is at Charlottetown, where the work is performed by the Longshoremen's Association. My sympathies are entirely with an organization such as the Longshoremen's Association, organized for the purpose of doing business. We employ the Longshoremen's Association at Charlottetown and get good results, and if this business continues another year, I can assure my hon. friend we will give every possible consideration to the claims and qualifications of the Longshoremen's Association for the handling of the work required to be done at the port of Pictou. It is possible that next year there will be very little work, if any, at Pictou for these ships if the car ferry is completed and necessary docks built and railway connections established so that there will be crossing between Cape Tormentine and Cape Traverse. I assure my hon. friend, however, that if there is any business in this line, the matter will receive every consideration at our hands. The Longshoremen's union is a worthy organization, and I hope it will continue to be very successful.

Mr. HUGHES: I have just come into the Chamber, but I know the purport of this discussion. I heard the minister say that he did not think present conditions would continue very long. It is anticipated, I know, that the car ferry will be in operation within a reasonable time, but I suppose the piers will not be ready by the opening of navigation this year.

Mr. HAZEN: We are speaking of winter navigation.

Mr. HUGHES: Is the minister in a position to say what arrangement the Government is making or will make for transportation between the mainland and Prince Edward Island at the opening of navigation

this year until such time as the car ferry will be in operation?

Mr. HAZEN: That matter has been and is engaging the attention of the Department of Trade and Commerce. I understand that arrangements have been made for a service that will, I trust, be satisfactory, during the period between the opening of navigation at Point du Chene and the time next summer when the car ferry will be in full operation.

Mr. HUGHES: Would the minister say when he expects the car ferry to be in operation?

Mr. HAZEN: I cannot give my hon. friend any definite statement in that regard. I understand it is the belief of the Railway Department that the car ferry will be in operation before the fall—some time during the summer.

Mr. MACDONALD: The minister will agree with me that this was a case in which he was misled by his advisors in my constituency. Those who followed the explanation of the hon. minister have observed that his only excuse for the course taken was that the Longshoremen's Union had been organized only last summer. That excuse is not a good one. The minister has given the promise that in the event of the winter service between the two provinces being carried on next year as it is now, he would be disposed to consider favourably the matter of giving the contract for handling freight and coal to those to whom he ought to have given it this year, to the organized longshoreman, the people who are doing business of that kind at the port. My hon. friend admits that the department had an offer from this Longshoremen's Union. Had he communicated with the agent of the Department of Marine and Fisheries at Pictou he would have been informed that this union was an affiliation of the Longshoremen's Union in the city of St. John, with the union in the city of Halifax, and with the International Longshoremen's union. He would have been informed, also, that that union, as I have already stated, got all the work in connection with large shipments of lumber, with large shipments made by the Nova Scotia Steel & Coal company to the Russian Government, and with shipments of important material which came from various other large industries. Somebody, however, in the county of Pictou, who is handling the patronage along the lines so eloquently condemned by the hon. Minister of Trade and Commerce the other night, said to my hon. friend: pay no attention to this Longshoremen's union, whose business it is to attend to this work; hand it over to this tailor, this monument builder, and this mason, because they are useful people when election time comes round. I am glad the hon. minister has been frank enough to say that if the opportunity comes again he will see that this difficulty is remedied. These longshoremen, who are devoted to the idea of labour union, and who have wives and families to support, are walking the streets of this seaport town this winter because the men brought in from all over the country by this unique trio to which I have referred are taking the bread out of their mouths. These men are not being given a chance to work simply because they are loyal to union principles. It was suggested to these men: we will give you work, but you must permit an intermediate rake-off of five cents a ton for these three men. They said, no; we will not do that; we will stand by our union. It was open to the minister, who could have cancelled the contract at any time, to give the work to the labour union of the town, the members of which were willing to do the work at the same figures as the trio to which I have referred are receiving to-day. In view of the evidence before us, and of the facts being conceded, I think it is only fair and proper that the minister should deal with this matter at once. During a period of two months more communication with Prince Edward Island will be carried on as it is at the present time, and these men, who make their living around the wharves, will be out of work unless the minister intervenes. I do trust that, as a result of this discussion, the minister will take steps to remedy this injustice.

Motion agreed to.

PICTOU COUNTY MAIL SERVICE.

Mr. E. M. MACDONALD moved:

For a copy of all letters, petitions, papers, telegrams, tenders and other documents relating to the establishment of a rural mail route from Alma, through Sylvester and Loch Broom, and as to the closing of the post offices at Sylvester and Loch Broom.

He said: I desire to state briefly to the House the grievance of some six families in my county who have been deprived of any convenient mail service as the result of the establishment of the rural mail route referred to in the motion, which has resulted in the closing of these two post

offices. I wrote to the Postmaster General before the House met calling his attention to the effect of this change, and the minister replied that he would see that one of the offices, Sylvester, was opened. This has not been done, and I have been unable to get the matter dealt with in accordance with the Postmaster General's assurance. We have had a great many rural mail routes established in my county, and I think that in quite a few instances there has been a disregard for the convenience of the public. This is only one of about half a dozen cases in which people have been deprived absolutely of mail convenience as the result of the establishment of rural mail routes. Just now when we are economizing, it would be well for the Postmaster General to balance the question of cost with the question of convenience. When the establishment of a rural mail route compels half a dozen families, or even three or four families, to go very long distances to get their mail, it is doubtful whether such a service should be established. The rural mail service in my county involves an annual increased expense of $4,600, and in some cases there sems to be no justification for the establishment of the routes except to give some person holding a mail contract a larger payment of money. I do not want to indulge in any controversy, but merely to put on record the facts in this case so that the Postmaster General may remedy the grievance of these people, which in the winter months is a serious one. These families live on the crossroads and have to go a long distance to get their mail. I hope that the minister will be able to fulfil his promise to me at an early date.

Sir ROBERT BORDEN: I regret that the Postmaster General is confined to his bed by illness. I am, of course, not familiar with the matters to which my hon. friend has directed the attention of the House, but I will direct the attention of the Postmaster General to the observations of my hon. friend and ask him to take the matter into his best consideration.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Sir ROBERT BORDEN: Before the Committee proceeds with Estimates I would like to give an answer to a question with regard to the Royal Northwest Mounted Police which was asked by my hon friend from Assiniboia (Mr. Turriff) during the discussion of an item in the Estimates to which it did not appertain. The item to which it properly referred, has been passed, but there is no objection whatever to giving the information. Upon an item relating to the Government of the Northwest Territories, my hon. friend made these observations:

Mr. Turriff: As this is probably the last item on which I can bring this subject up, I should like to ask the minister why Inspector Heffernan of the Northwest Mounted Police was not given his ordinary promotion, and why two junior officers were put over his head, practically compelling him to resign? I do not ask the minister to reply now, but he might have this information for me when his estimates come up again.

Mr. Roche: I would point out that the Royal Northwest Mounted Police are not in my department, but in the Prime Minister's. I will direct his attention to the hon. gentleman's question.

The report made to me by Mr. Fortescue reads:

In October, 1914, owing to the increase of the force to 1,200 non-commissioned officers and constables, two additional superintendents were required, and the appointments were filled by the promotion of Inspectors G. S. Worsley and R. S. Knight, Inspector Heffernan, who was senior to Inspector Knight, being passed over on account of his being lame and unable to ride, and therefore not in a position to perform his duties.

Inspector Heffernan having been passed over for promotion, requested to appear before a medical board with the view of taking his pension. This was done, and the board found that owing to the loss of power in his left leg, he was incapacitated for the performance of his duty; that the incapacity was likely to be permanent, and recommended that he be invalided and granted a pension. Inspector Heffernan was therefore, by Order in Council of the 4th December, 1914, retired from the service with a pension of $1,068 per annum.

Everything that was done in the matter was done on the recommendation of the Commissioner and Comptroller. I had no personal knowledge of the circumstances, and no knowledge of any of the persons involved, except that I had acquaintance with Inspector Worsley who, as I am informed, was the senior of Inspector Heffernan.

Mr. TURRIFF: I do not know very much about the matter either; I was asked to bring it up by a member who was unable to be present. But it would appear on the face of it rather peculiar that Inspector Heffernan should be considered as unable to perform the duties of Superintendent on account of lameness when apparently he was able for years to perform the duties of

inspector, which would be more likely to entail outside work and hard riding.

Sir ROBERT BORDEN: I really do not know anything more about the matter than is contained in the report. I can assure my hon. friend that I do not know Inspector Heffernan, and I would be very sorry to do him any injustice. The matter was in the hands of Commissioner Perry and Comptroller Fortescue, and I have no reason to suppose that they would in any way do injustice to Inspector Heffernan or to any officer or man in the force.

5 p.m.

Grant to the Interparliamentary Union for Peace, $200.

Sir WILFRID LAURIER: Is it the intention to spend this money this year; I wish it were.

Sir ROBERT BORDEN: This is the usual grant. It seems to me that this is a year in which the efforts of the Interparliamentary Union for Peace are required as much as in any other year. The amount will not be used unless it is necessary.

To provide for the expenses of the Acting High Commissioner, London, England, $10,000.

Sir WILFRID LAURIER: Does the Government intend to have a permanent Commissioner, or simply to have an interim Commissioner, as we have now?

Sir ROBERT BORDEN: The services of the representative of the Canadian Government in London during the war have been attended with a great deal of advantage in securing desirable co-operation between the Government of the United Kingdom and the Government of Canada in war matters. When Sir George Perley went to London in 1914, it was not the intention that he should remain there beyond September of the same year; but war broke out on 4th August, 1914, and, after consulting with the British Government, we thought it desirable that he should remain. He has satisfactorily discharged the duties of High Commissioner and he has also done a great deal of work, and has had to do with a great many affairs, which, strictly speaking, might not come within the purview of the duties of High Commissioner. Up to the present time, we have not thought it desirable to make any change in that arrangement, which has worked very satisfactorily. When in England in June last, I spoke to the Colonial Secretary, Mr. Bonar Law, and I found him very appreciative indeed of the services of Sir George Perley. He expressed to me the view that while the war lasted, at least, it was very desirable that the arrangement which has existed during the past eighteen months should be continued, and for that reason we purpose to continue it.

Sir WILFRID LAURIER: It is not proposed to make a permanent appointment now?

Sir ROBERT BORDEN: No, not now.

Mr. MACDONALD: I wish to inform the Prime Minister that there have been general complaints among the business men of the country as to the lack of a strong organization in the High Commissioner's office in London, to enable business interests in this country to be represented under more satisfactory conditions than have obtained in the past.

I make no special comment upon Sir George Perley's services one way or the other, except that I have heard prominent business men in this country say that there is no reason why there should have been such a tremendous expenditure in the United States upon a thousand and one different kinds of war supplies, when they could have been obtained just as easily in Canada. I am sure every hon. gentleman in this House has heard it said, as I have, that had the High Commissioner's office been properly organized, and had representations been made to the Imperial authorities as to Canada's facilities for turning out different kinds of war supplies, much of the trade that has gone to the United States would have come to Canada. We are told that in the United States, for some reason which it is most difficult for us in Canada to appreciate, everything that is purchased by Great Britain is done through Morgan & Company. Morgan & Company may be very important people in a financial way, and I suppose their services in that respect are of importance to the British Government; but at the same time there are many industries in Canada which could be operating to-day, turning out war supplies for the British Government if the trade had been brought to Canada instead of to the United States.

Sir ROBERT BORDEN: What, for example?

Mr. MACDONALD: My hon. friend from Guysborough (Mr. Sinclair) suggests horses. I am speaking of the general complaint made by commercial men in this country. We are told by certain persons represent-

ing Great Britain—and my right hon. friend must have heard of this—that if contracts in certain lines are to be given to Canada the prices must be lower than the price in the United States; when just the reverse should be the case. Canada, very properly, and on the highest possible grounds, is making great sacrifices in men, and in every other way for the Empire and the great issues involved; the United States, so far, has remained absolutely quiescently neutral. Yet, to-day, the workshops of that country are humming, turning out for the British Government supplies, a large portion of which might have been made in Canada. If immediately after the war broke out there had been a vigorous effort on the part of Canada's representatives in Great Britain; if they had made representations to the Imperial authorities as to Canada's facilities in the different lines of manufacture, I say we should have secured a larger portion of business than we have done.

Mr. BURNHAM: Is there anything to prevent my hon. friend going over there and making these representations?

Mr. KYTE: He is not paid for it.

Mr. MACDONALD: I do not see what the pertinence of my hon. friend's question is.

Mr. BURNHAM: I understand that the hon. gentleman, who characterizes a civil question as an impertinence——

Mr. MACDONALD: I said "the pertinence."

Mr. BURNHAM: I beg the hon. gentleman's pardon. I understood my hon. friend to say that if the proper people had gone to the Old Country at the beginning of this war——

Mr. MACDONALD: No, that was not it.

Mr. BURNHAM: Well, at some time during the war, then.

Mr. MACDONALD: No, that was not it.

Mr. BURNHAM: Well, at no time, then. I must have altogether misunderstood my hon. friend.

Mr. MACDONALD: I think my hon. friend must either be afflicted by the acoustics of this building, or, as the hon. member for North Cape Breton said the other day, the "alarm clock" has gone off again. My hon. friend spoke without appreciating what I said. I said if we had had a proper business organization in the High Commissioner's office at the beginning of the war, and our representatives had given to the proper authorities in Great Britain full and adequate information as to our facilities for manufacturing different kinds of war supplies we should have received a larger amount of orders than we have had. I say that that complaint is being made by business men all over this country; that the workshops of the United States are humming, and their workmen busy, manufacturing supplies which could be turned out in Canada just as well; furthermore, it has been said that unless Canada can supply certain lines cheaper than the United States she will not get the order.

Sir ROBERT BORDEN: Would my hon. friend give me his authority for that statement?

Mr. MACDONALD: If I may trespass upon a somewhat debatable subject, shells, for instance. Has my right hon. friend never heard the statement that unless Canada manufactures shells as cheap or cheaper than the United States, the order would go to the United States?

Sir ROBERT BORDEN: I have not heard of it.

Mr. MACDONALD: Then my right hon. friend has not heard what others of us have heard from well-informed authorities on the other side. Of course, I do not wish to give my hon. friend the details of a private conversation, but I may say that that statement comes from a source about which there can be no dispute. Sir George Perley is a very estimable gentleman, as all of us who knew him in this House know, but he went over to London as a locum tenens; he did not go over there inspired with the idea that a High Commissioner should have, namely, to make a record for himself as the representative of Canada. He went to London simply to hold the place till my right hon. friend was ready to make a permanent appointment. I do not care what the ability of any man is, or what his position, unless he gives to that position all the energy and enthusiasm which a man would do who was inspired with the idea of discharging his duties in the best possible manner and with full credit to himself, he will not get the best results. Complaints are made throughout Canada generally, and have been made for the last two years, that the business organiation of the High Commissioner's office should be on a wider basis. With all respect to the distinguished former High Commissioner, I say, as one who has visited

the High Commissioner's office, that we should have more Canadians on the staff; that now, before it is too late—and it is even more imperative on account of the war—there should be an immediate re-organization of the High Commissioner's office along business lines. We have been told in this House, and it is being said in the country, that when this war is over we may look forward to a period of prosperity. I hope that is true; the Minister of Trade and Commerce, however, expressed very grave doubt that it would prove to be true. We can be sure of this, however: so long as the war lasts, and perhaps for some years afterwards, Great Britain will be a big buying nation. Why should she not be induced to buy more supplies in Canada? It is all very well to say to business men in this country: send your private representative over to England. Men engaged in business in Canada have sent their own representatives over there; but they have always had difficulty in obtaining an entry into the proper quarters, on account of the red tape which always ensues from long-settled officialdom. Notwithstanding the personal regard we all have for Sir George Perley, I want to urge upon the Prime Minister the necessity of an immediate re-organization of the High Commissioner's office. We should have in London a business department, representing the business people of Canada, and prepared to say to the properly constituted authorities over there, Canada can do this, that and the other thing. I reiterate that the feeling among the business interests of this country is that greater energy should have been displayed by the Government in dealing with this matter. If Canada's facilities had been brought to the attention of the British Government, millions of dollars that have gone to the United States would have been spent in Canada.

Sir ROBERT BORDEN: My hon. friend has made some assertions that are entirely without warrant, as I can assure him. He takes it for granted—I do not know for what reason—that no representations have been made to the British Government nor to any of the Allied Governments—perhaps he did not go that far—as to the facilities in Canada for providing the supplies required for the war. He was never more mistaken in his life than when he made such an assertion, because from the very earliest weeks of the war up to the present time, the Government has repeatedly both by letter and by cablegram brought our resources to the attention not only of the British Government, but of the Allied Governments, through the British Government. My hon. friend contends that these governments should have been made acquainted with a list of the supplies of various kinds that can be furnished by Canada. That has been done by this Government on more than one occasion, and last summer I handed an amended and enlarged list to the various departments of the British Government. I had a great many conferences on the subject with them. In addition I arranged with the International Purchasing Commission in London to secure an interview at which all the Allied governments, I think, were represented. I spoke to them upon the importance of securing in Canada many supplies which we were able to provide as promptly and, I believe, of as good quality and at as reasonable prices as they could be furnished in any other country.

More than that, I have received from time to time, at least twenty-five delegations from persons in this country who were able to furnish supplies and who contended that the British Government had not availed themselves of the resources of Canada as freely as they should have done. To every one of those delegations which came at various times during the last fifteen months, I explained precisely what we had done in this connection, and in every single instance, after the situation had been explained and after the representations which we had put forward had been made known, those delegations stated to me in distinct terms that they believed that the Government of Canada had done everything possible to secure orders for supplies, not only from the British Government but from the Allied Governments. If my hon. friend knows of business interests throughout the country which are not satisfied with what the Government has done, I would be very glad to receive any of them and to explain to them, more fully than it is possible for me to do in this House, precisely what we have done in that regard, the character of the representations that we have made, and the effect that they sometimes have produced. It is perfectly true that early in the war there were sent to the United States orders that might very well have been sent to this country, and I have put representations in reasonably forcible terms before the various departments of

the British Government with regard to that. If my hon. friend were acquainted with those terms, I am sure he would regard them as expressing, as forcibly as it would be appropriate to do, the views of the people of Canada and of the Government of Canada in regard to this matter. I would be very much surprised to learn that any department of the British Government—

Mr. MACDONALD: I did not say "any department."

Sir ROBERT BORDEN: —or any person authorized to speak for any department, or any person speaking with any authority had said that no order for supplies could be given to Canada unless they could be furnished cheaper here than in any other country, because I have the assurance of the British Government and of the permanent officials of the great purchasing departments that, other things being equal, they would in every case give a preference to the productions of this country, and would in the first instance, look to the resources of this country. When I went over the matter with the Contracts Department of the War Office last summer, I asked to be furnished with a comparative statement and it was furnished to me. After my return from Great Britain, I made that statement public. I think it dated from the commencement of the war up to the beginning of July or to the end of July last—I am not quite sure which. That statement was accompanied by an explanation in every case why the order went elsewhere than to Canada, and I would be very glad, indeed, to show it to my hon. friend or to any other hon. gentleman opposite who might care to look at it. The results which were set forth in that statement were more favourable than I had anticipated from the rumours as to orders which had been placed in the United States. Of course, hon. gentlemen will remember that, particularly in the first four or five months of the war, there was hurry and confusion, and the most extreme haste to obtain certain supplies which were vitally and absolutely necessary. Hon. members must also bear in mind that at the commencement of the war the industrial resources of Canada were not as well understood in the United Kingdom as they afterwards were. Notwithstanding the haste, the urgency, the necessity that supplies should be procured with the utmost possible expedition, and in very large quantities, I was informed by the director of contracts, in this statement to which I have alluded, that up to the beginning or the end of July last—I am not sure which—the orders placed in the United States ran up to £101,000,000, and the orders placed in Canada ran up to £48,000,000. One would have imagined, from the reports in the press, that the discrepancy would be infinitely greater than that. I was distinctly informed by various members of the British Government, to whose attention I brought this matter, and by the permanent officials of every department, that Canada would receive the preference in respect of orders for supplies necessary for the war. Further than that, I was assured that, in so far as they had any influence with any of the Allied Governments—and I think they have some influence—they would endeavour to procure for the producers of Canada all orders that could be supplied at reasonable terms, with expedition, and of a good quality. I have no reason to believe that the assurance given to me at that time has been since departed from. If there is any ground for believing that the promise then definitely made to me is not being carried out I would greatly appreciate the advantage of having the information as to the specific instance afforded to me in order that I might bring it, as I would feel it my duty immediately to bring it, to the attention of the British Government, and particularly to the attention of the department concerned.

From my experience in London I know that Sir George Perley is in the most intimate and close touch with the purchasing departments and the permanent officials of those departments. He goes to see them daily in connection with some matter or other of this kind, and he did so while I was there. I should be glad, indeed, if any additional organization were necessary, to have it provided. But I might say this in connection with the whole subject, that the Canadian Manufacturers' Association have had their attention directed by the Government to the importance of making some effort in this regard themselves. It is not too much to say that during the early weeks or months of the war the manufacturers of the United States were, perhaps, a little more alive to the situation than were the manufacturers of Canada. When the war broke out the American manufacturers immediately sent across the Atlantic the best men they could secure for the purpose of soliciting orders

from the British Government and from the Allied Governments.

Our manufacturers, I believe, did not display quite the same activity and enterprise as was shown by those on the other side of the line. Later, however, the Canadian Manufacturers' Association, or a large number of its members, established last summer an organization intimately connected with the Manufacturers' Association, which, if I remember correctly, is called the Canadian Export Association. They appointed two managers and these managers have been in England during the past six months. By this means they are endeavouring to take action which, perhaps, might have been taken with advantage at a somewhat earlier date. I am led to believe from the report made to me by one of the managers of the association on his return, that the work they are able to carry on will be attended with some advantage.

In addition to what we have done in other regards, we have pressed the British Government and every one of the allied governments to establish purchasing commissions in Canada. The French Government appointed the Hudson's Bay Company. At first, it may be, this company had its authority somewhat restricted; but I have understood that about six months ago the authority of the Hudson's Bay Company to act for the French Government in this country was made pretty general, and that they are acting for the French Government in respect to all supplies that Canada can furnish. We had invited the French Government to take that step, and we repeatedly pointed out to them, not only through the British Government, but through the Consul General of France in Montreal, the opportunities which there are in Canada to secure the supplies required by France. We have taken the same course with the Russian Government, not only through the British Government but through the Russian Consul General in Montreal. Speaking with the utmost frankness and sincerity, I do not know of any step we might reasonably have taken in the last eighteen months to bring the resources of Canada to the attention of the allied Governments that we have not already taken. For my part, I shall be glad to show to my right hon. friend the leader of the Opposition (Sir Wilfrid Laurier) or to any other gentleman on the other side of the House, the very great volume of correspondence that has taken place on this subject during the last eighteen months. I venture to think that if hon. gentlemen should become acquainted with that correspondence—a good deal of which is of a highly confidential character—they will come to the conclusion that the Government is thoroughly alive to the importance of securing for Canadian manufacturers and producers a full share of opportunity to furnish the supplies made necessary by this unfortunate war.

Mr. TURRIFF: It seems to me that the hon. member for Pictou (Mr. Macdonald) might have gone a little further and included the allied countries as well as Great Britain. I have read in the newspapers half a dozen times within the last few months that even orders for British Columbia timber have to be given through agents in the United States. My right hon. friend gave the figures of British orders given in the United States, but we have seen lately in the newspapers statements of orders to the amount of $2,000,000,000 for war munitions and supplies placed in the United States, not by Great Britain alone, but by the allied Governments. I was told by one of the very highest railway authorities in the Dominion that last month there had been at one time twenty-five thousand cars loaded with supplies ordered by the Russian Government standing on the tracks around the port of New York, for which, by some mismanagement, the agent could not secure ships. That was one of the causes of the blockade in different parts of the United States and also in Canada. I do not know what class of goods these cars contained; they may have contained shells for all I know. So far as I can learn Canada has not yet produced one single completed shell, and so would not have been able to furnish shells to the Russian Government. But the fact that twenty-five thousand cars were standing on the track at one time loaded with goods consigned to the Russian Government, shows to what a vast extent that Government is buying goods in the United States. It seems reasonable to believe that there must have been in these cars some classes of goods that should have been ordered in Canada. And, while I am not going to say that my right hon. friend and his Government have not taken some steps to secure these orders, it does seem to me that there has been either carelessness or incompetency in some way or Canada would have got a better proportion of the orders for such materials as we could

have supplied just as well as the United States. I think the remarks of my hon. friend from Pictou were very timely and very much to the point, and I trust the Government will take them in good part, and will see if in the future something more and something better cannot be accomplished than has been accomplished during the last year. I can quite understand, as the right hon. the Prime Minister says, that during the first six months of the war things were upside down, and probably none of the Governments knew exactly where they were. But during the last year, and especially during the last six months, this has not been the case. And from this time on—and we may have this war going on for another year, or two or three years—if the Government will be alive they can accomplish more than any private individual, no matter how good a salesman, can accomplish. We should be able to obtain a good big percentage of the orders given by Russia, France and Italy, to say nothing about Great Britain. I have no doubt that, so far as British orders are concerned, if we can fill them, and fill them at right prices, we can get a good share. But I think we ought to get a good share, a bigger share than before the orders from the allied countries.

Sir ROBERT BORDEN: I hope the hon. gentleman (Mr. Turriff) will not place too great reliance upon reports he sees in newspapers. If on one occasion at least on fifty occasions since the outbreak of war indignant telegrams have been sent to me about rumours of huge orders for this, that, or the other class of goods, placed in the United States that could have been placed in Canada. I am quite sure that in at least ninety per cent of the cases, and I believe in ninety-five per cent, upon my sending a telegram to inquire the reason for this and why Canada had been overlooked, I found that there was no truth whatever in the newspaper statement. In almost every case where rumours of that kind were brought by us to the attention of the British Government, either directly through the Governor General or through Sir George Perley, that was the reply. I am really at a loss to know what more could have been done by a Government than has been done by the preseent Government since the outbreak of the war. I have made it a matter of personal attention. On many occasions, during my visit to England last summer I made it my business to go personally and see not only the responsible minister, not only the permanent head of the department, but the head of the particular branch that had to do with the ordering of supplies in this country, with the result, as I have said, that I had the definite specific and absolute assurance that, in cases where these supplies could be obtained in Canada, Canada would receive the preference. If any hon. gentleman on the other side of the House can give me any instance where that assurance has not been carried out during the past six or seven months, since that promise was made to me, I shall be very glad to have my attention directed to the instance, and I shall certainly bring the subject to the attention of the British Government without any delay.

Sir WILFRID LAURIER: It seems to me that my right hon. friend has not at all apprehended the force of the remarks that have been made by the hon. member for Pictou. The High Commissioner for Canada in London discharges in ordinary times duties of a diplomatic as well as of a business nature. Perhaps the exceptional nature of the events that have occurred in connection with the war have justified the view of my right hon. friend that it would be desirable to have one of his colleagues at the seat of Imperial Govenrment. The business in connection with work of a diplomatic nature has been increased tenfold by the war, and I find no fault with my right hon. friend's having in London one of his colleagues to represent the Canadian Government. I do not wish to say anything as to the character of the services which Sir George Perley has rendered, because they have been largely confidential, and we have not had any report of his operations. One thing, however, is apparent to everybody: if, in addition to Sir George Perley, who might properly have given the greater part of his time and attention to our diplomatic relations with the British Government, there had been at the High Commissioner's office in London a wide-awake, up-to-date business man, Sir George Perley would still have had his hands full in attending to the matters which came before him for consideration. I am sure that under these circumstances Sir George Perley, even if he did his best, could have rendered more valuable service. If this be the case, it would seem that the sooner some capable person is appointed to this position the better it will be for the country.

Sir ROBERT BORDEN: I do not believe that a better business man than Sir George Perley, who has had wide business experience, can be found in Canada. I know that his time has been taken up more largely with the matters of business than with matters of diplomacy. When I was in London during the past summer I asked him whether he required on his staff any additional persons who should be familiar with these matters, or whether he required any further organization. I assured him that if he desired any additional organization or any increase in his staff, the Government would be only too happy to make the necessary provision therefor. He told me that up to that time the staff had been adequate for all needs, and that if he should require any addition or reorganization, he would let me know, in which case the Government would make any provision that might be necessary or desirable.

Mr. PUGSLEY: I have heard from persons who ought to know that for a number of years the High Commissioner's Office has been lacking in officials who are Canadians. It has been strongly urged that Canadians of ability and experience ought to be attached to the office. That complaint was made at the time of Lord Strathcona's commissionership, and it is made to-day, notwithstanding the change that has taken place in the High Commissioner's Office. If my right hon. friend will ask the representatives of the provinces in London, what they think of the official circle in the High Commissioner's Office, I am sure he will be told that it is not at all satisfactory. The difficulty seems to be, and has been for years, that the office is looked upon rather as a diplomatic office, and that those who are in charge regard themselves as being above and separated from the ordinary people of Canada. I heard that statement not very long ago from a very able man who has been the representative of one of the provinces in London, and that which I heard a few weeks ago was the same story that I heard a few years ago. More Canadian life ought to be infused into the High Commissioner's office. No matter how good a business man he may be, the High Commissioner, occupying the distinguished position that he does—which, as I have said, is largely diplomatic—cannot be supposed to give to business matters the attention which would be given to them by business experts. My right hon. friend says that if the correspondence were disclosed it would be seen that he has made vigorous protests to the officials of the British Government respecting orders in Canada. The very fact that he found it necessary to do that is a reflection upon the High Commissioner's office. Why should my right hon. friend have found it necessary to make vigorous protests against the way Canada was being treated in respect to war orders? The proper officials of the High Commissioner's office ought to have been looking after that. They ought to have informed the officials day after day with those who had the giving of war orders. They ought to have informing the officials of the British Government that Canadian manufacturers were prepared to turn out all supplies needed for the equipment of soldiers just as well as manufacturers in the United States. The Minister of Militia has said that after the war broke out the officials of the British Government were actually of the settled opinion that shells could not be manufactured in Canada. Why were they so ignorant of the capability of Canadian manufacturers? Should they not have been informed by the officials of the High Commissioner's office that Canadian manufacturers could turn out shells? Why was it necessary for the Minister of Militia to cable to England the information that Canadian manufacturers were capable of turning out shells? So with other matters. Why was it that up to a few months ago it was thought by officials in Great Britain that Canada could not manufacture fuses? Large orders for the manufacture of fuses were given in the United States; I believe that these fuses have not yet been delivered to the British Government. Why were the officials of the British Government not informed that these fuses could be manufactured in Canada just as well as in the United States, and why should not these millions of dollars have been distributed among the Canadian people instead of among people of the United States? Why has it remained for Mr. Flavelle, as Chairman of the Munitions Board, after almost eighteen months, to take the first steps for the manufacture of fuses in Canada, when everybody knows that our manufacturers have the skill, the enterprise, the capital, the opportunity to establish factories which would enable them to do this work just as well as manufacturers in the United States do it? My hon. friend has a just ground for making, on behalf of the Canadian people, the complaint which he

has made. If we had attached to the High Commissioner's office, not Englishmen, who know comparatively little about Canada and its resources, as compared with what the people of Canada themselves know, but expert Canadians, who would give information on these matters, and would be in touch with the officials of the War Office from day to day, very much greater results would be accomplished for Canada and very much larger orders would be placed than have been placed. Of course, it is not too late to remedy the evil, and I trust that in the future some steps will be taken along the lines suggested by my hon. friend from Pictou.

Mr. OLIVER: I wish to draw attention to the fact that, so far as the manufacture of war supplies in the city of Edmonton is concerned, the condition is not as good to-day as it was six months ago. Some time last winter a contract for the manufacture of saddles for the Russian Government was secured by the Edmonton Saddlery company. That was filled with complete satisfaction. Then, in the spring, a contract was secured for a thousand sets of artillery harness for the French Government. That contract was filled to satisfaction; it was turned out within the contract time, the quality was beyond criticism, and, of course, no fault was found with it. But since then no contract of that character has been secured in that city; in fact, no other contracts of any kind, so far as I am aware, except that two machine shops have been able to get certain shell contracts. The manufacture of harness is an industry that naturally belongs to the western country. There is in that country an enormous demand for team harness, and it is advantageous that it should be made near where it is required. So we have in western cities harness manufacturing establishments manufacturing harness and leather work of that kind who do it, I have no doubt, as well as it is done anywhere in the world. Thus we are not barred by our conditions and circumstances from securing contracts for that particular form of war supplies. I wish to bring that fact to the attention of the Prime Minister as otherwise it might be assumed that while things were not satisfactory a few months ago they are satisfactory now. They were more satisfactory a few months ago than they are now, inasmuch as we were getting contracts then and are getting no contracts now.

I am under the impression that this question is very much larger than it has been considered to be up to the present time. While it is not well to pay too much attention to what appears in the newspapers, still the fact remains that there is an enormous industrial boom in the United States by reason of these war contracts. Only this morning I read in the Montreal Gazette that the bank clearings of the United States for the week ending on Thursday last were over fifty per cent higher than for the corresponding week last year, and the general impression is that that change of conditions is very largely due to the profitable work of providing war supplies. There has been no such increase in bank clearings on our side of the line. The same statement gives the increase of clearings in the eastern cities at twenty-nine per cent, in western cities at only six and a half per cent over the same week last year. So there is no doubt that unless there has been a misunderstanding as to the source of the industrial activity of the United States, it must be because the proportion of war orders there is immeasurably larger than here. The figures given by the Prime Minister were one hundred million pounds to the United States, as against forty-eight million pounds to Canada. That is to say we were receiving war orders of nearly half the value of those placed in the United States. If that were the fact, the forty-eight million pounds would mean relatively a much greater degree of industrial employment and advantage to Canada than the one hundred million pounds would to the United States; and yet we find that the financial conditions, universally represented as being the result of war orders, are very much better in the United States than they are in Canada. I do not wish to criticise or to suggest that the Government has not used every effort or has not appreciated its responsibility in the matter, or that the High Commissioner is not properly discharging his duties; but the fact remains that with the condition of war now existing there has been an opportunity for tremendous industrial expansion on this side of the Atlantic. According to what we might consider fair play Canada should share in that industrial expansion at least equally with the United States. But, as a matter of fact, Canada has not shared equally with the United States in that expansion and, so far as the city of Edmonton is concerned, the conditions are not as good to-day as they were six months ago.

Sir ROBERT BORDEN: The industrial organization of the United States is, of course, in a very much more advanced

condition than that of this country, and it is enormously greater. When the statement was given to me by the director of contracts. Mr. Winter, I really was surprised that the proportion placed in Canada was so large, because from the reports in the press I thought that the orders placed in the United States must be perhaps ten times as great. I have no reason to believe that the statement furnished to me was not an accurate statement; I am sure it would be accurate and dependable. That, however, relates only to orders placed by the British Government. There have been orders for harness from the Italian, French and Russian Governments, and there may have been some for boots at one time, although I think lately there have not been any orders for boots. Whenever we have heard of a contemplated order by the French, the Russian, or the Italian Government, we have not failed to press upon the attention of the Government concerned, in each instance, Canada's ability to fill that order. We have not failed to do that in a single instance where the subject has come to our attention, and in some cases with good results. As far as leather goods are concerned, I am informed that we shall require for our own troops in the immediate future a very considerable amount of harness, that requests for tenders have been sent out within the past two or three weeks, and that tenders will probably be in shortly. I hope it may prove that the industries in Edmonton, to which my hon. friend has alluded, will benefit by the opportunity thus afforded.

I may say to my hon. friend that in dealing with orders for supplies for our own troops, the Government have felt it incumbent upon them to give special consideration to the industries of Western Canada. We have taken steps for that purpose which I think have proved effective. I do not think we can well be criticised for taking the course to which I have alluded, and which can be explained later by the hon. member for East Toronto (Mr. Kemp) as chairman of the War Purchases Commission. It was felt that we should give consideration to the conditions of unemployment which prevailed in the West, during the months of last winter and last spring, perhaps to a more serious extent than in other parts of the country, and that we should also have regard for the splendid response that has been made all through Western Canada to the call to take up arms in defence of the liberties of the Empire. I hope that Edmonton may derive some benefit from the tenders which, I believe, are expected shortly.

At six o'clock, the committee took recess.

The committee resumed at eight o'clock.

Mr. MACDONALD: We have had the advantage of the statement which has been made by the Prime Minister in regard to this matter, but as has been pointed out by hon. gentlemen on this side of the House, I think the right hon. gentleman misapprehended the point I was making. I, of course, accept his statement as to what the Government did on this side in regard to supplying the material required for the war. It is, however, a matter of common notoriety in this country, that owing to certain representations that are said to have been made by certain members of the Government, a very large contract for shells for Russiia is now being filled in the United States, certain contractors having transferred it there. I quite believe that my right hon. friend discussed with the Sceretary of State for the Colonies and other members of the British Government, what Canada might or might not do in regard to supplying the needs not only of Great Britain, but of the Allies. But he is here and the War Office is there. The point which I made was and I desire to reiterate it, that there is not in the High Commissioner's office today, and there has not been since the war began, that arrangement for business representation in the Old Country whereby the War Office would be advised of the thousand and one things that could be made in Canada. The High Commissioner's Office is not in a position to advise the War Office as intimately as it should be advised in regard to these things. My right hon. friend and his Government are many thousands of miles away from the War Office. What Canada wants, and should have, in the High Commissioner's office is a business attache or attaches equipped with a full and complete knowledge of Canada and her industrial facilities, and in touch with the War Office at all times. That the necessity for such an organization exists I propose to prove by the evidence of my right hon. friend himself, in a statement which he made to the House just before prorogation last year. On the 15th of April, 1915, the Prime Minister made certain remarks in regard to a statement prepared by the

Chairman of the Shell Committee. The Prime Minister quoted the following paragraph from that statement:

> The ordnance advisor reported this matter and indicated how many more shells could be undertaken. The Minister of Militia called a meeting of the committee at Ottawa and, after discussing the matter, cabled Lord Kitchener, pointing out that much larger contracts could be undertaken by the manufacturers in Canada. He emphasized the fact that many works were standing idle in the Dominion, while contracts were being placed in the United States for shells by the British War Office. This resulted in additional contracts for 18-pr. fixed ammunition, complete without fuses and empty 18-pr. shrapnel shells.

Then my right hon. friend went on to say:

> It was proposed by several of the manufacturers that a deputation from the committee should be sent to the War Office, London, to put their claims before the Secretary of State for War. The Minister of Militia, decided on the recommendation of the committee, to send Mr. David Carnegie, as he was familiar with the whole situation. It was also decided that he should visit Woolwich Arsenal and obtain the latest information on the various details in the manufacture of complete ammunition.
>
> The result of his visit has been fully reported to the Minister of Militia, but it might be briefly stated here that the War Office officials did not fully understand the nature and importance of the committee's work, and had no idea that the factories in Canada were capable of undertaking such contracts, until these facts were placed before them.

I submit that that proves my argument, that there should be in the High Commissioner's office in London a business representative or representatives with full and complete knowledge of Canada's resources and industrial facilities. Then it would not be necessary for an errant Shell Committee to send over to England after a long lapse of time some gentleman to inform the War Office of Canada's capacity for making shells. I submit that the first duty of our representative in London, after his diplomatic duties, was to lay these facts before the War Office. The Prime Minister gave this statement to the House in April, 1915, less than a year ago. The War Office had no idea that our factories were capable of undertaking such contracts until these facts were placed before them. The High Commissioner for Canada should have placed these facts before the War Office months before we sent over Mr. Carnegie to tell the War Office what we could do; and I submit that if the conditions which prevailed in the High Commissioner's office at that time, and which had prevailed since the outbreak of war, still exist to-day I have fully proved my statement that Canada is daily losing business for the simple reason that we have nobody in England to tell the War Office what we can do. My right hon. friend told us to-day that there was not a better business man in Canada than Sir George Perley. Though I have every personal regard for Sir George Perley, I take exception to that statement. I do not think that the business knowledge of Canada will die with Sir George Perley. He was the fortunate possessor of inherited wealth, and his relation to business was largely confined to lumber and the Ottawa valley. There are hundreds of men in this country to-day who have fought their way up in the business world and have a more general knowledge of the business of Canada than Sir George Perley, estimable gentleman though he is. And that he has fallen down, or has not behind him that organization which would enable him to attend to all these matters, is quite patent from the statement I have just read in regard to the lack of knowledge on the part of the War Office, and the necessity for Mr. Carnegie's mission to England. What is the position of Canada to-day? Is Canada supplying the needs of the boys at the front? We all know what a tremendous consumption of clothing, fittings, and accoutrements there is in connection with our boys in the trenches; how their underclothing has to be thrown away, and that sort of thing. Can my right hon. friend tell me whether Canada is supplying these deficiencies as they arise? Unless we have in Whitehall or at Victoria street an organization which is able to be in touch with the War Office daily, and in a position to give the War Office full and complete information as to Canada's industrial facilities and capacity for production,—an organization in possession of all those details which proper business management would require to be on hand, is it any wonder that contracts are being placed in the United States while "many works were standing idle in the Dominion," as Colonel Bertram said in his statement. I submit that we should have in the High Commissioner's office an organization which would be on the qui vive at all times, to inquire from the War Office what was wanted and inform them as to the extent these requirements could be filled in Canada. That is what Canada requires at the other side. In considering this question we need not discuss the personality of Sir George Perley; the question is, has he under him that organization which will enable him to cope with the situation as it exists to-day? If the office of the High Commissioner is anything like it was some seven or eight years ago, I do not care how clever Sir

George Perley is, I say that High Commissioner's Office is totally and absolutely inadequate to deal with the representation of Canada's possibilities in connection with this war. Any one who has been on the other side will agree with me in that statement. I am urging, not upon any small ground, but upon the ground that it is in the interest of the whole country, that Canada should be properly represented in Great Britain. One does not need to recriminate in a discusion of this kind and I am not recriminating; I am simply stating that it is alleged in the press and that it is stated in the Shell Committee's report, that the War Office does not know what Canada can do; that it believed that we could not make shells and that it had to send Mr. Carnegie over here to tell us how to make them. The same is true of almost every other industry. I am as strong a British subject as any man, but I am also a Canadian, and I realize, as any hon. gentleman who has visited the other side must, that there is a long road to go in order to teach officialdom, and many people in Great Britain, just what Canada's possibilities are. Hon. gentlemen in after-dinner speeches will utter splendid sentences, and editors will write lengthy editorials in regard to these problems, but when you come down to the business end of the matter, Canada, if she is going to take her share in furnishing the supplies required to help out the Empire in this war, should have and must have adequate business representation in the High Commissioner's Office; or if not, the history of the first six months of the war, as detailed in this report will be repeated every six months until this war is over, and this great country to the south of us, whose rather apathetic interest in regard to the grave issues involved in the war has become the wonderment of the civilized world, will go on doing as it did during the first six months of the war, that is, taking many more millions of dollars for orders than Canada is receiving. I urge this matter upon the Prime Minister in all seriousness; I believe the importance of the business interests of this country requires this urging which I am attempting to make.

I assert that the High Commissioner should have a business organization representing this country which should gather from governmental and other sources full and complete and adequate information in regard to the possibilities of Canada, and that this should be available at all times so as to enable the High Commissioner to put his hand at any moment on information in regard to the furnishing of any supplies that the War Office may need from time to time.

Sir ROBERT BORDEN: My hon. friend speaks of the lack of knowledge on the part of the British authorities as to the capability of Canada to manufacture shells.

Mr. MACDONALD: This report does.

Sir ROBERT BORDEN: As a matter of fact, my hon. friend did not know that Canada could manufacture shells.

Mr. MACDONALD: Oh, yes.

Sir ROBERT BORDEN: Further than that, if he did know it, he knew more than the manufacturers themselves knew, because it was with the greatest possible difficulty in the first instance that they were persuaded to undertake the task of manufacturing, not shells, but shell cases, in Canada. At first, there was a great question as to the production of shells here, and it is to a gentleman in my hon. friend's constituency, Col. Cantley, that credit is due for making it apparent to the British Government that we could produce in this country steel which was perfectly well adapted for the purpose of manufacturing these shells, and the steel has to a very great extent been produced in Canada. It is all very well to look at conditions as they are to-day, but in order to understand conditions as they were when the war broke out, we must realize not only that the British Government did not know the capability of Canada to do a great many things that it is doing to-day, but the manufacturers of Canada themselves did not realize the capabilities of Canadian industries to do a great deal of what is being done in this country to-day. When that capacity was once demonstrated, the Government was insistent, in season and out of season, in urging, not only on the British Government, but on the Allied Governments, the resources of this country to produce food supplies and also manufactured articles necessary for the war. I said to my hon. friend this afternoon that there was a distinct engagement—I have it in writing under my hand—that whenever any articles required by the British Government could be produced in Canada, application would be first made to Canada. I have asked for any instance during the past six months in which the purchasing

departments of the British Government have not fulfilled that promise. I repeat that if any instance of that kind can be brought to my attention, I shall be prompt to make the British Government acquainted with it, and to ask them the reason why a distinct engagement entered into with them last summer has not been carried out.

My hon. friend asks whether or not our men at the front are supplied with uniforms and clothing produced by Canadian manufacturers. Our men go overseas supplied with uniforms and clothing ordered by the Canadian Government in Canada. I do not know whether my hon. friend had in mind what I had in mind when I was in the Old Country and brought the matter to the attention of the British Government. I said: "When our men get to the front, their uniforms and clothing have to be discarded from time to time and new issues are made by you; you tell me that you are able to supply in the British Islands all requirements for uniforms and clothing; I suggest to you that, so far as you issue uniforms and clothing to Canadians, under the conditions mentioned, you ought to consider the manufacturers in Canada, and I insist that you shall consider the Canadian manufacturers in this country." They gave me a pretty fair answer with regard to that, and I will tell my hon. friend what it is. I have it right here under my hand. They said to me: "Here is a statement of issues to Canadian troops already made and of estimated issues for the next twelve months, and here also is a statement of the purchases of these same articles in Canada from the first day of August, 1914, to September, 1915." The memorandum is as follows:

Issues to Canadian Troops.

Articles.	Issues already made.	Estimated Issues for next 12 months.	Total Issues.	Purchases in Canada, August, 1914, to Sept., 1915.
Great coats	7,700	24,000	31,700	103,145
Jackets	27,000	120,000	147,000	504,738
Trousers	18,500	80,000	98,500	502,000
Flannel shirts	45,000	200,000	245 000	1,015,385
Cardigans	200	50,000	50,200	665,488
Vests	19,000	80,000	99,000	207,450
Drawers	40,000	160,000	200.000	3,028,800
Socks (pairs)	71,000	300,000	371,500	5,155,002
Rubber boots	1,362	10,400	11,762	110,000
Shoe packs	275	Nil.	275	9,700

There were two items as to which purchases have not been made in Canada, and these I will read:

Articles.	Issues already made.	Estimated Issues for next 12 months.	Total Issues.	Purchases in Canada, August, 1914, to Sept., 1915.
Pantaloons	13,500	60,000	73,500	Nil.
Ankle boots	31,130	120,000	151,130	Nil.

If hon. gentlemen take these totals, they will see that the purchases in Canada of articles of the character set forth have been infinitely greater than those supplied to the Canadian soldiers. So, my representations to the War Office met, as I consider, with a very satisfactory answer. On the whole, purchases made by the British Government in this country are a good deal larger than hon. gentlemen imagine. I have documents here on this subject. They are marked "confidential," but I shall be very happy indeed to show them to any hon. gentleman on the other side. I have a summary of a statement of purchases, and I might just run over the list, without indicating the amounts, to show the wide range of articles purchased by the British Government: Sets of saddlery, artillery harness, blankets, saddle blankets, wire cable—thousands of miles of this has been ordered—copper rod—many tons—double sets of artillery harness, army blankets, high explosive shells, cardigans, pantaloons,

brass brushes, shaving brushes, paraffin candles, pick axes, picketing points, picketing posts, shovels, anti-toxin, water bottles, bacon, cheese, flour, fowl, oats, preserved meats, dried vegetables, great coats, trousers, coats (sheepskin lined), cotton drawers, fingerless gloves, leather mitts, rubber boots, travelling kitchens, wagons, horse collars and a very great variety of other goods. This was up to last July. Since then, we have had a statement of further orders placed. I may read a selection of some of these: Cables, munition boxes, cartridge cases, finders, trinitrotoluene—a new product in Canada—folding axes, hand-axes, hammer-headed axes, barbed wire, forgings, helves, leather goods, musical instruments—particularly bass and side drums—nails, shovels, bacon, cheese, flour, hay, oats, dried vegetables, rubber boots—a very large number—suction hose, cardigans, woollen drawers, socks, undervests, shoe-packs, and a great many other articles with which I need not worry the Committee.

I am as anxious as any hon. gentleman in this House to see full justice done by the British Government and the allied governments to the resources of Canada. I am convinced that the British Government is giving us every consideration possible. That is the statement that was made to me last summer. The correspondence, as I have said, is largely of a confidental character, but perhaps I may be allowed to quote a sentence, if the House will pardon me for not laying the letter on the table. This letter is a summary of a great many communications made orally and in writing by the spending departments of the British Government. At the end of what I shall quote is a reference to the exchange difficulty, which was very great at that time. I hope hon. gentlemen will bear in mind, in connection not only with the British but with the Russian Government, that the exchange question presented very great difficulty, and as is well known, the arrangements made for a loan in the United States were partly designed to meet this difficulty. I quote:

> Whenever it is found necessary to place an order abroad, it is and will be the settled practice of my department to give Canadian producers the first opportunity of tendering, but our purchases abroad must obviously be limited by our ability to pay for them.

That part of the sentence relates to the difficulty with regard to exchange, which was much more serious at that time than it is now. The pledge which was made to me in that letter and in letters from other departments of the British Government, has, I think, been honestly carried out. I think it has always been the desire of the British Government to give every possible consideration to our industries. I am inclined to think that in the early weeks of the war orders may have been given on this continent in the belief that they were being filled by Canadian manufacturers, when, as a matter of fact, they were being filled by people on the other side of the line. I hope hon. gentlemen will appreciate the enormous task that was imposed upon all departments of the British Government when this war broke out. There is, perhaps, a little more routine in those departments than in our own; and up to that time they had been filling their military and naval requirements almost wholly, I think, in the British Islands. In the stress, hurry and confusion of the awful events which were precipitated in August and which have continued ever since, one would not wonder, perhaps, that the officials of these two great departments should select some large company in the United States to fill an order which had to be filled at once, without giving that consideration which we might have expected they would give to the resources of this country. I thoroughly believe that the officials of all the departments of the British Government were not at all aware of the extent of Canada's industrial resources when this war broke out, and in that respect I entirely agree with my hon. friend. I think, however, that my hon. friend should be satisfied that I have taken every possible means to impress upon them since the war broke out the extent of our industrial resources, and I know that Sir George Perley has done so. By means of telegrams, despatches, and oral conversations with the various officials of the British Government, we have sought to impress upon them in the most vigorous way what we are capable of producing in Canada, and I do believe that at the present time they are pretty well seized of our capabilities. Every official of the British Government who has come here during the past eight or nine months—and there have been many of them, from the War Office and from the Admiralty—has freely admitted that the manufacturing industries of Canada are much more extensively developed than they had previously realized. It is that point of view which we have endeavoured with a good deal of success, I think, to impress

on all the officials of the War Office, the Admiralty, and the other spending departments of the British Government.

Mr. GRAHAM: Anything that I say must not be construed as an unfavourable criticism of Sir George Perley, much less a condemnation of his business ability. Sir George went to London as High Commissioner, not as commercial agent. The duties of High Commissioner heretofore have been along lines entirely different from those now under discussion, and it would not be surprising if the High Commissioner, without the necessary machinery at his disposal, should not be able to accomplish everything we might expect of him as our representative. But the point is that we have an office in London, and that we have not supplied that office with the machinery necessary to meet all the requirements of industrial Canada. Shortly after the war broke out I met in Toronto a gentleman from western Ontario, who wanted to know to whom he should convey the information that he could supply certain things for the War Department. I tried to advise him as well as I could, but he said that he had approached without success the persons whose names I gave him.

Sir ROBERT BORDEN: Had he tried me?

Mr. GRAHAM: I think I did not give him my right hon. friend's name. Whatever we have done in the past, I think it is now time that we had in the city of London full machinery to meet the requirements of businessmen and manufacturers of Canada who have had and will have goods to export. The office of High Commissioner has always been, as it is now occupied by prominent men who have upheld the dignity of the Canadian people. That is well; but as a young nation depending largely upon the returns from our export trade for our advancement, we ought to have in our office in London the most practical machinery that we can arrange for. A Canadian who had occasion to visit the United States frequently since the war began would have the peculiar experience of meeting in that country Canadians with orders in their pockets from the various Allies, which they were trying to place with manufacturing concerns across the line. Had we had the necesary machinery these orders would have come through the High Commissioner's office, and would have come to Canada first. The fact that a Canadian got an order did not imply that that order would be filled by a Canadian manufacturer.

That gentleman, no matter whether he lived in Canada or not, would take that order where, perhaps, he could get the largest amount of commission out of the various allied countries. Men from our own country, not by the single individual, but by the score, have been in the great cities of the United States ever since the war broke out, handling orders from the Allies and from the British Government, that ought certainly first to have been offered to the Canadian manufacturer.

Mr. W. H. BENNETT: What was the nature of the orders received from the British Government that they were peddling over in the United States

Mr. GRAHAM: They had orders for munitions of various kinds, and these were offered to and generally accepted by the United States manufacturer. I am not saying that I blame the Canadian for getting these goods manufactured in the United States as a pure business proposition, speaking of it in a cold-blooded way; but my contention is that if we have had the proper machinery attached to our High Commissioner's office, or, in an office by itself in London, these orders would have come through that business office, and the Canadian manufacturer would have had the first opportunity to fill the orders; then if he could not do so it would be his own fault. The other day I referred to the many millions of dollars' worth of orders placed in the United States, and it is no secret that some orders have first gone to the United States and have then come back to Canada. If proper steps had been taken we would not have had so many unfinished shells in Canada. Russia, I am informed, has a surplus of time fuses, or did have a few weeks ago. They were getting shells in the United States to be fitted with these time fuses, while we in Canada, an ally of Russia, have to make the empty shells without the time fuses. With proper organization these two parts would have been brought together, and the Allies would have had several more millions of rounds of ammunition complete, and the Canadian manufacturer would have had the benefit.

Sir ROBERT BORDEN: Were these time fuses manufactured in Russia?

Mr. GRAHAM: I am not sure. They had them on hand but had not a supply of

shells equal to their supply of time fuses. That there is a lack of information my right hon. friend admits. Of course one cannot be surprised, if we take Mr. Winston Churchill as an authority, because some years ago he did not think much of us as a manufacturing country. He thought we had not land strong enough to put a fifty ton crane on, and that we could not build the crane anyway. That only shows that we have not given our friends the Allies the information they ought to have. The Prime Minister, I admit, went to the Old Land and placed the information before the War Office, and has done so by correspondence as well.

Sir ROBERT BORDEN: We had done it before that.

Mr. GRAHAM: There ought to be some machinery, outside of the Prime Minister of Canada, to carry on this business. It ought not to be left to the First Minister of this country to make a commercial agent of himself and to have to go to the Old Land to tell them what we can do in Canada. It is not the man who does all the work himself in an institution who makes the institution successful; sometimes he is wasting his time doing things that the hired man ought to do. It is the man who will surround himself with men of ability to organize, so that he only has to say what ought to be done and he has the machinery at his disposal for the carrying out of his orders. The Government should have organized, as quickly as possible after the outbreak of the war, an office, either in connection with Sir George Perley's office or by itself, which would have been an official medium between Canada and the Allies to furnish information as to what Canada could produce and how quickly she could produce it. Then, when orders came to Canada, as no doubt any of the Allies were willing to give orders to us, they would know that there was an office in London where they could apply and receive the proper information. I do not wish to unduly criticise, but, I believe that during the first few months of the war when munitions were so badly needed, Canada missed the opportunity of her life to put herself on the map as one of the chief manufacturing countries in the world. Many of our shops that were standing idle for reasons to which I need not refer, could have been kept running at full speed; and instead of Canadians going to Russia, France, and Great Britain, getting large orders and taking them to the United States, we would have had an organization in London to direct a portion of these orders which we could have handled, to our own manufacturers. Whatever mistakes have been made in the past, would it not be a good idea for the Canadian Government from now on to attach to our London office some machinery to look after the business interests of Canada, not only in war time but in peace time! We have commercial agents in different parts of the world, but it is not strong or harsh criticism to say that the system of commercial agents for Canada has not produced the results the manufacturers and agricultural interests of Canada hoped it would. Particularly in the heart of the British Empire, Canada ought to be known; her resources ought to be recognized. Her ability to produce on the farm and in the shop ought to be as well known in London as in Ottawa, or Montreal, or Toronto. That is not the case with manufactured goods alone. We have our tanners, our meat producers, our men who are arranging for the marketing of agricultural products. We have supplies of all kinds that could have been sent to the Allies; Russia, Italy, and France, as well as to Great Britain. My experience is that the people of Canada who produced these goods did not seem to have an adequate idea of how they were to get to that market and get at it quickly. There is no question that we can produce all these kinds of goods; and we ought, and we can, produce them as cheaply as they can across the line. If, after forty years of protection, our manufacturers cannot produce the goods then we have been on the wrong track all these years and ought to start some other way. But I take the ground, without wishing to discuss the fiscal policy, that the manufacturers of the Dominion of Canada to-day have shown in the completion of the orders which have been given to them, that they are equal to the manufacturers of the United States or any other part of the world, and that all they need is to be given the machinery by which they can get at the consumer. Then, they as producers can compete with any other producers in any part of the world.

Mr. W. H. BENNETT: After the war broke out a great deal was said in different magazines and newspapers as to the supplies that were going to the old country, and I am sure it will be gratifying to know that one-half the purchases made by Great

Britain have gone from Canada. That was the official statement made by the Prime Minister this afternoon.

Mr. MACDONALD: Oh no; it was not.

Sir ROBERT BORDEN: I said £100,000,000 of orders had gone to the United States and £48,000,000 to Canada up to the 1st of July.

Mr. BENNETT: Up to that time £100,000,000 from the United States and £48,000,000 from Canada.

Mr. GRAHAM: That would not be fifty per cent.

Mr. BENNETT: Was it to be assumed, in view of the fact that urgency was the whole crux of the situation, that the British Government would look to Canada for supplies when it must have been patent to the British Government that the great factories of the United States, producing material for one hundred million people, would be better able to supply their immediate wants than the factories of Canada, which were producing for only eight million people? A great deal has been said in the newspapers that has misled people. For instance, in a town in the riding of East Simcoe there is a concern that makes motor boats. A public journal said that huge orders were being given in the United States for the construction of motor boats. I was appplied to as the sitting member to see if I could not have an order placed with this concern. I got in touch with the Prime Minister's office. What were the facts? The facts were that the Schwab Company of the United States had received a contract amounting to many millions of dollars from the Allies, not for these motor boats alone, but for a variety of articles, including, I assume, munitions of war. Included in that order were some two hundred or three hundred motor boats. Had the newspapers gone a little further they would have found that these motor boats were being manufactured in Canada because this concern came over to Canada and placed the order in Montreal and Quebec—at least that is the information I received from that boat company in Penetanguishene. The hon. member from South Renfrew says the British Government would not know what we could produce in Canada. Why, Sir, the first contingent of the Canadian Expeditionary Forces were thoroughly equipped in Canada, and the British authorities must have known that they were equipped in Canada. They knew that the equipment had not been sent out here. The hon. member for South Renfrew complains that shells were not made in Canada in the first instance. He is a director of a company engaged in making shells, and if they knew that shells were needed why did not his company send over a representative to ask for orders. That is the fact, and hon. gentlemen opposite know it. When war broke out, the large concerns in the United States did what the Canadian manufacturers neglected to do; they dispatched their commercial travellers or agents to Great Britain to secure orders at the outset. Any hon. gentleman who has read the magazines or newspapers knows, that London was swarming with representatives of those large concerns at the beginning of the war, and that was how they secured their first orders. As I have already said, urgency was the first consideration, and it was natural to expect that the British Government would look to the larger field. The hon. member for South Renfrew said he had been informed, and I have no doubt it is true, that Canadians had placed orders in the United States; but he will not say that they were orders for clothing, meats, canned goods, or for a thousand other articles that I could name. He says that they were simply orders for munitions, and that was to be expected.

Mr. GRAHAM: One order was for shirts.

Sir ROBERT BORDEN: Was the order from the British Government?

Mr. GRAHAM: I did not say that.

Mr. W. H. BENNETT: I do not know what the position may be in the hon. member's riding, but I do not think there is any complaint in my riding that the manufacturers are not getting a fair share of the work. Not only were British orders placed in Canada, but French orders as well. I know that a large number of woollen mills, including one in my own town, were employed for months in making blankets for the French army, and that order was, I assume, secured through the High Commissioner's office, or through the Department of Trade and Commerce. There were also, I understand, large orders placed throughout Canada for all kinds of woollen goods, and the entire equipment of the Canadian Expeditionary Forces was made within Canada. Sir George Perley is known as a leading business man,

and, apart from his own business as a lumberman, he is well known as a director of a bank and of other concerns. I think most people in Canada who know him will be quite satisfied to have Sir George Perley as an agent in London representing the business interests of this country.

Sir ROBERT BORDEN: I think the orders placed in this country by the French Government are larger than is generally imagined. Up to last summer they had placed orders for 458,200 army blankets; 15,000 complete sets of saddlery, 15,000 supply blankets, 5,000 complete sets of saddlery, 5,000 supply blankets, 9 p.m. 20,000 sets of artillery harness, 20,000 long driving boots, 20,000 supply blankets. Then the Russian Government, I know, placed an order on one occasion for 20,000 sets of saddlery. I think there were other orders, but I cannot recall at the moment what they were.

Mr. PUGSLEY: What would the total amount of these orders be?

Sir ROBERT BORDEN: I really could not tell my hon. friend accurately; it would amount to several million dollars.

Mr. COPP: I notice that in reading the items supplied by Canada to the British Government, the Prime Minister referred particularly to harness and saddlery. Can he inform me whether any of these articles are being supplied by Canada now for the British Government; that is, harness, saddlery and things of that nature?

Sir ROBERT BORDEN: I cannot say whether there are any outstanding orders for the British Government.

Mr. COPP: Will the Prime Minister get the information and let me know; I have an inquiry on the point?

Sir ROBERT BORDEN: The Minister of Trade and Commerce is more intimately acquainted with these matters, but I will ascertain and let my hon. friend know. I am reminded by the hon. member for Frontenac (Mr. Edwards) that the Russian Government placed a considerable order for locomotives, and a large order for cars also. I hope that hon. gentlemen will realize that for those orders which have come to Canada, Sir George Perley is entitled to a great deal of credit, for he has worked very hard and assiduously to procure them through the representatives of the various governments, and also through the Foreign office. I do not think my hon. friend from South Renfrew was in the House when I stated that the staff of Sir George Perley was more efficient than some hon. gentlemen seemed to realize. I also stated that when I was in London I told Sir George Perley that we were prepared to give him any additions to his staff, or any organization that he might think was necessary; and he told me that he did not think that any additions were necessary then. Whether his judgment was mistaken in that regard I do not know, but I have a good deal of confidence in his judgment on such matters. My hon. friend from South Renfrew, rather deprecated the idea of the Prime Minister of this country taking up such matters. I do not agree with him in that at all, because I can assure him, from my knowledge of how those matters are dealt with on the other side, that it is of some importance to this country that the Prime Minister should show such an interest in matters of that kind as would bring them to the attention not only of the ministers but of the permanent officials of the British Government. I am thoroughly convinced that the efforts which have been made directly by myself in that regard have not been thrown away—I will not say more than that. My hon. friend can take my assurance that the labour has not all been in vain.

For supply of Canadian publications to Library of High Commissioner's Office, $1,000.

Mr. PUGSLEY: Now that we are getting down to business in connection with the Estimates, I would like to point out to my right hon. friend what seems to me to be a great anomaly in the Estimates which have been presented to the committee. These are supposed to be estimates of the requirements of the Government for the coming year, and as submitted to the House, they amount to $188,981,218.58. In the Budget speech, my hon. friend the Minister of Finance (Sir Thomas White) made the statement that the total estimated requirements of the coming year would be only $160,000,000, there being nearly $29,000,000 in these printed estimates beyond the amount which the Finance Minister said would be required for the coming year. Does my right hon. friend think he is treating Parliament right when he brings down printed estimates for the very large amount of nearly $30,000,000 more than the Finance Minister says will be required to carry on the public services? That is the first point which I make: these Estimates ought to be revised, and there should be submitted to this commit-

tee Estimates of the actual requirements for the coming year. If the Government should disagree with that view and decide that they will not revise the Estimates, it seems to me the committee should be given a statement of what amounts are to be deemed as struck out; otherwise, in the case of each of these thousands of items we shall have to inquire which amounts it is deemed unnecessary to expend, and which are put in the Estimates simply, shall I say, as a matter of form, or with a view to inducing people interested in the various constituencies to believe that Parliament has voted certain amounts to be expended, when it is not intended to spend these amounts at all. We are left completely in the dark, and I think at this early stage in the Estimates the information I have asked for should be given to the committee.

Sir ROBERT BORDEN: My hon. friend will bear in mind that the Estimates for last year were made up, to a considerable extent, on the basis of the year before, and that for reasons which are obvious a number of public works, for example, were not proceeded with although they had been sanctioned by Parliament two years ago, and would have been carried out had it not been for the war. These Estimates have been somewhat cut down again this year, but some items have been left in, with the understanding that it would not be wise while the war is going on to begin new works. On the other hand it seems undesirable to cut out items which have been sanctioned by Parliament on more than one occasion, and which would have been expended had the financial condition of the country permitted the work to be done with due regard for the necessary equilibrium, so far as it can be maintained, between revenue and expenditure.

Mr. PUGSLEY: I do not remember that any such statement was made to Parliament last year as has been made this year by the Minister of Finance. Ordinarily, the Government asks Parliament to vote amounts for public services which are deemed to be necessary in the public interest. If, by reason of changed conditions, or delay in getting the plans prepared, it is inconvenient to go on with any particular work, that, of course, is a reason for not making the expenditure. But it would appear from the statement of the Minister of Finance, which can be found on page 847 of Hansard, that these Estimates have been gone over very carefully, and that the Finance Minister has determined what items shall be proceeded with and what shall not be carried on for the present, for he has given a positive statement that the estimated expenditure will be only $160,000,000. It does seem to me that before we go through the farce of voting those moneys we should know how the Finance Minister arrives at that figure; we should know what makes up this $30,000,000. If some of these works are not to be gone on with, Parliament at another session will have to vote the money for such as it may then be decided to carry on, and we shall therefore be going through the farce of voting moneys that there is no intention of spending, and that there is therefore no reason for asking Parliament to vote. My right hon. friend says it would not be fair to strike these items out. Why not? If it is not intended to carry on these works—and the Minister of Finance must have deliberately resolved that some of these works shall not be carried on or he would not have made the definite statement he did to Parliament—the fact of our voting the money this year will not save the necessity of voting it at another session. Does my right hon. friend not see how unfair it is not to give this comittee the same information as the Finance Minister has, so that we may know what amounts it is seriously intended to spend during the coming year, and what amounts are put in the estimates simply that those interested may have the pleasure of reading them over and seeing what might have been under other circumstances and other conditions. It does seem to me a perfect farce to vote $30,000,000 of the people's money as being required for the coming year, when the Finance Minister in his budget speech told this Parliament that that $30,000,000 would not be expended. If the Government are determined to keep the estimates as they are, I submit that this committee has a right to be informed as to what items it is not intended to act upon.

Sir ROBERT BORDEN: As we come to the different items we can make explanation as to whether it is intended to proceed with them or not, but I hardly think that my hon. friend with his warm and sympathetic nature would deny to the people interested in some of these items the poor consolation of seeing an item continue in the estimates which has been approved by Parliament on more than one occasion. My hon. friend knows that the Government do

not propose to proceed with new public works during the continuance of the war. It is desirable, however, I think, that the items should remain in the estimates as they have already been voted more than once. For instance, it might happen that the war would be over before the money is voted again. We have no reason to believe at present that such will be the case, but it is a contingency which none of us can absolutely dismiss. I do not think there is any harm in permitting these estimates to stand, as the Government has already given the assurance that it does not intend to proceed with new works while the war continues.

Mr. PUGSLEY: I doubt very much whether not proceeding with new works will account for the large sum of $30,000,000. Does not my right hon. friend see——

The CHAIRMAN: I must say to the hon. member for St. John (Mr. Pugsley) that out of courtesy to him as an old parliamentarian, and in view of the fact that he wished to make his protest while the Prime Minister was present, I did not take objection to his course. I must say, however, that the hon. gentleman is out of order, and if he purposes to continue, I must respectfully call his attention to subsection 5, of rule 13:

> Speeches in Committee of the Whole must be strictly relevant to the item or clause under consideration.

Mr. PUGSLEY: I will make it strictly relevant to the item under discussion. As you will see, item 309 is to provide "For supply of Canadian publications to Library of High Commissioner's Office." I have a right to know whether this is one of the items that it is intended to expend; therefore I am quite in order in the remarks I have to make. Does not my right hon. friend see that if we have to ask questions on all items that go to make up this enormous sum of $30,000,000, it will take us weeks to get the information? If my right hon. friend thinks these items should be left in the Estimates, surely he will not think it unreasonable that there should be a statement prepared of the items which it is not proposed to expend.

Sir ROBERT BORDEN: I will bring the observations of my hon. friend to the attention of the Minister of Finance. I understand that this particular item will be expended.

Mr. PUGSLEY: This is not a large amount, but it is by the thousand and one such items in these Estimates that this $30,000,000 is arrived at. At such a time as this we might very well defer the buying of new books for the library of the High Commissioner's office. If the High Commissioner and his staff do their duty, they will be devoting their attention to matters connected with the war, and they will not have much time to read the books in the library, so that they will not require much of this additional expenditure of $1,000. I take it that this library is merely for the use of the officials of the High Commissioner's office and not for the use of the public. I fail to understand why $1,000 should be expended at this time when money is so urgently required for other purposes.

Sir ROBERT BORDEN: If my hon. friend will confer with the hon. gentleman just behind him (Mr. Macdonald), he will understand that it is very important for the officials of the High Commissioner's office to make themselves thoroughly acquainted with the capabilities of Canadian industries from day to day and to know the progress of the business affairs of this country.

Mr. GRAHAM: They can get that information in Government returns.

Sir ROBERT BORDEN: My hon. friend will realize the great importance, at this particular time, of the officials of the High Commissioner's office keeping themselves thoroughly informed of what is going on in this country.

Mr. OLIVER: In regard to the advisability of keeping items standing in the Estimates because they were voted in good faith some years before, if we are to appreciate the statement made by the Minister of Finance in his Budget speech, we must realize that we are facing new conditions in regard to matters of finance, and that the conditions that prevailed two years ago when these items were voted, will never again prevail. We are already shouldering burdens that were never contemplated at that time, and we certainly shall have to shoulder still greater burdens. I think we hardly appreciate the tremendous change that has occurred in our financial situation, when we keep in the Estimates from year to year items that were originally voted under very different circumstances.

Sir ROBERT BORDEN: I will bring my hon. friend's observations to the attention of the Minister of Finance.

To provide for the publication of the second edition of Constitutional Documents relating to Canada, vol. 1, 1759 to 1791, $5,000.

Mr. PUGSLEY: My right hon. friend will surely admit that if there is any item included in this $30,000,000 in regard to which we may fairly assume that the expenditure cannot be deemed urgent, this is one. Is it proposed to spend this money?

Sir ROBERT BORDEN: It is proposed to expend this money for the reason that the previous edition is altogether exhausted, and we have received innumerable demands from judges of the courts and others in all parts of Canada, and from other countries, for further supplies of this book. It is a very important publication, and of a character such as is published by nearly every civilized country in the world. Commendations of the work have been received from time to time from important bodies in nearly every European country, and in the United States. The book is said to be urgently required in Canada for many purposes. I have had many personal letters on the subject, and, after a good deal of consideration, the Government thought that the demand for this book and its usefulness were such as to justify us in asking for the moderate sum of $5,000 in order that a second edition might be published.

Mr. PUGSLEY: The Prime Minister will see that it is an entirely new item.

Sir ROBERT BORDEN: Oh, yes; it is an absolutely new item for the second edition of the book.

Mr. McKENZIE: Can the Prime Minister tell us whether or not this is the book which an agent was endeavouring to sell in my province last summer? This agent represented himself as being connected with the Archives, and as co-operating with the gentleman whom I understand to be at the head of the Archives, and he said that the book was highly recommended by the Government. The book—from its name—pretended to publish constitutional documents and documents in the Archives that were never published before. Perhaps this is not the same book as is mentioned in this item, but I wish to bring to the notice of the Government that the publication I refer to is regarded as a huge fraud; it consists of sixteen volumes which are sold at $4 each. I am not speaking personally as having been hurt in any way in connection with this book, because I did not subscribe to it, but clergymen and other respectable people in my community came to me and said that the book was a great fraud upon the public, and that this agent had said that he was an agent of the Government, and was encouraged by the Government to sell this book, and he also had the names of some reputable men in this country. I take it for granted that this is not the same publication, but I take this opportunity of pointing out that this agent, whose name I now forget, represented himself as being connected with the Archives as receiving the assistance and co-operation of the gentleman at the head of the Archives, and as selling the book under the supervision and authority of the Government. Those who have received the volumes are very much disappointed, and they think that there is nothing new about them at all, and that the public should be warned against this agent.

Sir ROBERT BORDEN: The book mentioned in the item consists simply of one volume of Constitutional Documents. There is a publication—I will not go into the merits of it—called the Resources of Canada, or something like that, in a large number of volumes, but the Government has absolutely nothing to do with that work. If my hon. friend will send me the name of the agent who represented himself as acting for the Government, it will be my duty to make some inquiry into the matter.

Mr. McKENZIE: I want it distinctly understood that I did not mean to say that he was acting for the Government, but that he said he had the approval and commendation of the Government. That was about all he said.

Sir ROBERT BORDEN: I am not aware personally that the Government had ever expressed any opinion about this work one way or the other. I would not understand it was the duty of the Government to make any comment upon it.

Mr. McKENZIE: Can the Prime Minister tell us who is publishing this work?

Sir ROBERT BORDEN: The book referred to in this item was got out under the former Administration. I think Dr. Shortt compiled the volumes almost entirely, with some assistance from Dr. Doughty.

To provide for the expenses of the Conservation Commission, $80,000.

Mr. PUGSLEY: Is it expected to expend the whole of this money?

Sir ROBERT BORDEN: Yes, I understand it is necessary to expend the whole amount. The hon. gentleman will observe that there is a reduction in the Estimate this year of $13,000.

Mr. PUGSLEY: It seems to be a large amount to be spent in one year. Perhaps the Prime Minister would give us some items of the expenditure of last year.

Sir ROBERT BORDEN: They are all in the Auditor General's Report.

Mr. PUGSLEY: Then I need not trouble the right hon. gentleman.

Mr. OLIVER: I desire to ask a question in regard to the authority of this commission. An order has been issued to compel the Canadian Pacific Railway and the Grand Trunk Pacific Railway to use crude petroleum for firing on their locomotives in British Columbia. Is that order issued under the authority of the Conservation Commission or is it by the Government on the advice of that commission?

Sir ROBERT BORDEN: The Conservation Commission have taken a great interest in preventing forest fires caused by sparks from locomotives. They make representations to the Board of Railway Commissioners and the Board of Railway Commissioners issue the orders. If I am not mistaken there was an arrangement between the Board of Railway Commissioners and the Conservation Commission to bear jointly the expense of some investigation on that subject. I have not the details clear in my mind, but I remember that I have conferred with the chairman of these commissions and the Minister of Railways and Canals on the subject.

Mr. OLIVER: Recently the Canadian Northern railway has opened a line across British Columbia. Will it be compelled to install oil-burning appliances on its locomotives also?

Sir ROBERT BORDEN: I could not give an answer off hand, but I shall make inquiries and let the hon. gentleman know. These matters do not ordinarily come before me, but sometimes I have a representation from one or other of these bodies asking me to take some action, or to give particular attention to some subject that is regarded as urgent.

Mr. OLIVER: It would be an anomaly, of course, if the Canadian Pacific railway and the Grand Trunk Pacific railway are compelled to use oil and the Canadian Northern is not so compelled, because for some considerable distance west of the summit of the Rockies the Grand Trunk Pacific and the Canadian Northern run alongside each other within a few yards. But I take this opportunity to say that this order of the Railway Commission, even if based on the recommendation of the Conservation Commission, does not enjoy any large measure of favour in the minds of the people of Alberta, where they have a superabundance of coal which they are anxious to have used. The fact is that this order has been a stunning blow to the coal-mining industry of Alberta. It appears to me that the order was given, perhaps, with hardly a full appreciation of the industrial consequences to result from the importation of California oil to take the place, as a motive power, of Alberta coal. And while it is necessary, of course, that the forests should be conserved from fire, it does seem to me that some other means of protecting the forest from fire from locomotives might surely have been discovered by the Conservation Commission rather than a means which transfers such an important part of the industry of Alberta to the oil fields of Southern California.

Sir ROBERT BORDEN: I will direct the attention of the Board of Railway Commissioners to the observations of my hon. friend. In stating what I have stated about it, I speak, not so much from personal knowledge as from a recollection of the fact that the Conservation commission drew my attention to the matter. I am not sure of the representations they made, but I know that they were greatly interested in the subject.

Mr. GRAHAM: I am not sure that the Board of Railway Commissioners made that order; I am not sure they did not, although I have some doubt about it.

Sir ROBERT BORDEN: I was only suggesting that if the order was made I feel quite sure the Conservation Commission did not make it, because that commission would have no jurisdiction.

Mr. GRAHAM: Some years ago, when the question of better protection of the forest. Not only along railways in operation but along lines of construction, was under discussion, shortly after the formation of the

Conservation Commission, the chairman of that body, the then chairman of the Railway Board, the representatives of the railways interested held a conference in the office of the Minister of Railways of that time and expressed their views strongly as to what should be done for the protection of forests along railways built or under construction. Also, the Department of the Interior had certain methods of dealing with timber lands in their charge. The result of it all, was if I remember well, that certain amendments to the Railway Act were drawn up and submitted for the joint approval of those interested. And under that amendment powers were given to the Board of Railway Commissioners which were very wide in reference to the protection of forests. I think that if orders have been given in this case it would be under those amendments to the Railway Act. And I have been told that the two railways, of their own accord, had begun to use oil as a fuel, although I am not sure. It is also very well known that the Imperial Oil Company, which is the Canadian branch of the Standard Oil Company, is establishing a distribution plant in the West, for the purpose, I suppose, of meeting that demand. It may be somewhat hard on the coal producers of Alberta and British Columbia if the large consumers of coal use oil. Is the chief of the medical staff of the Conservation Commission across the ocean at present?

Sir ROBERT BORDEN: Yes, he is in charge of the Red Cross work.

Mr. GRAHAM: Is he still connected with the Conservation Commission?

Sir ROBERT BORDEN: It was suggested by the Red Cross Association that his services might be utilized in connection with Red Cross work. The chairman of the commission was consulted and he gave it as his opinion that leave of absence might be granted to Dr. Hodgetts without detriment to the public interest.

Mr. GRAHAM: That gives rise to the question as to whether the Government intends to create a new portfolio in the Cabinet, to be taken charge of by a medical man. Some months ago I had the pleasure of listening to a remarkable address by a young Canadian woman now resident in the city of Rochester. They have established in that city a "Live a Little Longer" association, the object of which is to give instruction in first aid. The public school buildings are utilized for the purpose of holding and giving instruction. Lectures are given by physicians; practical demonstrations are made by physicians and nurses as to how to treat every sickness in its incipient stage. Medical men assert that many deaths could be averted if those in attendance upon the sick person knew immediately what to do. Sometimes a few moments delay in getting a physician means death, while prompt action may save life. In Rochester valuable information in this connection is being carried right into the homes. Mothers are being instructed as to the symptoms of the diseases to which little children are subject, and how to deal with them instantly in order to protect these little lives until professional aid arrives.

Sir ROBERT BORDEN: Is the instruction given to the parents?

Mr. GRAHAM: The mothers go to the schools and receive instruction. As evidence of the fact that this work proves to be of practical value, I may point out that this young woman was asked to deliver this address at a meeting of the presidents of the life insurance companies of America. The heads of these great institutions believed that the information to be gained from this young woman's experience would be of actual financial benefit to their companies; they printed many thousand copies of the address and sent them all over the United States. I think it would be worth while bringing this matter to the attention of the Conservation Commission with a view to seeing whether we in Canada could not undertake that kind of work. I wrote the Chairman of the Conservation Commission, and sent him a copy of the address. He seemed impressed with the idea, but unfortunately the war broke out. Dr. Hodgetts was called away, and I suppose the matter was crowded out from the attention of the commission. It ought to be considered whether we in Canada cannot, perhaps at first in a small way, and with little or no expense, using for the purpose our public school buildings which are unoccupied during the greater part of the day, establish courses or classes of instruction along this line. If we should do so, I believe the benefit to the people and to the country as a whole would be marvellous.

Mr. McKENZIE: Does the Conservation Commission give attention to the conserving of forests in the provinces, or do they

confine their operations entirely to Dominion lands?

Sir ROBERT BORDEN: They interest themselves in the preservation of all forests.

Mr. McKENZIE: In Nova Scotia it is the practice of lumbermen to take leases of large tracts of timber lands, from which they cut the best of the timber, leaving scattered throughout the woods the tops, limbs and other parts of the trees that they do not want. The result is that forest fires occur in different parts of the province, causing immense loss. These men should be compelled to clear away or burn the rubbish and brush that is left after they have finished cutting, or dispose of it in such a way as to guard against fires. In Nova Scotia I do not think that any person takes special interest in that sort of thing. The Conservation Commission might co-operate with the Government of Nova Scotia or with their own officials in that province with a view to averting this danger.

Sir ROBERT BORDEN: The Conservation Commission have no administrative power in such matters. The only authority that would have the power would be the provincial authority, which could make regulations in connection with the leases, such as are made in a number of provinces, requiring the cutting to be done in a particular way and the dangerous material to be cleared up.

Mr. OLIVER: The duties of this commission are educative and advisory, not administrative. In view of the results to the province of Alberta of their advice up to date, I would be willing to agree to even a greater cut in the Estimates than has already been made. If the Prime Minister or the Minister of Finance should see fit to reduce the amount, I think the province of Alberta, at any rate, would submit with equanimity to the suggestion.

Cost of proceedings before the International Joint Commission, $10,000.

Mr. PUGSLEY: Will this be expended?

Sir ROBERT BORDEN: I think it probably will be. There are some important inquiries to be made, and the Government has to be represented sometimes by counsel and sometimes by experts.

Mr. PUGSLEY: I think this is one of the most important courts in the country, because it has to deal with international questions arising between Canada and the United States, and it has already settled some very important questions. The very fact that there is a tribunal of this character to which may be referred all disputes with regard to rights upon boundary waters, with regard to the erection of piers abutting on either one side or the other of boundary waters, with regard to the use of water for irrigation, and all those intricate questions which necessarily arise as to the use of waters having their origin on one side or other of the boundary line, and which are of such enormous importance, will go a long way towards preserving amicable relations between the United States and Canada. Therefore, I think that the court is a very important one, and everything ought to be done to make it thoroughly respected by the people of both countries, so that its judgments will carry weight with the people of both the United States and Canada. As Minister of Public Works in the late Government, I had a good deal to do with the formation of this court, as it came within the jurisdiction of the Department of Public Works. My own idea, and, I am satisfied, this was the idea of the Government of which I was a member, was that the tribunal should consist of eminent lawyers who would devote their entire attention to the work of the Commission. We started in that way. The Canadian Government appointed three lawyers, and the United States Government appointed three lawyers also. I impressed upon the gentlemen appointed on behalf of Canada that they would be expected to give up their professional work and to devote their entire attention to the work of this international tribunal. As my right hon. friend knows, a change of Government took place shortly after the appointments had been made by the Canadian Government, but before they were actually ratified by the Imperial Government. New appointments were made and a departure was made from the idea which we had. One gentleman on the Board is a layman, a very excellent man indeed, but still one who has not had any experience or training which would enable him to determine legal questions. In matters relating to rights of irrigation, and, perhaps, many other questions, he would be valuable as an expert to be attached to the Commission. The United States Government, I believe, has followed the course which this Government has adopted, and has not been careful to appoint only lawyers of eminence to the Commission. Gentlemen of the Commission

who are lawyers are constantly engaged in the practice of their profession, and I think it is not at all worthy of that court that gentlemen who are members of it should be engaged in hearing these questions of enormous importance affecting the interests of the two nations one week, and the next week be trying small cases in a county court, or in the Supreme Court of one of the provinces. If the salary is not large enough to induce them to give all their time to the work of this Commission, it ought to be increased. I believe, too, that the position ought to be a permanent one. It is now for ten years, but, of course, there might be a change in the personnel with a change of Government, if a new Government were to follow the procedure set by this Government. I remember my hon. friend the Minister of Trade and Commerce, when a criticism was made of the cancellation of the previous appointments, made the defence that the members of the Commission ought to be in touch with the Government of the day. I take an entirely different view from that. To ensure for the decisions of this court the respect and the confidence of both countries, it ought to be recognized that it is an International court, that it is not subject to be influenced by the Government of either country, and that all questions that come before it will be decided according to the principles of right and justice, irrespective of the wishes of the Government which happens to appoint either one or the other branch of the tribunal. I should think the tribunal ought to be of a permanent character, and the gentlemen who comprise it ought to devote their entire attention to the very important work which they have to perform. It may be that the salaries are not large enough, but I think the Government ought to consider whether it would not be well to fix the salaries at such an amount as would ensure the giving by the members of that court, so far as Canada is concerned, all their attention to the work of the tribunal. I have very little doubt that if the Canadian Government were to adopt that course the Government of the United States would follow suit. The questions which may be referred to this tribunal are of enormous importance. There may be referred to it questions which either Government may desire to have referred to it, and also, by the joint desire of the two Governments, all questions, not merely boundary disputes, but all questions of every nature and kind which may arise affecting the relations between Canada and the United States. One has only to mention the important subjects which will come before it to realize of what vast importance this court is and how much it may accomplish in the future towards preserving amicable relations between these two countries.

Sir ROBERT BORDEN: I entirely agree with my hon. friend as to the importance of this tribunal; indeed, I took occasion, when speaking in New York not long ago, to emphasize the very great importance of the work it had accomplished. It has brought about in a very quiet may, and with no loss of time, the settlement of many disputes which it might have taken a very long time to settle by diplomatic methods, and which might not have been settled by diplomatic methods in the same satisfactory manner as has characterized the work of this tribunal. So far as the appointment of commissioners is concerned, those representing Canada consist of two very eminent members of the legal profession, and the gentleman to whom my hon. friend from St. John has made allusion. I think the latter gentleman practically gives the whole of his time to the work of the Commission, and he is a man of a thoroughly judicial type, although not a lawyer. I do not believe that any member of the Commission, on either side, has given better service than that gentleman has given during the time he has been a member of the Commission. I am not so fully acquainted with the members appointed by the United States, but I do know that Mr. Tawney, who is, I think, chairman of the United States Commission, is a very eminent lawyer, a man who has taken a distinguished place at the bar of his State, and is regarded as a leader in his profession.

With respect to the point which my hon. freind has raised, that the members of the legal profession, who are members of the Canadian Commission, do not devote the whole of their time to the work, and engage in private practice, I may say the stipulation made with them when they undertook the work was that their duties as members of the Commission were to be considered as paramount and as having precedence over any work in the private practice of their profession. If I remember correctly, and I think I have a fairly correct remembrance of the matter, we followed in that regard the same instructions as were given to the gentlemen whom the late Administration proposed to appoint. I think

I have a pretty distinct recollection.—I am not going to state it positively—that before writing to those gentlemen on the subject, I examined a letter or was made acquainted with a communication from the right hon. the leader of the Opposition at that time the Prime Minister, and that he laid down precisely the same principle to be observed by them in the performance of their duties. My hon. friend seems to have formed a different impression. I shall be glad to refresh my memory on the point, and we could let the item stand. I know that I had in mind to follow the same course as was laid down in some communication by the then Prime Minister to the gentlemen whom he proposed to recommend, and whom he did recommend, to the British Government as suitable commissioners to represent Canada.

Mr. PUGSLEY: I had more especially in my memory the conversation I had with Mr. Barnhill, whom I gave to understand distinctly that he was expected to devote all his time to the work of the commission, and that he would have to remove his residence to Ottawa. Possibly my right hon. friend the leader of the Opposition, then the Prime Minister, might have taken a different view, but at all events, that is the view I formed at that time.

Sir ROBERT BORDEN: I do not make the assertion positively, but I have a distinct recollection that we followed the same course in that regard as was proposed by the late Government. Of course, as my hon. friend has already mentioned, and as I would like to emphasize, we could hardly expect a leading member of the bar in any province in Canada to give his whole time to this work for the remuneration that is granted, which is I think $7,500. The leading men of the bar, I think in every province, are in receipt of much larger incomes than that. The remuneration of the Commissioners is less than the salary of a judge of some courts, and the appointment is only temporary. They cannot be assured that the treaty will be continued beyond the ten or eleven years mentioned, and they do not enjoy, as a judge does, any provision by way of pension, even if they were to remain commissioners for thirty years.

Mr. GRAHAM: They are no worse off than Cabinet Ministers.

Sir ROBERT BORDEN: If Parliament desires to get the best men for the work, and the best men we can get are none too good for a tribunal of this kind, and if it expects them to devote the whole of their time to the work of the Commission, I think it would be necessary to increase very largely the remuneration which is now provided by law for the Commissioners.

To assist in suppression of the white slave traffic, $10,000.

Mr. PUGSLEY: Was the vote all expended during the past year?

Sir ROBERT BORDEN: I cannot say, but we could let the item stand, and I shall ascertain.

Mr. PUGSLEY: This might be one of the items which the Minister of Finance had in mind to strike out.

Sir ROBERT BORDEN: I am not sure it was expended, but I have not examined the Auditor General's report.

Mr. OLIVER: Under what authority is this expenditure made?

Sir ROBERT BORDEN: It is under the charge of Colonel Sherwood, the Commissioner of Dominion Police, who has his agents and representatives in different parts of the country.

Mr. GRAHAM: Has the Minister of Justice anything to do with the administration of the fund? There must be some judicial action in some of those cases, and I would like to know whether that lies with the Minister of Justice or with the provincial authorities.

10 p.m.

Sir ROBERT BORDEN: I imagine that the agents and representatives of Colonel Sherwood would lay information for any offence against the law, and then procedings would be carried on under the provincial authorities. Doubtless Colonel Sherwood and his agents and representatives would see to it that the evidence was forthcoming.

Mr. GRAHAM: It would be interesting to know how many convictions were obtained under this machinery during the past year.

Sir ROBERT BORDEN: I will get a report from Colonel Sherwood. Of course my hon. friend will bear in mind that the object is not merely to punish offences, but to prevent their commission; and really, I think the energies of Colonel Sherwood and those whom he employs for this purpose are chiefly directed to the latter consideration.

I shall be very glad to let the item stand until we get a report.

Mr. GRAHAM: I agree that an ounce of prevention is worth a pound of cure. I think it would be interesting to know just what has been done.

Mr. OLIVER: I should also like to know whether there is any lack of co-operation on the part of the authorities of any province.

Sir ROBERT BORDEN: I did not expect to go on with these Estimates, or I should have had a report from Colonel Sherwood before me. We shall let the item stand.

Amount required to pay Consular offices abroad for services, $500.

Sir ROBERT BORDEN: It occasionally happens that we require some special services from a British consular agent—services that we could hardly call upon him to undertake without recognizing them in some way. A small grant for this purpose has been placed in the Estimates for the last two or three years.

Salaries and expenses of the Paris Agency, $28,000.

Mr. GRAHAM: I do not want to repeat the discussion we had with reference to the High Commissioner's office, but I should like to ask whether the Paris offices are conveniently situated, and whether they are all together. The last time I was in Paris they were in separate places, but our agent was preparing to get new offices.

Sir ROBERT BORDEN: The offices now are very convenient and, I think, all together. They are entirely suitable, and are visited by a great many Canadians; at least, that was the case before the war. I was in the offices in 1912, and again last summer. When my hon. friend visits Paris again, I am sure that he will be pleased with the offices and come to the conclusion that the establishment there is creditable to Canada.

Mr. GRAHAM: At the present time we stand in a closer relationship to France and will probably continue to do so than ever before. Our treaty with France, entered into during times of peace, has I believe shown excellent results and we were just beginning to experience the benefits of that treaty when war broke out. It is a matter of general comment that when the war is over, there will be a closer trade relationship between the Allies and that may mean there will be a greater distance between the Allies and those opposed to them. I wish to direct the attention of the Government and the country to the fact that after the war our relations with the countries who are now our Allies will be on a different footing from what they have ever been before. From what the Prime Minister has said, I believe that we have comfortable and commodious offices in Paris. Naturally, we expect that when the war ends our trade with France will increase; for after the experience of the two countries, standing side by side facing a common enemy, when in days gone by they were facing each other, I cannot conceive how it could be otherwise than that great trade results will accrue to both countries. Whatever else we may do, I think we should not neglect to keep our machinery in France for trade information and trade increase up to the minute, so that every opportunity that presents itself may be taken advantage of without waiting; and we must remember that trade cannot easily be compelled to go in any certain direction. The feeling now between the Allies is that we should be friendly in business, as in everything else. If that spirit is taken advantage of and the business clinched (if I may use the term) at the opportune time, Canada will reap a rich reward financially and industrially in the years to come, and any reasonable expenditure along that line will, I believe, meet with the unanimous approval of the people of this country.

Sir ROBERT BORDEN: I think Mr. Roy has had these matters before his mind during the last eighteen months. We find him efficient and indefatigable, doing everything within his power under present conditions to promote trade between this country and France, and particularly to promote the placing of orders in this country for supplies required by the French Government.

Pension to J. B. Allan, $450.

Mr. PUGSLEY: What is that for?

Sir ROBERT BORDEN: Mr. J. B. Allan was a member of the Royal Northwest Mounted Police who was rendered unfit for further service owing to a gunshot wound which he received while endeavouring to effect the capture of an escaped Indian prisoner called Almighty Voice.

Civil Government—administration of justice —salaries, $146,224.37.

Mr. MACDONALD: What is the explanation of the increase of $4,075.62?

Mr. DOHERTY: The increase is attributable to statutory increases and to provision for one additional messenger.

Mr. GRAHAM: The first item in this is the deputy minister's salary, $10,000. Will the minister explain why his deputy gets $10,000?

Mr. DOHERTY: This is the third year that this salary of $10,000 has been provided. It was considered that my deputy earned this salary. Any one who is familiar with the remuneration ordinarily received by a lawyer of the standing in his profession of Mr. Newcombe, giving his entire time and services, will readily recognize that the amount allowed here to him is fully justified. I hardly think that we could expect to get the services of a man like Mr. Newcombe for less.

Mr. PUGSLEY: The minister in his Estimates is asking for $4,075.62 more than last year. Is it intended to expend this amount, or will it form part of the $30,000,000 not to be used?

Mr. DOHERTY: The increase is attributable to statutory increases and to provision for one additional messenger, so that I have no doubt it will be spent. I think the gentlemen will collect their statutory increases.

Mr. GRAHAM: The minister understands readily that the staff of his department has been increased very materially since he became minister, not in the lower grades, but by good strong men. I think the Solicitor General works pretty hard. He has been made a member of the Government so that, as a matter of fact, the Department of Justice has now two members of the Government. I do not suppose this one gentleman is deputy to these two members. If he were, I could see why he should receive more than another deputy, but I presume he is the deputy only of the Minister of Justice and not of the Solicitor General. The Government will have to adopt one of two principles in reference to deputies. I am not criticising the very able gentleman who is Deputy Minister of Justice; I agree with a good deal of what the minister has said, but this question of the salaries of deputies has always been a trouble with Governments and it is getting chronic. It started in easily. My hon. friend the Minister of Public Works has a deputy; the Minister of Marine and Fisheries has a deputy; the Minister of Justice has a deputy; the Minister of Railways has a deputy. You cannot convince these deputies that they are not working just as hard as men can work. The ministers must find it a little difficult every time they are making up their Estimates to have one deputy getting $10,000, another $8,000, another $7,000, while the statute says $5,000.

Mr. CROTHERS: You gave us a bad example in your time.

Mr. GRAHAM: When I was Minister of Railways I had a gentleman who was Chief Engineer and deputy, and he got not quite but approximately the salary of both, because he occupied the dual position. When he left the department and two officers were appointed, they were put on the statutory basis, and the Deputy Minister of Railways got $5,000, the amount named in the statute. There is a difficulty which is not easy to settle. Possibly the solution might be found in following the course which has been taken in Great Britain, where even ministers' salaries differ according to the labour they perform. I would not like to go through this Government and pick out the ministers who should get more, though that would be more popular than to pick out those who should get less. But there certainly is a difference in the labour performed by the heads of the departments, though it should be remembered that each head of a department has joint responsibility as a member of the Government, a responsibility which the deputy minister does not bear. There is no question that the responsibility of deputies, as well as the work they have to perform, varies. The statute which fixes $5,000 as the salary for each deputy is honoured in the breach every year. I think it should be understood that the harder-worked deputy ministers will be paid more and the statute fixing the deputy's salary at $5,000 might well be wiped out.

Mr. HAZEN: The statutes give some deputies $5,000 and some deputies $6,000.

Mr. GRAHAM: Of course, the whole thing is statutory, because these Estimates are put in the form of an Act of Parliament, but I mean the salaries fixed under the Civil Service Act.

Mr. HAZEN: The salaries of the deputies are fixed by statute. For instance, the

Naval Department—the statute provides that there shall be a deputy minister, whose salary shall be $6,000 a year. And I think the same is true of some other departments. I have the two departments under my charge and the salary of the deputy of one is fixed at $6,000 and of the other at 5,000.

Mr. GRAHAM: I think that the Naval Service Act is a case where the salary was "slipped over," because a deputy with technical knowledge was required. But every year we are over-riding the Civil Service Act by these estimates, and I think the time has arrived when statutes ought to be passed fixing the salaries of deputies in the several departments. Then, the man appointed to the position would know exactly what he is to receive, and there would not be this friction and discussion every year.

Mr. ROGERS: There is no violation of the statutes by the passage of the Estimates; and the amounts here are the same as last year.

Mr. GRAHAM: Yes, and the same as the year before. But the fact remains that we have a general statute declaring that the salaries of deputies shall be $5,000, and to that we make exceptions every year. It might cause a little friction at first to have the matter understood and fixed, but it would be better in the end.

Mr. PUGSLEY: I presume that nearly all the employees of the department are lawyers?

Mr. DOHERTY: The lawyers in the department are: Mr. Newcombe, Mr. Edwards, Mr. Chisholm, Mr. Coté, Mr. Bill, Mr. McGillivray, and Mr. Plaxton, Mr. Beauchesne has just left us.

Mr. PUGSLEY: Under Item 316 of these Estimates there is an appropriation of $13,000 for "expenses of litigated matters conducted within the Department of Justice." Does this money go to these gentlemen beyond their salaries?

Mr. DOHERTY: This is for necessary expenditure in this litigation. You have to print your factums, you have to pay such disbursements as the court requires, and so on. This is an item that has been voted year after year. The expenditure under it last year was $5,997.60, and the year before that $6,665.47. The amount varies necessarily year by year, and it is not possible to estimate it with accuracy in advance.

Mr. PUGSLEY: Would this include lists of costs that might be made up and taxed, or would it be limited to amounts paid for printing and so on?

Mr. DOHERTY: It is for expenses of litigation conducted in the department. The amount expended would indicate that it is not used to pay fees.

Mr. PUGSLEY: Suppose a suit is carried on by the Department of Justice; there will be solicitors' costs of say, $500; and these are incurred in the performance of work by the officials of the department. Would that be paid out of this item of $13,000?

Mr. DOHERTY: If the work is carried on by an official of the department we do not pay him solicitors' fees.

Mr. PUGSLEY: This is for disbursements?

Mr. DOHERTY: Yes.

Mr. KYTE: The report of the Auditor General, Volume IV, page 4, shows three items charged by the Justice Department as fees paid to lawyers for the preparation of legislation, as follows:

Preparation of Legislation ($1,570.50.)
Lafleur, E., Montreal, hotel expenses at Ottawa.....$109.40
O'Connor, W. F., Halifax, services 17 d. at $40; travelling expenses, $131.10. 811.10
Surveyer, E. Fabre, Montreal; services 15 d. at $40; travelling expenses $50. 650.00

In view of the statement made by the minister that he has eight lawyers in the department, and considering also that we have a Solicitor General, and a Parliamentary counsel, with two legal assistants, one would imagine that sufficient legal knowledge would be found in the combined staffs of the Minister of Justice and the House of Commons to make it unnecessary to go all the way to Halifax to obtain the services of a lawyer—who, apparently, was brought up here—at $40 a day, and also two lawyers in the city of Montreal.

Mr. DOHERTY: The item that the hon. gentleman refers to arose in connection with the examination of a large number of questions which it became necessary especially to look into just at the time of the outbreak of war, and these gentlemen's services were retained for that work. At that time Mr. Newcombe, the Deputy Minister, was in attendance before the Privy

Council. In considering Mr. Newcombe's salary, it ought to be borne in mind that he represents this Government before the Privy Council; if we had to employ special counsel to do that important work, the cost in a year would exceed Mr. Newcombe's salary by quite a substantial amount. But in regard to the particular matter that the hon. gentleman speaks of, it was considered that the importance of the questions to be dealt with and the research to be made necessitated this extra assistance, and the three gentlemen named were employed for that purpose. It is but paying them a fair tribute to say that their services were most valuable.

Mr. KYTE: Where was this work done?

Mr. DOHERTY: In Ottawa.

Mr. KYTE: The gentleman from Halifax who took part in this work is a very capable professional man; I find no fault on that score. But the department would have saved his travelling and hotel expenses if they had secured the services of a lawyer in Ottawa instead of sending to Halifax.

Mr. DOHERTY: This gentleman had done work of a somewhat similar nature, and we felt that he was thoroughly suitable to undertake this particular work. As he was available, we did not feel that we should be deterred from obtaining his services simply by the expense of his coming from Halifax to Ottawa.

Mr. MACDONALD: I notice that during the interim between the last session and the present session, the Solicitor General has become a member of the Privy Council. Is it the intention of the Government to introduce legislation to amend the statute by providing that the person filling the office of Solicitor General shall be ex-officio a member of the Privy Council?

Mr. DOHERTY: Not that I am aware of. As I understand the matter, the position of solicitor general remains precisely what it was. Hon. Arthur Meighen has become a member of the Privy Council, but the position of Solicitor General in itself has not been altered; his appointment to the Privy Council does not necessarily involve the Solicitor General ex officio being a member of the Cabinet.

Mr. MACDONALD: I understand, then, that the Solicitor General has been made, in persona, a member of the Privy Council, and that no legislation affecting the Solicitor General in this respect will be introduced.

Mr. DOHERTY: I do not think any is contemplated at this time; as to what may be done in the future, I am not in a position to say.

Mr. MACDONALD: I regard Mr. Newcombe as one of the ablest men in the Dominion, and I think he performs his duties with satisfaction to the country. I should like to know what is the status of the Solicitor General in the Department of Justice.

Mr. DOHERTY: The statute governing the office of Solicitor General does not, I think, go further than to say that the Solicitor General shall perform such duties in connection with the Department of Justice as may be assigned to him.

Mr. MACDONALD: Has the Solicitor General done any court work during the past year on behalf of the Government?

Mr. DOHERTY: He has appeared for the Government in quite a number of cases since he took office—whether within the last twelve months I should not like to say positively offhand.

Mr. MACDONALD: I understand that the duties of court work, so far as the Department of Justice is concerned, are performed largely by the deputy minister. Has the Solicitor General devoted any special attention to court work?

Mr. DOHERTY: He has devoted attention to certain cases; whether it would be called special attention I would not undertake to say. Up to the present time cases that have gone to Privy Council and cases heard before the Supreme Court have, as a rule, been handled by the deputy minister.

Expenses of litigated matters conducted within the Department of Justice, $13,000.

Mr. GRAHAM: Are there any cases to go to Privy Council this year?

Mr. DOHERTY: At the present moment I should not like to say positively. We have just disposed of the references with regard to companies, and one or two other cases; I think these are the only ones actually pending before that court.

Mr. GRAHAM: Is the minister settling with the Ontario Government the question of water-powers, or is it going to the Privy Council?

Mr. DOHERTY: Two cases are pending with regard to water-powers; they have not

as yet come before the courts of this country. We are negotiating with a view to arriving, if possible, at a settlement of those cases.

Mr. PUGSLEY: What influences me particularly in asking as to this is the fact that the Minister of Finance has assured us that there are some thirty millions of dollars in these Estimates which will not be required next year. I am not sure whether we have any means of compelling the Government to tell us, I have not much confidence in our strength and ability to force the Government to do the reasonable thing when they are determined to do what is unreasonable, but we want to know, if we can find out in some way from some minister, how that thirty millions is made up. Do any of the items of the Minister of Justice form part of it? Has he informed the Minister of Finance that any part of his items are not to be expended? We have tried to get the information from the Prime Minister, and he is going to see the Minister of Finance. If the Minister of Justice can assure us that he will exert his best efforts to get that information for us, and will give a list of items which will not be expended, it will save many days' investigation of these accounts, because we would not then question the Government about this thirty millions.

Mr. DOHERTY: I have no reason to suppose that any item contained in my Estimates was included in the thirty millions. I made no statement of the kind to the Minister of Finance. The only instances where I am not prepared to say it is intended to spend the money are cases in reference to which one has to take an approximate amount, as for instance where we may not have as much litigation this year as last.

Mr. GRAHAM: Then this department may be eliminated from the thirty millions?

Mr. CARROLL: Is the Department of Justice furnishing counsel in the case of McGillivray and the Sydney Pilotage Commission? McGillivray was a pilot, and was dismissed after the election, presumably for partisanship. He sued the Commission for wages, etc., before the Supreme Court. He succeeded in the lower court, but lost his case on appeal in the Supreme Court of Nova Scotia. He finally won in the Supreme Court of Canada, and I was given to understand the Commission had the assistance of the Justice Department in the furnishing of counsel.

[Mr. Doherty].

Mr. DOHERTY: I can safely say we have not employed counsel in connection with the case. That would come under the Marine Department and it would be only on their recommendation that we would employ counsel. The expense would be borne by that department if counsel was employed.

Annual contribution Canadian Law Library, London Eng., $1,000.

Mr. PUGSLEY: While this is not large, might it not very well be struck out? There is connected with the Judicial Committee of the Privy Council a splendid library available for all lawyers, and I understand that this is a library in a private office.

Mr. DOHERTY: I think the system has been changed and that the books are now kept at Downing street where the Privy Council sits. It has been found to be of great advantage and a great convenience to Canadian lawyers appearing before the Privy Council to have these books gathered together in one group. Out of the $1,000, such additions as are necessary from time to time to keep the library up are made. This amount has been voted for several years past and I think that the advantage to Canadian counsel fully justifies it.

Mr. PUGSLEY: While the amount is not large, there are over a thousand items in the estimates and in the aggregate they run to a very large sum. This has been voted for some years, but we never had a war on until now. The position of Canada has never been so desperate, Canada has never been in so distressed a condition as to-day. Unusal and enormous taxes are being levied on the people and poverty and distress are spread all over the country. Some people say Canada is prosperous. It is not prosperous. Certain industries are prosperous. But real estate, for instance, is greatly depressed and vast numbers of people are in a position that is everything else but prosperous. We are imposing heavy taxes to meet the war expenditures and interest and yet we are proposing to give a thousand dollars for additional books for a Canadian law library in London for the convenience of counsel going there to argue cases before the Judicial Committee of the Privy Council. Every lawyer who has argued cases before the Judicial Committee knows that there is a magnificent library connected with that committee adjoining the room in which the argument is carried

on. The books there are accesible to every lawyer; messengers are in attendance to bring the books out to the reference room and there is every facility for studying the cases which it may be necessary to study in order to properly argue cases before the committee. Is not this a time to drop unnecessary items of this kind? It is only a thousand dollars, but you will find a vast number of items of the same charter. It would not in any way militate against the public interest if this item were dropped for the present. The amount could be put in after the war is over, when good times return.

Mr. HAZEN: My experience before the Judicial Committee, so far as books are concerned, is entirely different. I found the greatest difficulty in getting books to refer to there. On one occasion when I was appealing against a judgment of the Supreme Court of Canada I wished to refer to judgments of that court, and I found that I had to go outside and make long extracts and bring them in. I could find no library in the room adjoining the committee room. While I was Attorney General of New Brunswick I was asked to supply a copy of the New Brunswick reports for the use at the Privy Council of lawyers who went from Canada. I was informed that the other provinces of Canada were being asked to do the same thing and that the same request was being made of the Government of Canada with regard to reports of the Supreme Court of Canada. If I remember correctly we sent a copy for the purpose of having them placed in a room adjoining the Judicial Committee room. My experience is entirely different from that of my hon. friend.

Mr. PUGSLEY: My hon. friend must have been very timid and modest.

Mr. HAZEN: I always am, of course.

Mr. PUGSLEY: And perhaps the gentleman in charge looked too dignified for my hon. friend to approach him. I had no difficulty. I told him what books I wanted and he got them for me.

Mr. DOHERTY: It was just part of the magnificent library the hon. member enjoyed that we are now dealing with. The Imperial Government furnishes us a place to keep the books and they are kept and cared for, and, as I have said, we try to keep up the supply of books.

As the Minister of Marine and Fisheries has said the provinces supply their own statutes, and I think there is every reason to believe the hon. gentleman was enjoying the advantage of that library.

Mr. PUGSLEY: At the time I was there the Canadian library was kept in another part of the city, and was connected with the office of Mr. Blake.

Mr. DOHERTY: The Imperial Government are furnishing for that library caretakers to look after our books, and the provinces are contributing books which are especially useful to us. However distressful our condition may be at the present time, I hardly think we ought to take the position of saying to the Imperial authorities: you can go on maintaining our library, looking after our books, and providing books that are necessary to us, while we do nothing. I think, on reflection, the hon. member will see that even in our present condition we ought to make this expenditure for the sake of our self-respect, as well as for the advantage of those of our counsel who go there to conduct cases.

Mr. PUGSLEY: If my hon. friend cannot see his way clear to cut down this item I would like to know where we are going to begin to save the $30,000,000 which the Minister of Finance said we ought to be able to save.

Mr. COPP: On whose advice are the books selected that we are asked to pay for?

Mr. DOHERTY: I do not know that there is any body specially appointed to advise as to the books. The department here have communicated with the librarian with regard to those required, and I believe that the deputy minister has expressed his opinion upon the desirability of particular books. Not improbably, counsel attending the library might make representations as to certain books; I cannot say positively, but the expenditure for books, and the keeping up of reports, which have to be maintained from year to year, is not very considrable.

Mr. McCRANEY: Who administers the money; is it paid out from the department, or is it placed in the hands of the librarian to be expended by him?

Mr. DOHERTY: The money necessary to purchase any books is paid from here.

Mr. COPP: Did I understand the minister to say that part of this money went to the librarian for taking care of the books, indexing, cataloguing and so on?

Mr. DOHERTY: I am not in a position to give the names of the individuals to whom this money has been paid. If the hon. gentleman would like to have the details, I shall be glad to furnish them.

Mr. COPP: It would be quite a different thing if, as I understand now from the minister that part of this money would go to the librarian for looking after the library, and cataloguing books.

Mr. DOHERTY: A sum of $250 is paid for the maintenance of the library, and apart from that, books are purchased according as they are required. As a matter of fact, I understand that it may not be necessary to spend the whole of the $1,000.

Mr. PUGSLEY: How much was spent last year?

Mr. DOHERTY: Last year, there was only $250 spent; no additional books were bought.

Mr. PUGSLEY: And that was in time of peace.

Mr. DOHERTY: I do not know whether we need more or less books in time of war.

Mr. PUGSLEY: In connection with the Judicial Committee there ought to be a library worthy of the Empire. Counsel go there from all parts of the Empire to argue appeals, and a great many eminent English lawyers are engaged in the arguments as well. Surely in that library there ought to be the ordinary text books and reports of the courts of the Empire as well as English reports. If it is simply a matter of getting statutes from the different provinces, these could be furnished free of charge, and reports of the different provinces would not cost very much. But it is absurd that each country should be contributing to the upkeep of an Imperial library in the city of London in connection with the Judicial Committee.

Mr. DOHERTY: Are we not part of the Empire, and should we not pay a part of the upkeep of the Imperial library, particularly when it is useful to ourselves?

Mr. PUGSLEY: We have here the Supreme Court of Canada, and who
11 p.m. would ever think of asking the province of New Brunswick, say, to pay for keeping up a library in connection with that court.

Mr. MACDONALD: This is one of the items which drifted into the estimates in times of plenty, when it was not necessary to scrutinize them so closely as now, or to pursue a policy of economy. If there are in these Estimates items amounting to $30,000,000 which can be saved, as the Minister of Finance said, surely this is one of them.

Consolidation and publication of Reports, Orders in Council and correspondence upon Provincial Legislation since 1905, $500.

Mr. PUGSLEY: Was the amount all expended last year?

Mr. DOHERTY: I understand that this is a revote; it was not spent last year.

Mr. PUGSLEY: Surely this might be dropped.

Mr. DOHERTY: I think the hon. gentleman will understand the importance of our preserving the reports upon the statutes of the different provinces, and the correspondence with regard to them. As the hon. gentleman knows, the statutes of the different provinces have to be passed upon each year from the point of view of determining whether there is anything that calls for disallowance. In that connection, questions not infrequently arise of very general interest. I think this country can afford $500 to provide for the compilation and publication of those reports.

Mr. PUGSLEY: If this is so important, why was not the amount spent last year?

Mr. DOHERTY: Important matters do not present themselves for determination every year. Some years the Provincial Statutes, while they have to be carefully examined, do not call for any special observation. Other years serious questions present themselves as to disallowance, and I think it would be unfortunate if we left ourselves without provision, where such questions did arise and had to be passed upon, to preserve the decisions passed upon the statutes. For instance, when we have to deal with these questions, the pronouncements of previous Ministers of Justice on statutes with regard to which similar questions have been determined are invaluable to us. The compilation is very useful, and I think it would be unfortunate if we left ourselves without provision to continue it in case it should be necessary.

Mr. GRAHAM: Before the committee rises I should like to ask a question. I have seen an item in the newspapers that application has been made to the Privy Council in reference to certain Ontario

legislation known as bi-lingualism. Is there any truth in that report?

Mr. DOHERTY: Not to my knowledge, and I think I would have heard of the application if it had been made.

Mr. GRAHAM: I saw it in the papers.

Mr. DOHERTY: Many items that appear in the papers are not true.

Mr. GRAHAM: It seems that the attitude of ministers in regard to the Estimates will resolve into this: each minister will adhere to his Estimates, and the Finance Minister will finally have to explain to the country how he came to make the mistake in his Budget of $30,000,000. None of his colleagues seem prepared to help him carry out his promise.

Mr. ROGERS: It will all be susceptible of explanation at the end of the session.

Progress reported.

On motion of Hon. R. Rogers the House adjourned at 11.10 p.m.

Tuesday, February 22, 1916.

The House met at Three o'clock, the Speaker in the Chair.

PUBLIC ACCOUNTS COMMITTEE.

Sir GEORGE FOSTER: With the consent of the House, I beg to move that Mr. Carroll be appointed to the Committee on Public Accounts, replacing Mr. Neely.

Motion agreed to.

WHITE PHOSPHORUS MATCHES ACT AMENDMENT BILL.

Hon T. W. CROTHERS (Minister of Labour) moved for leave to introduce Bill No. 37, to amend the White Phosphorus Matches Act. He said: The Act as it now stands prohibits the manufacture of matches from white phosphorus from and after the 1st of January, 1915, and also prohibits the sale or use of such matches after the 1st of January, 1916. The manufacturers ceased manufacturing on the 1st of January, 1915, but they were unable during the next year to dispose of all the matches they had in stock, and on the 1st of January, 1916, a great many people still had matches on hand, and under the Act they were liable to prosecution if they attempted to sell or use them. This Bill gives the manufacturers six months longer in which to dispose of their stock on hand, and it gives those using these matches a year from the 1st of January, 1916, to use them up.

Mr. MURPHY: Has the minister proof that the manufacturers had actually ceased manufacturing on the 1st of January, 1915?

Mr. CROTHERS: Yes, I am satisfied as to that.

Motion agreed to, and Bill read the first time.

THE BUDGET.

Consideration of the proposed motion of Sir Thomas White (Minister of Finance) for the Committee of Ways and Means, resumed from Thursday, February 17.

Mr. J. A. CURRIE (North Simcoe): Mr. Speaker, it is some time since I have had the privilege of addressing my colleagues in this House, for reasons which are well known to us all. It is a great pleasure to be here to-day and once more to address those whom I have met on the floor of this House, sometimes in gladiatorial political combat, sometimes assisting in the various projects before the country. I congratulate the House upon the splendid spirit of unity which it has displayed throughout this great war. There is no question that this House has given to the whole British Empire an example of freedom from political controversy. For, although we here may fondly imagine that there is no such thing as controversy in the British House of Commons, any one who receives and reads the debates of that House, will see that the spirit of politics is still rife. In this House the criticisms have been rather mild, and the Opposition has given every assistance to the Government to carry on the great work that is before us all. The leader of the Opposition (Sir Wilfrid Laurier) has shown great patriotism in seconding the desires of the Government. I congratulate him upon that and upon the fact that he has, as it were, held back the restless spirits behind him, who, quite naturally, I acknowledge, feel a bit anxious to take a fall out of the Government. The conduct of the leader of the Opposition in this respect has made for himself a name in the political history of this country which will never be forgotten. Of course there is, and must necessarily be, a certain amount of political sniping going on in this House as well as in the country. Any sniping here is done in the broad light of day; but sometimes, I am sorry to say, it is done in the country about the way it is done at the front—by getting behind the

lines and getting in a lick at some poor soldier-politician—behind his back. But we have had nothing but splendid assistance on both sides of the House to carry forward all the measures that have come before Parliament in these very strenuous times.

I desire to congratulate the Minister of Finance (Sir Thomas White) particularly, upon the very excellent Budget speech he made in this House, and the lucid manner in which he explained the financial position of the country. He is to be complimented and congratulated also upon his excellent conduct of the public finances during the last year and a half. There is no question that the situation of this country, when the war broke out, was exceedingly grave. We had undertaken public works, tremendous railway extensions, which had just reached the point where their securities would naturally be marketable and the railways placed upon a sound foundation. Great expenditures had taken place and the resources of the country had been pledged for a number of years. The instant the war came every industry was stilled, every wheel ceased to move. Those who recall the strenuous days of the opening weeks of the war, know that manufacturing in this country virtually ceased. In that we had an example of the state this country would be in should this House do anything that would cause a cessation of manufacturing operations. For, after all, the manufacturing industries of the country are just as essential to the country's success as any other department of our industrial life. A number of these industries, being very strong financially, continued to operate, and very shortly there was a gratifying recovery.

During the past year the country has made some of the greatest discoveries that it has ever made. We Canadians are very much inclined at all times to belittle ourselves, to consider ourselves, perhaps, as not so capable mentally or otherwise as other people. I deprecate that condition of mind among the members of this House or among the people of this country. When the first contingent left for the front a great many people felt that it would have to be broken up and merged with British regular troops. During the past year, however, it has been found that the Canadian soldier is as good a fighting man as any soldier on the continent of Europe.

Another strange thing has occurred. In connection with the tremendous expenditures with which we have been confronted, the Minister of Finance has been able to raise in Canada, by means of bond sales to the people, the enormous sum of $100,000,000. Two years ago no one would have conceived it possible that in a time of war the Minister of Finance could raise even $50,000,000 in Canada for war purposes; yet the minister got over $100,000,000. If we make the war pay in this country, as Pitt made a war pay in England, I am sure that the Minister of Finance will have no difficulty in getting all the money necessary to meet the requirements of Canada's participation in the conflict, and that not only $100,000,000, but, if necessary, $500,000,000, can easily be raised in Canada.

The Budget contains very few features upon which any remarks could be offered. The new policy of assessing corporations is one that will doubtless meet with considerable opposition. In my study of political economy I have observed that there are two kinds of taxation, direct and indirect. There is no doubt that this proposed taxation of profits is a form of direct taxation. In considering this matter we should always bear in mind that in their legislation the people keep constantly in view two things: they desire, first, that no special interest shall have anything to do with the making of the laws that pertain to the administration of justice; and, secondly, that no special interest shall have anything to do with the laws dealing with the imposition of taxes. We should deal with every business institution and every commercial concern and every individual as being free and equal in the eyes of the law. One feature of this proposed legislation that may create some opposition on the part of members perhaps on both sides of the House is the provision to make it retroactive. I confess that I threw away almost all my books on political economy when I went to the war, and I have not since been able to find them. In those to which I have had reference, however, I find no case in which taxation has been made retroactive. The desire has always been to place the burden of any year's taxation upon that particular year, and I am satisfied that when the Bill comes before the House the minister will take that matter into his very serious consideration. Retroactive legislation should be resorted to only after we have reached the limit of our taxation. If we had failed by means of customs and excise taxes to obtain the necessary revenue, it might have been wise to raise money by means of retroactive legislation of this kind. We are legislating

in this House with a view to doing the best for our country. If we put aside all partisan considerations, as I think we should under the circumstances, we will agree that the minister did not, perhaps, give wise consideration to that feature of the proposed legislation. However, when the Bill comes before the House, many of its provisions will be discussed, and many of them will be changed.

I desire to congratulate the minister upon placing a duty upon apples coming into this country. Before the war I had the pleasure of going West almost every year. One thing that has always struck me is that the fruit trade in the West, especially in the Middle West, was entirely under the control of the American Fruit Trust. It did not matter whether Canadian apples were good or cheap, no man selling apples in the West would dare purchase eastern or western Canadian apples if he was getting other fruits from American firms. The American Fruit Trust informed the retailers and jobbers in the Canadian West that if they wanted to get oranges, bananas, and lemons from the United States, they must purchase also American grapes, apples, and other fruits. The result was that our fruit was blocked out of the Canadian Northwest. Great areas of fine apples are under culture in British Columbia, and it is necessary to see that this basic industry is properly protected.

Large quantities of oil are imported into this country, and of necessity there must be some form of taxation, particularly in view of the fact that in various sections of the country we have other kinds of fuel, such as coal.

The tax which we are objecting to, that which applies to companies, will strike quiet a number of the most efficient companies in Canada, while a number of companies owned by foreigners will be entirely free from taxation. There are in Canada a large number of concerns controlled by foreigners; some of them as a matter of fact are controlled by Germans. A large copper corporation in the West is controlled by a German syndicate by means of trustees. We have it on the authority of a statement in the British House of Commons, made last month by men of responsibility, that the nickel industry in Canada is controlled by the Krupp interests through trustees in the United States. When you bear in mind the fact that the nickel mines of Canada alone are sufficiently wealthy to finance the war for five or ten years and still leave a dividend, you will realize how important the control of these mines is to the Germans. Some action should be taken to see that materials connected with this industry are manufactured in Canada; at the very least, they should be subject to some taxation. The same state of affairs existed in Australia, where zinc concentrates of great value were controlled by German syndicates with headquarters at Frankfurt. The Government of Australia took the bull by the horns. They immediately cancelled the ownership of these mines controlled by the Germans, and the British Government is now getting these zinc concentrates from Australia. I think it would be wise for the Government of this country to make a thorough investigation into the affairs of the International Nickel Company with a view to ascertaining whether the statements to which I have referred are true. If its affairs are controlled by Germans, we should know it; Germans are not very friendly to us just at this time.

I have heard the hon. Minister of Trade and Commerce make a number of able speeches in this House, but I confess that I never heard him make a more eloquent speech than he did the other evening. The hon. minister is fully alive to the fact that the Germans have decided to carry on after the conclusion of this war a great trade war against the Allies. Possibly the hon. gentleman's position did not permit his making known what suggestions have been adopted or what course is being taken to meet the German onslaught that is sure to take place after this war is over. Hon. gentlemen may say: how do you know that the Germans intend to carry on a commercial war at the conclusion of the present conflict? We all know that whether Germany wins or loses, she will at least have Austria included within her Empire.

In Germany they are already looking forward to the carrying on of a further commercial war against the Allies. Early in December a Secret Congress was held in Vienna between the various interests of Germany and Austria and the various states within the German Bund. At that congress certain resolutions were agreed to that are to govern their conduct after the war. There was but one purpose in those resolutions, to retain their interior trade to themselves and to take trade away from the Allies. We all know very well how Germany has conducted its affairs for a number of years. It might be well for us to take a short retrospect of

what Germany was and what Germany did. One hundred years ago Germany consisted of a bundle of independent states. In 1915 the Germans brought about amongst several of their states what was known as a zollverein, that is a customs union between those states. Prussia or Brandenburg was the centre of that union. Step by step and year by year they have brought various other sections of the country under the dominion of that union, until before the war Germany had reached a point where almost every German-speaking state was part and parcel of that customs or commercial union. In 1848 they fought against tremendous obstacles. The German states with one end in view, under the leadership of Prussia, had been consistently endeavouring to reach a dominating position in the affairs of Europe, but in 1848 they were defeated and on that occasion the German fleet had to be put up to auction, as it will have to be after this war. Later on came Bismarck, who laid down this principle: that it was not by speeches, it was not by talk, and it was not by resolutions and public meetings, that they were going to build up Germany; Germany could only be made a great country and unified by a policy of "blood and iron." He proceeded to carry out that policy of "blood and iron" and coupled with it always was, of course, the commercial propaganda. He attacked and defeated Austria in 1866 and after that he turned to France and defeated France. In both cases there were commercial impositions upon both of these unfortunate countries. The Treaty of Frankfurt was an imposition on France, and the French are very glad to be rid of it to-day. However, the growth of the country was carried on apace. They changed their method of diplomacy. Instead of sending men to various countries to be diplomatists and carry on the old school of diplomacy, they sent their shrewdest business men, with the result that the business of Germany grew by leaps and bounds. Their trade extended all over South America. They supplanted the English in South America, in India, and other colonies, and in other countries, and they did so under the ægis of the British flag. They carried on this commercial warfare by every means in their power, and all the influence and power of the state was placed behind the German merchant in getting that foreign business. The English merchant could get from his bank only short time notes, but the German merchant was placed in a position to give six months' or a year's time to his customers, with the result that he was able to get all the business among the small traders in all countries. The German Government bank would discount long term notes and enable German exporting firms to carry on their business on this credit system. The German consuls were really commercial travellers, and did everything in their power to secure information about the ability of merchants to pay, and information as to their financial condition was always at the disposal of the commercial agents of Germany. Germany hopes to renew that commercial war of "peaceful penetration" as soon as this war is over, and to carry it on more fiercely than ever. Germany will strive to drive the Allies from the face of the globe, so far as their commerce is concerned, so as to get gold to redeem her paper currency. It is necessary for us to take time by the forelock, and do something to prevent that. It has been suggested in England and amongst some of the nations included in the alliance that, since we are now virtually selling our bonds on the joint credit of the Allies, some method must be devised to have commercial treaties between the Allies so that they can all work together to one end. A favourite method suggested is a form of commercial treaty. There is no question that we must do everything in our power to carry on our commercial warfare after the war on identically the same lines as the Germans. Of all the colonies that have gone into this war Canada is the only one that will not receive any territorial acquisitions. We have nothing to gain from the war as far as territory or wealth is concerned. The only thing we can possibly get out of the war is trade. I do not say that a war should be waged for the purposes of trade, but we all know that even although the eagle soars very high, still he has to come down to the hedges to get a living. It is the same with the country. While our ideas may be very great and our loyalty tremendous, at the same time those who are left at home, the remnant who will be here after the war is over, should see to it that this country, after it has been bled white by the war, does not have to carry, as Turkey did, a burden of debt for years without some means of securing some compensation and method of redemption by means of our foreign trade.

Bear in mind that the British Empire has

within itself all the elements that are necessary to make a great nation. Take our wheat crop. Hon. members from the West talk about the western wheat. The Empire grows enough wheat to supply all the Empire with all the wheat it requires and still leaves seventy or eighty million bushels a year to hand over to France and Italy. It is essential to us in Canada, therefore, that we should take steps before this war is over to see that our commercial interests are forwarded. I am not one of those who believe that everything should be put over until after the war is ended. Nobody knows when this war is going to end. I have had some experience of the war. When I first started off for France we all thought the war would be over inside of six weeks and we were wondering if we could not get to the front a little sooner so as to be in the fighting. As a matter of fact, after being at the front and realizing the condition and state of the army at the present time, I unhesitatingly say that we are only at the beginning of the war, that this war is going to be carried on for another year, if not two years, possibly three or four; and if there are no means by which we can strengthen the position of ourselves and our Allies in any possible way, by commercial treaties or otherwise, we should take immediate steps to do that now and not wait until after the war. When Great Britain was in a great war once before, at the time of the Seven Years' War, and called on her colonies to assist her, everybody in the colonies expected that it would be only a few months until the Empire and the colonies would be one. As a matter of fact, Pitt had a number of delegates from the American colonies meet and discuss a union. All the states were assured that they would get representation in the British House of Commons. In fact, a Bill was prepared for that purpose. But something happened, the doctrine of states' right; with the result that after the war there was nobody with strength enough, or energy enough, to carry out this plan, and the result was that inside of fifteen or twenty years the Empire was torn asunder simply because things had been left undone until after the war. If we are going to have a long war, let us take action for unity now. Let the colonies and the Empire get together with the Allies on these commercial questions now and not postpone action until after the war, because if we do the chances are that there will be some other interests calling for our attention then and nothing will be done.

With reference to the war itself, I want to congratulate the House upon the excellent support that has been given to the war and to the troops in the field. Perhaps it may not be amiss for me to give a short sketch of the operations of the Canadian division at the front. I had the honour at the time when war broke out to be the commanding officer of one of the Canadian militia battalions, and it was my duty, not only as commanding officer of that regiment, but also as a Scottish Canadian to offer my services, which the Minister of Militia accepted. The officers of my regiment offered the services of the regiment and that offer was also accepted. I also considered it my duty as a military member of this House to go. I know that a great many members, probably 80 per cent of this House, are beyond the military age, and no matter what previous experience they had had, or what their ardour was, they could not go. But I considered it my duty to go. My battalion was mobilized, and we went to Valcartier. Valcartier camp was a great example of the ease with which Canadian troops could be mobilized, a marvellous example of organization. Some 22,000 men were at first required, and in about three weeks something like 33,000 were under canvas. The troops got a great deal of very practical drill at Valcartier; in fact I have heard nothing but praise for camp Valcartier. I think it reflected great credit upon the Minister of Militia who organized it, and on those who carried through the work there. There is no doubt that at the beginning there were certain difficulties, but there are difficulties at the beginning of all things; they are to be found also in connection with the continuing of all great undertakings. They were quickly overcome at Valcartier, and the camp proved a great success.

After receiving a certain amount of drill, the troops were sent to England. I shall never forget the great armada that sailed from Gaspé Bay—three great lines of ships, eleven in each line, each line flanked by a war vessel, with a warship in front and another in the rear. We were quite fully guarded all the way across, and within two days of reaching the shores of Britain the greatest warship in the world then came to meet us, the Princess Royal, and we were afforded an example of the tremendous naval power of Britain. I wish here to say a word on behalf of the British navy. It has done just what it was expected it would do; it has swept the enemy from the seas. At that time, the enemy was not swept entirely from the seas; the battle

of Falkland Islands had not been fought. Nevertheless, a very few weeks afterwards the navy accomplished all that the Empire expected it to accomplish. We must bear in mind that everything in this war depends upon the British Navy. It does not matter how bravely our men may fight; it does not matter how much money the Minister of Finance may have; the fact remains that the products of the farm in this country would not be worth 15 cents on the dollar were it not for the British Navy. I think that the Navy should always be borne in mind, especially by those who farm the wheat fields in the West. We must bear in mind this: that if we want free wheat—and I confess I see no reason why we should not have free wheat, always bearing in mind that whilst this war is on we are all dependent upon the British Navy to market our crops. The British Navy has marketed the Canadian crops this year, and not only the crops of this country, but those of the other dominions and colonies, Australia included. Would it be well for us to endanger that support by allowing our products to be diluted with foreign grain? That is something we should consider when we are talking of the question of free wheat, and perhaps it would be well to leave the discussion of free wheat over until after the war.

Well, the British Navy saw us safely over to Great Britain. When we landed, we were immediately sent to the highest plateau in England, known as Salisbury Plain. Salisbury Plain is one of the most historic spots in England. There you will see the remains of Britons, Romans, and Normans. There were gathered at times the military people of England for three or four thousand years; mounds there mark the graves of forgotten kings and warriors. We were the latest warriors to reach Salisbury Plain, and we certainly had a time of it whilst we were there. When we reached that camp we imagined that we were going to be drilled by English officers, and that our work would be easy for us. At that time, however, Great Britain was in the throes of mobilizing Kitchener's army. Thousands of men were joining the colours, and the authorities could not get enough instructors to train the troops, with the result that pensioners of 70 and 80 years of age were called upon to help in the work of instruction. The Canadian force supplied some instructors to the British Army, my own batttalion amongst the number, and I am very pleased to say that one of the lads from my battalion won the Military Cross at the Dardanelles the other day. He joined the British Army from the ranks of my regiment, and to-day he is a major in the British army. That speaks for Canadian merit. Some 18 or 20 others took commissions, and assisted in instructing that great army which was still in the process of organization. When I left England in midsummer last year, fully 50 per cent had not then received their uniforms, arms, or equipment, and yet we in Canada continually proclaim our helplessness, and rail because a man does not get his uniform and equipment the moment he enlists. Few of us have any idea of the enormous amount of work that Great Britain had to accomplish in order to arm herself for this momentous struggle.

To-day Canada has virtually twice as many regular troops as Great Britain had at the beginning of the war. One hundred and fifty thousand men—just imagine what a paltry army that British army was. Why, we would hardly go out to see it march past in Canada now, when we talk in hundreds of thousands. We had considerable difficulties there. The climate was very disagreeable, and we were kept under canvas which was not very good, canvas which looked rather like cheesecloth. We were kept under that canvas all through the fall of the year and during a very wet season. It rained continually; it was the wettest season they had ever had on Salisbury Plains. One author has written something about the rains on Salisbury Plains being very bad for the men, and he was perfectly right, so far as that goes. The weather was exceedingly bad, but the troops stood it well. They drilled regularly every day and at night, twice a week, under our own officers, and I may say that our own officers far exceeded expectations in that respect. Fuss and feathers were cut out almost entirely. Officers from the front came over to give us some idea of the conditions there, and our officers studied the methods and results, and organized the force until when it went to France it was one of the best divisions there. Ever since I joined the force, I have been "soldiering," and therefore my lips are closed with regard to a great many things that occurred at the front, because it does not do for a man who wears a military uniform to discuss questions that appertain to civil affairs or to military matters. Here I am free to speak, and there is one matter that I wish the Government would

look into, and especially my hon. friend the Minister of Finance (Sir Thomas White) who is looking after the dollars. It is this: While we were on those plains, for about a month and a half, forty or fifty per cent of our men were taken away from the battalions daily by fatigues. These men were employed in building huts, digging trenches, constructing railways and carrying on great public works on Salisbury Plain and quite gladly and nobly they went to work and did their duty. We all believed we were doing our bit for the Crown, for the King, and we worked night and day struggling to get the camp into shape not only for ourselves but for Kitchener's army. We left greater monuments on those plains than did the Romans or the ancient Druids, that built Stonehenge, because we built railways and useful works of that kind that they did not know anything about. However, this is the point that I am referring to particularly: Our men received 25 cents a day from the English contractors, in addition to their pay, for working as they had done. When I had returned from the front and was in England, I ascertained that all the work that our troops had done there had been done for one or two English contractors and that the Government of this country had been giving these English contractors a free gift of virtually $1.10 per day for thousands of men employed. I hope the Government will take that matter into consideration. I do not know that it has been made known to the minister but it is a very serious matter. The contractors who were paid for that work by the British Government should be made to make restitution to this Government the wages of the men who were employed there, amounting to hundreds of thousands of dollars. That is quite clear, is it not?

That is only one example, but we must know that in times of war there are conditions under which contractors and grafters will try to get into the twilight zone between this and other colonies and the British Government. We must take very great care to see that contractors of that kind are not robbing this country or robbing the British Government. I say that unhesitatingly. There must not be any roses hung over the tables where contracts are being made between contractors and the Government. Everything must be open and aboveboard. The people of this country are desirous of doing everything in their power for the war. They are giving their last dollar and their dearest sons to the welfare of the Empire, but that being the case we should make sure that no advantage is taken of the unusual conditions which prevail in war time. It must be remembered that they have rascals in Great Britain just the same as they have every place else. I was told that the Government had made an important contract with a German Jew for all the lumber that was used by the War Office in England, and that this man had got a commission and something like a million pounds. I understand that he was subsequently punished. I trust that they now have got him in the Tower or a concentration camp. Rascality of that kind must be stopped. Things like that have occurred also in other countries. In France much money was diverted by fraudulent contractors, and the same thing occurred in Russia, but that is all over now. The governments concerned took prompt action, and punishment followed. I trust that before this war is over steps will be taken to find out from the Commander-in-Chief of the Canadian forces how and why it was that our men were employed in that way, and why the money equivalent of their wages was not refunded to this Government. This is a very disagreeable thing for me to discuss, but it is one of the things that many officers and men asked me to take up when I came home. I could not, while wearing the uniform, say a word about it, because it was not my privilege until I spoke in the House of Commons. I have spoken of this question and I have done so in the hope that the Government will inquire into it.

4 p.m.

After we had spent a certain time on Salisbury Plain we were sent to France. Within a few weeks after the time that we had finished the building of these huts we were taken to France. That was all right; we were anxious to go there. Would it be occupying the time of the House too much if I were to describe the trenches in France and various matters illustrating the life of our men at the front?

Some hon. MEMBERS: Go on; go on.

Mr. CURRIE: I do not wish to occupy the time of the House at too great length. Well, the troops went over to France. Some of you may have heard stories about our troops; it has been said that they were drunkards and all sorts of things. I can now state, for the information of the House, that eighty per cent of the men in my

corps, which was no better than the others, never took a drop of liquor of any kind during all the time they were in England, or after they had left England for the front. They were all fine, clean young fellows, who had gone to France intent on doing their duty to themselves and to the Crown, and they were anxious to be a credit to Canada. When they had reached France they were sent immediately up to the trenches. They were first sent to the ancient town of Hazebrouck, where they detrained. That is right in old Flanders. It has been stated that England had two, or three, million men there when we were sent over. That is not a fact. A return brought down in the House of Lords shows that Great Britain did not have more than 350,000 effective bayonets in France when we went there; so that we were a good sized unit to be added to the British force at the front. We took our position prepared to fight for Great Britain. Before going into the trenches we went into billets behind the trenches. These billets are composed of farm houses generally knocked about a good deal by shells. There will be a stable, a stall here and there, and there will be one or two rooms in the house which have not been destroyed by shell fire. Shells are likely to arrive at any time, as some of the German guns have a long range, and their fire is effective at a distance of ten miles. The various companies of the battalions are divided amongst these farm houses, and the farmers supply the men with milk, butter, and things of that kind. These farmers are not young men. There are only old men, boys and women left at the farms, and I will say to the credit of our men that there never was a single complaint against our men by the farmers in Flanders and that they behaved themselves like gentlemen. Flemish farmers have again and again expressed to me their appreciation of this fact. The Germans had overrun that country, and you can see evidences of German atrocities which it is unnecessary for me to mention here; there were ample evidences before our eyes at every place we went. A Flemish farmer said to me: We have had German troops, French troops, English and Indian troops, but the troops that behave themselves best when at our farms are the Canadians. I wish to bear testimony here to the men of the first Canadian division with which I was, and I am satisfied 'hat the men of all the other Canadian divisions will behave themselves equally well. The trenches that we went into first were in front of Fromelle, or within three-quarters of a mile of rue d'Enfers, which is the main road running into Aubers, where the battle of Neuve Chapelle was fought. These trenches are not exactly the same as those that you see pictured and which are shown as deep ditches. The deep ditches are communicating trenches. The trenches all through this whole country are really parapets about four feet high covered with sand bags and provided behind with willow trestles or basket work so that the men can stand up close to the parapets. The reason of that is that if you dig one or two feet below the surface you are in water. The result is that the permanent entrenchments must be all built up. The men entrench themselves in this way: The troops, after being engaged in battle, are told to dig in and every man digs a little hole for himself in the ground. He carries an entrenching tool on his back which he brings out, places on its handle and proceeds, while he is lying down, to dig himself a little hole in the ground. He gets into this and in about twenty minutes every man is lying under cover and if he gets any sleep at all it is then although the guns are playing upon these parapets and entrenchments. All the work is done at night. The shovels are brought down by the engineers and the men throw up a parapet four or four and a half feet high all along their line. They place wire entanglements in front of the entrenchments. Then, behind these parapets they place little dugouts into which the men slip when they want to have a little sleep. In these trenches there is a rigid rule of discipline. The men are all required to be kept awake during the night. They are not allowed to sleep. If they do sleep they sleep with their rifles under their heads. Every man has to have his uniform and his boots on, his arms in his hand, his equipment ready and his ammunition in bandolier and belt holding 300 rounds, strapped around him. All through the night magnesium flares illuminate the sky between the trenches, and it becomes so bright that you can read a newspaper at a distance of even half a mile behind the trenches. These flares are for the purpose of illuminating that dead man's ground between the trenches, the devil strip. The patrols go in and out at night from both sides and fight in that interval where there is no law and nothing but death if any one is seen there. Along about the grey dawn, half an hour before daybreak, word is

passed from mouth to mouth—all orders are given in that way—for the men to "stand to their arms," and the men get into position behind the parapets, so that, if necessary, they can repel an attack. They then stand to arms until half an hour after daylight, when they get the word to "stand down," and then they proceed first to clean their equipment, and after that to shave and clean themselves. After they come out of the trenches, they look as clean as any of us here do, because our Canadian soldiers are endeavouring to carry out the rule of the best regiments in the British service, that every one must shave and clean himself every day, so that he may look clean and respectable; it does not matter if his clothes are dirty and muddy. The soldiers carry out this rule, because it makes for discipline, and there is no better disciplined force in the world than our Canadian soldiers who have gone over to France. You may talk about the discipline of Caesar's legions, but they never had better discipline than the Canadian troops. Discipline means the sense of duty to carry on all the work cheerfully as told, and our soldiers are all obsessed with an intense desire to do their duty and to behave themselves like men. If a soldier misbehaves himself or is dirty—it does not matter who he is—the officers do not have to take action; the men immediately bring him to attention, and in about five minutes give him enough to make him go and clean himself and behave himself in future. Thus the discipline is self-imposed and as rigid as I could make it, the men carrying out their orders to the letter. This makes life agreeable to the officers, and the Canadian people have good reason to be proud of the men who represent them on the other side at the trenches.

Now, I want to bear testimony to the excellent food that is given to our soldiers. Nothing in the way of food that they require is refused them by the Government, and this Government deserves to be thanked by them for that food. The English troops, I may say, are just as well fed as we are. I hope the men will be given to understand, as they should understand, that this Canadian Government is paying for everything supplied to our men at the front. Some weeks ago, at the opening of the session, the Minister of Finance stated that Canada was paying for everything in connection with our troops. That is a glorious idea. Some people, not only Canadians, but some who are not Canadians, had an idea that we were not paying our share in that respect, that the British Government was paying and feeding our men. At the front, if a soldier sleeps in a barn, his officer has to give a requisition to the farmer that this soldier has slept in his barn for so many nights, because, as we are in a friendly country, everything has to be paid for and is charged to us. All the supplies of our Canadian troops, ammunition, food, and everything else, is paid for by us, and that condition of affairs should be made known more publicly in Great Britain than it is at the present time. I have been told many times in England and in Scotland, and the people there know, that our Canadian soldiers are receiving much larger pay than the English Tommies. The English soldier gets 1s. 6d. a day at most; the non-commissioned officers, of course, receive higher pay and the English officers get much higher pay than the Canadian officers, notwithstanding that some members would like to see the pay of the Canadian officers reduced. The English officers also get a larger allowance than the Canadian officers, but the English Tommy gets only 1s. 6d., whereas our men get 4s. 6d. per day. Over in England the wealthy man is putting up the money required by Great Britain and Ireland for this war. He is paying taxes and buying war bonds. He is called the "British taxpayer," and he has been a notable factor in the history and development of Great Britain since the time of the Magna Charta. This British taxpayer admires the Canadian soldier; he has nothing but praise for the brilliant qualities in action and the bravery of the Canadian soldier, but he has a haunting idea that he is perhaps paying a little too much for our troops as compared with his own. Many men have asked me: "Colonel, do you not think it is unfair that the Canadian soldier should be getting four shillings and sixpence a day while our men have to serve for 1s. 6d.? I was not sure myself, until the statement was made by the Minister of Finance here, that Canada was paying all the salaries of our men. That is not generally known in Great Britain, and I think that the sooner it is known within the walls of the British Parliament by some notable man there or by some member of the Government there, that, so far as Canada is concerned, all the expenses of our troops at the front are being borne by us, the better it will be for everyone concerned. That fact

sould be made known for many reasons which I do not wish to discuss at this place and time. This being a fact, the position of our army at the front is to some extent different from what it is generally supposed to be, and in view of the fact that we are paying for everything for our own men, Canadians should command our own men and we should have some representation upon the committee that deals with the supplies and the handling of our troops in Great Britain. We are operating along with the British troops and the Indian troops, and the Indian troops are in exactly the same position as the Canadian troops, because India pays for everything connected with her own troops. India does not hesitate to have a say in matters connected with her troops and she has a representative in the British Cabinet, seated at the table with the British ministers, discussing Indian affairs and this war. We are in a slightly different position, and, so far as I am concerned as a member of this House, I bring this matter to the attention of the House, because I think we are amply justified in asking that we may appoint a committee in Great Britain representing this Government that may be able to control not only the expenditure of money in connection with our troops at the front, but promotions, appointments, and other matters of great importance. The question of promotions is a rather troublesome one. The British officers in command of the troops consider that they have all the say in connection with the promotions in our troops, whilst the Army Act places all such matters in connection with the troops in the hands of the Government of the colonies that send armies to assist the Empire, stating that they have a perfect right to have their own rules and regulations in reference to pay, appointments and promotions, provided they pay the troops. It is very disagreeable for a young man who has served continually during the war to find out that his promotion is held back when officers not at the front have been promoted. Perhaps he may be entitled to a majority or to be second in command in his regiment owing to casualties which have occurred. His promotion, however, is held up for weeks. I am sorry that the Minister of Militia is not here, because I have received several letters from the front to the effect that, whilst some who have started as lieutenants in this country and who have not gone to the front at all are now commanding regiments, many young men who have served at the front, a number of them graduates of our Royal Military College, still remain without promotions, whilst civilians at home are without experience, are aspiring to the command of brigades and divisions. Something should be done by the minister to bring before this House measures that would adjust this, so that these men may know that their promotions are being promptly looked after. Because, as we all know, what is everybody's business is nobody's business and is never looked after. The British Government—the War Office—does not want to take the responsibility in this matter; and I suppose there is not an overwhelming desire on the part of the officials here to undertake the responsibility of matters of promotion abroad. But these are vital matters in the trenches and should be attended to.

I have spoken of the food, now the clothing of the men—it could not be better. It is first-class clothing, warm blankets, and all kept clean. Behind the lines, established in the breweries—that country is dotted with breweries; there is one at every corner—are great baths where at least 100 men can bathe at once. The result is that they can run off three or four battalions a day, so that the men have a nice warm bath once a week. I mention these things because I am sure that hon. members are interested in knowing how our soldiers are cared for.

Now, it might be fitting for me to give a description of the great fight in which the Canadians so distinguished themselves. And when I say "Canadians," I want to include all the men in our ranks who came from the Old Country. Every one of these old countrymen who wears the strap on his shoulder "Canada" is as good a Canadian as I am, a native-born. And he is anxious to be known as a Canadian; there is no desire on his part to be known as an Englishman, Irishman, or Scotchman. He belongs to the Canadian army and is a Canadian, just as an Irishman in an Irish Highland regiment likes to be considered a Scotchman.

Mr. GRAHAM: They have to have them to get up a good Scotch regiment.

Mr. CURRIE. These is something in that, but in the army there is no question of nationality. All our men are Canadians. And as to other nationalities there is no distinction. I had with me a number of

Irishmen and to one I gave the military cross for his bravery, and he deserved it. He wore kilts like the rest. I had several Englishmen, and nothing too good could be said of them. I had some of our friends from Lower Canada—there were a number of them with me. No braver men or better troops ever stood in shoe-leather than the French-Canadians who were with the First Division. When you fight alongside of men and see them press on, fighting with their hands, and bayonets, and rifles, and all standing to it without quailing, you realize the merits of those men and know the stuff the real Canadian is made of. The French-speaking Canadian militia has had a glorious history. Think of that corps in the campaigns of Montcalm and Wolfe. We know that when Canada was handed over to the British Crown the Canadian militia did not surrender, but marched out with drums beating, colours flying, matchlocks burning, and with all the honours of war. And the men who are fighting on the front to-day, men alongside of whom I fought, the men of the Royal Highlanders of Montreal and the Montreal regiment, and some in my own regiment, were worthy successors of those brave men who tried to defeat the British over a hundred years ago. It makes me very tired indeed when I see the efforts made to stir up strife in this country with the old weapons of the seventeenth century. These men at the front forget all these things. Those here who are trying to stir up trouble should go to the trenches for at least a few days. There they will see the wild Orangemen of Ontario dying, hundreds of them, alongside their comrades from the province of Quebec. And what for? For the very language and ideals over which there is trouble in this country; for the liberties of France; for the rights of that French-speaking people, the Belgians; for the integrity and independence of Belgium, "the beloved daughter of the Church." All these ideas of race and religion have been thrown into the sea by the men who have gone across; there is nothing of that among them. When a man has been under fire for twenty-four hours he reconciles himself to death. And he has a great respect for the man alongside him. The devotion of those men dying there should be an example to us in this country. In the shattered churches behind the lines, you find priests of the old faith praying there for these Orangemen and the rest of us in the trenches, praying that we may be safe and victorious. That is an example for the whole world, and surely it should put an end for ever to strife in this country. I would urge those who seek to stir up trouble to go to the front and see what is taking place there. You will find the bodies of these same Orangemen that are derided by some here, and about whom such a row is raised by agitators, buried in cemeteries the walls of which have been thrown down, buried in consecrated ground; no question as to religion there in the presence of the Great Tragedy. And this Great Tragedy is not enacted on that embattled ground alone; it is here, at our doors, it is in this very chamber as real as among these men in Flanders—unless they win. Surely we have something else to do here than to stir up strife. It ill becomes any man of military age to carry on such an agitation among our people. Where the fighting goes on we come to know each other. And I can assure you that, so far as those are concerned who seek political preferment by means of such agitation, the men who have fought and learned lessons of toleration in the trenches—for they have votes—will take care of those agitators.

Perhaps the House would desire to hear something of the battle of St. Julien, and it may not be amiss for me to put on record a few words concerning it here. For no doubt future historians will take up this Hansard to see what one who was present had to say about it.

The Canadians took over the French trenches immediately east and north of the city of Ypres, in Belgium. I may explain that all Belgium is gone except a strip about twenty miles wide and thirty miles long—that is all that is left to the brave King Albert and his people to fight in. The rest is in the hands of the Germans. But it will not be always thus. The last city in Belgium is the city of Ypres. The Allies had thrown around it cordons of their troops and had driven the Germans back about six miles all around the city, forming what they call a salient. On the extreme north, along the canal to the sea the Belgian troops were holding. Then came the French, the "Iron Division" from Nancy, whose lines ran along the northeast section of this salient. Then came the Turcos, native Algerian troops, and brave troops they are. I do not say they were not justified in fleeing when the gas came. The French left their trenches, and we took them over, having a position between the Turcos and the British troops, who held the line southwest to Labasse.

Strong fighting had taken place there. The parapets were low, and many a German was piled up in these parapets and in the mud under foot, and almost every inch of the ground behind us was covered with the graves of the brave French defenders of that section and the Germans killed in trying to take the ground. Honourable members sitting here, I think, have little idea of the conditions under which our troops are fighting. Death is in the air every moment. Night or day, if a man raises his head above the parapet, he is liable to receive a rifle bullet. Every five minutes a shell will hit the parapet or the trenches. Of course, everybody is placed so as to avoid danger as much as possible, but not a day passes when there are not one or two casualties, sometimes three or four, in every Canadian battalion, as you will see by the lists in the newspapers. And we were giving it back with interest to the Germans across the hundred yards of space in the same way. Four days after we had taken over the French trenches, on the 19th of April, between five and six o'clock in the afternoon, we noticed a tremendous rifle fire breaking out along the line occupied by the Turcos. Then we observed a huge cloud of greenish-yellow smoke, like the smoke of burning straw. The riffe fire increased in intensity, and the shell fire became something terrible. The German guns gave what the newspapers call "a curtain of flame" on the forward lines of the Turcos' trenches. One of my companies was in the garrison of one of the villages behind that sector, St. Julien. When I first saw that the attack was coming, I was at the front line in company with Adjutant Dansereau, who is a native of Quebec, and one of the bravest men that ever stood in shoe leather. When we noticed the smoke and the intense firing, we immediately came to the conclusion that a tremendous thrust was being made against the French line at that point. We hurried back into the village of St. Julien and ordered our troops there to stand to. Shortly afterwards we noticed the figures of the French Turcos coming across the fields towards the village. Adjutant Dansereau, with a number of other young officers—Guy Drummond and Major Noseworthy among them—ran out to meet and to stop the Turcos. Dansereau rallied about two hundred of them into my trenches; the others were rallied into the trenches in front of the village. Drummond and Noseworthy fell gallantly, stemming the retreat. The Turcos told us that the Germans had suddenly turned a stream of gas on their lines, which, with the wind blowing about four miles an hour, quickly crossed the intervening space of 100 or 150 yards which intervened between the trenches. The opposing trenches are never more than 400 yards apart; indeed, the intervening distance is seldom more than 100 yards. When the gas first came the Turcos stuck to their trenches, and fully twenty per cent of their men died in their tracks. You can easily realize why so many of these poor, ignorant, coloured troops were so panic-stricken that they ran. Those who did not run were shot by machine guns or struck by shrapnel as they tried to make their way out of the trenches, so that only a remnant of their brigades reached the village. I desire to bear testimony to the courage of these men, even though they did retire. Out of the 200 men who were put in the forward trench at St. Julien, not more than sixteen remained alive after the battle; and the sixteen became prisoners of the Germans. You will see, therefore, that it was not lack of courage that caused the Turcos to retire. Well, the Germans were coming on, and it was up to the Canadians to fight a rearguard action. I am speaking now not as a soldier, but in my civilian capacity; so I can give praise where it is due. I am sure, therefore, that a word of praise for General Turner will not be out of place. He is an officer in whom we Canadians all have confidence; and he is one of the bravest men in the British Army to-day. He is a Victoria Cross man, and a true soldier from the soles of his feet to the top of his head. General Turner immediately grasped the situation. The 10th and 16th battalions, which were in what they call brigade reserve at Ypres, formed up in the dusk of the evening west of the village of St. Julien, fixed bayonets, ported arms, and started to drive the Germans back. They drove the Germans back nearly a mile, many men falling in the engagement. No braver deed is recorded in the annals of the British Army than the charge of the 16th and 10th at St. Julien wood. Many of the Germans, who threw up their hands, were cowardly enough, after the troops had passed over, to shoot our men in the back. Between 60 and 70 per cent of the charging battalions were wiped out; that is, were killed or wounded. I have not time to mention the bravery of the officers who fell during that fight. The regiments dug in at the edge of the wood, and then the 7th hurried up to form a link between the villages

of St. Julien and the extreme point of the triangle held by the Montreal Highlanders and by my battalion. The first brigade was hurried up from west of the canal in reserve, and they helped to drive the Germans back and reconstitute the line. We stopped the rush that night. I understand that in the rush five army corps were in front of us. One of my men who had been a prisoner, but who, having lost his eye, was allowed to return, told me that six double lines of Germans were dug in in the fields behind the front of our lines. It was well known that there were 250,000 Germans in front of the Canadians in that fight; the odds, therefore, were about 20 to 1. That the Canadians were able to stop the rush of the Germans speaks well for their bravery. There was no hesitation, no question as to whether or not the force of the enemy was overpowering. It was a rearguard fight, and the Canadians held their ground because there was nothing between the Canadians and Calais. If the German army had broken through, they would in two days reach Calais. It was necessary to sacrifice men, and we did not hesitate to do it.

On Friday the Germans gassed the front line again. They had come to realize, however, that the Canadians would keep on fighting like savage Indians, and would not throw up their hands as long as life and ammunition lasted. One wounded man in a ditch would hold up a whole battalion of Germans. Wherever they crossed bayonets with our men, our men overpowered them, and again and again the Germans were countered and driven out of our trenches. On Saturday morning they gassed us again, this time the attack being directed against the Montreal regiment and my battalion, which held the extreme angle of the salient. We were surrounded by Germans on three sides. Possibly 1,500 guns were turned loose on our sector; a shell fell about every ten feet. Out of forty-seven men who went into a small trench about 100 yards to the left of where I stood, only seventeen men came out after fifteen minutes shelling; the rest were killed by Jack Johnsons—great shells that fill the air with black and green smoke so thick that you could almost cut it with a knife. A number of the men applied wet bandoliers to their noses and escaped the gas in that way. We were not then supplied with respirators such as they have now. It was but the third day of our experience with German gas. In spite of the gas, the men held their line until late in the afternoon, when support came. On Friday evening Lt.-Col. Hart McHarg, who was in command of the 7th, got into a broken-down house from which the Germans were distant about twenty feet. While making an attempt to get out of the house he was shot and killed. Many other brave officers fell that day. On Saturday morning the Germans got a piece of our front trenches. They paid dearly for it. On Saturday afternoon the English troops came up and relieved us. I want to bear testimony to the extreme courage and bravery of these new British troops. They were not regulars, but Kitchener's army. They were fresh from England, had never fired a shot in anger in their lives, and did not know what the inside of the German trench was like. They took over our trenches, and their battalion lost possibly 50 per cent of its members. showing you that, with proper drill and discipline, the British troops are the equal of any troops and can hold any troops in the world. That makes us all feel satisfied that before this war is over we are going to have great and glorious victories.

I shall not refer to the few of our battalions who came out further than to say that I do not think any of the Canadian regiments could muster more than three hundred men out of the eight hundred or nine hundred with which they went into that fight. All through the fight our brigadier was with us and with him the gallant officer who was his brigade major, the son of the Minister of Militia, a young man who is simply one of the bravest of the brave—there is no question about his ability as a soldier and his bravery. His commanding officer, General Turner, had to take the cooks and all the men he could scrape up at his headquarters to fight the Germans, who were within 150 yards, the first evening. A young officer from Winnipeg, McDonald, was shot in the brigade quarters by a shell that came into the room and the house was burned—not a particle of the barns and buildings where General Turner had his headquarters was left. Still he hung on, although we all thought he was killed. Our brigade got out about four o'clock on Monday morning and went into action again at eight o'clock the same morning, each of the battalions about 300 strong. Mine had 22 unwounded men and only two officers, myself and my second in command.

Something may have been said and has been said, there has been some gossip about my conduct at the front. I want to state to you gentlemen present here that

all through my career as an officer I constantly had in view the fact also that I was one of the members of this House and that I should comport myself in accordance with its dignity and honour. Far greater responsibilities rested upon me than upon anybody else there, but I never found the fact that I was a member of Parliament had anything at all to do with assisting me in any possible way, because I did not presume upon that; I took very great care that I never presumed or asked anything for myself from any person; neither political favour nor military favour of any kind have I asked for myself. There has, as I have said, been a little gossip. The men in my regiment and my officers know that when a battle takes place and I am there with them it is my duty to be there to lead them, rifle in hand; and after the battle is over I am the man who knows whether they comported themselves with bravery and dignity or not. The man who knows whether I did my duty there is Brigadier General Turner, V.C., who was with me all through the fight, and who shared the same dig-in with me during part of the remaining twelve days of the battle when we were in the thick of it night and day. When I was invalided to England he was good enough to ask for four days more leave for me. I got six days to start with and he was pleased to give me four days more, and he wrote me a letter which I think it is only right, in justice to myself, I should put on record here as it will show that the words I have spoken to you are true. This letter was written on the 10th of May, virtually on the battlefield. The general was in the thick of the fight at Festubert a few days later. General Turner does not hesitate to go in with his men. He does not ask any officer or man in his brigade to do anything that he was not willing to do himself. That is the kind of man he is. He is an opponent of mine politically, so you will understand that there is no scratching of one another's backs, and no politics in this. He wrote to me:

Dear Colonel:

Leave has been extended for four days as requested.

The process of reorganizing is a heavy one.

Your battalion will have lost its identity as the 48th Highlanders.

In forwarding recommendation for "Mention in Despatches" it has given me great pleasure including your name for the valuable services rendered at St. Julien.

According to medical officers and my own opinion you are entitled to a good rest or suitable staff employment.

You have done more than called for as a regimental officer.

With best wishes, believe me,

Yours sincerely,

R. E. W. Turner.

General Turner, in his modesty, has not added the words letters "V.C." after his name, as he was entitled to do. That letter speaks for itself. So far as my conduct is concerned, there is nothing to be ashamed of there. So far as the conduct of any Canadian soldier in the Canadian army that took part in that battle is concerned there is nothing to be ashamed of as far as I know. I am speaking for them all. If anything has been said or done since to my injury there are only two men who stood between me and any decorations that might have come to me, or any "mention in despatches," and these were General Alderson and the Minister of Militia here. One was six miles back of the line all through the fight, and the other was attending to his duty in Canada, several thousand miles away. I choose to take the verdict of the man who stood over me in the trenches and the men that fought alongside of me.

We will now pass from what is a very disagreeable thing for me to speak of a personal matter, because a soldier has only his honour; you get nothing but hard knocks out of war and a little honour; so let us turn to the question of the war itself. We have now some 250,000 men ready for the field, and we are asked to get more men and yet more men. There are three things we will need: men, money, and munitions, and then more money and munitions. Of men we have now 250,000, and I often wish that this country had been blessed with national service before this war broke out. Then there would have been no heart burnings. The French people have national service, and you have no idea of their attachment to their country, and the excellent way in which that service works out. In France, when war broke out, every man, woman and child in the state was mobilized for war. The man whose place was behind the desk at the bank was left there, that was his place. The man who was to till the ground was left there. The only son of the widow, the only hope and support of a widow, or the bread winner of a small family, he was not taken off to the war. Places were adjusted for everybody, and there were no qualms of conscience in anybody whether he should don khaki or

not; or whether we was of age or not, whether he should go to the front or not. I find in this country men of my acquaintance of my age who have never served in any military capacity whose consciences are disturbing them constantly because they are not at the front. Their place if they led sedentary lives at home. There is a great difference between national service and conscription. Under conscription the names of the men in the community are taken and put in a hat. If twenty men are needed twenty names are drawn out. It used to be the custom with conscription, and I do not think any law has been passed to change it, that if a rich man's name were drawn he could hire a poor boy a substitute to take his place. That form of conscription bore very hardly on the poor. But in France, where they have national service, the mother who rocks the boy in the cradle knows he has to fight for France and she glories in that. Many of them told me last year they were glad their boys would be old enough and able to take part in the war. Talk about their conduct in this war! Our ideas of the French people are in many cases entirely erroneous. The ideas put in books by novelists are often contemptible. There are no finer people, no more casual people, no more cool and collected people under danger—and I have seen them in the fight, in the middle of it—than the French. One of our officers, a Highlander, and a very brave man, who was wounded the other day, said to me: These Frenchmen in front of us carry on this battle just as casually as if they were working on a railroad job. Anybody who has seen them fighting knows that there is no chance in the world of the Germans winning, so far as fighting is concerned. The social qualities of the French and their discipline are very good. They were holding nearly 400 miles of these trenches I have described to you while the great British Empire was holding something like 35 miles. So you can understand the work and labours they had and the difficulties with which they had to contend. When we got into trouble their brigades marched to our assistance, took their places and helped us out and helped to finish the big battle of Ypres, which ended in a victory for the Allies, because it stopped the great German rush on the west front for a year. They have national service in France. If we had had national service we would have had no difficulty now; everybody would have known that he had his place, and then there would not have been any qualms of conscience in the breasts of those who are now wondering if they should not get into khaki because I or somebody else has done so. They would have their place, and their proper place perhaps would be on the lines of communication; perhaps behind the men in the trenches, or perhaps legislating here. The legislators in France have to attend to their duties, even if men are fighting at the front. We must get the 500,000 men, and I feel satisfied that, in view of the martial ardour of the people of this country —and I am speaking now more particularly of the Canadians, who number over 80 per cent of the population—we will get them; there is no doubt about that. Even if we have to take action, even if we have to adopt some form of national service, I think 90 per cent of the people of this country would say immediately, "Amen, let the older men take our places and let the younger men go." Why should a middle aged man with a large family go to fight in this war, and leave the young fellows who have no ties to stay at home? I received a letter the other day from a man at the front who is 53 years of age, and who has a wife and twelve children at home, and for over 12 months he has been under fire in the trenches. It is very unfair that a man of his years and position should have to go when there are hundreds of young men in the country quite capable of bearing arms; and it would be the best thing in the world for them.

We must get these men as quickly as possible. The nation that has the greatest number of men, the largest number of guns, and the greatest amount of equipment at the front, is the nation that is going to win this war. We must not say: We cannot do this, and we must not expend this or that money, because the war is likely to stop soon. Do not believe, gentlemen of the House of Commons, that this war is going to end in six months or in a year. The Germans have won so far; bear that in mind, and whilst they may want peace, and whilst it would be to their interest to secure peace at this moment—and nobody knows that better than the Germans themselves—we should see to it that they do not get peace. What has kept us back was our lack of preparation. Germany has got 65 per cent of industrial France; she has the coal mines and the iron mines; and she has Austria, for Austria will be the lamb that will lie down inside the German lion when this war is over. There will be no Austrian emperor then; take that for

granted, even if Germany is beaten. Then Germany has the Balkan States, and there is no doubt that she has won great territory. But in the language of Joseph Chamberlain, are we down-hearted? Not a bit of it, because history teaches us that we must pass through at least two years of muddling in a great war before the tide turns in our favour. Those of us who read history know that in the war between the Parliament under Cromwell and the King that at the end of two years Pym was dead, Hampden was killed and all the great leaders of Parliament of that day were either dead or killed. Very few besides Cromwell and Milton were left, but the tide turned at the end of two years, and then there came great victories which won the parliamentary liberties that we now enjoy and cherish. Take the Seven Years' War. During the first two years of that war on the continent of Europe the battle of Kolin was lost. There was also the convention of Closterseven, the loss of Minorca, the defeat of Braddock, the fall of Fort Necessity. It looked as if the end were near. The French had everything. Then the great Pitt came and there was victory from which Great Britain emerged stronger than she had ever been before. She secured the Spanish and French colonies, among them Canada, and for the first time obtained absolute command of the seas. Reverting for a moment to Cromwell, I may recall that at that time were passed the Navigation Laws, and to-day they are reading the preamble of those navigation laws in the House of Commons in England, and wondering why they ever gave them up. Adam Smith says they were the wisest piece of legislation ever enacted.

Again, take the Napoleonic wars. The first two years secured for Britain the command of the sea, but there was mutiny at home and in many cases defeat abroad, the same as had happened in the previous wars. Pitt the Younger succeeded in getting command of the sea, cabinet after cabinet was formed, and coalition government after coalition framed by that great statesman, to the end that the country might succeed. Nevertheless, history shows that during the first two years nothing was done apart from securing the command of the seas. Then the tide turned and victories came. Need I make any further reference to history? The tide is turning now so far as we are concerned. It has turned in Asia. The Russians have captured the great city of Erzerum, and the keys of Constantinople are always on the south side of the Bosphorus. They have always been there, and the Allies should be thundering at the gates of the city of the Turks before many months have elapsed.

So far as we are concerned, the fight has to be finished on the western front, and Canada must be there. We must have arms, we must have men, but in the meantime we must not hesitate to establish great arsenals here to manufacture rifles, guns and munitions. We will need them all. It is a great mistake for us to spend our money abroad; it is a great mistake for the Empire to send its money abroad for munitions. There would have been no question at all as to the value of the English pound if everything possible had been done to bring about the manufacture of munitions in Britain or in the Empire. Why, the German guns that fired shells at my soldiers and myself day after day in Flanders, were made out of Canadian nickel and chrome steel. The rifles that fired at us had barrels that were made out of Canadian nickel steel. Every one of them was stamped "nickel steel," but they should have borne the motto "mined in Canada." This country has virtually the monopoly of nickel in the world. The French own New Caledonia, where there is nickel, but we are the only people in the world that have chrome ore in large quantities at the present time. There are loads of it in the province of Quebec, and it requires chrome and nickel to make the best electrical steel. The best guns that are being used in this war are not those of Krupps, but those of France and Austria, and the reason why they are the best is that the steel of which they are made is chrome nickel steel made by an electrical furnace. We have all the electricity we need in this country; we have the nickel, and the chrome, and therefore we should go into the manufacture of arms and munitions on a large scale. The result would be that large amounts of money would be made in this country, and Canada would become great and prosperous.

As I have said before, when this war is over, we should see to it that we have made it pay, the same as Pitt made war pay. I think the consensus of opinion in this House of Commons is that everything must be done to bring about that happy state of things. After the war broke out possibly 75 per cent of the factories in England were closed and the people were walk-

ing the streets. Before I left England last year I took occasion to visit Woolwich arsenal, and I saw the operations connected with the manufacture of guns and shells and fuses, and of all the articles that are needed in war. I spent some time there, and took complete notes of every operation in that connection. I have a knowledge of machine tools, and of automatic machinery, so that I apprehend everything that was done in that arsenal. And let me say that I saw nothing done there which the people of this country could not do just as well. We have workmen just as able, and engineers that will hold their own with the engineers at Woolwich.

We must endeavour before this war is over to put ourselves in a position to reap every advantage from our great natural conditions. What a great thing it would be if this country were to become the greatest munition and arm producing country in the world. We have a monopoly of the raw materials that make cannon. To make cannon requires a certain amount of nickel, and also a certain amount of chrome, otherwise the temper of the metal will not last when the gun is fired quickly. We are spending enough money on this war to build these great plants for us and operate them. Now is our opportunity. If we let it pass it may never come again. If we deprive the Germans of our nickel, their predominance as an arm producing country will cease for ever. We will not be troubled with so many wars. That is the whole secret of it. In all these localities we should be doing everything we can to bring about the establishment of works of this kind. I know that the Government have had a great many things to contend with and that they cannot do everything. I am speaking freely because, as a result of this great war, we have thrown our text books on economy into the fire and we have also thrown away a great deal of our politics.

I think that some steps should be taken to inaugurate a policy similar to that carried out by Mr. Lloyd George in the old country. When he found that there were only three or four industries in Great Britain making shells and guns, and that they were trying to " hog " it all, he realized that it was necessary for him to get busy and increase the output of munitions. He called on the shoemakers, the cloth manufacturers and the steel makers and he said to these people: "We want you to make material for the army." They said: "We have not any money to go into the manufacture of these articles." "Why?" he asked. They said: "We must have money with which to get machinery; the machinery that we require to make that stuff will be of no value after the war. Times are hard, we have no money, we have been fighting the Germans in the matter of commerce for years and we are without funds for the purchase of new machinery." That was true. He said: "You name what you want and the Government will provide you with it; if you want machinery for making munitions the Government will give you the capital that you require." He went to the manufacturers of clothing, of rifles, of shells, and made the same proposition to them. Hundreds of factories were established in that way and to-day they are all going and prosperous. They are making large returns on their capital. Now, Mr. Lloyd George goes back to these manufacturers and says: "Well, gentlemen, you have made enough money to pay for these machines, for which the Government advanced you capital, you have got everything in first-class shape, you are making big profits and now I think the time has come when the Government should go into partnership with you and take 25 per cent of your earnings." He is therefore quite justified in doing that. Something of that kind ought to be done in this country.

The day has gone by when we can stick fast to the old policy of letting everybody look after himself. England has advanced one hundred years in that respect during the last two years. Take it from me, if you had mentioned in England three years ago that there was a possibility of the Government taking over the railways of that country you would have been laughed at. you would have been told that there were so many interests at stake that nobody could get legislation of that kind through the British House of Commons. Yet, in one night the Government took over the railways of Great Britain and, with the exception of one or two small branches, they are now all under Government operation and control. The Government have gone behind the munition manufacturers and they are going to go behind other kinds of manufacturers. Read the debates that are taking place in the English House of Commons almost every day and see what members of Parliament are saying about what they are going to do after the

war. They tell you that the Government are going to arrange banking
5 p.m. facilities, that they are going to stand behind their own manufacturers and that they are going to use every means in their power to control the commerce of the world. That is the proper policy and it is time that we should consider a policy of that kind.

I have talked to the House possibly long enough. There is nothing, as far as this war is concerned, that interests us more than the future. I see a glorious future arising from this war for this country and for the whole Empire. No longer will the British Empire be regarded as a bundle of sticks, a collection of shreds and patches. You will see, before this war is over, representatives of all the colonies having seats in the House of Commons; I have no hesitation in saying that. But, there is plenty of time for that. The war is not going to be over to-morrow. We must not be in a hurry. We must do everything in our power to achieve the victory which we all hope for. If necessary, this House and this Government should take steps to assure the Mother Country that whatever can be done to bring about victory and the consolidation of the Empire we are prepared to do. Let us all pray that the day will come when we shall have, not an inglorious peace, but a splendid victory crowning our arms and sanctifying the sacrifices of our soldiers and people, when we shall have a great, free, united, happy and prosperous Empire presided over—as the great Pitt prayed for—by a pious and patriotic King and Emperor.

Mr. E. W. NESBITT (North Oxford): Mr. Speaker, as this is the first time I have spoken since you have occupied the Chair, I would like to congratulate you on your rapid elevation, and to express the hope and belief that you will discharge the duties not only with honour to yourself but with credit to the high position which you occupy. I also desire to congratulate the Government on the choice of a Deputy Speaker. The hon. gentleman who occupies that position (Mr. Rhodes) is a very strong personal friend of mine, and I think that both sides of the House will be satisfied with his discharge of the duties of the Deputy Speaker.

I would like to congratulate my hon. friend the Minister of Finance (Sir Thomas White) on the very lucid and brief manner in which he placed the Budget before the House. I also desire to congratulate the gallant colonel from North Simcoe (Mr. John A. Currie) who has just taken his seat. I listened to his speech with a great deal of interest, because it gave us a great deal of information. But, as far as the political end of it is concerned, it will not be necessary for me to make any extended remarks. Whether I could derive any advantage from such a reference, if it were necessary to make it, is another question. But, I must congratulate him on the tone of his address and upon the way that he delivered it. As far as his prophecies are concerned, I am neither a prophet nor the son of a prophet, nor an admirer of prophecies, and therefore I will not attempt to answer that portion of his remarks, because, if we live long enough, we will all see, when the war ends, how the country will work out the problems which will confront it. I have no hesitation in expressing the belief that Canada will take care of herself.

When the war first started, I confess that the men of this country did not realize the seriousness of the situation. I believe that a great many people, especially the men, thought that the war, being over in France, or Flanders, or Russia, it did not touch us as closely as we now realize it does. Not so, however, with our women. Our women from the very first put all their energy, not only into providing comforts for our own men, their sons, brothers and fathers, but helping in Belgian Relief and Red Cross work. These women in many instances were better and more systematically organized than a great many movements, even under the Government supervision, that we have heard of.

I am not speaking now of this particular Government. The work that these women have been doing for the men at the front and for the relief of the suffering caused by this great war has been admirable and their organization has been splendid. Some of the newspapers have recently been agitating that the women should take the place of men for manual labour. Personally, I thank God that our women have not so far found it necessary to do manual labour, and I sincerely hope that it will not be found necessary in this country at any time for them to do so. During last summer as I travelled through the country I am sorry to say I saw some farmers whose wives and daughters had to assist them in the removal of the crops, and I have no doubt that owing to the number of men who have been taken away on account of this unfortunate war, the same thing will have to be done to a certain extent in the future; but some of the news-

papers are agitating that women generally should undertake manual labour. I hope that will not be necessary. I think that for the last two or three months the people of this country have fully realized what they have to undertake. I believe that they are prepared not only to furnish the men necessary for recruiting purposes, but to pay whatever is necessary for the proper support of the army that Canada has to send to the front, no matter what the size of that army may have to be. They are ready, as the Minister of Finance has said, to economize and sacrifice to a certain extent; but they are looking to the Government for an example in the practice of economy. If the people have to economize as individuals, there is nothing that will make them so sore, if I may use the word, as to see what they consider wastefulness on the part of this Government. Now, there may be some misunderstanding, but questions are asked us every day even with regard to the expenditure of the Militia Department. Many men ask me, on the train and off the train, at home and away from home, various questions which I will attempt to repeat. They ask me: "Why is it necessary for an outside magistrate or some such person to swear in a recruit when the officers are there to swear him in? If it is necessary, are these outside men paid for the work?" They ask me: "Why is it necessary to have an outside doctor to examine the recruits when there are doctors belonging to each battalion? If it is necessary, are these doctors paid for the work?" They ask me: "If two or three men are recruited in a village, are these men paid from the time they are recruited, from the time they are taken away from their work? Are they paid in full while they are sitting around the village shoeshop or the village blacksmith shop doing nothing, not even drilling, or are they paid just the difference between what they would earn if they were not enlisted and what they earn as recruits?" I know that men are getting very scarce in some of the towns throughout Ontario; I do not know as to the other provinces. Is it necessary that these men, before a battalion is filled, should be left doing nothing in the villages? What benefit do we get in that way? Many people also say to me: "Is it necessary that these battalions should be kept so long drilling instead of being sent to camps with other battalions so that they can be taught the methods of warfare as it is carried on at the front?" I am not complaining about these things; I am simply stating what people ask me and what I cannot answer. It is for the Government or for the Department of Militia to answer these questions. At the same time, the men who ask these questions are willing to support the Government to the utmost extent in recruiting; they are willing also to pay to the utmost extent to bring this country and this Empire out victorious in this war.

As I have stated, it is up to this Government to set the example in economy. In looking over the estimates for the year, one cannot help feeling that during the last four or five years, since 1911, there cannot have been such improvements made in the public service that the ordinary Estimates should have been increased from about $87,000,000 in 1911 to about $158,000,000 in 1916. Just as the manager of an institution is responsible for any increase in expenditure, so the Government must explain the reason of this increase and tell us why the Estimates cannot be decreased without materially affecting the service that will be rendered to this country. The Government can certainly make a decrease in the Estimates of the Department of Public Works. I think it is very bad policy for the Government of a country, just as it is for the management of a business, to put in the Estimates items that they do not intend to expend. Of course, it may be a good thing politically. I myself am a poor politician; that is, I do not believe in taking political advantage by placing such items in the Estimates. If the Department of Public Works has no intention of erecting these buildings and constructing these various little public works, such as wharves and breakwaters, why does the Government put the items in the Estimates? It must have been for a political reason, for the purpose of convincing a section of country that benefit to them was intended by the construction of some public work at the general expense. There can be no other reason. Now, that is too bad. My hon. friend from North Simcoe (Mr. Currie) has been telling us about the unity of this country and about doing away with politics. In the face of that it is too bad that the Government should put in their Estimates appropriations that they have no intention of spending, as acknowledged by the Minister of Finance, to the extent fo $23,000,000. There is no possible reason that I can see why the Estimates should not be cut down by $35,000,000 more, for

that amount of saving could be effected without injury to the public service. The Government itself should set the example if it wants the people to economize. Let us look for a moment at the expenditures that have been incurred. In the first three years of their tenure of office the Government had surpluses aggregating $133,000,000. The Minister of Finance now tells us that at the end of the year the debt of this country will be $580,000,000, an increase of $243,000,000 over what it was. So that, with increased debt and expenditure of surplus, the Government have done away with $376,000,000 in something less than five years. And what have they to show for it? The Minist r of Finance may tell us of some things that they have to show, but he could not possibly make the list such as would justify this expenditure. Why, the post office expenses have jumped from about $7,000,000 or $8,000,000—I have not the exact figures before me—to $17,000,000 or $18,000,000. It is quite true that the Government has extended rural mail delivery, and for that I give them credit, but the expenditure on rural mail delivery would be only a drop in the bucket of this great increased post office expense. That increase is absolutely absurd. Now, if the Minister of Finance does not intend to spend the $158,000,000 represented by these estimates, why cannot he strike out those amounts he does not intend to spend, as we come to them in committee? He asks us to unite with the Government in not playing politics and not talking politics. Why not, then, be honest with us and with the people and state openly what expenditures are to be made? I believe that from their estimates for public buildings and other similar works, the Government could strike out items aggregating $7,000,000 without doing a particle of harm. Then, in our expenditures on public works to be charged to capital account, other great reductions could be made. They need not stop such great works as the Welland canal and the improvements at St. John and at Vancouver. Let these works go on to a limited extent. The Government need not fear that they will throw men into idleness, for the general labour market will take all the men that can be released from public works. While I know that my friends on this side are as guilty as those on the other side in regard to the Hudson Bay railway, certainly there is no pressure this year, so far as I know, for the expenditure of great sums of public money on that work.

Now I come to the revenue side of the account. The minister has shown us, and I am glad he was in a position to do so, that the revenues have increased very materially during the last six months. But I would have him remember that a great deal of that revenue has been obtained from customs charges on machinery imported for the manufacture of munitions, and that importation has about ceased. Besides, a great deal of revenue in January and the early part of February was obtained because merchants and manufacturers throughout the country looked to see higher duties on many lines of goods. They did not know on what lines, for the minister quite properly, had not taken them into his confidence. But I know that vast quantities of material for manufacturers were imported. Therefore, I doubt if the revenues will increase as fast during the next two months as they increased during the last two months.

The first change that I notice with regard to revenue is the duty on apples. My hon. friend from North Simcoe (Mr. Currie) said he was pleased to see that duty put on because it will help the people of British Columbia. That is one of the inconveniences of our widespread Dominion—what is meat for one province is poison for another. While this duty may benefit the people of British Columbia, it will prove a great detriment to the people of the prairie provinces. My hon. friend from North Simcoe says that no apples are shipped from Ontario or British Columbia to the Prairie Provinces. But so far as my own section of country is concerned that is not correct, for we ship many carloads of apples to the West; and, travelling in the West, I have found that there was a great consumption of Ontario apples and of British Columbia apples as well. I do not believe that we people in Ontario demanded this increased duty. For my part, I never heard it even mentioned. I know, from the prices that many men get who ship apples to the West, that the unfortunate people of the West must pay through the nose, as the saying is, for the apples they get. Now, while this duty may help the people of British Columbia, I would like to see them help themselves by competing with the Washington apple growers, just as people compete in any other line of business. I believe that the people of British Columbia could compete with the growers of the American West,

even without any duty, and I have no doubt the people of Ontario could hold their own against the American competition as well; and, so far as I know, the apple-growers of Ontario are quite willing to do so.

As to the duty on crude oil, the only people upon whom this will bear very heavily, so far as I know, are the Canadian Pacific Railway Company.

Mr. TURRIFF: And the Grand Trunk Pacific.

Mr. NESBITT: The Government will get something out of the Grand Trunk Pacific company by reason of the duty on crude oil, but their action is rather ungenerous, considering the amount that will be taken from the Canadian Pacific Railway company. I admit that the Canadian Pacific Railway company is a great corporation ; so far as I know they are willing to bear their share of the cost of this great war. But I think it is rather heaping it on to take a quarter of their profits over seven per cent, at the same time hitting them on the head so far as crude oil is concerned.

In the resolution which the hon. Minister of Finance submitted in connection with his new taxation proposals I find the following:

> That there shall be charged, levied and paid to His Majesty a tax of twenty-five per centum of the amount by which the profits arising from any trade or business subject to the tax in every accounting period ending after the fourth day of August, one thousand nine hundred and fourteen.

The banks, I think, end their fiscal year in November; therefore, their first accounting period under this legislation would begin in November, 1914. If it was my hon. friend's intention to make this legislation retroactive from the beginning of the year, I am not sure that he will succeed; he will certainly strike those banks whose accounting periods end in the latter part of the year if he causes the tax to cover the whole accounting period. I suppose the banks have already paid the one per cent on their note issue, as provided by the Budget of last year. Some persons say you cannot strike the banks too hard. I do not agree with that. My hon. friend realizes, I am sure, that any tax imposed upon industry finally comes back to the ultimate consumer. Every large manufacturing concern knows that an increase of one-quarter, or one-eighth, in the charge for cheques and drafts, would compensate them for the extra taxation. In any case, all these things come back to the ultimate consumer.

Clause 6 of the second resolution reads:

> That the capital employed in the trade or business of an incorporated company having its head office or other principal place of business in Canada shall be the amount paid up on its capital stock.

In Ontario many companies have issued capital stock as common stock that is paid up according to the laws of the provinces. In some way they have got round the law and arranged that the stock that is issued is just as much paid up as the preferred stock. I shall not call the great companies monopolies; it is my experience that the so-called monopolies are so overloaded with overhead expenses that the ordinary small business that is well run can easily compete with it. A number of large corporations—I shall not call them monopolies—have issued a great deal of common stock and have been capitalized to such an extent that this proposed ligslation will not touch them at all. The hon. minister shakes his head. I do not know how he is going to get out of that, because there will be lawsuit after lawsuit if he does not recognize as paid up stock the stock which the province of Ontario recognizes as such. This being the case, a number of large corporations—I need not name them—cement companies, steel companies, and other large corporations that have great quantity of common stock, will not be touched by this legislation.

Sir THOMAS WHITE: There will be a definition of " amount paid up on stock " which will prevent, I think, undue advantage in the case of over-capitalization.

Mr. MURPHY: Undue.

Mr. NESBITT: That gives rise to the observation that it is possible for a Government to take too much power into its own hands. What are we fighting for in Flanders and France? What are we spending this money for, if not to protect the right of the Englishman to be master in his own house? What are we spending this money for, if not to maintain what we call British fair play? Is it fair for the Government to take a man by the throat and make him pay what he should not pay? Is it fair for the Government arbitrarily to say what the stock of my company shall be when the Government have given me the right to issue that stock, the very Government that is going to take away that right? My hon. friend has no

right, in my judgment—leaning as I always do to British fair-play for every human being—to arbitrarily say just what that stock will be. That brings me to the people who will be most affected by the tax in the case of corporations. They are the people who are a credit to this country, those who very likely started with a small capitalization and have toiled night and day, with the greatest perseverance and industry, to work up a business in this country; and every member in this House who is in the manufacturing business and who has worked up a paying industry in this country knows what hard work it was. He knows that he kept down his capital stock and did not try to make money out of the flotation of stock in his company, by selling it throughout the length and breadth of the land, preying on his neighbours. He has attended to his own business and made it pay and has very likely gone without dividends for ten or fifteen years to get the business in a position to compete with his neighbours in the rest of the world. He is the fellow who will have to pay one-quarter of the profits over and above his seven per cent, because he has no other recourse. Take the man who is in a partnership or who is individually carrying on business. He also has worked, as I have stated in reference to corporations—and I might call a corporation one man because in all successful corporation businesses that I know of the success largely depends on one individual in that corporation. Take the fellow who has no partners, who is doing business by himself. He has worked till he is grey headed very likely, until he has built up a business of which he is proud, and of which his town is proud—and his country should be. He will be affected by this tax, while the great corporations, with what is sometimes called watered stock, with their great issues of capital stock, are not affected although they above all human beings in the world should be affected if you want to get at the rich man,—and I am taking it for granted that the Government want to get at the men who are capable of paying. The one person who escapes this tax is the fellow who promoted big corporations and sold the stock to everybody he could. Some of these promoters have put millions into their pockets by these promotions, yet they are not touched at all, they go scot free. I would find them if I had to take a searchlight. The man who has built up his business has to pay. I do not believe he will complain; I think he will pay and pay nobly without complaining. But let us be fair, that is what we are trying to do in this parliament, or should be. Let us try and be fair to him if he is willing to pay. There is no use in driving a willing horse to death.

Now I come to the question of the $50,000 minimum. Why should it be set at $50,000? I have been asking myself that question ever since the Budget came down. If my friend here has a company capitalised at $50,000, or is in a partnership with $50,000 invested, he is subjected to this tax; while I have only $40,000 invested, yet am making just as much in proportion as he, why should I not pay? Why should there be any limit? I do not see any sense in that. I might not have to pay as much as he, but I have just as much right to pay my proportion as the man with $50,000 invested. I do not see any reason for arbitrarily setting $50,000, because I believe that the fellow who has not the $50,000 is just as willing to pay his proportion as the man who has, and I think he has as much right to pay as the man who has. What I do object to more than anything else is the escape of the very men, the large capitalists, who have no possible chance, in my judgment, of paying seven per cent on their capital stock. These men escape. The men who promote these corporations escape. Take the men who sit quietly on their pants and do not do a thing for the country or anybody else, the fellows who have money invested in bonds and in real estate from which they derive rents, some of them worth hundreds of thousands of dollars, why should they escape? You take that very type of man in your town; he never goes to a town meeting, never helps the town, is never willing to come forward to help with anything. He quietly gathers in his rent and his bond interest and that sort of thing. Why should he escape? I ask the minister. They are the fellows who ought to pay. Half of them are getting old and they cannot live forever and certainly they cannot take their money with them. Even when they die, in the cases of nine-tenths of them their children will quarrel like the deuce about their money. Why should such men not contribute, if only to promote peace in their families? The thing gets more absurd as we get along.

Now I come to the worst feature, the retroactive legislation. No human being can defend that. We none of us know where we are at or when we are finished.

If the Finance Minister and the Government wanted to get at the men who were supplying munitions and supplying war material for this war, why did they not take the example of a celebrated colleague now deceased and be bold enough to be honest and honest enough to be bold, and get at them? Why whip all the other fellows over their shoulders? While I am opposed to retroactive legislation, absolutely, in any form, still, under the circumstances, considering the fact that people from one end of this country to the other say that these men who have supplied war munitions have made enormous fortunes, I believe that the people in Canada would have endorsed the action of the Minister of Militia and the Government if they had taken not one-quarter after seven per cent, but one-half.

Some hon. MEMBERS: Three-quarters.

Mr. NESBITT: One-half anyway of the profits made by suppliers of munitions and various supplies to the Imperial Government and to our own Militia Department. I believe the country would have endorsed that. Why did the minister not get at these men who have made enormous profits out of the supply of munitions and not at the companies that are doing the regular business of this country? Let me give an illustration. At the end of their fiscal year the directors of a company call in their shareholders and if they have made any money, and if they are honest, they distribute it to their shareholders, who should get it, because, after all, they are the owners. Now we go back to 1914, after these corporations have distributed their profits, if they made any. Do you mean to tell me that you are going to make these men go and borrow the money to pay up the war tax from 1914? I was the other day at a meeting of an insurance company, which gave the whole of its surplus profits, $50,000, to the Patriotic Fund—a Canadian insurance company. I had the pleasure of moving the resolution. Do you mean to tell me that you are going to make that company pay as taxes $12,500 of that sum which they gave to the Patriotic Fund out of their reserve?

Sir THOMAS WHITE: Was that a life insurance company?

Mr. NESBITT: No, it was a fire insurance company, the Gore Mutual Company, and a credit to this country. I repeat, do you mean that that company should pay as taxes $12,500 of the amount which it gave to the Patriotic Fund? So far as I can see, that would be the result of this legislation.

Now, I have an old grievance to ventilate. I want to bring to the attention of the Minister of Finance the fact that he is again giving a premium to insurance companies which do business in this country without a license. He is letting companies like the New England Mutuals, Reciprocal Underwriters, and American Lloyds go scot free. I have no doubt that there are some German companies still doing business in this country, and yet the Minister of Finance practically gives them a premium for not taking out a license. I think that every company doing business in this country ought to be forced to take out a license. I do not care who they are; I would put them all on the same level, and then there would be no grumbling. But these outside companies are not taxed anything. They come to this country and do business, and are not asked to pay a cent for the benefit of this country, while the licensed companies pay for their licenses, and will be taxed under this Bill, as they were taxed under last year's Act.

I would like to speak for a moment with regard to immigration. The Estimates for immigration have not yet been passed, and perhaps I will have an opportunity of discussing the subject at greater length then. But I have a very fixed idea that if there is one branch of the Government, the Estimates for which should not have been reduced, it is the Immigration Department, because now is the time to get ready. But the Government have reduced the immigration Estimates by $1,500,000, I think, despite the fact that now is the time to prepare for the immigration that is bound to come to this country if we are not taxed too high. I hope the Minister of Finance will see to it that we are not, although it looks very doubtful in view of this Budget. We have gone all wrong in our immigration policy. We bring immigrants here, men and women, and dump them down at the landing place, and do not look after them. We ought to make some arrangement with the provinces by which these immigrants could be taken to suitable places and educated to a certain extent in farm work. There could be large farms in the provinces where these immigrants could get a smattering, at least, of farm work. Most of them, when they come out, are of no use for farming, and the ordinary farmer will not engage them, and educate them, and pay them at the same time. We ought to change entirely

our system of dealing with immigrants, and that is one reason why I desired to discuss this subject. But I will take the opportunity later on.

Let me say just one word with reference to what my hon. friend the Minister of Trade and Commerce (Sir George Foster) spoke of so splendidly the other evening—the patronage system. I am not here to accuse the Government of bestowing patronage in connection with the war orders; I do not know that they did, but they say that where there is smoke there is sure to be fire, of which I got definite proof at the old Parliament buildings the other night. But I believe there is absolute corruption in connection with the system. I would certainly join with my hon. friend the Minister of Trade and Commerce, and with any other member of this House who will rise and condemn the patronage system in every shape and form. Personally, I never had any patronage to dispense in the riding which I represent; I always try to treat everybody exactly the same, no matter what their politics or religion may be. Regardless of politics or religion, regardless of creed, we in this country are willing to support the Government in any reasonable expenditures required for the upkeep of the army, and in order to win victory for our arms, and for those of the Empire; but we decidedly say that these expenditures should be reduced by the Government to a minimum. I am not going to attempt to indicate the various ways in which they could be reduced—it would take me all night to do so. The Government represent the people, and they are accountable to the people. If they have not a system which enables them to know where the leakages occur they should at once organize some such system with the view of cutting off all leakages, and all patronage, because that is the curse of the whole business. The Government should start now to reduce to the very lowest minimum the expenditures in connection with the various departments, and they can do it easily. There must be hundreds of people employed whom it is not necessary to employ in the various departments of the Government, and there must be hundreds and thousands of items that could be reduced without any hurt to the country. I say to you, Mr. Speaker, that it is the duty of this Government to meet the wishes of the people on this point, and I believe the people will be perfectly willing to bear any reasonable expenditures necessary to carry the war to a successful issue. But there will be grumbling, and certainly there should be grumbling, over the fact that in four years our ordinary expenditure has jumped from $87,000,000 to $158,000,000. Take it at the minister's own estimate, $135,000,000; why the whole thing is absurd. People would not believe it possible if they did not have it in black and white before them.

There was one point raised by the hon. member for North Simcoe (Mr. Currie) regarding which I would like to say one word. He said that the nickel industry in Canada was controlled by Germany. I know some officers of the nickel corporation, and I know that there is not a human being in Germany who has any control, or who has anything to do with the Canadian nickel interests. I think the ministers know that as well as I do. I have been told by officers of the nickel company that they would be perfectly willing to have any investigation that might be thought desirable to clear away any doubts as to German control.

As it is practically six o'clock, if I started to talk further on this iniquitous, retroactive resolution that my hon. friend has introduced, I am afraid that I would have to finish after dinner; so, I will now stop, as I have told the House frankly and plainly my views on the proposed Budget.

At six o'clock, the House took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

THIRD READINGS.

Bill No. 3, respecting the Burrard Inlet Tunnel and Bridge Company.—Mr. Stevens.

Bill No. 4, respecting the Canadian Northern Railway Company.—Mr. Bradbury.

Bill No. 7, respecting the Farnham and Granby Railway Company of Canada.—Mr. Douglas.

Bill No. 14, respecting the Central Western Canada Railway Company.—Mr. Green.

Bill No. 16, respecting the Quebec, Montreal and Southern Railway Company.—Mr. Lemieux.

CONSIDERED IN COMMITTEE—THIRD READINGS.

The House in Committee on Private Bills, Mr. Rhodes in the Chair.

Bill No. 13, respecting the Canadian Pacific Railway Company—Mr. R. B. Bennett—in Committee.

On section 4—issue of consolidated debenture stock or preferred stock:

Sir THOMAS WHITE: I think the wording of this section is reasonably clear. Hon. gentlemen may be aware that in Great Britain the principle proposed by the Chancellor of the Exchequer was that securities and stocks might be deposited with or sold to the Treasury. The intention was that such securities or stocks might be availed of by way of security for loans made in New York, or loans negotiated in New York, or sold upon the New York market. This Bill provides that the debenture stock of the Canadian Pacific Railway Company, which has been issued in sterling, may, with the consent of the holders, be issued in currency. It would then be available for deposit, and for use on this side of the Atlantic.

Section agreed to, and Bill reported, read the third time, and passed.

Bill No. 15, respecting the Pacific Northern and Omineca Railway Company—Mr. Green—in Committee.

Mr. GREEN: This Bill was allowed to stand yesterday, the point having been raised that in section 1, it was provided that the company might commence and complete the road within five years, no special time being fixed for commencement. So I have drafted the ordinary clause that is inserted in all Bills, providing that the railway may be commenced within two years and finished within five years. I move that section 1 of the Bill as it stands be struck out and this inserted in lieu thereof.

Mr. DOUGLAS: I note that in the description the expression is used, "Edmonton in the Northwest Territories". I would suggest that that should read, "Edmonton, in the province of Alberta."

Mr. GREEN: I do not know that it would affect it particularly, for there is only one Edmonton.

Mr. DOUGLAS: But there is a Northwest Territories north of Edmonton.

Mr. GREEN: I will be glad if the chairman will change it to read: "Edmonton, in the province of Alberta."

Sir THOMAS WHITE: This section covers a rather lengthy description of a great deal of which does not appear in the Bill before us. Was this description before the Railway Committee?

Mr. GREEN: Yes, the section is as passed by the Railway Committee, except that it is provided that the road shall be commenced within two years and completed within five years.

Mr. DOUGLAS: I think that the words "or near" which appear as applied to Edmonton, should be struck out. It should read, "at Edmonton," not, "at or near Edmonton."

Mr. GREEN: Yes, "at Edmonton."

The CHAIRMAN: I would call the attention of the committee to Rule 112, which provides that no important amendment may be proposed to any private Bill in the Committee of the Whole House unless one day's notice of the same has been given. I am subject to the direction of the committee as to whether this may be deemed an important amendment within the meaning of this rule.

Mr. GREEN: I do not think the House will consider this an amendment of any importance. If any objection is taken, I am ready to move that the Bill be referred back to the Railway Committee. But the change is simply to allow the company to commence within two years and complete within five years, instead of commencing and completing within five years, as provided in the section as it stands.

Section as amended agreed to.

On section 4—acquisition, transmission, and delivery of electric and other power:

Mr. GREEN: This is the standard clause.

Mr. OLIVER: I do not know who drafted the standard clause, but I would point out that there is the possibility under this section that the company holding this charter might exercise its rights as an electric company without having exercised its rights as a railway company. That is to say, this charter might be used as a cover for acquiring power rights without providing a railway. There is no objection to the railway using its right of way or its authority for this purpose if it becomes established as a railway; but it is not the intention of Parliament to give the rights of a railway company to a concern that is merely for the distribution of power—at least, I take it for granted that that is not the intention of Parliament.

Mr. GREEN: This is simply the standard clause inserted in these charters in this and other sessions. I do not see why a different clause should be made for this Bill. If the

remarks of the hon. member for Edmonton (Mr. Oliver) apply to this Bill, they apply equally to every other similar Bill passed within the last two or three sessions.

Sir THOMAS WHITE: Under the provision of the section in question, the right of the company to acquire electric or other power or energy is limited to the purposes of its undertaking—that is, its own purposes—and it may dispose of the surplus thereof. I think that unless the company should not proceed with its undertaking, it would not have the right to acquire power or energy. However, this is a standard clause, and I should think it would be inexpedient just now to raise the question to which my hon. friend has referred.

Mr. OLIVER: I do not see why it is inexpedient to raise the question, even though it has not hitherto been raised. Even in Parliament we live to learn; from time to time conditions are discovered that had not been observed before. This railroad has as much prospect of being built within two years as has a railroad to the moon. If it has any purpose, that purpose must be connected with the development of power. If it is the intention of Parliament to grant blanket power rights, as they do in the case of railway charters, well and good; but I do not take it that that is the intention of Parliament. Inasmuch as there is some question in the matter, I think that in all fairness that question ought to be settled now.

Sir THOMAS WHITE: We might dispose of the matter by adopting the Bill in committee and dealing with the question on the third reading. The section expressly states that the power which the company may acquire shall be for the purposes of its undertaking and subject to the provisions of section 247 of the Railway Act. No good reason appears to have been given why this company should be singled out for exceptional treatment. In view of the fact that this is a standard clause, and that section 247 of the Railway Act makes provision relative to a company of this kind which may acquire power and use the surplus, it would seem to me that the committee would be safe in adopting this section. Then, if my hon. friend desires to raise the question on the third reading, it might be more conveniently dealt with at that stage.

Mr. OLIVER: I should be very glad to accept the view of the Minister of Finance, but if the details of any private Bill are to be considered, they should be considered either in the standing committee or in the Committee of the Whole. As the point was not raised in the standing committee, here and now is the place to have it raised and settled. I did not hear the route of the railway laid down, but I am under the impression that the route approximates certain valuable water powers. There is a possibility that we may grant to this company rights and powers in regard to these water powers, while the company is professing merely to desire a railroad charter, and Parliament is professing to give them no more than that. If they build a railway let them have the benefit of the standard clause; but I certainly wish to have it provided that they shall not get the benefit of the water power clause unless the railroad is built.

Mr. GREEN: This Bill is simply a renewal of a charter already granted. The company may not use this power unless it appertains to their undertaking. This particular section was inserted not by the promoters of the Bill, but by the Railway Committee. I do not see why this company should be singled out for special treatment so far as the standard clause is concerned. I would suggest that the Bill pass through committee in the ordinary manner, and if there is any reason for objecting to this particular clause in the Bill, the matter might be taken up when the Bill comes up for third reading.

Mr. OLIVER: This is the time and place to raise any point such as I have raised. Of course, if the majority of the House think that the point is not well taken, I shall not delay the committee, but in my humble judgment the question is a very important one, and is very pertinent to this particular charter, whatever may have been the case with regard to other charters. I should like to have the matter settled now.

Mr. MEIGHEN: If I have caught the apprehension of the hon. member for Edmonton, it is that the company might, while masquerading as a railway company, be in existence only for the purpose of developing and selling power; that it might, in a word, undertake to develop power without building a railway at all. The hon. gentleman suggests that the company might argue that though the railway was not built, the power was being developed for the purposes of the railway when it should be built. I would not like to undertake to give a judicial decision as to the possibility of this taking place under section 40. The com-

pany might, of course, even though its undertaking were not actually in operation, be developing power for the purposes of that undertaking, and might argue that it had the right to sell that power under those conditions. I draw the attention of the hon. member for Edmonton to the latter phrases of the section, by which the company is forbidden to sell any power, except with the consent of the Railway Commission. Supervision is reserved to that commission, which must fix the rates. I understand that clause was framed by that commission itself. The commission would have power, should they come to the conclusion that the company, while pretending to be developing power for the purposes of its undertaking was not yet in esse and was really selling power, to refuse to that company the right to sell at all. It would have power to refuse that company the right to sell at all. We have therefore the protection of the first phrase. which says, "for the purposes of the company." Then we have the protection of Section 247 of the Railway Act. And further we have the protection of the Railway Commission. Consequently I do not think we could improve matters much by referring the section back.

Bill as amended reported and amendments concurred in.

The following Bills were considered in committee, reported, read the third time, and passed, without discussion:

Bill No. 5, respecting The Canadian Northern Ontario Railway company.—Mr. Morphy.

Bill No. 9, respecting The Peace River Tramway and Navigation company.—Mr. Douglas.

Bill No. 10, to incorporate Les Sœurs de l'Assomption de la Sainte-Vierge.—Mr. Lemieux.

Bill No. 11, respecting British America Nickel Corporation, Limited.—Mr. Northrup.

Bill No. 12, respecting The Calgary and Edmonton Railway company.—Mr. Douglas.

Bill No. 20, respecting Queen's University at Kingston, and to amalgamate therewith The School of Mining and Agriculture. —Mr. Nickle.

SECOND READINGS.

Bill No. 28, respecting the Kettle Valley Railway Company, and Vancouver, Victoria and Eastern Railway and Navigation Company.—Mr. Green.

Bill No. 36, respecting the Joliette and Lake Manuan Colonization Railway Company.—Mr. Guilbault.

THE BUDGET.

Consideration of the proposed motion of Sir Thomas White (Minister of Finance) for Committee of Ways and Means resumed.

Mr. J. E. ARMSTRONG (East Lambton): Mr. Speaker, I have listened with a great deal of interest and pleasure to many of the speeches that have been delivered in the course of this debate, and I must congratulate the members who have taken part on the reasonable criticisms which they have offered. We have heard a great many splendid patriotic utterances this session, and I am sure we all appreciated the speech delivered by the hon. Minister of Trade and Commerce (Sir George Foster) the other evening. I would even go a step further than the Minister of Trade and Commerce, and say that bitter partisan politics will not be displayed on the floor of this Parliament for many years to come; nor do I think they will be exhibited to any great extent in the country districts. There were two memorable speeches to which I would like to refer. I congratulate the right hon. the leader of the Opposition on the splendid tribute he paid to the late Sir Charles Tupper, and also upon the speech he delivered on the extension of the life of Parliament. I am sure that these speeches will be read with a great deal of interest and pleasure in years to come. We also feel deeply grateful, especially those on this side of the House, for the splendid effort of the Finance Minister (Sir Thomas White), when he placed before this House and the country this excellent Budget. While it is open to reasonable criticism, we must recognize the fact that Canada is at war, that she is fighting for her very existence, and that the people must expect exceptional war measures will be introduced from time to time until the close of the war and that extraordinary taxes must be collected in order that we may carry to a successful conclusion our share of the struggle. I am sure that after all is said and done we can do nothing less than congratulate the Minister of Finance and the Government upon placing before Parliament such a splendid measure for demanding a reasonable share of the profits of the great manufacturers and financial institutions of the country. Never let it be said again that the Government are tied

up to the great financial, railway, and manufacturing interests. Never in the history of the country has a Finance Minister attempted to gather from the financial institutions of Canada a reasonable and fair portion of the immense wealth which they are taking from the people. While it is true that some of our prominent men say that this is radical legislation, that it is bordering on socialism, yet, in talking with a number of prominent manufacturers and business men since the Budget was introduced, I have been assured by them that they are willing to assist in providing the means for carrying on the war and that they will gladly pay the portion that is demanded of them by the Minister of Finance.

It has also been said that this is a Budget in favor of the agricultural interests and the workingmen. Well may it be so said. The workingmen and the farmers are left free as far as this new taxation is concerned. On the other hand, one of the great departments of agricultural industry has been assisted by an added duty.

We have listened to-day to the address of the hon. member for North Oxford (Mr. Nesbitt) and I hope he will not expect me to deal with many of the matters which he brought forward. He urges that economy be observed by every department of the Government and I am sure that the members on both sides of the House earnestly hope and believe that the Government will exert their best efforts to promote economy in every branch of the service. He calls attention to the Estimates. The hon. gentleman knows full well that the items in the present Estimates that were left over from last year are revotes. The Government have already explained that they do not intend to go on with the public works to which these items apply until such time as they have sufficient funds to continue them. Should the war cease before the end of the year, and should they have sufficient money to carry on these public works, hon. gentlemen opposite will not complain about carrying on works which they were willing enough to pass at the last session.

We also found the hon. member for North Oxford making the statement that the duty on apples would be meat for British Columbia and poison for the West and that the Ontario fruit growers had not asked for a duty on apples. A similar statement was made by the hon. member for Halifax (Mr. A. K. Maclean) in his speech on the Budget. He said:

> In my judgment in no province of Canada outside of British Columbia are the apple growers interested in this increased duty.

Let me call the attention of these hon. gentlemen to the fact that on the seventh day of last month the fruit growers of Ontario met in the city of Toronto and passed a unanimous resolution whereby they appointed delegates to go to Ottawa and urge upon the Finance Minister the need of an increased duty on apples. In face of that we find hon. gentlemen opposite saying that the fruit men of Ontario did not ask for this, did not need it and did not want it. These gentlemen came to Ottawa, and I had the pleasure of introducing them to the Finance Minister; so I feel that I know what I am talking about when I make the statement that the fruit growers of Ontario are deeply interested in this question and are very anxious that this duty should be placed on apples. It will be recalled that five years ago 1,400 fruit men from Ontario met in the old chamber of the House of Commons and urged an increase of duty on the then Government. Hon. gentlemen opposite must appreciate the fact that as far as the Ontario fruit growers are concerned they are vitally interested in this question. You must also take into consideration the fact that the fruit-growing industry is one of the greatest that we have in Canada according to Mr. C. C. Moore, the market expert of the Department of Agriculture, who states that $127,000,000 is invested in that industry. Of that sum the following amounts are invested in apple orchards in the different provinces:

9 p.m.

Ontario	$50,000,000
British Columbia	20,000,000
Nova Scotia	20,000,000
Quebec	10,000,000

This is therefore an enormous industry and one worthy of the consideration of this House.

Let us look at a few more facts in connection with this industry. For many years past both the old Government and this Government have been sending out literature to foreign lands urging people to come and partake of the good things we have in store for them in the fruit districts of this country. Tens of thousands of people have come to our shores and spent millions of dollars in the development of the fruit industry, in the hope and belief that they would be able to make use

of the markets of this country. I believe that the people of the provinces of Manitoba, Alberta, and Saskatchewan, are willing to live and let live as far as this industry is concerned, and that they realise the importance of the vast development which has taken place in the fruit industry in British Columbia since 1891. At that time there was only a very small acreage, while to-day 2,500,000 acres of fruit lands are under development in that province. The Department of the Interior are issuing literature showing the great advantages of that province in fruit production. When you remember the enormous acreage that has been planted in apples in the northwestern States, you can readily understand the position in which the fruit men of British Columbia find themselves. The states of Idaho, Washington and Montana have planted so enormously that the estimate has gone forth that they are producing to-day eleven or twelve times as much fruit as they can dispose of in their own country to advantage; 500,000 acres of apple orchards have been planted in those northwestern states, largely for the purpose of disposing of their product in our western provinces. Canada, with her splendid opportunities for the production of fruit and the enormous acreage that she has capable of development, you cannot but agree with me that the time has now come when we should to a reasonable extent look after this great fruit industry. The Government of British Columbia has sent earnest petitions to this Government urging it to place this duty upon apples, and different organizations in that province have also sent delegations to place before this Government the strongest representations in support of an increased duty on fruit. Therefore, in face of the fact that according to the census of 1911, we have in the Dominion of Canada 14,800,000 apple trees, and only 60 per cent of them bearing, it is well for us to consider whether we should allow the great states in the northwest to dump into the western provinces an inferior quality of fruit, as they have been doing during the last few years. I have been urged to state to the House that the fruit growers' associations of the provinces of British Columbia and of Ontario believe that they will be able to deliver fruit in the western provinces at a price not exceeding the price now being paid by the people living there. The people of the western provinces, the Grain Growers' Association and the United Farmers of Alberta, should take into consideration the fact that the fruit trusts of the United States have control of the sale of fruit in the different towns and cities of their provinces. If they investigate, they will find that such is the case; and in future, if this additional duty is imposed, and if the Grain Growers' Association and the United Farmers of Alberta will get in touch with the fruit growers' associations in the provinces of British Columbia and Ontario, they will find that these associations will gladly meet them and ship to them at a small profit the enormous quantities of fruit which they require, and I hope that they will take advantage of the offer of these associations.

Canada is one of the largest apple producing countries in the world; she exports to-day apples to the extent of 1,200,000 barrels per annum. Now, some hon. gentlemen from the eastern provinces have said that the fruit growers of Nova Scotia do not need this added protection. For instance, the hon. junior member for Halifax (Mr. A. K. Maclean) said that the proposed increase would not be of any value to the province of Nova Scotia. I cannot but believe that when the hon. gentleman made that statement he was not closely in touch with the apple producers of that province. Although this province is a large exporter of apples and its market is the export trade market, its apple growers must expect that, unless some protection is given in the western provinces the fruit production of Ontario will interfere materially with their export trade. Only sixty per cent of the enormous area bearing, and we cannot tell what the production will be when all the orchards that are already planted come into bearing.

The hon. junior member for Halifax also made the following statement:

> I do not believe that the imposition of this duty will be of any advantage to the apple industry of British Columbia.

I do not need to argue that point; I think hon. members on both sides will readily understand that the imposition of this duty will be of untold benefit to the apple producers of British Columbia.

Let me give just one instance in which an increase in the duty on fruit has not increased the cost to the consumer. In 1874 the men who were interested in the grape industry of this country came to Parliament urging that the duty on grapes be increased. The Government of that day increased the duty by ten per cent, but the

grape growers found that it was impossible for them, with that small duty, to develop the industry, and so they came back, and in 1879 the Government raised the duty to two cents per pound. What was the result? The grape growers of this country planted out extensive vineyards, and within a few years the people of Canada were able to buy grapes at a lower price than the duty charged on them. What do we find to-day? In the Niagara district, in the fall of the year, grapes can be purchased at one and a half cents per pound, and that condition of things has existed for many years past.

The hon. junior member for Halifax gave us to understand that the increased duty on oil would not be of benefit to the farmers of the West. So far as gas and fuel oil is concerned, the farmers of the West do not use it in any quantities worth speaking of. Gas and fuel oil is used largely on the railways through the wooded areas of this country. The Canadian Pacific railway, the Grand Trunk Pacific railway, and several other railways are using gas and fuel oil extensively. While I have no intention of criticising the placing of an import duty on this article, I would suggest to the Minister of Finance that, after the war is over, he will probably find that the munition plants, which are using enormous quantities of this gas and fuel oil at present, will not require it in large quantities. I hope that when that time comes he will give to the railways the use of this oil for motive power and the advantage of importing it free. My reason for this suggestion will be explained by a reference to the report of the Commission of Conservation. On page 44 of that report I find this statement:

Locomotive Fuel.

Oil fuel is in exclusive use on 477 miles of the Canadian Pacific railway, on 134 miles of the Esquimalt and Nanaimo railway, and on 115 miles of the Great Northern railway, a total of 726 miles, all in British Columbia. In no case has a definite report been submitted of a fire caused by an oil-burning engine in Canada. The Grand Trunk Pacific railway has announced that during the spring and early summer of 1915, oil-burning engines will be installed on that portion of its lines in British Columbia and Alberta between Prince Rupert and Jasper, a distance of 718 miles. It is expected that this action will materially decrease the danger of fire along this portion of the line. The use of oil fuel is purely voluntary with the railways, and its adoption is dictated altogether by business considerations.

Anything that we can do towards conserving our great natural resources, our timber resources as well as others, should be done, and quickly done. When we consider the enormous fire waste constantly going on in those timber areas traversed by railways the benefit to the people of any steps to prevent forest fires is at once apparent. Hon. members who have travelled over the new Transcontinental lines must have seen the wilful waste of our great forest wealth under the conditions which have been allowed to exist in the building of our great roads. Tens of thousands of acres of timber and pulpwood lands have been burned over, and not for generations, can that forest cover be restored. I offer my suggestion not in a faultfinding way to the Minister of Finance. I do not say that the great corporations seriously complain about this duty, but I do say that it is worthy of the minister's consideration whether this duty should not cease with the end of the war, providing the production of crude oil in Canada does not increase. Unless we can encourage the use of this fuel, or can compel the railways to use electric power on their lines through our forest areas, we may expect that the enormous losses of the past will be repeated by the further destruction of our forests.

One other statement was made in this debate, and this is practically the last to which I shall refer—the statement made by the hon. member for Medicine Hat (Mr. Buchanan) in the quotation of a long communication from a farmers' organization in his district. The hon. gentleman said that there were 800 of these men, and that one of them had stated that the price of gasolene had increased from thirty to fifty per cent. Knowing the hon. member from Medicine Hat to be a fair-minded man, I was somewhat surprised that he did not take into consideration the fact that gasolene was free of duty except for the duty of 7½ per cent imposed last session. This would amount to only a little over one cent a gallon. That being the case, the hon. gentleman should not have presented to the House a statement that would lead the people to believe that this Government was responsible for great increase in the price of gasolene. I do not believe that he so intended it, and I cannot help thinking that he will tell the people of his section of the country that they were mistaken in this regard. They could have brought in tank cars or tank wagons, and so could have obtained the gasolene at the price in the market of production, plus the duty of about one cent a gallon.

As a number of questions have been asked in the House, and as I have been asked personally many questions on the subject, I feel that I should put on record a few facts, in order that honourable gentlemen may understand more about this product. Gasolene of Canadian quality still comes in free of duty, except for the 7½ per cent war tax imposed last session. The gasolene largely used in the United States is not allowed in, owing to its heavier quality. Canadian gasolene costs two cents a gallon more to manufacture, and is much better. The gasolene used in many districts in the United States is five points below the Canadian product, being 59 beaume, as against 64 required by the Canadian regulations. Regard must be had also to the difference in the size of the gallon. In the United States they use wine measure, while in Canada we use imperial measure, which is about one-fifth larger. Allowing for the size of the gallon and the quality of the oil, even with the war tax, the price of gasolene is not higher in the principal centres of Canada than at corresponding points in the United States.

The price of gasolene to-day in Detroit per wine gallon from the tank wagon is 18 cents, or equal to 21 cents per Imperial gallon. Under item 272 of the tariff, gasolene under ·725 specific gravity at 60 degrees temperature is admitted into Canada free. The gasolene offered for sale from the tank wagons in Detroit would not qualify for admission free into Canada, since it is 59 beaume, or ·7407 specific gravity. It is an altogether heavier gasolene, costs about 2 cents per gallon less to manufacture and can be purchased at 2 cents less in the market. Crude oil in the United States, from which so much of the Canadian gasolene is made, costs to-day two and three times as much as it did nine months ago. For instance, in the mid-continent fields it sold for 40 cents a barrel a year ago, and to-day is selling from $1.30 to $2 per barrel, or from 3½ to 5 times as much as it did then. The war in Mexico for the past two years, together with the shutting off of the production in Roumania, Central Europe, and Russia, appears to have left the world dependent on the United States supply. These causes, together with the enormous increase in the uses to which gasolene is put, particularly the tractors and motors, have all contributed to the rise in price, which has not been peculiar to Canada but has been generally world-wide. The demand for gasolene is now and will probably be during 1916, greater than the available supply, as the production of naphtha-bearing crude oils has not kept pace with the constantly increasing consumption. The large increase in the number of automobiles, motor boats, farm tractors and stationary gas engines has brought the gasolene price to its present level. The following figures will show why the price of gasolene has increased so enormously. In 1905 there were approximately 1,200 automobiles registered in the Dominion of Canada. In 1910, 10,000 cars were in operation and in 1915, 83,000. The automobile manufacturers estimate that in 1916, there will be over 3,000,000 cars in operation in Canada and the United States. In 1905 probably not one gasolene tractor was owned in the Dominion of Canada. In 1910, 2,000 of these machines were in operation, and in 1915, there were approximately 8,000 gasolene tractors in the Dominion. The average high power gasolene tractor consumes a barrel of gasolene every ten working hours. In 1905 it is estimated that only 5,000 stationary gas engines were in use in the Dominion. By 1910 this number had increased to 25,000, and at the present time there are over 100,000 of these machines, all helping to swell the figures for gasolene consumption. In 1905 Canada used approximately 100,000 barrels of gasolene, and in 1910, approximately 390,000 barrels. In 1915 the consumption of gasolene in the Dominion was over 1,300,000 barrels. Most of the gasolene refined in Canada is manufactured from United States crude oil, as the production of crude oil in the Ontario field is not large. Unfortunately the great increase in the number of gasolene consuming machines has not been followed by a proportionate increase in the production of crude oil; in fact some of the large naphtha producing crude oil fields in the United States have shown a marked falling off in production. The great Cushing field in Oklahoma is now producing considerably less than 100,000 barrels per day, as against 300,000 barrels per day which it was producing a year ago. My hope is that some inventive genius will evolve a practical kerosene carburetor which would enable a large proportion of the motor driven vehicles to operate with refined oil as fuel. Refined oil is a drug on the market. The price of gasolene has increased by leaps and bounds. For instance, in the city of Toronto for the past seven months, tank wagon prices per Imperial gallon were as follows:—August 1, 13½c.; September 1, 16c.; October 1, 17c.; November 1, 18½c.; December 1, 22c.;

January 1, 24c.; February 1, 25c. The same prices pervailed in other large cities near the International boundary line.

I am very glad to have the privilege of referring these matters, which are of interest to the district that I represent. We all appreciate the significance of the fact that this country is in the throes of a great war. The northern half of this continent is ours—ours to maintain and to develop. If the national ideals of Germany should ever hold sway in this country, we should lose the privileges and liberties that are our common heritage. It is hardly necessary to say that we decline to accept the national ideals of Germany, of Austria, or of Turkey. The happiness or misery of eight millions of people, the control and development of hundreds of millions of dollars' worth of productive industry and capital in this country, are at stake. Hon. gentlemen on both sides of the House—indeed, the whole of the people of Canada—are desirous of taking such steps as may bring this war to a successful conclusion. Never was Canada more united in a common cause; never was she more determined to do her part to attain a worthy end. Our brave soldiers on the battlefields of France and Belgium are singing:

> We'll never let the old flag fall;
> We love it the best of all.
> We don't want to fight
> To show our might,
> But when we do, we fight, fight, fight!

Our gallant boys are ready and willing and able to fight for the land they love so well and for the flag they hold so dear. When we realize that Great Britain has trebled her national debt and doubled her taxes, the amount being asked by the Finance Minister to-day seems but small. We should be glad and proud that we have controlling the affairs of Canada men who are able to guide its destinies in the manner in which they are being guided. We all love our country; we believe in her; we live for her; we are ready to fight for her, in order that her territory may remain intact and her name untarnished.

Mr. DUNCAN C. ROSS (West Middlesex): Mr. Speaker, as this is the first opportunity that I have had of addressing the House this session, I trust that you will not think it presumptuous on my part if I tender to you my congratulations upon your elevation to the high office which you occupy. Although my congratulations are late, they are none the less sincere. You possess all the qualities necessary to your office. The university of your native province has marked you as being possessed of scholarly attainments. We on this side of the House feel that, in addition to that, you are so inspired by ideals of fairness, justice and honour that you will be able to hold the scales in equal poise between the parties, unmoved by fear, favour or affection.

I have listened with a great deal of interest to the various addresses of those who have taken part in this debate. I have listened to none with more interest than to the hon. the Minister of Trade and Commerce (Sir George Foster). It is always a pleasure to listen to him; we esteem him one of the first orators of Canada. We know his wide experience in public life, and we know his intense patriotism and love for his country. His speech of a few days ago was only another instance of that eloquence, another manifestation of that patriotism. As I listened to him my mind travelled back over the space of several years, and I thought of a speech which I heard him make in 1910 when I had newly come to this Parliament. I think that, without exception, it was the most eloquent speech I ever heard. He then dwelt on the necessity of Canadians being able to fight for themselves, on the prowess of Canada, on its future potentialities and on all its coming greatness. I sat and listened to him in open admiration, as did every member on this side of the House. The other night he spoke to us about the evils of politics in this country and the evils of the patronage system, and I concurred also in all he had to say. My fear is only this, that the hon. minister may do as he did in 1910 when, a few moons having passed, the minister took a double back somersault in the air. I fear that now he will not, in the council chamber, inspire in the Prime Minister the same views that he expressed in this House on the evils of patronage and will not, as a member of the Privy Council of Canada, endeavour to do away with what he describes as this monster of iniquity, the patronage system. I hope he may, because I think patronage is one of the great evils of this country.

I wish first to discuss a few things that affect this country in relation to the war. Many of these matters have already been touched upon in a very able manner by the hon. member for Edmonton (Mr. Oliver). Some things which he said should be accentuated, and in my humble way I am going to associate myself with him in urging these matters. In the first place, I think if we are going to carry on this war to a success-

ful issue, as we certainly are, and if we are going to get 500,000 soldiers to fight for King and country, we must make sure that these soldiers are going to the battlefield with perfectly contented minds and that they feel satisfied that the dear ones they are leaving behind will be protected just as if they were remaining at home. They must feel sure that if they are injured on the field of battle they will be taken care of and if they lose their lives the dear one they leave behind, wives, mothers and children, will receive generous protection from the people of this country. It seems to me we cannot be too careful about this matter and that, although our allowances are generous to the woman and children left behind, they are not placed upon a proper basis. I was struck by a remark of the hon. member for Simcoe (Mr. Currie) who spoke of a man fighting in the trenches, under his command, a noble, brave soldier, one worthy of the Victoria Cross, a man who had left a wife and twelve children behind him. I could not get a better instance to typify or symbolize what I wanted to say. Here is a married man in the field, fighting the battles of liberty in Canada, with twelve children at home, and this country gives that wife the paltry allowance of $20 a month for her sustenance and that of her family. I think in this regard we are derelict in our duty. The British system is far better and I cannot understand why the principle we have adopted in regard to our pensions is not followed in regard to our separation allowances. Whether a man is dead or alive, his children will require as much to support them. If a man dies on the battlefield his widow has certain allowances, and she gets a certain allowance for each child. Why should not that system be followed also in regard to our separation allowances? For my own part I think the same principle should apply, and that some change should be adopted by this Government in that respect. I would like to emphasize the point made by the hon. member for Edmonton, that the pensions given to the rank and file of our soldiers, particularly those in the lower ranks, are insufficient. A single man who has been totally disabled in the face of the enemy receives from this country $22 a month, and he is also entitled to an allowance of $7.33 a month for an attendant. It strikes my judgment that this is not sufficient to give to a man who has risked his life for liberty and for this country, and comes back here totally incapacitated from earning a living for himself. I would commend to the favourable consideration of the Government a pamphlet issued by a committee of which Mr. Frank Darling is chairman, and I should wish to associate myself with the suggestions in that pamphlet, because they are all worthy of commendation.

We are engaged in the most terrible war that any land has ever been engaged in; the fury and fanaticism and strife and turmoil and noise of battle in this war are such as have never occurred before. Men are not only losing their lives and their limbs, but, what is even more pathetic and sad, men are losing their reason; men are having their nervous systems shattered; quite a few of them have come back to this country with those sweet bells of the mind jangled out of tune; and it seems to me that some special provision should be made for them. Up to the present I believe no special provision has been made. These men should not be put in the ordinary insane asylum, but special institutions should be built for them where they will receive unusual consideration, as there is no real life for them in the future.

The treatment of our officers is not very liberal, and should be improved. I was not aware until recently that they are treated less liberally than the British officers; I thought they received a little more; but the fact that they are paid less only accentuates the argument I wish to make. As I understand our present system, an officer who joins the active forces to-day is allowed by the Government $150 for uniform and accoutrements. As I understand the English system, a similar allowance is made to the British officer, but while our Canadian officer receives only one allowance for this purpose, no matter how long the war lasts, the British officer receives an allowance when he first goes on service, and each year thereafter receives about £20 for uniform and accoutrements. That is only just treatment of our officers. Their clothes cannot last for ever; in the struggle and strife of active army life their uniforms must wear out and become soiled, and I think it only fair that these officers who are risking their lives should receive an allowance of say $100 a year to replenish their uniform and accoutrements.

I shall not follow seriatim what the hon. member for East Lambton (Mr. Armstrong) has been saying. My hon. friend is my nearest neighbour, and we have ever been friends. He has been a constant visitor to West Middlesex for many years. He

always comes probably when we least need him; but if his visits have been as pleasant to him as they have been innocuous to me, I do not mind how often he comes. Some day in the future I may do myself the honour of returning some of them, and I hope that my visits to his constituency will have better results than he secured.

My hon. friend discussed the question of apples. He made some remarks in regard to apples which I could not follow. The part of the country from which I come is a part in which many apples are grown, the best apples in the world, I venture to say, not excluding those grown in the county of Lambton. I cannot understand the solicitude of the hon. member for East Lambton for the apple industry of this country. I could not follow his argument. He said, forsooth, that the apple growers of this country had 14,000,000 trees, that it was a great industry, and that the apple growers had sent petitions and delegations to the Government asking to have their industry protected. I cannot see that that is any reason for giving them additional protection. I cannot understand why the hon. member should have got so much worked up over this small industry. I have heard it said during the past four or five years that thousands of men had come from the West to interview the Government, men who are engaged in a very important industry, in which sixty per cent of the population of Canada are engaged, and in which from four to eight billion dollars are invested, and yet I have never heard that this Government acceded to their requests. The farmers of the West and of the province of Ontario have come here in thousands asking for the privilege, not of giving their particular line of production protection, but of giving it some freedom, and I have never yet heard that the Government considered that a good reason for acceding to their requests. At any rate, they have not done so. One reason given by the hon. member for East Lambton for the proposed increase in the duty on apples was that the people in the West were getting an inferior grade of apples. I take exception to that remark of the hon. member. I know of what I speak; I know that the people in Winnipeg, and further west, get apples from the good old province of Ontario, from the county of Middlesex as well as from other counties, and I defy any man to prove that the apples from Middlesex county, or from Lambton county, are inferior to any apples in the world. I think the hon. member for East Lambton was giving the industry in his own county, about which he is so solicitous, a black eye, and I do not think the apple growers of Lambton or of Middlesex will thank him for it.

Mr. J. E. ARMSTRONG: I know that the hon. gentleman has no intention to put words in my mouth which I did not utter. If he will read to-morrow's Hansard he will find that when I referred to inferior fruit going into the Northwest provinces, I was referring to inferior fruit from the Northwestern states, and not from Ontario or from British Columbia.

Mr. ROGERS: We always get good fruit from Ontario.

Mr. ROSS: I owe the hon. gentleman an apology. The inference I drew from his words—I may have misunderstood him, and I do not wish to put words in his mouth—was that the apples going into the Northwest provinces were inferior apples, and I naturally assumed that he had reference to Ontario apples, because Ontario apples go in thousands of bushels to the West.

This cry of protection is the old Conservative doctrine. The apple grower has to be protected because, according to the hon. member for East Lambton, it is a great and growing industry in which millions of dollars are invested, and the people engaged in it do not understand their business. Of course, in Canada we cannot do anything as well as it is done in the United States. Our people have no initiative, no brains. We cannot build ships, and we cannot grow apples; we cannot do anything that intelligent people ought to be able to do. We cannot stand on our own legs, but we must get subsidies from a paternal Government. For my own part, I think it is about time that we in Canada were getting beyond that stage of affairs. I think this war has taught us, at all events, that we can build our own ships, and I can speak for the farmers of Middlesex when I say that they do not thank this Government for any extra duty on apples. It is all very well for us to say that we are going to build up a big apple industry in this country, but there is one thing that we must not forget. There is a class called the common people to whom apples are an absolute necessity. The apple is the orange, or the grapefruit, of the common people. I contend that in the solicitude of this Govern-

ment to help the apple trade, they should not forget the labouring man and they should not make fruit, which to him is a necessity, dearer and harder to procure. That is one of the great reasons why this extra duty is not right and is not in the interest of the country. There is no reason why the workingmen should pay tribute to the orchard owners of British Columbia.

There is another matter to which I would like to refer; it has reference more particularly to the finances of this country. The Minister of Finance told us in his Budget speech about some loans which he made. I want to discuss everything as far as possible in an unpartisan spirit, but I do not think that the loans made by the Minister of Finance greatly redound to his credit. Let us take, for instance, the loan which he told us he made in the United States. It was made, as he told us, to cover the capital expenditure in connection with the public works of this country. For my part, I think it would have been much more creditable to the Minister of Finance if he had cut down the capital expenditure of this country, so that it would not have been necessary to borrow $45,000,000 from the American people.

Again, Sir, I think he made a loan which was not advantageous to the people of this country, and in which he did not show that keenness and financial ability which the Minister of Finance in this country should be endowed with. Let us look into this matter for a moment. He borrowed $45,000,000 from New York, and $25,000,000 of that amount was to be paid on August 1, 1916, and the balance of $20,000,000 on August 1, 1917. What were the facts in regard to loans at that time? The provinces of this Dominion were borrowing money in New York at the rate of five per cent, and the municipalities at the rate of five per cent. The great financial corporations of this country were doing the same. It is axiomatic in financial matters that, the standing of the Dominion being superior to that of the municipalities or corporations, Canada should be able to finance a loan of that magnitude at a lower rate of interest than the lesser bodies. At that very time Britain had borrowed three billion dollars at four and a half per cent, and the British loan was subject to income tax. The Minister of Finance took care that the loan he made in the United States should be exempt from income tax. The result was, that so far as Britain was concerned, while it was borrowing at four and a half per cent, it was really borrowing at four and a quarter. The Minister of Finance borrowed his $45,000,000 and agreed to pay interest half yearly, whereas the interest on the British loan, and on municipal loans, is payable yearly. The Minister of Finance also undertook to pay the money back in gold in New York, and in addition he gave the buyers of the loan the privilege, to be used at any time within three months of the time when the loan matured, of buying Dominion bonds, thus compelling the people of this country to pay to the money lenders in the United States the sum of five per cent for twenty years. Besides that, the Minister of Finance paid the New York brokers who consummated the loan three quarters of one per cent commission. What does all this mean in loss to the Canadian people? The Minister of Finance puts the municipalities in this position, that if the Dominion Government has to pay five per cent for American money, it necessitates the municipalities paying a higher rate than five per cent.

However, let us take the matter as it is. This money should, and could, have been borrowed, if the minister had been astute, at four and a half per cent, the rate at which Great Britain was borrowing. The fact that it was not borrowed at four and a half a cent means a loss to the tax-payers of $325,000. That, taken in connection with the three-quarters of one per cent paid to the American bankers as commission for consummating the deal, which means an additional loss of in the neighbourhood of $376,000 to the people of Canada, brought about by the carelessness of the Finance Minister, makes a total loss of somewhere in the neighbourhood of $750,000. I think it would be wise for the party in power, if they would in future have no truck and trade with the Yankees in regard to borrowing money unless they can send some man over to New York who will be a little keener in dealing with Morgan & Company than the Minister of Finance was in this case. I believe that if Mr. Fielding had been negotiating that loan we would not have had the people of Canada paying five per cent for $45,000,000, and we would not have run the risk of being bound for twenty years to pay five per cent on a loan of this magnitude.

I am going to deal for a few moments with the taxation which has been placed upon companies and corporations. I appreciate as well as any man in this House the necessity of raising money to carry on

this war, and I believe the people appreciate it, but, for my part I cannot follow the Minister of Finance in his argument or in his action in connection with these taxes. What I propose to say may, to some extent, be a repetition of what has been so ably said by my hon. friend the junior member for Halifax (Mr. Maclean) and by my hon. friend from North Oxford (Mr. Nesbitt), but there are some things about this taxation on corporations that seems to be so unjust and inequitable that I am sure I will be pardoned if I reiterate some of the objections which have already been raised against it. In the first place, it is my contention that, although the Minister of Finance in his address, discriminated between different classes of companies himself, when he came to the question of taxation, he failed to discriminate between them. Speaking, at page 849 of Hansard, he said:

10 p.m.

> Now, Mr. Speaker, there are in time of war many businesses and industries, which for one reason or another are able to maintain profits above the average return to capital in time of peace. There are others whose profits arise directly from the manufacture of munitions or the furnishing of supplies in connection with the war itself and are in some instances of abnormal character. It has appeared to the Government that persons, firms, and corporations whose profits have been such might well be called upon to contribute a share to the carrying on of the war. Their position being advantageous as compared with less fortunate fellow-citizens, it is just that a portion of their advantage should be appropriated to the benefit of the state.

That seems to me reasonable, but I do not think the Minister of Finance has carried his ideas out in his taxes. I think there should be a difference between taxes which are imposed on companies manufacturing munitions of war, that have made themselves rich to the extent of hundreds of thousands and millions of dollars of the money of the people, and corporations which have made their money in another way. The munition factories and manufacturers are simply the outcome of this war. They have not helped to build up the country. They are helping to defend the country, it is true, but they are being mightily well paid for it. This tax on the munition factories is, I say, an absolute admission by the Government that their treatment of the munition factories, and the way they gave them contracts, was a mistake, that it was wrong, and that it was not in the public interest. But, Mr. Speaker, these factories, when the war is over, are not going to help in the development of Canada; they will be out of business, they will not be employing men, and in the past they have not helped to develop the country. We have nothing to thank them for as far as that is concerned. Take the industries which, in so far as taxation is concerned, are being put on the same basis; take an institution like the Canadian Pacific railway, which has helped to make this land great; take all our large manufacturing establishments, which have helped to make Canada the prosperous country it is, in which men have struggled and wrought, and into which men have put their money, and in which men will struggle, will work, and into which they will put their money in the future, and which will make this country still greater, and I think you will agree with me that there should be discrimination between the taxes put upon munition factories and the taxes put upon these factories which are so necessary to the prosperity of Canada. It is not fair, it is not according to the usual canons of taxation to ignore the principles which I am now urging upon the consideration of the House. These institutions are not as well able to bear the load as the munition manufacturers. The munition manufacturers have made hundreds of thousands of dollars in a short time. The ordinary manufacturer has built up his industry and made his money slowly; he has been, and will be, of use to the country, and therefore that a different rate of taxation should be imposed upon the munition factorries from that which is placed upon the more stable industries of the country.

There is another point I would like to accentuate: it is the difference between corporations and partnerships. The proposal of the Finance Minister does not seem fair to me, looking at it from the narrow point of view which I get when applying it, for instance, to my own town. Here is a corporation, say, which is selling dry goods. They adopt the most modern form of business arrangement, that of a joint stock company, and they have a capital of $35,000 invested. Under this proposal you tax them twenty-five per cent on their profits over seven per cent. I think that is not just. In the first place, I think, they should be given more than seven per cent. If you have a stable industry which is making for the development of the land seven per cent is not enough to give the owner as a return on his capital. In our province we can go out and loan our money at six, seven, and eight per cent on legal security which is beyond the possibility

of loss. A man can put his mortgage in his vault and have no further care or responsibility. Here you are going to a merchant who takes all the risks of trade and you are only giving him a profit of seven per cent, when a man can get seven per cent on a mortgage, and you are finding him twenty-five per cent of the balance of his profits. I say that is not just. My argument is this: A corporation is charged with whatever amount of capital is invested. A corporation in the province of Ontario must consist of at least five people; a partnership may consist of as many persons as you like. Suppose that you have a partnership carrying on the same business as a corporation, say a dry-good business, and that it has $35,000 invested. This partnership which is competing with the company, is under no greater responsibility than the company; there may be more men interested in the partnership than in the company; the company has to meet the same emergencies and contingencies as has the partnership, yet the partnership escapes scot free from this taxation. That is not just.

There is another point that I think is unjust in this taxation. In my town there is one of the best furniture factories in Canada, bar none. This factory happened to be given a little order for $5,000 worth of munition boxes or shell boxes. I do not know how they got the order; I was surprised, but I was also glad to see them get it. If this taxation is imposed, this corporation, engaged in the manufacture of furniture and turning out probably $150,000 to $200,000 worth of furniture in a year, will, because it has received a little order for 5,000 boxes at 80 or 85 cents a box, be taxed 25 per cent on all its profits over 7 per cent on the whole of its business. That is absolutely unjust and inequitable. In that case, the company should not be taxed on anything more than on the order for shell boxes.

Besides being unjust and inequitable, this scheme seems to me to be absolutely impracticable and to have many evils connected with it. In the first place, it is going to lead to a great expense to this country. No man can convince me that, under this system, these taxes are going to be collected without scores and scores of officials being added to the many thousands that are already helping to make this country poor.

It also seems to me that it is absolutely impossible for the Minister of Finance to get at the capitalization of these companies. What he said himself in that regard on the 15th of February is not altered to-day. As reported on page 850 of Hansard, he made the following statement:

> We found it a practical impossibility to go behind the capitalization of companies and endeavour to ascertain the precise cash value of their assets as can be done in the case of individuals or partnerships.

If it is practically impossible to go behind the capitalization of companies and endeavour to ascertain the precise cash value of their assets, as can be done in the case of individuals or partnerships, then I say that this taxation cannot be levied equitably; because, if you have to take the actual stock issues of companies as the basis for your taxation, the company that has inflated its capital so that it is half or three-quarters water, is going to escape taxation, whereas the company that has put its earnings into its business and is in a good financial condition, is going, if I may use a vulgar expression, to be bled at the nose, and that is neither fair nor just.

The only just and equitable scheme for the Government to adopt is that of a graduated income tax, which has been adopted in Great Britain and in the United States. Under the scheme brought forward by the Minister of Finance, the wealth of men who have their money in bonds or in real estate is going to be absolutely exempt. These men have just as much right to contribute to the carrying on of this war as any other men. This country has helped to make them rich; its possibilities, its prosperity, and the protection it has afforded, have made their fortunes, and they should be glad to contribute, out of the wealth that this country has assisted them in making, their share of the money required to carry this war to a successful conclusion. Therefore, the proper scheme for any minister of finance at this time to adopt would be that of a graduated income tax, starting at $800 or $1,000, and the percentage increasing as the amount of the income increased. In that way every man would pay, and there would be kept in mind the cardinal canon of taxation that the burden of taxation should fall upon the shoulders of those who are the best able to bear it.

Now I come to what I think is the most important pronouncement made by the Minister of Finance in his Budget speech. He said:

> The future of Canada rests with the development of its great resources, of which the greatest and most fundamental is agriculture, and this development is in turn bound up with the

question of increase in population of the productive sort and the facilities afforded it for the application of its intelligence and industry. It is probable that in the straitened financial conditions which may prevail for some years forward the question of capital for the development of agriculture may be of paramount importance, and it is our intention to inquire carefully during the coming recess into this most important subject, with a view, if desirable in the public interest, to supplementing by federal aid existing facilities in this connection. Particularly will the question of establishment of a system whereby loans at reasonable rates repayable on the amortization principle engage the attention of the Government.

I wish to consider for a few minutes the question of rural credits. The agricultural industry of this country, of which the minister spoke in such laudatory terms, is getting in this case only the bread of promise. I hope it will get the bread itself before very long.

Mr. W. F. MACLEAN: The real bread.

Mr. ROSS: I do not think I need go behind the speech which the hon. Solicitor General (Mr. Meighen) made in 1913 in order to establish my argument in regard to rural credits. The Minister of Finance led us to believe that he was going to establish a system of federal aid on the amortization principle. As I view the present needs of the Canadian farmer, in Ontario and in the West, I do not think this is what he wants so far as federal aid is concerned. The amortization principle means that a farmer gets a loan on his land for a long period, say twenty, thirty, forty or fifty years, and he pays back the money, by means of a sinking fund, in equal annual instalments of both principal and interest. It seems to me that that is not the great need of the Canadian farmer to-day, and in that respect I am going to quote the words of the Solicitor General in 1913. I may say, in passing, that I have listened to several speeches of the Solicitor General. At one time I listened to a speech of his on free agricultural implements. The Solicitor General has probably forgotten that speech.

Mr. MEIGHEN: Oh, no.

Mr. ROSS: It was a worthy speech, more worthy of the Solicitor General than those that I heard him deliver later in regard to the Canadian Northern railway and in regard to cutting off the privileges of debate in this House. Of all the speeches of the Solicitor General which I have admired, this, to my mind, exhibited the greatest study and research, and was expressed with the greatest lucidity. The Minister of Finance at that time approved of the resolution of the Solicitor General, and both these hon. gentlemen were very solicitous about helping the farmer. But now they are putting the cart before the horse and proposing a scheme which they say will promote agriculture; and perhaps it would be partisan for me to say that they are postponing the bigger scheme on behalf of their great allies and friends the chartered banks of this country. It may be unfair to say that. These are the words of the Solicitor General to which I have referred:

> And, as I approach this part of the subject, let me premise that I am not convinced that the time has come in this country, as yet, when the application of the principle of the landschaften bank as now successful in older countries, can be made to advantage in this country. I think we should proceed first along the line of personal credit societies, and that, at least so far as the province with which I am more intimately acquainted are concerned, the time has not yet come when we can import into Canada the central principle of the landschaften bank or land banks as existing in Germany and all the older countries. I say this notwithstanding the fact that the report of the American commission is distinctly favourable to the importation of this system into the United States; I say this notwithstanding that even so high and conservative an authority as President Taft has distinctly and emphatically recommended to the congress of governors the immediate application of the land mortgage banks to the American republic.

I think the Finance Minister and the Government have been derelict in their duty to the agricultural class. Agriculture is the most important industry in this country. The agriculturists have been the mainstay of the country during this war; but for the immense crops of the West we should find ourselves in a most undelightful financial position. These rural credit societies, as the Solicitor General so ably pointed out, are not an experiment. They exist to-day in Belgium, in France, in Germany; they exist under provincial laws in the province of Quebec. They have been an immense success. They have expanded so greatly that in Germany there were, according to the Solicitor General, from 16,000 to 20,000 societies—and there must have been more since, because the Solicitor General stated that they were increasing at the rate of two and a half per cent a day. They have been instrumental in lending to farmers and other producers in Germany as much as $4,000,000,000 a year. They have helped to make the prosperity of Belgium, and of Germany as well; and Japan, as the Solicitor General has pointed out, was so convinced that this is the best system in the world, that she incorporated it holus bolus as a part of her banking system. It seems

to me the Finance Minister could give this system to this country, not a year from now or two years from now, but now. We are not so busy in this House, we are not so engrossed in other matters, that we could not attend to this. We have plenty of time. We should have a measure introduced this session which would give to the people of Canada now, and not several years hence, the great advantage of rural credits as they prevail in other countries.

The advantages of the system are many. As I have said before, the farmer does not want money for a long time, as a rule. I think the remarks of the Minister of Trade and Commerce (Sir George Foster) are quite correct. We are not going to be crowded out of this country by an influx of immigrants from other lands, and so an amortization system to aid immigrants to buy lands will not be necessary. But it is necessary to provide some practical present assistance to the farmer of the West who wishes to buy a cow, a horse, some grain, or something of that kind to carry on his business. A system should be established under which these men could go to their rural credit association and get temporary loans at a moderate rate to develop their farms and so to develop this country. The Solicitor General, in his speech to which I have referred, pointed out that this was the need of the farmer and producer, and what he said is just as true to-day:

I say to the discredit of Parliament we have provided as yet no machinery whatever of a uniform character, which is the first essential, to give the people of this country the advantage of co-operative banking as it obtains in almost every civilized country on the face of the globe. I should have said a few moments ago, that not only has it done great service in all the countries of Europe, but this last year in Japan alone, I believe, some five hundred banks were organized.

I desire to read, also, what the hon. gentleman quoted from a writer of the name of Wolfe. There have been two writers of this name, each of whom has written valuable books on this subject. And the United States has sent two commissions, one appointed by the Government, and another by a central association, to investigate this system. Those commissions travelled throughout Europe, and I have on my desk their reports speaking in the most laudatory terms of this system. The Solicitor General's quotation from Wolfe is as follows:

Personal credit in agricultural Europe is obtained usually by means of the co-operative credit associations. They are also used by artisans and small tradespeople in the towns and cities. These associations are in fact the only banks which the farmers will patronize for short-time loans in the nations where they abound in the greatest numbers. With their aid poverty and usury have been banished, sterile fields have been made fertile, production has been increased, and agriculture and agricultural science raised to the highest point. Their educational influence is no less marked. They have taught the farmers the uses of credit as well as of cash, given them a commercial instinct and business knowledge, and stimulated them to associated action. They have encouraged thrift and saving, created a feeling of independence and self-reliance, and even elevated their moral tone.

And the Solicitor General himself said:

The poorer classes of this country, if they be ever so honest, do not as a matter of practice, and cannot as a matter of possibility, secure the credit to which their honesty entitles them in the commerce of the world. There can be no greater benefit, there can be no greater blessing given to the humbler classes of any community, than to so press out the machinery of our banking system, to so extend it, as to reach those classes of people who are not now served and to enlist in the service of the state and in the full plenitude of citizenship, with all their potentialities and possibilities, the poorer classes of the country. By doing so you perform an educational work the advantage of which is hard to over-estimate. More than that, you teach self-reliance, you teach the great principle of mutual help, than which there is nothing more efficacious in securing the common advantage. You implant in the poor man the thought that this honesty of character, known as it is amongst his fellows, has been sufficient of itself to enable him to get a small loan, and, having implanted that in him, you give him an encouragement that is worth not a little.

It seems to me that I have established the point that the rural credit system has gained favour in all the countries of the world. The Minister of Finance has brought in a Bill to amend the Bank Act, which is fairly good so far as it goes; but it does not go far enough. It is not sufficient merely to amend the Bank Act. In the United States for many years the banks lent money on chattel mortgages, but they are not content with that system. As the hon. Solicitor General knows, a Bill is being considered by Congress to establish a system of rural credits throughout the United States. They have found that simply to accord the banks the privilege of lending money on chattel mortgages is not sufficient to meet the needs of the agricultural people. In this matter we should not be slow in following the example of the American people; we should keep up with the procession, and establish in this country a system of rural credits. I am sure the hon. Solicitor General will agree with me in that respect. We have all the information that we can get. Reports of commissions, opinions of text-

book writers and the experience of other lands show that this system is no experiment. The words of the Finance Minister simply mean that he is making a promise to the rural people that it will take him a long time to fulfil, and that money is being wasted without necessity.

Mr. MEIGHEN: I cannot fully express the pleasure I have in feeling that I have so able a colleague in this matter as the hon. member for West Middlesex.

Mr. ROSS: The hon. gentleman has been too slow.

Mr. MEIGHEN: A Bill relating to this matter was introduced, I think, the session before the special war session. I am free to say that the Government is in favour of legislation of this kind; it is entirely a matter as to whether its importance justifies its introduction at this time. This is the point I want to make: while in the province of Quebec the banks are established under the ægis of provincial legislation, they flourish in the province of Ontario without the advantage of any legislative acts at all. Would the hon. member give to the House his views as to the banks were they to operate under uniform Dominion legislation instead of without legislation at all?

Mr. ROSS: I am obliged again to refer my hon. friend to his own very able speech. The hon. gentleman said that if we had uniform rules and regulations all throughout the Dominion, a farmer going from Quebec or Ontario to Saskatchewan would know exactly what the system meant, having enjoyed its benefits in his native province; and he would be able to take advantage of it in his new location without delay or difficulty. That was the great advantage that my hon. friend pointed out as the undoubted result of uniform federal enactment in that regard. I think it is certainly a very good point.

The people of Canada are not afraid of the future. They are rich, prosperous, happy and contented. As long as the taxes deemed necessary to carry the war to a successful and permanent issue are just and equitable and fair, you will hear no outcry from the people. I do not say, Mr. Speaker, that the people of Canada approve of all the taxes that have been imposed by this Government. The majority of the people of Canada were very much opposed to the increase in the British preferential duties introduced by the Government last session, and passed by this House. I do not believe that the people will approve the taxes that have been submitted by the Minister of Finance in his Budget of this year. The people of Canada all throughout this land are doing more than the Government are asking them to do by way of taxes. I am going to refer for a moment to my native county. I do not think that it is parochial to do this, because what the people in my county are doing is typical of what is happening in every province of Canada, and in every country of the British Empire. The people of Canada are not afraid of taxes that are just, because they are voluntarily giving of their substance, out of their plenty and out of their scarcity, to assist the Government in carrying on this war. They are giving not only their money, but their blood as well. My heart throbs with pride and emotion when I recall the sacrifices that have been made by many of the young men of my county and by its noble women in order that Canadian homes and Canadian women and children may enjoy freedom and happiness. The same tale, Sir, can doubtless be told of every county in this country; but, in passing, I am constrained to drop a laurel leaf of appreciation, praise and gratitude upon the memory of those of my county who have gone to the front. They came from every walk of life. They were not divided by questions of race or creed or politics; they were united by a common impulse to serve the Empire. Some of them made the last great sacrifice that their country might live. They did so ungrudgingly, ungrumblingly, nobly, as became Canadians, and their parents sent them forth in the same spirit, rejoicing in the grandeur of their action, and believing, as the old Romans did: Pulchrissima pro patria mori. Some of them sleep beneath the hills of France—but they are not really dead. Their souls, like John Brown's, go marching on through Canadian towns and hamlets, through country fields and country lanes, through the thronged streets of great cities, inspiring Canadian men and women to renewed and redoubled effort in the great crusade which they have begun. Their final acts of devotion were not confined to any one part of this country; they were widespread throughout the whole Dominion. The lesson they contain for us cannot be better expressed than in the language of that greatest of Presidents of the United States at a time when his

countrymen had made similar sacrifices in order that that nation, conceived in liberty and based on the principle that all men are by birth free, should live and perpetuate those principles. At the dedication of the cemetery at Gettysburg to the memory of the brave men who had fought and died for their country, Lincoln used these words:

> It is for us the living rather to be dedicated here to the unfinished work which they who fought have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us, that from these honoured dead we take increased devotion to that cause for which they gave the last full measure of devotion. That we here highly resolve that these dead shall not have died in vain, that this Empire under God shall have a new birth of freedom, and that government of the people, by the people and for the people shall not perish from the earth.

I have inserted the word Empire instead of the word Nation. That is the lesson I take from the grand men of my county and the grand men of Canada who have gone to fight the battle of the Empire. Who were these noble men? I have in my mind Captain Fritz Robertson, a son of the rectory, who had two brothers in the service. The rector and his noble wife gave these three sons for this great cause. One of them was a distinguished student at Oxford university, preparing himself for the Church. Captain Fritz gave his life for his country, facing and fighting the enemy. Lieut. Lindsay also made the great sacrifice. His mother, a noble woman, also gave three sons for the good cause, one of whom died in defence of those principles which we all cherish. I am proud to say that one other son gained distinction on the field of battle, Col. W. B. Lindsay. Another widow in my county, Mrs. McColl, gave two noble, stalwart sons, who themselves gave their lives for Canada in that great battle which the hon. member for North Simcoe (Mr. Currie) so feelingly described to-day. And these are only a few of those who have brought honour to my county and honour to Canada. It is only fair that I should mention some of their names. Col. Lindsay, I have spoken of. Major Chesham, Chapman, of Ailsa Craig, Bolton, Degroat, and Pedden were all seriously wounded in the defence of liberty, but their courage was such that they returned again to close with the enemy. In passing, may I mention to the House a little remark that was made to me which showed the contempt of the Canadian Tommy for the German. This man of whom I speak had been wounded. I met him on the street and asked him about his wound, and he said: "Yes, I was wounded, but these Germans are no good." I asked him: "What were you doing when you were wounded?" He said: "Carrying His Majesty's mails from place to place, and they were throwing up flares and I was forty-five minutes in making my round. Every time they threw up a flare I threw myself on the road, as it was too muddy to use a motorcycle. They were shooting at me with machine guns for forty-five minutes, and they only struck me four times!" I would have thought that was quite often enough to be struck, but the pluck of that man was so great that he has gone back to the firing line. Major General Currie came from my county; he has been honoured by the King and by the President of France. We have others, such as Major Leonard, Officers Weir, McGugan (the son of a former member of this House), Scandrell—these all received recognition for distinguished services. Others have received mention in despatches, such as Malcolm Cuddy. Altogether I think I have a right to be proud of the showing of the good county of Middlesex, because I believe it typifies the showing of every other county in Canada.

In addition to the taxes that this Government are placing on the people of Canada, our people are voluntarily giving of their blood and of their treasure; and just here I want to mention my county again. Only a short time ago the county council of the county of Middlesex gave to the patriotic fund a monthly grant of $6,000 for the next year, in other words $72,000. Then every township, town, hamlet and village in Middlesex has in that way, by money grants as well as by giving its sons, shown its generosity and its willingness to give of their means to protect this country. The people of Canada to-day are not afraid of any just burden; the great danger is not that we shall not be able to bear the burden, but that wastefulness and extravagance shall so sap our strength that we shall fail in our effort to do so. That is the great fear in the hearts of the Canadian people to-day.

I charge the Government that, in the first place, they have shown lack of initiative. They have shown lack of initiative in regard to rural credits and in regard to the manufacture of munitions. It is my contention that the munitions factories of this country should have been taken over

or established by the Government long ago, as has been done in England; that these big shops should have been placed at the disposal of the Government so that munitions could have been made there, thus securing a lower price. The Government have shown a lack of initiative also in regard to protecting the great agricultural industry of which we hear so much from gentlemen on the other side of the House. They have shown great lack of initiative in dealing with the horse trade of this country. The Finance Minister expressed great solicitude for the agricultural interests of this country; but in all the Government have done since the war broke out there has been nothing to help the agricultural interests. Take the great horse industry of Canada,—and we all acknowledge that there are not better horses produced in any country in the world than in this land—what was done? The Government were very solicitous about the munitions manufacturers. They could not do too much for them. The Premier guaranteed that they would be protected from loss. They were given immense profits and helped in every way. Ships were commandeered to take their products across the sea. But what happened to the horse producers? First, an embargo was placed on the export of horses so that no horses suitable for artillery or cavalry purposes could be sent across the line. In the second place, an arrangement was made whereby the Allies should not buy horses in Canada but should confine their operations to other countries. In the next place, horses were bought in Canada in such small numbers that no advantage accrued to the farmers. What happened? Since the war broke out, if the evidence before the Davidson Commission is true, the farmers of Canada have sold for purposes of war about 27,000 horses. For these they have received about $4,000,000 or $5,000,000. On the other hand, the farmers of the great republic to the south have sold to Great Britain horses to the value of $60,000,000, and to the other Allies horses to the value of $140,000,000. In that way, whilst this country has derived an advantage from the sale of horses to the extent of about $4,000,000 or $5,000,000, the republic to the south has been advantaged to the extent of $200,000,000. What happens? In my part of the country, in the county of Middlesex, the farmers are grumbling, and rightfully. They are helping in every way to carry on the war, but they cannot get rid of their product. Their industry is not encouraged or developed. On every farm of 100 acres in Middlesex, for the past year, I think I am safe in saying, there have been from one to three horses fit for military purposes eating their heads off. In this matter the Government have shown lack of initiative. In fact, I do not know in what respect the Government has shown any initiative except in creating civil servants—and knightly personages. In those two things they have shown great initiative, but in no other. Extravagance is the great sin of this Government. In the first place, in munitions they have squandered thousands and millions of money. In the second place, they have in the post office a deficit of nearly three millions, whereas under the Liberal regime that department had an average surplus of $700,000. They have appointed civil servants in great numbers, and so have depleted the funds of the treasury of this country. To-day we find in the Estimates brought down by the Prime Minister items amounting to millions, which the Prime Minister himself says he does not intend to spend. I cannot speak in too strong terms of reprobation of the conduct of the Government in this respect. I say that if the Government does not intend to spend these moneys they should be wiped out of the Estimates. We are supposed not to be playing politics in this Parliament at this time, but to be acting patriotism; and these amounts put in the Estimates are only put there, it appears to me, for the purposes of dangling wholesale bribes, if the word is not too strong, before the constituencies, in which these buildings are intended to be built. The Public Works Department has gone beyond all bounds. In 1910-11, the last year of the Liberal regimé, we spent $11,000,000, if I remember correctly, in connection with the whole Department of Public Works. In 1914, the Minister of Public Works spent $11,000,000 in public buildings alone, as much as the Government of my hon. leader spent in the last year of his Administration in the whole Department of Public Works, and in 1914-15 there were eight months of war, during which many public works were not being carried on.

I have tried to avoid dealing with any subject in a partisan way. I may have failed, but I have tried to avoid criticism that might not look like honest, earnest criticism, or such as would tend to party advantage. Personally, I agree with that sturdy old Scottish iron founder, who

described the man who tried to make money out of his country's agony as a traitor, and any man, or body of men who indulge in unfair or partisan criticism and try to make party advantage, either for the Government or against it, are equally guilty of treason to the State. But that does not mean that a Government, no matter what its record may be, shall be subject to no criticism with regard to administrative or military affairs. No criticism might be more treacherous and dangerous to the State than party criticism.

Mr. MEIGHEN: Would the hon. gentleman permit an interruption with regard to something which he has just said? He stated that this Government had made an arrangement with the Allied Governments not to buy horses in Canada. That is distinctly not the fact. I would like the hon. gentleman to give his authority for that statement.

Mr. ROSS: At any rate, the results have been the same. They have not bought horses in Canada, and if the good offices of this Government had been exerted as industriously in the interests of the agricultural population and of the horse breeders of this country as they were on behalf of other interests, the Allies might have been induced to buy horses in this country. Maybe I am wrong, and maybe I am right.

Mr. MEIGHEN: The correspondence will show that the hon. member is wrong, if he will ask for it.

Mr. ROSS: I would like to see it brought down. Mr. Elihu Root made a speech the other day which I commend to every member of this House, and in which he used these words:

> There comes a time in the lives of men, as of nations, when to treat wrong as if it were right is treason to the right.

To deprive any one in this House of his right to honest criticism would be to deprive this House of the very purpose for which it was constituted, and to make it a burden, not a benefit, to the people. When we meet here it is not our duty to sit silent and close our eyes to matters of grave import, especially if those matters are inimical to the State and may lead to its disgrace or its destruction. In such a case he who would withhold just, fearless, and honest criticism would be a traitor to his country. In times of peace, Sir, when the State is prospering and flourishing, and is under no pressure, we may at times—though we should not even then—overlook little sores and ulcers in the body politic; but when the life of the State is at stake, when its very existence is being tried by the fearful arbitrament of war, we should not tolerate these things for a moment lest they fester and spread, and leave the State so weakened that she cannot defend and preserve herself.

David Lloyd George has said that this world war will be won by the nation having the most silver bullets, and making the best use of them. No man is in a better position than he to know what is the vital factor for victory. The Government of Great Britain evidently think the same, for they are advising their people to make every possible economy, to forego all luxuries, to use only those things in the nature of food and clothing which are produced within the Isles themselves. Such being the case, the matter of economy in public and private expenditure is one of the most vital questions for this House to consider, and members of this House, on whatever side they may be, who do not criticise this Government for any departure from the most rigid economy are not doing their duty to those they represent. It is as much the duty of an honourable member to your right, Mr. Speaker, particularly at this time, to condemn wrong-doing, or wastefulness, or extravagance, as it is for a member to your left to do so, and to find a remedy for the same if they exist. By not doing so he may be true to his party, but he is false to himself and to his country. So far, I have not seen an hon. member opposite, except, perhaps, the hon. Minister of Trade and Commerce (Sir George Foster), who spoke of the dangers of party shibboleths and party patronage, rise in his place to criticise this Government. Whenever hon. members opposite do rise, it is always to commend it. Are we therefore to presume, Sir, that this Government is considered perfect and infallible, or are we to draw the other deduction, that even when our life as a nation, and our liberty as a people, are at stake, there is no man among the members of the great Conservative party fearless enough, or thoughtful enough, to disenthrall himself from his party fetters, and say boldly: I stand for my country, not for the selfish interest of any party.

Mr. Speaker, no one can conscientiously deny that, even had the times been times of peace, the Government has been grossly extravagant, and it is alleged by many

thoughtful and patriotic Canadians, not all Liberals, that there is too light a characterization of its conduct. After listening to the masterly non-partisan and fair arraignment of its administration by the junior member for Halifax, this conclusion must have been borne in upon the mind of every hon. gentleman who heard him. From that arraignment, and from events which have transpired, another conclusion must also have been arrived at, and that is, that whatever extravagance and wastefulness and wrong doing there may have been, however dangerous they were to the State, they were the result of our party slavery and patronage system. If we do not destroy this monster, it will eventually destroy this country, or at best, it will ruin its progress and development and make the name of Canada a by-word in the Empire and throughout the world.

In this respect I think it is right for me to refer to what the Minister of Trade and Commerce said the other night, and I wish to say that I agree with every word of it. He said:

> Now, as to patronage, I have been thirty-four years in public life; I have been a pretty close student of political parties and political history in this country, and I have simply this to say—I give it as my individual opinion—I have long felt it and I feel it now that in the whole course of my political life I cannot point to a single instance where political patronage ever helped the status of the bench, ever helped the status of the Civil Service, ever helped economy in administration or enhanced the status of public administrators, no matter what functions they performed, ever helped a member of Parliament in reality, ever helped a Government in reality; it almost always causes the dry rot and disintegration that break up government after government and party after party, and I wish now, in the white heat and light of this great contest and struggle and the self-sacrifice that we are called upon to make, that we might speak from the heart out, and make an agreement in this country between both parties, that hereafter patronage shall not be applied by political parties in the construction of our public works. Now, that is a frank admission. Some may say to me that I have no right to make it. I presume upon my grey beard and thirty-four years in public life, and I make that statement for what it is worth, I will just append to that one single sentence, and it is this: that if there is any laxity in the public virtue of this country to-day, if there is any canker of public corruption, in ninety-nine cases out of a hundred you can trace it to the baneful effect of political party patronage.

To-day, party patronage and slavery to party are decreasing our power and efficiency in the great war of liberation. It is a curse in times of peace and a curse and a crime in times of war. It saps our life-blood, it destroys our unity as a nation outside this House and in it, and there is no good in it as a compensation. There never was a better time to destroy it; the people are united as they never were for one purpose and one purpose alone, and every other object interfering with that one purpose fades into insignificance. They are ripe for any change that will put the state before the party, and, if the leaders will only point the way and give the guidance, they will follow.

Mr. Speaker, the Prime Minister at this time is the chosen leader of the people. They look to him for guidance and real leadership in this matter, and they look to his opponents to support him in any efforts he may make with an eye to rid us of this monster and win this war, and in their expectation, Sir, I feel that the Opposition and its leaders will not disappoint them.

It may be presumption on my part as one of the younger members of this House, but I say this to the premier, as one who has followed his public career with great interest, while not approving, but himself disapproving, of many things he has done since he attained office, that, as the premier of the Canadian nation, he is no longer playing a minor part in some comedy or melodrama on some provincial or colonial stage. Events have carried him, and all of us, far beyond that. Thanks to the genius, statesmanship and foresight of my beloved leader, we have felt for some time, and we feel to-day the throb of nationhood. Are we, as members of this House, and is the premier as its leader, marching with events?

To-day, all the world's his stage, his audience humanity. He is no longer playing a minor part, but has one of the leading roles in the greatest tragedy ever staged for the world. Each of us has his lesser part to play. Will the Prime Minister rise to the height of the great argument? Will he act the part Canada has entrusted to him in a manner worthy of her and of the Empire? Will we each do our lesser part? Will he, at this crisis in our history, rid his councils of any man, if such exist, who has not an eye single for the service of the state, and call to his councils those alone seeking to serve the nation and the great cause of humanity, and not themselves or their party or their friends? Will he guard the public treasury as a most sacred trust, upon which the very life of the nation may depend?

Destiny has been kind to the Prime Minister even if she has burdened him with responsibilities such as none of his

predecessors were called upon to bear. But responsibilities such as his, efficiently and honourably borne, insures not only the satisfaction of looking upon duties well done, but honour and fame and a lasting place in the memory of the Canadian people and of the whole Empire. No statesman in this land has ever been given such an opportunity to make his name forever as sweet to his people as that of Lincoln to his countrymen. If he will seize the passing opportunity he may, in the Empire's progress, as Tennyson beautifully puts it,

> Live to clutch the golden keys,
> To mould a mighty state's decrees
> And shape the whisper of the throne;
> And, mounting up from high to higher,
> Become, on fortune's crowning slope,
> The pillar of a people's hope,
> The centre of the world's desire.

No one on this side of the House will envy him his glory so attained, but rather is it my belief that if he will just lend himself to the task, every member of this House, irrespective of the past, and the whole Canadian people, will support him with all their heart and soul.

Why, Mr. Speaker, can these things not be so in Canada? Are we never to arise above the muck and mire and mud of politics? Are we always going to be all for the party and none for the state? Are we going to allow the little things of self and party to eclipse the immense things of the nation and the Empire? In this House to-day we are under the surveillance not only of the Canadian people but of the Empire and the world as we have never been before. It is expected of us as men and as parties that we will measure up to the greatness of the occasion and not down to the smallness of party strife, or manipulation, or administration, for party advantage. If we fail I believe the temper of the Canadian people is such, and rightly so, that they will choose new men and new parties to guide their destinies and that a great, radical reform party will arise in this land to give the people what they desire and what they deserve.

In this House we are not lesser than the breeds from which we sprang. We enjoy the same free institutions, we possess the same ideals, we are inspired by the same determination to preserve the freedom and civilization of the world, and to-day our unity is accentuated by having everything that we prize threatened by a common danger. In Canada we are two races united for the present and for the future, I believe, as never before. We have two motherlands. As the hon. member for Rouville (Mr. Lemieux) so truly said in a speech in Toronto, we have the motherland of France and the motherland of Britain; France gave us life, Britain gave us liberty. To-day, with us, they are struggling to preserve that life and liberty and they are teaching us how best to do it. Britain is still the mother of freedom. In Britain, party strife, although never so bitter as immediately before the war, is hushed in the land. The leaders of opposing factions united by common ideals and purposes and threatened by a common danger, have clasped hands and, as Abraham said to Lot, in olden times, Mr. Asquith has said to Mr. Balfour: "Let there be no strife, I pray thee, between me and thee, and between my herdsmen and thy herdsmen; for we be brethren." This action has inspired the people with the same sentiment and Britain is united as never before. Faction has been unable to gather strength in that land. Her sons, gentle and simple, rich and poor, prince and peasant, inspired by her statesmen, are coming forward in millions to fight for liberty, and her daughters are making heroic sacrifices beyond any precedent. Her sailors are taking care that she is still encompassed by the inviolate sea.

11 p.m.

As for France, she is the wonder, the marvel, and the admiration of the world. Her statesmen are united, her people have but one thought, the sacrifice of everything they possess, if necessary, for the preservation of her liberty and integrity. She is no longer the gay, frivolous pleasure-loving France of our imagination. She has found her true soul, a new soul, a soul greater than she ever had. She has become inspired, glorified, transfigured. The whole world salutes her with reverence. As the editor of the Providence Journal said, she is fighting with the sword of freedom in her hand and the light of God in her face. Every daughter has become a Joan of Arc and every son a Roland, sans peur, sans reproche. She is the first republic of the world and from the ashes of Louvain and Rheims and the peasant homes of France like the fabled bird, there will arise a new France, a greater France, a better France to enrich the ages.

With Britain and the Allies she is fighting for her life, but also for the world's freedom. Over a hundred years ago her peasants fought to wrest for the individual from a kingly and autocratic despotism within her own borders, the blessings of equality, liberty and fraternity, and to-day

they are fighting a nobler fight to wrest from a foreign despot, for nations great and small, the blessing of equality, liberty and fraternity. France made possible the life of other republics who forget her when her life is endangered because they are too mercenary, or too selfish, or too proud, to fight for liberty. France will be remembered for her chivalry and nobility when their wealth cannot save them from scorn.

Mr. Speaker, these are our motherlands —France and Britain. We of British extraction, you of French, all Canadians, can proudly say with the Scottish singer: A dear old land is the Motherland. They are giving us grand examples of unity, of harmony, of self-sacrifice, of patriotism. They are worthy of emulation. They are worth fighting for, worth dying for. Let us measure up to these standards in this House and out of it and make the name "Canadian" one that will live forever.

Mr. A. BELLEMARE (Maskinongé): (Translation.) Mr. Speaker, every hour, events, both in Canada and Europe, take on a more serious turn. More than ever since the beginning of the crisis in which the Empire is struggling, the increasing hugeness of the conflict obtrudes itself on our minds.

The situation, even as regards our country, is becoming more tense.

In August, 1914, at the time of the declaration of war, all of us, in a common accord and led on by a like enthusiasm, have realized, without any other incentive but our loyalty to the Empire, that Canada was in honour bound to participate, to the extent of its resources, in the great struggle into which the Empire had just been drawn for the sake of its own preservation and the defence of civilization, threatened by a nation scorning its solemn engagements.

At that time, the world did not dream that in a few months the portentous struggle would reach such stupendous proportions. The worst pessimists could not but predict that the conflict would be of short duration; unhappily, those predictions turned out too sanguine and notwithstanding the successes of the Allies, interspersed, it must be admitted, with a few reverses, and notwithstanding that the final victory is certain, a guess as to the probable termination of hostilities, becomes increasingly hazardous.

Until now, the Allies, although labouring sometimes under a considerable disadvantage, sometimes have had the best of the struggle, but after long months of unrelenting endeavours, we are now more convinced than at any time since the opening of hostilities, that the triumph of the cause to which the Empire is giving the best of its resources in men and money, depends solely on the perseverance of all citizens in their devotion and sacrifices. Canada, I must say, has nobly and unsparingly answered the call. Our contribution to the defence of the Empire has been more than generous. The Government, anxious to meet its obligations to Great Britain, without nevertheless derogating from the traditions of the past, has opened its coffers to help the cause of civilization. That those sacrifices have not been in vain, the proof is wafted over to us from the battlefields of France where our valiant soldiers have won distinction, and the proof will again come out evident and eloquent later, on the day of victory, when we shall be proud of having helped in the final triumph, and take glory in the share we are now bearing of the present exceptional burden.

I say exceptional advisedly, because, so long as Canada was not threatened in its existence, there was room for difference of opinion regarding its obligations towards Great Britain. But in this war, as a matter of fact, there is no question of a crisis concerning one part only of the Empire, and, it cannot be denied, the cause of the Allies is not only the cause of the European powers directly at war, but Canada itself, notwithstanding its apparent safety, is nevertheless in danger. Like Belgium, whose automony seemed at first absolutely guaranteed by solemn treaties, we are not allowed to think of the future without some apprehension, especially with enemies such as we are contending with. We may from them expect anything, and the events of the last two years and the happenings of recent date amongst us give us cause to dread.

The present war is not, as would be thought by some, a European war, it is a universal struggle, in which all nations, including Canada are interested.

The events of the last year in Europe have developed into a situation of such gravity that those of us, who had been opposed to Canada's participation in Imperial wars, although at the time absolutely sincere in their opinion, are driven by the present turn of events, to acknowledge the changed conditions and alter their views on the subject.

Many MEMBERS: On the subject, hear, hear.

Mr. BELLEMARE: I take the greater credit for it, because in 1896, the Liberals who attacked the purchase of rifles by the

Government of Sir Charles Tupper, have changed their minds, and if we, independent politicians, follow their example, how can we be blamed? I still uphold the fundamental principle of national autonomy, but I cannot but tolerate in the circumstances the policy the present Government has hereto followed. Yet, Mr. Speaker, I would make a reserve. As I was saying a moment ago, Canada, as other countries, must look forward to the future, and if there is found to be danger, as seems to be the fact, is not now the time, before it may be too late, to think of our own security? Should Canada be attacked it is hard to state the precise developments that would bring about such an occurrence, but as it is among possible events are we, after the enormous sacrifices in men and money we have been making to this day, in a position to successfully defend our territory?

I do not thereby mean that we should completely stay those measures now being taken, but I particularly commend to the attention of the Government that in our decisions there be kept in view the safety of our own immediate interests. To this date, millions have been spent to come to the help of the Mother Country and the Allies, but led on by the burst of enthusiasm and generosity which in this war animates its citizens, Canada must not forget its own national security.

Mr. ROCH LANCTOT (Laprairie-Napierville): (Translation.) Mr. Speaker, I was much interested in the addresses delivered in this House following the Budget Speech of the hon. the Minister of Finance. Before adding my own remarks on the subject, I must first tell you, Mr. Speaker, what I think of the war expenditure.

I am of the same mind as last year, and I am at a loss to know where the Government is leading this country with the present expenditure, which has overstepped all bounds and control.

So as to ward off all misunderstanding, I shall quote what I stated in this House on the 9th of March, 1915, as reported, page 804 of Hansard:—

> It was with satisfaction that personally I voted the $50,000,000 required to defray the contribution which we deemed it proper that a country such as ours ought to vote.
>
> But, Mr. Speaker, I believe that such help ought to be proportionate to our resources and that we have no right to indulge in inconsiderate and uncontrolled expenditure. The help which a son is bound to give his father should be proportionate to his own resources and to the needs of his parent, and if we must accept that proposition as being absolutely logical and reasonable, we must also infer that we have now greatly exceeded the limit of our obligations.
>
> Let us calmly look into the situation, keeping in view solely the performance of our duty as representatives of the people.
>
> It is universally conceded that England has all the money she wants. We know through the Minister of Finance himself that we go to England to obtain the very moneys that have been appropriated for our war expenses. Is not that sufficient evidence that, instead of fulfilling an obligation, we have on the contrary imposed upon ourselves an immense sacrifice.
>
> In view of the present financial situation in England and in our own country, is it not evident that our sentiments of loyalty and the deep indignation felt at the atrocities committed by those blood-thirsty Germans, have been the sole motives of our spontaneous participation?
>
> But, Mr. Speaker, I ask this House, are we then justified in driving the country into bankruptcy? Not so, unless it may be shown that our participation to the full is the only guarantee of the certain success of the Allies. And as a member of this House is expected fully to speak his mind, let me say right here that the interest we have in this war, however great it may be, is far from being equal to the interest of England or the other independent nations engaged. We are only a self-governing colony, and we have no war to wage here for the conservation of our sovereignty, as have other nations; and that makes an enormous difference. If we were to follow the dictates of certain visionaries, we should exhaust, nay, we should already have exhausted at this moment our resources in men and money, and, say I, under what circumstances?

Since the last session, things have gone much worse. During recess, the Government has decided to increase our forces to 150,000 men, then to 250,000 and on the 2nd of January last, the Prime Minister, confined in his room by sickness, threw out that stunning news of an army of 500,000 men.

Why not have waited to the 12th of January, on the opening of Parliament, to lay before the House that ridiculous project?

In bringing the Canadian effective to 500,000 men, the Government puts us on an equal footing with European nations, leaving out of count the foreign nationalities among our population.

The Prime Minister, in his address on the Speech from the Throne, has declared to the House that the Canadians had saved the Empire at the battle of Langemarck.

So, it is, Mr. Speaker. Our soldiers have been mowed down as by a scythe, on account of our inferior arms and supplies and the large number of German guns and munitions of all kinds.

I maintain therefore that it was nothing less than a crime to thrust our soldiers into battle without weapons and supplies.

Mr. Speaker, I denounce with all the energy I can command, all that waste of men and money.

First of all, the request has never been made by England for sacrifices of that magnitude; she knew that it was beyond our power.

Will you not acknowledge, Mr. Speaker, that we could have rendered more yeoman service, a hundred-fold more so, to the Allies, by commandeering all our workshops to the making of munitions, and by getting the Government shops to manufacture shells at cost price? Valuable help would thereby have been given the cause.

The Westminster Gazette, during the month of January, 1915, had the following:—

> We are told that Canada desires to carry its contribution in men to 150,000 before next fall, should that number be required. It is needless to say that we do not believe such a sacrifice will ever be required from the Dominion. We fully acknowledge that Canada will be with us in the present war to the extreme limit of its resources. But we hope that the recruiting now going on in England will suffice and that we shall never be obliged to make such a call on Canada. We must not forget that what is required from Canada during the present conflict is two-fold service. That country must remain the granary of the Empire and if we are to achieve success in this war, the men working in the Canadian fields will help us to that victory just as effectively as those who expose themselves to the fire of the enemy.

Mr. Speaker, I am perfectly aware that the newspapers of the country, Grit and Tory, will denounce me to-morrow for the stand I now take on the question of our participation in the war, I realize that the yellow papers of Ontario will report my words. I am quite willing they should do so, what I say expresses my own personal opinion.

If my party was in power, and my party was guilty of such absurdities, I should attack my party with all the strenuousness I could muster.

The Ontario papers have spread the report that the French-Canadians were not performing their duty, that they did not enlist in sufficient numbers. I am of a contrary opinion. To my mind, their enlistment is too great for the treatment they receive at the hands of the majority.

In Ontario, the French-speaking element are deprived of the rights which were granted them by the Fathers of Confederation in 1867 in an agreement acquiesced in by the different groups which then inhabited the country. The clear intention was that the French language was to be on an equal footing with the English language, and yet what sight are we given to witness around our French schools in this very capital city of Canada. Are we not refused the liberty of teaching our children the language they learned on their mother's knee, a right guaranteed to French-Canadians by the Fathers of Confederation.

I take pleasure in congratulating the hon. member for North Simcoe (Mr. Currie) on the address he delivered this afternoon. I see that during his sojourn in France he has learned to appreciate the French race and the French-Canadians. Should he return, I should suggest that he bring along with him the Prime Minister of Ontario, Mr. Hearst, his colleagues, and many of the members of this House, in order that they may get an opportunity of finding out the real worth of Frenchmen. When they return, it is safe to say that they will no more insist on the children of such a glorious race being forbidden to learn their mother tongue in French-Canadian schools.

The war unfortunately is being waged in Europe since the third of August, 1914. Let us examine rapidly the relative position of both sides, both in men and resources. The Allies, I find, have an aggregate population of over 300,000,000, and greater resources than the enemy. Such being the case, why should the Canadian people be driven to the verge of bankruptcy by its Government in order that soldiers be sent to fight for the Allies, when it has been proved that what was wanting was not men but war supplies.

Let us compare our situation with Great Britain's. The latter, according to the statements made by Lloyd George in the British House of Commons, has enough funds invested in foreign lands to enable it to continue the war during the next four years.

We, on the other hand, are yearly paying as interesting to England $150,000,000, and $50,000,000 to the United States, and we still must go on borrowing hundreds of millions more if the war last another year or more. If after the war, this country should be called upon to pay the expenditure, three-quarters of our people will be bankrupt.

I read the other day the interview given certain New York newspapermen by the hon. member for Centre Toronto (Mr. Bristol). He claims there are now 150,000 Canadians in the trenches at the front and 1,350,000 British. There are in these figures a great discrepancy with the declarations made by the right hon. the Prime Minister and the hon. the Minister of Militia, in the course of their discussion on the address in reply. These gentlemen stated that we had at the front 50,000 men only. That leads me to conclude that if Mr.

Bristol has made a mistake of two-thirds regarding the number of the Canadian soldiers, he must have made a proportionate error in his estimate of the British forces.

Let us now examine what obligations we have incurred since the beginning of the war. Those obligations, I fear, will exceed our resources should the war last much longer, as seems to be pointed out unfortunately by present indications.

As a matter of fact, our soldiers are paid $1.10 per day while England only pays them a shilling, and the French soldier receives only five cents a day. We moreover pay twenty dollars a month to the soldier's family, which means that 500,000 men cost more to Canada than 2,000,000 to England. Again I say, it is an insensate policy to which the people of this country are absolutely opposed.

Our newspapers almost unanimously advocate recruiting. Have those Empire-saviours set an example by enlisting first? No, Mr. Speaker, they take good care not to display their patriotism in that manner. But we understand from what source springs all this devotion, paid by the Government at so much a line. Newspapers will publish any story for money—and you know the saying, Mr. Speaker: Lie, lie anyway; some of it is bound to stick. But, Mr. Speaker, the people of this country are wise to the patriotism of the great dailies; and sooner or later, a day of retribution will dawn, and the people who are good judges, will punish as they deserve all those who would save the Empire—for money.

I now should make a few remarks on the speech of my friend, the hon. the Minister of Inland Revenue (Mr. Patenaude), delivered in this House on the 2nd of February.

The hon. minister alluded to addresses which, he states, were delivered by the hon. member for Temiscouata (Mr. Gauvreau) and Kamouraska (Mr. Lapointe) in their respective counties some time last year. He likewise quoted from Le Soir a newspaper published at Montreal at the time of the general elections in 1896, and from the Electeur, the official organ of the liberal party in the province of Quebec, where the main question discussed was Desjardins rifles, Desjardins then being Minister of Militia in the Cabinet of Sir Charles Tupper. Among other things, Le Soir stated:—

> Why fight for England?
> The electors will have to keep in mind that those big and great leaders who are always so anxious to appear greater patriots than the rest of us, more loyal and eager to send us to war for another country's benefit, are not those who will be called upon to bear the burden.
>
> Those rifles, those guns, it will be the electors who will handle them. They see in you good gun targets. The Tupers, Angers, Taillons will sit quietly in their office at the department, whence they will despatch you to your doom.

Lower down:—

> Your sons will be sent to Africa or Asia, never to return.

That quotation is found at page 542 of the 1896 unrevised edition of Hansard. Twenty years have since elapsed, and the hon. minister could have, meseems, spoken of the happenings of 1910 and 1911. He dared not. Well, I shall supply the omission, which I suppose, he has made unintentionally. In the month of September 1910, addressing a large meeting at St. Rémi, the hon. the minister was then neither honourable nor minister. Mr. Patenaude declared among other things that Laurier had sacrificed Canada to secure titles and honours, and added that Borden was following in the same path. Needless to add that he has denied his leader many times during 1910 and 1911.

The elections of the 21st of September came about. Everything was peaceful. The minister's soul was peaceful. But, a few months later, the cock crowded again beside the Minister of Inland Revenue. On that day he was called on to deny not his leader but the master of his leader, that is the people. He lost no time, and the diminutive St. Peter was consecrated party organizer for the district of Montreal.

No more have you heard the voice of the hon. the minister throughout our counties clamouring that the proposed navy or the intended contribution to the Imperial navy ought to be laid before the people. The offer of three dreadnoughts was before the House in 1913. The hon. the minister did not say that they amounted to more than the real estate assessment of the counties of Laprairie, Napierville. Not so, Mr. Speaker; during the election of 1911, the hon. the minister warned the people of Laprairie-Napierville that the navy would be Canadian in times of peace but Imperial in times of war, and he quoted the Hon. W. S. Fielding, who had stated in this House that our navy could be put at the disposal of the Admiralty in case of need. You must learn, that the minister was very shy of cannon shots at the time. His nerves have improved. It was then a terrible sight, that of our sons being put aboard vessels to be sent to China or Japan to fight for England's sake.

I never could understand why a difference was made between the net and the gross

debt. It is well known that in the amount deducted from the gross debt, there are certain sums which have been loaned to railway companies, and which those companies have never paid back and never intend to make good.

However, another year of this war, and the gross debt will be $1,200,000,000 and the net debt $850,000,000. We will besides have to settle with England for our share of the expenditure for guns, munitions, etc. The figure will be a good round one, because shells have been expensive in this country. What the amount will be, I cannot forecast, but at its lowest figure it must be estimated at $100,000,000.

Since the August session of 1914, the Minister of Finance has, on three occasions, imposed on the country taxes aggregating at the least to $75,000,000, over and above the taxes with which the people were burdened in 1911.

This year, the revenue is considerable, on account of those new taxes. There must be taken into account that the soldiers' pay, their pensions, the monthly allowances to their families, increase the buying power of the population. A large number of workmen, moreover, get employment in the manufacture of all kinds of war supplies.

But once the war over, our high-paid workmen will be without salary; the soldiers now in training in various parts of the country will be sent back home. I do not think that I am imposing on this House in stating that the closing up of those two sources alone will result in a decrease in the actual purchasing power by over $1,000,000 a day. We shall have to pay pensions to our invalids, our widows and our orphans. What will this item aggregate? I cannot say, but if the war endures for a year or more the amount will be considerable. The hon. member for Carleton (Mr. Carvell) placed the figure at about $30,000,000. The interest on the debt will add at least another $50,000,000; to which if you add a sinking fund to cover those three items, the amount will not be far from $100,000,000. Then, the Civil Service expenditure will have to go on, so that, during the years following on the war, we will not be able to put both ends together for those purposes alone.

Since the month of August, 1914, the hon. the Minister of Finance has imposed additional taxes amounting to at least $75,000,000 over and above what the people had to pay in 1911. Those taxes always fall on the shoulders of the common people, whatever may state the Government organs. The last articles to be taxed are apples, petroleum, and the profits of manufacturers. Let us examine that taxation. The tax on the profits of industry and trade is the introduction of a revenue tax. If the war keeps on longer and if the Government puts into effect its proposal to raise 500,000 troops, every shred of income will be taxed within the next two years.

We need not for a moment put any stock in the declaration of the minister to the effect that this tax will end in August, 1917. My opinion, on the contrary, is that it will be renewed after that date and even increased. The consumer it is who will have to pay the tax; the manufacturer will lower the salaries and increase the price of his merchandise to an equal extent, and the people will pay over one-quarter of what the manufacturer will turn over to the Government.

That tax seems to me unfair to a manufacturer who acts in good faith. Suppose a company that had a capital of $100,000 fully paid and doing a successful business. Will not that company, Mr. Speaker, have to pay more to the Government than another company commencing business with an equal capital, but who found the means of watering it up to $400,000? That last one declares a dividend of 5 per cent on all its paid-up capital and its water stock. The new law does not affect it. If the other company realizes similar profits, namely 20 per cent on $100,000 of paid-up capital, it will retain only 7 per cent free of tax and the other 13 per cent will have to pay a tax of one-quarter. The law as it is appears quite unfair for the manufacturer in good faith and gross injustices will result. I fail to grasp why the minister has made such a slight distinction between the tax on ordinary manufacturers and that on shell producers, 7 per cent on the first and 10 per cent on the mushroom variety.

What strikes me most in all this is the discontent which that tax is raising among the manufacturers. Yet those very gentlemen mostly all favoured sending the first man and the last dollar to save the Empire.

The famous Ballantyne incident at Montreal is well-known. That gentleman, in the course of a speech at a recruiting meeting, held that all manufacturers ought to discharge their unmarried men who did not enlist voluntarily. Many have discharged their unmarried employees to force them to enlist. I have yet to hear that those big heads, those Empire-saviours, have pointed

the way by themselves enlisting; yet now that the Minister of Finance asks them to contribute twenty-five per cent over a reasonable profit of 7 per cent and 10 per cent, they are dumb as to the needs of the Empire; their chief care is to make money like other mortals, maintain the war to sell off their supplies, and begin again after the war, like the celebrated Krupp Company, in Germany.

As for me, Mr. Speaker, I am opposed to those excessive taxes. I say that we had no right to saddle the country with a war expenditure above its capacity. Future generations, who will administer the public weal, will say, and truly so, that the politicians of 1914, 1915, 1916 and 1917 have driven the country to bankruptcy; that their pretense at saving the Empire was but a bluff; that their real ambition was to enrich a large number of their friends and swell the electoral funds of the Tory party.

I like a game of bluff, on a green cloth, not in the House. Parliament is no place wherein to play political bluff.

I have but a few remarks to add with respect to hay. I have always found it strange that the Agricultural Department should have seen fit to place the hay-presses on the wharves in Montreal. I think, Mr. Speaker, there is no common sense in that. The hay should be pressed on the farm. As early as the month of September, 1914, the Government awarded James McDonald a contract to re-press that hay in small bales at $4.95 a ton. If I am rightly informed, the same James McDonald, of Montreal, had secured a contract for many thousands of tons of hay at $18 a ton for Nos. 2 and 3. What was the result, Mr. Speaker? In October, 1914, there were in the railway yards not less than 2,000 cars of hay. That is, there was enough for two months ahead, with the result that a large number of smaller dealers were ruined, hay was refused in large quantities, repurchased by associates of McDonald, put in shed No. 16 on the wharves, and, if I am rightly informed, paid $10 to $12 to those dealers. There was besides deducted from that price demurrage on each car, amounting in certain cases, to ten, fifteen, twenty and thirty dollars each car. That demurrage was charged to the dealers, so that they suffered to the extent of thirty, forty, and fifty dollars per car. Besides that, Mr. Speaker, many of those dealers found a shortage on some of their cars of twenty, thirty and forty bales, which meant a difference of, one, two or three tons per car. I am told further that a certain inspector used to send carloads of hay that had been rejected to a friend in his village, and I suppose that some time later, the same hay, loaded on another car, was sent again to the Department of Agriculture at Montreal.

I have a case of my own. During the month of October, I sold ten carloads of hay to a hay dealer, who had a contract with the department. That hay was shipped in the name of the dealer. It had been agreed between us that in the case of any hay being rejected by the inspectors of the department he was to have it carted by the J. B. Baillargeon Express, Limited. That was done. Out of the ten carloads about forty tons were rejected and carted by the Baillargeon Company. I gave instructions to the company to dispose of that hay and during the month of December, Baillargeon sold that hay to another dealer who was supplying the department. The hay was taken from Baillargeon's sheds, and passed the Government inspectors who accepted two-thirds of it. I am thus led to believe that the inspection was lax and must have been an incentive to many dealers to have an inferior quality of hay accepted by the inspectors. If, on the other hand, the department had awarded contracts of two, five and ten thousand tons to serious dealers, the latter, as was done at the time of the Transvaal war, would have installed their presses in the country, where they could have secured the hay from the farmers without the need of inspectors. Mr. Speaker, I have been in the hay trade for the last twenty-one years. Needless to say that I have sold large quantities of hay and my sales were always based on the quality of the merchandise, either No. 1, No. 2, No. 3, mixed clover, pure clover or cull, and be sure that when I had sold ten carloads of No. 1 hay, I had without fail to deliver the quality I had sold, otherwise, the hay would have been refused on its arrival where it had been bought. The same may be said of grain which, like hay, is sold according to its quality. In 1899 and 1900, I sold for the Transvaal 6,100 tons of No. 2 hay. There were no inspectors at the place of shipment. In summer, the hay was inspected on the wharves at Montreal by a Government inspector and in winter, the same thing was done by Government inspectors at St. John or Halifax. Out of those 6,100 tons only 1,232 bales of 100 pounds each, were rejected, and the rejected hay was stored in Halifax or St. John under my name. And I must add that I never had met, and what is more, was not acquainted with the inspectors. I am satisfied as to what they have done.

Last December, the Government prohibited the export of Canadian hay to the United States. It seems to me the Government should have followed New York's example. It often happens that an embargo is placed on New York, either for Thirty-third street, Brooklyn or Erie. Immediately all the railway companies of the United States and Canada are notified of the embargo and the very same day should we ask for cars for New York our station agents advise us that no cars are to be had on account of the embargo. I fail to see, Mr. Speaker, why the same was not done by the Government; much trouble would have been saved to the dealers. If I am rightly informed, about 300 cars loaded with hay were held at the port of entry on account of that embargo. I have myself two cars which were held at St. Alban from twelve to fifteen days, so that I may expect to have to pay from twelve to fifteen dollars a car. However, I shall know my fate when I shall receive my bills of sale of the two carloads. I am of the opinion that some compensation should be given by the Government to all those who have had to pay demurrage on cars on account of the embargo. As a result of the embargo we are deprived of our market for No. 1 hay and the hon. member for Chambly-Vercheres (Mr. Rainville) is as aware of that as I am. At the present time, there is no one to purchase that hay, and the farmers have to hold it until next harvest time, except what may be sold on the local market at Montreal.

Mr. RAINVILLE: (Translation.) The hon. member knows that last January there was in Eastern Canada, from Ontario to the Maritime Provinces, not more than 55,000 tons of hay to be had, and one hundred thousand tons were required for the War Office.

Mr. LANCTOT: (Translation.) I know what we have at home, and I know that we shall have some left over to next August, if we are afforded no other market but Montreal.

Mr. BOULAY: (Translation.) How much do you sell your hay for now?

Mr. LANCTOT: (Translation.) We pay $19 for No. 1 hay and sell it at $20. It must also be taken into account that the waste which is being sold is harmful to the trade; many large stables in Montreal, having little to do, buy that waste at a little over a dollar a ton. I am led to believe that at least one-quarter of all the horses in Montreal are fed that way. As we are prevented from selling our No. 1 hay in the United States, I should suggest that the Department of Agriculture buy our No. 1 hay at the price that it could be sold on the American market, namely $20 a ton, and I feel that this hay at $20 a ton would in the long run be much cheaper than No. 3 hay for which is being paid $18.50 a ton and which certainly is not worth any better than good straw to feed animals.

Mr. Speaker, as it is getting to a late hour, I will take my seat, and leave my remarks to the consideration of this House, believing that they are true and wise.

On motion of Mr. Boulay, the debate was adjourned.

On motion of Hon. R. Rogers, the House adjourned at 12 midnight.

Wednesday, February 23, 1916.

The House met at Two o'clock, the Speaker in the Chair.

REPORT.

Report of the Secretary of State for External Affairs for the year ended March 31, 1915.—Sir Robert Borden.

CRIMINAL CODE AMENDMENT.

Mr. PUGSLEY (for Mr. W. M. Martin) moved for leave to introduce Bill No. 38, to amend the Criminal Code.

Motion agreed to, and Bill read the first time.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

APPOINTMENTS.

Mr. MACDONALD:

1. How many men have been taken from other railways and placed in positions, with $900 a year and over, on the Intercolonial railway between April 1, 1913, and December 31, 1915?

2. What are the names of the men so employed?

Mr. REID:

1. There are eighteen such men now in the employ of the Intercolonial Railway.

2. Engineering department: C B. Brown, A. T. McDonald, F. S. Wilkins, G. C. Lightner, L. H. Robinson, A. D. W. Cuthbert, James Pullar, H. T. Rhul, L. Brousseau, T. L. Landers, G. C. Perkins, A. H. Jones, J. E. Long.

Operating department: J. K. McNeillie, A. C. Barker, William Charles Roberts.

Traffic department: C. A. Hayes.
Mechanical department: George E. Smart.

HORSES FOR FRENCH GOVERNMENT.

Mr. HUGHES:

1. Where is the French Government purchasing horses in Canada?
2. What are the names and addresses of the parties representing the French Government in the matter?

Sir ROBERT BORDEN:

1. The Government has no official information on the subject, but understands from advertisements appearing in the daily press that purchases are being made in various parts of Canada.

2. The Government has no official information on the subject, except that the Hudson's Bay Company is the official purchasing agent for the French Government in Canada. No information is available as to whether their duties comprise the purchase of horses. Information can doubtless be obtained from the French remount officers, who, according to advertisement, are to be in Ottawa during the whole of the present week.

102ND BATTALION.

Mr. CARVELL:

1. Why is the 102nd Battalion, the men for which are mostly being recruited in the upper county or the mainland of British Columbia, to be mobilized at Comox?
2. What is the additional cost to the country of transporting these men to Comox?
3. How long will they be trained there?
4. What is the total precipitation per annum at Comox, as given by the Meteorological Department?
5. How is it divided throughout the year?

Sir SAM HUGHES:

1. On the recommendation of the District Officer Commanding Military District No. 11.

2. Cannot be estimated. In most cases, men were en route to the front.

3. Until they are moved into concentration camp or overseas.

4 and 5. This information is given in reports.

SOULANGES CANAL—STONE FOR PIER.

*Mr. BOYER:

1. How many tons of stone did the Government purchase for the construction of the pier at the head of the Soulanges canal?
2. What price per ton was paid?
3. How many tons were purchased from Philias Doré, of Valleyfield?
4. What price per ton did he receive?
5. By what method of transportation was such stone conveyed to the works?
6. How many boats, scows and men were employed in such transportation?
7. How many days were required for the transportation of such stone?
8. What was the daily cost of such work?
9. What amount has Philias Viau received so far?
10. What amount is still due him?

Mr. REID:

1. 5,775 tons.
2. $1.20 per ton on scow at Valleyfield.
3. 5,775 tons.
4. $1.20 per ton.
5. By Government-owned scows and tug —the Carillon.
6. Two scows, one tug, six men.
7. Transportation at the rate of one trip per day for 52 days. Each trip consumed about two hours.
8. $2.35 for fuel and oil. No charge made for crew and tug which did the hauling, while the dredge she was attending was loading her own scows and otherwise would have been idle.
9. Nothing has been paid Philias Viau.
10. Nothing.

GUARDING AN INTERNATIONAL BRIDGE.

Mr. MICHAUD:

1. What arrangement has been made with the United States of America for supplying sentries for days and nights in watching the International railway bridge between Van Buren, Maine, and St. Leonard, N.B.?
2. Is the Government aware that these sentries are being accommodated in American cars? If so, who has ordered said cars for our Canadian soldiers?
3. Are the United States of America paying part or the whole expenses to watch the said bridge?

Sir SAM HUGHES: No arrangements have been made with the United States of America, but, on request of the president of the Bangor and Aroostock Railway Company, a guard was furnished by the Militia Department, the company agreeing to furnish the housing accommodation of this guard, and no complaint was ever received.

SWIFT CURRENT POST OFFICE SITE.

Mr. W. M. MARTIN:

1. Has the Government purchased any property in the city of Swift Current for a post office site?
2. If so, what is the description of such property?
3. What was the date of such purchase, and what was the price paid for such property?

Mr. ROGERS:

1. Yes.
2. Lots 19 and 20, block 55.
3. 31st March, 1914; $25,000.

CANADIAN PACIFIC RAILWAY SUBSIDIES AND GUARANTEES.

Mr. JAMESON:

1. What is the total sum of money paid out of the federal treasury by way of subsidy to the Canadian Pacific Railway Company?
2. How many acres of land have been granted by the federal Government by way of subsidy to said company??
3. What amount of bonds or other issues, if any, have been guaranteed by the federal Government on behalf of said company?

Mr. BLONDIN:

1. $30,369,374.70.

2. Main line, 18,206,986 acres; Souris branch, 1,408,704 acres; Souris branch, pipestone extension, 200,320 acres; total, 19,816,010 acres.

3. Total amount of guaranteed issues, £3,093,700. This obligation was assumed direct by the Government in December, 1906.

CANADIAN NORTHERN RAILWAY SUBSIDIES AND GUARANTEES.

Mr. JAMESON:

1. What is the total sum of money paid out of the federal treasury by way of subsidy to the Canadian Northern Railway Company?
2. How many acres of land, if any, have been granted by the federal Government by way of subsidy to said company?
3. What amount of bonds or other issues have been guaranteed by the federal Government on behalf of said company?

Mr. BLONDIN:

1. $26,155,360.65.

2. 3,422,528 acres.

3. (1) The Canadian Northern Railway Company, chap. 7, Edward VII. (1903). The guarantee is for the principal of £1,923,287 sterling, and interest thereon at the rate of 3 per cent per annum for fifty years.

(2) The Canadian Northern Railway Company, chap. 11, 7-8, Edward VII. (1908). The guarantee is for the principal of £1,622,586 19s. 9d. sterling debenture stock and interest thereon at the rate of 3½ per cent per annum for fifty years from July 20, 1908, interest payable half-yearly.

(3) The Canadian Northern Ontario Railway Company, chapter 6, 1-2 George V. (1911). The guarantee is for the principal of £7,493,835 12s. 4d. sterling debenture stock and interest thereon at the rate of 3½ per cent per annum for fifty years from May 19, 1911, interest payable half-yearly.

(4) The Canadian Northern Alberta Railway Company, chapter 6, 9-10, Edward VII. (1910) as amended by chapter 8, 2 George V. (1912). The guarantee is for the principal of £647,260 5s. 6d. sterling debenture stock and interest thereon at the rate of 3½ per cent per annum for fifty years from May 4, 1910, interest payable half-yearly.

(5) The Canadian Northern Alberta Railway Company, chapter 6, 2 George V. (1912). The guarantee is for the principal of £733,561 12s. 10d. sterling debenture stock and interest thereon at the rate of 3½ per cent per annum for fifty years, from April 1, 1912, interest payable half-yearly.

(6) By The Canadian Northern Railway Guarantee Act, 1914, authority is given the Dominion to guarantee the securities of the Canadian Northern Railway Company to an amount not exceeding $45,000,000, together with interest thereon at the rate of 4 per cent per annum. £3,500,000 of these securities have been sold and a portion of the remainder has been pledged for the purposes set out in the Act.

GRAND TRUNK RAILWAY SUBSIDIES AND GUARANTEES.

Mr. JAMESON:

1. What is the total sum of money paid out of the Federal Treasury by way of subsidy to the Grand Trunk Railway Company?
2. How many acres of land, if any, have been granted by the Federal Government by way of subsidy to said company?
3. What amount of bonds or other issues, if any, have been guaranteed by the Federal Government on behalf of said company?

Mr. BLONDIN:

1. For Victoria Jubilee bridge, $500,000.

2. None.

3. No bonds or other issues have been guaranteed by the Federal Government for the Grand Trunk Railway.

DR. FERGUSON.

Mr. COPP:

1. Is Dr. Ferguson, of the city of Moncton, in the employ of the Canadian Government railway?
2. If so, in what capacity is he so employed?
3. If he is so employed, when did he get his appointment?
4. What salary does he receive?
5. Is any allowance given him for expenses over and above his salary? If so, how much?

Mr. REID:

1. Yes.

2. Chief medical officer.

3. May 10, 1915.

4. $2,500 per annum.

5. Yes, actual expenses when travelling on railway business.

SUPPLIES FOR THE 106TH REGIMENT.

Mr. MACDONALD:

1. From whom were tenders called for the supply of milk to the soldiers of the 106th Regiment, billeted at Pictou, N.S.?
2. What were the prices from each tenderer?

3. What were the prices received from each tenderer for meat, groceries and coal, respectively, for the use of such soldiers?

4. To whom was the contract awarded in each case?

Sir SAM HUGHES:

1 and 2. No contract made.

3. Meat, only three tenders received:

	Beef. per lb.	Mutton per lb.
Pope Bros.	13½c.	13½c.
Michael Maher	16c.	16c.
John M. Murdock	13¾c.	13¾c.

Groceries. Only one tender received—John Munro: Bacon, breakfast, 27c. per lb.; bacon, green, 22c. per lb.; potatoes, $1 per 60 lbs.; beans, 8c. per lb.; dried prunes, 40-50, 12c. per lb.; butter, creamery, 37c. per lb.; butter, dairy, —; cheese, 22c. per lb.; rice, 5½c. per lb.; split peas, 7c. per lb.; rolled oats, $3.25 per 90 lbs.; sugar, white, $7.25 per 100 lbs.; salt, 1½c. per lb.; pepper, 30c. per lb.; fresh vegetables, 3c. per lb.; turnips, 1c. per lb.; lard, 17c. per lb.

Soft coal. Only two tenders received: Steam coal, double screened, Peter Brown & Son, $4.60 per ton. D. W. English & Co., $4.90 per ton.

4. Contract awarded as follows: Meat, Pope Bros.; groceries, John Munro; soft coal, Peter Brown & Son.

POWDER MILK.

*Mr. J. J. HUGHES:

What quantity of milk can be made from a pound of powder milk?

Sir SAM HUGHES: I really have no way of judging. I presume it would depend on the quantity of water.

Mr. HUGHES: Powder milk costs 14⅓ cents a pound, and I want to know whether it is as cheap as liquid milk.

Sir SAM HUGHES: We are trying to get a scientific answer to the question.

Mr. HUGHES: I want a practical answer. Let the question stand.

Sir SAM HUGHES: Does the hon. gentleman wish the question to stand?

Mr. HUGHES: Yes, if I can get a practical answer.

Sir SAM HUGHES: The only answer I can give is, "Add water."

COMMUNICATION BETWEEN EUREKA AND NEW GLASGOW.

Mr. MACDONALD:

1. Have any requests been received by the Railway Department with reference to providing better accommodation for the people of Eureka, county of Pictou, in going to and from the town of New Glasgow?

2. If so, what action has been taken in regard to the said request?

Mr. REID:

1. Yes.

2. The matter is being inquired into at present.

SUPPLIES FOR 40TH BATTALION.

Mr. MACDONALD:

1. Were any tenders called for the various supplies required for the men of the 40th Battalion, quartered in New Glasgow, Nova Scotia, in 1915?

2. If so, from whom were they asked?

3. To whom were the various contracts awarded?

Sir SAM HUGHES:

1. B Company of the 48th Battalion, stationed at New Glasgow received an allowance in lieu of rations. Therefore, no tenders were obtained or contracts made by the department.

2 and 3. Answered by No. 1.

UNOPPOSED MOTIONS FOR PAPERS.

Mr. Edwards.—For a return showing the amount paid out for new buildings and repairs at the Royal Military College and at Fort Henry in each of the years 1912, 1913, 1914 and 1915; to whom the money was paid; the amount in each case; what portion of the work was tendered for; and the amount of each tender submitted.

Mr. Lanctôt.—For a return showing the number of permanent employees in the Department of Inland Revenue in 1915-16; the number there will be in 1916-17; the amount paid in salaries for temporary employees in each of the following years: 1912-13, 1913-14, 1914-15, and 1915-16; and the names of the temporary employees and dates of their appointment, respectively.

Mr. Macdonald.—For a return showing the names of all shell inspectors employed in and about the Nova Scotia Steel Company, and the other factories producing shells at New Glasgow, in the county of Pictou.

Mr. E. Lapointe.—For a copy of plans, profiles, reports, correspondence and all documents concerning the construction of a viaduct at Amqui, on the Intercolonial railway, at the place called Traverse Dubé, Dubé Crossing; also of the plans of properties belonging to the Intercolonial railway at Amqui, and of the land leased to the municipality of Amqui, with a copy of the lease affecting such land.

Mr. E. Lapointe.—For a copy of all reports and documents concerning the surveys made by the Federal Government during the autumn of 1914 of Lake Matapedia and the river of the same name down to the village of Amqui.

Mr. E. Lapointe.—For a copy of all documents, correspondence, reports, etc., concerning the dismissal of J. B. Levesque, of Rivière Ouelle, as steward on the steamer Champlain.

Mr. E Lapointe.—For a copy of all documents, reports, correspondence, etc., relating to the changing of St. Eleuthère station on the National Transcontinental railway.

Mr. E. Lapointe.—For a return showing the names of all persons who worked at the repairing of the wharf at Rivière Ouelle during the summer of 1915, with a statement of their occupations and the amount paid to them, respectively.

VOTES FOR WOMEN IN DOMINION ELECTIONS.

On the notice of motion:

Mr. Pugsley: Proposed resolution: That, in the opinion of this House, it is desirable that the Government should promote legislation to amend the Dominion Elections Act, so as to provide that upon any province of Canada enacting legislation giving women the right to vote for members of the provincial legislature, such women as are on the provincial voters lists, or as are otherwise entitled to vote for members of the legislature in such province, shall also, unless otherwise disqualified, have the right to vote at elections for members of this House.

Mr. PUGSLEY: Unless the Government desire the order to stand, I should like to proceed.

Mr. ROGERS: Would my hon. friend let this resolution stand for to-day? Certain other arrangements have been arrived at between the whips.

Mr. PUGSLEY: Very soon there may be elections in the province of Manitoba, where they have passed a law giving women the right to vote. Under the Dominion Elections Act it is very doubftul indeed whether women could vote at elections in Manitoba for representatives of the federal House. Women are expressly excluded from voting in Dominion elections in the provinces of Saskatchewan and Alberta; it is desirable, I think, that this should be made clear. Perhaps my hon. friend will say that there will be another opportunity of bringing the resolution up.

Mr. ROGERS: I think there will be no doubt as to that.

Notice stands.

REGIMENTAL BANDS.

On the Orders of the Day:

Hon. RODOLPHE LEMIEUX: Would the Minister of Militia inform me what are the regulations governing the various battalions in respect to the formation of bands? I am the president of the Civilians' Committee of the 163rd, the new battalion being formed at Montreal, and I have been asked to urge on the Government the necessity of having a band for that battalion. I know that in several cases the citizens have subscribed funds for the purchase of instruments, but I wish to know if the department grants any help towards the maintenance of a regimental band. I am told that in this new regiment we have all the elements for the formation of a band, but they would like, if possible, to get the instruments from the Government.

Sir SAM HUGHES: The rule is that we furnish bugles and drums for the bugle bands of the different regiments, but regiments wishing brass bands furnish the instruments themselves. They have done that all over the country. I wish to add my tribute of appreciation of the work which our good friend from Rouville (Mr. Lemieux) is doing in connection with the formation of this new battalion. I understand, as he has suggested, that among its members are men with all the qualities of good bandsmen, and also all the qualities of good fighters.

Mr. LEMIEUX: I thank my hon. friend for his answer.

QUEBEC JUDICIAL VACANCY.

On the Orders of the Day:

Mr. LEMIEUX: I have received a telegram from some members of the Bar of Montreal asking if the Government have decided to appoint a new judge there. There has been a vacancy on the Bench in Montreal for over a month now, and the business at he court house is very congested. The barristers and the judiciary would be more than pleased if the Government would come to a decision and appoint a new judge.

Mr. ROGERS: I think my hon. friend asked this question the other day, when the Minister of Justice was present. As I understand, the answer of the Minister of Justice was, in effect, that he was giving the matter consideration, and that he hoped to be able to reach a conclusion in a very few days.

ENLISTMENT OF CIVIL SERVANTS.

On the Orders of the day:

Mr. PUGSLEY: I wish to secure some information from the Minister of Militia in reference to Civil Service enlistment. We have been informed by the Government that since the first of November last young men in the Civil Service who enlist are allowed the difference between the pay

which they receive as military men and their salaries as members of the Civil Service. I am informed that members of the Civil Service who have entered the service since the war began, that is, during the past eighteen months, are deprived of this privilege. I wish to know if that distinction is made and, if so, the reason for it. It is a matter of great interest to members of the Civil Service, particularly those who have joined the Service since the war broke out. I am unable to see why any difference should be made in the treatment of the two classes of civil servants, but I am told that such is the case.

Sir SAM HUGHES: The rule in force is that members of the Civil Service who enlisted in the army prior to the 1st of November last draw their salaries as civil servants and also their pay and allowances as soldiers. Those who have joined the colours since the 1st of November, 1915, receive their military pay and an additional amount which brings it up to the amount of their Civil Service salaries, if their salaries in the service were larger than their military pay. I am not aware of the existence of any such rule as my hon. friend has referred to, and I do not think that young men who have joined the Civil Service since the war broke out are discriminated against as he has suggested. I will look into the matter and give my hon. friend further information.

Mr. PUGSLEY: My information comes from two different sources, and I am satisfied my hon. friend will find, on inquiry, that there is ground for the statement which I have made.

Sir SAM HUGHES: I will look into it.

QUESTIONS OF PRIVILEGE.

CHARGES IN SASKATCHEWAN LEGISLATURE.

On the Orders of the Day:

Hon. ROBERT ROGERS (Minister of Public Works): Mr. Speaker, I desire to rise to a question of privilege. I have been informed by some members of the press this morning that there is a bulletin outside some of the newspaper offices to the effect that the Hon. Mr. Calder, a member of the Government of Saskatchewan, stated in the Legislature yesterday that I was the instigator of certain charges that are being preferred against members of the Government of that province. What I wish to say is that if such a statement has been made it is absolutely untrue. I am informed further that a statement has been made that I approached Mr. Calder a few months ago in respect to arranging the withdrawal of the charges against the ex-ministers in the province of Manitoba. Let me say that if Mr. Calder has made this statement, which I very much doubt, it too is absolutely untrue.

LIEUT.-COLONEL JOHN CURRIE, M.P.

Sir SAM HUGHES (Minister of Militia): I ask the indulgence of the House to rise to a question of privilege. In to-day's Hansard, I find in the excellent speech delivered yesterday by the hon. member for North Simcoe (Mr. Currie), that he referred to his non-recognition in the way of distinction or honours for his very excellent conduct at the battle of St. Julien. He said:

> If anything has been said or done since to my injury, there are only two men who stood between me and any decorations that might have come to me, or any "mention in despatches," and these were General Alderson and the Minister of Militia here. One was six miles back of the line all through the fight, and the other was attending to his duty in Canada, about 1,800 miles away.

I may point out, Mr. Speaker, that the command and administration of affairs at the front are absolutely independent of Canada, or, for that matter, of Great Britain. They come under the direction of the Field Marshal, or the General Officer Commanding the forces at the front. In regard to decorations, the hon. member for North Simcoe has as much to do with them as I have. I was not in the field, and therefore was in no position, other than from hearsay, to make a recommendation, even supposing I had the right to do so. Every one will admit that it would be a great presumption on the part of any one who had not been in the field, and who was not familiar with the actual operations, to interfere in the sense of making any recommendation. I may say that I have had a great many requests from young fellows, brave young fellows too, to make recommendations, but it can be easily understood that it would be altogether out of place for me to attempt anything of the kind. I was speaking with one young gentleman who won the Distinguished Service Order at St. Julien, and he remarked to me that he felt ashamed almost to take it, because out of the 4,000 men in his brigade who took part in the fight, he felt that 3,999 had earned it just as much as he had. The fact that a soldier, or an officer, does not receive recognition does not signify that he has not done his duty.

I may say, since the hon. member for

North Simcoe himself referred to the matter, that rumours have been going round as to his conduct in the field. Personally I do not pay any heed to rumours, and I may observe that at every opportunity I have had of mentioning his name I have stated that Colonel John Currie, commanding the 48th Highlanders, 15th Battalion, Overseas Forces, had, so far as I could find out, done his duty fearlessly and well. There were two rumours current. One had it that he had been found during the fighting in the rear of the British division, a considerable distance away from his regiment. If that rumour were correct it would require some explanation, but Colonel Currie was not there. Brigadier General Curry, who had a perfect right to be there, was there looking for reinforcements from the British division to help in the fight. General Curry had a perfect right to be there, because it was his duty to look for reinforcements.

Another rumour connected with that fight was that—I forget whether it was on the second or on the third day—Colonel John Currie was back in the rear of the Yser canal, behind Ypres. I investigated this rumour, and found that he was not in Ypres until 4 o'clock, or thereabouts, on the afternoon of Saturday, and that the officer referred to was again Brigadier General Curry, who was back, as was his duty, to consult General Alderson in the matter of getting orders for holding the position.

With regard to a recommendation, I took the matter up with General Turner, on two occasions verbally, and on one occasion in writing. Without suggesting that I was interfering in any way, I asked, as I had a right to do, for a report on the matter, and I inquired if he could give any reason why Colonel John Currie, if he was entitled to recognition, had not been given it. I have not yet received an answer to either of these requests. I have nothing to say further than this: that every one who knows Colonel John Currie believes that he is a thorough soldier, brave, and fearless, and one who performed his duty fearlessly and well on that occasion. So far as in me lies, I have endeavoured throughout this struggle to confine myself to my own part of the game. As I have said, the command and administration at the front are entirely under the direction of the Field Marshal or General Officer Commanding the forces, and that is as it should be. Every one will admit that for politicians, minister of militia, or any one else to interfere in the matter of giving a decoration to this man, or an order to that man, would be entirely subversive of discipline, and of the best interests of the service.

FREE WHEAT.

The House resumed, from Wednesday, February 16, consideration of the proposed resolution of Mr. Turriff:

That in the opinion of this House, in order to secure to the farmers and people of Canada the advantages of the American market for wheat products and potatoes, steps should be taken at once to put these articles on the free list in the Canadian Tariff.

Hon. ROBERT ROGERS (Minister of Public Works): Mr. Speaker, when the House rose at six o'clock on Wednesday last I had just made a passing reference to the very abnormal premium being paid to-day on Canadian wheat available for immediate shipment from Atlantic seaports to the United Kingdom, or to France, or to Italy, or to Belgium. I did not then have the opportunity of making an explanation of the circumstances which have brought about this favourable condition of affairs, and before doing so to-day perhaps I will be permitted to say a word or two in respect to certain statements that have been made regarding comparative prices in the Canadian market at Winnipeg and Fort William, and in the American market at Minneapolis and Duluth. Let me begin, Sir, by saying that it is impossible for even the most experienced trained man in the trade in this country to be able to make an accurate statement by way of a comparison of prices between those different markets, for the simple reason that the conditions in the two countries are entirely different. We have at the markets of Winnipeg and Fort William, the same conditions that obtain throughout the rest of the Dominion where wheat is being traded in. We have adopted and we maintain a high standard of grading, and under this high standard our grain trade is carried on. But, the conditions are entirely different on the other side of the line. They not only have their grades but they also have their sample market, a condition that, in my humble judgment, carries with it an advantage to the grain producers of that country. I feel now, as I have always felt, that the farmers of western Canada have suffered to a very considerable extent by reason of the fact that we have no sample market. Shortly after I came to this House I had the pleasure, in company

with the rest of my colleagues from the province of Manitoba, of waiting upon the Minister of Trade and Commerce (Sir George Foster) to press upon him the desirability of the establishment of a sample market. I felt that I was justified in this by reason of the fact that for years previously I had been listening to the Grain Growers' executive of that province urging upon myself, and upon other public men in the province, the necessity and desirability of a sample market. The Minister of Trade and Commerce gave heed to our request, and came down to this House and secured the necessary powers to carry it into effect. But, strange to say, no sooner had we reached this point, than this very same Grain Growers' executive appealed to the Minister of Trade and Commerce not to establish such a market. If we have not a sample market in western Canada to-day, the executive of the Grain Growers' Association is responsible and blameable.

On the American side they not only have a sample market but they have adopted methods of their own, resulting in what is called picking the grades. I perhaps might explain that the grain dealer who is receiving wheat has his own man look at a lot of wheat which has been graded, say No. 1 hard, or No. 1 Northern. This man will say: that will go into such and such a bin—it is a very good No. 1 Hard, or No. 1 Northern, as the case may be. The next car will be graded by the same person who will put it in bin No. 2, by reason of the fact that he does not consider it quite as good a sample as the car he has placed in bin No. 1; and the same thing will occur all down the line with respect to four or five different grades. That is what they call picking the grades in the markets at Minneapolis and Duluth. When these grades are picked over, the prices quoted in Minneapolis for a specific grade of No. 1 Northern vary at times as much as ten cents per bushel, while in Canada we have one definite standard for each grade, and our grading is maintained at that high standard, and therefore each grade, as fixed by the inspector, carries one and the same price. But these conditions are entirely different upon the American side, and by reason of that fact, it is impossible, for any member of this House, or any experienced grain buyer in the country, to make an accurate comparison of prices as between the markets at Winnipeg and Fort William and the markets at Minneapolis and Duluth.

To return to the question of the abnormal premium being paid on Canadian wheat to-day, let me first of all acknowledge that a portion of it is probably due to the war conditions under which our great agricultural capabilities have become so universally recognized in the wheat markets of the world; but it is probably more largely due to the fact that we have maintained in Canada a very high standard of wheat grades, and that we have traded under these standards for many years past. Because of the methods pursued by the grain trade of the Dominion, as compared with the methods employed in the United States, where they pick and lower their grades, a great advantage has come very recently to the grain producers of western Canada. In order that the House may understand the correctness of this statement, I shall quote from a supplement published by Broomhall's Corn Trade News of Liverpool, dated January 4, 1916, about six weeks ago. This paper, as every person in Canada who knows anything about the grain trade will understand, is published at Liverpool, and is the leading publication of the United Kingdom in connection with grain and flour. This Supplement contains a statement prepared by the Corn Association of London, with the co-operation and support of the corn associations of different parts of the continent as well. These united associations of the corn and grain trade of the United Kingdom and of the continent, prepared this statement for Broomhall's Supplement. Dealing with the conditions with which they were concerned as the purchasers of large quantities of wheat from various countries for consumption in Great Britain, they were very anxious to make a wide, a comprehensive, and a clear statement, and therefore they dealt fully, not only with their own conditions, but with the conditions in the United States and in Canada. Having prepared this statement, they waited upon the American Ambassador in London and made the request of him that he transmit it officially to the United States Secretary of Agriculture at Washington.

This statement contains a general review of the grain trade, and as it is rather long I will trouble the House with only such portions as relate to the United States and the Dominion of Canada:

Concerning United States Wheat Shipped from Atlantic and Gulf Ports.

For many years, European buyers of United States grain shipped from Atlantic and Gulf ports, have expressed grave dissatisfaction with the conditions of trading in respect of the qua-

lity of grain exported on Certificate. Matters have now reached a climax. According to the rules governing the inspection of grain in the State of Illinois—

"No. 2 Hard Winter Wheat shall include all varieties of Hard Winter Wheat of either or both light and dark colours, dry, sound, sweet and clean, and may contain not more than 25 per cent of Soft Red Winter Wheat, and weigh not less than 59 pounds to the measured bushel."

Large quantities of No. 2 Hard winter wheat, 1915 crop, Chicago inspection, have been sold and shipped in the last few months. A very large proportion of this wheat was neither dry, nor sound, nor sweet, nor did it weigh 59 pounds per bushel, nor even was it in any degree hard on its arrival in this country. Evidence in support of these statements is provided in Appendix A accompanying this communication.

This is what they have to say in regard to Canada, and I am sure it will be of interest to hon. members of this House and the country generally:

Prior to 1912, serious complaints were made against Canadian grading, but the Dominion Grain Act of 1912 and the administrative arrangements ancillary thereto, have effected very great improvements so that all European buyers have now confidence in Canadian certificates, and though a great number prefer trading on sample or on standard, they acquiesce in the system of grading and its concomitant "certificate final," as established by Canadian law and carried out by Canadian practice. Therefore in this brief historical review no mention need be made of the communications between European buyers and Canadian representative bodies.

One very important fact which has greatly enhanced the reputation of Canadian grading is this. Both in the United States and Canada a large proportion of the crop is sold before it is reaped. The buyer should be in a position to rely upon the grading rules current at the time the deals are made; in other words, the grain when it is reaped should be graded on its intrinsic merits according to rules which should not be changed from season to season. Canadian law and practice embody this principle. When the weather has been bad during harvest in Canada and the quality of the crop has therefore been depreciated, the statutory grades have nevertheless not been changed, and buyers have obtained grain of the quality they expected and had a right to expect.

With regard to trading in the United States, they say:

The merits or demerits of a system of grading are not ascertained on a crop harvested under favourable conditions. Between the crops of 1908 and 1914, trade with European buyers in United States grain languished. Then came the exceedingly favourable harvest of 1914, and an exceedingly large trade in United States grain, due, among others causes, to the fine quality of the Hard Winter wheat. Even then there was cause for complaint as to irregularities in grading, of which evidence is provided in Appendix "A", but on the whole buyers were satisfied. In that state of mind they made large purchases of the 1915 crop,

and it is important to note that the first arrivals of that wheat were satisfactory. Attention is called to a sample included in the set sent herewith, drawn from a bulk specially certified as New Crop. Such wheat would today command a ready sale on our markets for millers in the United Kingdom much desire to keep such wheats in their current mixtures, and doubtless the quality of these early arrivals induced buyers on this side to greatly increase their purchases. By the later export of grossly inferior and improperly graded wheat, some United States shippers have secured an immediate advantage, for the system of grading and trading on "certified final" appears to protect them from loss of monetary advantage on contracts then existing but the loss of good repute is serious and deplorable. Buyers cannot be fleeced with impunity. A buyer suspicious and unwilling, cannot be a satisfactory source of profit to the seller. For past years Canadian wheat has realized substantially higher prices in European markets than the corresponding grades of United States wheat, and the climax has now been reached in this further sense, that European buyers are restricting their present purchases of graded wheats almost exclusively to Canadian produce.

What more favourable condition than that could we wish to have in Canada? This favourable condition is not only cited by the Corn Associations of the United Kingdom, but is reflected in the markets of Italy, France, Belgium, and of all other countries in which our wheat comes in competition with that of the United States. This, to my mind, is Canada's great opportunity. That the grain producers of Canada have reached the goal to which they have been pressing year by year, steadily if somewhat slowly, is proved by the statement of the Corn Associations of the United Kingdom: that future European purchases will be made almost exclusively in Canada, for the simple reason that European buyers like our wheat and flour, and the way in which we handle the business. That is something of which we can be justly proud; and that is the reason why, within the past thirty days, the Canadian grain merchant who has had wheat at the Atlantic sea ports, available for immediate shipment to the markets of the world, has been able to sell his grain at a high premium. Would it be wise, now that we are in sight of this commanding position in the English market, to adopt the resolution before the House, and have our wheat go through American channels, and run the gauntlet of their methods of grading and trading, as described in the report I have just read to this House? Furthermore, in my judgment it would be a mistake for us to be entangled in any international agreement which might recoil on us in our preparations for the

blessings of peace at the close of this war. For who will deny that, so long as this war continues, the Canadian producer will enjoy the position of advantage he has had during the last sixty days in the markets of the world? In my humble judgment, no class of people will profit more by the present conditions, as described by the corn exchanges of Great Britain, than the producers of grain in the prairie provinces of Western Canada.

The same conditions obtain with respect to flour. Our exports of flour to Britain have been steadily growing year after year. I quoted the other day from the report of a commission appointed by the Government of Saskatchewan, to show how trade was increasing in the United Kingdom, and I would like to again draw the attention of this House to the opinions of that commission:

Canada's Increased Share of United Kingdom Imports.

It is of value to note the increasing quantity of Canadian exports of wheat and flour to the United Kingdom in the face of fairly constant aggregate annual imports of wheat by that country. The wheat imports of the United Kingdom are 196,000,000 bushels annually. This amount does not vary more than 8,000,000 bushels either way from year to year. During the five years ended March 31, 1907, Canada's wheat exports to the United Kingdom averaged 23,763,000 bushels annually. During the next five years, ended March 31, 1912, they averaged 49,893,000 bushels. For the corresponding periods Canada's flour exports to the United Kingdom averaged annually 750,000 barrels (representing 3,375,000 bushels of wheat) and 1,652,000 barrels (7,434,000 bushels) respectively of total imports of the United Kingdom averaging annually 6,646,000 barrels. Thus Canada already supplies rather more than one-fourth of the United Kingdom's wheat and flour imports. Roughly speaking, in these increases, Canadian wheat is replacing Russian wheat and Canadian flour is replacing United States flour. Whether the Canadian miller could continue to compete so successfully with the United States miller were the United States' duty taken off Canadian wheat is a question that only the event can prove. The commission sees no reason why in view of the protected home flour market he enjoys he would not be able to compete successfully.

Here we have a statement, made over a year ago, that Canada was supplying one-quarter of the flour that was being imported into Great Britain. I shall surprise this House, I am sure, when I state that whereas at that time we were exporting to Great Britain a little over 1,500,000 barrels of flour, we are exporting this year 3,500,000 barrels. The report of the commission goes to show that Canadian flour is replacing Russian flour in the British market, but we have the statement of the corn exchanges that the wheat produced by the Canadian farmer is almost entirely replacing the wheat of the United States, which has been our competitor for so many long years. This Saskatchewan commission states that the producers in Great Britain like our flour and wheat, and also like our methods of handling them. If the Canadian farmer sees any advantage in having his wheat milled in the United States, or if the millers of the United States see any advantage in grinding Canadian wheat, there is nothing in the world to prevent that being done. It will only cost them one dollar for every thousand bushels of wheat they deal with.

What would happen, Mr. Speaker, were we to adopt the resolution of the hon. member for Assiniboia (Mr. Turriff) to allow our wheat to go into the United States markets to engage in the mixing process that has practically ruined their trade in the markets of the United Kingdom, according to the authorities I have read? At best, it could have the effect of using but a small proportion of our good wheat, and that wheat would be mixed with a large volume of the poor wheat of the United States, and then our wheat and our flour would have to come into competition with this product in the markets of the United Kingdom. I ask you, would that be fair either to the Canadian farmer or to the Canadian people as a whole? Let me point out that the effect which this resolution would have on our whole crop is indicated by the following:

The want of uniformity in the system of grading must result in a lowering of the value of the whole crop, for buyers naturally base their prices on the poorest quality they may receive. Separate grading by the different ports tends to lower the grades in an endeavour to secure trade.

That is exactly what would happen to us should we adopt the resolution before the House. We should also lower our grades, and should have to meet the form of mixing employed in the United States. We have to-day a position of great advantage with our wheat, a position which we have won gradually by our own efforts.

Beyond question of doubt all these conditions justify us, having in view the interests of the farmers themselves, in rejecting this resolution, and thereby permitting these favourable conditions to continue.

The farmers of Western Canada have carried on their industry in a manner that has won for them a position of vantage and of respect. At the outbreak of the war, heeding the call of the Allies for increased production, they planted an unprecedented

acreage of wheat. They have been blessed with an abundant harvest, and I am sure that next year they will do again what they have been able to do in the year that is past. They recognize their duty in this great struggle, and they are performing it faithfully and well. While we shall ever acknowledge our great and lasting appreciation of the devotion and self-sacrifice of our gallant sons who have gone to defend our freedom and our liberty on the field of battle, we should not forget that "peace hath her victories not less renowned than war." Those who remain at home to till the soil in order that an abundant harvest may be obtained, and in order that the staff of life may be sent to England, France, Italy, and Belgium are performing a service for civilization no less important, though, of course, less spectacular, than that which is being performed by those who are engaged in the fight. At the close of the war no class of the community will be more interested in the lines upon which the peaceful development of the world may proceed than will the grain growers of Canada. A certain sentimental benefit will come to them, in addition to the special position of vantage which they occupy to-day. Therefore, Mr. Speaker, it is our plain duty, having in regard the best interests of the Canadian farming community, to adhere to our good old traditional policy of keeping Canada for the Canadians. Doing this, we shall have more reason to hope that at the conclusion of the war we shall be able to supplement that advantage with an allied policy of preference within the Empire.

We have in the prairie provinces something like 300,000,000 acres of the best land in the world, of which less than 20,000,000 acres are as yet under cultivation. These facts will cause the House to understand at least in some degree the great possibilities of the prairie provinces. It is our duty, I submit, to protect our great inheritance in the prairie provinces, and to build these provinces up, as Ontario, Quebec, and the older provinces have been developed.

It is true that we are confronted with the great problem of immigration, which is inseparably connected with the welfare of the grain producers of Western Canada. A vigorous and determined immigration policy will have to follow the conclusion of the war in order that all the advantages possible may come to Western Canada. The quotations that I have made in respect of the grain trade of the United Kingdom are clear and unmistakable evidence of the fact that the grain producers of Western Canada are the first in line to secure those material advantages and compensations which will follow the conclusion of the great conflict in which we are engaged. Indeed, the war has caused the agricultural capabilities of our great western country to be recognized by the opening up of every port in the United Kingdom Italy, France and Belgium for our grain. Coupling a vigorous immigration policy with the sentimental inclination of our people towards the welfare of their own country, and of the Empire and its Allies, we may reasonably expect a large influx of immigration upon the happy restoration of peace. Indeed, the unrest bred amongst the warring nations, the severance of family and business ties, the ruin which has been wrought, cannot but tend to increase the tide of immigration. Even the local pessimist, recently described as a person who, given the choice between two evils, promptly takes them both; even such a soured extremist must agree with Lord Derby, who has just been in close contact with the British masses, in his statement: that after the war there will be a tremendous rush to the British colonies of young men who are soldiers at the front. You will never get these former clerks and others from the middle classes to remain in Great Britain when peace comes. We in Western Canada appreciate Lord Derby's words; we believe that the fulfilment of this prophecy will bring untold advantage to that portion of Canada, the people of which at all times, and never more than to-day, recognize their duty not only to their own provinces, but as well to the whole of the Dominion. Next to winning the war, the first thought of Canadians everywhere, whether they be farmers, merchants, bankers, lawyers, manufacturers or politicians, should be given to the great task of assisting to protect Canada from the financial, industrial and commercial consequences which the devastation of this war is bound to let loose upon mankind. To my mind the great and pressing question for us in Canada is how to fortify our country against these conditions. In meeting them, we shall have to compete not so much with belligerent nations as with neutral countries that are not absorbed, as we are, in the great task of winning the war. These neutral countries have already begun to prepare for peace. Some of them are enjoying fabulous prosperity to-day through their legitimate

and friendly activities in connection with the war. I make no adverse criticism of this; for these countries I have, on the contrary, many warm words of gratitude. But the inevitable effect of this condition is that these countries take, what we may without critical intent call, the prosperity-promoting view of the war. They are free, as we are not free, to study carefully how profits may be extracted from this colossal tragedy.

Therefore, we should be very careful in any step that we may take, in order to make sure that we do not let them beat us in the discovery of how best to profit by the novel conditions which will follow peace. It will be no trivial matter for Canada to be so beaten, no small question of losing a little trade; it will be a matter of life and death for this country. Would it be wise for us to commit an act which would have for its purpose the denuding of our railways of their traffic. We have erected a great railway framework in this country for a prolonged period of progressive population. When we courageously and optimistically launched our vast railway project, belting the continent with three transcontinental lines, we were not calculating on legislating to divert their traffic to American lines; we were calculating not alone on feeding those lines with the produce of our present population of seven millions or eight millions; we were calculating, and calculating with reason, on a continuation, with marked increase, of our then immigration boom, and we saw the mighty tidal wave of immigration sweeping into this country from across the Atlantic and from across the American border, and we wisely prepared for it. Moreover, the West, and especially the grain producer of Western Canada has realized, and he realizes more than ever to-day, that we must undertake to educate the manufacturers of this country. We are often told that the manufacturers control Parliament. This is a chance for us to show that we can give the lead to the manufacturers. They are busy men, too busy often to look into new opportunities or to experiment in new fields. I claim that we have in Western Canada the greatest opening, the greatest field, for manufacturers and industrial development that is to be found in any part of the civilized world. So this Parliament should step in and subject our manufactured imports to the closest scientific analysis, and discover just what prevents every one of them from being made in Canada. Canadians are quite as well able as are any Europeans or Americans to manufacture the articles we require, and in no place are conditions more favourable for manufacturing than they are in the Prairie Provinces. We have there in many forms an abundance of raw material, of natural products, of cheap power, and of capable labour; and there is nothing too difficult, or too intricate, for us to undertake. It would not be too forehanded for us to import industrial instructors when necessary. We want for Western Canada an informed industrial leadership, a skilled industrial population, the best of both in the world. We should know exactly what the articles are that we buy in foreign markets, and we should have workmen to make them for us, and we should pay them handsomely. Let us manufacture these things at home, let us keep that money in our own country. That is the policy, and it is the only policy which to my mind is capable of ensuring a brighter and greater development in the Prairie Provinces of Western Canada. You will tell me that is the old Protection argument. That is just what it is; it is Sir John Macdonald's National Policy brought up to date; and it is what I propose, and what I believe he would propose if he were here to-day and saw the wonderful opportunity that peace is going to bring to our Dominion.

Therefore in view of those favourable conditions, conditions that have been created in a great measure during the last sixty days, as laid down in the very important statement given out and transmitted by the united corn exchanges of the United Kingdom and the continent, through the American ambassador to the Government of the United States, I say that we should appreciate the advantage of our position and that we would fail in our duty, especially to the farming community of Canada, and more especially of Western Canada, if we did not reject the resolution of my hon. friend the member for Assiniboia (Mr. Turriff), in which he proposes to divert our wheat into American channels as much as possible and thereby allow it to become mixed with American wheat, in which case we would have to go over again all the work that we have done in the past to establish our own transcendent identity in the markets of the world. To-day we are absolutely masters of the situation, so long as we continue to maintain our high standards and in the future to carry on our business in the efficient manner it has been

carried on in the past. If we act in this manner we shall be doing that which is best in the interests of the farming community of Western Canada, and I therefore hope, in view of the changed conditions, that my hon. friend from Assiniboia will withdraw his resolution and allow the matter to stand in its present favourable condition.

Mr. ROBERT CRUISE (Dauphin): Mr. Speaker, as I come from a constituency in Manitoba composed mostly of agriculturists, I feel I would not be doing my duty if I did not say a few words in favour of this resolution. A great deal has been said for the resolution and a great deal against it, but the one fact remains, and we cannot get away from it, that the farmers of this country are demanding the free admission of their wheat into the United States.

Mr. BURNHAM: Not the farmers of Ontario.

Mr. CRUISE: When I say wheat I mean wheat and the products of wheat; I do not wish to be misunderstood. It does not make any difference what arguments hon. gentlemen put up, the farmers of Western Canada have made a study of this question and they are determined to have free wheat from some Government. If this Government do not concede their wishes some other Government will. The Minister of Public Works (Mr. Rogers), when speaking on this question last Wednesday, took a very different view from that of the Minister of Finance, and I am prepared to take the statement of the Minister of Finance rather than that of the Minister of Public Works. The Minister of Public Works argues that the Canadian farmer gets more for his wheat than the American farmer. The Minister of Finance has quoted statistics which he has caused to be compiled by his department to show that the American farmer gets more, for his wheat than does the Canadian farmer. I shall read what both hon. gentlemen said and leave it to the House to judge between them, and to take the word of the Minister of Public Works or of the Minister of Finance as they prefer. The Minister of Finance said:

> Since last September I have caused statistics to be gathered, and the spread in price has been from three to eight cents a bushel, or even more, in favour of the American market.
>
> [Mr. Rogers.]

That is the statement made here by the Minister of Finance. The Minister of Public Works said:

> Come with me to New York, and you can stand on the docks and see Canadian wheat going to Liverpool at a price representing from twenty to twenty-five cents a bushel more than wheat from the United States.
>
> Mr. Oliver: Did the Canadian farmer get twenty-five cents a bushel more for it?
>
> Mr. Rogers: The Canadian farmer is getting a good deal more for his wheat this year than the American farmer is getting for his, notwithstanding the statements made by hon. gentlemen opposite. The extravagant statements they put forth do not agree with the facts. Every person knows that in trading in wheat there is no wide margin for the trader, for there are too many in the business and the profit is limited by competition. The fact is that Canadian wheat commands a price at at the American seaboard of from twenty to twenty-five cents a bushel more than the American wheat. That is one of the reasons why I say this House would fail in its duty to the farming community of Western Canada if it did not reject the resolution of my hon. friend.

Thus we have diverging statements of both hon. gentlemen in connection with the price of wheat, and I leave them with the House and the country. I prefer, as I said, to accept the statement of the Minister of Finance. We in Western Canada all know that the price on the American side is much higher than the price on the Canadian side. Another point that should be enlarged on is, that the Canadian grades are so much higher than the American grades—and the quotations are always made on the grade—that if we take into account the difference between the grades, the Canadian farmer loses considerably more than the difference in the price quoted, as his wheat would grade higher in the United States than in Canada. I shall read a letter which I have received from the vice-president of the Grain Growers' Grain Company. I do not believe there is any fairer minded man in the western country than this gentleman. He used to be a strong Conservative; to-day he has no politics, he is independent. He writes:

> I am proud of the fight that I see some of your men put up for free wheat. To my mind the most important thought so far as free wheat is concerned is that so many of our able men contend that when at times they find the Winnipeg prices are equal to those of Minneapolis and Duluth come to the conclusion that under this period, free wheat would be no benefit to the wheat producers of Canada. This is an awful dream, for where they seem to miss their cue is in the fact that Winnipeg prices may be equal to that of Minneapolis and in their opinion would go to show that the Canadian farmer was getting as great a price as the Dakota or Minnesota farmer. This is

truly a great dream, for the reason that Manitoba 1, 2, or 3 Northern on an average contains 5 cents per bushel, wheat based at $1 per bushel, the same milling value for the Minneapolis or Duluth grades.

The explanation is that after the Manitoba farmer cuts 100 acres of the finest Red Fife Wheat and when it goes into shock it is the finest 1 Northern Wheat, but because of climatic conditions coming before it is threshed it has become bleached and therefore our inspectors according to the Canadian Act or Inspection Act are obliged to place that wheat down into 2 or 3 Northern, while for milling values it is not reduced in any particular. This has been proven by chemical and scientific tests, that not once in ten years has the average of this wheat been affected by climatic conditions so far as market valuation is concerned. But when we go over into Dakota or Minnesota we find that the 100 acres of wheat cut under the same conditions and after it has gone into shock is number 1 Hard Wheat, but by climatic conditions it has lost its colour, yet when that grain reaches the Minneapolis Sample Market and governed under the Minneapolis Grain Act, we find that while the grain has lost its colour it is still No. 1 Northern and the farmer in Minneapolis and Dakota gets from 3 to 7 cents a bushel more for that same wheat than can be obtained in the Winnipeg market. The Inspection or Canadian Grain Act reads that No. 1 Northern shall contain 60 per cent of Hard Red Fife Wheat and the Minneapolis inspection demands that No. 1 Northern shall contain 60 per cent of Hard Wheat. Now there is only two words difference in the reading of the two Acts, but those two words have cost a loss to the Western farmers of not less than 5 cents a bushel when the average is taken on high grade and low grade wheat.

There is only one remedy to this situation and that is "let down the bars to the South" and that means freedom If you show me a man whose blood does not properly circulate through every member of his body, then we find a man who is not in a sound and healthy condition. So with the western country whose life blood is wheat, and should obstruction be placed in such a way that that life blood does not properly circulate, then we have an unsound and unhealthy country.

Another matter I would like to point out is that the large milling institutions get the advantage of this unfair condition and no other people can. For the reason that they can grind their grain and it is only the men who grind the grain that can participate in the loss to the farmer.

This is a letter from the vice-president of the Grain Growers' Grain Company, who has been a member of the Grain Growers' Association and of the Grain Growers' Grain Company ever since they were organized. No man understands the wheat condition better than he, and when a man of his stamp forgets party and stands for free trade in our agricultural products, I think hon. gentlemen on the other side of the House should take note of it, and accede to the reasonable request of the farmers.

There was a point in the speech of the Minister of Public Works to which I would like to make reference. He stated in connection with the Grain Growers' Grain Company, that they were the largest grain dealers in Western Canada. I will read his words, as I do not wish to misquote him:

> Will he say that Grain Growers' Grain Company are crucifying the farmers of Western Canada, for they are to-day the largest dealers and exporters of grain in the Dominion of Canada? They have shipped, I believe, something like 100,000,000 bushels of wheat.

I wish to inform the Minister of Public Works that he could not have been very well posted in the dealings of the Grain Growers' Grain Company. Speaking to the president of the Grain Growers' Grain Company some time ago, I happened to inquire as to the volume of business which they were doing, and he told me, and his information shows that the statement of the Minister of Public Works was far from the mark. I took the trouble to wire to the president, and I will read his reply:

> Winnipeg, Man., February 22, 1916.
>
> Robert Cruise, M.P.,
> House of Commons,
> Ottawa, Ont.
>
> Replying your inquiry companies last annual report shows that for crop year ending August thirty-first nineteen fifteen company handled about nineteen million bushels, year before thirty million on much larger crop. Present this year we expect handle forty million. Exporting is done through grain growers' export company which is controlled by Grain Growers Grain Company. Last year about nine million bushels Canadian grain this year we expect to do thirty or thirty five million.
>
> T. A. Crerar.

That is the statement of the president of the Grain Growers' Grain Company, showing that they have never handled more than 50,000,000 bushels of wheat.

Mr. MEIGHEN: Does the telegram state how much American grain they exported? I understand their export business covers both countries.

Mr. CRUISE: It does not mention American grain at all; it simply says that last year they exported about 9,000,000 bushels.

Mr. MEIGHEN: Their export trade is the larger part of their business.

Mr. CRUISE: The telegram says:

> We expect to export this year thirty-five million bushels.

Mr. MEIGHEN: The annual statement shows that their American business ex-

ceeded their Canadian business by many millions.

Mr. CRUISE: Even supposing the American business exceeded the Canadian business, this telegram shows that last year they only exported 9,000,000 bushels, and that this year they expect to export 30,000,000 or 35,000,000 bushels.

Mr. MEIGHEN: Canadian?

Mr. CRUISE: That is a long way from the statement of the Minister of Public Works, that they handled 100,000,000 bushels.

Mr. ROGERS: They probably did handle 100,000,000 bushels, but did not export it all.

Mr. CRUISE: According to the telegram they exported only 9,000,000 bushels. The hon. minister stated that the company exported 100,000,000 bushels of wheat, and I raised this point because the minister criticised members on this side of the House for not making accurate statements, and I wished to point out that he himself did not stick exactly to the mark. The argument that is put up against this proposition is that if we get the American markets opened up to us, the milling industry of this country will be destroyed, and the railway companies will suffer.

I would like to deal with the milling industry for a few moments. We are told, and we believe the statement of the Minister of Finance, that the millers in the United States can import our wheat into the United States without any duty, except one dollar on one thousand bushels. That puts the American miller on the same footing as the Canadian miller, so far as the exporting of our flour to the market of Liverpool is concerned. If the millers of Canada can buy our Canadian wheat, ship the flour to Liverpool or to the markets of the world, and compete against the American millers in those foreign markets, why can they not compete in the home market? There is no argument in that against this proposition. Any man who says the Canadian millers cannot compete against the American miller is a small Canadian, because our Canadian millers are as bright, as smart and as capable of milling wheat as cheaply as the American is. We have water powers, we have any amount of coal, the millers have railways at their doors, and there is no reason why they cannot manufacture flour and sell it as cheaply as the American milling company can. In connection with the railway companies, we are told that if the American markets were thrown open our grain would go south.

Mr. BURNHAM: Would the hon. gentleman be kind enough to say why he argues and special-pleads so strongly for free wheat only. If he has a broad idea of the question, why does he not include everything and give us all a fair show?

Mr. CRUISE: That question should be addressed to the Minister of Public Works, because in 1911 the whole question of agricultural products was involved and my hon. friend then opposed this proposal along with other hon. gentlemen. They waved the flag, and denied the farmers that which the farmers believed would be in their interest.

As to the railways, I do not believe that this would hurt them to any great extent. The great reason why the farmer wants the American market thrown open is that he may have competition for his wheat. We have not the competition in Canada to-day that we should have. We have a high standard, and it has proven that the man who ships Canadian wheat to Liverpool gets seven or eight cents a bushel more for it than the American shipper gets for his wheat. But the farmer does not get that advantage when he sells his wheat. If he had more competition the farmer would doubtless get a much higher price for his grain. I am one of those who believe that the railway companies will reduce their freight rates, that the companies that handle our grain will handle it on a smaller margin, and that the grain will go east over our Canadian routes instead of going south. Probably a portion will go south, but not to any great extent.

We recall the fact that last year the hon. Minister of Finance (Sir Thomas White) advised the farmers to produce more. Every farmer in Western Canada responded to the appeal of the Finance Minister by cultivating every acre of land that he could cultivate. A large number of fields that the farmers intended to summer fallow were ploughed and put into grain in order to produce as much as they could. The result has been that this year we have 335,000,000 bushels of wheat. The point I want to make is that the farmers have done their duty; they have produced every bushel of wheat that it was possible for them to produce with the help of Providence. Have the Government done their duty towards the farmers? There is a large quantity of grain in Western Canada to-day which cannot be got out. When I was

going to Vancouver some months ago I saw from the car window grain in bins on the field, and that wheat will spoil if the farmers do not get a market for it.

We were told last summer the right hon. the Prime Minister (Sir Robert Borden) went to England to secure transports to ship our wheat over. We find that we are short of transports. I do not propose to criticise the Government on that point, nor do I propose to criticise the British Government. If they think it is more advantageous to them to take over munitions of war than wheat, that is their business, and I have no criticism to offer. But the criticism I have to offer is that when our market is closed to us for lack of transports, and when buyers on the other side of the line are ready to take the wheat, the farmers are unable to sell it to them notwithstanding that the elevators at Port Arthur, Fort William, and interior points are full.

The Government have claimed that the war has raised exceptional conditions. I claim that they should meet these conditions and grant free wheat to the western farmer until the war is over. There was a pamphlet prepared by the secretary of the Grain Growers' Association some time ago. I do not like to weary the House, but I would like to read it. It shows the number of bushels of wheat that the Canadian farmer has to give more than the American farmer when he goes to buy some machinery. It says:

These comparative prices are more eloquent than words in illustrating the loss western farmers sustained from being denied access to the markets of the United States for their grain. If, however, instead of making the comparison in terms of dollars and cents, the comparison was made in terms of bushels, that is, in the terms of the purchasing power of a bushel of grain, the loss would be even more striking. Had the reciprocity agreement been accepted, many of the staple commodities that are used on the farm, such as cement, coal-oil, lumber, farm implements, etc., which are cheaper in the United States than in Canada, could be secured at a lesser price. The Canadian farmer would also receive a higher price for his product, and farmers would necessarily have to exchange less grain to secure the required articles.

A farmer in central Manitoba recently bought an American made gasolene traction engine, for which he paid $2,700. A Dakota farmer a short distance south of him could secure the same engine for $2,400, the difference being the duty. A neighbour of his bought at the same time a Canadian-made engine of the same capacity and at the same price. The farmer who bought the American-made machine put the extra $300 into the Canadian revenue to help pay the cost of government. The farmer who bought the Canadian machine put the $300 into the manufacturer's till and no one was benefited except the manufacturer.

At this point I would like to ask the Minister of Public Works who is the more loyal, the farmer who buys American machinery or the farmer who buys Canadian machinery?

Mr. ROGERS: The farmer who buys Canadian machinery, of course.

Mr. CRUISE: I understand the Minister of Public Works believes that the farmer who buys Canadian machinery is the more loyal. If a Canadian farmer buys an American threshing machine and pays $300 in duty that money goes into the coffers of the Canadian Government, and benefits the country to that extent, whereas, if he buys a Canadian threshing machine the $300 goes into the pocket of the Canadian manufacturer and nobody gets any benefit whatever except the Canadian manufacturer. I am very glad to have that question answered by my hon. friend. We know now who is the loyal farmer. If every man bought Canadian goods where would the revenue come from?

Mr. ROGERS: We would be so rich we would not want any revenue then.

Mr. CRUISE (reading):

As already stated in a previous article, the average difference in the market prices of wheat between Minneapolis and Fort William since the 1st of January—

No. 1 Nor., 10 cents per bushel.
No. 2 Nor., 11 cents per bushel.
No. 3 Nor., 13½ cents per bushel.
No. 4 Nor., 18 cents per bushel.

Taking the price as of the 1st of June, the Manitoba farmer would have to give 2,608 bushels of No. 1 Nor. wheat in exchange for his engine, while the Dakota farmer could get his for 2,122 bushels, a difference of 486 bushels in favour of the Dakota farmer. Of No. 4 wheat the Manitoba farmer would have to give 3,176 bushels and the Dakota farmer 2,243 bushels, a difference of 933 bushels. Of No. 3 oats a Dakota farmer would have to give 4,752 bushels and the Manitoba farmer 6,750, a difference of 1,998 bushels. 2,085 bushels of barley would secure a machine in Dakota while it took 4,150 bushels of No. 3 barley to secure the same machine in Manitoba. 2,085 bushels of barley in Dakota would be equivalent to 4,150 bushels in Manitoba in the purchasing of a gasolene engine. That difference exists in almost everything the farmer buys for his home and his farm. The difference in the grades in the two markets would make up for the excess freight rates that the Canadian farmer would have to pay to get the United States market. In wheat and oats the Manitoba grades are fully one grade higher than in Minneapolis, and what is more marked difference in oats is the weight

of the bushels—32 pounds makes a bushel of oats in the United States, while in Canada it takes 34 pounds.

That shows, perhaps better than any other way how the farmer loses money. Before hon. gentlemen vote on this resolution I should like to quote a few words and statistics from the high cost of living report, which was laid on the table a few days ago. On page 34 I find:

Wheat in Canada.

Year	Acres.	Yield per acre.	Total yield.	Average price per bushel.
		bushels.	bushels.	cents.
1910..	8,863,151	14·89	132,049,000	75
1911..	11,100,673	20·80	230,924,000	64
1912..	10,896,700	20·38	224,159,000	62
1913..	11,015,000	21·04	231,717,000	67
1914..	10,293,900	15·37	158,223,000	

The above shows the average prices received by the farmers for all Canada, as compiled by the Census and Statistics Branch of the Department of Trade and Commerce. It will be seen that for the three crops of the years 1911-12-13 the farmers received a little under 65 cents a bushel.

All the evidence which we have gathered from many sources leads to the conclusion that under present conditions it costs about $12 to produce and market the wheat from 1 acre. This includes interest on investment and allows the farmer average western wages for his work. At twenty bushels to the acre it gives us 60 cents as the average cost of producing a bushel of wheat in the three prairie provinces. This leaves a margin of 5 cents.

The above calculation is based on an average of 20 bushels per acre. It will at once be seen that the only farmers who really made money above their wages in growing wheat are those who produced in excess of 20 bushels per acre. When the crop dropped considerably below twenty bushels to the acre the farmer was not making even fair wages in the three years referred to. Further, this calculation does not take into consideration the fact that every bushel of wheat removed from the farm takes from the land soil material having a market value of 25 cents, which includes nitrates, phosphoric acid and potash, and the calculation is based on prices before the war.

According to that report, the farmers of western Canada are not making much money. I have farmed in the West for a number of years and have made some money, I admit, though I have not very much at the present time. I can honestly say, however, that farmers in the West cannot make very much money out of growing grain to-day, on account of the climatic conditions. A farmer in western Canada last spring, for instance, would put a hundred acres of land in first-class shape for his wheat; he would have his wheat all blue-stoned, and would go to bed in great hopes of fine weather on the morrow, when he would sow his wheat. Before he got up there would be a heavy fall of rain which would delay his seeding for a week; that might mean a loss of from five to eight bushels an acre. But granted that he has good weather in the spring and favourable weather later on, with lots of rain in June, at harvest time there may be two or three weeks' bad weather which would prevent him going on with his harvesting; and even if he has good weather for harvesting, he may have broken weather when the wheat is in the stook, as we had last fall. So the farmer has much to contend with in the way of climatic conditions; more, I think, than any other man in the country. Last fall I got forty-five bushels to the acre on land that had not been summer fallowed for seven years. The first 3,000 bushels threshed graded number 3 Northern, and was just as fine wheat as you could wish to see, though a little light in colour. Then we had a little rain, and the next two carloads graded only number 4 Northern Tough. This wheat damaged by the weather was really just as good as the first lot threshed, and that is where the millers get the advantage. Before I conclude, I wish to repeat what I have said before in this House; that the millers of Canada have to get off the farmer's back. They have, I think, made up their minds to lighten his burden, but they are doing it just as gently as they can. The millers must stand on their own feet.

4 p.m.

All the Finance Minister could do the other day, when speaking against free wheat and free wheat products, was to get behind the National Policy. I would like to ask hon. gentlemen opposite where the National Policy comes in with regard to the nickel industry. It is apparently all

[Mr. Cruise.]

right, so far as the National Policy is concerned, to export our nickel to the American side to be refined; and it is all right to let our silver go out of the country and be refined in the United States; but when the farmers of this country ask for free wheat hon. gentlemen opposite say, For national reasons we cannot grant it. I do not see much force in that, and if I had my way, I would say: To Halifax with the National Policy.

Just one more point before I conclude, there is no other industry that could be established in Canada which would develop our national resources so much as the shipbuilding industry. Canada is a producing country, and always will be, and I claim that it is up to this Government to establish a shipbuilding industry, so that our own ships can carry our own wheat to the Liverpool market. Before this war is over, there will be a great shortage of transports. The Germans are sinking ships as fast as they can. Unless we act in time, our transport trade will be captured by some other country. We are standing by and not lifting a hand, waiting to cure all these evils when the war is over. But I say that now is the time for the Government to start their shipbuilding industry. They could own and control the transports, and then they could control freight rates, and in that way producers would be greatly assisted.

Mr. ALEXANDER MORRISON (Macdonald): Mr. Speaker, the question of free trade in wheat between Canada and the United States has been the subject of a good deal of discussion in this House, in this and in former sessions. I therefore do not purpose at the present time to enter at length into the merits of the question. There is another and more important reason why I do not consider the present an opportune time to pass such legislation as is proposed in the resolution before the House. Last year the Government, through its Department of Agriculture, started a propaganda among the farmers for increased production: "Patriotism and Production" was the slogan. The object of that propaganda, I take it, was that the farmers of Canada might produce the largest possible amount of foodstuffs, to have them available for the use of the Empire during this war. The farmers of Canada responded in no uncertain manner to that appeal, and, with the blessing of Providence on their efforts, they produced the largest crop ever produced in the history of our country. I hold that it is the duty of Canadians to conserve what surplus we may have, over and above our own requirements, so that it may be available for the requirements of Great Britain and her Allies. It has pleased the great republic to the south of us to keep out of this conflict now raging in Europe, yet it cannot be denied that on more than one occasion diplomatic relations between that country and Germany have been strained almost to the breaking point, and no man can say that the United States may not yet be forced to take up arms in defence of its own national honour. Therefore, if the legsilation asked for in the resolution before the House were passed, and if sveral millions bushels of our Canadian wheat were to find its way into the United States, as it probably would, it might cease to be available for Great Britain and her Allies.

The Grain Growers Grain Company has been mentioned several times during this debate, and it might not be out of place for me to say a word or two about that institution. Hon. members generally may not know that the Grain Growers' Grain Company is an offshoot of the Grain Growers' Association, which association was organized some years ago. The producers felt that they were not receiving proper treatment from the Grain Exchange in Winnipeg, and they believed that if they had their own commission house they would be able to derive full benefit from the marketing of their grain. That asociation was formed and, I believe, did good service. After a few years they felt that if their powers were enlarged and they were given the status of a buying and exporting company, they would be of still greater service. Shares in the company were sold throughout the three Prairie Provinces I believe, and the company was organized. I have no doubt that the hon. member for Assiniboia (Mr. Turriff), the hon. member for Dauphin (Mr. Cruise), and probably the hon. member for Saltcoats (Mr. MacNutt) are shareholders in that company. They do not deny the soft impeachment, so I take it that I have correctly stated their position. The hon. member for Assiniboia shakes his head. However, the company was started in good faith, and it was expected that it would be a just and equitable middleman between the grain growers and the consumers. But it has developed that the company is just on the same footing, and doing business on the same basis of profits, as any other firm on the Grain Exchange in Winnipeg. The

hon. member for Assiniboia is quoted in Hansard as having spoken in this manner on the 14th instant:

> There is another point. In the months of September, October, and November last there was a spread of seven or eight cents a bushel between the Winnipeg and the American price, not taking into consideration the difference in quality.

What he meant, I take it, was that the price paid to the Canadian farmer, and the price paid to the Dakota farmer showed a difference of seven or eight cents a bushel in favour of the Dakota farmer.

> But what do we find when the wheat got to Liverpool? Instead of the Manitoba farmer getting seven or eight cents less a bushel than the American farmer, he received from the Liverpool merchant from six to eight cents a bushel more than the American farmer, and that cannot de denied by any one who knows anything about the grain trade.

Later on, replying to the Minister of Finance, the hon member for Assiniboia made this correction:

> Mr. Turriff: If the hon. minister will allow me, I was not correctly reported there, and I changed that portion of my speech when I got the copy of Hansard. I did not say those words at all, nor say words that meant anything like that. What I said was, that while the Canadian wheat was seven or eight cents a bushel lower, when that wheat got to Liverpool, it sold for seven or eight cents higher than the corresponding Mineapolis grade.

Well, a rose of any other name will smell as sweet; I cannot see any difference between the two. Now, if the statement made by the hon. gentleman be correct—and I am not going to dispute it—then the difference between the price that the farmer should have got, and what he actually did get, must have been tolled by the grain dealers in Winnipeg. The Grain Growers' Grain Company is one of the greatest of these dealers, and there is ground for investigation right there. No doubt, if the shareholders of that company in this House will use their good offices with the company, they can get the matter set right. Failing that, I would suggest that the Government look into the matter, either through the Grain Commission by enlarging their powers, or by a special commission to be appointed. There was no reason why the farmer should sell to the dealer at a low price when the dealer sells to the public at a high price.

It is generally conceded, I believe, that when this war is over, and probably before that, such trade relations may be made—and will be made—with the Mother Country as will make it not very desirable to have free trade in wheat between Canada and the United States. A week or ten days ago I read a press despatch quoting an editorial in the London Spectator which, I believe, has always been a staunch free-trade paper.

In that editorial fault was found with the proposed legislation of the British Government in the matter of duties. The Spectator advocated an ad valorem duty of ten per cent on all imports into England, and a rebate of five per cent to the British colonies. Even with a provision of that kind in operation, free wheat would have very little attraction, and would not be as desirable as some people think it would be at the present time. I repeat that it is our duty as a part of the British Empire so to conserve our own resources that they shall be readily available for the Mother Country and her Allies during the continuance of the war. For that reason, and the other reasons that I have mentioned, I consider it my duty to vote against the motion of the hon. member for Assiniboia.

Mr. J. J. HUGHES (Kings, P.E.I.): Mr. Speaker, this is not by any means merely a western question; it is as wide as the Dominion of Canada. The farmers who ask for this legislation are not desirous of obtaining privileges or favours; they do not ask for legislation that will enable them to take advantage of any other part of the community. They simply ask the privilege of trading with their neighbours to the south: of exporting a commodity which they cannot otherwise sell.

The Minister of Finance told us in his Budget speech that it was desirable to increase the exports of the country. The Government are expending large sums of money in establishing commercial agencies in different parts of the world, and in subsidizing steamship services to enable us to trade with distant countries; yet they refuse to extend to the farmers of Western Canada the privilege of trading with their nearest neighbours. The hon. Minister said that if the legislation asked by this resolution went into effect the price of wheat in the United States would drop to the price in Winnipeg; and therefore we would not ship any to the United States. Then he argued that the exportation of wheat to the United States would injure our transportation lines and the business of our Atlantic ports. He stated also that if legislation of this kind were enacted, the milling industries of Canada would be seriously injured, perhaps destroyed. Then

he quoted approvingly a New York journal which stated that if this legislation went into effect the beneficiaries would be the Canadian and American millers. I cannot quite understand how the proposed legislation could do all these things. The essential weaknesses of the Government's position appear to me to be revealed by the arguments of the Finance Minister and the Minister of Public Works on this question.

The resolution asks for the removal of the duty on wheat and wheat products. The duty on flour is sixty cents a barrel. I believe that the annual consumption of wheat in Canada is about 50,000,000 bushels, which would mean about 10,000,000 barrels of flour. The millers of Canada sell their flour in Liverpool from fifty to seventy-five cents a barrel cheaper than they sell it in Canada; the consumers are obliged to pay the millers of Canada from $6,000,000 to $8,000,000 in excess of a fair profit—as I presume they have a fair profit on what they export. The Minister of Public Works said this afternoon that the millers have exported 3,500,000 barrels of flour, meeting the competition of the world—of the American millers and of those of the Argentine Republic—but they cannot meet competition in Canada. The consumers of Canada, I say, have to pay from fifty to sixty cents a barrel more for flour, or from $6,000,000 to $8,000,000 a year, than they would if this competition existed. Should that condition be allowed to exist? I understand that with the western farmer it is a question not so much of the price he gets, as of the necessity for his selling his wheat at any price. In order to have a steady market it is important to have a large market. It is feared that tens of millions of bushels of wheat will rot in the fields of Western Canada if no market is found for it while the people of Eastern Canada are paying abnormally high prices for flour. Is that a condition of things that ought to exist in Canada? Is that a condition of things that the Government are unable to grapple with? The wholesale price of flour in Canada to-day is very high; in Montreal it is about $7 a barrel. By the time the flour reaches the consumer, the price is $7.60 or $7.75 a barrel, which is an unusually high figure. The retail price of second grade flour by the time it reaches the Maritime Provinces is about $7.50 a barrel; yet in the western part of Canada there is danger that when the warm weather comes large quantities of wheat will rot in the fields. Surely the Government can grapple with this condition.

The Minister of Finance said the other day—to me it was a strange statement—that even though such legislation as this should result in advantage to the Canadian farmers, that advantage might not continue; therefore he would vote against the resolution. That is to say, we should not trade profitably to-day lest we may not be able to trade profitably to-morrow. We would never make any trade at all if we acted that way. No business man acts that way, the Minister of Finance himself would not act that way in connection with his own business.

Speaking on this subject the other day, the Minister of Finance referred to the matter of potatoes, in which people of my province, and of other provinces of Canada as well, are deeply interested. He opposed the removal of the duty on American potatoes because it would be no advantage to us. He read tables to show that in 1914-15 the price of potatoes in Sydney and Halifax was higher than in the United States. And do you know what the Finance Minister did? He quoted the retail price of potatoes in these two cities of Sydney and Halifax, and compared it with the price the farmers received in the United States, which was even less than the wholesale price—and he built an argument on a statement of that kind, and he told us he was viewing the matter in a calm and judicial spirit. I wonder what kind of a statement he would make if he were considering it from a political point of view. Then, too, he quoted prices in Canada last year, when it is well known to everybody that we had a crop failure in potatoes, and the price was abnormally high. Very rarely do we have such a failure in the potato crop in this country, perhaps not once in twenty years. But we had that unusual condition of things last year; the crop failed all over Eastern Canada. If we could get potatoes from the United States this year the consumers of Canada would bring in potatoes from the United States which would be a great advantage to us. The Government has power by Order in Council to remove the duty or to suspend it temporarily. If they will not remove it permanently at least they should remove it temporarily this year. We had an exceptional condition of things in Prince Edward Island. As I have said, our crop there was a failure to such an extent that the farmers will

find it very difficult to obtain potatoes for seed this year. Last year, when a similar condition prevailed in Western Canada the Government very properly came to the rescue of the farmers and provided, or assisted in providing, seed wheat. I would strongly urge the Government to take into consideration the conditions in Prince Edward Island, and to see if they cannot assist the farmers there in obtaining seed potatoes this year, because if something along that line is not done, if neither the provincial nor the Dominion Government take the question up, it is very doubtful if the farmers will be able to obtain seed potatoes, and some of the ground will be left unseeded. So I would strongly urge that under these conditions the Government should seriously consider at least the suspension of the duty on American potatoes, if they will not remove it permanently. There is no doubt that the American market for potatoes would be of great advantage to us if we could get it. The Reciprocity agreement gave us a monopoly of the American market in posatoes, but we turned it down. When President Wilson took office and the Underwood Tariff came into operation, it reduced the duty on potatoes to every country in the world. The consequence was that large quantities of potatoes began to come in from Europe, from Great Britain and Germany, and the American people became alarmed lest the dreadful disease known as canker, which is prevalent in Europe, might be introduced. They held a convention at Washington to take the matter into consideration, and the Canadian Department of Agriculture sent Dr. G. Güssow down there to tell them that Canadian potatoes were diseased and ought to be excluded. Men were sent by this Government to Prince Edward Island in 1912, with the title of professors or scientists attached to their names, and the object was to find disease in the potatoes to sustain the action of the Government in making such representations to the American people, and of course they found the disease. I shall simply point out to the House the way those gentlemen acted. Two of those men in 1912 went to the cellar of a farmer, Robert Stewart, of Brudenell, a potato grower. They found disease in his potatoes and they advised him that he must not under any consideration use those potatoes for seed. He paid no attention to what they said, he knew that his potatoes were not diseased, but were the same as they had been for forty years, and so he planted those same potatoes for two successive years. Two other professors came along last autumn and gave him a clean bill of health. His was the only farm in the neighbourhood that had no diseased potatoes. Disease was found in our potatoes because gentlemen were sent there to find it, and representations of that kind were made to the American Government. The Minister of Agriculture became alarmed and he and Dr. Güssow have since been trying to prove to the American Government that there is no disease, or that it is of very harmless character. But the consequence is that an embargo was put on Canadian potatoes which prevents us having access to the United States market, and we have to thank the Canadian Government for it.

Under these conditions I say that there is no reason in the world why this motion should not carry. The western farmers are not asking favours; if they came here asking favours, probably they would be better received. They are asking simply to be allowed to increase the exports of the country, asking to be allowed to sell their surplus products wherever they can find a market for them. I repeat they are not asking for any favours or privileges, not asking for legislation to enable them to put any burden upon any other class of the community; and yet they are denied, they are turned down. The Government has set up the idol of protection and will not touch it—everybody must bow down and worship it. It is a serious condition of affairs when a Government will not listen to an argument of that kind, when the Government's position has to be supported by such self-contradictory arguments as the Minister of Finance made the other day. The Minister of Finance is an able man, and if he had a good cause he would not have had to make arguments of that kind. This shows the essential weakness of the Government's position in this matter. But they do not seem to be open to reason or to argument, and I suppose the farmers will have to put up with the consequences of the disadvantages under which they are labouring at the present time. I make these representations to the Government in all earnestness, and I think they ought to receive consideration.

Mr. H. BOULAY (Rimouski): (Translation.) I had not intended to take part in this debate, but as our friends opposite keep harping on this question of free wheat,

I take it to be my duty to express thereon a few ideas. Enough days and weeks have been spent on the subject during the last five years, that the discussion in my opinion, ought to be considered closed.

All the points of the question have been sifted again and again and all its aspects scrutinized, and from all the twaddle what stands out clear to me is that the western members are using the question as an electoral war-horse. They take it up as a good means of boosting their case and ensuring their re-election.

A while ago one of the western members attacked the Government for not giving the farmers all the help they were entitled to. Yet, if any people should grumble against want of solicitude on the part of the Government, surely not those farmers. Every time they are the victims of some slight mishap, a drought or a frost, they appeal to the Government and immediately millions of dollars are put at their disposal to enable them to tide over the crisis. Our eastern farmers have not the same recourse. If the harvest is bad, or they suffer from frost, they have to shift for themselves without any one coming to their aid. Of all farmers who have no reason to grumble, those of the prairies are first, for the Government is lavish in its favours to them.

The same orator complains that agricultural implements were not allowed to be imported free of duty from the United States, he claims the tariff in that respect is detrimental to them, and in support of his contention he maintains that the higher price paid for the same machinery in Canada than obtains across the border is disadvantageous to the farmer, that it is in fact money taken from the purse of the farmer and given to the manufacturer. So be it, but, in my opinion, when the hon. member further stated that only the manufacturers reap the benefit of the tariff, he is clearly mistaken. The workmen also find it to be their benefit. It must not be forgotten that in those manufactories are to be found workmen to whom the tariff is a benefit in the form of employment. Granted even that an article be something higher in price in Canada than it is in the United States, it seems to me that if the western people were good patriots, they would not begrudge this slight sacrifice to allow Canadian workmen to find his sustenance in this, our common country. After all we are not an agglomeration of two or three Canadas, but we form an entity destined to live as a whole in this country, and no section ought to be indifferent to the necessities of another section.

There is another subject I would call to the attention of my hon. friend from the West. We have, out of the public treasury, built for their use, at fabulous cost, three railways, designed to move their harvest and bring their produce to the Canadian harbours to be thence shipped overseas.

We are now building also, at their request, a request made to the late Administration and repeatedly pressed upon the present Government,—a burdensome railway, the Hudson Bay railway, to afford them a shorter route to the European markets. I would like to know the bottom reason for those railroad constructions. Why are we wasting so much money on the Hudson Bay road—built only for the benefit of our western countrymen, since neither Ontario nor Quebec nor the Maritime Provinces can utilize it; why waste so many millions for those western farmers, if those gentlemen are bent on dealing on the American market? Is that fair? Let them insist with the Government that a stop be put to that useless expenditure on the Hudson Bay railway. It might be after all to the country's advantage to abandon those undertakings and allow the western people freedom of trade with the United States. One of the previous orators stated that in the West the farmer made no money. It appears to me there is not much patriotism in coming here to make such a declaration. If in the West the farmers do not make money, why then ask so much for colonization, why all this propaganda to draw settlers to a region where results are so deceptive?

I, however, have it in my mind that the farmers of the West coin money much more freely than in the East. Had I spoken in the stead of the hon. member I should certainly not have delivered myself of such a remark, because it is not in the interest of his province. We all know that for the most part the western agriculturists are well-to-do and that many of them become rich with much less pains than our eastern farmers.

Such are the few remarks I wished to make. I make them without acrimony and in the best possible intention, so that our friends from the West may realize that they should not be parties to these unhealthy agitations, that they are not the only inhabitants of this country, but that on the contrary, they have to live in close community with the other parts of Canada, and

that their first thought should be the general interests of the country, and not those of a particular section.

Mr. LEVI THOMSON (Qu'Appelle): Mr. Speaker, I have followed this debate very closely. The Minister of Finance and the hon. Minister of Public Works appeared to be under the impression that what we lack in the West is information, and they undertook to supply us with information. But from what I heard and have read of their speeches, there is not a bit of information in them; their statements are as stale as yesterday, or as a year ago yesterday. If they would just take the trouble to attend some of the western grain conventions they would learn something. I know that my hon. friend the Minister of Public Works would learn more there in five minutes than he could ever learn from his study of the speeches of the Minister of Finance. The men in the West know their subject from top to bottom, and all I can say is that, if these hon. ministers have given us all the knowledge they possess on the subject, they know very little about it. The men whom they undertake to inform could give them lots of information which I think would be useful to them if they would heed it, but the trouble is that they do not want to listen to the western farmers; their desire is to know what the protected interests want; it is in these they are interested.

I desire to refer to one remark made by the hon. member for Macdonald (Mr. Morrison) in what I believe was his maiden speech. He said that we should hold this grain for Great Britain and our Allies. Is there any necessity for that? I expected some such argument would be sprung by some one; it is along the lines of some of the arguments, or what we call arguments, advanced by the hon. Minister of Public Works. But apparently even he thought little of it, and shifted it to the shoulders of his friend from Macdonald. Supposing we shipped 50,000,000 bushels of wheat to the United States, would they not ship a corresponding amount of grain to the Allies and Great Britain? I do not think it can be denied that the Allies would not get a bushel less.

Mr. MORRISON: I desire to correct the hon. member. What I said was that no man could tell when the United States might be involved in war, and if the resolution before the House were passed, and several millions of bushels found their way into the United States with the United States at war, that grain might cease to be available for Great Britain and her Allies.

Mr. THOMSON: Does my hon. friend think that there is a probability of the United States entering the war on the side of Germany? If the United States enters the war it is much more likely to be on the side of Britain and her Allies, and if the United States became one of Britain's Allies, it would supply her, for the United States would be exactly in the same position as the other Allies. I do not think I need go any further into that argument.

We have had something suggested about possible British preference. This possibility of a British preference has been dangled before our eyes ever since I entered this House, and probably for ten years before that. This preference has always been just coming, and we have always been told that we must pass legislation with that in view. My opinion is entirely different in regard to that. When we are passing legislation in this House, we must pass it with a view to the circumstances that at present exist. If there should be a complete change in those circumstances, then we would consider the question of amending or changing our legislation. If circumstances should arise which would make it injudicious for Canada to have free entry for her wheat into the United States, we could easily repeal the enactment. We have been told over and over again that this is not a permanent policy. It is objectionable to hon. members opposite because it is not permanent, and it is also objectionable to them because it is permanent. They want to have it both ways, and they can only have it one way. The Minister of Public Works was a little rash to-day, I think. He tried to answer a question which was put to him by the hon. member for Dauphin, and which was also put to the Prime Minister and to the Minister of Finance, but which they did not answer. In my opinion, they were wise in not answering. But my hon. friend the Minister of Public Works was not so wise, and he told us, at least by inference, that it was more loyal to put money into the pockets of the manufacturers of Canada than into the revenue of the country. I disagree with my hon. friend, but I will leave it at that. I do not think he will find many people in Canada to agree with him.

As I have said, I listened with care, and have read with care the speeches of the

two ministers who have spoken on the question. I am sorry to say that I am not disposed to consider very seriously the speech of the Minister of Public Works, because I do not think he gave his speech to us seriously; I do not think he was serious for a moment. We were told by the Conservative papers in the West that the minister was working day and night trying to get his colleagues to accede to this proposal of free wheat.

Mr. ROGERS: I do not think so.

Mr. THOMSON: My hon. friend claims to be an expert in winning elections, but apparently he is not an expert in winning his colleagues over. He has been a dead failure, so far as free wheat is concerned. We were told that when he went out West he had an open mind on the subject, but he came back to Ottawa and apparently read an old speech of the Minister of Trade and Commerce which closed his mind, and then he heard the speech of the Minister of Finance the other day, and that put the locks and bars on it. He has no opinion of his own. He may win elections, but he cannot carry his colleagues with him. They make a perfect tool of him—perhaps I should not say perfect, because I think he is a very imperfect one. I am always disposed, however, to take the Minister of Finance seriously, and I think most members of the House are. I read his argument very carefully, and I desire to make some brief references to it. I understand it is desired to take the vote to-night, and therefore I shall be as brief as possible, though I shall have to leave out some of the matters to which I intended to refer. The Minister of Finance acknowledged that the corresponding prices in the United States market are, on an average, better than our own. I gather that he is willing to admit that there might be some slight advantage to us in the matter of prices, but apparently he thinks that the disadvantages would be so great that it would not be wise to accede to our request. Before I leave the Minister of Public Works I should like to call attention to this remark in his speech:

> I am sure that no hon. member in this House would say that the provision in the Underwood tariff giving us free access to the American market, on certain conditions, was made for the purpose of giving the Canadian producer of western Canada any special advantage.

I quite agree with that, but my hon. friend falls into the error which many people fall into, who think that if there is any advantage to the other man there must be a disadvantage to them, and that if somebody else loses they must gain. If I want to buy anything I want to buy in such a way that both the buyer and the seller will gain, and if I want to sell I try to sell in such a way that both the seller and the purchaser will gain. I would not regard myself as a good citizen if I did otherwise. The same thing is true in regard to nations. He goes on to say:

> It, therefore, becomes our special duty to give this question most earnest and careful consideration, in order to ascertain whether there is justification for the statement that the acceptance of this proposal would carry with it advantages to the farming community and to the people of Canada generally.

That is very grand, but I am very sorry that my hon. friend departed entirely from that high plane which he had set up for himself during his speech. He did not follow the principle that he was laying down. I do not think that he, himself, imagines that he did. While the Minister of Finance was disposed to admit that there will be some gain to the Canadian farmer in the matter of price, he wanted to ease off that admission as far as he could and he carefully hand-picked some quotations as to the relative prices of grain and, after hand-picking them, he carefully avoided any reference to cash prices. All his references were to futures. I am glad to see that the Minister of Finance is now in his place because I want to bring this matter to his attention. I say that after hand-picking quotations he goes on to try and ease off his admission as to the difference in price between Canada and the United States and confines himself entirely to futures. The farmers of the West are not dealing in futures. I have grown and sold quite a number of bushels of wheat in my life but I have never sold or bought one future, and what I say of myself is true of almost all farmers of the West. A few of them deal in futures and in May delivery for speculation just the same as my hon. friend might speculate if he felt like it, but when he confined himself entirely to futures and ignores cash sales, he shows, what is true of the whole ministry, that he is not thinking of the farmers, but of the speculators. The speculators are the men whose interests they are looking after and not ours.

I am quite prepared to agree with my hon. friend on some things and one is that you cannot absolutely say what the effect of any special legislation will be. You cannot tell absolutely what the effect of

this proposed legislation will be. You cannot tell precisely and mathematically what the effect of any legislation will be. Let me offer you one illustration of that. This is for the purpose of stating a general principle although we cannot say that it is on all fours with the present case. Supposing my hon. friend had a water trough, a foot deep, a foot wide and perfectly level. He places sufficient water in one end to fill half of the trough one foot high; he places sufficient water in the other end to fill that half of the trough six inches high. You then get an argument in regard to the matter which would lead one to believe that in the opinion of these gentleman the water throughout the entire length of the trough would rise to 12 inches or drop to six. My hon. friend knows that neither of these things occur as a matter of fact. But he says that in trade matters this is the case and he chooses whichever side suits him; that is the trouble. While you can mathematically ascertain where the water will rise you cannot, as a matter of mathematics, tell exactly what the price of wheat will be if this legislation is passed, or what the absolute effect will be, but you can conform to general principles.

5 p.m.

Mr. WRIGHT: What would happen if both ends of the trough were equally full.

Mr. THOMSON: What does the hon. gentleman say?

Mr. WRIGHT: What would happen if both troughs were bulk full?

Mr. THOMSON: I am not talking about both troughs, but about one trough. If they were equally full, they would remain equally full, but I confess that I cannot see what the point of the hon. gentleman's question is. If my hon. friend will be kind enough to tell me I would be very much obliged to him.

Mr. BURNHAM: The hon. gentleman (Mr. Thomson) said that he could not do this thing mathematically and then he proceeded to demonstrate that he could.

Mr. THOMSON: Perhaps I do not speak plainly enough or perhaps my hon. friend has not been listening, because he would not have made that remark if he had been. I would advise him to read what I have said and pay a little attention to it, and use his brain power, of which he has enough. He has sufficient understanding to appreciate what I have said, and I do not think I need go over it again. However, I have sometimes said that we would feel rather offended if my hon. friend were in the House and he did not interrupt us in his good-natured way. We are always very much pleased to receive his interruptions, as they are invariably good natured. The Minister of Finance truly says that supply and demand rule this question. That is quite right. However, he proceeds, as plainly as he can, to contradict that afterwards. He says that the export price will govern the price. I do not know whether my hon. friend confines the meaning of export price to prices that we receive for grain shipped across the Atlantic. If he does he is entirely mistaken. If he means the whole of the export, wherever it is, he is right. I think my hon. friend will agree that the more outlets you have the better and the steadier your price will be. The law of supply and demand affects that. The better the demand there is for the amount of stuff we have to ship, the better and the steadier will be the price. My hon. friend apparently puts on his silk gown while he is in the midst of his argument. He does not mean to keep the farmer's togs on all the time; he becomes a lawyer, and he says a great deal to us about the necessity of telling the truth, the whole truth, and nothing but the truth, as we are required to do in the courts of law. I think that is a very good piece of advice to give us, but it would have been a very good piece of advice for himself to have taken. He should have applied that advice to himself before he began talking about the local demand in the way he did, and before he told us that the quotations he was giving had reference to the same grades. As a matter of fact, his remarks in regard to the local demand in the United States were entirely misleading. His remarks with reference to the same grade were also very misleading. He was comparing a grade of No. 1 Northern Canadian with a No. 1 Northern United States, and he said that these were the same grades. That is as much as to tell us that because one man is named White, and another man is named White, therefore it is the same man. Let me quote what the requirements are—I think this has been quoted in the House before—of No. 1 hard in Canada and No. 1 hard in Minneapolis:

Canadian No. 1 Manitoba Northern wheat shall be sound and well cleaned, weighing not less than 60 pounds to the bushel, and shall be composed of at least 60 per cent of hard red Fife wheat.

No. 1 Minneapolis spring wheat shall be dry, sound, sweet and clean, may consist of the hard and soft varieties of spring wheat and weigh not less than 57 pounds to the measured bushel.

My hon. friend would hardly claim that wheat which must weigh sixty pounds to the bushel, and contain sixty per cent of hard Red Fife, is of the same grade as wheat that requires to weigh only fifty-seven pounds to the bushel, and contains merely a percentage of hard wheat. I presume my hon. friend is well enough versed in the grades to know that the nearest comparison between Minneapolis and Fort William higher grades is No. 1 Hard Minneapolis and No. 2 Northern Fort William. Between those two grades there is very little difference, but the spread in price averages considerably over five cents a bushel. It is obviously unfair to compare No. 1 Minneapolis with No. 1 Fort William, and what is the use of my hon. friend lecturing us to tell the truth, the whole truth, and nothing but the truth, when he speaks of these two distinctly different grades as if they were exactly the same.

I think the House will agree that the hard wheat we grow in the West is the best in the world, but, it does not bring the best price in the British market. Why is that? I have heard the reason advanced that it is because we ship all our wheat over there at the one time. That reason is not sound, because on looking over reports of past years I find that the very same condition existed when we were not shipping wheat at all. Only one reason for this condition suggests itself to me: We are shipping more of our hard wheat than Great Britain requires, and we are glutting their market. If any hon. gentleman knows of any other reason I shall be glad to hear it, for I am anxious for information. At the same time, there is a tremendous demand in the United States for our hard wheat. We may take it for granted that the taste of Canadians and Americans demands a greater percentage of hard wheat than does the British taste. Canadian millers want nearly all hard wheat in their flour; British millers do not require nearly so large a percentage. It is quite plain from the grades that the United States is not producing anything like so good a quality of hard wheat as we are. The reason we have high grades in this country is because we have a high-grade wheat, and in the United States they have not these high grades, because their wheat is not of such a high quality. Their No. 1 hard has to contain only fifty per cent of hard wheat, and that not necessarily hard Red Fife; whereas our second grade No 1 Northern has to contain sixty per cent of hard Red Fife.

The Finance Minister has spoken of the demand in the United States for our wheat, as a local demand. I would tell him that that local demand extends over the whole of the United States. I have been told by gentlemen who have lived in the south that the bread they got there was not nearly so good as what they were used to in Canada. There was not enough hard wheat in the flour; the United States does not produce enough hard wheat to supply the demand, and they have to use soft wheat flour in making the bread. In one sense this demand in the United States is a local demand, as the Finance Minister says, because the United States is a locality; it is equally true that the European demand is a local demand, for Europe is also a locality. If the demand of the United States, with its 100,000,000 people, is a local demand, how much more of a local demand is the demand of Great Britain with its 45,000,000 people? If one is a local demand, surely the other is. American millers need our hard wheat to mix with their soft, and that is why free wheat and free wheat products would be a benefit to our farmers. The United States demand would increase the price to our farmers.

What would be the result if, instead of sending all our hard wheat to Britain, we sent a portion of it to the United States, and the United States sent to Great Britain the soft wheat which the British market requires? We should find that the British market would want our hard wheat. If you search back far enough in the English papers you will find that at one time Western Canada wheat commanded the highest price in the world, and I say that we should reach that point again if we limited our export of hard wheat to Britain. At the present time we are sending over far more than they require; we have glutted the market, and the price has dropped.

Just a word in regard to our milling friends. I think I speak for the western farmers when I say that we do not wish to injure the millers if it can be avoided. If legislation were passed that would prevent our milling friends from declaring fifty and sixty per cent dividend on their stock, watered and otherwise, and would allow us to get a little more than four or five per cent on the capital we have invested in the West, I do not think it would

be a bad thing for the country at all. Certainly the millers could stand it, according to their own figures. The Minister of Finance tells us that the United States has a milling capacity of 1,000,000 barrels a day, while Canada's capacity is 100,000 barrels a day, or just one-tenth the capacity of the United States. If that is so, we are better supplied with milling facilities per head of population than is the United States. The hon. gentleman will not claim that we have one-tenth of the population of the United States, and yet we have one-tenth of its milling power. That being so, why cannot our mills take care of themselves, especially when our millers pay less for wheat than the American millers pay and sell their flour at a higher price? That state of affairs, I may remark in passing, may account for our having more milling capacity according to population than the United States. But we are told that it would injure the milling industry of Canada to have such legislation passed as is proposed by this motion. The mills of Canada, in the financial year ending 31st March, 1914, exported flour to the value of a little over $20,500,000. That flour was sold in open competition with the mills of the United States and of the world. If our mills can compete in other countries with the mills of the United States, surely they can compete at home. In shipping abroad they have no freight advantages while in the home market they have. The amount of flour exported from Canada is increasing, being probably $25,000,000 or more this year, in addition to which they ship about $2,000,000 worth of bran. That does not look as if the Canadian mills could not compete either in flour or in bran with the mills of the United States.

The Minister of Finance makes a great deal of the point that this proposed legislation would lack permanency. Can the hon. gentleman point to any legislation that is permanent? Even the British North America Act, the most permanent of our laws, has been amended, and we are now seeking to amend it again. You cannot have democracy and have permanency of legislation, for the people must always have the right to change their laws. The hon. gentleman said that the Canadian millers could not export to the United States because there is no "permanency" in the legislation. Well, would not that apply the other way just as well? The argument of lack of "permanency" would operate against the American miller exporting to Canada, just as it would operate against our millers exporting to the United States. It is quite true, as the hon. minister has said, that in this matter we depend upon the legislation of another country, but that is true of every country in the world that makes a trade treaty. What guarantee have we that the French people will not put an end to the trade treaty between that country and our own?

Mr. MICHAEL CLARK: And there is the treaty with the West Indies.

Mr. LEMIEUX: And the treaty with Japan.

Mr. THOMSON: Yes, they are all in the same category. Now, there is one other matter that I wish to emphasize, though it has been called attention to by other speakers, and that is that we farmers of the West are not asking any favours. We want no advantage over any other producers on earth. We believe that we can compete with the American farmers or any other farmers. We believe that we have the land and that we have the men. I could not say that we desired to avoid competition without saying either that we had not the land or that we had not the men, but I am not prepared to admit that the United States has any better farmers or any better land than ours. We simply ask for an opportunity to market our products wherever we can find a satisfactory and profitable trade. If the American farmer can come across and undersell us, let him do so. If he can undersell us in oats or in anything else, let him do so. All we ask is a fair field and no favour. Quotations have been made from newspapers intended to prove that probably there would be no advantage to the Canadian farmers in the arrangement that we are asking for. But these same newspapers, in 1911, told us that there could be no advantage in selling our live-stock free of duty in the United States. I recall particularly the case of one newspaper published in western Canada.

That paper had fought tooth and nail against reciprocity, its chief argument being that we could not possibly get any advantage from reciprocity so far as live stock was concerned. One year after the Underwood tariff came into effect that same paper admitted that we were getting two cents a pound more for every head of cattle that we were selling. Certainly they overstated the figure, but it is

a fact that there was a substantial increase.

We are asking for no favours; give us fair play, and nothing more. Give us a chance to deal freely and openly in the markets of the world. If legislation of this kind is passed, benefit will accrue not only to the farmers of the West, but to the consumers in the East as well—to every man who wants to buy a pound of flour. It is admitted by all that the price of flour is lower in the United States than it is in Canada. The reason why objection is made to free wheat is that the Canadian miller would have to sell his flour cheaper in Canada than he has been selling it in the past. What would be the effect of that? Every labouring man in Canada would get his flour cheaper, his bread cheaper, his living cheaper. Is that not worth while?

Mr W. F. MACLEAN (South York): It is my intention to occupy the House only a few minutes, as I understand that a vote is to be taken at six o'clock. Our greatest poet has said that "nice customs curtsey to great kings." Among the nice customs may be included the tariff custom, and the great king to which the tariff custom must curtsy is democracy. The democracy of the Canadian West to-day is demanding free wheat. I have followed the discussion of this subject closely for many years; I have read the papers of the West; I have heard speeches; I have read the proceedings of all the farmers' conventions. The demand in the West now, as I see it, is that the people there shall have a wider market for their wheat. Surely if they have not now a market sufficiently wide this Parliament, representing the Canadian people, should not prevent the accruing of that benefit to the agricultural population of the country, especially the West. They simply ask for an opportunity to sell their surplus wheat in every possible market. Their doing this would not be against the interests of Canada; it would make these people richer and increase their ability to buy Canada's products, because they would sell their wheat at better prices than they get now. I believe in a national policy for Canada; I have in my time made some sacrifices in the matter of national policy. The argument that was made by the Minister of Public Works this afternoon was a first class argument in many respects. The hon. gentleman said that he wanted to maintain the National Policy. But do we go to the United States to maintain our National Policy? The United States could destroy the whole structure of that policy as it was outlined this afternoon if they saw fit to withdraw the duty which they now impose upon our wheat. The probability is that the Democratic party, soon to go to the country in a presidential election, will have in their party platform a proposal to abolish the duty on wheat. If they do this where will our national policy go then? We have got to have a national policy that will preserve traffic for our Canadian railways, if possible; we have got to have a national policy for our millers. But if we are consistent national policy men we ought to work that policy out by depending not upon the temporary or incidental legislation of the United States, but upon our own legislation. The British market, which we now have, is a good market. If we want to help the millers why not adopt the principle of the National Policy in regard to, say, a bounty on production, or, better still, by nationalizing our railways, transportation lines, ocean steamship services? Then we should be able to keep the British market, and hold it against any competition. The United States for the time being has put a tariff on wheat coming from Canada. They may take that duty off, and we can do nothing to keep that market for ourselves. After studying this question as well as I could, I have come to the conclusion that we should not resist the voice of the people of the West when they ask for the right to sell their wheat in every possible market. We will make them better farmers, and we will make them better consumers of Canadian goods if we keep them in good temper, and give them an opportunity of making more money than they are making to-day

The impression that I gained after a comparison of prices was that, on the whole, the price of wheat in the United States has been better than the price in Canada, and that the millers of Canada have at times not given as much as they could have given for Canadian wheat if the Canadian farmers had been able to sell in other markets. I have no prejudices in this matter; I have tried to consider it carefully, and that is the impression that has been made upon me. If we wish to make the West prosperous and contented, we ought to give the farmers of that country the benefit of free wheat. The West must be made to stand on its own feet, and you will never get it to do that if you restrict its freedom in the matter of selling a great product of which it has a large surplus. If there were any national reason why we

should prevent our own people from getting the largest possible returns from the sale of their wheat, I should not be prepared to support the motion. But I can see no national reason why we should restrict the Canadian farmer in the marketing of his great surplus of wheat.

As to the millers, I have this to say—the Minister of Finance is now proposing a tax on the profits of the business community of Canada in order to help pay for this great war, and the millers will have to pay a large share of that tax. The millers have been most successful in their industry. As between the miller and the farmer, it cannot be said that the miller has not had the best of it. As between the Canadian Pacific Railway and the Canadian West, it cannot be said that the farmer has had the best of it. The railways and the millers have had the best of it so far, and the Canadian farmers in the West are seeking some relief, some betterment of their condition. We may not even now be able to give them that relief, because, no matter what we may do, the United States may put up the duty against us. Of a certainty I see no relief in that direction. But there is an opportunity to improve the conditions by taking advantage of legislation that already exists on the statute book of the United States. Looking at the matter in the calmest possible way, after having studied all the circumstances connected with it, I have reached the conclusion that it is not along the lines of national policy that we should restrict the farmers of our West in their getting the best possible price for their grain. On the contrary, we ought to help them get the best possible price for their grain, and try to make the West not only a great grain growing country, but a great mixed farming country as well. Give the West an opportunity to work out its own salvation, and do not encourage it in nursing grievances. If we wish to improve the condition of our railways and our millers, we should do as I thought this House intended to do; as I thought the Conservative party intended to do two or three years ago—remove these grievances, the expression of which has been found in the House, in the press, on platforms in every direction. The sooner we get rid of the grievances, and give the farmers of the West what they ask for, the better it will be for the progress and development of the country.

Hon. ARTHUR MEIGHEN (Solicitor General): There are only a few minutes left within which, according to the arrangement made to bring this subject to a vote before six o'clock, to express my view upon the motion. One would indeed be blind who came from the Canadian West and failed to realize the scope of this subject and the place it occupies in the minds of the people of the three Prairie Provinces. The matter arose as a political question some five years ago; I do not think its origin antedates that time. It formed part of the great reciprocity issue of 1911, and as such the people of Canada passed upon it.

Since that time it would be idle to contend that it has been eliminated from the political horizon. It occupies its place there still and is a subject of political discussion, and is likely to be for some time. I respect the views of the men who have advocated the affirmative side of the resolution, including the hon. member for York (Mr. W. F. Maclean). I only note with reference to the speech of that hon. gentleman that while he established quite clearly that there was what might be called a political grievance, and while he, at all events, established his own conviction that the Conservative party as a party would make a stroke of political strategy to its advantage by removing this question out of the way, he said little or nothing that would even indicate that he was himself convinced that there was anything to the subject except what was of a political, and not of an economic character. I have always believed, and never more than now, that at least ninety per cent of this free wheat issue is purely political, while, for the other ten per cent, it is economically unsound. We on this side have been charged in this House, ever since I have been a member of it, and with increasing emphasis since we arrived in power, with being allied with big interests in this country, with being blind to the cause of the farming community and unresponsive to their cries. I must say the repetition with which this subject has been advanced has been so monotonous as to become almost nauseating; and to hear it now propounded with the same earnestness, apparently, as it was in years gone by, after the Budget proposals of this year, is to make one almost justified in charging insincerity against hon. gentlemen opposite. We hear it said by hon. gentlemen opposite in relation to this very subject: You listen to the cry of the manufacturers; you listen to the cry of the railroad; you listen to the cry of the am-

munition maker; but you never hear a word that the farmer utters; you arrange for cheap rates on ocean traffic for the shell manufacturer, but you never bother about the farmers' products in any way whatever. The hon. member for Assiniboia (Mr. Turriff), with just the same assurance and the same positiveness that he displayed in relation to every other phase of the subject, told us we had been instrumental in robbing the western farmer of thirty or forty million dollars because we had not reduced the high ocean freight rates. I am free to admit that we are as justly chargeable with taking thirty million dollars from him because of the high freight rates as we are chargeable with taking twelve and a half million from him by virtue of his not having access to this illusory American market. Thirty millions from him because of high freight rates! Have hon. gentlemen seen the freight rates charged to the exporter of farm products from the United States? I have them before me in the Northwest Miller. I do not know whether hon. gentlemen opposite concede that as an authority or not, but it is published by the millers of Minneapolis, who are persona grata with hon. gentlemen opposite, much more so than are the millers of Canada. The figures I have before me indicate that the American rates have averaged higher than the Canadian rates, and that the American farmer has had to pay at least the rates that we have had to pay. Through the efforts of this Government we were successful in arranging for the transport of supplies purchased by the British Government in vessels requisitioned by the British Government and placed in charge of one named by us. The history of that work and its success has been stated to the House by the Minister of Marine, and I do not know whether it is from his statement or from what, that hon. gentlemen have got the idea that we have been very partial in that regard to the manufacturer of shells. As a matter of well ascertained fact, over seventy-eight per cent of the goods that went on the vessels that were so secured and so requisitioned, were products of the farms of Canada. I have before me a letter from the director of transport, written to the Prime Minister of this country, and written, judging by its introductory words, because he had noted these extraordinary statements made earlier this session by the hon. member for Assiniboia. The director of transport says:

If, as I understand, Mr. Turriff alleges that the Government in its overseas arrangement has favoured the manufacturer to the disadvantage of the farmer then the answer is simple and may be found in the statement on file in the Naval Department showing weekly requirements of the War Office, (copy enclosed for easy reference) and also on page 2 of the memorandum attached to the recent Order in Council having reference to this department.

War Office requirements call for a movement of 35,900 tons per week, representing 2,282,000 cubic feet ocean space.

Of this total, 1,787,000 cubic feet is represented by the products of the farm (oats, hay and flour). The oats and wheat are grown in the West; and of the hay shipments over twenty thousand tons are now being compressed at Calgary for movement overseas. Of the balance, (495,000 cubic feet) 175,000 cubic feet is absorbed by ammunition, shells, forgings, etc., 40,000 by miscellaneous manufactures, and 280,000 by railway equipment.

In other words the available ocean cubic feet space is subdivided as follows:

	Per cent.
Products of the farm..	78·31
Railway equipment..	12·27
Munitions, shells, forgings, etc.	7·67
Miscellaneous..	1·75

Thus it will be seen that 7·67 per cent is the huge proportion of space secured on these vessels, requisitioned by the British Government at the request of the Government of Canada, for the accommodation of shells, etc.

Coming more directly to the free wheat and flour issue, I frankly admit, first of all, that it is a matter that concerns very vitally the farmers of the West. That is to say, they are very directly interested in it. It concerns what forms the major part of the product of their labour, and their investment. But I cannot agree, and I do not think any mind that is honest with itself can agree, that the question of whether or not free wheat and flour are made a fact by legislation of this country is a question that concerns the farmer alone. Although the wheat is the product of the farmer and of the farmer alone, flour is the product of the farmer and of the miller of this country; and in both products, wheat and flour, all our transportation interests have also a very vital concern. Were I to limit the interest in this question to those directly and indirectly concerned with transportation, with milling, and with farming, I should be too confined in my reference. The whole people of Canada are concerned, and concerned vitally, with the question of whether or not we place wheat and flour on the free list. Everybody has an interest in it, because it goes to the very root of the trend of our legislation; and if we take this step, then there

are other steps with which we must logically follow, and if we take those steps then we turn in the direction we were forbidden to turn by the electorate of this country in 1910. I have seen it argued in print and heard it argued on the platform for years, just in the language repeated in this debate by the hon. members for Assiniboia, and Dauphin, and others, that this is a farmers' question, that the farmers ought to know what they should do and where to market their goods; that their decision should be final, and that no one else has any concern in the question. I do not believe the farmers themselves take that ground; I think they are broader-minded than their spokesmen, or alleged spokesmen, in this House. They know that others are interested in it as well as they; they know that the whole people of this country are interested in it. Oh, says the hon. member for Edmonton (Mr. Oliver), if another class of men who are manufacturing goods come to the Government and say it is necessary for us —we are unanimous upon it—that you should put so and so in the tariff, the Government will do so. Does the hon. gentleman believe such a proposition as that? Why, if we followed the manufacturer of almost any line of goods in this country, I am afraid the tariff in respect to that line of goods would go up, but when any class of manufacturers, or any class of interests of any kind come to the Government and say: we are the makers of certain goods, and we know what is best for us; we say to them: you are the makers of the goods and you have a direct interest, but the people of this country are also interested; and we have to decide out of regard to the public interest, and not out of regard to your interest alone.

That is the answer we give to the demand voiced in this House by the hon. member for Assiniboia (Mr. Turriff). I have not the time to pursue the whole course of prices, or to compare the prices to the north with the prices to the south, as has been done at considerable length during this debate. I have never denied, nor could any one who pretended to give any study to the subject, deny, that at many times there is a higher price, sometimes a materially higher price, for hard wheat in Minneapolis than there is on this side of the line. I do not think it can be successfully denied that the average price across the line maintains higher for hard wheat than it does on this side, but I believe that the average is very much below the figures given by hon. gentlemen opposite. I do not think that the figures which have been communicated by the officials on both sides of the line will support the figures given by hon. gentlemen opposite. The average may be a few cents higher; it varies from year to year, and according to conditions, and the question for us to inquire into is this: not what the conditions are now, which are fixed in the main by the trade affected by the tariff, but what the conditions would be if we legislated, as we are asked to legislate, and whether or not they would bring a greater return to the producers of this country and a greater benefit to the country as a whole. I want the House to understand this, because it is a fact uncontroverted, and hon. gentlemen know it, that while they quote grade for grade across the line with grade for grade here, they ought to tell the House that the grade quoted at Minneapolis and Duluth is always the highest price paid that day, while the grade quoted at Winnipeg or Fort William runs from the lowest to the highest. But it is the closing price which they compare with that of Minneapolis; consequently, in many cases the closing price may be lower than the Minneapolis, but the average price for the day may be higher than the Minneapolis price.

Then there is the sample market over there, and that sample market principle invades the grade principle as well. The result is that all their wheat of a certain grade does not sell for the same price; there will be a spread of five cents some day between the same class of No. 1 Northern and another class of No. 1 Northern. Similarly with No. 2 Northern. The higher prices quoted by hon. gentlemen opposite are figures covering many months, and they say that by not allowing free entry we are standing between the western farmer and the markets to the south. It is true that by reason of conditions which are not difficult to understand, if one sets about to study them, very often, and I think on the average, there has been a somewhat higher level of prices in Minneapolis than on this side of the line, but the outstanding conditions and facts are so clear that it must be manifest to any one who studies the question that those conditions are essentially local, and are essentially the result of circumstances that would be swept away if the tariff were swept away by legislation. If what the hon. member for Assiniboia says is correct, that affirmation of mine is not true, and if what the hon. member for

Edmonton says in support of the hon. member for Assiniboia is correct, it is not true. They say that the farmer in the West is crucified, because there is a combination of buyers and millers which crucifies him and holds the prices down, whereas the benevolent people to the south leave the prices at export level and pay actually what the wheat is worth. They say that there is a combination of millers and grain buyers united on one point, to grind down the poor farmer. The hon. member for Assiniboia says that our wheat is worth at home 7 or 8 cents less per bushel to the farmer than is the American wheat to the farmer of the United States in his markets, but that our wheat brings at the Liverpool market 7 or 8 cents more per bushel than does the American wheat on the Liverpool market. If that is the case, my hon. friend has produced a good deal of evidence that there is a combination at the bottom of this trouble. If it is the case that there is a combination of millers and buyers who pay less than the fair market price to the farmer, hon. gentlemen have produced an argument stronger than any I have ever read, in reams of Hansard. What is the fact? Who are the buyers in the western country? The buyers are the millers of the country, but far more so are they the grain dealers of the country, and the biggest grain dealer in the country is the Grain Growers' Grain Company which is a company formed into a corporate representative of the Grain Growers' Association, and which does their business for them. It is a company formed for commercial purposes, it is true, but the directors of that company would be the first to acknowledge that besides being a commercial organization they hold a trusteeship for their patrons in that country and for the farmers in that country generally. They were organized for the purpose, and they say so, of protecting the farmer against the extortions of the grain buyer. If what the hon. member for Edmonton says is correct, the Grain Growers' Grain Company is paying 7 and 8 cents per bushel less at home and getting 7 and 8 cents more at Liverpool than the farmer across the line. The Grain Growers' Grain Company are buyers and exporters both. The hon. member for Moosejaw (Mr. Knowles) contradicted me the other day on that point, and declared that the Grain Growers' Grain Company were not exporters, and he advised the Minister of Finance not to rely on anything I told him. Imagine an hon. member coming to this Parliament, and not knowing that the biggest grain buying concern in his country is also perhaps the biggest exporter.

Mr. KNOWLES: I did not say that; the Minister of Finance asked if it were true that the Grain Growers' Grain Company were exporters, and I said I knew they were not exporters, and I still think so, notwithstanding what the hon. gentleman says.

Mr. MEIGHEN: I wonder at the hon. gentleman. Does he still think the Grain Growers' Grain Company are not exporters?

Mr. KNOWLES: Yes.

An hon. MEMBER: What do they do with their wheat?

Mr. KNOWLES: Sell it in Canada.

Mr. MEIGHEN: I have the annual report of the company here. I am sorry it is getting near to six o'clock, otherwise I would read it in full. The annual report of the company shows that in order to conduct their export business they organized some years ago a company which is officered by themselves and the stock of which is owned by themselves, the Grain Growers' Export Company. It is run by themselves, and is reported in the annual statement of the Grain Growers' Grain Company.

Mr. KNOWLES: It is a different company.

Mr. MEIGHEN: It is a company owned by themselves, and formed to carry out that branch of their work. They not only export Canadian grain, but American grain. Last year they exported many times more bushels of American grain than of Canadian grain, and their profits on their export business last year were over half a million dollars and they say that they pay for the grade.

Let me impress upon this House that the Grain Growers' Association, through the Grain Growers' Grain Company which they control, a company every dollar of whose stock is owned by farmers, a company I believe, well and ably managed, have the solution of the whole thing in their own hands. All they have to do is to pay the legitimate value of the wheat and if they do that, they will pay the western farmer not what they are paying to-day, not what the American farmer is getting, but ten cents a bushel more than the American farmer is getting. What about the

Saskatchewan Elevator Company buying last year over 15 per cent of the whole of the grain of Saskatchewan besides what the Grain Growers' Grain Company bought? What about the Alberta commercial organization? All these organizations are buying and are they in league with the millers? Are we asked, as a Parliament, to protect the Grain Growers' Association against themselves? Are they that class of people? I think not. I have not a word to say against the Grain Growers' Grain Company. They are more frank in their statements than are hon. gentlemen opposite. They come out squarely in their annual statement and say: we can scarcely make a dollar buying wheat in this country; we can hardly make anything out of our elevators in Manitoba because the competition of the millers is so keen that we have to pay more than the grain is worth to get it. That is what they say in their own annual statement published last autumn. They say that: the millers, because they can get No. 2 which is almost as good as No. 1 for their purposes, can pay more than we can for No. 2, and they complain that the millers of the West, at points where they compete with the Grain Growers' Grain Company, raise the price of No. 3 and No. 4 Northern up as high as No. 1 Northern and take the business out of their hands. Is that in accord with what we hear in this House? I believe that company is well managed and I do not believe it is mulcting the farmers of the West. If I did believe that I could agree with the allegations of hon. gentlemen opposite, I would say that there would be a case for free wheat or for a remedy that would bring about the same result because this Parliament could never do its duty to the people of Canada and allow the western farmer to lose from 5 to 15 cents a bushel on his wheat.

Mr. KNOWLES: Would the hon. gentleman explain how the Grain Growers' Grain Company, which, I understand, has never exported more than 20,000,000 bushels, could control the price on an export of 200,000,000 bushels?

Mr. MEIGHEN: Not more than 20,000,000? What I have to complain about with regard to hon. gentlemen opposite is that their understanding is not up to date. If the hon. gentleman will get the report—

Mr. KNOWLES: I take the president's statement.

[Mr. Meighen.]

Mr. MEIGHEN: Last year they exported 38,000,000 and 39,000,000 bushels of American wheat alone.

Mr. KNOWLES: That has nothing to do with our problem.

Mr. MEIGHEN: Mr. Speaker—

Mr. KNOWLES: Will the hon. gentleman allow me to ask him another question?

Some hon. MEMBERS: Order, order.

Mr. SPEAKER: Order.

Mr. KNOWLES: The hon. gentleman can say whether he will allow me or not.

Mr. MEIGHEN: Certainly.

Mr. KNOWLES: What has the question whether they have exported American wheat or not to do with our problem?

Mr. MEIGHEN: I will tell the hon. gentleman in a minute what it has to do with our problem. It shows that they could control it, and were able to get a fair value for the farmer in connection with such export business. It shows that they are able to make even more money exporting American wheat than Canadian wheat because their margin of profit is less on Canadian wheat. The paid-up capital of this company last year was $867,000 and its profits were $226,963, or 27 per cent. I am not complaining of that profit because so far as I know it was legitimately made, and all I have to say to the Grain Growers' Association, and to the Grain Growers' Grain Company is: go ahead, continue the good work as long as you can, because you have solved the problem of the western farmer.

They say that the millers are making colossal profits, that we would get our flour cheaper if you would only open the doors and let down the tariff on flour. Let me deal with that just for a moment. I took the trouble to collect the quotations for flour at corresponding points in the United States and Canada. It would not be doing any injustice if I said that the quotations for the same brand of flour are practically the same, but the average for every month—and I did not take any hand-picked figures, but I took the figures from all over the country—was 10 to 15 cents

6 p.m. higher in the United States than in Canada, and it was about 16 cents higher in January, 1916, in the United States than in Canada. I have these

figures before me and I would rejoice if I had a few minutes to quote them.

Yet, hon. gentlemen opposite say: Let down the tariff and we will get our flour cheaper. We will not get it cheaper because the price is higher there than it is here. But in addition to that, the price at which the miller can sell his flour depends in the main upon the quantity of flour he can turn out. If you turn out a huge quantity, you will be able to turn it out at a lower price per unit, and if we so change our fiscal arrangements as to make it impossible for the Canadian miller to turn out the product that he is turning out to-day, you will see the price of flour go up in this country.

The late Government recognized that fact. Why did the late Government, in arranging their reciprocity proposals, insist that 50 cents a barrel be retained on flour? Was there any reason in the world except this, that the miller could not stand it? I do not mean the big miller necessarily. We have 543 flour millers in this country, 303 flour millers in Ontario alone. The big millers are able to stand competition much better than the smaller ones, but is there a man who would feel that he would be doing his duty as a member of this House who would vote for legislation which would be unfair to 303 small millers in Ontario? They pay duty on almost every article they use, they are bound to pay according to the policy of this country, accepted on both sides, and while they are bound to do that, are they entitled to some fair measure of protection or are they not? The hon. member for Edmonton (Mr. Oliver) says they are. He is on record in this House as saying that they are so entitled as a matter of justice. Let me quote what the hon. member for Edmonton says, as reported at page 916 of Hansard:

> Then there is no reason why the Canadian milling industry should require an extraordinary measure of protection at the hands of this Government.

I agree with that statement.

> It is entitled, no doubt, to whatever measure of protection would naturally fall to it under a revenue tariff: I would not suggest at all that it should not have the benefit of that measure of protection.

If they are entitled in justice to a measure of protection, then upon what principle of reasoning are you going to take it from them? Is it because they are in the minority, is it because they have not as many votes at their disposal as another class? Will the hon. member for Rouville (Mr. Lemieux) subscribe to the doctrine that because you have fewer people on one side than on another, it is the duty of the Government to do an injustice to the minority? The hon. member for Edmonton says that in justice they are entitled to a measure of protection, but because the interests of the millers and the farmers are not the same you shall do what the farmers say and do an injustice to this other class. I cannot subscribe to that doctrine. I do not believe that it would be fair or just to the small millers of this country to take the duty off flour entirely. I believe they are interested in this, I believe that the farmers are interested in it, I believe the people of every part of Canada are interested in it, and I believe that under the conditions that exist to-day, if we have free flour these millers, all those dependent on them, and all in a similar position, could come to this Government and say: In the course you have taken, in removing the tariff from everything we have to sell, letting down the walls entirely between this country and every country in the world, you are reversing the verdict of the people in 1911. While on that subject the hon. member for Assiniboia stated that he did not believe that Mr. Lanigan had made the statement that he directed to me, denying his alleged interview to the effect that the Canadian Pacific Railway, or transportation interests in general would not suffer by the removal of the duty on wheat and flour. I had seen a quotation, said to be of some statement Mr. Lanigan had made in the Manitoba Free Press, and I thought that if that was the view of the Canadian Pacific Railway Company the people of this country were entitled to know it. I wrote and asked Mr. Lanigan if he had ever made a statement of that kind, and I have a reply here from him to the effect that he never made any such statement; that on the contrary the arguments that had been advanced in the Free Press by a Mr. McLeod of Brandon were falsely founded, and that in his view the Canadian people had decided the question of free wheat in 1911, and that the decision as given by them should stand. That is the position taken by him. I do not know that the transportation interests are to be impugned in this House because they have a view as to what is best for themselves. I am one of those who feel that the attitude Parliament should assume should be one dictated by national considerations, and by national considerations alone, and that

that parliament or that government is derelict to its duty which eliminates from those considerations any interests, however large or small, or that denies to any single one of those interests its proper say in the government and tariff arrangements of this country. That government does its duty which considers all, because when you injure one you injure another, and you injure all. Let me leave to the House this one consideration. All the avenues of industry and of activity in this country are open to every class of our community. We have no caste system in Canada; that is one of the ripe fruits of democracy that we enjoy and always will enjoy. There is no avenue to trade, or manufacture, or industry of any kind access to which is denied to the farmer, or to any others of our citizens. I am glad to see the movement of organized farmers in the West; I am glad to see the Grain Growers' Grain company become wealthy and prosper; I am glad to see it under able management, and I say to it, go on, invade all the fields that are open to you to invade: invade, first, those that are nearest to the field you occupy to-day; invade the milling industry of this country if you wish. That company is already dealing in merchanise to the extent of over $1,000,000 a year, over and above its grain trade entirely. I would say to that company: proceed further; you are big, and strong, and wealthy; go into the milling business; there is one industry in which the West can compete with the East under almost equal conditions; go into the milling industry; invade the field that is now monopolized, according to hon. gentlemen opposite, by the millers; you are able to do it; you have able men at your command; you have developed these men of recent years; go into that industry, and when you feel that that industry can get along with less duty than it has come to Parliament and you will then, indeed, have established a practical argument in favour of removing the duty. There is no caste system in this country; let this company, which is now in the grain trade, go into the milling industry. What do you think, Mr. Speaker, of one of their directors who uses the following language in the press with regard to the grain dealers of Canada:

> There is no good reason why the rest of Canada should suffer, so that the large mills and large dealers should enjoy a special privilege at the expense of the rest of the people.

Can the House believe me when I say that these words were uttered by a director of the Grain Growers Grain Company, the biggest dealer in western wheat that there is?

That is the attitude of hon. gentlemen opposite. They are in a position to control the grievance they complain of—if there is a grievance at all—and because they do not care to control it they come to Parliament and say: arrange your tariff so that the Grain Growers' Grain Company, which is a product of the Grain Growers' Association, shall not be able to defeat the object for which it exists. The Grain Growers' Guide, quoted by hon. gentlemen opposite, is a branch industry also of the Grain Growers' Grain Company, for I find that in their annual report, in detailing the success of the various enterprises they control, they deliver the result in connection with the Grain Growers' Guide. We have, then, the organ of the Grain Growers' Grain Company, or rather the paper that derives its financial sustenance at all events from that company, calling week in and week out to the Parliament of Canada to protect the farmers against the controlling company which controls themselves. That is a situation which ought to be known to House. If they have a grievance it is in their power to remedy it, and if they do not remedy it they cannot ask us to remedy, at the expense of somebody else, that which they have in their power to remedy without expense to anybody at all.

We are told that speculative conditions raise the prices on the American market above the Canadian level. That is true; but the reverse is also true. Speculative conditions sometimes raise the Canadian prices above the American prices. The hon. member for Assiniboia tells us that the United States needs our hard wheat; he says they need one bushel of our hard wheat in five—those were his own figures in Hansard—in order to make the highest grade of flour, and he leads the House to believe that they cannot get the wheat at their own doors. Is he aware that the states of North Dakota, South Dakota, and Minnesota produced, in 1912, over 200,000,000 bushels of hard wheat—260,000,000, I think, was the amount—is he aware that last year something over 156,000,000 bushels of hard wheat was produced right around Minneapolis; that the hard wheat produced right around Minneapolis far exceeds the soft wheat production; that the hard wheat production in the United States is over one-half the soft wheat production, and that of all the wheat available

for the Minneapolis mills by far the greater proportion is hard wheat. So far from having difficulty in getting one bushel in five, they can get three bushels in five right at their own doors. Consequently, speculative conditions, and speculative conditions only, dictate in the main the levels of these markets. Just as soon as you sweep the tariff away you kick the prop from under the premium that is paid in Minneapolis, and you do away with the conditions that put their prices above others; you eliminate everything that kept up their prices, and consequently their prices would fall. The hon. member knows that in September last, when rumours were sent out from Ottawa and circulated in the West that serious consideration was being given at Ottawa to the removal of the duty on wheat, down went the price at Minneapolis, and the gap of six or seven cents that existed before closed up. That is an illustration of what might logically be expected to occur; that is what actually did occur.

I have exceeded the hour for adjournment; I did not purpose to do so. I should like to pursue the subject further, but I am going to acquiesce in the decision of both sides of the House that the debate be closed now.

House divided on the motion of Mr. Turriff.

Mr. PUGSLEY: I was paired with the hon. Minister of Marine and Fisheries. Had I voted I would have voted for the motion.

Mr. NESBITT: I was paired with the hon. member for Centre York. Had I voted I would have voted for the motion.

Mr. LEMIEUX: I was paired with the hon. member for Quebec County. Had I voted I would have voted for the motion.

Mr CARVELL: I was paired with the hon. member for York, N.B. Had I voted I would have voted for the motion.

Mr. SMYTH: I was paired with the hon. member for Richmond and Wolfe. Had I voted I would have voted against the motion.

Mr. GREEN: I was paired with the hon. member for Victoria, Alberta. Had I voted I would have voted against the motion.

Mr. DAVIDSON: I was paired with the hon. member for Antigonish. Had I voted I would have voted against the motion.

Mr. NICKLE: I was paired with the hon. member for Regina. Had I voted I would have voted against the motion.

Motion negatived.

At six o'clock the House adjourned, without motion put, pursuant to rule.

Thursday, February 24, 1916.

The House met at Three o'clock, the Speaker in the Chair.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

BLUE RIVER M. & L. CO.

Mr. GAUVREAU:

1. Did the Blue River M. & L. Co., of Rivière-Blue, county of Temiscouata, receive the permission and support of the Department of Railways and Canals for the construction of a spur line to their mill?
2. If so, what are the conditions?
3. Is the Railway Department aware that the said company is said to charge excessive rates to the lumber merchants and colonists who wish to load timber on the cars upon that spur line?
4. If so, is it the intention of the Government to inquire into the subject to find out if the rates are exorbitant and if the company has the right to charge such rates?

Mr. REID:

1. Yes.

2. The company to pay the cost of the perishable material and labour furnished by the railway, and an annual rental on the value of the rails and fastenings; the railway to make a refund of the cost of perishable material and labour at the rate of $2 per car on all cars loaded by others than the company since the siding was constructed and until such time as the railway provides its own facilities at this point.

3. The department has not been advised of any such excessive charges being made.

4. The department is at present making such investigation.

PORT HOWE POSTMASTER.

Mr. MACDONALD:

What salary is paid for all purposes to R. H. Smith, as postmaster for Port Howe, Cumberland county?

Mr. CASGRAIN: Salary, $79; rent allowance, $6; total, $85; also the usual money order and postal note commissions, which amounted to $13.75 in the last fiscal year

PORT HOWE R. R. No. 1.

Mr. MACDONALD:

1. Who is the mail contractor for Port Howe, R. R. No. 1, Cumberland county?
2. What amount is paid him yearly under his contract?

Mr. CASGRAIN:

1. W. H. Dunbar.

2. $295.

SOLICITOR GENERAL'S OFFICE FITTINGS.

* Mr. LANCTOT:

What was the total cost of preparing, fitting up, and furnishing the new offices of the present Solicitor General in the Eastern Departmental block at Ottawa?

Mr. ROGERS: Cost of fittings and furniture, $802.45.

CHARTERS OF GOVERNMENT STEAMERS.

Mr. MACDONALD:

1. To whom did the Railway Department charter certain steamers belonging to them?
2. At what price, and for what time were they chartered?
3. Were tenders or offers called for before chartering?

Mr. REID:

1. Dominion Iron & Steel Company, Limited, Sydney, N.S.; W. J. Sharples, Quebec; Reid Newfoundland Company, St. John, Nfld.; British Empire Grain Company, Winnipeg, Man.; George McKean & Co., St. John, N.B.; Maritime Nail Company, St. John, N.B.

2. Dominion Iron & Steel Company, Limited: SS. Sharon, Sheba, and Durley Chine, at £800 per month for each vessel; the department to pay and board the respective crews, and the company to make any repairs necessary; delivery to charterer in November, 1914; re-delivery to department not later than July 1, 8, and 15 respectively, 1915.

W. J. Sharples, Registered: SS. Durley Chine for one voyage from Pugwash, N.S., to Manchester, England, with cargo of lumber; rate of hire, £8 15s per St. Petersburg standard; delivered to charterer November, 1915.

The Durley Chine one trip, North Sydney, N.S., to St. John, Nfld.; re-delivery at Halifax, N.S.; rate $300 per day, exclusive of bunker coal. One trip Halifax to Glasgow, cargo grain; 13 shillings per quarter.

SS. Sheba, one trip North Sydney to St. John, Nfld.; re-delivery at Halifax, N.S.; rate, $300 per day, exclusive of bunker coal. One trip Halifax to West coast of England, with lumber, at the rate of 175 shillings per standard. One trip Halifax to Havre, cargo, nails and wire; rate $25 per ton.

3. No. In October, 1914, a proposal was made by the Dominion Iron & Steel Company, Limited, for the charter of the three vessels employed in the Hudson bay dedevlopment for the interval between the seasons of 1914 and 1915, of Hudson bay navigation, which was accepted. At the conclusion of the Hudson bay season of 1915 the vessels were placed under the management of the Canadian Government railways for the winter season, except with respect to W. J. Sharples, charter which was negotiated by the department through shipping brokers. The steamers under the management of the Canadian Government railways were placed in the hands of a shipping broker, who chartered them in the open market.

LOUISVILLE POST OFFICE.

Mr. GAUVREAU:

What has been, during the past year, the total revenue of the Louisville post office?

Mr. CASGRAIN: Gross revenue from 1st January, 1915, to 31st December, 1915, $2,632.42.

SUPPLIES FOR 106th REGIMENT.

Mr. MACDONALD:

To whom were contracts awarded for provisions, meats, furnishings, stoves, coal and other supplies, respectively, in connection with the billeting of soldiers of the 106th Regiment at Pictou, Nova Scotia?

Sir SAM HUGHES: Contracts for supplies were awarded as follows: Meat, Pope Bros., Pictou, N.S.; bread, James D. McDonald, Pictou, N.S.; groceries, John Munro, Pictou, N.S.; jam and marmalade, E. D. Smith & Sons, Winona, Ont.; soft coal, Peter Brown & Sons. Stoves, fittings and materials for fitting up quarters for the battalion were obtained as follows: plumbing, W. D. McKenzie; tinsmith work, Scott Brown; toilets, Amherst Foundry Co.; 3 cooking ranges, Enterprise Foundry Co.; 14 stoves, J. F. Carson; electric light fixtures, John A. Stalker & Co.; lumber, A. Fullerton & Son

POWDER MILK.

Mr. J. J. HUGHES:

What quantity of milk can be made from a pound of powder milk?

Sir SAM HUGHES: This question was asked yesterday.

Mr. J. J. HUGHES: Might I amend the question, as there was a little difficulty in answering it yesterday. I would like to put the words "good, serviceable," between "of" and "milk." I am informed that a pint of this powder milk would not colour a cup of tea.

Sir SAM HUGHES: That is the answer.

64TH BATTALION.

Mr. PROULX:

1. Who is the medical officer of the 16th Battalion, now being formed at Sussex, N.B.?

2. Has Dr. Burnet, of Sussex, N.B., been doing any portion of this medical inspection work?

3. If so, what amounts have been paid Dr. Burnet since August 1, 1914?

Sir SAM HUGHES: The hon. member was not present when I pointed out that the 64th Battalion were not at Sussex. If the 64th Regiment is the one referred to, it is at Halifax. If the hon. gentleman will amend the question I will answer it.

Mr. PROULX: Suppose the question amended to read "64th Regiment at Halifax."

Sir SAM HUGHES: If that is what the hon. gentleman means let him give notice of it and the question will be answered.

PAYMENTS TO WALLACE SHIPYARDS, LIMITED.

*Mr. MURPHY:

1. What amounts were paid in each of the years 1913, 1914 and 1915, to the Wallace Shipyards, Limited, of Vancouver, for repairs or work of any kind on the dredge Ajax?

2. What amounts were paid in each of the years 1913, 1914 and 1915, to the Wallace Shipyards, Limited, of Vancouver, for repairs or work of any kind on the dredge Mudlark?

3. What amounts were paid in each of the years 1913, 1914 and 1915, to the Wallace Shipyards, Limited, of Vancouver, for repairs of any kind to the dredge Lobnitz?

4. What amounts were paid in each of the years 1913, 1914 and 1915, to the Wallace Ship-

yards, Limited, of Vancouver, for repairs or work of any kind to the tug Point Ellice?

5. What amounts were paid in each of the years 1913, 1914 and 1915, to the Wallace Shipyards, Limited, of Vancouver, for repairs or work of any kind on the tug Hoke?

Mr. ROGERS:

Plant.	Fiscal year.	Amount.
1. Dredge Ajax	1913-1914	None.
	1914-1915	$1,225 00
	*1915-1916	1,160 20
2. Dredge Mudlark	1913-1914	None.
	1914-1915	None.
	*1915-1916	None.
3. Lobnitz No. 1..	1913-1914	None.
	1914-1915	None.
	*1915-1916	None.
Lobnitz No. 2..	1913-1914	None.
	1914-1915	$2,911 15
	*1915-1916	None.
4. Tug Point Ellice.. ..	1913-1914	$5,523 37
	1914-1915	932 28
	*1915-1916	None.
5 Tug Point Hope	1913-1914	None.
	1914-1915	None.
	*1915-1916	None.

*To December 31.

CANADA CAR AND FOUNDRY COMPANY.

Mr. DOUGLAS:

1. What was paid the Canada Car and Foundry Company per kilowatt for electric light while the department used their buildings in 1915, at Amherst?

2. Did said company supply the said light, or did it purchase it from another company?

3. Is the department aware of the price paid per kilowatt for electric light by the Canada Car and Foundry Company to the electric light company?

Sir SAM HUGHES:

1. Nine cents per kilowatt hour.

2. Yes; but no evidence to show whether or not they generated the light.

3. No.

MILITIA AND DEFENCE—MORRISBURG, ONTARIO.

Mr. KYTE:

1. Did the Department of Militia and Defence, directly or through an agent, since August 1, 1914, rent an office in Morrisburg, Ontario?

2. If so, for what purpose was such office rented, and what is the name of the official who occupied it?

3. What was the rent paid for such office?

4. Is the office still occupied by the Department of Militia and Defence? If not, when did such occupation cease?

Sir SAM HUGHES:

1. No.

2, 3 and 4. Answered by No. 1.

FISHERY INSPECTOR FISHER.

Mr. KYTE:

1. Is Ward Fisher employed by the Government in any capacity other than as fishery officer?

[Mr. Murphy.]

2. If so, in what capacity, and how much is he paid for his services?

Mr. HAZEN: Yes. In addition to his duties as a fishery inspector he is for the time being performing services at headquarters, and is being paid at the rate of $2,000 per annum during the time he is at headquarters.

L'ASSOMPTION AND MONTCALM RURAL MAIL.

Mr. SEGUIN:

1. What are the names of the different tenderers for the carrying of the mails from the rural boxes established in the counties of l'Assomption and Montcalm down to the present date?

2. What is the amount of each of such tenders and contracts, and what is the name of the tenderer to whom each of such contracts has been awarded, and for what sum in each case?

3. Were there any contracts given without tender? If so, to whom, and for what amount in each case?

Mr. CASGRAIN: The information asked for by the question is contained in a return which will be laid on the table of the House in due course.

LIGHTHOUSE BOARD.

Mr. JAMESON:

1. Is there a Lighthouse Board for Canada? If so, when was it constituted?

2. Who are the members of the board, if there is one, and when was each appointed?

3. What are the functions of the board?

4. To whom is the board responsible?

5. Is any remuneration or allowance for time or expenses made to any member of the board? If so, how much has been paid to each since his appointment?

6. Of what transportation or steamship companies, if any, is any member of the board an employee or director?

Mr. HAZEN:

1. Yes. By Order in Council, dated 26th February, 1904.

2. The Deputy Minister of Marine and Fisheries, Chairman, appointed 8th June, 1910; the Chief Engineer of Marine and Fisheries, appointed 26th February, 1904; the Commissioner of Lights, appointed 1st July, 1908; the Superintending Engineer of the River St. Lawrence Ship Channel, appointed 19th September, 1912; the President of the Shipping Federation of Canada, as representative of the shipping interests in the Atlantic division, appointed 20th January, 1911; the President of the Dominion Marine Association, as representative of the shipping interests in the Inland division, appointed 3rd February, 1916; Capt. J. W. Troup, of Victoria, as representative of the

shipping interests in the Pacific division, appointed 6th June, 1906.

3. To inquire into and report to the Minister of Marine and Fisheries upon all matters assigned to him under section 833 of the Canada Shipping Act.

4. To the Minister of Marine and Fisheries.

5. Yes, the members of the board not officials of the department are allowed their travelling expenses for attending meetings of the board, and an honorarium of $5 a day each while attending meetings. Andrew A. Allen, $576.30; J. W. Troup, $768.65.

6. The department has no knowledge of the connection of members of the Lighthouse Board with transportation or steamship companies, except in the case of Capt. Troup, who is an employee of the Canadian Pacific Railway Company, and except in the case of the President of the Dominion Marine Association, who is assistant manager of Canada Steamship Lines, Limited.

UNOPPOSED MOTIONS FOR PAPERS.

Mr. Macdonald.—For a return showing how many men have been recruited in Canada for active service in the Navy, either Canadian or British; at what places they were recruited; and for what rank and service they have been recruited, respectively.

Mr. Sinclair.—For a return showing how many employees were in the Post Office Department on October 11, 1911, in the inside service and the outside service, respectively, including postmasters and other officials of every class paid by the department; also the number of temporary clerks employed in 1900, whose services were dispensed with on or before December 31, 1911; also, how many employees were in the pay of the Post Office Department on December 31, 1915, in the inside service and in the outside service, respectively, including postmasters and other officials of every class paid by the department; also the number of temporary clerks employed in 1915, whose services were dispensed with on or before December 31, 1915.

CARPENTERS' STRIKE IN MONTREAL.

On the Orders of the Day:

Mr. VERVILLE: I would like to call the attention of the Minister of Labour to the following telegram which I have just received, and which I have been asked to read to the House:

> Canadian Vickers Maxim, Ltd., carpenters, joiners, and ship carpenters are out on strike. Read this out to House this afternoon. Four hundred men affected.
>
> J. A. Laflamme.

I call attention to this because it is very important. I understand that the strike is on account of a reduction of wages.

Hon. Mr. CROTHERS: I received this morning information to the same effect, and took the matter up immediately with the employers at Montreal. I think there are prospects of an early settlement.

THE BUDGET.

Consideration of the proposed motion of Sir Thomas White (Minister of Finance) for the Committee of Ways and Means, resumed from Tuesday, February 22.

Mr. H. BOULAY (Rimouski): (Translation.) Mr. Speaker, at the outset I may be allowed to refer shortly to the address delivered the other evening by the hon. member for Laprairie-Napierville (Mr. Lanctôt). There is often wafted over to us from the opposite side of the House bitter criticism of the campaign made by Nationalists in 1910-11. Apparently our Liberal friends have lost sight of the Nationalists that are found in their own ranks, among them the hon. member for Laprairie-Napierville. The other evening he outstepped any Nationalist who has taken part in our campaign. I even felt sorry that, in the midst of our present difficulties, a pronouncement of such a nature should come from a French-Canadian. Mr. Bourassa himself, although denied by his friends, has certainly never expressed himself in such terms either in his public utterances or his writings.

If excommunication there be for Mr. Bourassa, the hon. member for Laprairie should also be read out of his party.

The hon. member criticised the hon. Minister of Inland Revenue (Mr. Patenaude) for not having restrained his nationalist feelings and followed the dictates of his conscience in accepting a portfolio. Well, I cannot bring myself to see the crime which has been perpetrated by the man in accepting a place in the Cabinet. In a masterly effort he explained his position, and accounted for his having had to modify somewhat his viewpoint. As a matter of fact, he who insists in circumstances such as the present in sticking to his old opinions is not a true Canadian.

The hon. member for Laprairie, speaking on trade and commerce, had another complaint to air. The farmers of his constituency could not dispose of their hay, or at least could not dispose of it at the price they expected. My idea is that the farmers in his county and the hon. member himself, expect too much when they ask twenty dollars a ton, or rather nineteen, with a profit of one dollar for the hon. gentleman from Laprairie. In Rimouski, we have no fault

to find, and yet our hay sells for only fifteen and sixteen dollars a ton. We are quite satisfied to sell it at that price. If the farmers of Laprairie get twenty dollars, they have no reason to complain.

Then, the hon. member thought himself bound to criticise the Government embargo on the export of hay to the United States. My idea is that the object is to prevent Americans from buying Canadian hay which they could then sell at a profit in Great Britain. The Government intended that such profit should remain with the Canadian farmers.

Mr. LANCTOT: (Translation.) Surely the hon. member is aware that the hay which is being sold in the United States at twenty dollars a ton cannot at the present time be exported to England. The freight charges are three times the price of the hay. At the present time, you cannot ship to England under one hundred and eighty shillings a ton. The drift of my remarks was that since we were prevented by the embargo from exporting our hay to the United States, it was unfair for the Government to import American hay, in competition with ours, to have that hay re-pressed at Montreal and exported to England. Do you think it fair, Mr. Speaker, that the farmers of Canada should have to compete with this American hay?

Some MEMBERS: Order, order.

Mr. BOULAY: (Translation.) In any case, even after the explanations of the hon. member I agree with the reasons given by the hon. the Minister of Agriculture (Mr. Burrell) in his explanation of the embargo placed upon the export of hay to the States the purpose of which he said, was to keep in Canada a quantity of hay sufficient for the army.

Mr. LANCTOT: (Translation.) Mr. Speaker, I insist on my hon. friend not attributing to me statements I have not made. I have not criticised the Government for placing an embargo on the export of hay.

Mr. SPEAKER: (Translation.) The hon. member for Rimouski has the floor and I should request the hon. member for Laprairie not to interrupt.

Mr. BOULAY: Mr. Speaker, I am through with what remarks I wished to make on the speech of the hon. member for Laprairie, and I shall now pass to a consideration of the Budget.

My first care will be to congratulate the hon. the Minister of Finance on his clear and definite statement of the country's financial situation, as set out in his speech on the Budget. In a masterly manner, he has traced out his policy and the means to be taken to meet the present crisis. The hon. the Minister of Finance is a valuable acquisition. He certainly is the man for the position. No one better qualified could be found at the present time to fill the most difficult position of Dominion tax-collector and work out a satisfactory solution of the present economical problem. It is given to nations in critical times to find among its citizens men capable of coping with great events.

To what has already been said by previous distinguished speakers, I feel I may subjoin my own remarks.

The House has just been told that the long drawn-out investigation on the high cost of living is completed. I am no expert in economics; yet, whatever be the conclusions the commissioners have arrived at, I find it my duty to say that two of the most potent factors in the increase of the cost of living are:—

1. The excessive immigration of Jews and labourers from other countries;

2. The lack of farmers and the exodus from country to city.

The Jewish immigration is a real plague. I am told that Montreal alone accounts for 50,000.

Mr. LAPOINTE (Montreal): And they are good citizens.

Mr. BOULAY: No doubt; they likely are electors of my hon. friend; 76,681 of them in Canada, without taking into account those who are disseminated throughout the country. Out of all that number I should welcome any one who would name a single Jew who settled on the land with the intention of improving it. Not one came to Canada with that purpose in mind. On the contrary, every where they are found as dealers, pedlars, real estate agents, etc., not one is of any benefit to Canada. The other day it was said in my hearing in this House that after the war a strong influx would set in. Should that be the case, I should impress upon the Government and upon the Immigration authorities the necessity of barring from Canada not only those who would come here to reside without a family, but also any man who would comes without the avowed purpose of tilling the land.

We have no place for a single foreign labourer; farmers are those we want. We have no further need of foreigners as real estate agents, dealers, shopkeepers, and what not. If it be intended to lower the

cost of living, let us cut out idle people, who live on other people's labour, and let us increase the number of our farmers. The Government should pass some enactment empowering it to deport any person coming into this country who will not settle on a farm. Not only should it be required that an immigrant be the head of a family and undertake to become a farmer, but our agents should keep trace of him to see that he lives up to his obligations.

An energetic move should also be made to induce our farmers' sons to follow their father's noble calling in the great profession of soil and stock husbandry.

I must say that the two hundred and fifty million dollar Budget submitted us this year appears to me quite heavy for the country, although our friends on the other side are prepared to endorse every item. I shall insist on what I said last year in this respect. The countries at war, Great Britain in particular, should see to the maintenance of our soldiers as soon as they leave Canadian soil and all expenditure for munitions and the maintenance of our troops across the ocean should not be borne by us.

I further claim that there is no valid reason why our forces should be raised to 500,000 troops when we have only 60,000 to 70,000 at the front. It is a wise policy to train soldiers in advance, but why undergo excessive expenditure, when our first contingent was trained in five or six months and gave such a good account of itself on the battlefield that it cast glory and pride on the Canadian name. My opinion is that we have too many soldiers in training, taking all the place on the railway trains. The reply will be made that we must prepare for every possible contingency. However, I should prefer on the part of the Government a little more foresight here at home. It seems to me that certain individuals who apparently are acting the part of spies are allowed too much freedom. I inquired lately as to the number of Germans in the Civil Service and on my expressing astonishment at their being kept in employment, the answer was that:

> As they fulfil the duties of their position conscientiously, the Government sees no reason why it should dispense with their services.

To my mind, such an explanation will no more satisfy the country than it does me. What a mere certificate of naturalization, the signing of a mere scrap of paper which Germany tears into shreds, and of the kind she has already thrown to the four winds of Heaven, will be sufficient to bind a citizen of the Kaiser and turn him into a citizen of his adoptive country in time of war! Let us have some sense. Will that certificate of naturalization, without more, change the colour of the blood that flows in the veins of a German or an Austrian? Belgium stands as an example and the international laws trampled under are a clear proof of the stock we should place in a German's signature.

The length of time one resides in Canada does not count for anything when feelings have to be stifled and a man's origin to be eradicated from his memory. I myself am a case in point. In 1632, almost three hundred years ago, my first ancestor settled in this country; we are loyal to our institutions and true to our word; but still we retain our love for our old Mother France. We have wept over its political wrongdoings, but the soil remains the soil of our forefathers and the object of our deep affection, and in a war between England and France, on what side would be found my sympathies? On the side of France. Why should a German be different from any other human being?

Study the past, and you will be readily convinced that I am right, a hundred times right. It is not fair that the Government should keep in its service a single citizen of German origin. Without proof that they are disloyal subjects, we have at least reason to be suspicious of them, whatever the number of years they have resided in this country.

At any rate we have had a striking example only recently, of their way of looking at things, in the case of the notorious Lincoln, a fugitive from English justice, who has just been arrested by the New York police. That clever German had come to reside in England a number of years ago. He was naturalized and then was elected to the House of Commons at Westminster, where he sat during one or two parliaments. As soon as war was declared, he hurried across the Atlantic and did not deem it in anyway shameful to say openly that he had acted the part of a spy.

Let me be allowed at this juncture a short digression. I shall first quote from the speech of the brave Colonel Currie, member for Simcoe:

> Our ideas of the French people are in many cases entirely erroneous. The ideas put in books by novelists are often contemptible. There are no finer people, no more casual people, no more cool and collected people under danger—and I have seen them in the fight, in the middle of it—than the French.

These few words pronounced in sincere language by a man who has risked his life on the battlefields of Europe, by a man that

we know to have fulfilled his duty as a soldier and a brave man, who saw so many other brave men falling alongside of him, and to whom death was despised, have made me cry. Why so? Because I then thought of our own French-Canadians, descendants of that glorious race referred to by Colonel Currie, to-day victims of uncalled for, senseless and shameful tyranny. We, priding ourselves on our descent from those heroes who know when to die for their country, we also are determined to the last man to do our duty and prove to the world that we are ready to make the sacrifice of our lives when circumstances require. But what stands in our way? The ban which has been placed on our language in almost every province of this Confederation, the treatment meted us by the majority in this country. We whose ancestors have opened the continent to the cross and to civilization; we, whose missionaries have suffered martyrdom at the hands of the heathen on Canadian soil; we, who have been in possession of this soil for over three hundred years, we are treated as trespassers, as Germans and Indians? Why? Because we have remained true to the language of our forefathers.

We are not understood by our English speaking countrymen; we occupy of right the little bit of land we hold of the creator, the little bit of land we want to cultivate, on which it is our wish to live, respectful of our country's laws; to live in peace, speaking the language of our ancestors, of those same Frenchmen who know so well how to fight and die.

We are prevented from enlisting before we ever attempt to do so; we are deprived of our full share on the death-roll, by the persecution we are undergoing in our schools. We are asked in the face of the treatment we receive to take our place in the ranks of those glorious soldiers who are going to die for their country! It passes all comprehension.

The reproach is cast to us, especially in the Ontario newspapers, that we are not enlisting as we should. I will not admit that such is the case, but the saying is current. Yet after the war, when the count is made, it will be found that the number of French-speaking and English-speaking recruits of Canadian origin will have been about equal and that the proportion of French-Canadians from now on will have greatly increased. Even at this date, there are many French-Canadian units in English-speaking regiments, and officers have told me that many Frenchmen have enlisted in English regiments, some of whom are even now at Belleville and reckoned among English speaking recruits.

Notwithstanding our grievances, I should like to see recruiting still more active. Yet my county of Rimouski has already given more than two hundred recruits, a fair number of whom are now at the front, and four of whom have already fallen on the firing line. I have no hestitation in stating that if the persecution against French was called off, and that language allowed to be taught untrammelled, a thousand soldiers could easily be enlisted in the county of Rimouski alone, and that in a very short time. The same thing would happen throughout the whole of Quebec. All the harangues of Bourassa and Lavergne could not impede or diminish enlistment, because at this date not two per cent of the population agree with them.

Mr. ETHIER: (Translation.) Things have much changed.

Mr. BOULAY: (Translation.) Yes, things have changed. I said so at the beginning and gave the explanation. In 1896, you also did change. It has been said that whoever never changes his views is a fool.

We have no wish to prevent the English-speaking majority from using their language, we are still more loath to impose ours on them; on the contrary, we want our own children to learn the two languages that are official in this country. Such is our ambition, and a legitimate one indeed. The same ambition is to be found at all periods and among all nations. Why not so with the French who inhabit Canada? We have not degenerated. The qualities that characterize the French of France are to be found in the French of Canada. We have one desire at heart, freedom, yes, that freedom which allows the child in the cradle to breathe freedom which makes one give his life in the defence of his country, of his motherland.

I shall now speak on a subject touched upon by the hon. member for Halifax (Mr. Maclean). He claimed that we should cut short all expenditure for public works, which are not strictly necessary. He insisted particularly on the Hudson Bay railway. It does seem to me that if there is an item of expenditure which should be cut off, it is indeed the construction of the Hudson Bay railway and all works connected with it. As a matter of fact, I never could understand why that construction was undertaken. Is it for the purpose of giving the western grain an earlier outlet?

But we have already three railways that can accommodate three such harvests like this year's, which however is quite abundant. How can it be said as a plausible justification that the purpose is to afford early shipping to western wheat, since, at the time wheat is ready for shipping, navigation has been closed for a long while already, and so, not before the following mid-summer, could the Hudson Bay road be utilized.

Are the millions of dollars now to be expended intended to satisfy the numerous requests made to the Liberal Government and which this Government has promised to grant? There was no obligation on our part to carry out the promises of the late administration. Even the present expenditure fails to satisfy the western farmers. Their representatives in this House show dissatisfaction. They dare not criticise the construction of that railway, but they take hours, days and even weeks of our precious time in pressing for the free export of wheat to the American markets. Free wheat is their shibboleth. If their sole ambition is to reach the American markets, why build a new railway at great expense to give a better outlet to their wheat? If our western countrymen cannot be satisfied with the expenditure of millions and millions for their sole benefit, let us do away with those enormous expenses, at least during the war. Let us put a stop to the gigantic building operations on the Hudson Bay railway, and we shall have done something to the country's advantage.

Let us also postpone the work in St. John harbour and the dredging of Courtenay bay. We have a splendid winter harbour at Halifax; why go on with those immense works at St. John? A small trip to Courtenay bay will convince you that we are wasting millions in digging a mud channel. Some justification could at least be found if a shorter route were made for ocean vessels, but on the contrary the ocean voyage by vessels running into St. John is increased by two hundred miles.

I quite understand that the Liberal party and the present Government in turn strive to construct as many public works as possible, and spend as much as possible at St. John. The city of St. John is represented in this House and has always been by Cabinet Ministers, but it behooves the rest of the country to approve or disapprove of all this expenditure.

The hon. member for St. John, I presume, place above the special interest of their city the general interest of the country. To hear them in this House, they have nothing at heart so much as the welfare of Canada.

I believe that the enormous expenditure in the misty harbour of St. John is a direct cause of the delay in bringing about the winter navigation of the St. Lawrence.

I believe previous experience has shown that ocean liners could with safety sail up to Rimouski or to the Saguenay and even to Quebec during the whole of December every year.

Yet that project of winter navigation has been relegated to the back ground to satisfy the ambitions of our two Atlantic ports, quite legitimate in the case of Halifax harbour, but unfair in the case of St. John.

I shall then conclude with the remark that the real interests of the country require that the works in St. John harbour and Courtenay bay and on the Hudson Bay line be stopped; that there ought to be enlisted only the number of soldiers strictly required and that steps should be taken to regulate the immigration which will flow into Canada after the war.

Mr. ALPHONSE VERVILLE (Maisonneuve): The debate on the Budget offers many advantages to members of this House, because we are at liberty to discuss during it many important subjects; in fact, almost any subject. It is not my intention to follow my hon. friend (Mr. Boulay) in all that he has said, because only one or two of his remarks call for a reply. At the outset of his remarks, when he was discussing the question of immigration, he condemned a certain element of our citizens, good, law-abiding people, declaring that they should be refused admission to Canada. He referred in this way to the Hebrews, the Jewish people, in this country. I do not believe it is fair for any member to criticise any citizen of Canada in this way; we have always said that we were a democratic country, that our doors were wide open for good, law-abiding citizens, and it is especially unfair to speak in this way of the Jews, because they are a class of people who will become naturalized as quickly as the laws of the land in which they settle will permit.

Sir WILFRID LAURIER: Hear, hear.

Mr. VERVILLE: I belong to a class of people who do not believe in any line of either creed, colour or nationality, and if I am to take the words of the hon. member for North Simcoe (Mr. Currie) the other night when he was speaking with reference to conditions at the front, we must believe, in fact he has proved to us, that there were

no questions of nationality, creed or colour among the men on the firing line. So I do not believe it becomes the hon. member for Rimouski to try to throw any slur upon these people as he did when he plainly stated in French that the Jews in this country were a plague. I take issue with this statement. I have no special mission to defend the Jewish people any more than any one else, but as the representative of a city where there are a number of Jewish inhabitants, I say it is unfair, unjust, and uncalled-for for any member of the House to use such language. Towards the close of his remarks my hon. friend reproached the city of St. John for always having the advantage of having a minister of the Crown to represent it. If any one in this House should say nothing on this line, it is surely the hon. member for Rimouski himself. Perhaps at present he has nobody in his family whom he would like to place in any of the departments of the Government; but if I were to take the list of his friends and relations whom he has placed in the different departments and place it before the hon. member, surely he would not attack the Minister of Marine and Fisheries (Mr. Hazen) nor the ex-Minister of Public Works (Mr. Pugsley), the other representative of that city, to-day.

We have heard in this House, particularly yesterday and a few days before, a full discussion of the wheat question. No family in this or any other country can do without the staple of life, bread. This is a very acute question, not only in the cities but everywhere. The report of the Royal Commission on the High Cost of Living was placed in the hands of the members of the House within the last few days, and, in the short time at my disposal since I have devoted a good deal of attention to its contents. The report undoubtedly contains a great number of statistics, but outside of that I do not like to say much about it. In going through this report, I wondered why, even yesterday, during that famous discussion, the Solicitor General, who showed such great sympathy for minorities, yet would not favour the motion that was before the House.

While on the question of minorities, may I say a few words with reference to another question of importance? From what I have heard lately I am tempted to ask if what is transpiring in the city of Ottawa and in this province is not the result of a system of German espionage established to prevent recruiting in the province of Quebec. I really believe that even Bernsdorf could not have done better, if he had been trying to stir nationality against nationality, than the system now in operation in the province of Ontario. I just cite that in passing, because I am going to ask members of this House, although the subject is outside of our jurisdiction, to use their good offices to terminate the dissention that now exists. We preach every day patriotism, and patriotism, and always patriotism. I may not understand patriotism as well as some other members, but surely in patriotism there is no question of nationality, or creed, or colour. It seems to me that the members of this House should do all in their power and use their good offices in that respect.

Reverting to the bread question, I wish to place on Hansard some figures showing a comparison between the prices of bread in the different parts of the world. These figures are found in volume 1, at pages 747 and 748, and cover Chicago, Montreal, Liverpool and London. That seems a fair comparison. The report is for the year 1909. One might say that there has been quite a change since, but nevertheless we have to take the report as it is given. We find that from a barrel of flour weighing 196 pounds a baker can make 280 pounds of bread. We find also that the total cost of everything that he adds to that barrel of flour to make that 280 pounds is $1.13. In Chicago, where the wages received by workingmen are between 20 and 22½ per cent higher than in Montreal, 280 pounds of bread cost $12.76, while in Montreal, for the same quantity, the price was $14.56; in Toronto $11.20, and in Ottawa $12.54; in Liverpool, England, $6.94, and in London $7.61. It sold in Montreal for twice the price that was charged in Liverpool or London. So much has been said with respect to the price of flour that I desire to quote prices given in this same report, at page 754, in a report from Mr. W. A. Black, managing director of the Ogilvie Milling Company. He gives the figures in criticising some other figures that appear in the paper as showing the difference in the price of flour in different places. He states that the top grade of flour costs in Winnipeg $4.50 and in London $4.18, a difference of 32 cents; patents, $4.80 in Winnipeg, $4.06 in London; bakers, $4 in Winnipeg, $3.60 in London. We can see by these figures, given by this managing director himself, that flour sold cheaper in London than in Winnipeg, and also that bread cost in London not much more than half what it

cost in Montreal. There is something radically wrong somewhere. I have said in this House in previous years that the bread trust organized in Toronto a few years ago was exceedingly powerful, and in that statement I made no mistake. They have spread everywhere. They have extended their operations to Montreal, and the profits which they are making are evidently enormous. It is a question whether these institutions will be covered by the taxation proposals of the Minister of Finance. That will depend largely on the amount of watered stock they have.

An hon. MEMBER: They will not pay anything.

Mr. VERVILLE: My hon. friend tells me they will not pay anything; I take his word for it. If I am to take my hon. friend's statement that these companies are not going to pay any taxes, is it advisable that we should any longer permit companies of this kind to exploit the masses of our people? It is impossible at the present time for any family to do without bread; there is no family poor enough or small enough to get along without the staple of life, that is, bread, and as I have stated it is a very acute question in our city. I go directly to the root of the whole question. If we could get the wheat cheaper we could compel the millers to sell the flour a little cheaper, and then we would have a basis on which to go to the baker and say to him: "You cannot complain about the high cost of flour, because you are now paying a lower price for it." According to the same report, at page 137 of the first volume, there is a statement by the Department of Labour of what is necessary for a family to live for a whole week, based on an income of $800 during the year. According to their report, a family of five would eat fifteen pounds of bread per week. You can imagine what that means, always keeping in mind the hundred per cent difference between London and Montreal. When I take the report brought down by the Department of Labour, previous to the report of the High Cost of Living Commission, although the former is included in the latter, I notice that the writer of the report fixes $800 as the amount that it will cost a family of five to live for a year, but he has forgotten a great many things, and amongst them some of the most important things of life. For instance, he has forgotten sickness, church contributions, the carfare that the workingman must pay to reach his place of employment, furniture, linen, etc. According to the figures contained in this report, $160 would not be any too much to add for these items, and we would reach $1,123 if we were to add all the absolute necessaries of life omitted from the list contained in the report. Every time that a workingman buys something—I do not care what it is—he pays the equivalent of the tariff rate on that article. The tariff tax is applied to every dollar's worth that he purchases. Not only on goods that are imported into this country does he pay the tax, but he pays it on the goods that are manufactured in the country. You know as well as I do that the tariff is the basis of the prices charged for goods manufactured in Canada. You cannot buy a pin, or anything else, but the tariff will set the price of it. If I take a rate of thirty per cent as representing the rate of tariff taxation, the workingman will have to pay thirty per cent additional on every dollar's worth that he purchases during the year.

I have a few figures here which I want to place on Hansard, and which I want to present to the members of this House, showing that we pay far more in taxation than we realize on the goods which we purchase, of which taxation the Government only receive a certain portion under the system now in operation. Taking the population of Canada at 7,500,000, and dividing this number by five, you get the number of families as 1,500,000. According to the report of the Department of Labour, it costs $800 per family to live, and on that basis you have $1,200,000,000 as the annual expenditure of these 1,500,000 families in the country. I know that I am far below the truth when I accept the estimate of $800 per family. If you add 30 per cent to that, which means that for every dollar we spend we pay 30 cents additional indirectly, you will find that this indirect taxation amounts to $360,000,000 every year. We take no less than $360,000,000 every year from the pockets of the consumers, the poorer classes especially, in taxation. According to the blue-book, 21 per cent is the maximum amount that the Government receive from the tariff, and I doubt very much if they receive that much.

Now, I would like to show by way of illustration the effect of the 7½ per cent duty which was added to the tax on raw material last year. What does it mean? Let us take a value of $100, by way of example, and see what it amounts to with the 7½ per cent added. One hundred dollars

worth of raw material, when it is landed in the factory, is, with the duty added, worth $107.50. I am not speaking of the profit of the person who furnishes the raw material. If you add 25 per cent, which is nothing but fair for the profit and overhead charges of the manufacturer, you find that the article costs the wholesale house $134.37. The wholesale man also must make a profit of 25 per cent. When it reaches the retailer it is worth $177.96. Is it unfair to expect that the retailer should also make 25 per cent profit? They say that 22½ per cent is the minimum amount that a business man can allow for overhead charges. We therefore add 25 per cent as the retailer's profit, and when the article reaches the consumer its cost has increased to $222.45. The article starts out with a value of $107.50, and by the time it reaches the consumer it has attained a price of $222.45 as a result of our present system. I do not want to take the rate of 30 per cent, because I am afraid that some members in the House might say that it was too high.

It is because of this excessive burden of indirect taxation that I have always said, every time I have had an opportunity of discussing this subject, that I was in favour of another system of taxation. I do not care whether the Minister of Finance wants to adopt a new system now or not, he will be compelled by the logic of events to change it. I am not opposed to a system of direct taxation, because I want to see taxes imposed in such a form as to make an equitable distribution of the burden amongst all. Under the system proposed by the Minister of Finance there are many institutions now in existence which will not contribute a cent of the taxes. What about the high-salaried men? There are many men in this country who are receiving $10,000, $15,000, $25,000 a year. I know of one who works for the Government who is receiving $20,000 a year, and he goes scot free. There are many others in a similar position. I do not think it is fair. That is why I am in favour of a change in the present system of taxation. If my hon. friend the Minister of Finance would come before this House with a direct system of taxation I would favour it. I do not believe there is any other equitable way unless you are going to tax the land itself. Suppose you, Mr. Speaker, purchase a lot for a thousand dollars and build a house upon it. There are two or three vacant lots adjoining your property. Your neighbour also builds a house and you both put a certain amount of money into your improvements. You wish to make your property attractive in appearance and you make a garden and improve your grounds. A man comes along and buys one of the vacant lots for perhaps $1,000, and, as a result of the improvements which you and your neighbour have put upon your properties, this vacant lot, in two or three years, attains a value of perhaps $5,000. The purchaser of this vacant land has had nothing to do with bringing about this increased value, it being the result simply of the improvement of the surrounding property. Then, if you paint your house, plant shade trees about it and cultivate a garden, thus adding to the attractive appearance of your property, the chances are that an addition of $200 or $300 will be made to your assessment, and your taxation will be increased.

When anybody proposes a system of direct taxation, or of land taxation, the cry goes up that it is too radical. We are always afraid of radical things here, but in two or three years what are supposed to be radical systems are accepted as commonplace, natural, and obvious. If we cannot have land taxation, let us have an income tax. Why should we not tax hon. members of this House who are receiving $2,500 a year? Why should we not tax the indemnities and salaries of ministers of the Crown? If we had an income tax of two per cent we could collect in the city of Ottawa alone $175,000 a year from the high-salaried civil servants. I am willing to pay my share if other hon. gentlemen are.

The present system of taxation imposes a heavy burden on the poorest class in this country. The basis of the cost of living in any country is the tariff. Suppose, for instance, that the labour men of this country succeeded after a long struggle in raising wages by twenty-five cents a day; the Government could wipe out that increase in a moment by simply raising the tariff on the goods the workmen consume. The moment the tariff goes up, the cost of living increases. Will any one in this House say that salaries have not decreased during the last two years or that the cost of living has decreased? According to the report laid on the table a few days ago, the cost of living has increased by five per cent, and wages have decreased—not in the shell industry, of course. We have recent proof that wages are decreasing in this country in the telegram I read to the House a few

minutes ago to the effect that Vickers-Maxim want to reduce by 2½ cents an hour the pay of their labourers; and that is a firm that is getting big money on its contracts.

Let us look for a moment at the system of taxation in Wisconsin. Speaking from memory, I believe that every bachelor in that state earning over $800 a year is taxed. Why should we not have a similar tax here? Wisconsin also taxes the married man who earns over $1,500 a year, after making an allowance of $200 for each child he has. Hon. gentlemen might retort that these taxes would not yield much money in the province of Quebec. Perhaps so. I am sure that in a great many places in my province very little money would be collected by taxes of that kind. It is only fair that bachelors should be taxed. A bachelor earning $800 a year is better off than a married man earning $1,500. What expenses has a bachelor got? Sometimes he pays his board, and sometimes he jumps it; he has nobody to carry with him when he goes. The Finance Minister saw difficulties in the way of collecting an income tax, but I think it could be very easily collected in the same way that we collect customs duties. The income tax has been very successful in the United States, where $83,000,000 was raised by it the first year. When there was talk of imposing the tax there, all the high-salaried people ran down to Washington and did all they could to prevent the imposition of the tax. But we don't hear any complaints about it to-day; they have made up their minds that it is only fair that they should be taxed.

I hope that before the Finance Minister brings down his Bill he will give serious thought to the suggestions I have made. I am convinced that this taxation is going to fall most heavily on the poor people of this country; I am positive of that. I hope no one will say that the poorer classes of this country have not done their share as regards recruiting. As soon as the question of recruiting came up amongst the organized labour men of this country, we in quired from headquarters, which are not in this country, what our attitude should be, and they said that as long as the men were fighting at the front they would pay their sick benefit, and that if they got killed they would pay their insurance benefit. It seems to me that the labour men of this country are doing their share in this war. I told the Finance Minister last year that the taxation he was then imposing would fall most heavily upon the poor people of this country, and so it has proved. A poor man cannot buy a box of pills from a drug store without paying from two to five cents war tax. It was said last year that the tax would be paid, not by the consumer, but by the druggist, either wholesaler or retailer. The fact is the consumer pays the tax in every instance.

I should like to say a few words in regard to soldiers' pensions. It has been my privilege to see quite a number of returned soldiers, for I have the honour to be a member of one of the commissions appointed to search for work for returned soldiers. I think everybody will agree that in the future we shall have to pay out a large sum for pensions, and it seems to me that we might as well make a thorough job of the entire pension system now. Why not, when we are arranging for pensions for soldiers, provide a general old-age pension scheme? We are juggling with millions, and a few millions more or less will make no difference.

I am one of those who has declared himself in this House to be against war. I have always been opposed to war—and it might fairly be asked why I am not opposed to this present war. The reason I do not oppose Canada's participation in this war is the same that was given by the president of the American Federation of Labour at the last convention, when he said that he had changed his mind in regard to war since he had seen all the labour men of Great Britain and France rallying round the flag to fight for civilization. It has been exactly the same with me. I have said in this House before, and I say it again now, that I am willing to vote any amount of money required to carry on the war, provided the money will be spent properly. I hope no one will accuse me for not enrolling under the flag; I am too old for that. I myself would not criticise any one for not enlisting, but I take off my hat to the soldier, and say he is a man. Labour men have done splendidly in this war. A large part of the blood that has stained the dunes of Flanders has flowed from the veins of the labour men of this country, who have made up their minds that this is a fight for right, a fight for liberty, and the liberty that the workmen of Great Britain fought for so stoutly. When I read of the manner in which the labouring men of Great Britain had to hide themselves in

cellars to safeguard their rights, and how they had to fight for the liberty which they had so far achieved, I made up my mind that the labour men of this country, whenever their rights might be menaced, would do all in their power to safeguard the liberty that was so dearly bought by our British brothers.

I hope the Minister of Finance, in framing his taxes, will take into consideration those who can well afford to pay. Let him put a stop to the "get-rich-quick" idea, and change his system so that there will be less taxation imposed upon the poorer classes of this country.

Mr. A. L. DAVIDSON (Annapolis): Mr. Speaker, a few years ago, before I became a member of this House, when I learned through the press of the election of my hon. friend from Maisonneuve (Mr. Verville), over a Liberal nominated by a Liberal convention in that constituency, I thought it a very fortunate circumstance. It struck me as being very appropriate that the great interests of labour in this country should have in this Parliament a representative who could speak exclusively for labour.

Mr. VERVILLE: Did my hon. friend say that I was chosen by a Liberal convention?

Mr. DAVIDSON: No, I do not think that even a Liberal convention would be guilty of that. What I said was that the hon. gentleman was elected in opposition to the nominee of a Liberal convention.

After having obtained a seat in this House and after having had an opportunity of observing the attitude of my hon. friend, I was at a loss to understand just what the distinction was between a labour representative and a hidebound Grit, and I have never yet been able to see in the attitude of my hon. friend anything that has convinced me that he has in his mind any very clear distinction between the two. I did think, however, when this Budget was brought down, that now my hon. friend would have an opportunity, if he really had at heart the interests of the great labour party, to show that he stood for the interests of labour, separate and apart from the principles of Gritism. But after hearing him to-day condemn in the most unmeasured terms this tariff which is very greatly in the interest of labour, and, furthermore, after hearing him speak so glibly about a matter of a few million dollars not amounting to anything, I made up my mind that there was very little in common between my hon. friend and the labour party which he pretends to represent.

I am informed that, in times past, when the Budget was brought down, the Opposition were in the habit of immediately rising to define the attitude of their party in respect to the Budget proposals. In former times, as soon as the Minister of Finance threw down the gage of battle it was taken up; but this year—and perhaps the change has dated back one or two years—there has been a change of tactics. This year two full days were allowed to elapse, with the glove of the Minister of Finance in the lists, before the financial critic of the Opposition could make up his mind whether it was better for him to pick up the glove or to run away. This I understand is due to a change in party tactics. In the old days, the Opposition party was led by men having seats in this House, and members of the Opposition were enabled to lay down a policy both for themselves in this House and for their party in the country outside. That policy apparently has been changed just as there has been a radical change in military tactics. In former times a commander went into battle at the head of his men. To-day, I am informed, the direction of a military engagement is not in the trenches, but some general, sitting miles back in a little office with plans and despatches before him, directs the conduct of the battle. So it is in this House at the present time. Hon. gentlemen in the trenches opposite do not direct their own movements; as a matter of fact, there is an advisory committee composed largely of persons not having seats in this House, in many instances of persons who have actually been rejected by the people of this country. This committee, which is out side of this House altogether, determines when hon. gentlemen opposite shall march to the attack and when they shall retreat.

Personally, I am not in favour of such a system. It is not democratic; it is not fair to hon. gentlemen opposite, and it seems to me that an hon. gentleman who is entrusted with looking after his constituents, in whose ability his constituents have enough confidence to send him here, should be allowed to act for himself after he is elected.

Further than that, such a system tends to do away with responsibility. I believe that hon. gentlemen opposite have made many wild and reckless statements which

would never have been made had they been allowed to think these things out for themselves, had they not been dictated to by people outside. When the Opposition are not allowed to think for themselves, when they are controlled by an outside party and when they must refer everything to people outside of this House, delay is caused and the debate drags. If hon. gentlemen opposite were allowed to get together and decide for themselves their own policy, they could act with cohesion; but as it is, hon. members opposite from the Maritime Provinces look for guidance to an individual who has not a seat in this House and who resides somewhere down in Nova Scotia, and they follow him and hon. gentlemen opposite from the West look to some one residing in the West for their judgment, and the result is confusion amongst them. It is no wonder therefore that we have found confusion and contradiction amongst the members opposite who have spoken in this debate. For instance, we have the hon. junior member for Halifax declaring that the duty on apples is a bad thing because the apple is a staple article of consumption, and we have the hon. member for Medicine Hat (Mr. Buchanan) objecting to the duty on the ground that apples are a luxury. Again, we have the hon. member for Halifax stating that seven per cent is not sufficient for a business interest to obtain by way of return on the investment of capital, and we have the hon. member for Medicine Hat claiming that it is too much. However, I suppose hon. gentlemen opposite will not attach much importance to my views in reference to the management of their internal affairs, and I do not suppose that, inasmuch as this is a domestic matter, I should say much about it. Constitutionally, we are bound to regard hon. gentlemen opposite as the authors of their own work; constitutionally we are bound to regard them as statesmen, and not megaphones. And so when the financial critic of the Opposition rises to deliver his views in reference to the Budget he binds his party in this House and out of this House for weal or for woe—and I think that in this instance it was mostly for woe.

It seems to me that the Budget presented by the Minister of Finance, especially when you consider the conditions under which it was brought down, is the most encouraging and the most courageous Budget ever brought before this Parliament. A Finance Minister who could announce in one Budget the floating of loans at more favourable rates than are secured by the wealthiest countries in the world; could announce that we have overdrafts nowhere and trade balances both at home and abroad; could announce the greatest aggregate trade in the history of the country; could announce a surplus of $45,000,000 and a trade balance in our favour of $200,000,000, it seems to me is a Finance Minister who might fairly expect words of congratulation even from very much less generous people than hon. gentlemen opposite. But no words of congratulation, no words of commendation, have fallen from the lips of hon. gentlemen opposite, so far as I have heard, certainly none from those of the hon. gentleman who prides himself on his fairness, the financial critic of the Opposition. From him we have not a word that would even savour of congratulation or commendation for the Minister of Finance.

I wish to point out that in his general public uterances there has been a marked change in that hon. gentleman (Mr. A. K. Maclean) in a few years. I have noted in his speeches on successive budgets the development of a wonderful religious spirit. There was a time, when he sat on this side, when he paid little attention to divine agencies and exalted and magnified the human. This sin clung to him even after he went over to the other side of the House. Let me quote what he said in 1912 when speaking on the Budget:

> Increased imports and exports, a buoyant revenue, a great increase in our immigration and commerce are all indications to a remarkable degree of our prosperity, and I trust are the tokens of a still greater future for this young country. We upon this side of the House follow with considerable interest the successful operations of the many political programmes or policies initiated by the late Government, and I am glad to observe that the continuation of this programme or policies in the hands of hon. gentlemen opposite is even productive of good.

You see it was the Government—it was human agency that was responsible for all these benefits, and it was only because the Government followed the practices of hon. gentlemen opposite that the sun shone and the harvests were bountiful. In the next year, in his address on the Budget, he said:

> I think I shall be able to show that the Government deliberately and in the face of warning brought about our present financial condition, that they never did and are not to-day making an effort to maintain the equilibrium between revenue and expenditure and place public expenditures upon a sound basis. They are almost entirely responsible for our present financial position.

Again, the Government is responsible. But, apparently, the vicissitudes of opposition have had an effect upon him, they have melted his stony heart, broken down the middle wall of partition; and so this year, speaking on the Budget, he shows almost a Christian spirit, and says:

> After the passing of almost a year hon. gentlemen opposite will agree with me that this prediction was idle, as was expected, and that any stimulation that came to Canadian industry or any relief that came to unemployment was not the result of the tariff taxation of last year, but one of the incidents of the world wide calamity, and further that any stimulation that came to Canadian agriculture was due to the efforts of men and the blessings of God, not to the tariff of the Minister of Finance.

The right hon. gentleman who leads the Opposition had at one time the same weakness as my hon. friend the junior member for Halifax. He used to claim credit for the very sunshine and for bountiful harvests, and it was only in deference to the religious sentiment of this country that he finally did admit Providence into partnership with himself.

On this side of the House we have never failed in that regard. This Liberal-Conservative party has always recognized its dependence on Providence. But it has always recognized also the truth of that principle that Heaven helps him who is willing to help himself. And if ever there was a Government that had fulfilled that condition precedent to divine assistance, it is this Government; if ever there was a Finance Minister who could claim credit for prosperity, it seems to me it is the present Finance Minister. A Government that, in the first place, started the campaign for greater production; a Government that gave the farmer consideration in its tariff; a Government that educated the farmers to produce more, and actually advanced to the farmers in the West $13,000,000 to aid them in buying seed grain—it seems to me that such a Government is in a position to claim some of the credit for the bountiful harvest which has blessed this country. This is a case of a Governernment scattering plenty o'er a smiling land, and of Providence blessing, and bountifully blessing, the work of its handmaid.

I think, however, that the features of the Budget which call for particular satisfaction on the part of the people even more than the splendid indications of prosperity that it discloses, are its tax features. In the past, in this country, it has been the poor man who has paid the taxes, and the big interests which make and break Governments have been almost exempt. That is so even in our municipalities—the small holder of property is usually taxed to the limit, while his wealthy brother escapes with very little taxation. For the first time in the history of this country a Minister of Finance has had the courage to put forth his hand upon the great, and to tax the people who had the money to pay and who were getting something out of the country. It required courage, it required sagacity to do that; and I believe the people will give the Finance Minister great credit for what he has done. Hon. gentlemen opposite have a new found solicitude for the business interests in this country. The Liberal party in this country has never been fair to the business interests. They have always referred to them as the mergers, the trusts and the combines. They have even gone so far as to refer to them as porch climbers, and any consideration which this Government has been able to give to the business interests in protection from their rapacious competitors in the United States, they have been able to give only at the bayonet's point, only after the most severe opposition from hon. gentlemen opposite. I say the Liberal party has not been fair with the business interests in this country, but the greatest injustice the Liberal party in this House has ever done to the business interest is to doubt its willingness at this juncture to pay these taxes. I believe that the business interests in this country realise that they get more out of this country by way of protection than the smaller earner of income, whom hon. gentlemen opposite would tax. I believe it realizes it is up to it to pay more towards the maintenance of this country than does the small income earner, and I believe the business interest will gladly do this. I believe that when the business interests consider the fact that business interests in Germany are paying fifty per cent in order to keep up a despicable and detestable tyranny in that country, they will regard it as a privilege to contribute one quarter of their earnings over seven per cent to keep up and maintain and protect the most glorious and free institutions that the world has ever seen. The hon. member for Halifax protested that seven per cent was not enough for a business interest to receive upon its invested capital, and he said it was unfair to tax the overplus on seven per cent in order to maintain the institutions of this country. These words of

his bound the Liberal party, as they were uttered by the financial critic of that party, but it is no wonder that my hon. friend from Medicine Hat (Mr. Buchanan) refused to agree to them and protested his unwillingness to accept that doctrine. The hon. member for Halifax contended that this tax would discourage the investment of foreign capital in this country. I say that any foreign investor of capital who would be unwilling to invest capital in this country with a prospect that he
5 p.m. be obliged to contribute towards the support of the country only one-quarter of what his capital earned him above seven per cent is a pretty good kind of investor to keep clear of. I think that we do not want that kind of investor in Canada—he has too big an appetite for this Canadian land of ours.

Then the hon. gentleman showed a great deal of concern for the Canadian Pacific Railway. Several of the hon. gentlemen opposite have shown a marked solicitude, a new-found solicitude, for the Canadian Pacific Railway, and once again it strikes me that they are more solicitous for the interests of the Canadian Pacific Railway than the Canadian Pacific Railway is for itself. I believe that, owing to causes produced by this war, owing to the fact that they have carried a great many troops and an immense amount of supplies for the Government, that their telegraph systems have earned a great deal more because of these war conditions, and that their railway lines have made enormous profits out of freight rates, the directors of the Canadian Pacific Railway will be the first to admit the justice of their contributing a portion of these extra profits towards the maintenance of this country. No institution in Canada, I believe, has done more to develop the Dominion of Canada than has the Canadian Pacific Railway; and no company in Canada has received more benefit from its development than has this same company. It was not many years ago that the country looked to the Canadian Pacific Railway to perform a great national task, looked with confidence to the Canadian Pacific Railway to perform a task of inestimable importance to this country, and in spite of the sneers and the scorn of the Liberal party of this country, from the Pacific to the Atlantic, the Canadian Pacific Railway went forth and discharged that duty. At the present time the country looks to the Canadian Pacific Railway to do its duty again in a cause only more serious, and I believe they will not look in vain. It is abundantly clear from this debate that the Liberal party in Canada has decided to throw down the food producers in this country, the farmers and the fishermen. There was a time when hon. gentlemen opposite were on very good terms, or pretended to be, with the producers of foods in this country. They were the great friends of the farmer and, true to their policy of stirring up one class against another, they attempted to stir the farmer of Canada up against the inhabitant of the city, the employee in the industries; and they tried to make the farmer believe that he was being bled white by the manufacturers, by the city men. Fortunately, to the credit of the farmer be it said, they were unsuccessful in that effort. The farmers and the fishermen of Canada recognized the fact that there must be various classes of people in this country if this country was to strive, that there must be factories as well as farms; and they refused to yield to the appeals of hon. gentlemen opposite, and hon. gentlemen opposite, in despair, have decided now to change their tactics. The hon. member for Halifax frankly admitted a year or two ago that he had taken a census of the two and found in Canada more consumers than producers of food; and so his party has decided to throw down the producer of food, the fishermen and farmer, and to make a strong bid for the votes of the consumer. So he has discovered that food, farm products and fish, are too expensive in Canada, and too expensive by reason of the taxes and duties, and he says that if these duties were removed these foods would be cheaper. That is the policy that hon. gentlemen opposite now present to the country. In this particular debate it is the matter of potatoes that claims the attention particularly of the hon. member for Halifax. He expressed a great deal of scorn and indignation at the Minister of Finance for not exercising the power which he has of suspending the duty on potatoes and allowing American potatoes to come into this country free of duty, in order that the price of potatoes might be reduced to the consumer. Potatoes are expensive in this country at the present time, particularly in eastern Canada, for the reason assigned yesterday by the hon. member for Prince, P.E.I. (Mr. Hughes).

Potatoes are expensive in Canada to-day because of the fact that last year there was an almost total failure of the potato crop. There were only about one-quarter of the potatoes grown in Nova Scotia last year that are usually grown there, and by reason

of that fact the price is just twice as high as it was last year. The loss which followed from a shortage of the crop is made up half by the farmer and half by the consumer. Is that not perfectly fair? But my hon. friends opposite would put the entire burden on the farmers, and would compel them to sell the potatoes at the price which they would have got if the crop had been a full one. Is that fair to the farmer?

My hon. friends opposite object very seriously to the imposition of an increased tariff on apples. The hon. member for Halifax (Mr. A. K. Maclean) objected to the imposition of this duty on the ground that it will not benefit the fruit growers in the province of Nova Scotia. Even if that assertion were correct, I would conceive that it might still be in the interests of the people of Canada to impose such a tariff, because I believe that, in these matters, there should be no sectional or provincial feeling, but that they should be judged from the standpoint of the greatest good to the whole community. But my hon. friend is absolutely wrong when he says that the imposition of an increased tariff on apples will not benefit the condition of the fruit growers in Nova Scotia, I am prepared to admit that the fruit grower in Nova Scotia stands in a somewhat better position than the fruit grower of Ontario or of British Columbia. I believe that apples can be grown more cheaply in Nova Scotia than in any other part of the country, and I believe that they can be grown better. Besides, the apples of Nova Scotia are grown nearer to a great market, the British market, and therefore it is quite possible that the fruit grower in Nova Scotia does not need protection so much as the fruit grower in other parts of Canada. But the prices during the last few years have gone down, and there is no money in fruit growing at the present crisis, and that fact has convinced them that there is a necessity for some such step as has been taken by the Minister of Finance. I have had a number of letters from fruit growers in Nova Scotia all of whom are entirely in favour of the change and heartily grateful to the Minister of Finance for proposing it.

I think, Sir, that it is a tremendous tribute to the statesmanship of this Government that they have shown so much concern for the farmer. I do not believe that any government in the Dominion of Canada, ever showed as much concern for the farmer as the present Government have shown, and I think that that fact is very much to its credit, and a very great tribute to its statesmanship at the present time. If this country is to recover from the strain of this war, if it is going to be a great and glorious country, as we believe it is, its greatness and its glory must, at first, be largely achieved by the development of agriculture. We have great agricultural possibilities, and as soon as we can induce our own people to flock to the farms in greater numbers, as soon as we can attract greater immigration from abroad to the farms, our country will begin to prosper. The Government cannot be better employed than in developing rural mail deliveries and parcel post, and in building good roads and extending the other favours that the present Government have extended to the farmer. They cannot be better employed than in making the agricultural industry popular with the people, because there is a great deal of truth in the statement of the American orator that if you burn down the cities and leave the farms, the cities will spring again as if by magic; but if you destroy the farms, it will not be long before the grass will grow in the city streets.

Hon. gentlemen opposite object to an insufficient reduction of expenditure by the present Government. A Government should keep a level head in respect to such matters at the present time. Often it is the poorest economy to cut down expenditures; there is truth in the saying that too rigid an economy is often the greatest extravagance. The hon. member for Halifax stated that the credit of this country was being destroyed by the fact that the Government were not making more radical reductions in expenditures. I would like to have asked the hon. gentleman, if he had been present, if he really thinks that this country would improve its credit by allowing its public works to fall into disrepair, by allowing them to remain unfinished, or by breaking contracts. I would ask hon. gentlemen opposite if our credit would not be injured by that sort of procedure rather than by going forward in a sensible and courageous manner to finish those public works. My hon. friend from Halifax gave an instance to show that the increased expenditures were affecting our credit prejudicially. This is what he said:

> When the Minister of Finance made his loan of $45,000,000 in New York last July, I understand that J. P. Morgan & Company sent their representatives here to investigate the revenues and expenditures of the country. Street rumour has it that they were astounded at the vast sums of money expended in this country for unproductive purposes.

That is what the financial critic of the Opposition, speaking for his party, said in this House. There is no hon. gentleman on the opposite side of the House who makes a greater pretense to be fair than the hon. member for Halifax. Had the hon. gentleman believed the truthfulness of this rumour it would have been hardly dignified, or patriotic to have quoted to the detriment of his country's credit without careful investigation. But as a matter of fact, the hon. gentleman had under his hand at the time evidence to show that this street gossip, if it existed, was absolutely wrong. What are the facts? After Mr. Morgan, or his agents, had made the investigation which they are reported to have made, he loaned this country money on most favourable terms. The bonds of this country were bought by him at a price, I think, from 99¼ to 99½, and only a few weeks afterwards, when the Anglo-French loan was floated, the combined credit of France and Great Britain could only command from this same capitalist a price of 96¼.

That proves conclusively that there was absolutely nothing in the street rumour, and it is a splendid tribute to the credit of this country, and to the way in which this loan was managed, that these Canadian bonds sold at a much higher figure than bonds of two such great financial powers as Great Britain and France.

One of the methods of reducing the expenditure which my hon. friend suggested was to curtail the advertising. He said that too much money was being distributed among the papers supporting the Government. I wish to say that in my judgment advertising is a poor item to practise economy on. I think that every business house in the country will agree that this is the last thing to curtail in. I know of no Government that ever invested money more wisely in advertising than did the present Government last year. How did they spend that money? One item of expenditure was in regard to advertising the advantages of the apple, in order to encourage the use of apples. Will hon. gentlemen say that that expenditure should not have been incurred? Another expenditure was incurred in conducting the "patriotism and production" campaign. Will the hon. gentlemen object to that expenditure? In speaking of unnecessary expenditures, the hon. gentleman says:

> For instance, witness the large amount disbursed last year for advertising and printing to the press which supports the ministry.

Why did he confine criticism to the distribution of money to the press which supports the Ministry? I would like to ask hon. gentlemen opposite if money paid to the Government press is any greater strain upon the treasury than money paid to the Opposition press. While hon. gentlemen opposite have no objection at all to money being distributed amongst the Opposition press, they have a great deal of fault to find with the distribution of money amongst the press which supports the Government.

Mr. CARROLL: How much was distributed to the Opposition press?

Mr. DAVIDSON: I am not able to tell the hon. gentleman how much, but it was a very considerable sum, and I can tell him also that the very gentleman who made the criticism, the hon. junior member for Halifax, was one of the beneficiaries of this kind of advertising and that both of the papers owned by him, which are very much opposed to the Government at the present time—whether they are doing the Government any harm or not is another question—have received considerable amounts on account of advertising.

The hon. gentleman also asserted that the Post Office Department should be run in a much more economical manner I want briefly to refer to the items which account for what may be regarded as increases in the post office expenditures. I find that the expenditures for the year ended March 31, 1915, were greater than the expenditures for the previous year by about $3,000,000. I find that this increased expenditure is practically accounted for by four items: conveyance of mails by land, conveyance of mails by railway, salaries by cheques, and rural mail boxes. These four expenditures account for an increase of $3,068,214.73. Let us examine these items. First, there is the conveyance of mails by land. What was the cause of that expenditure? The cause of that expenditure was the introduction of rural mail delivery. Will hon. gentlemen object to that? As a matter of fact, when the proposal was before the House hon. gentlemen opposite did not give it their opposition. The second item is the conveyance of mails by railway. That is due to the introduction of the parcel post. For a number of years the railway companies had been claiming that the basis upon which they were paid was unsatisfactory. That matter went along for quite a while, but with the introduction of parcel post this Government had to

make new terms with the railway companies, with the result that this expenditure was incurred. But hon. gentlemen opposite did not object to the introduction of the parcel post system. Another item is in connection with salaries paid by cheques to outside officials of the department. This increase was due to two or three Acts which passed this House since the change of Government, providing for increased salaries for outside employees, and no member on the other side of the House voted against one of these Bills. The fourth item is for rural mail boxes, which the Government have purchased to the amount of $450,000, and which sum they will get back again from the users of the boxes. Hon. gentlemen opposite talk about being fair. Personally I try to be fair, and I admire fairness in debate, but the brand of fairness that prompts hon. gentlemen to support legislation in this House calling for expenditure, and which then leads them to criticise the Government for making the expenditure under such legislation, is a brand of fairness that will not appeal to this House or to the country.

I am amazed at hon. gentlemen criticising particularly that item of expenditure in the Post Office Department under the head of "Conveyance of mails by land." They contend that these contracts now are let at enormous rates, without competition, and that they are let to others than the lowest tenderers. I can speak but for my own constituency, but in that constituency there is not a case where a contract for carrying the mails has been given to other than the man who agreed to do it for the least money, and I do not believe there is any hon. gentleman opposite who can cite a solitary case to the contrary anywhere in Canada. I believe that in every instance the contracts have been awarded by the Post Office Department to the people who have agreed to carry the mails for the lowest amount. After all, do hon. gentlemen want to make this country believe that the mail couriers are getting too much for their services? If there is one class of people in Canada who are underpaid, it seems to me that they are the people who carry the mails. Hon. gentlemen opposite have a great deal of sympathy for companies with a capitalization of over $50,000 who do not get more than seven per cent on their investment, but I would like them to point out to me in all Canada a single mail courier who gets seven per cent upon his investment. Hon. gentlemen have oceans of tears for interests with a $50,000 capitalization who do not get seven per cent upon their investment, but they have not even a sigh for the poor courier who, in rain and shine, in winter and summer, bumps over the rocks in some cases for fifty cents a day. This is not the first time we have heard hon. gentlemen opposite complain of the Government's extravagance, and demand a reduction in expenditure. Only a few months before this war broke out, when the Minister if Militia, with prophetic vision, was trying to prepare Canada for the calamity of war in which we are engulfed to-day, hon. gentlemen opposite from the member from Halifax down, criticised the Government for its militia expenditures. They occupied the time of this House for hour after hour, criticising the Government for introducing the military system into Canada, and protesting against the expenditure on the militia. I do not wish to say that hon. gentleman were disloyal in that course. I do not believe they said what they said with a full knowledge of the seriousness of it; but I think they are bound to admit now that they were wrong; that the words they used on them if they had any effect at all, had the effect of throwing obstacles in the way of the Minister of Militia, who was patriotically going about his duty of preparing the country for the peril. And I think hon. gentlemen opposite ought to reason with themselves that if their utterances on that occasion were so exceedingly unfortunate, there is also a very strong possibility that their words to-day may be equally mischievous.

The other night we listened with a great deal of pleasure to the eloquent remarks made by the Minister of Trade and Commerce, and it strikes me that what made those words of his grip our very hearts was the fact that they were in agreement with every public act of his, with every public utterance he has made during his long and useful public career. I think hon. gentlemen who heard those words of eloquence and high resolve must have been reminded of other words which the Minister of Trade and Commerce had used only a few months before in closing an important speech in an important debate:

> In the event of such a contingency, and if the day of Armageddon came and caught us napping, I would like to have the consciousness that I am free from the remorse which would lie heavily upon me if I had been party to or contributed in that fatal delay.

Mr. Speaker, Armageddon is here, and there is no responsibility on the Minister

of Trade and Commerce, there is no responsibility on this Government, there is no responsibility on members on this side of the House. But what about the other side of the House?

Mr. MICHAEL CLARK: What about Drummond and Arthabaska?

Mr. DAVIDSON: Does not the hon. member for Red Deer realize that a tremendous responsibility rests upon him?

Mr. MICHAEL CLARK: I think a great deal more responsibility rests upon the Minister of Trade and Commerce for his action in the Drummond and Arthabaska by-election.

Mr. DAVIDSON: If in the light of what has taken place, if the hon. member for Red Deer and other hon. gentlemen opposite do not possess remorse, I say the Opposition are a lazaretto of incurables whose sensibilities have been deadened by a leprosy, and I am afraid their case is hopeless.

Mr. TURRIFF: Why did you dismantle the Niobe?

Mr. DAVIDSON: Because, like the opposition that is put up by hon. gentlemen opposite, it was absolutely no good and of no benefit whatever. I am sorry if I have said anything to cause heart burnings among hon. gentlemen opposite. If they would only admit their folly, I would forgive them with a glad heart. Notwithstanding the mistakes hon. gentlemen opposite have made in the past, and which in their heart of hearts I believe they sincerely grieve over now, the country, thank God, is to-day united from the Atlantic to the Pacific, united in consciousness of our right, united in loyalty to the Empire, united in the determination to endure whatever hardships may come before us until the day of victory dawns.

Mr. LUCIEN T. PACAUD (Megantic): Mr. Speaker, I have listened with curiosity, if not with surprise, to the speech of the hon. gentleman (Mr. Davidson) who has just taken his seat. I had previously listened to a speech delivered this afternoon by the hon. member for Rimouski (Mr. Boulay), and it is this latter speech which I should like to answer in a few words. It strikes me that, were we to analyse the speech of the hon. member for Rimouski, there would be perhaps only three observations to make. In the first place, the hon. member was against the participation of Canada in the wars of the Empire before the war started; to-day, when the war is on, he tolerates its existence, at which I am sure every hon. member will be very much gratified; and thirdly, the observation which seems to crown the other two is that he intends to continue to support the Government as he has done in the past, without any wavering and without any scruples of conscience. As this is the first occasion I have had of speaking in this House on the great issue which overshadows all others to-day, perhaps I may be permitted to lay special stress on a few considerations which have impressed me still more deeply since the beginning of this debate. In the month of August, 1914, at the very outset of the greatest conflict known in history, the Canadian people, listening alike to the voice of reason and of sentiment, did not hesitate in the course which they intended to follow. Every province of this Dominion came forward spontaneously and patriotically and offered their best in men and in money. They understood, Sir, that if civilization, if justice, if liberty as we have conceived it, were to be maintained as the guiding star of our future destinies, a new and powerful enemy which had challeneged these lofty conceptions of human standard and opposed to them a new creed as hollow as it was barbarous, and which may be summarized in three words "Might is right," had to be crushed and crushed forever. In a word, we knew and felt, as we know and feel to-day, that in entering into this great struggle Canada was fighting not only for Canada, she was fighting not only for the Empire, but, above all, to maintain in this world all the great moral forces menaced, imperilled, and opposed by the German conception of "brute force." But, while from the very first our vision has been clear as to the justice of our cause, and as to the part we must take to insure its ultimate triumph, the speech delivered by the hon. Minister of Finance in this House a few days ago has revealed to us a situation which, if not sufficient in its gravity to deter us from our course—our national character knows not such weakness as to be deterred from the true course—has nevertheless stirred the public mind of this country to demand a radical and immediate change in so far as our national expenditure is concerned.

Let us stop for a moment to consider a single feature of the financial statement. We shall have added to our public debt in the short space of three years the enormous sum of $485,000,000. To understand the true meaning of these figures we can do

no better than to compare them with the public debt of Canada in 1914, just previous to the war. The public debt at that time, which represented all our capital expenditures, which represented the cost of most of our great national enterprises, which covered a period of over fifty years of our national life, reached only $335,000,000. In the space of three years, at the end of the fiscal year 1917, the public debt will, in all probability, have reached $1,000,000,000, with the corollary that we shall be obliged to raise annually nearly $50,000,000 to meet the interest on that debt. In the face of such enormous expenditures is there not good reason for the serious reflection of every member of this House? Are we not justified in pleading with the Government for economy and for still more economy in so far as our civil Estimates are concerned? This appeal was made to the Government last year; it is repeated this year with equal force and with equal justification. The Minister of Trade and Commerce (Sir George Foster) a few days ago admitted, in his admirable and eloquent speech, that there were expenditures now, that there had been expenditures from Confederation up, which had been put in the Estimates, which had been passed by this House, which had been carried by this country, but which were neither useful nor expedient. If such expenditures, if such waste of the people's money were tolerated in the past, we were surely at fault; but, to-day, in this our hour of trial, when the people of Canada are more heavily taxed than they have ever been taxed before, when the sword of Damocles seems to hang over the head of every business man in this country in the form of new taxation, unjust, unfair and arbitrary, as during this debate it has been proved to be, it would be no less than a crime to continue in the old system which appears to us to-day in its true and hideous colours. Yet the Government continues in its extravagant course. For the coming year the Estimates for our ordinary expenditures will reach the sum of $159,000,000, the largest figures since Confederation. The hon. junior member for Halifax (Mr. A. K. Maclean) demonstrated clearly that millions of dollars could be saved. He singled out in the Estimates items which should be set aside; he mentioned others which should be considerably reduced; but there is an old saying which seems to apply to the present Government: "There are none so deaf as those who will not hear." The Government should, in the face of a national crisis, have the courage to rise to a height where the evil influence of party patronage will lose its sway and relax its grip; or, will the Government continue as they have been doing in the past, alternating between a menace and a submission, one day full of fight, threatening the Canadian people with a general election, very much against their will, the next day miraculously transformed, having become so meek and mild that they cannot muster sufficient courage to shoulder in whole or in part their responsibility in the creation of our shell committees. May I suggest that this continual vacillation on the part of the Government is not at all in keeping with the strenuous times which we are now confronting.

I now come to another point. I have heard it said and repeated many times that the province of Quebec has not done her share in this war; that she has not lent a sympathetic ear to the appeals of the recruiting agent. This asertion is false; it has no foundation in fact; it was launched and spread throughout this country by a few, fortunately only a few, whose narrowness of mind is a continual danger to our country. In a previous debate we heard what the province of Quebec had accomplished in this war, and it is needless for me to repeat it. It is sufficient for me to tell this House that my province has remained true to herself; that her devotion and loyalty to the British Crown has not wavered; that she is in this war with all her heart and soul. Let us not minimize the part that the province of Quebec has taken in this war. Let us in this country, on the contrary, welcome with pride the part that the old province of Quebec has played. If the facts were known, I think that every hon. member would accept the statement that I have just made.

For six years the province of Quebec witnessed the bitterest of political agitations. The French Canadians were told, day in and day out, that Canada should not take part in any wars of the Empire, but that the obligations of our country were limited by our own boundaries. This was the language used; these were the sentiments uttered; these were the doctrines of the Nationalist party. This campaign of hatred and prejudice may have succeeded in winning a few more votes, it may have resulted in the downfall of a political party, it may have helped this Government to attain office; but let us take off our hats and be

proud that the French Canadians had a loyalty which these gentlemen could not shake.

Who were the leaders and who the followers of that party? Let us go down the long and well-known list. It is hardly conceivable, and yet it is true, that in this list we find two cabinet ministers, representing the province of Quebec in this Government, sharing in the responsibilities of conducting this war, and pursuing a policy which for six years they had openly and violently criticised and condemned. In this list we find at least twenty members sitting in this House, supporting this Government whom they were sent here specially for the purpose of defeating. I touch upon these points, not for the purpose of raising old issues—this is not the time for that—but to show what difficulties had to be surmounted in my province, what prejudices had to be overcome; and to show also what doubts have arisen in the minds of those who live in my province, when they see that the men coming before them are speaking in favour of taking part in this war are now the happy possessors of cabinet portfolios, who when they were ordinary representatives of the people condemned absolutely the very views that they are propounding to-day in the province of Quebec. The hon. Secretary of State (Mr. Blondin) has not yet told us in this House by what means he achieved the remarkable feat that has marked him out in our province as a political acrobat of no mean talent. The Minister of Inland Revenue (Mr. Patenaude) on the other hand, has tried to explain. He spoke, but his words did not convey to us that which we had the right to expect, a full and sincere confession. He preferred to draw a veil over the many political heresies which he had propounded in the province of Quebec; and he concluded his remarks with a plea to the House and to the country for us all to forget and forgive. No, the province of Quebec will not forget, nor will it forgive. The day of chastisement has not yet come. I know the old province of Quebec well enough to know that it will remain true to its past traditions. It will not be turned from its course by any just anger it may have against these ministers who misrepresent it in this Government or against the members behind the Government. The people of Quebec will continue to fight for Canada and the Empire. But the day will come when the cannon's roar will cease, when the threat of German world-dominion will be a thing of the past; the day when Canadians will enjoy peace, liberty and freedom at home, and the people will get together to work for the upbuilding of our common country; when the English and the French languages will be put on the same footing and will be taught freely without difference. And when that day comes, the day when we shall enjoy in this country the blessings of that happy culmination of liberty regulated by law, and law enlightened by liberty,—then, I say, will come the day when just punishment will be meted out to those who so richly deserve it.

At six o'clock, the House took recess.

The House resumed at eight o'clock.

Mr. PIUS MICHAUD (Victoria, N.B.): Mr. Speaker, I followed with great attention the speech of the hon. member for Rimouski (Mr. Boulay) this afternoon, and I must say that I was at a loss to understand his views on the important subjects dealt with in the Budget. The hon. member for Rimouski seems to represent the views of his electors every time he speaks against the Government. When he speaks he finds fault either with the individual ministers or with the general policy of the Government, but when the time to vote comes he gets up and votes for the Government. It appears to me that when he is speaking in the House he represents the views of his electors, but when he is voting he represents the views of the hon. member for Rimouski. My hon. friend has taken the trouble to state that he visited St. John during the past summer and inspected the port there. He has visited and has seen many things, and there are many things he has not seen; there are many things he has seen and not understood, and no doubt while he saw the port of St. John, he did not understand whether it was a good seaport or not. The Minister of Marine and Fishery may not have understood all that my hon. friend said about the port of St. John, but I feel sure that the hon. minister will be able to look after that port when the time comes. There is one thing that we may always expect from the hon. member (Mr. Boulay), and it is that he will be glad to and ready to vote a big estimate for the development of the port of St. John every time he has an opportunity. I followed closely, also, the speech of the hon. member for Annapolis (Mr. Davidson). I was amused at his remarks in reference to the hon. member from Maisonneuve (Mr.

Verville). My friend from Maisonneuve represents the labour class in this House, and this afternoon he delivered a thoughtful and earnest address upon the subject of the extremely high cost of bread and the hardship it entailed on the working man; but yet my hon. friend from Annapolis said that the hon. member had not obeyed his mandate as a labour man in this House. I can assure the hon. member from Annapolis that the hon. member for Maisonneuve will return to this House next Parliament, and that there is a great probability that there will be more labour members, from the province of Nova Scotia, in that Parliament.

I was much interested in the remarks of the Minister of Finance during his Budget speech, but I shall discuss only a few of the important subjects which most deeply concern the country at this hour. We have lately been spending large sums; we have been sending our soldiers to the front and taxing ourselves for that purpose, and our generosity has no limit. We are again called upon to tax the Canadian people heavily in order to meet the heavy expense of keeping our soldiers at the front. Canada is better known to-day than before this war, simply because in Flanders and in France no nation striving for liberty and freedom has done more than our Canadian soldiers. Soon there will be an end to this great struggle, I hope, and what have we done to prepare for the return of our soldiers? Many speeches have been delivered in the country during the last summer by the ministers, and not one of them omitted to point out the great importance of having a large immigration come to Canada after the war. Before we look for immigration into this country after the war, we should put the country in a good financial position, we should look after our natural resources and prepare to take care of the widows and orphans of our soldiers on the conclusion of the war. I have been interested since the war began in what I may term national economy. Go into any city in Canada to-day and you find no difference in the way of living amongst the rich class of people, the class of people who have a fair revenue from year to year. It is the poorer class of people who are making the greatest sacrifices during this conflict. It is the poorer people who are really bearing the great burden of the war. We have increased the cost of their living by increasing the tariff, but we have never for a moment thought of increasing their salaries or wages in order that they may bear the increased burden of the cost of living. The sons of the labour man and of the farmer are in the majority in the trenches to-day. A great number of them will soon come back, I hope, and what arrangements have we made for them on their return? The attention which is to-day being devoted to immigration should be given entirely to these returning soldiers, their wives and their children. It is the children of our soldiers who will, in the near future, partly decide the destiny of this country. Among the soldiers who have enlisted from my own town there are two who have left families, one of eight children and another of seven. All they have for their support for the moment is the pay of their fathers and what is given them from the Patriotic Fund. For the present that is very satisfactory; but let us look into the future. What happens to these children if their fathers fall on the field of battle? They will have mothers who are poor, left to look after them, and I say it is a deplorable position for these families if the country does not at once take steps to look after them. Let us not depend too much on immigration from Europe after the war. The soldiers of Britain, France, Belgium, Serbia, and other countries who have joined the Allies, will not be permitted to come to Canada after the war. Those who are between the ages of 18 and 45 will be needed at home, they will have to return to the soil and to industrial pursuits. They will have to rebuild the country devastated by the enemy, and I predict that for a long while we in this country will have a very small immigration. We do not want any one above the age of 40 or 50 coming into the country, not do we want any one below 18. We do not want orphans and widows, and I repeat that we will be greatly disappointed in our expectations of immigration after the war from the countries now engaged in this struggle. What will be our financial standing after the war? A year from now we will have a debt of one billion dollars.

What is true of the different nations of Europe is also true of Canada in reference to what will happen after the war. I have in my possession the opinion of an American subject. It is given in an article entitled "A Glimpse at the Future," and is as follows:

> The demand for capital will not increase (in the aggregate) in Europe after the war, but will decline. It will decline absolutely, far more than the supply. For this reason interest rates will more likely fall to a low level and remain there for a long time, rather than rise or even hold at the relatively high levels ex-

isting during the actual hostilities while the government are floating their big loans. A "demand for capital" means a producer whose market has so broadened that he can profitably borrow money to increase his producing capacity; or it means that his customers are buying so freely that he needs to carry a larger stock of goods. In short, it means, for business generally, an enlarged demand for goods. Now the direct effect of war is not to increase demand or buying capacity, but rather to impoverish a country to such an extent that people everywhere buy less of everything. In consequence, producer, dealer and transporter all have less to do, and because of this none of them need much or any new capital. Consequently, demand for capital falls flat and interest rates range at low levels.

If this is the case, it is another reason why we should go slowly when we consider what will happen after the war is over and what is now best to be done. Sir George Paish said lately:

> The money which has not been saved constitutes an enormous loss. That may be said to be gone for ever. The loss of the greater part of the world's entire savings for even eighteen months is a very serious matter and its seriousness will become more and more intense the longer the war lasts and the period of loss extends.

I say then, Mr. Speaker, that when war was declared, this Government should have given an example of economy. Parties found guilty of handling improperly public money should have been punished. The man found with goods belonging to the Canadian people should be punished. Companies organized for the purpose of manufacturing munitions of war at a profit greater than that of an ordinary business firm should not be tolerated. The high cost of living should be studied, and a remedy at once applied in order to help out those who have not a sufficient revenue to support their families in comfort.

If this war should unfortunately make many Canadian millionaires, it will be a sad page in the history of Canada. The future generation, the sons of our soldiers who are at the front, will be called upon to pay the war debt, and it would be a pity to see them living alongside the sons of millionaires who had made their fortunes out of war munitions.

I read with surprise a report of the failures in the United States during the year 1915. There were 19,035 reported, an increase of 13.4 per cent over 1914. Our big neighbours to the South of us are certainly showing us an example in the matter of preparing for the future and of practising economy. In a country like the United States, which has received from the Allies millions of dollars on war contracts,—and which had only an average crop last year, it is not surprising that the question of the high cost of living has arisen, and it will have to be solved there in the same manner as in Canada.

The Government have endeavoured to do their duty in every manner possible in reference to helping out the Mother Country and the Allies in this great war. The fathers, mothers, young men, and young women of this country are doing all they can. The Canadian people have shown a noble example to the world, and have done their duty with cheerfulness, and in the true spirit of patriotism. We should, Sir, at this very moment study what is one of the greatest questions in Canada to-day, the question of national economy. We should endeavour to find a remedy to meet the conditions that will arise after the war. We will certainly do ourselves a great injustice if we do not prepare just now for the future. We are not anxious to disturb the public mind, but the public mind has been disturbed already by the high cost of living, and if a remedy is not applied immediately we will have, in the future, great hardships amongst the poorer classes of Canada. When the times were prosperous a man earning $1.75 or $2 a day could very well afford to pay for the necessaries of life, but now he is earning $1.50 and $1.75 a day and has to face an increase of between forty and fifty per cent in the cost of living. So that, if things go on in the same way, we will be called upon before long to take down the wall of protection and to give free entry to foodstuffs into Canada in order to meet the requirements of the poorer classes.

At the beginning of the war the Canadian people were rather taken by surprise when our boys were called upon to take up arms and to cross the ocean, but since then there has grown a feeling of determination, and the people have just one object in view, and that is to see our great armies triumph over our enemies.

Hon. GEORGE GRAHAM (South Renfrew): Mr. Speaker, I do not know that I can add anything to what has been said by hon. members on both sides of the House in regard to what is known as the Budget. It is a practice and a right guaranteed to members of a legislative body like ours that in the Budget debate we can roam far afield in the discussion and deal with any question that we think appertains to the welfare of the people of the country.

It is right that that should be so, because on the matter of the speech of the Finance Minister depends the financial future of the country. He is supposed to be the balance wheel, financially, at least, in the Government, and he is expected to keep in subjection the unruly members of that body. Those who desire to spend money which they have not, and which they see no way of getting except by pressing the Finance Minister to make another loan, are supposed to listen to the warnings of the Finance Minister, if he gives those warnings, and to keep the expenditure within the limits which he, in his judgment, says the finances of the country are able to stand. I regret that, with the present Government, either the Finance Minister is not sufficiently strong, or the members are too unruly, because he has not been able to keep them in subjection as far as their expenditure is concerned. Even this session they ask to have a statute passed to expend $28,000,000 more than the Finance Minister tells us ought to be spent. We have tried, as each minister presented his Estimates, to induce him to meet the demands of the Finance Minister by telling the House frankly whether he, in his department, intends to synchronize his expenditure with the statement of the Finance Minister. Up to date no member of the Government has agreed, in so far as his expenditure is concerned, with the statement of the Finance Minister. Even the docile Minister of Justice (Mr. Doherty) refuses to have his Estimates cut down to the extent of $500. When such a quiet-mannered member of the Government as the head of the Justice Department will not agree to have his expenditure reduced even a little to meet the requirements of the Minister of Finance, what, oh what, can be expected of the large spending departments?

The Minister of Finance, in his remarks, dealt briefly and succinctly with questions of vital interest to the country at the present moment, and with the problems that have confronted us, do confront us and will increasingly confront us for some years to come. He spoke of the loan by which Canada borrowed $45,000,000 in the United States. There possibly were two reasons for going to the United States. One reason was to regulate, as far as possible, the difficult question of exchange, and the other was, if I may hint it mildly, that the atmosphere in the Old Land had grown quite cool when it came to borrowing for domestic purposes even by Canada. I believe it is not going too far afield to say that at the time this money was required, it was the opinion of the money market in England that Canada should adopt other means in order to finance her own domestic affairs because the burden on the Motherland in financing herself, in granting the aid which she has given to Canada, and in assisting some of the Allies, was already sufficiently great for even that great centre of financial strength to assume. I am not sure that the Finance Minister made a very good bargain in connection with that loan. I read carefully the terms of the provincial loan by the Hon. Thomas McGarry, and, comparing them, I rather think, to put it in ordinary language, that he got a shade on the Finance Minister in a transaction that he made with the New York financiers. The loan made by the Dominion of Canada in New York was ostensibly a short date loan coming due in 1917, but, as a matter of fact, these securities are negotiable for securities having a thirty-five year term at 5 per cent; so that if the New York investor desires, he can convert his short term loan into a long term one at the ordinary rate of interest of 5 per cent, which means that Canada expects to pay not less than 5 per cent for her money for the next thirty-five years. That is not as good an arrangement for Canada, in so far as the interest is concerned at least, as if it were a short term loan.

Sir THOMAS WHITE: Will my hon. friend allow me to correct him? The bonds mature in 1935, but they are twenty-year bonds.

Mr. GRAHAM: My statement with reference to the term then should be corrected by saying that the bonds are for twenty years. They mature in 1935, but you extend the term of this short loan for twenty years. Then there was the loan of $50,000,000 from the people of Canada. The Finance Minister asked for $50,000,000 but he got $100,000,000. The request that the people should hand into the treasury $50,000,000 met with such a hearty response that they doubled the amount. That shows that the people not only had the money, but they were willing to lend it to the Dominion Government, some of them to withdraw it from the other investments that were paying a higher rate of interest than the Government were proposing to pay which, I believe, is approximately 5½ per cent considering the price of the security. I do not wish to criticise the Government on this point especially but I think it was hardly proper that, having

asked the people for $50,000,000, they should impound $50,000,000 more and make it $100,000,000. I know the Finance Minister will say to me: We sent a notice to every investor that we would allow him to withdraw the amount of his subscription to this loan if he so desired, and thus it might have been reduced to $50,000,000, but that few, if any, did withdraw their subscriptions. One can see at a glance the position in which you place the investor. After having said to the Government: I will subscribe a certain amount, he could not very well, without placing himself in a peculiar position, withdraw that proposition and ask that his subscription should be smaller. I know that no public objection has been taken, and I am not taking serious objection to it, but financial men in discussing it will want to know the next time the Finance Minister asks for a certain amount if he is going to double up on it. They make their arrangements along certain lines and it must be remembered that some of these institutions withdrew investments that were paying a higher rate of interest in order to give the money to the Government at a lower rate of interest.

My hon. friend referred to the balance of trade but I hardly think that he will follow that argument to its logical conclusion. If the argument of my hon. friend be correct, then the longer this war lasts the better off Canada will be. The balance of trade to-day is due to the abnormal condition in which we find ourselves. It is not due to the natural development of trade; no person pretends it is. The Minister of Finance himself, I thought, made the wonderful admission—I think it has been practically repeated by every member who has spoken on that side of the House—that Canada, at the outbreak of the war, was in a critical position financially and industrially.

If I wished to say a word politically, I might say that it was a strong admission the Finance Minister made, that after three years of the management of his Government Canada found herself in a more critical position than she had been since his party was in power before. As a matter of fact, everybody knows we were in a critical condition, both industrially and financially. Then the war broke out, and very large orders came for different kinds of war material. The balance of trade which the Finance Minister pointed to is due to these two things: first, the large crop in the West, and secondly the immense value of the war orders we have received. But my hon. friend may say to me: If you have got the money for the grain and the money for the war munitions, if your theory be correct, why don't you purchase imports and reduce the balance of trade? Sir, the world knows that the money received by Canada during the past year was not used to buy imports for the reason that, in the first place, they had to pay their debts of three years' standing, and secondly, the balance of the money received had to be devoted to the prosecution of the war; it is on account of these two things that the so-called balance of trade is in our favour. After all, this question of balance of trade might be argued for months and years, and it has ben so argued. Under normal conditions, if we import goods to take the place of a certain amount of goods we have exported to a foreign country, we are prosperous rather than otherwise. As outlined by the Finance Minister, we have this year a balance of trade of $200,000,000 in our favour, while some years ago we had an adverse balance. Now, I should like to ask any business man here which period in the history of Canada he would prefer: the present period with the so-called balance of trade in our favour, or the period of much greater prosperity a few years ago, when the so-called balance of trade was adverse. Theorists may theorize, but the fact is that when trade flows freely to and fro between countries, business is in a healthy condition. I do not think much of this balance of trade theory, because we, as a practical people, have to face in our every-day living conditions and not theories, and the history of our country shows that year after year prosperity has come to the high and the low, to the rich and poor, even when the so-called balance of trade was adverse.

The Finance Minister gave us some good advice in his Budget speech, and I know he will pardon me if I read a paragraph to the House. On page 847 of Hansard, speaking of economy and economic conditions generally, he says:

> From this viewpoint it is our true policy to augment our financial strength by multiplying our productive exertions, and by exercising a rigid economy which reduces to the minimum all expenditures upon luxuries and non-essentials. Only in this way shall we be able to make good the loss caused by the withdrawal of so many of our workers from industrial activities, repair the wastage of the war, and find the funds for its continuance. It cannot be too frequently or too earnestly impressed upon our people that the heaviest burdens of the conflict still lie before us, and that industry and thrift are, for those who remain at home, supreme patriotic duties upon which faithful fulfilment

our sucess and consequently our national safety may ultimately depend.

Apart altogether from these higher grounds, it is to be pointed out that in so far as our present prosperity is based upon abnormal prices for our produce and upon the production of war material, it is precarious and transient, and dependent upon the continuance of the war and its conditions. On ordinary business grounds alone, the prudent husbanding of resources, and the wise conservation of profits, are dictated by the plainest considerations of practical wisdom and good sense. It is in the spirit of these remarks that I now approach the consideration of our financial estimates and programme for the coming year.

I agree with every word of that. But the Government do not take to heart the good advice which they and the Finance Minister give to the rest of the people of Canada. They say to us: If you indulge in luxuries cut them out and buy only necessities, be economical; if you have made profits store them away. Now, I will put it to the Finance Minister—but no, I need not put it to him, for he has already admitted the soundness of my argument when he said that present conditions were precarious, and only temporary, and that we should provide for the future. But I will put it to the Minister of Marine, the Minister of Labour, or the Solicitor General: If the ordinary man in Canada ought to take the advice of the Finance Minister and cut out his luxuries would it not be wise for the heads of Government departments to do the same thing, and cut off luxuries from their Estimates? The Minister of Finance has undoubtedly pleaded with them in Council to do so, but they will not take his advice. The Finance Minister tells Parliament and the country that at least $30,000,000 of these Estimates are luxuries. I therefore ask the Government to follow the wise advice of their own Finance Minister, and before they proceed any further with the Estimates to get together for the national good, and cut out the luxuries in these Estimates. As the Finance Minister well points out, it is only by sacrifices that we can hope to bear the burdens of the war, the heaviest of which are still ahead, and in that way only can we hope to retain our position in the world as a country that knows no stopping in its national progress. The Finance Minister, in his Budget speech, estimated the year's expenditure at $160,000,000. We see, however, that the civil expenditure is estimated at $158,000,000, and the capital expenditure at $30,000,000, or a total of $188,000,000. There is, therefore, a chasm between the Finance Minister's Estimate of

$160,000,000 and the $188,000,000 of $28,000,000. When speaking of the Estimates just now I said that, according to the Finance Minister $30,000,000 were luxuries; to be accurate I should have said $28,000,000. I have every confidence that the Minister of Finance intends to keep the expenditure down to $160,000,000; but, if it is true that he intends to do so, why are we, as responsible representatives of the people, asked to place on the statute book a law which gives the ministers a right to expend $28,000,000 which the Minister of Finance says they ought not, in the public interest, to expend. This is a serious matter in any deliberative assembly, particularly at a time of such great stress, when every man, woman and child in this great land is straining every nerve to do his or her utmost, so that the boys we have sent to the front not only may win glory for themselves, but may help to retain for us the great privileges and birthrights for which our fathers fought. We are not living under ordinary circumstances when a great deal of elasticity might be permitted; we are living in a time when we are all doing our best, and if the Government of Canada expects the people to husband their resources and practice the economy which the Government preaches, it ought to show an example and take out of the Estimates the $28,000,000 which there is no need to expend during the coming year.

We have expended more money than we should have expended, and we have had a good deal of discussion about the methods of expenditure in conection with war supplies. I do not wish to dilate on these matters at any great length, because my desire is that we, as a Parliament, should not be divided in the schemes which we are trying to work out for the nation's good. What I am saying, I am saying in the most serious way to endeavour to impress upon the Government what I think to be its duty in this trying time. I need not argue that millions of dollars have been expended that might have been saved. The Government must realize that, and I think no person realizes it more than those who sit around the council board and talk these matters over, and have before them details which we on the outside have not been privileged to see, and only fragments of which have come under our notice. To show that the method of buying war supplies has not been right, I need only call the Prime Minister and his colleagues as witnesses.

It will be remembered that at the outbreak of the war the Militia Department made the purchases of war supplies. The Prime Minister himself came to the conclusion that that method of purchasing was not satisfactory, and almost at the very outset he was so informed by the Canadian Manufacturers' Association. Here is just one paragraph from a letter which Mr. Murray, secretary of the association, sent to the Prime Minister:

> Stories that are going the rounds may have no foundation in fact, but the persistence with which they are being circulated, and the circumstantial detail with which they are being backed up, is creating a feeling of suspicion and distrust that is doing your Government real harm. I am quite prepared to believe that nothing, or at most very, very little, has been done to justify these suspicions, at the same time it would seem wise to remove all ground for suspicion by throwing the business wider open and by placing it in all instances with manufacturers direct instead of through middlemen.

The Minister of Militia in his recent speech in the House said that middlemen came to Ottawa by the score, and we all know that to be true. The Canadian Manufacturers' Association say that it was true, and, as they could not get at the buying department direct, if what Mr. Murray says is the truth, complaint was made to the Prime Minister. A little later on the Prime Minister must have agreed that there was something wrong with the method of purchasing, because he changed it and appointed a sub-committee of council, thus taking the work of purchasing out of the hands of the Militia Department in which it had previously been. That sub-committee took in hand the purchasing of war supplies and it was not long before some one found out that they were not equal to the task. To prove that, you need not take my word; you can take the word of the Government, practically of the Prime Minister himself, because he disbanded that sub-committee in a short time and appointed another, not confining himself to the members of the Government at all. I find that the Prime Minister had tried them all and found them all wanting, and that he said: "If we want to do this purchasing properly, we must go outside of the Government, because it does not seem to be made up of business men at all." Two-thirds or a majority of the board that was appointed is outside of the Government, and the chairman of the board is the hon. member for East Toronto (Hon. Mr. Kemp), Minister without Portfolio. I need not argue that the purchasing for many months was done improperly. The action of the Prime Minister in dispensing with two organizations which he had formed for the purpose, and in appointing a third, proves my case more conclusively than if I talked for an hour. What has happened in Canada has started the Canadian people thinking, and the news which we received this evening shows that they are thinking. The issue in Peel county was solely on the point of the purchasing of supplies in the way of horse-flesh for our boys at the front, and to-day in that comparatively small county in Ontario a change of twelve hundred votes has resulted on that issue alone. What I am trying to convince the Government of at the present time is not of a political nature, but, the fact that the people of Canada have not been satisfied with the way in which the purchase of all kinds of war supplies has been conducted.

Mr. LEMIEUX: It is a hard pill to swallow.

Mr. GRAHAM: In regard to taxation; I admit at the outset that we must find some new method of taxation to meet the great responsibilities and to carry the great burdens that are at present resting upon us, and which, as the Minister of Finance says, will become greater in the future. We need not plume ourselves on the fact that we have what is called a favourable trade balance. In the years to come we shall have to face the most serious condition that Canada has ever faced, a much more serious condition than confronts us at present. We cannot retreat; there is no Canadian worthy of the name who would think of retreating. There must be no retreat by Canada until we gain what we are attempting to gain in this great fight in which we, along with the Allies, are engaged. Our business is now not to act from a party standpoint in the hope of gaining political advantatge, but calmly to try to find how we can get the money which we need and how we can get it from the sources that ought to pay it, and that we need the money goes without saying.

Taxation is never welcome, and seldom is it distributed with absolute equity. Under our municipal institutions the rate of taxation is the same for every tax-payer in the municipality, but even so the taxes may not be equitable as they depend upon the assessment valuation. In most instances, the man in ordinary circumstances pays a little more than his share of the municpal taxes. Mr. A. owns a house and lot that, all told

is worth $1,200 and if it were to be sold to-morrow it would probably bring $1,000. It is a practical house, with no extra finish and fit for the occupancy of a man in ordinary circumstances and the assessor will probably put down the value of that property at $1,000. But Mr. B has a house which cost $50,000, yet he will probably escape with an assessment of $20,000, on the ground —for which there is some reason—that there are so few possible purchasers for a property of that kind that if it were put on the market it would not bring more than $20,000. But that does not alter the fact that the system results in the ordinary man paying more than his relative share of the municipal taxes. I do not believe that we can expect perfect equality in whatever taxation is imposed, but I do believe that the Finance Minister ought not to consider himself wedded to what he has proposed merely because the Government has proposed it. This is apart from and beyond any party measure and it is proposed under conditions that do not permit of partisan discussion of it. The Finance Minister ought to have an open mind on this subject, and if something better is proposed he ought to accept it and welcome it.

With that in mind, I am going to discuss some of what seem to me the glaring inequalities of this proposed taxation measure. I absolutely believe that the Finance Minister intends to change these things. I cannot conceive that he will adhere to his proposition as laid down after the full facts have come to him, as they must have come to him, if not in mail-bags full, at least in letter-boxes full, to say nothing of various deputations. And I want to impress it again on the Government before I leave the subject, that while they are asking the industries of Canada to contribute of their excess profit, they ought at once to cut off their own excess estimates. Let us get together, one paying and the other reducing expenditure, and then the burden will be evenly divided between the payer and the economist, if such there be in the Government. One objection is, that this is a proposal to tax industry while, to a great extent, it omits to tax wealth. Wealth and water escape; industry and integrity get soaked.

Mr. CARVELL: With the water?

Mr. GRAHAM: There is enough water in some of these concerns to soak out a lot of integrity. Let us consider the retroactive principle in this measure. I want it to be distinctly understood that I am not now dealing with any institution that has furnished war supplies and made an abnormal profit. I admit at once, and without a word, the contention that if the retroactive principle were not applied the Finance Minister would not get his money, because, if the Munitions Board is up to its business, then, in the year that is ahead of us, these concerns will not make any excess profit; and so, if the Finance Minister is to get from those who have made abnormal profits from war supplies a fair share of those profits, he must make the law retroactive. In what I have to say I have no reference whatever to those institutions that have made these abnormal profits as a result of the war. I say to the Government, tax them. It is their duty to contribute, and they ought to be willing to contribute a large share of these profits to further the great object we are striving for. But, in doing that, to use the words of an ancient writer, let no man escape. A good many will escape; but of that later. Let me point out to the minister the case of many industries which are not furnishing munitions or war supplies at all. I take one company as an illustration, without mentioning names. In 1912, 1913 and 1914 business with this concern kept getting a little worse all the time, and, before the war broke out, the company owed the bank quite a large amount of money. But the men who were in it were the kind of men that Canada wants. They were real business men. They did not flee for aid to some unknown source when they found they were coming to a time of stress. They did what the Government has not done, they reduced expenditures; they girded up their loins to face the situation. They had to reduce the time of their men to half—but giving all some employment that their families might be kept together. And they hoped against hope that the tide would turn. During the past year the company has made some money on account of the improvement in conditions. They have paid up the bank as well as they could, and to-day they are in a better position. But if the money they took to pay off their indebtedness to the bank is taxed as profit under this measure, these men will have to go and borrow that money, or at least a portion of it, from the bank again. That is not fair to the industry of the country. We ought to face this question, and so levy taxation that the money shall be paid by the men most able to pay it. Under the conditions which I

9 p.m.

have described, the man who carried on the business for years, and who, it may be, has his son in the company with him, may have to go into bankruptcy unless this measure is changed. They have made more than their seven per cent, and they have paid the money back to the bank to which they owed it. They have not got a dollar of money on hand, and if they are compelled to go on their knees to the bank to borrow that money again, it will be unfair to industry, and will be a check to the commercial life of this country.

That is only one sample, and the minister will find that there are quite a number of similarly situated institutions in the Dominion. I cannot think that he has them in mind, and I urge upon him that, in a case of that kind, where a man who has been honestly working and struggling for years has gone to the bank and paid off his indebtedness, or part of it, during the last couple of years, thus enabling him to proceed with his business and keep his company together, that the Bill be so amended that some redress may be given to this man, and that he may escape a taxation which he is not able to bear, and should not be asked to bear. Take another class. Some are under the impression that money put into betterments or held in reserve will be allowed as capital. The proposed measure does not say so, except as to small concerns, such as partnerships. In Ontario most businesses are put into the shape of joint stock companies for convenience, and because that is a better method of doing business. The men at the head of these companies are real business men; they are not mushrooms. Their business has not been carried on for kite flying in stocks, but has, perhaps, been carried on for years, handed down from father to son, carried on with honesty and integrity and with profit to the development of the whole country. What do these men find? Year after year, it being their own business, they did not take the profits and put them in their pockets; they took what money they made, whether it was ten, or twelve, or fifteen per cent, and added betterments to their concerns. They bought new machinery, they were trying to fit themselves to compete with all comers. They built new buildings, brought in new apparatus, discarded old steam engines, and in some places put in electric power, adopted all modern methods of doing business successfully. What do we find under the proposed measure? These betterments, these additions to their business, these improvements that have given employment to men in Canada, and will do so in the future, that have helped to make Canada what she is, a hive of industry; these things will be taxed under the Bill, and twenty-five per cent of the money put into these betterments, if the earnings are over seven per cent, will have to be handed back to the Government as taxes. The people of Canada who have money do not demand that from these people. Those in Canada who are able to pay for the carrying on of this war are the last men who will demand that these businesses, worked up in the way I have mentioned, shall be taxed to that extent. I urge upon the Finance Minister that his measure be so changed that consideration will be given in the cases I have mentioned in respect to companies as well as to partnerships.

Companies that have head offices in Canada are being invited by this measure, as it now stands, to remove their head offices to another country. There are several businesses in Ontario, and undoubtedly quite a number in Canada, whose head offices are in this country, but the greater proportion of whose business is outside of this country. We are glad to have the head offices of these institutions in Canada. They are working under provincial or Federal charters, and the profits from all these sales, all over the world, come back to the Dominion of Canada and are largely spent here. But the interest of these institutions, in many cases, lies nearly altogether in another country and the minister, by his present method of taxation, leaves it open to these companies to take out American charters and move their head offices across the line. In this way they will escape the taxation. I say that that is an invitation to these companies to take away their head offices from Canada, and in some cases these are great institutions and it has been a great benefit to Canada to have their head offices here. I admit that it is easy to give advice to the Minister of Finance, but I am bringing these matters to his attention as strongly as I can because it cannot be worked out in an easy way; it will take time.

I come now to a class of people who escape this taxation altogether. As men get older they begin to retire from business, unless they are harnessed to it. Where do they put their money? They are tired of the risks of business, and so they buy bonds at six per cent or Government bonds at five and a half per cent. It

is not fair to compare the income from a six per cent bond or a five and a half per cent Government bond with the income from a seven per cent return from an industrial concern. The man who holds the bonds takes no risk, not a cent. The man who has his money in an industrial concern at six or eight per cent is taking all the risk, and any day his whole capital may be wiped out. Perhaps a Government bond at five and a half per cent is equal, when we consider the element of security, to an income of about twelve per cent in an ordinary industrial concern. As men grow older they get away from the industrial concern; they want something safe and sound. Their chief occupation is to have an enjoyable life and to cut coupons to keep life going on leisurely; so they buy Government bonds. In this country many vaults are full of municipal and Government bonds. A man may be worth $1,000,000 of Government or municipal bonds and not contribute one farthing under this Bill; while the man next to him may be of the same age but may be harnessed to his business, working hard with his sons in a small company, and he is taxed under this measure. I ask if that is equity. The fact that this is so proves what I said a moment ago that in that instance industry is taxed and wealth goes scot free. I would prefer absolutely an income tax, graded, and not imposed on small incomes where it would affect the living of any ordinary man, woman, or child. But these are abnormal times and we could perhaps hardly adhere to that principle, particularly in cases where large concerns have made abnormal profits out of the war.

Let me point out another inequality, and this, I know, will strike the Minister of Finance. We have one dry goods store here with a large capitalization, which is perhaps not taxed under this Bill; but the competitor of that concern, with a much smaller capitalization and not doing nearly the business, will have to pay twenty-five per cent of its excess profit over seven per cent. That is not fair; and there is no system of reasoning by which it can be argued that it is fair. A big concern which ordinarily buys cheaper and does a bigger trade and surely makes more money, will not, under this measure as it now stands, have to contribute a farthing under certain conditions; while its competitor, doing a smaller business, may have to contribute.

Then, take the manufacturing concerns. Under the Bill if passed, as proposed by the Minister of Finance, a boot and shoe concern, which I have in mind, will not contribute a farthing, while a competing boot and shoe company, a few blocks away, will pay, perhaps, $20,000. That is an inequality which the Government cannot afford to allow. I could go on citing instances, but I want to give a few concrete cases, and not at all with the view of criticising any company. I believe that every man in this country is willing to pay his share of taxation, but he wants to know that every other man, who is in a position to do so, will pay; and if the object of the Government is to have equality, they will have to change the Bill very radically.

Let me give a few instances. I think the figures I am about to cite are correct; they have been hurriedly got together, but I think they are approximately correct. Take the Canadian Pacific Railway Company, and I am told that they object to the taxation on other grounds which I do not know to be the case, but the Canadian Pacific Railway, under this measure will pay over $2,000,000, while the Canadian Northern Railway and the Grand Trunk Railway, competing transcontinental lines, will pay nothing. If we are going to take into consideration what institutions or industries make out of war profits, I think you will find that every one of those railway companies has made a little out of this war. There are three transcontinental railway companies; one of them will pay over $2,000,000, and the other two, competing lines, will pay nothing. The Minister of Finance rather gloried in the fact that the farmers were not going to be taxed. Let me just say this: that every dollar you put on the railways will have to be paid by the individuals who use the railways.

Mr. MEIGHEN: Out of the taxation of surplus profits?

Mr. GRAHAM: The railways are going to have surplus profits next year just as they have had this year, and my hon. friend the Solicitor General cannot get away with that kind of quibble. When railways contribute anything, they find a way of getting back at the man who uses the railways, just as any payment made out of any concern will add a little to the price of the goods of that concern, and the consumer will ultimately pay.

Mr. MEIGHEN: Then we should never tax the railways at all.

Mr. GRAHAM: You have not done it so far, but when you do tax them, you ought to tax them all; that is my argument.

Mr. MEIGHEN: That would be more out of the pockets of the people.

Mr. GRAHAM: Not at all; my hon. friend is not very well versed in how the railways manage their affairs. For example, the Toronto Street Railway has a capital of $12,000,000, and it will pay approximately $88,000; the Quebec Railway, with a capital of $10,000,000, will pay nothing under the Bill as it was outlined by the Minister of Finance in his speech. What I am arguing is, that my hon. friend will have to change his Bill, even if he has to let go a good deal of his speech. The Solicitor General seems to be at variance with the Minister of Finance, for he says the Bill is going to be all right. What I am anxious to do is to impress upon the Government the inequalities of their proposed taxation as I see them. There is plenty of time to change the Bill and to make the taxation as equitable as possible.

The Ogilvie Flour Mills, with a capital of $4,500,000, will pay $201,000, while the Dominion Flour Mills, with a capital of $1,000,000, will pay nothing. The Lake of the Woods Milling Company, with a capital of $3,600,000, will pay approximately $41,000; the Montreal Power Company, with a capital of $18,800,000, or a little over, will pay $320,000, while the Shawinigan Power Company, whose capital is $13,612,500, will pay $29,000. The Nova Scotia Steel Company, whose capitalization is $8,500,000, will pay $254,000, whereas the Dominion Steel Company, with a capital of $44,000,000, will pay nothing.

Mr. MEIGHEN: Do not be too sure.

Mr. GRAHAM: My hon. friend says: "Do not be too sure." If the Government should change the Bill, it will not be in accordance with the speech of the Minister of Finance, and what I am saying will have borne some fruit. The Dominion Textile Company, with a capital of $6,900,000, will pay $186,000, while the Montreal Cottons, whose capital is $6,000,000, will pay nothing. The Maple Leaf Milling Company, with a capital of $5,000,000, will pay $131,360, while the St. Lawrence Flour Company will pay nothing. The Laurentide Pulp and Paper Company, whose capital is $9,600,000, will pay $28,000, while Price Bros., capitalized at $5,000,000, will pay nothing. The Canadian Foundries, with a capital of $1,920,000, will pay $216,400, while the Canada Cement Company, whose capitalization is $24,000,000, will pay nothing. The Canadian Consolidated Rubber Company, with a capital of $4,785,500, will pay $193,000, while the Canada Locomotive Company, with a capital of $3,500,000, will pay nothing. The Dupuis Frères (dry goods) with a capital of about $100,000, will pay $30,000, while the Goodwins, Limited, whose capitalization is $3,000,000, will pay nothing. The Canada Sugar Refinery, with a capital of about $1,000,000, will pay $250,000, while the Atlantic Sugar Company, with a capital of $6,000,000, will pay nothing.

Sir THOMAS WHITE: Will my hon. friend allow me to correct him? His statements are quite inaccurate. I made the statement to the House that the Bill to be founded on this resolution will have a definition of the amount paid on capital stock which will prevent any undue advantage to overcapitalized companies.

Mr. GRAHAM: That is not what was outlined in my hon. friend's Budget speech, What he said was that the capital stock would govern. Common stock is paid up capital stock, and if the Government intend to introduce a clause in the Bill—

Sir THOMAS WHITE: It is in the Bill.

Mr. GRAHAM: I have not got the Bill; I am referring to what the Minister of Finance said in the House. Parliament can only discuss what the Minister of Finance gives it. He now tells us he is going to change the Bill. When a resolution is submitted to the House, it gives notice to the members that a Bill is to be introduced based on the principle of that resolution, and the statement of the Minister of Finance, and everything that has appeared in Hansard up to date, certainly gave us to understand that common stock would be called paid up capital, and would count.

Mr. MEIGHEN: The hon. gentleman was not in the House when the statement was made.

Mr. GRAHAM: I was, and I heard the statement.

Mr. MEIGHEN: Then my hon. friend is incorrect.

Mr. GRAHAM: I know what I am saying. I say again, that if the Minister of Finance proposes to bring in a Bill differing in this respect from what he stated in his speech, and differing from what is set forth in the resolution, I congratulate him on that great improvement. But he has no right to expect me to discuss something

which he has not submitted to the House. What I have before me is what he said in his speech. Here is what he said:

> We found it a practical impossibility to go behind the capitalization of companies,—

Sir THOMAS WHITE: Read on.

Mr. GRAHAM (reading):

> —and endeavour to ascertain the precise cash value of their assets as can be done in the case of individuals or partnerships.

Mr. PUGSLEY: They cannot do it.

Sir THOMAS WHITE: They do not propose to do it.

Mr. GRAHAM: If a Bill is to be introduced along the lines now suggested, it is because of something that has happened since the Minister of Finance delivered his Budget speech, and I am glad of it, because it will clear the air. There has been a good deal of dissatisfaction, and the change will make people pay, who according to the minister's original proposition would have got off scot free.

There is another clause to which my hon. friend will have to give some attention, and, perhaps, make some variation in, and that is the mining clause. I am not here with a brief for the miners at all, but every man who knows anything about mining, as some of our hon. friends from the West and from Northern Ontario do, knows that a mine is a terminable quantity and that the returns from that terminable quantity are supposed to be sufficiently great that when the source of wealth is exhausted the mine will have returned to the owner his capital as well as a profit on his investment. If the Minister of Finance is to adhere to that twenty-five per cent of what appear to be the profits from the mining industry you will see that this industry will not be able to carry out the implied contract with those who have invested in it.

Sir THOMAS WHITE: I would call my hon. friend's attention to the wording of the resolution:

> The profits shall be taken to be the net profits.

Net profits, not capital.

Mr. CARVELL: On what?

Sir THOMAS WHITE: My hon. friend (Mr. Graham) is speaking of mining companies. There are net profits of mining companies. The total output of the mine includes a portion of the capital, but it is possible to estimate properly the net profits of the mine.

Mr. GRAHAM: In the statements we get the profits are put down as so much. My hon. friend intends to introduce something into his Bill specifying what shall be the net profits?

Sir THOMAS WHITE: No.

Mr. GRAHAM: There would be a grievous injustice, but if the minister intends to work that out in any way, and it will not be too easy to work it out properly, my criticism as far as the mining industry is concerned will be withheld until I see the Bill, which he has and I have not.

Having dealt with that, let me speak for a few moments concerning the great question that is before us; that is the question of why we are asking for all this money, of why we are worrying as to various methods of taxation in order to produce the best results. I fear that what I am going to say will not meet with the concurrence of a good many of my own friends and of many who have perhaps given the subject as much attention as I. In the press of Canada and in the speeches of some public men, the United States has been criticised for not being more aggressive under the circumstances. Of course, it is none of our affair in a way what the United States may do as a country. As a neutral country they have a perfect right to take whatever action seems to them best, but speaking from the viewpoint of Canada, as I see it, the United States should not be condemned by any one in Canada for the attitude it has assumed. It is a terrible thing to plunge a great nation into war and there are so many conflicting interests, of which we in Canada possibly know nothing, or little, and so many contingencies that may arise did the United States declare war, or join with the Allies, that, I say, any man who carries the responsibility on his shoulders of the welfare of nearly 100,000,000 of people ought to hesitate long before he plunges that people into this great war. But, turning to the other side, as a Canadian, my view is that we would lose rather than gain if the United States should join the Allies as a combatant. What would happen? We are now getting large amounts of munitions and supplies from across the line. Suppose the United States entered actively into the war, the supply of war materials for the Allies would, in a large measure, be stopped because the United States would have to

begin at once and equip an army of her own. She has no army of any great strength that could leave her shores. With a population of nearly 100,000,000 to-day her army is comparatively small and it would take time to do what Canada has done—find, drill and equip an army before she would be ready to give us practical assistance in the field. While all this was being done all the great industries would be engaged preparing supplies for this army when it was ready to go to the front and the Allies, in my humble judgment, would be deprived of a great deal of aid under these circumstances that they are now getting.

We are prepared to do our share; we are all agreed on that. I think that one benefit that will come to the people of Canada out of this great struggle will be the fact that we will leave behind many of the recriminations which have characterized the attitude and utterances of some of us during years gone by. We find that everybody, no matter from what country his father came, is a Canadian through and through and ready to do his bit for the country in which he lives. The war has had a great levelling process in the old land. We, who, in this part of the Empire, in days past have looked with some slight degree of comtempt—perhaps that is too strong a word—on what we call aristocracy of England, are learning that the man of aristocratic descent is standing shoulder to shoulder, and side by side, with Tommy Aitkins in the trenches and doing his bit as well as the poorest man who comes from any part of the Empire. We are paying dearly for the lesson we are learning, but behind the dark clouds there must be a silver lining, and if each part of the Empire does its duty, as it will, the day cannot be far distant when out of this great struggle will come a clarified, a purified, a more thoroughly united people throughout the entire world, and in this great regeneration Canada herself will have done much and will enjoy the benefit thereof.

Mr. D. D. McKENZIE (North Cape Breton): Mr. Speaker, this question has been very ably and very exhaustively discussed, but there remain a few observations that I desire to make. The question in particular before us is the Budget. There is an old saying that:

> Hope springs eternal in the human breast:
> Man never is, but always to be, blest.

Last year when we were discussing the Budget we were hoping that before another year would pass a better condition of things would come about. The war cloud is still hanging over us, but we have made fine progress since last we discussed the Budget. We may not be able to put our fingers on the particular advances we have made, but we feel that we are in a much better position to face the enemy to-day than we were a year ago. We have measured up our own strength, we have mustered our forces, and we have found what we really could do, and what men, money, and munitions we can put behind the mother country in this desperate struggle. That, Sir, is a great advancement. A year ago we were not the organized body that we are to-day. The great Empire to which we belong had not then found the strength of its various parts, or consolidated its resources. But we have now found the range, we understand the boxing methods of our enemy, and it is only a matter of time and of opportunity until the British Empire and the British people shall give that enemy the upper-cut on the jaw that will put him asleep, and perhaps a little sooner than the Hun expects. We have cleared the seas of the piratical Hun. We are proud to say that on this occasion, as of yore, Britannia rules the waves, and shall continue to do so. Our people have their feet firmly planted on the ground. We have known the worst and have provided for it. We are better organized than when we commenced the war, and we shall continue until final victory perches on the banner of the Allies. Life is the dearest possession of man, but none too dear to be sacrificed on the altar of freedom, security, fidelity, and truth. That, Sir, has been abundantly proven by the Canadian people in their sacrifice of the best lives of the land, and in their sacrifice of money, which is as nothing compared with the sacrifice of the flower of our people. It is not necessary for me to spend any time in going over what has been so well said by many speakers in regard to the stand the Canadian people have taken in this war. In my observations on the Budget last year I made reference to what was expected of us by the King, and to what the King himself had declared to be the expectations that he had from the overseas dominions. His Royal Highness the Governor General also declared to us what was expected of the Canadian people, and we are proud to have more than measured up to the highest expectations announced in any of those despatches. Although I cannot entirely approve of the

methods of the Finance Minister and the Government, I am to some extent pleased at the success that has attended their efforts in providing the sinews of war for the contest in which we are engaged.

The Budget is the real subject with which we have to deal on this occasion, and perhaps it would be well from my standpoint, as an Opposition member, if I briefly reviewed the financial conditions of the country for a short period before this Government came into power, and very hurriedly from that time down. When Sir Wilfrid Laurier took charge of the affairs of this country some years ago, the country was in a very bad financial position, but by his excellent administration, by placing the affairs of the country in the hands of men who understood such matters, men who would exercise economy, and who foresaw the development this country might attain without extravagant use of the means that had been placed at their disposal by the people of this country, Canada was brought into a first-class condition financially. In 1911, when the present Government came into office, the Finance Minister must admit, and did admit, that he found the financial condition of this country to be first-class; he found every obligation fully met and satisfactorily squared up. He found the books balanced, and $40,000,000 of cash available at his hand. The credit of the country was excellent, no bills were falling due, and there was nothing to disturb the equanimity of the Minister of Finance. This happy portion was left to him by the Hon. Mr. Fielding, who, for the fifteen years before, had so wisely conducted the finances of the nation. During the very first session after the change of Government, I observed during the course of some remarks in the House that the country had been placed in such a sound position by the wise and capable administration of the outgoing Government, that I hoped it would never again be found in the position it was in some fifteen years before. But I reckoned without my host; I reckoned without having proper knowledge of the spending capacity of the hon. gentlemen who took charge of the administration of this country at that time. I had not counted upon the thousands of hungry hordes that were waiting at the doors, anxious to get their forelegs and whole head into the political trough, and into the treasury of this country. I had not calculated upon the purposes for which the present minister was put at the head of affairs. If rumor be true, he was put there to provide for a certain class. He was but one of a number of gentlemen who were returned to power by a certain class who were masters of the situation then, masters of the Government then, and who are masters of the Government to-day. In listening to these masters, in giving to Manitoba four or five million dollars to which they had no right; in giving to the Canadian Northern Railway something like sixteen million dollars to which they had no claim; in ladling out dollars by the sixteen millions and twenty millions; it took the Finance Minister but a day, comparatively speaking, to get rid of the $40,000,000 that he found in the treasury. As the old saying is, soon he had not a penny to bless himself with.

Mr. PUGSLEY: And he laughs over it.

Mr. McKENZIE: That is the pace at which hon. gentlemen opposite got back to the old stress and storm, to the old condition of things, with not a dollar in the treasury and with the faces being ground off the people by high taxes. That was the position in which the Tory party found themselves, that was the true condition of the Tory party. I suppose that the Finance Minister, having been taken into the Tory family, felt that he must be even worse than the old Tories themselves in order to show that the proselyte was fully converted.

There are only certain conditions of financial circumstances in this country under which our Tory friends know how to rule, and the story which I was going to tell, and which I think I told some time ago, was about a doctor who went one day to see a patient, and discovered that that patient was in a very high fever. The doctor could not make out what really was wrong, and he asked the people of the house to prepare a tub of ice cold water. They got the tub of ice cold water, but when they saw that the doctor was going to take the patient and plunge him into the tub, they tried to prevent him, saying: "That will be the death of him." "Oh, no," said the doctor, "it won't; I cannot make out what is the matter with him now, but I will put him into this tub, and I venture to say that in a few minutes he will develop fits, and I am the devil on fits." The hon. gentleman who, with great credit to himself, now fills the position of Minister of Finance, never really got his bearings until the country was in the old Tory condition of affairs, and then he said: "I see the smoke; I see the points; I know where

I am." With those conditions he started out, and I must say that things have not been much better since he found his bearings, because it was impossible for them to be so.

Last year the Minister of Finance told us that the ordinary and capital expenditure of the country would be $140,000,000, and the war expenditure $50,000,000, a total of $190,000,000, and we had a revenue of $130,000,000, leaving a deficit of $60,000,000. That was the condition in which we found ourselves on the 31st of March, 1915. For the current year, the minister tells us that he is going to get $170,000,000 out of the people. Let me remind hon. members that, in the old days when the Liberals were in power, and when the gentleman who is now Minister of Trade and Commerce (Sir George Foster) was the financial critic of his party, he used to sit up at night and bewail the conditions of this country on account of the fact that we were collecting from the people from seventy to seventy-five million dollars. Now, Sir, this same gentleman sits back and cheers, as an extraordinary feat of statesmanship, this squeezing out of the same people of $170,000,000, or more than twice the amount that the Liberal Government was collecting. It is another illustration of the "ins and the outs." Of course, the Minister of Trade and Commerce and his friends are now in, and it is perfectly right and proper, in his opinion, that the faces should be ground off the people for $170,000,000, when his heart was bleeding at the thought of $70,000,000 being taken from them in other years. The same cry was abroad when we were spending $87,000,000. The right hon. gentleman who is now the leader of the Government used then to say with emphasis that there was no further nor better evidence required of the extraordinary and unjustifiable extravagance of the late Government than that we were spending eighty-seven or eighty-eight million dollars in keeping up the affairs of this country. Since then there has been a different tune and a different fiddler, and a first class fiddler for doubling and trebling the expenditure over what it was when we had the reins of power. If the Prime Minister, who was then leader of the Opposition, was sincere and honest in saying that an expenditure of eighty-seven or eighty-eight million dollars was conclusive evidence of dishonesty and extravagance, what does he say as to the condition of things that prevails to-day in the Government over which he presides? When we find expenditures of $125,000,000 and $140,000,000 and $145,000,000 within a few years after this Government came into power, with nothing to show for them except the feeding to a great extent of that class of people of whom I spoke before, who have become the camp followers of this unfortunate Administration.

The minister told us last year that in his taxation he expected to provide for $150,000,000. That, of course, was a guess, and I suppose a minister can do no more than guess under such circumstances. However, when he went to collect the tax from the people he made a fortunate guess to the extent of $20,000,000, which he collected over and above what he had said was necessary. Now, his friends who sit behind him applaud that as a most marvellous feat of statesmanship. In order to get this $170,000,000 that he is collecting for this year the minister had to impose an extraordinary amount of taxation: he had to levy upon the people an extra duty of seven and a half per cent upon all kinds of goods and commodities that came in free last year, or that were subject to a duty ranging from twenty-five to thirty-five per cent, and an extra duty of five per cent on goods that came in under the preferential tariff. This is not a light matter to the poorer classes in this country; it bears heavily upon the working classes with small wages, large families, and many requirements, with everything to be bought from the pay received weekly or fortnightly as the case may be. When the minister takes thirty or forty per cent out of the pay envelope of the workingman he is placing that man in a very awkward position.

The minister was not satisfied with all this taxation, and this year he has come down with further taxation. He comes down with a tax on apples and a tax on oil. Apples are the luxury of the poor man; oil is the light of the poor man. And now the minister—I suppose unthinkingly, as he has not the experience to make him aware of the difficulties of the poor man's lot—comes down with a policy of added taxation on apples and oil. In other words, he strikes the apple out of the baby's hand and sends him to bed in the dark. But the hon. minister has indicated that he has experienced some change of heart, and I hope that he will decide to give back the apple to the baby and to re-light the lamp that lights him to bed.

I said a moment ago, and I say it again

with regret, that this Government seems to be to a great extent controlled by the big interests. It was the theory of the National Policy that it would conserve for our own people the trade of this country and that local competition would keep down prices. That was the view expressed by Sir John Macdonald, Sir Leonard Tilley, Sir Charles Tupper and others who agitated for the adoption of the National Policy. They used to say: It is true we put a duty of 30 per cent on boots and shoes, but boots and shoes will be no dearer because the competition within our own borders will prevent an advance in prices. That is a plausible presentation of the case, and the people accepted it, and so the National Policy was adopted. But in those early days we had no knowledge of mergers and combines; these things have developed since that time. But they are with us to-day—the flour trust, the beef trust, the pork trust, the grain trust, the shoe trust—everything is a trust, and with it all we have a trust Government. What is the good of talking of local competition? The people in these industries get together and say: let us not fight each other, but let us combine and we can fleece the poor man. And I was sorry to hear the Minister of Finance the other day, when metaphorically speaking, he threw off his coat and rolled up his sleeves in defence of the millers—the poor millers of this country who are making only fifty or sixty per cent on their capital. The minister feels that he must stand behind these poor orphans, lest something should be done to cheapen flour in this country. But he had nothing to say for the poor man. In the part of the country that I come from the labouring man earns from $1.45 to $1.75 a day, and he has to pay $7 to $7.50 a barrel for his flour. On the other hand, the farmer in the West says that he gets hardly anything for his wheat; wheat is so cheap out there that they let it rot on the ground, for they think it not worth while to carry it to the mill. We have 370,000,000 bushels of wheat in this country this year. There are 8,000,000 people to feed. We have plenty of cheap power to grind the wheat. Will anybody tell me that it is reasonable that the people of the Maritime Provinces, under these conditions, should pay $7.50 for a barrel of flour? Yet the other day, when the Minister of Finance was asked by an hon. member on this side how it was that the price of flour had gone so high, the answer of the Minister of Finance was: "Three years ago we appointed a commission to inquire into such matters, and we expect that in a short time they will bring down their report." And he might have added: "That report will consist of two or three volumes, and if you want to find your needle in that hay stack, you are welcome to search for it." Is it not most extraordinary that, when such a question is asked, such a reply should be given? I would not have believed it, had not I heard it myself. We have a Government, one of whose members is Minister of Labour, with a large staff, part of whose duties should be to collect such information as this. We have a Minister of Trade and Commerce, with a great Department of Trade and Commerce that might well be engaged in considering matters of this kind. Yet the Minister of Finance, who should be the reservoir of all such information, and ready at any time to give it to the House and to the country, was not able to tell us why the poor man's flour has jumped from $4.50 a few years ago to $7.50 to-day. The minister could not answer a plain question, but he could declare his determination to protect the millers' trust regardless of what became of the poor man. I trust this condition of affairs will not continue, but that such conditions may be established that when we have an abundance of wheat, or an abundance of any other great staple commodity, the Government will see to it that that commodity gets into the poor man's house at an honest price. I am proud to say that in the province of Nova Scotia, from which I come, though we do not raise a great deal of wheat, our provincial government is endeavouring to meet this problem of the high price of flour. We have two mills built by the provincial government and we will take the wheat from Manitoba and grind it in these government mills, and so will create a competition which will keep prices at a reasonable level. That is what we are doing in Nova Scotia, where we have not the grain that they have in the West, and where we have not the money and the facilities controlled by this Government. I hope that the time will come when the Minister of Finance and the Minister of Trade and Commerce will throw off the shackles with which they are bound and will tell these trusts that they must do an honest business; tell them that, in a country where wheat is abundant and power is cheap, we must have cheap flour.

We have heard a great deal about the

immigration that is to be expected. We hope that, whereas we have room for one hundred million people in this country and have only eight million, the day is not far distant when we shall have a large influx of people into this country who will develop it more and more, in proportion to our means of providing for them. If there is one thing that more than another will make it easy for us to get good people into this country, it is to show that this is a good country in which to live, that this is a good moral country, that it is a country in which children may be brought up in the fear and admonition of the Lord, in which there is a good system of education, absolute freedom for every man to bring up his children in whatsoever religion and form of education he wants, and that they will be taught their own language if they want to be without any question or any trouble; that we have abundance of everything necessary for the sustenance of life; that we have no combines and no trusts that can control the necessaries of life and make it hard for the people to live comfortably, and that our Government does not permit or encourage anything in the nature of combines. But when you tell the poor man in England that a barrel of flour will cost him fifty cents or sixty cents more in Canada than in London, that is not an argument to induce him to come to this country. I am earnest in pointing out that the best immigrant agency for Canada would be to make Canada a good, comfortable country in which to live, to make the dollar go further than it is going to-day, and to show the poor people that with such wages as they can get they and their families can live in comfort and happiness. I have pointed out that the monied interests of this country have more power and more concessions than they should have, and possibly I need not further enlarge upon that point. I am proud that we provided for the war in 1914 $50,000,000, and last year $100,000,000; and that this year we will provide $250,000,000 without any hesitation. That is, we have now provided about $400,000,000 for the purposes of the war; and I am sure the Canadian people will support any Government in furnishing that money. The regrettable feature is that after this money has been furnished a certain laxity appears to have been permitted to crawl into the administration of the affairs of this Government, so that much of the money does not find its way to the proper spot. We are voting this money for the purpose of buying guns and munitions and making our soldiers comfortable; in fact of doing everything necessary in order to convert the raw recruit into a first-class soldier and send him to the front to fight with our friends in Europe. It is regrettable to find what a very large percentage of this money has found its way into the pockets of profiteering leeches who have got into the good graces of this Government, which we on this side have no means of preventing. It cannot be denied; it is happening every day. So this money is not producing the fruit it should if properly handled. The minister has the responsibility of collecting this money; let me urge him to see that it is properly expended and expended in such a way that it will bring forth good fruit. This money should be expended with the greatest possible scrupulosity, yet men are permitted to come into this field, where this $400,000,000 is, with no other shibboleth or passport being required than the recommendation of some Borden club or other Tory club in any part of the country. I hope that what has occurred in our political life in the past is sufficient to impress on us that henceforth better conditions must prevail in this country? I am sure that the Minister of Finance would like to see all of this business done in a better way, but he does not seem to have any control over certain factions of the Government of which he is a member.

I was astonished, on re-reading the speech of the Minister of Finance, to see the reasoning by which he supported his claim that we have a surplus of $45,000,000 this year. He says that we collected $170,000,000 of money, that our ordinary expenditure was only $125,000,000, and that therefore we have a surplus of $45,000,000. When the minister started to collect this $170,000,000 what did he say? He said: This is war taxes, we are getting this money on postage, on patent medicines and from the banks; every cent of this extra money we are getting as war taxes and this money is for the war, you are paying it for the war. If you ask any Tory newspaper editor in my part of the country why Sir Thomas White went over to these horrible Yankees for $45,000,000, he will say he went there on account of the war. Everything you criticise, from Dan to Beersheba, it is nothing but the war. But what does the minister himself tell us about the $45,000,000 he got from the Yankees? He says he paid some of it to strengthen the premier of Nova Scotia in the county of Halifax and some of it out in the frozen regions of the northern ocean in connection with the

Hudson Bay Railway, and some other works which he would not mention. Not a dollar of it went to the war. That $45,000,000 and the $100,000,000 collected from the Canadian people by the recent loan, was collected, not for the purpose of the war, but for other purposes. Of the loan, one-half went, correctly enough, to pay a part of our obligations to the Mother Country. I care not what the minister may call it, but we are certainly under a huge debt to the Mother Country for expenditures in connection with this war; and if $50,000,000 of the $100,000,000 borrowed from the Canadian people last year went to the credit of the Mother Country, it is not a gift, it is not given as an accommodation to them; we owe them at least five times that much money and we are only paying back a part of our debt. When the minister tells us that we have a surplus of $45,000,000, it is certainly wide of the mark, we have nothing of the kind. How does the account stand? He tells us himself that we paid $158,000,000 on war account apart from this $50,000,000. We are paying $208,000,000 in connection with the war, and we have a capital and ordinary expenditure of $125,000,000, making a total of $333,000,000. Against that we have the $170,000,000 which we collect, leaving a deficit of $163,000,000. What is the good of juggling with figures and telling the people of this country that there is a surplus of $45,000,000 when, as a matter of fact, taking all expenditures into consideration, there is a shortage of $163,000,000. That is the position in which we stand to-day, and it is a position which was well known to the Minister of Finance when he told this House that we had a surplus of $45,000,000.

I do not wish to encroach upon the good nature of the House in dealing with this subject. The hon. member for South Renfrew (Mr. Graham) has dealt with the new taxation proposals in such an effective manner that I do not propose to waste further time upon them. I am afraid the Minister of Finance will find that the machinery he will have to provide for collecting those taxes will eat up the whole of the money and there will be nothing left. I am afraid, also, that it will afford the Government another field for displaying their great aptitude for increasing the Civil Service of this country. When they came into office they increased the Civil Service by 12,000 men, which meant an addition of $12,000,000 to the expenditures of this country. Now it would appear that another field has been opened to the party heeler, and that another bright day is about to dawn for him, when perhaps 12,000 more civil servants, at an expenditure of $12,000,000, will be found by the Minister of Finance. I venture to say that the minister will have to shell out in connection with this new collection of taxes, and, if so, there will be very little left. I fear, indeed, that he will have nothing left, and that he will create another institution like the post office, that will be prolific in producing deficits and in squandering the money of the people.

My hon. friend the Minister of Finance is also going to create new courts. He is going to create a board of arbitration. He is going to furnish machinery by which there will be no end of law suits in the Exchequer Court. I can see here another field opening up to barristers from the Atlantic to the Pacific who will be at the heels of the minister looking for positions. I believe that the officers of the Department of Justice would do this work if they were asked, but they will not be allowed to do it. It would not do to scatter the patronage or pelf among the officers of the department. It must be peddled out to barristers from the Atlantic to the Pacific who will do nothing for it. We had an illustration the other night of what had been done and will be done, in connection with the Justice Department. We had a shocking condition of things revealed. We have a first-class Minister of Justice, a Deputy Minister who is second to none as a lawyer, a first-class Solicitor General, and seven or eight lawyers in the Department of Justice; and yet we had the extraordinary and sorrowful spectacle here the other night of the Minister of Justice explaining that he had had to send to Halifax or to Montreal to get three lawyers to draft some little Bill that had to be submitted to this House.

Mr. CARVELL: What did that cost?

Mr. McKENZIE: Something over $5,000. Of course it would have been beneath the dignity of the Minister of Justice to do anything of that kind, and the Deputy Minister is not supposed to interfere in matters of patronage, while perhaps it did not come within the purview of the seven or eight lawyers in the department. As for the Solicitor General, he was quite prepared to spend fortnights and months in framing legislation to shut our mouths in this House by means of the closure, but he had

no time or inclination to draft a few lines of a Bill a few months ago.

I would like to make some reference to some of the speeches delivered in this debate. There was a very wild and enthusiastic—I would almost say sarcastic speech this afternoon from the hon. member for Annapolis (Mr. Davidson). I do not propose to pay very much attention to it. It reminded me of the story of the old Scotchman who was sitting by the side of the house on a fine sunny afternoon. His wife, who was a small woman, was most unmercifully beating him about the head and face with her hands. Somebody said: "Why do you allow that little woman to throw you about in that way?" and he replied: "Oh, well, it pleases her and it doesn't hurt me." If the delivery of such speeches as that pleases the hon. member for Annapolis it does not hurt us in the slightest degree. He spoke about giving us a portion of his mind in his own speech. These are things with regard to which he ought to be careful and conservative. Nature did not give him a measure pressed down and running over of that excellent commodity and if he has yet any of it and does not desire to part with it I would ask him to put it in his wife's name so that it may not escape him. So far as we are concerned on this side of the House, we will try to get along without robbing him any further of that commodity.

I must give some attention to the very excellent speech that was delivered here a few evenings ago by the hon. Minister of Trade and Commerce (Sir George Foster). That speech was taken seriously evidently by some of the newspapers of the country. I find an editorial reference to it by a newspaper known as the morning Citizen, of this town, a paper which seems to be well edited, and is held in very great respect in this community. I have not the honour of being acquainted with the editor, but I presume, from his excellent editorials, that he is a man of education, strong commonsense, and good moral qualities. He was moved to say in the Citizen of February 22:

> Looking Facts in the Face.
>
> Sir George Foster's splendidly patriotic address of Thursday night last in the House of Commons will probably remain the outstanding feature of the present session, as it deserves to rank. The address of the Minister of Trade and Commerce serves to remind Canadians that the present Administration contains at least one really great man—great in the sense that he can divest himself of the habiliments of partyism—

Think of it; this gentleman is going to cut himself out from the habiliments of his party.

> —whenever occasion offers and that he possesses the courage of his convictions. It takes political fiber of a quality above the ordinary nowadays to take the attitude which Sir George Foster is apparently ready and willing to assume when called upon.

That is the impression which the Citizen formed of his speech. Now, the Minister of Trade and Commerce said himself, and we will take his own words for it as quoted in this paper:

> I have been for thirty-four years in public life. I have been a pretty close student of administrations and I cannot point to a single instance in which patronage has helped the status of the bench, the status of the civil service or the public administration or has helped a member of Parliament in reality or a government in reality, but almost always brings the dry rot which breaks up a government. I would wish that in the white heat of this struggle we could speak from the heart and make an agreement between the parties that patronage should have no influence in regard to our public works. If there is any laxity in the public virtue of this country to-day, in 99 cases out of one hundred you can trace it to the baleful effects of political party feeling.

There are other parts of the same speech quoted here, but what I want to refer to is this dry rot which the minister has discovered. It may be remembered that a few years ago he made other discoveries in connection with the election of the hon. member for South Renfrew (Mr. Graham), and I will have occasion to refer to that a little further on.

The speech of the Minister of Trade and Commerce deserves more than ordinary attention. The occasion of the conversion and confession of the hon. gentleman should be held as a red letter day in the life and history of the Tory party in Canada. The Minister of Trade and Commerce spoke with the zeal and ardour of Saul of Tarsus after he had been transformed into the new man and had entered upon the new life of Paul the Apostle. It was clear that he was convinced of the iniquity of the practices of his party and of the immediate necessity of the complete abandonment of the life and course of political depravity and corruption, blindly pursued by his party ever since they could distinguish between the right and the left, and that henceforth, whatever others might do for him and his House, he would aspire to higher and better things and, having put his hand to the plough, he would never look back to the Lot possessions of his former days and associations. It is clear that the spirit

of confession and the spirit of penitence were upon him. It is to be hoped that the spirit of perseverence to the end will crown a glorious finality to this notable conversion. As this conversion, at least the confession of it, followed immediately after the able address of the hon. junior member for Halifax, (Mr. A. K. Maclean), he must share some of the honours of this notable incident, and be regarded as the sower who went forth to sow. In this connection we cannot forget the experience and fortunes of a sower of other and more ancient days. The experience of the ancient sower was that some seeds fell by the wayside and the birds picked them up. I could not help fearing a like result the other night as I noticed such birds of ill omen as the hon. Minister of Customs (Mr. Reid), the hon. Minister of Public Works (Mr. Rogers), and the hon. Minister of Marine, Fisheries and Naval Affairs (Mr. Hazen), hovering around the head of the earnest and unsuspecting convert. Let us hope, however, that he may break away alive and well from his threatening environment and bring forth fruit meet for repentance.

What are some of the fruits that will be looked for by the Canadian people? First, the Conservative party in which the Minister of Trade and Commerce is such a leading and important factor must be purged of the concubinage of the Nationalist alliance; second, the development of a clean, sound, free public opinion and the expression of it at the ballot box immune from the blasting and damnable influence of the money bags. If the hon. the Minister of Trade and Commerce will accomplish these reforms of and for his party he shall have conferred upon them and his country a boon greater than anything that "science can devise or money can buy." But here let me quote and adopt the language of the immortal Burns:

> I backward cast my eyes on prospects drear,
> And forward, though I cannot see, I guess and fear.

For we heard some such speeches from the hon. gentleman more than once on former occasions and no corresponding reform, or any reform at all, in the Government to which he then and now belongs. But the hon. gentleman is wise and experienced enough to know that he cannot fool the people all the time and that he has now reached the stage where he must do one of two things—show some fruits of his reform in the life and conduct of the Government of which he is so prominent a factor, or come out from among them and separate himself from them and have no further part or lot with the evil works of darkness. Some years ago he feared the inoculation of poison into the veins of the Government and he stated that the electing of the honourable member for South Renfrew would be in fact the absorption into the life blood of the Government of that malignant and deadly element and now he has discovered this condition of the political constitution of the Government has developed into a dry rot permeating the whole fabric with no possible results but annihilation and death. The change of heart of the honourable gentleman in face of the facts as stated by himself cannot but remind us of the belated conversion of the covetous prophet of old who, for filthy lucre, attempted to curse the chosen people of God, and discovering his failure and moral collapse, called out: "Let me die the death of the righteous and let my latter end be like unto theirs." I said at the beginning that Saul of Tarsus had become Paul the Apostle, and indeed the great Paul and Sir George Foster (the Minister of Trade and Commerce) have many points in common, although differing in sufficient particulars to make them easily distinguishable. Paul was a citizen of no mean city, and in that he has nothing on the Hon. Sir George—as Toronto the Good, the Athens of America, bears more than favourable comparison with the metropolitan home of the aged philosopher, author and preacher of other days. Paul tells us that he was a Pharisee of the Pharisees, and in that role let me emphasize that he will find in the hon. Minister of Trade and Commerce a foeman worthy of his steel. Paul says that he was a Hebrew of the Hebrews. Well, if my hon. friend is not a Hebrew, his attainment would justify the presumption, and if a love of the good things of this world characterizes the Hebrew—tell it not in Gath, but it was hinted that the hon. minister was not averse to the accumulation of wealth, impatient of the slow, glacial progress of honest poverty. Paul was a clear-cut, incisive logician, diplomat and scholar; in all those most excellent talents he breaks but even with the hon. Minister of Trade and Commerce. But, with all his excellences, Paul had his moments of weakness, and by actual confession we have it that the hon. minister himself is subject to like infirmities. Paul expresses an overwhelming desire to be "freed from

the body of this death." The hon. Minister of Trade and Commerce expresses a longing desire to be liberated from a body that bears in its members the disintegrating influences of slow poison and malignant dry rot. Paul tells us that he had to fight with wild beasts at Ephesus, and that he encountered a spiritual wickedness among principalities and powers; in all this, Paul had but light affliction, indeed, compared with the experiences of the minister, for has not the minister attended meetings of the Borden Cabinet, when one-half of that noble band were dismantling and scuttling the Canadian Navy, rending and punching the British flag, and the other half exchanging compliments, not of the Sunday-school brand, about Manitoba graft, unclean political records, glue-pot military horses, boots and binoculars. Amid scenes like these it seems I hear the Minister of Trade and Commerce cynically soliloquizing:

> How beautiful a thing it is,
> And how becoming well,
> Together such as brethren are
> In unity to dwell.

Paul and Sir George, the hon. Minister of Trade and Commerce, had other mutual experiences, though of perhaps less note. Paul tells us, in penitential mien and tones of self-condemnation, that he was present at the death of St. Stephen and that he held the clothes of the rioters. The Hon. Sir George, Minister of Trade and Commerce, "from his nest beneath the rafters," viewed with calm complacency and approval the slow torture and ultimate decapitation of that venerable nestor of the Tory party, Hon. Sir Mackenzie Bowell. I shall not follow the comparison any further, and hope that the common good in the contrasted characters will deserve and enjoy common rest and felicity "where the wicked cease from troubling and the weary are at rest."

Those are the observations I have to make on the Budget.

On motion of Mr. J. J. Hughes, the debate was adjourned.

On motion of Sir Thomas White, the House adjourned at 10.40 p.m.

Friday, February 25, 1916.

The House met at Three o'clock, the Speaker in the Chair.

MESSAGE FROM THE GOVERNOR GENERAL.

ACKNOWLEDGEMENT OF ADDRESS.

Mr. SPEAKER announced that he had received a message from His Royal Highness the Governor General. The message was read to the House as follows:

Arthur.

Gentlemen of the House of Commons:

I have received with great pleasure the Address that you have voted in reply to my Speech at the opening of Parliament and thank you for it sincerely.

THE MINISTER OF MILITIA.

On the Orders of the Day:

Mr. PROULX: I have been informed that the Minister of Militia contemplates leaving for Europe in a few days. If so, his reason for going must be very important. Has the minister any objection to letting the House and the country know the reason of this proposed trip, as his presence is very much needed in this country now?

Sir SAM HUGHES: I shall be delighted to give the House and the country all the information with regard to my movements to which they are entitled.

WOODMEN'S REGIMENT.

On the Orders of the Day:

Mr. KNOWLES: Can the Minister of Militia give us any information as to the proposed woodmen's regiment?

Sir SAM HUGHES: This regiment is being organized for the purpose of cutting timber, and is being recruited from among lumbermen in Canada, who are very familiar with the cutting of timber into various lengths and sizes. The freight on timber from North America and other parts to Europe is practically prohibitive now; vessels cannot be obtained to carry it. Timber is being cut in Europe, and these men are going over to cut it.

Mr. KNOWLES: Are the announced officers official?

Sir SAM HUGHES: I have picked out the commanding officer, Colonel Alexander McDougall. I am afraid he is a Liberal, but it is one of my peccadillos—I have a knack of picking these fellows—

Mr. E. M. MACDONALD: Good men.

Sir SAM HUGHES: Fine men; no trouble about that. Mr. McDougall is a very fine officer. I understand he has selected two

very distinguished members of this House as his seconds in command. He has not yet submitted a list of his officers.

IMMIGRANT WIDOWS AND CHILDREN.

On the Orders of the Day:

Mr. MURPHY: On Monday last I made an inquiry with reference to a cable despatch to the effect that Commissioner Lamb of the Salvation Army was coming to Canada for the purpose of settling 15,000 dependent widows and children in this country. The Prime Minister then said he had not heard of the matter, and I sent the despatch over to him. By this morning's Citizen I see that Commissioner Lamb has given an interview at Montreal and practically confirms the statement.

Sir THOMAS WHITE: I shall be glad to bring my hon. friend's renewal of the question to the attention of the Prime Minister.

THE FIGHTING IN FRANCE.

On the Orders of the Day:

Mr. E. M. MACDONALD: In view of the reports in the press as to the battle that is now raging in France, I would like to ask the Minister of Militia whether any of the Canadian troops are engaged, or whether the fight has extended to the quarter where they are stationed. Has he any information on the subject?

Sir SAM HUGHES: The fight that is now going on is north and east of Verdun, a very strongly fortified position, perhaps the most strongly fortified position in Europe, except Metz. The latest news is that the French have completely smashed the first attack of the Germans, and that the troops now coming on are reserves, and practically raw recruits. They appear to be hurrying them on in masses, but the French have held a very strong position. In two places, the first line trenches have been broken, but the second line trenches are absolutely intact, and all the accounts agree that there is no danger. The fighting is in the vicinity of the Meuse along a front of about 20 miles, and the Canadian lines are a long distance from that; I need not mention where they are. There have been no infantry attacks on the Canadian lines, but the artillery firing is very heavy. Two generals have been wounded. Brigadier General Macdonell of Winnipeg was wounded rather seriously by shrapnel in the shoulder and in the side, and Brigadier General Leckie of British Columbia was shot in the thigh. These casualties are supposed to have taken place in the rear of the Canadian position, but they are chances that our men are taking every day. The casualty list is not very heavy. I get a return every night, and there are five killed and eight wounded in last night's list. These are heavy enough, of course, but not serious. The artillery firing, as I have said, is very heavy on our line, and our fellows are giving it back to the enemy in their own coin.

NEW RICHMOND WEST POST OFFICE.

On the Orders of the day:

Mr. MARCIL: I would like to call the attention of the Postmaster General to the post office at New Richmond West, in my constituency, which has lately been closed owing to the introduction of a rural mail service. This post office has been in existence for sixty years, and near to it is a school attended by 100 children. The institution of the rural mail service does not seem to have been accepted by all the people interested, and I have received copies of a petition, which I understand has also been sent to the minister, signed by a large number of people in that locality. The introduction of the rural mail service has had the effect of depriving those people of the outgoing mail on the same day as they receive the incoming mail—the trains meet at New Richmond—so that the rural mail service is not an improvement in that locality. I will send the minister the letters if he cares to see them, and in view of the facts I have stated, perhaps he might look into the matter and see if the old post office, which has been in existence for over sixty years, could not be re-established.

Mr. CASGRAIN: I would like the hon. gentleman to send me the papers he has. I may say that the matter is under consideration now.

THE BUDGET.

Consideration of the proposed motion of Sir Thomas White (Minister of Finance) for the Committee of Ways and Means, resumed from Thursday, February 24.

Mr. J. J. HUGHES (Kings, P.E.I.): Mr. Speaker, this is the first time that I have formally addressed the House since you were appointed Speaker, and I wish to associate myself with the other members of this House who have offered you their felicitations on your elevation to that high and honourable position. The other day I had

the privilege of listening to the Budget speech delivered by the hon. Minister of Finance, and also the advantage of reading it afterwards in Hansard, and in my judgment the speech was concise, well arranged, and well delivered. But I thought I detected running through it a note of self-adulation because the hon. minister was not as extravagant in his expenditures this year as he was last year; and he seemed to take considerable satisfaction from that fact. There will be expended on ordinary account, or on consolidated fund account, some $10,000,000 less this current year, ending on 31st March next, than on the same account last year. But the hon. minister omitted to say that, on the same account last year, he expended some $48,000,000 more than was expended in 1911, and some $56,000,000 more than was expended in 1910.

The hon. minister compared himself with himself, but I wish to compare him with his predecessor; the hon. minister will not object to that comparison. When the expenditures, to which I have referred, took place in 1910-11, the revenues were abundant, and increasing rapidly. We were at peace with the world, and we did not have to consider anything beyond the development of this country, and beyond providing money for its development. At the present time, as we all know, we are engaged in a terrible crisis, in a world-wide war with a strong, powerful, and relentless enemy, and our resources are being taxed to their utmost. This is a time for economy in every branch of the public service; everybody has to practise economy except the Government. During this time of stress and trial the Minister of Finance, and some of his supporters seem to derive considerable satisfaction from the fact that he is expending even in this year from $35,000,000 to $38,000,000 more than was expended on ordinary account during the last year of the late Administration.

Coming to next year, the year ending March 31, 1917, the hon. Minister of Finance told us that the expenditure on ordinary account would be $135,000,000. I am taking into account the portion that can properly be charged to the war, because it is only fair to take that into account; but allowing for the $20,000,000 that he estimated he would have to pay in interest on account of war loans, and for the $2,000,000 for the pension fund, he would still be expending between $25,000,000 and $30,000,000 beyond what was expended in 1911. Is there any reason for this? Have public affairs been carried on better; has public business been better attended to; have the needs of the country been better looked after this year? Hardly any man will venture to answer yes to these questions. I have referred to the statement made in the Budget speech, but in the Estimates presented to the House, the hon. Minister of Finance, and the Government, are asking for some $30,000,000 more.

He is asking for $158,000,000 on Consolidated Fund Account. He has made the statement to the House that they did not intend to expend between $20,000,000 and $30,000,000 of that money. It appears to me to be a very strange thing indeed for the Government to prepare Estimates and submit them to Parliament when they do not intend to spend the money that they ask for. I do not know whether that is constitutional or not. It seems to me to be trifling with Parliament. There are only two reasons that suggest themselves to me why the Government should pursue that course. The first is that the Minister of Finance has lost control of his colleagues at the head of the large spending departments, if he ever had control, and he is obliged to come to Parliament and say that the Government intend to expend between $23,000,000 and $30,000,000 less than the Estimates in order to protect himself from his colleagues. The hon. Minister of Trade and Commerce (Sir George Foster) made a speech here the other night in which he advocated economy and declared that the time had arrived when everybody should practise that virtue. He further stated that he did not know whether he should speak along that line or not but he thought his grey beard and thirty-four years' experience gave him the right to speak in that way. I cannot help thinking that he spoke in the wrong place and to the wrong people. He should have addressed an argument of that kind to his colleagues at the Council board. Perhaps he did and perhaps they heeded not and he was appealing from them to Parliament and the country. If that is the case, and if the minister failed to make any impression upon his colleagues in regard to this important matter, his duty to himself and to the country is to leave the Government.

Another reason that suggests itself to my mind is that when preparing these Estimates the Government expected to have an election this year and they deliberately padded them in order to deceive the coun-

try. If that is the case we have a degree of political obliquity that is a discredit to the Dominion. In view of this extraordinary expenditure the Minister of Finance urges economy and the Minister of Trade and Commerce makes a strong and eloquent plea along the same lines. Is this large expenditure due to the fact that, after this Government came into power, to use the words of the Minister of Finance himself on a former occasion there was ushered in "an era of uncontrolled prodigality, utter wastefulness and reckless extravagance unparalleled in this or any other British country"? These are strong words, but I intend to prove their application to present conditions and to prove it from the Public Accounts themselves. This is the law and the testimony. I have the Public Accounts for the year ended March 31, 1915, and I invite the attention of the Minister of Finance to them. First, we will take the account we have been considering—expenditure chargeable to consolidated fund. As I have stated, I will compare the administration of the present Minister of Finance with that of his predecessor, and see how it will work out. The comparison is as follows:

Expenditure on Consolidated Fund Account.

		Yearly average.
1896-1911..	$876,985,606	$58,465,700
1911-1915..	473,128,655	113,282,164

Or practically twice as much. Is there any justification for that? Has the country benefited by that enormous increase in expenditure?

I will go on now to examine the acounts in the different departments which go to make up the total. I will take them as they occur here, not perhaps in order of their merit, or should I say demerit. I have given some attention to the Public Accounts, and it is a book that will pay perusal.

Collection of Revenue.

		Yearly average.
1896-1911..	$232,492,843	$15,499,523
1911-1915..	142,580,587	35,645,147

Or two and a half times—250 per cent—more. Then comes the account for other expenditures. I suppose this is the account into which are put miscellaneous matters that are not properly placed under any particular heading:

Other expenditures.

		Yearly average.
1896-1911..	$358,848,809	$23,896,600
1911-1915..	223,427,163	55,856,800

An increase in this account, under the present Administration, of two and a half times the average expenditure under the previous Administration.

The next account I will consider is that of Civil Government. That is an account that should not increase very rapidly from year to year. I understand that expenditures on that account are made up of the salary and expenses of the High Commissioner in London, the salaries of the lieutenant governors, the salaries of the Civil Service and expenses of the offices at Ottawa. The expenses, therefore, under this head should not increase very rapidly. Under the old Administration there was some increase with the growth of the country, but not much. I find that for the fifteen years previous to 1911 the total amount expended on Civil Government was $31,130,268, or an average yearly expenditure of $2,075,350. Under the present Government the expenditure has increased very rapidly. During the four years they have been in power they have spent under this head $21,649,896, or an average yearly expenditure of $5,412,474. Is there any reason in the world for that increase? Can hon. gentlemen opposite possibly justify it? According to a return brought down in the House last year, some eleven or twelve thousand employees have been added to the Civil Service in this city, and that, I think, largely explains the increase in Civil Government expenditure under this Government. Although the amount under this head is not very large, the comparative increase is simply enormous, and the country cannot stand it.

Now I come to the Immigration Department. Under the previous Administration immigrants came into this country by the hundreds of thousands. The cost of managing that department from 1896 to 1911 was $9,926,394, or a yearly average of $661,760. Under the present Government the expenditure has been $6,343,589, or a yearly average of $1,585,897; that is, although very few immigrants are coming into the country at the present time, the present Government is spending on immigration nearly three times as much per year as the late Administration did. Can any explanation be given for that increase? I say it is absolutely unjustifiable; to use the words of the Minister of Finance, it is "uncontrolled prodigality, utter wastefulness, and reckless extravagance."

The Indian Department. The previous Administration expended on this department during the fifteen years they were in power $16,752,817, or an average yearly ex-

penditure of $1,116,854. The present Government, in its four years of office, has spent $8,157,850, or an average yearly expenditure of $2,039,462, practically twice as much. Have the Indians increased in number, or are they better looked after than they were under the former Government? Can any reason at all be given for this increase? It is unthinkable that such a sum should be expended on this department.

Public Works Department. The late Administration during their fifteen years of office expended on public works $80,313,281, or an average yearly expenditure of $5,354,220. The present Administration in the last four years has spent on this department $62,164,036, or an average yearly expenditure of $13,041,000; more than twice as much.

The cost of collecting the customs revenue for the fifteen years previous to 1911 was $21,282,332, or an average yearly expenditure of $1,418,822. From 1911-12 to 1915 this Government has expended under that head $13,219,069, or an average yearly expenditure of $3,304,800; practically three times as much, and that is something to consider. Have these matters been considered in Council? Have these enormous expenditures received the consideration the Government should give them? Can the country stand such expenditure? A country can be driven into bankruptcy just as an individual can. Was it these expenditures the Minister of Trade and Commerce had in mind the other night when he spoke so eloquently and forcibly in this House? Yes. If so, he was speaking in the wrong place; he should have addressed those remarks to his colleagues. Of course, if he had already spoken to them, but without any effect, he did well to address his remarks to Parliament.

Now I come to the Dominion Lands Department, and this is the worst of all, because expenditure in that department is increasing all the time although the revenue is falling off; less work is being done, and more money expended. The previous Administration in its fifteen years of office spent on this department $5,736,870, or an average yearly expenditure of $382,460. During the last four years the present Government has spent on this department $11,727,381; very nearly twice as much as the cost during the fifteen years previous.

Mr. ROCHE: For the same service?

Mr. HUGHES: Yes.

Mr. ROCHE: The figures are quite wrong.

Mr. HUGHES: I am reading from page 73 of the Public Accounts Report, comparative statement of expenditures on consolidated account. As I said, this department is the worst of all, for the revenue is falling off. For the first time in thirty years there has been a deficit in that department in the last two years. I think the deficit in 1914 was $250,000, and last year about $900,000. The receipts over expenditure during the last year of the previous Administration amounted to over $1,000,000. I think some explanation should be given of this increase.

As I see the Postmaster General in his seat, I wish to call his attention to the fact that the previous Administration in its fifteen years of office expended on the Post Office Department $72,438,037, or an average yearly expenditure of $4,828,536. The present Government during its four years of office has spent $48,838,088, or an average yearly expenditure of $12,209,522; that is, they spend on the average practically three times as much as the previous Government did. Sir William Mulock, when he was appointed Postmaster General, introduced business principles into the conduct of his department, and the effect was very quickly seen. Under the Conservative Administration the deficit was about $700,000 a year for some years. During the first two or three years of Sir William Mulock's Administration the deficit in the Post Office Department was reduced, but not completely wiped out. After that a surplus was the order of the day, and I think that the surplus during the last year or two of the previous Administration was pretty nearly a million dollars. Under the present Administration the surplus quickly evaporated, and a deficit took its place. Under the late Administration the postage rates were reduced from three cents to two cents on domestic letters, and, I think, from five cents to two cents on letters to Great Britain and all British dependencies, a very large reduction; but notwithstanding that the business management of the previous Administration brought about the condition of surpluses to which I have alluded. Under the late Postmaster General (Hon. Mr. Pelletier) business methods were discarded, and patronage committees from the Atlantic to the Pacific took charge of the Post Office Department, and the results were quickly seen. The present Postmaster General (Mr. Casgrain)—I have not the

honour and privilege of his personal acquaintance—has, amongst those who know him best, the reputation of being an honest man, but those who know the late Postmaster General do not make the same statement about him. If the present Postmaster General is to sustain the reputation that he possesses he will have to get busy, because, although the receipts are increasing, the expenditures are rolling up, and so are the deficits. The deficit last year was $3,000,000; this year I understand it will be about $5,000,000, and yet the Postmaster General is asking, in his Estimates, for about $800,000 more than he asked for last year. That is a serious state of affairs. Can the country stand an extravagance of that chracter? It is time that the matter should be made known publicly, because very few men would believe that any Government would conduct the public business in such a manner. I have to borrow the language of the Minister of Finance in order to describe this extravagance properly, because I myself cannot do it justice. That is the situation so far as the civil expenditure is concerned, and there is practically no let up, even under the trying conditions through which we are passing at the present time.

Now, Sir, one would have thought that, when the war broke out and we were confronted with the enormous expenditure that would have to be made under war conditions, the extravagance that had been practised during the previous years would disappear, but it seems that, instead of that, the flood-gates were opened and grafters and middlemen from all parts of the Dominion flocked to Ottawa as flies gather around a molasses barrel. The revelations made in the Public Accounts Committee last year, although they only touched the fringe of the matter, shocked the country. In that committee evidence was submitted to show that, when representatives of business firms came to Ottawa to try to do business with the Government, they were told that they could not do it direct; that middlemen would have to be employed. Shaver, the Toronto representative of Bauer & Black, Chicago wholesale druggists, who made a specialty of field dressings, made the sworn statement before the Public Accounts Committee that, when he came to Ottawa wishing to do business with the Government, he was told that he would have to employ a middleman, and in that way Mr. Garland, the late member for Carleton, came into the business.

In Kings county, N. S., there were in regard to horse purchases revelations which discredited the country. Horses that were lame, blind, spavined, ringboned, windbroken, or old enough to be rejected at the time of the Boer war, were accepted and paid for, with very few questions asked. Of course, the men connected with this matter had to leave Parliament and were read out of the party. A few days ago I put upon the Order Paper a question asking the Government whether the horses that had been purchased for army purposes in Prince Edward Island and also in the other provinces were found to be suitable and satisfactory, and I got the answer "yes" in both cases. I was told that 114 horses had been purchased in Prince Edward Island, and I know that the Davidson Commission, after examining into that purchase, stated that everything was right; that the man who made that purchase had acted honestly and squarely with the Government; that he had got good value for the Government. But the Government left off buying horses in that province. What, Sir, can be thought of the answer which I received in reply to my question whether the horses purchased in the other provinces were suitable and satisfactory? The minister said "yes," and when I questioned the accuracy of his answer, he stated in the House a few days afterwards that he saw the horses that came from Kings county, N.S., and that he never saw a better lot of horses. That is the kind of information which we get from Ministers of the Crown, notwithstanding the sworn evidence before the Public Accounts Committee.

There is published in my province a paper which gets articles written in Ottawa or inspired in Ottawa, and in it I saw a statement that the speech recently made by the Minister of Militia and Defence had completely exonerated the Government from any impropriety in regard to the manufacture of shells and all expenditures of the Militia Department. I just want to read to the House an extract from the Daily Mail, a paper which is published in the city of Montreal, and which supports this Government. This paper, the president and managing director of which is a brother of the Minister of Finance, had this to say in its issue of January 28 with regard to the statement of the Minister of Militia and Defence concerning war munitions:

It is not so long since Sir Sam launched an attack of the stereotyped Hughes quality, at the head of Mr. D. A. Thomas, for the reason that the latter gentleman questioned the econ-

omic and other capacities of the old Shell Committee. Sir Sam then asserted in his vigorous cocksure manner, that all was well and no change would be required or would be tolerated.

But a change has been made; a reduction in price was brought about, and an increased production was thus secured. And now Sir Sam quotes this right-about-face as a justification of his wisdom or initiative.

General Hughes' comparison of shell prices in Canada and those in the United States, like a great many other statements made in his speech on the Address, are based upon information the sources or bona fides of which he does not establish or reveal. If these statements are in keeping with the General's allegations as to the politics of some of the so-called mushroom manufacturers of shells in Canada, they are not worth considering.

It will be remembered that in his statement the Minister of Militia said that as many Liberals as Conservatives—and he gave some names—were making shells. The Daily Mail says that a statement of that kind is not worth considering. The article goes on:

We are in a position to say that he has named exceedingly good Conservatives in the mushroom business, and styled them Liberals.

I want to examine for a moment a matter with which the Minister of Militia and Defence is most closely connected, and which concerns a contract given to the Midvale Steel Company of Philadelphia. In his speech in the debate on the Address, the Minister of Militia said that the people of Canada could do anything that any other people on the face of the earth could do; that they could manufacture anything that could be manufactured elsewhere. There was only one thing that we could not manufacture—shovels. That must have been the reason why a contract for 25,000 shovels at $1.35 each was given to the Midvale Steel Manufacturing Company. I am informed that at 500 different places in Canada these shovels could have been manufactured at from 30 to 35 cents each. Why was this order given to the United States firm? The only reason to be offered is this: no investigation could subsequently be held into the transaction. The people of the United States are not amenable to any court in Canada, not even to this Parliament, and no investigation into the giving of this contract could be held. Last session, over eleven months ago, I got an order of the House for the papers in connection with this transaction, and they have not yet been brought down. My impression is that the Minister of Militia and Defence has no intention of bringing them down; he intends to flout and disobey the order of the House. This year the matter is before the Public Accounts Committee, and some light may be thrown upon it; but certainly no thorough investigation can be held. In my judgment there are doings in connection with this transaction that are more reprehensible than anything that Garland of Carleton, Ont., or Foster, of Kings, N.S., did. It is known that a young lady, a stenographer and typist in the office of the minister, got a patent on a shovel and made perhaps $25,000 out of it. The thing was worthless; 6,000 of them were sent over to England, but never got any farther. Is it possible that a young lady in the minister's office could have had sufficient military knoweldge to enable her to invent a military tool or arm that the generals of Europe, with their years of experience, would not think of? This young lady has been made wealthy at the public expense, and my constituents have to bear a share of that burden. I do not want them to bear it; it is not fair that they should. There is no surer way of injuring the country than by destroying the faith of the people in the impartiality and rectitude of its courts. This is the highest court in the land; the Prime Minister has its honour in his custody. Garland and Foster are out of the party; they are punished to the full extent of the minister's power for doing something that, in my judgment, was not as reprehensible as certain things done by another gentleman who was recommended for knighthood.

4 p.m.

Considerable discussion has taken place in this House and in the press of the country with regard to shell contracts. That will be discussed at length before the session is over, and I shall not go into it now, except to say that the facts that I mention show the enormity of the graft which characterized the operations of the Shell Committee. The Minister of Militia says he is responsible for that committee, and that he will stand by it as long as it has a button on its coat. I just wish to mention that Mr. Jones, manager of the Canada Mr. D. A. Thomas, special representative of Mr. Lloyd George, secured by his intervention, the cancellation of certain contracts and saved Canada and the Empire $21,000,000 of excessive profits. These contracts were re-let at a price saving $21,000,000 in profits. It is not too much to say that there are men in the Dominion of Canada who will be multi-millionaires in consequence of some of the operations of the Shell Committee. An investigation has so far been refused by the Government, the reason advanced being

that the greater part of the money expended belonged to the British tax-payer. And that is our idea of loyalty, that is our idea of guarding the British taxpayer, who is carrying a burden at the present time, and will be after the war, greater than has ever been imposed on any man in the world, who is bleeding from every pore at the present time. And these super-loyal men are piling millions on millions of graft upon the British taxpayer—and yet the Government so far refuses an investigation! Other things are going on that are nearly as bad. There is at present pending in the city of Quebec a suit between a middleman and a reputable shoe manufacturing company. The John Ritchie Shoe Company is being sued by a Mr. Belmar for some $40,000 or $50,000 as a middleman's profits on 150,000 pairs of canvas shoes, an order for which he claims he was instrumental in getting from the department. This suit is contested, but a contract has been submitted, signed by the John Ritchie Company, acknowledging Mr. Belmar to be the middleman who obtained the orders for them, and it is known that on a previous order for boots they gave him a very considerable commission. The iniquity of the whole thing must be apparent to everyone. Under the present purchasing committee, which was appointed last year to do things properly, it appears that an order for trousers was given in Toronto at $40,000 more than the price at which the lowest tenderer was willing to make them. One company got a small portion of that order, some twelve thousand pairs of trousers, upon which they made an excess profit—because I presume the lowest tenderer was calculating on a profit—of over $6,000. That is going on at the present time, or it was quite recently ,and so it is all along the line.

Turning to the purchase of horses in Canada, I have been trying during this session to get some information from the Government in regard to their purchases of horses, but I cannot get any. Why should not the Government try to dispose of the surplus horses in this country? The situation appears to be that the Government started in to purchase horses for the Canadian troops—and we have seen the kind of horses they purchased. That discredited the horse industry of the country. Whether or not the horses were sent to Salisbury I am not aware, but I presume some of them were, and that they were very little good when they arrived there. Later on the Government put an embargo on the export of horses, they passed an Order in Council prohibiting the exportation of horses from Canada. Then, almost without warning, the men who came from Great Britain and France to purchase horses were turned out of the country; the Government would not allow them to purchase horses here and they went to the United States. That embargo, I understand, was removed, but there have since been no horse purchases worth speaking of in Canada, and there is a large number of horses in Canada for sale, probably one hundred thousand. I wish to refer to some answers which I received to questions placed by me on the Order Paper. On page 794 of the unrevised Hansard, these questions and answers will be found:

1. Did the British or French Governments purchase any horses in Canada for army purposes since 1st August, 1914?

2. If so, how many, and when did they stop buying horses in this country?

3. Has the Government made any representations to the Government of Great Britain or France in regard to the number of horses obtainable in Canada? If so, with what results?

4. Are the British and French Governments purchasing horses in the United States for army purposes?

5. When did the Canadian Government stop buying horses for military purposes?

Sir Robert Borden:

1. The Government is informed that the British and French Governments have purchased horses in Canada for army purposes since the first of August, 1914. I understand also that the French Government is buying horses in Canada at the present time.

2. The British Government has not been purchasing horses for some months; I think since about November. I would not feel at liberty to give information to the House as to the number of horses purchased as it would be against the policy which the British Government has pursued in such matters. The British Government does not give information as to the numbers of horses, or munitions, or anything of that kind which they purchase.

3. Representations were made to the Government of Great Britain with regard to the number of horses obtainable in Canada, and the British Government was asked to communicate these representations to the French Government. The result was that in August last an arrangement was made between the British Government and the French Government, by which the French Government should be permitted to purchase horses in this country.

4. The Government is not aware whether the British and French Governments are purchasing horses in the United States for army purposes.

5. The Canadian Government stopped purchasing horses for the reason that an arrangement was made during the past summer by which the British Government would purchase whatever horses might be necessary, not only for the British forces but for the Canadian forces as well. That arrangement was made in the early part of August, and I believe that since about that time the Canadian Govern-

ment has not been purchasing horses for military purposes.

Remember, the Prime Minister stated that he could not give me the information in regard to the number of horses purchased by the British Government, or anything of that kind. I have here clippings from the Ottawa Journal which are of interest in this connection. They are as follows:

Kansas City, Mo., Feb. 18.—No more American horses for use of the British forces will be purchased for some time at least, according to Major General F. W. Benson, of the general staff of the British army, who is in charge of the purchase of horses. The British Government has secured enough horses for the next three years.

New York, Feb. 18.—Records of the exports of horses to Europe show that more than 500,000 horses valued at $125,000,000, have been shipped there from this country since the beginning of the war.

The prices show a declining tendency. The average price in 1914 was $240, against an average of $207 in November last.

So it appears that the Major General, who is purchasing horses in the United States for the British army, gave out the information that we could not get in this Parliament. It appears also that the British authorities have purchased half a million horses in the United States at a value of $125,000,000, while the farmers and stock breeders of this country cannot sell a horse, and the Government appear to be helpless. Whatever interference, whatever action they took, would appear, so far as we can discover, to have been futile. Their Order in Council appears to have been ill-advised. Sending the representatives of the British and French Governments to the United States to purchase horses was surely a suicidal act. It reminds me of what the Agricultural Department did some years ago in sending an officer of that department to Washington to tell the people of the United States that our potatoes were diseased and should not be allowed into that country. Horses are what the British and French armies want, and if the Canadian horses are not sold for army purposes, they will not be needed at all, for there is no local demand for them. Is there any reason in the world why an industry in which the farmers and the stock breeders of the country are so deeply interested, should not find a market if the Government would only interest thmselves in securing it? But they seem to have done nothing; they have simply destroyed the horse trade in this country. We read in the despatches that the British Army have secured in the United States sufficient horses for the next three or four years, so that we cannot expect to sell horses in this country for army purposes, and the surplus stock now on hand will be practically useless.

I would like to read a part of the answer to a question which I put to the Prime Minister. The Prime Minister in his reply said:

1. The Government is informed that the British and French Governments have purchased horses in Canada for army purposes since the first of August, 1914. I understand also that the French Government is buying horses in Canada at the present time.

I then put a question on the Order Paper asking where the French Government were buying horses in Canada, and what the names and addresses of the parties representing the French Government in this country were; and the answer of the Prime Minister—I am not able to put my hand on it at the moment—was that he could not give me the information. He understood that the Hudson Bay Company was doing something in that line, but he was not sure; that was the purport of the answer. That is the condition of affairs; the Government do not seem to know anything at all about the matter. If they do, they will not give the information. Why should there not be some place at headquarters in Ottawa where information of this kind could be obtained? Why withhold this information? Why should the Government not be pleased to give the members of this House such information, information that they could convey to the people. They should be willing to get the information from any source in regard to a matter of such importance to the farmers and stock breeders of the country. There seems to be something radically wrong in regard to the matter. If the Government have information in regard to it, they are withholding it for some reason or another not yet understood, and in all probability no information will be forthcoming. But this matter will be fully investigated before this session ends.

Sir, I have brought to the attention of the Government some matters which I think deserve consideration. In the dying days of the old French regime the Intendent Bigot, and those associated with him, introduced into the colony a carnival of corruption, graft and dishonesty. We are not in that position; but we are at war, and a great many people in this country are taking advantage of the war to make pat-

riotism pay, and some of them are the men who most loudly proclaim their loyalty. The Government are either protecting them or they seem to be powerless. Notwithstanding the revelations that were made in the Public Accounts Committee last session, the people of this country did not slacken their efforts or moderate their determination to see this war through. When demands were made upon them for the Patriotic Fund, for the Belgian Relief Fund, for the Red Cross Society, and for other funds, everybody responded. In my own small town, when we heard that there was a scarcity of machine guns at the front, and that our soldiers were not having a fair show against the Germans, we subscribed to a fund to purchase three of those weapons. One man alone subscribed an amount sufficient to purchase a machine gun. He could afford it; he is a member of the other Chamber. Another man in very moderate circumstances subscribed for another gun, the town collected money to purchase a third, and that same man subscribed $300 to the second fund and was ready to give everything he possessed in the world to help on the war. That is the spirit which animates the people. Even the school children subscribed, giving their pennies. But while that is the spirit among the ordinary people of this country, the grafters are getting away with their millions, and the Minister of Militia and Defence says he will stand behind them while there is a button on their coats. That is the state of affairs.

Mr. BURNHAM: I may point out that when you wish to shield a man you stand in front of him, not behind him.

Mr. HUGHES: That is very smart. The people of this country will see the war through; they are determined upon that, but when it is through I think they will turn their attention to the men who betrayed them, to the men who have made enormous profits out of the terrible crisis through which we are passing—who are making money out of the agony of the nation.

Mr. W. S. LOGGIE (Northumberland, N.B.): Mr. Speaker, before addressing myself to the subject matter before the House, perhaps it would not be out of order if I referred to an incident that happened when I last addressed you. It was my pleasure on that occasion to congratulate you (Mr. Rhodes) on your elevation to the position of Deputy Speaker, and I regret that I have not the pleasure on this occasion of addressing the Speaker of the House, because I have not addressed the House when that gentleman was in the Chair, and I would like to tender my compliments to him.

I want to say, with reference to the circumstance that I have already referred to, that when I was addressing the House a voice came from my left saying that there was a bad fire. I cast my eye to the left and I could see a reflection in the hall. The rapidity with which the fire seemed to surround the chamber was marvellous. Within a few moments I rushed across the House, but I was not able to find an exit. I, with six other hon. members, made two attempts to find an exit, but failed. A short time afterwards we got through the same door as that at which we had previously failed. It is regrettable that on that occasion some persons unfortunately lost their lives, and especially in this connection I would refer to our late colleague, the hon. member for Yarmouth (Mr. Law), and I desire publicly to express my heartfelt sympathy with his wife and daughter in their bereavement. I think I should also congratulate the members of the House and those who were in the Parliament buildings at the time upon their wonderful escape under the circumstances.

Now, allow me to make a few remarks on the subject matter before the House. We are told by those in authority that we require half a million men from Canada to go to the front in order to win this war. The hon. Minister of Finance (Sir Thomas White) tells us that we need $250,000,000 for war purposes this year. I am sure we are all impressed with the fact that men and money are needed to maintain the rights and privileges that we at present enjoy. My son, who has been in the trenches in France, and who was wounded in October of last year, said to me in a letter recently that it would take money to win this war. What we are able to offer, whether it be men or money, we shall offer, I am sure not grudgingly. We have volunteered to raise half a million men, and we are endeavouring to devise means by which we can raise $250,000,000 to pay the cost of what we have so laudably undertaken in our desire to aid the Empire at this time.

The question comes to me: what is our urgent duty on the present occasion? That brings me to the statement which has been

made to the House by the Minister of Finance. That hon. gentleman intimated that there were in the Estimates votes to the amount of about $30,000,000 that the Government does not propose to expend this year. In these critical times, in these days when we have extended the life of this Parliament—our own parliamentary life, if you like—we might depart from the procedure of the past and eliminate votes that we are told it is not intended to expend during the coming fiscal year. I commend this suggestion to the Minister of Finance. It seems to me that under the present circumstances it would be a move in the right direction. Another suggestion I would make to the Government is that we, as a people, and as a House of Commons, should rise to the dignity of the occasion and adopt the attitude towards public affairs which was so ably presented to us by the hon. junior member for Halifax (Mr. Maclean), and by the hon. Minister of Trade and Commerce (Sir George Foster), who spoke with particular reference to what I might describe as the patronage system disease. This disease is working into the very vitals of our country and undermining our best interests. I agree with the Minister of Trade and Commerce in the statement that really no good comes from it to any party, but that in the end nothing comes from it but evil. In every town, as I understand it, where soldiers are billeted, orders for supplies are given out by a patronage committee. A patronage committee tells whom to ask for prices for supplies, and notwithstanding that a firm may have the necessary stock, is doing a legitimate wholesale business, and could supply the goods at reasonable prices, it is passed over, and firms named by the the patronage committee are asked to supply the necessary food for the soldiers.

Mr. CARVELL: And without tender.

Mr. LOGGIE: And without tender. We are giving our life-blood to pay for these goods. You propose to tax my earnings to pay for these goods and yet you say that all the firms in a town that are to pay should not be treated alike. I think that this is an opportune time to cut the patronage system out of our political and national life. Let us be as one man in our stand for liberty based on righteousness. If eternal vigilance be the price of liberty, it is the price we ought to pay to-day to maintain a standard of liberty based on righteousness. We are paying the price in money and blood to maintain our liberty. Surely this is a time when we should rise to the occasion and cut out this evil of the patronage system. Our King and his representatives call to us for men and money. We are responding to that call to-day and to-morrow shall be as to-day, but the response will be much more abundant.

That brings me to the resolution which has been proposed as a means of securing a portion of the money that we require to carry on the affairs of the country and to meet the interest on the money borrowed for the prosecution of the war. I see that the resolution is divided into two parts, or rather it refers to two classes of persons or companies as being subject to taxation. One class is spoken of as incorporated companies and the other as " persons." It is laid down that the expression " person " means " any individual or person and any partnership, syndicate, trust, association, or other body, and any body corporate," etc. There is one point on which the minister might enlighten me right now. I suppose there are companies that are bodies corporate but are not really incorporated. I am not quite clear why such a company should not be called a partnership, instead of a body corporate. If there is no such thing as a body corporate, outside of an incorporated body, the minister has no right to say that a person is a body corporate and tax all his profits above ten per cent. It does seem to me that the term "body corporate" is not in its right place. Perhaps the minister will explain.

Sir THOMAS WHITE: I have not had my attention drawn to the point to which my hon. friend refers, but I shall be very glad to look at it with a view to discussing the matter when we are in committee on the resolution.

Mr. LOGGIE: The other clause refers to incorporated companies, and I think every hon. member clearly understands what an incorporated company is. The minister, however, in his speech the other day said:

> It will be observed that incorporated companies are taxed upon a higher basis than individuals and partnerships. The reason for this is that capital in the case of joint stock companies frequently represents intangible assets or capitalized earning power or good will.

Even if that were true, I think that if we are to put this legislation on the statute book, we ought to be big enough to undertake to arrive at a fair valuation of those assets. That should not be an impossibility; and if it is, the resolution as brought down should be amended before being dis-

cussed in Committee of the Whole. The minister goes on:

> We found it a practical impossibility to go behind the capitalization of companies and endeavour to ascertain the precise cash value of their assets as can be done in the case of individuals or partnerships.

There should not be any great difficulty in doing that, although of course it might not be easy to arrive at the precise value of the assets. But I venture to say that the Government will not be able to arrive at the precise value of the assets of any company or person. Would the minister undertake to say that he will be able to arrive at the precise value of the assets of the J. R. Booth Company of Ottawa, for instance? I do not think he will. And yet he is providing for that being done, for I understand the Booth Company is not incorporated. I do not think we should let these apparent difficulties stand in our way. If we are to collect taxes in this way let us treat the people of the whole Dominion alike, let us do the thing fairly and equitably. I maintain that under the present proposals there will be positive discrimination. I of course realize, as the Finance Minister says, that there will be difficulties, but they should not be insurmountable. We ought to be able to arrive at a fair value of the assets of any company doing business in Canada. The Minister of Finance illustrated the difficulty in this regard as follows:

> The cases of railway, public franchises, and so-called holding companies, mining and other corporations, illustrate the difficulty to which I am referring. In addition there is the further fact that shareholders have purchased their shares and receive their dividends upon the basis of issued capital stock.

I do not care one iota what dividends shareholders have received upon the basis of issued capital stock. To me the only fair thing seems to be to put all the companies in Canada on the same basis; we should value the assets of every company in Canada, and form a reasonable fair value of the assets, deduct all direct liability. That would give us the capital on which the money is made, and that, I take it, is what the Government really desire to tax. It cannot possibly be that the Government desire to tax anything other than the earnings of a certain amount of money invested in a business.

I think this resolution is unfair in another regard. I have read the minister's speech very carefully, and I cannot see that he has explained why the profits of an individual or partnership should be taxed only above ten per cent, while incorporated companies with the same amount of capital are to have their profits above seven per cent taxed. Is that fair? Let me give an illustration. Suppose I started an incorporated company twenty years ago, with an original investment of $100,000. That $100,000 is not sufficient to enable me to carry on the business, and I borrow money in the ordinary way of business. Supposing in ten years I have made $10,000 a year. As I am indebted outside, and the business is expending, the money is left in the business with the result that in ten years I have a surplus of $100,000. I go on, and in ten years more have a surplus of $200,000. That gives me a surplus of $300,000 last year, and that $300,000 has earned me $21,000. What would be my position with relation to this resolution? If the resolution carries in its present form my position will be this: My original $100,000 will have earned $21,000, and I shall be called upon to pay one-fourth of $14,000, or $3,500, whereas I have earned only seven per cent on the total capital. But the hard part of it is that if I were an ordinary company, I would not have to pay a cent, because I would be entitled to 10 per cent on $300,000 That is not equitable, and the minister ought to make some announcement before this resolution is passed and amend or add something to it so that we can discuss what the minister proposes to do in order to get out of this difficulty.

I do not understand why the minister has arbitrarily fixed $50,000 as the capital for a person and not fixed any sum for an incorporated company. Let me illustrate how unfair that is. Suppose I form a partnership with my friend, Mr. Turriff, in the dry goods business in a town of five or ten thousand people; I invest $30,000—and $30,000 invested in dry goods in a small town will give a very nice stock and will enable us to compete with any other person or firm doing the same class of business. Suppose I make ten per cent, fifteen per cent, or twenty per cent on the $30,000—

Mr. MICHAEL CLARK: Too much.

Mr. LOGGIE: I admit it is too much, but under this resolution not one dollar would I be asked to pay to the Crown. If, however, I should have been unfortunate enough to join my hon. friend (Mr. Turriff) in an incorporated company and put that $30,000 into it, and carried on the same business and made, say, only 8 per cent, I would have to divide with the Crown, the one per cent over the seven. Therefore I cannot for

the life of me understand why the minister intends to discriminate against an incorporated company doing business in a town of five or ten or fifteen thousand people, or, if you like, in a city. I have in mind at the moment an incorporated company doing a boot and shoe business in one of the western cities, and having a capital of $7,500, and a surplus of $5,000. A neighbouring boot and shoe store might have the same capital in a partnership company, but whereas the incorporated company would have to pay taxes to the Crown, the partnership company would escape scot free.

Sir THOMAS WHITE: The limitation of $50,000 of capital applies to firms, individuals and partnerships as well as to joint stock companies. If my hon. friend will look at section 4 of the resolution, he will find that it is perfectly plain.

Mr. LOGGIE: Yes, I see. I did not understand. I thought that the $50,000 applied to incorporated companies and not to partnerships.

Sir THOMAS WHITE: It applies to both.

Mr. LOGGIE: The minister has answered that question. Will he tell me why he asks an incorporated company to pay on its earnings over 7 per cent while he does not ask a person to pay until he has earned over 10 per cent? I have endeavoured to think out what the reason can be, but I cannot understand it. I can understand that in large corporations 7 per cent may be considered a fair earning for the money, but I cannot understand why J. R. Booth should be able to keep his money up to 10 per cent on his earnings, while the W. C. Edwards Company cannot keep theirs when they get beyond 7 per cent.

Mr. MURPHY: That is an awkward case.

Sir THOMAS WHITE: I prefer to deal with the matter in committee, because it will take me some little time to give he necessary explanation, and probably this is not the best time to do so.

Sir GEORGE FOSTER: It would break up the hon. member's speech.

Mr. LOGGIE: It is not fair that a limitation should be put upon capitalization, and I cannot understand why the minister should arbitrarily fix the capitalization at $50,000. Why should a man who has a capital of $50,000 have to pay taxes to the Crown, whereas another man doing business beside him with a capital of $49,000 is not called upon to pay one cent? I also cannot understand why one class of firms should have the benefit of 10 per cent interest and another the benefit of only 7 per cent. These are inequalities that ought to be cleared up before the resolution is passed.

The minister was not in the House when I referred to the valuation of intangible assets, and I think he should be able to overcome that difficulty by consulting experts and framing legislation in such a way that all classes of the community, all business interests, will be affected alike, so that one class will not have an advantage over another, because competition is very keen, and it is inequitable if one firm has to pay three or four hundred dollars into the treasury and another firm doing business beside it is exempt. I hope the minister will try to make this a matter of equality; I hope he will see to it that all business interests contribute alike to this laudable work. As the Finance Minister suggested, we all wish to pay our share, but we on this side of the House naturally think that the Government should set the country a good example by cutting down their expenditure as much as possible. In England the public are asked to economize; surely we in Canada also ought to economize. When you ask the people to economize, you cut down the profits of the men who are doing a general store business throughout the country, in the large as well as in the small towns. It seems to me, therefore, that this is a matter which will require consideration before the resolutions proposed by the Finance Minister are adopted.

I should like to congratulate the Minister of Trade and Commerce and the Finance Minister upon the titles which have recently been bestowed upon them. Forty years ago I heard the hon. gentleman who is now Minister of Trade and Commerce deliver in Fredericton a lecture on temperance, with Sir Leonard Tilley as chairman. I have not forgotten that occasion. I have heard the hon. gentleman deliver many eloquent speeches since that time. I recollect an address that he delivered in 1907 or 1908, when he bewailed the taxation that the then Government were imposing upon the people of the country, asserting that they were taking out of the pockets of the people probably 100 per cent more than his party had taken from them when in power. If the hon. gentleman were on this side of the House now, how he would bewail the taxation that the Government is imposing

upon the people. On another occasion I heard the hon. gentleman deliver an address in this House on the navy question, when he said that we should give not money, but something tangible. I have not forgotten that address; it was grand. I heard him on another occasion, when, I think, he was not sane; at the time of the Drummond and Arthabaska election he gave insane advice. Now, however, I congratulate him for rising to the dignity of the occasion when he addressed the House a few days ago.

Sir GEORGE FOSTER: Life is a series of contrasts.

Mr. LOGGIE: I join hands with the hon. minister in the stand that he takes with regard to the patronage system, which, as he says, has resulted in dry rot. I assure him that I should be glad to join with him in bringing about the good result that would accrue from doing away with this patronage sytem. Let us unitedly make new resolves in this day of our prolonged parliamentary life. Let us rise to the occasion and eliminate all that is wrong in connection with the patronage system; let us, when we go before the people, do what we can to see that no undue influence is brought to bear upon the electors. All that demoralizes political life ought to be stamped out. It behooves the hon. Minister of Trade and Commerce, having in regard the high tone of his last address, to lead the way; if he does so, I am sure that he will have a great many faithful followers.

In closing, I think it falls on me to express my sympathy with those of my country who have lost sons in the cruel conflict that is now taking place in Europe. To those who have been maimed for life I extend my deepest sympathy, expressing the hope that the Government will give due regard to their requirements and to the requirements of all those who are entitled to the benefits of a pension fund. No doubt this matter will receive proper attention at the proper time; meanwhile, to the bereaved I extend my deepest sympathy on the occasion of their loss.

Mr. J. G. TURRIFF (Assiniboia): Mr. Speaker, the Budget that has been brought down by the Minister of Finance is a new departure in the history of Canada. The imposition of a direct tax on capital is, in my judgment, a step in the right direction, and in that respect I offer the Minister of Finance my congratulations. In bringing down the proposal to tax industry, I think that the hon. minister has not been desirous of making party capital; in that respect his Budget is free from partisanship. I should like very much if I were honestly able to congratulate the Minister of Finance that in that part of his Budget relating to changes in the customs tariff he had refrained from indulging in any partisanship. But, Mr. Speaker, knowing the circumstances as I do, it is impossible for me to absolve my hon. friend.* I think that personally he would prefer not to introduce partisanship into the Budget in any shape or form, but, if that was his desire, certainly he allowed his colleagues to put one over on him.

5 p.m.

Only two changes in the tariff are proposed. One is the raising of the duty on apples from 40 to 90 cents a barrel; that is, an extra duty of 50 cents a barrel is imposed on apples coming into Canada. Why was this done? For whom was it done? The Minister of Finance stated that it was done for the apple growers of British Columbia in particular and of Canada in general. The hon. minister knows as well as I know, and as well as any hon. gentleman in this House knows, that the extra duty that he is putting on apples will not materially affect the conditions in the lower provinces; he knows that it is not going to affect the condition in Ontario to any extent. The only province to which it applies is British Columbia. Why has the minister done this? In order to protect and assist the apple growers in British Columbia. My hon. friend is ever ready to protect the farmers when they ask for duties, but he is not at all ready to listen to them when they ask to have duties taken off. For one farmer in British Columbia who grows apples, there are a hundred on the prairies who grow wheat. These hundred men have for years come down here demanding the removal of duties, and the Minister of Finance has on every occasion turned a deaf ear to them; but as soon as one man, one per cent of their number, comes from British Columbia and asks that a duty be put on, my hon. friend comes to the rescue at once and puts a duty on apples. What is the result? Every man on the prairies must in future pay fifty cents a barrel extra for his apples, in some cases a great deal more. In my part of the country apples come in by the carload for the American towns just a mile or two south of the boundary line. They are shipped in bulk as we ship potatoes or wheat.

These are second-grade apples, windfalls, and they are sold from the car at from twenty-five to thirty cents a bushel, and shovelled into the farmers' wagons. Then, our farmers are accustomed to purchase ten or twenty bushels and team them home, paying the small duty that has hitherto been imposed on apples. But my hon. friend comes forward and says, "You must pay more than double what you paid in former years." That is the way it works out, and why? To protect a few apple-growers in British Columbia. I said a moment ago I was sorry I could not exonerate my hon. friend the Minister of Finance from being touched with partisanship in this matter, perhaps not intentionally. My hon. friend is the last man in the House to whom I would wish to do an injustice; but somebody has put one over him, for I say that that duty was put on apples not so much to protect the farmer as to protect the discredited politicians in British Columbia. There are by-elections taking place there to-day, and the general elections for the local House are coming on within the next two or three months; and in order to try to save the practically defunct Government in British Columbia my hon. friend and his colleagues put a duty on apples, and every farmer on the prairies has to pay the piper. That is the state of things we are up against. My hon. friend refused the ten thousand farmers their demand for free wheat. He did it, he said, in the general interest of the country. The farmers could not be listened to. But in this case, in which the proposal is against the general interest of the country, when only a few are to benefit by it, the voice of the farmer is listened to. Nobody in Canada, so far as I have been able to learn, has during the past few months asked for this duty on apples; there has been nothing in the press about it, so that it is easy to see that it is a put-up political job to help out the political friends of the Government; and the farmers of the Prairie Provinces are the people who have to bear the brunt. Not only are they not allowed to have duties taken off, but they are not permitted to secure a market. It was bad enough to be refused that market, but now the Government come along and say: "Not only will we not take the duty off your wheat so that you can sell in the American market, but in addition we will put another load on your back and make you pay fifty cents more for every barrel of apples you buy for your family.

Mr. PUGSLEY: Is that not about nine times the United States duty against Canadian apples?

Mr. TURRIFF: I am not able to answer that.

Mr. PUGSLEY: The duty on apples entering the United States is ten cents a barrel.

Mr. TURRIFF: And this is done to protect the British Columbia apple growers, while a few years ago those very British Columbia apple-growers voted almost solidly to refuse the American market for their apples, a market that would have been open to them had we obtained reciprocity, a market that is within easy reach, because, as every hon. member in this House understands, in British Columbia the rivers and mountains and valleys all run north and south, so that you can ship fruit into the United States from the apple-growing portions of British Columbia at a very much lower rate than to Vancouver or Victoria, where the great bulk of the population of British Columbia is, or to the prairies of the West. In the past we on the prairies have been getting apples from British Columbia, and why is it necessary to put on the duties to keep American apples out? Simply because we could buy the same class of apples from the United States a great deal cheaper than we could get them from British Columbia, and the market that was most suitable for British Columbia was closed by the votes of my hon. friends opposite. Now they come complaining when they get exactly the result that they voted for in 1911, and want to tax practically everybody in the Dominion of Canada in order to keep up that industry, whereas the industry would flourish if it had the American market in which to sell its product; because it must be remembered that our apples ripen later than those of the United States and would command a better price. The same thing applies to all fruits.

My hon. friend has put an extra duty on oil. I shall not discuss that at length because, unfortunately, I do not understand exactly what the tariff means. It seems to give a reduction in one case, but in the other it apparently means an increase of 7½ per cent on the illuminating oil used by the people on the prairies and all over Canada. As I understand the proposition, it is that oil coming into Canada to be refined shall be charged an extra 7½ per

cent. Well, if you charge the refiner 7½ per cent extra, you are going to charge the consumer probably 15 per cent extra. I may be wrong in my understanding of this proposition and perhaps the minister would explain it.

Sir THOMAS WHITE: It is on fuel oil, not on illuminating oil.

Mr. TURRIFF: I am glad to hear from the minister that it does not apply to illuminating oil, because that is the chief article of light used generally throughout the country. I shall say no more about the oil duty, because I am not very well posted on it. I am glad to know that in some cases there have been reductions.

We have heard a good deal in this House since the debate started about this being a farmers' budget, and some speakers on the Government side have taken credit to themselves because the farmer is not taxed under it.

Some hon. MEMBERS: Hear, hear.

Mr. TURRIFF: My hon. friends opposite say, hear, hear. I have been now some thirty-five years in public life. I have represented my constituency for a good many terms, in both the local and the Dominion Houses, and I have never once, in the course of my life, heard a farmer complain at having to pay his fair and proper share of taxation. The farmers of the western prairies are readier than any people on the face of the earth to pay their fair share of taxation. They are not asking for exemptions. Why should a cattle rancher who has 5,000 or 10,000 head of cattle, and who makes a profit of $10,000 or $20,000; or a farmer who puts by $10,000 or $15,000 or even $5,000, after he has paid all the expenses of producing his crop, not pay his fair share of taxation as well as any other man? There is no farmer who would object to that proposition; at all events, I have never met one. What the farmer objects to is being taxed up to the neck on everything he buys, on everything he uses to produce his crop, and not being allowed to sell his crop where he can get a market for it. He is hit at both ends; that is what the ordinary farmer objects to; it is not to paying his fair share of taxation.

The farmers of the West, and of the East as well, have responded readily to every call made upon them, whether it be in the way of contributing to the Red Cross fund or the Patriotic fund, or other funds. They have done their share in that respect, and it would not be to their credit if a law were passed exempting them from taxation. Last year the farmers in three of the prairie provinces, in convention assembled, passed unanimous resolutions calling on the Government to impose a single tax, which meant taxing their farms. In that case every farmer would be obliged to pay a tax, whether he was making a profit or not. Do you think then that these men, who asked that the revenues of the country should be raised by a tax on their lands, would object to paying a fair share of taxation out of their profits? No, Mr. Speaker; any minister who would so judge the farmers is mistaken. Give the farmer fair play in the matter of duties, and give him a free market, and he will not complain about paying his share of taxation.

I am very glad, however, that my hon. friend the Minister of Finance has resorted on this occasion to a system of direct taxation. Why did my hon. friend take up that new position? It was simply because he was driven to it, simply because he was unable to raise any more revenue by increasing the customs duties. My hon. friend is fortunately in the position this session to say that the revenue for last year was greater than had been anticipated; but let me point out that it was not because of the 7½ per cent extra tax that he put on last year. Let me remind my hon. friend, and this House and this country, that in spite of the extra 7½ per cent tax, for several months after the new duties came into force last year, the revenues kept falling. For several months after the new duties came into force, the revenue was not increased; it was, in fact, less than for the corresponding months of the previous year. What was the cause of the extra revenue last year? There were two, and two only, and neither was the 7½ per cent extra duty that was imposed. The two causes that contributed to the increased revenue were: first, the goods imported, a great deal of which were for the manufacture of munitions of war, and second, the bountiful harvest all over the Dominion. On the western prairies during the first few months of the shipment of the last crop, over 200,000,000 bushels of wheat went east of Winnipeg. The price paid for that immense quantity of wheat and the cost of freight for carrying it down to Fort William, represented a large amount of money going into that country; and then you can add the money going in for cattle, for hogs, for oats, for flax, for barley, and for all the products of the farm that were going east

or south. It was that condition of affairs which increased the revenue that my hon. friend was so fortunate to get during the first few months of this year.

I have several objections to the proposed taxation, but the main objection I have is this: the minister proposes to treat the honest business man exactly as he would treat the dishonest munition manufacturer who makes a huge fortune by robbing this country and Britain. The minister puts that class on exactly the same footing as the conservative business man who has been in business all his life, and who carries on a straightforward, legitimate business. Will any one tell me that that is a fair proposition? Will any one say that it is fair to put the regular business man on the same footing as the members of the old Shell Committee who acted simply as a committee to hand out to themselves contracts by which they made millions and tens of millions of dollars, which they were not entitled to make, and which any decent Government would not have allowed them to make? If the Government did their duty they would take at least half of the profits of these munition manufacturers in taxation. But what have they done? As I said a moment ago, they put that class on exactly the same footing as my hon. friend here (Mr. Loggie), who has been in businesses all his life, and who carries it on in a legitimate manner. Is it fair? Is there any equity in that? Is it reasonable? I venture to assert that there is not a business man in Canada who would object to pay this war-tax if it were evenly levied. If business men were called upon to pay approximately the same, you would not have one word of complaint from one end of the country to the other. But are we called upon to pay the same? No, not in any degree. I venture the assertion that, if my hon. friend the Minister of Finance had properly taxed the munition manufacturers, he would have secured a large sum of money, and as for the balance of the $30,000,000 or $35,000,000, which he expects to get out of this tax, he could have saved every dollar by a little economy. Why should it cost $50,000,000 more to run this country to-day than it did four years ago, when the Liberals were in power? Have we any more population to-day than we had then? If we have, it is very little. Is the country any better able to pay taxes than it was then? I think every man will answer that it is not as well able. Still this Government, instead of cutting down expenditures, prefer to tax the people. Suppose my hon. friend the Finance Minister went to each voter in the country and said to him: "Do you prefer that I should tax the munition manufacturer, who has made his ten of millions; do you prefer that I should take half of his profits, and that for the balance of the $35,000,000 which we require we should cut off $25,000,000 of expenditure? We are expending $50,000,000 more than our opponents did four years ago; do you want us to cut off $25,000,000 of that and get the balance that we need from the munition manufacturer, or do you prefer that we should tax your industry to get that money? What would the answer be? I can tell my hon. friend what the answer would be. There would not be one man in a hundred who would support his proposal if he had the option of supporting or rejecting it.

Let my hon. friend take warning by what happened yesterday in the county of Peel. The people of Canada are being roused up about the way the money has been handled in connection with this war—squandered by tens of millions of dollars. My hon. friends opposite seem to think it is all right. Mr. Fallis thought it was all right and the hon. member for Peel (Mr. Blain) thought it was all right. With the support and backing of the Ontario Government, and with the backing of this Government up to the hilt, their candidate was defeated, there being a change of something like a thousand votes. Let my hon. friends opposite take warning by that, let them realise that it is the handwriting upon the wall, because, if they do not take warning they will get a rude awakening whenever they go to the country. Talking to-day to one of my Conservative friends, something was said about the election in Peel, and he remarked: Well, thank God, we got an extension of Parliament for one year. Well is it for the Government that they have got an extension of Parliament for one year, but it would be well for my hon. friends not to rely too much upon that, because a year goes around very quickly, and if they do not mend their ways with regard to the expenditure of money in connection with this war they will find that a great many counties will follow the example of Peel when they next confront the electors.

Let me refer to another item in the Estimates. During the Liberal regime we had two-cent postage in Canada, and under the administration of Sir William Mulock and of my hon. friend from Rouville, the ex-

Postmaster General (Mr. Lemieux), we had, after the first year or two, a surplus every year running up, I think, to as high as $1,000,000. Our friends opposite came into power and the surpluses gradually melted away until they vanished altogether, and we had a series of deficits. The Government, in order to avoid a deficit last year, raised the postage to three cents on letters and two cents on post cards, an increase of from 50 to 100 per cent. What was the result? This year, I am told, we may look for a $5,000,000 deficit. They have a deficit of $5,000,000, notwithstanding an increase of from 50 to 100 per cent in the postage rates. Why? Simply because they have departed from the ordinary business methods that had been adopted by my hon. friend from Rouville. Now contracts are given without competition, and money is squandered in every direction. I do not know that the present hon. Postmaster General (Mr. Casgrain) is entitled to very much of this blame, but his predecessor is. His predecessor, the Hon. Mr. Pelletier, now Judge Pelletier, of the Quebec bench, is the man who brought this about. He was one of that little coterie in the Government who believe that the way to keep a party in power is to be extravagant, to spend money, to get big election funds, and to spend them corruptly in order to corrupt the people. We have seen examples of that in Manitoba, and we have seen examples of it here. What has it done? Landed the Post Office Department, after a 50 to 100 per cent increase in the cost of postage, into a series of deficits that is culminating this year, I am informed, in a deficit of $5,000,000.

The Minister of Finance told us that the only way in which we can save this country, and put it into a position to handle our immense debt after the war is over is by the practice of economy. I quite agree with my hon. friend that that is the proper position to take; I quite agree that that is what we should do, and I agree, also, that people all over the country, rich and poor alike, have been practising economy all through this war—all except the gentlemen on the Treasury benches and those behind them when it comes to spending public money. Where has any saving been attempted by this Government? Where have we had any evidence of economy on the part of the Prime Minister or the Minister of Finance? There is not a single sign that they contemplate economy. The only evidence we have is the speech made by the hon. Minister of Trade and Commerce (Sir George Foster) the other night, and I venture to say that that speech will stand to his credit as one of the finest speeches he has ever made in his life. But it would stand a great deal more to his credit if he would live up to it. If the Minister of Trade and Commerce, instead of speaking to us across the table, would speak to his friend the Minister of Finance and his friend the Prime Minister, and ask them to carry out the proposal that he made the other night, we might expect something to result from it. Why, Mr. Speaker, if the Minister of Trade and Commerce could have that proposal carried out there would not be the slightest necessity of the Finance Minister asking for a dollar of taxes.

Mr. NESBITT: Extra taxes.

Mr. TURRIFF: Yes, the $35,000,000 that the Minister of Finance wants. Let us see just what the Minister of Trade and Commerce did say. Here are his words, and I give him credit for them:

> The same remark applies to the question of patronage. I said I was disposed to be perfectly frank on both of these points. There are expenditures now—there have been expenditures from Confederation up—which have been put into the Estimates, passed and carried out in the country, that were neither useful nor expedient. There is no doubt about that; it has been done under all Governments—

I quite agree with that.

> —it probably is being done under this Government.

I must confess I agree with that.

> My opinion is that until a different method is pursued with respect to our expenditures upon public works, in their authorization, we shall be open to these troubles and to that criticism. My view is that every application for a public work, or a public improvement, should go before a competent board of engineers and business men, should be reported upon by them for the information of the Government, and that every application should have to show some cause of necessity, of public benefit, or of future usefulness before it was passed and put into the Estimates. I do not believe that we will ever get down to a proper system of husbanding the resources of our country, as we are bound to do as trustees for it, or of confining ourselves to useful and necessary public works until we get some machinery of that kind.

Those were the words of my hon. friend the Minister of Trade and Commerce, and very fine words they were. While I believe there are men in this Government who could never be brought to look at the matter in that light—the Minister of Finance is not one of them—such is the stand-

ing of the Minister of Trade and Commerce in this country, and so great is his ability and power, that I believe he could compel the other members of the Government to come round to his views. If he succeeded in doing that, it would be the greatest work that had ever been accomplished in this country, and no future government of this country would dare go back to the old system, for the people would not stand for it.

We are living in changed times. Look at what has happened in Great Britain during the last year and a half. Why should we not, in these momentous times, adopt the policy outlined by the Minister of Trade and Commerce?—but which, I notice, has not been advocated by any of the hon. gentlemen behind him who have spoken since. Let us see what a saving such a committee as the Minister of Trade and Commerce has suggested would effect. If all questions in regard to public works had had to go before a committee of engineers and business men who would certify that the work proposed would serve some present purpose, or be of value to Canada in the future, aid would never have been given to the Canadian Northern Railway in building its road from Edmonton to Vancouver, and millions and tens of millions of dollars would have been saved. Do you think, Mr. Speaker, that such a committee would have approved of the vast expenditures being made on Victoria harbour and Vancouver harbour? No, they would have realized that the work in both those places could have been done for half the money, and millions would have thereby been saved to the people. And the same may be said with regard to Halifax harbour, on which it is proposed to spend some thirty odd million dollars. I have heard it stated that the whole work at Halifax could be done at from one-half to one-third of the proposed amount. Look at the money that is being squandered on St. John harbour, on wharves that cannot stand up straight. There is no question that the Minister of Trade and Commerce is the ablest man in the Government.

Sir GEORGE FOSTER: Don't pile it on too thick.

Mr. TURRIFF: I am not piling it on at all. The Minister of Trade and Commerce is a credit to the people of Canada. He is the strongest man in the Government at the present time, but, unfortunately for Canada, bad influences are also very strong with the Government. For all that, I have confidence in the ability and integrity of the Minister of Trade and Commerce, and I am sure that if he set himself to this task he could accomplish it. He would have public opinion behind him, and that helps a great deal. I venture to say that any man in Canada who lives up to the ideals propounded by the Minister of Trade and Commerce the other evening will have the people of Canada, Liberals and Conservatives alike, behind him.

Ever since this session started, and in debates in previous sessions, hon. gentlemen opposite have been giving sly digs at gentlemen on this side of the House in connection with the naval policy. My hon. friend from Annapolis (Mr. Davidson) had a great deal to say about that the other evening. If hon. gentlemen opposite want to discuss the naval question, and the attitude taken in regard to it by hon. gentlemen on this side of the House, as contrasted with the position taken by hon. gentlemen opposite, let them bring the subject up in this House whenever they like. We are ready to debate that question at any time, but this habit of giving sly digs is unfair and unmanly. If gentlemen opposite want to discuss this question let them discuss it in an open way. We have nothing to fear. From the day the Minister of Trade and Commerce introduced his resolution in 1909 up to this moment, the right hon. leader of the Opposition and hon. gentlemen sitting behind him have not changed their policy with regard to the navy one iota, not to the extent of dotting an "i" or crossing a "t." We stand to-day exactly where we stood in 1909, and in 1910, and in 1911; that is, for a Canadian navy, built by Canada, manned by Canadians, at the call of the British Empire whenever she is at war. Had our policy been carried out—and hon. gentlemen opposite had it in their power to carry it out—we should not be in the position we are in to-day, without a ship on the sea, and having to depend upon Japan and Australia for the protection of our western coast; we should not have had to buy two obsolete submarines, at double the proper price, to protect Victoria and Vancouver—submarines without a torpedo in them. A great protection they would be to anything or anybody! Had the hon. gentlemen on the treasury benches carried out the policy for which they voted in 1909, we would have had torpedo boats of our own on the Pacific and Atlantic coasts and cruisers to protect our trade and our transports as our soldiers

crossed the Atlantic in order to take part in the war of the Empire.

Just here let me say that we on this side of the House stand exactly where we stood on the 18th day of August, 1914, when the House was summoned in order to vote the first war credit. We are behind the Government absolutely in carrying on this war; we are prepared to support them in everything; but we want a fair and reasonable accounting of the expenditure of all moneys voted for war purposes. A year ago the Government asked for $100,000,000 and we voted it without question. My hon. friend the Minister of Finance this year says, "We want $250,000,000," and we will vote that. We are not one whit behind in the field or in the trenches or in the Parliament of Canada in anything connected with carrying on this war and bringing it to a successful issue; and, to-day, when the fiercest battle of the war is raging, I think every one in this country can say that Canada is doing her duty fairly well, and will continue to do her duty to the end. If more money than the $250,000,000 is necessary, no complaint will come from this side of the House as long as that money is expended in carrying on the war; but we do not want tens of millions of dollars to be turned over to private raiders of the treasury, as has been done in the past year in connection with the manufacture of shells. We want to see an end put to that, and those men who got illegitimate gains punished by at least half of those gains being taken away to help in the carrying on of this war.

One of the main objections, Sir, to the industrial tax is that it is so absolutely unfair, because it taxes one man heavily and lets two or three others escape. When the Minister of Finance proposed to tax all corporations on the same basis by taking their capital stock as paid-up stock without going behind it to see what was the true capital, I am sure that a gentleman with the business experience of my hon. friend must have seen that such a proceeding is eminently unfair, because he is as well posted a man on affairs of this kind as any man in Canada. Let me illustrate this point: One man put $100,000 into a business, and, as he is an honest, decent man, going about his business in a conservative way, he issues $100,000 of paid-up stock. His neighbour going into the same business also organizes a company, but he makes his capital $1,000,000, and he takes his $100,000 and buys certain property that the new company will need, and he sells that new property to the new company for $1,000,000; that is, he gets $1,000,000 of paid-up capital. Both companies start business. Suppose the first man, who has $100,000 of capital stock, makes $15,000. $7,000 of that is exempt and he has to pay 25 per cent on the balance. The second man, however, who is a kite-flier, who goes in for speculating in watered stock, who has the get-rich-quick idea, has $1,000,000 of capital, and he can put $70,000 per annum in profits into his own pocket before he is called upon to pay one cent under the legislation proposed by the Minister of Finance. From what my hon. friend said last night, he has some intention of making a change in that regard, and I am quite satisfied that he will make a change. Why? Because there has been a general protest in all parts of the country from the Atlantic to the Pacific against the absolute unfairness of such a proposition. One of the strongest protests I have seen has come from Sir E. B. Osler, a member of this House, and a wealthy man, who has pointed out that the proposed taxation is eminently unfair. So far as I know, no one in this country objects to paying a fair tax for the carrying on of this war, and I do not suppose any one would object to paying 25 per cent of the profits over 7 per cent if the same tax applied to every one; but that is where the shoe pinches. The tax does not apply to every one; for one man who pays, one or two will escape, and the men who escape are the very ones who should not be allowed to escape.

Another point is that if every one had to pay, the Minister of Finance would not have to call for 25 per cent of the profits over 7 per cent, because in that case 10 per cent of the surplus profits over 7 per cent would give him all the money he requires. Why should one man pay 25 per cent of his surplus profits over 7 per cent and another man not pay anything at all? Would it not be much better to work out the tax so that every one would pay practically the same percentage? No one expects that under a proposition of this kind every one will be treated exactly alike, but it is a gross injustice to let one man escape and another man pay two or three times over. I am sure that if the minister, when he brings this Bill before the committee, will make a change that will spread the tax equally over the community, he will be doing something in the interest of the people of Canada as a whole, and will give general satisfac-

tion and not leave the heart burnings and the bitterness that the carrying out of the present proposition will do. Just think of the injustice of two companies earning the same profits and one company not paying a single dollar and the other company having to pay $100,000. Do you imagine, Sir, that the shareholders of the company that have to pay that $100,000 will sit quiet when they see the shareholders of the other company, who inflated their stock with water, get off without paying one cent? Do you not think there will be dissatisfaction and some very hard things said about this Government if it should put such a proposition in force?

At six o'clock the House took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

THIRD READING.

Bill No. 15, respecting the Pacific Northern and Omineca Railway Company.—Mr. Green.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill No. 17, to incorporate Canadian Indemnity Company.—Mr. Schaffner.

Bill No. 18, respecting W. C. Edwards & Company, Limited.—Mr. Fripp.

THE BUDGET.

Consideration of the proposed motion of Sir Thomas White (Minister of Finance) for Committee of Ways and Means resumed.

Mr. TURRIFF: When the House rose at six o'clock I was pointing out that the system of taxation on industries as proposed by the Minister of Finance is uneven and unfair; that some companies will be taxed, and others will escape altogether. Under the provisions of the legislation proposed, my hon. friend does not by any means get at the general wealth of the country. Wealthy men all over the country are practically exempt from taxation, and unless my hon. friend makes some changes in his proposals, many persons will not be obliged to pay anything. Let me give you one or two instances where wealthy men will not be called upon to pay one single cent of the $30,000,000 or $35,000,000 that the minister is looking for. Some few years ago the late owner of the Canada Atlantic Railway sold that line to the Grand Trunk Raliway Company for $14,000,000 worth of 4 per cent guaranteed bonds. Four per cent of $14,000,000 is $560,000—and the owner of these bonds is not called upon to pay one single cent. Does the hon. Minister of Finance think that is a fair deal? Is it fair to let this man off scot free, while a man who is struggling to make an honest living with a capital of $55,000 or $60,000 is taxed 25 per cent on everything that he earns over 7 per cent? I leave it to the justice and fairness of my hon. friend as to whether such a measure as that will appeal to the good sense and to the commonsense of the people. Many men, though willing to stand behind the Government in carrying on this war, will not like to see 25 per cent of their profits over 7 per cent go to the Government, while many huge concerns like the one I have mentioned, controlled by millionaires whose money is in real estate and bonds, are not called upon to pay one cent.

I recall another instance of a gentleman in this city, walking around the streets with nothing to do, with $3,000,000 in first-class bonds which yield him a revenue of $150,000 a year. That man is not called upon to pay one dollar, while hundreds of other men in this city, who are with difficulty making their businesses go, will be called upon to pay. Surely hon. gentlemen opposite must see that such a tax cannot appeal to the country, cannot be successful, and will leave heartburnings throughout the whole Dominion of Canada, and justly.

I wish to place before the House the names of a few companies that will get off scot free and others with equal or smaller profits that will have to pay large taxes to the Government. I am now quoting from the Montreal Financial Times of February 19, 1916. These are shown in the following table:

Company.	Net profits.	Approximate amount of tax for one year.
Bell Telephone	$ 1,650,838	$ 97,710
C. P. R.	35,575,109	2,681,844
Canada Cement	1,286,963	
Can. Con. Rubber	1,108,845	193,465
Canada Locomotive	44,501	
Carriage Factories	267,230	24,807
Can. Foundries	*1,000,000	216,400
Dom. Bridge	1,344,347	222,337
Dom. Textile	1,230,767	186,750
Hollinger	*2,350,000	535,000
Kaministiquia	181,332	12,382
Lake of Woods	419,920	41,980
Laurentide	787,191	28,800
Lyall Construction	137,696	
Maple Leaf Milling	875,437	131,360
Montreal Cottons	337,306	
Montreal Power	2,596,743	320,186
Montreal Tram	1,185,820	243,955
Nat. Breweries	334,000	
N.S. Steel and Coal	1,613,063	254,515

* Approximate earnings.

Company.	Net profits.	Approximate amount of tax for one year.
Ogilvie Flour	$ 1,519,594	$ 201,150
Ont. Steel Products	76,745	
Penmans, Ltd.	260,315	6,133
Shawinigan	1,069,032	29,040
Sherwin-Williams	384,495	
Smart Woods	351,658	22,023
Toronto Railway	1,192,489	88,122
Total		$5,537,959

Let me compare the burdens imposed on some companies that have made about the same amount. Take the Bell Telephone Company, whose profits amount to $1,650,000 and their tax to $97,000. The Nova Scotia Company made profits of $1,613,000, just a little less than the Bell Telephone Company, and they are called upon to pay over a quarter of a million dollars, whereas the Ogilvie Milling Company makes $1,500,000 and has to pay $201,150. Then, the Canada Cement Company makes $1,286,000 and pays nothing. The Dominion Bridge Company makes $1,344,000 and pays $222,337. The Dominion Textile Company makes $1,200,000 and pays $186,000. Nothing more unfair could be devised. If the minister had tried to get a system that would tax one man heavily and let others off scot free, he could not have devised anything more efficient than this. Take the Hollinger Company which has to pay over half a million dollars for this year. For the two years the shareholders of that company will be called upon to pay up over a million dollars to this Government.

I turn now to a list of companies whose taxation I have figured out for myself, taking the figures from the Annual Financial Record Review of 1914:

Name of Company.	Net profits.	Approximate amount payable under tax.
Asbestos Corporation	$270,932.37	Nothing.
Ames Holden & McCready	351,390.10	"
Lake Superior Co.	419,179.91	"
British Columbia Breweries	109,898.86	"
Canada Bread Co.	88,689.96	"
Canadian General Electric	821,067.97	$4,629.44
Cockshutt Plow Co.	321,273.39	Nothing.
A. McDonald Co.	228,073.20	"
Riordan Pulp Co.	640,010.79	"
Steel Co. of Canada	214,325.07	"
Tuckett Tobacco Co—	151,773.99	"
Wayagamack Pulp Co.	148,980.32	$14,742.58
Winnipeg Glass Co.	884,626.89	116,156.39
Canada Permanent Loan.	285,815.47	40,828.86
Central Canada Loan	371,970.38	56,242.57
Huron & Erie	351,056.10	65,839.02

[Mr. Turriff:]

Name of Company	Net profits.	Approximate amount payable under tax.
London and Canada Loan Co.	$ 88,026.00	Nothing.
Calgary Power	841,981.27	127,807.81
Consumers Gas Co.	762,525.11	Nothing.
Dominion Power and Transmission	533,126.53	"
Ontario Power Co.	392,942.63	"

Let us compare a few of these. Take the Ames Holden & McCready Company, which made $351,000 and will pay nothing; and then take the Huron and Erie Loan Company, which made only $20,000 more, $371,000, and will pay $56,000. Then, take the London and Canadian Loan Company, which made $351,000, the same amount as the Ames Holden Company, and will be called upon to pay $65,839, while the Ames Holden Company do not pay one single cent. The Steel Company of Canada makes $640,000, and they will pay nothing, but their stock has gone up since the war munition manufacturing started from $15 to $40 a share. Surely nothing more can be needed to convince my hon. friend the Minister of Finance, and those hon. gentlemen sitting behind him, or to convince the country that he is on the wrong track.

Sir THOMAS WHITE: I do not like to interrupt my hon. friend, but his figures are wholly erroneous, wholly inaccurate.

Mr. TURRIFF: If my figures are wholly inaccurate, my hon. friend had better get hold of this annual Financial Review, and see that it does not publish erroneous figures. I have taken these figures from that Review—I can turn up the page, if necessary—and the figures I have given are correct, if the Financial Review is correct.

Sir THOMAS WHITE: My hon. friend is not applying the tax properly. In the first place, he is not taking into consideration the question of reserves; and, in the second place, he is not taking into consideration the fact that there is in the Bill a definition of paid-up stock under which, as I stated last night, and on Tuesday last, there will be no undue advantage to overcapitalized companies. If he would take these facts into consideration, his figures would be worth listening to.

Mr. TURRIFF: My hon. friend brings forward a resolution, on which his Bill is to be based, and in that resolution he does not say what he has stated to-night. In the resolution he states that it is impossible to go behind the capitalization of the companies. That is what the minister stated,

and, in order that there may be no misunderstanding about it, I will quote his own words from Hansard of February 15, page 849:

> It will be observed that incorporated companies are taxed upon a higher basis than individuals and partnerships. The reason for this is that capital in the case of joint stock companies frequently represents intangible assets or capitalized earning power or goodwill. We found it a practical impossibility to go behind the capitalization of companies and endeavour to ascertain the precise cash value of their assets as can be done in the case of individuals or partnerships. The cases of railway, public franchises, and so-called holding companies, mining and other corporations, illustrate the difficulty to which I am referring. In addition there is the further fact that shareholders have purchased their shares and receive their dividends upon the basis of issued capital stock.

If these words mean anything, they mean that the paid-up capital stock is the basis on which the companies would be taxed. I am very glad, however, to have the statement of my hon. friend the minister tonight. Since 15th February, the minister has seen a great deal of light, and he has come to realize, not from anything we have said on this side of the House, but from the influence brought to bear upon him by supporters of the Government, by industrial institutions who support hon. gentlemen opposite, the absolute unfairness, and the absolute inequality of the system of taxation proposed, one man being taxed heavily, while many others are left off absolutely free. Then there is a difference in regard to the capital in incorporated companies, and the capital in partnerships, but it is too late for me to go into that at the present time.

Another point to which I desire to call attention is, if I understood my hon. friend rightly, that he proposes to let life insurance companies off absolutely, with the exception that they have to invest in Government bonds one half of their extra assets earned during the years 1914 and 1915. I think that the ordinary life insurance company, which has put up bonds earning from 4 per cent to 4½ per cent, will be only too glad to exchange these bonds and the securities they have for Government bonds which will yield 5½ per cent. Is that putting a tax on life insurance? I would like to know why a difference is made between life insurance companies and accident insurance companies. It may be said that, if you tax life insurance companies, they will charge a higher premium on their policies; but does that argument not apply in the same degree to fire insurance companies? If fire insurance companies are taxed, will their policy holders not have to pay higher premiums? I would like to know on what grounds the life insurance companies are exempted, and in fact given a bonus, while the other insurance companies are to be taxed, and very heavily taxed.

Sir THOMAS WHITE: The reason is that a tax upon life insurance companies would fall upon policy holders and their beneficiaries.

Mr. TURRIFF: A great deal would fall on the policy-holders, on the men who are paying the premiums.

Sir THOMAS WHITE: The policy-holders would suffer.

Mr. TURRIFF: I am not very well posted on life insurance matters, but I have a couple of small policies, and therefore I am a policy-holder.

Sir THOMAS WHITE: We do not want to tax you.

Mr. TURRIFF: Why should you let me off, and tax the man who is paying fire insurance? That is what I am trying to get at. Why should the man who has life insurance get off scot free; why allow to get off scot free those insurance companies that have a very small amount of capital, but that have piled up millions and tens of millions of dollars, while the shareholders of fire insurance companies, marine insurance companies and accident insurance companies are to be taxed? It seems to me that it is giving an unfair advantage to life insurance companies as against the other insurance companies.

There are a couple of other classes of companies that my hon. friend puts in the same position as the companies I have mentioned—the mining and lumber companies. It seems to me to be altogether unfair to put a mining company in the same class as an industrial company or a loan company, because the mining company is using up its capital every year in taking ore out of the ground. It is always considered that unless a mining stock is paying 20 per cent the stock is not worth par, and the same argument applies to lumber companies. And yet lumber companies are put by the hon. minister in exactly the same position as commercial companies, notwithstanding the fact that every year they are digging out of their capital. For every thousand feet of lumber they take out, there is so much less standing timber out of which to make lumber. Take again the mining companies which should pay, and pay well;

my hon. friend lets them off altogether. Under the present proposition there is no attempt whatever to tax the big nickel industry of Canada. That industry is owned outside of Canada. The Canada Copper Company in Sudbury own the largest nickel properties on the earth. They mine more nickel than any other company. There are only three concerns in the world handling nickel. We in Canada own 85 per cent of all the nickel that has ever been discovered. The only place, outside of Sudbury, Canada, where nickel has been discovered is the island of New Caledonia, near Australia, and that deposit is owned by the Anglo-French Nickel Company. They control about 15 per cent of the product of the world; the other two companies own the balance, and those two companies are the Canada Copper Company and the Mond Nickel Company, an English concern who mine their ore near Sudbury, smelt it into matte, and ship the matte to England where it is refined. The Canada Copper Company is only a subsidiary of the International Nickel Company. They have at Sudbury the largest mine in the world. They are producing a huge amount of nickel, copper, gold, a certain amount of silver, and a large amount of platinum, with its great value. This is all sold by the Canada Copper Company to the International Nickel Company at a price that gives a moderate profit to the Canada Copper Company. The Canada Copper Company will pay probably a small tax to the Government in this connection, but the great big profit is made by the International Nickel Company, that purchases this matte, takes it down to the state of New Jersey, refines it, and puts it into commerce. They have the big end of the profit, but they do not pay one single dollar of taxes to this country.

Of all mistakes that this Government have made during the past year or two this is one of the greatest. I charge this Government with being absolutely unfair to Canada; I charge this Government with standing in with the Huns, our enemies, in so far as they have refused to exercise their power to prevent the exportation of nickel to the United States. Who are the International Nickel Company? The Krupps, of Berlin, and German-Americans own and control that company. The hon. member for North Simcoe (Mr. Currie) stated the other day that Germany cannot make armour plate, and cannot make guns, without the nickel that comes from Canada. Here we are supplying our enemies with nickel with which to make their armour plate. Canada has it in her power, and has had it in her power ever since the war began, to prevent the Germans from getting any further armour plate to build their battleships, and the Government have refused to exercise this power. What have they done to prevent our nickel going to Berlin to make guns and warships to kill our sons? Nothing, and I charge them with that dereliction of duty. But take it on the commercial side alone. The International Nickel company have 2,000 men at work in New Jersey refining our nickel. Why are they not refining it in Canada? That is something for the Government to answer. Two thousand men at work drawing big pay!

Sir THOMAS WHITE: How long have they been refining nickel in New Jersey? Were they refining nickel down there four or five years ago?

Mr. TURRIFF: I cannot give the exact date, but they have been refining nickel in New Jersey for something like fifteen or twenty years.

Sir THOMAS WHITE: Why, if the hon. gentleman's facts are correct, did the late Government not put an export duty on nickel?

Mr. TURRIFF: A fair question, and one that I am not a bit surprised that my hon. friend has asked. It is a question that I would be inclined, if the circumstances were reversed, to ask myself. I think the late Government were very remiss in their duty in that respect. I went to them time and again as a private member and asked them if something could not be done on that line. It was not a very important matter then, not nearly as important as it has been during the last year and a half, because when the war broke out was the time for Canada to do something for the Empire and herself. This Government did not hesitate one moment to stop the farmer and the miller from exporting wheat and flour to enemy countries, and it did not hesitate to prevent others from exporting other articles of commerce in the belief that it would not be to the advantage of the Empire to have them exported to Germany, Austria, or Turkey. But when it comes to nickel, the one article that we absolutely control, the Government do nothing. Remember that nickel is not in the same category as wheat, or flour, or

clothing, or anything else. If the enemy countries could not get these articles from us they could go elsewhere and get them. But if an enemy country could not get nickel from the International Nickel Company, of New York, they could not get it anywhere else in the world. The Anglo-French Nickel Company, composed of Englishmen and Frenchmen, own all the nickel that comes from the island of New Caledonia, and the Germans cannot buy any of the nickel that the Mond Company ship from Sudbury to London. But all the nickel that is produced by the Canada Copper Company at Sudbury goes to the International Nickel Company. It is shipped to New Jersey, refined there, and sold by them to Germany, because the Krupp people are big owners of the International Nickel Company.

When war broke out nickel was worth from 20 to 24 cents a pound. This company immediately held up the British Government for fifty cents a pound. Canada allows it to be taken free to the United States, there refined, and sold to our enemies at whatever price they choose to pay for it, because they control it; but Great Britain has to pay fifty cents a pound for it. The International Nickel Company have been making from $1,000,000 to $2,000,000 a month, every month in the year, or $25,000,000 a year, and they have been making this huge profit out of the ore that we are supplying them with. That is a state of affairs which should not be allowed to exist another hour. They do not allow it in Australia, nor in the United States. The United States imposed a duty of $120 a ton on refined nickel entering that country. If we had a refinery in Canada, we could not ship nickel to the United States without paying six cents a pound duty. And we allow our matte to go in there free! What is the process this company employs? The ore is first of all mined at Sudbury. It contains a large amount of sulphur, and is next gathered into large piles, hundreds of feet long; it is then roasted over wood fires until the sulphur is all burned out. This takes about three months. The nickel then goes to the smelter, where all the other metals, copper, gold, silver and platinum, go into the matte. And we allow this matte to be shipped to the United States free of duty, giving employment to two thousand men in New Jersey! But that is only a small matter. The worst feature is that it enables our enemies to get all the nickel they want. Those are the plain facts of the case. Let us see how this company treats the settlers in the Sudbury district. The country is simply devastated by the sulphur fumes that are given off as the ore is being roasted. Farm after farm has been devastated, and every bit of vegetation destroyed. In many cases the farmers have been left without a single dollar's worth of crop. Last year things were so bad that 150 of the farmers got together and engaged experts to ascertain the actual damage to the farms, and report to the Canada Copper Company. The company absolutely refused to pay any damages after these experts had reported. Months afterwards the Canada Copper Company sent out its own experts, but this was in the fall when it was impossible to see the full damage that had been done. Their own experts reported on the damage done, but the Canada Copper Company did everything in its power to delay settlement; and you know, Mr. Speaker, what a powerful millionaire company can do when it comes to litigation with a poor farmer. The company in every case refused to settle, except on its own terms. And remember, Mr. Speaker, England is paying this ten or twenty million dollars a year profit that the International Nickel Company is making. That company has doubled its output, and has erected new plant. It could very easily burn the ore in kilns, instead of in the open. If that were done, the sulphur and other bi-products could be saved, but it would cost a couple of hundred thousand dollars to erect the necessary plant, and the company absolutely refuses to do that. What do you think, Mr. Speaker, one of the grounds of their refusal was? To quote:

> The damage caused by the Company has been going on to a smaller extent for many years, and the Company in their defence claim to have acquired a prescriptive right to cause such damage even on the enormously large scale.

Simply because this company had ruined every farm in the vicinity in the past, they claimed the right to go on doing it in the future. The local Government at Toronto is just about as bad as this Government. They have recently withdrawn 200,000 acres of land from settlement at the demand of this company—this enemy company that furnishes to the Germans and Austrians and Turks the nickel that they require for the battleships that are to be used against the British Empire. And this Government sit quietly in their places and refuse to take the necessary action! The way this company is treating the settlers in the

Sudbury district is simply scandalous. In this connection let me read an affidavit I have just received:

In the Supreme Court of Ontario.

Between Emile Fredette, plaintiff, and the Canadian Copper Company, defendant.

I, Emile Fredette, of the township of Rayside, in the district of Sudbury, farmer, make oath and say:

1. I am the plaintiff in an action in the court above stated.

2. On either Tuesday, the 23rd day of November, or Wednesday, the 24th day of November, the defendant, by two of its agents, Messrs. M. J. Powell and a tall, middle-aged, fair, clean-shaven, bespectacled man giving his name to me as Mooshous, now staying at the Balmoral Hotel, Sudbury, settled with me my claims in the above action at my farm in the township of Rayside.

3. My wife had recently given birth to a child that lived but a few minutes, and as my crops had been burnt so that I had little or nothing to sell, I was forced to accept the settlement offered me of $30.30.

4. When I asked them about paying the costs of my lawyer, Mooshous said to me, "Why, we haven't made any costs; we have no costs to pay."

5. I had been informed that my action against the Company could not be heard at the November court, and I couldn't afford to wait till Spring and undergo the expense of coming back for trial from wherever I might go.

(Sgd) Emile Fredette.

Sworn before me at the town of Sudbury in the district of Sudbury, this 1st, day of December, 1915.

(Sgd) J. S. McKessock,
A Comm'r in S. C. O.

This is Exhibit C to the affidavit of J. H. Clary, sworn to before me this 14th day of January, 1916.

(Sgd) J. S. McKessock,
A Comm'r in S. C. O.

What do you think of that, Mr. Speaker? This man claimed $150 from the company for damage to his crops. The company refused to settle until this man had a dead baby in the house and no money for the funeral, and then they forced him to accept $30.30 and pay his own costs. This is the company that we are allowing to make a million dollars a month, and in some cases two million, and that money is practically taken out of the British treasury. This Government knows all about it, but refuses to take any action. The Minister of Railways knows more about it perhaps than any other man in the Government; he knows all the circumstances. It is time for the people of Canada to wake up. These are times of change. They are doing things in Great Britain to-day which they never thought of doing years ago. When we are in the midst of war, when we hope to send 500,000 men to the front to fight the battles of the Empire, why should we supply the Huns with this nickel which they need for their battleships? The ore could all be refined in Canada; but even if we couldn't do it here, we could have it done in Great Britain, where they have refineries. The Government is derelict in its duties when it allows such a state of affairs to continue for any length of time.

All this is a good deal on a par with what we have heard already during this session. The hon. Minister of Marine and Fisheries (Mr. Hazen) was very indignant the other day at the charges that had been made against a German in his employ, and he thought that they were very unfair and unreasonable; but no man in Canada made such a heavy charge against this German as did my hon. friend the Minister of Marine and Fisheries himself. My hon. friend stated that his private secretary did not see his private papers. What is a private secretary for? Does the Minister of Marine and Fisheries do his own letter opening and his own filing, and does he take care of his office day and night? The fact that my hon. friend says that his private secretary cannot be trusted to see his private papers is proof positive that my hon. friend does not think him trustworthy. If he thinks he is trustworthy, why does he not allow him to see his private papers? This is a case of a German being in a position to learn all sorts of things.

The other day we had another case of a similar nature. I refer to a man named Kastella in the Department of Public Works a German who came out from Germany only a few years ago, a man who had worked for years for the Krupp Company in Germany. When he came out here, my hon. friend the Minister of Public Works immediately made him Superintendent of Harbours in the Gulf and the lower St. Lawrence. What is more likely than that this man was sent to Canada by the Krupp Company of which Kaiser Wilhelm II. is one of the largest shareholders, in order to find out all about our harbours in the gulf and the lower St. Lawrence? A submarine can now be sent a distance of 3,000 miles, and it is only half that distance for a German submarine to come across to the gulf of St. Lawrence. Still this man was put in a position where he could learn the secrets of every harbour in the gulf and in the river St. Lawrence. Should such a state of affairs exist in Canada? I claim that it should not. The worst feature of the case

is that this man Kastella was not a capable man in any way. You may be surprised, Sir, to learn that this same man, without any authority from the minister or the deputy minister or any one else in the Department of Public Works, bought $50,000 of goods off his own bat, and that he paid 42 cents a pound for steel of a poorer quality than steel for which the department was paying 12 cents a pound; that is, he paid 30 cents a pound extra for 12,000 pounds of a poor class of steel, and from whom did he buy it? From 9 p.m. a German over in Hull. That is what has been going on. and it is what is going on to-day. Some years ago, when the Minister of Public Works came into power, he was very ready at firing men and putting Germans in their places. In charge of the dredging works at the mouth of the Red river he had a man named Sweeney, a pro-German. If you went into this man's office at any time, there you would see him, with his feet on the desk and a cigar in his mouth, reading pro-German papers, and every time that the British lost anything in the way of a battle, he was exulting over every one that came within sound of his voice; when the Germans won a battle, he was all happiness. That is the class of man who has been brought down East and put in charge of the Toronto harbour improvements.

Mr. GAUVREAU: What about Mr. Gutelius in charge of the Intercolonial railway?

Mr. TURRIFF: I do not know anything about him; I speak only of those I know. Probably there are many more of these men.

This work going on in Toronto harbour had to be stopped on account of the rascality that was going on in regard to the class of work which was being done, and we have our enemies doing this work. Why is all this being done? For a little bit of paltry party advantage, a little bit of patronage, of trying to catch the German vote, while the country is bleeding at every pore and suffering on account of this. That is the existing state of affairs, and I call on the Government to put a stop to it.

Now, I ask the Government to put a stop to the exportation of nickel, unless it goes direct to Britain and the Allies. I ask the Government to put a stop to the exportation of nickel to the United States, where it can easily slip through to Germany. The Government will tell me: "Oh, we have an understanding with the International Nickel Company that they will not sell any nickel to our enemies." Well, who buys it? Why, the Krupps are buying it, and do you expect, Sir, that it is not going to get to Germany, perhaps not as nickel, but combined with other metals? Do you think you can trust them? I remember a few years ago we had at Vancouver and Victoria a German named Alvin von Alvinstein, who was a great man out there, a fine fellow. He invested there a lot of money, a good deal of which belonged, so he said, to the German Emperor. He made a visit to Germany a couple of years ago; he did not return until after the war had started, and, as he was refused admittance to Canada, he remained in the United States, and what was found? The German Emperor had endeavoured, through this fine fellow, to have an invitation sent by the people of Victoria and Vancouver to the two German warships, the Goeben and the Breslau, the two ships afterwards transferred to Turkey, to pay a visit to British Columbia. Had he been able to carry out that idea, these two ships would have been in the harbours of Victoria and Vancouver respectfully when the war broke out. If that had happened, what would have taken place at Victoria and Vancouver? Nobody suspected Alvin von Alvinstein; nobody in times of peace suspected the International Nickel Company. But when war comes, our view of these things is changed. War changes everything excepting our friends on the Government benches; they do not and will not change. Again I call upon the Government to do something to put an end to the state of affairs to which I have referred.

Hon. RODOLPHE LEMIEUX (Rouville): Mr. Speaker, we have just listened to one of the ablest speeches ever delivered on the occasion of the discussion of the Budget, and I am glad to offer to the hon. member for Assiniboia (Mr. J. G. Turriff) my sincere congratulations upon his earnestness and his devotion to his public duty as a Canadian and a parliamentarian. May I offer also my sincere congratulations to the Minister of Finance for the brevity of his speech and the felicity of his words when he delivered the other day a typically White speech to the House, by means of which he will be able to bleed white our dear country, Canada. I wish the hon. minister would spare the money of the treasury as well as he spares the time of the House when he delivers his annual Budget speech.

Whilst I am complimenting members of

the House, I wish to say a good word to the Minister of Trade and Commerce for the masterly address he gave to the House and to the country the other day. Indeed, it was a clarion call of a kind to which we on this side of the House are not accustomed. It was an earnest appeal from one who, as he said, has been thirty-five years in public life. At last he warns his friends that the moment has come to rid the country of the canker of patronage and corruption. If the right hon. Prime Minister had been in his seat that evening, and if, surveying his flock around him, he had been fortunate enough to look instantaneously upon the Minister of Finance, the spendthrift, and the Minister of Trade and Commerce, the preacher of economy, he might well have said: I have a difficult team to drive. The address of the hon. Minister of Trade and Commerce will not raise him in the public estimation, because he already stands high in the estimation of the people of Canada. But I wonder if his address, when read carefully and thought over by his fellow members of the Cabinet, will raise him in the estimation of his own party. I remember having read, in one of the first books that I read in English, that admirable saying of Hooker:

> Even ministers of good things are like torches—a light to others; waste and destruction to themselves.

I think that the effect of the address of the Minister of Trade and Commerce was like the effect of the torch; a light to others, but waste and destruction to himself. After the verdict of yesterday in the county of Peel, where the election was fought on a Dominion issue, not on a local issue, at least we may say that the Minister of Trade and Commerce, after thirty-five years of public life, has been of service to his country. It is said that Queen Mary of England, lamenting the loss of Calais, which for so many years had been the proud possession of England, said to her courtiers: "When I die, open my heart, and there you will find 'Calais.'" Sir, when the Prime Minister read the Toronto and Ottawa papers this morning, and was apprised of the result in the county of Peel—a verdict against corruption; a verdict against the canker of patronage as denounced by the oldest member of the Cabinet a few days ago—I wonder if he said: Open my heart, my friends, and you will find deeply engraved within it the name of Peel.

Let me, Sir, come at once to the all absorbing issue, the war, which is being carried on to-day in nearly all parts of Europe. I agree with the hon. minister of Trade and Commerce when he says that the people of Canada, irrespective of party politics, are behind that war and underneath that war. As a Canadian and as a Liberal, all war expenditures on the part of the Minister of Finance that are properly and honestly applied, will receive my unqualified support. Sir, I read with pride as a Liberal and as a Canadian the words spoken by the Prime Minister of England two days ago. In the roar of cannon at Verdun, when peace proposals were whispered by some weak-kneed members, the Prime Minister of England said:

> What I said November 9, I repeat now. 'We shall never sheathe the sword which we have not lightly drawn, until Belgium—and I will add Serbia—recover in full measure and more than they have sacrificed; until France is adequately secured against aggression; until the rights of the small nations of Europe based upon an unassailable foundation, and until the military domination of Prussia is wholly and finally destroyed'.

The pledge taken by the Prime Minister of England is the pledge of every Canadian, as it is the pledge of every Australian and of every New Zealander. The spirit of the Canadian people with regard to the war has never been better exemplified than during the weary months that have passed since August, 1914. The manhood and the womanhood of this country have vied with each other in the effort to replenish the treasury of the Patriotic Fund, in order to maintain the families of the soldiers; in giving to the Red Cross societies, the Serbian Fund, the Belgian Fund, even the Polish Fund, all that they could give. Sir, never was it more remarkably manifested than when, in the month of November last—yes, even under the present Administration—the Canadian people were asked to subscribe $50,000,000 to a domestic loan. From every city, town and hamlet in the country came subscriptions towards that domestic loan, and my hon. friend was able to get not merely $50,000,000, but more than $100,000,000. There you have an illustration of the Canadian spirit as regards the present war. Our participation in this war has been questioned by a few. Sir, I do not know that there ever existed, at least in the British Empire—nay, speaking of Cobden, I must speak of him as a citizen of the world—that there ever existed in the world a greater pacificist than Richard Cobden. But, op-

posed as he was to war, Cobden himself said:

> When a military despot interferes to crush the men of another country while struggling for their national rights, no principle can make it wrong for a free nation to interfere by force against him. It can only be a question of expediency and prudence.

Sir, I have very often heard warlike people criticising Richard Cobden, the apostle of free trade. Certainly he was not a fervent advocate of war. But if Cobden himself had lived in August, 1914, he, I am quite sure, would have stood by the Allies in the attitude they took in fighting the enemy of mankind. In my own province, there are people who have taken to task the right hon. gentleman who leads the Opposition. They claim that he has not been true to himself, because some years ago he stated on the floor of the House of Commons that he was opposed to Canada being launched into the vortex of European militarism. It would be quite easy to make the distinction between espousing the cause of European militarism and fighting the military caste of Berlin, as we are fighting it to-day. But is not this a war between the forces of light and the forces of darkness? Is it not the conflict between liberty and tyranny? It was quite logical for the right hon. gentleman who leads the Opposition to take a commanding attitude in this country and particularly in his own province, in his advocacy of Canadian participation in the war. Sir, look at the United States to-day. The Americans are described as a matter-of-fact people. They chose to be neutral from the outset of this great conflict. They kept silent when Belgium was ruthlessly invaded; they kept silent when the crime of the Lusitania was committed. But behold the reaction which is taking place across the boundary. President Woodrow Wilson has been, I must say, a great servant of the American Commonwealth and of democracy. But, Sir, the reaction to-day is against men who are too proud to fight when their country is being humiliated. The issue in the month of November next, when the presidential election takes place, will not be the tariff, will not be any domestic question, the issue will be whether America is to be a factory or a shrine, whether it will adhere to or desert the cause of justice, liberty and humanity. There are many arm-chair critics nowadays. It is extraordinary how their number increases when great events take place. There are arm-chair critics in my own province, and elsewhere too, who think that England has been rather slow in this war, who say that England has not done her share so far. We hear that statement even here in the city of Ottawa. Mr. Speaker, there is one cardinal feature of this war which must not be lost sight of: it is that the British Navy saved the Allies from speedy and irrevocable disaster. It gave them time and opportunity to organize resistance to the tremendous German swoop which in August and September, 1914, was the outcome of forty years scheming and planning. The fleet has been the vital element and has been the determining factor of the fortunes of the war up to date, this being said without any disparagement of the forces fighting with us. We all know that the Allies have fought nobly, that the French and the Russians have fought valiantly; but we must never lose sight of the fact that without the British navy the war would have soon ended to their disadvantage. If you eliminated the British fleet from the conflict, what would happen even to-day? With superior Teutonic argosies the French colonial empire—which is second only to the colonial empire of Great Britain—Tonquin, Madagascar, Annam, and other dependencies would have been attacked and captured long ago; French and Russian shipping would have been swept away from the seas; French commerce would have been annihilated; France would have been cut off from Algeria, Morocco, and Corsica, and all chance of obtaining munitions of war, food supplies, and mechanical supplies from over the seas would have disappeared. When I hear the arm-chair critics complaining of England's slowness in moving in this war, I bear in mind the words spoken by the Minister of Marine in France, M. Augagneur, who said:

> It is the British fleet that saved the world from destruction by the barbarians of the twentieth century.

Before I come to the way and means, I wish to say a word or two about two classes of combatants in the present war. Reference was made yesterday by my hon. friend from South Renfrew (Mr. Graham) to the gallant conduct of the British aristocracy. There are two facts in this war that will ever remain salient—the gallantry of the British aristocracy, and the indomitable courage of the French democracy. It has been said—I read it time and again before the war in books, pamphlets, reviews, that England was decadent, that her aristocracy was effete, idle, degenerate. But when the sons of the

British nobility responded to the call of duty on 4th August, 1914, when they buckled on their armour, when they rushed to the front in Artois and Champagne, when later on they were mowed down at Charleroi and Mons, mingling their blood with that of the soldiers of the Republic, I could not help thinking that they were the worthy sons of their sires, of the noblemen who wrested from King John the Magna Charta, and of the men of that aristocracy who played such a prominent part in Europe in the course of the 18th century; I could not help thinking that their chivalrous spirit was after all the best evidence that "bon sang ne peut mentir."

As regards the French democracy, let me say this: before the war it was thought that the anti-military party in France would not respond to the call of duty, and fears were expressed that as labour had been more or less internationalized in its organization, the French proletariat would not fight the Germans. Mr. Speaker, the present Munitions Minister of France, Mr. Thomas, is one of the leaders of the old French Labour party. He himself sided for many years with the anti-militarists. But, listen to what he said the other day, speaking at a meeting of labourers in England; one of his friends, who had returned from the front was listening to the complaints of a civilian, and here is the language which he used:

> Comrades, I am surprised to hear what is now being said. We, who have been with the colours, know all about the fatigue, the suffering, and the demoralization of French warfare; but we are to-day in the same mind as we were on the day of mobilization. I want to fight in order that my son here may never have to go to war. If I am to die, then I shall die; but I do not want him to see war. To avoid this we will make every sacrifice—our liberty, our blood, and our life.

That is the spirit of the French democracy, a spirit which is on a par with that which animates the British aristocracy.

I now come to the ways and means proposed by the Minister of Finance in order that Canada may stand the test during this crucial period. Let us be sincere with ourselves; let us face the facts as they are, not as we would like them to be. The present war will leave Canada saddled with a huge war debt of probably more than one-billion dollars. As I stated a moment ago, we stand in this war for the ideals which the Allies represent. The first question which any intelligent man should put to himself in this great crisis, is, it seems to me: How best can the Government of this country help the cause of the Allies? Is it not just by practising, as all the Allies are practising, rigid economy in civil expenditure, by the elimination of all unnecessary capital expenditures, and of waste in war expenditure. What is our financial position at the present moment? Sir, when I look at the array of figures representing our expenditure since 1911, I cannot help but think, pause and ponder. Let us take the fiscal year 1915. The revenue for that year amounts to $133,073,000 and the total expenditure, war expenditure included, is $237,721,000. The year ends with a total deficit of $104,647,000. Let us take the fiscal year 1916. The revenue is $170,000,000; the expenditure, war expenditure included, is $295,000,000, a total deficit of $125,000,000. For the fiscal year 1916-17, the revenue is estimated at $170,000,000; expenditure, war expenditure included, at $415,000,000, a total deficit of $245,000,000. These are facts which the country has to face at the present time.

Now, let us compare the expenditures of 1910-11 with those of 1916-17. I take 1910-11 because that year marked the height of our prosperity in Canada, whilst 1916-17 finds us in the most crucial period in Canadian history. In 1910-11, when we were abnormally prosperous, the interest charges on our national debt took from us $14,114,000; the estimate for 1916-17 is $39,640,000.

	1910-11.	1916-17.
Civil Government	$4,463,000	$7,240,000
Dept. of Agriculture	1,379,000	4,263,000
Immigration	1,079,000	1,534,000
Pensions	240,000	3,365,000
Militia	6,868,000	5,706,000
Public Works—income	8,621,000	18,814,000
Public works—capital	3,742,000	8,072,000
Steamships subsidies	1,918,000	2,963,000
Naval Service	256,000	2,250,000

The list gives us some striking contrasts from beginning to end. The total estimate for 1910-11, when we were prosperous, was $132,827,000 as against $188,981,000 for 1916-17. The best interests of the country command the Government to revert to the figures of 1910-11 when we were prosperous. But I anticipate the answer of the Minister of Finance and the spendthrifts who sit around him. They will apply to the situation the popular slogan, "Business as usual." In a sense I would be inclined to say that this watchword is a true one, but it must not be forgotten that we have to reckon with an unusual business at the present time. We must provide for an army of 500,000 men, we must pay pensions, we must maintain the dependents of the soldiers, we must pay the interest on a huge

war debt, and the war will be long. The immigration wave which swept the prairies of the West during the Liberal Government has passed away not to come back very soon, if we take the Minister of Finance at his word because he predicted a not very roseate aftermath. I believe also with him that the reconstruction of this country will strain all our energies for many decades to come. Therefore, I say that the policy of any wise and patriotic Government during this crucial time should be to practise economy as they practise economy in England, the best ruled country in the world, and in France where they are facing the realities of the war more than anywhere else. Why not imitate England and France in the practice of economy? France and England are wealthy countries. We must preserve our credit. It must be remembered that we have not only interest to pay on our Dominion liabilities. When the Minister of Finance devised his scheme of taxation, which will strike not only those who are profiteering, but legitimate and ordinary business as well, did he think of the other interest charges which bear so heavily on the shoulders of the Canadian people? We have something else than the interest charges on our Dominion liabilities to meet. We have our provincial and municipal liabilities to meet. The Toronto Weekly Sun, a radical paper, one of the best edited in Canada ,and a tolerably good authority, has compiled a list of the liabilities, direct and indirect, of the provinces and municipalities, from which it appears that the direct debts of the provinces amount to no less than $183,000,000. Ontario heads the procession with $44,000,000, while Quebec has liabilities of $26,000,000. The indirect provincial liabilities, consisting principally of railway bond guarantees, amount to $195,000,000, British Columbia leading with $80,000,000, far more than she can afford to pay with her small and not growing population, followed by Alberta with $42,000,000. The municipal liabilities of the entire country have reached the gigantic sum of $625,000,000. The commitments of the provinces and municipalities together amount to $1,000,000,000. Did the Minister of Finance, when he was devising his scheme of taxation the other day, think of the other liabilities that the Canadian people, and legitimate business, have to face? That is one more reason why, as in England, as in France, the Government should practise rigid economy. I know it is a difficult matter for the Government. In England, where there are statesmen, in France, where there are statesmen, when the war broke out the best men of the various parties sunk their party differences and acted as patriots. They turned their attention to the national issue alone. England formed a coalition government, and so did France. We all know what took place in England. Sir, it was nothing short of a miracle to see Asquith, Grey, Churchill, and Lloyd George sitting around the same table in counsel with Bonar Law, Balfour, Carson, Lord Robert Cecil, and Lansdowne. In France where party passions run very high, it was still more surprising to see Poincairé, the President of the Republic and a moderate Republican himself, gathering in the Cabinet chamber men like Briand, an ex-socialist, Cochin, the representative of Catholic opinion, and Viviani, representing the advanced Socialist opinion, Ribot, a liberal, Combes, an extreme radical; a cabinet not unlike a mosaic, firm and strong, though diverse in colours.

I have no advice to offer to the Government, I am not looking for a coalition government in Canada, but I say to my fellow members and to the country that if the Prime Minister of Canada had been inspired by lofty and patriotic motives on the 4th of August last, he would have left the council chamber, and walked across the Parliament building and knocked at the door of the venerable leader of the Opposition, the senior member of the Privy Council in the British Dominions, the Nestor of the British Empire, as he was well described by Mr. Asquith at the time of the Imperial Conference in 1911. He might well have said to the right hon. gentleman: "I want your advice and counsel, let us put an end to party politics and think only of the great national issue." But nothing of the kind was done. This Government thought only of parish-pump politics. Ever since this war began they have been playing the game, watching for a chance to surprise their opponents. On the 15th of November, 1914, I was present at the first recruiting meeting held in the city of Montreal. The right hon. leader of the Opposition was present at that meeting. Long before, he had made a promise that whenever the Empire was on its trial he would appeal to his fellow men in the province of Quebec to join the colours. That night a telegram was handed to the right hon. gentleman, who was sitting next to me on the platform. The telegram informed him that sinister influences were at work in Ottawa, that a dissolution of

Parliament was impending. But such a protest went up from one end of the country to the other that the Government paused and pondered, and finally receded.

Then, in the month of May last, the hon. Minister of Public Works visited Montreal and practically announced an immediate general election. At that moment, our boys were fighting and dying at Festubert and St. Julien, and next morning, as the people read in one column of their papers the report of his speech, and in another column the story of how our boys had been mown down by the enemy, every one felt this time the veto against an election had been written with the blood of our brave soldiers, and the Government would not dare dissolve Parliament. Yes, Mr. Speaker, it was the blood of the bravest which prevented this Parliament from being prematurely dissolved.

This Government have been playing politics, instead of playing the part of statesmen. What have they done since 1911? If they really wanted to help the Mother Country, if they were really in earnest, would they not stop at once every foolish expenditure and use the money to purchase equipment and necessaries for our soldiers? For instance, is it not a scandal that instead of conducting a recruiting campaign, this Government is only recruiting camp followers for the inside and outside public service? Since 1911 they have appointed 25,613 men to the service. Of course, I know they will answer that many employees have died, many have resigned or been dismissed—the larger number of them have been dismissed—but we know that after allowance has been made for all these, there have been 11,147 additional appointments made by this Government during a period when the country was making mighty little progress. In the Department of Agriculture there have been 579 new appointments; Customs Department, 1,649 new appointments; Indian Affairs, 295 new appointments; Inland Revenue, 165 new appointments; Immigration, 343 new appointments, and no immigration; Mines, 103 new appointments; Public Works, outside service, 1,877 new appointments, inside service, 128 new appointments; Intercolonial railway, 2,076 new appointments; Post Office, civil servants, 3,312 new appointments; postmasters, new appointments, 6,591; Marine Department, 1,608 new appointments. In the Fisheries Branch alone there have been 269 new appointments. I say in the presence of my hon. friend the Minister of Marine and Fisheries (Mr. Hazen) that if he conducted his own private affairs as he and his colleagues have conducted the affairs of this country, he would very soon have no business to conduct.

Mr. CARVELL: He would not have any business to manage.

Mr. LEMIEUX: He would not have any business to manage, and he would not have the confidence of his friends or of the public. So glaring and so apparent is the scandal that even in the city of Ottawa, in a paper published by the Civil Service, whose editor could be reached by his minister if his minister wanted to reach him, this system has been condemned. The Civilian of March 5, 1915, used the following language:

> This responsibility prompts us, as a positive duty, to point out that the public service is over-manned to a remarkable degree and on account of this over-manning, of inefficient organization, or duplications and other kinds of waste, there is a loss, conservatively estimated, of over $5,000,000 a year.

I quite understand that a party coming into power, after having been in the cold shades for fifteen years, might require a few appointments for their friends, but can any one believe that a party which preached economy and retrenchment in thunderous tones for fifteen years would, in the short period of three years, appoint 11,147 new civil servants? The Prime Minister should tell any of his camp-followers who, at this juncture, are trying to obtain positions in the Civil Service that after all he has to be true to himself. Did he not say in the election campaign of 1911 that the increase in what is known as ordinary controllable expenditure of from $36,000,000, in 1896, to $79,000,000, in 1911, was proof of extravagance beyond any possible defence, and was prima facie proof of corruption? The rate of increase in expenditure during the four years after my hon. friends took office has been $16,000,000 a year, or $64,000,000 in four years. Well might Mr. Pierpont Morgan, when the Minister of Finance was passing the hat in the name of Canada for $45,000,000, send his agents to Ottawa to examine the books and tell the Government that, if they wanted another $45,000,000 or $50,000,000 they had better retrench and economize. I do not wish to weary the House with any array of figures, but let me say that, from 1911 to 1915, inclusive, the cost of running this country has been abnormal, nay, scandalous. In public works the increase

has been 84 per cent; in immigration, 30 per cent; in arts and statistics, 106 per cent; in civil government, 15 per cent; in administration of justice, 7½ per cent; in fisheries, 45 per cent; in quarantine stations, 24 per cent; in Indian affairs, 24 per cent; in penitentiaries, 40 per cent; in Dominion police, 45 per cent; in the Department of Labour, 50 per cent; in miscellaneous expenditures, 145 per cent; in customs, 57 per cent; in excise, 13 per cent; in the Post Office Department, 39 per cent; in railways and canals, 21 per cent.

Mr. CROTHERS: Is my hon. friend speaking about the expenses of the different departments?

Mr. LEMIEUX: Yes.

Mr. CROTHERS: Does my hon. friend say that the increase in the Labour Department is 50 per cent?

Mr. LEMIEUX: Yes.

Mr. CROTHERS: The expenditure was $7,000 less last year than in the previous year.

Mr. LEMIEUX: I am speaking of the four years since 1911.

Mr. CROTHERS: That is not true; I will tell you that.

Mr. OLIVER: The hon. minister is scarcely in order in making such a straight remark as that.

Mr. CROTHERS: What is there out of order about it? I do not for one moment charge my hon. friend with making a statement that he knows to be untrue. I know him too well to believe that he would do such a thing as that. I simply say that the statement which he makes, which I assume he has from an outside source, is untrue.

Mr. LEMIEUX: When my hon. friend's Estimates come before the House, I will prove to the hilt that my statement is true.

Mr. CROTHERS: No, you will not.

Mr. LEMIEUX: I happen to know something about the Department of Labour, because I administered it for four years; and I can compare favourably the administration during that time with that of my hon. friend.

Mr. CROTHERS: We are not discussing that just now.

Mr. LEMIEUX: The rate of expenditure during the short term of office of my hon. friend has been simply scandalous as compared with the rate of expenditure during my time.

Mr. CROTHERS: I can only say that that statement is also untrue. I do not charge my hon. friend with intentionally making it.

Mr. LEMIEUX: In Trade and Commerce, the rate of increase has been 905 per cent. That was explained in a way the other day by the Minister of Trade and Commerce, and I am inclined to accept his statement, but the increase is nevertheless abnormally high. In the inspection of staples, the rate of increase has been 98 per cent; in the inspection of weights and measures, gas and electric in-

10 p.m. spection, 25 per cent. I know whereof I speak. If my hon. friend the Postmaster General were in his seat, I would not charge him, because he is, fortunately, not responsible for the maladministration of the Post Office Department; but I would call his attention to the state of things which exists in his department. When I administered the Post Office Department, no contract above $200 was given without tenders being called for; but, since the Hon. Mr. Pelletier took charge of that department, the policy of public tenders has been cast to the winds, and that explains why, three years after the administration of the department by Mr. Pelletier, the expenditure has been more than doubled.

Let me give my hon. friends another instance. The other day I put a question on the Order Paper, asking the Postmaster General how many new appointments had been made in the Quebec post office since 1911. Let me explain to you, Sir, the Quebec post office yields on an average a revenue of $100,000 a year. When I left the department in 1911 there were from 70 to 75 employees in that post office. I will ask my hon. friend the Minister of Labour how many appointments have been made by Mr. Pelletier since 1911? Did he make no more than fifty appointments to an office which does not yield a revenue of $100,000 a year? No, Mr. Speaker. Did he make 75, 100, 150, 200 appointments to that office? Sir, Mr. Pelletier appointed in the Quebec post office 255 camp followers in three years. In the Montreal post office there were about 750 to 800 employes in 1911. I am not positive as to the figures, but I am not far astray when I say that there are over 1,500 employees in the Montreal post office today. Is it, then, surprising that the rate

of expenditure should have gone so high as it did during the administration of Mr. Pelletier? I say that his administration in the Post Office Department was a scandal from the day he went in to the day he went out. He has not been fair to his successor, the present Postmaster General, who is a business man and who has a sense of responsibility.

Mr. CARVELL: What are they going to do with the $17,000,000 they are asking for this year?

Mr. LEMIEUX: I will say in a moment what the Government ought to do. I am going to appeal to the better instincts of the Prime Minister and the Minister of Finance. I am appealing in this grave national crisis, not to the spoilsmen, but to the Prime Minister, the Minister of Finance, and the Minister of Trade and Commerce. I say, let us have a round table conference in the House of Commons. Let us form a committee, and let us apply the pruning knife to the scandalous expenditure of the various departments of the Government. When our sons are bleeding on the plains of Flanders; when our wives and sisters are straining every nerve on behalf of the Patriotic Fund, the Red Cross, the Serbian Fund, the Belgian Fund, the Polish Fund, it is a scandal for the Government to maintain such a high rate of expenditure. The conditions are as I have stated them, Mr. Speaker, and no answer can be given to the charges that I have made. No justification of the expenditure can be offered, because there has been no corresponding increase in population, in trade, in revenue, in business generally. Sir, we are not the only pebbles on the beach. In the other overseas dominions, there are level-headed men. What have they done in South Africa? I quote from the Times of May 22, 1915, which says:

> Steps were at once taken by the Government of South Africa to curtail as far as possible the expenditure for the fiscal year ending March 31.

Regarding India, the Times says in the same issue:

> To meet the shrinkage in revenue it has been decided to curtail expenditures, and not to resort to additional taxation. The capital outlay for public works, etc., was reduced by $60,000,000. Australia and New Zealand adopted a similar policy.

Economy in private life is a golden rule, I think; economy in public life is also a golden rule. But more especially is it a golden rule when a country is at war, and when that country is being taxed and overtaxed by its administrators. The Government cannot complain that it has not received warnings. Warnings have come to hon. gentlemen opposite, not only from this side of the House, but from their own friends. A year ago, Sir Edmund Byron Walker, who is probably the counsel and adviser of the Minister of Finance, speaking in Toronto, reminded his hearers that it was the duty of every man, woman and child to do their little part in adding, by extraordinary industry, to the natural store of wealth. Nothing, he counselled, should be bought or built that is not absolutely necessary. He added the following words:

> For, in the years to come we shall be bending our backs to a taxation such as in this country, which has been singularly free of taxation, we have never known before; and so also will our children for generations to come.

I say that the Government have received warnings not only from this side of the House-- though it is our duty and our business to warn the Government—but from their own friends. Was there not something strange in the language of Lord Shaughnessy the other day when he received the news of the Finance Minister's new taxation measure. No Government, no private individual, would have received without a blush the warning contained in his words. After having criticised moderately the measure of taxation brought down by the Minister of Finance, Lord Shaughnessy added the following ominous words:

> Every good citizen and reasonable man will loyally stand back of the Finance Minister in the adoption of the plan of action that they find may finally be considered best in the circumstances, but in return, the people of the country will demand, probably more emphatically than ever before, that expenditures in connection with war shall be without wastefulness or extravagance, and that the Minister of Finance, with his colleagues, shall see that the country's money is neither pilfered nor squandered.

Do you think that if the Government were blameless in the administration of the affairs of this country since the beginning of the war: do you think that if the Government had behaved themselves even in the ordinary way, Lord Shaughnessy, a friend of the Government, the mighty president of a mighty company, would have used that language? Mr. Speaker, we live in a British Dominion, under British laws. We have a British form of government; we have British ideals of government. Could you imagine the governor of the bank

of England, or the president of a powerful company in London, or even the bitterest opponent of the Asquith Government, speaking as Lord Shaughnessy spoke when giving this timely advice to the Government? Could you imagine any one in England saying to the Government: "Do not pilfer, do not squander the money of the people." Why, Sir, the very warning is an accusation that goes to the heart of the people of Canada.

I for one do not object to being taxed. We have an old French saying: "On ne va pas à guerre sans qu'il en coûte"—no war is carried on without toxation. But taxation, in order to be borne by the people, must be first equitable, and before taxing the people it is the duty of the Government to avoid all unnecessary and extravagant expenditures so as to limit the burden of taxation.

I know what will be the cry of our hon. friends when Parliament is dissolved and when we on both sides of the House have to face our electors. I can anticipate the excuses given by the Government for this taxation. We have heard some of these already. One hon. gentleman, I think the hon. member for East Lambton (Mr. Armstrong), said: "Oh, we of the Tory party will never be accused of favouring the interests: we have taxed the interests this time." What a shallow excuse, as if last year by that horizontal raising of the tariff by 7½ per cent, the minister had not gone to the very vitals of the consumers of this country. We were told last year that it was a war measure. I doubt it very much. In my humble judgment the raise in the tariff was the payment of the debt which the Tory party owed to the privileged interests, which put them in power in 1911.

The Solicitor General the other day, when fighting the resolution for free wheat, said: "There is no caste system in this country." His remark reminded me of what Mr. Bryce has written in his classical book, "The American Commonwealth." Speaking of those Americans who boast of having no aristocracy in the United States, but that on the contrary, the United States of America are the home of modern democracy, Mr. Bryce says that it is true that there are in the United States of America no kings, no dukes, no counts, no knights. But, he says, if the world changes, the change is only on the surface and the same idols reappear under different names He said: "True, there is a President of the Republic, and surely he is the President of a great democracy; but there is in the United States a silver king in California; there is a steel king at Pittsburg; there is a cotton king at New Orleans. They are not kings by divine right, but by the rights conferred upon them by privileges—by the tariff, by the trusts, and by the combines."

So there is no caste system in Canada, as the Solicitor General said the other day, but we have privileged interests well entrenched. The millers belong to our Canadian pseudo aristocracy; they fight free wheat in the name of interests which they hold dear and sacred. They fight wider markets; they fight the farmer in order to maintain well entrenched their interests, as the dukes, as the counts, as the knights of old fought behind their walls and behind their castles against serfdom. The Minister of Finance is very much perturbed indeed lest free wheat would make us Canadians dependent on the United States. The same candid gentleman who in 1911 said that Canada should not truck nor trade with the Yankees, in the month of November, 1915, went to New York to borrow $45,000,000 from Pierpont Morgan and the American money trusts. In the same vein, in order to keep the farmers of the West marking time he predicts for them a preference with the Mother Country.

I wish here to settle a controversial point with the Minister of Finance. The other day he was reciting an Order in Council of the 60's about a request of the Canadian traders and merchants for a preferential agreement to be obtained from the Mother Country, and I said to him that it was the withdrawal of a similar preference which had precipitated the movement for annexation in Canada; that, on the contrary, the granting of reciprocal trade to Canada had been the means of stopping the agitation for annexation. He at once said: "Yes, we obtained reciprocity; but reciprocity was withdrawn; that treaty was abrogated in 1866." We may always learn something from history. The House will pardon me if I venture for a few moments to speak of that particular period of our commercial history, because it shows how hollow is that prediction of a future agreement for mutual preferential trade between England and Canada, and at the same time how foolish is the idea that free wheat would endanger our national standing. In 1911 the Minister of Finance said that if we had reciprocity it would endanger our Canadian nationality, and this year, when our friends from the West

are pleading in vain for free wheat, he says your wheat is liable to lose its identity if it is mixed with American wheat. It would be just as wise to say to the people of the county of Rouville, who grow the finest apples in Canada: "You shall not sell your beautiful Fameuse apples to England for fear that they may be consumed by the people of Whitechapel instead of by the people living in the mansions of west London." There is as much truth and honesty in this argument as there is in the one given in answer to the unanswerable speech delivered the other day by the hon. member for Edmonton (Mr. Oliver).

Sir, what caused the annexation movement in 1849? It was the repeal of the Corn laws. What was the essence of the Corn laws as regards Canada and some of the other colonies? It was that Canada and the other colonies enjoyed a preference in the British market for certain staple goods, corn included; and it was the abandonment by England of that Imperial preferential policy, and her adoption instead of free trade, which created that agitation in Canada in favour of annexation. Our merchants could not compete in the British markets with the exports of the older nations, and our raw products were shut out of the American market by duties as high as thirty per cent. The manifesto, signed by men of all shades of opinion, advocated annexation because the efforts to obtain closer commercial relations with the United States had failed. Lord Elgin was then the Governor General of Canada, and he was by no means a free trader. I wonder if my hon. friend the Minister of Finance has read Walrond's "Letters and Journals of Lord Elgin." I would recommend him to read the following passage:

> How long can such a state of things be expected to endure?. .I am confident I could carry Canada unscathed through all these evils of transition, and place the connection on a surer foundation than ever, if I could only tell the people of the Province, that, as regards the conditions of material prosperity, they would be raised to a level with their neighbours.

Writing to Lord Grey, he says:

> You have a great opportunity before you. Obtain reciprocity for us, and I venture to predict that you will be able shortly to point to this hitherto turbulent colony with satisfaction, in illustration of the tendency of self government and freedom of trade to beget contentment and material progress.

Lord Elgin was authorized to negotiate the reciprocity treaty with the Washington Government. He concluded that treaty in 1854, and it was much wider than the Fielding-Knox pact of 1911. It was, it is true, abrogated by Congress in 1866, but that was in consequence of the difference between England and the United States during the Civil War. So that reciprocity was a cure for the evil of annexation in Canada, and reciprocity helped the people of Canada to get substantial and remunerative markets for their products in the United States. The result is worth mentioning. In 1854, the exports of the farmers of Canada to the United States amounted to only $10,473,000. In 1855, they amounted to $19,368,000, and in 1866 to $39,950,000. Sir John A. Macdonald, who was just as good an Imperialist as the Minister of Finance, was most anxious in 1865 that the treaty should be renewed. In 1878, when he was leader of the Opposition, he moved an amendment to the Budget of that year. He declared that his policy,

> moving, as it ought to do, in the direction of a reciprocity of tariffs with our neighbours so far as the varied interests of Canada may demand, will greatly tend to procure for this country, eventually, a reciprocity of trade.

In the tariff of 1879, which was the foundation of the so-called National Policy, there was that famous standing offer in which wheat, barley, rye, Indian corn, buckwheat, and all other grains; flour of wheat, and flour of rye, Indian meal, oatmeal and flour meal, were enumerated. We have there the standing offer of reciprocity to the United States, made by the Chieftain of the Conservative party.

But my hon. friend who is siding with the millers and the interests now implores the farmers of Western Canada to wait patiently until this war is over, when new arrangements will be made with the home Government to obtain a mutual preference. The answer to this is easy to make. First of all, this mutual preference policy has been to our knowledge defeated twice in England within the last 15 years. We are told that after this war new fiscal relations will exist after the war as between the the Dominion. As to that, Mr. Speaker, I believe that, in the loftier sense, new relations will exist after the war between the dominions and the Mother Country, but I say that those relations will not involve the putting of shackles on British trade. The answer to that contention has been given by Mr. Runciman, the President of the British Board of Trade. Speaking on the 10th of January of this year, in reply to a speech delivered by Mr. Hewins in the British

House of Commons, he used the following language:

> The idea of free trade as between the Allies is even more difficult than complete free trade between different parts of the Empire. As he truly pointed out, the action of our Empire has been more individualistic than that of any other Empire in the world. The individual policy of the dominions is not likely to be modified as far as we can see in any measureable time. They are determined to raise revenue in their own way and to foster their industry in their own way, and I think we must dismiss the idea of free trade within the Empire. So far as the zollverein, if you include the Allies as well, is concerned, I would point out that the difficulties are very great. I am certain if a zollverein between this Empire and the Allies were necessary to end the war successfully a zollverein we should have, for there is no arrangement which we are not prepared to make in order to bring the war to a successful conclusion.

So that Mr. Runciman, the President of the British Board of Trade, dismisses the idea of any zollverein between the various sections of the Empire. He says that if it is necessary and possible to have a zollverein between the Allies—not with the overseas dominions—during the war, in order to end the war, he is ready to advocate it as a war measure. Therefore the sentimental promise of my hon. friend the Minister of Finance to the unfortunate farmers of the West is a sorry substitute for a plain, honest and businesslike answer.

I do not purpose to go very deeply into the taxation measure which has been propounded by my hon. friend, because it is easy to see that he has already been bombarded by the business men in the country with petitions and protests, and that his Bill will be quite different from the resolution he has introduced. I shall therefore await the Bill before criticising its proposals. But, with your permission, Sir, I may be allowed to read the mild criticism of his predecessor, Mr. Fielding, the man who administered successfully the affairs of this country during 15 years, who gave Canada the British preference, and who piled up in successive years surpluses which unfortunately have been spent so lavishly since our friends opposite took office. In the Journal of Commerce of Tuesday, February 23, Mr. Fielding says:

> The retroactive character of the proposal is a good ground for objection, except perhaps in the case of the munition makers. These had very large profits during the past years—larger, probably, than they will have in the current year—and the retroactive provision doubtless was designed to reach them. But the general application of the tax to business from the beginning of the war, on August 4, 1914, is likely to be the cause of considerable trouble affecting, as it does, parties interested in transactions which were long ago settled and closed.

Mr. Fielding goes on to say:

> The minister has endeavoured to define what is "capital" for the purpose of his scheme, but the definition, as it stands, will not work out equitably. The holder of a watered stock, which has now become profitable, will escape the tax, because his dividend is less than 7 per cent on the par value of the shares, but on the price he paid—if there was originally any price—his dividend is 15 or 20 per cent on the real capital invested. While this lucky fellow escapes, the holder of shares of a more substantial character, purchased at a high premium, is taxed, because his dividend on the par value is 8 or 10 per cent, though in reality it is only 4 or 5 per cent on his investment. This is one of the most vulnerable parts of the minister's plan.

But I understand from the remarks interjected into this debate by the Minister of Finance that on this question of the definition of the capital of companies he intends, when his Bill is introduced, to give more satisfactory explanations than are found in the resolution as it appears here.

Speaking for myself only, I say that the tax on the war profits of the munition makers is not high enough. We all know that their profits have been abnormally high and I say that a tax of 50 per cent would possibly satisfy me with the retroactive clause. But a tax on industry, on business, is objectionable and a retroactive clause applied as against legitimate business and trade is nothing short of confiscation. This tax on business and trade will discourage investment of capital in industrial enterprises. It will prevent the flow of American capital into Canada. I know, as a matter of fact, and I will read the letter when we reach the committee stage, that an American capitalist who had decided to open at least four or five different establishments in Montreal, on reading the resolution introduced the other day by the Minister of Finance, decided to return to the United States and concentrate his business there.

We all know that there can be no war without heavy interest charges to pay. Some day, after this war is over, our customs and excise will not suffice to pay our interest charges. Then we will have, as a Government, to face a new measure of taxation. What is the fair and equitable system to be adopted in such a contingency? I say—and I speak for myself only—I commit no one to my views—that there is only one principle of equity and fairness, and it is the introduction of the income tax. Will the Minister of Finance

allow me to refer him to the classics? Will he allow me to read some lines written on the subject by masters in political economy? Let me refer him to Adam Smith in "The Wealth of Nations," book 5, chapter 2. He says:

> The subjects of every state ought to contribute to the support of the Government as nearly as possible in proportion to their respective abilities; that is, in proportion to the revenue which they respectively enjoy under the protection of the state. The expense of government to individuals of a great nation is like the expense of management to the joint tenants of a great estate, who are all obliged to contribute in proportion to their respective interests in the estate.

Let me read now what is said by Adolphe Thiers, the first President of the Third Republic, who served the French monarchy under the Restoration, and who opposed the second Empire in the time of Napoleon III. M. Thiers said:

> Every kind of revenue, without exception, ought to contribute to the needs of the state, for all depend upon it for their existence. Every exemption from taxation is an injustice. . . . Society is a company of mutual insurance, in which each man should pay the risk in proportion to the amount of property insured. . . . Society is a company, in which each man has more or less shares, and it is just that each should pay in proportion to their number, whether they be ten, or a hundred, or a thousand, but always according to the same rate imposed on all. There should be one rule for all, nothing more or less.

Let it be well understood that I speak for myself only. I do not propose to the Government the introduction of an income tax at the present moment; but I say that the day will come, after this war is over, when, this country being saddled with a huge war debt, the Government will have to adopt the system which has been propounded by Adam Smith in his "Wealth of Nations" and by Adolphe Thiers. I invite the Minister of Finance to read again these classics on political economy, in order to find a better system than has been devised by him to meet the exigencies of the present situation.

One word more and I am through. I wish, as a French-Canadian, or, if you please, as a Canadian of French descent, to offer my most hearty thanks to the hon. member for West Middlesex (Mr. Ross), and to the hon. member for North Simcoe (Mr. Currie) for the words which they spoke in praise of my old Motherland, France. It is well that we should speak of the existing relations between France and England at this tragic moment, when France is fighting so valiantly to stem the tide of barbarian hordes around Verdun. For many a century England and France were enemies, but they were not enemies in the sense that Germany is an enemy to the civilized countries of the world. Even Sir Philip Sydney himself always spoke of France as "la douce ennemie de l'Angleterre"—the sweet enemy of England. You, Sir, will remember that when the English and the French were facing each other at Fontenoy the commander of the French very gallantly said, "Tirez les premiers messieurs les Anglais." To one of French descent who has travelled in Europe and lived here in Canada under British institutions, it is always difficult to realize that England and France should for centuries have lived in a state of hostility. I read not many years ago a book which well reflects the sentiments which France entertained for England during the latter part of the last century. The book was written by a French lady residing just across the channel on the French coast, and was published under the very suggestive title of "l'Ile Inconnue"—the unknown isle. In a lesser degree we might say that the average Englishman of that day spoke of France as a "terra incognita." The two races did not understand each other, because of secular conflicting interests, until our good and gracious King Edward VII established the entente cordiale, which I know will endure as long as the French and British live. The admiration of my English-speaking friends for the courage and bright qualities displayed by the French in this war seems to be a little mingled with astonishment. Mr. Speaker, I find nothing astonishing in the brilliant part played by France in this war. It is not a new France which is fighting to-day so nobly and so valiantly against the Hun. France is what she has ever been, the knight errant of civilization, of justice and of freedom. I have heard many people in days gone by speak of the French frivolity. My answer to that is the same as was given by the American war correspondent who accompanied the French troops the days following the glorious retreat from the Marne. "A frivolous people? Why," he said, "they are the most thoughtful people in the world; their frivolity is nothing but a disguise. There is no miraculous regeneration in France. You cannot remould a nation's soul in a day, in a week or in a year." Mr. Speaker, the France of Poincaré, of Joffre, of Castelnau, of Pau, of Foch is the France of Joan of Arc, of

Desaix, of Hoche and of Marceau. Her internal dissensions of the past are but evidence of the intense intellectuality of the French people, and of their keen pursuit of ideals. No, Mr. Speaker, it is the same old France. Even one of our enemies, Count von Bulow, says in his book, "Imperial Germany": "It is a peculiarity of the French nation that they place spiritual needs above material ones." I can quite understand that a propounder of German kultur thought this peculiar.

Before concluding, I should just like to give the House a description of the French by a Frenchman, and a Frenchman of no mean ability, Alexis de Tocqueville, who wrote on the American democracy more than half a century ago. I think, after listening to this, the House will better understand how France is France and how the French are the French:

> When I contemplate this nation itself, it strikes me as more extraordinary than any of the events in its history. Was there ever in this world a people so full of contrasts, so extreme in each one of its actions, more guided by emotions and less by principles? Thus always doing better or worse than was expected, at one time below the common level of humanity, at another far above it; a people so stable in their principal instincts that they are still recognizable in portraits that were drawn two or three thousand years ago, and at the same time so changeable in their daily thoughts and in their tastes, that they themselves are finally astonished at the spectacle they present, and are often as surprised as foreigners at the sight of what they have just done; the most stay-at-home creatures of habit when left to themselves, but once they have been forced, against their will, to abandon their accustomed dwellings and uses, ready to carry all before them to the ends of the earth, and to dare anything; intractable by nature, and nevertheless submitting with a better grace to the arbitrary and even brutal rule of a prince, than to the orderly and free government of the principal citizens; one day the avowed enemy of all allegiance, the next day serving with such a passionate devotion as even the nations most prone to servitude cannot attain; people who can be guided by a thread as long as no one resists, but who become ungovernable as soon as the example to resist is given anywhere; thus always deceiving their masters who fear them either too little or too much; never so free that it is hopeless to try and subjugate them, nor so utterly enslaved that they cannot throw off the yoke; qualified for anything, but excelling only in war; worshipping chance, force, success, show and glamour, rather than true glory; more capable of heroism than of virtue, of genius than of common sense, better able to conceive immense schemes than to consummate great undertakings; the most brilliant and the most dangerous of the nations of Europe.

And he concludes with the following sentence, which is often quoted:

> And the most apt to become in turn an object of admiration, hatred, pity, and terror, but never one of indifference.

This is France as depicted by one of the foremost French writers and thinkers. I said a moment ago that for many centuries the French and the English of the old world did not know nor appreciate each other well. So it is ,so it has been between the English-speaking and the French-speaking Canadians. May I say to my English-speaking fellow-members, after having sat in this Parliament for twenty years, counting as many friends amongst the English as amongst the French, knowing my compatriots as I know them, understanding their traditions and their aspirations, that they are one of the best assets of the British Empire. Bear always in mind that their language and their traditions are a barrier, not to British influence, not to British civilization, not to British ideals, but to Americanization, which is admittedly the greatest danger of Canada.

In conclusion, may we not hope that this war, in which French-Canadians and English-Canadians fight and die for the same ideals, may be the promise of a brotherhood exhibiting harmony and strength at home, may substitute for disunion, misery and contention, the actual arrival and the yet richer promise of a reign of peace for our common country.

Mr. G. H. BRADBURY (Selkirk): Mr. Speaker, at this late hour I do not intend to enter into a discussion following my hon. friend (Mr. Lemieux), who has delivered such an eloquent speech. I have risen for the purpose of criticising just for a few moments some of the remarks which have fallen from the lips of the member for Assiniboia (Mr. Turriff). We have read a good deal during the last few months of the sniping that is going on at the front, that most cowardly kind of fighting in which men hide themselves in a bush and shoot those who have no chance to defend themselves; but there is political sniping going on in this House of such a nature that is utterly unworthy of any man either in or out of the House. I am very sorry that the hon. member is not in his seat, because I would like him to hear what I have to say regarding a statement which he made in reference to a loyal citizen of Canada. I had just left the Chamber or I would have called him to order when he made the statement, but after I came back I was informed of what he said. Speaking of

some of the employees of the Public Works Department, he said:

> Some years ago, when my hon. friend the Minister of Public Works came into power, he was very ready at firing men and putting Germans into their places.

That statement is absolutely without foundation, and the hon. gentleman ought to have known that. He went on to say:

> In charge of the dredging works at the mouth of the Red river he has a man named Sweeney, a pro-German.

That statement is also absolutely incorrect and without the slightest foundation. It is unfair, and, if I dared use the language that I feel like using, I would use much stronger language in regard to it. The hon. gentleman who made this statement in this House regarding Mr. Sweeney, would not dare repeat it outside the precincts of this House, because the laws of the country would call him to account for it. He said further:

> If you went into his office at any time, you would find him, with his feet up on the desk and a cigar in his mouth, reading pro-German papers, and every time the British lost anything in the way of a battle, he was exulting over every one that came within sound of his voice; when the Germans won a battle, he was all happiness. That is the class of man who has been brought down east and put in charge of the Toronto harbour improvements.

The hon. gentleman has been stuffed by some one who has told him what is absolutely untrue and who has made him convey to the House and to the country statements that are absolutely unfounded and untrue. There should be some fairness on both sides regarding public officials. I have known Mr. Sweeney ever since he came to Winnipeg to take up a position in the Public Works Department. He is, without any exception, one of the brightest young engineers in Canada.

Mr. LEMIEUX: Is he a German? The name does not sound German.

Mr. BRADBURY: He is not a German. He is a loyal Canadian; he is a British citizen, and he has done what the hon. member for Assiniboia (Mr. Turriff) has not done; he has volunteered and joined Colonel Sharpe's regiment, the 184th. Yesterday he told me in the corridors of this House that he had asked the Minister of Public Works two weeks ago to relieve him in order that he might join Colonel Sharpe's regiment. He has given up a position worth $4,000 a year in order to don His Majesty's uniform and fight for the Empire. The conduct of the hon. member is unmanly, unfair, and unjust, and should not be permitted from any member of this House. I cannot help thinking that the hon. gentleman who has been guilty of this gross unfairness owes to Mr. Sweeney a public apology, and I believe that, when this matter is drawn to his attention to-morrow, he will be man enough to get up in this House and take back what he has said.

Mr. CARVELL: Can the hon. member tell me if the gentleman who is under discussion was engaged in work in St. John some two or three years ago?

Mr. BRADBURY: I believe he was.

On motion of Mr. Oliver, the debate was adjourned.

On motion of Mr. Hazen, the House adjourned at 11.05 p.m.

Monday, February 28, 1916.

The House met at Three o'clock, the Speaker in the Chair.

REPORT.

Report of the Secretary of State for year ended March 31, 1915 (English and French versions).—Mr. Blondin.

COMMANDEERING OF WHEAT.

On the Orders of the Day:

Sir WILFRID LAURIER: At the last sitting of the House I inquired when we might expect the papers ordered by the House concerning the commandeering of wheat, and I was told that I would have an answer to-day.

Sir ROBERT BORDEN: I think the Minister of Trade and Commerce is prepared to make a statement on the subject to-day.

Sir GEORGE FOSTER: I am prepared to make a statement on the subject when the House reaches the Orders of the Day, but it would not be debatable then, and perhaps my right hon. friend would rather have it deferred until an occasion when it might be discussed.

Sir WILFRID LAURIER: If there is any correspondence on the subject, is my right hon. friend prepared to place it on the table of the House?

Sir GEORGE FOSTER: There is correspondence on the subject, the Order for which was passed by the House. But at the time of the passing of the Order I stated there would have to be some discre-

tion used as to what would be brought down. The papers are now being made up; but they are not yet ready.

Sir WILFRID LAURIER: We had better wait until they are ready.

STRIKE IN MAXIM-VICKERS WORKS.

On the Orders of the Day:

Mr. VERVILLE: Has the Minister of Labour any information respecting the strike in the Maxim-Vickers works, Montreal?

Mr. CROTHERS: I have no further information, except that efforts are being made to adjust the matter. I would suggest to my hon. friend that he would speak to me in private about these matters, as it is not considered in the public interest that they should be made public. I shall be glad to give him in private any information I have touching the matter.

POSITION OF J. K. SCAMMELL.

On the Orders of the Day:

Mr. CARVELL: I would call the attention of the Minister of Public Works (Mr. Rogers), and also of the Minister of Militia (Sir Sam Hughes) to a letter which appeared in the St. John Telegraph on Friday last, and which is signed by J. K. Scammell. I do not think it necessary to read the whole letter, but the substance of it is this: Mr. Scammell offered his services for overseas in August, 1914. He had been employed as an engineer in the Public Works Department, and he asked for leave of absence, which was granted, to go to Halifax to qualify as a lieutenant. He now finds that he has been practically retired from the position which he held. I would like to know what the policy of the Government is in regard to their positions in the Civil Service of men like Mr. Scammel, who volunteered for overseas service.

Mr. ROGERS: I have not all the facts in my mind concerning Mr. Scammell's case, but, as I recall, Mr. Scammell had been making certain reports on public works, which were recently discovered by the department to be not at all correct. Some action has been taken but I do not remember at the moment just what, I will let my hon. friend know to-morrow.

Mr. CARVELL: Might we not have a declaration of the policy of the Government in regard to such cases?

Sir ROBERT BORDEN: In what respect?

Mr. CARVELL: In reference to the position of officials of the different departments who have joined the overseas forces. The gentleman referred to is, I understand, a lieutenant in the 104th battalion.

Sir ROBERT BORDEN: The policy of the Government was set out in Orders in Council which were laid on the Table at the commencement of the session, and which formed the subject of debate when, I think my hon. friend was absent. If he will read that debate, and look at the Orders in Council, he will see what the policy is, so far as it has been formulated.

PRIVATE BILLS.

CONSIDERED IN COMMITTEE.

The House in Committee on Private Bills, Mr. Rhodes in the Chair.

Bill No. 19, respecting a patent of James W. Owen—Mr. Middlebro—in Committee.

Mr. NESBITT: This is the Bill that was up the other night, when there was nobody present to explain it. Is there any one here now to explain it?

Mr. HAZEN: The hon. gentleman who introduced this Bill is not present. I understand he went home on Friday night and has been detained in consequence of the train service being disorganized. I have looked at the papers in the Department of Agriculture, which has jurisdiction over patents, and am prepared to explain the Bill to the committee.

In this case an inventor named Owen obtained a patent in the United States for a device in connection with a sound reproducing machine, on the 9th December, 1915. He also, about the same time, obtained patents in several other foreign countries for this invention. The Canada Patent Act, section 8, requires that an inventor who has obtained a patent in a foreign country should make his application in Canada for a patent within one year of the time at which he has obtained this foreign patent. This was not done, and he asks an extension of time. He presented reasons for this request which were satisfactory to the committee and they reported in favour of the Bill. The facts are that, well within the prescribed time, Mr. Owen gave the necessary instructions to a prominent firm of patent attorneys in the United States to make application in Canada for a patent, but that owing to the long illness, resulting in the death, of the patent attorney in whose hands this business had been placed, the matter was overlooked

and the application was not made. Subsequently to the death of the patent attorney, in whose hands the matter had been originally placed, the papers were put into the hands of another attorney and it was discovered that it was too late under the Canadian Act to make application here. Consequently this application is made to Parliament. The term of a Canadian patent is eighteen years. If the application had been made within the prescribed time, namely, in 1914, the patent would have expired in 1932. By an amendment made to this Bill in committee, it was provided that the patent to be granted now would cease in 1932, or at the time that it would have ceased if the patent had been issued within one year of the time at which it was granted in the United States. These facts were established by affidavit before the Private Bills Committee which has reported the Bill for the favourable consideration of the House, and if the Bill is passed the Commissioner of Patents will be empowered to receive and deal with the application as if it had been made within the prescribed time.

I am told that this action on the part of the Private Bills Committee is not at all inconsistent with the practice of the committee for some years past in a number of other cases. The Department of Agriculture, I am informed, does not look with favour on any Bill by which it is sought to override the provisions of the Patent Act, but the present Bill, I am advised by those whose business it is in the department to study measures of this sort, is less objectionable than the ordinary one, the object of which is usually to revive a patent which the patentee had allowed to lapse. The department, while giving the facts, were not opposed to the passage of this Bill through the Private Bills Committee. The feeling rather of the department is that, these facts having been proved to the satisfaction of the Private Bills Committee and the Private Bills Committee having recommended this Bill, it would not be justified in opposing its passage.

Mr. CARVELL: I was not at the meeting of the Private Bills Committee when this Bill went through and therefore I suppose I ought not to come here and find fault. But, it seems to me that we might as well repeal our whole Patent Act as to allow Bills of this kind to be continually put through Parliament. It does not seem to make any difference how negligent a man may have been with reference to carrying out the provisions of the Patent Act; if he has money enough to pay his fee, and retain some solicitor to make a reasonable excuse, he can get his patent through. This has been going on ever since I have been in Parliament, and I must say that the nuisance is getting worse every year; in fact, I think there have been more of these Bills going through Parliament in the last three years than during all the time since I first came to Parliament. You have heard the explanation which the hon. the acting Minister of Agriculture (Mr. Hazen) gives this afternoon, and he gives it, of course, in perfectly good faith. A man hands over such an important thing as the obtaining of a patent for something which he looks upon as being valuable and he says that he places it in the hands of a solicitor who becomes ill. Is there any man in this House innocent enough to believe that that man did not know that this solicitor was ill, that a man who takes the trouble to obtain a patent in a foreign country is not looking after his interests sufficiently to know that his solicitor is ill? I do not believe it at all. That may be a very strong statement to make, but I have seen too many of these excuses put before this House during the last ten or eleven years and I am beginning to look with suspicion on every one of them. I will vote against the passage of this Bill. I do not know who the parties are and I do not know what the value of the patent may be. It may be worth $10,000,000, or $100,000 or it may not be worth $1. I think the time has come when we should stop that sort of business. We have enough provisions in the Patent Act by which any reasonable omission can be corrected by the patent office itself. I had a case not long ago where an American manufacturer honestly came to Canada in order to try to obtain a factory in which to manufacture his invention, but on account of the factories being so taken up with the manufacture of munitions of war he was unable to carry out his purpose. He made an affidavit setting forth the facts and he put it before the patent office. They held that this affidavit was sufficient and they gave him an extension of time for one year within which to commence the manufacture of the patented article in Canada. But this man has entirely slept upon his rights; he has not applied to the patent office in Canada within one year of the time at which he obtained his patent in a foreign country. To show the fallacy of granting this extension: there are a

number of other reasons for which a patent may become void, and one of the principal ones is that if the article has been on sale in any foreign country for a longer term than one year prior to making the application in Canada, the applicant cannot get his patent here. We have no evidence that this article may not have been on sale two or three years in the United States before the application was made in Canada, and if that is so the patent never should be granted. Yet, by this Bill, the man is reinstated with all his rights, no matter how much he may have violated the provisions of the Canadian law before that, the only palliation being that there is something like a year taken off the life of his patent at the other end eighteen years hence. I do not think any patentee will feel that he is called upon to make any very great sacrifice by the fact that his patent shall be for seventeen years instead of eighteen years. I make these observations without any feeling in the matter I am registering this protest on principle, and I hope the time will come when this Parliament will stop reinstating men in patent rights when they have either violated, or neglected to observe, practically every provision of the patent law of Canada.

Mr. MACDONALD: Will the minister tell the committee whether the person asking for this exceptional treatment is a Canadian or belongs to some other country?

Mr. HAZEN: He belongs to the town of Lansdowne, Pennsylvania. That is set out in the preamble of the Bill. I may say, in regard to what has been said by my hon. friend from Carleton, N.B. (Mr. Carvell) that I do not know who this gentleman is, nor do I know anything about him, but it would appear that he has acted in good faith in regard to the matter. That, of course, was a matter for the Private Bills Committee to ascertain and he satisfied the committee by affidavits that are produced here and which show his bona fides. It seems to me that under circumstances of this sort, when a man swears that he, still within twelve months of the time when he obtained his patent in the United States, placed his business in the hands of a reputable patent attorney with instructions to make his application in Canada, that the attorney became ill, that the matter was neglected and that, in consequence of that fact, he did not make his application, there is reason which would justify this Parliament in granting this extension. The case presented is one that seems to have justified the Private Bills Committe in coming to a conclusion to recommend it. Apparently there could be no reason why he should delay his application for twelve months after he obtained his patent in the United States. If he actually did not, and if he gave instructions to a reputable attorney to have this patent taken out in Canada and if, through the illness of that attorney, and through no fault of the applicant, that was not done, there seems to me to be a fair case made out why this Parliament should exercise its right and grant him the right to take out a patent under the patent law of the land for the length of time which the patent would have run if taken out in the first instance within the time provided by law.

Mr. CARVELL: Notwithstanding the explanation made by the minister, I would like to see this Bill go back to the Private Bills Committee. I would like to see the Private Bills Committee bring this man before them. It is a simple matter to draw an affidavit which means nothing and yet is not perjury. He says that he put this matter into the hands of a solicitor who has since died. That may be all true and yet there may be no excuse in it. I would like to know if the attorney had a partner, a well-organized office, a number of clerks in his office, or somebody else, to carry on his business, and I would like to know whether all the business in that solicitor's hands was allowed to lapse for months because the solicitor was ill and subsequently died. I venture to say there is not a word of that kind of explanation in the affidavit and yet I dare say that every word in the affidavit may be true, but even if the condition that I have suggested is true it is no excuse why this Parliament should step in and rectify these blunders and omissions. A patent is an important thing. A man who invents a new or useful article is entitled by law to protection in the manufacture and sale of that article so long as he complies with the laws of that country. If he does not comply with the laws of the country he is not entitled to protection and the people of this country generally are entitled to the use of that article. Every day we are deliberately thrusting away from our own people the right to the use of something which some foreigner has invented and has failed by his negligence to protect himself in the use of in Canada; and yet, we are stepping in and

giving him these valuable rights. I would like to see this Bill go back to the Private Bills Committee and I would like to see the Private Bills Committee establish the precedent of bringing these gentlemen before the committee and having them sworn so that we would have a chance of examining and cross-examining them in order to see if the real reason has been given for the negligence in this and other cases.

Mr. MACDONALD: The situation in regard to this Bill would vary somewhat depending on whether the applicant for exceptional treatment was a citizen of Canada or whether he came from some other country. After all, what is done under the Patent Act is to give certain persons, by way of a premium upon invention, the exclusive right to manufacture and sell the particular articles which they have produced. The inventor is given that privilege at the expense of the public in Canada who must pay tribute to him either by royalty or in some other way is they desire to use the article. In regard to the question of amendments to the patent law, I have deemed it my duty on various occasions to note with some care the measures which have been submitted to this Parliament giving special rights to parties who made lapses and departures from the statute. In most cases, although various reasons were put forward by the parties, it would seem that, as a matter of fact, the party had discovered that the article which he had produced had proved to be of some greater value than he had at first suggested and that the neglect to comply with the statute was due to a cause of that kind more than to any reason such as could be forward in this particular case. What is the proposition before the committee? That this man living in Lansdowne, Pa., who has an article which he has patented in the United States, and which could not be patented in Canada under the procedure more than a year after the date of having obtained the patent there, has forfeited his right of imposing on the Canadian people the exclusive right of manufacture and sale which would otherwise be his under the Patent Act. It is all very well for a solicitor to present a Bill to this House and give as a reason that his attorney was ill and that therefore the matter was neglected. I see no reason whatever why Parliament should go outside of the Patent Act and give any special rights to this gentleman who happens to belong to another country. This is very exceptional treatment and if the law as it has been laid down, and has not been amended, is to be disregarded, do not let us disregard it for people outside of Canada who are to be given special privileges. By what reason are we to say that manufacturers in Canada could not go on and produce the article which this gentleman could have patented freely and without any restriction? Why should we impose a tax, by way of royalty, on anybody in Canada who wanted to produce it for the benefit of this gentleman in the United States who did not choose to have his business looked after? The hon. member for Carleton (Mr. Carvell) says that this gentleman engaged an attorney in the United States, and that the attorney fell ill and did not attend to the business. I submit, as a professional man, that it would be very curious indeed if that occurred. Was there only one lawyer in that firm; was there no other lawyer looking after the business of this attorney? What was happening to all his other interests while he was prevented from attending to such an ordinary matter as looking after this patent? Even supposing that the claim submitted is true, and I suppose we must presume, prima facie, that it is true, that is not sufficient for this Parliament to go out of its road to give to an alien such advantage over the Canadian people.

Mr. HAZEN: In view of the opposition which has developed to the Bill, as its promoter is not here, and as there seems to be present very few members of the Private Bills Committee, who have heard the evidence, perhaps it would be better to report progress. I therefore move that the committee report progress and ask leave to sit again.

Progress reported.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

DINGWALL, N.S.—POSTMASTER.

Mr. McKENZIE:

1. When was Joseph O'Brien, of Dingwall, Nova Scotia, appointed postmaster and telegraph operator at that place?
2. When was he removed, and what were the reasons for his removal?
3. Who was appointed to the office which he held?
4. Was there an investigation held in his case? If so, who was the investigator, and what was the cost of the investigation?
5. Was there a written report filed by the investigator? If so, when?
6. Who was appointed or sent to instruct the new operator at Dingwall, and at what cost to the department?

7. Who is the operator at Dingwall at present?

8. Was there more than one appointment made to office of telegraph operator at Dingwall since Joseph O'Brien was reported as dismissed?

9. If the second appointment was made, who instructed that appointee, and at what cost to the department?

Mr. BLONDIN:

1. Was appointed postmaster of Dingwall, N.S., on the 1st December, 1907, and agent of Government telegraphs on 1st November, 1907.

2. On 11th September, 1915, owing to his inability to perform the duties of the office satisfactorily.

3. Mr. David Macdonald who resigned in favour of Mr. Gordon W. McPherson.

4. No investigation was held; charges of closing the office for days at a time and sending no meteorological reports were made by Mr. R. F. Stupert, Director at Toronto, and were admitted by Mr. O'Brien.

5. Answered by No. 4.

6. Miss Bingham was sent to instruct McDonald but instructed McPherson; cost ninety dollars.

7. Gordon W. McPherson.

8. Yes, answered by No. 3.

9. Answered by No. 6.

NORTH ONTARIO MINES.

Mr. BOULAY:

1. What quantity of metal, extracted from the North Ontario mines, has been exported to the United States for refining and finishing, during the years 1912, 1913, 1914 and 1915?

2. What is the total value of the mining products thus exported?

Mr. BLONDIN:

1. Department of Customs: Export entries in Department of Customs do not indicate in what part of Ontario metal shipped from Canada to United States originates.

Department of Mines: The compilation of statistics of exports is not within the scope of the Department of Mines.

2. Answered by No. 1.

PAYMENTS TO H. B. DUCHEMIN.

Mr. SINCLAIR:

What is the gross amount paid to H. B. Duchemin, barrister, of Sydney, N.S., by the present Administration for his services since October, 1911?

Mr. BLONDIN:

Agriculture Department, $75; Customs Department, $813.70; Interior Department, $15; Marine Department, $1,181.25; Militia and Defence Department, $36.80; Post Office Department, $817.50; Public Works Department, $371.25; Railways and Canals Department, $1,365; total, $4,675.50.

WAR EXPENDITURES BY DEPARTMENTS.

Mr. A. K. MACLEAN:

What were the sums paid on war account during the present fiscal year to January 31, 1916, by the several departments of Government outside of the Militia Department?

Mr. BLONDIN:

Agriculture, $3,758.04; Auditor General, $3,271.27; Governor-General's Secretary, $516.64; External Affairs, $8,046.76; Finance, $73,428.12; Indian Affairs, $4,909.39; Inland Revenue, $20,420.33; Interior, $35,033.74; Justice, $1,218,643.75; Labour, $529.97; Marine, $10,383.37; Mines, $927; Naval Service, $5,280,568.48; Post Office, $272,372.54; Privy Council, $12,510.56; Public Works, $76,000.05; Railways and Canals, $125,027.61; Secretary of State, $15,029.80; Trade and Commerce, $9,458.10.

INDUSTRIAL DISPUTES ACT.

Mr. MACDONALD:

Is it the intention of the Government to introduce any legislation at this session of Parliament to amend the Industrial Disputes Investigation Act?

Mr. CROTHERS: The matter is under consideration.

ASSISTANT CLERK OF ROUTINE AND RECORDS.

*Mr. TURRIFF:

1. Is it the intention of the Government to appoint, by statute, as Assistant Clerk of Routine and Records, Mr. M. Crossley Sherwood, son of the secretary of the Conservative Association, Ottawa?

2. Has the Speaker given instructions to include in the Supplementary Estimates an item to appoint by statute Mr. H. Crossley Sherwood as Assistant Clerk of Routine and Records, as a salary of $1,600 per annum?

3. If so, why is the Civil Service Commission being ignored in filling this position?

4. Has Mr. H. Crossley Sherwood passed the Civil Service examinations?

Sir ROBERT BORDEN: It is not the practice to give information as to Supplementary Estimates before they have been submitted to His Royal Highness the Governor General and approved by him.

SUSSEX BATTALION MEDICAL OFFICER.

*Mr. PROULX:

1. Who is the Medical Officer of the battalion now being formed at Sussex, N.B.?

2. Has Dr. Burnet, of Sussex, N.B., been doing any portion of this medical inspection work?

3. If so, what amounts have been paid Dr. Burnet since August 1, 1914?

Sir SAM HUGHES:

1. Captain David D. Freeze.

2 and 3. Yes; $637.50 for examination of recruits for 104th Battalion.

ACCOMMODATION FOR SOLDIERS AT CAMPBELLTON.

Mr. MICHAUD:

1. Were the engine houses of the Intercolonial railway at Campbellton, N.B., fitted up for the soldiers?

2. If so, were tenders called for to do the work? If not, who was appointed to look after the work?

3. Were tenders called for material supplied in connection with the fitting up of the said engine houses? If not, who has supplied said material, and to what extent and value?

Sir SAM HUGHES:

1. The shops of the International Railway at Campbellton, N.B., (not engine houses of the Intercolonial Railway) were fitted up for soldiers.

2. No. Work done by day labour under supervision of Lieut. Cavanagh and Staff Sergt. Collins.

3. No. Materials were purchased direct as follows: Lumber, from D. A. Stewart, $1,435.02; plumbing, from H. Marquis, $386.76; 20 heating stoves, 1 jacket heater, from A. H. English, $539.17; 3 cooking ranges, from Enterprise Foundry Co., $124.50; 1 12-seat w.c., from Amherst Foundry Co., $204.43; sewerage, from town of Campbellton, $327.77; electric light fixtures, from H. Marquis, $177.12. These accounts are being examined by the Engineering Department, and, where not found fair and reasonable, will be reduced.

CAMPBELLTON PUBLIC BUILDING.

Mr. MICHAUD:

1. Were repairs alterations and improvements made to the post office and customs building at Campbellton, N.B.?

2. If so, were tenders called for the work, and how much did it cost in each case?

3. Was the sidewalk repaired in front of said post office? If so, by whom, and how much did it cost?

Mr. DOHERTY:

1 and 2. Yes, in April, 1915, fire escapes were erected; two tenders were received, and contract was awarded to the lowest for $243. In November, 1915, the customs offices were transferred from ground floor to basement; new partitions, doors, etc., were built under agreement with D. A. Stewart for $310. Cleaning, tinting, etc., done under agreement with W. Metzler for $75. In 1913, grading, wire for, and erecting fence cost $103 under agreement.

[Mr. Proulx.]

3. Yes, in 1913, sidewalks were removed and repaired by D. A. Stewart at a cost of $213.

MAJOR G. OGILVIE, R.C.A.

Mr. LAMARCHE:

1. Is Major G. Ogilvie, R.C.A., in the employ of the Government at Quebec?

2. If, so, since when, and what are his duties?

3. By whom was he appointed, and on whose recommendation?

4. Was Major Ogilvie born in Canada or in Great Britain?

5. What rank and grade did Major Ogilvie hold in the Canadian Militia before his appointment?

6. What rank and grade does he hold in the British army?

7. What special qualifications has he in regard to explosives, and what experience has he had before entering the employ of the Government?

Sir SAM HUGHES:

1. No, not now.

2-7. Answered by No. 1.

WAR SUPPLIES—REMOUNTS.

Mr. SINCLAIR:

What is the average price paid by the Department of Militia and Defence for remounts for the use of the Canadian forces, from the opening of the war until March 31, 1915?

Sir SAM HUGHES: Average, $162.53.

PAY OF CANADIAN SOLDIERS.

Mr. CARVELL:

1. (a) What proportion of the pay of Canadian soldiers is withheld by the department while in Canada, (b) while in England, and (c) while at the front, respectively?

2. Is any portion so withheld from those soldiers who have assigned any portion of their pay to dependents?

3. When will the amounts so withheld be paid?

4. In case of the death of such soldier, to whom will the drawback be paid?

Sir SAM HUGHES:

1. (a) While in Canada, $10 is withheld from the pay of all soldiers enlisted for service in the Canadian Expeditionary Force for a period of six months, as a set-off for issues of clothing, etc. If the man deserts or is discharged for misconduct during this period, the amount is forfeited. (b) While in England, 50 per cent of the soldier's pay is withheld, and, in the case of men guilty of misconduct, the General Officer Commanding is authorized by Order in Council to direct that men shall only receive the same rate of money as paid to British soldiers. (c) While at the front, to comply with the requirements of the British Army, pay is only issued in limited amounts of

six dollars a month, but men employed at various stationary bases receive larger amounts.

2. Where there is an assignment of pay, a sufficient amount is withheld, spread over several months, to build up a credit equivalent to the amount assigned, and this is kept in hand as a credit balance so long as the assignment is in force. When once this credit balance is in hand, if the assignment amounts to 50 per cent or more of the men's pay, no further amount is withheld.

3. Amounts withheld are paid to the men on return to Canada or on discharge from the Force, except that in the case of men serving at the front who only receive limited amounts while in the field, when they proceed on leave to England they receive any balance up to 50 per cent of their pay

4. In the case of death, all sums standing to the credit of the soldiers are dealt with in accordance with the law, and are paid to the heirs or other beneficiaries who may be entitled to the same.

TONNAGE OF CANADIAN VESSELS.

Mr. SINCLAIR:

(a) What is the aggregate net tonnage of all steam vessels standing on the Canadian Register in 1910, and (b) the increase each year since to date?

Mr. HAZEN: (a) 337,721. (b) 1911, 17,864; 1912, 34,149; 1913, 39,562; 1914, 25,772; 1915, 7,387. (Approximately).

W. LLOYD CARKNER.

*Mr. LEMIEUX:

1. Is the Government aware as to whether or not Mr. W. Lloyd Carkner, formerly employed as a member of the railway mail service at Montreal, has been transferred to the Post Office Inspector's Office in the same city, dating from the 6th of July last?

2. Is the Government aware as to whether or not the said Mr. Carkner was appointed deputy inspector in place of Mr. Elie Maurault, deceased?

3. Is the Government aware as to whether or not the said Mr. Carkner performs any of the duties of his office, and if he is still acting as a member of the office of the superintendent of the railway mail service at Montreal?

4. Is the Government aware as to whether or not Mr. Carkner is being paid by and belonging to the Post Office Inspector's Office, in charge of the railway mail service branch at Montreal?

5. Is the Government aware as to whether or not Mr. Carkner was appointed to fill the vacancy caused by the death of deputy inspector Elie Maurault, and is being paid as such, and at the same time performs the duties in an office independent from the Post Office Inspector's Office?

6. Is the Government aware as to whether or not Mr. Carkner's salary is continued as far as $2,500, while no one in the superintendent of the railway mail service office, with the only exception of the superintendent himself, is said to be entitled by law to go any further than $1,800?

Mr. MEIGHEN:

1. By Order in Council, dated 7th August, 1915, Mr. William Lloyd Carkner, first-class clerk, grade "A," in the office of the superintendent of the railway mail service, Montreal, was promoted to the position of assistant post office inspector at Montreal, as from the 6th July, 1915.

2. Mr. Carkner was promoted to replace Mr. Elie Maurault, deceased.

3. Since the date of his promotion, Mr. Carkner has been employed partly in connection with work attached to the post office inspector's office and partly in connection with work attached to the office of the superintendent of the railway mail service. Owing to the efficient services and close knowledge of the work connected with the office of the superintendent of the railway mail service, it has been necessary for the department to make use of his services in the way mentioned until arrangements had been made for his work in that office to be taken over by another official. This has now been arranged. In this connection, it may be mentioned that the work now done in the office of the superintendent of the railway mail service was originally transacted in the office of the post office inspector and is, therefore, of a similar nature.

4. Mr. Carkner's name has been on the pay-list of the post office inspector since the 1st September, 1915.

5. Answered by 1, 2 and 3.

6. As assistant post office inspector, Mr. Carkner was appointed at the minimum salary of $1,800 a year, which can be increased by annual increments of $100 up to a maximum of $2,500. The promotion did not give Mr. Carkner any immediate increase in salary.

MAJOR DE LOPASSEY.

Mr. LANCTOT:

1. Is there an officer named Major De Lopassey employed in the fifth military division at Quebec?

2. If so, what are his duties?

3. Is the said Major De Lopassey authorized to require that the contractors for military works in the said division supply him with their reports and accounts in English and to refuse such as are written in French?

Sir SAM HUGHES:

1. Yes.

2. In charge of engineer works in 5th Division.

3. No.

RIVIERE OUELLE WHARF.

Mr. ERNEST LAPOINTE:

1. Did Dr. Michaud, of St. Pacôme, county of Kamouraska, sell wood and materials for the wharf at Rivière Ouelle during the years 1914 and 1915?

2. If so, what materials were sold by him, and what were the quantities and prices of such wood and meterials?

Mr. DOHERTY: No wood nor materials were purchased in the fiscal years 1914 or 1915, but during the calendar year 1915 the following materials were purchased: 29,923 feet spruce at $23, $688.28; 2,572 feet 2-inch timber at $28, $72.01; 5,529 feet 3-inch timber at $23, $127.16; 3,073 feet plank at $23, $70.67; cartage, 9 loads at $2, $18; 523 feet finished plank at $28, $14.64; 596 feet heavy plank at $28, $16.68; 6,264 feet 3-inch spruce at $23, $144.07; 2 windows at $4.50, $9; cartage, 8 loads at $2, $16; total, $1,176.51.

POST OFFICE DEPARTMENT ADVERTISEMENTS.

Mr. GAUVREAU:

1. What amount was paid to Mr. Auguste Bourbeau, or his newspaper L'Echo des Bois-France, at Victoriaville, Quebec, by the Post Office Department for advertisements or announcements of tenders for mail contracts, either for regular mails or for rural deliveries, during the financial year 1915-16?

2. Is it the practice of the Post Office Department to give such advertising and publication to newspapers that are neither published nor printed, nor received in the localities, districts or counties through which such rural delivery and such mail-carrying is done?

Mr. MEIGHEN:

1. $595.60.

2. The practice of the department is to advertise in newspapers which are published or have consiclerable circulation in the districts concerned.

IMMIGRATION.

* Sir WILFRID LAURIER:

Did the Government take up with the British Government the question of greater co-operation in immigration, in accordance with an offer contained in a letter from the Right Honourable John Burns, President of the Local Government Board to Mr. Arthur Hawkes, published by authority of the Hon. Robert Rogers in a special report on immigration, in May, 1912? If so, what progress has been made?

Mr. ROCHE: The immigration efforts of the Dominion Government are confined to securing for Canada agriculturists, and, at times, female domestic servants. As the British Government does not desire to encourage the emigration of agriculturists, no greater degree of co-operation than now exists can be hoped for while our immigration policy remains as at present, and for this reason no representations regarding co-operation have been made to the British Government.

FARNHAM CAMP.

Mr. KAY:

1. Is it the intention of the Department of Militia and Defence to mobilize any troops at Farnham, Quebec, during the coming summer?

2. What has been the total expenditure on the Farnham camp grounds from the first of January, 1913, to the first of January, 1916?

3. What has been the total revenue received from these grounds between the first of January, 1913, to 1916?

4. If it is not intended to use the grounds for military purposes, is it the intention of the Government to dispose of this property?

Sir SAM HUGHES:

1. Under consideration.

2. $3,310 on engineer services.

3. $134.

4. The question has not been considered.

BEAR RIVER, N.S., PUBLIC BUILDING SITE.

Mr. MACDONALD:

1. Was a site for a public building in Bear River, Digby county, N.S., purchased since the last sitting of the House?

2. If so, from whom was it purchased?

3. What was the price of the land?

4. Is it the intention of the Government to proceed with the construction of the building pending the war?

Mr. DOHERTY:

1. Yes, a recommendation to Council for this lot was prepared and sent to Council in April, 1914, but delay in the negotiations prevented the matter from going through until 1st November, 1915, when title deeds were passed.

2. Mary A. Rice et al.

3. $2,200.

4. No.

STELLARTON PUBLIC BUILDING SITE.

Mr. MACDONALD:

1. Has land for a public building in the town of Stellarton been purchased by the Department of Public Works?

2. If so, was the deed passed for the same?

3. Has the price been paid?

4. Is it the intention of the Government to proceed with the erection of a building thereon this year?

Mr. DOHERTY:

1. Two parcels of land were expropriated in June, 1912, and papers amended on 28th July, 1915; the vendor, Mrs. McKay, is unable to show a complete title to the land.

2. No.

3. No.

4. No.

PICTOU COUNTY RECRUITING OFFICERS.

Mr. MACDONALD:

1. Who are the recruiting officers in the county of Pictou?
2. What amounts are paid to them as salary?

Sir SAM HUGHES:

1. Captain the Rev. J. F. Tupper, Major Robert H. Graham.
2. They receive the pay of their rank.

UNOPPOSED MOTIONS FOR PAPERS.

Mr. Kyte.—For a return showing in detail the payment or payments, amounting to $647.50, paid to P. A. Stoddart, fishery guardian, Shelburne county, N.S., during the year ending March 31, 1915.

Mr. Kyte.—For a copy of all correspondence, letters, telegrams and documents of all kinds relating to the chartering of the vessel Starling, by the Department of Marine and Fisheries.

Mr. Pugsley.—For a copy of the contract with the Amalgamated Dry Dock and Engineering Company for the construction of a dry dock at North Vancouver, B.C., together with the application for subsidy therefor, and also a copy of all reports of engineers' correspondence, and all other documents relating thereto.

Mr. Gauvreau.—For a copy of all accounts, telegrams, letters, bills of costs and other documents relating to the case of J. P. Dionne against the King, before the Exchequer Court, in which case Mr. Leo Bérubé was attorney and Mr. E. H. Cimon was counsel, both being lawyers of Fraserville.

Mr. Proulx.—For a return showing the names, rank and military qualifications of the officers on the headquarters staff of the 1st, 2nd and 3rd divisional areas, including those on staffs of camps and schools of instruction, on october 1, 1915; the names of those of the above who on that date had volunteered, taken the oath and been attested for overseas service.

Mr. Ethier.—For a return showing the number of employees in the Militia Department at Ottawa on the 4th August, 1914; the present number of employees in the Militia Department; how many of them are of Canadian origin, and how many of foreign origin; the dates of their respective appointments, the nature of their duties, and their salaries.

Mr. Ethier.—For a return showing how many persons have enlisted in the Dominion since the 4th August, 1914; the number in each province; the number of French-Canadians in each province; the number of those who have recently come to Canada and enlisted, and the date of the arrival of each.

Mr. Delisle.—For a return showing the number in 1911, of the buildings leased in part or in entirety by the Government; what total amount such annual leasing represented; the number at present of buildings leased in part or in entirety by the Government; what total amount such annual leasing represents.

SUGGESTED DEPARTMENT OF PUBLIC HEALTH.

Mr. MICHAEL STEELE (South Perth) moved:

That, in the opinion of this House, the organization of a Department of Public Health is desirable in order to conserve in the largest measure possible the physical welfare of the people of this Dominion.

He said: Mr. Speaker, this question has been considered in a more or less casual manner by the different Governments of Canada for the past thirty years; but at no time in the past has the subject been so urgent as it is to-day.

It is amazing at this period of the world's history to read in even a few of our Canadian papers editorials which display a lamentable ignorance of the present day significance of the term public health. Whenever the subject is referred to, these journals, with gross ignorance of the subject and possibly with some prejudice, interpret it as having reference only to one phase of the medical profession. This view of public health might have been excusable half a century ago, but any person who looks at it in that light to-day merely illustrates the fact, all too apparent, that the subject has not received that intelligent consideration by those assuming to educate our people that its vast importance demands.

At the outset let me say a word to disabuse the minds of a few suspicious and misinformed people and newspapers who are labouring under a misapprehension regarding the object aimed at by this resolution. Permit me to say, it has no reference whatever to the subject of medical education nor to the teachings or beliefs of any school of medicine.

I said that this subject has been discussed in Parliament before; but, in view of the great development which Canada will experience in the near future, and in view of the wonderful advance that has been mede in the science of public health even in the last ten years, no apology is required on my part for its re-introduction at this time. The fact that the Dominion of Canada almost alone among the larger nations of the world has no department of public health, so defined, rests upon the basis upon which the Confederation of Canada was formed as set forth in the British North America Act. In 1867 little thought was given to public health problems, and the British North America Act makes no reference whatever to public health as a function of government. The Act merely states that census and statistics are under the Federal Government, while the management of hospitals, asylums and charities is left under the charge of provincial Government. There has always

been some confusion in the minds of our Canadian people regarding the authority of the Federal Government to deal with health matters.

The British North America Act, section 91, declares that the exclusive legislative authority of the Parliament of Canada extends to all matters coming within the classes of subjects enumerated, and among other subjects mentions (1) census and statistics and (2) quarantine and the establishment and maintenance of marine hospitals. Under section 92, enumerating exclusive powers of provincial legislatures, are named among others:

> The establishment, maintenance and management of hospitals, asylums and charities and eleemosynary institutions in and for the province, other than marine hospitals.

Practically all health work done in 1867 fell under "Quarantine and Marine Hospitals." Section 91 further states that:

> It shall be lawful for the Federal Government of Canada to legislate on all matters not coming within the classes of subjects by this act assigned exclusively to the Legislatures of the Provinces.

This appears with absolute clearness to give power to this Parliament to deal with public health matters, for the only phases of public health assigned to the provinces by the British North America Act are the establishment, maintenance and management of hospitals, asylums and charities. In so far then as the Federal Government in the interest of the State desires to perform public health work, it has competent power under the constitution to do so.

At the time of Confederation little thought was given to public health problems. No state in the American Union nor any province of Canada had a health department. It is not surprising therefore that a subject of so little interest at that time should receive such scant mention when the powers of the various legislatures were being defined by the Fathers of Confederation. It was not until fifteen years after Confederation, in the year 1882, that the first provincial board of health of Ontario was established, this being the first in Canada. Most of the provinces found it in their own interest to collect vital statistics, as the Federal Government failed to undertake this duty, and there gradually developed regular departments of health in the various provinces. This fact, however, does not in law relieve the Federal Government of the duty of administering a public health department. As a matter of fact, many health services are to-day conducted by the Federal Government Let me enumerate some of them:

Under the Inland Revenue Department: the chief analyst deals with composition of foods and drinks.

The Department of Agriculture: (1) the health conditions of construction camps or public works, controlled by Federal Government; (2) public health of Yukon Territory; (3) disease of animals; (4) various lines of work at Experimental Farm relating to plant and animal life; (5) vital statistics.

Department of Interior: (1) inspection of immigrants; (2) town planning and housing; (3) port hospitals; (4) health of Indians.

Department of Militia and Defence: (1) army medical corps and hospital service; (2) sanitation and food for the army.

Department of Public Works: sanitary inspection of public buildings.

Department of Marine and Fisheries: (1) studies of fish; (2) examination of pilots; (3) hospital care of sailors; (4) sanitation of ships; (5) health of sailors; (6) food for the navy.

Post Office Department: (1) sanitation of post offices; (2) infectious diseases as transmitted through mails.

Department of Finance: infectious diseases through handling money.

Department of Justice: (1) sanitation of prisons; (2) diseases of criminals.

These are sufficient to show the various lines of work now being done and the various directions in which expert scientific research will be required in the near future. When, therefore, it is contended that the Federal Government has no power under the British North America Act, we can reply that the Government has for years been taking control of much health work, and when it is asserted that public health is not the duty of the Federal Government under the British North America Act, it can with equal force and logic be insisted that public health is not a function laid upon the provinces since it is nowhere referred to in the Act of Confederation.

The present condition in the administration of health matters in Canada is in itself sufficient to warrant the organization of a special department inasmuch as the distribution of this work among eight or ten departments is not conducive to intelligent nor efficient administration. Let me illustrate this by a reference to the methods of dealing with immigrants. Immigrants are inspected by officers of the Department of the Interior. When placed in quaran-

tine they come under control of officers of the Department of Agriculture; and if necessary that immigrants be sent to a hospital, they come under officers of the Department of Marine and Fisheries. The results of such a system cannot but be lacking in efficiency.

Canada is almost the only country among the larger nations of the world that has no department of public health, defined as such. Every European country, with the exception of two or three of the smaller states, has a public health service. Japan has a most efficient department, and the United States, although for many years content to leave the administration of health matters chiefly to the individual states, have since 1871 gradually been developing a service under the Federal Government. At the close of the Spanish-American war the necessity of an up-to-date service was pressed strongly upon the Federal Government, and in 1902 the public health and marine hospital service was established and provision made for a hygienic laboratory and an advisory board. This board was composed of three competent experts from the army, the navy and from the Bureau of Animal Industry, to be associated with the director of the laboratory, and five additional members, to be nominated by the Surgeon General. The Act further provided for establishing research divisions of bacteriology, chemistry, zoology and pharmacology. This organization has made it possible to provide a large body of trained officials competent in every branch of public health work, not only to carry out the duties laid directly upon them by Congress, but also to be in a position to assist in the study of general problems which might affect the health, prosperity and commerce of the whole American people. In 1912 the duties of the service were further extended, and the whole organized into the Public Health service of the United States, with a surgeon general in charge.

The situations in so far as the Governments are concerned are very similar in both Canada and United States, and the conditions to be met are also so much alike that Canada may well, with the experience of the United States before her, consider in the light of that experience what her procedure may wisely be.

No duplication of work should be permitted. While the greater part of the health work now done in Canada is undertaken by the municipalities and provinces, the urgent problems of the future are wider than the mere provincial question; some of them are international. This being the case, it is proper to consider, having in view the changed conditions brought about by the discoveries of science, what is the duty of this Government in the highest interest of health of the whole people of Canada.

I referred a moment ago to the progress in recent years of medical science. Permit me to give some illustrations of this. I need only refer to the discoveries of Pasteur, Koch, Lister, each of whom by his researches, the result of which are known to the whole world, has saved the lives of untold numbers of the human race. Previous to Koch's discoveries, tuberculosis was little understood, and the person who developed the disease faced sure death. But with Koch's remarkable discovery of the tuberculosis bacillus, a new note of hope rang round the world. In the last fifty years the mortality from tuberculosis in Britain has fallen 50 per cent, and there exists to-day in the mind of the student of medical science a sure belief that with time and care tuberculosis will become a rare disease.

Cuba, which at the time of the Spanish-American war was a plague-stricken land, was, under the administration of the United States health service, cleared of malaria and typhoid, within a few years of the close of that war, and transformed into one of the garden spots of the world. The greatest thing that the United States has done for Cuba and Porto Rico since the close of the war has been its contribution to those countries of good health and sanitary science.

When the French endeavoured to build the Panama canal their attempts ended in utter failure, owing to the prevalence of disease in that section of our continent, but Surgeon-General Gorgas, by the application of modern science, destroyed the plague-producing agencies and made the construction of this great work a possibility and an assured success.

Our minds are centered to-day upon the great European war, and it may be interesting to know something about what medical science has done for our armies.

Typhus fever in Scotland in 1865 was responsible for a death rate of 108 per 100,000 of the population. This disease, with its unnumbered tens of thousands of sick and its thousands of dead, has practically vanished in the last fifty years—and its extirpation is a triumph of administration. Typhoid fever, the scourge of armies in previous wars, has, through scientific methods adopted for its control, become in the present war a minor cause of disease in all

armies except those in the Balkans, where sanitation was neglected. The history of smallpox is little less striking. With a death rate in Scotland fifty years ago of 35 per 100,000, it has been reduced until it is less than one per 100,000. With antitoxin, diphtheria has lost its chief terror.

In England and Wales the death rate for the five years from 1861-65 was 21·4 per thousand persons living. From that date the death rate gradually declined, until in 1908 it had fallen to 14·6 per thousand living. Under the improved methods of medical and sanitary science there was a saving from death of seven persons per each thousand living, or a total saving of 245,000 lives in each year for England and Wales.

Amid all the tumult, amid cries of anguish and defeat, amid thunderings of artillery, there stands on the European battle plains the man of science—a conqueror, undismayed, bringing life and healing to fields of death. He has cut our casualties in two. The bullet has always been a great enemy of human life and safety, and it has a brother in the bacillus; in fact, the bacillus has generally been considered a greater enemy than the bullet. Disease has been the soldier's deadliest foe. In the Crimea, 6,000 British, 80,000 French and 800,000 Russian soldiers died from fever. In 1870, in the Franco-Prussian war, for every 10 Germans killed, 15 died from disease. In 1877, in the Russo-Turkish war, for every 10 Russians who were killed, 27 died from disease. In Britain's campaign in Egypt, for 10 British soldiers killed, 42 died from disease. In the Spanish-American war at one time 20,000 Americans out of an army of 100,000 were ill from typhoid. In the Boer war, there were 60,000 typhoid cases in the British Army, with 8,000 deaths, and for every 7 soldiers killed by bullets, 10 were killed by disease. Disease, not cannon, has swept away the great armies of the past. For years we have had the power to banish half the disease of the world, but we let our power lie idle, and let people die. But war is a great master. It can nationalize railways in an afternoon. It can take over coal mines, close public houses, seize factories. It can take a useless citizen, put him in khaki and make a man of him. So science became clothed with the power of war. While men in the trenches were keeping the Germans back, men in the laboratories were keeping back that unseen enemy, disease. The British Army in South Africa was more severely smitten by invisible foes than by all they met in the open. But there was one wise nation, Japan. It remained for her to teach the Governments of Europe how to apply the knowledge they had given to the world. Japan went to war with science on her side, and for the first time bacilli were less deadly than bullets. There had never been a war with so little typhoid or so few deaths from wounds as the Japanese army which took part in the Russo-Japanese war. Sir Frederick Treves, who observed what happened on that occasion, declared that Russia had been beaten by an English Quaker named Lister. It had been demonstrated that medical science could save men by thousands and tens of thousands, and at last governments knew it. Admiralties and War Offices knew it; and so it comes about that, for the first time in the history of war, a British army has been equipped against its greatest foe. Science has armed it so effectively that with the greatest British army ever placed in the field, the cases of disease were even less than under conditions of peace. Science makes our soldiers typhoid proof, cholera proof, and tetanus proof. These three enemies are beaten for all time. Under former sanitary and health conditions, and with armies fighting amid the present surroundings, probably typhoid would have claimed 100,000 victims by this time. That it has not is one of the great victories of the war. When all is over, it will be seen that the merciful science developed by France and Britain has saved hundreds of thousands of the lives of the men who are giving their all to save to the world its civilization and its freedom. If we can conquer disease in war, we can overcome disease in peace; and the nations that have seen what science has wrought in France and in Flanders will be unwilling in years to come to let their people die when they might live. Canada will be one of those nations. These form a minor part of the story of the progress and accomplishments of medical science during recent years and indicate in some small measure what we may expect in the future.

Canada has only begun the business of nation-building, and at this period when the great European war has demonstrated most clearly the advantage of good health among our young men especially, it is opportune that this Parliament should become aroused to the need of devoting more attention to the health of our population, for it

is the physical, mental and moral quality of our people that will establish our position in the world. The future is before us; men of science have afforded us the means of avoiding the errors of the United States and European countries. If we do not build up in this Canada of ours a nation which will surpass physically all others of past history, it will be because of the incapacity and the indifference of the public men of the present day.

Public health is a great social and economic question, one of the most important that any nation has to face at the present day. First, there is the matter of feeble-mindedness, so closely associated with immigration which is directly under the control of the Federal Government. At the close of the present war there will undoubtedly be a very large influx of immigrants both from Europe and the United States. It is estimated that in Great Britain there are about three hundred thousand feeble-minded. In the United States there are an equal number, rapidly increasing. It is most important, therefore, that the greatest care should be taken in the inspection of our immigrants, as the above figures indicate a fruitful source of supply of mental defectives. It is open to doubt whether our present methods of inspection are all that are required. It seems to me that none but trained experts, qualified for the detection of mental as well as physical ailments, should be in charge of this work.

In 1914-15, 59 immigrants were rejected on account of imbecility, insanity, and mental defect, but in the same year 154 were deported for similar causes; while in the last three years 606 deportations have been made for these causes. Doubtless many of those deported were the offspring of parents whose history, if inquired into in their home lands, would have prevented the immigration to Canada of those deported persons.

To show the prevalence of feeble-mindedness in our country, let me quote the results obtained at a special clinic for feeble-minded, conducted by the Toronto General Hospital for twelve months from July 1, 1914, to July 1, 1915. During that time there were discovered 425 feeble-minded persons, of whom 203 were Canadian born and 222 foreign born, showing again that considerable numbers of feeble-minded are gaining admission to our country.

Recently a carefully-conducted examination of 2,064 children in four schools in Toronto by a specialist from the feeble-minded clinic of the Toronto General Hospital showed almost four per cent to be feeble-minded. We have no statistics to show how many mental defectives we have in this country, but it undoubtedly numbers thousands. Someone has said that the greatest menace to race regeneration to-day is our ever-increasing population of inefficient and feble-minded. Our first duty is to strengthen the inspection of immigrants. A feeble-minded immigrant may in one or two generations cost the state thousands of dollars annually. Let us in this country not repeat the mistakes of the United States, where the care of the insane per annum is costing thirty-two million dollars.

To emphasize the danger to Canada, look at New York State where the authorities have given the subject more attention than in any other part of America. There are in that state 32,000 feeble-minded in a population of 10,000,000. Of these only 4,900 are cared for. Of the balance, 7,000 are girls and women of child-bearing age, and they are producing children at nearly twice the rate of normal women. A very large percentage of these children will inherit the mental weakness of their mothers and go on adding to the already tremendous burden of providing for the mentally deficient of the state. Let Canada wake up to the threatening danger in this regard; let us profit by the warning given us by New York State.

Infant mortality is another subject which is becoming a great national problem. Our present knowledge of infant life, and the measures taken for the prevention of deaths among infants, guarantee that about 47 per cent of those dying under one year of age could be saved, and that 67 per cent of all diseases that afflict children under five years of age are preventable.

John Burns says: "We are beginning to concentrate on the child." Why should the state spend so much on inducing immigrants to come to our land, and so little in attempts to save our own native born children? Infant sickness and mortality is one of the greatest preventable wastes of to-day. We have in Canada no statistics regarding the economic loss to the nation through sickness of the people but figures from the United States will suggest to us something of our loss.

There are no complete vital statistics collected for the Dominion, the registration of births, marriages and deaths being under provincial control. New Brunswick collects none, and there is no uniform system in the other provinces in the method of collection.

Returns available for 1911.

Province.	Births.	Rate per 1,000.	Deaths.	Rate per 1,000.
Alberta	8,813	23·52	3,618	9·69
British Columbia.	5,841	14·88	3,660	9·32
Manitoba	15,918	34·93	5,481	12·03
Nova Scotia	12,322	25·03	8,237	16·73
Ontario	57,235	22·68	34,341	13·61

Yukon	48	5·64	87	10·22
	184,894		94,169	

Total births, 225,000, estimated.
Deaths under 1 year, 26,325—117·7 per 1,000 births.
Could be saved, 12,361—47 per cent of deaths.

We have in Canada no statistics whatever. Even our efficient Department of Labour has not collected statistics along this line showing the great economic loss to the nation from the sickness of our people; but I may be permitted to use some figures from the United States which will suggest to us something of our loss. Dr. Irving Fisher, in his report on "National Vitality," estimates the total financial burdens placed upon the people of the United States from sickness, including loss of wages, at two billion dollars per year. The average cost per family is $110, including loss of wages. Three million are sick at one time and the Bureau of Labour estimates that about 25 per cent of heads of families are idle three weeks or more each year from sickness among working men. The largest burden falls upon the poor and middle classes. Sickness therefore becomes a very important cause of distress and poverty. Sydney and Beatrice Webb say in their book, "Prevention of Destitution":

> We are apt to forget that in all countries in all ages it is sickness to which the greatest bulk of destitution is immediately due.

Dr. Edward T. Devine in "Misery and its Causes" says:

> Ill health is perhaps the most constant of the attendants of poverty. It has been customary to say that 25 per cent of the distress common to charitable societies is caused by sickness.

Prof. Lloyd, of the Department of Economics, Toronto University, says:

> Among the social causes of poverty none is of more importance than preventable sickness.

Many countries recognize these facts and by legislation have attempted to alleviate the conditions. Sickness insurance in some form or other has been adopted by every European nation except Roumania and Serbia. Lloyd George's Insurance Act of 1911 is a plan for handling much of the social problems of sickness. The social consequences of sickness must be considered. Disease produces poverty and destitution. Destitution and poverty lead to disease. So it goes in a circle.

The Commission on Industrial Relations, created by the United States Congress to inquire into the causes of the unrest that is shaking the country, have recently made their report. The minority report contains the following:

> Each of the thirty odd million wage earners in the United States loses an average of nine days a year through sickness, a money loss of $680,000,000. Great attention is given to accident prevention, yet accidents cause only one-seventh as much destitution as does sickness, and one-fifteenth as much as does unemployment. Unemployment is largely due to sickness and sickness in time follows unemployment. Thirty to forty per cent of cases requiring charitable relief are immediately due to sickness. The report advocates a good system of sick insurance, the fund to be created by joint contributions in this proportion; workers fifty per cent, employers forty per cent, Government ten per cent.

That is the report of an efficient and well-organized commission appointed by the Congress of the United States, and I think we can accept its statements as being accurate. I wish to give to the House the opinion of one of the greatest men that the world has produced—Pasteur. The Pasteur Institute in Paris was built as a memorial to the effective work which he had done along scientific lines. At the inauguration of the Institute he made use of the following language:

> Two opposing laws seem to me now in contest. The one, a law of blood and death opening out each day new modes of destruction, forces nations to be always ready for the battle. The other is a law of peace, work and health, whose only aim is to deliver man from the calamities that beset him. The one seeks violent contests, the other relief of mankind. The one places a single life above all victories, the other sacrifices hundreds of thousands of lives to the ambition of an individual. The law of which we are the instruments strives even through the carnage to cure the wounds due to the law of war. Treatment by our antiseptic methods may preserve the lives of thousands of soldiers. Which of these two laws will prevail. God only knows. But of this we may be sure, that science, in obeying the law of humanity, will always labour to enlarge the frontiers of life.

Reading these words to-day we could almost imagine them to have been uttered within the last year. Instead of that they were spoken in the year 1888. While the older countries are attempting to find a remedy which at best can be only partial, young Canada should face the problem which in this country is not yet very seri-

ous, by taking steps to prevent the cause—disease. Herbert Spencer says:

> To be a good animal is the first requisite to success in life. To be a nation of good animals is the first condition of national prosperity.

So efficiency of the individual and efficiency of the nation are dependent on the physical well being of our people. For years the industrial system of the world bent its energy to the efficiency of the individual corporation. Then we passed into a period when an attempt was made to increase profits and efficiency by amalgamation of corporations. To-day we are entering upon an era when the corporation, and the industrial and the commercial world, are beginning to realize that efficiency in its truest sense must begin with the conservation of the health and strength of the individual, and they are placing a higher estimate upon the value of the human machine, realizing that a man is greater than a mill, the producer more important than the product, and that what reduces the value of the man will lessen the value of the machinery. Sickness means lessened efficiency of the workmen, lessened efficiency means reduced income, and this is followed by losses in the home and privations to the family.

Dr. Harrington, of Boston, in his book, "Prevention of Disease vs. Cost of Living," says:

> The extent to which health may be conserved and the number of accidents and deaths that can be prevented to-day seems incredible. Testimony of all those qualified to judge agrees that on a very conservative estimate 42·3 per cent of the deaths each year might be postponed; that at least 50 per cent of all cases of serious illness are preventable; that the average of human life can be prolonged 12·3 years; that in Massachusetts 4 per cent of the people are sick all the time, a per capita loss of $15 per year or total loss of 50 million dollars from sickness and death preventable. This does not include 12·3 years of added age possible.

One of the most valuable assets of our nation is the vital efficiency of Canada's citizens. As efficiency largely depends on good health, therefore it becomes the urgent duty of our Government to give all reasonable aid within its power to preserve the health of our people. Dr. Osler has truly said: "What is required next to popular education is education not in disease but in health." From all parts of our country, from sanitaria, from educationists, from medical men, from insurance companies, from the public press and from all classes comes the cry, "Educate us regarding health." Commerce calls for it. The first health boards ever formed were established in the interests of trade and to-day all over the world commerce demands proper sanitation.

Canada, a new country, has a brilliant opportunity. Entering as we are upon a new period of re-organization and re-construction, we should estimate at its true value national efficiency. It may reasonably be asked, what can Canada do? We are spending hundreds of millions and properly so to defend ourselves from enemies that are without. Surely it is proper also to do our utmost to protect ourselves from those enemies that are within. Canada has two illustrious examples, either one of which she could follow with great profit to herself. She has the example of France in the inauguration and establishment of the Pasteur Institute, one of the greatest in the world, which deals not only with the health of the people, but with many other matters relating to the national prosperity and the welfare of the people of France. Or Canada may follow the example of the National Public Health service of the United States, which has become one of the most effective health services in the world. If Canada would organize her health department along the lines of either one of these it would remain then only for the imagination and the ingenuity of the men in charge of such a service to see how great the work accomplished by that department should be.

Mr. CARROLL: Do I understand the hon. member to say that the United States has a Federal department of health in addition to the state departments?

Mr. STEELE: The United States have a most efficient service—a federal public health service which is under the control of the Federal Government. It was found by the United States that the state boards of health did not meet the full requirements of the nation along these lines.

Let me quote an extract from a book entitled "Health and Disease," written by Dr. W. L. McKenzie, a member of the Local Board of Scotland, in which he says:

> It is our duty to prevent death.

That seems like a strong statement, but perhaps it expresses the idea more clearly and succinctly than any other statement could.

> It is our duty to prevent death. Out of the effort to keep alive those that would die of preventable diseases, the vast health service has grown. Of what diseases do we die? Of

what diseases must we die? These it is our duty to answer. Until the secret of physical persistence is revealed, it is ours to reduce the agencies of death to those few that men must face and accept; to create, if it be possible new channels for human energy, that the waste of living may fall to its least, and the wealth of living—in breadth, in depth, in intensity—may increase to the uttermost. Our service meets heroic obligations. In despair it is not desperate. As the physician never abandons the bedside until the breath ceases and the pulse fades into rest and the limbs lie without will and the eyes change their lustre and there is no more man, so the service of health watches the birth, the adolesence, the full tide, and the ebb of the social life. Never at any period is the task abated. It is the form the service of man takes equally in the day of his strength and in the last phases of his decrepitude.

The story of public health administration lays bare the nerve of social health, the minimum conditions of individual growth, the contrast between the listless neglect of 50 years ago and the skilled services of to-day. Surely the service of man owns no higher, no more honourable minister than him whose mission it is to cleanse, to purify, to sweeten the bright air, to shine the light into dark places, to fill with the joy of living the highways and byways, the alleys and the lanes, the courts and the wynds and the reeking cloisters of the social under world. For in that dimland the primary ritual of nature has passed from the memory; misery and filth clog the spontaneity of life and overload the will; there is nothing but torpor and hunger and the melancholy vices of personal degeneracy.

So I say, with all these considerations before us, it is the urgent duty of the House to at once take steps to organize, for the benefit of the people of this country, a department of public health. That does not necessarily mean the appointment of another minister, or of another whole department, but it does mean that all such matters shall be placed under the control of one head who is qualified to deal with them, and who will see that there are taken, on behalf of the people of this country, all those steps that are necessary and that will be useful for the conservation of the physical welfare of the people of our land. The prevention of disease may well be the crowning glory of Canada's civilization. It lies within our power. And if this work is to be assured of continued efficient management, it must be conducted by a thoroughly efficient organization.

In conclusion, let me quote a few words from the great Disraeli on this matter. He said:

> Public health is the foundation on which reposes the happiness of the people and the power of a country. The care of the public health is the first duty of a statesman.

I wish to move the adoption of this resolution.

[Mr. Steele.]

Hon. J. D. HAZEN (Acting Minister of Agriculture): Mr. Speaker, the hon. member for South Perth (Mr. Steele) should be congratulated on having brought before this House a subject of very great interest, and he is to be congratulated, also, on the well considered and admirable speech in which he has moved his resolution, a speech that, I am sure, will receive most favourable comment throughout the country, and be of great value in the consideration of this matter. I am sorry that the Minister of Agriculture, within whose department this matter more especially falls, is not able to be present to-day, and, in common with the other members of the House, I more regret the circumstances which make his presence here impossible on this occasion, because the Minister of Agriculture has given a great deal of thought and careful consideration to this very important subject. If he were present I know he would be able to make an address to the House that would be interesting and illuminating, and that would give far more information than it is possible for me, temporarily filling his position—as I hope for a very short time only—to do.

The hon. member for South Perth has referred to certain constitutional questions involved in this subject. I do not think there is any constitutional objection to a department of public health being established by the Dominion Government, either as a separate department or as a branch of one of the departments that at present exist, because, from Confederation down to the present hour, the Parliament of Canada and the Government of Canada have been giving consideration, and have been dealing with questions affecting public health. I think it may be fairly said, speaking from a constitutional standpoint, that while there are certain matters in public health, such as quarantines, sick mariners, etc., that come exclusively within the jurisdiction of the Federal Parliament, there are many other matters connected with public health over which the Federal Parliament and the provincial parliaments exercise a joint control. The provincial legislatures, for many years past, have been dealing with this subject by law, in practically every province of Canada. Boards of health, provincial and municipal, have been established, and those boards of health have applied themselves, with very excellent results, to the task of improving the sanitary conditions of their communities, and of handling all epidemics of contagious

diseases, such as small-pox, that have arisen from time to time. They have dealt with these matters themselves and have borne the expense of them, and these Acts have been administered by officials appointed under Acts passed by the provincial legislatures.

In addition to that, the provinces of late years have been giving very considerable attention to the question of the prevention of the great white plague, tuberculosis, and in different provinces throughout Canada we find established sanatoria where those who are affected with tuberculosis in its incipient stage can receive treatment, and institutions for those who have passed the incipient stage are being established now in different parts of Canada under legislation passed by the provincial legislatures. In my own province of New Brunswick, a splendid establishment for the cure of incipient cases of tuberculosis is to be found at River Glade, in the county of Westmorland. This institution was established through the generosity of the widow of Mr. Eben Jordan, of the firm of Jordan, Marsh & Company, of Boston, and it is administered by a commission appointed under an Act passed by the legislature of New Brunswick; Mrs. Jordan being a most valued member of that commission. In the city of St. John, the municipal authorities have erected an institution for the treatment and possible cure of cases of tuberculosis arising within the city and county of St. John. That institution is carried on under provincial legislation which provides that the province shall pay a per capita allowance for each patient who is in that sanatorium or in sanatoria of a similar character that may be established in different municipalities throughout the province. Similar legislation is to be found in almost all the other provinces.

There is no constitutional objection to the establishment of a department of public health, but the question will arise, if such a department should be established, with what subjects connected with public health that department should deal, so that it will not intrench upon what, by practice, has fallen under the jurisdiction of the different provinces, and before any such health department is established, it would be most desirable to consult the different Provincial Governments so that no action may be taken that would be regarded as tresspassing upon the jurisdiction of the provinces, and upon the work which they feel it is their duty to undertake. As the constitutional question involves considerable interest, I have prepared a statement dealing with what this Dominion has done since Confederation with regard to matters of public health. I find that by chapter 67 of the Revised Statutes of Canada, which created the Department of Agriculture in 1868, immediately after Confederation, the subjects of public health and quarantine were placed under its administration. It is laid down in chapter 74 of the Revised Statutes of Canada that the administration of quarantine pertains solely to the Dominion Government, so that the precedents established under the British North America Act would lead us to the conclusion that there are certain subjects relating to public health that come exclusively within the jurisdiction of the Dominion, and that there are others as to which there is equal control by the Dominion and by the provinces.

Until 1872 the Quarantine Act contained provisions charging the Department of Agriculture with the administration of public health, there having been under that department a public health medical board, of which the late Dr. Taché, Deputy Minister of Agriculture, was the secretary. In 1872, however, the then Minister of Agriculture, the late Hon. J. H. Pope, advised the elimination of the public health clauses from the Quarantine Act, because he found that heavy accounts for public health service were presented to him for payment by the provinces while he had no control of appointment or in the direction of the service, which had gradually become provincial. The then premier, Sir John A. Macdonald, concurred in this view, and the Quarantine Act was amended by the elimination of the directory administrative clauses pertaining to public health. The Government of Mr. Mackenzie, which succeeded to office (in 1873) strictly carried out this policy, and did away with the health statistical office at Halifax, which had been retained by the previous Government.

In 1878, on the return of the ministry of Sir John A. Macdonald to power, Mr. Pope again becoming Minister of Agriculture, on the very earnest representation of Dr. Taché, the subject of leprosy within the Dominion—which belongs to public health and to which Dr. Taché had devoted special study on a reference from the Imperial authorities—was again taken over as part of the administration of the department. For many years there has existed in the county of Gloucester in the province of New Bruns-

wick, and, I believe, to a slight extent in some portions of Nova Scotia, the disease of leprosy, and before Confederation the province of New Brunswick maintained at Tracadie in the county of Gloucester a lazaretto, all the expenses of which were paid by the province. That continued for a short period after Confederation, and then the expenses were borne by the Dominion Government; I believe that the lazaretto was again taken over by the province, but, in 1878, I find that an arrangement was made with the province of New Brunswick by which the lazaretto at Tracadie was transferred to the Dominion Government, and it has since been administered through the Department of Agriculture. That lazaretto, I may say, has done very excellent work; it has been well managed and well maintained, and the disease with which it is especially intended to cope is gradually though slowly being eradicated. In addition to this, the Dominion Government from time to time has taken action in isolated cases of leprosy reported within the Dominion and, in late years, more particularly amongst the Chinese in the province of British Columbia.

Under the Canada Shipping Act the care of sick sailors pertains strictly to the subject of public health, and was formerly under the administration of the Department of Agriculture. It is now administered, as hon. gentlemen know, by the Department of Marine and Fisheries, to which it was transferred in virtue of an understanding between the then ministers of the respective departments, the Hon. Mr. Pope and the late Hon. Peter Mitchell. It may further be stated that the practice of the Dominion Government since Confederation has been to take votes for both public health and quarantine.

To sum up, I may say that the administration in all matters pertaining to quarantine, that is the dealing with any infectious disease on its presenting itself at any of the ports of the Dominion, maritime or inland, is vested solely in the Dominion Government; while it is contended that all other matters pertaining to public health are joint between the Dominion and the provinces, in virtue of the provisions of the British North America Act.

There is a Dominion Public Works Health Act, under which sanitary arrangements and matters of that sort in connection with the construction of public works are attended to throughout Canada by the Department of Agriculture.

Having said that much in a general way with regard to the powers of the provinces and of the Dominion with respect to this very important subject, brought to the attention of the House by the hon. member for South Perth (Mr. Steele) I may say that we are all aware that the question of public health is daily assuming greater importance in this country. It has become a distinct subject and branch of study in medical universities throughout the land, and to such an extent is this the case, and it is so recognized as a distinct branch of medical science, that special degrees in public health, for which being now looked universities, including, I believe, the University of McGill, and men who have graduated in public health from these institutions are in some cases acting as health officers in different cities of Canada, having been appointed to such positions by virtue of legislation passed by the Provincial Legislatures.

The subject is considered to be of so much importance that the man with the ordinary diploma of M.D. from any university is not regarded as being qualified to deal with the question of public health for which being now looked upon as a special branch of science special degrees are conferred after courses of study.

The progress of hygiene and preventive medicine known under the name of "Public Health" has been rapid and marked, especially during the last few years, and there has undoubtedly been an increasing demand for governmental regulation. In the United States the marine hospital service has been by Act of Congress enlarged into a public health service. There are already departments of public health, I am informed, in some of the sister colonies. There has been discussion about the matter in England, but I do not think the movement for the appointment of a Minister of Public Health, which was very active a few years ago, has been discussed recently, all other subjects, of course, having been made secondary to the problem of the war. The medical profession of Canada speaking through the Canadian Medical Association, has urged the importance of the establishment of a Department of Public Health. The object of the creation of such a department by the Dominion Government, having in view all the subjects related to the public health with which the Government deals at the present time, would, it seems to me, be to consolidate with a view to efficiency and economy in those matters concerning public health and sanitation which are already within the jurisdiction

of the Government, but which are now scattered among the different departments. The question of adding to the duties of a department of public health other matters such as now fall within the control of provincial legislatures, and to which they have been industriously and energetically in many cases giving their attention for years past, will have to be considered carefully, and there would have to be conferences on the subject between the Dominion and the provinces. The establishment of such a department, it is contended, would obviate the confusion and extra correspondence often caused by the want of knowledge of the jurisdiction of the Minister of Agriculture in public health matters, and would facilitate the business of those who come to the capital in connection with the various sanitary matters now divided up amongst the different offices of the Government, many of them under the direction of non-medical heads, who have little knowledge of medical or sanitary science. That would be a matter of internal domestic consolidation within the Dominion Government itself. It would be a governmental recognition of the importance of public health, and of the authority of such a department to issue rules and regulations on the subject. The experience of the Department of Agriculture, I am informed by its permanent officials, as well as the example of other countries, leads them to believe that such publication so issued would carry much more weight than similar publications issued in the name of any other department.

It may surprise the House to know how many matters affecting public health are dealt with by this Government at the present time. These subjects are now scattered over several departments, without co-ordination or homogeneous supervision, and might well be grouped together in a department of public health:

In the Department of Agriculture:

1. Sanitary advice to Dominion Government.
2. Quarantine (maritime and frontier.)
3. Leprosy throughout the Dominion.
4. Public Works Health Act.
5. The sanitary part of the census.
6. Vital statistics (Dominion).
7. Health of animals.
8. Inspection of meats and canneries, and factories of foods generally.

In the Department of Inland Revenue:

9. Adulteration of foods and drugs.

In the Department of the Interior:

10. The sanitary and medical side of immigration affairs.
11. The sanitary and medical side of Indian affairs.

In the Department of Marine and Fisheries:

12. Sick seamen and marine hospitals.

Also

13. Supervision of sanitary measures and sanitary police in the Territories which have no organization corresponding to a Provincial Board of Health.
14. National bacteriological laboratory.

A department of public health could be equipped with a national bacteriological laboratory, as is the case in other countries. Such a laboratory could report promptly on suspected specimens of micro-organisms from vessels, trains, etc., held under quarantine of observation. The quality and purity of the various protective and curative agents, such as vaccine, tuberculine, Haffkine's prophylactic plague fluid, and the anti-toxins and serums of plague, cholera, diphtheria, typhoid, anthrax, etc., are of the utmost importance to the public health and to the well being of the country. It is suggested that the manufacture of these protective and curative agents might be carried on by salaried officials in the national laboratory, and the issue of them could be under the supervision and direction of the proposed public health department. In this way, it is claimed, the maximum protection of the people of Canada in this matter can alone be attained and that confidence secured which will induce the people to properly avail themselves of these all-important means of protection from epidemic and infectious disease. It is also contended that in such a national laboratory here might well be bacteriologists and chemists engaged in original research. This country would thus rise above the position of hanging on to the skirts of other nations and waiting to hear from them of the progress made in these important lines of science. Other people have suggested additional subjects that might be included if a department of public health is esablished. After conferences with the various provinces, the following might be included:

15. Sanitary direction of the service of protection of international waterways—a most important subject.
16. Sanitary supervision of the protection of the public health against tuberculosis, a subject that is being dealt with on a large scale by several of the provinces.
17. Smallpox and vaccination.

That, I understand, is already dealt with

by the Dominion Government. In case of a smallpox epidemic along the border, the Dominion Government takes means to see to it that the people are vaccinated and the spread of the disease prevented while the local authorities take steps to quarantine the disease in the different cities and towns and to isolate people who have contracted the disease.

18. Railroad, car and steamboat sanitation, a most important matter—to see to the disinfection of cars, and public conveyances, in order to assure the exclusion of malignant microbes so that disease may not be spread by those who travel.

There is already an official of the Government known as the Director General of Public Health and Sanitary Adviser of the Dominion Government, with the rank of deputy minister. But, up to the present, the matters I have enumerated have been left scattered through the different departments and not collected under the control of a specially qualified officer. I presume that their union, co-ordination and development would naturally follow the creation of such a department.

As I said at the outset, I regret that the Minister of Agriculture (Mr. Burrell) is not here, because I know that in the last few years he has given a great deal of thought and study to this very important subject. My hon. friend from South Perth (Mr. Steele) has undoubtedly accomplished a good work in bringing this matter to the attention of the House. It will no doubt attract attention throughout the country, and will cause the public to give consideration to this important matter. And, while, at the present moment, our thoughts are taken up with the war now being waged, and upon which our liberties and the institutions of our country depend, to the exclusion of practically every other subject, yet I think that all will agree that the time occupied by the House this afternoon in a discussion of this matter, so well brought to our attention by the hon. member for South Perth, is time not wasted. I would suggest to my hon. friend that it would not be desirable to cause the resolution to be pressed to a vote this afternoon. I can assure him that the matter will receive, as it has received, the best thought and attention of the Government. I am sure that when the Minister of Agriculture is once more restored to health and able to deal with the work of his department he will be only too glad to pursue the study which he has been giving to this matter, that in future it may receive the consideration, and I trust the action, that its importance deserves.

[Mr. Hazen.]

Mr. ALFRED THOMPSON (Yukon): This, in my judgment, is one of the most important questions to come under the consideration of this House, and I regret that I did not know that the motion was to be up for discussion this afternoon. The Minister of Agriculture (Mr. Burrell) who has charge of the department under which this arises, and who has given the subject special consideration, is not here, and for that reason, and because I know that, besides myself, there are a number of medical men, members of the House, who would like to present some observations on this interesting subject, I move the adjournment of the debate.

5 o'clock.

Motion agreed to and debate adjourned.

FRENCH CANADIANS IN THE CIVIL SERVICE OF CANADA.

Mr. BOULAY (Rimouski): (Translation) moved,

That, in the opinion of this House, Canadians of the French language should hold positions in the employ of the Intercolonial Railway, and in the public service of Canada, in proportion to their number in the country; and that it is urgent and in the public interest that all civil servants holding higher offices, and drawing salaries of $2,000 and over, should understand the two official languages of this country, and that no official in the said service should be admitted into the Civil Service in future unless he can fulfil such conditions.

He said: (Translation). Mr. Speaker, There are two distinct parts to this motion; the first refers to the employees on the Intercolonial railway, the other one states that the higher officials in the Civil Service, those belonging to Class A and first subdivision A of Class B, should speak the two official languages of this country.

As to the first part, namely, that concerning the Intercolonial, I have many times in past years, drawn the attention of the House to the injustice done the French-Canadians and French-Acadians, who are not treated as their number would warrant. That state of things has been in existence for the last forty-four years.

French speaking Canadians seem to have been completely ignored, or nearly so, on the whole system of the Intercolonial.

Notwithstanding repeated requests on my part and numerous articles in French publications we have always met with difficulties that should not exist, especially when the facts are called to the attention of the authorities.

Last fall, Le Progres du Golfe had an article, dealing partly with our grievances, which I intend reading, so that it may be of record in Hansard. It read as follows:

French Canadians and the Intercolonial.

Some newspapers published in English complain that French Canadians are not enlisting at a sufficient rate in the ranks of those who are going to the battlefield of Europe to be scorched alive.

The charge is groundless. If only the proportion were properly computed, it would be seen that the native English Canadians who have enlisted are not more numerous than the French-Canadians. It must be kept in mind that a large number of English recruits come to Canada to enlist, likely to obtain a higher salary, but they are Englishmen and not Canadians, as may be seen by the daily newspaper bulletins.

If the English-Canadians received the same treatment as French-Canadians in Canada's Civil Service they would be less anxious than ourselves to rally to the colours. In fact, were we not moved by our feelings of sympathy for blood-bespattered Belgium, were we not connected with France by the sacred ties of blood, were not with Great Britain, which has always treated us in all fairness, entitled to our gratitude, and were we to consider solely the treatment meted out to us by the English speaking population in Canada, not one French-Canadian should be found at the front.

Why? We are systematically debarred from every public employ; we are treated as outcasts and slaves, all the best-paying offices in the country are closed to us, there being nothing left for the French-Canadian but the small salaries and the positions as snow-shovellers and messengers; how may we in return be anxious to get killed at the bid of those gentlemen who flay us alive?

Our national pride, inherited of old from France, revolts every day against the injustices we are made to suffer. And why protest? Our English-speaking fellow-citizens are in resolve bound to allow to French-Canadians a bare twentieth part of what they are entitled to. That crying injustice has been in existence of old; it is continued from decade to decade, and the present generation of Englishmen is nothing loath to take our places and crush us under heel. Here and there, a sympathetic Englishman may be found whose feelings towards us are sincerely generous, but the number of such is so small that their voice is not listened to. I shall point out one case in a thousand that happened on the Intercolonial. The section from Mont-Joli to Campbellton is 105 miles in length, of which 92 miles run through the province of Quebec. All along the railway, the population is French-speaking. Although situated in the province of Quebec, not one of the superior officials of that section of the line speak a word of French. There is a superintendent, an assistant, a chief train despatcher, four other train despatches, a bridge foreman, four line foremen, a divisional engineer, all high-salaried officers, not a single one of whom is a French-Canadian. One of them has within the past two years learned to speak a little French, and the intention, it seems, is to put in his place an employee who cannot understand us.

Should men be wanted for some important work, French-Canadians are hired for the heavy work, but the foreman and even the time-keepers are always English-speaking who cannot understand the men. Even foremen are appointed of the stamp of a certain Bulmer who writes articles in the Orange Sentinel against our language and our faith.

During last fall, a vacancy occurred in the position of superintendent on the section from Moncton to Mont-Joli, when I saw that the illness of the superintendent was likely to prove fatal, I set to work to notify the railway authorities that in case of a vacancy caused by the expected death of Mr. Price, the French-speaking Canadians would ask the appointment of a French superintendent. That cannot be denied either by the Minister of Railways or by the general manager, because I took the trouble to interview those officers and explain to them the situation. Some of my friends also wrote more strongly in support of my request that justice be done to the French-Canadians.

The facts show that our efforts failed. Yet candidates for the vacancy were not wanting. I suggested a number of names, among others, that of a man who has been on the Intercolonial during thirty years of his life and who was dismissed for the bare reason that he was a Conservative. He was entitled, from all viewpoints, to the gratitude of his party, on account of both his personal qualifications and his services on the Intercolonial. His name is Rodolphe Blais.

I also suggested names of many others whose qualifications could not be impeached.

What was the result?—A man has been appointed by the name of Davenish, who hails from Ulster, and who has been a year or two on the Transcontinental and only one year in the offices of the Intercolonial at Moncton.

I felt sorry, lately, to hear the answer of the acting Minister of Railways (Mr. Reid) to the question asked by the hon. member for Bonaventure.

INTERCOLONIAL RAILWAY—CAMPBELLTON SUPERINTENDENT.

Mr. Marcil:

1. Who succeeded the late Mr. Price as Superintendent of the Intercolonial railway, at Campbellton?

2. Was the principle of promotion followed in the appointment?

3. Was the new appointee connected with the Intercolonial railway service?

Mr. Reid:

1. W. R. Devenish.

2. Yes.

3. Yes.

Peculiar promotion that, when the highest appointment on the Intercolonial goes to foreigners who know nothing of the railroad, the employees or the travelling public!

What? You call it a promotion when a man is appointed who has only one year's experience on the railway?

He was appointed over the heads of old employees, who, a great number of whom began as mere labourers at small salaries; and how many among them would be glad to earn those fat stipends paid by the railway to those foreign officials.

Instead of an attempt being made to encourage the employees who properly perform their duties, they are debarred from any promotion. One might think that they are expected to do the bare work that their salary pays for.

That particular state of things is not specially of this Government's doing, as I pointed out in another article published in Le Progrès du Golfe last November, but this treatment of the employees has been prevalent since 1896, at which time strangers were invited from all over, to take the place of those higher officers who were found to be too Conservative.

I claim that in all justice, such should not be the case, and that if it be a shame for common employer of labour to act thus unfairly, it is still more so for the Government, who ought to set the example of fair treatment and justice.

When the new superintendent was to be appointed, a few suggested for the vacancy the name of the member for Rimouski and Matane.

The Hon. the Minister of Railways quickly replied that the Government's policy was not to give appointments to members, and that moreover an officer in a position of such importance required in the interest of the public certain definite qualifications. I shall first state that I have never directly or indirectly sought the position, and had it been offered me, I should have refused it; and secondly I wish to tell the Hon. the Minister of Railways that I pretend to know as much as he about railway administration, since I have been connected with it almost all my life, by my intercourse both with the employees and the management.

Let us now revert to the reasons I gave at that time in support of my request for the appointment of a French-Canadian superintendent.

I first invoked the fact that for the last 44 years 92 miles of the Intercolonial, running in the province of Quebec, have always been annexed to the new Brunswick division going into Moncton; I also put forth the fact that the territory under the superintendent of that district was for the most part French-speaking, and in support of my contention, I shall give a statement of the population of the different counties bordering on or crossed by the Moncton-Mont-Joli division.

Population of the counties served by the Intercolonial Railway, within the jurisdiction of the superintendent of the Moncton-Mont-Joli division.

Statement by nationalities, taken from the 1911 Census, comprising the branch lines from Fredericton and from the Intercolonial.

	English-speaking.	French-speaking.
Westmorland	25,726	17,081
Kent	6,598	17,441
Northumberland	23,413	6,818
Gloucester	4,775	27,733
Restigouche	7,216	8,136
Bonaventure	7,316	20,050
Rimouski	1,118	50,075
	76,232	147,334

Those figures show a French majority of 71,102, if only the main line is taken into account. If the branch lines from Fredericton on the International are added, we have the following figures:—

Victoria and Madawaska	8,160	18,480
York	28,602	712
	36,762	19,192

The grand total of the population of the counties along the Intercolonial including the chief branch lines is then according to the 1911 census English-speaking 112,994, French-speaking 166,466, which means a French majority of 53,472.

In proportion to our numbers we are consequently entitled on the Moncton-Mont-Joli division and the above mentioned branch lines as regards the quota of employees included in the list just cited to 13 employees for every 10,000 inhabitants, that is to 208 French-speaking employees as against 142 English-speaking. The count is therefore short by 136 French-speaking employees as will be seen by the following list:

	English.	French.
Officers of the superintendent at Campbellton	50	5
Workshops at Campbellton	52	7
Workshops at Gibson, N.B.	25	0
Workshops at Newcastle	18	0
Station employees, Moncton-Mont-Joli division, main line from Moncton to Flatlands	71	11
From Matapédia to Mont-Joli	0	27
Section men, North division - No. 2, from Campbellton to Newcastle	20	8
Section men from Newcastle to Moncton, foreman	27	1
Section men from Mont-Joli to Campbellton	7	13
Total	270	72

Even in Montreal we do not get our proper share. In a city where the population is three-quarters French, there are several men employed who are ignorant of French, as follows: —

	English.	French.
Asst. traffic manager, Montreal	27	14
Office Montreal-Mont-Joli section	16	37

So that including the branch line from Fredericton and from the International, there is still to be found a French majority of 58,472 out of a total of 279,510, within the teritory under the Moncton-Mont-Joli superintendent. That shows a strong proportion in favour of the French-speaking element, and is another proof that we are right in asking that the number of such employees be increased and made proportionate to the number of our population.

I must also add that those employees that come from New Brunswick or elsewhere, who had no experience on the road are responsible, especially in the Quebec section of the line, for a large number of grievances, accidents, and discontent among the employees and the whole public, and for much delay in the running of trains.

It often happens that trains are sidetracked for two or three hours to give the right of way to other trains, and for no other reason except that the train despatchers know nothing of the railroad and its slopes.

Those train despatchers have always been strangers. Not a single French-Canadian from the province of Quebec or the Maritime Provinces ever could obtain a position in the office at Campbellton.

Only lately I called the general superintendent's attention to the fact. And though Mr. McNeillie is himself a stranger from the Pacific coast, he was struck by the reasonableness of my stand in the matter.

Nor are we any better in the distribution of the public positions at the Moncton headquarters, and as regards the appointment of divisional superintendents.

A glance at the list of employees in those offices will show the situation:

Names and salaries of the office heads at Moncton.	
MM. Gutelius	$ 20,000
Brady	7,250
Brown	6,000
Whelply	1,800
Paver	2,280
Burpee	4,000
Hayes	10,000
Allen	15,000
Joggins	4,500
McKenzie	1,800
Dustan	1,680
Barnes	1,920
MM. Logan	$ 1,400
Melancon	3,000
Rippy	2,100
Alward	4,000
Shannon	5,000
Burns	2,400
Estano	2,400
Clock	2,400
Avard	1,680
Walker	2,100
Simpson	2,100
McDonald	1,800
Appleton	3,000
Taylor	2,100
Cameron	2,400

We have a total of $99,930, distributed among 27 men, of whom one only is a French-Canadian.

Those figures are taken from the report of the Auditor General, French translation, for the year ending March 31, 1914. Page W—198 and the following pages.

Mr. E. DEVLIN: Is that where Mr. J. B. T. Caron was employed?

Mr. BOULAY: Yes, out of a total of 27 men receiving the large salaries in the higher offices of the Intercolonial, there is only one French-Canadian. Why is that?

If you read down a little farther, or if you look at the list of French and English employees in the Maritime Provinces, you come to a state of things much to be criticised.

The French people of those provinces seem to have been completely ignored and debarred from the road, and the list of the employees in the Moncton offices furnishes ample proof of that fact.

It must be kept in mind that the Moncton offices are supposed to be for the service of people who do business directly with the Intercolonial or the provinces through which it runs, that is the province of Quebec and the three Maritime provinces. Comparing the French and English population of those provinces, 66 per cent will be found to be French-speaking as against 34 per cent English-speaking

We ought therefore to have, on the basis of population, 66 per cent of the employees French-speaking as against 34 per cent English-speaking. But what are the facts?

	English.	French.
General manager's office at Moncton	13	1
Office of the superintendent of car service	32	7
General superintendent's office	20	3
General solicitors and claims agents	7	3
Chief engineer and right-of-way and lease agent	87	12
Comptroller's office	15	4
Cashier's office	3	0
Auditors of disbursements	35	4

	English.	French.
Insurance and providence fund	30	3
Audit office	69	22
Engineer of maintenance	18	3
General tie and timber agent	20	0
General traffic manager's office	5	1
General freight agent	19	1
Assistant general freight agent	6	1

Freight claims agent	20	6
Headquarters staff at Moncton	6	0
Montreal assistant general freight agency	27	14
Montreal-Mont-Joli division office	16	37
Total	686	206

Out of the total number of men employed at headquarters at Moncton, and who have to do with the four provinces, dealing directly with the Intercolonial, 66 per cent should be French-speaking as against 34 per cent English-speaking.

Thus, instead of 686 English-speaking and 206 French-speaking, as now is the case, we should have 590 French-speaking to 304 English-speaking, a difference of 384.

If we go on, again, and examine the list of the employees in the workshops in the various divisions in the Maritime Provinces, the situation disclosed is even worse. I shall give that list to prove what I say. As will be seen the number of watchmen, conductors, brakemen, engineers, firemen and temporary employees is not given, but I presume the same state of things is to be found.

Total	315	9

There is then a deficiency in French-speaking employees appointed for this class of work on the Intercolonial, amounting, according to the public accounts of March 31, 1914, to the following figures:—

	Employees.
General offices at Moncton	523
Heads of department at Moncton	17
On the road and in offices outside Moncton	399
Total	939

In order that the French population should receive their due share of those positions, 939 persons must be appointed over the actual number which is 366 in the Maritime Provinces, leaving the Moncton-Mont-Joli division out of count.

In the latter division, we lack 136 employees out of a total of 304. There is, therefore, a shortage of French-Canadian employees on the Intercolonial amounting to 1,075, taking into account only those classes mentioned in this analysis, and leaving aside the classes already pointed out.

No doubt the statements I have put before the House will come as a surprise to many who had no inkling of the true state of things, and the question will be asked why have French-Canadians not insisted on having their deserts with the Intercolonial.

The answer is easily given. I shall first read the following letter which is nothing but a scrap of paper like all the replies we get from the heads of the various departments of the railway:

Canadian Government Railways.

E. P. Gutelius.

H. Boulay, Esq., M.P.,
Sayabec, P.Q.

Dear Mr. Boulay:

I am in receipt of your letter of December 31, enclosing one from S. Morissette, applying for a clerical position with these railways.

There is not a vacancy at present to which he could be appointed, but I am forwarding your letter with the request that this young man be borne in mind should any vacancy occur at either Campbellton or Lévis.

Yours very truly,

F. P. Gutelius.

Every time we seek to secure positions at Moncton for our young men, we receive in reply a letter similar to the one I have just read. If a few odd employees of French language are appointed, it is only for the general work of translation. Only last year, the Moncton staff in the civil engineer's office was cut down. Who were let off? French-Canadians.

We are also denied our due in other ways. French-Canadians, before securing employment, are required to pass examinations in English, either reading or writing; a thousand means are devised to get rid of them. If there happens to be a vacancy in the offices of the superintendent at Campbellton and if perchance a French-Canadian puts in his application, he is put at the foot of the ladder under English-speaking chiefs, who, of course, speak no French and try to make it as hard as they can to the French-Canadians.

As proof of that, I will refer to the cases of two men, Anctil and Bray, who were disciplined in an altogether different way. About the year 1905, a man by the name of Anctil, station agent at Petit Metis, Matane county was discharged for the only reason that he had sold tickets over the Quebec Central line instead of selling tickets to Montreal. You must keep in mind that the agent had still the right to sell those tickets, since they had not been taken from him. Anctil had been thirty-five years on the Intercolonial, he was a model employee, steady and who had not a black mark against his name. He was discharged during the previous administration, for no other reason than the one I mentioned.

In 1911, one of my first cares was to draw the Minister of Railway's attention to the case of Anctil so as to secure his reinstatement in order to allow him to take advantage of the law concerning the pensions of the Intercolonial employees. But my efforts were fruitless and Anctil remained out of employment and in very hard circumstances. Now comes as a contrast, the case of a man of Campbellton by the name of Bray. The latter had been on the railway about the same length of time. He was caught in a predicament a great deal worse than that of Anctil. Bray was found drunk by the higher officials of the road, and I believe the affair was known to the general superintendent himself. The thing happened at the funeral of Superintendent Price. Bray's case was an open violation of a regulation of the railroad. There is no excuse for a railwayman to get drunk either on or off duty. Yet Bray who is English-speaking, instead of being dismissed, was only transferred to another office and he is still in the railway's service, that being done, I am told, to permit of his taking advantage of the Pension Act.

I have no grudge against Bray; on the contrary I was glad to see him retain his position, and I should not complain if different standards were not used according as the men are French-speaking or English-speaking. In view of such gross injustice towards my compatriots, I felt in duty bound to reveal those facts before the House and the country.

An easy means may however be found to rectify the state of things complained of; it would be the appointment for the division of a French-Canadian superintendent and some French-speaking train despatchers.

I have no personal complaint to urge against Mr. Gutelius; all I have to say concerning him is that he is being paid an exorbitant salary, altogether out of proportion to the revenues of the Intercolonial and to-day, as I ever did, I claim, notwithstanding what my friends of the legal fraternity may say, that railway manager cannot earn a salary of $20,000.

In every other particular, Messrs, Gutelius and Hayes are perfect gentlemen absolutely qualified for a proper fulfilment of their duties and they show the people who have to do with them the utmost courtesy.

I trust that the few remarks I have made, will be endorsed by the other members of the province of Quebec and that those who are here to represent other provinces, will admit that I am justified.

If I have thus spoken it is not as a matter of enjoyment nor for the purpose of annoying anyone, but because I knew that I was voicing the general sentiment and the unanimous thought of the people of Quebec.

The second part of the resolution now before the House deals with the higher officials in the Civil Service at Ottawa, who are daily called on to meet citizens of Canada, either French-speaking or English-speaking.

I claim that the Civil Service regulations are most lax when they allow in the first division and in the second division, subdivision A, of the Civil Service, persons who do not understand the two official languages of the country.

All those employees are supposed to be men of especial ability, and to be paid by the country, according to their qualifications and their education. But, any among them who speak no other lnaguage but English, are not in a position to properly perform their duties, when they are called on to meet citizens who speak French only or vice versa, supposing those higher officials were French-speaking and had, now and then, intercourse with English-speaking members of parliament or citizens. Those gentlemen have to travel throughout the country in the interest of their department, and, as for us, in the province of Quebec, we have to deplore the fact that those who are acquainted with nothing but English are of no practical benefit. Let us, as an instance, take the higher officials of the Agriculture Department. They have to impart their practical knowledge by means of lectures delivered, not only to the English population, but to the French people as well. I do not remember ever seeing them in the county of Rimouski, where, in any case, their presence would be of no practical avail, so far as their giving useful information, since they would not be understood by most of the farmers. That is altogether unfair to French-Canadians who speak no English, for they are called upon to pay their share of the salaries of those officials equally with the English-speaking farmers. I have no objection to the lower grade of civil servants speaking only the language they choose. But, as regards higher officers, I strongly insist on a complete reform being made. It is a common thing for some of us among the members to go into an office where in a staff of a dozen employees, none are found to understand our French. See what would happen to a farmer from Quebec who could not speak English. If at least the head of the department spoke French, we should at any rate get from him the information sought. Such a regulation would also result in all those who aim at the higher appointments having to study the two official languages, a boon indeed to both English-speaking and French-speaking people. It must be admitted that in England itself and even in Austria——

Mr. DEVLIN: (Translation.) Even in Japan.

Mr. BOULAY: (Translation.) Nobody claims to have any education if he cannot speak French in England, and yet there is but one official language, English.

[Mr. Boulay.]

If no French-Canadian can secure one of the higher appointments in the Civil Service at Ottawa, unless he be acquainted with English, why should not the same requirement be asked of English-speaking candidates?

The first question a French applicant for a position at Ottawa has to answer is: Do you know English? Why, even here, in the House of Commons, we are unfairly dealt with. There are twelve young pages, and only three of them speak French. In the office for the distribution of Hansard, although the officer has been changed three times since 1911, in each case the position went to a man who could not understand a word of French. And most of the employees of the House who are of English origin do not speak a word of French.

If my suggestion were put into practice, we should learn to know ourselves better, to appreciate one another better, and my remarks apply not only to the English provinces, but as well to what takes place in my own province.

I remember that in my young days, every one in my parish held everything English in high detestation. Brought up with that idea, we came to college strongly determined to speak nothing but French, and the teachers met with all kinds of difficulties, and generally failed to make us understand how important was to us a knowledge of English. Most of our educational institutions of the province of Quebec turn out graduates who can neither speak nor write English. Only later, when they have to do their share in the struggle for life, do they see the awful mistake they made in neglecting the study of such an important language.

It must be acknowledged that conditions even worse prevail in the English provinces, where I must say the French language is completely ignored. People have the idea that it will never be of any use to them. If students were made to see as they enter school, that in order to secure certain important positions in Canada or become somebody, they must learn the two official languages, I feel sure that, first of all, the teachers would find them less refractory to learning a second language, and secondly, the students themselves would later realize how beneficial it has become to them.

As a result of a general knowledge of both languages, we should become less averse to each other, because the fact stands that, in certain quarters, there are between the two races feelings of distrust

and aversion. I grant that a number of people are to be found, with a wider and more patriotic outlook, who are above those petty jealousies, and will readily give each one his due, whether French or English. But they do not form the bulk of our population. Let us get rid of our blinding fanaticism; let us study the two official languages of the country, and I feel sure that the first step will have been taken towards an era of peace and happiness, unprecedented in Canada.

When both languages become necessary in order to reach the most remunerative positions in the gift of the Government, the tyrannical legislation which seeks to bar French from the schools in the English provinces will gradually disappear, the present agitation will cease and there will come to exist the same conditions as prevail in Quebec: complete freedom in education for both races.

Let us also suppress papers such as The Sentinel, and put a stop to the furious attacks made against our faith and our language, and complete harmony will be restored among all classes of citizens.

At six o'clock, the House took recess.

The House resumed at eight o'clock.

Mr. BOULAY: (Text.) Mr. Speaker, in order to explain further what I was saying at six o'clock in connection with Civil Service officers, it is fit, I think, I should give a list of some of the staffs. It shows that we are not dealt with fairly. Thus I see by the official Civil Service list for 1915, that the French-speaking employees are not even 30 per cent of what they should be according to population.

These conditions are not new. When I first was elected, in 1911, I was given a list of the Civil Service employees prepared in 1907, and I found that we were not given justice then any more than we are to-day.

I heard a few days ago the hon. member for Frontenac (Mr. Edwards) say that in each province the military recruiting will be judged by the efforts of every religious denomination to boost it. He also said that he trusted that the Pope himself was with us in this war.

But I maintain that the hon. member sets a false criterion by which to judge recruiting, because all our churchmen, priests and bishops, have continually urged our young men, with great patriotic eloquence, to join the colours. As to the Pope, he is the head of Catholics all over the world, and I am not prepared to desire that he should side with one or other of the belligerents, although I hope his love of humanity prompts him to favour the Allies.

It is his duty not to allow his preference to be seen.

If enlistment seems to be going slower in Quebec than in the other provinces—which I am not prepared to grant—the English and French fanatics in this country are responsible for it. Let us have justice throughout Canada. We want very little after all: only the right of teaching our language, of educating our children as we desire, of receiving our share of the public offices, and no more. We do not want to hamper the teaching of English in Canada, far from it. Let it be taught everywhere. We say that our British connection is the French-Canadians' best safeguard. We are not annexationists. We desire to remain Canadians and inhabit the land we have inherited from our ancestors. If we are to be denied that legitimate request for freedom, if we are not to be treated on an equal footing with all the other citizens of this country, better know our fate once for all, so that we may ask without delay the repudiation of the Federal pact, which would not then have for us the value of the scrap of paper on which it is written. The destruction of individual freedom will always entail endless controversies, going even to the shedding of blood. If justice is not to be ours, let it be known now, and we are willing to see the province of Quebec withdraw from Confederation. It is not our desire, of course, to pass under any other domination but the British Crown, nor become one of the United States, but we must have complete and absolute freedom.

The few remarks I have made are not prompted by any bitterness or secret design; their only purpose is to point out the conditions in which we are placed, and I hope my intentions have been clearly grasped by the statesmen who sit in this House and are called upon, each in his own sphere, to enlighten public opinion. The teaching of French properly is no danger to public morality. One may easily judge of its moral effect from a comparison of the two races. The Citizen of Ottawa, edited in English, admitted that in the province of Quebec, crime was much less prevalent than in the English provinces. If such be the case—and there is no doubt of it—there can then be no harm in practising the Catholic faith and teaching the French language and I trust that the greater fanatics among our friends will grant that my words are perfectly true.

I would now like to say a few words in English, so that my fellow members who speak that language may understand what I have said, and I hope they will admit that I am right. The first part of the resolution refers to the employees on the Intercolonial railway. For forty years the Intercolonial railway has been running through the province of Quebec and the Maritime Provinces, and I claim that the French speaking population of these provinces have not had their share of patronage on that railway. I have given a list that will show my fellow members that I am right in what I say. The French speaking population in the Maritime Provinces and in the province of Quebec are perfectly justified in claiming their rights. Of the population along the Intercolonial railway, particularly between Moncton and Mont-Joli, 66 per cent are French, and 34 per cent English, but instead of the number of French speaking employees being according to the population, they number only 20 per cent.

In the second part of the resolution, I refer to the Civil Service of Canada, and particularly to the employees in the higher grades, those whose duties render it necessary for them to come in contact with the French speaking population, or with the French speaking members of this House while in attendance at Ottawa. It refers to the employees who, by reason of the fact that they cannot speak French, are unable to give satisfaction. It often happens that when a French Canadian member enters one of the departments, he finds a staff of from ten to twelve employees, none of whom can understand him. The resolution does not refer to employees of the lower grades, but simply to those who are paid large salaries, from $2,000 to $5,000 a year, and these I maintain should be men possessing a knowledge of the French language, so as to be fully equipped for their positions, and to give satisfaction, not only to the English speaking people of this country, but also to the French speaking population. Take the men for instance at the head of the Department of Agriculture. They are called upon to attend conferences in various parts of the country, and to direct the development of agriculture throughout the country, but so far as the French speaking population is concerned, they are practically of no use, because of their lack of knowledge of the French language. Men with less knowledge could fill their places just as well at smaller salaries. The French speaking population cannot profit from their services at all. When they go into the province of Quebec, the people, except in a few centres, cannot understand them. I maintain that the employees of the Civil Service occupying the

higher positions should know both the official languages of this country.

In closing these remarks, I may express the hope that they will be accepted in the best spirit. I am not actuated by any animosity or hatred; I simply wish my fellow countrymen to understand the situation. It is not only in connection with the school question that there is a kind of animosity, if I may use that term, between the two great races in Canada. The feeling does not start there; it started at Confederation, and perhaps before Confederation. We feel that we have never been treated as fairly as we should have been. We do not want to do injustice to anybody, but we want fair play, and when we get that, our English speaking countrymen will find that we will cease to grumble.

Mr. E. PAQUET (l'Islet): (Translation.) Mr. Speaker, I should like this evening to say a few words in support of the resolution moved by my hon. friend, the member for Rimouski, but as the Minister of Railways is ill and Dr. Reid, who take his place could not reach the House on account of the storm, I think it better to move to adjourn the debate.

Motion agreed to and debate adjourned.

WOMAN SUFFRAGE.

Hon. WILLIAM PUGSLEY (St. John city) moved:

That, in the opinion of this House, it is desirable that the Government should promote legislation to amend The Dominion Elections Act, so as to provide that upon any province of Canada enacting legislation giving women the right to vote for members of the Provincial Legislature, such women as are on the Provincial voters lists, or as are otherwise entitled to vote for members of the Legislature in such province, shall also, unless otherwise disqualified, have the right to vote at elections for members of this House.

He said: Mr. Speaker, it is now nearly thirty years since I had the honour of proposing in the Provincial Legislature of New Brunswick a resolution to grant to women the right of suffrage. I had made that question an issue at the polls in the county for which I was a candidate, and I was elected. The people approved of my stand, but the resolution which I proposed was defeated in the Legislature by a small majority, and although the resolution was largely supported, the proposed measure never became law. Entertaining the views which I did at that time, that it was proper to grant to women the right of voting, and not having seen any occasion since to change those views, it is particularly gratifying to me at the present time to know that a Bill has already passed the Legislature of Manitoba granting equal suffrage to women, and that at the opening of the session of the Alberta Legislature, it was declared in the speech from the Throne that one of the principal measures which the Government would submit would be a Bill granting female suffrage. I have the Edmonton Bulletin, which contains the speech of the Lieutenant Governor of Alberta, and I find in it the following paragraph:

For many years there has been a growing feeling that the equality of the sexes should be recognized, and that the women, who, perhaps in a special degree in a new country, have aided in the development, put up with the hardships and assisted in the prosperity, should have the right to take an equal part in the Government of the country. My Government has considered this question, and has decided that so far as the legislature has power, this equality should in Alberta be fixed by law, and that for the future there should be no distinction of sexes in our province.

I think that declaration reveals the spirit which should animate the members of legislatures in the other provinces of Canada, as well as the members of this Parliament. For my part, I do not see that one supporting the proposition of equal suffrage is called upon to present any arguments in its favour, because I think that the burden should rest entirely upon those who oppose the granting of this measure of justice. I am unable to see one reasonable argument that can be presented against granting to the women of our country the same right to share in public affairs, the same right to vote for members of the legislatures, or of Parliament, as is granted to the male portion of the community. But, with respect to the resolution which I have ventured to submit for the opinion of this House, it is not necessary, I think, that one should declare in the abstract in favour of granting female suffrage and for this reason: when the Liberal party came into power in 1896, there was then upon the statute book an Act providing for a federal franchise and providing federal machinery for the making up of the lists of voters and for the qualification of voters. The Liberal Government took office, and at a very early period it carried through Parliament a measure doing away with the Federal Franchise Act and making provision that the provincial lists in the various provinces, and the law providing the qualification of voters, should govern in federal elections as well. During the whole of the period while the Liberal party was in power.

that principal was adhered to. The Conservative party has now been in office governing this country for upwards of four years, and no move has been made to change the present Dominion Elections Act. So, I think we may fairly take it for granted that both parties in this country are agreed that whatever may be the qualification for voters for the provincial legislatures in the different provinces, shall also be the law in so far as the right of electors to vote for the Dominion House of Commons is concerned.

It will be observed that my resolution only proposes that the Government should frame legislation to provide that in those provinces where the right of suffrage has been granted to women by the legislatures, women in those provinces shall have the right to vote at elections for members of the House of Commons. The necessity for making some such provision, I think, will be abundantly clear from an examination of the Dominion Elections Act. An examination of the provisions of the Revised Statutes of Canada, Volume 1, chap. 6, shows that in respect to all of the provinces, except Alberta, Saskatchewan, and the Yukon Territory, there is no express prohibition of women voting.

Mr. ROGERS: There is no prohibition in Saskatchewan against the ladies voting.

Mr. PUGSLEY: There is, unless the law has been changed recently.

Mr. ROGERS: They voted there in 1912.

Mr. PUGSLEY: For the Dominion?

Mr. ROGERS: No, for the provincial legislature.

Mr. PUGSLEY: I am speaking now of elections for the Dominion House. There is no express prohibition in the Dominion Elections Act against women in that part of Canada other than Alberta, Saskatchewan and the Yukon, voting for the Dominion House of Commons, and it might be very well argued that if, in that part of the Dominion which is not embraced within Alberta, Saskatchewan, and the Yukon Territory women were placed upon the provincial voters' lists they would have the right to vote in Dominion elections. But, when we bear in mind that also in respect to the representation in this Parliament there is no prohibition against women, and that the statute is equally silent in regard to women sitting in this House as it is in regard to women voting for members, I think, perhaps, it would raise a very strong doubt as to whether or not, if the question came before the courts, it would be held that women have the right to vote, merely because there is no express prohibition of their exercising that right. The words of the statute with regard to candidates for Parliament are simply that a British subject may be elected to Parliament. The words will be found in Section 69:

> Except as in this Act otherwise provided, any British subject may be a candidate in an election for a seat in the House of Commons.

These words, of course, are broad enough to allow a woman, if she is a British subject, to be elected to this House. The same argument, which could be made in favour of giving such a construction to the provisions of the Act which relate to the rest of Canada, apart from Saskatchewan, Alberta, and the Yukon as would give to women the right to vote for members of Parliament would also give women the right to sit as members of Parliament. I doubt very much if the statute would be so interpreted by the courts.

My hon. friend the Minister of Marine and Fisheries (Mr. Hazen) knows that some years ago, in the province of New Brunswick, an application was made by a lady for admission to the Bar. There was no prohibition in the provincial statute against women practising at the Bar, and therefore there would have been, on the face of the statute, apparently no reason why a woman should not be admitted to practise law. But, when the question came before the courts on application for a mandamus to compel the Barristers' Society to admit a lady to the practice of the law, the court determined that as from time immemorial women had not been allowed to practise, or had not practised either at the Bar in Great Britain or in New Brunswick, it had not been the intention of the legislature to grant that privilege in the absence of express language of the statute granting it. Assuming that decision to be correct, I should judge that a similar argument might be made in respect to women being elected members of this House, namely that from time immemorial women had not been permitted to be elected as members of the British House of Commons or of this Parliament, and therefore were not eligible. It would, I fear, be held that when this Legislature passed the Dominion Elections Act it had not in mind the giving to women of the right to vote. My hon. friend (Mr. Lemieux) informs me that a similar

case arose in respect to an application of women to study law in the province of Quebec. In one portion of Canada, there is an express prohibition against women voting for members of Parliament. Part two of the Dominion Elections Act, consisting of sections 32 and 33 says:

> In the provinces of Saskatchewan and Alberta except, as in this Act otherwise provided, every male person shall be qualified to vote at the election of a member under this Act, who, not being an Indian, is a British subject and of the full age of twenty-one years and has resided—

Then follows the provision for residence. There is the same prohibition in respect of the Yukon territory in section 33:

> In the Yukon Territory, save as in this Act otherwise provided, every male person shall be qualified to vote at the election of a member under this Act, who, not being an Indian, is a British subject and of the full age of twenty-one years.

Then again by the form of the proclamation which will be found upon page 82 of volume I, revised statutes; and which is made a part of the statute there is this notice for the electors:

> The following is the qualification of electors as prescribed by Parliament:
> In the provinces of Saskatchewan and Alberta and the Yukon Territory except as in this Act otherwise provided, every male person shall be qualified to vote at the election of a member under this Act, who, not being an Indian, is a British subject and of the full age of twenty-one years and has resided in the provinces of Saskatchewan or Alberta or the Yukon territory, as the case may be, for at least 12 months.

And then in the oath, which will be found on page 89, in case the right of any one to vote is challenged, the oath is as follows:

> Do you swear you are of the male sex and a British subject, that you are not an Indian, that you are of the full age of 21 years and have resided in the provinces of Saskatchewan or Alberta or the Yukon territory, as the case may be, for at least 12 months.

Mr. ROGERS: What Act is my hon. friend quoting?

Mr. PUGSLEY: The Dominion Elections Act.

Mr. ROGERS: There have been some changes.

Mr. PUGSLEY: I have not been able to find any revisions of these sections; they have not been altered but remain in the statute.

Mr. ROGERS: My hon. friend should look up the Saskatchewan Act and he will find in it some very important changes.

Mr. PUGSLEY: That would be so far as the Saskatchewan Legislature is concerned.

Mr. ROGERS: The same law applies in Saskatchewan to the Dominion and to the provincial elections.

Mr. PUGSLEY: My hon. friend is wrong. The Legislature would make provision for the lists, but this Parliament has never altered those provisions of the statute which expressly limit the right to vote to males. Parliament has not changed the law in that respect. I am quite aware that the Legislature of Saskatchewan has made provision for electoral lists and, as a reasonable consequence, one would suppose that apart altogether from this question having arisen, this Parliament would have followed the action of the Legislature of Saskatchewan and made in regard to that province similar provisions to those which exist in other provinces where there are lists.

Mr. ROGERS: Surely my hon. friend would not ask us to follow Saskatchewan, when they provided that it was not necessary to be a British subject to exercise the franchise in that province.

Mr. PUGSLEY: I should think myself that the right of franchise should be limited either to British subjects or to those who have taken the statutory declaration. Perhaps my hon. friend might be able to point me to that statute.

Mr. ROGERS: I shall be delighted.

Mr. PUGSLEY: Since the fire we are at a great disadvantage in getting books of reference.

Mr. TURRIFF: The Minister of Public Works is a little bit wrong. There was a question whether the Saskatchewan Act stated definitely that the voter had to be a British subject, but that was removed by amendment in the session after the question arose.

Mr. ROGERS: Following an election.

Mr. TURRIFF: In Saskatchewan we do not use the provincial lists in Dominion elections.

Mr. PUGSLEY: I thank my hon. friend from Assiniboia for the statement he has made. I have no doubt the minister made his statement in perfect good faith.

Mr. ROGERS: My statement is perfectly correct.

Mr. PUGSLEY: I have no doubt the minister is glad to have the information from the hon. member for Assiniboia.

Mr. ROGERS: There is no information that changes my statement at all.

Mr. PUGSLEY: At all events, this does not at all militate against my statement that this Parliament has not yet taken away the disqualification on female residents of the provinces of Saskatchewan, Alberta, and the Yukon, and I care not what may be the legislation of the provinces, until this Parliament chooses to legislate these sections which I have read are in force and must necessarily govern the returning officers, and must necessarily determine the right to vote, so far as sex is concerned.

Mr. ROGERS: Would it not be well for my hon. friend to amend his resolution and make it applicable to all parts of Canada?

Mr. PUGSLEY: If I were to do that it would raise in a broader way the question of the right of suffrage, and it would be changing the provincial lists. If the law were changed in accordance with the suggestion of my hon. friend, the result would be that in all the provinces where female suffrage has not been adopted there would have to be two lists.

Mr. ROGERS: I should think the provinces would be very glad to follow the example of this Parliament if we should adopt it.

Mr. PUGSLEY: I am not sure that this Parliament has decided that it will be governed by the views of the Provincial Legislature in this respect. I did not think it wise to make the resolution so broad as my hon. friend suggests, and, further, I did not deem it desirable to do so in this Parliament because we have it on record, if the right hon. the Prime Minister is reported correctly, that in an interview which took place recently between a committee representing the women of Canada who are in favour of female suffrage, and himself, when the Government was pressed to promote legislation along the lines now suggested by the Minister of Public Works, the Prime Minister stated that the Government could not deal with the matter because it was one entirely for the legislatures of the different provinces. The Prime Minister is quite correct in that statement because, as long as Parliament says that the franchise shall be defined by the legislatures of the provinces, and that the provincial lists shall be the lists upon which elections for the Dominion shall be held, we cannot properly depart from the franchise as it may be laid down in the different provinces by the provincial legislatures. The House will at once recognize how anomalous it would be that in Manitoba, which has given to women the right to vote, they might have the right to vote for members of this House, that is, on the theory that there is no direct prohibition in Manitoba, and in the province of Saskatchewan they would be denied that right by reason of the express prohibition which is in the Dominion Elections Act.

Mr. ROGERS: It is in our power to correct that.

Mr. PUGSLEY: Yes. That was my object in bringing this matter before the House to-night, not in any partisan spirit, but simply with a view to getting an expression of opinion from the House, and with a view to having the Government act so that there may be no question as to the right of women to vote in those provinces in respect to which the right to vote in a provincial election is granted to them.

Mr. PROULX: Would the hon. member be willing to go as far as the legislature of Manitoba did and extend the franchise to include the right of women to occupy seats in this Parliament?

Mr. PUGSLEY: My hon. friend can answer that question for himself. It is not involved in my motion and it will be time enough to consider it when the question arises. I am not at all disposed to fear that any harm will come to the province of Manitoba by reason of women being given the right to sit in the legislature and take part in the government of Canada. I think they have that right in New Zealand and Sweden.

Mr. LEMIEUX: And Norway.

Mr. PUGSLEY: I know they have it in a large number of the states of the Union, and I have never heard that any harm has come to the people of those countries or states by reason of women having been given the right to sit in the legislatures.

During the terrible eighteen months through which this Empire has passed, the women of this country have shown that they are just as loyal and that they know their duty just as well as the men, and that they can make the same necessary sacrifices in the interest of the country and of the Empire. In England they have shown their willingness and ability to take

the place of the men in the workshops and to engage in those various avocations to which it was supposed before that men were specially adapted, and in which it was supposed that women had no place. By their conduct during this war the women of this country have earned the right to be recognized as the equals of men and to be given the opportunity of discharging equally with men those duties which pertain to citizenship in a free country. That is the answer which I make to my hon. friend from Prescott (Mr. Proulx), and if he or anyone else will move that women should be given the right to sit in Parliament, I can assure him that he will have, in the person of myself, a sympathetic listener to his arguments. I am inclined to think that the motion which I am making to-night will be received with hearty approval by my constituents. I am only asking this Government to promote legislation which will carry out what has been the view of this Parliament for the past nineteen years, that is, that the provincial lists of voters in the different provinces shall govern in the elections in those provinces for members of this Parliament. This legislation is necessary in order to remove difficulties and make the provincial lists really and truly the lists for the election of members of Parliament, and to place all the provinces, which from time to time may grant women suffrage, in the same position so far as electing members to the House of Commons is concerned. It is not necessary for me to argue the general question, because the events of recent years, the trend of legislation in other countries, the benefits which have accrued to those countries which have adopted woman suffrage, all tend to throw, and ought to be sufficient to throw the onus upon those who would seek to oppose such a measure as this which is manifestly founded upon the principles of justice and equal rights to all the members of the community.

Mr. G. W. KYTE (Richmond, N.S.): Mr. Speaker, while it is a common practice in this House, when a mere academic resolution is proposed, to have it disposed of either by an adjournment so as to place a further discussion of it beyond the possibility of being reached during the session in which the motion is made, or by a vote being taken upon it as a mere matter of form, I do not intend to sit silent until the matter proposed by the hon. member for St. John (Mr. Pugsley) is disposed of. I desire at the earliest possible moment to put myself on record, in language as concise and clear as I may command, as being against the principle enunciated in the resolution.

My hon. friend has stated that the onus is upon those who oppose woman suffrage to show that they should not be permitted the right to vote in Federal elections. It will not be very difficult to give reasons why the reception which the proposal to give women the right to vote received in the states of Massachusetts, New Jersey, and New York a few months ago ought to be accorded to the present resolution by representatives occupying seats in this House. I am opposed to the resolution of the hon. member for St. John because it refers only to a franchise to be exercised by women in the province of Manitoba. This Parliament ought not to be asked to legislate piecemeal with respect to those who shall have the right to vote in Federal elections. I cannot understand why the women of the province of Manitoba, estimable and intelligent though they may be, shall have the right to vote in Federal elections, while the women of the other provinces are excluded from that privilege. We are legislating here, not for one province alone, not for one section of the Dominion, but for the whole of Canada, and any proposal or resolution designed to give the people, either male or female, certain privileges in any particular portion of Canada ought not to prevail unless those rights and privileges are made applicable throughout the Dominion.

The demand for woman suffrage is made because women claim to be the equal of men in all respects, and that is one of the arguments put forward by the hon. member for St. John. For my part I never dispute the proposition that women are not only equal, but in many respects, superior to men; but does it add to their superiority, or does it increase their virtues to accord to them the privilege of voting and becoming a part and parcel of the political machinery of this country? The right to vote is only one prilivege which is sought to be conferred upon women by this proposed legislation. Although women are the equal of men in this country, there are certain positions which men occupy which are not occupied by women, although they are not prevented from occupying them by reason of any hostile or adverse legislation. In this country there are large railway corporations, banking institutions, and industrial corporations which are governed by men alone. There is not a railway, bank-

ing, or industrial corporation in this Dominion on whose board of directors women sit. Now, is that because there is any legislation, or any lack of legislation, which prevents them from sitting there? There is no reason in the world why the good women of this country should not occupy positions on these boards of directors, but they do not, and I have not heard of any great agitation on the part of our estimable women to be accorded seats upon these boards. I presume that the reason why we have no agitation with respect to that is that it is not necessary to come to Parliament in order to have these rights accorded. It appears to me folly to say that women are excluded from the right to vote in this country because they are not assumed to be the equal of men. As I pointed out, there are other responsible and important positions in this country in which women could take their seats beside men, and have not done so up to the present time. I do not understand that there is any particular reason why these positions should not be occupied by women unless it is that these large corporations have been managed from the beginning by men and have been made successful by the business energy and pluck put into them by men. It may also be because the wealth of this country, like the wealth of all countries of the civilized world, has been produced by men, women not having participated to the same extent in adding to the wealth which makes these corporations possible. These may be the reasons why women have not put themselves forward as entitled to participate in the management of these institutions.

The demand is also made that women should have the right to vote because there should be no taxation without representation. The right to vote will not give these women representation. I am opposed to the resolution of the hon. member for St. John (Mr. Pugsley) because if it were accepted by the House it would not settle anything. The right to vote is only one of the rights which, if that be granted, must be accorded to women. My hon. friend from Prescott (Mr. Proulx) I think hit the nail upon the head when he asked the hon. member for St. John if he is willing to concede to women the right to sit in Parliament. The influence of electors is very small in matters of taxation. Tom Jones or John Brown, living in a remote district in Nova Scotia, has very little influence on the Finance Minister in settling his Budget. In order to give representation to which one is entitled who is subject to taxation, it must be given not in the electoral list but on the floor of Parliament. But there are certain advantages and rights which women enjoy by reason of any taxation they pay quite equal to those enjoyed by men. In the matter of civic taxation, women who have property have the same police protection, the same enjoyment of municipal regulations to protect their property, as the men have. On the other hand, hon. gentlemen who occupy seats in the other branch of this Parliament, though they are considered intelligent men, possessing considerable wealth in some instances, have no right to say in what manner taxation shall be levied upon them. We have there a case of taxation without representation.

It is stated by the advocates of woman suffrage that women are entitled to vote because it would give them an opportunity to exercise their influence with respect to matters pertaining to property and civil rights. Now, property and civil rights are matters concerning which this Parliament has no control. Uuder the British North America Act such matters are relegated to the Provincial Legislatures, and if there is any argument in favour of women being accorded the right to vote on account of their disability to exercise their influence with regard to these subjects, then the right to vote should be limited to the Provincial Legislatures, and not extended to the Dominion Parliament.

Another argument used in favour of woman suffrage is that women would exercise a most beneficial effect upon all questions of social and moral reform. Well, we have had questions pertaining to social and moral reform before this Parliament and before the Legislatures of the several provinces for many years. We have had temperance legislation promoted in the various provinces. We know that in three of the provinces at least there is practically total prohibition. The women of this country are naturally interested in the question of temperance. It is to the highest degree commendable in them that they have always given their influence on the side of temperance. But they have made their influence felt in the legislation adopted by this Parliament and by the legislatures of the provinces on this subject. In Nova Scotia

9 p.m.

we have practically total prohibition. In Saskatchewan they have prohibition to the extent that there is no such thing as a liquor business carried on by private individuals. And there are assurances that Alberta will have prohibition within the next few years. These reforms have been brought about notwithstanding that women have no votes and have not occupied seats in the provincial legislatures or in this Parliament. There is a stronger feeling in favour of Dominion-wide prohibition to-day, I believe, than ever before. On all sides we see evidence that the temperance movement has received enormous momentum within the last few years, and we have every reason to believe that there will be more temperance legislation within the next few years than in all the previous history of the Dominion. And all this is brought about by representatives in the legislatures and in the Parliament of Canada among whom women do not sit. Mere men are willing to give ear to pleas for social and moral reform; and I question very much if the influence of women, if they were given the right to vote and to sit in Parliament, would be more potent than it is at the present time. Has there ever come up in this Parliament a question in which the rights and interests of women have been discriminated against as compared with men? Very few subjects are dealt with in this Parliament in which women have an exclusive interest? Take our criminal law, as an example. There is not a line from one end to the other of that code that discriminates against women. On the contrary, exceptions are made in favour of women under the provisions of the criminal law that do not apply to men. Therefore, women cannot ask the right to vote on the ground that because they do not exercise the franchise their interests are not safeguarded in Parliament or in the legislatures of this country.

Women's condition in the scheme of citizenship has been vastly improved by the legislation of the last hundred years. The Married Women's Property Act, which has been placed upon the statute-books of the various provinces of this Dominion within comparatively recent years, accords to women the right to exercise control over their own property which they did not exercise fifty or a hundred years ago. It was brought to the attention of the representatives of the people in the legislatures of Canada that the right of property was not enjoyed by married women to the same extent as by men, and immediately these legislatures took up this question and enacted laws on the subject of women's property, so that to-day women exercise practically the same control over their property as men do with respect to the property which they own.

Woman suffrage is demanded because it is complained that virtuous and intelligent women have no votes, while male illiterates and drunkards have the right to vote. I ask, are all women virtuous and temperate? I am willing to concede that the exceptions are not so numerous among women as among men; nevertheless, if you are going to extend the franchise to women you will be extending it to some who are of the same class as those among men whose exercise of the right to vote is objected to. We have in some provinces a limited franchise. In the province of Nova Scotia, and I think in New Brunswick and Ontario and some other provinces as well, there is a property franchise upon which the right to vote is based. In Nova Scotia, before a person is permitted to vote, he must show that he is the owner of real estate to the value of $150 at least or is in receipt of an income of $250 a year. But in the province of Manitoba, if I am correctly informed, there is manhood suffrage. Every male person of the age of 21 years has the right to have his name placed on the electoral list, quite irrespective of whether or not he owns property. The same law prevails in the province of Saskatchewan, and, I have no doubt, also in Alberta and possibly in British Columbia. Therefore you have an adult suffrage in these provinces. If the principle contended for by my hon. friend from St. John is carried, you not only place the women owning property upon the electoral list, but you put upon the electoral list the name of every woman 21 years of age whether she owns property or not. As I say, you take in the whole scope of the female population of these provinces, and again I ask are there no drunkards among the women of these provinces?

Mr. ROGERS: No.

Mr. KYTE: I do not know; but I do know that in some countries we sometimes find that the virtue of sobriety is not as universal among the women as we would like it to be.

Mr. ROGERS: That is not so in the West though.

Mr. KYTE: If such a thing happened that there were any women in those prov-

inces where manhood suffrage is enjoyed who do not possess the highest standard of sobriety and morality, they would be equally objectionable as voters as those male electors of whom the women complain. You have these undesirables, if there be any, placed upon the electoral list, and I should like to know how much more the undesirable female voter would improve the moral condition of this country than the undesirable male voter. Government means force; it means endurance; it means physical power. Voters do not make Governments. The decrees of Governments are not enforced mechanically or automatically. After laws are passed in the legislatures and Parliaments it is necessary to give effect to them, very frequently by force. Our civic ordinances are enforced by certain officers who constitute the police force in the community where the ordinances apply. Our national laws are enforced very frequently by our soldiers and international rights are necessarily enforced by arms. If women claim that they occupy the same position exactly in the scheme of citizenship that men do, then how are their laws going to be enforced, because there will be no distinction? They say that in all respects they are equal to men and they are prepared to assume the same burdens that are imposed upon men. Then if that be true women must assume the garb of the police officer if she represents the public in civic matters. Her sisters, by virtue of whose support perhaps she occupies a seat in the civic or municipal council, must assume the garb of policemen and must do police duty to enforce civic laws. If rebellion breaks out in this country it is necessary to call out the militia. There is no reason why the militia force should be confined to the men, because if the resolution of the hon. member for St. John passes and women become as important a factor in the government of this country as men, then they must have the same obligations imposed upon them, and these women must be prepared to shoulder their guns, to march out and take their places in the trenches, and to do their full share in enforcing the laws which they are parties in the making. We have a condition of affairs existing now which shows how futile would be the assertion of international rights if they were not backed up by force of arms. Advocates of woman suffrage, if the ideal conditions are brought about which they have in mind, must agree that women shall constitute part of our armies and shall endure the same hardships, the same discomforts and the same privations that are endured by the men now occupying the trenches. It is folly to say that women are physically the equal of men. In some other respects they are superior to men.

Those in favour of women having the right to vote seem to be influenced by two notions. One is resentment at the suggestion that women should be counted by men as inherently inferior in certain respects. The second is reprehension of a state of society in which more money, more personal liberty, more power, more public recognition and happier psychological conditions fall to the share of men. The interference in politics on the part of woman I very much fear is more likely to degrade women than her influence is calculated to elevate politics. We do know that in certain states of the Union women have enjoyed the right to vote, for 48 or 50 years. Twelve states have adopted prohibition with men alone voting, while only four states have adopted prohibition with the aid of women's votes. The State of Maine, which has defeated every attempt to introduce woman suffrage, has had prohibition since 1850. North Dakota, which defeated woman suffrage at the polls in 1914, has had prohibition since 1889. Not a single state went dry with women voting before Nov. 3, 1914. According to Senator Works of California, the city of San Francisco has 3,500 saloons. The male suffrage city of Boston, with a population one and one-half times as large as San Francisco, has only about 700 saloons. On May 4, 1915, the women of Reno, exercising the franchise for the first time, voted against the proposition to reduce the number of saloons from 80 to 40, and were publicly thanked by the liquor interests for standing by them. After 46 years of woman suffrage, the State of Wyoming is still wet. Colorado, woman suffrage since 1893, adopted prohibition Nov. 3, 1914, but the city of Denver, under the local option provision for cities of 50,000 and over, voted to remain wet.

I cite these facts for the purpose of showing that one of the reasons advanced in favour of woman suffrage has not been realized as respects prohibition. Originally, when this agitation was let loose in the United States, the contention was made that woman had the inalienable right to exercise the franchise and have her name placed on the electoral list. The Supreme Court of the United States, 20 years ago, upon that matter being referred to them, declared unanimously that women had no

inalienable right whatever in regard to the matter. So the advocates of woman suffrage were obliged to shift their ground and they based their argument on the claim that, while they did not have a right to claim the exercise of the franchise, it was desirable in the public interest because their influence would be so elevating on all subjects of social and moral reform. The facts I have cited as to the influence of women voters on the prohibition question in the portions of the United States where they exercise the franchise, goes to show that no marked advancement has been brought about by reason of their exercising that privilege. As I stated a moment ago, the granting to women of the right to vote does not settle anything whatever. In the province of Manitoba the legislators recognized that fact; they felt it would be useless and futile to stop at giving women the mere right to vote, so they coupled with it the necessary corollary of giving them the right to sit in Parliament. I repeat, there is no question as to women being inferior or unequal to men in any way, but there is a vast difference between the functions of women as compared with those of men. In every well-regulated family the work is divided among its members, so that each duty is assigned to such member as should most properly perform. Take a homely illustration from country life. The father and sons do the outside work, while the household duties are performed by the mother and daughters. Now, any rearrangement of those duties, that would place the mother and daughters upon the roof of the barn to repair the leak, and the father and sons in charge of the pastry and needlework, would be universally regarded as highly inequitable and improper. Votes for women mean for the suffragette not only the right to vote, but the right to canvass in elections, to serve upon committees, to attend caucuses, to sit in Parliament, to have no time left to devote to those tender duties for which she alone in the whole creation is specially fitted. The division of labour that I referred to a moment ago was decreed by God himself and honoured and respected by man throughout all the ages. It implies no lack of capacity, no inferiority, on the part of women. It is the sturdy trees of the forest that bear the brunt of the storms, and thus afford shelter to the tender foliage that vegetates beneath their protecting branches.

The agitation for women suffrage began in the United States some seventy years ago, and it has been going on merrily ever since. It is quite true that in some of the Western States they have succeeded in getting the suffrage as respects State elections, but during those seventy years every attempt made to grant women the right to vote in federal elections has been persistently and consistently opposed. I recognize and appreciate the character and quality of the citizens of the United States, and there are many respects in which they can set us an example, in certain departments of government, as well as regards intellectual development; but there are other aspects of their social and civic life from which I would not like to borrow, or which I would care to have engrafted upon the body politic of this country. There are two evils from which the United States has suffered as no other country in the world has suffered; the first is that of divorce, and the other arises from the agitation for woman's suffrage. I submit Mr. Speaker that the agitation for woman suffrage bids fair to rob the people of the United States of the remnant of domestic and social life which has been left to them by their divorce laws. The agitators in favour of woman suffrage would call her away from the functions which she was designed by nature to perform, and would change her from the gentle creature that we have always known her to be into a raving militant suffragette. The agitation in England has been such as to leave a blot upon the civilization of that country. Advocates of woman suffrage say that the women would ennoble public life. I would ask if they approve of the actions of the militant suffragettes in England previous to the war. There was no breach of the peace, no destruction of property, no invasion of private rights which they failed to conceive and carry out. The jails were filled, week in and week out, with the women who believed that by those methods, and those methods alone, they would be able to carry out the reform which they sought to establish.

I referred a moment ago to the consequences upon the social life of the United States of the advocacy of woman suffrage. I will quote a few statistics showing the result of the agitation during recent years.

In the House of Representatives, January 12, the proposed suffrage amendment to the Federal Constitution was defeated by a vote of 174 yeas to 204 nays, with 57 representatives not recorded. In a full House the suffragists would have needed 290 votes to carry the amendment. They fell 116

short of that. On the vote recorded they needed 252 votes. They fell 78 short of that.

The following were the results so far as the legislatures are concerned. In Alabama, the suffrage amendment for which the suffragists had made an active campaign, did not get out of committee. In Arkansas, the suffrage amendment was crowded out by the provision that only three constitutional amendments can be submitted at one time. In Connecticut, the proposed amendment was defeated in the House by a vote of 106 yeas to 124 nays. In Delaware, the proposed amendment was defeated in the House by a vote of 8 yeas to 22 nays, and in the Senate by 6 yeas to 11 nays. In Florida, the proposed suffrage amendment was defeated. In Georgia, a resolution for the submission of a suffrage amendment was laid on the table by a unanimous vote by the Legislative Committee. In Illinois, the resolution for a constitutional convention, for which the suffragists laboured, in the expectation that the convention, if it met, would make full suffrage one of its chief considerations, failed to pass the House after receiving a nearly unanimous vote in the Senate. In Indiana, a limited suffrage Bill, after the Illinois model, was defeated. In Maine, the proposed suffrage amendment was defeated in the House. In Michigan, the suffrage attempt to secure the enactment of a limited suffrage Bill failed because the Bill was found to be unconstitutional. In Minnesota, the proposed suffrage amendment was defeated in the Senate. In Missouri, the attempt to persuade the legislature to resubmit the suffrage amendment which was defeated at the polls last year by a majority of 140,206 failed. In Nebraska, a limited suffrage Bill was defeated. In New Hampshire, a municipal suffrage Bill was defeated in the House by a vote of 121 yeas to 230 nays, an adverse majority of nearly two to one. In North Carolina, a proposed suffrage amendment was indefinitely postponed by the House by a vote of 68 to 39. In North Dakota, the proposed suffrage amendment, which passed the 1913 legislature, came up for the required action by a second legislature, but was tabled in the Senate by a vote of 26 to 21. In Oklahoma, the proposed suffrage amendment was indefinitely postponed in the Senate. In Rhode Island, a presidential suffrage Bill was defeated in the House by a vote of 65 to 31. In Vermont, a combined presidential and municipal suffrage Bill was defeated in the House by a vote of 129 to 100.

[Mr. Kyte.]

In Wisconsin, the resolution providing for the submission of a suffrage amendment to the electors was defeated in the House, April 20, and in the Senate, July 1.

The results at the polls were: In New Jersey, October 19, for the suffrage amendment, 133,201; against, 184,474; majority against, 51,273. In Massachusetts, November 2, for the suffrage amendment, 162,482; against, 295,939; majority against, 133,487. In New York, November 2, for the suffrage amendment, 544,457; against, 732,770; majority against, 188,313. Unofficial anti-suffrage majority in Oneida county, 6,154, making the total majority against, 194,467. In Pennsylvania, November 2, for the suffrage amendment, 385,348; against, 441,-034; majority against, 55,686.

If after seventy years of agitation in the United States these important and wealthy states of the Union have pronounced so decisively against female suffrage, how can my hon. friend from St. John hope that this Parliament is going to accept his resolution upon a mere moment's notice? He stated in his opening remarks with much pride that thirty years ago he had proposed a similar resolution in the legislature of New Brunswick. I commend him for his persistency, I commend him for the consistency of his course, but inasmuch as the legislature of New Brunswick has not yet accepted female suffrage, the hon. gentleman cannot boast of the success that has crowned his efforts.

I am opposed to the resolution of the hon. member for St. John because it imposes an obligation upon the vast majority of the women of this country that they are unwilling to assume. The right to vote is not a contest between the women in the United States and England who seek the franchise and the men who are opposed to it. I say, and I say with authority, that the contest, both in England and the United States, is rather between the women who are in favour of the exercise of the suffrage and the vast majority of the women in those countries who do not want to exercise the suffrage. Take a poll of the women in England, and a poll of the women in the different states of the Union in which this agitation is going on, and it will be found that there is a vast majority of women who are opposed to woman suffrage. So far as this country is concerned, I am unwilling that this Parliament shall impose upon the vast majority of women an obligation which they are unwilling to asume, which they do not wish to assume and which, according to all womanly and motherly instincts, they ought not to be

asked to assume. If the resolution of the hon. member for St. John becomes crystallized into law we will bequeath to our children, and our children's children, a social and domestic life as bald and barren as the mountains of Gilboa.

Mr. W. H. BENNETT (East Simcoe): Mr. Speaker, in view of the wide difference of opinion which exists between such weighty men as the hon. member for St. John (Mr. Pugsley, and the hon. member for Richmond (Mr. Kyte), and in order that they may have an opportunity, between now and a future session, of adjusting their differences amicably, and as there is a great number of gentlemen on this side of the House who desire to speak on this most important subject on a future occasion, I move the adjournment of the debate.

Some hon. MEMBERS: No, no.

Mr. SPEAKER: It is moved by Mr. Bennett that the debate be now adjourned.

Mr. PUGSLEY: I think that upon reflection my hon. friend (Mr. Bennett) will see that it is not desirable to press this motion. It is quite early in the evening and my motion has stood over on quite a number of occasions when it was called particularly at the request of members of the Government. It having now come up for consideration I think it is desirable, if possible, to take a vote upon it to ascertain what is the opinion of the House so that the Government may be guided by that opinion. If the House should be in favour of refusing the motion, of course, the Government will act accordingly. If the House should be of the opinion that the motion should carry, I think it is desirable that it should be so informed at as early a time as possible, because Manitoba has passed woman suffrage. There are two vacancies in Manitoba, and unless the legislation is made clear there will be inextricable confusion in connection with these elections when they come on. There will be many lawyers, I venture to say, who will claim that women have the right to vote for members of Parliament. There will be many others who will say that they have not the right to vote. It is desirable to make it clear. If the motion stands over to-night by the ingenuity of my hon. friend, it may not come up again during the present session, as the Government have given notice that they are going to take Wednesdays, and Government business will have precedence on that day. I would therefore ask my hon. friend not to press this motion.

Mr. ROGERS. In answer to my hon. friend, I may say that this is undoubtedly a very important question that has been raised, and, in so far as any fear my hon. friend may have with respect to the question not again being brought to the attention of the House, I assure him that the question will come up again before the close of the session. It is an important question and we are most desirous of disposing of it in the most reasonable and the clearest manner possible. Therefore, I entirely agree with my hon. friend from East Simcoe (Mr. Bennett) in moving the adjournment of the debate.

Mr. GEORGE E. McCRANEY (Saskatoon): Mr. Speaker, before the motion to adjourn the debate is put, I would like to say a few words as coming from the province of Saskatchewan, which is one of the provinces that in the very near future will adopt suffrage for women.

Mr. SPEAKER: Is it the pleasure of the House to adopt the motion of the hon. member for East Simcoe?

Some hon. MEMBERS: Carried.

Some hon. MEMBERS: No.

Mr. SPEAKER: I declare the motion lost.

Mr. McCRANEY: As has been pointed out in the House already, the province of Manitoba has passed a resolution which will give the franchise to the women of that province. The legislature of the province of Saskatchewan is now in session and Mr. Walter Scott has given the assurance that similar legislation will be passed. In Manitoba a very large petition was presented by the women of the province asking for the franchise. The same has been done in Saskatchewan—

Mr. ROGERS: I am afraid my hon. friend is rather out of order in view of the fact that the debate has been adjourned.

An hon. MEMBER. No, the motion was lost.

Mr. SPEAKER: The hon. member for East Simcoe made a motion to adjourn the debate and I declared the motion lost.

Mr. McCRANEY: I do not know whether or not a petition was presented to the legislature of Alberta, but that legislature is now in session, and the Premier of the province has pledged that there also

woman suffrage will be granted. The hon. member for South Cape Breton (Mr. Kyte) argued that if these women were given the franchise they would have to assume obligations different from those assumed by men in respect of the franchise—as though they had not the right to exercise the franchise as men do. If women are given the franchise, those who do not care to exercise it may stay at home, as the men do when they do not wish to exercise it. The motion of the hon. member for St. John city does not seek to impose woman suffrage upon the county of Richmond; it simply asks that any province desiring to do so may have the right to give their women a voice in public affairs. This has no reference to the question of prohibition. In the province of Manitoba, women will not vote in the plebiscite which is to be taken on the thirteenth of next month. Women had no part in the vote which was taken last summer in the province of Alberta. In Saskatchewan it had already been determined to take a vote on the question of prohibition, and it is only because that vote has been accelerated that in the meantime women will be given the right to vote.

But what is the real reason why we should give women votes if they want them? We have learned many things from the war, and one thing that I believe we have learned more than any other is that women are able to take a place in public affairs that we had not previously thought them capable of. Their patriotic instincts have been a surprise to us; they have shown an ability to organize and a desire to advance national welfare which entitled them—at least in our province, we think—to take part in public affairs. In no province has the right of women been more fully recognized than in my own province—in the matter of their being given a right similar to dower, in the matter of their rights in cases of intestacy, in the matter of their right to vote in municipal and school elections. The right which I have last mentioned is extended to unmarried as well as to married women. There are reasons why the western provinces recognize the copartnership of husband and wife in public affairs which may not apply with equal force in the eastern provinces. It is well known that in every new country the burden of settlement and of building up the community is borne by women as well as by men, indeed, as one who has lived quite a number of years in the West, I would say that those burdens fall more heavily upon the women than upon the men. The men of our province and of the other Prairie Provinces wish to give women a share in public affairs because they recognize what women have done in the building up of the country.

My hon. friend has argued that if women take part in public life they will have to bear arms and act as the policemen of the country. That is as we will. If we say to the women: you must bear arms and be policemen, I am quite sure that there are many of them who will do so and will do it well. In any such argument there is no appeal to our chivalry, and I am quite sure that my hon. friend was not in serious vein when he made use of it. The fate of this motion has been indicated; it will probably arrive at nothing more than discussion this session. But I believe that after women shall have been given an opportunity to take part in the public affairs and have shown their capacity to do so, we shall have in all our legislatures a better class of men than we have had hitherto. That result in itself would be sufficient. In view of the results which have come from the part taken by women in elections, I do not think this Parliament should refuse to give to the women of the western provinces who already have a vote in municipal affairs the right to exercise the franchise as proposed by the hon. member for St. John city.

Mr. EDMUND PROULX: I regret to have to differ from the hon. member for St. John City (Mr. Pugsley) in that I think the franchise should be extended only to widows and spinsters.

Mr. PUGSLEY: You think they are the most sensible.

Mr. PROULX: No, but a widow may be the head of a family, and may take great interest in the affairs of her country. In Ontario the right to vote in municipal elections has been extended to widows and spinsters who hold property, and it was recently proposed to extend this right to provincial elections. If the resolution of the hon. member were limited to widows and spinsters, I should feel disposed to support it, but I do not feel disposed to support a proposal to extend the franchise to married women, thus introducing into the home matters of political discussion and dissension.

Mr. CARVELL: You are a man of peace.

Mr. PROULX: The home is sacred and no cause for dissension or quarrelling should be introduced into it. Often per-

sons who marry entertain opposite political views and controversy may arise, but in the case of widows and spinsters there would be no danger of that. Parliament and the provincial legislatures may enact laws affecting the property and civil rights of women, and I think they should have the right to exercise the franchise. At one time the franchise was limited to a certain class of persons who had to own property assessed for a certain amount; but when this Parliament accepted the provincial franchise in 1898, that was done away with. In Ontario the provincial franchise is very wide, including every British subject of twenty-one years of age. Now, as men in all countries have always held a higher place than women, the privileges can still be given to men and not extended to women. There may be some agitation in some of the provinces for female suffrage, but I do not know that it is very wide in the province of Ontario, and I have never heard of any agitation in my county. I, one time, was at a meeting of the Ontario Liberal Association and a lady who was supposed to be the president of the Women's Suffrage Association at Toronto wanted to have the privilege of addressing the meeting. We gave her that privilege and, after she had addressed us, I asked her whether, if we adopted her programme, she would work for the Liberal party. Well, she told us that women should not have any party. Now, if the women have not decided what party they belong to, or if they do not belong to any party, I do not think it will be of much use to grant them the franchise. Some years ago I read a speech delivered by Mr. Justice Longley, of Nova Scotia, in which he admitted the great influence that women exercised over the affairs of our country. We all know from history that women have always played great parts in the ruling of various countries; we have all read of the great ladies of France and England; we have heard of petticoat governments; that is, of governments ruled by the influence of women, but Mr. Justice Longley said that he had never seen a woman very anxious for the franchise unless she had lost all confidence in her charms. I believe that, although women are denied the right to cast their vote, many men deposit their ballots according to the will of their wives, and that women, if they so desire, can exert a great influence in the election of members of this House as well as of members of the different provincial legislatures. I do not want to detain the House any longer, but if this resolution comes to a vote, I am afraid I shall have to record my vote against it.

Mr. MICHAEL CLARK (Red Deer): Mr. Speaker, I regret that I was not in the House when my hon. friend from St. John (Mr. Pugsley) proposed his motion, but I have gathered that his proposition is one that would lead to the gradual substitution of the vivacity of women in the affairs of the state for what is usually the crass stupidity of men, the quickness of observation of the female sex for what is the absolute dullness of man, and, if I have rightly gathered the object and purport of the motion, then I now hold with my hon. friend from St. John. I support the motion on very broad grounds. It seems to me that, for the ordinary purposes of the nation, the duties of men and women are pretty equally divided, and it would not be regular nor proper, nor even possible to endeavour to carry on the general purposes of the nation without women. Every one must realize, if he will reflect for a moment, that he had a woman for his mother, and, if he happens to have a daughter, she is a woman also, and he cannot get married without having a woman to help him to the business. The two sexes are really absolutely necessary for carrying on human affairs. A proper appreciation of this elementary fact on the part of my hon. friend from Richmond (Mr. Kyte) would have kept him from delivering what I think was the weakest logic and one of the weakest speeches to which I have ever listened. I have frequently listened to my hon. friend and he always delivers an eloquent speech, and sometimes a comprehensive and logical one, so that I am inclined to be charitable enough to attribute the weakness of his logic in this case to the feebleness of his subject, or to the absolute want of any subject at all.

The greatest political evil that we have in Canada at the present moment is political corruption. I am sure I am right in this, because if I did not know it was so, I was told so by my hon. friend the Minister of Trade and Commerce (Sir George Foster) the other day. I have asked a good many very observant and very knowing people of both sexes what they thought would be woman's attitude towards political corruption. Nine out of ten observers, whose opinion I would value, at once answered: "Oh, you cannot buy an average woman at all to do anything against her will," and

that is just my opinion of the sex, having seen a great deal of them in all the avenues of life that are followed by medical men. Therefore I think that the greatest political evil existing in this country at the present time would almost cease to exist if you had many women taking interest in politics as men do to-day. But perhaps one can best demonstrate the strength of the position of my hon. friend from St. John by looking at a few of the arguments advanced by my hon. friend from Richmond. My hon. friend said, in referring to an argument which I have always thought a very small one, as to a certain number of women being intemperate, that, after all, in enfranchising women we should enfranchise such women, and therefore the case would not be mended as against the fact that there are a certain number of intemperate men at the present time. He said—and I think in saying it he gave away his case—that in enfranchising women we should be dealing with the same class as men belong to, although I admit that he modified his opinion.

I have already said that the strongest argument for woman suffrage is the fact that women do belong to the same great human family that men do. If my hon. friend had extended his observation a little further he would have seen that the restricted application of his argument was wrong, and that the wider application of it absolutely takes the ground from under his own case.

The hon. gentleman said that if woman suffrage were granted we should need to make women policemen. As my hon. friend from Saskatoon (Mr. McCraney) has said, that would not necessarily follow. But I agree with my hon. friend from Saskatoon that if we do make women policemen they would be very efficient ones. I never saw a man so far gone in crime, so very much the worse for liquor, that he would not rather be taken to a cell by a woman than by a man. In fact, the great majority of criminals, unless the most desperate class among them, would accept the gentle leadership of women and make the duties of policemen very much easier than sometimes they are at present.

Then the hon. gentleman said that we should have to be prepared to put women in khaki and send them to the trenches. Why, he misses the whole case that women set up for the vote, the whole case that reformers put up for woman suffrage. Is there a member of this House who does not know that if woman had the vote there would be no trenches and no khaki, in a very short time? They would put an end to war, they would not be such fools as men are; they would take the more rational, elevated path of reason for the settlement of international disputes. Such, at any rate, is the argument of the social reformer. It does not meet the case to say that we should have to dress women in khaki and send them to the trenches after khaki and the trenches had been done away with.

Then my hon. friend had a very eloquent passage about the weakness of woman and the strength of man. There is perhaps no one who can so fully understand the erroneous nature of that argument as a medical man. I recall a story that Max O'Rell used to relate, and which I think he has put in one of his books. He tells of listening to a bunch of men talking about a woman acquaintance of theirs who had to undergo an operation without chloroform, and one of them spoke of her admiringly as having "stood it like a man." There is not a woman who does not know, and there are not many men who do not know, that if she had only stood it like a man she would not have stood it at all like a woman. I have seen many a man go into fits of fear and desperation about an ailment that a woman, if he had consulted her, could have told him meant that there was nothing particular the matter with him. Take it from me, Sir—and in this I speak more dogmatically than I usually speak—that for endurance, for patience, for all the virtues of that kind, no man who knows himself and also knows woman will ever put himself in comparison with a woman for a moment. That is my experience; I give it for what it is worth. And I do not think that any man in this House really disagrees with me.

10 p.m.

My hon. friend admitted that in a great many ways which he did not mention women are the superiors of men. That scarcely seems an argument for the inferiors keeping their superiors out of the vote. I submit for his consideration that that admission of his wrecked another portion of his platform beneath his feet.

The hon. gentleman seemed to argue that women, if given the vote, would vote against prohibition. Well, there is something to be said on both sides of the prohibition question. I am not now discussing the question of prohibition in its restricted sense as applied to the sale of liquor; but on general principles I am very much in favour of freedom, as this House well knows. It is freedom we are fighting for in Europe,

and it is freedom for which men have been willing to lay down their lives throughout all ages of the world's history. So, if a woman has an instinctive or intuitive prejudice against prohibition, even of intoxicating liquors, she has, I say, the mental characteristic possessed by the best men throughout the ages of human history. She possibly has some little sex and domestic reason for being opposed to prohibition—if she be opposed to it, as the hon. gentleman suggests; and I only meet the statement as he makes it. Nothing would terrify a married woman more than the thought that she had to have her husband dangling on her hands, morning, noon and night. Nothing bothers a woman's life more than to have a man of that kind. There are exceptions, of course, but the exceptions only prove the rule. The woman, like the man, likes to have a little time to herself, and it may be a little domestic prejudice that gives her that view of prohibition, if my hon. friend is right, and she really does hold that view.

My hon. friend said he would not like to have the women of Canada turned into the militant suffragettes of Britain. Well, I rather admire the militant suffragettes of Britain from this point of view, that I recollect what men had to do in Britain before they got the vote. I know something about the Chartist movement. I have heard of the massacre of Peterloo, and the riots that men had to betake themselves to before they got the vote. And, after all is said and done, if the women in Great Britain are so determined to have the vote that they have proceeded to certain practices which to the men now comfortably ensconced in their privilege seems reprehensible, I would remind the hon. gentleman and those who think with him that women are only paying to men the sincerest form of flattery by imitating them in this respect, and that they are being met only as entrenched privilege has always met the demands of the people for enfranchisement and the broadening of their rights.

In this connection, the hon. gentleman used an expression which to my mind was distinctly alarming. If he could prove his case, I am sure he would change my position on this subject, and I think he would change the position not only of all the men but of all the women in Canada who think with me on this question. He said that the women would become "bearded Amazons." If he means that literally, and had said only "Amazons," I would not have been so alarmed, but when he spoke of them becoming "bearded Amazons" he seemed to think that one of the results of the extension of the suffrage would be that they would at once proceed to grow beards. If this part of his case could be proven I believe it would change the attitude of every supporter, male or female, on my side of the case. But I do not think that his physiological knowledge would enable him to place the proof in such a shape before us that we should be convinced that he has the correct view of this matter. In the same connection he said that it would interfere with the performance of the functions proper to women. I think that in that he held out a more alarming prospect even than that of the growth of beards on the part of women—that the extension of the suffrage to women would lead to the extinction of the species. I desire to reassure him, when that state of affairs comes about we shall be so near to the millennium that all these questions of suffrage, and prohibition, and the others that occupy our minds will have ceased to interest us. But I think that for the present he need not be alarmed over any such prospects as either the general growth of beards by women or the extinction of the species.

The weakest argument that the hon. gentleman used he used last. He said that my hon. friend from St. John (Mr. Pugsley) was presenting a professed reform which had been rejected in that enlightened country, the United States, for seventy years. My answer to him upon that point would be: Just think of the weakness of any reformer—though I am sure you will never find it in the hon. member for St. John city—who would cease to attack any evil simply because it has been supported for seventy years. If the argument meant anything, it meant that if a political evil is old enough, it should not be interfered with. There is nothing in the way of reform that has not been fought for, not merely for seventy years but for centuries. Why, parliamentary institutions had existed in Britain for hundreds of years before the first Reform Bill, which was passed, as you remember, Mr. Speaker, in 1832. By that Reform Bill, as an elementary knowledge of English history reminds us, boroughs were destroyed where there were only two houses and, in other cases, where were not more than five voters. That state of affairs had existed for the hundreds of years that Britain had parliamentary institutions before the destruction of the rotten boroughs. Would it have been logical, while Macaulay was de-

livering his wonderful speech on the Reform Bill, or when Grey was laying the foundations of the first extension of political liberty in Britain; would it have been logical to go before the British House of Commons and say: You must not attack this evil of restricted franchise; it has existed for centuries? I think my hon. friend will say that that would have been a most illogical position. Reformers have never taken that attitude. For a period of thirty-five years after the first Reform Bill was passed, from 1832 to 1867, the reformers worked for household suffrage in the boroughs of England. In 1867 they got it, from a Tory Government. From 1867 to 1885, a period of nearly twenty years, the workmen in the boroughs had the vote, but the workmen in the counties did not have it. The reformers went on working for the next twenty years, and then the workmen in the counties got it. That was thirty years ago, Mr. Speaker, and they have not manhood suffrage in Britain yet; but manhood suffrage will come by the same patient perseveraance against odds and difficulties and prejudices by which the other extensions of the suffrage came. Woman suffrage may be right or it may be wrong, but it is neither right nor wrong because the United States has refused it for the last seventy years.

From a careful study of the qualities of the sexes, I am persuaded that women have more endurance than men, tnat they see more quickly, that they see further than men, that their moral qualities along other lines are higher than those of men. I am persuaded that when they get an equal voice in public affairs, as they always take very good care to have more than an equal voice—and with our consent—in domestic affairs, I am persuaded that it will be a better world to live in, and that the countries that adopt this reform will be better countries to live in. For that reason, Mr. Speaker, I am in favour of the motion of the hon. member for St. John City.

Mr. J. G. TURRIFF (Assiniboia): As this is a matter, Mr. Speaker, that is of very great interest to the province from which I come, I feel that I should not be doing my duty if I did not express my views on the subject. The question of extending the franchise to women has been discussed for some time in the province of Saskatchewan, where not only the majority of the women, but the majority of the men as well, are in favour of it. We all feel out there that when women get the franchise, there will be a direct advantage all round. Hon. gentlemen who have been through a number of elections will recognize that in the past women have had a great deal of influence in elections. Why, then, should they be debarred from expressing their views at the polls? We would be better if the women had votes. We would have better laws. When the women have votes they will be not so partisan as the men; they will vote for good candidates; they will advocate desirable reforms. In all matters pertaining to moral issues and to the advantage of the home the great majority of woman voters will be on the right side of the question, no matter how the men may vote.

The hon. member for Richmond (Mr. G. W. Kyte) said that you do not find women on bank directorates; you do not find them taking a large part in the commercial affairs of the country. Why has that been, Mr. Speaker? Simply because for centuries past, owing to the law of custom, women have not been allowed to occupy these positions. But in these days I think he would be a courageous man who would say that in any of these walks of life women are not just about as capable as men are. Look at the number of women who succeed in business. Throughout the West large numbers of women run farms, and run them well. I know of cases where men have died, leaving their farms, with, perhaps, a good deal of debt as well, to their families. In many cases of this kind the widows have made greater successes of the work than their husbands did.

The hon. member for Richmond pointed out that laws which were unfair to the women had been remedied by the men. I direct his attention to the fact that, in many provinces of Canada to-day, laws unfair to the women are still in force. If the women had the franchise these matters would be remedied. The fact that a few militant suffragettes in England have gone to extremes is no argument against giving women the vote. I venture to say that for one woman who has been extreme, or who has made a fool of herself in the matter of proposed action to bring about woman suffrage in England, ten, twenty or fifty men would be just as foolish under similar circumstances. The province of Manitoba has granted woman suffrage. The Government of the province of Alberta have announced that legislation will be passed this session giving the franchise to women. As the hon. member for Saskatchewan (Mr. McCraney) has pointed out, the Saskatchewan Government has promised to bring

down at this session legislation granting the vote to women. I can assure you, Mr. Speaker, that if the other provinces will follow the line of the three Prairie Provinces in that respect, they will not go very far wrong, and their action will tend to the general advantage of the whole of Canada.

Mr. E. W. NESBITT (North Oxford): I think that some irregularity might result from giving the franchise to women, in provinces where they already have the right to vote in provincial elections. Throughout the Dominion we have pretty much the same kind of voting in all the provinces; it is nearly all based upon the principle of manhood suffrage. This condition results in the vote being equalized throughout the Dominion; if this resolution should become law, however, some inequalities would exist.

I am not one of those who had to wait for the war, as the hon. member for Saskatchewan evidently did, to find out that women are equal to men in business as well as in other respects. My experience is that, so far as business is concerned, women are quite equal to men. I would just as lief have women on a board of directors as men. I am not making any reflection on the ability of the men, but I am in dead earnest when I say that, so far as my experience goes in business matters, women have just as much ability as men have.

As to their other qualities, we all know them. Women are the salvation of humanity. Were it not for the influence for good that women exert over men, we would be a fine bunch. As to the argument that the granting of the vote would change them, I doubt that. As a matter of fact, women are a power behind the Throne, and they exert a great deal of influence on elections, as we all know. There are few men who are not influenced more or less for good by women. The finer instincts of men are due, I think, to the influence of their mothers, and when a man grows up he derives the best kind of influence from the women who surround him. If a man has a mother and sisters, even when he comes to my age, their influence over him is certainly good. Therefore, I think their influence upon politics would be equally good. In all probability this resolution will not go much further to-night, but I see a difficulty in this that the women in one province would have votes while those in another province would have no votes. That does not seem to me to be putting them on an equality. As for the argument that if we give women the right to vote, we must give them the right to sit in Parliament, I can only say that that would be no hazard for me. I would be very glad to welcome my sisters in Parliament if they wished to sit here and were elected. I assure you they would elevate the tone of Parliament. Outside of the question of inequality in the franchise throughout the different provinces, I am certainly in favour of giving women the franchise, but I would not like to force it upon any woman who does not want it. I do not agree that women should be given the right to vote even if they did not exercise it. It is one of the drawbacks of our electoral system, that a great many men do not vote. That is one of the reasons why there is so much corruption in elections; they do not vote, or they vote during the last hour. I do not believe in passing laws that will not be lived up to, and I do not agree with my hon. friend from Saskatoon (Mr. McCraney). If the women of this country demand the right to vote, by all means give it to them, they are perfectly capable of exercising it but if they do not want to vote, and they will not vote, then by no means give it to them.

Mr. PUGSLEY: Might I ask my hon. friend if in connection with the difficulty that is in his mind as to equalizing the vote in the different provinces he has kept in view the fact that each province has a fixed representation in this Parliament dependent on its entire population?

Mr. NESBITT: It might not alter the representation of the provinces, but my hon. friend can easily see what I mean, that in one province the women would have the right to vote, while in another province only the men would have the vote, so that they would have a double franchise in one province, and only a single franchise in another.

Mr. McCRANEY: They would have the same representation.

Mr. NESBITT: Suppose we went further and gave them representation according to the votes.

Mr. PUGSLEY: The British North America Act assures that.

Mr. E. M. MACDONALD (Pictou): Mr. Speaker, it seems to me that this question is one of sufficient importance to entitle us to expect that some hon. gentlemen on the Government side of the House will indicate the attitude of the Government with regard to it. The matter has not been brought

forward as a party question in any sense, and the discussion has extended over a very wide range. The proposition submitted in the resolution of my hon. friend (Mr. Pugsley) does not necessarily involve a discussion of the wider question; it merely raises the point as to whether or not this Parliament should recognize a change in the franchise as might be brought about in the different provinces of the Dominion, in the direction of permitting women to vote. The views of hon. gentlemen who have spoken have varied as to the wisdom of such a change, and the discussion has been entirely apart from any political differences that exist in the House. As my hon. friend from St. John pointed out, the change is only imminent. Already, in one of the provinces, the franchise has been made sufficiently broad to permit the women to vote, and two other provinces are on the point of granting the same privilege. These provinces are in the West, and it has been urged by some hon. gentlemen who have spoken to-night that the conditions in those provinces are peculiar, that they are such that it is only natural and proper that the women should have the franchise. The question is whether or not we in this Parliament should recognize the view which has been adopted by those provinces in regard to this question, and I think the proposition is sufficiently important to justify some pronouncement on the part of the Government as to their attitude.

Hon. ROBERT ROGERS (Minister of Public Works): The hon. gentleman (Mr. Macdonald) has suggested that some reference should be made on this side of the House as to the attitude which the Government takes in respect to the question under discussion. If I could believe that my hon. friend who moved the resolution was quite sincere in presenting it to this House, I would be disposed to discuss it from a somewhat different viewpoint.

The hon. gentleman started out by telling the House that it was his privilege thirty years ago, when seeking election in a constituency in New Brunswick, to advance this same proposal of votes for women. But, strange to say, although my hon. friend from St. John has had ample opportunity, in his native province, from that time on, to secure the enactment of such legislation as would give the women of that province the right to exercise their franchise, which he is proposing here this evening for another province, he has not availed himself of that privilege. My hon. friend from Pictou has

apparently a doubt also whether this legislation should be extended to one particular province and not to all the provinces of Canada. When I suggested to my hon. friend from St. John that we amend his motion so as to provide for the extension of the privilege to the women in all the provinces of Canada he was not disposed to acquiesce in that proposal. I submit that if my hon. friend was sincere in the proposal which he has made he would have adopted this suggestion and then this House would have had something before it to consider in a tangible manner, and something that we would have reason to give very serious consideration to. It has been suggested that the proposed resolution should be confined simply to one particular province which has already adopted the principal of woman suffrage—the province of Manitoba—and that it might be extended to any other province that might follow Manitoba's example later on. The question is whether this Parliament should adopt a principle of a limited character or whether it should go the full length and adopt the principle of extending woman suffrage to all the provinces of Canada as well as to the individual provinces that might adopt it.

I am sure we all agree with the principle of equal rights to all the provinces. My hon. friend who sat down a few moments ago raised that particular question. I think he was quite right in saying that if we are to have woman suffrage in any one particular province we should have it in all the provinces of Canada. If the hon. member for St. John would amend his motion I would be disposed for one to give it consideration and to support a resolution by this House to extend the franchise to women in all parts of Canada.

Mr. PUGSLEY: How would my hon. friend reconcile that with the statement which the right hon. the Prime Minister (Sir Robert Borden) is reported to have made that this Parliament would not interfere with the provincial franchise, but that the question must be left to the provinces to deal with?

Mr. ROGERS: We would not at all be interfering with the provincial franchise. Each province has the right to make its own franchise. If we extend the franchise we shall be extending it to all parts of Canada alike. I do not see that we would in any way be interfering with the provincial franchise, because it would apply to all the

provinces of Canada. We have a right in this Parliament to grant that extension if we so wish. It is true, in view, as has been stated here this evening, of the part that our ladies have taken in the recent war, that they are entitled, if for no other reason, to full consideration and to all the rights that it is possible to extend to them in the matter of their franchise. That would be, therefore, a very powerful reason why this question should receive serious consideration at the hands of the members of this House.

As far as the franchise in the province of Saskatchewan is concerned, I would like to say that in the last local election certain women were allowed to exercise their franchise, although there was no law of the province to enable them to do so. However, they were allowed that right, and they did really in certain places cast their votes.

Mr. McCRANEY: I would like the hon. gentleman to tell me what riding he is referring to. I have never heard of any such incident.

Mr. TURRIFF: Neither have I.

Mr. ROGERS: I do not remember the particular riding but I remember the fact that ladies voted in certain parts of the province. I have the evidence to substantiate that statement, and I shall be glad to supply my hon. friend with sworn declaraion of a scrutineer and naming the ladies who voted in that particular province in the election of 1912.

Mr. McCRANEY: I would ask the minister to lay the declarations on the Table if he will.

Mr. ROGERS: I shall be very glad to do that, and I shall be very glad to present the House with that sample of the elastic manner in which the franchise of Saskatchewan was exercised in the election of 1912. At the same time, in that province, before the election, they removed that portion of the Act which provided that it was necessary for a man to be a British subject in order to vote at the election. It is true that some hon. gentlemen on the other side of the House told us that that had been rectified later on. It was rectified but not until after the election was over, and in the event that there would be a Dominion election, it would be necessary for a man to be a British subject before he would be entitled to exercise the franchise in that province. We have no guarantee that the same province will not change the Act before the next general election thus repeating that which was done before the last election. It is their privilege, of course, if they desire to carry out their election law in that manner.

I do not believe it would be in the interest of the women of Manitoba, to have the franchise unless it were extended to all the provinces, and if my hon. friend had, as I suggested, amended his resolution to that extent, I would have been disposed to have supported him. But, in view of the fact that he has not done this, I will have to record my vote against his resolution and I will ask the members on this side to do likewise.

Mr. E. B. DEVLIN (Wright): Mr. Speaker, I want to say a word in favour of the resolution of my hon. friend from St. John (Mr. Pugsley). I shall content myself with saying that I shall be in favour of the resolution and until reasons are shown to me why the ladies should not be free in this country as well as the men, I mean to support all similar resolutions. I can hardly agree with my hon. friend the Minister of Public Works (Mr. Rogers). His contention is that only a half loaf is offered to the ladies and that because they are not offered a whole loaf he is going to refuse them the half loaf. That is poor logic and I hardly think it will satisfy the ladies of this Dominion. I have a feeling that our ladies in Canada are thoroughly satisfied with the manner in which the men carry on the affairs of the country, but there is a desire that they should enjoy the same freedom and liberty as the men do. I therefore support the resolution of the hon. member for St. John.

Sir ROBERT BORDEN: My hon. friend from St. John (Mr. Pugsley), I believe, has alluded to some answer to a delegation which he stated I had given a year or two ago. Am I correct in that?

Mr. PUGSLEY: I do not think it was a year and a half ago—some months ago.

Sir ROBERT BORDEN: I have not received any delegation on the subject for a year and a half at least. I did in 1912, when in Great Britain, receive a delegation of ladies there; I think, in fact, there were two delegations, one supporting the idea that women should be invested with the franchise and the other opposing it. In the same year, 1912, I received. I believe, a delegation of ladies in Toronto, but I am not aware of having done so on any other

occasion. In regard to the delegation in Great Britain, I ventured, to say that I thought, in view of certain statements which were made, that the women of Canada were quite capable of looking after their own interests in such matters, and that the ladies of Great Britain would not require to interest themselves particularly in the matter in so far as this country was concerned.

My hon. friend refers, I understand, to the answer I gave to that delegation. The answer I gave, as I recollect, was that, under the system which had prevailed in this country from 1897 or 1898, the Federal franchise had been made to depend on the franchises of the several provinces; that persons entitled to vote at provincial elections were entitled to vote at Federal elections; and I suggested to them that probably the ladies of Canada would find it desirable, in the first place, to address themselves to the provincial authorities. And I said, that until we departed from that system of having the franchise for Federal affairs dependent upon the franchises in the several provinces, such would be the proper course for them to take.

My hon. friend (Mr. Pugsley) has perhaps raised some considerations this evening which might make it desirable for us to take the whole question of the Federal franchise into consideration, and I do intend to take it into consideration in view of what the hon. gentleman has stated. When that question is so taken into consideration, the enfranchisement of women must be considered, not in relation to any individual province or provinces in Canada, but from the standpoint of the whole Dominion. We shall then be prepared to come to the House if necessary, with proposals based upon a wider conception of the matter than that which has impressed itself upon my hon. friend in proposing his motion. It would seem to be quite undesirable that we should be responsible for any enactment by which the women in one province of Canada should have the right to vote in Federal elections, and the women in other provinces should not have that right. Upon reflection, hon. gentlemen must come to the conclusion that such a result, which is apparently desired by the hon. gentleman (Mr. Pugsley) would not commend itself to the good sense of the members of the House, or to the good sense of the women of Canada. Therefore, it does not seem to me that the motion of the hon. gentleman, which has in view the granting of the Federal franchise to women in some provinces of Canada and the withholding of it from women in other provinces, ought to commend itself to the good sense or the good judgment of the House. For my part, and reserving my right of judgment on the wider question, which is one of very great importance and which I shall be prepared to discuss at the proper time, I venture to submit that the proposal of the hon. gentleman ought not to command the support of hon. members, for the reason that, as regards the right to vote of one half the proposed electorate, it would create a discrimination in the franchise, as between the various provinces of Canada.

Mr. PUGSLEY: I could not help admiring the ingenuity of the Minister of Public Works when he suggested that I amend my resolution, and that if I did not amend it he would not only oppose it himself, but he would call upon all his supporters to oppose it. In other words, on a simple question, introduced not as a party question at all but introduced for the purpose of giving to the members of the House the independent right to express their opinions upon the question in regard to which gentlemen on each side of the House are divided in opinion, my hon. friend saw fit to demand of his supporters that they shall sink their individual opinions and shall maintain the Government in its refusal to support this motion. Did you ever see in this House a more sorry spectacle? I could have understood such a course upon the question of supporting these wonderful tariff proposals which my honourable friend the Minister of Finance has submitted to tax the people of this country, when it might be necessary that the Government should push the measure through in order to carry out their policy, that the Government might appeal to their supporters to sink their individual opinions and vote from a party standpoint. But upon this simple question of doing justice to the women of this country, in regard to which we all may have our own opinions, in regard to which we may differ, it passes my comprehension that the Government should make it a party question and demand that its supporters, as party slaves, should obey the crack of the party whip and vote down this motion. I cannot understand what the Minister of Public Works is thinking about in making such a suggestion.

I am glad that I did not misunder-

stand or misquote the Prime Minister as to the interview he gave the ladies who aproached him on the question of woman suffrage. My right hon friend admits that he told those ladies that they had better go and address the Governments of the provinces and get them to promote legislation granting woman suffrage. What was the inference which these ladies had a right to draw from the statement of my right hon. friend? Was it not that if any province enacted legislation giving women the right to vote for the Legislature they would also, as a matter of course, be granted the right to vote for the Dominion Parliament? In other words, that for some 19 years this Parliament had pursued the course of going entirely by the views of the Provincial Legislatures with regard to the franchise, and this Government did not propose to depart from that principle. My right hon. friend says, in effect: When I told the ladies that, I meant that they must get the views of the Legislatures of all the provinces so that we would have uniformity; in other words, in effect, I told them that they must go out to the council of the Yukon, away in the Yukon territory, and get that council to introduce a resolution providing for female suffrage. I do not think my right hon. friend, with all his tact and diplomacy, with that courtesy which he would be sure to show to the ladies, intended for a single moment that they would think that that was what he meant. I think the fair inference was that, if any province chose to adopt female suffrage, it would result in the women of that province having also the right to vote in the Dominion elections. Now, my right hon. friend tells a different story: he says that by reason of my presenting this evening certain considerations with regard to female suffrage, there may devolve upon the Government the whole burden of recasting the federal franchise system, and of considering whether or not they will introduce a federal franchise law applicable to the whole Dominion, and do away with the system of provincial franchise which has been in vogue with complete satisfaction in this country for the past nineteen years. I must truly be a most remarkable man—

Sir ROBERT BORDEN: You are.

Mr. PUGSLEY: —and this must be a most remarkable question which I have presented to the attention of the Government; one so important that the Minister of Public Works wishes his party to vote it down, and that my right hon. friend thinks it is going to cause the repeal of the whole system under which the elections have been held for the past nineteen years, and that the Government must take up the responsibility and labour of evolving a new franchise Act for the purpose of carrying into effect the ideas which I venture to propound this evening in presenting this simple resolution, which might so easily and with such great advantage be adopted by the House.

Now, just a word in answer to my hon. friend the member from North Oxford (Mr. Nesbitt), who said that the only objection he had to the resolution was that it would prevent an equality in the electorate of the different provinces. That would not make any difference, as between the representation of the different provinces, because, under the British North America Act that representation is based entirely upon population, and in any province, if there were ten times as many women as there are men, there would still be the same representation according to population. If ladies were allowed to vote in any one province, only between the people of that province would it make any difference, the number of representatives would remain the same; but a great deal might depend on the quality of the candidate who might be chosen by the people, because the women, if allowed to vote, might prefer one candidate to another, and they might succeed in electing a candidate who might not have been elected if men alone had the vote.

My right hon. friend says that there would be a difference in the franchise upon which the elections were held. That is the case to-day. In some provinces there is manhood suffrage, all men over twenty-one years of age having the right to vote if they have resided in a district for a very few months, whereas in other provinces no man has a right to vote unless he owns four or five hundred dollars worth of real estate or personal property, or has an income to that amount.

Mr. HANNA: What province is that?

Mr. PUGSLEY: I think the province of Prince Edward Island. The hon. member for Richmond (Mr. Kyte) says that there is a property franchise in Nova Scotia. That must exclude many thousands in that province from voting.

Sir ROBERT BORDEN: Practically a manhood franchise.

Mr. PUGSLEY: I am told not.

Sir ROBERT BORDEN: An income franchise.

Mr. PUGSLEY: I am told not; but suppose it were different, what is to hinder any province from going back to property franchise? What is to hinder any province from disfranchising thousands of men who in other provinces would be entitled to vote? Nothing at all. Therefore there is nothing in that argument. If this Parliament chooses to adopt the provincial franchise, to allow an election to take place on the provincial lists, I see no inconvenience and no difficulty whatever, in any province in which women are allowed to vote for members of the Provincial Legislature, being allowed the right to vote for members of Parliament. It must be borne in mind that this resolution merely proposes:

> That, in the opinion of this House, it is desirable that the Government should promote legislation to amend the Dominion Elections Act, so as to provide that upon any province of Canada enacting legislation giving women the right to vote for members of the Provincial Legislature, such women as are on the provincial voters' lists, or as are otherwise entitled to vote for members of the legislature in such province, shall also, unless otherwise disqualified, have the right to vote at elections for members of this House.

If in the course of time the other provinces of Canada should follow the example of Manitoba, Saskatchewan, and Alberta, then women throughout Canada would be allowed to vote; but so long as we act upon the provincial franchise and use the provincial lists, then with no degree of justice or fair play can we refuse to allow women whose names are on the provincial lists also to cast their vote for the members of the House of Commons. When I made my first observations in support of the resolution I did not think it necessary to present arguments in favour of the general principle of giving women the right to vote; but if any such arguments were needed to support such a proposition such arguments were afforded by the speeches made by my hon. friend from Red Deer (Mr. Michael Clark), my hon. friend from Saskatoon (Mr. McCraney) and my hon. friend from Assiniboia (Mr. Turriff). Their arguments were unanswerable, and to any fair-minded man they should have been convincing in favour of passing this resolution. My hon. friend the Minister of Public Works (Mr. Rogers), and my right hon. friend the Prime Minister need not pretend to the women of this country that they are in favour of woman suffrage; they need not think for a single moment that they can keep this thing hanging before the women of this country for years and make them believe that at some distant date, some time after the next election, in case the women should be foolish enough to give the Government their support, they will be willing to introduce a general franchise Act in which they will give women the right to vote.

Mr. ROGERS: That was your policy thirty years ago.

Mr. PUGSLEY: To-day in the three Prairie Provinces, with a population of about 1,500,000, or one-fifth of the entire population of Canada, there is the opportunity of giving women the right which they are demanding to-day, that is, to vote for members of this Parliament at the same time that they are given the right to vote for members of the legislatures of the three provinces.

Mr. DAVIDSON: Does the hon. member think that the women of Manitoba have any better right to vote than the women of New Brunswick?

Mr. PUGSLEY: Not at all, but the women of New Brunswick and the men of New Brunswick can follow the example of Manitoba, and Saskatchewan, and Alberta, and secure the franchise in elections to the provincial legislature, and when they secure that, if my resolution is adopted, it will result immediately in their having the right to vote for members of this Parliament. If the men of the provinces are agreeable, that is the way in which the women of Canada will secure the right to vote for members of this House. Notwithstanding the fact that the Government is going to ask its supporters to vote down this resolution, I am proud to have the honour of moving it and of presenting it for the vote of the members of this House; I am glad that we are pressed to a vote, and that the members are to stand up and say whether or not they are in favour of granting to the women of Canada this small measure of justice.

Motion of Mr. Pugsley negatived on division.

PRIVILEGE.

THE BILINGUAL QUESTION.

Mr. G. H. BOIVIN (Shefford): Mr. Speaker, I rise to a question of privilege.

I desire to refer to the report of a recruiting meeting which I had the honour of addressing last night at Massey Hall in the city of Toronto. I find in this morning's Montreal Gazette a very fair and very complete report of that meeting, with one exception. There is one sentence in the report which gives it an altogether different meaning, and I deem it my duty to correct the mistaken impression at the earliest opportunity. In that report, I am made to say, in speaking of the bilingual question:

> Why should they talk like that? Are there any difficulties to settle?

That is far from what I said. The exact words are:

> Why should there be difficulties to settle?

Which puts altogether a different meaning upon the whole report. The Toronto Globe, in a more lengthy report, after placing in my mouth the same question, gives my exact words. I followed up the statement. "Why should there be any difficulties to settle?" with the words:

> I have met many people from all parts of the Dominion, and I am absolutely sure that there is not one man who is not perfectly willing that the French-Canadian people should be allowed to have their children learn French if they so desire, and to-night I tell you that there is not one French-Canadien who is not anxious to have his child or children taught to speak and understand the English language as I do.

The reports of La Patrie, the World and the Mail and Empire, as well as that sent to other papers by the Canadian Press Service are substantially correct.

I did blame Bourassa and Lavergne in Toronto. I did not blame them for having been the cause of the bilingual trouble in Ottawa; I blamed Bourassa and Lavergne in Toronto as I would blame them in this House, and as I would blame them in any part of the province of Quebec, for having used the bilingual trouble in Ottawa or elsewhere in Ontario as an argument against recruiting in the province of Quebec. That is why I blamed them in Toronto, and that is why I will blame them at every possible opportunity in my own province. To-night I find in Le Devoir an article addressed to myself. It certainly does me too much honour. It is signed by one of the writers in Le Devoir, Mr. Omer Heroux. Before waiting even to see the Toronto papers, basing himself entirely upon the report of the meeting wired to the Gazette, he wrote a strong editorial concerning the statement attributed to me in Toronto last night. I am well aware of the difficulties in Ottawa. I am very sorry those difficulties should exist; there is no reason why they should. I wish to correct the statement attributed to me; and I feel sure, knowing the honesty and integrity of Mr. Heroux, that he will correct the mistaken impression he has given respecting my statement. If he wishes to repeat exactly what I said, he will say that I blamed the editor of his paper, Mr. Bourassa and Mr. Armand Lavergne for using the bilingual question as an argument against recruiting in the good old province of Quebec.

On motion of Sir Robert Borden the House adjourned at 11.05 p.m.

Tuesday, February 29, 1916.

The House met at Three o'clock, the Speaker in the Chair.

DEPARTMENT OF EXTERNAL AFFAIRS.

Sir ROBERT BORDEN: Mr. Speaker, may I make a statement to the House on behalf of the Under Secretary of State for External Affairs in connection with some criticism of the report of the department which appeared in the press? The statement is as follows:

> The passport requirements of foreign countries is an appendix to the report, and is an exact transcription of a similar statement in the Foreign Office list for 1915. It does not relate to any regulation of ours. It is, as it purports to be, a record of what foreign countries normally require in the matter of passports.
>
> It is only in a technical sense here for the information of the public, as the report is nearly a year old when published, and we provide all people seeking passports with up-to-date information concerning them. It might perhaps have been well to have inserted a note to this table saying that passports were not issued to enemy countries during the war, but the fact being so obvious, and the Foreign Office not considering such a precaution necessary, led the clerk who made up these appendices to take the same view.

TRANSPORTATION OF GRAIN.

RAILWAY ACT AMENDMENT.

Hon. J. D. REID (Acting Minister of Railways) moved for leave to introduce Bill No. 47 to amend the Railway Act. He said: This is a Bill which the chairman of the Railway Commission has requested me to introduce, and which he recommends to the consideration of the House. It is applicable particularly to the western provinces. As hon. members know, we had a very large crop in the West last year, and in certain portions of the country the railway lines are having a great deal of difficulty in moving it. Along some branch

lines large quantities of grain are still lying in the fields, and the railways are unable to move it before the spring rains come on. A great deal of it will be damaged unless some prompt action is taken. This Bill empowers the Railway Commission to order any railway company on whose lines grain is located to use its equipment to rush that grain to the nearest elevator, and then to order another railway company to take the grain from the elevator to Fort William. The commission may thus use two railway systems to ensure the early removal of the grain. At present the one railway has to take it from the point where it may happen to be, in Alberta or Saskatchewan, all the way down to lake Superior, whereas the equipment of the company is not sufficient to enable it to take all the grain before spring. Compelling one railway to use its equipment for the short haul to the nearest elevator, and the other railway to take it from the elevator to lake Superior, will very much expedite the removal of the grain from the fields where it is now exposed to weather conditions. This, it is expected, will greatly help the farmers of the West.

Motion agreed to, and Bill read the first time

PRIVATE BILLS INTRODUCED.

Mr. BLAIN moved for leave to introduce Bill No. 39, (from the Senate), respecting the Governing Council of the Salvation Army in Canada, and to change the name thereof to The Governing Council of the Salvation Army, Canada East.

Some HON. MEMBERS: Explain.

Mr. SPEAKER: It is not customary for an explanation to be given when a Senate Bill is introduced in the House of Commons (reading):

> When any Bill is presented by a member, in pursuance of an Order of the House, or is brought from the Senate, the question, "That this Bill be now read a first time," shall be decided without amendment or debate.

If it is the desire of the House to have an explanation, I have no objection at all.

Mr. MACDONALD: I hardly agree with your Honour. A Senate Bill may not be debatable when introduced here, but surely it can be explained.

Mr. SPEAKER: No doubt the House is entitled to an explanation, but I am told that it is not customary to explain Senate Bills when introducing them in this House.

Sir ROBERT BORDEN: When a Bill is introduced in this House the explanation is made on the introduction, and there is no debate on the first reading. If the hon. gentleman desires an explanation I have no doubt it can be given.

Mr. MACDONALD: I just rose to say that I did not agree with the Speaker's ruling.

Motion agreed to, and Bill read the first time.

Bill No. 46, respecting the Algoma Central and Hudson Bay Railway Company.—Mr. Boyce.

Bill No. 42, for the relief of Robert Napper.—Mr. Buchanan.

Bill No. 43, for the relief of Sherwood Norman Hill.—Mr. Douglas.

Bill No. 44, for the relief of Ida May Woltz.—Mr. Boys.

Bill No. 45, for the relief of Cecily Ethel Maude Farera.—Mr. Buchanan.

BUSINESS OF THE HOUSE.

WEDNESDAY SITTINGS.

Sir ROBERT BORDEN moved:

> That on Wednesday, the first day of March next, and subsequent Wednesdays to the end of the session, the House will meet at three o'clock p.m., and that the sittings on such days shall in every respect be under the same rules provided for other days; and that on said Wednesdays, Government notices of motions and Government orders shall have precedence after questions and notice of motions for production of papers.

He said: This motion is made at a considerably later date than was the case last year. Last year, the House met on the 4th of February. On the 16th of February I moved that the Government take Wednesdays and Thursdays, and the motion was accepted on February 25, or just three weeks after the session opened. We have now reached the seventh week of this session, and I therefore ask the House to adopt the motion making Wednesday a Government day from now to the end of the session.

Sir WILFRID LAURIER: I am reminded by some friends around me that next Wednesday week is Ash Wednesday, and that if this motion carries there will be no more private members' days this session. I therefore suggest that the motion be amended so that we have to-morrow as a private members' day.

Sir ROBERT BORDEN: If my right hon. friend particularly desires it, I am willing to consent, but I would point out that when we were discussing this matter last

year, my right hon. friend himself laid down what had been the practice in the past, namely, that at about the sixth week of the session Wednesday is taken as a Government day. We have gone a week beyond that this year, and I therefore thought the motion would be accepted. We have not only greatly extended the time beyond last year, but beyond the period during which Wednesday is taken in an ordinary session.

Mr. MACDONALD: I should like to point out that the burning of the Parliament House destroyed a great many papers relating to matters which hon gentlemen on this side desired to bring before the House. I have no desire to prolong the session, but I think we could clear these matters off if we were given one more private members' day.

Sir ROBERT BORDEN: The burning of the Parliament Building, whatever else it may have accomplished, does not seem to have resulted in any curtailment of the time usually occupied on public questions. We have really had only two questions under debate this session: the debate on the Address, and the debate on the Budget. In six weeks we have consumed about five thousand columns of Hansard in debating these two subjects, and we are not through with the Budget debate. However, if my hon. friends opposite are very anxious to have to-morrow, I am agreeable.

Sir WILFRID LAURIER: We have no objection to sitting at three o'clock to-morrow, but should like it to be a private members' day.

Sir ROBERT BORDEN: What my right hon. friend proposes is that to-morrow the House shall meet at three o'clock and sit in the evening, but that it shall be a private member's day, and that after to-morrow Government Orders shall have precedence on Wednesdays?

Sir WILFRID LAURIER: Yes.

Motion, as amended, agreed to.

QUEBEC JUDICIAL APPOINTMENTS.

On the Orders of the Day:

Mr. LEMIEUX: In all sincerity, might I ask my hon. friend the Minister of Justice if any appointment is to be made to the bench of Montreal?

Mr. DOHERTY: The only vacancies existing in Quebec have been filled.

Sir WILFRID LAURIER: Who are the appointees?

Mr. DOHERTY: Mr. L. J. Alfred Désy, K.C., of Three Rivers, and Mr. Victor Allard, K.C., of Berthier, in Montreal.

Mr. LEMIEUX: Were the appointments made to-day?

Mr. DOHERTY: They were approved to-day.

THE BUDGET.

Consideration of the proposed motion of Sir Thomas White (Minister of Finance) for the Committee of Ways and Means, resumed from Friday, February 25.

Hon. FRANK OLIVER (Edmonton): Mr. Speaker, the discussion of the Budget has been carried on at very considerable length, and in order that it may not become too wearisome, I desire to deal with it to-day from a somewhat different angle—to consider rather the condition of the country than that of the treasury, and the effect of the Government's administration, past, present, and prospective, upon that condition.

I have heard it said in this House upon former occasions that the condition of the country was something beyond the control of the Government; that, as a matter of fact, good times came and went by reason of conditions over which no Government had control; that our conditions in Canada were affected by conditions in other countries; and that if and when conditions were not favourable to the citizens of Canada, the reason was because of conditions elsewhere, rather than because of anything in the administration of our own affairs. However much truth there may be in the contention that we are affected by our environment as a country—and no one will contend that we are not, any more than one can successfully contend that a citizen is not influenced by his environment—still it is a fact that the fortunes of the citizen are largely the result of his own wise direction; and so with the fortunes of a country. The Government of a country, being charged with the disposition of its affairs, is necessarily in large measure responsible for the conditions prevailing in that country. It must, of course, be admitted that a Government cannot compel good crops, nor can it control demand for products in other countries, but a Government can take advantage of a condition of good crops, and it can enable its people to get the benefit of a demand for their products in other coun-

tries, thereby bringing to its people an advantage which would not exist did not the Government use wise direction in these matters. If it is a fact that the well-being of our country is not in large measure under the direction of our Government, then we are spending an enormous amount of time and wasting an enormous amount of money in carrying on representative Government, because the whole purpose of parliamentary or representative Government is that all parts of the country, and all interests in the country, shall be represented in the councils of the nation, with the view that those in charge of affairs shall give them the best direction in the interest of the people. If ever conditions were favourable in any country, and best calculated to produce prosperity amongst the people, those conditions exist in and surround Canada at the present time. There is at present in progress, as has been said by every speaker, and as, of course, is borne in upon the mind of every citizen, an immense, stupendous and terrible war; and whilst every one must deplore that war, every one must admit that, while it does exist, there is a demand for industry and the results of industry both in the field and in the factory, such as never existed, was never heard of, and was never before dreamed of in this hemisphere.

At the same time, we are compelled to realize that although these favourable conditions exist the results to our people are not at all proportionate; we are not to-day in Canada enjoying that measure of prosperity that the conditions certainly entitle us to. I read in a newspaper the other day that in the city of Toronto there are 9,000 vacant houses, and in the great buildings on the principal streets of that city offices are to let by the hundreds. In this city of Ottawa, the capital of the Dominion, where is concentrated all the vast and special expenditure of Government, there are closing-out sales on Sparks street to a degree that has not been known for many years. What is true here in the capital of the Dominion and in the great city of Toronto is true in other parts of Canada. I am not familiar with the whole country, but I am terribly aware that throughout a very large part of the country the condition of prosperity that should naturally result from the enormous expenditures that are being made and the phenomenal production of the soil is not at present being realized.

I read a little time ago a history of Canada. The author laid some stress upon the conditions existing in those periods when this or the neighbouring country was involved in war. The war of 1812, he said, produced an era of tremendous prosperity in Canada as it then was. Those old enough to remember know that the Crimean war produced a most remarkable boom throughout eastern Canada—certainly throughout the province of Ontario; every one knows that the American Civil war produced very favourable financial conditions in Canada; and even the Boer war had a favourable effect upon our financial conditions. The historian commented upon this succession of events by saying that it was so thoroughly recognized in Canada that war meant good times that it was, in the province of Ontario, jocularly suggested that there should be interpolated in the Litany a prayer "for a bountiful harvest and a bloody war." Well, we have had the most bountiful harvest that this country ever saw, as bountiful a harvest as it can ever expect to see; and we are engaged in the bloodiest war in all history, with expenditures being made in respect of that war such as never were dreamed of. Yet to-day we have houses vacant, and business places tenantless, and our country, instead of enjoying the high tide of prosperity, is, at the most that can be claimed for it, holding its own.

This is a condition that we are entitled to consider. For if, with that magnificent crop and with these stupendous expenditures that we ourselves are making in support of our part in this war and the still more stupendous expenditure being made in our midst by Great Britain and her Allies,—I say, if, under these circumstances, we secure no better results than we have at the present time, what are we to look forward to when these vast expenditures cease to be made, and when we possibly have to face a crop less favourable than that of last year? I notice that the Minister of Finance (Sir Thomas White) in some measure agrees with what I have said. He says in his Budget speech:

> In so far as our present prosperity is based upon abnormal prices for our produce and upon the production of war material, it is precarious and transient.... It cannot be too frequently nor too earnestly impressed upon our people that the heaviest burdens of the conflict still lie before us.

And again he speaks of "straightened financial conditions which may prevail" after the war.

The question of how our people are being affected by these conditions of vast expen-

diture is one that may very well engage the serious attention of this House, and inquiry may well be made as to why financial conditions amongst the people at large are not better than they are. The Government of the day has had control of the affairs of this country for some four years. During the first year of their administration they could not be charged with whatever might occur, perhaps not in the second year, perhaps not seriously in the third year. But I do submit that in the fourth year it is time to take stock and to consider whether the promises and expectations that were indulged in on their accession to power have been realized or not, and, if not, why not?

It will be remembered that the Government of the day came into power on a very definite policy of high taxation and restricted trade. There is no argument upon that point. Te former Government went out of power on a declaration for lower taxes and wider trade, the present Government came in on the opposite policy of higher taxes and restricted trade. The Government have worked on that policy now for four years. This country now sees the greatest opportunity that it ever saw or that it can ever hope to see for an abounding prosperity, which certainly it is not achieving in any reasonable measure. For that condition the Government must in a large measure be held responsible. Its policy must be judged by the results.

When I have heard the Finance Minister on different occasions place before the House his Budget proposals, involving largely increased taxation, I have been struck by the lightness with which he seemed to regard the imposition of increased taxation. It is true that it was his policy and the policy of his colleagues, but it seemed to me that when he was proposing to add enormously to the burdens of the Canadian people, he should have been impressed with the fact that a burden may be made so heavy that it bows down and renders ineffective the efforts of those who are compelled to bear it.

I must agree with certain remarks made by the Finance Minister as to the natural and proper source of permanent prosperity in this country. He says:

> The future of Canada rests with the development of its great resources, of which the greatest and most fundamental is agriculture.

If the future of Canada rests on the development of its agricultural resources, does not the present of Canada also rest in large measure upon the development of those same resources? Perhaps it would be interesting to know just how those resources have been developed under the administration of the Government in power. It will be admitted, of course, that it is to the prairie west that we must look for our greatest agricultural development. It was to the prairie provinces, in the process of their rapid development, that Canada was indebted for that period of increasing prosperity that continued until the year 1911. It was because the prairies were being brought under cultivation and were being made to produce wealth—wealth which was turned into every line of trade, transportation and industry throughout the whole Dominion. It was because of that yearly increase of wealth that Canada, as Canada, was prosperous. In the year 1910 the wheat area of the prairie west was approximately 8,000,000 acres; in 1911 it was approximately 10,000,000 acres, an increase of 2,000,000 acres in one year. The wheat area in 1912 was 10,000,000 acres; in 1913, 10,000,000; in 1914, 9,250,000 acres; in 1915, 11,750,000 acres. It will be observed that from 1911 to 1914 the productive area of the prairie west not only did not increase, but was in the year 1914, 750,000 acres less than it was in 1911. It is true that in 1915 the area was largely increased, the reason being that war prices prevailed in 1914. These prices gave to the farmer the expectation of large profits on his production, and he responded at once by increasing his production to the extent of 750,000 acres over the largest previously cultivated area, and practically 2,500,000 acres over the cultivation of the previous year. If it is a fact, as it is a fact, that the producer of the prairie west vastly increased his production because of the sharp rise of prices in 1914, is it not also absolutely a fact that the reason he not only did not increase his area, but decreased it during the three preceding years, was because the prices did not give him a fair return for his efforts? Again let me remind the House that the present Government came into power on a policy of restricting the farmers' market. They did restrict it. The result was that they restricted production, and the result of restricted production in the prairie west was hard times throughout the rest of Canada. There is no escaping from the facts, because the evidence is that just as soon as an opportunity for higher prices was shown, at that moment the western farmer responded, and forthwith he cropped a vastly increased area. It

is true that Providence was kind as well, and gave him an abnormal crop, with the result that we have to-day more grain to market than we ever had before. It was Providence that gave him the good crop; it was the war that gave him a good market in 1914; but it was the Government of Canada that kept down his prices during the years 1912 and 1913 and is keeping them down to-day.

The failure to increase the area of land under cultivation was not because there was not an increase of settlement. The facts which I have given to the House are the more striking when it is remembered that there was in each of those years a very large number of homestead entries and that the immigration to Canada was increasing from year to year. It is true that the homestead entries were decreasing, but the immigration to Canada was increasing. The result shows that the immigration was not going on the land, and that the man who did go on the land was not using the same exertions to bring it under cultivation as had been done in former years. The reason was that the returns for his labours were not satisfactory, and for that lack of returns the Government and its policy must bear the full share of blame. The rotation of increase is shown in the following table:

Year.	Free and purchased homesteads.
1910	41,000
1911	44,000
1912	39,000
1913	33,000
1914	31,000
1915	24,000

It is expected that in 1916 the number will be about 18,000. This shows that the demand for land was decreasing, as the profits from working it were not being realized. At the same time the immigration increased as follows:

Year.	Immigration.
1910	208,000
1911	311,000
1912	354,000
1913	402,000
1914	384,000

I have not the figures for later years. Thousands and tens of thousands of people took up land, and yet the area of production and the actual production in bushels did not increase. Our hon. friends must take the responsibility for that position, as being the result of the application of their policy of restricted trade to that industry which the Minister of Finance says contains the future of the country.

But there was something more in this policy of the Government besides restricted trade; there was the policy of high taxation; because it will be remembered that the reciprocity agreement upon which the late Government appealed to the people provided for a large and substantial decrease in our taxation as well as a widening of our markets. It was rather because it reduced the taxation than because it widened the opportunities for trade that it was opposed. Therefore there is no doubt that our friends came to Parliament on an avowed policy of high taxation, and we are bound to say that they have lived up to the most ardent expectations.

Looking over the revenues of the country during recent years, I find that the total receipts for 1911-12 were $118,000,000. That was the last full year that the late Government held office. In 1912 they had increased to $136,000,000. In 1913 they had increased to $168,000,000. In 1914 they had decreased slightly to $163,000,000. You will observe that, although the production of the great basic industry of the country was not increasing, the amount of taxation was increasing. It is true that, up to the date I have given, it was increasing on the same rate of taxation; the rate had not been seriously increased up to that time. But the Government was standing to its colours in good shape when, seeing the production of the country standing still, it yet levied all that the tariff would give it. Although the revenue in 1913 was $40,000,000 more than in 1911, still they levied the taxes and they spent the money. It will be remembered that the war broke out in August, 1914, and the Minister of Finance, in presenting his Budget proposals, provided for meeting the decrease in receipts not by economy in expenditure, but by increase in taxation, and so, in the session of 1914, he imposed taxes, revenue taxes in a large measure, which he estimated would yield $7,000,000 during the remaining half of that year. That is to say, the taxation was increased in the year 1914 to the extent of $14,000,000 a year. As a result of that increase of taxation, receipts in 1915 were $133,000,000. I do not know that it was part of the declared policy of the Government in the contest in 1911 that there should be a policy of large expenditure as well as of high taxation and restricted trade. However, in operation that is how it has worked out; for, although the revenue dropped

4 p.m

from $163,000,000, in 1914, to $133,000,000, in 1915, or, deducting the $7,000,000 extra taxation, to $126,000,000, in 1914, the expenditure was kept up at the good old figure.

Then we came to the session of 1915, and again our friends stood to their guns. No such thing as reducing the expenditure; that would be an economic mistake. I think we have the honourable the Minister of Finance on record on that point, although I do not need to trouble the House by quoting his words. At any rate, he decided that instead of reducing the expenditure he would give another boost to the taxation, and so he imposed special and direct taxes, which he told the House he expected would yield $10,000,000 during the year about to close, and customs taxes, which he expected would yield about $25,000,000. And, so far as we can judge from his statement in presenting the Budget, his expectations have been fully realized. Thus in this year of grace we are paying an increased rate of taxation over that prevailing in 1913 of approximately $50,000,000. We are carrying a burden over and above what we were carrying in 1911, in increased taxation, of $50,000,000. At this session my hon. friend comes down with a proposal to add to that increased burden of taxation a further amount of $25,000,000.

When this House rises at the end of this session the Government record in imposing taxation will stand something like this. In the years 1912 and 1913 they changed the tariff only a little; it was increased—I cannot give the details—but we will assume that in these two years they managed, on behalf of their friends, to add a million dollars in extra taxes. Next year, in 1914, they imposed $14,000,000 of taxation; in 1915 they imposed $35,000,000; and this year they propose to impose $25,000,000, which, if I make my calculation correctly, means a burden of $75,000,000 of additional taxation over and above that which was levied on the country when the Liberal Government went out in 1911. As my hon. friend from Rouville (Mr. Lemieux) says, when the Liberal Government went out, and the country was almost at the climax of its prosperity, the revenue was something less than $120,000,000. Our friends have added to that $75,000,000, making the total burden to be carried by the people of Canada during the coming year $195,000,000. They certainly have lived up to their policy of high taxation. If the amount of extra taxation that they have imposed is taken from the total receipts, it will be shown that the tax-paying power of the people of Canada stands just where it did in 1911, at $120,000,000. Their extra taxation is an extra burden to that extent. In a country where conditions are far less prosperous amongst the individual citizens than in 1911, we shall carry an additional burden of $75,000,000, or a total increase of about 70 per cent.

It may interest the House to know just how this course of taxation has run, and perhaps it can draw the conclusion that there is some connection between high taxation and hard times. In 1878-9 the total revenue of Canada was $22,500,000, and in 1886-7 it was $35,500,000. In eight years it had increased by $13,000,000, or 50 per cent. These were the years during which the vast expenditures in connection with the building of the Canadian Pacific railway took place. They were also the years during which the policy of high taxation, the so-called, but miscalled, National Policy was introduced. As a result of the two, a higher rate of taxation and vast expenditure on the Canadian Pacific railway, our revenue was increased by $13,000,000, or 50 per cent in eight years. In 1895-6 the total revenue was $36,500,000. In nine years, under a policy of high taxation, the revenues of the country had increased just $1,000,000. It will be recalled that this period of nine years was a period of anything but prosperity in the Dominion. It will be recalled that this period of high taxation had the effect of making Canada the greatest emigrating country in the world except Ireland—that it had the effect of sending our population to the United States, so that in the United States census of 1900 over 1,000,000 native-born Canadians were enrolled as citizens or residents of that country. That is how the policy of high taxation worked out during Canada's previous experience of it.

But the fathers of the National Policy were men of great limitations. They did not realize their possibilities as these possibilities have been realized since. In 1896 the revenue was $36,500,000 and in 1910-11 it was $118,000,000.

Mr. MEIGHEN: Was that taxation?

Mr. OLIVER: That was revenue.

Mr. MEIGHEN: The hon. gentleman almost always calls it taxation when he refers to the revenue since 1911. Why does he not call it the same before that time?

Mr. OLIVER: I am willing to call it the same. Taxation is revenue and revenue is taxation, as I understand it. I will call it taxation if it suits my hon. friend any better. From 1896 to 1911 the increase was from $36,500,000 to $118,000,000 of taxation, if my hon. friend likes. But he will have to agree with me, since he insists on the word "taxation," that the increase to $118,000,000 occurred under a substantially lesser rate of taxation than had prevailed before 1896. In those years the increase was $81,000,000. Call it taxation if you like, or call it revenue, but in those fifteen years, under a lower rate of taxation, the revenues of Canada increased 300 per cent. Under this policy of lowering taxation and widening trade, the tide of immigration to the United States was stopped, and was replaced by the tide of emigration from the United States to Canada. The Government of that day desired still further to decrease the taxation, and still further to widen the trade of Canada. Hon. gentlemen opposite attacked those principles. They triumphed; they have now been in power four years, and they have applied their principles. Am I wrong when I say that the flow of emigration from Canada to the United States that prevailed during the years of the so-called National Policy is again in force to-day, and that Canada is losing thousands of her people to the United States for the very same reason as during the years previous to 1896, namely, a policy of high taxation and restricted trade?

I am sure my hon. friends opposite will have an answer to everything I have said up to this point. First of all, they will declare that the condition of hard times prevailing in Canada was precipitated by the outbreak of war. Seeing that no one has actually made that statement on the floor of this House at this moment, you will not call me to order, Mr. Speaker, if I say that it is not correct. In the years 1908, 1909, 1911, and 1912, Canada was enjoying a boom, or suffering from a boom, which ever you please to name it, and the boom burst in the fall of 1912. If there is any doubt that hard times did exist previous to the war I can say that to my knowledge, men in hundreds, if not in thousands, were parading the streets of many of our cities in the fall of 1913 demanding work or bread. In Edmonton I saw the motto carried in procession, "Steal or starve, which?" And they demanded charity, or, as they said, they demanded their rights, and in many cases those rights were conceded. The city of Edmonton spent $25,000 in the winter of 1913-14 in feeding the men who they were satisfied had no other means of support; and what occurred in Edmonton occurred in many other cities, though perhaps not to the same degree. So the contention that the present hard times in Canada were precipitated by the outbreak of war is certainly not correct. It is true that when war broke out there was a momentary disarrangement of financial conditions, and that the hard times then existing were accentuated. But that the war, instead of being a detriment to financial conditions in this country, was really the one thing that relieved those conditions is proved by the statement of the Minister of Finance in his Budget speech; that the present prosperity of our people—and I am not saying that there is not some measure of prosperity—is due to conditions resulting from the war. The war was the one thing which alleviated the unemployment which prevailed throughout Canada previous to its outbreak. How could it be otherwise than that some measure of prosperity should result from the expenditure of hundreds of millions of dollars because of the war, and only because of the war? The Minister of Finance warned the country of the possible collapse—he did not use that word, but I use it—of these conditions. Therefore, it is not the war that we should blame for unfortunate financial conditions; it is not the war that we should blame for the empty houses, the shut-down businesses, or the movement of people to the United States. We have no more right to blame the war for these conditions than we have to blame it for the similar conditions that prevailed during the enforcement of the National Policy previous to 1896.

There is another feature of the Budget proposals in regards to which I have no doubt the war again will be used as a justification. I think the Minister of Finance did in his speech actually cite the war as a justification for the vast amount of taxation that has been imposed on the Canadian people since the war began. What are the facts? I think his statement was that, up to the end of January, we shall have spent for war purposes $158,000,000. Assuming that we spend $8,000,000 a month on the war, we shall spend before the end of the year $16,000,000 more; that is, interest will have to be found during the coming year on $174,000,000 that will have been spent in connection with the war. The interest and sinking

fund payment on $174,000,000 for one year is approximately $10,000,000. But my hon. friend has laid estimates on the table of the House calling for interest and sinking fund payments amounting approximately to $40,000,000 for the coming year. When my hon. friend became Finance Minister the interest charge against the people of Canada was a little over $14,000,000 a year; to-day it is $40,000,000, and there is no justification for charging more than $10,000,000 of that $40,000,000 to war account. The difference between the interest charge my hon. friend found when he took office and the interest charge of to-day, after allowing for war account, is $15,000,000. This Government since they took office doubled the interest charge against the Dominion of Canada, and that is after allowance has been made for war account. The Finance Minister tells us that the Government is going to ask for an appropriation of $250,000,000 for the coming year. Interest upon that amount will, of course, have to be provided. If you add that $250,000,000 to the $174,000,000 that will be expended by the end of March of this year you will have an amount upon which the interest charges will be about $25,000,000; but my hon. friend, since he has taken office, proposes to add to the taxation of the people of Canada, not $25,000,000, but $75,000,000, that is, $25,000,000 on account of continuing the war until the end of next year, and $50,000,000 on account of the expenditures of the Government on civil account during four years of administration.

Mr. MEIGHEN: Additional interest?

Mr. OLIVER: Additional taxation. When the Budget proposals of this session go through the Minister of Finance will, on his own statement, have added $75,000,000 to the taxation of the Canadian people, that is, he will have increased the means of taxation upon them to such an extent that he will take from them $75,000,000 more per year than were being taken from them under the rates of taxation prevailing when he took office. To meet the interest charges on the war for the next year my hon. friend needs $25,000,000. There is, therefore, $50,000,000 of extra taxation that this Government is taking from the people because of its methods of carrying on the civil government of the country.

Mr. MEIGHEN: Did the hon. gentleman not hear the Minister of Finance say that the money is going on the principal war account?

Mr. OLIVER: It does not make any difference where the money goes. The Minister of Finance and the Solicitor General can juggle the figures any way they like. The point is that the figures are as I have stated them. The Minister of Finance has said he is going to apply $35,000,000 of his surplus this year on civil account to the payment of capital expenditure on war account, and he is going to borrow $35,000,000 on civil account. What is the difference? There is none. The fact is that, because of the administrative extravagance of this Government, he has increased the burden of taxation on the people of Canada $50,000,000 over and above the requirements of interest on war account. He said:—

> To win the war with the decisiveness which will ensure lasting peace, the Empire will require to put forth its full collective power in men and in money.
>
> From this viewpoint it is our true policy to augment our financial strength by multiplying our productive exertions, and by exercising a rigid economy which reduces to the minimum all expenditures upon luxuries and non-essentials.

Can any one find a form of words that will convey the idea of economy more lucidly, more correctly, or more forcibly than those which I have read? But the Minister of Finance, who exhorts the people of Canada to economize and charges them to avoid expenditures on luxuries and non-essentials, is the very man who has laid upon the backs of the people a burden of $50,000,000 of taxation per year, and to pay for what?

Sir THOMAS WHITE: To pay for the mistakes of our predecessors.

Mr. OLIVER: Oh, no. To pay for the addition of 10,000 civil servants to the pay-list; to pay for expenditures where expenditures ought never to have been made. I have heard of my hon. friend eloquently declaiming in this House against the expenditures made by the late Government on the Transcontinental railway.

Sir THOMAS WHITE: $60,000,000.

Mr. OLIVER: But it will be noted that the increase of taxation by the late Government in order to meet the expenditures made on that railway while they were in office, did not produce an increased burden of taxation, as have the expenditures since my hon. friend came into office. More than half of the legitimate expenditures on the Transcontinental railway had been made before he took office; my hon. friend had to meet expenditures only for the comple-

tion of the work; but when he completed the Transcontinental railway, did he stop there and curtail other expenditures because of the feeling he had that the money of the people of Canada was being spent unduly on that great enterprise? Not so. If there was extravagance in building the Transcontinental, surely there is ten times as much extravagance in the conduct of affairs under the control of this Government to-day, when the Minister of Finance calls upon the whole citizenry of Canada to practise economy—every one is to practise economy except the Government.

I have pointed out that, when my hon. friend's proposals of this year are carried through, he will have imposed upon the people of this country an additional taxation of $75,000,000. When the Liberal Government took office, in 1896, the total revenue was $36,500,000. Therefore, in four years my hon. friend has imposed in additional taxation twice as much as the total revenue of the country was in 1896. If the money was necessary for war purposes, no one would raise any question; but, when out of that $75,000,000, only $25,000,000 is for war purposes and $50,000,000 is for extravagance on the part of the Government, surely some question should be raised. At this time, when very heavy burdens are being laid upon the people, surely the burdens should be lightened where they can be lightened instead of expenditure going on just as it has gone on in the same merry way under the belief that, as long as this Parliament has the authority to impose taxes on the Canadian people, it makes no difference to the country at large; the people simply can bear it and it will do no harm. Probably the idea is, as my hon. friend from St. Antoine (Sir Herbert Ames) said, in inaugurating the Patriotic fund, it will do good to their souls to pay this higher rate of taxation.

My argument is this, that the Government of to-day, being compelled to meet large requirements because of the war, should, at such a time and under such circumstances, have taken measures to curtail expenditures on ordinary civil account My contention is that they have not done so and are not doing so, for they come down with estimates amounting to $190,000,000 on civil account and ask this House to vote them. These figures are so immense as to be staggering. The ordinary man does not realize what they mean. He can only tell, when he comes to pay, whether his ability to pay is equal to the demands made upon him or not. As my right hon. friend the leader of the Opposition said on one occasion, the ordinary man can tell best by the jingling of the money in his pocket. If we found that our agricultural area was expanding, that our agricultural production was increasing, that the Government of the day was using the money they have taken from the people for the purpose of increasing that production and expanding that area, then we might hope to carry the burden that is being cast upon us.

Let us carefully consider what that burden is. There has been a Cost of Living Commission at work in Canada for some years and its report is before us. While that report does not come down to the present day, still it is very interesting as far as it goes. The Labour Gazette, that useful publication for which we are indebted to our genial friend the Minister of Labour (Mr. Crothers), gives information up to date. We find, on consulting the Cost of Living Commission's report and the Labour Gazette, that the cost of living—and that is what we have to jingle the money in our pockets to meet; if we have not the money we must cut down our living accordingly;—we find that the cost of living has greatly increased. A certain figure has been arrived at by consent, representing the average of the wholesale prices of some 271 commodities in general use. This is called the "index number." We find that in 1911 this index number stood at 131, and that for January, 1916, it stood at 172. This is a difference of 41, and, as I figure it, it means practically an increase of one-third in the cost of these 271 articles. Does the House realize what the increase of one-third in the cost of living means to the people? The burden of taxation imposed directly by my hon. friend the Minister of Finance fades into insignificance in comparison with it. Suppose there are 7,500,000 people in Canada. If we assume that these people consume on the average $100 worth a year of the 271 articles—and surely that is below the mark—we find a total consumption of $750,000,000. If the cost is increased one-third, it means an additional burden of about $250,000,000, or one-half the amount of the present national debt upon the people of Canada in addition to what they had to bear in 1911. Now, I am not making these figures; the Government and its commission are responsible for them. Unless there has been a most grievous error in their calculations, the result has been, as I have stated, that under the administration of this Government there has been an increase of one-third in the cost of living of the people of Canada in a matter of four years, and that

increase has taken place when business conditions were down grade and not on the up grade, as they were in the years previous to 1911.

Is this the time—when people are carrying that enormous burden of the increased cost of living—to impose $50,000,000 of additional taxes upon them because of the extravagant administration by this Government, in addition to the $25,000,000 of interest on war account that they must pay? And not only so, but consider what the Minister of Finance said—and I hope he will allow me to refer thus often to his Budget speech because it contains a vast amount of good material:

> It cannot be too frequently or too earnestly impressed upon our people that the heaviest burdens of the conflict still lie before us, and that industry and thrift are, for those who remain at home, supreme patriotic duties upon faithful fulfilment of which our success and consequently our national safety may ultimately depend.

We are not at the end of the conflict. No man can tell how long it may last. The Minister of Finance advises everybody else to hoard their resources, but he heaps on the taxation and spends the money royally. Is there any connection between this enormous increase of taxation and this increase in the cost of living? Whoever follows these figures will notice that it is since the burden of taxation has been so largely increased that the cost of living has gone up most rapidly The rotation is this: 1911, 131; 1912, 143; 1913, 135; 1914, 136; 1915, 139; 1916, 172. It may be only a coincidence that the cost of living and the increase of taxation have, so to speak, synchronized; but I cannot rid my mind of the idea that the increase in the cost of living is in large measure dependent upon the increased burden of taxation and upon the tariff changes that have been made in accordance with the Government's policy of increased taxation and restricted trade.

In the present Budget there have not been many tariff increases. There have been two—one in regard to apples and the other in regard to petroleum. I have not been able to find out just how far-reaching the new petroleum duties are, but I notice that they are expected to produce a revenue of half a million dollars, and I am interested to know who is going to pay that half million. I do not know whether the prairie West will have to pay it, but there is no question about who is to pay the duty on apples; that seems to be settled beyond a doubt. The minister proposes to raise the duty on apples to 90 cents a barrel. He says:

> We regard this duty as indispensably necessary for the preservation of the apple-growing industry of Canada, and particularly that of British Columbia, which has been most seriously affected since the outbreak of the war.

I have to disagree with my hon. friend in that last remark. I think it is possible to ride this war a little too hard; in this case my hon. friend is putting upon the war one more burden that it is not entitled to carry. I think it would be found that the apple industry of British Columbia was affected in years previous to the war. However, in order to bring this apple question down to a fine point, I wish to quote from the Columbian, which is published, I believe, in New Westminster. It says:

> In such circumstances, if the apple-growing industry of British Columbia, in which, it has been estimated, $20,000,000 has been invested, there being 30,000 acres of orchard lands, 40 per cent of which are now bearing, is to be saved from ruinous competition, the additional protection was certainly needed, and those who have at heart the agricultural interests of the province, will be appreciative of the Ottawa decision and congratulate the Fruit Growers' Association on the success of their representations to the Government.

It is not necessary to urge that the people who will pay the extra price to the British Columbia fruit growers are the people of the prairie West— the people, Mr. Speaker, who constitute that great agricultural industry the expansion and development of which is the future hope of our country. According to the Columbian, the minister is making the farmers of the prairie West responsible for the profits on an investment of $20,000,000 in the apple producing industry of British Columbia—and 30,000 acres in British Columbia are occupied by orchard lands. Just imagine laying the three prairie provinces under direct tribute for the benefit of 30,000 acres in British Columbia! We are to provide the dividends on an investment of $20,000,000 out of forty per cent of the production that that 30,000 acres is capable of. If we are not to do that, then the minister on the one hand and the Columbian on the other, are misrepresenting the facts. In any case there is no doubt as to who pays this part of the extra taxation.

Let me show hon. gentlemen how absolutely uncalled for this duty on apples is, looked at from every standpoint of national interest, which the minister suggested

should have the first consideration at the hands of this House in the present great imperial crisis. The total import of apples into Canada in 1915 from the United States was 269,000 barrels, of a value of $648,000. The duty was $107,000, and the new duty on that valuation would be $242,000, or an increase of $135,000. If the fruit growers of Canada cannot stand the competition of that quantity of apples, either they are not growing fruit in the right way or in the right place. Having regard to the figures of the Trade and Navigation returns, there was no justification for this taxation except the very special interest of the people who are most closely identified with the apple industry, personally and politically—and, I would say, very much more politically than personally. It is the agriculturists of the prairies who will pay the $135,000 a year extra duty, who will pay in increased price for their apples an amount that will yield a profit on an investment of $20,000,000. Given the opportunity, there is no doubt that that opportunity will be taken full advantage of. There is no doubt that the cost of living in the prairie provinces will be increased to that extent; and there is no doubt that that increase in the cost of living will be to the very great detriment of the people who live there. If there is one thing in the way of luxury that they are entitled to at a fair price, surely it is that fruit that is most abundant and best adapted for transport—apples. If the duty on apples to protect 30,000 acres of orchard land is to have such a far-reaching effect in raising the cost of living in the prairie provinces, certainly my hon. friend's increase of customs duties last year, which he hoped would yield $25,000,000, will have a correspondingly wide effect in increasing the cost of living not only in the prairie provinces but throughout the whole Dominion of Canada. The $25,000,000 that he gets into the treasury is a heavy burden. It would pay the interest on the war debt as it will be next year.

But is that all that the people of Canada have to pay? If it is a fact, and it surely is, that on the average we produce twice as much as we import, then, surely, instead of the burden being $25,000,000 by reason of that general tariff increase, it will be $75,000,000—$25,000,000 to the treasury and $50,000,000 to the friends of my hon. friend and his supporters. But still he says:

> The future of Canada rests with the development of its great resources, of which the greatest and most fundamental is agriculture; and this development is in turn bound up with the question of the increase in population of the productive sort and the facilities afforded it for the application of its intelligence and industry.

And so he increases his tariff and he adjusts his taxes so as to lay the maximum burden upon the great agricultural industry.

We have to borrow money, of course, to pay for this extra expenditure, and we have to borrow money to carry on the war. But we have another source from which we derive money, that is, the issue of Dominion notes. I find that my hon. friend, in his address, makes this reference to the issue of Dominion notes, with every word of which I agree:

> The Government is resolutely determined to maintain the standard of our currency and not to resort to the issue of unsecured paper money, which is merely a short loan without interest, leading to depreciation and the greatest economical evils which can afflict a nation.

The opinion of no man in Canada is entitled to greater respect than that of the Minister of Finance on matters of finance, and when he made this announcement it was greeted with applause on both sides of the House. But on looking into the public accounts I find that, whereas in 1911 the total amount of Dominion notes issued was $90,000,000, in 1915 the amount was $157,000,000, an increase of $67,000,000, or about seventy-five per cent in four years.

Mr. MEIGHEN: Has my hon. friend the figures of the gold reserve against this circulation?

Mr. OLIVER: I have the figures of the gold. I am merely stating the fact that he has increased the circulation of Dominion notes to the extent of 75 per cent in four years over what it was when he took office, and that is, according to his own statement, a forced loan, an addition to the money that he would otherwise have had available for expenditure.

5 p.m.

Mr. MEIGHEN: How can it be a forced loan when there is gold against it? What is the difference if ten times that amount is issued in four years if there is gold against it?

Mr. OLIVER: I do not know what the difference is, but my hon. friend objects most strongly to an undue issue of paper money.

Mr. MEIGHEN: It cannot be undue if there is gold behind it.

Mr. OLIVER: It depends on how much gold there is behind it. It is merely a forced loan without interest; that is what the minister says. He has increased that forced loan without interest to the extent of 65 per cent while he has been in office. He has had that amount of money available for expenditure in addition to the interest-bearing money that he has borrowed both in Canada and abroad.

Sir THOMAS WHITE: I do not like to interrupt my hon. friend, but I am sure he does not desire to make such an extremely inaccurate statement. Dominion notes are issued as a matter of course to the banks against gold deposited to the credit of the Receiver General. The Government does not spend tne money produced by the notes issued against gold.

Mr. OLIVER: Who gets it?

Sir THOMAS WHITE: The banks. It is for the convenience of the banks and of the public. The banks are permitted to deposit gold with the Receiver General and get Dominion notes in exchange, but the Dominion Government does not spend the Dominion note issue. It is only for the convenience of the banks and the public and to meet the circulation needs of the community.

Mr. OLIVER: My hon. friend must hold himself responsible for my error, because he speaks of an issue of unsecured paper money as merely a forced loan.

Sir THOMAS WHITE: Unsecured paper money. What I had in mind was that it would be a very great evil for the body politic if the Government should issue unsecured paper money, fiat currency, for its purposes, as has been done in Germany and in the case of many other nations when at war.

Mr. OLIVER: As a matter of fact, is there gold behind each dollar of this paper currency?

Sir THOMAS WHITE: Over 70 per cent.

Mr. OLIVER: Over 70 per cent, and therefore 25 per cent or 30 per cent is a forced loan.

Sir THOMAS WHITE: No.

Mr. OLIVER: Then I have to disagree with my hon. friend. Unless there is dollar for dollar behind it the country is getting the benefit of that amount. There is no argument on that point at all. As long as gold is the standard and there is no gold behind that paper, that paper is not absolutely secured, and it is to all intents and purposes a forced loan. The minister in his remarks contemplated the possibility of the Government issuing paper money to a greater degree than it had done. At what point in that issue would he consider he had reached the point of a forced loan if he does not admit that when he issues a dollar of paper money more than he has gold, that is, to all intents and purposes, a forced loan?

Sir THOMAS WHITE: The matter is governed by legislation. Two or three years ago it was permitted to the Government to issue paper money to an amount represented by $22,500,000. Afterwards, by virtue of legislation, that amount was extended to $37,500,000. Then, under the Finance Act, paper money may be issued against securities. But what I referred to was the issue of unsecured paper money, such as is being issued in Germany to-day, and as was done by the South in the great struggle of the Civil War, and by the North also, with consequent depreciation and the resultant evils that afflicted the nation.

Mr. OLIVER: If the minister has a dollar of gold in the treasury and issues $2 of paper money, does he consider that second dollar fiat money, or what does he consider it?

Sir THOMAS WHITE: It depends entirely upon the legislation of the country. If the country has legislation under which it is permitted to issue a certain amount of paper money, about equal to the currency needs of the community, not likely to be handed in for redemption, I would not consider that fiat money. What I had in mind was that the laws of the land should not be exceeded by the issue of fiat money, as was done by the United States in the Civil War, and as is being done by Germany to-day, and as has, in fact, been done by most nations engaged in war.

Mr. OLIVER: It all comes to the same thing, that if the gold is not there there is nothing behind the paper but the credit and good faith of the country. The point I wanted to make is that the Government had the benefit of the increased issue of paper money in adjusting its finances during these past years, in addition to the money which it bor-

rowed, and on which it pays interest. Otherwise, there is no meaning to the paragraph that I have read out of my hon. friend's speech.

Now, I want to draw attention to a further feature of this question of the well-being of the country through its agricultural interests and the policy which has been adopted by this Government in regard to those interests. I shall not refer at length to the policy of the Government in refusing the export of our wheat to the United States. We have threshed that out, and the Government has taken its position definitely on that point. I believe that our people, especially the producers of the West, stand to lose a vast amount of money because of the policy of the Government. Our production is being restricted and our expansion is being prevented by that policy. I shall not argue that at length now. But I want to point out that when this war broke out it was the business of the Government to take all reasonable means to secure for the farmers of Canada, both East and West, the maximum advantage that could be derived from the existence of war conditions. Instead of their acting upon that idea, they have at every turn hindered and hampered the farmer, particularly the farmer of the West. Did they not at the beginning of the war place an embargo upon the export of wheat and flour to the United States? Did they not place an embargo upon the export of horses to the United States? Did they not place an embargo upon the export of hay to the United States? Did they not place an embargo upon the export of wool to the United States? Have they not placed a partial embargo upon the export of oatmeal to different parts of the world? Is there any sense or reason, from any point of view, why the farmers of Canada should not have benefited to the fullest extent by the war conditions that have prevailed?

Mr. MEIGHEN: Does the hon. gentleman say that we were wrong in placing these embargoes?

Mr. OLIVER: I am trying to say so; I am sorry that I cannot say it emphatically enough to impress my hon. friend, but I will try. I consider that a Government which has refused to put an embargo on the export of nickel to the United States cannot go before the farmers of Canada and plead patriotism in refusing to allow them to export their products to the United States. Horses, wheat, flour, wool, hay can be bought elsewhere than in Canada; but nickel cannot be bought elsewhere than in Canada. Why should the Government hamper the operations of the farmer? Did the well-being of Great Britain or her Allies depend on the farmer of Canada not being allowed to sell his horses to Great Britain or to the Allies, or on his being prevented from selling them to the United States? The United States, I am credibly informed, has sold half a million horses to Great Britain and the Allies, and it has sold them at a price averaging over $200 per head. The horses sold by Canada, I see by a recent return, have gone at an average of $162 per head. Is that giving to the farmer of Canada even a reasonably fair chance of making a profit out of his operations? How can the Minister of Finance give his blessing to the agricultural industry in the terms in which he does in his Budget speech and permit his colleagues to hold up the farmer at every turn in all his operations where there might be an opportunity for him to secure an advantage out of the war conditions?

My hon. friends seized 13,500,000 bushels of wheat, and they have not explained yet why they seized it. They have not told us what they did with it; but we have it in evidence that the 5,000,000 bushels which they kept—and they kept only 5,000,000 bushels and gave the rest back—was farmers' wheat on which the farmers stand to lose 25 cents a bushel. The farmer is a patriotic man, willing to pay his share of the cost of this war, either in Canada or in Europe, and God knows he is doing it in money and in men. But why should he have to pay 25 cents a bushel on 4,000,000 or 5,000,000 bushels of wheat that nobody else in Canada has to pay? Why have the gentlemen composing this Government the right to take a million dollars out of the pockets of the farmers of the West and say to them: "Oh, patriotism demands that you make that sacrifice." Let them go to their friends in other parts of Canada and commandeer their products, take the money out of their pockets, and see where their patriotism would be.

This Government is able to get transportation facilities on the Atlantic ocean for the benefit of munition makers, those gentlemen who are so very much in need of assistance at the hands of the Government, but it is not able to do anything to overcome the handicap that the farmers are labouring under at the present time. Wheat is higher in London to-day than it was a year ago, but the farmer of the West is getting a less price for his wheat, in proportion, than he

was getting a year ago. What becomes of the difference? It is taken up by the cost of ocean transport. Surely, if ever there was a time or an occasion for the Government of Canada to step in and aid in the expansion of the agricultural industry of the West and increase its production in order that the burden of this may be carried in the future, that was the time and that was the occasion. To-day the consumer in Great Britain is paying an abnormal price for his wheat and the producer of the prairie West is getting less than he should get under the circumstances. Give the man of the prairie West the same conditions as you give the munition manufacturer. If you can do it for the one you can do it for the other, and if you cannot do it for the one why should you do it for the other? We have had a magnificent crop in the West. It is to that crop that the people of Canada as a whole look for lifting the country out of its present and recent condition of financial depression. Has the Government appreciated the situation and made adequate and suitable provision for getting that crop on the market in such a manner and form that it will produce the best results? The answer is there—the commandeering of the wheat, or the embargo on the wheat, or the ocean freight rates on the wheat. The Government has no interest in the wheat except to tax the man who grows it, and to benefit those of their friends who supply the farmer with the articles he requires.

Now, this is a serious matter. The farmer has produced an enormous crop. He has not been able to dispose of that crop to advantage; it is in a large measure on his hands up to this moment; and the acting Minister of Railways tells us to-day that a large proportion of that crop is in danger of being destroyed by the weather conditions. Under these circumstances, can we expect the farmer of the West to increase his acreage next year? Is it reasonable to expect him to do it? Is it possible for him to do it? The hope that the Finance Minister expressed of a further increase in agricultural production next year might reach fruition if this Government would give the farmer of the West a square deal. That is all he asks for and that is all he needs. But this Government since they have been in power have loaded the western farmer with taxes and imposts; they have advantaged their own friends in all parts of the country at the farmer's expense; they have hampered his opportunities in connection with the war, as though he were somebody who was doing the country an injury in producing what was required. I say that the farmer of the West has no right to contribute more than his fair share to the conduct of this war. He has a right, and he is willing, to contribute his fair share, and if only that is taken from him you may confidently expect that his industry will expand, and that in the end the country will benefit. But the Government of to-day, in regard to the prairies of the West, is following exactly the policy and principles of their predecessors in office before 1896. History is absolutely repeating itself. The policy of high taxation and restricted trade that was applied in those years prevented expansion, and the same policy is having exactly the same result to-day.

Mr. EDWARDS: Has not the aggregate trade of the country been greater since 1911?

Mr. OLIVER: I should hope it has, considering the enormous amount of borrowed money spent in this country on the manufacture of munitions. If it is not greater it certainly ought to be, especially as in the West there has been a two-years' crop in one.

Mr. EDWARDS: Apart from the war, was not the aggregate trade in 1912 and 1913 greater than in the years previous to 1911?

Mr. OLIVER: I could not say. What I am saying is that the production of the West has been decreasing since this Government took office, with the exception of the production of last year, and I say you cannot build up this country on any such programme. The prosperity of this country absolutely depends upon the expansion of the agricultural industry, and it is only in the West that that industry can expand. Surely, then, the policy of the Government of the day should be to take measures to secure that expansion, rather than to follow a policy of high taxation and restricted trade, a policy that up to the present time has resulted, in spite of our magnificent crop and war business, in keeping our bank clearings down to a 23 per cent increase over last year, as compared with an increase of 50 per cent in the United States. The argument has been made that if times are bad in the United States we cannot have good times in Canada. But times are good in the United States; they were never better, and still we have not good times in

Canada, speaking at large. The Government of Canada must take the responsibility for the administration of the affairs of Canada, and for the results of that administration.

Hon. ARTHUR MEIGHEN (Solicitor General): Mr. Speaker, the hon. member for Edmonton (Mr. Oliver) is the last of nine speakers who have followed in succession on the opposite side of the House since any hon. gentleman on this side of the House rose to speak on the Budget. I am afraid I cannot congratulate my hon. friend on making any better success than his eight predecessors in attacking the proposals of the Minister of Finance. If, however, he has illuminated no subject, he at least has been careful to visit them all. Scarcely anything has been discussed in this House for the last five years that he has not rehearsed in the course of his long speech, except possibly that feature of the Budget proposals which alone is new, and which demands discussion most. The hon. member commenced with a recurrence to the cry with which we were all so familiar nineteen years ago, that ruin and calamity were coming upon this poor country—that want and misery were abroad in the land. I waited with some anxiety, at all events with some curiosity, wondering by what talisman he would judge, wondering what would be his proofs of the absence of prosperity in Canada to-day. With a great war upon us, a war that is absorbing the energies of about one-sixth of the manhood of this country and the financial resources of this country to the extent of perhaps one-third, the hon. gentleman marvels that the prosperity of Canada is not greater than it is to-day. I marvel at the prosperity that we do enjoy; I am grateful for it, and I think all Canada is grateful. Did the hon. member for Edmonton make reference to any of the usual guides by which we measure our prosperity? Did he refer, for instance, to the trade returns, perhaps the best guide of all? The trade of Canada to-day has reached the total of $1,200,000,000, which is about $200,000,000 in excess of the highest record of any year gone by, or $600,000 per day in excess of the best days in all our past. Did he make reference to the prevalence of unemployment in this country? As a matter of fact, there never was less unemployment in the history of Canada than there is to-day; every man can get work, and at fair wages. Wages were never better. Is there any dearth of capital? Is there lack of remuneration for capital?

By what guide does the hon. gentleman affect to tell us that prosperity is waning in this country at the present time? Oh, he has a proof, and I want to tell the House upon what a slender and emaciated foundation he builds the conclusion that we have no prosperity in Canada to-day. He read somewhere in a newspaper that there were 9,000 vacant houses in the city of Toronto. Does he know that over 30,000 men have gone to the front from the city of Toronto? Does he not know that in winter time it is the habit of people in all cities to live in fewer houses than at other times of the year? Does he know the average number of houses that in a city the size of Toronto would be unoccupied in winter time? He has given us no evidence at all, no suggestion of evidence, on those points. Does he, in fact, know that there are 9,000 vacant houses, or even half that number, in the city of Toronto? Oh, but he has something else. He tells us that there is some closing-out sale on Sparks street, in the city of Ottawa; hence we are at the end our prosperity; this country is in for a long period of want. I wonder what the people of Ottawa will say, those who get three meals a day—as I think all of them do—those who are better off to-day than they have ever been in the history of this country—I wonder what they will think of the proof adduced by the hon. member for Edmonton that want and misery and lack of prosperity are abroad in this country to-day.

The hon. member was also very seriously alarmed about our financial condition. Well, the Budget is indeed the occasion on which to take our financial soundings, and ascertain where, as a country, we are. It is well for us to compare our present financial condition with that of other years, and I purpose to follow the hon. gentleman in the course he then pursued, although I must admit that though I struggled honestly and with difficulty to gather from his remarks the points he intended to make, I was none too successful. However, I followed him earnestly until at last he started on a long mathematical aviation and got entirely lost in the clouds, I do not know whether he knows what he was steering for, but I am certain that I do not. He is alarmed because, he says, the extravagance of the Government is extracting $50,000,000 more in taxation than it ever did before. I do not know how he

arrives at his figures, because I was not able to extract that information from his address, but I assume that he means there is to be $50,000,000 more revenue next year than there was last year. If he means that, he is not far out, because we expect $50,000,000 more revenue in 1916-17 than there was in 1914-15, but not much more than there is this year, 1915-16. The Minister of Finance has stated the outstanding features of our financial condition so clearly that they must be in the minds of all. In 1914-15 we had a revenue of $133,000,000 and an expenditure on capital and ordinary account of $187,000,000, while in the year before the expenditure was $186,000,000. There is no doubt that the expenditures of those two years 1913-14 and 1914-15 were the highest in our history. This year, 1915-16, we have a revenue of $170,000,000 and an expenditure of $125,000,000 on ordinary account and $40,000,000 on capital account, or $165,000,000 altogether, making an excess of revenue over all expenditures of about $50,000,000. For the coming year we expect from the same sources a revenue of about $170,000,000, the same as this year. We expect, from the extraordinary source to which we resort by the new Budget, that is, the tax on profits of business, an additional revenue, which is estimated to amount in three years to $30,000,000, and which next year will perhaps bring, on account of the retroactive feature, betweeen $10,000,000 and $15,000,000. But, leaving that out of account, we anticipate from the sources now in force about $170,000,000, and our total expenditure is anticipated to be $160,000,000, that is, $135,000,000 of ordinary expenditure and $25,000,000 of capital expenditure. So that, aside from what we shall gather in by the new taxation, we should, on the anticipation of the minister, have a surplus next year of $10,000,000 over both capital and ordinary expenditures. I do not know that there is any dark feature here. In addition, of course, we have our war expenditure and our interest charges, included in which is a good deal of expenditure that ought correctly to be attributed to the war; I refer to the extra interest charges which arise by reason of the war alone. Next year those charges will amount to $22,000,000 consisting of extra interest charges, $20,000,000, and pensions, $2,000,000. Those are surely war charges. Out of the $165,000,000 that we spent altogether this year, there should be deducted about $9,000,000 caused by the war alone, so that, if we take that off, we shall have a surplus over capital and ordinary expenditure of about $14,000,000. That is not so bad when we consider the fact that, during the whole fifteen years when hon. gentlemen were in power and when there was no war at all, they had an average deficit year in and year out of $5,436,314 of ordinary and capital expenditure over revenue. On the contrary, up to the time when the war began we had an average surplus of revenue over capital and ordinary expenditure of $1,348,400.

I have tried thus to give succinctly a review of our finances for two years gone by. I was surprised to read some remarks made by the hon. member for Rouville (Mr. Lemieux) in regard to this part of the Budget speech. He, too, became greatly alarmed. He first of all emphasized his adherence to our war policy, emphasizing his earnest desire that no resource of this country should be spared to bring to our Mother Country, to France, and the other allies, our whole strength in this war, and he closed with the same laudible sentiments. But between the two he interspersed words that were calculated to make this country restive under our war expenditure, and he tried to show that we were going much too rapidly into debt for war. I do not think he should shake his head; if he asks me to refer to Hansard, I shall be only too ready to do so. He called upon us to follow the example of nations which are governed well. He said: "Why do you not do as England does, the country that is the best governed in the world, and curtail your expenditures in war time?" I am going to make a comparison between what this country is doing and what England is doing, in order to show the hon. member for Rouville that we are doing a great deal better than England is in the way of curtailing expenditures during the war. I have prepared a statement along that line. The expenditure in Great Britain in 1915-16, including the war vote, is £1,132,654,000. Deducting from that the war vote of £978,000,000, you have £154,654,000, the expenditure of Great Britain this year for purposes outside of war, subject to considerations that I am going to mention. There must, however, be added to this the ordinary navy and army expenditures which in other years are paid in the usual way, but which now are paid out of the war vote. This makes an addition of £80,435,000, from which should be deducted £32,000, which now is paid out of ordinary expenditure, leaving £80,403,000 to be added to the ordinary expenditure of Great Britain outside of war. That makes a total of £234,057,000, the

ordinary expenditure of Great Britain outside of war, from which there is still one deduction to be made. That deduction is in respect of national debt charges, which are greater now by reason of the war, and which in national book-keeping come out of ordinary expenditure.

The addition on account of war charges on the national debt amount to £28,777,000. Take that from £234,057,000, and you have a net expenditure for Great Britain this year outside of the war of £205,280,000. This shows a net increase for Great Britain in a year of war of £1,806,000; and they had a net increase in four years of twenty per cent, outside of war altogether. That statement is carefully made up, and on my responsibility as a member of the House I say it is correct.

Great Britain's Expenditure, 1915-16.

Total expenditure including war vote	£1,132,654,000	
Less war vote	978,000,000	
		£ 154,654,000
Add to this saving from previous year (now included in war vote)—		
Army estimate	£51,550,000	
Navy	28,885,000	
Less	£80,435,000	
Nominal vote	32,00	
	£80,403,000	80,403,000
		£ 234,057,000
Deduct extra charges as follows (really war charges)—		
Estimate 1915-16 re national debt	£51,446,000	
Actual 1914-15	22,669,000	
Estimated excess deducted	£28,777,000	28,777,000
		£ 205,280,000
Actual expenditure 1914-15		203,280,000
Increase 1915-16 over 1914-15		£ 1,806,000

I have also a statement on similar lines for this country, and I will give the figures. In Canada we have an expenditure this year outside of the war of $165,000,000. Add to that expenditure what we save in our Militia Department, which is ordinarily charged to ordinary expenditure but now is paid from the war vote, $5,700,000, and you get a total of $170,700,000. Take from that the increased charges on the public debt by reason of the war, $9,102,591, and you have a net expenditure of $161,587,908, which expenditure we should have whether there was a war or not. So, instead of there being any increase over last year, there is a decrease of $25,760,641. This is our reduction in the year of war as against an increase for Great Britain of almost half as much, or £1,806,000. Now, is the hon. member for Rouville prepared to give us the credit that, the other day, he was so willing to give to the Government of Great Britain. The table follows:

Canada's Expenditure 1915-16.

Estimated expenditure 1915-16 (not including war vote)	$165,000,000.00	
Add diminution in Militia appropriation (now paid from war vote)	5,700,000.00	
		$170,700,000.00
Charges re national debt—		
1915-16	$22,077,009.78	
1913-14	13,353,518.91	
Excess	$ 8,663,490.87	
Plus pensions, 1915-16	449,097.70	
Extra amount (really a war charge) deducted	$ 9,112,591.57	9,112,591.57
		$161,587,408.49
Expenditure 1914-15—		
Net (deducting war vote)		187,348,050.32
Decrease in 1915-16 over 1914-15		$ 25,760,641.83
Decrease in 1915-16 over 1913-14 ($186,241,047.63)		24,653,639.14
Increase over 1908-09 ($133,441,524.29)		28,145,884.20

Mr. LEMIEUX: How much has this Government increased its expenditures in four years?

Mr. MEIGHEN: I am coming to that next, and it will be worse for the hon. gentleman than what I have just given. We have diminished our expenditure for 1915-16 as compared with 1913-14, aside from the war, by $24,653,639; and the increase since the hon. gentleman was in power—going back to 1908-9, and comparing that with the year 1915-16—is only 21 per cent. That is, this country in seven years has increased its expenditure by only 21 per cent, and the British Government has increased the expenditure in four years by 20 per cent.

The hon. gentleman made a casual reference to the expenditure of the Government of France. The only reason he did that, I fancy, is that he did not know there had been an increase by the Government of France. You cannot get the figures for 1915-16; at least I could not; but I apprehend that they would be more to my advantage than those of 1914-15, which I have before me. I find that

the expenditure of the Government of France for 1914-15 shows an increase of 25 per cent as compared with four years before. That of Australia is still more, and that of New Zealand still more. And these are the governments held up to us as an example by the hon. member for Rouville

He was not content, however, to make a general racing charge against the Government of increasing the debt. By the way, the debt had diminished until we entered the war. But what was the policy of hon. gentlemen opposite in regard to the debt? The hon. member for Edmonton (Mr. Oliver) says that the late Government went out of power because they appealed to the country on a policy of lower taxation, that is, lower revenue. If they proposed lower revenue, I know another thing that they proposed, and that was a great deal higher expenditure. Their proposed expenditure in 1911 was over $156,000,000.

Mr. OLIVER: The hon. gentleman has not quoted my position correctly. I did not say the late Government were going to collect less money; I said they were going to collect their money at a lower rate.

Mr. MEIGHEN: The hon. gentleman said their policy was lower taxation.

Mr. OLIVER: Sure.

Mr. MEIGHEN: He was going to get more revenue by a lower rate of taxation?

Mr. OLIVER: Certainly; that was what we did in the fifteen years we were in power.

Mr. MEIGHEN: And we kept their low rate, as he calls it. He says that they themselves increased taxation from $36,500,000 in 1896 to $113,000,000 in 1916. We charged the same rate that they did, until last year, when it was increased by 7½ per cent. Up to that time there was no increase, but rather a diminution of the rate.

Mr. OLIVER: My hon. friend must have forgotten about the session of 1914, when this Government imposed duties that he said would yield larger sums during that half year.

Mr. MEIGHEN: Inland revenue duties.

Mr. OLIVER: No.

Mr. MEIGHEN: All that was done was a very small change in the tariff, but whatever was done had the effect of a diminution in the rate of taxation under the tariff up to the outbreak of this war.

Mr. OLIVER: I do not agree with that.

Mr. MEIGHEN: The hon. gentleman agrees with nothing; but the figures are here.

Mr. OLIVER: I say that an increase was made in the tariff.

Mr. MEIGHEN: Then it was an increase to change from 17½ per cent to 12½ per cent on farm implements. The tariff was increased in 1915—a level increase of 5 per cent preferential and 7½ per cent general. Up to that time we had the old rate. And what does the hon. gentleman say resulted? He says that in the fall of 1913 workingmen were marching the streets of the cities of Canada with banners inscribed "Bread or wages" and "Steal or starve." That was the result of the low rate he boasts of, for it was still in effect in 1913.

Mr. OLIVER: That was the result of the hon. gentleman's bad administration.

Mr. MEIGHEN: In retaining the low rate of hon. gentlemen opposite, I suppose. What I was saying before the hon. gentleman interrupted me was that he said his Government went to the country on a policy of lower taxation. I say that they went to the country at the same time on a policy of higher expenditure, because the Estimates for 1911 were in all $158,716,929; their revenue the year before was only $101,000,000; so that they went to the country on a policy of increasing the national debt annually by over $57,000,000. That must have been the intention of the hon. gentleman in 1911. The people of Canada can hardly help but be grateful that they were turned out of office.

Mr. OLIVER: Does the hon. gentleman say that we increased the national debt yearly by $50,000,000?

Mr. MEIGHEN: No. But the hon. gentleman says they proposed lower taxation than before. In the previous year their taxation yielded $101,000,000. Their proposed expenditure when they went out of office was $158,000,000. Therefore they proposed to increase the national debt by $57,000,000 a year. How do you get out of it?

The hon. member for Rouville went through a long array of figures. I should like to know the source of them. I have searched diligently and with care, and I cannot learn where he got them. I have taken a few instances. I notice that he got into an altercation with the hon. Minister of Labour (Mr. Crothers).

I just mention this as an example; it is not the most extravagant, by any means. In fact other portions of his remarks were far worse than this, but this is the subject upon which he got into the altercation with the Minister of Labour, and the one upon which he promised to establish his position to the very hilt. We have the figures concerning the Department of Labour, over which the hon. gentleman himself presided in days gone by. He complains that since 1910-11—which, he says, was Canada's banner year—although our revenue went up nearly fifty per cent the next year and the year after—the expenditure of the Department of Labour was so much, and that now it shows an increase of fifty per cent. Does the hon. gentleman believe that to be true? There he sits—but he speaketh not. I want to tell him that the expenditure this year in the Department of Labour is not fifty per cent more than it was when they went out of office. It is not any per cent more at all; it is less than it was in 1910-11, less than it was when they went out of office. But I shall not leave it at that; here are the figures. The expenditure in the Department of Labour in 1910-11, which my hon. friend refers to as the banner year, was $146,527.98. The expenditure in 1911-12 — for which also hon. gentlemen opposite are responsible, as we came into power on October 7, 1911 — was $156,167.99. In the next year it was $140,934.95, or $16,000 less Labour Department was $121,655.55, a diminution of $40,000 in one year. The next year it was $140,034.95, or $16,000 less than it was in 1911-12, and about $6,000 less than it was in 1910-11. In 1914-15 the expenditure was $130,030.73, or less than it was in 1910-11 by $16,000, and in 1911-12 by $26,000. These are the actual figures; how does the hon. gentleman argue that we had an increase of fifty percent? Just the way he argues everything; he simply makes the assertion, hoping that before it is caught up it will get abroad and do a little good for his party. But that is not the whole story concerning the Department of Labour. I am aware that the hon. gentleman was not himself at the head of that department during the years that I have mentioned; it was then presided over by Hon. Mr. King, in whom, I have no doubt, my hon. friend still has absolute confidence. But the department was under my hon. friend's charge in 1907-8, for the most part in 1908-9. In 1907-8 the expenditure was $84,723.74, and in 1908-9, $112,204.39. By 1910-11, in a period of four years, the expenditure had increased not by fifty per cent but by seventy-four per cent—and hon. gentlemen opposite were in power. This may account for the manner in which my hon. friend was mixed up in the figures that he gave to the House. Seventy-four per cent was the increase in four years, thirty per cent was the increase in three years. The hon. gentleman himself was not bad at increasing the cost of the Labour Department. In 1906-7 the expenditure was $41,282.12, and in 1907-8, $84,723.74. He managed while himself the minister to run the expenditure up in one year by 100 per cent or a litlte more.

Reference has also been made to expenditures in other departments; I am ready to take in review any that are challenged. There have been increases in expenditure. As time goes on and as the country prospers and advances, the services of Government must increase. That is the tendency of the age; that is the tendency of civilization. The function of the state increases; the function of the individual diminishes. The state invades fields one after the other. The Post Office Department, for instance, invades this field and that; it performs functions that were left to private competition before. The same takes place in every place in every department of Government, and always will take place. When you find a Government not extending its services from one field to another, you may make up your mind that it is time for a change of Government.

Under the extraordinary conditions that obtain to-day, we must refrain from expenditures that otherwise it would be expedient for us to make—and we are so refraining. We diminish the expenditures in one year from $187,000,000 to $165,000,000. Next year we reduce to $160,000,000. Oh, hon. gentlemen say, your estimates are $158,000,000 for ordinary expenditure and about $30,000,000 for capital expenditure, a total of $188,000,000. It has been stated over and over again in this House, on the responsibility of the Government, that, as long at all events as the war lasts, the Government does not intend to expend any of that money in excess of $135,000,000 ordinary and $25,000,000 capital. Then, say hon. gentlemen, eliminate from the estimates the amount that you say will not be spent. Well, that is a debatable question, but it is not debatable that the money will not be spent. The authority of the

Government is behind the statement that that money will not be spent. These moneys are in the Estimates because, year after year, they have been voted and re-voted by Parliament. They were in the Estimates before the war began; they are continued in the Estimates now. We do not know what may take place, but we do know that as long as the war lasts—yes, and after the war, until the necessary money can be found—these works will not be gone on with. New works will not be commenced. Even works that are under contract will be curtailed. We must do all that in us lies to conserve the energy and strength of the country, and to direct it toward the paramount purpose of the war.

I wish to say a word as to those features of the Budget that pertain to the tariff. It would have been unlike the hon. member for Edmonton if he had taken his seat without making some reference to the tariff. Since 1911, the tariff has been, in the mind of the hon. gentleman, the origin of all evil. Before that time it was, he thought, the origin of much good. But since 1911 the tariff has become a ghost, a spectre to the hon. gentlemen for Edmonton. In this duty on apples—yes, even in the duty on oil—he finds something wrong, something mysterious. I wonder how it is that he and the hon. gentleman for Assiniboia cannot possibly understand this duty on oil. Neither of them has been able to get it into his mind at all; both have said from their places in this House that they cannot understand it.

Mr. TURRIFF: Hear, hear! As clear as anything in the Budget!

Mr. MEIGHEN: The Opposition financial critic said the Budget speech was remarkably lucid. Then what more does he want? I think it was as plainly put by the Minister of Finance as words can clothe a thought. But it does not work out in such a way that he can make an argument out of it from the viewpoint of what he calls the "crucified" western farmer, therefore he cannot understand it. The Minister of Finance, referring to this subject, said:

> We also propose a duty of one-half cent a gallon on oils, petroleum, not including crude petroleum imported to be refined, or illuminating or lubricating oils, ·8235 specific gravity or heavier at 60 degrees temperature.

Now, where is the intellect that can possibly conceive that illuminating oils are included in the duty? "A duty on oils, petroleum, not including illuminating oils." The hon. member for Assiniboia assumed, prima facie, from that that the poor farmer of the West was going to have to pay on all his oil, and the hon. member for Cape Breton (Mr. McKenzie) assumed that the little babies were going to have to be sent to bed without a lamp. How could the English language make it clearer that there is no imposition of duty on illuminating oil? If that is not clear I cannot help the hon. member for Assiniboia. There is something else that the duty applies to, but in respect to which it effects a substantial reduction:

> This change will include heavy distillates that are now assessed duty at two and one-half cents a gallon and which have been chiefly imported into the prairie provinces.

The duty on heavy distillates now charged is 2½ cents, plus 7½ per cent, and it is changed to ½ cent on a gallon. Any difficulty about that? It is a reduction of 2 cents. The reduction is really more than that, as the old rate of duty was 2½ cents plus the war tax of 7½ per cent, so that there is a net reduction of about 2½ cents on heavy distillates, and these heavy distillates are used by the farmers of the West. Anything that is still not clear? Heavy distillates are used in the internal combustion engines in that country to the extent of about 1,000,000 gallons a year, as estimated by one of the officials of the department. So there is a saving there to the farmers of the West of some $25,000.

Oh, but this apple duty, that is going to ruin him; an increase of 50 cents a barrel on apples. Well, in the first place, there is no increase of 50 cents a barrel on apples, but that is about the closest I have ever heard the hon. member for Assiniboia get to the exact facts when he is using figures. The real increase in duty is about 25 cents a barrel. Surely the hon. member can understand that 40 cents a barrel was the rate before the war time; 7½ per cent was added; 7½ per cent a barrel on the lowest class of apples brings the duty to 56 cents and on the best class of apples to about 70 cents, an average of about 65 cents a barrel. That is a net increase of 25 cents a barrel. Twenty-five cents a barrel, they say, is going to be a ruinous burden pressing down these men, some of whom were described by the hon. member for Assiniboia as making $5,000, $10,000, $15,000 or $20,000 a year, and who he said were insulted because they were not asked to pay some of these new war taxes. Each of these men will be using a barrel of apples a year, but not much more. Even if the

whole duty is added, I do not think there is a family that will pay more than 75 cents or $1 in one year in additional cost.

Mr. TURRIFF: My hon. friend has a poor opinion of the farmers.

Mr. MEIGHEN: Does my hon. friend mean that four barrels a year is not an outside estimate of the quantities of apples to be used by one family? Am I not pretty generous? I know I do not use that. That would be $1 a year, supposing the whole duty were added. What an awful calamity for the western farmer!

Mr. TURRIFF: One more burden, that is all.

Mr. MEIGHEN: The hon. member for Edmonton (Mr. Oliver) states that there is $20,000,000 invested in land devoted to the fruit industry in British Columbia. He quotes from a newspaper to that effect —$20,000,000 invested in some 30,000 acres. Now, it is a well known fact that if the cultivators of that land get the benefit of the increased duty to the extent of enabling them to market a larger proportion of their products, it will be a benefit, not to the combines or the trusts or the bloated capitalists or any body of that sort, for whom the hon. gentleman has such a horror, but it will be a benefit to a struggling man, the fruit farmer of British Columbia, admitted to be struggling by every honest citizen of this country. This is doing just what was done in other days for the grape growers of this country, who were protected. The protection first given to them did not prove enough, and a little increase was added. The result has been that we in Canada can now buy the best grapes in the world at about the lowest price. The price is kept down by the competition among the grape growers of this country. It is hoped the same thing will take place in respect to apples.

At six o'clock the House took recess.

The House resumed at eight o'clock.

PRIVATE BILL.

CONSIDERED IN COMMITTEE—THIRD READING.

The House in Committee on Private Bills, Mr. Rhodes in the Chair.

Further consideration of Bill No. 19, respecting a patent of James W. Owen.—Mr. Middlebro.

[Mr. Meighen.]

Mr. OLIVER: What is the article that is being patented under this Bill?

Mr. MIDDLEBRO: The Bill stands in my name more as a matter of form than anything else. The matter came up in the Private Bills Committee, it was thoroughly discussed there, some amendments were made, and the committee thought it right that the Bill should pass. I do not even know what the article referred to is; that shows how much I know about it. There has been an objection from year to year about these Bills which are introduced to renew patents, and I thoroughly agree with that objection, but until we get some uniform law dealing with the question, it seems to me that we cannot make fish of one and flesh of another. The Deputy Minister of Agriculture suggests that after the war is over the patent fee be reduced, as it is in the United States, and that the patent cover a uniform term of 18 years, so that we will not be bothered when a man forgets to pay his six-year term fee and then comes to have his patent reinstated. There is no objection, as I understand, to this patent going through with the amendment which was made to the Bill on the advice of the Deputy Minister of Agriculture. I do not know anything more about the Bill than that; it merely happens to stand in my name.

Mr. OLIVER: I am not particularly inquisitive, but I think we ought to know what the article is before we agree to it. However, if the rest of the House can stand it, I can.

Bill reported, read the third time, and passed.

THE BUDGET.

Consideration of the proposed motion of Sir Thomas White (Minister of Finance) for Committee of Ways and Means resumed.

Mr. MEIGHEN: The only remark I have to add by way of linking what I have to say with what I have said in regard to the slight alteration in the tariff, is that if this small extra duty results in saving the amount of capital and the years of toil that have already been expended in the apple industry in British Columbia, and in tiding them over the present invasion of apples from the south, caused by the extraordinary and tremendously unnecessary production of the Western States, the cost will be a trifle relative to the great results achieved. Furthermore, the cost, in so far as, for the

time being, it may fall in very slight and almost imperceptible degree on the farmers of the West, will be repaid to them by the service they will get at the hands of their fellow farmers in British Columbia. While I am on the point, it will be noted that the half cent that is now made the duty upon fuel oil, will come entirely out of people other than agriculturists; it will come, in the main, if not altogether, from manufacturers and railways. I am not surprised that we have no comment upon that fact from hon. gentlemen from the West on the opposite side of the House. The taxation in that item alone levelled against these people, against whom these hon. gentlemen are never tired of hurling their diatribes, is many, many times, even pro rata, greater than what is being asked to be paid to save the apple industry of British Columbia. I do not want to be understood as saying that 25 cents a barrel can mean the salvation of a great industry. I am not in a position to estimate just the extent of the benefit that will result. The change in the tariff is not made for the purpose of adding to the price that the British Columbia farmer will get for his apples. It is for the purpose of extending the area of his market and protecting him against unfair and unhealthy competition. I understand that the farmers of British Columbia would be quite willing to enter into an arrangement with farmers' organizations of the prairie country to ship them apples for the coming year, or perhaps more than a year, at the actual cost of the apples themselves, but under present conditions it is argued that their selling price is in no sense fixed by themselves, that they have practically nothing to do with it, and that they are undersold by this tremendous overproduction in the western states, with the result that they are almost helpless.

We are through with that phase of the subject. The large phase of the Budget proposals remains, namely, that portion of its proposals which asks the great industries of this country to give of their surplus profits to help the country to tide over the financial stress of this war. In comparison with these proposals, everything that has been discussed by the hon. member for Edmonton—yes, and by the hon. member for Assiniboia, and others on that side of the House—in the way of taxation pales into comparative insignificance. This great order placed upon the people of this country by the Budget, against the fruits of industry, not against industry itself, represents a toll of between $30,000,000 and $35,000,000—I defer to the figures of the Minister of Finance, if I quote them correctly—in a space of three years. There is a large toll exacted from which every farmer in every portion of Canada is exempt, and it is exacted in such a manner that it cannot be in turn taken from the pocket of the consumer. It is exacted in such a manner that it comes from the extraordinary profits of industries, profits that are in a large degree, in many cases, perhaps not in all, caused by conditions brought about by the war. I know just as well as hon. gentlemen opposite that the farmer of this country, be he in the West or in the East, is in no sense averse to paying his share of taxation. I know that he is quite ready to pay his share. I know that an agitation is abroad in our western country, fomented by the hon. gentlemen who sit beside him to-night, an agitation to endeavour to make the farmers of the West believe that they have here at Ottawa some awful enemy, an enemy who is in alliance with the large manufucturers and the controllers of capital in Canada, and who adopts a method of taxation that not only bears heavily upon them, but, in the few words of one hon. gentleman opposite, that "crucifies" them. I do not believe that that is the prevalent opinion among the farmers of the West. I know it is not the prevalent opinion in Canada, and, what is surer still, I know that it is not a fact. Hon. gentlemen opposite know that that it is not a fact. It sounds very flat indeed—the assertion of my hon. friend from Edmonton and of those lesser lights who sit behind him, that this Government is supported by great interests and is here for the purpose of serving great interests. It sounds very flat indeed in the light of the truth that the great proportion of the taxes required to carry on this war are to be levied against those great interests themselves, while the men whom hon. gentlemen opposite claim to be crucified are to be exempt. And they are exempt, not because they should not pay their fair share of taxation —not at all; they are ready to pay it. But they are exempt for this reason, that the first and greatest burden of taxation should come upon those who are best able to bear it. That is the principle we have adopted. As I said a moment ago, we are not taxing industries; we are not enacting any legislation that is going to frighten capital from this country. Industry is what we want in this country, and capital. But, says the hon. member for Rouville (Mr. Lemieux), capital already is being frightened from Canada; and the financial critic of the

Opposition, the hon. member for Halifax (Mr. Maclean), says that we have not large stores of capital in this country—that in fact there is a dearth of capital in Canada. How do those statements harmonize with the contention of their friends from the West who sit behind them, that this Government is the friend of capitalists and is increasing capital at the expense of the farmer? We are not taxing industry. We are taxing the extraordinary profits of industry, after those profits have been earned and ascertained, and we allow to incorporated companies 7 per cent before their profits are touched, and only a quarter above that is taken; and to individuals and partnerships ten per cent before their profits are touched, and then again only a quarter is taken. We are not taxing or injuring industry. You cannot injure anything unless you get to its foundation, unless you get to its source. We are not touching the vitals of industry at all. To use the words of Mr. Asquith, we are taxing not the potential germs but the gathered fruits of industry, and by taxing the gathered fruits we shall never strike a blow at industry at all.

It is argued—or at all events it was argued, and a statement of the policy of the Government clearly made and repeated several times does not seem to deter those who still advance an argument inconsistent with it—it was argued for a time that companies over-capitalized would get an advantage over companies honestly capitalized. That argument, in the first place, is not consistent with the contention of the hon. member for Oxford that we have no right whatever to touch capitalization that is legally made, and he says that all capitalization is legally made, because it is made in consonance with the laws of this country. However, it has been made clear in this House over and over again—and the definition is already in the Bill—that the Government will not allow companies whose capitalization is unfair, unduly disproportionate to their actual assets, to get an advantage by that over-capitalization. It would be a practical impossibility to get at the exact assets of incorporated companies, and to ascertain precisely what their stock should be valued at. That it is impossible and for the reason that it is impossible to go behind the capitalization and effect that exact estimate, we are allowing a larger percentage of the profits of partnership and individuals to escape free, than what we allow to incorporated companies. There might have been added the further reason that incorporated companies are the creation of the state, and being the creation of the state, they became the beneficiaries of the laws of the state differently and in addition to the manner in which partnerships and individuals become the beneficiaries of the laws of the state. They have certain rights and protections as incorporated companies, and for that additional reason I contend that it is only fair that a larger percentage of profit should be accorded partnerships and individuals than what should be accorded to incorporated companies.

It has also been argued that the process of allowing a revenue upon capital before the tax takes effect will tell against those companies who, though they are incorporated, have a very modest capital, and who by proper business management have gathered up reserves; which reserves have gone into plant and betterment and which in fact are actual capital and entitled to some consideration as such, though not appearing as capital on the books of the company. That point has been covered by the Minister of Finance. On the 22nd of this month he plainly stated to the House that such reserves, in part at all events, and to the extent that they could be fairly called capital, would be so treated; so that to the full extent that it is in the power of this Government to accord equal treatment we propose to so accord it. Those companies that are over-capitalized we shall, as fairly as we are able to do, place on the same footing with companies capitalized more in consonance with their actual assets.

The hon. member for Edmonton came along with another contention, and I must say that I was rather surprised that he did. I do not know that there is any use in answering it. I do not know that there is any use in stating the facts to the House, and the foundation of the facts, because it has already been done. It really seems of no value whatever to lay facts before hon. gentlemen opposite. They still come along with flippant fiction; they still flare before us the same old sentences. But I am going to try it once more. The hon. member for Edmonton says that we have been taking great care of the munition men, that we have been guarding them against ocean rates, raised as they have been by war conditions, and that we have left the farmer to take care of himself. It is only about three days ago that the facts in that regard were placed on Hansard in detail, and placed on Hansard by the very man who has control of those vessels requisi-

tioned by the British Government. This man has control of all the vessels on which these munitions go. Could there be any better authority than he? He ought to know. I am going to repeat the facts on the authority of that gentleman. I am quoting from his actual letter, in Hansard of February 23. He stated that in all the vessels that have been requisitioned by the British Government for the carriage of munitions and for the carriage of supplies the products of the farm had occupied on those vessels 78.31 per cent of the total capacity, and that the munition makers had obtained only 7.67 of the capacity. In other words, the men that the hon. member for Edmonton says are favoured get one cubic foot of space, and the farmer who is "crucified" gets ten cubic feet.

Mr. OLIVER: Since the hon. gentleman is giving information, would he tell us the rate that was paid on munitions, and the rate that was paid on the wheat?

Mr. MEIGHEN: Just exactly on the same basis. They are all fixed by the British Government. We have nothing to do with it.

Mr. OLIVER: What was the rate in each case?

Mr. MEIGHEN: The British Government has the basis for fixing the rate. We have nothing whatever to do with it. There is no favoritism whatever. Whatever advantage the munition man gets, the farmer gets too. Does the hon. member wish to say that the British Government is in league with this Government in getting after the farmer of Western Canada?

Mr. OLIVER: I certainly have no information as to any person transporting wheat across the ocean at a favoured rate.

Mr. MEIGHEN: Nor did the munition men get any favoured rate. Why does the hon. gentleman charge us with having requisitioned vessels for the munition men, and not for the farmers?

Mr. OLIVER: If my ears did not deceive me, some time ago I heard the hon. Minister of Marine and Fisheries (Mr. Hazen) inform the House from a printed or written document that that was the case, that the munitions were being taken across the ocean at a rate that compared favourably with the rate that prevailed before the war. I know that no wheat is being taken across at such rates.

Mr. MEIGHEN: The hon. member for Edmonton has not read what the hon. minister said more carefully than he has read what I said. The Minister of Marine and Fisheries stated that certain vessels of the British Government had been obtained on the request of this Government for the carriage of supplies for the British Government from Canada. The British Government neither requisitioned nor commandeered any vessels except for the carriage of British Government property, and after the British Government had commandeered these vessels, they were placed in charge of a director of transports, who took charge of the transfer of all British Government property from this country, and of that property 78.31 per cent was the product of the farmers of Canada.

Mr. OLIVER: Will the hon. gentleman inform the House if wheat was carried in those vessels at a lower rate than wheat was carried in other vessels crossing the ocean under ordinary conditions?

Mr. MEIGHEN: I would rather presume so, but that is not the point at all.

Mr. OLIVER: That is the point.

Mr. MEIGHEN: I quite understand the hurry of the hon. member for Edmonton to get away from the utterly incorrect and misleading statement he has made to the House.

Mr. OLIVER: I made no statement to the House except on the authority of what I heard the Minister of Marine and Fisheries state to the House.

Mr. MEIGHEN: We had nothing to do with the making of the rates and consequently we could give no preference. The British Government had the making of the rates; they had a system for doing it, and the farmer who ships 78 cubic feet on a vessel gets the same advantage as the munition manufacturer who ships 7 cubic feet.

Mr. OLIVER: All I can say, then, is that the Minister of Marine and Fisheries misinformed the House, if I understood him correctly, because I understood him distinctly to say that the munitions manufactured in Canada were carried across the ocean at a rate that was either the same or that compared favourably with the rate that prevailed before the war. Now, either he said that or he did not say it.

Mr. MEIGHEN: If the hon. gentleman says he said it, he should quote what the

Minister of Marine and Fisheries said. That may be all he has to say now, but he had a lot more to say when he was on his feet, and I am answering what he said then.

Mr. OLIVER: I am asking a straight question, and as the hon. gentleman is desirous of entering into a discussion, will he be good enough to give me a straight answer.

Mr. MEIGHEN: I do not know that I am called upon to spend ten minutes here in looking up Hansard because the hon. gentleman has misunderstood the Minister of Marine and Fisheries.

Mr. OLIVER: I did not misunderstand him.

Mr. MEIGHEN: If the hon. member understood the Minister of Marine and Fisheries to say what my hon. friend says he said, why does he not quote his statement as a foundation for his remarks?

Mr. OLIVER: I think I laid a good enough foundation.

Mr. MEIGHEN: Why did he not give his statement to the House?

Mr. OLIVER: I am giving it to the House now.

Mr. MEIGHEN: No, my hon. friend is giving only a misunderstanding of it that he himself has.

Mr. OLIVER: Perhaps the minister himself, as he is so determined on the point, will give it to the House.

Mr. MEIGHEN: Perhaps so. It will not be the first time that we on this side of the House have performed services that hon. gentlemen opposite should have themselves performed for the benefit of the House.

Mr. OLIVER: Let us have it.

Mr. MEIGHEN: The hon. member for Edmonton also—

Mr. OLIVER: I do not get my answer, eh? I see the hon. minister does not see fit to give an answer to my question.

Mr. MEIGHEN: I have not the speech of the Minister of Marine and Fisheries before me, and it is the duty of the hon. gentleman from Edmonton to quote from it.

Mr. OLIVER: The hon. minister has contradicted me. Let him read the proof.

Mr. MEIGHEN: I have contradicted my hon. friend and proved my assertion. The hon. gentleman may say that I am wrong, but he says: "I misunderstood the speech of the Minister of Marine and Fisheries and"—

Mr. OLIVER: I did not say that I misunderstood his speech; I deny that I misunderstood it.

Mr. MEIGHEN: My hon. friend says he misunderstood it if he was wrong, and he was wrong, so he must have misunderstood it.

Mr. OLIVER: It is your privilege to put it that way. I did not misunderstand it.

Mr. MEIGHEN: I will show my hon. friend another place where he is just as flagrantly wrong. In fact, it would be one of the most difficult tasks that I ever attempted to pick out a sentence in his address which is in accord with the facts. He repeated—I suppose on the authority of that most infallible man, the hon. member for Assiniboia (Mr. Turriff)—certain allegations about the export of nickel.

Mr. OLIVER: Yes, I said that the assertion had been made in the House and had not been denied.

Mr. MEIGHEN: It has been denied time without number, and I will read the denial from the returns. There have been laid upon the table of the House within the last four weeks, papers showing absolutely that there is not an atom of fact in the statements of hon. gentlemen opposite—in particular the statement of the hon. member for Edmonton. There have been before the House for over a year papers showing that there is an utter absence of fact in what they say.

Mr. OLIVER: As to what?

Mr. MEIGHEN: As to the nickel situation.

Mr. OLIVER: As to their being nickel at Sudbury?

Mr. MEIGHEN: The hon. member thinks that all he told the House was that there was some nickel at Sudbury. His argument was: "You pass a regulation putting an embargo on the export of wheat, on the export of flour"—my hon. friend has for the time being become quite a protagonist of the miller—"on the export of practically all our manufactured goods, on the export of oatmeal also, and you are all wrong in doing so. What you ought to do, if you want to be truly patriotic, is to put

an embargo on nickel." That is the contention of my hon. friend.

Mr. OLIVER: I did not say that.

Mr. MEIGHEN: That is not what he said? Unfortunately Hansard is not yet transcribed, but if my hon. friend reads it to-morrow, he will see that is perilously near what he said.

Mr. OLIVER: Just as near as my hon. friend usually gets when he quotes.

Mr. MEIGHEN: That is nearly what he said—

Mr. OLIVER: That is not what I said.

Mr. MEIGHEN:—that we should put an embargo on nickel, and not on wheat, flour, oatmeal, horses, etc. Now, I propose to take that matter up. In the first place, if there is or has been a duty on this Government since it came into power to place an export duty on nickel, it would indeed be interesting to inquire why that duty did not also exist during the fifteen years that hon. gentlemen opposite were in power.

Mr. OLIVER: Hear, hear.

Mr. MEIGHEN: The hon. member for Edmonton says, "Hear, hear." The question was put to the hon. member for Assiniboia by the Minister of Finance: "If we are playing false to the best interest of Canada, to allow nickel matte to be shipped out of Canada in order to be refined in New Jersey, how is it that your Government was not false also, because, while it was in office, it put no export duty on nickel and allowed the same thing to continue for about eleven years during which the nickel industry was in existence." How did the hon. member for Assiniboia answer that question? "Oh," he says, "the old Government was all wrong; they should have put an export duty on nickel. I went to them and asked them, and I pleaded with them,"—and I have a photograph of the hon. member for Assiniboia pleading with the hon. member for Edmonton to put an export duty on nickel. I wonder what the answer of the hon. member for Edmonton was to the hon. member for Assiniboia. The hon. member for Edmonton was a member of the late Government, and he must be understood as having said that under the conditions that existed it was not in the interest of the country to put an export duty on nickel. Now, I do not contend that it was. For myself, I do not think it was. For myself, I am quite certain it would not be at the present time. I am quite certain it never has been the proper course, at all events, since this war took place. I am strongly inclined to the belief that it has not yet been the proper course. But it is difficult to conceive the state of mind of an hon. gentleman who will argue that as soon as war began it was the proper course of this Government to put an export duty on nickel. Before I take up the argument in the main, I should like to quote to the House the statements made in this connection by the hon. gentleman to this House. I dwell with some emphasis upon this point, because the situation with regard to nickel involves the very fidelity of this country to British interests. If this Government is guilty of a fraction of what is charged against it by the hon. member for Assiniboia, there is not a member of the Government but should be indicted. For words of a member of Parliament on this subject to go broadcast throughout this country and throughout this Empire, charging this Government with being in league with Germany in nickel production and nickel supply, is a serious matter indeed, no matter who that hon. member may be. What did the hon. member say? At page 1095 of Hansard he is reported:

> First of all, we in Canada own 85 per cent of all the nickel that has ever been discovered.

The hon. member for Edmonton, I think, went him one better, and said that we controlled the nickel of the world. In the first place, we do not own 85 per cent of all the nickel discovered; we do produce about 85 per cent of the nickel that is produced. By virtue of the policy pursued, the nickel industry of this country has been developed to the extent of producing the nickel ore from the mine and the manufacture of it into nickel matte; and consequently we have reached the proud position of producing about 85 per cent of the nickel produced in the world. I am very glad to see that the hon. member for Assiniboia is placing Hansard before the hon. member for Edmonton; I hope it is his own speech to which he is calling attention. The hon. gentleman went on:

> Of all the mistakes that this Government have made during the past year or two this is one of the greatest. I charge this Government with being absolutley unfair to Canada; I charge this Government with standing in with the Huns, our enemies,—

Mr. TURRIFF: Hear, hear.

Mr. MEIGHEN:

—in so far as they have refused to exercise their power to prevent the exportation of nickel to the United States.

That is to say, the Government that would not prevent the exportation of nickel to the United States would be standing in with the Huns of Germany. And the hon. member for Assiniboia, who has not yet seen the record, says "Hear, hear." He goes on:

Here we are supplying our enemies with nickel with which to make their armour plate. Canada has it in her power, and has had it in her power ever since the war began, to prevent the Germans from getting any further armour plate to build their battleships, and the Government have refused to exercise this power. What have they done to prevent our nickel going to Berlin to make guns and warships to kill our sons? Nothing, and I charge them with that dereliction of duty.

The hon. member nods in approbation. Yet he has not yet seen the record. He goes on:

This Government did not hesitate one moment to stop the farmer and the miller from exporting wheat and flour to enemy countries, and it did not hesitate to prevent others from exporting other articles of commerce in the belief that it would not be to the advantage of the Empire to have them exported to Germany, Austria, or Turkey.

Further on he states:

But all the nickel that is produced by the Canada Copper Company at Sudbury goes to the International Nickel Company. It is shipped to New Jersey, refined there, and sold by them to Germany, because the Krupp people are big owners of the International Nickel Company.

The House will remember these words: "The Krupp people are big owners of the International Nickel Company." He goes on:

When war broke out nickel was worth from 20 to 24 cents a pound. This company immediately held up the British Government for fifty cents a pound. Canada allows it to be taken free to the United States, there refined, and sold to our enemies at whatever price they choose to pay for it, because they control it; but Great Britain has to pay fifty cents a pound for it.

He says further:

The International Nickel Company have been making from $1,000,000 to $2,000,000 a month, every month in the year, or $25,000,000 a year, and they have been making this huge profit out of the ore that we are supplying them with.

Further on he states, at page 1196:

The worst feature is that it enables our enemies to get all the nickel they want. Those are the plain facts of the case.

It will be noted that the hon. gentleman states that these are the plain facts of the case. At another point, page 1197, he takes care to observe: "I always speak of things I know."

Now, what are the plain facts of the case? In the first place, it becomes necessary for me to place upon Hansard the correspondence upon this subject that has been upon the table of the House—

Mr. TURRIFF: I read it.

Mr. MEIGHEN: —for over a year. Not all, but nearly all, of the correspondence I shall read—sufficient to disprove absolutely everything stated by the hon. member for Assiniboia—was laid on the table of this House on the 11th of February last. That correspondence shows that after the outbreak of the war an arrangement was entered into between the Government of Canada and the International Nickel Company, with the approval of the Government of Great Britain—and not only with the approval, but with the unqualified approval, and with a special note from that Government, appreciating the conduct of this Government for its action in the interest of Great Britain and her Allies. I should like to ask the hon. member for Assiniboia, who still laughs, whether he accuses the Government of Great Britain of being in allegiance with the Huns? The Government of Great Britain are with us on this nickel policy, not partially, not in principle alone, but in detail. They have approved of every step taken as being in the best interests of this Empire. I ask the hon. gentleman again: Does he say that the British Government are in alliance with the Huns in this matter?

Mr. TURRIFF: Just as much as they are in alliance with this Government in allowing the manufacturers of munitions and shells to charge four prices for each article they produce.

Mr. MEIGHEN: The answer of the hon. gentleman is scarcely worth referring to. It is obvious to any man who has the interest of his country at heart that the details of the arrangement which I have mentioned could not be made public. If we were to make that arrangement public, we should be acting contrary to the desires of the British Government; and, aside from any express desire on the part of the Imperial authorities, we should obviously be acting prejudicially to the best interests of the British Empire and her Allies. The correspondence that took place after that arrangement had been consummated shows

whether or not the steps taken should be acceptable to the people of Canada and of the Empire. The following is a telegram dated at London, December 10, 1914, from Sir George Perley, High Commissioner, to Sir Robert Borden:

Placed your letters regarding nickel before Hopwood last Monday.

Who Hopwood is will appear in a moment.

Have appointment to-morrow discuss matter with him.

Perley.

Here is another cablegram, dated December 11:

Hopwood considers present arrangement regarding nickel perfectly satisfactory.

Perley.

On December 15 the following letter was written by Sir George Perley to the Prime Minister of Canada, from 17 Victoria street, London, S.W.:

Dear Sir Robert Borden:

I duly received your letter of November 20, enclosing copy of a report made by Mr. Graham Bell regarding the arrangement for the purpose of preventing the enemy from obtaining nickel, and also copies of other communications on the same subject. I at once communicated with Sir Francis Hopwood, who is chairman of the sub-committee here for the purpose of curtailing enemies' supplies, and with whom I had previously discussed the same question a couple of times. I showed him all the papers, and afterwards met him and talked everything over, after which I cabled you that he considers the present arrangement regarding nickel to be perfectly satisfactory. He kept the papers to show to Mr. Churchill, and has just sent them back to me with a note saying that they think the Bell report quite satisfactory. They expressed themselves as very appreciative of the steps which you have taken to assist them in this important matter.

Mr. OLIVER: Would the hon. gentleman be good enough to explain what the important matter was?

Mr. MEIGHEN: It is stated in their letter. That was the arrangement—absolutely to prevent the enemy from obtaining nickel.

Mr. OLIVER: Who is Mr. Graham Bell?

Mr. MEIGHEN: He is the financial comptroller of the Department of Railways and Canals in this country, one of the ablest civil servants in Canada, and so denominated by the hon. ex-Minister of Railways, the member for South Renfrew (Hon. George P. Graham) two years ago in this House.

Mr. OLIVER: As I understand it, this Government was making arrangements for the purpose of protecting the interests of the Allies in regard to Canadian nickel, and the British Government expressed itself as being satisfied with these arrangements.

Mr. MEIGHEN: Yes, absolutely. The papers were laid on the table of the House over a year ago. The following cable was sent by Sir Robert Borden to Sir George Perley on December 23, 1914:

We understand that the British Government are quite satisfied with arrangement already made and outlined to you for checking export of nickel from Canada, but as complaints are being made in press that such nickel is reaching enemy, we desire to have your confirmation of our understanding before issuing statement to that effect. Please answer immediately.

On December 24, Sir George Perley cabled as follows:

Prime Minister, Ottawa:

Hopwood, Chairman Restriction Enemies' Supplies Committee, charged with such matters, assures British Government quite satisfied with arrangements made by you regarding nickel. Appreciates steps you have taken to assist them in this important matter. Wrote you this effect December 15.

Perley.

Before I leave the central part of the subject, let me add—I am justified in adding this, because it does not go into the details of the arrangement in any way—the following: this same official of the Government has had access to the books of the International Nickel Company, with its friendly consent. He has had all the access that he required or asked for to enable him to check to the full the carrying out of that arrangement. Having had that access, and as a result of that inspection, knowing whereof he speaks, Mr. Graham Bell gives me such assurance that I can categorically say to the House that not one pound of Canadian nickel has reached the enemy since the war began.

Mr. OLIVER: It is thoroughly understood, I believe, that Germany is using a great deal of nickel. Where does Germany get her nickel?

Mr. MEIGHEN: I do not know how much nickel Germany is using; I do not know whether the hon. gentleman does or not. I do not know whether she is using a great deal or not; I very much doubt it. I do know, however, that nickel can be procured from copper; that nickel is by-product in the production of copper and, I believe, of other metals, and that scrap nickel can be picked up the world over. The British Navy has succeeded pretty well in checking the ambitions of Germany with regard to the gathering of scrap nickel, and nickel which is the by-product

of copper and other metals, but I do not think that the British Navy has succeeded in checking the importation of nickel into Germany as fully as we have succeeded in checking, by means of the arrangement with the International Nickel Company, the export of Canadian nickel to Germany. It is a fact that cannot be contravened that by virtue of that arrangement, not a pound of nickel sent from this country, at Sudbury or anywhere else, has reached the enemy since the war began. There is a considerable production of nickel in Sweden.

Mr. TURRIFF: Would the hon. gentleman say how he knows that none of this nickel goes through the International Nickel Company into Germany? It may go to Belgium, Holland, Sweden, Roumania.

Mr. MEIGHEN: I have already explained how I know that; I repeat that the arrangement forbids it. It is true, of course, that the arrangement might be violated, but the arrangement is not violated, and we are in a position to know that through the inspection of an officer of this Government. How better could we know it than through the inspection of an officer who has the absolute confidence, I think, of every one in this House?

Mr. TURRIFF: There is no doubt the officer has the confidence of the people of this country, but my hon. friend stated that it was through the kindly offer of the Nickel Company that he was able to get this information. But, supposing the International Nickel Company was exporting nickel that got to Germany, would they show that to our inspector?

Mr. MEIGHEN: They could not avoid it. The system of inspection absolutely covers that point. They could not do it under the system of inspection, and the British Government ratifies the arrangement. Surely the system that is good enough for the British Government might be good enough for the hon. member for Assiniboia.

Mr. OLIVER: There are many complaints in England that the British blockade is not effective.

Mr. MEIGHEN: Certainly there are complaints that it is not effective against nickel, and perhaps some other things that have got on the water, but as respects this nickel, our blockade is so effective that not a pound has ever got on the water. The British Cabinet does not have to come in at all. When the main statement of the hon. gentleman for Assiniboia is refuted he makes a lot of wild and turbulent assertions as foreign to the facts as his main charge. He stated that the International Nickel Company was controlled by the Krupps of Germany, that Germany could pay just what she liked for nickel, and that Great Britain had to pay fifty cents a pound more than the price before the war. Controlled by the Krupps? The hon. member for North Oxford (Mr. Nesbitt), who is a business man, on the same side of the House as the hon. member for Assiniboia, said in this House within a week that he himself was aware of the constitution of that company, aware of its personnel, and that he knew that no such people had any influence whatever in the International Nickel Company. Does the hon. gentleman say that the hon. member for North Oxford did not say that? He shakes his head, but he will not go on Hansard as saying that.

9 p.m.

Mr. TURRIFF: Yes, I will go on Hansard as saying that the hon. member for North Oxford told me that the Krupp people were the owners of a certain amount of stock in that company, and I would ask my hon. friend if he thinks the Krupp people would put the majority of the stock in their own name if they owned it.

Mr. MEIGHEN: Here is what the hon. member for North Oxford said:

> There was one point made by the hon. member for North Simcoe (Mr. Currie) regarding which I would like to say one word. He said that the nickel industry in Canada was controlled by Germany.

I have read the speech of Mr. Currie and I cannot find any such assertion in it. He goes on:

> I know some officers of the nickel corporation and I know that there is not a human being in Germany who has any control, or who has anything to do with the Canadian nickel interests.

That is very clear, very definite.

Mr. TURRIFF: That is what they told him.

Mr. MEIGHEN: He says he knows it. Why did the hon. gentleman contradict me a few minutes ago when I told him that the hon. member for North Oxford said that?

Mr. TURRIFF: They told him that. I would not take a German's word.

Mr. MEIGHEN (reading):

I think the ministers know that as well as I do. I have been told by officers of the nickel company that they would be willing to have any investigation that might be thought desirable to clear away any doubts as to German control.

Mr. TURRIFF: I would not take a German's word.

Mr. MEIGHEN: The hon. member for Assiniboia—and I may say to him that the less he talks on this subject the better whether from his seat or elsewhere—stated that the Krupps and German-Americans owned and controlled that company. He said further:

It is shipped to New Jersey, refined there, and sold by them to Germany, because the Krupp people are big owners of the International Nickel Company.

Now, this matter has been open for inspection and has been inspected, and the extent to which any stock of that company is held in any enemy country is clearly known. I will read to the House a letter which shows the full extent of that ownership. It is a letter written by Mr. Bostwick, assistant president, to Mr. Graham A. Bell, dated November 24, 1914—and these facts were not only confirmed on inspection later, but remain substantially true to-day, at all events, there is less stock owned in enemy countries now than then. The letter is addressed to Mr. Bell and is as follows:

The statement that the Krupp's are interested in the International Nickel Company has again been made as shown in the attached article from the Journal of Commerce.

To our positive knowledge, the Krupp's have absolutely no influence in the affairs of the International Nickel Company, and it is our implicit belief that they have no ownership of any securities of the company.

Our list of stockholders on record shows that only 158 shares of common and 263 shares of preferred stock are owned by stockholders resident in Germany and Austria. An examination of the list of stockholders on record is open to any one of our Canadian stockholders, and we shall be glad to extend the opportunity of examining the same to you should you so desire.

This constantly recurring and erroneous statement of Krupp's ownership and influence in this company is becoming exceedingly annoying, and we trust that some means can be speedily found by which it can be definitely refuted.

Mr. OLIVER: How many stockholders?

Mr. MEIGHEN: He says 158 shares of common and 263 shares of preferred, a total of 428 out of 469,441 shares, or less than one share in a thousand. So the people who the hon. gentleman says have control own less than one share in a thousand of the stock. There is a sort of nebulous shadow, one one-thousandth part, of truth in what he said. The Canadian Pacific Railway Company would be a German corporation according to the argument of the hon. gentleman, as the stock of that company is largely held in Germany and Austria—I believe more in proportion than that of this company; in fact, I am informed by the Prime Minister that it is very much more. No more absurd suggestion could be offered to the House. But if the word of his colleague is not sufficient to convince him, surely the facts as revealed to an old and reliable official of this Government, and as also revealed in the document of record, should be sufficient to allay any doubt raised by him or any one else in the minds of the people of this country.

Mr. TURRIFF: From whom did our officer get the information?

Mr. MEIGHEN: From the books of the company.

Mr. TURRIFF: Yes.

Mr. MEIGHEN: That is not enough? The hon. member for Assiniboia gets his on the street. It is understood that somebody said something to somebody else, and it got in the papers through somebody else, and that is enough for him to act upon and make assertions in the House. But it is not good enough for an officer of this Government to examine the books of a company. Of course, the hon. member is authority for the statement—we have his own imprimatur for it—that he never states anything in the House of Commons except what he absolutely knows.

Well, he knew something else. He said that when the war broke out the price of nickel was 24 to 25 cents a pound, and that they immediately raised it to the British Government to 50 cents a pound, and let Germany have it for just what she wanted to pay. It has already been established that Germany never got any of it for 50 cents, or at any price.

I will next proceed to show that his figures in regard to the cost of nickel before and since the outbreak of the war are equally astray, one about as much astray as the other. The arrangement involved the price of nickel, and I am at liberty to state the arrangement in so far as the price of nickel is concerned. The price of nickel to the British Government in very large quantities before the outbreak of the war was £160 per ton, or approximately, at the

rate of exchange that then prevailed, 34 2/5 cents a pound. These facts are also made clear by the inspection of the books of the company itself, and they are clear and known to the trade everywhere. The price continued at that figure. I can put the facts on the record in this regard rather better by reading a letter of the company which was received to-day by Mr. Bell, and which is in accord with the results of his own investigation, and embodies the facts brought out by that investigation. But, inasmuch as his report involves other facts that should not be disclosed, I shall put it to the House in the form of the letter which I have here from the company, the statements contained in this letter being known to Mr. Bell to be correct:

February 28, 1916.

Your code message did not reach me last night in time to get the information asked for by you in your hands this morning, and I trust that the message just sent you will reach you in due time.

When I last saw you, I gave you a memo. as to the price at which the Ministry of Munitions were purchasing for account of the Allies, and this price of £175 sterling f.o.b., New York, is applicable only to purchases made for account of Russia, Japan, etc. In the case of shipments direct to the Ministry of Munitions in Great Britain for consumption there, our price is £175 per ton delivered United Kingdom port.

That much less to Great Britain than to the others, owing to the fact that they buy in much larger quantities.

The price to the British Government at the outbreak of the war was £160 sterling delivered in the United Kingdom. This, at an exchange rate of $4.87 is the equivalent of 34⅘ cents per pound.

A very material difference from 24 or 25 cents.

At the time that the price of £175 was established—

That, by the way, was part of the arrangement into which the Government entered—

—we had been negotiating with the Ministry of Munitions and they fixed, with our approval, the price of £175 delivered United Kingdom port, taking cognizance at that time of the increased expense of transportation, insurance and loss in exchange.

The contract that we have just recently closed with the Ministry for delivery over the balance of this year is at £175 delivered United Kingdom port, which, at the current rate of exchange, $4.76 works out to 37⅖ cents per pound. On the first deliveries to be made against this contract, the increase in freight to the United Kingdom port over the normal rate prevailing before the war, the cost of war risk insurance and the difference in exchange, assuming that $4.76 will obtain at the time of payment, amounts to 2·34 cents per pound, so that this increase in cost of shipping, if deducted from the delivered price, makes the price to us 34·86 cents per pound comparable with the price of 34·8 cents ruling before the war.

Practically the same figure, aside altogether from the extra cost which is to be referred to.

This, as you readily see, does not begin to compensate us for all the extra expense in connection with manufacturing and shipping, and no increase in price has been made on our part, due to the extra cost of materials and labour in our mining, smelting and refining operations.

That is to say, that the extra cost being taken into consideration, they are selling now at less to the British Government than they were before the war. These facts, as I have stated them here, are attested correct by the inspection of the officer of the Government whose inspections have been periodical, and at very close intervals, ever since the war began.

Mr. OLIVER: Did my hon. friend say that they were selling less, or at a less price?

Mr. MEIGHEN: They are selling at about two cents and a small fraction more, which just compensates them for the increased freight rate, but with no compensation at all for the increased cost of material, labour, and expenses of handling in the United States after the outbreak of war.

Mr. OLIVER: I was asking as to the quantity.

Mr. MEIGHEN: They are selling more. I was not able to get the output to Great Britain, and I do not wish to state it to the House authoritatively, but Mr. Bell informed me that it was 25 or 30 per cent more than in 1915. That makes it clear that by virtue of this arrangement effected by this Government, with the approval of the British Government, the price of nickel to the United Kingdom has been maintained at a rate less indeed to the company selling it than before the war. In face of these facts, which are established as being correct in the only way that facts can be established, a member rises in this House and states that this arrangement permits nickel to go to Germany at any price they want to buy it at, and doubles the price to Great Britain, since the war. But he did not stop there. He told us that we had permitted this company to make a profit of $25,000,000 a year. That is a pretty good profit. He could have had access to the balance sheet of the company: at all events, he could have had access to

the last published on the 31st March, 1915. I have that balance sheet before me. It shows the dividend paid, it shows the profits made, and the profits, as established by the balance sheet, are not $25,000,000 a year at all, but are represented by the sum which was put aside and added to the reserve, namely, $309,377.71, plus what was paid in dividends, $5,288,693.50, or a total of about $5,590,000, instead of $25,000,000, as stated by the hon. member for Assiniboia. These are the profits of the company which are being paid now, as shown by the balance sheet. I do not think I am saying anything that I should not say in regard to the corporation. Profits are now being paid at the rate of 20 per cent per year, which I think will not be contended to be—I know it will not be by one hon. gentleman who has spoken already in this debate—a high percentage for a mining company which extracts something from its capital every year and embodies it in its profit; that is to say, that some of the capital of the company always appears in the profit that is shown by the balance sheet. So far from having a profit of $25,000,000 a year, they have something like $5,590,000; so far from being controlled by a corporation of people in Germany and Austria-Hungary, they have only one share in a thousand; so far from doubling their usual rate against Great Britain, they are selling at a less rate to themselves than before the war; so far from giving nickel to Germany at any price they want to pay, there has not been a pound of nickel sent by that company, or through that company in any way, to Germany or Germany's allies since the war began.

Mr. OLIVER: What was the period during which they made that profit of $5,590,000?

Mr. MEIGHEN: The year ended March 31, 1915.

Mr. OLIVER: Just a year?

Mr. MEIGHEN: Yes, but they were not paying 20 per cent before that. They have only paid that for one quarter. Previous to that time, instead of 5 per cent per quarter, they were paying 2½ per cent per quarter, or 10 per cent per year, and, on the preferred stock, 6 per cent.

There may be said to remain only one feature of this question which I have not covered; that is to say, as to whether or not it would be possible by an export duty on nickel to bring to this country the refineries that are now in New Jersey and make all the profit Canada's, and not merely part of the profit. If it could be done by the ordinary means, by means not too drastic, and which would not involve other countries in antipathy to us, I certainly should be in favour of that being done. Hon. gentlemen opposite say that the cardinal point of our offence, where we erred most grievously, was in not putting an export duty on nickel after the war began. When hon. gentlemen stand up and ask us to place an export duty on nickel to prevent its exportation now that the war is on, I say that, to put it mildly, they have not a very serious sense of responsibility, if they understand the facts at all. In the first place, to place an export duty on nickel would mean the prevention of a supply of nickel for making the munitions of war ordered by Great Britain and her Allies in the United States. Is that a consideration that appeals at all to the hon. member for Assiniboia? Does he think that this Government should have prevented the exportation of nickel, and thereby prevented the Allies of this Empire from obtaining munitions of war in the United States? According to his own argument, it would do it.

Mr. TURRIFF: No.

Mr. MEIGHEN: It would not do it? They could still make munitions without nickel?

Mr. TURRIFF: No.

Mr. MEIGHEN: They could not? If they could not get nickel, then how could they make munitions of war?

Mr. TURRIFF: It could be refined in England, for instance.

Mr. MEIGHEN: How could the United States get nickel if we sent it to England to be refined? Would it be shipped back to the United States, and used there for making munitions of war?

Mr. TURRIFF: Yes.

Mr. MEIGHEN: Then, this is the proposal of the hon. member for Assiniboia. We should put an export duty on nickel to the United States, compel our nickel matte to go over to England to be refined, have it shipped back to the United States, and there made into munitions to supply the Allies in this war. That would be a decidedly economical arrangement.

Mr. TURRIFF: It could be refined in Canada.

Mr. MEIGHEN: Has the hon. member any idea how long it would take to establish refineries in this country, even if they

were practicable from a business standpoint. What is my hon. friend's idea of the time necessary?

Mr. TURRIFF: Make your own speech.

Mr. MEIGHEN: I think he will let me alone now! He refuses to answer for the first time. The one in this country who should know best, one who has made a study of the subject and who is unprejudiced, tells me that to establish refineries to the extent that would be necessary for the purpose would take about a year. Does the hon. member think that we should have stopped the utilization of Canadian nickel for a length of time that at the beginning of the war would have appeared longer than the war would last? Would that have been sensible business? Would it have been sensible for us to have incurred the antipathy, or at all events the possible antipathy, of the United States by denying to that country the only source of supply whereby they could be of real use to our Allies? It is a question that involves the attitude of that country towards Canada, and it is a question that also involves the attitude of Great Britain towards this country; for Great Britain in the course of this war should have something to say as to how we control our policy in regard to this vital asset. And the British Government has stood beside the Government of Canada, and has said that the course we are taking is the best course not only in her interests, but in the interests of our Allies as well. I think it is only fair to assume, and I know the people of Canada will assume, that the British Government know their own business in this matter just a trifle better than the hon. member for Assiniboia.

I have no intention of further detaining the House; but before I sit down I apologize to the House for reverting to just one phase of the early discussion that I think should be kept in mind by the hon. members when they consider, as every man seriously does, the condition of this country from a business standpoint in view of the tremendous responsibility we are facing now. It has been argued by hon. gentlemen opposite that we pay no attention to the call of economy, that we go ahead throwing away money here and there, employing civil servants beyond number, squandering the assets of Canada, and taxing the people of Canada to make good the loss. All that is said in sentence after sentence, and without very much attempt to ascertain the actual facts. But it is important that the people of Canada should know the actual facts, and know what confidence to place in these wild and rambling assertions. The assertion has been made in this debate that we have added some 11,000 to the Civil Service since 1910-11. Well, in the first place, the Civil Service of Canada has expanded, not so much in personnel as in extent; it covers a much greater service than it did in 1911. We have services that were never in existence then. We have other services which have been amplified, which are reaching out their good offices and doing more and more year by year for the people of this country. Hon. gentlemen opposite know it. They talk lightly about expenditure in the Post Office Department. But they do not state that the expenditure means that the mails of this country are year by year being carried in greater and greater degree to the very doors of the farmers of this country. That is an extension of the service that involves an additional cost of over a million dollars. Hon. gentlemen do not admit that we have added parcel post to the service of this country, and that by virtue of the parcel post system a large portion of the extra expenditure is accounted for. When they state that about 11,000 have been added to the Civil Service, if they have listened to what has been delivered in this House and have read what has been placed on the table in this House, they ought to know that that is not a fact. It is true a return has been brought down showing that after allowing for resignations and dismissals there have been 11,000 appointments. Does that show that there are 11,000 more civil servants? It does not show it, and the hon. member for Edmonton knows it. He well knows that month after month in this country we make temporary appointments as the demand appears. For instance, as has been shown many a time, in almost all the larger post offices of this country three, four or a dozen extra men are taken on, and sometimes hundreds in the large cities, just for the Christmas season. That accounts for hundreds, yes thousands, of those eleven thousand. The number of civil servants did not increase by reason of those appointments; the appointments were made, but the appointments lapsed with the expiration of the temporary period for which they were made. That applies all through the Civil Service. When you eliminate this factor, the result is not only justified but demanded. The increase that has taken place, whatever it is, was demanded by the

amplification of the Civil Service, and the greater service that is being rendered the people.

Mr. PROULX: Does my hon. friend believe that the increase of business at Quebec warranted an increase of 180 civil servants in the post office?

Mr. MEIGHEN: The hon. gentleman has been informed by the Postmaster General, who I think ought to know, that there has been no such increase at all.

Mr. PROULX: The figures were given by the hon. member for Rouville (Mr. Lemieux) the other evening.

Mr. MEIGHEN: The hon. gentleman was not in the House this afternoon, or he would never quote the hon. member for Rouville.

Mr. PROULX: He quoted the figures brought down by the Postmaster General.

Mr. MEIGHEN: No, he did not quote. The hon. gentleman does not see the difference between a quotation and a mere assertion. He simply made the assertion. I took up one of those assertions of his this afternoon, and made a few quotations which did not altogether harmonize with the assertion. It seems to have passed out of the minds of hon. gentlemen opposite altogether that in the expenditures we have made we have been paying the promissory notes made by hon. gentlemen opposite when they were in power. They find fault with us for paying the debts they incurred, for discharging the obligations they fastened upon the necks of the taxpayers of this country. We have spent over $60,000,000 completing their National Transcontinental railway. I hope they are satisfied with the returns that are coming in from that road. We are paying $14,000,000 on the Hudson Bay railway, and we take full responsibility for that ourselves. We endorse that road; we stand behind it. Does the hon. member for Edmonton repudiate that road?

Mr. OLIVER: Certainly not.

Mr. MEIGHEN: I wish he would convert some of the hon. gentlemen around him. They would like us to stop with the road half built.

Mr. OLIVER: I repudiate Port Nelson.

Mr. MEIGHEN: Does my hon. friend repudiate the Quebec bridge? We take full responsibility for Port Nelson and for the Hudson Bay railway. We intend, if the resources of this country are sufficient for the purpose, having regard to all our other obligations, to carry that work through to completion, and to make it of service for our western country; but, besides the Hudson Bay railway and the National Transcontinental railway, we have the Quebec bridge that flutters still like a hideous nightmare before this country, and that has been hanging over us year after year. We have spent on the Quebec bridge alone some $10,810,500 and it is not nearly completed yet. For these items alone we have spent something over $85,000,000 since we came into power. Furthermore, when the hon. member for Edmonton speaks about the facility with which the Minister of Finance should be able to raise his money, does he recall that, by virtue of a certain implementing clause, the Minister of Finance has had to raise some $34,000,000—I think more than that—in order to redeem the bonds of the Grand Trunk Pacific Railway?

Sir THOMAS WHITE: Nearly $40,000,000.

Mr. MEIGHEN: Of course, that is by way of investment. I do not contend that that is added expenditure, but there is about $12,000,000 of it which we have had to pay out and which is added to expenditure. On those four items alone there has been added to the expenditure of the country over $97,000,000. Now, who is responsible for that expenditure? Are hon. gentlemen opposite not responsible? For three of them they alone are responsible and for the other one they are jointly responsible with us. But we do not care about their responsibility; we take it upon ourselves; we are going ahead with the work, and we hope to make it a success—I refer to the Hudson Bay railway.

Now, I do not know that we are in such a bad position. Let me epitomize our financial statement. We have for next year a contemplated expenditure of $160,000,000, $20,000,000 of which represents added interest next year because of the war and nothing but the war, and $2,000,000 for pensions.

Mr. OLIVER: And what amount of war debt?

Mr. MEIGHEN: The amount that it would take to make $20,000,000 yearly at five per cent.

Mr. OLIVER: Yes. You charge up everything.

Mr. MEIGHEN: No, we do not; we charge up war debt only. The hon. member can get a statement of that at any time that he wants it. $20,000,000 for interest charges and $2,000,000 for pensions make $22,000,000 which is, strictly speaking, a charge against the war, although it does not so appear on the books of the country. That amount deducted from $160,000,000 would leave $138,000,000, the contemplated expenditure for next year. The expenditure of hon. gentlemen opposite in 1909, seven years ago, was $133,500,000 and, in 1909, the revenue was just half of what it is this year. Is that extravagance in Government?

Mr. OLIVER: Sure.

Mr. MEIGHEN: Oh, no, it was seven years ago. I do not think the hon. gentleman understands what the extravagance of his Government was.

Mr. OLIVER: There is $50,000,000 more taxation now.

Mr. MEIGHEN: $50,000,000 more taxation and, with it we have to pay $85,000,000 that hon. gentlemen opposite incurred, to say nothing of the war.

Before I sit down I feel it my duty to speak on my own behalf—and I know that I can speak on behalf of the Government of the day—in regard to a remark that fell from the lips of the hon. member for Rimouski (Mr. Boulay), who sits on this side of the House. I did not understand his remark at the time, but in his remark, which I will quote as I translated it myself—and I think I translated it correctly—I do not associate myself and this Government does not associate itself. The hon. member for Rimouski stated that one of the less desirable features of our immigration was the immigration of Jewish people. He further stated that it should be the policy of the Government to restrict that immigration, and that they added nothing to the wealth of this country. In so far as I have come into contact with the Jewish people, they are a creditable people from end to end of this country, and at this time, when hon. members on both sides know quite well how the adherents of that faith throughout Canada are joining hands with ourselves in the awful struggle which we are now engaged, and in doing their full share manfully, cheerfully, and effectively, it is our duty to say that we welcome them to these shores as we have always done, and that we hope they will come in larger numbers in future years. I say that with no idea of catching votes, because they would disdain such a thing at my hands. I know that the same sentiment prevails with hon. gentlemen opposite as does on this side of the House.

Coming from Western Canada, and representing a district that is devoted to, and the prosperity of which is founded in agriculture, and almost in agriculture alone, I am doing no more than justice to the Minister of Finance of the day when I say that the people of that country will regard his Budget proposals of this year as not only eminently fair, but as eminently generous in respect of the farmers of Western Canada. I know they will take them—and no reasonable man can take them otherwise—as a demonstration that he and this Government have at heart the best interest of agriculture and the best interest of Canada in general, and that there is nothing more remote from either the intention or the policy of this Government than a desire to do an injustice to the farmers, whether in the West or in the East. The burden of the war debt is being placed upon the shoulders of those who control large industries in Canada, and who, from those industries, make large profits. Upon no other does this tax fall. It may be that later on other sources of revenue may have to be tapped. For the present, however, we feel that we are raising sufficient money and that we are going far enough when we ask those who should first be called upon to pay this large contribution in order to help this country bear her share of the cost of war. This tax is equitable and just. It is also an evidence that this Government has at heart the best interests of the farmer, and it is also an evidence of the courage and resource and initiative of the eminently capable Minister of Finance who now controls the financial policy of this country. On behalf of Western Canada, I say to him that his action will be so regarded there. On behalf of the farmers throughout Canada, I believe I can say to him that it is an evidence to them that no wild and reckless assertions will ever controvert, that he and the Government with which he is associated are determined to place burdens upon the shoulders of those who can bear them best, and to offer the utmost facilities and the best possible chance for prosperity to those who are at the basis of our prosperity, namely, the agriculturists of this country.

Mr. E. M. MACDONALD (Pictou): Mr. Speaker, I always listen with interest to my hon. friend the Solicitor General (Mr. Meighen) when he assumes a task similar to the one he undertook this afternoon. Whenever a member of the Government feels that he is in a bad way, that he requires some special pleading, some argument for the defence, then my hon. friend the Solicitor General is closely briefed and called in to address the jury on behalf of the defendant. The Minister of Finance (Sir Thomas White), since he introduced this strange and curious Budget, has been hearing from the country, he has been receiving resolutions from boards of trade and other organizations; and gradually the truth is being made plain that at a time of stress and storm, when we should be conserving our resources, and when we should have an equitable system of taxation for the raising of larger revenues, the Minister of Finance is taxing industry. The Minister of Finance has heard these complaints, he knows that he is being found out, and so has called upon the Solicitor General to make an argument in his behalf. And the Solicitor General has talked about everything under the sun except the new taxation. He has been briefed with regard to the International Nickel Company, as to who their stockholders are and who they are not, where they sell their product and where they do not, and all the rest of it. He has taken up a great proportion of his speech with the discussion of matters, the information concerning which is entirely under his own hand. I leave it to his friends to deal with him, as no doubt they will, in regard to that matter. But in regard to the Budget, he descended to what might be called demagoguery, to special pleading, when he said that he would be able to tell the farmers of the West that, although every man in this land ought to bear his share of the burden of taxation according to his capacity in this time of war, yet the Minister of Finance was giving us class legislation and the favoured class ought to thank him because they are being let off. That is not the kind of statesmanship we ought to have at this time of our history. Let us have the burden of this war distributed equitably and fairly upon those who can pay—not upon one particular class but upon all classes who are in a position to pay. I shall deal with that phase of the question later on, but I propose, before going into it, to discuss the reasons that have been given for the Minister of Finance imposing taxation in the way he is doing.

The Solicitor General argued, with a temerity which was really wonderful even for him, that there had been no extravagance by this Government. Does he suppose the members of this House have not read the public accounts? Do the Minister of Finance and his colleagues believe that this country does not know the story that is writ of their extravagance ever since they took their places on the treasury benches? The keynote of their action since 1911 was given in the statement of my hon. friend from Queens, P.E.I., when he said, "Let us dash away and spend the money." That is what this Minister of Finance has been doing ever since the hon. member for Queens, P.E.I., gave the keynote. Let me take one statement at the close of the Solicitor General's speech. He dealt with the charge made from this side that 23,000 civil servants had been appointed since the Government came into power. He suggested, by a species of innuendo, that no fault should be found with that because the men they had appointed were working very hard. But, after dodging all around the question, he admitted that 12,000 more civil servants are now in the employ of this country than there were in 1911. Every practical man knows that the population of Canada is about what it was five years ago. Will any sane person suggest that a government is economical in employing 12,000 more civil servants than we had five years ago? Will it be pretended that, with no increase in the numbers of our people, we require 12,000 more men to carry on our public business than we did before?

But this story does not rest merely upon the number of men appointed. Take the statement issued by the Minister of Finance under his own hand with regard to the cost of collecting revenue, a matter which is under the control of the Minister of Finance, for he is the one who is supposed to keep the hand of check upon his reckless colleagues. According to this statement issued by the minister, the cost of collecting revenue in this country in 1910-11 was $24,951,636.34. Now, let me call your attention to what has been done by this economical Government whose eulogy has been sounded by the Solicitor General for its prudent management of affairs. The cost of collecting revenue last year was no less than $42,232,952.94. In other words, these gentlemen paid out approximately

$18,000,000 more for the collection of revenue than was paid in 1911-12 by the Liberal Government. And they have collected, not as much but less revenue. According to this blue-book, the increase in the amount of revenue collected in 1914-15 over 1910-11 is just $16,000,000. In other words, this Government pays $18,000,000 in extra expenses under the head of collection of revenue for the purpose of adding to the revenue a less amount, namely, $16,000,000.

Now, let us calmly and quietly examine the history of these gentlemen a little further. In 1914, their deficit was $21,695,224; in 1915, their deficit was $43,997,114; making a total deficit in these two years of $65,692,338.

These deficits have to be provided for; they form part of the debt of the country. My hon. friend would like the people of this country to believe that he is imposing these extra taxes on account of the war, whereas he knows in his own heart that he is using the war as a cloak to cover the extravagance and mismanagement which resulted in a deficit of $65,000,000 in two years.

The hon. Solicitor General made some curious comparisons concerning expenditures, which I shall refer to in detail later. Let us consider for a moment what the situation was in 1911. In that year the consolidated fund expenditure was approximately $87,000,000, and capital expenditure $30,000,000, a total of about $117,000,000. In 1914, my hon. friend the economist spent under consolidated fund $127,000,000, and for capital purposes $37,000,000, a total of $164,000,000. In 1915 he spent $135,000,000 on consolidated fund account, and $41,000,000 on capital account, a total of $176,000,000. This amount was $58,000,000 in excess of what was spent in 1911, with practically the same population in the country. There was no justification whatever for that increased expenditure. In 1911 the total expenditure of this country was at the rate of $16.57 per head. In 1914, based on a population of 7,500,000, the rate was $24 per capita, an increase of $8 per head, the result of extravagance and mismanagement which is clearly apparent to every hon. gentleman who studies the public accounts of Canada. In 1911, we spent $8,000,000 on public works. In 1914-15, the amount spent under this head was $19,000,000. The hon. minister talks about the Grand Trunk Pacific commitments being responsible for deficits. How can the hon. minister have the audacity to say that, when, in one department of the Government alone, the Department of Public Works, there has been an increased expenditure of $11,000,000 since this Government came into power? This year, the minister estimates that the expenditure in that department will be $18,685,000, or over $10,000,000 more than was spent in 1911 with practically the same population.

My hon. friend referred to the Post Office Department. In 1911 the expenditure of the Post Office Department was $7,954,000; in 1914, $12,800,000; in 1915, $15,961,000. Here we have an increase in five years of $8,000,000 in that department alone, with practically the same population. Yet my hon. friend the Minister of Finance has the audacity to talk about a heritage being left him by his predecessor. The hon. Finance Minister last year, in the most solemn tones that he could command, asked for the imposition of an additional tax of one cent on every letter that went through the mails of this country, for the purpose, forsooth, of meeting war expenditure. Taxes upon patent medicines and upon various things were included, the minister saying that the people should willingly accept the imposition of this taxation in order that we might thereby provide the funds to pay the interest upon the debt that we were contracting in order to fight the battles of old England. I tell you, Mr. Speaker, that the proceeds of not one of the stamps that were put upon letters in all parts of the country were devoted to war purposes. Every cent and every dollar made up from this source was appropriated by the Post Office Department for the purpose of paying the extra clerks in Montreal and Quebec, and of meeting the boundless run of extravagance that was begun by Hon. Mr. Pelletier, and that is being continued by the present Postmaster General. I should like the hon. Solicitor General to tell the House why this $3,000,000 that was wrung from the people under the guise of taxation to meet war purposes, was appropriated by the Post Office Department for the purpose to which I have referred.

The hon. Finance Minister has the nerve to say to the business interests of the country: you may not proceed along the lines upon which you have been proceeding unless you give us $25,000,000. What guarantee have we that when we meet next year the hon. minister will not apologize to Parliament, or endeavour to suppress the information, as he has done hitherto in making his financial statements, for appropriating a large portion of the $25,000,000 to

some department of the Government in order to gratify the wishes of party heelers who want offices? The Solicitor General, in his special pleading, talked about the rural mail services being extended. Well, if the rural mail service is to be extended, nobody is going to find fault if done on right lines. The idea was originated by the hon. member for Rouville (Hon. Rodolphe Lemieux) when he was Postmaster General of this country; he it was who first established rural mail delivery in Canada. But let me give my hon. friend an example of rural mail service. In the county of Pictou we have a line of railway which runs up the East river to a place called Sunny Brae, a distance of eight miles. There are four or five stations along this line of railway, and formerly the mail bags were thrown off at the station and taken by the carriers to the post offices. Thus at small expense, the whole of the people in that country were served on both sides of the river by a proper mail delivery. But a political friend of the hon. gentlemen opposite wanted to get a job, Would you believe it, Mr. Speaker, that part of the money that was taken from the people under the guise of a war tax is being appropriated to pay this man a large sum for carrying the mail up one side of the river and down the other, while the railway trains, which are running back and forth every day in that district, are not utilized for that purpose?

Mr. LEMIEUX: Pelletier and progress.

Mr. MACDONALD: It is not only Pelletier and progress; I think the present Postmaster General is also to blame for these things. Day after day, unnecessary routes are being opened to provide jobs for Conservative politicians throughout the country. My hon. friends speak about it being the duty of the Canadian people to do everything they can, in the way of men and money, to bring the war to a successful issue. Thank God, the Canadian people will stand by this issue, in men and in money; but they do not want to see their money misappropriated or obtained from them under false pretenses. That is what the Minister of Finance is doing this year, and that is what he did last year.

Previous to 1897, when this country was relieved of the incubus of a Conservative Government, there were being dragged into Canada a beggarly 20,000 people a year. In 1911, under the progressive policy initiated by the Liberal party, 315,000 people came into Canada. This shows where Canada stood in the estimation of the world, after the policies of the two political parties in this country had become generally known. Then, how many people do you suppose came into Canada last year? Only 144,000 —going down the scale again. Let us see the figures. In 1911, when we received 311,000 people, there was spent for immigration $1,079,130. Last year, when 144,000 people came into Canada, practically one-third of the number that had come in five years ago, my hon. friend the spendthrift Minister of Finance allowed the Department of Immigration to spend how much money? $1,875,000, or over $800,000 more than was spent five years before, when immigrants were coming into Canada in such large numbers. On what grounds can hon. gentlemen defend such extravagance? As a matter of fact, the results are that in 1911 it cost the Canadian people $3.46 per head for every immigrant that came into Canada, and in 1915 it cost $13.02. If the Minister of Finance thinks he can delude the people of Canada by talking about war burdens and the necessities of war while this spendthrift expenditure is going on, he is mistaken. Does he expect to be able to hide his head like the ostrich and escape all possible attention from the people of Canada in regard to this matter? It is no wonder he asks his colleague the Solicitor General to come here to-night and talk about the International Nickel Company, or any other old company, as long as he keeps away from the crux of this question, the extravagance of the Government and this useless expenditure which it is putting on the country. He is fulfilling the very apt expression of the hon. member for Queens, Prince Edward Island—he is dashing away and letting all his colleagues dash away and spend all the money, as they have been doing during the last five years.

The Solicitor General told us this afternoon that the hon. member for Edmonton (Mr. Oliver) had no business to suggest there being any doubt about prosperity in this country. Well, if he has no right to express any doubt, I should like to know what the Minister of Finance meant when, in the most solemn tones, in his Budget speech he warned the Dominion of Canada that the present prosperity was precarious and transient and dependent on the continuance of the war.

Sir THOMAS WHITE: My hon. friend, I am sure, does not wish to misquote me.

Let him read back a little and he will see that I said in so far as it depended on abnormal prices.

Mr. MACDONALD: I will read all my hon. friend wishes me to.

Sir THOMAS WHITE: Well, it is pretty good; you might do worse.

Mr. MACDONALD: He thinks so, anyway. My hon. friend said:

> Apart altogether from the higher grounds, it is to be pointed out that in so far as our present prosperity is based upon abnormal prices for our produce and upon the production of war material, it is precarious and transient, and dependent upon the continuance of the war and its conditions.

If he will be good enough to tell me to what other things the conditions of this prosperity in Canada is due besides the abnormal prices of our products—

Sir THOMAS WHITE: I should think the very excellent government we have been giving.

Mr. MACDONALD: My hon. friend is retreating.

Mr. LEMIEUX: He is dashing away.

Mr. MACDONALD: He is not dashing away; rather he is retreating very ignominiously, because if that is the best explanation he can give us and the Canadian people, my hon. friend has a very poor answer, entirely unworthy of a Minister of Finance.

10 p.m.

Sir THOMAS WHITE: I do not think my hon. friend is serious.

Mr. MACDONALD: Perhaps my hon. friend will have occasion to treat me seriously before I get through. If he can controvert a single statement I have made in regard to the expenditures, I shall be delighted to give way to him. He cannot do so, and it is of no use his making a remark of that kind, which emanates absolutely from weakness, because he knows he cannot controvert the assertions I have made.

He suggested this afternoon that he had to pay the debts of his predecessors and that the Transcontinental railway was responsible for the deficits. What are the facts? My hon. friend was carried along with the wave of prosperity initiated under the Liberal rule—and it is well known to every business man that from 1900 to 1911 there was not a day of business depression in this country—and for two years after he took office he was moving on the crest of the wave of prosperity and had no difficulty.

[Sir Thomas White.]

But what occurred to my hon. friend? He first had a reduction of the debt and then it increased again. I find that for 1914 my hon. friend increased the debt by $21,000,000. Previous to that, in 1913 and 1912, he had reductions of the debt.

Sir THOMAS WHITE: How much?

Mr. MACDONALD: In one instance $122,000 and in another instance $25,000,000.

Sir THOMAS WHITE: Can you show any such reduction in the Liberal regime?

Mr. MACDONALD: We will go down the line and see. I find a series of reductions amounting to 4, 6, 5, 3, 2 and 2 millions of dollars.

Sir THOMAS WHITE: Will my hon. friend kindly say what was the increase in the national debt of Canada from 1907 to 1911?

Mr. MACDONALD: I have not the figures totalled, but I can give them in detail.

Sir THOMAS WHITE: The increase in the net national debt.

Mr. MACDONALD: From 1907 to 1911 the increases in the debt were fourteen, forty-five and twelve millions, a total of $71,000,000.

Sir THOMAS WHITE: That is to say, in four years the Liberal Government increased the net national debt by $71,000,000.

Mr. MACDONALD: Yes.

Sir THOMAS WHITE: Until this war broke out how much did this Government increase the net national debt?

Mr. MACDONALD: In 1914—

Sir THOMAS WHITE: In 1912, 1913 and 1914?

Mr. MACDONALD: My hon. friend had just better take the result of his operations in regard to the whole matter.

Some hon. MEMBERS: Oh, oh.

Mr. MACDONALD: Very well, we will take it that way, although I cannot see what assistance my hon. friend gets from it. The decrease in 1911 was our decrease.

Sir THOMAS WHITE: The next year.

Mr. MACDONALD: In 1913 the decrease of debt was $25,000,000. My hon. friend had a decrease in two years and an increase in the last two years. That is my hon. friend's situation as shown here.

Sir THOMAS WHITE: A decrease of $25,000,000.

Mr. MACDONALD: Certainly, but my hon. friend is not going to say that because in one year he had a decrease of debt, that would explain the increase of debt in another year.

Sir THOMAS WHITE: The war explains it.

Mr. MACDONALD: The war does not. My hon. friend will not be able to rely on any such explanation in regard to it. He will find, if he looks at the expenditure, that the expenditure which was chargeable to capital resulted in the increase of debt in 1914. My hon. friend wants to say that this was all due to the Transcontinental railway. In that year $12,000,000 was paid on account of the National Transcontinental railway. That does not account for the $21,000,000 increase of debt. There was $9,000,000 besides that. Then, in addition, in the year 1915—

Sir THOMAS WHITE: The war.

Mr. MACDONALD: The war? Well, my hon. friend increased the debt by $113,000,000. The increase of the debt by my hon. friend in 1914 and 1915 amounted to $135,074,457.53. We deduct from that the cost of the Transcontinental railway, which he paid in these two years, and which amounted to $22,502,037.75. That leaves a debt for which my hon. friend, inclusive of the war debt, was responsible, namely, $112,572,419.78. My hon. friend charges up on account of the war last year $60,750,476.01. I have accounted for the war and for the Transcontinental railway, and still my hon. friend is responsible for a debt of $51,821,943.

Sir THOMAS WHITE: Is my hon. friend not aware that at the outbreak of the war our revenues were cut in half?

Mr. MACDONALD: I am speaking of the debt. My hon. friend this afternoon, in discussing the question with my hon. friend from Edmonton, said that it was the Transcontinental railway that caused him to go into debt. But, when we come to analyze these figures, when we take the war out, when we take out all that he can charge against the Transcontinental railway, we find that he still has put this country into debt to the extent of $51,000,000, and he cannot deny it in the slightest degree. Let us hereafter have no quibbling on the part of these hon. gentlemen about the Transcontinental railway being responsible for their having got this country into debt. My hon. friend has, by the extravagance of himself and his friends, put an additional debt of $51,000,000 upon the people of this country apart from the war and the Transcontinental railway together, and the hon. gentleman went on with these extravagant expenditures with a war on. The taxation was appropriated by the Post Office Department, and other departments, for their own purposes. It is no wonder that he has this additional debt of $51,000,000, and it is no wonder that there is a shortage of money which he is trying to get the Canadian people to make up under the guise of these excessive impositions for war taxation. That is the position of my hon. friend in regard to the matter and from that situation my hon. friend cannot escape.

The Solicitor General was trying to draw a herring across the trail very ingeniously this afternoon. He had gone and hunted up somewhere the figures of expenditure in England. Those of us who sit on the Opposition benches have some difficulty these days in getting hold of any data at all on account of the library being inconvenient. My hon. friend went into some wonderful calculations as a result of which he told us that the British people were spending £1,000,000 more than they did last year on services exclusive of the war. My hon. friend is too astute a gentleman in making an argument not to know that unless you give to the House the premises in regard to the proposition the conclusion is not worth very much. Until we see the items that go to make up that expenditure my hon. friend should refrain from making the argument.

Mr. MEIGHEN: I read them out.

Mr. MACDONALD: Yes, with wonderful detail! My hon. friend has a very luminous mind, but if he thinks for one moment that the data which he ventured to give this afternoon contains every item of which the British Budget is made up, his luminosity is not as great as he believes it is.

Mr. MEIGHEN: What I gave was all exclusive of the war. What is the difference how it is made up?

Mr. MACDONALD: It makes a good deal of difference. I venture to say that from one end of the British Budget to the other you have not $20,000,000 or $25,000,000 put in there that the Government say to the people they are not going to spend at all.

Mr. MEIGHEN: That is all that they had spent.

Mr. MACDONALD: What I would like this Government to do is to come down to this House and be frank and businesslike enough to say what they want and what they are going to spend. We have a right to expect from the Minister of Finance that, when he comes here with the Estimates for this year, he is asking only the amount of money that the Government propose to expend and that he will not come down and say: We are asking for so much but we do not expect to spend $20,000,000 or $25,000,000 of the amount placed in the Estimates. The Solicitor General recognized the weakness of the position because he said it is debatable whether that should be in the Estimates or not. But, of course, with a casuistry worthy of himself, he at once shifted his position and said that the question was not debatable as to whether this sum would be spent or not. With all deference, it does seem to me that my hon. friend has not submitted a proposition that is absolutely indisputable. To say that the Government would not spend money which was voted by Parliament if they saw fit to do so, or if political pressure required that they should do so, is to say something that is not borne out by what has already taken place in this country. I call to mind a matter on which I put a question to the Government now two days ago. There was an item providing for the expenditure on a public building in one of the counties of Nova Scotia. It was there last year. It was announced last year that no money was going to be spent. In the meantime they proceeded to spend $2,500 of that in buying a site for the public building for which money had been voted. If you can depart from this principle in one respect you can depart from it in another. If it was right to violate the statement made in the House last year, that these items were not going to be spent, by appropriating $2,500 for the purpose of buying land, it is right and proper to spend the whole amount of money. Why should not the Minister of Finance, when he comes to the people and asks them to submit to an abnormal taxation measure, put his cards on the table? Why does he not say to them: We propose to ask the country to spend a certain, definite sum of money this year? Then the people will know just what the Government are going to do. My hon. friend does not do that. My hon. friend says: It is true I am asking for so many millions of dollars this year but I want you to take my word that I am not going to spend so many millions of dollars by about $25,000,000. Is that business? What would you think of the directorate of any vast enterprise that would come to the shareholders, if they were proposing to make an extra call upon their stock, and say: Our bill amounts to $160,000,000, here are the items, and we want to tax you on your stock to the extent of $25,000,0000 or $30,000,000, but we are not going to expend the $25,000,000 or $30,000,000? Would not the shareholders say to the directors: Why not save $25,000,000 out of the Estimates and then you would not need to tax us at all? I would like to know what answer these hon. gentlemen can make to this proposition. They put Estimates before Parliament, carry them through the House, make them law, take power to spend this money and yet say: "We are not going to spend it." The only excuse that has been put forward is that possibly the war may come to an end in the meantime, and, if the war comes to an end, it would be nice to have the money there because we perhaps could spend it. There is nothing in that proposition. Nobody knows better than the Minister of Finance. Nobody knows better than he that with commitments in the form of debt of nearly $900,000,000 in this country, if the war was over, my hon. friend could not recklessly continue along the course which he began three years ago and keep dashing away with this extravagant expenditure because the people would decline to be taxed any further, and would rise against my hon. friend and see that he had no right to tax them nor to interfere with their taxation again. I submit that before my hon. friend proceeds with these proposals he should submit a list of the items to which he referred in his speech the other day, as items that would not be expended. He should let the country know where it stands, and where he stands, frankly, as a man who holds the key to the money chest of this country. My hon. friend is adopting a subterfuge in this matter. He is not playing fair with the Canadian people, and we shall watch with interest for the disclosure later on of his real reason.

The Minister of Finance proposes to tax every industry in this country from Vancouver to Halifax. When my hon. friend first made his proposals he very adroitly led the House to believe—and his press supported him—that he was taxing profits of

an abnormal character due to the war. The Finance Minister said in his speech the other day:

> Now, Mr. Speaker, there are in time of war many businesses and industries, which for one reason or another are able to maintain profits above the average return to capital in time of peace. There are others whose profits arise directly from the manufacture of munitions or the furnishing of supplies in connection with the war itself and are in some instances of abnormal character. It has appeared to the Government that persons, firms, and corporations whose profits have been such might well be called upon to contribute a share to the carrying on of the war.

And the word went forth in the Government press next day that the people who were making abnormal profits out of this war were to be taxed. But as a matter of fact it is the small business man in the villages and small towns of this country, who is engaged in a little industry that keeps his community going, whose life is part of its life, that is the man who is going to be hit. He has to pay taxes just the same as the big munition man. Under the guise of a war profit tax the Minister of Finance has gone down the whole line and taxed industry in every department, just as he added $51,000,000 to the debt of this country under the guise of war expenditure, when it was really to cover up his extravagance. The rich man under these proposals is let go. Many rich men are not engaged in industry at all. They sit quietly in their palatial homes, cutting off the coupons from their government and municipal bonds, and escape absolutely scott free under the minister's proposals, and they are the very ones who should be made to contribute first. Why, the Minister of Finance does not even pretend that these wealthy men should be taxed! He says, look at me, the wonderful Finance Minister, I am no longer under the control of the interests; I am not going to tax the farmer. And then he lets the bondholder, the Croesus in the palatial mansion, the man who is doing nothing for the building-up of the country, but sits in his chair cutting coupons and drawing dividends, go absolutely scott free; he is not made to contribute a farthing. Take the case of a man who made money out of real estate in the boom and people in the big cities all over this country did make money. These people are escaping from the Finance Minister. It is not very hard to escape from him anyway, because he is really not hunting for these people. There are over three hundred million dollars held in this country in American stocks and bonds. The owners of these securities cut their coupons and draw their interest and say: What a terrible thing this war is, and what a great thing that we and the farmers don't have to pay anything towards it. It is the poor business man in this country who is going to pay. The men holding securities have to pay nothing. My hon. friend should go to England and take a lesson from Lloyd George. He very soon got after the rich, after the landed proprietors such as the Dukes of Norfolk, Westminster and Rutland whom he made contribute to the extent of 35 per cent of their incomes.

Mr. MEIGHEN: What big landed proprietors would the hon. gentleman recommend us getting after in Canada?

Mr. MACDONALD: The Minister of Finance knows a few. If they have not the land now, they have the proceeds from the sale of the land. Many men became rich in the land boom a couple of years ago. The Minister of Finance in these proposals is shielding the rich, and extorting the war taxes from the small business men of this country, from the prospectors and miners of the Dominion of Canada. Take the case of two brothers, living in one of the smaller towns. One has $60,000 engaged in a local industry, employing men in his own community; the industry is a matter of pride locally. This man may make $10,000 a year and stays at home devoting his energies to building up the community where he was bred and born. His brother is a promoter who struck things right a few years ago and made two or three hundred thousand dollars out of some of his investments in lands or mines. He comes back home with his money and lives in the same town. Under the proposals of the minister he will not have to contribute a cent to the taxation, whereas his brother, if the $60,000 is invested in an incorporated company, will have to give up 25 per cent of his profits over 7 per cent. If he has an income of $10,000, he will have to give up at least $1,500 to the Government of the country. His brother who was lucky enough to strike things rich will not have to contribute a five-cent piece. That is the situation. The lawyers and bankers and stockbrokers with large incomes, in all the large cities of this country, will not have to contribute a five-cent piece. My hon. friend has been hearing during the last few days from the little vilages and towns where the industries are being carried

on. But he will hear more as the days go by and the business people of this country find out how they are being dealt with. Take mining companies, for instance. The prospects may be the finest in the world, all the indications may point to good results, but you simply have to have capital to develop a mine.

My hon. friend knows the condition of certain kinds of mining in this country. In the first place, capital does not go into mines except for speculative reasons; it does not go into mines for the same reason that it does into a settled business. The history of mining the world over indicates that gold and other mines may run along very well for a few years and then fade away, and in order to get capital interested in the development of mining rights, the first thing you have to get is a man of a speculative turn of mind who has some money and is prepared to take a chance. If you do not get such a man, you will not have your mine developed. The same thing is true of coal mines and of all other kinds of mines. Under the Budget proposals of the Minister of Finance, is a man who has a mining claim in Canada goes to New York and wants to put his mine into proper shape for being operated, he is compelled to say to the man to whom he is looking for capital: "All we can get out of this mine is 7 per cent; the moment we get more, the Government of Canada comes along and takes 25 per cent of the rest of the earnings." The man from New York will say: "Do you suppose that the Government of Canada, if this war continues, will increase the war taxation?" The man who owns the mine is in no position to assure him that his capital may not be compelled to bear further impositions. Under such circumstances, do you suppose it will be possible, under my hon. friend's proposed legislation, for any one in any branch of the mining business to obtain capital for the development of the mine in which he is interested? The result will be absolutely to paralyze the development of the mineral resources of this country.

Sir THOMAS WHITE: Is my hon. friend aware that in the United States there is a substantial income tax on mining companies?

Mr. MACDONALD: My hon. friend goes to the United States to speak about an income tax. Why did he not follow the example of the United States and put an income tax on every one? If my hon. friend had put an income tax on all the people of this country, fixing a minimum income to be taxed, and taxing companies also, then he would have been acting in an absolutely fair manner to every one. What I complain of in regard to my hon. friend is that he has made class legislation in taxation. He is not taxing every one; he is taxing only certain people; and just as certainly as my hon. friend is going to have class legislation in regard to taxation for the purpose of this war, he will some day find out that he will have class legislation in regard to other matters. A man will say: "If I am the only person that can be called upon to pay, let some one else do the fighting." Does my hon. friend not see the danger of inaugurating class legislation in taxation? Unless in all the relations of the Government of Canada with the people there is impressed on all sections of the country the feeling that the burdens imposed on account of this war are to be imposed in accordance with the capacity of each individual to bear them, my hon. friend will, before many years have passed, have trouble on his hands in the attitude of various sections of the Canadian people. When, in justification of his tax on mines, my hon. friend says that there is an income tax on American corporations, I say yes, but there is an income tax on more than mining companies in the United States. That is the way in which the United States went to work to raise money, and that is the course which my hon. friend ought to have pursued when he wanted to provide money for this war or for his extravagance. My hon. friend says to the mining operators to-day: "You may have spent years in waiting, but your earnings for the past two years are to be confiscated, and no matter what reason you may give, no matter what risk the man who has put money into your mine may have undertaken, we are going to make you pay twenty-five per cent of what you earn over seven per cent, and no guarantee can be given that this tax will not be greater later on." The result of my hon. friend's legislation, because it is class legislation, will be to paralyse the mining industry of this country.

Then, labour will be affected. There are certain industries which, my hon. says, are enjoying a fictitious prosperity on account of the war. There are persons working in those industries who complain that their wages are not satisfactory. Now, my hon. friend puts into the hands of capital-

ists an argument which absolutely bars the right of labour to get an increase. When a delegation of workmen comes to the man who owns the industry and says: "We want an increase in our wages, because you are sharing in the general prosperity, and we have been working hard and doing our best," he will say: "Oh, you must remember that we have to pay the Government 25 per cent of everything we make over 7 per cent; we have been having hard years, and, as we have had financial difficulties, we cannot do anything for you. If we did not have to pay this money to the Government, we might do something for your wages; but Sir Thomas White, the Minister of Finance, has barred all that; he has shut the door, and we cannot do anything for the labouring people of this country." That is what my hon. friend has done for labour. On what ground does he defend this legislation? It is confiscatory legislation, for which my hon. friend cannot find any precedent except in the most extreme cases.

Sir THOMAS WHITE: Is my hon. friend not aware that Finance Bill No. 2, introduced by the Right Hon. Mr. McKenna and passed in December last, is retroactive to the outbreak of the war?

Mr. MACDONALD. I was aware of that. Does my hon. friend think his extravagance has placed him in the position in which the British Government is?

Sir HERBERT AMES: We also are at war.

Mr. MACDONALD: My hon. friend from St. Antoine must not think that I forget that we are at war. He has been going around the country talking about the Patriotic Fund. I have a son going to the war, and I do not need my hon. friend to remind me that we are at war. In Great Britain to-day, with the commitments of that country, with its enormous expenditures, the methods of taxation pursued in the past involve the principle of direct taxation. The Minister of Finance is introducing direct taxation for the first time in this country, but when the proposal is made for an income tax he runs away from it. If he wants to cite what Mr. McKenna is doing in the way of taxation, why does he not follow him in the income tax?

Sir THOMAS WHITE: It is not necessary.

Mr. MACDONALD: I say that the situation in England is entirely different from the situation in Canada.

Sir THOMAS WHITE: The hon. gentleman asked me to give him a precedent for retroactive legislation. I met him squarely by citing the Finance Act passed in December last and made retroactive to the 4th of August, 1914. Does he deny that that is a precedent for retroactive legislation?

Mr. MACDONALD: The hon. gentleman may offer that as an illustration. But it is not worth anything unless the cases are parallel. Here he proposes to raise $25,000,000 and to do it by a direct tax, this being the first direct taxation applied in Canada. But he declines to put on an income tax that would bear fairly on all sections of the population and would make the people pay who can pay and ought to pay. He is adopting in this country legislation which is entirely unjustifiable, and seeks to justify it by citing the case of England when that case is not parallel.

Sir THOMAS WHITE: Does the hon. gentleman know of any income tax in Great Britain, the United States, or any other part of the world that is not based upon the previous year?

Mr. MACDONALD: The hon. gentleman has evaded my question again. I am dealing with a case in which the Government of Canada propose to raise about $25,000,000 by taxation. I say that he could raise that money without confiscatory legislation of this character, by means of an income tax fitted to the situation. But he is not content with an income tax, but proposes to tax industry, and in doing so to go back for two years, with all the chances of tangling up business in every part of this country.

Sir THOMAS WHITE: No.

Mr. MACDONALD: Of course he will. He will have to add to the army of 23,000 men that this Government has employed since 1911 a new army of men to send up and down this country from Vancouver to Sydney, going into the books of every firm and corporation to ascertain for the minister's information just what every man's business is, and where he stands, and what he has been doing with his money for the last two years.

Sir THOMAS WHITE: I would point out that that is precisely what I should have to

do if I adopted the income tax, but will not have to do under this Bill.

Mr. MACDONALD: How is the hon. gentleman going to do it?

Sir THOMAS WHITE: The hon. gentleman will find that out if he will have patience.

Mr. MACDONALD: The hon. gentleman comes down and with a great flourish lays this proposition before the House, but the secret of its working he keeps to himself. When does he propose to tell us? When the Bill is before us? What then is the sense of submitting a resolution? If he raises objection to the income tax on the ground that he will have to employ many men to administer it, I say he will have to employ twice as many for the system of taxation he proposes. He will have to employ accountants. The income tax could be dealt with by the customs officials and the post office officials; but he will not be able to send the ordinary officials of the country to examine critically the books of the industries throughout this country concerning which he must satisfy himself. He will have to have an army of accountants at work from one end of Canada to the other, going through the small firms of the quiet towns, turning business upside down and wanting to know what those business houses have done with every dollar they received since 1914. Does he think that that is an inaccurate representation of the case? I think the House has not discussed this question as it should be discussed. I am confident it will be impossible for him to put this Bill into operation except at tremendous expense to the country. It will cost him a big percentage of the $25,000,000 to collect the tax in the way he suggests. And he will overturn business. Suppose a man in a small business who has made commitments of one kind or another—has made contracts based upon faith in his financial condition. Once business men realize the full effect of this Bill, they will be compelled to such contracts, probably at great expense. Take the case of men who, thinking their financial position secure, though with small capital, have made contracts for new machinery, or some other engagements which they never would have made had they known that the minister was going to take twenty-five per cent of all the profit, over seven per cent, for two years. The Minister of Finance will have it in his power to wreck many business institutions in this country. That is altogether too much power to commit to his hands having regard to the tremendous expense the operation of the Bill will involve, the disarrangement of business, and the absolute unfairness. while entering upon the realm of direct taxation, of discrediting the fair and reasonable method of an income tax and instead putting on a business tax. The Solicitor General said this was not a tax on industry, but on the products of industry. That is one of those very fine distinctions that the Solicitor General alone can make. The result will be the same in the end.

My hon. friend has singled out this one particular element of the country and is going to make them pay.

Then, he is not going to tax the people with the watered stock. I have been trying to follow the remarks he has made in regard to that matter. There is one statement made by him with regard to something that was going to be put into the Bill, but I do not find that he is very definite about it. Here is his statement, at page 1159 of Hansard:

> The Bill to be founded on this resolution will have a definition of the amount paid on capital stock which will prevent any undue advantage to overcapitalize companies.

That is a very cryptic utterance, a very cryptic utterance indeed.

Mr. GRAHAM: And what did he say in the Budget speech?

Mr. MACDONALD: I was about to call the attention of the House to the statement made by the Minister on the Budget, reported at page 850 of Hansard, in regard to this very question of capital:

> We found it a practical impossibility to go behind the capitalization of companies and endeavour to ascertain the precise cash value of their assets as can be done in the case of individuals or partnerships.

If he found this a practical impossibility for the purpose referred to, has he now found the way?

Sir THOMAS WHITE: Certainly.

Mr. MACDONALD: Then, why has not he told us what it is so that we can discuss it?

Sir THOMAS WHITE: If the hon. gentleman will wait until the Bill comes down, or until the wording of the resolutions is considered, I shall be glad to give the precise wording. The object will be to prevent any undue advantage to over-capitalized companies, as against those whose stock has been fully paid up in cash. I see no difficulty in accomplishing that.

Mr. MACDONALD: Then, the Minister of Finance owes it to the House, seeing that he made this definite statement that he "found it a practical impossibility to go behind the capitalization of companies and endeavour to ascertain the precise cash value of their assets," to make the matter clear. But he tells us now that in the resolution which he will submit to the House, he is going to define "capital," which, according to the rules of interpretation of statutes, is a legislative declaration as to what these things mean. This is what his resolutions declare:

That the capital employed in the trade or business of an incorporated company having its head office or other principal place of business in Canada shall be the amount paid up on its capital stock.

Sir THOMAS WHITE: Assuming that there is a definition in the Bill of amount paid up on stock, does the hon. gentleman pretend to say that that provision of the Bill will not have legal force and effect? In other words, if the Bill says that amount paid up on stock means a certain thing, does my hon. friend as a lawyer say that it will not mean that thing?

Mr. MACDONALD: My hon. friend knows enough about law to know that there is not much use in giving a legal opinion on a hypothetical case, particularly when we are dealing with a concrete Act or a specific situation. My hon. friend, during the course of his Budget speech, told the House that he could not find any way of dealing with that question of capital except the way in which he put it in the resolution. There he defines capital simply and solely as amount paid up on the capital stock. Now he comes along and says: Although I did not know, when I brought down the Budget on February 17, how to deal with companies having watered stock, I have found a way since. My hon. friend has not told us what that way is; if he will tell me what it is, I will express my opinion upon it. I think my hon. friend ought to do that.

Sir THOMAS WHITE: My hon. friend is at present discussing the principle of this proposed legislation. As I have stated, when the House goes into committee on the resolutions, I shall be glad to lay the provisions of the Bill upon the table, and give the definition of amount paid up on stock to which I have referred. I am quite sure that it will meet the situation, and prevent any undue advantage to over-capitalized companies.

Mr. MACDONALD: My hon. friend is still an enigma. It is just as well that the House and the country should understand that on February 17, when my hon. friend brought down his Budget, he told the House that these companies would be taxed on the basis of their capital, which was defined as the amount paid up on the capital stock, and that he also stated that he found it to be practically impossible to go behind the capitalization of a company and ascertain the precise cash value of its assets.

Sir THOMAS WHITE: I say so still.

Mr. MACDONALD: My hon. friend says, notwithstanding that, that he has found some way by which he can get at the value of what is called watered stock. However, I understand the hon. minister to say that when the Bill comes down he will propose an amendment—what it shall be he does not tell us—which will deal with this question of watered stock. All we can do is await the arrival of the Bill.

Sir THOMAS WHITE: I will inform the hon. gentleman when we are discussing the resolution.

Mr. GRAHAM: The new resolutions will not be like the ones the minister had in his Budget speech.

Mr. MACDONALD: No. To summarize, I submit that the Minister of Finance, in dealing with the question of the present financial condition of Canada, has not been frank in his statement to the House and to the country. He is responsible for a debt of $51,000,000, which was incurred under his administration by unnecessary extravagance and mismanagement of the affairs of the country. The debt was contracted entirely over and above any money spent in connection with the war or in connection with the National Transcontinental railway. The Canadian people are ready to fulfil their obligations and to bear the burdens imposed upon them, but they ought to know where their money is going and why these burdens are laid upon them. Let us not have any misrepresentation about the matter. We have had misrepresentation, though I trust that it was not wilful, so far as the Financial Minister was concerned. As for the extra tax on letters which everybody in Canada has been paying since last year, not a cent of it was devoted to war purposes; it was appropriated absolutely, for the ordinary affairs of the Post Office De-

partment. In view of the fact that we are, for the first time in the history of this country, to have direct taxation, a frank, fair and plain statement should be given to the people, so that they will understand the matter properly. My hon. friend will have to bear the responsibility sooner or later for this debt, of the existence of which there can be no question. If my hon. friend would start fairly, he would find the people all the more willing to bear the burdens when they realize that the person who is the custodian of their treasury for the time being has given them an accounting which may be audited by any auditor in the country and found correct. That is not the condition just now. I submit that the only way to raise the $25,000,000 or $30,000,000 that the minister says he requires is for everyone to pay according to his ability to pay. A line should be drawn between the man whose earnings are so small that he cannot be expected to pay and the man whose receipts are quite sufficient to enable him to pay. If you make everybody pay according to his wealth and income, there will be an abiding sense of responsibility on the part of the whole of the Canadian people in regard to the carrying on of this war. Any different course breeds discontent and evasion of the burden of the war, which gives rise to discrimination which makes for disunion. As it is now, only certain persons are required to pay, and, under the nefarious system of patronage which was attacked by the Minister of Trade and Commerce the other night, only certain persons can sell to or be employed by the state. Let us do this thing fairly and squarely. Shall our people assume a portion of this burden and leave a portion of it to posterity, as my hon. friend proposes? Why should we not all do our part to-day, and let everyone bear an equitable and fair share of the burden?

I direct the attention of the House to this statement made by the hon. Minister of Trade and Commerce. After dealing with the question of patronage, he says:

> I wish now, in the white heat and light of this great contest and struggle and the self-sacrifice that we are called upon to make, that we might speak from the heart out, and make an agreement in this country between both parties, that hereafter patronage shall not be applied by political parties in the construction of our public works. Now, that is a frank admission. Some may say to me that I have no right to make it. I presume upon my grey beard and thirty-four years in public life, and I make that statement for what it is worth. I will just append to that one single sentence, and it is this: that if there is any laxity in the public virtue of this country to-day, if there is any canker of public corruption, in ninety-nine cases out of a hundred you can trace it to the baleful effect of political party patronage.

An opportunity has come to hon. gentlemen opposite which has never come to any political party in this country since Confederation. Everyone who has had the honour of sitting in this Parliament, whether on the Government or whether on the Opposition side of the House, must agree in his heart that those conceptions of duty with which the true public man in this country ought to be inspired are seriously debased when they are interfered with by the party patronage system.

I make that statement having had experience while I supported the Government of the right hon. gentleman who leads the Opposition (Sir Wilfrid Laurier). Every hon. gentleman who sits behind the right hon. the present Premier knows the same thing. We endeavour to hold up to the young men of this country the highest possible ideals in urging them to take their part in this great struggle. Do you mean to say to me that the intelligence of the youth of this country is of such a low order that they do not reason with themselves as to whether the men who make these appeals are sincere? Do you mean to tell me they do not ask themselves whether these men are actuated by the ideals which are held up to them, when they see this system of patronage in regard to public affairs, by which only a certain person can sell to any department of the Government, only a certain person can be appointed to this office or that post in this country? Do you mean to say to me that the ideals of the youth of our country are to be maintained at a high level by the operations of this nefarious system of patronage? This Government has been given the greatest opportunity in the whole history of this country, when the hearts of our people are stirred by this grave issue, to endeavour, by conference or in some other way, to arrive at some system by which the public men of this country, on both sides, will agree that some substitute shall be found for the patronage evil. I venture to say the lesson of Manitoba, the lesson of Vancouver a few days ago, is one that ought not to be lost upon them. The result in these and other elections, including Peel, is directly traceable to the patronage system, against which the Canadian people are rising in revolt. They are thinking more deeply than ever before, and they are stirred by greater emotions and higher

ideals. They will look for these ideals in public men, and if the Premier and those associated with him fail to take advantage of this opportunity in this time of our history, the same fate that overtook these men a few days ago will be the fate of this Government when they come to face the people of this country.

Sir HERBERT AMES (Montreal, St. Antoine): Mr. Speaker, it may be a relief for the members on both sides of the House to desist for a short while from the debate on partisan lines and to deal with a subject on which we have all thus far worked in harmony.

As my remarks proceed, and they will not be long, I think the reason why they are interjected into this debate will make itself apparent. It is a marvellous thing, when you think of it, that the people of Canada, during the first twenty months of the war, have raised and expended for its prosecution $175,000,000, and that if the war continues another twelve months they will have raised from $250,000,000 to $350,000,000 more. Were this every dollar that Canada was raising for patriotic purposes it would go down in history as a remarkable action on the part of a people of our numerical size and our comparative wealth. But this does not entirely encompass Canada's activities and financial gifts in connection with this war, for if one makes an estimate of the voluntary gifts that have been made since the war broke out, it will be found that they will total between $20,000,000 and $25,000,000, and probably in another year that sum will be doubled.

11 p.m.

Principal among these benefactions is one which you all know of, the Canadian Patriotic Fund. It has been referred to in this House on several occasions, and because it has been referred to in a certain way, in an intimation on the part of some members that the fund should not longer rely upon voluntary support but should come under the aegis of the Government and should ask the aid of the Government to finance it, I wish to lay before this House some information regarding that fund with a view of satisfying members that, at least for the coming year, we have no intention of asking the Federal Government to assume this burden in addition to those which they already carry.

The Patrio ic Fund and the Government co-operate. They each have their function to perform; but they work together with one common result. The Government deals with the soldier as a man purely and simply. There are two classes of soldiers —the married and the single soldier. The single soldier receives his $1.10 a day and the married soldier his $1.10 a day plus $20 a month separation allowance. With an auxillary Patriotic Fund it is possible to provide adequately for the dependents of those who have gone to the front. At the present time it is not necesary to appeal to the Canadian Government for any assistance for this fund. If the war be prolonged indefinitely, the time may come when the people of Canada will have exhausted their ability to give, or may no longer be in a position to deal as generously as at present with the dependents of soldiers; and possibly then, as a last resort, we shall have to fall back on the Dominion Government. Should the time ever come when we needed to do this, I am sure that the Dominion Government would not permit the Fund to go into default and allow hardship to come into the homes throughout Canada which to-day are being assisted by that Fund. But it is desirable, I think, that that time be deferred as long as possible, and I sincerely hope and firmly believe that unless the war be of very long duration it will not be necessary for us to appeal to the Dominion Government for assistance.

As I said a moment ago, the Dominion Government at the present time is doing a great deal for the soldiers' wives; that ought not to be lost sight of. There are about 50,000 families which are already receiving $20 a month from the Dominion Government; so that the Dominion Government is directly giving the wives and dependents of soldiers $1,000,000 a month, or more. That, it should be remembered, is the primary and basic contribution on which other grants follow. The difference between the Government and the Patriotic Fund in the treatment of the soldiers' dependents rests altogether on the point of view. The Government looks upon the wife purely from the soldier's viewpoint. The Patriotic Fund looks upon the wife and family from the point of view of whether they need additional help to live decently while the husband and father is away at the front. Between the two, the Government and the Patriotic Fund, the family is adequately provided for.

Mr. CARROLL: Does the Patriotic Fund make provision for the father, say, of a

boy who has gone to the front and who is the sole support of the father?

Sir HERBERT AMES: If the father is unable to work and is over a certain age, so that he is entirely dependent on the man who has gone to the front, the father is assisted from the fund, not by the Government.

I want to point out, first of all, how exceedingly difficult it would be for the Government to do the work which the Canadian Patriotic Fund is doing. The Government cannot discriminate. That is the first reason why the Government cannot become the Patriotic Fund or take over its work. The Government looks upon the woman only as the appanage of the soldier. The man gets $1.10 a day, and if he is married his wife gets $20 a month. The $1.10 a day and the $20 a month are given without any reference to what that man's financial position may be.

If a millionaire and his coachman enlist as privates in the same regiment, each gets $1.10 a day and the wife of each gets $20 a month. In the case of the millionaire's wife $20 a month is a mere incident to her; she has no need of it at all. In the case of the coachman's wife, provided she has a family of four or five children, she cannot subsist on $20 a month. Consequently the Patriotic fund comes along and says: "How much is needed for you and your children to live decently and comfortably?" The Patriotic Fund brings that $20 up to a sum necessary to enable that family to live as a soldier's family should live. Thus we are able to provide for soldier's families who are left behind.

But sometimes we hear it said: "Why not increase the separation allowance and thus make it unnecessary for the Patriotic Fund to exist?" What would be the result? There are 44,105 separation allowances being paid from Ottawa and 8,000 or 10,000 more being paid by the local paymasters scattered throughout Canada. There are in all 53,000 families receiving separation allowance from the Government. The Canadian Patriotic Fund at the present time is helping about 30,000 families. If you add to that the independent Manitoba fund and one or two other local organizations, you account for about 5,000 more families. We are helping many families that get no separation allowance, so there are at least 20,000 families in Canada that receive all the money they require from present separation allowances and what soldiers send home by way of wages. The Government are assisting 20,000 more families than we are. If you propose to increase the separation allowance from $20 to $30 a month in order to obviate the necessity of a Patriotic Fund, you will be paying an additional $10 a month to at least 20,000 families who do not need it, and it will involve very large expenditure on the part of the Government to families who have not necessity for it.

I wish to speak here in regard to remarks which have on several occasions been made in this House, particularly by the hon. member for Edmonton (Mr. Oliver), in which it has been affirmed that our voluntary system should pass away and that the Government should take over the Fund. It is because the question has to be met, and because it is raised in other debates in the House of Commons that it becomes a pertinent one when the Budget is under discussion. At the outbreak of the war there was held in Ottawa a sort of informal conference, and there was an attempt made to determine the various spheres of activity that the several governmental bodies should occupy. It was felt that the Dominion Government should assume all the cost that was necessary to raise the army, to train, equip, transport, and maintain the troops, and all the expenditure necessary to provide for wounded men, and for the pensions of widows and disabled soldiers. That was distinctly the act of carrying on war and that was entirely taken on by the Dominion Government and the necessary funds raised by taxation imposed on the people of Canada. It was felt too that the provinces, each in the particular products that it was famous for, should contribute from their wealth to the Mother Country and to others and thus take their share of the burden. It was also felt that municipalities should look after the local out-of-works and the local needs incidental to the war but not directly arising out of the war. These three different governing bodies assuming each their different functions are in a general way, I feel confident, meeting the needs as they arise.

There was then left something for voluntary activity, and voluntary effort has found its outlet in the various funds that have been raised—the Patriotic fund, the Red Cross fund, the Belgian Relief fund, and other funds of that character. Thus we found the men of Canada undertaking to look after the women who had been left behind by the other men who had gone to fight; thus we found the women of Canada

undertaking to collect money, to make supplies for sick men in hospitals and elsewhere, and to raise money for ambulances and the like; thus we found all Canada uniting in sympathy with the Belgians and other oppressed peoples; thus it has been found that voluntary action has co-operated in supplying the needs created by the war, with the Dominion, provincial and municipal governments.

As to the work, the way in which it turned out, and the response that the people have made, I wish to say just a word. The response in respect to our Canadian Patriotic fund certainly has been one of which we all have reason to be proud. I was to-day handed the figures by our treasurer up to the 28th day of February. I find that in cash there had come to the Patriotic Fund, under the control of the Finance Minister, who is the treasurer, a sum slightly exceeding $8,000,000. I also made to-day a careful calculation to see what might be expected to come from the generous giving of the people of Canada during the next twelve months. (As you know, an appeal was issued on the 1st January by His Royal Highness the Governor General, the figures being set at $8,000,000.) I am pleased to be able to say that in pledges and assurances for the term which will be covered in the next twelve months, we are practically certain of $10,000,000 more; so that, if the war lasts until, we will say, the 1st March, 1917, there will have been $18,000,000 or $20,000,000 contributed voluntarily by the people of Canada for the care of the dependents of the men who have been left while they have gone to the front.

During last year there have been many periods that tried our faith, because necessarily the income and outgo have almost paralleled each other for the last twelve months. In February, 1915, we had an expenditure of $156,000, but in February, 1916, our expenditure was $573,171.50, an expenditure nearly four times what it was a year ago. Our revenue in February, 1915, was $346,000 and our revenue during February of this year has been $754,632.56. Whereas, a year ago we had a surplus in cash in the banks of $1,977,418, we have to-day a surplus of very nearly the same amount, namely, $2,161,063.78, showing that during these twelve months, month by month although our expenditure has increased, has doubled, and has finally more than trebled, we have been so generously supported by the people of Canada that we have not run behind, but are in a slightly better position than we were a year ago.

Sometimes we are asked why we deem it necessary to keep a surplus of $2,000,000 in the Patriotic Fund. I do not think I need waste time in explaining that to the members of this House. If peace should be declared to-morrow it would probably be all of six months before those who went across the seas could be brought home again and passed back into their ordinary civil employments.

The executive of the Canada Patriotic Fund realize that this Parliament will be prorogued in probably a month or six weeks, and that if we have any request to make of Parliament it must be made now, or otherwise we must hold our peace for twelve months. Consequently, it is a matter of serious consideration to us whether the outlook is such that we shall feel justified in saying that for another year at least we shall require no help or assistance from the Dominion Government. I think the outlook does justify us in making a statement of that kind, and I want to put on Hansard a short statement of the expenditure last year, and the probable demands for the next twelve months. Running over the provinces briefly, we find that Nova Scotia has sent us in cash about $300,000 to date, and we expect $500,000 in the next twelve months. Halifax raised $260,000 in their campaign, and we are assured that as much more will come from that province in the next twelve months. New Brunswick has already sent us $300,000, and we have every reason to believe that $350,000 more will be forthcoming in the next twelve months. Prince Edward Island has given us $38,600 in the past year, and we are counting on $40,000 in the next twelve months. The province of Quebec has given us $2,000,000 in the past year, and we are counting on $2,750,000 in the next twelve months. Ontario has sent us $3,500,000 in cash, and we have pledges and assurances that we shall receive over $5,000,000 from that province in the next twelve months. Manitoba has an independent organization working in the utmost harmony with us. They have raised over $500,000, and will probably raise within the next twelve months another $500,000. Saskatchewan has raised $400,000 in cash, and is pledged to raise $500,000 in the next twelve months. Alberta has raised $428,000, and is pledged for the coming year to raise $500,000. British Columbia has raised $490,000 in cash, and we have assurances that she will raise in the next twelve months

$600,000. Victoria has raised $200,000, and Greater Vancouver $300,000. Yukon raised $20,000 last year, and they will raise a like amount this year. So it will be seen that notwithstanding the increased demands, there is enough money in sight to obviate the necessity of our approaching the Government in any way at this time.

Now, looking over our probable requirements and estimating them very carefully, I should like this statement to be recorded. At present Nova Scotia is spending about $30,000 a month. Allowing that within the next six months that will have to be added to by 50 per cent she will then spend per month $45,000 or $540,000 a year. I am estimating that during the next twelve months every one of our provinces will double its requirements, and that consequently the average for the next twelve months will be 50 per cent greater than the present expense per month. If that be carried out, the figures will be as follows:

	Present rate per month.	50 per cent increase.	Twelve month.
Nova Scotia.. ..	$ 30,000	$ 45,000	$ 540,000
New Brunswick ..	28,000	42,000	500,000
Prince Edward Island..	1,500	2,500	30,000
Quebec..	80,000	125,000	1,500,000
Ontario..	250,000	375,000	4,500,000
Saskatchewan.. ..	35,000	50,000	600,000
Alberta..	65,000	90,000	1,000,000
British Columbia..	65,000	80,000	900,000

This seems to us a very generous estimate. We have allowed for recruiting and for soldiers returning should there be serious casualties to our boys at the front. We should be able to carry on the work for the next twelve months with $9,500,000, and we have in sight $10,000,000; consequently, I think I may say to the Minister of Finance that as far as the Patriotic Fund is concerned he need not fear that in the Budget for the next twelve months he will have to provide for our needs or requirements.

Sometimes the argument is made that a fund of this kind should be kept up by taxation instead of by voluntary subscription. It has been stated that we are receiving a certain portion of our fund from taxation; that is perfectly true. We have received some contributions from Provincial Governments, a great many from county councils, and I should like just here to bear tribute to the unanimous generosity with which the county councils of Ontario have contributed to the fund. Our expectations for the coming twelve months from county council grants are $1,250,000, and this, of course, will be raised by taxation. Townships and municipalities are also taxing themselves. We find that during the first nineteen months of the war, while only $500,000 was raised by taxation, $7,500,000 was raised by purely voluntary, giving on the part of a generous and patriotic people. Of the $10,000,000 which we expect to be raised within the next twelve months, not more than one-fifth will be raised by taxation.

Probably the ideal method is a combination of taxation and voluntary giving. In many cases we find that a rural community, widely scattered, prefers to give its contribution through a tax on real estate, and where the money is unanimously voted that, perhaps, may be regarded as a voluntary contribution. I have had the privilege of going before nearly every county council in Ontario, and I was pleased to find that whatever was given was invariably given unanimously. On one occasion, when a discussion arose in a county council as to the amount to be granted, and it was apparent there would be a division, and that the result of the division would be a more generous amount for the fund, I told them that we would prefer to have a smaller amount unanimously voted. Consequently we may really consider the unanimous grants of county, township, and municipal councils as practically on the same basis with purely voluntary subscriptions.

It is quite true that there are some people who will not give to any good cause. They are pointed to in every community, but I am glad to say that they are very few, and are becoming constantly fewer. We cannot force them to give. There might, of course, be an income tax which would force everybody to give in a way, but the number of people who attempt to shirk this matter of patriotic giving is very small when you come to analyse it, and I think the force of public opinion directed against those people at this time brings with it obloquy and scorn to such an extent that they suffer from their deliberate refusal to help a good cause. Our slogan throughout the country has always been "Fight or pay." We call upon the people to enlist or help others to enlist. We sometimes say: "If you cannot put the 'I' into fight, put the 'pay' in patriotism," and that serves as a slogan on many a platform. We have no conscription in Canada, and probably never shall have. We do not conscript the men's bodies, neither, as far as the Patriotic Fund is concerned, do we

conscript their money. We expect to get it by voluntary subscription, and we think that method preferable. We say to the man who stays at home: "You have a ransom to pay for the privilege of staying here; if you stay at home and have other men fight for you, you should contribute." We think that from this voluntary giving there comes a moral uplift which is its own reward. The sacrifices that the people of the this Dominion are making, from the richest to the poorest, that every class in the community is making—the contributions of the rich as well as the contributions of the poor, the contribution of the farmer as well as the contribution of the artisan, the contributions of the British-born as well as the contributions of other nationalities—all go into one common purse, and all represent self-sacrifice on the part of our people; and that self-sacrifice serves as a tonic, because we find that a community which gives in money is always willing to give in men. It would be a genuine deprivation and the taking away of an uplifting influence from the people of Canada if opportunities for voluntary subscription were removed or were replaced by compulsory taxation for purposes such as these.

Before I take my seat, I wish to bear tribute to the fact that, while we may spend considerable time in this House in discussions along partisan lines, as far as the Patriotic Fund is concerned, it has been loyally supported by members on both sides of the House. It has been to me a source of the greatest pleasure to appear over and over again upon the same platform with hon. gentlemen whom I see opposite to me to-night and hon. gentlemen who surround me on this side of the House. We have no politics whatever in the Patriotic Fund, and I trust we never shall have. That is one of the great compensations that I have in my connection with it; and since the war broke out every hon. member, and almost without exception hon. members, each in their own locality, have taken the necessary leadership in doing what is necessary to keep this fund alive.

At present we have on the fund about 30,000 families. In 30,000 homes the supplementary assistance that we give represents the difference between bare subsistence and decent living. In the East the sum paid averages from $15 to $16 per month; in the western provinces it averages from $18 to $20 a month, because the cost of living is estimated to be higher there. 30,000 men are on their way or have gone to the front feeling certain that their wives and families will be cared for, and, although the months go by with the same amount going out as comes in, each month we are able to meet the current needs of the fund, and I hold the belief that the people of Canada will keep faith with the Patriotic Fund.

Mr. G. E. McCRANEY (Saskatoon): Mr. Speaker, we are indebted to the hon. member for St. Antoine (Sir Herbert Ames) for the illuminating statement that he has made with regard to the Patriotic Fund. The country is to be congratulated upon the fact that the hon. member has given of his time and of his means to the administration of that fund, and that it has the approval and the support of all the citizens of Canada.

In returning to a discussion of the Budget, I wish to congratulate the people of Canada on the result in the county of Peel, which result I claim not as a victory for the Liberal party alone. If I thought that such a great result was brought about simply by the transference of a few Conservative votes to the Liberal party, I would not be so hopeful of the political future of this country as I am at this time. I believe that the result in Peel is indicative of the sentiment of Canada as a whole. An attempt was made during the campaign to have it appear that only the people of Peel were interested in that contest, but I am very glad to say that the people of Peel were only representative of the rest of us, and that, while the voting was done by the electors of that county, the result was to our credit, and it would have been to our great shame had any other result been brought about. I have no desire to discuss the sordid circumstances which caused the contest, nor to dilate upon the imperfections of Mr. Fallis; but one aspect of this matter, to which I have already called the attention of the Minister of Finance, is as to the disposal of the sum of $1,880 which Mr. Fallis received by his intervention between the farmers of Peel and the Government purchasers, and which he later on paid into the Patriotic Fund. In a question which I asked in this House on the 10th of this month, I suggested that the Government might apply to the person in charge of the Patriotic

Fund for this sum of $1,880, and the reply of the minister was:

The Government is not aware that it has any claim to the sum of money referred to.

That may have been the attitude of the minister and of the Government at that time, but this election has been held, and, by it, two things have been made very clear. One is that Mr. Fallis did not claim the money, and the other is that the people of Peel do not think that the money belonged to him. Now, if it did not belong to him, it belonged either to the farmers whom he cheated out of the money or it belonged to this Government, who should have bought their horses cheaper. I am not bothering so much about the amount of money, but I would like to see this Government apply to the treasurer of the Patriotic Fund for the payment of that sum to this Government, because this Government is entitled to the money, either in its own right or in the right of the people out of whose pockets it was taken. I do not wish to see the Patriotic Fund deprived of the money, because I am satisfied that, if it were given back to those farmers, they would say, "We will let the Patriotic Fund have it;" but I would like to see this Government, although they may have no right to go into court and sue for it, ask for the money, and then give it back to the Patriotic Fund. My reason for suggesting that course is that every grafter and every scoundrel in this country, and every man who gets his hand into the public till, becomes a patriot by paying into the Patriotic Fund the money that he has taken. I would like to see this new principle laid down and properly understood, that whenever a man is found with the goods on him, he cannot, by claiming that he has done a virtuous act, get out of such opprobrium as comes to such a man. I know of an instance in my own province where funds to the amount of thousands of dollars were taken from recruits by improper entries in paysheets and that kind of thing, and the money was turned into the regimental fund and went to pay off an old indebtedness. There was a trial and one of the officers was indicted for theft. But the jury came to the conclusion that it was all right because the accused had not kept the money himself. I say that that is a condition of political morality that men like Fallis encourage, unless we take some strong stand against them. I bring this to the attention of the Minister of Finance who, I believe, wants to see clear-

[Mr. McCraney.]

cut political morality and does not want to see the flag and sound patriotic causes besmirched by men of the stamp of Mr. Fallis.

The Solicitor General (Mr. Meighen) spoke in the name of the West and declared, in the name of the farmers of the West, that they were satisfied with the Budget speech of the Minister of Finance. He spoke with such an air of sincerity that I cannot but believe he was sincere. I do not doubt his sincerity, but that is the tragedy of it. There was a very eminent Conservative family in France who went out of power more than a century ago because they learned nothing and forgot nothing. But when a member of Parliament declares in this House that the farmers of Western Canada are satisfied with this Budget and with the Conservative party, I am afraid he is following in the steps of the Bourbon house, and that the result which the Bourbon family got will be theirs at the next election.

While that is the attitude of the Solicitor General, I do not think for a moment that it is the attitude of the Minister of Public Works (Mr. Rogers). That hon. gentleman is a Winner of Elections. He has seen the province of Manitoba turn over last summer and he has seen the result last Saturday in the province of British Columbia. He knows that there are two seats open in the province of Manitoba, where the farmers are very anxious indeed to express their opinion of this Government. While the Solicitor General is very sure as to the attitude of the West, I do not think there is any such certainty in the mind of the Minister of Public Works. When the Minister of Public Works wanted an election he beat the drum, he made speeches, he gave interviews, and his party papers were echoing his thoughts. He heard the cry for an election in tones louder than thunder, and the cry for free wheat as only a still small voice. The Minister of Public Works has not been of certain mind on this question of free wheat. Last November a deputation from the Dominion Council of Agriculture called on the Minister of Public Works at Winnipeg and made a strong request for immediate action by the Government in this matter of free wheat. The Minister of Public Works expressed his sympathy with this desire and said that he would press upon the Government at Ottawa the farmers' representations on the subject which, he said, was one of the utmost importance. Such an expression of opinion would lead

the farmers to expect that he was in sympathy with them. At the same time, his own organ, the Winnipeg Telegram, and most of the Conservative papers in the West, including the Saskatoon Star, in my own riding, and most of the Conservative candidates, were expressing the same kind of sympathy with the people as did the Minister of Public Works. That brought criticism. The Hamilton Spectator, which is one of the straight-line Tory papers of the province of Ontario, chided the Minister of Public Works on his attitude on this question and on his attitude towards the farmers, and pointed out that under cabinet government there must be unity, and that it was not the place of one member of the Government to express views which were contrary to the view of the Government as expressed by the Minister of Finance. It spoke of the Minister of Public Works as indulging in the artifices of Absalom. Absalom was the son of King David. His father had reason to expect the support of Absalom in the administration he was giving the country. But when the King's subjects came to Absalom with their grievances, Absalom in a quiet way gave out to the people that he would if he could redress their grievances. The words in which he expressed himself have their parallel in the words of the Minister of Public Works to-day: "Oh that I were made judge in the land, that every man who had any suit or cause might come unto me, and I would do him justice." No one in the Canadian West believes for a moment that the Minister of Public Works, who holds such a prominent position in this Government, and who knows the needs of the West better than any member in it, has to-day anything but an open mind on the question of free wheat, and that he would have it adopted as one of the policies of the Conservative party were he able. The change in the attitude of the Minister, I understand, has been brought about by some articles which appeared in some magazine published by the London Corn Exchange, and also the circumstances of the last sixty days in Canada. We shall hope that some new article will be published which will induce the Minister of Public Works to change his mind again. When the minister spoke about people demanding an election in tones of thunder, he quite overlooked the fact that some persons might take him seriously. In the constituencies of Brandon and Lisgar some farmers have taken the minister seriously and have not forgotten what he said about the people calling in tones louder than thunder for a contest. Poker is not their game, and they are not accustomed to bluff. A political truce has been entered into by members of the parties which are represented in this House, and I am sure that these parties will do all they can to preserve that truce. But in Western Canada there are those who do not give adhesion to either party, and in Brandon and Lisgar there are those who take the minister at his word, and speak in tones of thunder on the question of free wheat. Many people say that it is not patriotic to have an election during war, but evidently the mind of the Minister of Public Works is open on this subject. Contrary to the view of other public men whose opinions are highly respected, the Minister of Public Works has declared that there should be an election. He opened two seats to serve the ends of the Conservative party, and he endeavours to meet the situation by appearing to speak with an open mind on the question of free wheat.

In reply to the demand of the western farmer for free wheat, the statement has been made that we are like spoiled children; that seed grain has been given to us in large quantities. This Government has security for every dollar which was advanced for seed wheat; if they have not got it, it is because of their own negligence. The Dominion Government has a first lien on the lands which received seed wheat last season, and, as we have had the largest crop in the history of the West, there is no reason why this money should not ultimately be paid back. There is this to be said about our people: when they are in need of assistance, they give security and pay interest at the rate of 5 per cent; when almost every other industry in the country wants help it gets it by way of bonus, and the money is never paid back. We do not mind paying taxes, but we want to see the country rid of the protective element of the tariff. I must commend the Budget of the minister for one thing, and that is that it does not increase the customs duties. We have a suspicion that the customs duties were increased in 1914 for the purpose not so much of raising revenue as of fastening upon the country a protective system which it will take as many years to shake off as this Government shall be in power.

I want to endorse what has already been said in this debate, that the farmers of our country are ready, willing and anxious to

bear their share of the burdens which are necessitated by the war. I do not advocate an income tax upon the farmers, because they are paying more than their share of the taxes which go into the public treasury. For my own part, if I have any influence with my farmer friends, I shall ask them to do what they can to have the duty on wheat removed. It is of no use in itself; it merely operates to help the millers in getting higher prices for their flour and a cheaper market for their wheat and to keep the farmers from getting a better market. The ministers of the Crown are reasonable men, and one would almost expect them to give reasonable reasons for what they do. But, to me, the attitude of the Government on the question of free wheat is not a reasonable one. They have not taken the pains to familiarize themselves with the attitude that the people in the West take. This tariff imposes, as the hon. Solicitor General points out, an extra duty on the apples that they use in the West. If there is one thing calculated to educate our farmers to the adoption of a clear, straight free trade policy, it is the example of this Budget in its endeavours to protect the miller and the apple-grower at the expenses of the farmer, and to deprive the farmer of a free market. Some people express the hope that conditions may be changed, but for my part I have no hope that conditions will be changed under the present Administration.

Since the last general election this Government is to be congratulated only upon its success in the county of Chateauguay and upon the inclusion in the ranks of its followers of some twenty members of the Nationalist party. I congratulate the Liberal party on the fact that these Nationalists have found more affinity in the Conservative party than in the Liberal party. Those are the only cases in which the Conservative party may claim success. On the other hand, in Prince Edward Island there has been a very decided and encouraging change in favour of the Liberal party. The same thing has occurred in the province of Ontario in the last provincial election, in the winning of South Bruce, and also in the recent contest in Peel. In the province of Manitoba, the results have been so overwhelming that I should think that if the ministers from that province have a good night's sleep over it, they are very good sleepers. In the province of British Columbia the results are encouraging also and as my hon. friend asked, what about Saskatchewan? I can assure him that the province of Saskatchewan will take care of itself.

Mr. W. F. MACLEAN (South York): Mr. Speaker, I intend to take only a short time of the House to-night. In the first place, I wish to deal with the nickel question which was brought up by the Solicitor General. He has made a defence of the present condition of affairs in Canada, but I do not think the last word has been heard in that matter and I believe that the opinion of the people in this country will express itself before very long in the direction of Canada controlling the nickel production, using it as a means of revenue for the country and also as a means of building up a great industry. I know something of this International Nickel Company and of the nickel question. I have brought it up in this House on several occasions and I have discussed it in the press. The conclusion I have reached is that it is high time there should be a reform in our nickel policy. As regards the International Nickel Company I must say that I have no confidence in that company or in the statements it makes. It is on record as doing its best to centralize the production of refined nickel in the United States instead of in this country. It went so far in this policy that it actually succeeded in inducing the Congress of the United States to put a duty on pure nickel coming into that country, and especially when coming from Canada, whence they draw their supplies. They did that by legislation which was put through at Washington. A company which does this is not entitled to the confidence and the support of the people of this country in regard to nickel. I have not any confidence in the statements they have made as regards their profits. I believe their profits are much larger than those published in their statements; I believe that for the current year they will be in the neighbourhood of $10,000,000. I also know that, besides the profits they have distributed, they have made a bonus distribution of stock to their shareholders and that their stock now is quoted away above 200 and will probably go much higher, unless something is done in this country to control this industry and that company. I do not like the way that company has had its agents here in Ottawa and in Toronto and all through this country. I do not like the way they have been able to

12 midnight.

influence public opinion in Canada, in order to place themselves in the position which they have attained, and I think that therefore it is high time that Canada should change its policy. Perhaps we cannot do it just to-day, but I think it is high time that we assumed control of this industry, which Canada ought to control by reason of our National Policy and of the fact that the greatest store of nickel in the world is in Canada. I have said in this House, and I repeat, that the greatest store of mineral wealth in all the world is in Ontario, in Sudbury and that district. No place else is there such a collection of mineral wealth, neither of gold, nor of diamonds, nor of silver, nor of iron, as is to be found at Sudbury and some of the districts thereabouts. If that is the case, especially if that nickel is an essential of war, at a time when the world is engaged in the greatest struggle of history and when at this very moment the greatest battle that was ever fought in the world is being fought, I say it is high time that Canada, which has that wealth of nickel, and can control the product of that company, so essential in war, should see that the absolute control of the industry is in Canada and not in the United States. The United States might be at war with Canada to-morrow. Judging by what you see in the United States, a situation unparalleled in the history of that country exists there to-day on account of the war which is now devastating Europe. The United States may be in the war, the United States may be our enemy to-morrow. We do not know what will happen in the United States after twelve o'clock to-night, when this new German policy goes into effect. And yet the control and production of our nickel is in the hands of a company located in the United States. That company is making enormous profits out of this industry, and is not treating Canada quite properly in the matter. This same company has not paid its just dues to the province of Ontario, which for some years has had a law under which, if it was fully lived up to, that company would have to pay a percentage of all its earnings. So far it has not paid it. I would like to ask the Minister of Finance if by the Bill which he now has before the House he can reach the profits of this company, which the Solicitor General admitted this afternoon amounted to $5,000,000 last year. Does he propose to make that rich company pay a share of those profits as a war tax to the people of Canada? I read the statement the other day that Mr. Delmar, who is connected with the company, had said that they would pay their share of the taxation, but, it would be very little; that they had two companies. There is the Canadian Copper Cliff Company, which is supposed to own or work the mines, and that company will show little or no profits. The large profits will be shown by the International Nickel Company, an American corporation. I hope the Minister of Finance will be able, by the means in his power and by the inquisitional powers which he has taken, to reach that company and make them pay their just share out of their profits towards the war taxes of this country. They have offered a compromise in a way, and this compromise is based on a proposal made to them by the Prime Minister of this country. He asked them, in substance, when they proposed to manufacture refined nickel in this country. I do not quite like the idea of the Prime Minister speaking to that nickel company by a letter addressed to them. I think this country should have addressed the International Nickel Company by legislation and have said: After a certain day you must refine your nickel in this country. But they said to the Prime Minister: "We will grant your request," and refine in your own country at an indefinite date enough nickel to supply the requirements of Canada and the Empire. The people of Canada will demand that the International Nickel company refine all the ore they raise in Canada, and that these people shall not be allowed to take out of this National Policy country a product of which we have the monopoly.

I agree with what the Solicitor General said this afternoon, that it may be necessary, by reason of complexities which have arisen, to allow them to take the ore out at the present time and refine enough for the requirements of the Allies. But, concurrent with permission to continue for a short time the refining of this ore out of Canada, I would insist upon a declaration that after a certain date all of this product must be refined in Canada. I have taken a great deal of interest in this question. The people of Canada are in favour of a new policy in regard to nickel, and they have been in favour of it for a great many years. I am going to delay the House for a few moments while I read a statement made by Sir Charles Tupper a good many

years ago. It is a good many years since nickel was discovered in this country, and since scientists came to see the important part that nickel plays in the industries not only in regard to nickel steel, but in regard to the armaments of nations. Sir Charles Tupper, long ago, when these discoveries were first made, saw the importance of having a National Policy in regard to nickel and the necessity of concentrating the industry in Canada. Here is what he said:

> Why then should not Canada utilize these iron ores and these nickel ores and make this nickel-steel and armour-plate upon her own territory? If the Government takes the proper action there is no doubt that the best skill and the strongest financial backing in England could be had to carry it on and it really looks as if it were possible for Canada to control the character and efficiency of the guns and the navies of the world. I am led to say this much from the statements of every expert with whom I have talked.

Sir Charles Tupper went fully into the question a great many years ago, he collected a lot of information and the conclusion he reached was that Canada, by reason of her monopoly of nickel, could control the output and should control it for the benefit of the steel industry and the armament of the Empire. That has not been accomplished. For some reason or other, in consequence of some influence—what it is I do not know—any movement in that direction has been frustrated from time to time and this industry has not been located in this country as it should have been. Now the time has come when it must be established here and the people demand that it shall be. Not only must we make them refine the nickel in this country, but I believe that this policy should be extended in the direction of producing in Canada all the nickel steel required in the world in so far as we can control one of the essentials to the production of nickel steel. Nickel steel is bound to play a more important part in the industry of the world and especially in the construction of armaments. Nickel steel is entering into everything, but if it is entering into everything, Canada has little or no share in its production. We have to import from the United States and pay duty on all the nickel that comes into this country for nickel-plating and similar purposes. That should not be. We should have the whole of that industry in Canada. We should supply the Mother Country with all the nickel she requires. It should not go by way of the United States. In the present emergency I will not take the word of any official of the United States in regard to where this nickel goes. It is impossible for a Canadian official to trace or control the immense output in the United States. It can be mixed up in every way with other things and it can be sent out through all kinds of ports and I believe it has been sent out through all kinds of ports. I am not making any charge against the Government but I am impressing upon them the necessity of changing their policy and getting the situation in such shape that they can regulate the output of nickel. There is no way to do it but by putting a prohibition on the export of the matte. You do not know what goes out in the matte? I have reason to believe that we do not know all of the products that go out in the matte such as platinum, polonium, irridium and some other kinds of valuable metals which are being recovered in the United States, and in regard to which no return is being made to this Government. For some reason that company has been able to check and paralyse every effort to secure the location of that industry in this country; how I do not know, but we see their agents all over this country. I have seen them in Ottawa, I have seen them in Ontario and they are everywhere in this Dominion. We ought to control this industry; we ought to get it in Canada. There is enough royalty to be taken out of the production of nickel to pay the whole national debt of Canada. I do not make that statement on mere hearsay or without consideration. I have considered it very fully. I have talked with people who know about it, I have read the opinion of scientists and of metallurgists and their conclusion is that the nickel deposits are enormously valuable. It would be a great advantage to Canada if we had absolute control of them. Sir Charles Tupper tried to get control of them and other people have also tried. But we have always been put off and now we are told that we are to be satisfied with an undertaking, to be carried out later, to put a refinery in the province of Nova Scotia, or one of the Maritime Provinces, where Canadian nickel will be refined in sufficient quantities for the use of Canada and the Empire. That is not satisfactory to me. We want that industry here, and while for the present we are compelled to allow the nickel to be refined in the United States, in order that the American factories can continue to make munitions for the Allies, there ought to be a further announcement here by Act of Parliament that on and after a certain date no more nickel shall be exported from this country, or only under

such terms as will give this country absolute control of the nickel.

But perhaps there is some relief for Canada in this matter. This company has strengthened itself; its capital is now in the neighbourhood from $40,000,000 to $60,000,000. I forget the exact figure, but it is a great capitalization; some of it, of course, is water. The people who control this company are rich in other metals mined in this country. They own the Dome mine in Porcupine, for instance. They say they have no German alliances. I should like to think that that was true, but the greatest trust in the world to-day is the metal trust which centres in the city of Frankfort, in Germany. That city is the centre of the metal industry of the world. This metal trust is so well backed by the German Government that, to use a vulgar expression, they got their hooks into Australia and got control of their metal. The organization probably controls the zinc output of the world. I do not care what has been said, there may be official denials, but I have no confidence in these denials. I do believe the Germans have a large interest in this International Nickel Company. That is the impression I have. I perhaps cannot say exactly how I gathered it, for you cannot get at Prussian methods these days. They hide things up so well, and humbug and delude everybody. And they can always get people in other countries to assist them. Germany has three or four of the biggest trusts in the world; one is the metal trust, and another a trust in regard to chemicals. By reason of the far-reaching character of these two trusts, and the way the Germans have of making all the world pay royalties, and by reason of the patent laws of various kinds protecting metal products, the Germans to-day dominate the world in regard to metals, and they dominate to-day in connection with the nickel industry in this country. It is time that it should stop. It is time for Canada to fix a day when nickel shall no longer go to the United States to be refined. We must find a way of locating the industry in this country.

I mentioned a moment ago something to the effect that relief might be in sight. I cannot pass judgment on certain information which has come before me in the last few months, and which has reached its culmination here in Ottawa in the last few days, but I believe that a process of refining not only nickel, but every other metal, has been developed in this country, and most of the work has been done in this city. A wonderful revolution in the process of reducing ores has been worked out, and demonstrated in the city of Ottawa, and with this result: whereas, heretofore, the International Nickel Company had to collect its ore in great heaps at Sudbury and roast it for a period of ninety days, the matte having then to be sent over to New Jersey, by this new method the process can be carried out within forty-eight hours. Instead of the International Company taking 100 pounds of their ore, and roasting it into matte which produces less than five pounds of nickel. by this new method they will be able to get 70 pounds of alloy, in a powder, from the 100 pounds of ore. That powder is then put in a crusible, and gives 50 pounds of metal, which, for convenience's sake, is called after the name of the inventor, Professor Burrows; and that 50 pounds of metal is the equivalent of 50 pounds of nickel in making nickel steel. There is the revolution. It has been effected in our own country, and I believe that it is a fact that out of 100 pounds of our nickel ore we shall get 50 pounds of Burrows metal, which is the equivalent pound for pound of the nickel that is used in making nickel steel. And not only will this process apply to nickel, but to every other ore. The process is largely based on the making of hydrogen gas in a very cheap way out of steam. Any kind of ore can be treated in this hydrogen furnace. I have been following this process now for some months, and I know others who have followed it and who are more competent to pass judgment on it than I am, and the impression that has been made upon me is that this invention will revolutionize metallurgy. This great discovery has been made in Canada. If we have this discovery, as I believe we have, and if the requirements of the Empire call for the control of the nickel output as an essential in this war, this National Policy Government, knowing of the vast stores of nickel in this country, should not delay a single day in making the announcement that the dependence of this country on a foreign corporation must cease, and cannot cease too soon. We ought to give this company notice that on a certain day they must begin to put up their plant in Canada, so that this country may control the entire nickel output. We should then know exactly what our ore was producing. We know this company gets 4 pounds of nickel out of 100 pounds of ore. They also get a little copper out of it, but we do not know how

much of platinum and other metals they get. We do not know where these metals go. It is all very well to say that this nickel can be traced, but it is very hard for any one who knows the ramifications of the metal trade in the United States to believe that the nickel can be kept track of. The metal industry in the United States is one of their greatest industries, and with their scrap and junk dealers, with all the ports of the country from which to ship, with the possibilities for concealing the nickel in ships' cargoes, there are numberless opportunities for getting the metal out of the country. We know that people have been found carrying contraband rubber within the past few months.

Mr. LEMIEUX: By parcel post?

Mr. MACLEAN: Yes. It is absolutely impossible to check this nickel ore.

Mr. MEIGHEN: Is it impossible to check the amount of nickel ore that goes out of Canada?

Mr. MACLEAN: No.

Mr. MEIGHEN: Is it impossible to check the amount of nickel ore that goes into Great Britain?

Mr. MACLEAN: No, you can check that.

Mr. MEIGHEN: If the two agree, then, is not all the ore going out of Canada going to Great Britain?

Mr. MACLEAN: Does the hon. gentleman tell me that all the nickel that has been sent to the United States has gone to England?

Mr. MEIGHEN: All that has been shipped.

Mr. MACLEAN: Has none of it gone into nickel steel?

Mr. MEIGHEN: That has not been shipped.

Mr. MACLEAN: Shipped where?

Mr. MEIGHEN: All that has been shipped from the United States has gone to Great Britain.

Mr. MACLEAN: How does the hon. gentleman know that?

Mr. MEIGHEN: The hon. gentleman just admitted that we could check it off.

Mr. MACLEAN: I said you could check what goes to England. Has the Solicitor General information that all the nickel that was produced from all the nickel ore that we sent to the United States went into Great Britain?

Mr. MEIGHEN: Yes, I have the report that shows it went to Great Britain or our Allies.

Mr. MACLEAN: But an immense amount of it is used in the United States.

Mr. MEIGHEN: All that went out.

Mr. MACLEAN: But you cannot trace what goes out, for instance, what goes out at Galveston, because it can be put into steel rails and other things.

Mr. TURRIFF: You have to take the Hun's word.

Mr. MACLEAN: I am not saying that; I am not trying to put the Solicitor General in a wrong position.

Mr. GRAHAM: He is trying to do that to you.

Mr. MACLEAN: You cannot trace all the nickel ore that goes out of this country once it gets into the United States. England has her agents there and we have our agent, who is a very competent official, but once the nickel gets into the United States—and foundry after foundry is in need of it for making steel—it cannot be traced. In the United States Congress the other day the question of preparedness came up and it turned largely on how the navy of the United States could be strengthened. The Government there proposed to buy their armour plate from certain foundries who have the control of it, and the control of the production of armour-plate in the United States turns on the monopoly which the International Nickel Company have in regard to nickel, and the two monopolies together having control of armour-plate, they held up the Government of the United States, who were trying to solve the problem of preparedness, by telling them: "If you do not buy all your armour-plate from us, you will get none of it or else we will double the price which will make it $400 a ton. Now, the same thing might happen to the Empire of Canada, and we cannot afford to have such a state of affairs any longer. We must have control of our nickel and with it the control of nickel-steel and armour-plate, and it is time that Great Britain, if she is to maintain her position among the fighting nations should, along with Canada, control all the nickel output. I believe that all the people of Canada are in favour of such a policy, and there is an opportunity now of recovering our position. Even supposing that the

new process that I have mentioned may be overstated and that those who control it may be over-enthusiastic, the time has arrived when we must serve notice that on and after a certain day the control of this monopoly, which is in our hands, must remain in our hands, because such a course is in the interest of the Empire. It has been said here that the officials of England endorse what we have done. I have not the greatest faith in the way in which the war has been handled so far by the British officials. They have been humbugged by the Germans, and from my place on the floor of the House I tell the Admiralty that they have badly managed this matter of nickel and that they did not take the advice of Sir Charles Tupper when ten or fifteen years ago he urged them to take control of the output of nickel. It is very hard to convince British officialdom what it ought to do in certain matters and especially in matters of high policy, and the following criticism was passed upon them recently by the scientists of Great Britain who asked the British Government this simple question: Why are not the best scientists in the British Empire not in the service of the country? A gentleman asked: "Why do you want that?" One of the scientists answered: "Well, we would have told you about lard and we would have made lard contraband." "Well," said the gentleman, "what has lard got to do with the matter?" This scientist was able to tell the Government that lard was used largely for the production of glycerine and that glycerine was one of the important elements in explosives. Germany has the advice of the best scientists that she possesses and she breeds scientists for the service of the state. England, on the other hand, has not in her service the scientists that she ought to have, and that is the reason why she was found unprepared, and she is still unprepared, and the charge of the British people against their own Government is that they have not been prepared and that they have not had the advice of the scientists and of the best trained men of their own country. That being the case, and Germany having these scientists at her service and being resourceful in queer methods, with the aid of her scientists and her business organizations, she has been able to get all the nickel she wants, and during the last fifteen years, while she was preparing for this war, she was getting unlimited stores of nickel from Canada for the making of her armour plate, munitions and great guns, and to-day she has the largest guns, every one of which is strengthened and reinforced by Canadian nickel. If we had had a live imperial policy, based on scientific knowledge, that would not have happened, and we would not be in the position in which we are to-day. That being the case, the Empire must call her scientists to her assistance and we must have an Imperial and a national policy based on the absolute control of nickel, of which we have the monopoly. I think Norway produces a considerable amount of nickel, and France, through New Caledonia, also produces a considerable amount, but their supplies are not to be compared in richness, in ease of mining, or in ease of extraction of the ore, with the Canadian nickel. If that is so, we have not taken advantage of the possession of this great wealth of nickel to further the defence of the country and to build up new industries in Canada. Just think, Sir, of the requirements of the world to-day in the way of nickel steel for rails; think of the monopoly that we could have, the control that we could have of the commerce of the world and the influence that we would exert in the United States if we had control of our nickel.

I am not here to blame any one. Perhaps every one is to blame for the present position of affairs. But the Canadian people, just as sure as the sun will rise to-morrow, expect that the Government and Parliament will change that condition of affairs. We have drifted into it. Able men have manipulated us into the position. I have seen these so-called able men and have been surprised at the things they have done and the condition of affairs which they have brought about. While I attribute no blame, I appeal to Parliament to put an end to this state of affairs and to keep this industry, build it up, for the use of Canada and the Empire, and to tax it. What is the characteristic of the new condition of affairs to arise out of this war? It is organization to the highest degree of our great industries and of the conservation of our resources. We cannot go on after the war in the old way of allowing private interests and foreigners to control our great resources. The country that is to survive must be organized economically and industrially, as Germany has been organized. It cannot keep up the battle otherwise. The new democracy is based on this, that the state and not individuals is

to control these products and regulate these industries. It is in the interests of humanity that such concerns as the great Krupp industry of Germany and the armament trust of Europe and the United States should be managed by the State. These interests have been charged with encouraging war, with actually having emissaries and newspapers for the purpose of promoting war in order to secure a profit for their shareholders. But under the new condition of affairs, the most prominent thing you will see is that the State will organize and control such an industry as the nickel industry—which we have not yet got in this country, but ought to have. We should take effective means to change our policy in this matter. We should go at once to the British Government and ask what they are prepared to do; ask if they are satisfied with a condition which results in Germany having the supply of nickel that she has and the armament she has, made out of Canadian nickel. If there is a new invention in this connection, I would advise the Government to try to get control of it. If by this new process our Government could control the nickel industries and direct what things shall be made from nickel, including nickel steel rails, we should have the leadership of the world to-morrow. And now that we are seeking revenue, and proposing to tax the various industries, I would point out to the Minister of Finance that here is one industry that could be made to pay by royalty or otherwise a very large portion of the war debt of Canada and be a permanent source of revenue to the country.

Not only must we conserve the metal industries of this country, but we must conserve other natural resources, such as waterfalls for the production of hydro-electric power; also the petroleum and other resources of that kind. We should not allow them to be alienated even to our own people, but should keep them in the main for the benefit of the nation and of the Empire. And the sooner we begin a policy of that kind the better will it be for this country. I hope the Government will make some inquiry forthwith, and not be satisfied to take the statement that has been put on record; not merely say to these people that we will let them establish the nickel-producing industry where they direct. Let us be the judge of what we want. We want to know what is in that ore, and we want to know how it is got out and where it goes. And if there is in this a great monopoly of unparalleled wealth, we want to make it share the expense of carrying on Government in Canada. And we cannot do that unless we locate the industry here. My talking here to-night to a small House may not have very much effect, yet I think that even my feeble voice will be heard outside this House and throughout this country. Since taking up this question two or three years ago, I have been surprised at the correspondence I have received from all over Canada, especially from those interested in our northern mines, asking why we have not established this industry in this country. I find that in Sudbury, near which these mines are situated, they regard it as of moment and as giving a great deal of work to them. I want to see that strengthened and the completing work done by this industry carried on in Canada. It may pay us to take it over to-morrow by some form of expropriation with fair payment given. But we ought to be considering the matter. The attempt is made to shove it over to the future and take the promises of the company. That will not do for the people of Canada. This is one of the most vital issues in the country to-day, and some solution of it needs to be found. I hope the Government will find it and that Parliament will take it up, and that Canada will find herself in control of one of the greatest monopolies in the world which can be used for the welfare of mankind and especially for the defence of the Empire.

I had intended to discuss in this debate some of the other questions involved in the motion now before the House. But I will leave that over to the committee stage of the measure. I wish to add a word to give credit to the Minister of Finance for his boldness in the revolutionary policy which he has introduced.

The Budget is subject to criticism in respect of certain points, but it is certainly subject to commendation for its good points, and for the manner in which it seeks to make certain people in this country pay their portion of the war expenditure. The minister deserves great credit for that part of his Budget; as the Solicitor General said this afternoon, those who are well able to pay will have to pay. There are other ways in which he could get the money and make the tax more equitable, but probably he will come to that, or, as the Solicitor General said this afternoon, perhaps that will come later. The minister has con-

ducted himself in a very praiseworthy way in financing the affairs of Canada. But there is a still greater question yet to solve, and that is how we are to finance the Canadian people as a people, having regard to war conditions. Are our currency laws, our banking laws, our methods of lending money to the farmers, all of the best possible character? The minister has promised to consider and introduce legislation that will establish a system of agricultural credits in Canada; that is a step in the right direction. A little later, perhaps in committee, I intend to take up the banking and currency question, and to discuss whether we are doing everything we can to finance not only the Government as an organization, but the business of the country as well. In closing, I trust that some new departure will be announced at a very early date with regard to the nickel monopoly, which we have allowed to pass out of our hands.

Mr. J. A. C. ETHIER (Two Mountains): (Translation.) Mr. Speaker, the Budget resolutions have occasioned quite a number of speeches, aiming at propounding the best possible settlement of the question which the tariff and the financial heads of the country are striving to solve, in an endeavour to tide over the present crisis.

Every newspaper in Canada discussed their contents; business men gave their opinions and made suggestions; and when the end of this lengthy debate has been reached, I am sure the hon. the Minister of Finance will have come to the conclusion that his proposals must be further reconsidered, and modified, in their most drastic essentials.

I do not claim to be a financial critic or expert; so my object is not to demonstrate how imprudent it would be to adopt the Budget proposals as they stand, but merely to inquire into their general drift and give some of my views on the question.

Three features of the new Budget have given rise to objections and protests: the system of taxation, its unequal distribution and the retroactive clause; and I do think that in all three respects the new Budget is inconsistent and objectionable.

As I view the matter, the hon. Minister of Finance has made an unfair distribution of the new taxes, by taking no account of the difference between the big and small concern. The part that is most objectionable and was chiefly aimed at in the criticisms made by the business men of this country, is that which puts a premium on watered stock and imposes a burden on legitimate corporations. Thus, a company with $1,000,000 of preferred stock fully paid up and $1,000,000 of watered stock may realize a profit of 14 per cent on its stock and yet evade the new tax, because its dividends would amount to only 7 per cent of its entire capital.

As to the retroactive feature, it also came in for severe criticism and I will draw the minister's attention to the opinion of an eminent banker:

> My opinion is that there were two ways of meeting the war expenditure; first, by an income tax and secondly by effecting a loan on future revenue. Yet Sir Thomas White makes an onslaught on past revenue, which comes near to confiscation. The difficulty increases once dividends are paid over. It would be easier to take a bone away from a dog than the dividends paid over to shareholders.

And then, how far back will the tax apply. The retroactive clause mentions "every fiscal year ending after the 4th day of August, 1914." So that, if a company's fiscal year comes to end on the 31st day of August 1914, it would follow that the profits of that year would be subject to the tax. Sir Thomas White's speech seems to show that only the profits earned after the 4th day of August 1914, would be subject to the tax, but the resolutions do not warrant that interpretation.

Moreover, certain sections of the Budget, dealing with the taxing and collection, are so vague and ambiguous, that they are bound to give rise to disputes and discontent that will work prejudicially against the good management of public business.

I think the proposed taxation should be apportioned among all citizens according to their status, their financial standing and their income; as well as upon the real estate and even, as suggested by the hon. member for Maisonneuve (Mr. Verville) on bachelors, if the needs of the war become still more burdensome.

I am of the opinion that the hon. the minister, when draughting the Budget, made a grievous mistake in not imposing a special and substantial tax on the profits resulting from the manufacture of war munitions. No one could have objected to a tax of 50 per cent on profits of that kind, nor to its being made retroactive.

It is unfair to put on all business men identically the same burden as on people who have made excessive profits in the Empire's hour of peril.

Take as one only of the cases in point, the Maxim-Vickers firm highly bonused, I am told, by the Montreal Harbour Com-

mission and the City of Montreal. It secured big contracts from this Government for the manufacture of munitions, reaping large profits; that company has now locked out on the street a large number of workmen whom I saw yesterday parading in the streets of Montreal, as a protest against a decrease in their wages now barely sufficient to enable them to support their families.

Thus is the people treated by those powerful corporations, with the Government standing by and not even daring to tax them, much to the prejudice of smaller industries and particularly the workman. Those very firms take advantage of the exceptional circumstances through which both the country and the Empire are passing to heap millions on millions, without giving a thought to the common misery.

The whole question may be summarized in the opinions which have been expressed by men high up in the financial world, such as Lord Shaughnessy and Mr. Henry Miles, ex-president of the Montreal Board of Trade. It is right that this House and the electorate should be given the views of those eminent financiers, and I believe I ought to have them recorded in Hansard for the Government's and the country's information.

Lord Shaughnessy, president of the Canadian Pacific Railway, gave out to the press the following interview:

> The war has, as we all know, added and will for some time continue to add, important financial burdens to those that the country was already carrying and the Minister of Finance is compelled to resort to drastic methods of taxation for the purpose of the situation.
>
> The measure now before the House would appear to be about the most feasible means of providing the additional revenue required, but it strikes me that it has some features requiring elucidation, and that Sir Thomas White would be inclined to amend before the Bill becomes law.
>
> It may be pointed out that if "the amount paid up on its capital stock" needs to be determined by the share capital actually issued as fully paid, some of our Canadian companies, although making large profits just now, will have oceans of water between their net revenue and the proposed tax, while others, like the Canadian Pacific, for instance, have outstanding capital stock less in amount than the money actually paid for it, without reference to appropriations from revenue for capital expenditures.
>
> Every good citizen and reasonable man will loyally stand back of the Finance Minister if he adopts a plan of taxation that they find may finally be considered best in the circumstances, but in return the people of the country will demand probably more emphatically than ever before, that expenditures in connection with war shall be without wastefulness or extravagance, and that the Minister of Finance, with his colleagues, shall see that the country's money is neither pilfered nor squandered.

[Mr. Ethier.]

As to making the tax retroactive, Mr. Miles published on the 22nd of February last, the following letter:

> 22nd February, 1916.
>
> Mr. George Hadrill,
> Secretary, Montreal Board of Trade.
>
> Dear Sir,—I observed the other day that the Council of the Montreal Board of Trade had discussed informally the proposed war taxation scheme placed before Parliament by the Finance Minister of Canada, and that the council had expressed the conclusion or opinion that the measure in question was satisfactory to the business community. I have learned to-day that a committee has been appointed to look into this matter—more carefully I trust.
>
> There is one feature in regard to this proposed taxation that cannot be maintained as equitable or just. I refer to the principle of retroaction. Retroactive legislation has been disapproved the world over, and is of extremely rare occurrence. There have been occasions where retroactive enactment has been for the specific purpose of affording relief, but I cannot find record of one deliberately passed by the representatives of any people calculated, or that can be clearly shown to convey hardships, injustice, and in some directions even misery.
>
> I do not criticise the rate of taxation, nor do I wish to take up the question of the multitude of people that escape the taxation altogether. There escape makes it no better for those who are included. I wish to put before you simply a few words in regard to making this taxation apply to the year 1914. In the abstract it can be readily argued that taxation of this character will prove the greatest blow to the commercial interests of this country that has ever been inflicted by Act of Parliament.
>
> It has evidently been estimated along the lines of its effect upon the large companies—the smaller companies and individual interests have not been considered—these are totally different from the larger companies. It will be the act of a government, and of a large majority of the representatives of the people in Parliament, should the measure not be amended. The commercial people of the Dominion are intelligent enough to ultimately appreciate and resent this application to them of a drastic, unfair, unequal taxation of business. If the measure had been made applicable to munition supply and manufacturers who have profited enormously by the war, it would not be possible to find probably other than approval. The profits in those directions have been abnormal, and in many directions a matter of public scandal. At first sight the appearance of making the law retroactive, and to cover the entire year 1914, one would say, perhaps, the only question is that of getting back from shareholders a small percentage of what has been distributed to them in 1915.
>
> In the first view of the matter, the ordinary man in the street has in mind that business has gone along about the same, or has been vastly increased by war orders. When one analyses a bit it can be quickly seen that vast numbers of business houses, individuals, firms and companies doing a good profitable business up to the time the war broke out in 1914 and who made a very good showing of profit for the whole year 1914, found their business totally changed by the war, or through its effects.
>
> Any number of houses who did a profitable business in the ordinary spheres of commerce in 1914 did little or nothing, or at the best a very

poor business in 1915. Their profits of record for 1914 have been distributed or made use of, and now in 1916 this class, or perhaps the majority in number of the business houses in Canada, when making little or no profits, are called upon to pay back as a tax the money made in 1914, already, as above stated, distributed or dissipated. I know personally of several business concerns that came under the provisions of the proposed tax, who made excellent returns, in fact, some of them remarkable returns, for the year 1914, principally attributable to the first nine or ten months, and since that period have made nothing, or a bare operating expense. To meet the provisions of the Act thousands of business houses will be obliged to borrow the money for this tax to pay to the Government the percentage of money made in 1914, and which has been paid out and used by the shareholders or individuals.

I believe the only fair method of taxation to reach a scale of result, such as is aimed at, would be the "Income Tax," but if this is to be applied for only two or three years, the cost involved in the organization would appear to be a grave objection. Montreal has met the calls for the Patriotic Funds on two occasions and each one, and every one in our city, filled with loyalty, is willing to make sacrifice, and do everything that could be asked by the Government of the country.

It is presumed that the scheme placed before Parliament will be carried into effect, but it is certainly not too late to seek some amendment. I believe that the Council of the Montreal Board of Trade should not have expressed an informal opinion on this subject without further and more serious consideration.

Unless some definite action is taken we will see the name of the Montreal Board of Trade utilized on the floor of Parliament to justify making these taxes retroactive to the definite injury, from an unjust and inequitable point of view, to the commerce of Montreal and to commercial interests of the Dominion. I think the energy and influence of the Board of Trade should be directed to the obtaining of an amendment against this drastic retroactive feature of the measure, to the end of making it applicable to the present and future for a term of years. Should it be made applicable from, and after the first of January, 1915, it would probably be found open to less objection that as at present, because in most instances disposition of any profits made in the year 1915 has not taken place. It is in regard particularly to the year 1914 that you can find the most absolute objections to this retroactive feature.

Some of the leading bankers of the country have been astute enough to withhold their opinion on the Finance Minister's proposal to the House of Commons, but it is regrettable to notice that many bankers have expressed approval just in the same way as did the Council of the Montreal Board of Trade last week. It is surely a time for us all to be serious. No individual or body has any particular monopoly in respect to loyalty to the Empire, and it seems lamentable to me that the names of so many well know staid bankers can be coupled with that of the Montreal Board of Trade, as expressing approval as to this measure of taxation, particularly so long as it includes going back two years to a time when no one even thought of war, and having effect of making third parties pay in taxes, profits of a peace period, already dissipated or paid out in other directions. It is wrong to mislead the Government in this way as well, and more seriously unjust to business people all over the Dominion of Canada. To this latter it costs money, it costs trial and tribulations, it is unjust and unfair, while to the former it is a question of political life, and reaches only individuals instead of entire commercial communities. The company that makes very narrow profits on a watered capital, readily joins in the chorus of bubbling loyalty to approve, for the very good reason that the measure does not touch these people. The house that runs its business on a capital that is represented by gold dollars, dollar for dollar, makes a bigger percentage of profit, and is thus not upon an even basis with the watered undertaking. But hardest of all is the position of the house using only real capital, whose business was excellent in 1914, and almost done away with as soon as the war commenced in 1915 and 1916— and who find that with no business return there is obligation, according to the law of the country, that he borrow or procure money from some source, to pay back the ante-war profits of 1914.

The retroactive principle of this taxation measure cannot be justified, and never will find justification if it be finally carried out, and I beg to express the opinion to-day that it is th duty of the Montreal Board of Trade to interv vene energetically towards securing amendmen in that sense, and if the Council of the Montreal Board of Trade still hold to their informal expression of opinion to the public, I believe in justice to the membership and to themselves, under the circumstances they should not hesitate to call together a general meeting of the Montreal Board of Trade to help guide them in the action that a majority of that incorporate body desires in this matter.

Yours truly,

HENRY MILES,
Ex-president of the
Montreal Board of Trade.

Neither of those two opinions need be commented on and I would draw to them the minister's attention, in the hope they will be of some use to him in framing the Bill which will be submitted after the adoption of these resolutions.

Instead of the usual title " Budget for the fiscal year ending on such a date," the hon. the Minister of Finance's report might be called " The War Budget."

On the 4th of August, 1914, when war was declared, the national debt amounted to $330,000,000. In December last, 1915, it exceeded the half billion mark. According to the estimate of the Minister of Finance, it will reach $830,000,000 by April, 1917, and I claim that before the war is over, it will be a billion, and after the war, what with the pensioning list providing for the families of the victims, for the wounded and invalids, it will reach the billion mark.

I do not feel sorry for having given my support to the vote of fifty millions asked for at the short war session of 1914, nor for the one hundred millions we voted last year, as I shall also vote for the two hundred and fifty millions asked for by the Government this year, as Canada's contri

bution to the cause of the Allies, in the tremendous struggle before which the entire world stands terrified, dismayed and appalled.

It was Canada's duty, and it still is, to extend its help to the utmost of its resources, to the Empire, for the sake of its past, the glory of its present and to insure its future security. But ought we not to stop to think on the consequences of an enthusiasm and a so-called patriotism worked up to fever-heat, which may drive the country to bankruptcy; as was put by the Solicitor-General (Mr. Meighen), and inevitably to imperialism, which we have in the past condemned and shall not now countenance.

On the 1st of January last, the Prime Minister thought fit to make a gift to the Canadian people, and, while expressing his wishes for the coming year, he stated that his hope and wish was to see the people of Canada enlist to the number of 500,000 men. At the same time, he had his colleagues give the country at large the assurance that military service would never be made compulsory; and the hon. the Solicitor General has again this evening made the same declaration. Well, up to date, the recruiting has brought 250,000 men to the colours, only 50,000 of whom are said to be at the front, the rest being found in the various training camps throughout the country. The cost of maintenance, together with the salaries of those 250,000 men, would amount, according to the money votes submitted to about $400,000,000, and if the number of soldiers be doubled, we shall of course have to expend $800,000,000, entailing a yearly payment of interest to the extent of $40,000,000.

It is stated that military service will never be compulsory in Canada. But in view of the desire expressed by the Prime Minister and his War Minister to reach 500,000 men, we are really coming, by a back doorway, to compulsory service.

According to the census statistics of 1911, what was the male population of the Dominion from 19 to 30 years of age, and from 30 to 40 years inclusively? The first class comprise 756,349, and the second 568,214, a total of 1,324,563; one-third means 448,053 men. So 500,000 men would be not less than one-third of the male population between 19 and 40 years, fit for military service. Could any more men be enlisted by means of compulsion? I think not. And when you take into account the means taken for enlisting recruits, consisting of intimidation and misrepresentation, you are quite right in impeaching the good faith of the Government in their statement that no compulsion will be resorted to. We need only mention the stand taken by the Dominion Bridge Company, of Lachine, where as we are informed, work was refused to those employees holding back from enlistment. Everywhere in the country, agents and officers of the Militia Department urge, in many cases quite unduly, our young farmers to enlist, and thus deprive our farmers of the help necessary for keeping up the tilling of the land.

I shall insist on this question of farm help as it should be considered of prime importance by the Government. It is all very well to wear khaki, handle a gun and a bayonet, but in the present crisis there is more profit for the future in not leaving to rust the plough and the reaper, and in preparing to till the soil and take in the harvest; and without the required farm-help what will happen to the produce needed by the army and the country. And since the Government will not raise the embargo on American wheat, which we could utilize if there were a failure of the Canadian harvest, we must at all costs see to enlisting our farmers' sons in the great army of tillers of the soil, and keep them in the country.

I noticed in the February bulletin of the Conservation Commission, published at Ottawa, a report of an investigation made last summer. They found that out of 400 farmers 15 per cent employ help the year round, 11 per cent by the month, 34 per cent by the day and the balance occasionally; 64 per cent employ men born in Canada, 13 per cent men from the United Kingdom and 2 per cent employ aliens. Those figures go to show the great scarcity of farm hands who, by what I claim is excessive recruiting, are withdrawn from the farm and the city.

The present must be taken care of, Mr. Speaker, but the future must also be anticipated, and we must give some forethought to the fields of activity that after the war will call for development in order that the country may recover from the stress, namely, our public works, colonization, railways, harbours and canals, etc. Has this Government administered the moneys which have been entrusted to it as an honest and conscientious trustee? I claim not.

Since the 4th of August, 1914, they have taken an undue advantage of the political truce, of the good faith of the Opposition, of the generosity of the Canadian people. At a time when all true citizens of all races and creeds, are making untold sacrifices for the destruction of our common foe; when our daughters enlist as nurses, go to the front, and swell the ranks of the valorous

and heroic Red Cross; while our wives are vieing in zeal, patriotism and devotion to send aid to the French and Canadian soldiers, what were we given to behold in this country? With the Government's open protection and consent, or at least tacit toleration, dishonest politicians are known to have manipulated the war funds to suit themselves, gorged themselves with enormous profits obtained through political patronage and heaped millions of dollars over the corpses of their fellowmen stricken by German shrapnel while defending their country.

One need only recall without going into details the scandals which under this Government have blurred the pages of our parliamentary history since the 4th of August, 1914. Think among others of the shameful transactions concerning the purchase of submarines in British Columbia, the purchase of hay, horses, motorcycles, trucks, field glasses, drugs, even such as were required for dressing the wounds of our martyred soldiers; also the orders for boots, uniforms, blankets, shirts and slippers.

The exchange of communications between the hon. the Prime Minister and the Manufacturers' Association, as to war supplies shows the iniquitous deals which have been put through and of which the Government will be answerable to the people in due time.

Is not the punishment making itself felt already in Peel county? The hon. member representing that county in the Dominion Parliament (Mr. Blain) could tell us something about it. Does he not see the writing on the wall warning himself and the Government of what the country has for them in store? The lesson may be profitable to the Garlands and Fosters, partners of the late Peel poltician, Mr. Fallis.

Moreover, the provinces of Prince Edward Island and Manitoba had already sounded the signal, and in the late by-elections British Columbia has been seen to fall into line; the future will take care of the other parts of the country. A very eminent citizen —an ex-Minister of Justice in the Conservative Government—has been heard in condemnation of the present Administration, and is siding with the Liberals in their policies; such is Sir Charles Hibbard Tupper. True it is that the hon. the Minister of Public Works (Mr. Rogers) is said by the papers to have stated that he would never have thought a Tupper could be any other but a Conservative. But the minister must know that we are never too old to learn; such is now his painful experience.

To the long list of scandals which I have given must be added the contracts for shells and other war munitions and requisites entered into by the notorious Shell Committee, a creation of our too famous Minister of Militia. In spite of the charges launched by the member for Carleton (Mr. Carvell), in spite of the intimation given by even the press of Canada, will the Government refuse the investigation called for in no uncertain terms by the Ottawa Evening Journal and the Montreal Star? I will quote first the Evening Journal:

Mr. Carvell's speech in the House of Commons, Wednesday, was the most extreme indictment yet uttered or published of alleged shortcomings in the Canadian case. It contained all of the complaints and none of the explanations or compensations, nevertheless, it was forcible because it cited what seemed illustrations of the Shell Committee having sometimes unfairly ignored some would-be shell manufacturers, while extending patronage to others; also because apparently sometimes prices were paid which circumstances could hardly justify; also because there appeared sometimes to be political interference and corresponding profit to middlemen. The Journal is under the impression that the whole subject has been so messed up now that an inquiry and report would be desirable, made by some tribunal not liable to be suspected of being under partisan domination. There may be technical difficulty in regard to the Shell Committee being of Imperial appointment, but we think the public wants some independent report in the matter and that is worth the Government's while to try to supply.

Let us now see what the Star has to say in the same connection:

Now that Sir Wilfrid Laurier has put down a formal notice of motion calling for an inquiry into the work of the late Shell Committee, it is earnestly to be hoped that the Government will not hesitate to join heartily in launching the unpleasant task. Sir Sam Hughes gave us some figures, during his fighting speech on the subject, which were distinctly reassuring. But the public mind has reached such a condition of doubt and suspicion touching the matter that nothing short of sworn testimony and a chance to bring out all the truth will satisfy it. Both sides in the House have now quoted figures. Let both sides now submit their figures and their facts to expert analysis and searching investigation.

The honour of Canada is at stake. This is more important than Canada's money. As for the attitude of the British Government, they cannot, of course, ask for an inquiry. They cannot even seem to encourage one. They still regard Canada as "the spoiled child" of the Empire, and must perfunctorily pat us on the head for offering to make shells at all. But the British Government will undoubtedly and joyfully consent to an inquiry if asked to do so by a unanimous vote of the Canadian Parliament.

After such denunciations, the hon. leader of the Opposition (Sir Wilfrid Laurier) has thought fit to submit the following resolution, now on the Order Paper:

That a special committee of members of this House be appointed to inquire into all pur-

chases of shells or other munitions or goods by the Shell Committee formed by the Minister of Militia, as stated to this House by the Prime Minister on the 15th April, 1915, together with all contracts made or orders given by the said committee for any shells or other munitions or goods, with authority to the said committee to examine witnesses under oath and to require the production of any documents, books, letters or papers; and that such special committee be directed to report from time to time to this House in such manner as it may think advisable.

I trust the resolution will be carried unanimously and that, for the good repute of the Canadian Parliament, the investigation will be ordered, so that the guilty may be unmasked before the people and be dealt with by the law of the land.

And, moreover, while all men of good will unite and concentrate all their best energies in an endeavour to secure the welfare and safety of the Empire and to crush the Germans, the Government entrusts to those very Germans the most important functions in the country's public service. Thus I have been surprised, amazed to hear the hon. the Minister of Militia boast that he was employing as brigadier-general in the Canadian army a German by the name of Kahn. In the course of a recent debate in this House, the Minister of Marine (Mr. Hazen) eulogized another German, Mr. Heidmann, his private secretary. Another German is said to be assistant private secretary to the Minister of Public Works (Mr. Rogers), at the Ottawa post office, there is another German employee by the name of Dohlmann, in the dredging service another German, with his father and brothers fighting for Germany, is now employed at examining our harbours and has charge of the dredging of our rivers and lakes. The head of the Mines Branch is also a native of Germany, Dr. Haanel; the head botanist for the Government at the Ottawa Experimental Farm, Dr. H. T. Güssow, is another German; and in the renowned Gutelius in whom the Minister of Railways has full confidence for the management of the Intercolonial, we have another German. In this very building, the National Museum, where the House is now in session, many offices are filled with Germans, who belong to the Civil Service. And to get this building ready for Parliament after the conflagration and disaster of the 3rd of February, the Minister of Public Works went to the extent of giving employment to German labourers, to the detriment of British citizens of Ottawa.

I will not say, nor even insinuate that the persons I have mentioned are spies, but now that we know German kultur and its elaborate spy system throughout the world, it is the Government's duty to take all measures necessary to safeguard State secrets. If those employees realized their position, their first care, after the declaration of the war with Germany, ought to have been to hand in temporarily to their minister their resignations, as did Mr. Brandt, of German birth, a homestead inspector for the Interior Department. The Prince of Battenberg, also of German birth, and allied to the Royal House of Great Britain, saw fit, and it is to his credit, to hand in his resignation to the Imperial authorities at the beginning of the war. That is another example the Germans in our Civil Service ought to follow. And as they refrain from doing so, it behooves this Government in the very interest of those civil servants themselves, to discharge them and put in their places competent Canadians of Canadian birth.

In Great Britain, the same leniency was not shown for Sir Edgar Speyer and Sir Ernest Cassell, two Germans, who were asked for their resignation as King's Privy Councillors. And in Germany, Mr. Speaker, could there be found in the public service a British subject, having access to the secrets of the several departments of the Reichstag?

Indeed not, over there they go to the extent of expelling from German territory women of British and French birth, when indeed they are not incarcerated, as happened to our hon. friend, Dr. Béland, ex-Postmaster General, referred to by the hon. member for Rouville (Mr. Lemieux) and notwithstanding all the requests and diplomacy of the Canadian Government, helped by the Imperial Government, Germany persists in her refusal to set at liberty our friend Mr. Béland. A base exchange was offered for our friend's liberty, the condition being the release of a mean spy incarcerated in the London Tower; the offer was proudly refused.

In certain quarters, despite the common danger, it is sought to pit against each other the two races that live in this country under the protection of the British flag, and in that connection, I may say to the people of Ontario, as years ago was said by the Hon. Honoré Mercier to the people of Quebec, "let us once for all stop our fratricidal feuds," because in Ontario as well as in Quebec English-Canadians and French-Canadians should live in a common brotherhood. I join in the appeal framed so eloquently by the hon. member for Bonaventure (Mr. Marcil) to those of our English-

speaking fellowmen, who believe in justice, broadmindedness and true British fair play, to put an end to this unfortunate school question and bilingual embroglio, which threatens the peace and safety of our country. Leave to such fanatics as the hon. member for Frontenac (Mr. Edwards) the monopoly of sarcasm, and gross and unwarranted insults with which that worthy scion of the followers of William of Orange must on every occasion bespatter everything Catholic and French-Canadian.

I am sorry the hon. member is not in the House at present, because I want to take this opportunity to read to the members the report of a meeting held at Kingston, as published in the Ottawa Free Press of the 25th of February, at which meeting that gentleman has vented his malice against the province of Quebec. I quote the whole article:

Says Quebec not doing its duty—Dr Edwards in Hot Speech at Kingston—Sees Traitor Influence in Lack of Recruits.

Kingston, Feb. 25.—(Special.)—Dr J. W. Edwards, M. P., gave some red-hot stuff to the members of the Frontenac Conservative Association in session for their annual meeting here yesterday afternoon. He declared that he had voiced the opinion of both Liberals and Conservatives in making an attack upon Bourassa and Lavergne in the Commons recently.

With the motherland of Quebec province attacked, Dr Edwards said, it would have been expected that the province would have sent at least 100,000 men overseas, it had not sent one-quarter of that number. While Ontario sent 14 per cent of its available men between the ages of 20 and 45, Quebec sent but 6 per cent, and, according to Mr. Lemieux, only 9,000 of these were French-Canadians.

Continuing, Dr Edwards scornfully exclaimed: "These are the people parading the streets of Ottawa, and who have certain public men as heads making demands for equal languages, and telling the people not to go to war until Ontario has given them what they want, and also telling them not to contribute to the war until they get what they want. Vile as the Germans are, they have no use for a person who is a traitor to his country."

I throw back with scorn at this fellow his vile and mean language, spoken outside of this House; let me tell him that the province of Quebec will not have him as its spokesman in denouncing to the people of Ontario Messrs. Bourassa and Lavergne. If Quebec requires defenders against demagogues who would put us in a false light before our fellow citizens, we shall not have this business done for us by any insulters from the ranks of the Frontenac Conservative Association. We have in our midst men who can go to the very heart of Ontario, to Toronto, as was done only lately by the hon. member for Shefford (Mr. Boivin) to convince even Orangemen of the stamp of the hon. member for Frontenac that the province of Quebec is as loyal as Ontario may be.

Vile fellows and traitors are we, according to the hon. member for Frontenac! Traitors indeed, those who in the space of five days have in Montreal subscribed to the Patriotic Fund the sum of $2,378,854! Vile fellows and traitors indeed those Sulpicians who have contributed to the Patriotic Fund the round sum of $35,000! Vile and traitors those Canadians who have shed their blood at the battles of the Marne and Ypres! Vile and traitors those brave French-Canadians of the 22nd regiment, who, at the very moment they were being insulted at Kingston by the hon. member, were giving their lives in the trenches under the walls of Verdun. I much rather accept the testimony of the officers of the British army, of the hon. the Minister of Militia himself, of the hon. member for Simcoe (Mr. Currie) and of eminent citizens of Ottawa, such as Sir Joseph Pope and Mr. Cameron, Registrar of the Supreme Court.

After such evidence, the only place for the diatribes the hon. member for Frontenac may give vent to, is the waste basket.

Mr. Speaker, I am sorry to have kept the House until such a late hour in the night but I had at heart to set in its true light, and such as I understand it the present situation. A last appeal I would make, Mr. Speaker, let us extend the hand of fellowship; let us be fair to the minority and respectful of our constitution, our treaties and acquired rights; let us prove to the whole country, and to our fellow-countrymen of foreign birth, our good public spirit and the generous and broad culture of the Canadian people.

Motion agreed to and the House went into Committee of Ways and Means.

Progress reported.

On motion of Sir Thomas White, the House adjourned at 1.40 a.m. Wednesday.

Wednesday, March 1, 1916.

The House met at Three o'clock, the Speaker in the Chair.

THE PARLIAMENT BUILDINGS FIRE.

MESSAGE OF SYMPATHY.

Mr. SPEAKER: I wish to inform the House that I have received the following:

Barbados, Feb. 24, 1916.

The Speaker,
House of Commons,
Ottawa.

The Barbados Chamber of Commerce in annual session assembled desires to express to the House of Commons and the people of Canada its profound sympathy and emotion at the destruction of their Parliament Buildings, and the deplorable loss of life caused thereby.

PRIVATE BILL INTRODUCED.

Bill No. 41, for the relief of Lena Pearl Potter.—Mr. Wallace.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

RETURNED SOLDIERS IN CIVIL SERVICE.

*Mr. LEMIEUX:

How many returned soldiers have been given employment in the various branches of the Civil Service during the last fiscal year?

Mr. BLONDIN: Finance Department, 1; Interior Department, 1; Justice Department, 1; Labour Department, 1; Marine Department, 1; Militia and Defence Department, 260; Railways and Canals Department, 14.

TRANSCONTINENTAL RAILWAY GRAIN SHIPMENTS.

Mr. BUCHANAN:

1. How many cars of wheat have been shipped on the 6 cents per bushel rate on the Transcontinental railway, Armstrong to Montreal?
2. How many cars of wheat have been shipped at this rate, Armstrong to Quebec?
3. What is the rate on wheat from Armstrong to St. John, Armstrong to Halifax, and Armstrong to Portland, Me.?
4. What are the rates on wheat for domestic consumption from Armstrong to Montreal and Quebec?

Mr. REID:

1. Twenty cars.
2. Eighty cars.
3. Armstrong to St. John, for export, 14·22 cents per bushel; Armstrong to Halifax, for export, 14·22 cents per bushel; Armstrong to Portland, for export, 14·22 cents per bushel.
4. Armstrong to Montreal, for domestic consumption 12 cents per bushel; to Quebec, 15 cents per bushel.

CONSOLIDATION OF RAILWAY ACT.

Mr. PAPINEAU:

1. What has been the total cost of the consolidation of the Railway Act?
2. To whom was such amount paid?

[Sir Thomas White.]

Mr. REID:

1. The work of consolidating the Railway Act is in progress. Besides the work usually incidental to consolidation, thorough inquiries and investigations have been made, involving conferences with the Railway Commission and other bodies, into the working out of the different sections of the Act, with particular regard to those in respect of which amendments have been offered in recent years. $7,000 has been paid on account of this work.
2. To Mr. Samuel Price, K.C

SHELBURNE, N.S., IMPORTS.

Mr. KYTE:

1. What amount of dutiable goods was entered at the port of Shelburne, N.S., during the month of December, 1915, of the following classes of imports, respectively, and the value of each; rope, pianos and organs; shipping, sail and steam; and rough or surfaced lumber?
2. How much duty was paid on each of the above classes of imports at the said port of Shelburne?

Mr. REID: The answer to this inquiry would disclose the value of an individual importation. It is not usual to give information as to the value of individual importations entered at the custom house.

DIGBY GAP SUBMARINE BELL.

Mr. JAMESON:

1. Was a submarine bell established at or near Digby Gap?
2. If so, when was it established and upon whose authority?
3. From whom was the application for the establishment of the bell received?
4. What was the cost of such bell?
5. What vessels navigating those waters carry apparatus for detecting the presence of a submarine bell?
6. By what steamship companies are any such vessels operated?

Mr. HAZEN:

1. Yes.
2. Established January 7, 1915, by authority of Governor General in Council.
3. Mr. Andrew A. Allen and Mr. F. L. Wanklyn.
4. $2,154.85.
5. When installation of bell was approved the SS. St. George, operated by the Dominion Atlantic railway, equipped with receiving apparatus, was plying on the route between St. John and Digby. The SS. St. George was subsequently withdrawn from the route, and there being no other vessel fitted with receiving apparatus regularly plying on the route, instructions have been issued, on the recommendation of the Lighthouse Board, that the bell be withdrawn.
6. See answer to No. 5.

MUNITIONS WAGE BOARD.

Mr. VERVILLE:

1. Has the Government been solicited by any one to establish a wage board for munitions? If so, by whom?

2. Has the Government made any demand to the Imperial authorities or to the Munition Board in that respect? If so, to whom?

3. Has the Government received any communication from the Imperial authorities or from the Munition Board respecting a fair wage clause on contracts for munitions? If so, of what nature, and from whom?

4. Has the Government attached a fair wage clause on all contracts to which our Federal authorities are responsible? If not, why not?

Sir ROBERT BORDEN:

1. A discussion as to the establishment of a fair wages board or boards has taken place with the representatives of the labour organizations. The discussion also had reference to the application of the Industrial Disputes Act in such cases.

2. The subject has been discussed with the chairman of the Imperial Munitions Board.

3. Confidential communications on the subject have taken place, and the Government has made its views known to the Imperial authorities in the following terms:

A fair wages clause is inserted by the Government of Canada for all contracts for supplies and munitions of war which are ordered by the Canadian Government for the Canadian Military forces. There is therefore no reason whatever from the standpoint of the Canadian Government why the contracts placed by the British Government in Canada should not contain a fair wages clause. In adopting that course the British Government would be directly in line with the course which has been pursued by the Canadian Government in its own contracts. The representatives of the Labour Organizations have been informed that the Government of Canada has no control whatever over the form or nature of such contracts, but that their suggestions would be recommended to the consideration of the British Government.

4. Yes. Except in a few cases in the early weeks of the war, when telegraphic orders were given and no formal contracts were drawn up.

POPULATION OF CANADA.

Mr. ETHIER:

1. What is the total population of the Dominion?

2. What is the male population of the Dominion?

3. What is the male population from 10 to 19 years inclusive?

4. What is the male population from 20 to 29 years inclusive?

5. What is the male population from 30 to 39 years inclusive?

6. According to the above statistics, what proportion of the male population from 19 years to 40 years of age would remain in the country after the recruiting or enlisting of 500,000 men of that category?

Sir GEORGE FOSTER:

1. 7,206,643.
2. 3,821,995.
3. 706,155.
4. 756,349.
5. 568,214.
6. Sixty-two per cent.

IMMIGRATION AND PRODUCTION.

*Sir WILFRID LAURIER:

Has the Government, in view of the scheme of co-operation in immigration and land settlement by the use of public credit between the Dominion and Provincial Governments, presented to it, at its request, in a Special Report by its Commissioner, Mr. Arthur Hawkes, dated March 18, 1912, held any communication with the Provincial Governments looking to the development of immigration and land settlement on systematic and scientific lines? If so, with what results?

Mr. ROCHE: The development of immigration and land settlement has been a subject of formal communication between the Dominion and Provincial Governments since March 18, 1912, and numerous informal discussions between officials of the various Governments upon this subject have taken place since that date, and the matter is now being carefully investigated by the Economic and Development Commission. In addition, at a conference of immigration agents held in the city of Chicago, at which the Governments of the three prairie provinces were represented, the subject of immigration was thoroughly discussed, and steps taken to prosecute a vigorous propaganda in the United States, with a view to securing a larger immigration from that country.

*Sir WILFRID LAURIER:

Has the Government taken cognizance of a Resolution unanimously passed by the Legislature of Saskatchewan in June, 1915, proposing closer co-operation between Provincial and Dominion Governments in regard to immigration and greater production from the soil? If so, what action has been taken to give effect to such proposals?

Mr. ROCHE: The Dominion Government has appointed the Economic and Development Commission to consider amongst other questions the possibility of "increasing the acreage under cultivation" and of "inducing the settlement of an agricultural population upon the fertile uncultivated lands in Western and Eastern Canada." The Commission will inquire into "the means by which and the lines upon which the Federal Government, whether upon its own

sole initiative or in co-operation with Provincial Governments can best carry out an effective scheme of colonization."

As an evidence of our continued activity in the United States, and of our desire to act in co-operation with the western provinces, the following letter from the Premier of Saskatchewan is presented:

Regina, 17th February, 1916.

Dear Sir Robert:

Mr. Calder has shown me your letter to him of 22nd January acknowledging receipt of the joint resolution of the prairie province governments upon immigration work in the United States. All that you say and the suggestions and requests which you offer in relation to the co-ordination of Dominion and Provincial activities are very satisfactory indeed. In the meantime I attended, on Dr. Roche's invitation, the conference of federal agents held at Chicago, January 28, taking down with me Mr. Auld, our Acting Deputy Minister of Agriculture. I was highly satisfied with the spirit and proceedings of the Conference. From it I came away convinced that any impression existing that the United States agents had been relaxing their efforts was an entirely mistaken impression. For the recent disappointing results the agents are not to blame; they have continued working zealously in face of extremely discouraging conditions. In some respects their hands may be considerably strengthened by arrangements which will ensure to them more specific, regular and prompt information of affairs in Western Canada, and in this matter Mr. Auld's Department can assist and will assist in future in every possible way. You are of course aware that the Saskatchewan Government maintains that as long as your Government controls our public lands and other natural resources the implied guaranty given in 1905 should be respected, viz; that your Government should be responsible for all outlays for colonization in behalf of Saskatchewan. We have never entered upon immigration work, and will not do so until the control of public resources is transferred to us, but to the extent to which any machinery we have in existence can be used in helping your Government's efforts, we are earnestly desirous of assisting.

Believe me,
Very sincerely yours,
WALTER SCOTT.

*Sir WILFRID LAURIER:

Has the Government received any communications from the Toronto Board of Trade or other bodies, urging the necessity for an improved immigration policy? If so, what are they, and what steps have been taken to give effect to them?

Mr. ROCHE: Numerous representations for a changed immigration policy have from time to time been made directly and indirectly to the Dominion Government. The suggestions have varied from the advocacy of " a wide open door " to the most restricted form of " restricted immigration." It has not been considered advisable to depart from the present policy of encouraging the immigration of suitable agriculturists and, when necessary, desirable female domestic servants, and the withholding of any encouragement to come to Canada of those desiring to follow other occupations.

Prior to the outbreak of war immigration to Canada was most satisfactory, as is evidenced by the following figures:

1910-11	311,084
1911-12	354,237
1912-13	402,432
1913-14	384,878

NEW ZEALAND WHEAT PURCHASES.

Mr. CARVELL:

1. Has the Government of Canada, since the outbreak of the war, purchased any quantity, and if so, what amount, of wheat on behalf of the Government of New Zealand?
2. If so purchased, was it done on the request of the said New Zealand Government?
3. Where was the said wheat stored, and is any portion of the said wheat now in warehouse in Canada? If so, where?
4. What amount thereof has been disposed of, and when?

Sir GEORGE FOSTER:

1. Yes. 1,406,732.30 bushels.
2. Yes
3. After its purchase it was stored in various elevators in Canada until shipped to New Zealand, or until otherwise disposed of. None of this wheat is now in warehouse in Canada.
4. 504,223.40 bushels have been shipped to New Zealand, and the balance, 902,508.50 bushels, were sold at New Zealand's request on the 10th January last.

WHEAT COMMANDEERED BY GOVERNMENT.

Mr. CARVELL:

1. What is the total amount of wheat commandeered by the Government of Canada since the 1st day of August last?
2. What amount of said wheat has been shipped from the elevators, and the dates of said shipment?

Sir GEORGE FOSTER:

1. 13,621,822.50 bushels.
2. It is impossible to answer this question in its present form. In moving the wheat to the seaboard the same lot may have to pass through one, two, or more elevators, and would show as having been shipped from elevators one, two, or more times.

PURCHASE OF DESKS.

Mr. CARVELL:

1. What is the value of desks purchased by the Government since the fire in the Parliament buildings?

2. From what persons or firms were the said desks purchased?

Mr. ROGERS:

1. $6,333.67, of which $5,331.82 have been delivered and are in use in the Museum building.

2. Bryson-Graham, Limited; Capital Office Supply Company; T. W. Currie & Company; T. Eaton Company; Larose, Hull, Quebec; S. A. Luke; Oliver & Son; Office Specialty Company; Preston Furniture Company, Preston Ontario; Stewart & Company; D. Storey; Steel Equipment Company, Pembroke, Ontario; Ottawa Typewriter Company, Ottawa.

UNOPPOSED MOTIONS FOR PAPERS.

Mr. Macdonald.—For a copy of all correspondence, telegrams, reports and documents of all kinds relating to the visits of a fair wage officer to New Glasgow, N.S., in connection with the schedule of wages of men employed in works making shells at that place.

Mr. Carvell.—For a copy of all papers, letters, telegrams, Orders in Council and payments of money with reference to the quartering of troops at Amherst, province of Nova Scotia, respectively, in the financial year ending March 31, 1915, and during the present financial year up to date.

Mr. Turriff.—For a copy of all letters, correspondence and telegrams between the Speaker, the Clerk of the House of Commons, the Civil Service Commission and the Minister of Finance in regard to the proposed appointment of Mr. H. Crossley Sherwood as assistant Clerk of Routine and Records, from October 1, 1914, down to the present date.

Sir Wilfrid Laurier.—For a copy of all correspondence between the Prime Minister and Mr. Arthur Hawkes, during the years 1912 and 1913, relating to the Special Report on Immigration, published by the Hon. Robert Rogers in May, 1912, and particularly referring to the necessity for greater production from the soil, following the application of the Canadian Northern railway for financial assistance, and the speech of the Minister of Finance, in concluding the debate on the Budget, in April and May, 1913.

Mr. Graham.—For a copy of all correspondence, letters, telegrams, Orders in Council, etc., relating to the transfer by the Government of Ontario to the Government of Canada, of the rights held by the former in the lakes, dams, etc., contiguous to or forming a part of the Trent Valley Waterways System.

WAR PURCHASING COMMISSION CONTRACTS.

On the notice of motion:

Mr. Carvell.—For a return showing the dates, quantities and values of all contracts made by the War Purchasing Commission so called, from its formation down to the present date.

Sir ROBERT BORDEN: Perhaps the hon. gentleman may not fully appreciate the amount of labour and the cost involved in the preparation of such a return. I am informed that it would take the entire staff of the department three months and that the cost would be very great. Perhaps, therefore, before proceeding with this motion, the hon. gentleman might confer with the Chairman of the War Purchasing Commission. As far as the records of that commission are concerned, they are open to any member of Parliament who desires to inspect them or to look at the papers in relation to any contract. The hon. gentleman might, therefore, let his motion stand.

Mr. CARVELL: If the House could be furnished with information of this kind, it would be very valuable. My right hon. friend can understand the impossibility of a member of Parliament going to the office of the commission and getting any real information. However, I am quite willing that the motion shall stand for the present.

Notice of motion stands.

THE FLAX INDUSTRY.

Mr. S. FRANK GLASS (East Middlesex) moved:

That, in the opinion of this House, taking into consideration the stability of the flax industry and the market value of the product, more attention might be given to promoting its cultivation in Canada; that the flax and linen industries should, both as to culture and manufacture, receive that aid and consideration from the Government, which would enable it to assume the importance the natural resources of our country assure it. And to this end, serious encouragement should be given to farmers by such means as the Government, after full investigation, deem best to increase the production of flax throughout the Dominion.

He said: Mr. Speaker, I desire at the outset to say that I have been prompted to introduce this resolution as a result of observations in the districts surrounding that from which I come, and of representations made to me and to other hon. members, all tending to show that, owing to the very unusual conditions which prevail at the present time by reason of the destruction of the flax industry in the countries of Europe who are at war, it is peculiarly desirable that the Government of Canada should take advantage of the opportunity now presented to put the flax industry of this country on a stable foundation. When I placed the notice of motion on the Order Paper I was not aware that my hon. friend from East Lambton (Mr. Armstrong) had already taken the matter up. I desire just here to say that my hon. friend

from East Lambton has, during the recess, been very active in promoting the interests of the flax-growers in that part of western Ontario where the production of flax for fibre has reached its highest development. Before proceeding with the discussion of this subject I would like to present to the House, and record in Hansard, the views of flax-growers of western Ontario, who have, on their own initiative and in their own interest, stimulated as they have been by the unusual conditions, taken steps to promote the development of this industry. I believe that Mr Howard Fraleigh, of the village of Forest, Lambton county, is generally looked upon as one of the most capable and best informed men on this subject to be found within the confines of our country. He has been a successful man and he has given a great deal of time to research, study, and experiment in connection with all branches of the question of fibre production from flax. He is president of the association in the province of Ontario; and, in giving his ideas as to how the Government may best co-operate in promoting an increased production of flax, he suggests the following:

1. Closer co-operation between the departments of the Government and flax men. For example, the experimental stations can scarcely do the flax growers much good unless they investigate wherein we need assistance. Again, it does not by any means follow that, because poor samples of flax may be grown on the Experimental Farm at Ottawa, the whole Dominion is unsuitable for the crop. Some such propaganda as the teaching of farmers what are the peculiar needs of flax in the way of cultivation would be advisable.

2. The establishment of a flax bureau or commission, composed of men who understand flax and have its interests at heart. This bureau to have charge of the activities looking to improved methods of cultivation and manufacture, the education of the public in the true facts about flax, and the introduction of standards of grading both seed and fibre for export.

3. Encouragement by the Department of Commerce in building up a greater linen industry at home.

4. Some sort of bonus to growers of flax for fibre purposes, same to take effect after the war prices decline, and remain in force until the industry becomes re-established again.

5. Government assistance to manufacturers in securing flax workers by encouraging immigration of Irish and Belgian flax-workers; or courses of instruction to young Canadians, such as are carried on in Ireland. Such courses could be given at the big agricultural colleges.

6. Government encouragement to farmers to grow more flax, not only for their own profit, but to help nearby towns, and the Dominion at large.

7. A series of government experiments, in collaboration with the growers, to determine whether water-retting can be successfully carried on in Canada on a commercial scale.

[Mr. Glass.]

8. Immediate and temporary assistance to our organization, as by the payment of the salary of our secretary, who is devoting his time to this work. Such assistance is extended to other organizations of an agricultural nature.

In connection with this subject, I have naturally found it necessary to make some investigations and to study the question from different standpoints, and I am indebted for a good deal of the information I have been able to procure to the records of the Department of Agriculture of our own country as well as to the United States and to various states of the Union. In view of the very great importance of the subject at this particular time, I have prepared the observations which I have to make, and I would ask the indulgence of the House while I give them such information as I have been able to procure, hoping that it will impress upon the members of the House the need of this industry for assistance.

Considering the various difficulties that flax culture has undergone in this country through the experience of many years, it may well be considered one of the curiosities of agriculture. There is nothing strange or unusual in the methods of cultivating flax as compared with cereals generally; nevertheless, there are features connected with its history that make the flax crop unique among agricultural products. The cultivation of flax and the manufacture of its fibre, date back to a very remote period. The great value of the plant has been known and appreciated for some thousands of years. The fact that Egyptian mummies were wrapped in linen proves that the use of flax fibre is very ancient. It is said that it was a well established industry in Egypt at the dawn of the Christian era. Some three thousand years ago the Phœnicians devoted much attention to the cultivation of the plant, and subsequently the Greeks and Romans made the working of flax fibre a part of the household duties.

The flax plant is the source of two extremely valuable economic products, the one a fibre derived from the straw and noted from time immemorial the world over for its strength, beauty, fineness, and length of staple; the other, a seed rich in oil of such superior drying qualities as render it an indispensable ingredient in paint and varnish, and in the manufacture of linoleum, oilcloth, printer's ink, patent leather and other products. The full value, however, of both seed and straw from the one crop does not seem to have been realized

on a large scale in practical agriculture. The fibre, next to cotton, is the most valuable and universally employed textile in the whole range of vegetable fibres, and the plant can be grown in almost every part of the world where the climate is temperate. It has been cultivated to a considerable extent in Great Britain, Ireland, Sweden, Denmark, Holland, Belgium, France, Russia, Germany, Austria, Spain, and Portugal, and likewise in many portions of North and South America. Recent investigations and statistics show that of the world's total production in the year 1911, South America produced 33 per cent, Russia 22 per cent, India 18 per cent, United States 18 per cent, Canada 5 per cent, and other countries 4 per cent. So that, if the ratio of production for the last year prior to the war, or even say for the year 1914, were the same as in 1910, it is evident, in view of the fact that the countries engaged in the world-wide war were producers of 49 per cent of the world's crop in 1914, that there must necessarily have been an enormous shrinkage of the world's supply of flax during the year 1915, and that this shrinkage will be likely much greater during the coming year and for some years to come.

It would seem that the time for active effort to increase production in Canada has arrived. In the year 1908 the Government of this country, through the Department of Agriculture, made some investigations relating to the industry in Canada, which resulted in the publication of a pamphlet by the department, giving some useful information. But it appears that this was not in any way followed up, or the research or experiments continued with a view of giving any permanent assistance to the industry, and as a result valuable time has been lost. It is a matter that may be questioned, whether the present position of the industry has been in any way improved. Stimulated by the demand for the products of flax which can no longer be procured in countries that were chiefly the source of supply prior to the war, the Government of the United States have inaugurated a live propaganda, with a view to encouraging and developing flax culture in that country. It would seem that we in Canada would be neglecting our duty to ourselves, to the Empire and to the world, if at a time like this we did not awaken to the opportunities that now knock at our doors by stimulating by every means within our power the development of flax culture and the production of fibre, and applying the fullest resources at our command to the study and means of making the best use of the various by-products which are incidental to the flax industry generally. As to how this may best be accomplished, there will be necessarily a difference of opinion, but that the whole subject is one that may well be considered by the Government through its Department of Agriculture, who should be able to reconcile conflicting opinions and determine, in so far as the cultivation of the plant is concerned, just what is best to be done, I do not think any one in this House will doubt. But aside from this, there is a phase of the subject to which the Department of Trade and Commerce might well apply its energies. The Department of Agriculture can direct its efforts to the many problems necessary to the cultivation of the plant, the selection of seed, and possibly to the development of special seed suitable to the climatic and other conditions of this country. The department has rendered valuable aid in the matter of developing other cereals or seeds peculiarly suitable for our soil and climate. Though it is recognized that the best flax seed for sowing is imported from Holland, it may be that under experiments and with experience, our own Government may develop seed that will give better results in our country. It should be our aim to produce seed for the farmer that will give the best results, and that will assure the production of a fibre equal to the best that has been produced in those countries of Europe where for so many years the linen industries have not only given much employment to labour, but have also added much to their countries' productive wealth.

There are doubtless many prejudices in connection with the growth of flax. Farmers have an idea that its growth exhausts the soil, but the experiments carried on by the Department of Agriculture during the years 1906 to 1908, the results of which appear in Bulletin No. 59, show that this view is unwarranted. This bulletin asks: "Is flax a specially exhausting crop?" It answers this question as follows:

> This question is usually answered in the affirmative, but this opinion does not appear to be warranted by the chemical analyses which have been made of this crop, showing the principal elements of fertility taken from the

soil during the period of its growth. The results which have been obtained by chemical examination have furnished the following figures which represent approximately the plant food removed from the soil by flax, wheat and oats.

It is not necessary that I should give the figures, as the bulletin may be obtained by any one who makes application to the Department of Agriculture. Suffice to say that the summing up of the result is given thus:

It will be seen that the grain, in the case of the wheat crop, takes up a little more nitrogen and somewhat less of phosproric acid and potash than is taken by the flax seed; while the oat crop takes for the grain a larger proportion of nitrogen, nearly one-third less of phosphoric acid and about one-eighth less of potash. The difference, however, in exhaustive effect of these several crops on a rich soil would scarcely be perceptible, and would not justify the opinion that flax is a very exhausting crop.

Notwithstanding these experiments made some eight years ago, it would seem desirable that the experimental farms should carry on investigations and furnish fullest information by bulletins to the farmers as to this matter. Doubtless with many farmers the prejudice is deeply rooted, and nothing but scientific experiments, which the Government can best carry out, and experience in results, will ultimately remove the objections which many farmers have to the growth of flax.

The United States have devoted a good deal of attention to investigations along the line of finding economic industrial use for the straw of flax, which is more essentially grown for the production of seed than of fibre, especially in those parts of the Western States, like our own Northwest, where the straw, instead of being returned to the soil, is burned. The result has shown that this straw as a by-product, may be utilized in many ways. From the paper-makers' standpoint, the flax crop represents a raw material of immense latent value, as it is likewise a source of great latent value to the farmer. In the United States, as in Canada, the seed flax of the West is different in type from that cultivated for fibre production, and because of this difference and of the methods of cultivating and handling the crop, the straw cannot be used to make a good spinning fibre. The straw resulting from the harvesting and threshing of this crop is usually burned, not because it has no intrinsic value, but because adequate industrial use has not been established to absorb it. A bulletin published by the United States Department of Agriculture dated January 7, last, reporting recent tests made on the utilization of seed flax straw in the paper and fibre board industry, states that successful commercial tests have been completed wherein domestic flax straw and tow were used in place of imported flax waste in the manufacture of fibre-board. The tests made were pronounced satisfactory and the product sold to the trade at the regular price for such boards. From an economic point, therefore, at a time when we are urged to conserve all the resources of our country, it would seem inconsistent that this country should waste its millions of tons of flax straw. Might it not be a subject worthy of the closest investigation of the Government to encourage the commercial use of this by-product?

Our acreage in flax in the year 1912 was equal to that of the United States in 1914. James L. Merrill, paper-plant chemist in the paper plant investigations of the United States Department of Agriculture referring to the waste of the straw of seed flax in that year, said that (1) its paper-producing possibilities would be equal to the annual production of wrapping paper, and more than double the annual production of writing paper in the United States; (2) its sale would represent, in added revenue to the farmers, about $5,000,000 annually; (3) it would exert a very strong tendency towards maintaining the flax crop in our agricultural system; (4) it would probably result in the establishment of paper manufacturing industries where there are now none; (5) it would aid in making our paper industry more independent of foreign paper-making raw materials; and (6) it would produce a keener realization of the latent value of some of our enormous crop wastes. These investigations, which have cost much in time and money, are surely worth the closest consideration of our Government, and they are in every sense as applicable to the conditions in Canada as to those in the United States.

From every viewpoint the cultivation of flax would seem to mean, under proper conditions, more new-found wealth than the production of any other single plant. If it be possible—and some authorities agree that it is—to cultivate flax that will produce seed of best quality, and at the same time straw for fibre of high standard, much advancement will be made and the value of the crop greatly increased. Whether this be so or not, the prevailing opinion and custom in this country is to grow flax separately either for seed or for fibre. The

Northwest has produced flax primarily for seed, and so far little, if any, use has been made of the straw. In Ontario flax has been grown more for fibre, the proportion grown for that purpose last year being about four-fifths of the whole. The total value of the production of seed in Canada between the years 1910 and 1915, as per census of January, 1916, amounts to $87,933,000, so that the importance of flax growing to the agricultural industry is not inconsiderable.

The need of Government co-operation as a means to produce not only more, but better, flax has been demonstrated beyond any doubt. The Canadian Textile Journal, in its issue of September last, has an article contributed by Mr. Jas. A. McCracken, secretary of the Ontario Flax Growers' Association, who is probably in a position to speak with knowledge, in which he shows that in many respects the industry is groping in the dark, and needs the united co-operation of the Government in the propagation and production of a Canadian flax seed adapted to the peculiar needs of our climate and soils. In this article he says, among other things:

> After close observation of the stands in various fields of western Ontario and elsewhere for twenty years, I am a strong advocate of more particular grading and soil cultivation. Every fibre field I have ever seen produced a more or less uneven stand, more noticeably so than fields of wheat, oats, or barley. This is the result of non-germinating seed, and the early death of many young plants from weak vitality. We certainly know too little about imported flax seed. We renew every two or three years. It comes to us from native conditions considerably different from ours. Most of it produces flax to be sure, but there are many failures of crop that seem attributable to nothing but the partial non-adaptability of foreign varieties to the soil and climatic conditions of Canada. There should be seed plots in this country where the talent and money required for seed breeding and development would be available. Our agricultural colleges are constantly evolving and creating new and excellent varieties of oats, wheat, barley and rye, but flax is practically neglected. No one man, especially now after a decade of depression, can finance this work successfully. It is a matter for combined effort and Government assistance. H. L. Bolry, botanist of the North Dakota Agricultural College, has shown what can be done in this direction by developing well-resistant seed and discovering that a spraying of formaldehyde makes the seed immune from exterior ravages by the spores of wilt and canker fungi. These are not vital considerations where fibre flax is grown on a studied rotation as in Ontario, but they show us what can be done by patient investigation and study.

The United States has a fibre bureau, which has been in operation for twenty-five years, working on flax, jute, hemp, and other fibre-bearing plants adaptable to their climate. The Irish have special government flax bodies for the promotion of flax study, but Canada seems to be still in the dark in this respect, though it has been established beyond peradventure that flax for fibre can be produced in western Ontario of as good a quality as anywhere else on the globe.

Further, the Government having undertaken the task of developing a suitable Canadian seed, may well further prosecute their investigations along the line of applied science and seek to determine the best methods to be employed in the production of the fibre. Opinions as regards this likewise vary. In many places, and generally throughout Ontario, it is still held that the old method of pulling the flax by hand is best. Against this the scarcity of labour has been a deterrent factor in the matter of greater production. If experience and science demonstrate that those who hold to the view that pulling is the best method are right in their contention, then the ingenuity of man, and the aid of the Government, should be directed to the invention of machinery that would do this work with economy of man labour, and to the cheapening of flax production. I understand that some advancement has already been made along these lines by the invention of Chas. H. Vessot, of Ottawa, and A. G. Mathers, who have produced a flax-pulling machine that in some measure meets the requirements and results in diminishing the cost of pulling by fifty per cent. Testimonials from prominent flax-growers in western Ontario bear testimony to the efficiency of the machine, and show that their experience has been that its use reduces the cost of pulling by from sixty to seventy-five per cent. By some it is claimed that this machine, while performing most effective and satisfactory work under certain conditions, is not yet so perfected that it will meet all conditions. It would therefore seem that Canadians have made considerable progress towards producing that which the ages heretofore have not yet produced, a machine for pulling flax. Might not the Government lend its aid to the further improvement and perfecting of this device? The Government could also materially assist in developing a process for the subsequent treatment of flax, which, while avoiding the difficulty of procuring cheap labour, would achieve the same results as hand pulling. If such a system were worked out it should be possible to develop a large and important flax indus-

try which would take rank with the other great stable industries of Canada.

The proprietors of a mill at St. Catharines, Ontario, have for some years devoted much time and investigation to this subject, and in their report on the subject the management say:

For several years past many machines have been devised and constructed and various improvements introduced having for their object the improvement of agricultural conditions—the sowing, pulling and harvesting of the flax. These are all more or less successful and in time will be made entirely so, but the subsequent treatment of the straw and its conversion into fibre is the branch of the industry to which we have chiefly directed our efforts.

By the process which we have developed the hand pulling will be largely done away with, and the subsequent spreading in the field entirely eliminated. In future the flax will be brought direct from the field, threshed by specially designed threshing machines, and immediately baled by powerful hydraulic process into bales each containing about 700 pounds of flax.

These bales are then carried by electric carriers or hoists and placed in large concrete tanks of a capacity of about ten tons of flax each. Here the flax is treated by means of bacteria cultures in water held constantly at the required temperature, by which means the flax is thoroughly "retted" in from two to three days.

From the tanks the wet flax is lifted by electric hoists and passed immediately to large specially constructed dryers, where in the short space of three hours the moisture is removed, leaving the flax thoroughly dry, and ready for the next operation.

From the dryer the bales are carried by overhead conveyors to the machinery room, where it is mechanically fed into large breakers and the wood broken and crushed into fine particles, the fibre being carried automatically into large shakers or beaters, where it is thoroughly cleaned and the resultant fibre deposited into large bins ready for baling and shipment to the spinning mill.

From the above it will be seen that no experienced or expert labour is required. The process is short and inexpensive, is positive in its results, and will produce a uniform grade of fibre. It can be done in any quantity desired. It is entirely free from weather conditions and can be carried on the whole year round and is not limited to a few weeks in the autumn as in the present system. Our mill is designed to handle 20 tons of straw per day, but additional mills can be erected and machinery installed capable of treating all the flax that can be grown in the entire country and as rapidly as the same can be produced by the farmers.

The object kept in view in designing and installing this plant for handling the flax has been simplicity and economy, and these two words are written large over the entire process; from the harvesting of the flax right through to the baling and shipment of the fibre to the spinning mill, everything has been designed to handle the flax by the most economical labour-saving methods so as to assure the farmer who grows the flax steady market for his product and at profitable prices, and also to insure our company in the operation of the plant a regular manufacturer's profit in producing the fibre for the trade.

It is now only a question of the intelligent co-operation of the Government with the farmers and flax producers to secure a sufficient quantity of flax—the raw material of the linen trade—in order to make possible the building up of a large and prosperous flax industry in the Dominion of Canada. It is simply a question of the production of the raw material and the investment of sufficient capital to manufacture the same into fibres, yarns and linens.

This firm, I understand, has been using this method with very satisfactory results, and it would seem that, as a result of their experiments, a new era in the flax industry is about to dawn.

It would seem, therefore, that there is sufficient divergence of expert opinion to justify the Department of Agriculture in taking immediate steps to make a thorough investigation of the whole subject, and lending to agriculture and industry the aid of their practically limitless resources to solve the vexed problems that for years have been the stumbling block to success. The department might also take up the matter of utilization of the straw from flax grown, particularly for seed, by which as a by-product at the present time is a total waste, but which, under scientific use in applied industry, might become of economic value impossible now to conceive. Then there is the by-product of the flax, or I might say of the linseed mills,— the oil cake. This commodity, which is produced in considerable quantities as a necessity in the production of linseed oil, is, I understand, a most valuable stock food, and yet only a limited proportion of what we produce is consumed by our stockmen. Does it not seem incongruous that, in a country like ours, with its millions of acres of grazing land, a country which beyond any other is peculiarly adapted to stock raising, this valuable by-product, linseed meal and oil cake, should be sent to Belgium, France, England, and other European countries to fatten and develop their live stock, and that our farmers, possibly for need of knowledge of its value as a feed to stock, do not avail themselves of its use. I say the Government can do much along the lines of conducting an educative campaign to correct these conditions, and to encourage the consumption, as far as may be necessary, amongst our stock men in Canada.

4 p.m.

The Department of Agriculture, having applied itself to a solution of these problems, might not the industry be further encouraged by the Department of Trade and Commerce? Having produced our flax fibre, encouragement should be given to the

spinning of yarns in Canada, and this should be further followed by giving encouragement to the linen mills; otherwise, our country would receive only a small proportion of the productive value of the product. Fibre is the raw material of the spinning mill for years, and this yarn again is the raw material of the linen mill used in the manufacture of linens. It will appear that flax, developed to the limit of its possibilities, will produce a greater amount of increased wealth than any other plant grown; and therefore, in the words of my resolution, more attention should be given to promoting its cultivation in Canada. Both as to culture and manufacture, the industry should receive that aid and consideration from the Government which would enable it to assume the importance the natural resources of our country assure. In countries where its development has reached the highest stage, governments have appreciated its value and the need of government aid; and even in Great Britain, where bonuses and protection in the way of import duties are the direct antithesis of her economic policy, the need for granting bounties to encourage the production of flax in Ireland, was recognized as far back as 1911, and in a single year as much as $100,000 has been paid to producers in bonuses. Even here in Canada we have applied the principle of bounties to certain comodities. I find by the Trade and Commerce returns for the year ending March 31, 1914, that we paid in bounties a total sum of $143,652.47, as follows:

Lead	$ 8,179 45
Manila fibre, used in the manufacture of binder twine and cordage	17,959 73
Crude petroleum	117,513 29
Total	$143,652 47

The bounties for twine making, amounting to $17,959.73, were distributed among only five producers—the Canadian Cordage and Mfg. Co., Ltd., Peterborough, Ont.; the Brantford Cordage Co., Ltd., Brantford, Ont.; the Consumers Cordage Co., Ltd., Montreal, Que., and Dartmouth, N.S.; the Farmers' Binder Twine Co., Ltd., Brantford, Ont.; the Plymouth Cordage Co., Ltd., Welland, Ont. I say, therefore, it would not be inconsistent with the policy we have adopted towards other industries if we, like other countries, recognized the great importance to economic productiveness in giving to flax cultivation and flax fibre production most liberal aid, even if it implied liberal bounties to the farmers. If flax pulled is determined to be the best method of handling the crop, it would not be unreasonable to ask the Government to give a bounty on fibre production equal to at least half of the cost of the labour of pulling, which is said to be $8 per acre.

In France this policy has been and is now pursued. There they give a bounty of $5 per acre in cases where flax is pulled and utilized for its fibre. This policy has been fully justified, it would appear, from the resulting mammoth textile industries widely distributed throughout the northern half of the country.

Ireland takes a different method, but an effective one, in stimulating flax culture. The Department of Agriculture and Technical Instruction for Ireland has charge of flax education. A thorough course in flax culture and manufacture is given to students, and the young graduates are sent out over the country to spread the gospel of improved methods. Belgium, which for years back has been the home of the highest grades of flax products, is now devastated, and it might be possible, if the Government directed efforts to that end, to get a number of expert flax men from that country to come over to Canada and lend their aid and experience to communities in this country. A few of these men have already reached us, and can be found around districts in western Ontario such as Forest, Alvinston and Mitchell, and some have been engaged in flax mills in these districts. Around Wallaceburg there is a large colony of Belgians and Dutch. The fact that sugar beets and flax require attention at different periods of the growing season, together with the fact that both crops like best the same kind of soil, would encourage the hope that these industries might be developed side by side.

The possibilities for flax culture in this country are so great, and its economic value so immense, that I feel that our Government would fail in the discharge of their duty to agriculture and to productive wealth if they did not without further delay arouse themselves to the great need that confronts them with reference to this subject. The United States Year Book for 1913 shows that in that year Canada had under flax cultivation 1,553,000 acres of flax, and produced 17,539,000 bushels of seed, and the United States on an acreage of 2,291,000 acres produced only 17,853,000 bushels. The adaptability of our climate and soil would seem to far outrival that of the country to the south.

This subject is so important, Mr. Speaker, and the possibilities so immense, that the

discussion of it might be continued at some length. I feel that I have not only unduly trespassed on the patience of the House in presenting the facts that I have collected, though I must confess there is doubtless much that might be said concerning it that I have not said. In closing, I would just add that the grading of flax fibre, the sorting of it, and the establishing of standards would seem to be matters of importance, and should receive the consideration of the Government, as also co-operation in the marketing of the product.

The Secretary of the Canadian Flax Growers' Association has sent me a communication in which he outlines certain ideas and suggestions concerning a flax culture bureau. I do not wish to tire the House, but I would like to read this communication and to have it placed on record as an expression of the views of a man who has had experience, and whose judgment is entitled to consideration:

Suggestions for Flax Culture Bureau.

Arguments for its Creation.

Cotton interests have put flax into as much disfavour as possible. Canada can never become great in cotton. She can become great in flax. Flax cultivation has failed to advance and flax manufacture to succeed because the industry has never been boosted by big or influential organizations. Even the manufacturers of flax fibre are not united. Thus the educational propaganda necessary to place such an industry (embracing as it does many processes) on its feet and to overcome both the farmer's and the labourer's prejudice, has been lacking.

A single instance of successful fibre production in Canada justifies government encouragement, and support for the industry. Thousands of instances prove that first-class fibre can be produced in Canada.

The farmer's prejudice against flax is wholly unwarranted, as the experimental stations have proven. Flax, besides, is an enemy to the wire worm; flax entails a vigorous campaign against weeds.

Equipment of Flax Culture Bureau.

(a) A demonstration car to be educational work for at least six months.

(b) Permanent headquarters for the bureau, preferably at some point in the midst of the fibre region or, if advisable to have it in touch with the Department of Agriculture, at Ottawa or Toronto.

Duties of Flax Culture Bureau.

(a) To disabuse the farmers of their unreasonable prejudices against flax.

1. By circulating exact information based on tests, experiments, etc., as to the exhaustiveness of flax on the soil.
2. By encouraging flax growers' associations.
3. By creating or encouraging a mafiazine devoted wholly to flax, for seed and fibre.
4. By driving home the lessons learned in Russia, India, etc.

[Mr. Glass.]

(b) "Made in Canada" cry. Have Canadian linen mills established, possibly by association of flax manufacturers. By stimulating a return to linen garments for summer wear.

(c) Standardization of flax as to both seed and fibre; new Canadian strains to be developed; encouragement of means, such as by baling the crops and by lower freight rates on such goods whereby growers remote from mills can profitably market their product in the sheaf.

(d) Encouragement in the estiblishment of paper mills in seed flax centres, such as Saskatchewan, where coarse straw can be profitably utilizer.

(e) A live publicity man in charge of the bureau; an agricultural expert and a mill-man as consulting specialists; office help, etc.

As I said, the industry in the western part of Ontario, where more direct attention has been given to fibre production, has received a stimulus by reason of the greater demands and increased prices resulting from the war, and of course the war has also decreased the production in the belligerent countries. The flax growers in the western part of Ontario, realizing their responsibility to the country, did their utmost to increase production last year; in fact, I doubt whether any other part of Canada made a more pronounced effort in that direction last year than the counties of Huron and Lambton. I know that my hon. friend the member for East Lambton (Mr. Armstrong), who is thoroughly conversant with that part of the country, will agree with me that this is a serious matter, and one which should commend itself to the most favourable consideration of this Government.

Mr. E. W. NESBITT (North Oxford): Mr. Speaker, I had not noticed this resolution on the Order Paper until my hon. friend from East Middlesex (Mr. Glass) moved it in the House this afternoon, or I should have given the matter some thought. I notice that he hopes the Government will give "serious" encouragement. Did he mean to suggest that the Government do not as a rule give "serious" encouragement to the farmers of this country? Well, perhaps the word is appropriate under the circumstances. I wish that my hon. friend, instead of merely giving a resume of the flax industry, had brought down some cut-and-dried proposition that we could have fully discussed. We all know, of course, that the flax industry is a valuable one, and that there is lots of room for improvement in that industry in Canada. A few years ago there was a strong agitation for flax mills in this country for the purpose of making paper out of the flax straw

in the West, which at the present time is burned or thrown away. Nothing, however, came of that agitation because moneyed interests could not be induced to advance money for the project. I quite agree with my hon. friend that it would be an excellent idea for the Government to appoint some one who has a knowledge of the business, and general business ability, to look into the whole question with a view to making recommendations to the Government. I am quite sure that there are men in the Agricultural Department capable of doing this work.

Among other things, my hon. friend read a statement to the effect that oil-cake and flaxseed meal are not much used in this country by the farmers, and the writer of the article wondered why these foodstuffs were not more used by farmers, instead of allowing them to be shipped to foreign countries. On behalf of the farmer let me say that the up-to-date farmer in this country calculates just how much protein and fats there are in every feed he gives. If oil-cake at a certain price will pay him better than oats at a certain price, he will buy oil-cake; or he will buy oil-cake in preference to cottonseed-meal if it pays him better. But if it does not pay him to use oil-cake, then, like the rest of us, he will not buy it. The farmer who is progressive and knows his business has things calculated pretty fine and knows just which food pays him best. Cottonseed-meal with 41 per cent protein pays better at $40 a ton than oilcake at the same price with only 35 per cent protein. I think oilcake in places like Woodstock is sold at $40 a ton laid down, and cottonseed-meal at about $38; but cottonseed-meal contains more protein or butter fat, and the farmers are therefore buying it in preference to oilcake. I can say positively from my own experience that oilcake is a very excellent food, but at the same time if other countries will pay more for it than our farmers, it is only natural that the producers should ship it to the highest market. There is no doubt that the fibre could be made up entirely in this country. Speaking offhand, I would say that the Government might very well look into the question whether linen could be produced in Canada from the fibre, also paper, and at what cost. If it could be shown that the proposition would pay, there would be no trouble in getting people with means to go into the business. The Government might very well investigate this question, and then lay before the House a definite proposition as to the amount of assistance required.

I have nothing more to say except to endorse my hon. friend's resolution so far as it goes, but I do not think it is definite enough. I hope the hon. member for East Lambton (Mr. J. E. Armstrong) will give us something more definite than a general resume of conditions of the flax industry throughout the world.

Mr. J. E. ARMSTRONG (East Lambton): Mr. Speaker, I am glad to know that the hon. member for North Oxford (Mr. Nesbitt) is interested in this question and anxious to support the resolution. I agree with him that, instead of the words "serious encouragement," the words "immediate attention" should be inserted in the resolution, so as to make the resolution stronger. We must, however, congratulate the hon. member for East Middlesex (Mr. Glass) on the large amount of research he has made in gathering together the facts in regard to the flax industry and on the able manner in which he has presented them to the House.

This resolution deserves the attention of every hon. member, because practically every province in Canada is and has been deeply interested for many years in the flax industry, and when one takes into consideration the enormous production of flax seed and flax fibre or straw in Canada one will appreciate the fact that immediate attention should be given to the development of that industry. I regret exceedingly that the serious accident which the Minister of Agriculture met with on the occasion of the fire in the parliament buildings prevents him being present. I cannot too highly congratulate the minister (Mr. Burrell) on what he has accomplished in past years, and while my remarks may appear to be somewhat of a criticism of the lack of interest or initiative shown by the Department of Agriculture in regard to the flax industry, I can assure you, Sir, that, in his administration of all the other branches of agriculture the minister is deserving of every consideration and confidence.

When war was declared, I called the attention of the Minister of Agriculture to the fact that the flax industry, in those countries that have for years been producing flax fibre in great quantities, was very much demoralized. I was able to show that France, Belgium and Germany, three of the large flax fibre producing countries, would for years to come be unable to produce the flax required for the linen mills of Ireland,

the United States and other countries. In the year previous to the war Russia had 3,500,000 acres under flax; but owing to the careless manner in which the flax industry is conducted there, the active men who are interested in the flax industry in Canada need not be afraid of that competition.

Last session, speaking in the House on the second day of March, I called the attention of the Government to the importance of investigating this question, to the need of immediate attention and assistance being given to our flax producing centres, and to the encouragement and education required for the development of the industry. I informed them that fifty years ago in the province of Ontario we had 80 flax fibre mills in operation; that forty years ago we had 65 mills; that twenty years ago we had 30 mills, and that two years ago we had only 9 flax mills. There must be good reasons for these mills going out of business, and I shall place before the Government some of these reasons, and point out the need of immediate attention being given to supplying a remedy. In Quebec, I believe that in Rouville there is one mill still in operation, and if my hon. friend (Mr. Lemieux) will look back at the history of the flax industry in his district, I am sure that he will appreciate my remarks and will support the resolution under discussion.

I have before me a map of the province of Ontario showing the districts in which flax mills were formerly located, the mills that are now in active operation, and those that have gone out of existence. The Department of Agriculture does not appear to give any assistance to this branch of agriculture, nor does it assist by experiments on its experimental farm its development. When one considers that in 1910, there were in the Dominion 476,000 acres under flax, 438,000 acres in Saskatchewan, 24,577 in Manitoba and 14,300 in Alberta, besides what was grown in Ontario and the other eastern provinces, we must realize the importance of some active interest being taken towards the development of this industry by a branch of the Department of Agriculture which should at once be organized for that purpose. We ought to have good seed for planting purposes so that we may increase the quality of the fibre. In 1911, in Western Canada, 1,500,000 tons of flax straw was burned, whereas if that had been turned into flax fibre it would be worth, at the prices current today, $100,000,000, and be it remembered that the farmers of the western provinces received only $11,555,000 for the seed which they produced.

As the hon. member for East Middlesex (Mr. Glass) has said: this is Canada's opportunity. Canada never can produce cotton, but she can become great in the production of flax, and there is no reason why every province of Canada should not assist in the development of this industry. Some years ago the Minister of Agriculture set aside $10,000,000 for the purpose of assisting in the education and development of agriculture throughout the various provinces, and if the Federal Government are determined not to take an active interest in the flax industry, they should urge upon the Provincial Governments the need of expending some of the money that is handed over to them out of this fund towards that end.

The subject is one that should be dealt with entirely by the Dominion Government, it is a Dominion proposition. When you realize that practically all the products of this industry are exported out of the country, it will be seen that the Minister of Trade and Commerce should be deeply interested in the question. For instance, his is the only department from which we can obtain reasonably accurate returns in regard to the development of the industry. From the statistics gathered by that department in 1915 I find the following figures indicative of the progress which is being made by the flax industry throughout the country:

Table showing the Estimated Area, Yield, Quality and Value of Flaxseed in Canada, 1915.

Province.	Area.	Yield per acre.	Total Yield.	Weight per measured bushel.	Average price per bushel.	Total Value.
	acres	bush.	bush.	lb.	$	$
Quebec	600	11·89	7,000	54·16	2.18	15,000
Ontario	5,000	12·38	62,000	50·78	1.72	107,000
Manitoba	34,000	11·00	374,000	55·00	1.54	576,000
Saskatchewan	697,000	13·00	9,061,000	55·89	1.50	13,592,000
Alberta	70,000	16·05	1,124,000	56·37	1.49	1,675,000
Total	806,600	13·18	10,628,000	55·28	1.50	15,965,000

An industry in which the farmers of Canada are interested to the extent of over 800,000 acres is surely worthy of the very best attention that the Department of Agriculture can give to it. I sincerely hope that another year—indeed, another month—will not pass without some definite organization being completed, and some effort being put forward for the development of the flax industry. Consider for a moment the enormous development that is possible in the Northwest. When you realise that nearly 800,000 acres in the western provinces are devoted to the growth of flax, and that they have been able to grow it successfully in such large quantities for many years past and apparently intend to continue it, you must realize the great importance and potenialities of the industry. They have received their returns entirely from the seed. If the fibre from that enormous area could be made use of in the manner in which they make use of it in western Ontario, you can readily appreciate the enormous returns that could be made by the people of the prairie country.

Let me call your attention for a moment to some of the developments that are carried on in western Ontario. This industry might be developed in western Ontario to a much greater extent. The area under flax, grown for fibre, in southern Ontario during 1915 was about 4,000 acres. From this area the production of flax fibre was about 800 tons, which at the average price of approximately 20 cents per pound, or $400 per ton, was of a total value of $320,000. But some of the plants in that part of Ontario were able to receive ten cents a pound more than the price which I have quoted, simply because they were under the control of live, active flax millers who were able to produce the very best quality of fibre and export it to advantage. That meant ten cents a pound, or $200 per ton, to the men who were able to produce that quality of fibre. Then, in addition, 80 tons of tow, at $35 per ton, realized $2,800. The same crop also produced seed at the average rate of nearly 12 bushels per acre, or a total yield of 48,000 bushels, the value of which, at the average rate of $1.60 per bushel, was $76,800. About thirty per cent of the total production of fibre is shipped to Ireland, the rest being exported to the New England states. From a small area of about 4,000 acres there were returns to the people of that district of at least $400,000. Taking that into consideration, it is surely worthy of the attention of the Department of Agriculture.

I said that every province was interested in this proposition. We are not here today asking for a bonus, or a duty, but we are here asking that some definite proposition should be presented as a result of which this industry could be developed along proper lines. Before I sit down I shall try and carry out the wishes of the hon. member for North Oxford (Mr. Nesbitt) by placing before the House a definite proposition. All that we are asking for is education and experiment. Go to the experimental farms in every province of this country and you will find that they are paying little or no attention to experimental work in connection with the flax industry. It is true that some little attention was given to it last fall. Mr. Grisdale went to Washington, and some slight efforts have been made towards inquiring into the needs of the industry. But I do not feel

that we should lose valuable time, especially when the market for the product is calling for enormous quantities of it at prices double what they were a few years ago and which should bring very great returns to the millers and farmers. In western Ontario, in 1913, we had 2,500 acres under flax for fibre; in 1914 we had 1,300 acres, and in 1915, 4,000 acres. Our mills have increased in number until last year we had 27 in operation, largely in that western district.

Mr. PARDEE: How much of the flax was grown in Lambton?

Mr. ARMSTRONG: We have five mills in operation in Lambton.

Mr. PARDEE: How many acres of flax were grown in Lambton?

Mr. ARMSTRONG: I would be afraid to estimate. The mills have increased in the last two years from 9 to 27 in the province of Ontario, and there are ten new mills that are to be opened during the present spring. I am satisfied that if a reasonably earnest effort were put forth a large number of these mills could be opened in different parts of our province, and in the eastern and western provinces as well.

I listened to the hon. member for East Middlesex while he was calling attention to the fact that foreign countries bonus and assist this industry in many ways. Surely it is a reasonable request for us to make that at least an educational campaign should be carried on looking to the development of this industry. In Russia they have established ten standards of flax fibre.

In Canada we have no such thing as a standard for flax. Our millers are carrying on their industry by guesswork largely, sending their product abroad and receiving what little they can for it, while, as a matter of fact, they should be furnished with all kinds of information in regard to the markets for the disposal of this product and to assist them in the development of the industry. My hon. friend from East Middlesex called attention to what Ireland, through the Board of Agriculture, is doing for the development of the flax industry. Surely that is worthy of our consideration. In Australia the mills are assisted and an export fibre bonus is paid. Experiments should be carried on in all experimental farms; factories should be furnished with proper asistance and information in regard to the handling of the product, and the farmers should be educated by the distribution of pamphlets and of general information regarding the care of the product and the harvesting of the crop.

I believe that a division under the Experimental Farm Branch of the Department of Agriculture should be opened immediately, similar to the live stock division, field husbandry division, serialists division, forage crop division, horticulture division, poultry division, botany division and chemistry division.

The duties connected with this division should cover the sending out of literature from time to time to men interested in flax growing and production. The districts where mills are not now being operated should be visited, and if possible the owner should be induced to re-open these mills. Information and encouragement should be given the owners in the way of securing proper seed and giving encouragement to the farmers of the district. The flax mills in operation should be visited by experts at times of seeding, harvesting, spreading, retting and turning, in order that the best results might be obtained. The person in charge of the division should see that the best seed is used for planting purposes. Proper grading of flax fibre for export should be carried on. He should investigate the new means of retting and pulling which are being introduced from time to time. The miller should be kept posted in the latest European and American methods of handling the flax. Ways and means should be found for the disposing of flax and its by-products in Canada and in foreign lands. The flax grower should be assisted in importing the proper kind of flax-seed from Holland or elsewhere, and co-operation should be encouraged. The division should aim at the standardization of flax both as to seed and fibre. New Canadian strains should be developed. Encouragement should be given in the way of baling the crop, and information sent out concerning tests as to the exhaustiveness of flax on the soil.

Lower freight rates should be secured. The western provinces should be visited and a thorough investigation made into the methods of growing flax and the possibility of using the straw or fibre for export or milling purposes. The United States, Ireland, Holland, France and other countries should be visited and their methods of growing and curing the product carefully inquired into and studied. The districts located in the provinces of Quebec

and Ontario, where flax is now being produced, should be visited at the earliest possible date, and every encouragement given to the millers and farmers to become interested in the development of the flax industry. I appeal to the members of this House to give this matter their earnest consideration, and to the Government to take immediate action to secure the development of this industry in Canada along proper lines.

Mr. DONALD SUTHERLAND (South Oxford): I am sure, Mr. Speaker, that we have listened with a great deal of interest to the remarks of the mover (Mr. Glass) and the seconder (Mr. J. E. Armstrong) of this resolution affecting what is in some parts of the world a great industry.

I was interested in the remarks of the seconder of the resolution with regard to flax growing in Canada. The fact that fifty years ago 80 mills were in operation in Canada—largely, I think, in the province of Ontario—forty years ago, 65; twenty years ago, 30; two years ago, 9, shows that considerable experimenting has already been carried out in connection with flax-growing in this country. I happen to come from a part of the country where some of this experimenting has been carried on. While I may not be altogether in accord with some of the views expressed by the mover and the seconder of this resolution, I do not want it to be understood that I am not in favour of all possible light being thrown upon the subject. I was impressed with the remark of the mover of the resolution to the effect that the views which he expressed were based upon his own observations. There are two sides to the question. I believe that the prejudice of the farmers against flax production, referred to by the secretary of the Flax Growers' Association, is not unnatural. While the growing of flax in Canada since the beginning of the war has proved unusually profitable, by reason of the good prices received for the fibre, yet, having regard to the agricultural condition of the districts where flax-growing was extensively carried on for a number of years, I for one do not look favourably upon the encouragement of the industry. In the harvesting of a flax crop the whole plant is taken from the soil, even the root. It is said that machinery has been invented whereby flax may be cut and harvested like other grain. To my knowledge, however, that experiment was made thirty-five or forty years ago, and the objection was that the very best of the fibre was left on the field. When you think of the fight that the farmer is continually waging against noxious weeds, you will appreciate the difficulties that he has to contend with in growing a crop of flax. The whole crop has to be pulled; this operation involves a good deal of labour. In western Ontario I believe the custom has been to get large numbers of Indians from the reserves to camp in the flax-growing districts and pull the flax. The flax was stuked up on the land, and as it remained there for a considerable period, the farmer was unable to cultivate the land immediately after harvest. All the weeds that grew in the crop, being left on the soil seeded there, and in a short time the land became impoverished and full of weeds. Farmers who engaged in flax-growing for a number of years were eventually driven out of the business for that reason. Of my own personal knowledge, I know of farms that were rendered practically useless for any other purpose simply because flax was grown upon them for a number of years, and only after many years were they restored to a reasonable state of productivity. I do not know so much about the condition in western Canada, but I am satisfied that with the new lands they have there, they can grow great crops of flax. I doubt very much, however, whether their climatic conditions will permit them to rett the flax so that they can separate the wood from the fibre. In western Ontario the conditions in the fall of the year are different from what they are in Western Canada. If you look over the records I believe you will find that flax growing is popular only in countries where they have cheap labour. I believe that India is the largest flax-producing country in the world. Argentina is second, and Russia third. United States is a large grower of flax, but she does not engage in the industry as these other countries do. The labour conditions in Canada make it very difficult in normal times to grow flax at a profit. I am satisfied that the farmers of western Ontario would make a great mistake if they should change their system of agriculture and go into the growing of flax, which entails a great drain on the land, whose fertility can be maintained only by the use of artificial fertilizers. I am satisfied that agriculture must be carried on more scientifically in Canada in the future than has been the case in the past. In Ontario, in years gone by, when there was a great deal of new land, flax was a splendid crop to sow on the land the first two or three crops, while rotting the sod, levelling the soil, and bring-

ing it under a system of cultivation. And I believe that even to-day in those sections where mills have been re-erected, the prevailing custom is to sow flax on sod with a view to rotting the sod. But I am afraid of the consequences and I would not like to advise the Government to encourage the growth of flax in this country. A few years ago, I believe, a certain association claimed that they were able to separate the fibre of flax without rotting it. The unrotted flax fibre was going to revolutionize the whole system of flax growing, not only in Canada but in the world. If that were the case, probably in Western Canada it would be a great boon to that country, because I have no doubt that with the system of farming they are able to carry on there, with a rich, virgin soil which will undoubtedly stand cropping for a number of years, they could make it a very profitable enterprise. I have my doubts as to the possibility of making that industry a success in Ontario, particularly in those districts where they have had considerable experience in the growing of flax. I have fresh in my mind the scene that meets my eye every year when the grain is maturing and when I pass through those districts in which flax used to be grown quite a number of years ago. You find that in those fields, even to-day, it has been impossible to obliterate the effects of growing flax. The fields in those districts are as yellow as gold with the wild mustard that grows in the soil as a result of the cultivation of flax. I believe that the weed nuisance, if I am not permitted to describe it by a more severe name than that, is the greatest enemy the farmers of Canada have to contend with to-day, and that it is costing this country annually hundreds of millions of dollars. I believe that the Government will have to resort to drastic measures in order to stop the spread of noxious weeds. It must not be longer tolerated. I do not wish to couple these objections with this resolution, but the two are so bound up, in my mind, that I can scarcely separate them.

Mr. HAZEN: How has the growing of flax caused the spread of wild mustard?

Mr. SUTHERLAND: For the reason I pointed out, that it is almost impossible to pull weeds among flax without tramping it down and destroying the crop. With other crops you can go through and pull out what mustard there is in the field, but you cannot do that with flax. The mustard matures and the seed spreads on the ground before the flax is ripe. The same thing is true of other weeds.

Mr. ARMSTRONG: How is it that in western Ontario, where we have the oldest-established flax mills, which have been in continuous operation for many years, the farmers in the districts convenient to them are the most successful farmers in the country?

Mr. SUTHERLAND: In my boyhood days, which is a considerable time ago, we had three mills in the county in which I live, and for the last 15 or 20 years there has not been a mill in operation there. I understood from the remarks made by the hon. member for East Lambton that 50 years ago there were 80 mills, 40 years ago about 45 mills, 20 years about 30 mills, and 2 years ago only 9 mills in Canada. I think that is a sufficient answer to the question.

Mr. NESBITT: Is there not a mill at Tavistock?

Mr. SUTHERLAND: Tavistock is partly in Perth County. I am not sure whether the mill is on our side of the line or not.

Mr. NESBITT: It is on our side.

Mr. F. F. PARDEE (West Lambton): Some time ago I, in common with other members of this House, received a letter from Mr. Fraleigh regarding the giving of some consideration by the Government to the flax growers of Ontario. I think this question affects the western part of the province to a greater degree than any other part. I cannot, with my knowledge of the subject, go into details as other gentlemen have done, but from hearing the figures given to-day and from reading the circular to which I have referred, the subject appeals to me in this way, that if there is the large acreage growing flax which has been quoted by the hon. member for East Lambton, and if the mills have gradually fallen off from their former prosperity, and if, as the flax growers seem to think, the growing of flax, if properly attended to and with sufficient co-operation between the Department of Agriculture and the growers, is a profitable business it is a fit and proper case for the favourable consideration of the Government and the demands of the flax growers ought to be acceded to, because they are simple demands. They say, in their circular, simply that they desire more co-operation as between the experimental farms and such institutions and the flax growers. Even if the hon. member for Oxford (Mr. Suther-

land) is correct in the statement that the sowing and reaping of flax is liable to leave more weeds in the ground than the sowing of other grains, then there would seem to be even greater need for the Department of Agriculture stepping in and finding out if that state of affairs actually exists, so that the farmers and those interested in the growing of flax may know whether they are sowing a crop that it is advantageous for them to grow. I only desire to repeat that with the acreage sown to flax and the extent of the industry in western Ontario, it appears to be a proper case for the consideration of the Government. If they are not receiving sufficient consideration from the Government and the Department of Agriculture, surely the department should undertake such experiments as will satisfy those interested in the industry that everything is being done that will be of advantage. If the result of these experiments proves that it is not a desirable industry, the flax growers should be told that. The whole matter seems to be in an experimental stage. Then surely it is the duty of the Department of Agriculture to make exhaustive experiments, and so the Government might well accede to the request made by the flax growers.

Mr. J. G. TURRIFF (Assiniboia): Mr. Speaker, judging by the figures that have been given by hon. gentlemen opposite, it would appear that, during the past few years, the principal acreage of flax has been grown in the West, more particularly in the Province of Saskatchewan. As hon. members are aware, some years ago the price of flax was very high. At one time the farmers got, I think, as much as $2.25 per bushel; I know it was around $2 a bushel for a considerable period, and during those years a great deal of flax was grown. As was pointed out by one hon. member, we have never made any use whatever of the straw on the prairies; it has been used either for feeding, or has been burned, which ever was most convinient, I imagine, for the farmers. The money they made out of it, was altogether out of the seed. Anything done by the Government in the way of carrying out the wishes of the flax growers of Ontario, or of ascertaining whether the flax grown in the West is of the right quality to make a valuable fibre that will be worth money on the market, would I think be a step in the right direction. I certainly think it is the duty of the Government to take some steps, for after all it would be a simple matter to make the necessary experiments.

I know that a few years ago a company, having its head office in the Old Country and a branch here, made some experiments, and tried to do something in the way of establishing mills throughout the West. Their purpose was, as I was informed, to pay the farmers so much for the flax straw, after it came from the threshing mill, or so much an acre for the flax straw unthreshed; in fact, to cover both the grain and the straw. So far as I am aware, however, nothing was accomplished in that direction. Among the things that would help the flax industry in the West, there is one which I noticed that my hon. friend who moved the resolution (Mr. Glass) and the hon. member for Lambton (Mr. Armstrong) did not include. I refer to the removal of the duty on flax going into the United States. So far as the flax in the West is concerned, Duluth is the principal market. We cannot consume the flax grown in our country, at least not a very large portion of it; we have to export it. A few years ago when the price was high, a duty of 25 cents a bushel, though a large tax, did not interfere with the growing of the flax, but when the price went down, as it did a year ago, to something around $1 a bushel, a duty of 15 cents on flax going into the United States was quite enough to keep some farmers from growing flax to any extent. I would suggest that if the Government could secure the abolition of the duty on flax going into the United States they would probably do more than could be accomplished in any other way to encourage the growth of flax on the prairies. I think it would be better to adopt a system by which the straw could be used for mercantile purposes, but in the West I do not know that that idea would ever take a very great hold, because labour is high, the farms are large, and the settlements are thin and scattered. They would have to draw the straw a considerable distance, I imagine, in order to have it treated, but whether that would be the case or not I do not know. What I am sure of is, that something ought to be done by the way of experiment, and I think the resolution moved by my hon. friend (Mr. Glass) is in the right direction. I trust that the Department of Agriculture will take hold of the question, find out something about it, and give the House the result of their investigations at an early date.

5 p.m.

Mr. W. A. BUCHANAN (Medicine Hat): The views just expressed by the hon. member for Assiniboia (Mr. Turriff) are very much in accord with those held by myself.

In the southern part of Alberta there is a considerable acreage of flax, not so much in recent years as formerly, and I am sure that if there was more encouragement for the use of the by-products of flax, there would be a greater acreage in that part of Western Canada. Flax grows there with a great deal of success, and the farmers are anxious to find some use for the flax straw. They would also like to get a much higher price for the flax if that could be secured. The flax straw problem has been discussed by the Board of Trade of the city of Lethbridge, and I understand that a few years ago a gentleman from Holland or Belgium travelled through the western country with the idea of establishing a factory for the purpose of utilizing this straw. I think that the Department of Agriculture should give every encouragement to experiments along that line. We are going into intensive farming more and more, and we do not want to waste anything. At the present time flax straw is being wasted, throughout Western Canada at any rate. It is of use in other countries, and we should ascertain whether it is not practicable to use it in this country so that the farmers may get full value for the flax which they grow.

Mr. WILLIAM WRIGHT (Muskoka): I think that one of the reasons why farmers do not go in for growing flax is the excessive cost of threshing and marketing it. This applies perhaps more particularly to the great western country where there is a very large quantity of farm weeds. While threshing operations are in progress with regard to larger grains, such as wheat and oats, it is a comparatively easy matter to separate the weed seeds from the grain, but when you try to separate them from flax, you find it a much more difficult proposition. The result generally is that a certain percentage of those small weed seeds find their way into the flax when it is threshed, and a very large deduction has to be made when the farmer comes to sell it. Even the cleanest growers of flax have to face a reduction of 15 per cent when they sell the flax; that is, that amount is deducted by the elevator companies from the quantity the growers may happen to have in the car. Then, as the hon. member for Assiniboia mentioned, the price cuts a considerable figure, the threshing of flax costs a good deal in the West. I have known 25 cents per bushel to be charged for simply threshing the flax; 20 cents per bushel is a very common charge in the West. The thresher will thresh oats for perhaps 6 cents a bushel, and wheat for from 8 to 10 cents per bushel, according to the manner in which the threshing is done. The fact, therefore, that the cost of threshing flax is so much higher than that of threshing wheat or oats, that the deductions are so much greater, and that there is difficulty in getting the whole crop to ripen at the same time so as to enable the grower to eliminate the immature seeds, all militate against the farmer in the growing of flax. The result has been that a good many farmers in the West, who would otherwise have made a success of it, have given up growing flax.

Perhaps under better conditions this might be made a more profitable crop. The farmers in the West say that they can get a crop of flax off land that would not be a success in growing wheat or oats, and a great deal of the flax of the West is produced under those conditions. As regards the province of Ontario, the people in the district from which I come go in for growing flax in only a very limited way indeed. I should be very pleased to see the Government take this matter up, and see whether something could not be done in the direction of utilizing flax straw. It is a question, I think, that comes very properly within the purview of this Government. Men have visited this Parliament in past years, bringing plans with them, and claiming that they had machines that would pull flax successfully; they said they had some process by which flax could be made merchantably profitable. But as to all these things, our farmers are in very great doubt indeed, and I do not think it would involve any great expense if the Government put some of these processes to the test, in order to find out whether there was any hope of making a success of the flax industry in this country. If some way could be found of utilizing the straw in our great western country, it would certainly be worth while. Flax straw is cut up very much finer than ordinary straw in threshing, and the thought has sometimes occurred to me that perhaps flax straw could be compressed into bricks and used for fuel, like we use peat in the East. There have been in the West experiments with the burning of straw in large ovens or stoves, and the waste in the burning of the straw has been to some small extent utilized; at all events, attempts have been made to utilize it. Any one who is accustomed to growing flax in the West knows that it gives off an immense heat when fired, and I think there is a great

deal of this kind of heat stored up in the West. I should like to see this suggestion tested out, along with any other tests the Government may make when they take hold of this question.

Hon. J. D. HAZEN: The resolution proposed by the hon. member for East Middlesex (Mr. Glass) opens up a question which I think is of very great importance and of very great interest as well. At the outset I may say that I can see no objection whatever to the adoption of the resolution, with this exception: the resolution suggests that " aid " should be given. It says:

> That the flax and linen industries should, both as to culture and manufacture, receive that aid and consideration from the Government, which would enable it to assume the importance the natural resources of our country assure it.

And in speaking to his resolution the hon. member for Middlesex also suggested that it might be desirable for the Government to give a bonus to encourage the flax industry. I do not wish any misapprehension to exist on that point. I do not think the House wishes it to be understood that in voting for this resolution they are voting for a resolution which contemplates giving a bonus for the encouragement of this particular industry. The word " aid " might possibly give the impression that financial aid was intended, and I would suggest to my hon. friend that " aid " be eliminated, and the word " encouragement " substituted therefor. I do not think it is the intention of the House to pass a resolution at the present time giving financial aid to this industry, but if that was the intention of the hon. member for Middlesex, I might point out that such a resolution could not properly emanate from a private member, by reason of the rule that resolutions involving money grants must emanate from a member of the Government. I therefore suggest that the word "aid" be struck out and the word "encouragement" be substituted therefor. The matter which my hon. friend has brought to the attention of the House, like all other matters affecting the agricultural industry of this country, is of great importance, and anything that can be done to encourage the farmers of this country to go into an industry that will be of advantage to them will be of very great value to the country generally. The flax industry in Canada to-day, as appears from the figures of the hon. member for East Lambton (Mr. Armstrong), is not a small industry. The value of the flax produced last year in Canada, as my hon. friend has pointed out, amounted to $15,965,000—a very considerable amount, but very small in comparison with the value of the flax that could be produced in Canada if it was thought desirable, in the interests of the farmers and in the public interests, that more should be produced. Of that $15,965,000 worth of flax, over $13,592,000 was produced in the province of Saskatchewan alone. Of the balance, $1,675,000 was produced in Alberta, $576,000 in Manitoba, $107,000 in Ontario, and $15,000 in Quebec; while in Nova Scotia and New Brunswick, Prince Edward Island and British Columbia no flax at all was produced. The $13,592,000 of flax that was produced in Saskatchewan was grown on 9,061,000 acres, and I believe that the great portion of that flax was grown, not for the purpose of producing fibre for making textiles and linens, but for the seed, out of which oil is made for feed for cattle. My hon. friend from Assiniboia (Mr. Turriff) has pointed out that there is not a large enough market in Canada for the production of a large quantity of flax, and that it might be of some assistance to the flax producer of this country if the United States Government removed the duty on flax. I might say to my hon. friend that so far as the production of flax for the manufacture of oil is concerned, there is a very great demand in Canada to-day for a much larger production. The paint makers of this country have been in communication with the Department of Agriculture about it, and have represented that the demand amongst the paint makers of this country to-day for the oil produced from flax seed is very much in excess of the supply in Canada at the present time. Not only is that the case in Canada, but there is also in Great Britain to-day a very large demand for linseed oil, and if the acreage in Western Canada was increased to a very great extent over what it is now, there would still be a market in Great Britain and Canada for all the oil that could be produced from the extra amount of flaxseed grown. I think my hon. friend, had more in mind, as the hon. member for Lambton had, than the growing of flax for the purpose of fibre out of which textiles could be produced. I speak without any practical knowledge of the subject, and only with such information as I have been able to obtain from reading, and in discussion with others, but I think I am correct in stating that the variety of flax from

which seed is produced for the purpose of oil, is not the best sort for the production of fibre out of which textiles can be manufactured. There is a difference in the quality and, to some extent, in the nature of the flax that is used for these different purposes. I might say the Department of Agriculture has been taking steps along the lines which have been suggested in the debate this afternoon, and I trust they will be of such a character as to satisfy the farmers of this country as to the advantage or disadvantage of raising flax in Canada. As was pointed out by the hon. member for South Oxford (Mr. Sutherland), who addressed the House some time ago, there is an apparent difference of opinion with regard to this matter. In certain parts of the country where farmers have ceased producing crops that at one time they produced, they have done so because, being alive to their own interests, they concluded that other crops would pay them better. This may be the reason why the farmers of Ontario are at the present time producing less flax than they did fifty years ago when the industry was, according to the figures given to-day by the hon. member for East Lambton (Mr. Armstrong), quite a flourishing one; but I know of sections in the eastern part of Canada where years ago the people produced a considerable quantity of wheat and where now they have altogether abandoned its production, finding it more profitable to purchase their flour from the millers of Western Canada and to use their lands for the production of crops of an entirely different character. Yet I have known of a case where, years later, under altered circumstances and conditions, farmers have returned to producing those crops which at one time they thought it was better to abandon in order to produce other crops that were more profitable, and that could perhaps be produced more easily. The same conditions may apply to the production of flax in Ontario. When the farmers of Ontario abandoned the production of flax to the extent stated by the hon. member for East Lambton the conditions may have been very different from those prevailing to-day, and, in the section of country from which my hon. friend comes, the farmers are evidently finding it to their advantage to return to the production of flax, because, if I understand my hon. friend aright, where two years ago there were only nine mills, there are now twenty-seven mills and ten more mills will be added during the present year. I conclude that the farmers, who are pretty good judges of their own interest and who are practical men, have, at least in that portion of western Ontario in which the Lambtons and the Middlesexes are situated, decided that under the conditions that exist to-day it will pay them to raise flax, and consequently farms are being planted with flax and mills are being erected for the purpose of retting and scutching the flax after it is produced.

My hon. friend from South Oxford (Mr. Sutherland) has referred to the fact that flax is not regarded as a desirable crop because of the difficulty of doing away with and destroying the weeds that grow amongst it, and because in pulling up the weeds, the fibre of the flax is apt to be destroyed, since, if I understand the flax business correctly, flax cannot be mowed or harvested as can wheat and oats. It has to be pulled up by the roots, because some of the very best part of the fibre is contained in the root, and if the flax is cut off by a mower or a reaper, a great deal of this very best part is wasted. Thus, in pulling up mustard weeds, which grow amongst the flax, there is danger of pulling the flax up and destroying the fibre and to a great extent destroying the crop. That is a matter that should be considered by the experts of the Department of Agriculture; and it is altogether likely that if experts in the culture of flax and experts in the experimental farm work take the matter up, they will be able to find a remedy for this trouble. At the present time the people interested in the flax business are endeavouring to find a remedy by the invention of machinery for the purpose of pulling up the flax so that the labour problem may be overcome, and the work of pulling not so expensive as it has hitherto been. I have before me the photograph of a machine invented for pulling the flax, which, if successful, will very much lessen the cost of pulling.

I have stated that the Department of Agriculture has taken this matter into its serious consideration. Mr. Grisdale, director of Dominion Experimental Farms, was some time ago directed by the Minister of Agriculture to look thoroughly into this matter with a view of working along the broad lines suggested in the resolution now before the House. The result has been that the growing of flax for fibre has, during the past year, received very considerable attention from the department. A quantity of flax has been grown on the Ottawa Experimental Farm, and

there have been collected in the various provinces where flax is grown, samples which have been retted here and scutched at Forest, Ontario. For the information of hon. members who perhaps know very little about the flax business, I may say that "retting" simply means "rotting," and is spelled with an "e" instead of an "o." This process is generally carried out by placing the pulled flax, or what we might call the straw, in water, and allowing it to remain for four or five days. At the end of that time the ligneous matter is retted or rotted to some extent and separated from the fibre. The mass is then taken out of the water and allowed to dry, when it becomes quite brittle. It is then put through corrugated rollers and broken up. The next step in the treatment of the flax is the scutching. The scutching machine consists of an instrument something like a wagon wheel with the felloes removed and seven or eight spokes left attached to the hub. This is rolled over the straw, and by this means the woody portion is knocked off and the fibre is left. The fibre, as we have it in Canada, is something like the sample that I have in my hand, and it is not manufactured into linen in this country, but is shipped in this condition. This work has been going on at the experimental farm, and some very good samples have been obtained by means of this process.

In August last Mr. Grisdale, director of Dominion Experimental Farms, made a general investigation into the status of the industry and the possibility of its expansion in Canada. A bulletin on the subject of flax for fibre in Canada has just been prepared, and when printed it will be distributed generally amongst prospective flax growers. Mr. Grisdale has made a report on the subject, from which I will quote a few extracts:

> Acting under instructions from the Minister of Agriculture, the Hon. Martin Burrell, the writer has, during the last two or three weeks, made an effort to learn something about the "flax fibre" producing industry in Canada and the United States as to (1) information available in Government bureaus, (2) men capable of taking part in the propaganda to increase production and encourage the industry in Canada and available for such a purpose, (3) the line such a propaganda might follow, (4) the present state of flax for the fibre producing industry in Canada and the United States, and (5) general information on the subject.

For this purpose Mr. Grisdale first of all went to Washington to see what information he could get there from the secretary of the fibre division of the United States Bureau which is connected with the Department of Agriculture of the United States. His visit there, however, showed him that very little information of real value had been collected by that division. The files showed but a very small knowledge of people interested in the actual production of flax for fibre in the United States, and Mr. Grisdale found that the two men apparently recognized as the best men in the industry in the United States were Mr. B. Summers of the Summers Linen company, Port Huron, Mich., and Mr. McCaul, of the James Livingstone Flax company, Yale, Mich., while in Canada the only man recognized as an authority was Mr. G. Howard Fraleigh, of Forest, Ontario. Mr. Grisdale proceeded from Washington to Chicago, where he had an interview with Mr. Dewey, who, I understand, is connected with the Department of Agriculture at Washington, but who was not in Washington at the time of Mr. Grisdale's visit. Mr. Grisdale, in his report, states:

> Through kindness of Mr. Taylor, I was able to get into touch with Mr. Dewey by telegraph and to make an engagement to meet him in Chicago. This I did and found Mr. Dewey very sympathic in his attitude towards our efforts to gain information along various lines of interest in connection with fibre flax. He admitted, however, that neither he nor Mr. Miles, his assistant, was in a position to help us out although he expressed willingness to do anything he could in that way. Their knowledge was, he admitted, theoretical, rather than practical and the bulletin recently prepared by Mr. Miles was largely of the nature of a compilation rather than a work based upon results or practical work done by their division. The work being carried on by the fibre division with flax is along the following lines:
>
> (a) Improvement of varieties by selection from experimental plots being grown in the United States and by importation of new varieties. Blue and white blossom varieties are being tried out from seed imported from Russia, Belgium and Ireland.
>
> (b) Study of cultural methods on farms in various parts of Michigan and Wisconsin.
>
> (c) Study of machinery and manufacturing methods.
>
> (d) Study of the fertilizers and soil requirements of the crop.
>
> (e) Dissemination through the medium of bulletins and leaflets of information collected.
>
> Mr. Dewey corroborated what I had learned at Washington as to Summers, McCaul and Fraleigh being the best men in America from the flax-for-fibre producers standpoint.
>
> Leaving Chicago, I next visited Mr. Bartrand S. Summers, of the Summers Linen Co., Port Huron, Michigan, and was by him shown all through the rather extensive plant of this company. In this plant I was so fortunate as to see every operation under way except the threshing.
>
> This company—which is really Mr. Summers—is the only firm known to carry on chemical retting on a commercial scale in the flax world. The threshed flax is baled and brought in from as far as 25 or 30 miles in box cars. It is

retted in a large steel cylinder, probably 20 feet long by 10 feet in diameter, lying on its side and having two port holes with iron doors on top. It will ret about 5 tons at one time.

In Mr. Summers' opinion the most serious problems confronting the growers of flax for fibre to-day are: (1) better varieties, (2) better cultural methods, (3) a pulling machine, (4) better fertilizing methods, (5) more information on best time to harvest, (6) a scutching machine.

He considers that if a puller could be perfected a tremendous advance will have been made in the industry in America and that fibre flax would immediately take a prominent place among crops over very considerable areas in Canada and the United States. He considers climatic and soil conditions over practically the whole of western Ontario as highly suitable for production of fibre flax.

Mr. Summers has built a flax puller which has given fairly good results and he thinks that he may yet be able to make a really first class machine of this kind. Mr. Fraleigh, of Forest, Ont., with whom I discussed this machine seems to think that Mr. Summers would eventually have a really good puller. Mr. Summers has also built a scutching machine which he showed me, but he did not seem particularly optimistic as to its future, admitting that it was far from perfect yet.

Mr. Summers did for some years manufacture rugs from a certain proportion of his output of fibre. These rugs sold well and wear well. He has, however, been forced to abandon the manufacture for the present on account of a fire in his factory and the scarcity of suitable dyes since the beginning of the war. Mr. Summers imports seed from Holland and Russia and also from Canada. From Holland he gets the best seed from Mr. Lucardie, of Rotterdam. Mr. Summers claims to have found a market for a part at least of the ligneous residues from scutching. It is to be used by a certain company as a base for a stock food.

Mr. Summers advised me that the best man in the business of producing flax for fibre today in America was Mr. G. Howard Fraleigh, Forest, Ont. So, on leaving Port Huron, I crossed to Sarnia thence to Forest and there met Mr. Fraleigh already mentioned several times above.

Mr. Fraleigh I found to be an enthusiastic and energetic grower of "flax for fibre". He has been in the business some twenty odd years and seems to have made a decided success financially. He handles about 500 acres of flax for fibre each year. His plan of operation is, he states, practically the same as is followed all over Ontario and in Michigan. He rents fields of varying size from farmers in a radius usually of 5 or 6 miles but occasionally farther afield. The soil preferred is heavy loam, clay loam, or clay. Sometimes fields of lighter soil are selected but this kind of land is not favoured since the crop is more likely to suffer from drought in the early part of the season and so be short in the staple. The farmer undertakes to plough the land, at the time approximately indicated by the operator, disc-harrow, roll and harrow until ready for the seeder. Once the field is ready to sow the responsibility and the work of the farmer cease.

The report is a very interesting one, and will well repay the careful perusal of any member of the House interested in this and other agricultural subjects, but I cannot trespass upon the time of the House by reading very much from it.

Mr. Fraleigh states that the industry of flax growing for fibre production in Ontario is at present in rather bad shape for the reason, as he thinks, that the business has to some considerable extent got into the hands of promoters and others having no practical knowledge on the subject or at best very small experience. This is due to the fact that no new blood has been coming into the practical side of the business for some years and that recently the old men have been dropping out. Their business, where not allowed to go down, has usually been taken hold of by a promoter who has seen in it a chance to make money and is now using all the devices or schemes of the promoter to make it go and to make as much money out of it for himself as he possibly can. He claims that the old line men and the new men or promoters have little in common.

In the opinion of Mr. Fraleigh, as expressed to me, the thing that would do the most good to the industry in Canada would be the appointment of a man, who could immediately go out and help the producers by showing them how to grade their fibre products. Lack of proper grading methods results, he claims, in the loss of many thousands of dollars each year in Ontario. Such a man might also do something to help the industry by visiting the farmers and giving personal advice and also by getting out instructive literature.

The above report summarizes as briefly as possible such of the information I have been able to gather on the subject of flax for fibre production in Canada and the United States, as seems to me to be of sufficient importance to justify its incorporation herein.

The impression left upon me by all I have been able to see, and by the men I have had a chance to interview, I shall attempt to summarize in the following few sentences:

1. Flax for fibre production in the United States is quite a negligible industry. It is confined almost entirely to Michigan and includes, I am reputably informed, not over five operators. The most important of these are the Summers Linen Co., Port Huron, Mich. and the Jas. Livingstone Flax Mills, Yale, Mich. Recent failures in various parts of the United States in this industry due to wrong methods—due to promoters—would seem to indicate no expansion in the near future.

2. The Fibre Investigation Division of the bureau of Plant Industry, Washington, has carried on very little investigational work with flax and is not in a position to assist Canada with either information or men capable of collecting or imparting information on the subject.

3. The Industry in Canada, while apparently profitable is in the hands of a very few people. There would seem to be room for a very considerable expansion.

4. Prices for fibre are high. The districts in Russia, Belgium and France where flax for fibre is grown most extensively are being devastated by the present great war. In some cases a large percentage of the men and other labourers formerly engaged in this industry have been killed or scattered. It is probable, therefore, that it will be some years before prices will be materially lower. It would on this account seem an opportune moment to encourage expansion in this industry in Canada.

5. The peculiar character of the industry in that it affords opportunities for gain to both farmers and artisans and to labouring men, women and children (for the last three as well as for the first under very healthful conditions) would seem to make it an industry well worthy of every effort on the part of any Government, to foster and encourage.

6. Another peculiar feature of the industry, that it might employ a considerable number of labourers of all kinds in small centres close together which would not complete but rather help each other by their actual co-existence in a country, seems to me most insistent of consideration.

7. The sources of profit from the crop are: seed, cattle feed, oil; fibre for textile or cord making purposes; tow for upholstering purposes; coarse, broken straw for packing and cheap upholstering; chaff for cattle feed; ligneous residues for fertilizer, or, possibly. other purposes.

8. The production of this crop would seem to be indicated over the vast clay belt in Northern Ontario and Northern Quebec along the line of the Transcontinental railway, where soil and climatic conditions are probably favourable, as well as in western Ontario and over certain parts of southern Quebec.

Since writing the above sentence I have visited northern Ontario and on the line of the Transcontinental at Ground Hog river (Fauquier) I saw a field of excellent flax sown in June and just about ready to pull on September 24.

After reviewing what I have seen, the information I have collected and my interviews with different men interested in this industry, I would like to make a few recommendations along two lines.

Recommendations as to lines of effort likely to help the industry at the present juncture:

(a) The urging upon producers of the importance of grading their product, and, if possible, the assisting of them along this line. To do this it might be possible to bring over two or three experts from Ireland or from among the Belgian refugees in England.

(b) The preparation and circulation of a brief pamphlet setting forth the possibilities of the industry and indicating the methods most likely to insure, profitable production.

(c) The undertaking of a series of meetings during the coming winter in those parts of Ontario where the industry is already established. Such meetings should have for object the impressing upon farmers and growers of the necessity for better methods of producing and better seed. An effort should be made also at such meetings to show that flax is not a crop extraordinarily exhaustive of soil fertility.

That would seem to be rather in conflict with the opinion expressed by the hon. member for South Oxford this afternoon.

The report goes on to make certain recommendations in regard to permanent work. By permanent work is meant the work that should be undertaken by the Government with a view of helping the industry in the near future and of putting it on a stable basis in such parts of Canada as may be found suitable as to soil, water, and climatic conditions. The recommendations are as follows:

(1) The establishing of a subdivision for fibre research work as a part of the Experimental Farms Branch.

(2) The exhaustive trying out of varieties of flax and methods of cultivation on our various experimental farms in Canada and in addition at, say, three or four points in the present flax growing districts of Ontario, and possibly at two or three points in Quebec, where flax is likely to be successful.

(3) The establishment on the Experimental Farm at Ottawa of a small but complete plant for all the operations in connection with the production of fibre from flax. Building machinery and equipment would cost probably $3,000 or $3,500.

(4) The securing of a practical man such as Robinson, now employed by Fraleigh as a foreman in charge of the work there.

(5) The employment of a young man with an Agricultural college training and an inclination toward this industry to go into the thing and make a thorough study of the practical side of the business for two or three years by performing all the actual operations, say at Mr. Fraleigh's until he could act as an expert in judging growing crops of flax for fibre, in harvesting, in retting, in scutching, in sorting and grading, in baling, in hackling and in judging fibre. This man, when adjudged to have attained a sufficient degree of efficiency, should be placed at the head of the work with fibre, either as a chief officer, or as a sub-officer of the division of botany; probably the former.

(6) The appointment of a temporary officer in the outside service, attached to the experimental farms, who would take charge of the work outlined under first heading, and who might later develop into a useful man for outside work in this connection.

(7) The continuation and expansion of the breeding work and selection work with flax now being carried on at the Central Experimental Farm.

That report was received some months ago by the Minister of Agriculture. The minister has been giving his attention to this question, and as a result instructions have been given along this line: First, that a properly trained man be selected to take charge of investigational work at Ottawa in connection with fibre flax production. Difficulty has been found in getting the right man for this position, because, as is pointed out in this report, not many young men in Canada are experts in the matter of flax production. The department believes that it is on the track of such a man now, and it is hoped that an appointment will be made within a short time. Once we get a man who understands the flax business, the rest will follow as a matter of course. In the second place, instructions were given that a series of experiments be carried on in the different provinces, and that a special building be erected in Ottawa this season for the work in connection with flax. The

department is considering the question of bringing an experienced retter and scutcher from Ireland, where the flax industry has assumed a very great degree of perfection. Special investigational work, with a view to approving varieties and methods will be undertaken at Ottawa and at other points where there are experimental farms. It is hoped that a series of meetings can soon be arranged for in the flax areas of Ontario, with a view to encouraging more of our farmers to grow flax for fibre this year.

These are the steps that have been taken. It seems to me that the result of these recommendations depends upon the qualifications, energy and industry of the man selected to take charge of this work in connection with the Experimental Farm and the Department of Agriculture. If the department is fortunate enough to secure a man of ability who will take the matter up with enthusiasm, everything else will follow as a matter of course. The matter will be thoroughly discussed, and after experiments have been carried on for a short time, I think it will be demonstrated whether it is expedient for the farmers of Ontario and the other provinces to extend their flax acreage and proceed with the manufacture of fibre from flax. The House will see from what I have stated that the Department of Agriculture has not been idle in this matter; it has given it very serious consideration, and has almost I may say, forestalled the resolution which has been moved by the hon. member for East Middlesex.

Mr. GLASS: The suggestion of the hon. minister with regard to a proposed change in the resolution is quite satisfactory. When the resolution was framed I had not in contemplation the giving of a bonus or financial aid. I realize that there is a distinction between encouragement without aid and aid without encouragement. The use of the word "encouragement" meets the purpose of the motion, and I have no objection to the amendment.

Motion, amended as proposed, agreed to.

VALCARTIER EXPROPRIATIONS.

Rt. Hon. Sir WILFRID LAURIER moved:

For a copy of all correspondence up to date respecting expropriations at Valcartier, as well as statement of actions taken, judgments rendered, and claims still unsettled.

He said: Mr. Speaker, this is the third time I have moved for papers in connection with the camp at Valcartier. They have been brought down on each occasion, and my reason for again referring to this subject is that, of the eighty farmers whose farms were taken, twenty have not yet been paid nor has any action been taken against them. Of course they are not able to bring their claims into the courts; they must await the action of the Government. Everybody will admit that this reflects little credit on the Government; these men should either be paid or brought before the courts so that a judgment may be had on their claims. I ask the Minister of Public Works (Mr. Rogers) to bring the matter to the attention of the Minister of Justice in order that the matter may be expedited; otherwise I shall have to again bring it to the attention of the House.

Mr. ROGERS: I had occasion to discuss this matter the other day with the Minister of Militia (Sir Sam Hughes), and he then informed me that many cases that had been taken to the Exchequer Court were being very rapidly disposed of. The statement was then made that every effort was being put forward with a view to having all the cases entirely disposed of. I shall, of course, bring the remarks of my right hon. friend to the attention of the Ministers of Militia and Justice and endeavour to see that the remaining claims of the farmers of Valcartier are dealt with immediately. I know that the Minister of Militia was well satisfied with the progress that was being made a short time ago—

Sir WILFRID LAURIER: He is easily satisfied.

Mr. ROGERS:—and he was making every effort to have the matter adjusted as soon as possible, in the interests of the people there.

Motion agreed to.

At six o'clock the House took recess.

The House resumed at eight o'clock.

CANADA SHIPPING ACT AMENDING BILL.

Mr. J. H. SINCLAIR (Guysborough) moved the second reading of Bill No. 21, to amend the Canada Shipping Act.

He said: I desire to make some progress with this Bill to amend the Canada Shipping Act which has stood on the Order Paper now for a long time. It is intended to give some relief to the toilers of the sea. The coasting trade of the Maritime Provinces is what I have chiefly in my mind, though, of course, the Bill affects the Pacific as well as the Atlantic coast.

The present law limits a coasting captain to 5 degrees north latitude; that is to say, he is not permitted to clear his vessel for any point further south than 5 degrees north latitude. The distance that the ship is allowed to go is governed by the kind of certificate that the captain holds. Under the shipping law of Canada there are two classes of certificates. One is called the deep sea certificate, and a man holding the deep sea certificate is at liberty to clear for any port in the world; there is no limit whatever, providing he complies with the law in other respects. A captain holding the coasting certificate however, is, as I have said, restricted at the present time to 5 degrees north latitude, sailing south. My purpose is to change this, and to allow a captain holding a coasting certificate to go a much greater distance south.

Originally the law relating to coasting captains did not contain the restriction complained of. In the early days in the province of Nova Scotia, and the other Maritime Provinces, coasting captains were permitted to go as far as the owners of the vessels wished them to go, and they frequently took advantage of this liberty to sail as far south as Cape Horn, and even round the Horn. In the days of the gold mining in California, it was a usual thing for a coasting captain to go to California, and some of the more adventurous spirits went as far north as Alaska, to engage in the seal fishing. This continued for half a century or more. Those were the days when shipping flourished in the Maritime Provinces. It used to be the proud boast of Nova Scotians in the sixties, that there was no country in the world that owned as many tons of shipping to the population as the province of Nova Scotia, not even Great Britain or the United States. That was in the sixties and the seventies, but I am sorry to say that that condition does not exist to-day, and I have no doubt that that fact is partly owing to the restrictions that have been imposed since confederation.

The ships of the Maritime Provinces were sent to all parts of the world in those days, and I have no doubt that the intercourse which the people had with foreign countries had a good deal to do with the moulding of the Bluenose character as it is known to-day. The talk around the fireside on the winter evenings was about Shanghai, Nagasaki, Calcutta, Cape Colony, Valparaiso, San Francisco and other places far distant. It had the effect of making the Bluenose a sort of a roamer, for he is a wanderer, and has been for generations. I think it was Sam Slick who said that wherever you go throughout the world you can find a Scotsman and a Newcastle grindstone. I think it is also true that nearly everywhere you go you can find a Nova Scotian, for they are scattered pretty much all over the world. In those early days nearly every family had a son or a relative engaged in the deep sea trade, and of course they kept the people at home in touch with the great world outside. The ambition of the ordinary Nova Scotia boy was to grow up to be a sea captain. Among the published works of Joseph Howe there is a poem which is now out of print, and which contains a very interesting description of the coaster. I do not think it will be out of place for me to embalm it in the pages of Hansard. I know that the Deputy Speaker will not object, as I am quite sure a large number of his constituents are interested in the coasting trade in such places as Parrsboro, Westport, and other ports along the coast of the county of Cumberland, men who like those from other parts of that province, have distinguished themselves as hardy and adventurous seamen. The following is Howe's description of the coaster:

Though the idle may heed not, the wealthy despise
The race to which I and my fellows belong;
My voice o'er my own native waters shall rise,
And the deck of my shallop resound to my song.

Though my craft may be small, she is snug and she's trim,
And her crew are accustomed to battle the wave,
They are cheerful of heart, and athletic of limb,
And follow the business their bold fathers gave.

Through the storm and the sleet of the winter we sail,
While the rich and the feeble on couches repose;
There is health in our toil, and a charm in the gale,
And our courage still rises the harder it blows.

Every harbour from Sable to Canso's a home,
Every depth from the Banks to St. Lawrence we've tried,
And we care not though round Labrador we may roam,
Or sweep on the strength of old Fundy's fierce tide.

Now wealth from the wave we draw forth with our lines,
And now with a cargo of produce we're stow'd,
Or having a full freight of coal from the mines,
We slowly sail on with our cumbersome load.

Though the Merchantman looks gay, her crew
are but slaves
And own not a stick of the vessel they
steer,
Though the Frigate glides by, like the Queen
of the Waves,
We know that the cat and the bilboes are
there.

Then who would exchange the rough life that
we lead,
Joint owners at sea, and free sons of the
soil,
At the bidding of others to labour and bleed,
With but little of pleasure to sweeten our
toil?

We build our own shallops, we rear our own
crew,
And life has for us sweet endearment in
store,
For though luxury's fetters our souls never
knew,
Bright eyes bid us welcome when peril is
o'er.

Thus we Coasters enrich the fair land that
we love,
And if danger should threaten, the cutlass
we'd seize,
And our hearts and our sinews in battle
would prove,
That the spirit of freedom is nursed by the
breeze.

Mr. GRAHAM: They would make good men for a navy would they not?

Mr. SINCLAIR: I have no doubt that, if the Minister of Naval Affairs would send out a call for naval recruits, he would find the young men along the coast of Nova Scotia just what Howe described them to be 50 years ago.

I refer to these historical matters for the purpose of showing what an important place the coaster has in the life and history of the Maritime Provinces. As I have said, the tonnage owned in Nova Scotia was much greater in the days of Howe than it is at the present time; that is a regrettable fact. There was a ten per cent tariff and free navigation laws and the coaster to go wherever he could find business. The distance that the smaller class of vessel went was restricted by the size of the ship, because it is not profitable for a small vessel to go on a very long voyage as she cannot carry enough freight to make the venture profitable. Those restrictive laws which limit the distance unnecessarily are only hampering trade and doing good to no one. A vessel that can go 1,000 miles can go 2,000 miles, if she can find profitable business. That freedom prevailed up till Confederation, and after Confederation, but I think it was in the time of Captain Spain or Captain Salmon of doubtful memory that the officers of the Marine Department began tinkering with the shipping law. They passed a regulation, which was ratified by Parliament, that a captain holding a coasting license could not go further south than Cape Hatteras. That shut out the coaster from the West Indies, where his most profitable trade is to be found in the winter season.

Many of our ships that are engaged in the fishing industry during the summer season, when winter comes and fishing on the banks is closed, were accustomed to find profitable trade with the West Indies. They frequently carried down a cargo of lumber or fish and returned with molasses or rum. That was the course of trade for many years. Then this unfortunate restriction was imposed by which they were not allowed to go beyond Cape Hatteras. This shut our vessels out from trade with the West Indies. This continued for several years, until the statute was repealed in 1908 and the line moved down to 5 north latitude, which enabled our coasters to engage in the West Indian trade. But that is not far enough. Our larger ships can find more profitable business in South America. Since the war began, the larger class of coasters in the United States have done a very profitable business along the coast of Brazil and the Argentine Republic. This business has chiefly been done by the vessels of the United States. Their laws are so free from restrictions that a captain of a coasting vessel up to 700 tons needs no certificate at all. The owner of the vessel selects his captain, puts him aboard, and the Customs House asks no questions. That is the law of the United States, and you can readily see what an advantage it gives their seamen over ours, who are subject to these restrictions in competing with the United States for that profitable trade. Shipowners naturally tried to discover some method of evading this regulation. The coasting captain is a resourceful fellow, and he did discover methods of evading the law. One method was by securing the services of a deep-sea captain to clear his vessel. In many ports of the Maritime Provinces can be found some old retired sea-captain who has served his time at sea and holds a deep-sea license. The Customs House cannot refuse to clear a ship when a man holding such a license is in charge. The consequence was that the owner of a ship would temporarily employ one of these retired men for the temporary purpose of clearing the ship. The deep-sea

captain would get his clearance from the customs house for some port further south than the law would allow a coasting captain to go. The old captain would then sail his ship down the harbour, and at some convenient headland would go ashore and the real captain come aboard and go on with the voyage. The law was evaded in that way for several years, but it was found very inconvenient, for these old captains were not always on tap, and I have heard of one case where the captain thus temporarily put in charge refused to give up the ship after he had cleared from port. So they had to find some other method, and the next one adopted was to change the registry of the ship. That has been frequently resorted to. The result to-day is that about sixty or more of the largest coasting vessels in the Maritime Provinces are registered in Barbados; a few are registered in Newfoundland or some other colony.

There is no difficulty about changing the registry of a ship; it is just as easy as rolling off a log. The Government provides the necessary machinery, and that is what makes the whole proceeding look so extremely foolish. All that an owner has to do when he wants to evade this regulation is to go into one of the offices of the Canadian customs and ask for a blank form, which is provided freely by the Government. He then fills it out, signs his name, and his ship is transferred to Barbados or wherever elese he wants it registered. He pays the trifling sum of three or four dollars to the customs officer, walks out of the office, pulls down the Canadian flag, and goes on with his business. That is what has been going on for many years, until now a great number of the vessels that were under Canadian registry have been transferred to the registry of some other colony, or to that of the United States. And a great many more ships would have been transferred to United States registry during the past two years if it had not been for the Order in Council which prevents ships from being transferred to any foreign registry during the war. Everybody knows that until about two years ago the American registry was closed to foreign vessels. If a citizen of the United States wanted to own a ship he had to build it in the country. Then, in the early summer of 1914, a law was passed in the United States allowing an American citizen to purchase a ship and place her under the American registry without paying any duty, and subject to no special restriction. Between that date and the outbreak of war no less than fourteen vessels had been transferred from Canadian registry to United States registry, and had it not been for the Order in Council passed by this Government many more Canadian vessels would have been transferred to the American flag. As I have already said, some of our vessels are even now under the American flag, and many others are registered in some distant colony. The reason why they register in other colonies is because the ships of these colonies are under British law and are not subject to the restrictions that exist in Canada. A vessel registered in Barbados, for example, is permitted to sail to South America, and to carry on business where business is profitable. This is the definition of a coasting voyage as it stood in the revised statutes prior to 1908:

> Coasting voyage means a voyage between any port or place on the Eastern coast of Canada and any other port or place on such coast or in Newfoundland, Labrador, St. Pierre, or Miquelon, or on the Eastern coast of United States, not farther south than Cape Hatteras; and on the West coast not farther south than the harbour of Portland, in the State of Oregon.

That was repealed in 1908 and the line moved down from Cape Hatteras to 5 north latitude. I propose now to repeal the present section and to substitute therefor the following:

> "Coasting voyage" means a voyage between any port or place on the eastern coast of Canada, and any other port or place on such coast, or in Newfoundland, Labrador, or St. Pierre or Miquelon, or any port or place on the eastern coast of the United States of America or Mexico or Central America or in the West Indies, or on the eastern coast of South America not further south than forty degrees south latitude; and also means a voyage between any port or place on the western coast of Canada, and any other part or place on such coast, or on the western coast of the territory of Alaska, or of the United States of America or of the western coast of Mexico or Central America or South America not further south than forty degrees south latitude.

If this Bill becomes law the Canadian coaster will be permitted to compete for business in the ports of South America. I see no reason why he should not go round the Horn. The American coaster is at present free to engage in South American business. What I am asking for is that a captain holding a coasting license be allowed to trade with South America, and go through the Panama canal, and be free to do business in the ports of the Pacific coast.

Mr. Speaker, you will agree with me that capital is very sensitive, especially capital engaged in shipping. The man who owns a ship is in a much more independent position than the man who owns a railway, or a telegraph line, or any similar enterprise on land. It is the easiest thing in the world for a shipowner to seek new fields, and if need be to change the registry of his ship. If the Canadian trade is not profitable, he can leave Canada, and engage in trade in Europe, in the Argentine Republic, in the West Indies, in India, wherever there is profitable business. He has the seven seas to go to, and, consequently, when this Parliament imposes upon him a foolish restriction which hampers his business, he simply pulls up his stakes and goes where laws are reasonable and business is profitable. That shows how important it is for Parliament to be careful in regard to such restrictions. In the United States, for example, not more than a year or so ago, some labour organizations raised an agitation that Japanese and Chinese should not be employed in vesels plying out of the ports on the Pacific coast of the United States. Congress capitulated to this agitation and the consequence was that they passed a law prohibiting foreigners from being employed as sailors on American ships. At that time California was the headquarters of a large shipping firm which had a fleet of ships trading in the Pacific and calling at Honolulu, and proceeding to far eastern ports. This firm was compelled to retire from that business and use their vessels elsewhere, because they could not comply with the law. They could not get American sailors to man their ships, and now the only communication which the people of the United States have with far eastern ports is by Japanese vessels, and there is now no regular liner flying the American flag sailing out of any of the Pacific coast ports of the United States. That is humiliating to the United States, and has happened because of that simple regulation that I have referred to in regard to the employment of sailors, so that restrictions of this nature which may appear simple enough to landsmen and people who do not understand shipping matters, frequently turn out to be very serious when applied to shipping interests where capital is sensitive and where it is open for a shipowner to escape from the scope of such regulations.

Now, there are still a good many coasting vessels on the Canadian register, and we want to keep them there; but if we are to do so, we must act promptly in order to prevent more of them from leaving. Two years ago I introduced a Bill intended to rectify this difficulty by repealing this clause and allowing the coasting captains to sail further south. At that time the Minister of Marine and Fisheries (Mr. Hazen), who I am sorry is not in his seat, postponed any action in the matter, stating that he intended to revise the shipping laws of Canada, and that then this matter would receive his attention. So far as I know nothing has been done, and the consequence is that since that date two things have happened: a large additional number of ships have withdrawn from the Canadian register, and those which have remained under the Canadian flag have lost hundreds of thousands of dollars for their owners, who are penalized by the loss of profitable business which they cannot engage in because they are not allowed to sail to southern ports. The question is often asked, why is such a regulation as this in our Statutes? I confess that I am not able to answer the question, and I do not believe my hon. friend the Minister of Marine and Fisheries is able to explain it. The question has been asked over and over again in this House, and no one has ever been able to answer it. The restriction apparently was made owing to the whim of some one in the office of the Department of Marine and Fisheries, and it is difficult to understand why it has been allowed to remain in the Canada Shipping Act for so many years, seeing that it has done so much damage to the shipping business of this country. If it was a question of safety, I would not complain. If safety was the object one would have supposed that restrictions would have been imposed upon captains sailing to northern latitudes in the winter season; but there is no restriction so far as going north is concerned, the only restriction is against going south amid the laughing waves and eternal sunshine of the topics. The Minister of Customs never hesitates to allow a captain to clear his ship in the dead of winter for the stormy shores of Newfoundland, for Labrador, for Baffin bay, for that new country where Stefannson planted the Canadian flag last year. You can go as far north as the North Pole if you wish; the Minister of Marine and Fisheries offers no objection to a northern voyage, but as soon as you turn the prow of your ship south, he says, "No, you must not go there,

because it is past 5 degrees north latitude," but he gives no other or better reason, and no man in this House or outside of it has ever been able to give any better reason why that should be the case. The restriction, however, has stood on the statute books of Canada for a good many years, and it reflects on the intelligence of the Canadian parliament that it should remain there.

The size of the coasting vessel does not justify the restriction because some of these vessels are large enough to sail anywhere; they can go across the ocean just as easily as along the coast; they are quite capable of sailing any sea and weathering any storm. They do not usually cross the ocean because it is more profitable for them not to do so. Many of them are too small for long voyages. At the same time the average of these ships is larger than the ship in which Columbus crossed the ocean on his eventful voyage. If my hon. friend the Minister of Marine and Fisheries had been in power in the days of Ferdinand and Isabella, Columbus would never have been allowed to sail outside the straits of Gibraltar; he certainly would not have been allowed to cross the Atlantic. If I remember rightly, the Pinta was only 90 feet long and 25 feet wide, whereas many of these coasting vessels are of much larger dimensions and tonnage.

If there is a reason for maintaining this restriction in the statutes, I would like the Minister of Marine and Fisheries to give it to us. If there is no reason, I would suggest that he allow my Bill to become law. Time after time we engage in discussions in this House as to the necessity of more tonnage; my hon. friends from the West have made many appeals on that question; but it is an extraordinary thing that, while they are demanding more tonnage to carry our ever increasing trade, the Customs Department and the Department of Marine and Fisheries are driving our tonnage away from the Canadian flag to the ends of the earth because they will not give shipowners an opportunity to carry on their business free from needless restrictions. If this country is ever to become a great commercial country we must encourage our people to build and own ships to carry our products to the markets of the world. That is why I consider this matter important and why I have been persistent for the last four years or more in bringing it almost yearly to the attention of Parliament. I do not see why it should take four years to secure a reform of this kind. However, following the example of the Scotch spider I do not think that the resources of civilization are yet exhausted, and I intend to keep on until I get a hearing from this House. Now, as I said before, if there is any intelligent reason why this restriction should remain, it should be given to us. If not, the Minister of Marine and Fisheries should let my Bill have its second reading, so that the principle may be adopted. It is the easiest thing in the world for a minister to prevent a private member like myself from ever securing any legislation. I have waited for a month now in order to get a chance to move the second reading of this Bill, and by a mere accident I have had my opportunity to-night. The whole session, however, might have passed away without my getting even this chance. I have seen such things happen, and besides there are a hundred ways in which the Government can hamper the passing of this measure. The only way to ensure its enactment is to make it a Government measure. I desire to throw the responsibility on the Minister of Marine and Fisheries, as he is the one who is alone responsible. My proposal is that he accept this Bill as a Government measure, and place it on the Statute books of Canada and relieve once for all our coastwise shipping of this unjustifiable and useless restriction.

Motion agreed to, Bill read the second time, and the House went into Committee thereon, Mr. Rhodes in the Chair.

Mr. REID: The hon. member (Mr. Sinclair) has referred to me, in my capacity as Minister of Customs, as being really the one who understands the Shipping Act in connection with this Bill. Of course, the hon. gentleman knows that the Marine and Fisheries Department is the department that has to do with the making of the shipping laws. The Customs Department only administers the law after it has been passed by Parliament. I would not like to have this Bill passed without my hon. friend the Minister of Marine and Fisheries (Mr. Hazen) being present. I understood that it had been arranged that we should go on with the Estimates of the Department of the Interior to-night, and that is why the Minister of Marine and Fisheries, who had some other appointment, is not here. I would therefore ask the hon. member to allow the Bill to stand in committee until the minister is here.

Mr. GRAHAM: The suggestion of the hon. Minister of Customs seems to be quite reasonable. This, being a public Bill, unless the minister will say that there will

be an opportunity of discussing it on some future occasion, it would go to the bottom of the list, and there would be no opportunity of further dealing with it.

Mr. REID: There will be no trouble about that; I will see that there is an opportunity of discussing it.

Mr. GRAHAM: Then I think it is fair to accept the minister's suggestion, and ask that the committee rise and report progress.

Progress reported.

TRANSPORTATION OF GRAIN.

RAILWAY ACT AMENDMENT.

On motion of Hon. J. D. Reid (for the Minister of Railways), Bill No. 4, to amend the Railway Act, was read the second time, and the House went into committee thereon.

Mr. OLIVER: Would the minister, in a few words, give the committee, for the purposes of record, the object and scope of the Bill?

Mr. REID: The Chairman of the Railway Commission, Sir Henry Drayton, had been taking up with my hon. friend the Minister of Railways (Mr. Cochrane), a few days prior to Mr. Cochrane's departure from Ottawa, the question of trying to relieve the situation in the West in so far as the movement of grain is concerned. When I took charge of the department, I found a letter from Sir Henry Drayton to the minister. In this letter Sir Henry Drayton explains the situation in connection with the movement of grain in the West, and suggests the passage of a Bill similar to that which I have placed before the House. I believe the best way to explain this Bill to the committee is to read the letter which was sent by Sir Henry to the Minister of Railways. It is so complete, and, I believe, so interesting, that I think it should be placed on record. It reads:

Ottawa, February 18th, 1916.

Re Grain Crop.

Dear Mr. Cochrane;

The Railways have been faced with an exceedingly difficult problem in the transportation of the very large grain crop of the North West.

I make no complaint whatever as to the manner in which the railways have moved the crop during the past season. On the other hand, the movement was extremely good, surpassing all records. It is sufficient to say that from September 1st, 1915, to January 15th, 1916, the railways had transported no less than 53,920 cars of grain more than were hauled in marketing the large crop of 1913, and extending over the whole period required to market it.

[Mr. Graham.]

I fully realize the importance of the service to the public and the fact that the result could not have been obtained had not the railways been efficient and properly operated. While this is all true, however, the present condition is unsatisfactory and calls for some special remedy.

The Department of Trade and Commerce places the crop (all grains) in the Western Provinces at 723,664,000 bushels, as against 322,056,000 bushels for 1914, and 503,267,000 bushels for 1913. At a low estimate, 300,000,000 bushels remain to be carried; and unfortunately a comparatively large percentage of this total, as to which only an approximation can be made, is without proper protection.

The tremendous crop of this year is such that the elevator capacity of the country cannot commence to contain the balance of the crop, even in view of the fact that no less than 191,323 cars have already been transported up to the 15th of January last.

Temporary granaries have at different points been erected, but over and above the grain in elevators and in temporary granaries, there is a large amount of grain which has been left out all winter, either in stook or already threshed and covered with straw. This grain, while subject to danger of some deterioration, will largely be saved, provided it is moved before the spring rains set in.

The grain on the Grand Trunk Pacific has been largely marketed; and the Board has now no serious complaint of congestion on its lines. This, of itself, does not show any more efficient management on that system, as the crop tributary to this line is much smaller than the volume tributary to the Canadian Pacific and Canadian Northern Railways.

The Grand Trunk Pacific has moved approximately 15 per cent of the present crop, and they will be in a position in the near future to handle grain to a considerable extent that may be offered for transport.

The Grain Commission reports congestion on the following Canadian Pacific Railway Lines: Outlook Branch, north of Moose Jaw; Empress Branch; Vanguard Branch; South of Lethbridge. There is also complaint as to congestion on the Weyburn-Shaunavon Branch.

The Grand Trunk Pacific has moved approxition on the Canadian Northern Railway on the following lines: In the Goose Lake District; Moose Jaw-Gravelburg Branch; Saskatoon to Regina. And also state that outside of Manitoba every Canadian Northern point has grain which should be moved.

Again, in so far as delays in the movement which have occurred since the close of navigation are concerned, no complaint is made as against the railways. These delays were largely inevitable. Firstly, owing to the fact that, generally speaking, there was but comparatively little available storage in the East; secondly, that, owing to the war and the commandeering of boats, the supply of bottoms was limited; thirdly, because of the embargoes obtaining largely, and frequently absolutely, at all grain shipping sea ports; and fourthly, congestion of traffic, which was even more marked in the large American terminals than in our own winter ports. In addition to all this, weather conditions and the necessities of the coal movement would, in any event, have prevented any free or general movement of grain traffic.

The situation, however, as I see it, demands

that the ordinary traffic conditions must be departed from, in order to save a large portion of the crop, and the ordinary rules of traffic should be at least temporarily disregarded. The railways should co-operate closely with each other and move the crop as soon as possible, irrespective of the fact that traffic returns of the originating road may be diminished.

The crop on the Canadian Northern Lines has been very large. Notwithstanding the fact that that Company carried a large percentage of the grain already transported, perhaps 35 per cent, an estimate made by the Company of grain still to be marketed on its lines in the prairies amounted to 53,232,480 bushels, and in elevators adjacent to its system 36,000,000 bushels, making a total of 89,232,480 bushels to be hauled.

The Company has since reported that the total grain still in the farmers' hands and unmarketed amounts, according to its estimate on the 15th instant, to 32,844,000 bushels of wheat, and 15,402,000 bushels of other grain; so that the total grain still in the farmers' hands is reduced from 53,232,480 bushels to 48,246,000 bushels. The result is that the Canadian Northern has on or tributary to its system in the Prairie Provinces 84,246,000 bushels of last year's crop yet to be transported.

The congestion which the Grain Commission complain of as the worst in the country is on the Saskatoon-Drumheller, and De Lisle-Elrose lines, running through what is known as the Goose Lake District.

I should also say that a deputation from this district waited upon the Honourable Dr. Reid, when acting as Minister, and was referred by him to me, with the request that I would see that everything possible should be done to relieve the conditions there obtaining.

The Company advises that in this district and adjacent to its lines, there are 11,732,000 bushels of wheat and 1,945,000 bushels of other grain yet to be marketed, or a total of 13,677,000 bushels.

I take the situation here as illustrating the need of relief, again making no complaint against the Canadian Northern, but merely to illustrate the demands of the district and the necessities of the farmers, which are the more serious, in view of the fact that, generally speaking, there was a crop failure in this district last year.

These thirteen million odd bushels represent wheat which has not yet been carried to the elevator, much of which will be subject to damage, unless the grain is moved, as already stated, before the spring rains.

The figures as to grain storage in the district show 7,063,900 bushels, making a total of 20,740,900 bushels of grain to be handled in this district alone.

The matter has, of course, been carefully canvased by the Board with the Company, and the best service Mr. Spencer, the Board's Chief Operating Officer, was able to get the Company to say would or could be given to the district was 150 cars a day. In view of the conditions of operation on the line and the failure of the water supply, which has resulted to a large degree at least from excessive winter conditions, it is extremely doubtful whether the Company could possibly move this number of loads; but, assuming that the Company could load them and should commence this movement on the 1st of March next, which is probably the best that could be hoped for, owing to the fact that the line has only recently been opened after the winter storms, and that water conditions are still bad, it would take, if the movement was maintained, until the 15th of next July to market the crop; or, on the other hand, if the amount of grain in storage is deducted from the calculation and only the 13,677,000 bushels yet on the farmers' hands considered, the amount could only be moved by June 1st. This, of course, would be altogether too late to save unprotected grain.

The usual rule is that a company should be entitled to the traffic of its own lines, and to the business of that part of the country which it has opened up by its enterprise and the expenditure of its capital. This rule may be said to be of general application, applying, not only in Canada but also in the United States and in Great Britain. It is fair; but only fair, as it occurs to me, when the company can handle that traffic within a reasonable time. This rule gives the Canadian Northern the benefit of the long haul from the Goose Lake District to the Lake Elevators.

I am very free to admit that it would be foolish to expect the railways to move the whole crop in any given year before the close of navigation; and that, if it was so moved, it would probably be the worst thing that could happen for the farmers themselves, destroying to a large extent the value of their product by the consequent depression of the market price. On the other hand, any condition of transportation which results in the western farmer being unable to market his crop until the following June or July, is just as unreasonable.

The condition of the farmers in the Goose Lake district for example, to-day is that in so far as the 13,677,000 bushels of grain already referred to are concerned, they cannot market it, and owing to lack of storage facilities, for which of course the railway is not at all to blame, they will be unable to save a large percentage of it under the present transportation conditions.

It should be possible to increase the movement on this line by proper co-operation between the Canadian Northern and the Grand Trunk Pacific Railway Companies. The Railway Act does not enable the board to order this to be done; and I recommend that the Act be amended on the lines of the amendment now enclosed.

It is extremely doubtful that if the traffic moves under ordinary conditions the Canadian Northern will be able to look after more than 100 cars a day. It would appear, however, that if the maximum number of cars and engines were supplied and placed in service on the branch, and instead of being run through to eastern points, made delivery in the Saskatoon elevator, where weights and inspection can be obtained, and were then taken on by the Grand Trunk Pacific, the movement could be very greatly accelerated.

The grain should move at the present through rates, without additional expense to the farmer. The ordinary rate per mile which the rate from Saskatoon would make should be reduced and the through rate should be apportioned so that a greater mileage return should be given to the Canadian Northern, in order to make its shorter movement profitable. As the resultant business to the Grand Trunk Pacific would be largely found business, as it has idle engines and equipment, some reduction in the regular

rate would be fair to that company. Apart, however, from any railway concerned, but treating the matter merely in the public interest. this action or some similar action is necessary.

It well may be that, as the movement develops, similar joint traffic arrangements will be found necessary at other points, both on the Canadian Pacific and the Canadian Northern lines.

It is but fair to say that what I propose is an extension, and perhaps a radical one, of the joint traffic requirements companies are now subject to, owing to the fact that a single line route, reasonable and direct, has been already provided, and also that the movement, although by joint operation and subject to the additional handling charges entailed thereby, will nevertheless move at the ordinary rate in so far as the shipper is concerned. The fact that the single direct route is congested and unable to move the traffic, coupled with the exigencies of the situation, affords, however, as it occurs to me, an ample justification for the proposed action.

As to the urgency of the situation, there does not seem to be much room for argument; and, if in your view, that situation can be remedied on the lines proposed, might I suggest that the Bill be immediately introduced and its passage facilitated?

Yours faithfully,

H. L. Drayton.

The Honourable
The Minister of Railways and Canals,
Ottawa, Ont.

I thought it better to read that letter, as it is very full and very interesting. I do not think any further explanation is necessary. Sir Henry Drayton has asked me to submit the Bill to the House and ask the House to facilitate its passage. So I should like it to receive its third reading to-night in order that it may go to the Senate for action to-morrow.

9 p.m.

Mr. BUCHANAN: How many cars are being moved out on the Goose Lake line each day since the weather moderated.

Mr. REID: I do not know. I discussed the matter with Sir Henry Drayton a few day ago and the line was then in very bad shape, they were only getting it opened. I have here some photographs showing the conditions on that line which might interest my hon. friend.

Mr. BUCHANAN: I happened to be a member of a deputation from residents on parts of the Goose Lake line in Alberta, which waited on Sir Henry Drayton on this particular matter. I am inclined to think that the proposal will be of assistance in getting the grain out of that country. At the time the deputation waited on the Chairman of the Railway Commission, in the Acadia and Handhills legislative districts of Alberta, it was estimated that the crop was fourteen million bushels and that two million bushels had been moved out. As has been stated by the minister, a great deal of grain was stored in the fields and some of it was in temporary storage elevators in some of the towns; the elevators were all full, the side tracks were all filled with cars loaded with grain, and it was practically impossible to get that grain out of the country. Something has to be done. I would point out that the storage elevator at Calgary is very close to this particular district. It is true that to send the grain there would involve a back haul, but I understand that there is not a quarter of a million bushels of wheat in that elevator to-day, nor has there been at any time since it was opened last fall. It has a capacity of about two and a half million bushels, and it would be of great assistance if the grain could be stored there. Otherwise the grain will have to shipped east, and Saskatoon is one storage point and Moosejaw the other. Moosejaw cannot be reached by the Canadian Northern or any other line tributary to it, because once the grain goes east to Saskatoon it is past Moosejaw. Some effort might be made to carry the grain from the Goose Lake country to Calgary and place it there until the facilities at the head of the lakes are better than they are at present. The farmers in that district are suffering. They have their grain stored in temporary shelters, and if the spring opens inauspiciously they may lose two or three grades on grain stored in that way. Some exceptional effort will have to be made to get the grain out of the country.

Mr. OLIVER: The proposed arrangement involves storage of grain in either local elevators or the storage elevators. Does the shipper have to pay the elevator charges or do the railway companies absorb them?

Mr. REID: I have not discussed that point with Sir Henry Drayton. The intention of this Bill is to compel the Canadian Northern railway to put on a very large equipment on the lines in the Goose Lake district, say from Drumheller to Moosejaw, and keep cars rushing backwards and forwards between Saskatoon and that railway. The Grand Trunk Pacific will be ordered to take that grain from Saskatoon through to the upper lakes. If it was all left to be carried through by the Canadian Northern railway the movement would be very slow, and perhaps the line would be unable to do the work.

Mr. OLIVER: But who pays the storage; the railway company or the shipper?

Mr. REID: I understood from Sir Henry Drayton that, whatever the rate was from any point on the Drumheller section or any other point on the Canadian Northern railway from a point east of Drumheller on to Fort William, the farmer would pay the same rate even if the grain went through this elevator and right through to Fort William. That was the impression Sir Henry gave me, and I suppose the railways would have to absorb any charges in between. That was the impression the chairman of the commission gave me when we discussed the matter.

Mr. GRAHAM: I suppose that this Bill was suggested by the Chairman of the Railway Commission.

Mr. REID: Yes, he wrote the Bill.

Mr. GRAHAM: The word "board" undoubtedly means the Board of Railway Commissioners; it means their interpretation of the clauses of the Railway Act. This Bill enlarges the powers of the board.

Mr. REID: Yes.

Mr. GRAHAM: It enlarges the powers of the board to deal with special cases in which where one railway company is not able to handle the congested traffic, other railways can be asked to assist in the relief of that congestion; and the board is given the power to distribute the rates among the different railways.

Mr. REID Yes.

Mr. GRAHAM: It may be asked whether this could not have been done without an Act of Parliament, but I do not think it could, for the reason that the regular railway tariff as to mileage and hauls will be disturbed by this arrangement; that is to say, the rate on the short haul usually allowed will not be allowed under this arrangement, and the rate on the long haul may be changed to comply with the special conditions. Undoubtedly, the railway companies themselves could not get together and make a joint rate under those conditions, because the proposed arrangement disturbs their haul arrangement. This gives the board a power which it did not possess before, to step in and arrange the rates under these peculiar conditions. Neither the Chairman of the Railway Commission, nor any member of the board could do it without this Act.

Mr. REID: That is it exactly.

Mr. GRAHAM: I think that the letter to the Minister of Railways from the chairman of the board, who has studied the case closely, makes it desirable that we should facilitate this Bill so that it may go through the House and to the Upper Chamber and become law as soon as possible, because every day lost in the movement of the grain makes it much more serious for the farmer.

Mr. BUCHANAN: Was some arrangement not made by the Grain Commission as to a reduction in the storage rates for the grain? If grain was shipped say from the Goose Lake district and stored at Saskatoon, was it not arranged that a reduction should be made in the rate, if the grain could not be carried through to the head of the lakes? I saw an announcement to that effect in a western paper.

Mr. REID: The Grain Commission and Sir Henry Drayton dealt with this matter jointly, that is, as to the best way of removing the grain from the congested districts to Fort William. Sir Henry Drayton told me that the rate which the farmer would have to pay on his grain from any station in any congested district to Fort William would be the same, even if it had to be carried by two railways.

Mr. BUCHANAN: That is the rate on the railways?

Mr. REID: My hon. friend stated that he had noticed some item in a newspaper that the Grain Commission were making a reduction in the rates. I take it for granted that under this arrangement, made by the chairman of the Railway Commission and by the Grain Commission, there will be no increase in the rate from one point to the other.

Bill reported, read the third time, and passed.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Government of the Yukon Territory, $353,000.

Mr. GRAHAM: Has it ever struck the minister that the expenses of the management of the Yukon Territory could be materially reduced?

Mr. ROCHE: That was very thoroughly discussed the other night.

Mr. GRAHAM: I did not have an opportunity of discussing it. The reason I ask is that I received a communication on this very point to-day from a gentleman who is not located in the Yukon, but who is evidently interested in it. It contained a lot of items, but I am not going to read them to the House. The point that struck me as being well worthy of consideration was his suggestion that several offices might be combined, one official doing the work of two or three. For instance, when one of the officials is out of the territory, as these officials often are, his duties are performed by some other official in the territory, and if the other official can perform those duties for four, or five, or six months, could some reduction not be made in the expenditure by doubling up on the work done, without, of course, overworking the officials? I am not given to criticising the work done by officials. When the population in the Yukon Territory was large it was proper that every dollar necessary should be expended in that part of the country, but at the present time the population is not nearly so large as it was, to put it mildly, and the gentleman I refer to is very strongly of the view that the expenses of the management of the Yukon Territory could be cut in two without overworking any official, or underpaying him. I did not hear the minister's view on that point.

Mr. ROCHE: I allowed the member for the Yukon (Mr. Thompson), who is much better acquainted with the local conditions than I am, to give an explanation the other night, and I will ask him again to explain. I understand that while the population of the Yukon has been materially reduced, the salaries have been materially reduced, and also the number of officials. We are not paying anything like the amount for salaries that we paid some years ago. I do not know that we can affect any great reduction in salaries by combining officials. I have not made any particular inquiry into that, but I have inquired as to the duties performed by the present officials and compared them with those performed during the past four or five years, and while the revenue has decreased somewhat I do not know that any great reduction could be effected by any reduction of the officers. I would like to hear what the hon. member for the Yukon has to say on this. He is probably more conversant with the details of work in the Yukon than I am. If there are any directions in which we can economise I am sure I shall be only too pleased to listen to suggestions.

Mr. GRAHAM: He is not strong for economy.

Mr. ALFRED THOMPSON: My hon. friend misjudges me, I am strong for economy. But my hon. friend will admit that it is possible to carry economy beyond the point where you get efficiency. We have really some difficult problems in governing the Yukon. It is an entirely different proposition from governing a province in the East, where things are settled and where the population is comparatively dense. In the Yukon the territory is great, but the population is small. With regard to the union of offices for the sake of greater economy, possibly some offices might be merged for that purpose. Speaking off-hand, I cannot think of one just at the moment. but it is a suggestion well worthy of the consideration of the Government. Of course my hon. friend knows it is easy to criticise, but he must remember that it is exceedingly difficult to govern a country as far away from the seat of government as is the Yukon from Ottawa. The Yukon is 4,500 miles from here, and 1,500 miles northwest of Vancouver. For seven months of the year, or at all events for six months, the Yukon is isolated; we are frozen in. After a few years in that country the men feel they need a change, and it has been the custom of the Government—not only of this Government, but the Government of which my hon. friend (Mr. Graham) was a distinguished member—to treat the Government officials in the Yukon generously in regard to vacations. The distances up there are so great that the time the average man in the East is allowed for a vacation would be consumed by a man travelling from Dawson to Ottawa say, and back again. So we have been in the habit of allowing the vacations to accumulate, and when a man has served a certain number of years in the country he is given a trip; sometimes the trips are extended, for, as I have said, both this Government and the late Government have treated the officials up there very generously. I have nothing but thanks for the way the late Government treated its servants in the Yukon. My hon. friend from Edmonton (Mr. Oliver), when Minister of the Interior, took a broad view of this question. He was a frontier man himself, and knew that after a man had been up in that country for some years he required a change. Of course, it may seem to some

who do not understand it, that there is too much vacation given to the officials of the Yukon, but when you consider that Dawson is in latitude 54° north and that at times the thermometer is 64 below, and sometimes lower, it must be admitted that the men deserve a change after working in that country for some years. We do not wish to add to the cost of Government by engaging other men to take their place while they are on vacation, and very often we merge the work between the different officials, particularly in the winter when things are more or less quiet. The summer is when we reap our harvest of gold. Last year we took out $4,500,000 to $5,000,000 in gold. While I am free to admit that the revenues are decreasing, yet like all mining men, we have great hopes. I noticed a despatch in the Ottawa Journal to-night saying that a new strike had been made at Rude Creek, and that the miners were petitioning for a better road. That road will cost about $500 to build, and it is items like that which add to the cost of Government. Let me impress upon the House that it is not Ontario, or Quebec, or Nova Scotia that we are governing. We are in the primeval wilderness, where you see nature in its rudest form; it is cold and inhospitable, the distances are great, and the rivers large. We have an adventurous population, which lives largely from the gold, and silver, the copper, and the coal that they dig out of the wilderness. Whenever a new mine of gold or silver, or copper, or coal is struck, the Government does everything it can to make it easy for the prospector to go to and from his base of supplies, and I am sure that policy will commend itself to hon. gentlemen in this House. That is one of the things that adds to the cost of administration in the Yukon. We have to have roads and trails. Sometimes a prospector will want to get to the head of one of the streams tributary to the Yukon, and it would seem the part of wisdom for the Government to encourage him to get there.

Mr. GRAHAM: And not tax him too heavily after he gets there.

Mr. THOMPSON: We have tried to make taxes as reasonable as possible. First of all, we try to give the miner security of title. When my hon. friend from Edmonton was Minister of the Interior, he put through this House a Bill which incorporated the regulations of that day into the Yukon Placer Mining Act, and from that time to the present every one in the Yukon has been satisfied as to the question of title to property. Millions of dollars have been invested in the mining industry in the Yukon because of the law passed by the hon. member for Edmonton when he was Minister of the Interior. When a miner goes out into the wilderness we want him to feel that the Government is behind him, so far as title is concerned. These men then go out into the hills and valleys, and sometimes find it difficult to get more than what they call their grubstake. In some cases the Government, feeling that it is in the interests not only of the Yukon but of Canada as a whole, has paid the way of these prospectors. If a group wanted to go to an outlying district, the Yukon Government would appropriate a few dollars to carry these men to that distant point. Then as regards mail service, we have had to subsidize some boats running on the tributaries to the Yukon, and it must be remembered that some of these tributaries are navigable for from 250 to 300 miles from their juction with the Yukon. The territory up there is vast, but I am sorry to say the population is sparse. We have not the population we had years ago, but it is a vigorous, a hardy and adventurous population, a population specifically and peculiarly fitted for a great territory like that. I venture to say that there is not an army in Europe to-day, and that Napoleon never led an army, that was better, physically and morally, than the army that crossed the White Pass and developed the gold mines of the Klondike in 1896. Many of those men and many of their children are still there. They have erected schools, and for the information of the House I might say that in the public school of Dawson we give the first year's course in the University of Toronto. We do not call it a High school or a Normal school, but the students can matriculate from it to McGill and Varsity. We could not do that without money; we could not do it unless the Federal treasury was behind us. The suggestion was made the other night that the Yukon should unite with British Columbia and I did not have an opportunity then to express my disapproval. I do so now in the name of the people of the Yukon, because our people have a destiny of their own. The Yukon territory, which comprises an area of 200,000 square miles, has produced in sixteen or seventeen years nearly $200,000,000 worth of gold, and its resources are so far barely scratched. The part that is developed is in the same

proportion to the whole territory as a postage stamp is to a post card, and we have huge areas that have never been trod under the foot of the white man. Why should we wish to be tacked on to British Columbia, particularly as we receive assistance from the Federal Government?

Mr. GRAHAM: That shows our humanity.

Mr. PUGSLEY: What officials are there in the Yukon who are paid out of the Dominion Treasury? I refer to the principal officials and their duties.

Mr. THOMPSON: That is a fairly large order.

Mr. PUGSLEY: Is there a public administrator there?

Mr. THOMPSON: Yes, Mr. John Black.

Mr. PUGSLEY: Is there a judge of probates there?

Mr. THOMPSON: We have one judge in the Yukon, Judge Macaulay, formerly of Belleville.

Mr. PUGSLEY: Only one?

Mr. THOMPSON: Yes.

Mr. PUGSLEY: Who acts as judge during his absence?

Mr. THOMPSON: A year ago Judge Macaulay, who had been in the territory for some years, asked the Minister of Justice for furlough, which was granted, and accordingly Judge Macaulay took his vacation. Mr. John Black was public administrator and, in the absence of Judge Macaulay, it was necessary for some one to act as interim judge. Mr. Black's name was submitted for the position, and he was nominated and filled the position of interim judge with great credit to himself.

Mr. PUGSLEY: Did he as judge have to do with appeals from the action or conduct of the public administrator?

Mr. THOMPSON: I do not think so.

Mr. PUGSLEY: I am told that he did.

Mr. THOMPSON: My hon. friend should verify that before asking his question; I know he wants to be fair.

Mr. PUGSLEY: Yes. Is it not true that an appeeal from the action of the public administrator necessarily goes to the judge, and, therefore, during the absence of Mr. Macaulay, did not Mr. Justice Black, who was a temporary justice, exercise jurisdiction over his own conduct as public administrator?

Mr. THOMPSON: If he did, this is the first news that I have had of it, and, knowing Mr. Black as I do, I do not believe that he would act in that capacity. I can hardly imagine a man acting as a judge to pass on his own judgments.

Mr. PUGSLEY: I was informed that conditions were in a very unsatisfactory state at that time by reason of Mr. Black's occupying three different positions, being public administrator, judge of the court, and I think, judge of the appellate court also.

Mr. THOMPSON: No.

Mr. PUGSLEY: Who was judge of the appellate court?

Mr. THOMPSON: We have no appellate court in the Yukon now. We used to have an appellate court, that is, we had a court en banc, composed of the three judges who were in the Yukon at that time; but as time went on, two of the judges were eventually retired leaving just one judge, and, of course, there could not then be any appellate court. There is an appeal from the Gold Commissioner to the sitting judge, but the appeal from the judge is to the Supreme Court of British Columbia. I am subject to correction on that, but I thing such is the case. At one time the appeal from the court en banc was to the Supreme Court at Ottawa, but I think now it is to the Supreme Court of British Columbia. My hon. friend from South Renfrew (Mr. Graham) is advocating that we merge certain offices, and this is an illustration of the criticism to which the Government is open when such a thing is done, although it was done for the purpose of economy.

Mr. PUGSLEY: You do not suggest that the office of public administrator should be merged with the position of judge?

Mr. THOMPSON: Not as a permanent thing but as an expedient. Of course, we could easily have paid some one else to do the work, but we were anticipating the criticism made by my hon. friend. I quite agree with my hon. friend that a man cannot sit in appeal on his own judgments.

Mr. PUGSLEY: During that period there was no other court to which he could go unless he went to himself.

Mr. THOMPSON: I do not know whether I am clear as to what the hon. gentleman means.

Mr. PUGSLEY: The criticism made to me was that Mr. John Black was public administrator, and that the Government appointed the same gentleman as judge of the court. All appeals from the actions or decisions of the public administrator must go to the judge. During that period he was both public administrator and judge. The people of the Yukon had no appeal from his decisions except to himself.

Mr. THOMPSON: Would my hon. friend say whether he was informed if there was a case in which an appeal was asked for, or might have been taken, or a case referred from this gentleman acting in one capacity to this gentleman acting in another?

Mr. PUGSLEY: I was told that people were debarred from an appeal which otherwise they would have had the right to make.

Mr. THOMPSON: That just shows how unfair some people are and how statements become at direct variance with the facts after travelling from the Yukon here. I know that my hon. friend has used the information as he has received it.

Mr. PUGSLEY: Exactly as I received it.

Mr. THOMPSON: Exactly, I am sure. But I do not know of any case where the public administrator was called upon to sit in judgment upon his own decision. It is so ridiculous that I cannot think of it seriously. Possibly it might have occurred but certainly it never occurred in the Yukon to my knowledge. I do not believe that Mr. Black would ever think of doing that.

Mr. PUGSLEY: Does not my hon. friend realize that when this Government appointed the public administrator to be judge of the court, which is the only court of appeal from the action of the public administrator, they did an improper thing because they were thereby debarring people from the opportunity of making an appeal except appealing simply from Caesar unto Caesar?

Mr. THOMPSON: That is a different thing. My hon. friend now says they were debarred from making an appeal. I understood him, when he was speaking before, to say that people wanted to appeal and could not appeal.

Mr. PUGSLEY: It debars them.

Mr. THOMPSON: That is in the abstract, but I submit that there is no specific case.

Mr. PUGSLEY: Perhaps not, but my information is that there has been such a case.

Mr. THOMPSON: I accept my hon. friend's statement, but I do not think there was a case of that kind. But, even so, it was only an interim appointment; Judge Macaulay was only out of the territory for five or six months and at the expiration of that time he returned and took his place on the bench, while Mr. Black, who had been acting as interim judge, stepped down and resumed his duties.

Mr. PUGSLEY: He did not give up his duties in the lower court while performing his duties in the higher court?

Mr. THOMPSON: In what capacity?

Mr. PUGSLEY: As administrator.

Mr. THOMPSON: That is not a court.

Mr. PUGSLEY: Yes it is.

Mr. THOMPSON: No, it was never so considered in the Yukon. I am sure that at one time the public administrator was not a lawyer at all.

Mr. PUGSLEY: To what court could any person who wanted to appeal from the public administrator apply for redress unless to the court over which the public administrator presided?

Mr. THOMPSON: I have no doubt that the procedure indicated by the hon. gentleman would be quite correct, and that an appeal would lie from the public administrator to the judge of the Territorial court.

Mr. PUGSLEY: While the public administrator was acting as judge of the court any appeal from his conduct as public administrator would necessarily have to be taken to himself as judge of the court.

Mr. THOMPSON: I admit that if there were appeals that would probably be the procedure, but I have never heard of a case being taken from the public administrator in the Yukon to the judge of the Territorial court. However, if there were such a case what would be the result? The man who had this fantastic grievance, if he had a grievance, would simply have to wait until Judge Macaulay returned. While we all understand the procedure in the court, what would my hon. friend think of this? He speaks of an appeal from a judge to the same judge. Judge Macaulay for years had been acting in the Yukon Territory as Police Court Magistrate, again meeting the argument advanced by the hon. member

for South Renfrew, and this was done while he was a minister of the Crown and for the purpose of effecting economy. While Mr. Macaulay was sitting as Supreme Court judge he was also acting as Police Magistrate. The culprit was apprehended by the Northwest Mounted Police, brought before Judge Macaulay, sitting as Police Magistrate, he had his preliminary trial before Judge Macaulay as Police Magistrate, he was committed for trial by Judge Macaulay as Police Magistrate, and then was tried by Judge Macaulay as judge of the Supreme Court.

Mr. PUGSLEY: Does not my hon. friend see the distinction between that and the case of a man who is handling the estate of widows and orphans, and from whose conduct as public administrator during that period, no appeal could be taken except to himself? It must also be remembered that the public administrator is in receipt of fees and commissions. From what this party told me it seems to be quite reprehensible that the Government should appoint a gentleman occupying a position of responsibility and trust in connection with estates to a position which would take away any right of appeal from his conduct as public administrator except to himself as judge of the court.

Mr. THOMPSON: The distinction is so great that I cannot imagine the two things from the same standpoint at all. In one case it is a matter of dollars and cents; in the other case it is a matter of life or death, and very frequently, a matter of personal liberty. In the one case, the man who came before the public administrator, only had to wait until the judge, in fact, returned which at the most, was a matter of six months. In the other case, there was no possibility of the man getting out of it. He was arrested by the police, committed by Mr. Macaulay as police magistrate and tried by Judge Macaulay as judge of the Supreme Court. The only appeal he had was to Judge Macaulay of the Supreme Court. How can you measure these two cases by the same standard? In that instance the Government did it, and I think they were right in doing it from the standpoint of economy. But, here is the milk in the cocoanut. You could meet my hon. friend's criticism by creating another official. But by not doing so, looking at it from the standpoint of economy, you save a little money, but I question whether it is good economy or not. Mr. Black to-day is acting in the capacity of judge of the Territorial court. Judge Macaulay has gone on a vacation. He had a murder case to try at Whitehorse, 400 miles from Dawson, just before the close of navigation. He came up to try that case, and, if my memory serves me right, navigation closed while he was there and he could not get back without going by the same line. While he was at Whitehorse he wired to his chief, the Minister of Justice, for permission to come out for a further vacation of three months. My hon. friend will appreciate the fact that the lawyers in the Yukon have their vacation in the winter time, when there is very little to do, instead of in the summer time when they are quite busy. Judge Macaulay wired for another furlough, and the Minister of Justice very kindly granted this to him. He is spending his winter at Belleville, Toronto and Montreal. Again, we had to have some one to act as interim judge, and we choose the man who acted with so much satisfaction before. I have never heard of any criticism in the whole of the Yukon Territory of the conduct of Mr. Black acting in his capacity as interim judge. Even his political opponents admitted that he made a good judge. My hon. friend knows him very well. He knows that he is a gentleman of long experience at the Bar and of considerable attainments. When Mr. Black acted before—the same applies to his present service—he did not receive one dollar by way of pay, although he adjudicated upon several intricate and important cases in the Yukon.

Mr. PUGSLEY: Then he was clerk of the court, public administrator, and judge?

Mr. THOMPSON: He not only was, but is now. He is considerable of a Pooh-Bah, but he is a good Pooh-Bah. I am anxious that my hon. friend should not overlook anything; I may mention that he is also legal adviser to the Yukon Council.

Mr. PUGSLEY: What does he get for that?

Mr. THOMPSON: $500.

Mr. PUGSLEY: What does he get as clerk of the court?

Mr. THOMPSON: I really do not know positively; about $7,000 a year, I think, altogether. The records show: salaries of the

Territorial Court sheriff, and clerk, $4,000 each.

Mr. PUGSLEY: Is he sheriff, also?

Mr. THOMPSON: No. We are great economists, but we do not think it wise to add the office of sheriff to his other duties.

Mr. C. A. WILSON: Is he sheriff, and then announcer, and then judge of preliminary inquiry, and then judge of the session, and then hangman; does he perform all these functions?

Mr. THOMPSON: He is not sheriff, or hangman, or jailer. There are many things that he is not.

Mr. WILSON: He is so many things that we have to find out what he is not.

Mr. THOMPSON: If the hon. gentleman had been more assiduous in his attendance upon this committee, he would have heard just what this gentleman is and just what he is not.

Mr. WILSON: I may tell the hon. gentleman that when the Yukon Territory was organized two judges were named, Mr. Dugas and Mr. Craig. The Supreme Court of Canada is, I understand, the Court of Appeal for the Yukon.

Mr. THOMPSON: No, the Court of Appeal is the Supreme Court of British Columbia.

Mr. WILSON: When Mr. Congdon was the Crown Prosecutor I had to defend the Yukon murderers, Labelle and Fournier, before the Supreme Court of Canada as the Court of Appeal of the Yukon Territory Am I right or wrong?

Mr. THOMPSON: Right.

Mr. WILSON: Since that time, has any change been made?

Mr. THOMPSON: Yes. I told the committee before my hon. friend came in, that at one time appeal lay from the Yukon court to the Supreme Court of Canada When the court en banc was abolished, appeal was taken to the Supreme Court of British Columbia, and that is where we have our appeal now. If litigants wish to cary their cases further, I suppose they can carry them to the Supreme Court of Canada. We have only one judge there now.

Mr. WILSON: I thought you had two judges.

Mr. THOMPSON: We had three judges, but we retired two. Mr. Black is interim judge while Judge Macaulay is on his vacation. Primarily his position is clerk of the court; he is also legal adviser to the Yukon Council and public administrator.

Mr. PUGSLEY: How much does he get for his services as public administrator?

Mr. THOMPSON: He is paid in fees; he gets five per cent of the estate.

Mr. PUGSLEY: To what court does the administrator apply for letters of administration, and to what court are his accounts submitted for examination and approval? Would it not be to the very court which he was appointed to preside over in Judge Macaulay's absence?

Mr. THOMPSON: I do not deny that. There is but one court in the Yukon, and if there were an appeal, it would have to go to that court.

Mr. PUGSLEY: That would be to himself, during the time that he was acting as judge. Does my hon. friend remember a case in which the judge, as police magistrate, tried a case in which he himself was a party?

Mr. THOMPSON: No, he never did anything of that kind. I defy any one to name a single case in which he sat in both capacities. I know my hon. friend wants to be fair, but he is wrongly informed. I say here on my responsibility as a member of the House that Mr. Black would not do that. My hon. friend would not do it, I would not do it.

Mr. C. A. WILSON: That is not the question; it is a question of jurisdiction, that is all.

Mr. THOMPSON: There is no question of jurisdiction, the jurisdiction is clear. He is acting in the three capacities at the present time.

Mr. WILSON: What capacities?

Mr. THOMPSON: Clerk of the territorial court, interim judge, and public administrator.

Mr. WILSON: I am sorry for these three offices.

Mr. THOMPSON: My hon. friend may be wasting his sorrow. I have not heard any sorrow expressed in the Yukon where he administers these estates and deals with these cases. The people there are satisfied; I have not heard a complaint. It is they

whose judgment should be taken in this matter. I admit that in normal times, with big revenues and a large population, this condition would not be permitted to exist; but the basic reason for this course is economy, which has been so strongly urged upon the Government by hon. gentlemen opposite.

Mr. C. A. WILSON: There is one thing I cannot understand. As a clerk, he would act for himself as a judge; and, being a judge, he would act for himself as a clerk. Then, being a clerk and a judge, he would act for himself as a clerk and as a judge as a court of appeal. We had something of the same kind in Montreal when Judge Sicotte was clerk of the peace and was acting as magistrate of the court of enquete and sitting as clerk of the court of King's bench on the criminal side. We objected very strongly to that. If you want to economize there are many other things in which it is possible to economize in the Yukon. The things which are important to the citizens are, first his life, then his liberty, and then his property. This man being a judge, and a clerk, and a sheriff, in the morning at 9 o'clock he would sit as a clerk, at 10 as a judge, and at 11 as sheriff—or hangman. That is what I object to.

Mr. PUGSLEY: My hon. friend seemed to think I was criticising the conduct of Mr. Black. I used to know Mr. Black in New Brunswick, and I should be very sorry to say anything as to his conduct since he has been in the Yukon. I have no reason to suppose that it has not been exemplary. What I complain of is the action of the Government in appointing a man to all these different positions. It would appear to me that Mr. Black was receiving a very large income indeed. He is
10 p.m. public administrator of the whole Yukon territory, and my hon. friend says he gets five per cent of all the estates which he administers as public administrator. This must bring him in a very large income indeed. Then he is clerk of the court, from which office he gets, my hon. friend says, $4,000 a year. He is advisor of the Yukon Council, from which my hon. friend says he gets $500 a year; and there was something else, what was it?

An hon. MEMBER: Hangman.

Mr. PUGSLEY: I should suppose that in all probability Mr. Black's income would reach the very large sum of $15,000 or $20,000 a year.

[Mr. Thompson.]

Mr. ALFRED THOMPSON: Oh, no.

Mr. PUGSLEY: Do not let my hon. friend make any mistake. There have been many wealthy people in the Yukon, and, despite the invigorating climate of that country, some of them must die, as in other parts of the world. My objection is to this man being the administrator of estates and also being the judge of the court before which these estates may be brought in litigation. Thus people are deprived of the right to bring the administration of these various estates before the court for proper judicial review. No Government should take a course that would deprive people of that right. The positions of clerk of the court and judge of the court are entirely inconsistent, and it is particularly absurd to say that one man in the Yukon, Mr. John Black, who, when in New Brunswick, was a most ardent Conservative, as I suppose he is still, should be made a perfect Pooh Bah and occupy all of these positions, to which considerable emoluments are attached. It is not only unjustifiable, but I say it is disgraceful that the Government should appoint one man to all these various positions.

Would this not be a good time for the minister to let us know what of these Estimates are to be actually expended and what are not? The Minister of Finance informed us that there were some $29,000,000 in these Estimates which the Government did not intend to expend during the coming year. The Minister of Finance pledged the good faith of the Government to this statement. We have been considering Estimates for a number of days, off and on, and so far we have had no statement from any minister as to what of the Estimates in his particular department are to be expended and what are not. The time has come, in my humble judgment, when this committee ought to be informed upon this point. We ought to know from the Minister of the Interior which of these amounts which he is asking for are to be expended. We have a right to assume that, before the Minister of Finance made the statement he did, the question had been considered in Council. It was a most important statement to make to the people of this country and to their representatives in Parliament. A very large amount is involved. I want it understood that the members of this House on both sides who do not occupy the treasury benches have a right to be informed upon this important question. I think it is only fair and reasonable that we should ask the Minister of the Interior to give us informa-

tion upon this point before we go on to consider these items. Surely the Minister of the Interior will be able to give to the committee that information as far as his department is concerned. I would ask my hon. friends on both sides of the House if we are asking for anything unreasonable when we make this demand. We are here representing the people, and are supposed to take, as we are desirous of taking, an intelligent view of these estimates, in order to judge whether or not we should vote the items. We have a right to know which of them are to be expended, and which are simply here upon paper and are not intended to be acted upon. Why does the Government bring these Estimates before us at all, unless they want our judgment upon them? We are not here simply to record the views of the Government; we are not here simply to hear the Deputy Speaker read out these items, and then to pass them without some intelligent idea as to whether or not they are required for the public services during the coming year. I appeal in the best spirit to my hon. friend the minister to inform the committee as to which of these items it is intended to expend and which it is not deemed necessary to expend for carrying on the public services in his department.

Mr. ALFRED THOMPSON: Perhaps I might be permitted to add a word.

Mr. PUGSLEY: Let the minister answer. My hon. friend might divert his attention.

Mr. THOMPSON: My hon. friend is not going to divert my attention.

Mr. PUGSLEY: I have asked the minister to reply.

Mr. THOMPSON: If the minister wishes—

Mr. PUGSLEY: Perhaps he does wish; I have a right to ask him to reply.

Mr. ROCHE: I do not know why the hon. member for St. John is putting up this sham fight.

Mr. PUGSLEY: It is no sham fight, as perhaps you will realize before we are through.

Mr. ROCHE: I have not refused to give any information that has been asked. I allowed the hon. member for the Yukon to reply to the question because, as my hon. friend realizes, he is much more conversant with the matters of that Territory than any other member of this House, and he can answer as to the local conditions better than I can. We are now on the item relating to the Government of the Yukon Territory. If my hon. friend had been present the other night he would have heard discussed many of the things we are talking of now. Are we going over these items and rehash them every time a member comes into the House, and waste the time of the House giving members information time and time again. If the hon. member for St. John wants an answer about these particular items, I may point out that they are divided into three:

Salaries and expenses connected with the administration of the Territory; grant to Local Council, and grant to Local Council for maintenace of and repairs to roads.

The first is the item we have been discussing; the two others are fixed items which are requisitioned by the local council. The expenditure is under their jurisdiction; we do not expend this money. We vote it to the council, and they expend it. They have spent more than we voted. Take the expenditure on roads. The item for last year was $100,000; they have expended $140,000. Then in salaries and expenses, the vote was $128,000 and out of that amount we expended $115,000. It is not possible at all times to have right down to a dollar the exact amount which we are going to spend. I do not think that the margin between $128,000 and $115,000 is very large. I have not refused to give any information, and I do not think I deserve a lecture which I have received from the hon. member for St. John.

Mr. PUGSLEY: The minister has been very fair, so far as those particular items are concerned. He speaks of my putting up a sham fight; what would he think would be a real fight? I am simply doing the best I can, as a member of this committee, to get information, and I would expect support from my hon. friend from Peel (Mr. Blain). When he was a member of the late Opposition he was very watchful; he was a perfect watchdog, and I would expect to have his co-operation. I am glad to see him here to-night, glad to see that he has come back. I appeal to my hon. friend from Peel to say whether I am not right. We must treat the Government as a whole. The Minister of Finance has informed Parliament and the country that although there are printed here in black and white numberless items, including the Estimates of my hon. friend, amounting altogether to the enormous sum of $189,000,000, it is the opinion of the Government that it will not be

necessary to expend $29,000,000 of that amount. I ask the Minister of the Interior in all sincerity if he thinks it is right to keep the members of this committee in the dark as to what the items are which, in the opinion of the Government, it will not be necessary to spend. I ask the minister whether he will not be good enough to tell us what items there are in his department, the expenditure of which will not be required. Then we will be able to help him along materially. I have seen the Opposition in this House do a great deal to facilitate the passing of Estimates, but we want to be treated fairly. I am not asking for anything but fair treatment when I ask this information to be given to the committee.

Mr. ALFRED THOMPSON: Perhaps I may now be permitted to refer to the discussion which preceded the remarks of my hon. friend, and to point out to the hon. member for St. John that in combining the offices to which he referred, the Government have followed the policy carried out by the late Government with great success, the object simply being to economize. The only estates of which Mr. Black acts as a public administrator, are estates in connection with which no will has been made, and they are not large estates.

Mr. PUGSLEY: Cases of intestacy.

Mr. THOMPSON: Yes. There are not very many of them, and they are very small. I would not undertake to say how many hundreds of dollars a year he gets, but it does not amount to anything like the sum my hon. friend mentioned. Furthermore, when he sits as judge, he does not act as clerk of the court; the sheriff acts as clerk of the court. But this whole matter can be easily arranged if my hon. friend wants it. It would be an easy matter to get a clerk of the court and a public administrator.

Mr. C. A. WILSON: It is about time the judge acted as his own clerk.

Mr. THOMPSON: He does not act as judge and clerk of the court at the same time.

Mr. PUGSLEY: He is the real clerk.

Mr. THOMPSON: I am not denying that. It is all a question of economy. We can get other men to do the work, if that is what is wanted, but we have been trying to meet the exigencies of the territory.

Mr. PUGSLEY: I think you could get two or three men to do the work at no greater cost than is involved in paying this one gentleman this enormous salary.

Mr. C. A. WILSON: Is there any official stenographer in the Yukon?

Mr. THOMPSON: Yes, George Craig and Harold Blackman; their salaries will be found in the Justice Estimates.

Mr. GRAHAM: When I suggested that some of the offices in the Yukon might be amalgamated, I had not in mind the offices that have been described by the hon. gentleman to-night. The minister got a bit cross with me for asking for some information with regard to the cost of the government of the Yukon Territory, but I think the information that has been given out to-night makes it clear that I did not make any mistake in asking my question. The minister himself says that he is asking for $13,000 more than he expects to spend.

Mr. ROCHE: That was last year.

Mr. GRAHAM: Well, surely my hon. friend is not going to spend more this year than last. Could he not cut this $13,000 out? That would take a little off the $29,000,000 that the Government does not expect to spend. The minister says that he has made a reduction from last year, but that does not affect the statement of the Minister of Finance that approximately $29,000,000 will have to be cut off these Estimates. We on this side of the House are doing all we can to back up the Minister of Finance in getting this reduction made, and I think the minister might make a start. The country should know just what the Government intends to spend. It is not fair to the country as a whole, nor to the taxpayer, to allow this $29,000,000 to stay in the Estimates, and it will militate against the borrowing power of the Government, because when the Government goes to the markets of the world, they will have to explain why they have expended $29,000,000 more than they should have expended, according to the Minister of Finance. It is not fair to the country, and it is not fair to the House for ministers not to intimate what items they do not intend to expend, nor is it meeting the wishes of the Finance Minister, who says that there are now in the Estimates $29,000,000 more than ministers should be allowed to expend.

Mr. ROCHE: I do not think the Minister of Finance had reference to the Interior when he stated that there were amounts in the Estimates which it was not intended to expend. When the Estimates were being made up, I gave instructions to have them prepared with a view to the strictest economy, and some that were submitted to me I sent back with the request that they be reduced if it could possibly be done without impairing the public service, and I received memoranda back from those in charge of the preparing of the Estimates to the effect that they had been prepared on the lines indicated, and they did not see how the Estimates could be reduced without impairing the public service. That, in short, is the position of the Department of the Interior. There have been certain reductions this year, but as regards the ensuing year I do not think there is any large amount at all in the Estimates that we could say for a certainty will not be expended.

Mr. PUGSLEY: Does the minister say that the Finance Minister made his statement to the House without the matter having first been brought before the council and carefully considered? Was council not informed how the $29,000,000 was made up?

Mr. ROCHE: I think the hon. member knows pretty well that when the Finance Minister made that statement, his attention was directed principally to those Estimates in the Public Works Department, which were re-votes, and in regard to which work would not be gone on with this year.

Mr. PUGSLEY: That accounts for only about $5,000,000.

Mr. C. A. WILSON: How many judges are there in the Yukon territory?

Mr. ALFRED THOMPSON: One judge.

Mr. C. A. WILSON: I see by page 32 that the judge gets a travelling allowance of $500, and a living allowance of $5,000. Then, as sheriff he gets $4,000, and $4,000 as clerk, which makes $13,500 altogether.

Mr. THOMPSON: The judge is not the clerk of the court. This item would be clearer if it were written out as follows: Salaries of the Territorial court officials, such as sheriff, clerk, etc. The judge does not get those salaries.

The CHAIRMAN: May I suggest that as we are not considering this item at all, it would be better to postpone this discussion until the Estimates of the Justice Department are up. It does seem to me that no useful purpose can be served by considering the Justice Estimates at this stage, and I therefore hope that the discussion from now on will be confined to the item under discussion, which is, the government of the Yukon Territory.

Mr. PUGSLEY: Perhaps the minister would explain how this $128,000 was expended last year.

Mr. ROCHE: It is found in detail on page K-162, vol. 1, of the Auditor General's Report.

Mr. PUGSLEY: I see the Hon. George Black gets a salary of $6,000, and a living allowance of $6,000. What relation is he to Mr. John Black?

Mr. THOMPSON: A nephew.

Mr. PUGSLEY: They have done pretty well.

Mr. THOMPSON: I am sure that my hon. friend is glad that fellow-countrymen of his are doing well.

Mr. PUGSLEY: They come from my own province, and I have nothing to say against them personally. Is there any account of the $125,000 grant to the Local Council?

Mr. ROCHE: At K-236 of the Auditor General's Report.

Mr. PUGSLEY: That gives simply the amount for salaries, but does not give the names of the employees. Is there any return showing the names and what amount each person gets? I want to know if Mr. Black got any more of the money; he has already received nearly $20,000. The names are not given on this page?

Mr. ROCHE: No.

Mr. THOMPSON: I think that is all Mr Black received.

Mr. PUGSLEY: Does not the minister require details showing the names?

Mr. ROCHE: No, I do not think any minister has ever done so.

Mr. PUGSLEY: And therefore this minister will not do so.

Mr. ROCHE: I think the Auditor General has satisfied himself as to the correctness of this item.

Mr. BOULAY: I would like to get some information from the minister as to the

number of employees in the Royal Northwest Mounted Police.

Mr. ROCHE: I am afraid it takes all my time to give accurately information in regard to my own department. I cannot meet the wishes of the hon. member for Laval in regard to the Department of Justice, and I am sorry to say I cannot meet the wishes of my hon. friend from Rimouski in regard to the Prime Minister's Department.

Scientific institutions—Astronomical surveys—Investigations and demarcations of the exterior boundaries of Canada, the triangulation, levelling and topographic work of the Geodetic Survey of Canada, and the Astronomical work of the Department of the Interior, including the expenses of the Dominion Astronomical Observatory at Ottawa and the branch therefrom at Saanich Hill, B.C., and $1,000 to W. F. King, as International Boundary Commissioner, $260,000.

Mr. PUGSLEY: Is this amount to be expended, and if so, why during the present conditions of affairs?

Mr. ROCHE: This is how this item is to be expended:

International Boundary Surveys—		
(a) Ontario Minnesota Boundary	$25,000 00	
(b) Boundary between Quebec and New Brunswick and the adjacent States	25,000 00	
(c) Boundaries generally, preparing and printing reports and maps	10,000 00	
		$60,000 00
Geodetic Survey of Canada		125,000 00
Field Astronomical and Magnetic work		10,000 00
Books, maps and photographic material		5,000 00
Instruments		15,000 00
General expenses at Head Office		40,000 00
Expense at Saanich Hill Observatotory		4,000 00
Payment to Dr. W. F. King as International Commissioner		1,000 00
Total		$260,000 00

Mr. C. A. WILSON: That could surely be left out in this time of war.

Mr. ROCHE: Seeing that we are at present engaged in the work, we should not have any break in it. We have our staff and we might as well keep them at work.

Mr. PUGSLEY: If they are all young men, perhaps they might want to enlist.

Mr. ROCHE: They are not all young men.

Mr. PUGSLEY: From the statement of the minister, here is an expenditure of

$260,000 which is not required during the coming year. It is not required half as much as the expenditure on public buildings, but it is proposed to keep men at work in investigations and demarcations of the exterior boundaries of Canada. Does this mean the provincial boundaries? How ridiculous it is that we should be now defining the boundaries of two provinces; although, I assume that as these are exterior boundaries, they must be the boundaries between Canada and the United States.

Mr. ROCHE: That is what they are.

Mr. PUGSLEY: Is there any necessity for that?

Mr. ROCHE: It is being done jointly with the United States.

Mr. PUGSLEY: That is very true, but the United States would not complain if, by reason of the conditions due to the war, this work was allowed to stand over. The minister should bear in mind that the Minister of Finance has felt himself obliged to come down with proposals for taxation which mean the imposition of very heavy burdens upon all the business interests of this country. The minister must be aware that, from the Atlantic to the Pacific, complaints are coming in to the Government, as they are coming to the private members of this House, that the proposed taxation is going to be very burdensome. Not only is the minister proposing to put taxation in the future upon the business interests of this country, but he is proposing to adopt a principle which has not been recognized as a correct one; he is proposing to pass retroactive legislation.

The CHAIRMAN: I must respectfully ask the hon. member to confine his remarks to the subject under discussion. I cannot see any connection between retroactive legislation and an item of $291,000 for scientific institutions for the Department of the Interior. I hope my hon. friend will try to confine his remarks to the item under consideration.

Mr. PUGSLEY: Mr. Chairman, I am sure that you would not be unduly narrow in your rulings in regard to this question. I do not want to question your ruling, but I see the error of it and the difficulties into which we would be led if it should prevail. It would mean that I could not point out the reasons why the Government at this time should not ask for this large vote of $260,000. What reason can I advance?

Is not the financial position of the country the very strongest reasons which a member of this committee could urge against the voting of this large sum of money? Is not the fact that the Minister of Finance comes down and tells us that he cannot get along without imposing heavy burdens upon the business interests of the country, and not only imposing them for the future but taking them out of the pockets of those who have been carrying on these industries in the past year and a half, and thereby imposing retroactive legislation? Surely, Mr. Chairman, you do not mean that I cannot give the reasons—

The CHAIRMAN: I must point out to the hon. member that his remarks might be very proper in the Committee of Ways and Means, but this is the Committee of Supply and the rule is very clear that the discussion must be confined to the item under consideration.

Mr. PUGSLEY: Then, I move that this item be struck out, and I will proceed to give my reasons, which I think will convince the committee that it ought to be struck out. You, Mr. Chairman, speak of the difference between the Committee of Supply and the Committee of Ways and Means. How can you vote Supply until you know that you will have the means to pay the money you vote? How can the Government ask the committee to vote $260,000 unless they are going to state to the House the means by which they will raise that money? The two committees of Ways and Means and of Supply are indissolubly connected. Before the Government come and ask this House to vote any sum of money it ought to be in a position to say what it wants the money for. How is it proposed to raise this money to pay this $260,000, which is a part of the $189,000,000 which it is proposed to raise? The Minister of Finance, when he lays his Estimates, amounting to $189,000,000, on the Table, said: " we want a vast sum of money and how are we going to raise it? I am going to ask this House to raise it by imposing taxes upon the business interests of this country among other things; we are going to raise it out of customs, excise, and from other sources, but by reason of the vast amount of money which we want for the ordinary services of the country we intend to impose this taxation upon the business interests of the country." I could not present to this committee any stronger argument in favour of striking this item out than by mentioning this fact. Where is the necessity for it? I could understand that if there was an abounding revenue we might indulge in this unnecessary expenditure; we might go on with our investigations and demarcations of the exterior boundaries of Canada; we might even take up triangulation, levelling, topographical work, geodetic surveys and astronomical work. We might do all that if we had the money to spend, but when there is distress all over this country, when people are contributing of their means for patriotic work and when the Minister of Finance comes down and demands that this extra burden of taxation shall be imposed upon the people, it is not a time to expend a vast amount of money which is not necessary. I appeal to every member of this House, as to whether I am not right in that. You may say that this is only $260,000, but, after all, this forms a part of the vast sum which the Government are calling upon Parliament to vote. The Government have not the money to warrant them in expending this sum and in order to obtain this money, which is a part of the vast millions which they are demanding from the people, they are proposing to impose the extra taxation.

Mr. C. A. WILSON: Where is Canada after all? Do we not know yet? Notwithstanding the Treaty of Paris of 1763, we do not know the boundaries of our own country. We require a triangulation, an investigation and a demarcation to ascertain the exterior boundaries of Canada. It seems to me that we are quite behind the time. The hon. member for Yukon (Mr. Thompson) was talking about the Alaskan boundary a few moments ago and now we have to spend $260,000 to find out the boundaries of our own home. I am perfectly sincere in what I am going to say. If this item refers to the salaries of the men who are employed in this work, I am willing to vote for the payment of salaries because I do not want to deprive any man of his salary. He is accustomed to receiving his salary; he has based his system of living upon it. But why should we spend a large sum of money to find out whether Mount Stephen is 5,000 feet or 3,800 feet above the level of the sea? We know what lake Superior is; we know what the prairies are; we know what the Rockies are; why should we spend a large sum in finding out whether Mount Washington is a few feet less than a certain

number of feet above the level of the sea? When we are spending a million and a half every day on the war, why should we spend a quarter of a million dollars to find out whether the ice at Glacier is colder than the ice at lake Louise? I read a few of the items:

Investigations and demarcations of the interior boundaries of Canada.

We are living in peace with our neighbours in the United States; could we not postpone this expenditure while the war lasts?

Geodetic Survey of Canada.

I suppose we shall have to find out how many cubic feet of water flow daily over Niagara Falls; possibly $25,000 would cover that. We shall have to find out also whether the level of the sea has increased or decreased.

Astronomical work. Department of the Interior.

It will be necessary to ascertain, I suppose, when Venus or Mars will meet the Sun. I agree that those employed by the department should be paid their salaries, but no other expenditure should be made.

Mr. OLIVER: What portion of the International Boundary Survey is included in this item?

Mr. ROCHE: The Ontario-Minnesota boundary, and the boundary between Quebec and New Brunswick, and the adjacent states.

Mr. OLIVER: Surely there cannot be much of this international boundary incomplete; the work has been going on for many years. So far as this vote is required by reason of an agreement with the United States, it is my view that it would be unwise not to provide the money necessary to carry out that agreement. Would the minister say whether the work proposed to be done is called for by agreement with the United States?

Mr. ROCHE: Yes, by article 5 of the treaty of 1908. The commissioner in charge of the matter in the United States is providing a vote to carry on their portion of the work, upon the understanding that we carry on ours.

Mr. C. A. WILSON: We are friendly with the United States; is there no way by which we could communicate with President Wilson or members of the United States Government, with a view to postponing this expenditure of $260,000? One cannot walk on the streets of Ottawa, Quebec or Montreal without being appealed to in some form or other, for funds for war purposes. I am giving as much as I can, and you are giving just as much as you can. Are we going to spend $260,000 to secure the delimitation of the boundary between this country and the United States? By all means let us live up to our obligations under the treaty mentioned. But I suggest that hon. gentlemen opposite would be rendering a great service to their country if they could save a quarter of a million dollars by suspending this expenditure for the present. I would feel disposed to give it to the Minister of Militia for the purpose of serving the Empire and our country.

Mr. ROCHE: This $260,000 is not all appropriated for the delimitation of the boundary between the United States and Canada. Only $25,000 is for that purpose.

Mr. WILSON: Save that.

Mr. BOIVIN: Save the rest; save it all.

Mr. ROCHE: If the suggestion of the hon. member for St. John were adopted, the result would be just the condition of affairs that the hon. member for Laval would deplore. $40,000 of this vote is for salaries of officials, who would be deprived of this amount if the vote were eliminated. Parties are prepared to go out in the spring on this work; their salaries also would be sacrificed. I think it would be very ill-judged action on our part if we were to adopt the motion of the hon. member for St. John. As the hon. ex-Minister of the Interior justly states, we are carrying out our agreement with the United States in finishing this Ontario-Minnesota boundary line. I believe there are about 120 miles yet to be marked out.

Mr. PUGSLEY: The minister says it will cost $25,000.

Mr. ROCHE: For the Ontario-Minnesota boundary.

Mr. PUGSLEY: How is the $235,000 to be expended?

Mr. ROCHE: I read all of that a few moments ago. The Ontario-Minnesota boundary, $25,000; the Quebec-New Brunswick and adjacent states boundary, $25,000; boundaries generally, drafting, printing,

etc., $10,000; geodetic survey, astronomical work, general expenses, etc.—

Mr. PUGSLEY: How much is the geodetic survey?

Mr. ROCHE: It is $125,000.

Mr. PUGSLEY: What is that survey?

Mr. ROCHE: It is somewhat scientific, and I think that the work done under this vote is not less for the Interior Department than for some other departments, including the Public Works and Militia Departments.

Mr. PUGSLEY: I was Minister of Public Works, and I never was able to see where it was of the slightest advantage to that department. I never utilized it and never could see how it could be of any advantage.

Mr. ROCHE: I am informed by the officer in charge that it is for the purpose of accurately determining points which will serve as bases for surveys of all kinds. The triangulation is to be continued. The precise levels are being determined in various parts of the Dominion. The total mileage of levelling to-day is 9,000 miles.

Mr. OLIVER: How does the vote for this year and last year compare with those of the past four or five years? Has it been increasing or decreasing during a period of say five or six years?

Mr. ROCHE: There was a considerable decrease, I understand, last year, and the vote is exactly the same this year.

Mr. CARVELL: It seems to me the minister has struck the crux of the question when he says that it would necessitate the disbanding of some of our parties and that men would be thrown out of employment if this vote were reduced. Why should they not be thrown out of employment at a time when individuals and communities are saving every dollar they can to carry on the war? Why then should the Government spend money on things that are absolutely useless? We know how these things are done. They have a number of officials and the minister says: We must keep these men employed. They have a lot of men employed on these surveys, and it simply serves to keep them going during the summer. Why should not these men devote their time to something else, go to work and
11 p.m. really earn some money? Many of these men are ordinary labourers, or young men going through college, and in order to keep up the supply of money for these people, this enormous sum is being paid. This Government does not realize for a moment that the country is at war and that immense sacrifices are being made. As long as they can borrow money by millions, they say the country is prosperous, and that they will keep this army of officials in employment. It has been pointed out that there are 11,000 or 12,000 more people in the employment of the Government to-day than there were four or five years ago. In order to keep these 11,000 useless employees of the country going along at high salaries, the Government says: if we do not vote this money we cannot keep our people going. The minister says it is necesary to spend $25,000 this year in order to delimit the boundary between New Brunswick and Quebec, and the neighbouring states. So far as the New Brunswick-Maine boundary is concerned, that was settled in 1842. The lines were then run out and, many years ago, this Government, in conjunction with the United States Government, surveyed it, and they have had party after party going over the country the last five years making re-surveys. The part of the boundary which is on land is marked by concrete posts which are in sight of each other, and on the lower and upper parts of the line, where the boundary is the St. Croix and St. John rivers, the boundary posts are set up on the shore in such a way that at any turn in the river engineers can determine from these posts, within six inches, the exact location of the line in the middle of the river. I am thoroughly familiar with the situation there and to spend money to delimit that boundary at this day is simply throwing away that amount of money.

Mr. WILSON: This $25,000 would keep 25,000 soldiers for a day.

Mr. CARVELL: If the rest of the work, between Minnesota and Ontario, is of the same character, and I suppose it is, as that between New Brunswick and Maine, the money there is simply being thrown away too. The geodetic survey might be of some use to scientific men in later years, but what use can it be to the people of Canada to-day? As I understand, it is a scientific process by which certain base marks are provided, and engineers or surveyors can go by them and by testing out can see whether their instruments are absolutely accurate and whether the levels of the water are correct to the tenth of an inch. That may be interesting from a

scientific standpoint, but of what use is it to the people of Canada to-day when every man, every woman, and every child are depriving themselves of the real necessities of life in order to raise money to carry on the war? If there is a vote which has been proposed by the Government during this session that ought to be struck out—I was going to say root and branch, but perhaps a few dollars should be retained to carry out treaty obligations—this is the vote. The minister, I hope, will take this into consideration, and if he cannot stop all of this expenditure, let him at least stop most of it and try to save $200,000 of this useless waste of money for surveys that have been completed and that are only kept up in order to provide salaries for a lot of political friends of the Administration.

Mr. OLIVER: I am very anxious to see that the obligations of the country are carried out, especially in regard to the boundary, but I must say that I was very strongly under the impression, like the hon. member for Carleton, that the boundary survey, as required under the treaty arrangements with the United States, had been completed some time ago. If it was not it seems to me that that would be a point on which to make the criticism that there has been undue delay in the administration of my hon. friend, because, when I left office, I am sure the work had progressed so far towards completion that, at the same rate, it should have been completed before now. If this proposed survey is merely something in addition, something that is not absolutely called for by our treaty arrangements with the United States, I agree entirely with what the hon. member for Carleton has said.

Mr. ROCHE: Since there has been so much objection on the part of hon. gentlemen opposite, I am willing to let the item stand for further consideration. My information is that the particular item referred to, the survey of the boundary line between the United States and those provinces is the result of the treaty, and it has not been completed. It is work that has been progressing since before this Government came into power, and it did not receive any opposition when my hon. friends were in office.

Mr. PUGSLEY: Things were different then.

Mr. ROCHE: Yes, there was another government in power.

[Mr. Carvell.]

Mr. PUGSLEY: There was no war.

Mr. CARVELL: And the work was not finished then.

Mr. ROCHE: I thought it only right that we should continue the work and complete it, but if hon. members desire this item to stand I shall offer no objection.

Mr. OLIVER: While the geodetic survey may be an entirely desirable means of information when we have the money to spare, it is a fact that at the present time money is required not only for war purposes, but also for the development of necessary enterprises in which this country is now very heavily engaged. I am bound to agree that under these circumstances the work of the geodetic survey might be suspended for a period.

Mr. PUGSLEY: Before this matter is disposed of, I would like to call the attention of the minister to the fact that from his statement there would be at the very most $50,000 in regard to which there would be any possibility of an implied obligation to the United States to complete the survey. That reduces by $210,000 the amount which it seems to me it is necessary to expend at the present time.

Mr. ROCHE: What about the $40,000 for the head office?

Mr. PUGSLEY: I do not understand that any gentlemen are engaged in this work at the head office but those who have permanent employment. Take Dr. King; he is a very eminent scientist, but he is employed at the head office at other work. He is the chief of the Astronomical Observatory, and so with others. There is a good deal in what my hon. friend from Carleton said that in connection with this work young men, students of the universities, are employed temporarily. Every young man to-day who is able and willing to work can get employment of various kinds. Then we know there are a great many men in the service who are enlisting, and the men who are permanently on the staff might very well be engaged to replace those who have enlisted instead of bringing in new men. I think the minister should reduce this vote by $210,000 at least, and on the understanding that he will give us a statement as to how he proposes to expend this money I shall withdraw my motion and let the item stand. The minister must not think for a single moment that we are raising these objections

from any narrow standpoint. We have a duty to perform, and that duty is to point out, if we can, to the minister that, in respect to various items which come up for consideration in the Estimates, the expenditure is not required in the public interest, particularly at this time when the war is on, and in view of the enormous taxation which it is proposed to impose on the people. We are trying to discharge our duty; we hope to do it firmly, and with some degree of intelligence, but we must do it persistently, and we must not allow these items to go through as a matter of course. I should just like to say to my hon. friend the Minister of Public Works who is leading the House that the work of the Government would be greatly facilitated if they would make up a list of the items comprising the $29,000,000 or $30,000,000 contained in these Estimates, which the Minister of Finance guaranteed to Parliament and to the country will not be expended because they are not required for the public services. To-night we are to a large extent in the dark. We do not want to obstruct the estimates of any minister; we want to facilitate their passage, but we also want to have the consciousness that we have done our duty, and, so far as we can, prevented the passing of unnecessary Estimates. If this information were given to us, it would greatly facilitate our work, and, I am sure, the work of the Government. With that understanding, I will withdraw my motion and the item can stand.

Item stands.

Progress reported.

On motion of Mr. Rogers, the House adjourned at 11.17 p.m.

Thursday, March 2, 1916.

The House met at Three o'clock, the Speaker in the Chair.

CANADIAN RED CROSS SOCIETY.

AMENDING BILL.

Sir ROBERT BORDEN (Prime Minister) moved for leave to introduce Bill No. 48, to amend an Act to incorporate the Canadian Red Cross Society. He said: I was asked to introduce this Bill by the executive of the society, as the result of a communication received by them to that effect from Sir John Gibson. There was some difficulty about the notice, and there was also a desire to avoid all unnecessary expense in the way of publication. The purpose of the Bill is to increase the number of members on the council and on the executive committee. Mr. Sweny, Chairman of the Council, explains the purpose of the Bill in this way:

> The limitations of the members of the Council and Executive Committee as laid down in the original charter have been found not to work so well from the difficulty experienced at certain seasons of the year providing for a quorum at the meetings called by the Council and Executive Committee. In addition, representations have been made that the western provinces of the Dominion have not been adequately represented. Some idea may be formed by you of the great extension which has taken place in the society's operations by the simple statement that there are now in addition to the provincial branches some five hundred branches and probably double that number of auxiliary societies all working in the cause. It is important that as many members of the council as possible should be chosen from leading people in the several provinces in order that their influence may be widely exerted.

Motion agreed to, and Bill read the first time.

Sir WILFRID LAURIER: This is really a private Bill?

Sir ROBERT BORDEN: Yes.

Sir WILFRID LAURIER: All the requirements have not been fully complied with, but I suppose no interest can suffer on that account, the society being one of a purely benevolent character. Does my right hon. friend intend to send the Bill to the Committee on Standing Orders?

Sir ROBERT BORDEN: I had not thought of sending it to a committee at all, but I have no objection to sending it to the Committee on Standing Orders.

Sir WILFRID LAURIER: It would be better to send it to a committee to see that no private interests are affected.

Sir ROBERT BORDEN: I have no objection whatever to that course. We will send it after the second reading.

Sir WILFRID LAURIER: Yes.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

LIEUT. COLONEL ONESIPHORE TALBOT.

Mr. LAVALLEE:

1. Is the Government aware that Lieut. Colonel Onesiphore Talbot is said to be carrying on recruiting in the county of Bellechasse?
2. For what regiment is he doing such recruiting, if at all?

3. What salary is attached to his duties as recruiting officer, and what sums to date, have been paid to him as salary, outlays, travelling expenses, etc.?

4. How many soldiers have been enlisted in the county of Bellechasse since Lieutenant Colonel Talbot is said to have been acting as recruiting officer?

Sir SAM HUGHES:

1. Yes.

2. He is doing organization work re recruiting in Military District No. 5, pending his taking over his duties as second in command of the 171st Overseas Battalion.

3. Salary of his rank, $7.75 per diem. Paid to date: Salary, $356.50; travelling expenses, $109.50; total, $466.

4. This officer, while employed in general recruiting, was more especially detailed to organize meetings for the purpose of educating the people in the necessity of responding to the call for recruits. Only one recruit has been so far enlisted in Bellechasse county, although it is understood that a number from the county have been enlisted elsewhere, but it is hoped that the campaign of education will materially assist us when recruiting officers are sent into this county. Lieut.-Colonel Talbot has held meetings in the following parishes, which were attended at least by 300 people, and, in many instances, by as many as 700 people: St. Raphael and St. Nerée, St. Gervais, St. Charles, St. Michel, St. Valier, St. Gabriel de la Durantaye, Beaumont, St. Paul and St. Philemon, Montmagny (2 meetings), Cap St. Ignace, L'Islet and St. Eugène, St. Jean and St. Aubert, Ste. Louise, St. Roch and St. Damase, Armagh and Buckland, Ste. Euphrem and Notre Dame du Rosaire.

WAR SUPPLIES—HORSES.

Mr. KAY:

1. How many horses for military purposes has the Government on hand at present in Canada?

2. Where are they being kept?

3. Is it the intention of the Government to buy any more horses for military purposes during the present summer?

4. Has the Canadian Government purchased any horses for military purposes outside Canada? If so, where?

Sir SAM HUGHES:

1. 1,769 horses.

1st Division: London, 37; Guelph, 70; Woodstock, 5; Chatham, 1; Stratford, 1; Galt, 1; total, 115.

2nd Division: Toronto, 270; St. Catharines, 58; Welland, 8; Niagara Falls, 8; Barrie, 8; Orillia, 8; Brantford, 50; Collingwood, 8; Oshawa, 8; Sault Ste. Marie, 8; total, 434.

3rd Division: Kingston, 251; Ottawa, 90; total, 341.

POLITICAL PATRONAGE.

Mr. MACDONALD:

1. In what departments of the Government is a patronage list maintained?

2. In what departments of the Government is no patronage list kept?

Mr. BLONDIN:

1. Wherever in any department there is occasion to make comparatively small and incidental purchases in respect of which the usual practice of securing the same by advertising for tenders would be disproportionately expensive and hence impracticable, the names of reliable persons or firms from whom the same may be conveniently procured, having regard to the place where such supplies are needed, must necessarily be obtained; but the patronage system as it was practised before the general elections of 1911 is not carried out by the present Administration. The tender system is rigidly adhered to by all departments except in cases where it would mean waste of money. The purchase of all supplies for war purposes is under the War Purchasing Commission, which calls for tenders in every case where it is practicable.

2. Answered by No. 1.

Mr. MACDONALD:

1. Is it the intention of the Government to carry out the statement made by Sir George E. Foster, as set out on page 949 of Hansard, as follows: "I wish now that I might speak from the heart out, and make an agreement in this country between both parties that hereafter

patronage shall not be applied by political parties in the construction of our public works."

2. Does the Government intend submitting to this House a definite proposal, by which means the evils of patronage may be done away with?

3. If not, what action does the Government propose to take in the way of doing away with the patronage evil?

Mr. BLONDIN:

1. Public works are constructed by tender and contract except in occasional urgent cases where for reasons of public interest it is deemed advisable under the authority of the Governor in Council to proceed otherwise. It is not deemed wise to depart from this sound principle of public policy. The Government have ceased to undertake any new works since the commencement of the war, and during the continuance of the war they propose to commence none except in cases of extreme urgency. When any new public works may hereafter be started the Government will not use or introduce the system of patronage, but will continue the system of tender and contract. Consequently the suggested agreement is not necessary so far as they are concerned; although they would welcome the adherence of the Opposition to the same policy.

2. and 3. Answered by No. 1.

MR. BECKLES WILLSON.

*Mr. PROULX:

1. Referring to an item in the Ottawa Citizen of January 29, 1916, as follows:

"Mr. Beckles Willson, of Windsor, N.S., the biographer of Lord Strathcona, has been selected by the Minister of Militia to assist Sir Max Aitken in compiling the records of the Canadian forces in the war."

2. Is the statement therein contained correct? If so, what is the date and terms of Mr. Willson's engagement?

3. Did Mr. Willson agree to expunge the Hutton letter from a new edition of his Strathcona biography? If so, what was the date of such agreement?

Sir SAM HUGHES:

1. Yes, Mr. Beckles Willson of Windsor, N.S., was appointed assistant to Sir Max Aitken, general representative for Canada at the front.

2. He was granted the honorary rank of major in the Canadian Militia and in the Canadian Expeditionary Force, with effect from the 31st January, 1916, and was graded as a general staff officer, 1st grade.

3. No.

PIERCE ARROW MOTOR CAR PURCHASE.

Mr. CARVELL:

1. When was the Pierce Arrow motor car purchased, referred to on page S. 168, Vol. 11, of the Auditor General's Report, 1915, at a cost of $7,003?

2. Who ordered the purchase?

3. For what purpose is said car being used?

Mr. CASGRAIN:

1. The Pierce Arrow motor car was purchased on the 27th day of March, 1915, at a cost of $6,750. (The difference between this amount and the amount mentioned in the question is for accessories.)

2. The Postmaster General, after receiving a report from the Chief Post Office Superintendent, Eastern Division, as to the necessity of the purchase.

3. In July, 1910, owing to the great expansion of the city of Montreal, and the necessity for supervising efficiently and with despatch the many sub-offices and postal stations which came under the direct supervision of the Montreal post office, it was found necessary to purchase an automobile for the use of the Post Office Department in Montreal. During the last few years several new postal stations have been opened in Montreal. These postal stations consist of branch offices operated in exactly the same manner as the Montreal head office, the majority of which in themselves are each as large as an ordinary city post office. The accumulation of work resulting from this steady increase has been so great that in order to overcome the great amount of postal work, it is an absolute necessity that the Post Office Department should have the use of an automobile which they could obtain at a moment's notice, in order that they may follow up inquiries and investigations which call for immediate attention and keep their postal stations and sub-offices under close supervision.

At the present time, there are seventeen postal stations in different parts of the city of Montreal as well as nearly 100 sub-post offices, all of which are under the direct supervision of the officers of the Montreal head office, and some of which are sixteen miles apart, as the Montreal post office district now covers an area extending from Summerlea, west of Lachine to Longue Pointe, and from the River St. Lawrence to Rivière des Prairies.

A great bulk of the work transacted in that district is of a transient nature. The whole British mail is sorted at the Montreal head office, and is subsequently distributed from that office. The majority of investigations and inquiries in connection with the British mail have, therefore, to be made at the head office in Montreal and the various postal stations. These investigations, which take place from time to

time, are very numerous and it is absolutely necessary that the same be followed up without delay, as, unless immediate action is taken directly a loss is discovered, it is almost impossible to trace any missing mail. These remarks apply particularly to the registered part of the British mail, which is always very heavy. In this particular class of work, despatch is the most important factor, and it is necessary that the officials of the department should have every facility to carry out these investigations. In the past, ever since Montreal was furnished with an automobile, it has been found of almost invaluable use in regard to this particular class of work, and also the most economical way of dealing with the same.

The automobile has been and is used in connection with the establishing and superintending of rural mail routes on the island and in the district of Montreal.

The automobile is used both summer and winter continuously. At the beginning of 1915, the automobile, which had been purchased in July, 1910, had become dilapidated and worn out, so that on many occasions when engaged on work in connection with postal matters, it broke down and became so defective that it could not be relied upon The present car, which is a more powerful and more durable one, and better suited to the winter roads, was, therefore, purchased and is being used for the same purpose as the car which was purchased in 1910.

ROSS RIFLE MAGAZINE PURCHASES.

Mr. J. J. HUGHES:

Were any extra magazines for Ross rifles purchased since the beginning of the war? If so, how many, and at what price?

Sir SAM HUGHES: Yes, 43,000 magazines, at $2.31 each, were purchased, through the War Purchasing Commission.

COMMISSIONED OFFICERS AND COMMONS AND SENATE.

Mr. J. J. HUGHES:

Can the members of the Commons and the Senate, who are officers of the Volunteer Forces, attend to their duties as officers and their duties as members and senators at the same time?

Sir SAM HUGHES: Yes, when they can be spared from their regimental or other military duties.

EMPLOYMENT OF MRS. SHOULDIS.

*Mr. PROULX:

1. Is there employed in the Dead Letter Branch of the Post Office Department a Mrs. Shouldis? If so, what is her salary?

2. Is the husband in the Canadian forces? If so, what pay is he receiving?

3. Does Mrs. Shouldis draw separation allowance, in addition to her salary?

4. When there are said to be many needy persons on the waiting lists in all the departments of the Government, would the Government consider it fair to allow persons in good circumstances to draw from several sources?

Mr. CASGRAIN:

1. Yes, at $2 a day.

2. No information in the department.

3. No information in the department.

4. In view of the great amount of work added to the Dead Letter Office as the result of the Government censorship of all classes of mail and the much greater difficulty of handling these mails owing to the war, it was not a question of putting any person in this position, but some person of tried and proved ability and with a knowledge of this work. Mrs. Shouldis had been before her marriage (from 1907 to 1910) a clerk in the Dead Letter office, and had proved herself a more than ordinarily intelligent and expert clerk, and when the department ascertained that her services, backed by her knowledge and ability, could be obtained, it was considered very much to the public advantage to secure them if possible. For the above reasons the appointment was made, on the recommendation of the superintendent of the branch, approved by the Deputy Postmaster General, and it was made solely because of the necessities of the case and the expert knowledge possessed by the appointee. The necessity, moreover, was greater owing to the fact that on account of the number of men going to the front, one of the ablest clerks in the branch had to be sent temporarily to the West to assist in the work of the Dead Letter office for the province of Saskatchewan. Mrs. Shouldis has only been appointed a clerk temporarily, and until the pressure of the work is relieved.

Sir SAM HUGHES:

1. Answered by Post Office Department.

2. Yes, $1.50 per day.

3. Mrs. Shouldis draws separation allowance.

4. Answered by Post Office Department.

PACKARD AUTOMOBILE PURCHASE.

Mr. PROULX:

1. Was a Packard automobile bought by or for the Post Office Department for use at Montreal?

2. If so, what was the date of purchase, and price paid?

3. Is this automobile used for private purposes? If so, by whom?

4. If used for public purposes, what are the names of the persons so using it?

Mr. CASGRAIN:

1. Yes.

2. July, 1910; $5,472.75.

3. Car was sold on 15th July, 1915.

4. See No. 3.

EXPORTATION OF HORSES PROHIBITED.

*Mr. J. J. HUGHES:

1. What is the date of the Order in Council prohibiting the exportation of horses from Canada?

2. Has the said Order in Council been cancelled? If so, when?

Mr. REID:

1. Saddle, draught and pack animals suitable for use in war were prohibited export to any place other than the United Kingdom or British Possessions, from August 9, 1914, under Order in Council based on section 291 of Customs Act, chapter 48, Revised Statutes of Canada, 1906.

2. Said Order in Council was amended by Order in Council dated January 6, 1916, by which horses and other animals, pack, saddle and draught, suitable for use in war, are prohibited export to all destinations abroad other than the United Kingdom, British Possessions and Protectorates, United States, France, Italy, Japan and Russia (except Baltic ports).

DUTY ON NECKLACES.

*Mr. J. J. HUGHES:

Did the Government collect duty on the pearl and diamond necklaces that are said to have been imported from England by a Minister of Crown during the last six months?

Sir THOMAS WHITE: The Government have no knowledge of any importations having been made on which duty has not been paid.

COMMANDING OFFICER, 13TH C.M.R.

Mr. BUCHANAN:

1. Who is commanding officer of the 13th C.M.R. stationed at Medicine Hat?

2. What previous military experience did he possess?

3. Whom did he succeed in the command?

Sir SAM HUGHES:

1. Lt.-Colonel W. J. Holmes is Commanding Officer of the 13th Canadian Mounted Rifles.

2. Graduated Royal Military College, June 26, 1891; Lieutenant, R.O., same date; Captain, 102nd Regiment, March 20, 1902; Lieut.-Colonel, 102nd Regiment, May 4, 1908; transferred to R. O., February 16, 1912.

3. This officer was appointed as Commanding Officer, vice Lieut.-Colonel A. C. Kemmis.

191ST OVERSEAS BATTALION, MACLEOD.

Mr. BUCHANAN:

1. Has authority been given to raise an overseas regiment with headquarters at Macleod, Alberta?

2. If so, who is the commanding officer?

3. What previous military experience does he possess, and what rank did he hold at the time of his appointment?

Sir SAM HUGHES:

1. Yes; the 191st Overseas Battalion has been authorized for Macleod, Alberta.

2. No Commanding Officer has yet been appointed.

3. Answered by No. 2.

ASH WEDNESDAY ADJOURNMENT.

Sir ROBERT BORDEN moved:

That when this House adjourns on Tuesday, the seventh day of March, it do stand adjourned until Thursday, the ninth day of March instant, at three o'clock p.m.

Motion agreed to.

IMPORTED LABOURERS IN BRITISH COLUMBIA.

On the Orders of the Day:

Mr. VERVILLE: I desire to call the attention of the Minister of the Interior to an article appearing in the Vancouver Sun of Saturday, February 26 last. I give the article with its heading:

Hundreds of Loggers Imported to Work in British Columbia—Canadians complain cannot get work owing to Importations from State of Washington.

At least seven hundred loggers have been imported from the State of Washington, it is said, on the authority of Canadian loggers, who complain that they are unable to obtain positions on account of the imported labour. Cities of Washington are said to be placarded around those sections where the logger and labourer congregate. These posters say there is a shortage of labourers in British Columbia and pay is $3 a day. A considerable number of loggers attracted by the offer of $3 a day have gone back to Seattle, it is reported, on finding that the posters had misled them and the pay was not $3.

It was reported to the Trades and Labour Council that the Princess Sophia on Tuesday night at nine o'clock took some two hundred of the foreign loggers up to Comox, where they were to work in the logging camps of the Fraser mills. Local loggers complain too that these men were provided with transportation from Seattle to the camps. The immigration authorities professed to know nothing about any such influx of labourers when communicated with by officials of the Trades and Labour Council.

Mr. ROCHE: If the hon. member will send the clipping to me, I will have it in-

quired into. I am convinced that the immigration authorities have no knowledge of the matter, as there is an Order in Council prohibiting such immigration.

IMMIGRANT WIDOWS AND CHILDREN.

On the Orders of the Day:

Mr. MURPHY: Can the Prime Minister give me any information on the subject I inquired about the other day—the reported arrangement with the Salvation Army to bring dependent women and children to Canada?

Sir ROBERT BORDEN: A letter was received, but when the subject was last referred to Commissioner Lamb had not arrived. Since then he has arrived and has proceeded to Montreal. He has a proposal which is, in effect, an enlargement of the work which the Salvation Army has been doing during the last four or five years, in bringing to Canada widows with families, under conditions which make it possible for them to support themselves and for the children to engage in work for their own support as they become old enough to do so. I understand that the idea is to enlarge this work so as to bring to Canada the widows of men who have fallen at the front, and to make arrangements to provide for their support in Canada.

Mr. MURPHY: Does it involve the granting of aid by this Government?

Sir ROBERT BORDEN: No formal application has been made with regard to that, and I am not quite sure whether it is involved or not. The Minister of the Interior may have fuller details. I will ask him to ascertain and give the information later.

WAR TAXATION.

WAYS AND MEANS.

The House in Committee of Ways and Means, Mr. Rhodes in the Chair.

Sir WILFRID LAURIER: I understood from the discussion that has already taken place, that several amendments to the Ways and Means resolutions were to be brought down. It would have been more convenient had they been communicated to the House before proceeding with their consideration.

Sir ROBERT BORDEN: That is the intention.

Sir THOMAS WHITE (Minister of Finance): The right hon. leader of the Op-

[Mr. Roche.]

position has anticipated the course I intended to pursue. The resolutions which were brought down in the Budget appear in the Votes and Proceedings of February 15. In the course of the debate on the Budget, I stated, as my right hon. friend has said, that I would acquaint the House with certain provisions which appear in the Bill to be founded upon the resolutions dealing with some important matters which were discussed in the course of the debate. I propose, at this sitting of the committee, to deal briefly with these points and with the amendments which I have to offer; and then I will ask the Committee, to rise and report progress. The resolutions can then be printed, and to-morrow or some later day, with the full text of the resolutions and amendments before it I will ask the committee to proceed with their consideration.

In the resolutions it was provided that the special taxation measure should apply to the accounting periods ending after August 4, 1914, of persons, firms, partnerships and companies. I may say, although I do not purpose arguing the question now, that that followed the precedent of the British Finance Act No. 2, which was passed into law in December, 1915—some three months ago—and which related back to August 4, 1914. In some of the accounting periods ending after August 4, 1914, it is obvious that there might be included some part of the period previous to the outbreak of war on August 4, 1914. But the committee will no doubt have observed that as the Bill imposed taxation only in respect of accounting periods up to August 3, 1917, to the extent that any business was taxed in respect of its accounting period prior to August 4, 1914, it would not be obliged to pay for a corresponding period prior to August 3, 1917. In other words, the intention of the proposals was, that no business should pay upon more than three accounting periods, or upon less than three accounting periods, of one year each.

The proposal to make the taxation apply to the past has been discussed at some length, and, so far as the revenue of the Dominion is concerned, I think it makes no difference—as only three periods can be taxed, and as three periods must be taxed—whether or not the proposals are limited to accounting periods which fall in after August 4, provided that three accounting periods are dealt with. This, however, is subject to two considerations. In the first place, large profits were derived during 1915 by many firms and companies engaged in the munitions business and in many other

businesses in which, owing to the war, there was an abnormal rise in the price of the commodities dealt with. Secondly, there is this consideration: that it is not desirable, as this measure is a temporary one, to extend its provisions far into the future. In view of the discussion which has taken place, and having given the matter full consideration, the Government is of the view that the measure might with fairness be made to apply to businesses in respect of accounting periods which end after December 31, 1914, instead of after August 4, 1914. The months of August, September, October and November, after the outbreak of the war, were very trying months; and, therefore, I have to propose, in the amendments which I shall lay upon the table, that the taxation measure shall apply to businesses in respect of accounting periods which end after December 31, 1914.

Mr. A. K. MACLEAN: The month of December is excluded.

Sir THOMAS WHITE: After December 31, 1914. There is a further consideration which I desire to draw to the attention of the committee. It takes a considerable time to levy income taxation, or taxation in the nature of income taxation, and so far as I am acquainted with that kind of legislation, income taxation, or taxation in the nature of income taxation, is always levied in respect of the past, and usually in respect of the past year.

Mr. GRAHAM: That is the basis.

Sir THOMAS WHITE: Sometimes it is the basis, and sometimes it is upon the actual business. Whether it be the basis, or whether it is upon the actual business, the tax is levied upon an amount determined by the past year's business. If—and the question has been raised in debate—we provided that these proposals should apply only to accounting periods from this date forward, it is perfectly obvious that we would not be able to obtain any revenue during the present year, because it takes almost a year to make assessment, to allow for revision, and, finally, to collect the taxation. I desire not to elaborate the argument, but for the present only to submit statements of fact.

Mr. MURPHY: How far does the explanation that the hon. gentleman has just given apply to the accounting period which, under the resolution, is to be determined by the minister himself?

Sir THOMAS WHITE: As my hon. friend will observe, the discretion of the minister to determine the accounting period applies only to cases where the accounting period exceeds a year, or where there is no accounting period. I do not think that occasion will arise frequently for the exercise of that discretion. It is only to safeguard the measure, so that companies cannot evade the tax by saying: we have no accounting period. As a corollary to what I have stated, namely, that the new proposals will apply to accounting periods ending after December 31, 1914, the operative part of the Bill will come to an end on December 31, 1917, instead of August 3, 1917, in order that the measure may apply to three accounting periods of a year, and to not more than three accounting periods a year each.

Mr. GRAHAM: You will get more money, too.

Sir THOMAS WHITE: I am glad to hear my hon. friend say that. I am trying to meet the difficulty that has been mentioned; I am rather disposed to think that my hon. friend is right in suggesting that we shall get more money. At all events, that seems, to my judgment at least, to be a fair meeting of the situation so far as the so-called retroactive provisions of the Bill are concerned.

The Bill itself contained provisions, even under the resolutions as drafted, whereby any business subject to the tax would not be obliged, in the year 1916, to pay in respect of two accounting periods. There were provisions in the Bill that, where a business was liable in respect of two accounting periods, representing a period of two years, the business might pay for the first accounting period in 1916, for the second accounting period in 1917, and for the third accounting period in 1918. My object was to avoid inconvenience and hardship to those who might be subject to the taxation in being obliged to pay in 1916 in respect of two full accounting periods.

Turning from the so-called retroactive provisions of the measure to certain other matters which were discussed, and particularly to the question of the capitalization of companies, I have the following observations to make: It is not necessary for me to say to the committee that in an intricate measure of this kind, a measure so far-reaching in its character, it has not been an easy matter to deal with the important question of reserves. The committee, comprising as it does so many lawyers and business men, of course understands that there are reserves and

reserves. One company has carried on its business properly. Starting years ago with a small capital, it has written off year by year a proper amount for depreciation. Every year it has put part of its profit back into business, usually into the plant or stock in trade. In a word, it has built up its business along conservative lines. Some of the greatest enterprises in the world have been built up precisely in that way, and in my opinion that is the proper way to build up large industries; that is to say, to grow by certain and sure steps from small beginnings to a larger, and finally to a great business. In cases such as that, where the reserves are true reserves, no question could possibly arise. Such reserves are just as much capital as the paid-up capital of the company, even if it is fully paid up in cash.

Mr. NESBITT: Does that apply to incorporated companies as well as to partnerships?

Sir THOMAS WHITE: Undoubtedly. The question does not arise in the case of firms, because there we are taking the value of their assets. In my remarks I was referring more particularly to reserves of incorporated companies. On the other hand, there are companies whose reserves are more or less what might be called book-keeping reserves. Some of these reserves are actual reserves, but others cannot be regarded as true reserves. We have in this country a number of public franchise corporations, for example. I do not wish to make a sweeping statement, because it would probably be inaccurate, but I know that in the case of many of these companies very little is written off year by year for plant. The profits in excess of the dividend distributed to shareholders are carried to profit and loss account, or to reserve. The motive may be to show a large body of assets, especially in the case of those companies whose franchise expires at a certain time and who look forward to their plant being taken over by the municipality. Such companies naturally desire to show as large a body of assets as possible in anticipation of that time and of such taking over. I use these two illustrations because they represent extremes. In the one case, we have the well-managed company with true reserves, and in the other the company which, neglectful of sound business principles, has failed to make due allowance year by year for depreciation, and to whom it has been an object to build up reserves which, in part at least, may be regarded as book-keeping reserves. So that in dealing with such a range of business as we are dealing with in these proposals, it is a very difficult thing to lay down a rule as to what amount of reserves should be allowed as capital. It is not necessary that I should trouble the House by indicating the different stages of my consideration of this question. At first I thought it might be proper to allow a percentage of all reserves of capital, but that appeared to me to be unsound, because, as I have stated, in the case of some companies the reserves can be considered as true reserves, and in other cases the reserves cannot be so considered. Not to trouble the House further, I finally reached the conclusion which is embodied in the Bill, namely, that the true principle was that there should be allowed as capital the actual unimpaired reserves of a company. Now that is a question of fact. In my opinion that is the sound way of dealing with these reserves. It means that the man who has conducted his business soundly and written off a proper amount year by year for plant, and built up a reserve, will be allowed his reserve as part of his capital. On the other hand, if it should be found that reserves, so-called, are not true reserves, they would be allowed to the extent that they are actual and unimpaired reserves. That is the conclusion the Government has reached upon the question of reserves, and I think it will meet most of the criticism which has been advanced in respect of that feature of the Budget proposals.

Now I come to what might be called the converse of that: the so-called watered stock corporations—corporations whose capital is excessive. In a great many corporations, capital stock is issued in respect of consideration other than capital. It may be that the stock is issued in consideration of the transfer of a patent, of a valuable agreement, or of a franchise, as in the case of a public service corporation, and it is to be observed that it does not necessarily follow that that stock is valueless because it has been issued in respect of such patent, agreement, or franchise. A patent, agreement, franchise, good-will are all recognized in law as being value, as constituting valuable consideration in any agreement. The difficulty has been that company laws of all countries have been abused, and that the true amount of stock representing the real value of such patent, agreement, or franchise, has not been issued. If stock only to the true value of the patent, agreement,

franchise, or other intangible asset had been issued, the question which has been discussed in this House would hardly have arisen. But the difficulty has been that by virtue of the laws, and of decisions under the laws, which are a part of the law as hon. gentleman know, once capital stock is issued as fully paid for consideration other than cash, then under the authority of leading cases in the English law, which of course have the effect of law here and followed in our courts, no question can be raised by reason of the principle of estoppel against the company which has issued the stock. It has been held, Mr. Chairman, in one of the leading cases that the Court in the absence of fraud, will not inquire into the question of whether or not stock has been fully paid if issued as fully paid for other consideration than cash, even at the instance of a liquidator. That, I think, is the law, but what has happened is that under the company laws of all countries, under the decisions of the courts in this country, and by virtue of the decisions to which I have referred, capital stock has been issued to an unconscionable degree against intangible assets. It is in such cases that, unless there was a definition of paid-up capital which would bring those companies within the operation of the Act, injustice would result to those whose stock had been fully paid up in cash, or whose stock had been properly issued for consideration other than cash.

I need not say to the House that there is considerable difficulty in meeting such cases and in doing full justice in such a measure as this. I stated before, and I state now, that it is practically impossible to ascertain the precise value of the consideration for which the capital stock of a company has been issued as fully paid. It would not be possible to go back to the past to ascertain what was the precise value of the patent, of the agreement, or of the franchise at the time that the stock was issued. Not only that, Mr. Chairman, but in the intervening period, the agreement or the patent or the franchise might have wasted, or become deteriorated. If, on the other hand, the stock has been issued, as consideration for real property, then the real property might have been sold, and altogether it would be impossible, as I stated, to ascertain the precise cash value of the consideration for which such stock was issued in the past.

Mr. SINCLAIR: What would the minister say as to the value of stock quotations on the exchange? We will say that a stock which has a nominal value of 100 is quoted in the market at 400. Would the minister say that that was a fair way of finding the market price?

Sir THOMAS WHITE: I am coming to that, but I will say now, and I think my hon. friend, as a lawyer, will agree with me, that stock market value is evidence, but not conclusive evidence of value. It is some evidence to be taken into consideration. But many factors enter into stock market values—earning power as well as the tangible assets back of the stock, and while I would be disposed to say to my hon. friend that some regard should be had to stock market quotations, still I would not consider that a sound basis on which to reach the value of any stock listed upon exchange. My hon. friend also knows that stocks fluctuate very much according to financial conditions. When money is cheap, when there is a boom, stocks of course rise in value. On the other hand when panics occur, or money becomes dear, stocks fall in value; so I think it would be very unsafe to take the stock market quotations as the value at which stock should be fixed for the purpose of ascertaining the true capitalization of over capitalized companies.

Now I come to what I have to propose. I told the House that this taxation measure would apply to businesses, including corporations, in respect to accounting periods ending after December 31, 1914. To meet the case of so-called watered stock corporations, or over-capitalized companies, I propose by way of addition or amendment to the resolutions a definition of amount paid up on capital stock, which I think will fairly meet the situation. I say again, perhaps quite unnecessarily, that it is not an easy situation to deal with, because we have behind us the entire legislation of the past, and corporate action in virtue of that legislation, and decisions thereunder.

What I propose is as follows: That the amount paid on the capital stock of a company shall be the amount paid up in cash. That is to say, if paid up in cash, no question arises. Where stock was issued before the first day of January, 1915, for any consideration other than cash, the fair value of such stock, on such date, shall be deemed to be the amount paid up on such stock; and where stock has been issued since the first day of January for any con-

sideration other than cash, the fair value of the stock at the date of its issue shall be deemed to be the amount paid up on such stock. In estimating the value of stock issued for any consideration other than cash, regard should be had to the value of the assets, real and personal, movable and immovable, and to the liabilities of the company at the date as of which such value is to be determined.

In no case shall the value of the stock be fixed at an amount exceeding the par value of such stock. In other words, what we propose is that where stock has been isued for cash, the amount paid upon the stock shall be the amount of cash so paid upon the stock, but not of course exceeding par. Where the amount paid exceeds par, that would appear in the reserves of the company, so that no injustice is done in making the limitation par. Where the stock of a company has been isused, for consideration other than cash, prior to January 1, 1915, we propose to say that the amount paid up on the stock for the purposes of this Act is the fair value of that stock as at January 1, 1915. Why? Because, as I have said before, this is a tax upon profits upon capital, if we can determine the capital of the company as of a date approximating the beginning of the period in respect to which the company is taxed, then we are fairly imposing the tax in respect to the capital of the company at that time. In other words, we are dealing with the over-capitalized company on precisely the same basis as we are dealing with the properly capitalized company.

Mr. W. F. MACLEAN: And the hon. gentleman de-waters some of the stock?

Sir THOMAS WHITE: We de-water some of the stock for the purposes of this Act. I did not know that my hon. friend knew what watered stock was. That is the proposal which the Government has to make in respect to companies whose stock has been issued for consideration other than cash. I realise that it will not be possible to ascertain the precise cash value, but for every practical purpose of the Act, this puts the over-capitalized company upon exactly the same basis as the company which has been properly capitalized.

Sir WILFRID LAURIER: How will you determine what is water and what is gold?

Sir THOMAS WHITE: No doubt my hon. friend uses the word "gold" in the sense of tangible assets?

[Sir Thomas White.]

Sir WILFRID LAURIER: Yes.

Sir THOMAS WHITE: Let me give my right hon. friend an illustration such as this: You may have an industrial company whose stock was watered to a very considerable extent, say, some time ago, or, recently—it really makes no difference for the purposes of my argument. That company has certain earnings to-day. Its stock has been issued for a consideration other than cash. If we could determine the value of the assets of that company as of January 1, 1915, and determine the liabilities of that company as of January 1, 1915, we would have a reasonably fair idea of the value of the stock; in other words, of the true capital of the company. My right hon. friend will, no doubt, say that it will be a difficult thing to do, and I quite agree with him, but in connection with assessment, I may say that I had charge of the business assessments in the city of Toronto for ten years, and while a number of questions arise which are difficult of determination, they are not impossible of determination along fair or just lines for purposes of a taxation measure. Personally, I see no difficulty in administering the Act under this provision, and administering it in such a way, as I stated a few days ago to the House, as to allow of no undue advantage to the over-capitalized company.

Mr. PUGSLEY: Is it proposed to take the actual, fair, cash value irrespective of any prospective profits?

Sir THOMAS WHITE: What I say is the value of the assets, movable and immovable, real and personal, irrespective of future expected earning power.

Mr. PUGSLEY: The cash market value?

Sir THOMAS WHITE: The cash value? What I say is the value of the assets of the company, real and personal, movable and immovable, adopting the same language as we do in connection with persons and firms subject to taxation, less the liabilities of the company.

Mr. PUGSLEY: Does the minister know any other better way of arriving at the fair value except by taking what the men who own these properties and franchises, not being obliged to sell, would be willing to take for them and what the purchaser would be willing to give? In other words, would he consider that to be the fair, actual market value?

Sir THOMAS WHITE: I have no doubt that my hon. friend has really in his mind

the provisions of some of the assessment Acts. Of course, my hon. friend knows that there is a difficulty in reaching what might be called the cash value. We had an assessment act in Ontario the wording of which is something of this character: The amount which would be taken in payment of a lawful debt by a solvent debtor. That was the language of the statute but I do not believe you can express it better than to say the fair value, or the value of the assets. After all, the words, " value of the assets " convey a definite idea to the mind.

Mr. PUGSLEY: When you say the " fair value," do you allow for prospective profits?

Sir THOMAS WHITE: No. I have not used the words " fair value " in respect to the future profits on the stock, but I say that regard should be had to the value of the assets, real and personal, movable and immovable, subject to the liabilities of the company at the date at which such value is to be determined. When the matter is in committee I would value very greatly the opinion of my hon. friend, or any suggestion that he might put forward, but when we say that it is to be the value of the stock as of about the time this Bill begins to operate, and when we say, in reaching that value, that regard shall be had to the value of the assets, real and personal, movable and immovable, and the liabilities of the company, we put the over-capitalized company precisely on the same basis as the fairly capitalized company and the individual who is being taxed by this Bill. That is what we propose to do and that is the intention of this amendment to the resolution.

Mr. W. F. MACLEAN: Would the minister say who is to apply the law in this case?

Sir THOMAS WHITE: This is a temporary measure. It has not been my intention, or the intention of the Government, that the measure should become permanent. It is due to the exig-

4 p.m.

encies of the present situation under which it is absolutely necessary that the Government should raise further money by means of taxation if our credit is to be protected. We are fronted with responsibilities in this coming year to the extent of $425,000,000, and next year the liabilities for war will be greater than they are this year. Even if the war ends within this year, we shall still have a military establishment, and it will be a long time before we can get off a military basis. I do not desire to mislead the House and the country; the financial responsibilities of the future are very heavy, and I feel if we did not bring in this measure of taxation the credit of the Dominion would suffer, and it would react upon our borrowing powers, because, when you go to borrow in the markets of the world at a time like this, the question that is put to you is: What measures are you taking to increase your revenue so as to take care of your rapidly expanding public debt?

Mr. PUGSLEY: They would ask two questions: What measures are you taking to increase your revenue and to decrease your expenditure?

Sir THOMAS WHITE: I would like nothing better than that my hon. friend should raise the question of expenditures by this Government, so that I might have the opportunity, which I have not had up to date, of telling what I think about some of the arguments that have been made in this House against our expenditure.

Mr. PUGSLEY: Let us do it in committee.

Sir THOMAS WHITE: I am quite willing to discuss the matter with my hon. friend now or at any other time. This probably may not be the most convenient time, but at any convenient time I shall be glad to take the question up, because I say that this Government has done everything that is possible for any government to do to keep down expenditures.

Mr. MARCIL: Why did you not strike them out of the Estimates that you are now asking us to vote?

Sir THOMAS WHITE: I do not want to be diverted from my argument, but I desire to say that for the last eighteen months, since this war broke out, in fact, for twenty months—since June, 1914—practically no new works have been gone on with in this country, and if hon. gentlemen can suggest any better policy of economy than not going on with any new works I would like them to submit it for my consideration, and I will consider it. My hon. friend from South York (Mr. Maclean) asks how we propose to administer this Act. We propose to administer this Act through the Finance Department. Just as the customs administration is under the Minister of Customs, just as the administration of the inland revenue is under the Minister

of Inland Revenue, so the administration of this Act will be under the Department of Finance, and we shall have to make the assessment and collect the taxation. There will be an appeal to the Board of Referees and a further appeal to the court in order to safeguard the rights of the taxpayer.

Mr. GRAHAM: Will the capital stock be taken into account at its value at the time of issue, no matter when issued?

Sir THOMAS WHITE: No, that would be unsound for two reasons. In the first place these proposals are designed to tax profits in excess of a certain amount on the actual capital invested. Suppose you have a company which years ago issued its stock for considerations other than cash. It would be impossible now to go back and ascertain the value of those considerations many years ago, and therefore in order to put the over-capitalized company, because I am dealing only with that class of company, upon the same basis as the properly capitalized company, I say: "We will determine what your stock is fairly worth on January 1, 1915; in other words we will dewater your stock, if it needs to be dewatered, to what its fair value was on January 1, 1915, and then put it on all fours with the company whose capital you allow and whose true reserves you allow as of January 1, 1915."

Mr. GRAHAM: What about stock issued after that date?

Sir THOMAS WHITE: My hon. friend must be interested in some stock issued after January 1, 1915. If stock is issued after January 1, 1915, it will be determined on its fair value at the time of issue, but in determining that value regard will be had to its assets, real and personal, movable and immovable; or in other words, it will be put on the same basis as a company whose capital stock has been paid up in full in cash.

Mr. GRAHAM: There are two kinds of securities, namely: bonds and preferred stock, which usually provide the capital in cash. Common stock represents an intangible asset such as goodwill or something of that kind. As I understand it, my hon. friend proposes to treat preferred stock and common stock just as capital stock.

Sir THOMAS WHITE: "Capital stock" for the purposes of this Act is capital stock, whether preferred or common, but bonds, the liability of the company, cannot be regarded as capital stock.

Mr. LEMIEUX: I would like to read a letter from Alderman Joseph Ward, who is a high-class business man of Montreal. Alderman Ward is a member of the firm of Joseph Ward and Company, one of the large firms dealing in produce in Montreal. I would like my hon. friend, if he can, to give an answer to the questions raised by Mr. Ward, who writes:

Sir,—Unless this measure is closely studied it may be found far from equitable. How will firms with two or more partners whose joint capital may be only $50,000 combined be treated? Will all be subject to the tax? In many cases junior partners in such firms have but little capital and very few firms are composed of members with even capital. In a firm of $50,000 combined capital there may be members with an individual capital of one or two thousand and even if of even capital in a firm of two each would have only $25,000, such would be taxed whereas a firm with only one proprietor might have up to $49,000 capital and not be taxed. You can see the injustice to those forming the firm with the combined capital, and especially if made retroactive and the individual partners have spent or invested their past profits on given amount of business. Now how will firms with several partners under such conditions, compete? Taking the country and city firms with one proprietor is possibly ten to one, so that ten will escape and one will be taxed unless this is adjusted. Do you not think that in all justice in connection with private unchartered commercial firms of that kind, only the profit of such members who may have individually $50,000 capital invested in such firms should be taxed and not the profits of junior members who need all their profits to grow to take care of the commerce of this country? Whatever is done the Government should not allow the one proprietor with more capital than such individual to go free.

Sir THOMAS WHITE: While I do not care to state the effect of these resolutions in any case, as I think it would be unwise to do so, the points raised in this letter present no difficulty to my mind. If men are combined in a partnership, no matter what their interest may be amongst themselves, their firm is an entity. It is engaged in business and the matter of how they pay the tax is a matter of arrangement amongst themselves. The same argument will apply properly to the case of a joint stock company where there is a number of shareholders, one man holding five shares, another 500, and so on. You must deal with a firm as an entity, and a partnership as an entity.

There are carrying on business in Canada some companies who are controlled by companies outside of Canada and, instead of those companies paying their true net

profits, or a substantial part of them by way of dividends to the holding or parent company, they have an arrangement whereby they sell the parent company their product at less than its fair market value and in that way the parent company takes its benefits or advantage from the stockholders in such company. That also is a matter of some difficulty, as hon. gentlemen will realize, but I think I have covered that by an amendment which I shall ask the committee to consider carefully, and which is as follows:

Where an incorporated company conducts its business whether under agreement or otherwise, in such manner as either directly or indirectly to benefit its shareholders or any of them or any persons directly or indirectly interested in such company by selling its product or the goods and commodities in which it deals at less than the fair price which might be obtained therefor the minister may determine the amount which shall be deemed to be the profits of such company for any accounting period and in determining such amount the minister shall have regard to the fair price which but for any agreement, arrangement or understanding might be or could have been obtained for such product, goods and commodities.

Mr. W. F. MACLEAN: Would the amendment reach the nickel company—a nickel company? I do not want to specify. Is the minister trying to deal with a company of that kind?

Sir THOMAS WHITE: I think that might fairly be gathered from the clause I read. There has been a misunderstanding with regard to the effect of the measure on mining companies, and there is no doubt that mining companies present difficulties that are not presented by other companies. It would in my view be quite unjust to leave mining companies untaxed in a measure such as this. You have in the case of mining company frequently a capital of five, ten or twenty million dollars earning large profits, and it would seem unfair to other corporations for mining corporations to escape untaxed. Now, it is only fair to the mining coroporations, because I have had representations from some of them, to say that they do not in the least degree desire to escape taxation at this time. They put forward their view as to the method of application of this Act to mining companies. But, as I have said, there has been misapprehension as to the effect of the proposals upon mining conditions. In the case of a mine, profits, so-called, include not only what might be regarded as true net profits, but a very substantial portion of the capital of the mine. Therefore, when we assess mining companies, we must bear in mind that, in order to ascertain what their net profits are, a substantial part of the apparent profits of the mine represent capital, and that within a few years, depending upon the character of the mine, whether metalliferous or otherwise, the capital will be exhausted. Under the laws of the province of Ontario, and possibly under those of some other provinces, a mining corporation is permitted to do what another corporation is not permitted to do—namely, to pay out as profits to its shareholders a part of the capital. Now, under the resolutions as they stand, it is perfectly clear that in determining the net profits, regard must be had to the amount by which the mine is yearly exhausted. I may say, there is legislation in the United States assessing the income of mining companies, and it is provided that allowance shall be made, not exceeding a certain percentage—I have forgotten the exact figure—to represent the capital that is being returned to the shareholders in the so-called profit distribution. Now, although it would be implied by the resolutions as they stand, that this allowance should be made for the depletion of capital, yet, in order to make it perfectly clear, I propose to provide that the minister, in determining the profits derived from a mine, may make an allowance for the exhaustion of the mine.

Now, carrying out the intention I indicated at the opening of my remarks, I would suggest that I be allowed to lay upon the table the amendments to these resolutions, that these be printed, and that after they are printed we shall resume the discussion of them in committee. That would seem to me to make for the convenience of all concerned.

Mr. BOIVIN: Before the committee rises, perhaps the minister will permit me one question. The minister explained that the profits made during a certain number of years, and invested in a business carried on in a conservative way, would be considered as part of the capital, in computing the profits of the company. I quite understand that, and I quite understand that that will be very advantageous for a company with a paid-up capital of $50,000 or even more. But suppose the case of a company in which the paid-up capital stock is less than $50,000, but in which, owing to accumulated profits, they have invested more than $50,000, will that be taxed?

Sir THOMAS WHITE: They come under the provisions of the Act, because their capital will be more than $50,000.

Mr. BOIVIN: But paragraph 6 of the resolutions provides:

6. That the capital employed in the trade or business of an incorporated company having its head office or other principal place of business in Canada shall be the amount paid on its capital stock.

Sir THOMAS WHITE: I am defining what "capital stock" means. If I define "capital stock" to include the reserves, then "capital stock" will be the capital stock plus the reserves.

Mr. BOIVIN: So, the idea that all companies with a capital stock of less than $50,000 shall be exempt from this taxation, is a wrong idea?

Sir THOMAS WHITE: What we intend is that companies with a capital stock of $50,000 or over shall be taxed, and in determining what "capital stock" is, regard will be had to the paid-up capital and the reserve. A company in the position referred to by the hon. gentleman would be liable, and, I think, properly so.

Mr. LOGGIE: The hon. minister said in his Budget that he would explain later on why he put partnership companies on the basis of ten per cent while he put incorporated companies on the basis of seven per cent. I should be glad if the minister would explain this before he proposes these resolutions. The proposal does seem to be inequitable, for it means than an incorporated company would pay four hundred per cent more taxation than would a partnership concern of equal capital and earnings. Suppose that a partnership company earns eleven per cent on a capital of $500,000. It is allowed earnings up to ten per cent without taxation, so that only the balance would be subject to taxation. That is, its earnings would be $55,000, of which only $5,000 would be taxed. Apply to this the rate provided, which is twenty-five per cent, and you find that the tax payable by this concern is $1,250. But take an incorporated company with the same earnings and the same capital, and it is allowed only up to seven per cent profits untaxed. On its earnings of eleven per cent, four per cent would be taxed. That is, $20,000 would be subject to taxation at twenty-five per cent, so that this incorporated concern would pay $5,000 in taxation, or as I have said, 400 per cent more than would a partnership concern of equal capital and earnings.

Sir THOMAS WHITE: If my hon. friend will be good enough to raise that question when the matter is under consideration in Committee, after the amendments have been printed, I shall be glad to give my views upon it. I may say now, however, that I consider that there is a real difference between an incorporated company and a firm or partnership, and to show that that view is not singular to myself or to this Government, I would cite the fact that under the Imperial Finance Bill, No. 2, to which I have referred, the pre-war standard in England was six per cent for corporations and seven per cent for individuals and firms.

Mr. NESBITT: Is there any change with reference to the minimum capital in a partnership?

Sir THOMAS WHITE: No, I have not brought in any change. I do not wish to widen the discussion at this time, but I may say that we regarded it as necessary to fix a minimum. This is a temporary measure. If we had not fixed a minimum, or if we had done what was suggested by certain members of the House—establish an income tax—we should really be obliged to establish another Civil Service in Canada. We should have to cover the country from the Atlantic to the Pacific with an army of officials—assessors, and their clerks; we should have to go into every village, town and city; into every shop and office building, and make the necessary assessments.

Mr. MURPHY: In that respect, do you not think that you are making a good start in these proposals?

Sir THOMAS WHITE: I think this legislation can be administered with little expense. I myself do not know any better method—I am open to suggestions—of raising a substantial sum of money at the minimum of cost and inconvenience to all concerned. I shall later ask the House to make an appropriation for the administration of this legislation. The reports of commercial agencies are open to us, and by fixing a minimum of $50,000 our task is greatly simplified. We shall not be obliged—and we should not, at this time—to engage an army of officials from the Atlantic to the Pacific to make a comprehensive assessment upon income and upon small firms, like grocers, tailors and others.

Mr. NESBITT: After all, you are trying to get a revenue. I should like the minister to consider again whether that mini-

mum should be fixed, because I think it is absolutely unfair. A man with capital slightly less than that amount goes scot free, though he is willing to pay. It will not cost you any more to collect from everybody who is willing to pay than it will to collect from those having a capital of more than $50,000.

Sir THOMAS WHITE: In that respect, I do not agree with my hon. friend. My information is that if we made these taxation proposals apply to every class of business in the country, without any minimum, the added expense of administration would more than equal the revenue that we should raise.

Mr. NESBITT: I do not think so.

Sir THOMAS WHITE: That is a matter of opinion; my view is as I have stated. I beg to give notice of, and to lay upon the table, the following amendments to the resolutions:

The definition of "non-Canadian company" in clause 1 is amended by adding thereto the following:

"Either directly or through or in the name of any other company."

The following is substituted for clause 2 of the proposed resolution:

2. There shall be levied and paid to His Majesty a tax of twenty-five per centum of the amount by which the profits earned in any business exceeded, in the case of a business owned by an incorporated company, the rate of seven per centum per annum, and, in the case of a business owned by any other person, the rate of ten per centum per annum upon the capital employed in such business. Such tax shall be levied against and paid by the person owning such business for each and every accounting period ending after the thirty-first day of December, one thousand nine hundred and fourteen.

Provided, however—

(a) that the amount paid or payable by any person under the provisions of Part One of the Special War Revenue Act, 1915, shall be deducted from the amount which such person would otherwise be liable to pay, and the minister shall have power to determine any questions that may arise in consequence of any difference in the several periods for which the taxes under the said Act and those proposed herein are payable;

(b) that the dividends received from the stock of any incorporated company which has paid a tax upon its profits under the provisions of any Act based upon these resolutions shall not be included when the profits of any business are being determined; and

(c) that the amount of any tax paid by a person under the provisions of the Finance Act (No. 2), 1915, passed by the Parliament of the United Kingdom of Great Britain and Ireland or under any legislation for raising revenue for the present war in force in France, Russia, Italy, Belgium, Servia, Montenegro, Japan or the colonies or dependencies of any of these countries in respect of the profits of any business liable to taaxtion hereunder shall be deducted from the amount of the tax that would otherwise be payable by such person.

The following is substituted for clause 4 of the proposed resolution:

5. That the businesses to which the tax shall apply are all trades and businesses, (including the business of transportation,) of any description carried on, or partly carried on, in Canada whether continuously or not except:

(a) the business of any person the capital employed in which is less than fifty thousand dollars, other than a business which, or twenty per centum or more of which, is or has been the manufacturing or dealing in munitions of war or in materials or supplies of any kind for war purposes;

(b) the business of life insurance;

(c) the business of farming and live stock raising; and

(d) the business of any company, commission or association not less than ninety per cent of the stock of which is owned by a province or a municipality.

Clause 5 of the proposed resolution is amended by adding the following to sub-clause 3:

"And the minister when determining the profits derived from mining may make an allowance for the exhaustion of the mines."

Clause 5 of the proposed resolution is also amended by changing the date of the fifth line of sub-clause 4 to "the first day of January, one thousand nine hundred and fifteen," and by adding the following sub-clause:

6. Where an incorporated company conducts its business whether under agreement or otherwise, in such manner as either directly or indirectly to benefit its shareholders or any of them or any persons directly or indirectly interested in such company by selling its product or the goods and commodities in which it deals at less than the fair price which might be obtained therefor, the minister may determine the amount which shall be deemed to be the profits of such company for any accounting period and in determining such amount the minister shall have regard to the fair price which but for any agreement, arrangement or understanding might be or could have been obtained for such product, goods and commodities.

The following clauses are substituted for clauses 7, 8 and 9 of the proposed resolution:

Capital.

7. That the capital employed in the business of a non-Canadian company shall be such portion of the amount paid up on its capital stock as shall have the same proportion to the amount paid upon the entire capital stock the value of its total assets.

8. That the amount paid up on the capital stock of a company shall be the amount paid up in cash. Where stock was issued before the first day of January, one thousand nine hundred and fifteen, for any consideration other than cash, the fair value of such stock on such date shall be deemed to be the amount paid up on such stock; and where stock has been issued since the first day of January for any consideration other than cash, the fair value of the stock at the date of its issue shall be deemed to be the amount paid up on the stock. In estimating the value of stock issued for any consideration other than cash regard shall be had to the value of the assets, real and personal,

movable and immovable, and to the liabilities of the company at the date as of which such value is to be determined. In no case shall the value of the stock be fixed at an amount exceeding the par value of such stock.

9. An incorporated company may include as part of its capital, its actual, unimpaired reserve, rest or accumulated profits.

2. The minister may determine the amount of the capital of any corporated company issuing stock after the fifteenth day of February, one thousand nine hundred and sixteen, and if, after the said fifteenth day of February, one thousand nine hundred and sixteen, the capital stock of any incorporated company is increased or additional stock is issued, or if the stock is in any way changed or re-organized in such a manner as to increase the amount of the capital, the minister may decide whether or not it is fair and proper to include such increase or any part thereof when determining the capital of such company, and the decision of the minister shall be final and conclusive.

9a. That the capital employed in the business of any person other than an incorporated company shall be taken to be the fair value of all assets, real and personal, movable and immovable, used in connection with such business.

2. So far as the capital consists of assets being debts due to the business the value shall be the nominal amount of those debts, except bad debts proved to be such to the satisfaction of the minister; and

3. Accumulated profits employed in the business shall also be deemed capital.

4. Any borrowed money or debts borrowed or incurred in connection with the business shall be deducted in computing the amount of capital for the purposes of this section.

Sir WILFRID LAURIER: I understood from some of the remarks of my hon. friend that there was to be an appeal from the decision of the Minister of Finance. There is no provision in the resolutions concerning this appeal.

Sir THOMAS WHITE: My right hon. friend will understand that a Bill which contains all the machinery for the administration of an Act of this kind is necessarily very much more comprehensive than a resolution. The resolutions are declaratory of the principles and exhibit the leading features of the Bill. The machinery is provided in the Act, which of course will be brought down and discussed on its second reading, and in committee; and in this connection, just to show how far the English practice has gone, I may say that the resolution upon which the Right Hon. Mr. Lloyd George founded his pension legislation was as follows:

That it is expedient to provide for old-age pensions, and to authorize the payment, out of moneys to be provided by Parliament, of any expenses incurred for that purpose and connected therewith.

I quote that only to show that the resolutions are not on all fours with the Bill, but of course they should not be inconsistent with the Bill.

[Sir Thomas White.]

Sir WILFRID LAURIER: So far so good. Another question: My right hon. friend said that in the case of mining companies the minister would be allowed to make a deduction upon the amount the companies are assessed. Will provision be made in the Bill authorizing the minister to make that deduction, and will any limitation be set?

Sir THOMAS WHITE: I gave that matter very careful consideration, and finally came to the conclusion that it would be unwise to fix any limitation, and I will tell my right hon. friend why. In the legislation of the United States respecting mining companies, there is a limitation beyond which an allowance cannot be made. An allowance may be made for exhaustion of a mine, but the allowance must not exceed 5 per cent, I think it is, of the output of the mine. I regard it inexpedient to fix a limitation for this reason. Mines are of different character. You may have a coal mine that will last for generations, and silver and gold mines which will last for varying periods. You cannot lay down any hard and fast rule in regard to all mines. It would seem to me that the facts in connection with each particular mine should be taken into consideration at the time the assessment is made; such facts, for instance, as the district in which the mine is, the condition of the mine, etc., and then try and reach a just conclusion as to how much should be allowed as capital. My right hon. friend might properly observe that that leaves a great deal to discretion, and I agree that it does. I think it advisable in all legislation, whether taxation or otherwise, that the law should be clear in so far as it is possible to make it clear, and that as little room as possible should be left for the exercise of discretion; but in all legislation, and especially in taxation legislation, a certain amount of discretion is necessary in the administration of the Act. I do not mean a discretion which would favour one and do an injustice to another; but a certain amount of discretion must be exercised by the officials who carry out the Act. They may say: In this particular mine or industry we estimate that an allowance of such and such per cent should be made for exhaustion of capital. It might be better to deal with this matter—and I have given this some consideration—by regulations of the Governor in Council, and I shall be very glad to consider any such suggestions when we are in committee again, and in the meantime my hon. friends may think the matter over with a view to offering

suggestions that they think would improve the Bill.

Mr. W. F. MACLEAN: The minister is, in fact, proposing a visitation upon certain citizens of this country. Is he going to begin by making up a visiting list, and will that list be made public, so that the people may know whether any who should be on that list have been left off? The public will want to know who comes within the purview of the Act.

Sir THOMAS WHITE: There is no doubt that if Parliament desires information with regard to the assessment that is made upon parties liable to taxation under this Act, such information should be laid on the Table of the House, but if any confidential information should be received I consider that it should not be made public. It would seem to me only proper that this House, having authorized this taxation, should, if it so desires, see the results of it.

Mr. SINCLAIR: Has the minister considered the case of holding companies? I have in mind a company, for instance, which does not do any business at all itself, but holds stock in other companies which do carry on business. These latter companies will be taxed under these proposals. What I want to know is whether the holding company will also be taxed? Has the minister guarded against double taxation in cases of this kind?

Sir THOMAS WHITE: That point is guarded against, in the amendments of which I have given notice. If some provision were not made great hardship would be done in the case, for instance, of some English companies which hold almost a like amount of stock of Canadian companies. These companies are already heavily taxed in England, and provision has been made against doing an injustice in cases of this kind.

Progress reported.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Militia and Defence—allowances active service, $100,000.

Sir SAM HUGHES (Minister of Militia): I understand that the right hon. leader of the Government and the right hon. leader of the Opposition have come to an agreemen whereby I am privileged to go on with my Estimates this afternoon, and I wish to thank both right hon. gentlemen for their courtesy in arranging this matter.

I have been listening for some little time to the discussion of matters bearing on business and finance, which is something we are not accustomed to do in the Department of Militia and Defence. There we do not listen; we practise; our thoughts turn more to the practical end of things. The last time I had the opportunity of listening to a financial discussion I heard a speech from the lips of that distinguished soldier, General Joffre, the great leader of the French soldiers who have acquitted themselves so gloriously in the recent fighting. On that occasion General Joffre, a practical business man as well as a brilliant soldier, pointed out the desirability of union between the French and British peoples, not only in the fighting, but in the financing of this great war, and he took the liberty of suggesting that it could be done by floating an Anglo-French loan in the United States, and he also suggested the possibility of Canada doing something along the same lines in order to carry on the great struggle in which we are now engaged.

Before entering into details I should like to give a brief resume of the work of my department. I have not burdened the House much with elaborate explanations during the last three years when putting through the Militia Estimates, and I take this opportunity to thank the House for the confidence it has shown in the department. We are pleased to have all necessary inquiries made, and I am satisfied that the House will be pleased with the information it receives. The task in which we are now engaged is one that is second to none in the history of Canada from a business or financial point of view. Three great undertakings have been carried through in the Dominion. One was the Canadian Pacific railway, another the National Transcontinental railway, but these pale into insignificance compared with the magnitude of the financial operations connected with this great war. Canada was a peaceful nation trying to build up homes for her people, and to promote industries for their benefit. In connection with the expenditures on this war, the Government have had many more complicated problems to handle than had the Canadian Pacific railway or the National Transcontinental railway. These undertakings occupied years, and those engaged in them had ample time for elaborate preparations, with large staffs

at their command, and plenty of time to prepare for their work. This crisis came upon us suddenly, and we had no opportunity to prepare in advance for what had to be done. Yet, with all the care and attention devoted to those great railway undertakings, extravagant prices were paid, and even scandals arose here and there.

When war broke out the people of Canada faced the issue. On the one hand it was human liberty and progress, on the other Kaiserism and tyranny. I want here to say a word absolutely on my own account, and in saying it I am not voicing the opinion of any one else. The Teutonic races in all periods of history, until recently, worked ardently in the cause of liberty. They fought with the British to overthrow the tyranny of Bonaparte some hundred and odd years ago. From the days of the old Roman wars until recently the Germans were ardent in the cause of individual liberty, but their changed position indicates how essential it is for the people of every land, in all periods of history, to be eternally vigilant, or otherwise the iron heel of tyranny may trample upon Parliament and the people, and grind them down as the German people have been ground down. I feel this, further, that if the people of Germany get an opportunity to express themselves, as I believe they will after another smash such as they have received at Verdun, you will see them assert their individual rights and privileges, and you will see Kaiserism and tyranny and autocracy vanish from the face of the earth.

When war broke out, there was but one spirit throughout the Dominion of Canada, a spirit in the lines of Whittier:

> God and our chartered right,
> Freedom forever,
> Truce with oppression?
> Never, no, never.

Canada rose to the situation, called the boys together, trained them at Valcartier, and sent them over the sea. At that time we were not prepared to undertake the great industries which have since developed. As I pointed out on a former occasion, we started the shell industry, and little by little the manufacturers of Canada gained confidence in themselves and in their great resources until that industry attained the tremendous proportions it has reached to-day. The total number of contracts which the Department of Militia and Defence made up to February 15 of this year was upwards of 15,000, and between 1,000 and 2,000 Orders in Council were passed on various subjects connected with the department.

Our aggregate expenditures, up to the time we handed the purchasing over to the War Purchasing Commission, was $114,000,000. We had a limited staff, and as my hon. friends know we had practically no patronage list. Tenders were called for, and contracts were let irrespective of political predilections. Possibly we have made mistakes, but they have been very few. Like the Irishman, we want to know where the mistakes were, but we have not found very many so far. We reduced the waste to a minimum, and wherever it was found that exorbitant prices had been charged we promptly took steps to secure the return of the money so over-charged. We took every precaution and every safeguard in the expenditure of those moneys that we possibly could with the limited staff, and with the limited time at our disposal.

There were three classes of prices, we found, in dealing with war matters. There were the prices in vogue before the war, honest peace prices. Then there were what might be called legitimate war prices; a great many commodities which had to be purchased after war broke out having increased in value owing to the operation of the principles of supply and demand. These prices might, as I say, be called legitimate war prices, though they were higher than the peace prices. Then we had what might be called war combine prices, or exorbitant prices. As I have said, we took every precaution to keep these prices within bounds. Our policy has been to give every man a fair and square profit on anything he did for the Government or for the country. We have endeavoured to prevent anything like extravagance in prices, and to keep everything down to the minimum. We have heard a good deal of talk about profiteering. We are told that profiteering of any description is very bad, but I have noticed that it is always the man who is not immediately concerned who is interested in somebody else's profits. There has been a good deal of criticism in regard to this matter. Our experience has been that it is always the good man who believes in charity beginning at home who pockets his profits and keeps them, and who has something to say about other people's profits. It is so with the manufacturer, with the banker, with the leather merchant, and even with the lawyer and doctor. We do not find any of these surrendering their profits, but we do find them talking about

the profits in other lines of business We find that talk against profiteering always concerns somebody else and some other business than that in which the complaining party is engaged. That is our experience. Every man has a right to a certain profit but he has no right to an exorbitant profit.

At the beginning of the war, United States firms with which not only the Canadian Government but the British Government had largely to deal, would not undertake delivery under contract in Canada or in any other country at war. Therefore, the contract had to be arranged so that they would deliver to some non-combatant person in the United States who would then transfer the goods to Canada or Great Britain. Our concern was to get these goods made and delivered as rapidly as we could. I had been associated, for 25 or 30 years with Colonel J. Wesley Allison in various matters. But in 1909 and 1910, we were concerned most intimately with the St. Lawrence dam question. The House will remember the great struggle over the St. Lawrence dam. We visited Washington and Albany on a number of occasions and we were successful both in Albany and Washington, and finally in the Parliament of Canada, in preventing the passage of Bills for the damming of the St. Lawrence river. I found Colonel Allison on that occasion an absolutely disinterested and straightforward business man. That is why I chose Colonel Allison to act as my adviser, counsellor and guide in connection with the various matters that would come before us in connection with this war. I spoke to him about getting these goods out of the United States and into Canada. He told me that it could be arranged after consultation with the railway people; the goods would be shipped from the various places where they were manufactured to certain persons, all of whose names I do not know—I know some of them—and that these persons would have the goods transhipped from the point at which they had been delivered in the United States to Canada in bond. I may as well be frank about it and tell the House that, by arrangement with the Customs Department, these goods came right straight in and were passed on to their destination in England or to our own Canadian camps.

I have noticed that a question has been raised in the press about some goods which were brought in across the river at Morrisburg by Colonel Morgan, who was in the United States representing himself as an ex-member of Field Marshal Lord Kitchener's staff, and who had served in South Africa. Colonel Morgan, I believe, did send some samples to certain persons in this country, not for Canada at all, but to parties who were interested in getting contracts in Canada with the French, British, and Russian Governments. There have been some criticisms in regard to this and here I desire to say that we court full and fair discussion of all these matters.

I now propose to refer to the purchase of Colt pistols and revolvers. At the outset of the war I took the opportunity of discussing with the Prime Minister the policy that should be pursued in this regard. We foresaw that it was going to be a very great war and that the resources of the Empire would probably be strained to a considerable extent in meeting the demands. We therefore decided that, so far as possible—so far as possible, mark you, because it is not entirely possible to control these matters—the middleman should be eliminated, and that prices should be kept down to the fair, rock-bottom level. In connection with the purchase of the Colt pistols and revolvers, we knew that the rule that had been followed in 1899-1900 was to add a percentage for commission on the list price of revolvers. We knew that by reference to the books of the Auditor General's Department, and, mark you, I am not finding the slightest fault with it, because in a war like that, or even in a war such as this, every man is entitled to a fair compensation for the work he does. We knew that in 1899-1900, by reference to the Auditor General's Report, page Q—121, the Department of Militia and Defence purchased from an agent in Canada, when they could have brought direct from the Colt firm, 300 Colt double-acting army revolver; blue 7½-inches, ·45 calibre, at $14.50. The list price of this revolver was $13, at which the department could have bought them direct from the Colt Company. In the same year, 1899-1900, the department purchased from an agent in Canada, 400 new service revolvers, 5½-inches, ·45 calibre, at $15.50. The list price of this revolver was $14, at which figure the department could have bought them direct from the Colt Company. The list price for these goods to wholesale dealers in the regular trade carried a reduction of 10 per cent, 5 per cent and 2 per cent with duty extra. I am not saying that the commission of $1.50 each paid in 1899-1900 was wrong. I am here to say that in many instances it can

5 p.m.

be justified as being a fair, square deal all through, but the Auditor General's Report shows that a commission of $1.50, or upwards of 10 per cent was paid for these revolvers, and the same rule was followed right straight along the line. Compare this transaction of 1899-1900 with the transaction of 1914. The Canadian Government, in 1914, bought 70 Colt new service revolvers, 5½ inch .45 calibre, at $14 each, exactly the same revolvers as cost $15.50 in 1899, and under exactly the same conditions. In 1914 there was no commission. The Colt pistol is a modern weapon with a range of 500 yards. One government has purchased 200,000 and another government 300,000 of those pistols from the Colt Company. Other governments are ready to take them as fast as the Colt's Arms Company can fill the orders. This is the weapon that is used in the trenches and it is a rapid-fire, magazine loader, arm. The price to the United States, which has an arrangement by which they can manufacture one-third of the requirement themselves, is less than it is to any other Government. The Colt price to all Governments, excepting the United States, is $18.50. The trade price is lower but the duty raises it above $18.50. In my remarks recently, which will be found at page 300 of the unrevised Hansard, I read a letter from the Colt Company explaining the business arrangement of the company in this matter. It thus appears that in August, 1914, there was no commission whatever paid on pistols or revolvers of any kind and the Canadian Government obtained the lowest price paid by any Government; whereas, in 1899-1900, the Canadian Government, in addition to the regular list price of the revolvers, paid to an agent as commission, the sum of $1.50 on each revolver.

I might quote in this regard the evidence given by the Vice-President of the Colt Company recently before Sir Charles Davidson's Commissioin of Inquiry. Sir Charles Davidson put this question to the vice-president of the company:

Sir Charles Davidson: So far as you know, was there anything in the remotest degree which could be styled graft, or rake-off, or undue commiss'on, with respect to this?

Mr. Stone: Appertaining to any of this business, absolutely no.

Sir Charles Davidson: As regards the purchase of these pistols?

Mr. Stone: Absolutely no.

Sir Charles Davidson: Do I understand you to affirm solemnly that as regards your company it was a fair and honourable business transaction?

[Sir Sam Hughes.]

Mr. Stone: Absolutely yes.

Sir Charles Davidson: As to the price?

Mr. Stone: Absolutely so.

To summarize: In 1899-1900, Canada paid $1.50 commission on each revolver; in 1914, Canada paid no commission, and got the lowest price at which these pistols were sold to any Government. Canada paid the same price as do nations which are buying as many as 200,000 of these pistols.

On tri-nitro-toluol, picric acid, copper, brass, zinc, ammunition of various kinds, Col. Allison undoubtedly saved upwards of $50,000,000 to Great Britain and Canada. Even when the British Government wanted a hundred rifles for testing purposes, they applied to Col. Allison for them.

Take, for instance, copper and zinc. We found that the prices of these metals were soaring rapidly and that there was a great shortage in Canada. I took the matter up with Col. Allison and we decided to bring about, as far as possible, the refining of copper and zinc in Canada, and in that way we would have a double string to our bow and be able to control to a certain extent prices in the United States. As soon as our decision became known, the trade combine formed in the United States fell to pieces and the prices dropped.

Early in the war the British Government asked us to purchase ammunition for them in the United States. At a meeting held in the little village of Moira in the Adirondacks—I have nothing to conceal, nothing that any loyal gentleman may not hear—there were present gentlemen from the United States interested in various commodities required for the war, and amongst other things the question of ammunition for the British Government was discussed. For some weeks the prices quoted in Ottawa by numerous concerns for Mark VII ammunition ranged from $37.50 to $42.50 per thousand, because the manufacturers had not made it before and they wanted to be on the safe side, and in our own arsenal at Quebec this ammunition is worth $36. Nevertheless, through the influence of Col. Allison with these manufacturers, we were able, in one day, to get the whole of that class of ammunition at $33 per M rounds, thus saving the British Government $4.50 per M rounds, or $337,500 on the whole order. Now, Col. Allison, had he been so inclined, might have divided up that amount with the manufacturers. The price of Mark VII ammunition has, neither before nor since

that date, been nearly as low as $33, and no ammunition purchased in the United States by Great Britain has proved so good.

When we were discussing with Col. Skinner the question of Colt's revolvers and pistols the latter asked the question: "Is there to be a commission on these? If there is it must be added to these prices." That was the system in vogue in 1899 and 1900, and it was the usual custom to add on the commission. I am not complaining about the custom; I am merely explaining that, as far as Canada was concerned, nothing was to be added to the prices, and that at the close of the war we should endeavour to recompense Col. Allison in some other way, because he has consistently refused to take any commission, although he has had to pay out money in express and freight charges, and I hope he has kept the bills. I know that he was advised to take a proper commission on purchases which he effected for France, Russia, and Great Britain, but on such work he has refused to accept more than fifty per cent of what was offered him for his services by those ocuntries. To Col. Skinner's question, Col. Allison, without a moments hesitation, said that not one cent whatever would be taken out of the pockets of the Canadian people for any transaction in which he was concerned.

In purchases of motor trucks Colonel Allison has saved the country hundreds of thousands of dollars. In one day, by getting together a number of experts in the city of New York, he saved the French Government upwards of $1,000,000 because of the way in which he handled the matter. The question is simply one of following the prices and not accepting the catalogue retail prices, but getting the regular wholesale prices to the trade. It was through Colonel Allison that I met Colonel Thomas who has been instrumental in carrying on this work in Canada.

When the First Division went over to France, 51 motor trucks were taken with them. An objection was raised that these trucks cost $2,800 plus $200 for freight, handling on the other side, and certain repairs, making a total of $3,000 each. We turned them over to the British Government and took over from them 51 other trucks at a cost of £55,000, or $5,240 each, a net advance of $2,240 on each truck. Those first trucks, I may say, are still running in England. Colonel Allison showed me how to obtain wholesale rates, and on 476 motor trucks which we have already purchased at a cost of $2,800 each in Canada, plus $200 for freight to land them in England, we have thus saved a total of $1,066,240. Had Colonel Allison stood in with the sellers of those trucks, he could have let them be sold at the high price. Hon. members on both sides will remember the trouble that we had when we fought, not for days, but for weeks and months, to smash the combine and bring down the price of these trucks to $2,800. Through the agency of this officer we brought the price down, and Canada is to-day the only country in the world that is able to purchase motor trucks at wholesale prices. Had Colonel Allison stood in with the manufacturers, he could have got a rake-off on this $1,066,240; or, had he taken a commission at the ordinary rate of 10 per cent, on a purchase of $2,500,000 worth of trucks, he would have pocketed the neat sum of $250,000, whereas he has never pocketed a single cent, although he has received considerable abuse. The purchases of Lewis guns amounted to $3,395,297, so that Colonel Allison's commission, had he taken one, would have been $339,529. The purchase of Colt's guns, pistols, and revolvers, amounted to $754,426. Had Colonel Allison taken his commission, there would have been $75,442 taken from the taxpayers of Canada. The purchases of cartridges amounted to $31,533, so that there might have been a rake-off of $3,153 there. On motor trucks we made a saving of the difference between $5,240 and $2,800, that is, $2,440 on each truck, or on the total purchase of 476 trucks, a saving of $1,161,440. Spare parts of cars to the value of $300,000 were purchased, the commission on which in the ordinary way would have been $30,000.

The total of these purchases in the United States for Canada was $5,814,056. Had there been a commission charged in the ordinary way, that commission would have amounted to $1,609,564, and the total cost would have been $7,423,620. So that the total saving under what you may call the Hughes-Allison system, is over $1,600,000. This saving was effected in the purchases we made in the United States alone.

I come to the question of fuses, and I doubt not that what I have to say on that subject will be startling to some hon. gentlemen. I do not wish to indulge in personal criticism, or to say anything to make any hon. gentlemen opposite feel aggrieved; but I have here the facts and figures, and I challenge the freest and fullest inquiry into

them all. In 1914, we took steps to have fuses manufactured in Canada. Every firm that any one could even dream of as being likely to indulge in the manufacture of these commodities was approached, and not one firm in Canada could be induced by any offer of assistance to go into the manufacture of these fuses. Any one could see that fuses would be needed. Later on, an order came to the Shell Committee from the British Government for 4,000,000 fuses. I had nothing to do with this—as I have had nothing to do with the Shell Committee—other than to ask the same gentleman to make sure that the lowest possible prices were obtained. I may say that I knew that the raw material for these fuses—time fuses—cost, before the war, $1.90, which included 24 cents royalty to the Krupp firm. This is the same fuse that we are making to-day. I realized that under the conditions prices would be almost sure to double, if not more, but still I thought that they should be obtained at that price. Imagine our surprise when Col. Bertram told me that they were asking $6 apiece for these fuses. I sent for Col. Allison and said to him that this price was absurd, that we should get them for easily half that, and so fire two shots instead of one at these gentlemen who are seeking to overthrow the liberties of the British Empire and of the French nation. Col. Allison brought the price down to $5.10; later, to $4.90, which is the lowest price for which I have heard of any company in the United States, the Morgans or any other, making fuses for the British Government. Later, Col. Allison brought the price down to $4.50, and, by still further organization, to $4.25. Contracts were made at this price of $4.25 for these time fuses. But, owing at least in part to the fact that a number of firms in the United States had been blown up, and there was more or less of the "German peril" idea abroad, they refused to take the contract, and it remained at $4.50. Thus there was a saving of 40 cents on each fuse, or a total saving to the British Government of $1,600,000 in that one deal alone.

Then the president of the Shell Committee informed us that a rush order had come in for No. 100 fuse for the high explosive shell. This is not a time fuse. All that we could ascertain about it was that it was being made in Great Britain for $3.75. A contract was let in the United States at $4—and I may say that Colonel Allison never heard of that contract until it had been let. Subsequently, a month later, a contract was let at $3.50, with the price of $4 to a firm in Canada, who, I believe, got their fuses largely made in the United States.

Speaking of these matters, I received this morning from Colonel Skinner, head of the Colt's Patent Fire Arms Manufacturing Company of Hartford, Conn., the following:

28th February, 1916.

To Major-General Sir Sam Hughes:

Dear General Hughes,—At the suggestion of Mr. Archie MacFarlane, the Canadian representative for the Colt's Company, I am sending you my affidavit covering details of sales of machine guns and pistols to your Government at the beginning of the war and since. I have tried to cover the points named by Mr. MacFarlane, and trust that I have done so in a satisfactory manner.

Sincerely yours,

Wm. C. Skinner.

I, William C. Skinner, of Hartford, Connecticut, chairman of the Board of Directors of the Colt's Patent Fire Arms Manufacturing Company, being duly sworn, do depose and say:

1. That on account of personal friendship between Major General the Honourable Sir Sam Hughes and myself, the Colt's Patent Fire Arms Manufacturing Company has given preference to Canada in regard to the execution of orders for machine guns and pistols, and particularly in the matter of giving the Government of Canada options for the purchase of machine guns, such options extending over a much greater length of time than the company has accorded to other governments.

2. That on account of the promptitude of the Department of Militia of Canada in placing its first order for machine guns after the outbreak of war it was granted a price of $600, which was the price for similar guns and equipment to the United States government, and no sales of machine guns of similar type and equipment have been made to any other foreign government since the outbreak of war except at a higher price.

3. That the price of the said machine guns and equipment as quoted to the Canadian Government was later advanced from $600 to $650, such increase being due to the greatly increased cost of labour and materials, and this advance in price applied to all other sales made by the company to other nations. A number of the sales made to other nations were for much larger quantities than were covered by orders from the Canadian Government.

4. That the price charged the Canadian Government for automatic pistols, Cal. .45, namely $18.50, was the same price at which the company has sold to all other governments since the outbreak of war with the exception of the Government of the United States, for which Government the pistol was expressly designed and with which Government the company has a special contract.

5. That nothing was added to the selling price of machine guns, pistols or revolvers sold to the Canadian Government for commission or selling expenses and that the Canadian Government could not have obtained these these machine guns, pistols and revolvers from any other source at lower prices than those paid by it to the company.

William C. Skinner.

Sworn and acknowledged before me at the city of Hartford, Conn., this 28th day of February, 1916,

Arthur L. Ulrich,
Notary Public.

I wish to enter into the details of these matters as fully as possible. Another question which has arisen, and which has been discussed very much, is that concerning the Canadian trench shovel. This shovel was invented at the Swiss manoeuvres in 1912-13. It was realized in some quarters when this war broke out that it would be a trench and shield war. I may recall that when war was declared I drew attention to the fact that the war was going to be a trench war, and that, at the Prime Minister's request, I sent a cablegram across the water dealing with this aspect of the matter. It was realized at the outbreak of the war that no troops could possibly advance against machine guns and rifles; and during the course of the fighting it has been proved over and over again that this cannot be done. It cannot be done and will not be done, unless at the conclusion of the war auxiliary means of covering the advance are provided. The shovel to which I have refered has since formed the model for the trench and shield shovels, some for one, some for two, and some for three men, used by the French, Prussians and British in trench work. Inquiry was made from the United States and British firms as to the prices at which these shovels could be manufactured, but the prices were all too high. The lowest price I got at first was between $4 and $5; the highest price was $6. After a number of experiments had been carried out, the Midvale Company evolved a process of making them more cheaply, and they came down in their price to $1.35. The Midvale Company, in order to cover themselves legally in the premises, asked the inventor and the minister if there was any royalty; and the reply in each case distinctly was that there was no royalty whatever. The Russian Government offered the inventor 5 cents a shovel on 1,000,000 shovels, but the offer was declined. The question of delivery arose. The shovels had to be shipped to Col. Allison, or to some one named by him, by whom they were transferred to this side of the line at no cost to the Canadian Government. When the first contingent sailed the straps and fastenings were not ready, and these shovels were left in England. They were not the only things that were left in England at that time. Fifty-one motor trucks were left there, as well as wagons, harness, saddles, water-carts, boots, field kitchens and valise equipment. When the second division went across, I put my foot down. Our goods had stood the wear and tear of training in England, and I could not see why they should not stand similar conditions in France. We took steps, therefore, to secure as far as possible the use of our own materials at the front.

The board which was subsequently requested to look into this matter reported that the Canadian supplies were thoroughly serviceable.

Another matter which has been exercising public attention to a considerable degree is that of the Ross rifle. I shall not go into the history of this matter, for it has been gone over again and again in days gone by. Suffice it to say that the Lee-Enfield was not a success in South Africa. The Ross rifle, having a straight pull, had commended itself to many; trade rivalry sprung up; opposition came from people who opposed the spending of any money on rifles, and, for this and other reasons, the Canadian rifle was bitterly opposed. The Mark 3 Ross rifle is an excellent weapon; it has the same calibre as the British rifle, and takes the same ammunition. The fact that the chamber—not the groove or the barrel—of the Ross rifle was two-thousandths of an inch smaller than the chamber of the Lee-Enfield was claimed by some to be the cause of the jamming of the cartridge in the barrel. The reason was this: The Canadian-proved rifle is the same as the British-proved rifle. The steel elastic limit of the British rifle is only 48,000 lbs. to the square inch, while that of the Ross is 76,000 lbs. With the Lee-Enfield a proof charge of 50,000 pounds caused the chamber of the rifle to be raised .462 instead of .460. However, the Canadian rifle has been reamed out and enlarged to .464, and, as the British rifle has been similarly treated, the two rifles are now the same size. The difference of two-thousandths of an inch made it more practicable for both rifles to take the defective cartridges which were found all through the service. These rifles were reamed out because different brands of ammunition issued by the British Government were found to be defective. As they contained brass, and were very soft, they would stick in the gun when they were fired. Frequent tests have been made with this ammunition, and in every instance the Canadian rifle has gone more rounds than the

Lee-Enfield before jamming. I may mention that that bad ammunition was all withdrawn from the lines, and no trouble has since been experienced. No charge of jamming in either rifle has been made for many a day.

An hon. MEMBER: Where is Canadian ammunition made?

Sir SAM HUGHES: At the city of Quebec; also at points this side of Montreal.

Mr. LEMIEUX: Is there any truth in the rumour that it is the intention to transfer the ammunition factory from Quebec to Lindsay?

Sir SAM HUGHES: The factory at Quebec will remain there.

Mr. MACDONALD: Do I understand the hon. minister to say that the Ross rifle has given absolute satisfaction?

Sir SAM HUGHES: I will make that clear before I get through; if I do not do so, I shall be glad if my hon. friend will repeat the question. I shall not go into the details of the arguments advanced by those who have opposed the Ross rifle, but I wish to call attention to a strange incident that occurred at the time of the battle of St. Julien. It having been found that a number of the rifles were jamming, ten questions were circulated among the Canadians, as follows:

1. Do you find the Lee-Enfield better on account of its being lighter?
2. Do you find the Lee-Enfield to be handier on account of its shortness?
3. Do you find that the bolt in the Lee-Enfield does not jam as much as in the Ross?
4. Is the aim not quicker with the Lee-Enfield owing to the sights?
5. Do not the heavy lugs guarding the foresight on the Lee-Enfield give an approximate aim at night which the ring on the Ross does not?
6. Does not the magazine of the Lee-Enfield hold ten cartridges while the Ross holds only five?

So far as that last question is concerned, I may say that every rifle in the world, the Lee-Enfield included, has five cartridges in the magazine. The next questions are:

7. Is it not true that the magazine of the Lee-Enfield allows for cleaning, while that of the Ross does not?
8. Does not the charger clip guide on the Ross allow too much play, making loading difficult?

I may say that not one of the suggestions made in these questions is justified. The next question is:

9. Does not the bayonet on the Ross work loose in rapid firing?

[Sir Sam Hughes.]

The same may be true of any rifle. The last question is:

10. Is not the bayonet too short and thick?

This question I shall take up later. These ten questions were circulated in the Canadian division just before the battle of Ypres. If they were not circulated by some person in the hope of causing the Ross rifle to be distrusted, I should like to know what they were circulated for. The fact stands out that the Canadian forces, armed with Canadian rifles, held at St. Julien as no troops ever held before in the history of the world. There was some bad ammunition, and undoubtedly some of the rifles did jam, just as the British rifles jammed. Owing to the jamming of their Lee-Enfields, two British regiments were forced to retire after firing scarcely a shot. They had this bad ammunition, and their rifles jammed. The Durhams and Yorks, two of the finest regiments in the British service, were fighting with rifles that were useless, owing to the condition of the ammunition, and were forced to retire at various points, just as the other regiments were forced to retire at various points, not because of the men, but because of the bad ammunition that was served out to them. At Festubert the Canadian Division, armed with the Ross rifle and fair ammunition, met with grand success, advancing 2½ miles, and it was the only advance made along the whole line. The troops armed with the Lee-Enfield made no advance, and that is charged up to bad ammunition. At Givenchy, our troops were armed with the Lee-Enfield, and, as is well known, we did not succeed in making an advance there on account of the bad ammunition. With regard to the bayonet it is now giving general satisfaction. I have this report here from Colonel Helmer on the bayonet:

Memorandum re Bayonets, Ross Rifle.

1. The Ross rifle bayonet was adopted with the idea of furnishing a combined tool and weapon; being of the knife pattern and strongly constructed, it fulfils both requirements.

2. No criticisms have been received from overseas regarding this bayonet, except that it is too short; but it must not be forgotten that the fighting length of the Ross rifle and bayonet combined is equal to the Lee-Enfield and American rifles, i.e., long rifle, short bayonet, short rifle, long bayonet.

3. Extremely long bayonets such as the French, Russian, and German, are inconvenient to carry, and for penetrating purposes none of them is superior to the Ross rifle except the French, which is of the stiletto type but useless for other purposes.

4. Long bayonets, as compared with short, are a decided disadvantage in a fight, in that they are less easily carried. In addition if a man "gets home" with a long bayonet, the wea-

pon is likely to go clean through the body and protrude, making extraction difficult and placing the man, who has momentarily succeeded, at the mercy of any one who attacks him. "A short quick jab and get clear" is the safest rule in bayonet fighting, and this is difficult with a long bayonet and rifle.

5. The honourable the minister has given instructions that the bayonets for overseas are to be ground so as to provide a fine sharp point. It is understood that these instructions are now being carried out at the factory and inspection branch. This will eliminate any reasonable ground for criticism.

R. A. Helmer, Colonel,
Director of Musketry.

The bayonet was designed a number of years ago under the direction of my predecessor. We call it the Lake bayonet, because it was designed by General Lake, one of the best soldiers in the British Empire, and who is now in Mesopotamia. The Committee on Small Arms assisted General Lake in designing this bayonet. The one objection I had to this bayonet was that it had a bulge at the point, but we have now had the bulge removed, and all the soldiers of the Canadian Division think that it is as perfect a weapon as there is in the world. To show what it can do, I need only mention that at St. Julien 2,000 Canadians entered a wood one night against 7,000 Germans, and only 1,000 Germans left the wood alive.

Mr. MACDONALD: What is the present status of the Ross Rifle? Is it popular with the soldiers at the front?

Sir SAM HUGHES: All reports that I have received are to the effect that it is giving splendid satisfaction. Only a short time ago, a gentleman came to me with a letter from his son at the front, saying what a splendid weapon it was. The Ross rifle, in fact, is such a splendid success that the Canadian soldier has to sleep on it or the British soldier would steal it from him. Now that the bad cartridges have been eliminated, there is no trouble with either of the rifles being used at the front.

Mr. LEMIEUX: Then the statement in the Canadian Courier last year that the Ross rifles were discarded by our boys is untrue?

Sir SAM HUGHES: The rifles were not discarded. As the House will understand, a number of our rifles were lost at St. Julien, and the first division were then given the British rifle. I do not know whether the first division have yet received the new weapon we are making, but as soon as the rifles are made the whole Canadian army will be armed with the Ross rifles. At the present time all our troops except the first division are using the Ross.

In regard to medical examiners, I might point out that we have now a new system. Under the old system we found that recruiting was greatly embarrassed by reason of the fact that there was only one examiner in each district. We have altered that, and now the officer in command can appoint an examiner in any centre to examine recruits. The examiner is given fifty cents for each recruit examined. This new system is more economical, and much more convenient to the boys.

Mr. COPP: When did this new arrangement go into effect?

Sir SAM HUGHES: About a month ago.

Mr. CARVELL: Examiners only get fifty cents a man?

Sir SAM HUGHES: That is all they ask.

Mr. CARVELL: If all the minister's expenses were as economical as that we should have little to complain about.

Sir SAM HUGHES: I think we are enlisting the sympathy of the medical men. They have done splendid work, not only the military examiners, but civilian doctors too. I understand from my deputy that fifty cents per man is all they wish to take. They want to deal fairly and squarely with the country.

Mr. CARVELL: What was the previous system of medical inspection?

Sir SAM HUGHES: The medical officer attached to each regiment would go all over his district examining recruits. It took the examiner in my county about five weeks to cover his district.

Mr. CARVELL: How was he paid under the old system?

Sir SAM HUGHES: He got his regular pay, and travelling expenses.

Mr. LEMIEUX: Has the regulation in regard to height been altered?

Sir SAM HUGHES: We still have the old regulation. I may say that we are raising a couple of bantam regiments.

Mr. TURRIFF: It was said that at Kingston last year there were a number of soldiers in the camp who had been passed by doctors not connected with the militia. After they had been in the camp for a considerable length of time, these men were

re-examined by the military doctor, and some of them rejected. I understand that these outside doctors got $2 a piece for every recruit they accepted. Is there any truth in this report?

Sir SAM HUGHES: I think there is more or less truth in the statement of my hon. friend. That is partly why we have adopted this new system. It will prevent anything of that kind happening again, and will expedite the work generally.

With regard to recruiting officers. Last year, when I was out of the country—I am not shirking any responsibility in this matter, but am just mentioning that it was done when I was in England—recruiting officers were appointed all over the country, whether military men or not. In many instances these men were excellent officers, but in other cases they were absolutely useless, and yet were kept on pay. In the month of November last we adopted a new system of recruiting. We issued the order that all these officers must attach themselves to an overseas battalion or retire, and most of them have since undertaken overseas service. We have an officer supervising the whole work, with headquarters here at Ottawa.

With regard to the billeting of troops, I am sure that our new system of billeting the boys in the small centres has met with general approval. The tendency hitherto has been to keep these troops in the larger centres, and that of course did nothing towards creating any local spirit. Under our new system there is hardly a county in Canada to-day that has not soldiers billeted all over the district. I am pleased to learn from both sides of the House, and from men of all shades of politics, that our new system of billeting is giving satisfaction. Unfortunately, one or two officers on their own responsibility undertook to order the men into larger centres. This was done without the knowledge of headquarters, and as soon as we found out we promptly stopped it.

Schools of instruction had been opened in every division, and also in cities such as Ottawa, for example. Recently, a number of members on both sides of this House, animated with the laudable desire to acquire a knowledge of drill so that they would be prepared in case of necessity, desired to have a school of instruction opened for their benefit at Ottawa. Some of these gentlemen were men up in years, business men not accustomed to getting up early in the morning, such as my venerable friend from Souris (Mr. Schaffner); my hon. friend from Moosejaw (Mr. Knowles) and my hon. friend from Missisquoi (Mr. Kay), were also in the class. I believe they all managed to impress the instructor so favourably that he is giving them all a certificate of some kind or another; I do not know just what the details are. I am sure that there is not a man of them who, altogether apart from the war, does not regret that he did not start training when he was a boy, just for the benefit to be got out of it. It makes them better men.

There is another matter to which I desire to draw attention, and that is the question of promotion. There are three forces, the forces in Canada, the forces in England, and the forces at the front. It goes without saying that the heart of every good fellow in the country is with the boys in the firing line. The soldiers in England have no claim to more favourable consideration than the soldiers in Canada; if any favours are to be given, they should go to the boys in the firing line. We had not a definite system until recently. No one ever dreamed that the war was going to last so long, otherwise we would have adjusted matters earlier. But we have now got the matter on a proper footing, and the boys at the front will no longer have reason to complain in regard to lads who were their juniors in service when they left Canada getting priority in any company or regiment. In other words, the first consideration in the matter of promotion will be for the boys in the firing line. We will regard the forces in England and the forces in Canada as on the same footing I can see no reason why a man training at Shorncliffe should be given consideration in preference to the boys in the camps in Canada. I believe that that is a course which will meet with universal approval. As the House knows, promotions are made on the recommendation of the commanding officer of each regiment. I might add that the same holds good in regard to honours for heroic conduct in action; we do not interfere in any sense whatever, though, of course we rejoice when we hear of a man winning meritorious recognition.

All the little difficulties in connection with the Valcartier camp ground are being satisfactorily settled. I will now present to the House a return of 29th February, 1916, showing the number of troops enrolled in the Dominion of Canada. In No. 1 district, which includes western Ontario,

there are 23,560; in No. 2 district (Toronto), 60,360; in No. 3 district (eastern Ontario), 27,856; making a total for the province of Ontario of 110,676, and nearly all are in readiness for the front.

In No. 4 district (Montreal), there are 22,926 soldiers; in No. 5 district (Quebec), 5,212, a total for the province of Quebec of 28,138.

In No. 6 district, which includes the Maritime Provinces, there are 24,198 soldiers enrolled—I have not the total for each province separately. In No. 10 district (Manitoba and Saskatchewan), there are 50,710; in No. 11 district (British Columbia), 24,368; in No. 13 district (Alberta), 24,424; the total for the four western provinces being 100,002.

Exclusive of officers, therefore, the total number of soldiers enrolled and on duty is 263,114. The number of officers is 10,468, which brings the total to about 275,000 troops, ready for overseas service.

Reference has been made to patronage. Every one knows that so far as the Department of Militia is concerned, the patronage list practically vanished at the outbreak of the war. If any grocer in the riding of any hon. member happens to get an extra bit of patronage, I do not know anything about it; we have not time to bother with such small things.

Mr. MACDONALD: It is all very well for the minister to say that there is no patronage list, but it is the case that when supplies are needed for the troops it is the friends of the Government who get the contracts. If the hon. minister is not responsible, who is?

Sir SAM HUGHES: In my own town, which is in the district under the officer commanding at Kingston—the district of my hon. friend is under the officer commanding at Halifax—two or three honest Grits are—I will not say enriching themselves—but getting a fair share of contracts.

Mr. CARVELL: Will the minister tell us how many Grits are getting a share in the town from which I come?

Sir SAM HUGHES: Are there any there?

Mr. CARVELL: I had a majority of 79 at the last election, and I will double it at the next election. Not a single Liberal has got a dollar's worth from the Militia Department, and at present we have 500 soldiers there.

Sir SAM HUGHES: I am glad there are so many soldiers, but I say, and I challenge contradiction, that we have not interfered. We have no time to look after the peddling of groceries.

Mr. MACDONALD: There is no use in my hon. friend saying that there is no patronage list. If the men who have charge of the distribution of these matters have a patronage list, then my hon. friend is not stating a fact. The minister can settle the question by giving directions to carry out what he says is his view.

Sir SAM HUGHES: My hon. friend knows that so far as headquarters is concerned, and I challenge contradiction, we have not a patronage list in connection with our contracts. I do not know anything about these local affairs; it is the first time that my attention has been called to them. I have had complaints over and over again from Conservative members of Parliament who demanded my scalp because I had let Grits get contracts in various centres. The Prime Minister has been bombarded, and I have been bombarded with letters from Tory friends, because contracts have gone to Grits; I have had ten complaints of that character for the one I have had from Grits. But I have not paid any attention to them. They cannot all get contracts, and complaints about groceries are not worth attention.

Mr. MACDONALD: Last year I happened to be a member of a committee that investigated certain matters connected with the Militia Department and an officer came before that committee and distinctly swore that there was a patronage list in the department. That statement was made under oath.

Sir SAM HUGHES: We had a patronage list in the department before the war broke out, but so far as I know, after the war broke out, that patronage list received no consideration. The cases of a number of gentlemen, who had obtained contracts were reported to me, and I found that two of the firms, about which there was the most talk, were Grit firms, and representations were made that they should not get contracts. I refused to entertain any such objections.

Mr. MACDONALD: The statement made before that committee by an officer of the department was that at that time, last spring, when the war was on, there was,

and had been for months, a patronage list in the department. The question is, is there, or is there not, a patronage list in the department? My hon. friend says there is not, which indicates, I assume, that the minister thinks that the proper way to do business is to dispense with such a list. Has there been a change since last year; has the patronage list been abolished since last March?

Sir SAM HUGHES: I know nothing about a patronage list last year. I know that there was a patronage list before the campaign came on, and I am not sure that I was very much enamoured of it. There has been no patronage list in connection with this war in the Militia Department as far as I am concerned, or as far as any officer with whom I am in touch is concerned.

Mr. CARVELL: The minister evidently could not have heard what took place in the Public Accounts Committee yesterday morning, when Mr. Brown, the purchasing agent of the department, stated there was a patronage list, and that it had been made up after 1911. We asked him if he could produce it, and he said he could. We expect to have it before the committee tomorrow morning. He told us that down to last May he had bought from that patronage list and that since May he has been buying under the instructions of the War Purchasing Commission. They send instructions to him, and when they want him to buy a certain article they tell him how to do it. Sometimes he buys from his own patronage list and sometimes he buys from a list of names that the War Purchasing Commission has given to him.

Sir SAM HUGHES: That is all under the War Purchasing Commission; I have nothing to do with that.

Mr. CARVELL: But it is done by the minister's department, and his own purchasing officer swore to it yesterday.

Sir SAM HUGHES: Only recently the hon. member for Ottawa berated me very severely because certain Liberals were getting contracts from my department.

Mr. CARVELL: You could not satisfy the member for Ottawa.

Sir SAM HUGHES: Let me say here that ever since this war began I have refused to allow patronage or politics to influence me in any shape, manner, or form, in regard to the appointment of men to office, or the awarding of contracts. Unfortunately, some of my Conservative friends say that I have appointed too many Liberals. As long as they are good men it makes no difference what their politics may be, but once they show that they are not out they go, whether they are Liberals or Conservatives. As far as the peddling around of $200 or $300 worth of lumber or potatoes is concerned, I have not given any attention to that, and I do not intend to. If I cannot trust my officers to look after things of that kind they are not fit for their jobs.

Mr. W. M. MARTIN: Does the hon gentleman know anything about a patronage list in the city of Regina?

Sir SAM HUGHES: I do not know anything about it. How could you expect me to keep such things as that in my head?

Mr. MARTIN: I know that in the city I reside in no person but a Conservative can serve a meal to a soldier, and I am told that no person but a Conservative can shave a soldier. The minister knows the trouble that developed in Regina some months ago in respect to the patronage system that existed there.

Sir SAM HUGHES: Who found it out?

Mr. MARTIN: I do not know whether the minister found it out or not, but there is a great deal more, I believe, that might be told and that the minister does not know. If the minister does not want to go into it now we might take it up at some other time.

Sir SAM HUGHES: I would like to get through before six o'clock. I may say that we have carried out our ideas with regard to the development of our citizen soldiers. There is a tendency in many lands to place the citizen soldier in a subordinate position to that of the regular soldier. My idea always has been that the citizen soldier, properly trained, is superior to the man who is not properly trained, and this country has exemplified that fact. We have followed certain original ideals and ideas, and we have tried to hold a firm hand. Our decisions have to be rendered rapidly, because there are questions coming up every day, and we have always tried to be fair. I think I am justified in saying that every one of our decisions, and actions, has met with the approval of the men against whom they necessarily had to be directed at the time. There are only one or two instances in which our decisions have met with opposition. We have necessarily had to offend some contractors who wanted favours at the hands of the department and some offi-

cers who were seeking places which the officers of my department thought they were not entitled to. There are certain other people who have raised disturbances but they are comparatively few in number, and, taking it all in all, I cannot but express my appreciation of the splendid assistance which the people of this country have given us in the strenuous work which the war has imposed upon us.

I want to express my appreciation of the treatment accorded me on this side of the House by my Conservative friends. If any of my Conservative friends asked me to do anything which it was not possible to do, or to have done in their ridings which could not be done, when I explained the case to them, in every instance, I found them absolutely square and sympathetic and quick to see my difficulties. I want also to express my appreciation of the attitude of my hon. friends on the Liberal side of the House, who have been, all in all, very fair in this matter. Some of them have been more than fair and there have been very few who have not been straight and just in their attitude towards me. I wish to express my appreciation to these gentlemen for their conduct in the premises.

At six o'clock the Committee took recess.

The Committee resumed at eight o'clock.

Militia and Defence—allowances active service, $100,000.

Mr. CARVELL: Mr. Chairman, before you go into the consideration of this item, I would like to make a few general observations with reference to the very mild and gentle speech delivered this afternoon by the Minister of Militia and Defence. I am a great admirer of the minister, because he has the most wonderful faculty of coming before the House of Commons, shooting off a lot of hot air, getting it into the newspapers the next morning, and getting away with it.

Mr. GRAHAM: His organization is perfect.

Mr. CARVELL: Yes, and I think he has surpassed himself this afternoon; he has out-Hughed Hughes and Allison put together. If I could sum up his arguments under headings, I would say that the first heading is that there have been no politics and no patronage in the conduct of the affairs of the Department of Militia and Defence since the beginning of the war in August, 1914. In fact, I do not think he discussed anything regarding his department prior to that date, and therefore I do not intend to refer to anything prior to that date myself. I want to call my hon. friend's attention to a few matters which took place about a year ago, and I am sure my hon. friend's memory can go back as far as that, because he has told us of things which have happened as far back as the outbreak of the war. He has told us that there have been no patronage and no patronage lists, and that he has bought things from Grits and Tories, from everyone who had anything to sell. Now, I wonder what he has to say about a few of the war purchases that we investigated in the Public Accounts Committee last session.

Let us take, for instance, the purchase of binoculars. There is in the city of Ottawa a very estimable gentleman, Mr. Birkett, whose father is a hardware merchant, and I believe a very honourable one, a man who at one time occupied a seat in this House. This young man, according to the evidence, was a clerk in his father's business, and he never saw a binocular in his life except to look through it. He would not know anything about a 6 millimetre binocular or a 10 or 12 millimetre one any more than I would. Nevertheless this young man formed himself into a company called the Ottawa Supply Company, which was put on the patronage list. This company could not purchase binoculars themselves, because they did not know how to go about it, so they went to our good friend Sam Bilsky, who is a Liberal, and who knows how to buy binoculars; they allowed him a commission of $5 apiece, and they went down to New York and bought a lot of cheap binoculars at prices ranging from $7.50 to $25 each. They brought these binoculars to Canada and handed them over to one of the boys, and the Government bought the binoculars at $10 more than the original price. There was thus a rake-off of several thousand dollars. I do not care whether you call it patronage or not, but if Birkett had not got his name on the patronage list, he would not have been able to sell binoculars to the Government.

Mr. KYTE: The Government would not buy from Bilsky.

Mr. CARVELL: Certainly not. Bilsky was a Grit, and although Bilsky tried over and over again, as only gentlemen of his race know how to try, he could not get his name on the patronage list.

Sir SAM HUGHES: If my memory serves me aright—and I think it will be found fairly accurate—it was Colonel Hurdman,

a gentleman whom I retained in my service, who made this deal, whether good, bad or indifferent, and the matter was taken up later on by Mr. Mason. The whole thing was started by Colonel Hurdman, a Liberal in whom I had confidence.

Mr. CARVELL: The hon. minister need not hit back at us this evening after being so kind to us this afternoon. Colonel Hurdman is not on trial. The people of this country do not care two straws who Colonel Hurdman is or whether he ever was in the business at all.

Sir SAM HUGHES: Colonel Hurdman had no list whatever; he made this deal off his own bat.

Mr. CARVELL: The people do not care whether Colonel Hurdman is a Grit or a Tory, a Jew or a Gentile, or whether he has any politics at all. The Minister of Militia and the officers of his department are responsible for this deal, and those officers are working under the instructions of the minister and in the Public Accounts Committee last session we had cases of men being put on the patronage list on the express instructions of the minister. These are all matters of record and sworn to by witnesses and if the minister had had the time to attend the sessions of that committee as some of the rest of us had—and it was rather strenuous three weeks, but some of us had the constitution to stand it out—he would know what we and the public know. The difficulty with the minister is that he has been living in a fool's paradise; he does not think that we know what has been going on. I want to tell the minister—I am not saying this as a threat—that before this session of Parliament closes, he will be surprised at the information he will receive. It will amaze him and I think it will do him good, because many men are benefited by getting information, and I think the minister is one of them.

Let us take another matter that was brought to light in the Public Accounts Committe last year—the purchase of some bandages from a former member of this House, Mr. Garland. I am not going into the details of that unfortunate and regrettable transaction, but Mr. Garland took an innocent young clerk in his office and, through the political machinations of the political friends of the minister in this city, he was able to have him placed upon the patronage list, and no man could sell bandages except through this man. Mr. Shaver the Toronto representative of Bauer & Black, the largest producers of bandages in America, came to Ottawa wanting to sell these goods to the department at a fair price. He swore he was willing to do so, but stated that the department would not talk to him at all, and the only answer he could get was to go to Mr. Powell, a young man twenty-one or twenty-two years of age, a clerk in the store of the late hon. member for Carleton, Ontario, not for Carleton, N.B., thank Heaven! The result was that this young man received about $10,000 more than he was entitled to, and more than Bauer & Black would have sold the goods for; but there was a patronage list; there was politics in the deal, and the Government would not buy from the men who had the goods and wanted to sell them, but they did buy them through politicians, thus losing $10,000. It is, of course, true that, through the ventilation of this matter in the Public Accounts Committee, the country got back the $10,000, but that does not palliate the crime at all.

Then there is something about horses. I am not going into the question of the Peel election; I am far from going into anything like that, because I do not believe in recriminations. The people of the county of Peel have settled the matter themselves, but does any man mean to tell me that Mr. Fallis thought of buying horses without having been put on the scent by someone in power? The idea is absolutely absurd. I do not know whether Mr. Fallis' name is on the patronage list or not, but it is patronage just the same. We have to treat the ordinary affairs of life from the standpoint of the ordinary individual, and Mr. Fallis did not set out on this business of his own accord; he did so because of instructions from some one higher up. And so one might cite cases without end.

In the Public Accounts Committee during the last week we have been investigating a little matter of a few hundred dollars, although such a small amount is of no importance the way money is flowing nowadays. The department wanted to buy a few thousand feet of lumber in the city of Ottawa. As they needed the lumber in a hurry, I can quite understand that they could not call for public tenders for such a small quantity, because sometimes lumber ordered in the forenoon has to be delivered in the afternoon. Instead, however, of going to the lumber dealers in Ottawa—and if there is a city in Canada where there are bona fide lumber dealers, it is the city

of Ottawa—they went to this infernal patronage list, and a clerk in a real estate office, a Mr. McGee, who by the way has a brother who is a partner of the senior member for Ottawa (Mr. Fripp), managed to get his name on the patronage list. This was on the ground, as set forth in the Public Accounts Committee a few days ago, that he and his father were interested in a little planing mill in a small town a hundred miles or so up the Rideau river—a one-horse affair which never sold a dollar's worth of goods outside its own town until they got an order, since the war began, for target frames, or something like that. They never had shipped a carload nor a thousand feet of lumber to Ottawa in their lives. Yet, through this Westport Lumber company, as he explained, he succeeded in getting on the patronage list under his own name, McGee, and when they wanted lumber Mr. McGee was applied to. Other men were given a chance to tender, being called up on the phone, but Mr. McGee got the right to furnish the lumber. He had not any lumber himself—he never intended to have any. He went down to a firm of Grits, who could not get on the patronage list, but who were real lumbermen, and had the goods to sell. He got a commission of five per cent—somewhere about twelve cents or fifteen cents a thousand, or thereabouts—and the firm of Grits were able to sell the lumber. This is all in order to pay what I suppose you would call a ward heeler—he must have had some influence—a prominent Conservative in Ottawa, the paltry sum of $200. Yet the minister says there is no patronage list and no politics in the purchasing of war supplies. Why, I could go on all night detailing what we proved last year in the Public Accounts Committee, and what we propose to prove this year. I do not need to say this to members of this House; they know that it is the same throughout Canada. They know that there is nothing you can buy in the way of war supplies anywhere except on a basis of patronage and politics.

Mr. BURNHAM: I can give that a flat denial.

Mr. CARVELL: The hon. gentleman certainly can, if he wishes.

Mr. BURNHAM: So far as the county of Peterborough is concerned it is absolutely untrue.

Mr. CARVELL: The hon. gentleman will have a chance to air his views in a little while. This is a free-and-easy argument; we are in committee, and the night is young, and all may have an opportunity of expressing their views. What I say is that from one end of Canada to the other it is nothing but politics and the patronage list. Why, down in New Brunswick the patronage committee even appoint commissioned officers up to lieutenants. If a man wants an appointment as lieutenant in the province of New Brunswick he goes to the patronage committee.

Sir SAM HUGHES: Did that occur in the case of Major Anderson?

Mr. CARVELL: He is a major.

Sir SAM HUGHES: Can the hon. gentleman give one solitary name in New Brunswick to establish what he says?

Mr. CARVELL: Yes.

Sir SAM HUGHES: I would like to hear it.

Mr. CARVELL: In Victoria and Madawaska—

Sir SAM HUGHES: The commanding officer at Sydney is a Liberal, and so is the commanding officer at Moncton; Colonel Borden at Halifax is a Liberal, and so is the next officer under him. Colonel McAvity of St. John is a Liberal, and so is every man of them in the Maritime Provinces, except Colonel McLeod.

Mr. CARVELL: That is more hot air. Any man who lives in New Brunswick knows that the minister has been misinformed—to put it that way—because those who want appointments must go to the patronage committee. There are Liberals in the province of New Brunswick who have commissions, but they had to go to the patronage committee. Every time the minister has referred to this matter he has spoken of Colonel McAvity and Major Anderson. They are good men—such good men that they could not get around them. But whether it is a commission to be given or an order to be placed for meat or lumber, it is all politics there from beginning to end.

The minister spent a good deal of his time in defending his own department with regard to certain matters, and I am not going into them all. He went a long way out of his way, I thought, to defend Colonel Allison. When he was making that defence there came to my mind the well-known words of Shakespeare: "The lady doth protest too much, methinks." One can hardly understand why it should be necessary for the minister to take half or three-

quarters of an hour of the time of Parliament in defence of Colonel Allison. If Colonel Allison is all right, why not say so and let it go at that? Let me point out to the minister one of the cruel things in this world—at least from his standpoint: he must think it a cruel thing that such an angel in disguise as Colonel John Wesley Allison should be so maligned by ordinary people. Well, my experience of life has been rather the other way. I have very seldom found the real, true, honest man of this world maligned by anybody. And when I find reports with regard to a person coming from every point of the compass, all tallying exactly and all along the same line, I naturally come to the conclusion that there is a little truth in them. Where there is so much smoke there is sure to be fire. But the minister says that Colonel Allison is an honest man—I think he said he was the only honest man he had met since the war began. At least he said he was the most honest of all the men he had met, if there can be degrees of honesty, and I presume there can be. But, besides being the most honest man, Colonel Allison, it seems, is also the most able. Why it is evident that the minister could never have carried on this war successfully—and I want to give him all the credit that is coming to him; he has shown a lot of energy and has done some great hustling; we on this side give him credit for all that—had it not been for the great assistance he has received from Colonel Allison. Judging from what we have heard this afternoon, had it not been for this gentleman, the minister would not have succeeded in getting anywhere; there would have been no Canadian overseas force but for him. The minister tells us that Colonel Allison has saved $50,000,000 since the war began, and would not take a cent. What is the use of the Minister of Finance (Sir Thomas White) racking his brains and getting grey-headed over the question of raising money for this war, when all that is necessary is to bring on this wizard, Colonel Alliston, and let him wave his magic wand, and bring forth $50,000,000 when it is needed. Why, the minister has not treated this colleague of his right. Instead of having Colonel Allison down there in the United States he ought to have him here, running the whole show. I am afraid, maybe, some of his colleagues would object to Colonel Allison running the show, and some of his followers also. Looking at the faces of some of the followers of the Government, when the minister was extolling the virtues of his friend, I thought I noticed on some of them indications of dissent. That may have been an optical delusion, but some feeling was patent in their faces as the minister was telling of the virtues of Colonel Allison. Well, we have invited Colonel Allison to come before the Public Accounts Committee, and we will have an opportunity to judge for ourselves whether the minister's opinion of this gentleman is right or wrong, coloured or not—that is, from our standpoint, and I admit that we are very much below the plane of the minister. The minister endeavoured this afternoon to free Colonel Allison from any suspicion of wrong-doing. Well, the minister had better wait until a charge is made before he attempts to put up a defence. But let me call attention to something that was brought out in the Public Accounts Committee yesterday morning. A man named Nash, a tailor, I think, of Morrisburg, said that in the early days of the war he was requested by Mr. Chambers who, I have learned, is a very active gentleman in the Conservative organization of the constituency that I have mentioned, to give Colonel Morgan some assistance in the tailoring line. He consented, and, with that end in view, went to Colonel Allison's office, where he met Colonel Morgan and two or three merchants from Redfield, New Jersey. These gentlemen, one of whom was a Mr. Eismer, had twenty or twenty-five samples of all kinds of army clothing—caps, greatcoats, tunics, trousers, knickerbockers, handkerchiefs, shirts, shoes, blankets. Upon these samples was stamped the firm name and the price. Evidently the gentlemen who came here from New Jersey were not trying to deceive anybody, for there were the samples, with the name of the firm and the price of the goods stamped upon them. But the Conservatives of Morrisburg employed this tailor to go to Colonel Allison's office and change these labels. He cut the labels off, and put on other labels from which he had removed his own name, simply leaving the label blank—"white linen," he called them. The number and the price, I think, appeared on the label. Mr. Nash does not know exactly what was done, but he heard them talking about the price that was going on one of these labels. The price that was on the manufacturer's label was $3.50—this was a pair of trousers—and he says that they were talking about putting on a price something over $4. When we asked him why they were removing these labels, he

[Mr. Carvell.]

said they told him that they did not want the Germans to know from whom the goods had been bought. A little later in the investigation he said that these were samples, and that he heard them direct the stenographer to address them to Sir Sam Hughes at Ottawa. I asked him if he was afraid that the Germans might capture some of the British soldiers who were wearing these trousers, and subsequently trace their purchase back to United States manufacturers. He said he hardly thought so, because these goods were only samples. Then I asked him if he thought the price would scare the Germans, but he had entirely receded from the German theory. These samples were going to the Minister of Militia; it was supposed that from them the Government of Canada would purchase goods. The manufacturer was perfectly willing to leave the price upon the goods, so that everybody should see it. In Col. Allison's office, by Col. Morgan, his associate and friend, these tags were cut off and other tags put on upon which other prices were placed. We have not got any further than that; I do not know whether they succeeded in getting orders.

Mr. MIDDLEBRO: The hon. gentleman is in error when he says that other prices were placed upon the labels.

Mr. CARVELL: The witness swore that he heard them talking about putting another price upon this particular pair of trousers—more than $4.

Mr. MIDDLEBRO: The hon. gentleman just now said that other prices were placed on these tags.

Mr. CARVELL: Certainly.

Mr. MIDDLEBRO: That is not so.

Mr. CARVELL: I will admit that the Chairman of the Public Accounts Committee, by his ingenuity, did everything he could to keep that evidence from coming out. But he got it, and now the public is getting it. The Chairman of the Public Accounts Committee is now seeking to draw a herring across the trail.

Mr. MIDDLEBRO: The hon. gentleman is stating what is not true.

Mr. CARVELL: That will not help matters one particle. I tell my hon. friend right here that we know our rights in the Public Accounts Committee just as well as he does, and we know our rights in this committee just as well as he does. He will not help the Estimates through by any such conduct as this.

Mr. MIDDLEBRO: My hon. friend said a moment ago—and Hansard will bear me out in this—that different prices were placed upon these tags.

Mr. CARVELL: Yes; and they were.

Mr. MIDDLEBRO: The evidence was that there was a price of $3.50 on one pair of trousers, and that no other prices were put on. As my hon. friend says, the witness heard different prices mentioned.

Mr. CARVELL: Is that not a nice distinction? Is the Chairman of the Public Accounts Committee not covering himself with glory by making a statement of that kind? The Solicitor General will have to resign if my hon. friend takes his place in the hair-splitting business. With all the ingenuity that the Solicitor General possesses, he never could make an argument like that; he never could draw so fine a distinction as that. What do you suppose they cut these tags off for? What was the object of taking these articles into Colonel Allison's office and changing the tags? They say it was done to fool the Germans; do you think anybody in Canada is fool enough to be fooled by a reason like that? Hardly. The minister knows better; everyone of his followers around him knows better; even the Chairman of the Public Accounts Committee knows better. He knows that men do not do things like that without a purpose, and he knows that the purpose of these men was to deceive somebody—and that somebody was the Government of Canada. Whether they succeeded or not, I do not know. We will try to find out.

The hon. minister told also about the wonderful honesty of Col. Allison in purchasing Colt revolvers and pistols. I shall not go into that to-night, for I know that there will be another opportunity of going into it more thoroughly. The hon. gentleman tries to justify the throwing away of thousands of dollars of the people's money because of something that was done in 1899 or 1900. It is the tu quoque argument over again; if somebody else steals, we have the right to steal. That is the answer that has been given to every statement which we have made on this side of the House since 1911.

Sir SAM HUGHES: May I correct my hon. friend? I did not say that if somebody else had the right to steal, we also have the right to steal, but that if some others had

the right to put on a commission, we might have justification for putting on a commission, but we did not do it.

Mr. CARVELL: Then I will modify my assertion by using the word "commission" instead of the word "steal." The hon. gentleman says: "We did not do it." Has my hon. friend forgotten the evidence given by two reputable witnesses before Sir Charles Davidson's commission in Ottawa, one of them a representative of Mr. Birkett and the other a representative of the Ketchum Company? Two hardware firms in this city swore at the very time the minister was buying these revolvers at $18.50 that they were able to buy them at a discount of 10, 5 and 2½ per cent, which brought the price down to $15.05; it was either $15.05 or $14.05. One of these firms bought one pistol, and the other two. And Colonel Allison, who was buying them by the thousand, paid $3.50 more for his pistols than did these two firms. Does the minister tell me that if he had had Birkett buy these pistols he could not have saved the country at least one-half of the commission? I will go further. Is there a man within sound of my voice to-night, is there any man in Canada who has read the evidence, who does not believe that the Colt Revolver company paid a commission in some way or other to somebody? The vice-president of the Colt company swore that he made a present to Col. Allison, and said that it was for general business. Is there any man who believes that business is carried on in that way? Is there any man who believes that there was not a rake-off somewhere? There is something else the minister did not tell us this afternoon, when he was reading the evidence of Stone. He did not say that he was present when this trade was made.

Sir SAM HUGHES: Stone was not present.

Mr. CARVELL: Stone said the minister was present.

Sir SAM HUGHES: The minister made the deal; Allison had nothing to do with it.

Mr. CARVELL: He was present too.

Sir SAM HUGHES: Yes.

Mr. CARVELL: You always find Allison around. You will find Allison around in every transaction of this kind that has taken place in the United States since the day war was declared. Of course, the minister says that he is a saint, and that everything is all right. We have no proof to the contrary, but we have a lot of suspicious circumstances. As I said before, Allison can come here and we will try and get the matter straightened out.

The minister has also been able to revolutionize the price of copper in the world to-day. He says that he has had a smelting establishment erected in Canada and that this at once brought the price down. I have not bought any copper myself in the last three or four weeks, but I am buying copper quite frequently, and I know the price has been going up and up and up. The last I bought I paid 25 cents a pound for it. But I can discuss copper with the minister a little later on. He has copper on the brain just now, and shells, and fuses, and things of that kind. Next Tuesday we shall have the pleasure of discussing shells, and fuses, and copper, and I know the minister will be present to discuss these things with us face to face. I will therefore reserve my remarks on copper and fuses and shells. While I am on the subject, however, I might say that when it comes to letting a $22,000,000 contract for fuses, at an average price of $4.33⅓, we find Colonel Allison on the job again. Wherever you find the Militia Department doing business in the United States, there you find Colonel Allison. And another gentleman is usually found with him, one by the name of Harris. Probably the minister knows something about him. He has an interest in the shell business in Ontario. Like Colonel Allison, he is a great friend of his; he is always around when fuse contracts are being let.

Mr. A. K. MACLEAN: He lives in New York.

Sir SAM HUGHES: Perhaps the hon. member for South Renfrew (Mr. Graham) could tell us something about this gentleman.

Mr. CARVELL: I know this man Harris is always around when contracts are being let.

Sir SAM HUGHES: Is there any harm in that?

Mr. CARVELL: I don't know. He is simply Allison's friend. The minister also told us this afternoon what a wonderful saving had been made on motor trucks. I want to give my hon. friend credit where credit is due. I admit that the department bought motor trucks cheaper after April, 1915, than they did before, but how much cheaper I do not know. The minister gave us certain figures this afternoon, but you

know, Mr. Chairman, the minister's memory is bad when it comes to figures. I do not mean that he would mis-state a figure, but only that his memory is bad. However, the accounts will be brought down, and I presume we shall have a chance of verifying his figures. I should also like to know what has become of this wizard in buying motor trucks, Col. Thomas. The minister referred to him this afternoon. This Col. Thomas appeared before the Public Accounts Committee over a period of three or four weeks last spring. He took all the credit to himself for reducing the price of motor trucks, and gave Allison none at all. Whenever we had a spare half-hour in the committee we used to put Col. Thomas on the stand, and he would tell us how he purchased the motor trucks. Then we would go on with our business, and when work became shy again, we would put Thomas on the stand and hear the story once more. But he seems to have disappeared altogether. He has not been seen around the city since October or November last. He may have gone to the front to look after motor trucks, or he may be in the United States buying more, or spending the winter in Florida with Allison and Morgan. Will the minister tell us where he is?

Sir SAM HUGHES: Col. Allison is the gentleman who first drew my attention to the plan by which the price could be reduced. He gave me the names of two gentlemen who were experts in the business, and if, when I was speaking this afternoon, I omitted anything in this regard it was an act of omission, not of commission. I will tell the whole story. There is nothing being kept back at all. Colonel Allison got me in touch with Mr. Thomas, now Colonel Thomas—promotion comes rapidly when you do good work—and with a young gentleman by the name of Bucroft, who is the editor of some automobile journal in the United States, and one of the brightest young fellows it has been my privilege to meet. These three gentlemen thought out the plan, and I executed it. I am a little proud of that, because we saved Canada on these motor trucks the sum of $1,600,066. Thomas has since been sent over to England to consult with the British Government, and has been inspecting trucks at the front. He is returning to Canada at a very early date. His services have been recognized as very valuable both by this Government and the British Government.

Mr. CARVELL: The minister should tell him to take a little less credit to himself, and leave a little for Allison.

Sir SAM HUGHES: He was the expert.

Mr. CARVELL: Then Allison did not play any part at all in the saving on these motor trucks?

Sir SAM HUGHES: Oh, yes, he did. He was the engineer of the show, Thomas was the expert, and I had the honour of being the driver.

Mr. CARVELL: There always seems to be enough glory to go around. The minister is never shy on glory, he has a plentiful supply of it. They are all the finest chaps in the world as long as the money holds out. The minister has also referred to the Ross rifle, in practically the same terms he used a month ago. I am not here to defend or condemn the Ross rifle. I am free to admit that on many occasions in this Parliament during the last eight or ten years I have defended the policy of manufacturing rifles in Canada. I defend that policy to-day. I believe it is the proper policy, but I am surprised that in the conduct of his department, the minister has not gone further in connection with the manufacturing of war supplies in Canada than he has done. We have a big plant down in Quebec; I think my hon. friend referred to it as a blacksmith's shop. Well, it costs a lot of money to run that blacksmith's shop; the cost runs into hundreds of thousands of dollars a year; I refer to the arsenal. Is it not a most remarkable thing, Mr. Chairman, that we have been buying our war supplies, such as shrapnel shells and high explosives, though I do not believe we had any high explosives in Canada before the war comenced.

Sir SAM HUGHES: In Canada, we have made millions of high explosive shells. The Shell Committee—

Mr. CARVELL: I know more about the Shell Committee than my hon. friend thinks I do.

Mr. GRAHAM: There were not high explosives made before the war.

Sir SAM HUGHES: No.

Mr. CARVELL: We will discuss the Shell Committee next Tuesday, and probably without gloves. But to-day we are discussing the Militia Department, and the policy of manufacturing war supplies in Canada. I defended the Ross rifle propo-

sition some years ago, and I defend it to-day; but I want to say, in passing, that I only hope the Ross rifle is in the happy condition in which the minister claims it is. One would think, according to the description given by the minister this afternoon, that the Ross rifle was such a fine weapon that everybody in the Old Country had his eye on it, and that the soldiers had to sleep on it to keep other solders from stealing it, and substituting a Lee-Enfield, Of course I know that that was a figure of speech intended for the reporters.

Sir SAM HUGHES: I referred to sharp shooting.

Mr. CARVELL: Let us get down to the ordinary business of Parliament for a little while. I have met four different soldiers within the last two months—I could give their names, but I do not wish to do so—two of them were sergeants and the other two privates. They were wounded soldiers who had returned from the front, and I discussed this matter with them. By a rather singular coincidence their statements agreed. They were partly commendatory of the Ross rifle, and partly condemnatory. They all agreed that, for sniping, all the soldiers wanted the Ross rifle because it had the peep sight, and the men who were hidden had plenty of time in which to shoot. But they said that for action or ordinary service the men would throw away their Ross rifles for a Lee-Enfield. I give that statement to the minister and to the House. I came to the conclusion that there must be something wrong with the Ross rifle as an ordinary weapon for trench and field warfare, but if the minister can succeed in eliminating those difficulties, or, if he has succeeded, as he says he has, I am glad.

Sir SAM HUGHES: I did not say there were difficulties. I stated that it had been discovered that the ammunition was at fault. The Canadian soldiers could not be expected to have confidence in their rifles when they were asked to answer those ten questions that were sent to them. The bad ammunition got mixed up with the good, and at the battle of St. Julien some of the rifles were found to be jamming. The soldiers who had not been accustomed to the Ross rifle might take it into their heads that the rifle was at fault, but it was the fault of the ammunition. It is known now that the fault lay with the ammunition; the report of Field Marshal French showed that. The reports show that for many weeks there has been nothing wrong except that some ammunition got mixed up again. My hon. friend will remember that I read a letter from the inspector, a very capable officer, in which he stated that by some peculiar mischance a lot of bad ammunition got mixed up with the ammunition served out to the Canadians.

Mr. CARVELL: The minister told us on a former occasion that they had enlarged the chamber of the Ross rifle something like a two-thousandth part of an inch. Would that make any difference even if the soldiers got perfect ammunition? I am just giving the facts as I understand them. I know there has been a lot of dissatisfaction at the front, in England, and in Canada over the Ross rifle, but I sincerely hope that the minister has overcome the difficulties. If the difficulty was not with the rifle, of course the rifle cannot be blamed. I do not want to say anything here that would in any way be quoted as criticising or condemning the equipment of the Canadian army at the front.

Sir SAM HUGHES: I know my hon. friend does not. I am sure he will agree with me that when questions like those to which I have referred were distributed among the soldiers—and they were sent there with an object, whether by an enemy or not, I do not know—the men would not have a feeling of confidence in their arm, particularly on the eve of battle.

Mr. CARVELL: I agree with that, and I think the party responsible should be severely censured. I am very glad to learn that the fault in regard to the Ross rifle is with the ammunition and not with the rifle itself. But why is it, that in the three years during which my hon. friend was minister, prior to the outbreak of war, nothing was done in the way of manufacturing shells in Canada? We had an arsenal at Quebec. The minister made a statement which I could hardly credit, but I read it over in Hansard, and found that I had understood him correctly. He stated that they made only 75 shells a day at the arsenal, and that 75 per cent of these shells were no good. What is wrong with the outfit at Quebec anyway?

Sir SAM HUGHES: In the event of war taking place we felt that we would be in a better position to buy our shells, and we only made enough to meet ordinary requirements. Both our energies and our money went towards making Mark VII ammunition. The manufacture of shells was so

small that it would not count in the case of war.

Mr. CARVELL: That is the minister's explanation, and of course we must accept it, but to me it is a remarkable thing that the arsenal at Quebec, which costs, I am safe in saying, hundreds of thousands of dollars a year, was so utterly useless when the war broke out. The minister will remember that, prior to 1914, we on this side of the House called his attention on many occasions to the fact that his militia was not anything like what he said it was. We were compelled to point out that his principal business was building armouries and places of that kind; that he was not really building up the militia. While I do not want to cast any reflection on the Canadian militia, it would be very interesting now to get a return showing the number of men in the first contingent who had attended the annual drills five or six weeks prior to the time they were mobilized. However, that is a matter which we may bring up at another time.

There is one thing that must be impressed upon the minister, that must be engraven upon his heart, and that is that if he is Minister of Militia after this war is over there will be a very different militia system in existence in Canada than that which prevailed prior to the war. We used to listen to the bombastic speeches of the minister, in which he used to tell us about the 75,000 trained and equipped men whom he had ready to jump into the fray at a moment's notice. I think he has had cause to revise that opinion; but, fortunately, the yeomanry, the young men, the middle aged men, and the old men of Canada, who did not belong to the militia, who were not under the special guidance of the minister, and did not know anything about his top-heavy militia department and system, jumped into the breach, and well it was that they did, because otherwise the minister would not have been able to read us the figures to-day, that will excite the pride of every Canadian, showing that there have been recruited 275,000 men in a year and a half. I do not know that the minister should take all the glory to himself. He had better distribute that glory around a bit.

Sir SAM HUGHES: Did I not try to do it to-day?

Mr. CARVELL: Yes, I admit that he did; he was very impartial in his distribution of the glory. If he had been as impartial in his distribution of business favours as he was in throwing bouquets around the House we would not be criticising him.

Sir SAM HUGHES: I do not know how I can please my hon. friend. I was tackled by my hon. friend from Portage la Prairie (Mr. Meighen), who said: "This thing works one way altogether; no Tory in Portage la Prairie can get a contract; the Grits get them all." A friend from Brandon wrote to my right hon. friend the Prime Minister and myself complaining that we had given the Grits of Brandon everything, and that nothing was given to the Tories at all. I get knocked on this side, I get knocked on that side, and all I can do is to settle down and keep going ahead on an even keel.

Mr. BRADBURY: It is the same in Selkirk.

Mr. WEBSTER: It is the same in Brockville.

Mr. CARVELL: That is internicine warfare, and I am not interested in it. The minister will have to settle that matter with his followers. But, to be serious, I would say that he has not got any more knocks than he deserves.

Sir SAM HUGHES: From both sides.

Mr. CARVELL: Yes, from both sides. I was very glad to hear the minister say this afternoon that he had got out of the patronage system as far as medical doctors were concerned.

Sir SAM HUGHES: I used the wrong term this afternoon, my deputy minister informs me, in speaking of the patronage list. The local officers have a purchasing list for small things in country towns, but I do not know anything about it. There is a purchasing list, for instance, in Portage la Prairie, Brandon, Pictou and other places. This purchasing list is sent to the local divisional officers, I believe.

Mr. CARVELL: This list must be all Tory then down in New Brunswick, because no Liberal has heard anything about it.

Sir SAM HUGHES: Anybody who has the line of goods desired can get on the list.

Mr. CARVELL: He can get on the list, but he will never be applied to, and therefore will not be enabled to sell anything. Being placed on the list is one thing, but being applied to and asked to sell goods is another thing. Will the minister say

that every man on the list will have a chance to supply the goods that he has to sell?

Sir SAM HUGHES: I do not know the first thing about the list. Such things are left to the local men. In Kingston, Brandon, Portage la Prairie, Brockville, and a hundred other places they have been tearing me limb from limb because I would not give them this business. Now, my hon. friend is tearing me limb from limb the other way.

Mr. CARVELL: That is a family fight. The minister says that he has no time to bother with these small things. All right; I agree that he is a busy man, but it would not take very much of the valuable time of the minister if he ordered his deputy to send out instructions that any man who has goods to sell should be put on the list and will have the right to tender.

Sir SAM HUGHES: That is the order now.

Mr. CARVELL: And that the lowest tender be accepted.

Sir SAM HUGHES: That is the rule which has invariably been followed.

Mr. CARVELL: Will the minister tell us that all over Canada that policy will be followed and that he will give instructions to that effect?

Sir SAM HUGHES: No, I cannot give instructions because I gave them long ago. Those are my instructions to the officers in various places. Not only that, but instead of placing the list on the back door of a store, I have instructed them that the call for tenders shall be made public and that a list of the things required shall be sent to people able to supply them whether they are Liberals or Conservatives. That order has been in existence for years.

Mr. CARVELL: How long?

Sir SAM HUGHES: That was issued before the war.

Mr. CARVELL: Then, I can only say that the minister has been awfully deceived, that somebody has gone back on him or has double-crossed him, because, certainly down in my county no Liberals ever get a chance to tender on anything. There is no use in the minister talking about what he has done in this town or in that if they have not carried out his instructions. Every gentleman sitting around me to-night can bear testimony to that. My hon. friend from Northumberlanad (Mr. Loggie) was telling us this evening that in Chatham no Liberal could by any chance sell a loaf of bread.

9 p.m.

Mr. BURNHAM: Perhaps they do not deal in bread.

Mr. CARVELL: I hope my hon. friend from Peterborough (Mr. Burnham) will pardon me if I do not reply to that sage remark at the present time. I want to have this thing thoroughly understood before leaving it; let us have no misunderstanding.

Sir SAM HUGHES: The deputy minister informs me that I was absolutely right in the statement I made and that at every place where troops are stationed the Army Service Corps invariably call for public tenders for these things.

Mr. CARVELL: I can tell the minister that that statement is not true. In Woodstock, New Brunswick, there have been 500 troops stationed since some time in December and there were no public tenders for supplies of any kind.

Sir SAM HUGHES: Are they fed by the Army Service Corps?

Mr. CARVELL: Certainly they are. Two good Tory firms were invited to tender for the groceries, they put their heads together and they decided that they would tender just exactly alike, and they put the tenders high enough. One of them double-crossed the other, he cut a little off the price and got the business. Nobody else got a chance to tender. The minister may have given instructions that Liberals might be given a chance to tender for groceries, meats and things of that sort, but there is somebody between him and the carrying out of his instructions and I do not think it is the deputy minister either. The whole thing gets down to local Tory patronage. When the minister interrupted me I was going to congratulate him. I was going to tell him that the arrangement he has made whereby the commissioned officer of a corps can appoint a medical officer at any time he chooses to examine recruits is a move in the right direction. There may be some things that his Conservative friends may complain of in certain places; that is liable to happen. I imagine, from what he tells us that he does not take very much stock in some of these complaints. I think it is a move in the right direction because men

have been moved long distances to be examined, in many cases they have failed to pass the examination and it has been a cause of a great deal of inconvenience, and I believe, to some extent, has retarded recruiting.

Sir SAM HUGHES: And it has obviated the objection of keeping men waiting for weeks.
