The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol  $\rightarrow$  (meaning "CONTINUED"), or the symbol  $\nabla$  (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole  $\rightarrow$  signifie "A SUIVRE", le symbole  $\nabla$  signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

But if approaching Boston from Cape Ann, via Broad Sound, bring Long Island Light to bear S W by W, and run for it until Deer Island Point Beacon bears N W by N  $\frac{1}{4}$  N, three-eighths of a mile distant, then W by N  $\frac{1}{4}$  N up the harbor. Strangers should bear in mind that in the middle of Broad Sound there is but 8 feet of water at low tide; but by keeping on the southern side of the Sound, leaving the Graves Automatic Buoy half mile on the port hand and the Devil's Limb Buoy (black can No. 1) a mile on port hand, and running straight to Ram's Head buoy (black can No. 5) about W S W, passing Aldrich's Ledge buoy (black can No. 3)  $\frac{1}{4}$  mile on port, then leaving Ram's head 50 yards distant on port, and run about W  $\frac{1}{4}$  S to clear Deer Island Point Beacon, you can carry 12 feet safely. **Explanatory.**

**Aphelion**—The point of a Planet's orbit farthest from the Sun.

**Apogee**—That part of the Moon's orbit farthest from the Earth.

**Astronomical Day** is reckoned from noon to noon through the 24 hours. Thus, July 21, 9h, is 9h A of July 21, and July 21, 15h, is 3h M of July 22.

**Conjunction**—A Planet directly between the Earth and the Sun is said to be in Inferior Conjunction with the Sun. A Planet with the Sun directly between it and the Earth is said to be in Superior Conjunction with the Sun. Planets are said to be in conjunction with each other, or with the Moon, when they are in the same sign and degree.

**Declination**—The distance of a heavenly body from the Equinoctial, measured north or south, in degrees or minutes, on a Meridian.

**Ecliptic**—The plane of the Earth's orbit, so called because Eclipses can take place only when the Moon is on or near it.

**Elongation**—The distance of a Planet from the Sun as seen from the Earth.

**Equinoctial**—The circle in the heavens traced by the Earth's Equator.

**Node**—That part of the orbit of a heavenly body which intersects the Ecliptic. If the body is passing from south to north, it is called the Ascending Node; if from north to south, Descending.

**Opposition**—A Planet with the Earth directly between it and the Sun is said to be in Opposition to the Sun.

**Penumbra**—That portion of space around the shadow of the Earth, in passing through which the Moon diminishes in brightness, in consequence of a part only of the Sun's rays reaching her surface.

**Perigee**—That part of the Moon's Orbit nearest to the Earth.

**Perihelion**—That part of a Planet's Orbit nearest to the Sun.

**Quadrature**—Two heavenly bodies are said to be in Quadrature when they are distant from each other by one-fourth of the Zodiac, or three signs apart.

The Sun's Declination and fast or slow of clock are given for apparent noon, or time of passing the Meridian of St. John.

ND, CHILDREN SCHOOL BOOTS, VERY DURABLE, AND AT LOW PRICES.

**Hurley's Hand-Made Cowhide and Kip Boots suit the Trade.**

The Moon's Southing is given in Astronomical time for the Meridian passage at St. John; and her Declination, when on the Meridian.  
The Rising of the Moon is given from Full Moon to New Moon; and the Setting from New Moon to Full Moon.

**TIDES.**

The Tides in the Calendar are the Morning and Afternoon Tides at St. John and Charlottetown. In the Tide Table (page 37) will be found Constants for finding the time of High Water at each of the places given in the Table.

In editions of this Almanac prior to 1885 the Tides were only given approximately, but ever since they have been corrected for the varying distance of the Moon from the Earth, and also her angular distance from the Sun. They can now be depended on as accurate to at least the same degree as the Admiralty Tide Tables.

It will sometimes be found that when a Constant is added to the time of High Water at the Port of reference the sum exceeds 12 hours; in this case subtract 12 hours from the sum and the remainder will be the time of High Water at the required Port on the succeeding afternoon or morning, according as the Tide at Port of reference was a Morning or Afternoon Tide.

**EXAMPLE.**

High Water at St. John, January 13th,.....	11h. 43m. A.
Moncton add,.....	54m.
	12h. 37m.
	12 0
	Subtract,
High Water at Moncton, January 14th,.....	0h. 37m. M.

It will sometimes be found that a Constant to be subtracted is greater than the time of High Water at the Port of reference: in this case add 12 hours to the Time at the Port, subtract the Constant, and the remainder will be the time of High Water at the required place for the previous Morning or Afternoon, according as the Tide at the Port of reference was an Afternoon or Morning Tide.

**EXAMPLE.**

High Water at Charlottetown, January 16th,.....	0h. 17m. M.
Add,.....	12
Newcastle, Beaubère Island, subtract, .....	12h. 17m.
	4 15
High Water at Newcastle, January 15th,.....	7h. 2m. A.

**FORECASTING THE WEATHER.**

Men have, from a very early period, studied the weather, on account of its great influence on their pursuits, in order if possible to predict its nature, and prevent those losses to the Farmer and the Sailor which result from violent storms.

The earlier students based their predictions on the phases of the moon, and an examination of the Greenwich observations for more than half a century has shown that this theory is entirely unfounded. Weather prophets, Moore, Zadkiel and Vennor claim in their Almanacs to be able to forecast the weather day by day for a whole year; but meteorological science in the United States, and the Signal Service of the United States, with the Weather Bureau of the Dominion, does not claim to forecast, with any certainty, the weather for more than three or four days at the most.

**WM. HEATHFIELD, MAIN STREET (WEST), PORTLAND, N. B., De**

Wholesale. 23 and 25 Prince William Street, Saint John, N. B. <sup>11</sup>

If an observer could obtain, at regular and repeated intervals, readings of the Barometer at stations distributed over a large area, he would be enabled to trace the march of the storm, for it has been found that the wind always blows towards the place of the lowest barometer reading; and so, by means of the telegraph, he may warn those places the storm is approaching. Still, mistakes are often made, and the forecasts are not always infallible, so that much remains to be done before meteorology can be ranked among the exact sciences.

TIDE TABLE.

The time of High Water in the following places will be found approximately by adding to or subtracting from the time of High Water at the given Port of reference, as follows:

Sign + add; Sign - subtract.

Letter Carriers' Delivery.

Letters and Papers for St John delivery should be addressed to STREET and NUMBER.

Change of Residence should be promptly notified to the Postmaster in WRITING.

Three Deliveries daily in business sections of the City, commencing at 8.30 a. m., 1 p. m. and 3.30 p. m.; two deliveries in other sections at 8.30 a. m. and 3.30 p. m.

Letters not bearing the name and number, addressed to parties whose address may be known to the Carriers, will be delivered by them.

An order to place in a box letters belonging to another person than the owner of the box, cannot be recognized unless such letters are addressed to the care of the box or its owner.

**'Time Ball on Northern Tower of Custom House.**

The Ball will be hoisted half its elevation each day (Sunday excepted) at fifteen minutes before one o'clock. At one minute before one o'clock it will be hoisted its full length; and at one o'clock, mean time, the Ball will be dropped. A Chronometer keeping correct Greenwich time should then show 5h 24m 15s, and the difference between this and the time shown by a Chronometer, is its true error on Greenwich time at the moment. As the above hour of one o'clock when the Ball drops, represents 5h 24m 15s at Greenwich, the error of a Chronometer may be ascertained, no matter where the ship is lying. Masters of vessels arriving at Saint John should compare their Chronometers by the time Ball, as it will enable them to get the sea rate, which frequently varies from harbour rates. Latitude 45° 16' 42" North. Longitude in time 4h 24m 15s West of Greenwich. GEORGE HUTCHINSON, *Director.*
