Religious Tract Society's Publications.

The publications.

The publications.

The publications of the London Religious Tract Society are now sold for each at the book store of Mr. G. T. Husiard. The stock has been much ealarged by recent impersations, and many works of the best Eaglish davines will be found on their shelves—The Purent Society has also entrasted this Committee with six Libraries to be sold at half price to Sunday Schools. These libraries ambering from 30 to 1000 volumes, can thus be purchased for £25 c. As it will materially advance the interests of religion amongst our scattered population to have grants of books towards the formation of libraries and the establishment of Sunday Schools, especially in the country parts; it is turnistly hoped that Christian friends will help as with their subscriptions. A few pounds subscribed now, would enable the Committee to do much towards supplying the most destinate and control of the same,

PATENT OFFICE REPORTS

These elaborate reports from the Patent Office are gratifying indexes of the general inventive industry of the country. Commissioner Hodges' present one is full of valuable and interesting information. There were 2639 applications received for patents during the year, and 1020 patents issued. An application is rarely disposed of without heing examined at least twice, and sometimes six times. Probably those 1020 patents have cost 7000 examinations. This is the largest number ever granted, in one year, except during the first year of General Taylor's administration, when Commissioner Ewbank issued 1076. Extensive additions have been made to the Patent Office

Taylor's administration, when Commissioner Ewbank issued 1076. Extensive additions have been made to the Patent Office buildings; and there is still a want of space. Professor Renwick's examiner's report explains the principle of the Celebrated Hobbs'lock. Its "unpickability" depends upon a secondary or false set of tumblers, which prevent the instruments used in picking from reaching the real ones. Moreover, the lock is powder proof, and may be loaded through the keyhole and fired off until the burglar is tired of his fruitless work, or fears that the report of his explosions will bring to view his experiments more witnesses than he desires.

Doors and shutters have also been patented that cannot be broken through with either pick or sledge-hammer. The burglar's "occupation's gone."

The caloric ship is described and commended at some length, but the report admits that "its end is not yet fully attained.

tained.

A harpoon is described which makes the whale kill himself. The more he pulls the

wante kill himsell. The more he pulls the line, the deeper goes the harpoon.

An ice-making machine has been patented, which goes by a steam engine. In an experimental trial, it froze several bottles of sherry, and produced blocks of ice of the size of a cubic foot, when the thermometer was standing at 6th content. thermometer was standing at 80 degrees. It is calculated that for every ton of coal put into the furnace, it will make a ton of

From Dr. Gale's examiner's report we gather some idea of the value of patents.

who had some a slight with the work of the work sold for \$60,000. A third obtained a paten for printers' ink, refused \$50,000. These are ordinary cases; while such inventions as the telegraph, the planting machine, and the India rubber patents, are worth millions

Twenty-seven harvesters, fifteen ploughs, twenty-six seed-planters, eight threshing machines, ten corn-hullers, and three horserakes, have been patented during the year, in addition to those now in use.

Six new saw mills, seven shingle-split-ters, and twenty new planing machines, have been patented within the year. Seven new machines that spin, twenty that weave, and seven that sew, are also described.

described.

Examiner Lane's report describes various new electric inventions, Among these is an electrical whaling apparatus, by which the whale is literally "shocked to death." Another is an electromagnetic alarm, which rings bells and displays signals in case of fire or burglars. Another is an electric clock, which wakes you up, tells you what time it is, and lights a lamp for you at any

hour you please.

There is a sound gatherer," a sort of
There is a sound gatherer, a sort of
There is a sound gatherer, a sort of locomotive, bringing to the engineer's ear all the noises ahead, perfectly distinct, not-withstanding the rattle of the train.

withstanding the rattle of the t.ain.

There is an invention that picks up pins from a confused heap, turns them all round with their heads up, and sticks them in papers, in regulars rows. Another goes through the whole process of cigar-making, taking in tobacco leaves and turning out the perfect article.

One machine outs shores a mether secure.

taking in tobacco leaves and turning out the perfect article.

One machine cuts cheese; another scours knives and forks; another blacks boots; and another rocks the cradle; and seven or eight take in washing and ironing.

There is a parlour chair putented, that cannot be tipped back on two legs, and a railway chair that can be tipped back into any position, without any legs at all.

Another patent is for a machine that counts the passengers in an omnibus, and takes their fares. When a very far man gets in, it counts two and charges double.

There are a variety of guns patented that load themselves; a fish line that adjusts its own bait; and a rat-trap that throws away the rat; and then baits and sets itself, and stands in the corner for another.

There is a machine also by which a man prints instead of writing his thoughts. It is played on like a piane. And apeaking of planes, it is estimated that nine thousand are made every year in the United States, giving constant employment to one thousand

nine hundred hands, and coasting over two millions of dollars.

One class of inventions, we are glad to see, meets with deserved reprobation. Whatever may be said of others, the examiners of the Patent Office are not likely to exaggerate, either from ignorance or design. This is their official judgment respecting "burning fluids:"

"There is yet much to be accomplished in perfecting artificial light; and it is to be regretted that the inventors should be so generally satisfied with attempts on their part to render the use of dangerous materials popular, rather than occupy themselves with the search after something that could be used to supply this want, without endangering the safety of all who participate in its consumption. The desire to render the use of highly combustible fluids less dangerous than they can be when burned in lamps of the ordinary construction, has given rise to a few improvements, for which patents have been granted. Thus far, however, nothing has been presented which are needed to supply this want, without the use of highly combustible fluids less dangerous than they can be when burned in lamps of the ordinary construction, has given rise to a few improvements, for which patents have been granted. Thus far, however, nothing has been presented which are not in the frequent and dreadful accidents almost daily recorded from their general use, should prompt the public to the utmost care, if not to banish from all dwellings, as mioveable lights, and especially when burned in lamps of fragile materials."

Albany Journal.

CARPETS.

CARPETS. The Home Journal thus speculates about carpets. In the Crystal Palace, there are specimens of a new article, which, it is said, will supersede them. We copy a part of the *Home Journal's* remarks on the subject; Carpets are going out. Tiles, floors of oak, painted floors and floors inlaid, are coming in. Accustomed as we are to the oak, painted floors and noors initid, are coming in. Accustomed as we are to the use of carpets, it is yet a fact, that in no countries but America and England, are carpets in general uso. The advantages of carpets are two in number: first, they are the cheapest mode of having a showy floor; secondly, they save a world of scrubbing. They are, in fact, a description of sham, being designed to conceal bad carpentery, pine and—dirt. The Exhibition cont

pentery, pine and—dirt. The Exhibition cont is of most of the carety and ladies will do well to consider them. Among others, we observed a very striking floor, made of black walnut and hickory—squares of one bordered by stripes of the other; Minton & Co's "encaustic tiles" are Exhibited in great variety. And they certainly make the finest floors imaginable—(as one who passes the Prescott House, and glances down the entrance, can see.) These tiles are the most formidable rival carpets have had to encounter. They are not only had to encounter. They are not only beautiful in the extreme, but combined the additional advantages of being particularly agreeable to the trade, not very expensive, everlastingly durable, and as easily kept

clean as a marble mantle-piece.

In Great Britain," says the inventor,
upwards of three hundred churches have been either wholly or partially paved with these tiles; fifteen club-houses, banks, castles, and railway stations; ten training institutions, the cathedrals of St. Patrick, Wells, Ely, and Perth; four hundred mansions and conservatories of the nobility and gentry: and five hundred halls and lobbies of private dwellings have also been paved.

Amongst the finest and most elaborate specimens may be named the marine residence of Her Majesty the Queen, at Osborn; the Duke of Sutherland's mansion at Clifden near Maidenhead, Berks; the New Palace at Westminister and par-New Palace at Westminister and par-ticularly that part of it called the great octagon, which was a most difficult work, successfully executed; and the Town Hall, Liverpool. The palace of the Sultan, at tantinople, is laid with Minton & Co.'s

. . . . . "Already many thousand pounds' worth have been shipped to the United States, and many churches and public buildings, (including the State Library at Albany,) besides private dewellings and conservatories, have been paved with the tiles.

The cathedral at Frederickton, New Brunswick; the churches of St. Mark and St. James the Less, Philadelphia; Dr. Alexander's and St. George's. New York; and Grace Church, Jersey city, are paved with them, or in part." We are, therefore, Grace Church, Jersey city, are paved with them, or in part." We are, therefore, justified in saying, that carpets are one of the numerous present institutions, which the future will partly or entirely dispense with.

Novels and Insanity.-The most abundant proof has been furnished of late years, that excessive novel-reading has produced many cases of insanity. It is phylosophical that the education of fictitious sentiments at the expense of real feeling—that the undue excitement of the imagination and of the imagination and of the passions, at the expense of the rea-soning faculties and the exercise of real benevolence, should tend to insanity.

It has often been charged to religion, that it has made people crany insane, and melaneholy. This is a baseless charge

HONITON LACE.—Silk is manufactured in Spitafields, London, not lace. The lace for the manufacture of which the village of Honiton, in Devonshire, England, has long been famous, is supposed to have been first made in Saxony during the sixteenth century, whence it extended to Flanders and France. In Brussels alone there were 100,000 females employed in lace making at the close of the last century. The art was introduced into England soon The art was introduced into England soon after its invention in Saxony, and it is singular that Honiton has produced the best kinds from that time down to the present day. Honiton lace is distinguished by the beauty of its devices, the neatness of finish, and excellence of workmanship; and these qualities, joined to its long established reputation, cause it to command at all times a high price.

PRESERVING FRUITS AND VEGETABLES. Imagine yourself in my cellar; the first thing that attracts your attention is a large basket that holds fifteen bushels; a little basket that holds fifteen bushels; a little further on is another that holds ten; these are filled with apples, Some may say, why do you prefer baskets to boxes? I will state my reasons, they give a chance for the air to circulate through the apples, which keeps them dry and healthy. On the east end of the cellar some boards are raised from the ground, on which is careful to the form the ground on which is careful to the form the the cellar some boards are raised from the ground, on which is spread a lot of onions; and on another table, about two feet above, is spread a lot of onion seed, top onions. The next thing is a heap of carrots, piled up just as you cord up wood, the top ends on the outside. This gives a chance for the air to circulate through the whole pile. I am persuaded that there are a great many vegetables lost by smothering, keeping them from the air.—Maine Farmer.

MOUNTAINS IN THE MOON. It is an accretained fact that there are three clases of lunar mountains, The first consists of isolated, separate, distinct mountains of a very cui distinguishing characteristic of these mountains is, they start up from a plain quite suddenly. On the earth it is well known that mountains generally go in ranges of groups; but we find these isolated lunar mountains standing up entirely apart, never having been connected with any range. The one named Pico is 9000 feet high. This mountain has the form of an immense sugar-loaf; and if our readers can imagine a fairly proportioned sugar-loaf, 9000 feet in height, and themselves situated above it so as to be able to loak down upon its spex, than will have an approximate idea of the they will have an approximate idea of the appearance of Pico. There are many other mountains of a similar description scattered over the moon's surface: and these mountains not only stand apart from each other, but what is still more remarkable, the plains on which they stand are but slightly distributed. How singular, then the influence that shot the mountain but signify distributed. How singular, then the influence that shot the mountain up 9000 feet, and yet scarely disturbed the plain in the immediate neighbourhood. The second class of lunar elevations consists of mountain ranges. Now this is the principal features of he imountains on earth. This phenomenon is also found, in the moon, but there it is the exception; only two principal ranges are found, and there appears to have been originally one range. One is called the Appenines. It is so well seen, that, just as the line of light is passing through the moon you will think it is, generally speaking, a crack in its surface; but a telescope of ordinary power will at once manifest it to be a range of mountains. The lunar Appenines may be compared with the lottiest range of mountains upon earth. It is 18,000 feet high, and there is another range still higher 25,000 feet above

its base. In this feature, then, the moon occresponds with the earth, but with this difference—what is the rule on earth is the exception in the moon.

Gas for Heating and Cooking.—We find by the New York Mirror the modus operandi by which heating and cooking by gas is to be accomplished. The gentleman who has succeeded in this matter is Mr. who has succeeded in this matter is Mr. John Power, of Brooklyn. The Mirror says, the gas pipe is tapped at any point, an Indian rubber tube is attached by means of an ingenious coupling, composed in part of the same material, (for which Mr. Power has a patent,) through which the gas is conducted to a small iron plate—not much larger than one's hand—this forms what may be called the stove. This plate is filled with perforations containing asbestos, which concentrates and diffuses all the heat. The computation of the inventor goes to show that a small office might be heated for the trifling sum of fifteen cents per day. Incredibly small as this appears, the Mirror confidently thinks it will cover the whole expenses, thought it has not demonstrated expenses, thought it has not demonstrated this by actual experiment. Admitting, however, that a much larger amount will come nearer the truth, the advantages of the invention are obvious. Eor lawyers' and similar offices, where it is desirable to avoid the dust, dirt and trouble of a coal fire, to the dust, dirt and trouble of a coal fire, to say nothing of the expenses of keeping an attendant, it is peculiarly adapted. A man can enter his office in the morning, turn on the gas, apply a match thereto, and the fire is instantly started, and by the time he gets comfortably settled down to his desk, the room will be warmed.

room will be warmed.

Of its complete success in cooking, the Mirror speaks with a confidence, founded upon careful observation and repeated experiments. Colonel Fuller has eaten meats cooked by this new process, and can vouch for their fine flour; as for the expense, vouch for their fine flour; as for the expense, he speakes with mathematical precision, having carefully computed the cost with Mr. Power, the President of the Brooklyn Gas Company. To cook three pounds of mutton chops takes just ten minutes of time, and costs only one-third of a cent, to boil a kettle, containing half a gallon of water, occupies exactly twelve minutes, and consumes less than a cubic foot of gas. To receive a breakfast of four uishes, and sumes less than a cubic foot of gas. To get up a breakfast of four uishes, a for meats, a second for coffee, a third for potatoes, &c., and a fourth for eggs, or whatever else you please, will cost only three cents, and can all be done within fifteen minutes. Fifty dishes can be cooked at the same time if desired. A fine large turkey was roasted at the Astor House the other day, by this process, and those princes of caterers, Messrs. Coleman & Stetson, pronounced this mode of cooking the most complete and successful in its results that complete and successful in its results that they had ever witnessed. The days of stoves and cooking ranges are numbered. The use of gas is to form a part of our domestic economy; and the kitchen will become an attractive place.

TREATMENT OF THE NATIVES IN INDIA. Most Europeans treat the natives more like brutes than men: they seem to think a na-tive is made to be abused and beaten, and the most vulgar parvenues treat native gentlemen as the dirt beneath their feet. I will give you two instances of the ungentlemanly and unchristian tone of Jadian ciety and opinions in this r society and opinions in this respect. In some notes of a journey from Agra to Bombay, in 1841, now publishing in the Delhi Gazette, the writer says, 'I managed to bag a few peachicks, though the people do not like them to be shot, and at one place we met with some grey partridges which the Zamindars (land-holders) wished to be spared. As we had no occasion for their good offices for supplies, but rather required the birds, there was little hesitation in bag-ging all I could.' Again the Delhi Gazette announces that 'an unfortunate accident nounces that 'an unfortunate accident has occurred to a young officer, who, of course, is a kind-hearted man and greatly beloved in his corps.' What do you think this accident is? When out shooting, he beloved in his corps.' What do you think this accident is? When out shooting, he became enraged with his unfortunate Sais, and gave him a kick on the back, of which the poor man died in a few minutes, the spleen having been broken by the kick. Men can restrain their tempers when a stout hackney coachman or coalheaver is abusive, because they are afraid; they can even keep from striking their servants in England, because they would be punished by law; but here, because they know that they are the strongest, they are cowardly enough to tyrannize over every one who happens to thwart their childish humours."

Mrs. Mackenies Six years in India.

An Interesting Fact.-Some of the An INTERESTING FACT.—Some of the New York papers publish a statement that Emperor Faustin, of Hayti, is anxious for the introduction of religious books and papers into the island and that he has given orders that henceforth no duty shall be charged upon Bibles, Testaments, or Protestant religious tracts or books, or other publications. THE STATE OF CHINA.

The following is an extract from a private letter:—

"" Cauton, Sept. 24:

"" We are kept constantly on the alert by the continual arrival of expresses night and day, so that we have little shee, and next week we may get no sleep at all. We are on the top of a volcano, and must trust in Providence that we shall get clear out of the cruption. Shanghai in taken, and several places in its neighbourhood. Amoy still holds out. The Begue Forts were attacked four days ago, and guns taken from them. A large city, within ten miles of this place, a ant of warehouse up country to Canton, called Fieshan, it is reported, has had a rising in it, and the chief magistrate has lest his head. I wrote long ago that Canton would be taken in September. The 17th, the day of the feast of Lanterns, was fixed for the event, but it thundered and rained, and the Mandarins had the streets full of soldiers, no two people being allowed to walk together in the city, and the firing then and since, night and day, especially during the former, has been a saure sign that the troops are kept at hard exercise. The most certious ground for alarm is the rebellious proceedings here from the Triad and Scon Tarn (\*small knief\*) Societies. At Shanghai and Amoy the latter predominate, but in this neighbourhood the movement chiefly originates with the Triad Society. Up the country teas are detained—that is such as are made; and they are not picking the later crops. Of this we are informed by eye witnesses, among whom is Mr. Fortune, who certainly is of such matters the must competent and credible authority. The export hitherte, although the season began a month earlier than last year, in 6,000,600 lbs. deficient up to this date, which is a decrease of 22 per cent.; and as for ten going to Shanghai, that is out of the question while that city is held by people who do not enjoy the confidence of capitalists, and have even no confidence in themselves. These parties containly wish to join the reforming rebels, and have even no confidence in themselves. These the present Government more with a view to their own advantage than from any patrotic cause. In fact, they are chiefly men from Canton and Fektien, who have long been feared by the peaceable people of the province, and have been leaders on all occasions of riot and robbery. I have often assisted in rooting out their haunts, where they concealed their plunder, and they are so cowardly that five or six foreigners have always been successful in securing those who were wanted; but yet the magistrates years ago dared not do the same thing, and gave free leave to the English and other foreign residents to seize those thieves wherever they could discover them. It is this new description of rebels that we have to fear, and when the real Tea-jing-wang people get the wherever they could discover them. It is this new description of rebels that we have to fear, and when the real Tea-ping-wang people get the Emperor ousted from Perkin, and a new Enperor proclaimed, these hands will be their worst enemies; and, unless some foreign nations interfer—which at present seems to be improbable—unless indeed the Americans take the initiative, it is to be feared that anarchy will reign for years. You will see that what I have hitherto predicted has come to pass, except as to Canton being taken this month, and it is more than probable that even this may take place before the month closes, but it is to be hoped that this will be deferred until the rebels in the north of the province come down, as they are known to be connected

"You may consider it as almost certain that trade will soon come to a standstill here, and after the produce at Shanghai, which is already brought into foreign godowas, has been shipped off, there will be no further export of tea from that place till a firm Government is established; and here there will be so many disturbing influences when trade is stopped, that though we may keep the fectories the trade in exports will be quite nominal. The people in the country will not incur the risk of sending produce down till a secure time arrivas, and, for the same reason, those who have money here will keep it hid, and never venture to send it up the country until they can do so with greater asfety. I think it by no means improbable that our exports this year will not in any case exceed two-thirds of those of last year. In good tens it will be greatly deficient, as very little care has been taken in the manipulation. You must not, as some do, consider tea to be a raw material; it is manufactured, and in the expanse of that process and of the transit great part of the control of the foreign export in a peculiar manner, while silk is prepared in a way which is alike suitable for foreign or native demand. If peace were established in the north the export of silk from Shanghai would be enormous this year, as that place is not far from the producing districts, and in times like the present the native concumption is of course small, both on account of the difficulty of internal transit and of the change in the occupation and disposition of the people.

\*\*The northern robe army has taken Tient-sin, the port of Pekin. By next mall you will meat kety learn that the capital has fallen. It must be taken before the end of this month, or it will so the taken for a long time. It is most desirable for the taken for a long time. It is most desirable for the taken for a long time. It is most desirable for the solvement, the fall of Pekin will thue be sevelerated. When the fall of Pekin will thue be sevelerated. When the fall of Pekin w

it will take some time to establish the new system of Government, and trade will not at once flow into its accustomed channels. There will, consequently, be less teas shipped next year than many may expect, while from the short export this senson the demand is likely to increase. The Americant have shipped comparatively little, and the prices in the States are therefore likely to advance, and the rapidly increasing demand for Australia abould not be lost sight of.

"Foreign trade in this country is very small and little thought of as compared with the native internal trade. The trade with foreigners is not desired by many of the Chinese. It is indeed rather in some measure forced upon them. There is not one shop in a hundred here where foreign goods are sold, and there is therefore no predilection for them on the part of the natives. They do not on this account desire peace for the sake of foreign trade, and the rabble, until either defeated or satisfied with plunder, will hold the day.

"Before you receive this letter I believe that most of my opinions will be realised as facts. I write from firm conviction of the correctness of my leas, and with a wish to show as exactly as f can what occurrences, both political and commercial, may be expected to take place. I may be wrong, but, judging from the past, I rather believe that I am right; and I am willing to let my opinions now, and the results hereafter, be placed together, and confidently abide the issue." it will take some time to establish the new sy

( From the News of the World.)

The present aspect of affairs seems calculated to occasion considerable suspense lated to occasion considerable suspense. It appears beyond question that the Turks maintained their position at Ottenitza with the utmost intrepidity, and that neither in science nor discipline did they evince any inferiority to their assailants. Omar Pasha could only be dislodged from the left bank of the Danube by the concentration of the whole Russian force in the Principalities, and, even before this demonstration, he retreated without loss and without dishonor. and, even before this demonstration, he retreated without loss and without dishonor. If the retirement of the Turks had been extended to all the divisions of their army, affairs would now be reduced to nearly the same position as that of last month—Russians and Ottomans being arrayed in Wallachia and Bulgaria respectively, prepared for war, but with the Danube between them. There still, however, remains a strong Turkish detachment at Kalafat, a place which has been recently fortified with intrenchments and field-works, which possesses a secure communication with Widdin, and which can be occupied at pleasure by and which can be occupied at pleasure by as many additional troops as Omar Pasha may decide on throwing across. Already the force in this quarter is considerably the force in this quarter is considerably more powerful than that which gave the Russians so much trouble at Oltenitza, and the position itself, as has been often remarked, is one of great stratagitical importance. It is, consequently, by no means improbable that Prince Gortschakoff may direct his operations against this point, either after the reinforcements from Jassy have reached him, or with the army which is now concentrated between Oltenitza and Bucharest. As the Turks can command succours from their entire force, by means of the communication at Widdin, we may possibly hear of a decisive engagement in these parts; nor is it unlikely, indeed, that Omar Pasha may repeat his attacks at other parts of the Danube, when the strength of his adversary has been drawn isto Lesser Wallachia. On the other hand, the Russians may now oppose the passage of the which of genus are with a proper to the property of the contract of the contra

it was reported, had been shockingly massacred on board the vessel, off the coast of Cape San Antonio, South America.

The Reindeer, it appears, was on a voyage from Valparaise to Monte Video and London, with a general cargo. At Monte Video she shipped on board two passengers, Spanish priests, and within a short time after her sailing from that port for England, she was discovered, abandoned and ashore off Cape San Antonio, a headland near the mouth of the River Plate. She was taken possession of by five fisherman, who, after much exertion, succeeded in getting her off, and towing the vessel back into Monte Video, where they claimed as salvage 4000 dollars. About the same time the British consul learnt that the master of the vessel, Captain Wilson, his officers, steward, and one or two of the Spanish priests, had been murdered by some of the crew, who, after plundering the vessel of everything that was valuable, ran her ashore, and then escaped into the interior of the country, where it is reported they subsequently fell aroda in the country subsequently

into the hands of some troops belonging to General Urquiza's army. They were stoped outside of the walls of Buenns Ayres and suspicions were excited owing to the quantity of gold and papers found a them; and as the papers found related to the Reindeer, they were accused of being the preparators of the murders on board that vessel. When interrogated, one of them where they were sent to prison or pressed into the general's service, the writer is been unable to learn, but it appears quite clear, that those who materially assisted towards prosecuting the criminals have been permitted to leave the country. One of them proves to be one of the Spanish priests who sailed in the Reindeer from Mon. Its Video, who has gone to his convent at San Jose de Flores. There is a mystery how he seased. The claim made by the salvors for 4000 dollars was opposed on the ground of its being excessive, as well as oppressive to the owners, and 2000 dollars were offered as an equitable remuneration for their services. This was refused, but we have ince learnt that the matter has been adjusted, and that the Reindeer was on the 3d of October, in the outer roads of Monto Viedo waiting her despatches to sail for separation of the control of the premium, and the printing appointed a master to her and an efficient rew.

ENGLISH STEAM NAVIGATION ON THE PARAN.—The new Liverpool steamer Are ceived from the Piate, arrived at Buenos Ayres for the purpose of ascending the Parana to Rosario, which port the great of the control of the propose of ascending the Parana to Rosario, which port the propose of ascending the Parana to Rosario, which port the propose of ascending the Parana to Rosario, which port the propose of ascending the Parana to Rosario, which port the propose of ascending the Parana to Rosario, which port the propose of ascending the Parana to Rosario, which port the propose of ascending the Parana to Rosario, which port the propose of ascending the Parana to Rosario, which port the propose of ascending the Parana to Rosario, which port

ENGLISH STEAM NAVIGATION ON THE PARANA.—The new Liverpool steamer Argentina, had, it appears, by letters just received from the Plate, arrived at Buenos Ayres. On the 21st of September she left Buenos Ayres for the purpose of ascending the Parana to Rosario, which port the Argentina made in twenty-one hours and thirty minutes steaming, having been obliged to stop at San Nicolas to wood. The Argentina left Rosario on the 23d September, and reached Buenos Ayres in twenty hours steaming. In passing the island of Martin Garcia on her ascent, the Argentina, though carrying the English flag, was fired at by a small war schooner stationed at the island; but on her descent Mr. Hadfield, the agent of the Liverpool company, at the island; but on ner descent Mr. Flau-field, the agent of the Liverpool company, who went ashore, was assured by the com-mandant that the guns had been fired with-out his permission. The vessel was receiv-edat San Nicolas and Rosario with great

ELIFE AT THE DIGGINGS.—Here was a blacksmith firing away in his particular department. The shoeing of horses, the pointing of picks, and restoring the wearied and worn-out edges of shovels, comprehended the sphere of his labours. His stock of iron was ludicrously small for such a rich tradesman as he probably was. But the profits were a fortune notwithstanding. He was as busy as a bee. The earnings were

BARBADOES.

PHILADELPHILA, DOC. 1.—Barbadoes dates to the 8th have been received at Philidelphia.—The health of the Island had much improved. Des-tructive hurricanes had occurred damaging the cane crop, unroofing dwellings, mills, &c.

We were always satisfied that the progress of our Railways would not be hindered by any want of our neighbours in Maine, and we are gratified to learn that the surveys have been finished, and the location well advanced of the European and North American Railway in Maine, and that it is confidently expected that early next Spring such arrangements will have been made as shall ensure the construction of the whole line quite as soon as our portion can be ready.—St. John Courier.

Lyon McKenzie challengesMr. Brown to meet him face to face on a platform in St. Lawrence Hall, and discuss the questions of the present day in fifter minutes' speeches.

We notice the copy of the address to Messre. M'Gowan and M'Eachen with its long and imposing list of names published in the Royal Gazette and Weekly Advertiser and if we do not immediately make any remarks upon the document and the mode of getting it up, it is not from any wish to pass it over or evade a discussion upon its merits but because we conceive it involves a principle of the highest importance and one to which we are desirous to give the ducconsideration that it requires before we communicate the result of our deliberations to the public.

MUTUAL IMPROVEMENT ASSOCIATION.—This Association now commenced its winter Session and elected as its officers for the ensuing year, the

sociation now commenced its winter Session and elected as its officers for the ensuing year, the following persons, vis.

Chas. Palmer, Esc. President.

Mr John Williams, Vice P.

Mr. Wh. Shith, Vice P.

Mr. Wh. Shith, See'y. and Treasurer.

Messrs. Wm. Dawson, J. Haalewood, Jas. Bevan, J. Ridor, and Wm. Smith. Committee.

Its meetings will be as formerly in the Wesleyan School Room, Grafton Street, on every Friday, evening, commencing at eight o'clock precisely, when public lectures will regularly be delivered on literary and scientific subjects, and as soveral guntlemen of talent and influence have kindly premised their aid in carrying out the objects of the association, it cannot fall in affording much popular information. It offers to young men especially a valuable means of improvement by availing themselves of which, they may at once acquire calarged views, and on any mode of expression.

A Public Meeting was held in the Temperance

on any mode of expression.

A Public Meeting was held in the Temperance Hall, on the 8th inst., to take into consideration the expediency of organizing a Total Abstinence Society, uncounseded with the Order of the Society, uncounseded with the Order of the Society, uncounseded with the Order of the Society, uncounsed the meeting a favour of the movement—pointing out in what respect the efforts of the of the Sons of Temperance had fallen short of their desires in the spread of Temperance principles, and the necessity of forming a Society, having for its sole object, the support and advancement of Total Abstinence—and urging its claims on the attention of the public. A Committee was appointed to carry out the intentions of the meeting, by whom the following resolutions were drawn up, and agreed to.

"That a Society be now organized, to be called the Charlottetown Total Abstinence Society."

"That the Office bearers shall consist of a President, Vice Presidents, Sec'y and Treasurer, and a Committee of tive."

"That the Following be the Pledge of this Society."

"We, the undereigned, desirons that the Counse of Temperance be kept more constantly and generally before the Public, and believing that this object can be best attained by frequent meetings, for the exposition of the growing evile of the Liquer Traffic, do agree to the following pledge, to be subscribed by all becoming members of this society viz."

"We do hereby premise that we will neither make, buy, sell, or use as a Beverage Spirituous or Malt Liquers or any other Intoxicating Drinks, and that we will de all in our power to discountenance their use."

The following persons were appointed Office

VETERINABY PRACTICE,
Under the Patronage of His Excellancy Sir
ALEXADDER BANNEMAN, Knight.
To BORGE LORD, begs leave respectfully to intimate to his friends and the public in general,
that he har reasted the practice in the VETERINANY
LINE, under the patronage of His Excellancy Sir
ALEXADDE BANNERMAN, Knight.
After a successful practice of 27 years—14 in England and 13 in America—in the course of schick he
has been directly instrumental, through his still, in
naving, for their owners, the lives of many valuable
Horska and Cowa; he hopes that, in sew soliciting
a renewal of Public Patronage, he may be permitted to say that he considers himself to be as well
qualified to prescribe—MEDICINES and preform
OPERATIONS, in the capacity of a Horska and Cow
DOCTON, as any individual who has ever practiced in
that lies in this Colony; and he; therefore, presumes
that he may confidently look forward to a renewal of
that patronage which he formerly anjoyed in the Jeland.

### VARIETIES.

Boxes Hearrs. -- If men, my dears, were to pay, like servants, for everything they broke, they wouldn't be so fond of breaking their hearts for every pretty girl they saw. The fortune of a Rothschild couldn't stand, my dears, against such a ruinous amount of breakages. Why, I have known a man's heart break as often as an America bank, and yet he would open the next day with the same brass plate on his face, on which you could plainly read "Assurance," and his heart would go on issuring the same amount of false notes as before Bendes, what becomes of all their broken hearts, I should like to know? Where do they all go to? Along with old moons, I suppose; or they may be keeping company, their's no knowing where, with all the pins that are lost, each heart being stuck through with a ping like the curious insects in a mus-

Ox Strayed

FROM the Subscriber's Premises, about the 20th
Cotober last, a Black Ox with a white streak on
the Railroad which is to run a hundred
the Railroad which is to run a hundred
the whom the perfect safety. Its
to rewarded for their trunbe. Scientific American has an engenving of the Railroad which is to run a hundred miles an hour with perfect safety. Its distinctive principle is that the cars run on a single track for the train to be hung upon it. The train is, in fact, placed a straddle of the rail, running on wheels, to whose axies the cars are hung. It is obvious that, with the rail running, as it were, through the car, the latter could not be thrown off the track by any amount of speed, and no obstruction of sufficient magnitude to do mischief could be made to lay upon a single rail raised six or eight feet from the ground.

To become slandered—be connected with a paper; tell the truth, and tread on the toes of some rogue.

Mock Turtle. Galling a husband " my dear" in public, and "you brute" in pri-

Mrs. Price, before her marriage with the worthy alderman of that name, was a widow with a large fortune, and her name was Rugg. On being asked a few days after her second marriage how she liked it, replied: "Oh, very well, indeed; I sold my rugg for a good Price."

The Forlorn Hope of Ladies-expecting an old sweetheart to marry you on the death of his third wife.

That "all is not gold that glitters," is sufficiently proved by the base sovereigns now in circulation.

The Russians having a plenty of tar and rosin, will be sure to come off well in a pitched battle!

A gentleman, speaking of Cincinnati, says its most appropriate name would be Ham-burg of America. "Yes," replied another, "I think it will be the meat-ropolis of the United States."

Come hear, my little n gentleman to a youngster of lour years of age, when sitting in the parlor where a large company where assembled, "do you know me?" "Yes, sir, I think I do." "who am I, then—let me hear?" "You are the man what kissed sister Jane last night in the parlor." Jane fainted.

In the old English ale house, it used to be the custom 30 keep the accounts of each beer bibber by scoring down the pints and quarts—hence the warning phreses "Mind your P's and Q's."

Cicero has said of men : "They are like wines; age some the bad and betters the good." We cannot say that misfor-tune has the same effect upon them.

What kind of a man do women like best? Why, a husband-man, iff course.

The middle-aged, lady or a respectable connection, "who never naired a tree or flower," has gone south, to marry the blacksmith by, whom "the last link was broken." It sendam assistant to the sandam assistant to the sandam

mith by whom "the last link was broken."

It is said that of five hundred and forty young ladies who fainted last year, more than one half fell into the arms of gentlemen. Only two had the misfortune to fall on the floor, and they mere not good looking, we had the misfortune to fall on the floor, and they mere not good looking, we had the required a gentleman of his Irishing if as she came up from the cellar, "It is full on the bottom air, but there's none at the top," said Biddy has been at the top," said Biddy has been at the top," said Biddy has been at the top, " said Biddy has been at the top," when it

BELLS! BELLS! BELLS!

BELLS! BELLS! BELLS!

THE Subscribers manufacture and keep consumity
I on hand, all sizes of Church, Fectory, Steamboat, Ferry, Locomotive, School House and Plantation Bella, with the best description of Hangings.

These Bells are made from the best stock, and the small sizes undergo the same process in manufacturing as Charch Bells. An experience of thirty years, with a great theiry received improvements, and as entirely nave method of casting, enables us to obtain the most metodious tone, combining also, in extruordinary vibration.

Nearly 9,000 Bells have been cast and add from this Foundry, which is the best evidence of their superiority. We have fifteen Gold and Silver medals at our office, which were awarded for the "best Bells for sonorousness and purity of tone." We pay particular attention to the getting up Peals or Chimes, and can refer to those farnished by us. Our establishment is contigious to the Eric and Champlain Canala, and Railroads running its every direction, which brings us within four hours of New York. Cash paid for old Copper. Old Clocks, Levels, Compasses, Transits, Theodolites, &c., for sale, of superior workmanship. All communications, either by mail or otherwise will have immediate attention.

West Troy, N. Y., March, 1883.

Orders will be received and information gi-en as to prices, at Geo. T. Haszard's Book and Sta-ionery Store.

# AYER'S PILLS

A YELL S.

A NEW and singularly successful remedy for the cure of all Billious diseases — Contributes, Indigestion, Jaundice, Dropey, Rhesimatism, Fevera, Gout, Humors, Nervousness, Irritability, Inflamations, Headache, Palns in the Breast, Side, Back, and Limbe, Feunsle complaints, &c., &c. Indeed, very few are the diseases in which a Turgetive Medicine is not more of less required, and much alchness and suffering might be prevented, if a harmless but effectual Onlinetic were more freely used. No person, can, fast well while a coative habit of body prevails; besides it soon generates serious and often fatal diseases, which might have been avoided by the timely and judicious use of a good purgative. This is alliet true of Colde, Feverish symptoms, and Billious disrangements. "They all tend to become or resource the fore meter of any formulated by distinctive or contract the fore meter of any formulated by distinctive or resource the fore meter of any formulated distinctive or resource the fore meter of any formulated distinctive or resource the fore meter of any formulated distinctive or resource the fore meter of any formulated distinctive or resource the fore meter of any formulated in the surface of the surface of

often fatal diseases, which neight have been avoided by the timely and judicious use of a good purgative. This is alike true of Colda, Feverish symptoms, and Billons derangements. They all tend to become or produce the deep seated and formidable distensives which lead the heavest. They all tend to become or produce the deep seated and formidable distensives which lead the heavest all over the head. Hence a reliable family physic is of the first importance to the public health, and this Pill has been perfected with consummate skill to meat that demand. An extensive trial of its rituant by Physicians, Professors, and Patients, has shown results surpassing anything hitherts haven of any medicine. Correlators, and Patients, has shown results surpassing anything hitherts haven of any medicine. Correlatories by generom of such exated position and character as to forbid the unsatedne destroy and the contribution of the first person of New York City.
