THE  
**Prince Edward Island**  
**ALMANAC**

FOR THE YEAR OF THE CHRISTIAN ERA

**1854:**

BEING THE SECOND AFTER BISSEXTILE, OR LEAP YEAR, AND  
THE LATTER PART OF THE SEVENTEENTH AND BEGIN-  
NING OF THE EIGHTEENTH YEAR OF THE REIGN OF  
**HER MAJESTY QUEEN VICTORIA.**

CALCULATED FOR  
**THE LATITUDE OF CHARLOTTETOWN,**  
46d. 14m. N., long. 63d. 10m. 22s. W. from Greenwich.

CONTAINING  
*Extensive Astronomical, Statistical, Departmental, Com-  
mercial and Agricultural information, together with  
all matters of Local and General interest pertaining  
to an Almanac.*

**CHARLOTTETOWN:**

**JOHN J. PIPPY,**

*Advertiser Office, 15 Queen Street.*

Sold also by **EDWARD WHELAN**, Royal Gazette Office,  
and **H. STAMPER**, Queen Square.

ADVERTISEMENT.

In presenting to the public the Prince Edward Island Almanack for 1854, at this rather late period of the year for the publication of such works, it is perhaps necessary that the publisher should state why he did not issue it earlier, and what led to the publication of it after the year had commenced. The first is answered from the fact that the sales of last years' Almanack did not meet the expense of publication, and for this reason, although the matter was prepared and the work commenced in October last, the publisher abandoned the idea of issuing a second number, not doubting but that the public demand would be adequately supplied by the publisher of the P. E. Island Calendar, Mr. Haszard. This Calendar made its appearance about a fortnight since, and, to use the language of a contemporary newspaper, "a more bald and meagre affair of the kind has never come under our notice." Mr. Haszard's Calendar, in short, contains but thirty-two pages, and these—with the exception of a list of district teachers, the legislature, and departure of the mails—are occupied with the usual astronomical pages. This being the case—at the desire of several persons, and a wish on our own part to supply the public demand,—we concluded to issue a full, correct, and reliable Almanack, which will be found to contain in addition to the usual astronomical and chronological tables, complete lists of all the public offices and their Incumbants, Terms of the several Courts, Departure of Mails, the Trade and Commerce of P. E. Island, its Revenue and Expenditure, its Tariff and Public Institutions, Churches and Clergy; and all local and general information usually found in publications of the kind.

Hoping that the success attending the present number of this Almanack will be such as to induce the publisher to continue its publication regularly hereafter, and that if any inaccuracies should be discovered, the haste with which these pages have necessarily been put together will be received as a sufficient cause, it is placed before the public, and their patronage respectfully solicited.

Advertiser Office, January, 1854.

## ECLIPSES IN THE YEAR 1854.

This year there will be two Eclipses of the Sun, and two Eclipses of the Moon.

I. A partial Eclipse of the Moon, May 12, in the morning. Magnitude 2.87 digets on the southern limb. Invisible on this continent.

II. An annular Eclipse of the Sun, Friday, May 26, in the afternoon. Visible *principally* as a very large partial Eclipse on the Sun's northern limb, throughout North America, except along the isthmus of Darien. At Charlottetown it will begin at 4h 26m., and end at 6h. 50m., Magnitude 10.75 digets. During this Eclipse the apparent diameter of the Moon will be little less than that of the sun, and therefore the sun cannot in any place be entirely or totally eclipsed. This circumstance also will cause a bright ring of light to be formed around the darkened parts of the Sun. This ring will be only about one-third of a diget wide, and will be visible only in the vicinity where the line of central eclipse passes. The eclipse is central in longitude 73dg 53m west of Greenwich, latitude 44dg 14m north; and in longitude 64dg 35m west, latitude 41dg 10m north. By finding these positions on a map and drawing a line from one to the other, the towns and countries through which the central eclipse passes will be readily discovered. The path of the annular eclipse will be about a 100 miles wide and extend about 50 miles each side of the line described. It will move about 100 miles per minute, and begin at sunrise in the Pacific ocean, near the Caroline Islands, long. 162dg. 51m. east, lat. 6dg. 43m. north, ending at sunset in long. 51dg. 53m. west, lat. 36dg. 18m. north. The partial eclipse first touches the earth at sunrise in long. 176dg, 35m. west, lat. 1dg. 22m. south; and ends at sunset north east of the Bahama Islands, in long. 73dg. 41m. west, lat. 23dg. 29m. north. The first time this eclipse ever occurred was in 1313, July 2d, since then it has returned 31 times, including its return this year. It occurred in April 1800, in May 1818, and in May 1836. It will return again in June 1872. Its last return will be in the year 2593, Aug. 17th.

III. There will be a very small partial eclipse of the Moon Saturday, Nov. 4, in the evening. At Ch. Town the Moon will rise about the time of greatest eclipse, (4h, 43m.) The eclipse may be seen, when the moon rises, throughout the Island.

IV. There will be a total eclipse of the Sun on the 30th Nov. invisible in North America. This eclipse is confined mostly to the Indian and Atlantic Oceans. At the Cape of Good Hope it will be 6.97 digets in size.

To ascertain the Length of the Day and Night, at any time of the year, add 12 hours to the time of the Sun's setting, and from the sum subtract the time of rising, for the length of the day. Subtract the time of setting from 12 hours, and to the remainder add the time of rising next morning, for the length of the night.

MORNING AND EVENING STARS FOR 1854.

Mercury will be morning star until Feb. 8 ; then evening star until March 23 ; then morning star until May 28 ; then evening star until July 30 ; then Morning star until Sept. 12 ; then evening star until Nov. 19, then morning star until Jan. 20, 1855. Venus will be evening star until Feb. 28 ; then morning star until Dec. 13 ; then evening star until Oct. 1st, 1855. Jupiter will be morning star until July 15 ; then evening star until Jan 29, 1855. Mars will be morning star until Feb. 26 ; then evening star until April 9, 1855. Saturn will be evening star until May 26 ; then morning star until Dec. 4 ; then evening star until June 10, 1855.

SATURN'S RINGS will be in a position favourable for visibility the whole of this year, with a telescope of moderate power. A third ring has been discovered recently. It is said, with reference to this planet, that the discovery has lately been made that the rings are but arches of the most perfect geometrical formation.

EQUINOXES and SOLSTICES.

		H. M.
Winter begins	Dec. 21, 1853, at	4 48 afternoon.
Spring "	Mar. 20, 1854, at	5 56 afternoon.

## AGRICULTURE FOR THE MONTH.

The first and most important thing for the farmer in this month is to attend to his horses, cattle and swine. Let them be housed at night, and in stormy weather. See that the stables are cleaned, the yards dry and well littered, the sheds warm and yet well ventilated. If hay is scarce, and labour cheaper than fodder, it may be cut and mixed with chopped straw, corn stalks, meal, bran, grain or roots; take care, at all events, that no fodder is wasted. Cut up a few potatoes or turnips for sheep, and mix a little salt with them. If there be sufficient snow, haul home wood for fuel and fences. Logs may be taken to the mill and made into boards for future use. Repair your tools, vehicles and implements, when obliged to stay in-doors. Thrash grain, clean seeds, and take farm produce to market. Take oats to mill. Take every opportunity of chopping and preparing new land for a crop. This is also a good time for breaking steers and colts, and for making tenons and mortices in fence stuff.

“Ma,” said a young lady to her mother, the other day, “what is emigrating?” “Emigrating, dear, is a young lady going to Australia.”—“What is colonising, ma?”—“Colonizing, dear, is marrying there and having a family.”—“Ma, I should like to go to Australia.”

Why is a sharp-nosed woman like the great wall of China—Because, if crossed, you are apt to find a Tartar.

The oftener carpets are shaken the longer they will wear;  
 the dirt that collects under them grinds out the threads.

If you wish to preserve fine teeth, always clean them  
 thoroughly after you have eaten your last meal at night.

## REMARKABLE DAYS.

2 Purification of V. Mary, <i>clear,</i> Candlemas. <i>cold</i>	15 National Debt commenced, 1500.
4 Sir John Oldcastle burnt, 1418	17 Galileo born, 1564.
5 4th Sun. after Epiphany. <i>weather.</i> Sir Robert Peel born, 1788.	18 Canada settled, 1534. <i>Cold</i>
6 Cunard Steamers est'lished, 1840.	19 Sexagesima. <i>but</i>
8 Cholera in London, 1832.	21 Trinidad taken, 1794. <i>fine.</i>
10 Queen Victoria married, 1840. P.E. Island ceded to Britain by France, 1763. <i>Hard frost.</i>	22 George Washington born, 1732.
12 Septuagesima Sunday.	23 Sir Joshua Reynolds died, <i>Snow</i> 1792. <i>and</i>
14 St. Valentines. <i>Snow.</i>	26 Quinquagesima. French <i>wind</i> Republic proclaimed, 1848.
	28 Shrove Tuesday,

## AGRICULTURE FOR THE MONTH.

Continue to attend to the stock: remember that by keeping animals warm you economise the food which would otherwise be applied to sustain the heat of the body. Curry the cattle and horses. Lice, which accumulate on over crowded cattle, may now be destroyed by tobacco-juice, snuff, lard, fish-oil or soap. Hens will lay all winter if their houses be impervious to cold winds, and if with their grain they receive a supply of gravel and old mortar. Continue the hauling of fuel and fencing stuff; cut up as much of the former as possible, and pile it away under cover for summer use: this seems novel, but the *farmer* will understand, though the *lumberman* may not. Finish the thrashing of grain, and stow it away beyond the reach of rat, mouse or weevil. Prepare for making maple sugar. Take advantage of this season for hauling peat, swamp muck, sea, river or pond mud, for making composts of.

An attorney about to finish a bill of costs was requested by a client, a baker, to make it as *light* as he could. "Ah!" replied the attorney, "that's what you may say to your foreman, but it's not the way I make my bread."

The question "why printers did not succeed as well as brewers?" was thus answered: Because printers work for the head, and brewers for the stomach, and where twenty men have stomachs, but one has brains.

Franklin Pierce is the Fourteenth President. His initial stands for it, and his name in full counts fourteen letters.

Woollens should be washed in very hot suds, and not rinsed.  
 Luke-warm water shrinks them.

## AGRICULTURE FOR THE MONTH.

Make maple sugar. No trees of less than twelve or eighteen inches diameter ought to be tapped: they should be bored with an inch auger; all the vessels used should be perfectly clean; the sap should be first strained and reduced by boiling nineteen-twentieths of its bulk, then clarified by white of egg, boiled and strained again; boil again and then pour it into pans till it grains; after this, dry it by placing it in wooden drains filled with gimblet holes. Look well to the cattle, and give those with young an extra feed or mash occasionally. Manure may be hauled from town or elsewhere. Take every opportunity of hauling wood, and of carting manure to the fields. Let the yards be cleaned at regular times and new littered. Early lambs for market should appear in March, but very great care is required to preserve them.

GOOD CERTIFICATES.—“You say, Mrs. Smith, that you have lived with the defendant for eight years. Does the Court understand from that that you are married to him?”—“In course it does.”—“Have you a marriage certificate?”—“Yes, your honor, three on 'em—two gals and a boy.”—Verdict for the plaintiff.

A FACT IN ECONOMICS.—There is one redeeming trait about termagants, and that is, they are always tidy. The more a woman scolds the harder she scrubs—a fit of ugliness always terminates in a breaking out of slop-pails, mops, and whitewash brushes.

Moon—First Quarter, 5th day, 11 hours, 9 minutes, morning.

## AGRICULTURE FOR THE MONTH.

The farm should be plotted and each field assigned its crop for the year. Manure should be all got out while the hauling is good. The cattle should not be allowed to wander on the road, fields or meadows, which does no good to themselves and much injury to the land. Let the drains be overhauled and cleared out. Continue the cutting, splitting and piling of wood. Prune and remove dead limbs and branches of fruit trees, bushes and shrubs. Scrape off moss from apple trees, and cut off black nobs on the plum trees. All kinds of fruit and forest trees may now be safely transplanted. Transplanting must always be done before the leaves are out or after they have fallen; if a tree is covered with leaves when it is transplanted, the evaporation by their surface is so great, that the vital moisture of the plant would be all dissipated before the roots had begun to absorb water from the soil. Break up the garden and sow the early vegetables. Commence ploughing in dry situations and on sod land as soon as the frost will allow.

A husband at the grave of his wife delivered himself of the following to a neighbour, as the coffin was lowered into the grave:—"I have lost cows, I've lost sheep, I've lost hosses, and I've lost calves, but this is the wust of the whole lot."

What makes a lawyer's position so perilous?—Because he has other men's deeds to answer for as well as his own!

Moon—First Quarter, 5th day, 5 hours, 17 minutes, morning.  
 Full Moon, 12th " 11 " 23 " morning.  
 Last Quarter, 19th " 2 " 19 " morning.  
 New Moon, 26th " 4 " 34 " evening.

## AGRICULTURE FOR THE MONTH.

Set about ploughing the land. Early spring ploughing is the best for sod land, as the frost both pulverizes it and kills the weeds. Sow grass and plant the root crops. Steep and sow the grain crops. Corn may be sown after the grain crops and clover. Turn out the sheep and cattle, but not before the land is tolerably dry and the young grass has appeared. Cart out the remainder of the manure, and clear up the farm yards. Manure will waste as much in the heap in one season as in the ground, and for the first you will get nothing, for the other a great deal. Towards the close of the month the meadow lands may be top-dressed with compost, gypsum or other manure. Mark spots for future drainage. Beets, mangold-wurtzel, and swedes may be sown with advantage after the other crops. Peas, beans, onions, turnips, carrots, parsnips, potatoes, radishes and spinach may be sown in garden and fields. Cabbages, cucumbers, cauliflowers, lettuce, radishes, tomatoes and peppers may be planted out. Hedges and shrubs may be trimmed.

The lowest charges for advertising in the *London Times* is about three dollars a square; even a line announcing a marriage or death costs seven shillings—nearly two dollars.

When is a porter (railway for example) not a porter?—  
When he is stout.

The reason that a chilly day is called raw, "is because the sun doesn't give heat enough to cook it!"

Moon—First Quarter, 3d day, 8 hours, 27 minutes, evening.  
 Full Moon, 10th " 7 " 17 " evening.  
 Last Quarter, 17th " 10 " 1 " morning.

10 and dull with rain		day,
11 Trinity Sunday, St. Barnabas,		25 2d Sunday after Trinity, Sir C.
13 1st Temperance Society estab'd		Fitzroy, Lt. Governor, arrived
in Ireland 1835,	<i>Much</i>	1837,
17 John Wesley born,	<i>rain</i>	26 George IV died 1830,
18 1st Sunday after Trinity.	<i>Bat-</i>	28 Queen Victoria crowned 1838,
tle of Waterloo 1815.		29 Saints Peter and Paul.

## AGRICULTURE FOR THE MONTH.

Finish sowing and planting. The seed end of potatoes, cut rather deep, will yield the best crop. Ruta-bagas, or swedès, may be sown after the potatoes. Four or five pounds of seed are not too much for an acre—that will allow some for the insect and some for the land. Transplant so as to fill up spots where crops seem to fail. Hoe, or set the cultivator going among the corn and root crops. Weed the garden, the grain and root crops, otherwise it will be fifty times more troublesome later in the season and next year. Weedy fields may be ploughed for summer fallow. Buckwheat land ought to be prepared. The earlier the chopped land can be well burnt the better. Prune, trim and transplant trees. After transplanting the soil should be rendered mellow and rich by *mucking in* for a considerable distance around; choose a moist or rainy day for the operation. Remove or destroy insects, lice and caterpillars on fruit trees. Plant out cabbages. Transplant wild plants, bringing with them a portion of the natural soil.

**HAIR WASH.**—To one ounce of borax add half an ounce of camphor; powder these ingredients fine, and dissolve in one quart of boiling water; when cool, the solution will be ready for use. Damp the hair frequently. This wash not only effectually cleanses and beautifies, but strengthens the hair, preserves the color, and prevents early baldness.

**THE CHEMIST'S ANSWER TO "WHAT IS MAN?"**—Chemically speaking, a man is 45 lbs. of carbon and nitrogen diffused through 5½ pailfuls of water.

Moon—First Quarter, 3d day, 8 hours, 38 minutes, morning.  
 Full Moon, 10th " 2 " 11 " morning.  
 Last Quarter, 16th " 8 " 12 " evening.

## AGRICULTURE FOR THE MONTH.

Hoe and weed corn, potatoes and all other crops; run the cultivator through them when the opportunity offers. Buckwheat and even turnips may be sown as late as July. Make early preparations for harvesting; repair barns, vehicles and tools. Get the best tools in the market: a man may earn the extra cost of a good scythe or cradle in a single day's work. Procure a horse rake, by means of which one man with a steady horse can do the work of seven or eight men. Clover should be cut while it is in full bloom. Timothy and red-top do not ripen till a fortnight after clover: they should be cut while the seed is in full milk, and before it is so ripe as to shake out when handled. Weeds should be cut down or rooted out before seeding; transplant cabbages and turnips in field or garden; gather flowering herbs, and dry quickly in the sun.

It is said that raw eggs and milk are a sure remedy for poison of any kind taken into the stomach. This is information that may do a deal of good if remembered, and cannot possibly be productive of any harm.

It is extremely probable that whatever conducts the electricity of the body from it, will occasion direct debility. With this view, I have long been in the habit of causing females who used steel supports in their stays, to lay them aside altogether.

## AGRICULTURE FOR THE MONTH.

Finish hoeing and weeding, and prepare for grain harvest. Wheat, oats and barley are generally cut in this month: the best are to be set aside for seed, and allowed to ripen fully while standing. The grain intended for consumption should be cut while still soft, for not only is the flour better, but there is much less loss and waste in harvesting the crop. Lowland hay may be cut and made into stacks. If there is time, it is much better, at once, to get the low meadow hay beyond the reach of the river than to wait till winter. Make drains where required; gather seeds and herbs; destroy weeds wherever they are to be seen; remove the balls from potato vines, if thought necessary. Fall wheat may be sown. If grain harvest be finished, fall ploughing for next season may be begun. A good farmer will be ploughing all summer long. Don't burn too soon, or the trouble will be greatly increased. Great care should always be taken to extinguish fire on new land.

**TO CLEAN PAINT.**—Smear a piece of flannel in common whiting, mixed to the consistency of common paste, in warm water. Rub the surface to be cleaned quite briskly, and wash off with pure cold water. Grease spots will in this way be almost instantaneously removed, as well as other filth, and the paint will retain its brilliancy and beauty unimpaired.

Gross jealousy is a distrust of the person beloved; delicate jealousy is a distrust of one's self.

## AGRICULTURE FOR THE MONTH.

Carry on the harvesting of grain, corn and root crops. Neglect not fall ploughing for a single day. Draining ought to be gone on with: let the drains be from 30 to 36 inches in depth, and placed about 20 feet apart. Grain may now be field thrashed. Do not take up potatoes until the vines have been killed by the frost, and are perfectly dry; keep them from sun and wet, and allow them to dry before housing; let them be stored away in barrels or bins well protected from air. Early apples may be gathered by hand, wiped, and put away in bins or barrels, taking care not to bruise them: they should be kept in a cool dry cellar, or upper room, where the temperature is not below the freezing point: should they by any means get frozen, they should be kept covered, so as to let them thaw gradually. Trees may be budded in this month. N. E. farmers generally sow grass seeds (not clover) as early as possible after the summer crop. This is likewise a good time for the cow to go to the bull. Rams, again, should be removed from the sheep until the end of November or December.

Wisdom is the result of calm and disinterested meditations, proceeding from an observing and penetrating mind; it is seldom that experience alone can confer it.

## AGRICULTURE FOR THE MONTH.

Continue draining, fall ploughing, and securing corn and root crops. When potatoes are to be stored in the field, a dry, sandy spot should be chosen, on which they are to be laid in heaps, then put a layer of straw over them; thatch them carefully, and cover the whole with earth; two small orifices should be left, the one at the top and the other at the bottom; these should be closed with a wisp of straw, and opened occasionally to permit the access of fresh air. If the soil of the field is a wet clay, a ditch ought to be dug around the spot where the roots are to be laid. Turnips may be either stored in root houses, or in pits three feet in breadth, and covered with straw and earth as above. Cull out the choicest animals for breeding and for use; sell or fatten the remainder. Trees may be set out for the ensuing spring as soon as the leaves have fallen, and the buds have fairly formed. Small seedlings, however, are the best transplanted in the spring. Fruit trees may now be propagated by layers or cuttings.

Few are so wise to prefer useful reproof to treacherous praise.

Vanity is the excess of ambition over common sense.

Rule the appetite and temper the tongue.

## AGRICULTURE FOR THE MONTH.

Preparations must now be made for a long and severe winter. The summer vehicles and implements should be dried, cleaned and stowed away. The fences should be put in order, so that none of the fields may be exposed to the poaching of cattle, sheep or hogs. The farmer should walk about daily with a hammer and pocket full of nails, patching and repairing the barns and sheds where they require it. The yard should be well bedded with turf, peat, muck, straw, sawdust, weeds, or other vegetable matters; at the same time it should be so constructed, that the soluble parts of the manure, which are the best, should not be lost. Finish digging and storing of roots and the fall ploughing. One good ploughing of clay land in the fall is worth two or three in the spring. Husk the corn, make cider, examine and make cuts for the drainage of surface water; underground drains are preferable to surface cuts. The children should be kept close at school, and the farmer should never forget that more attention is due from him toward the improvement of his children than to that of the land or stock.

A farmer, when flagellating two of his unruly boys, was asked what he was doing. "Thrashing wild oats," was his reply.

A very interesting obituary notice of a lady says—"She was married twenty four years, and in all that time never once banged the door."

Why should a "deed" not be dated in a glen? Because it would be "in-valley-dated."

1854.

## AGRICULTURE FOR THE MONTH.

Stock now require increased attention: they should be stall-fed for the winter, if possible, or put up in yards with a warm aspect, and with sheds attached, whereto they can resort in stormy seasons: they should be supplied with plenty of water and salt, and fed about three times a day, and curried regularly. The sow may be taken to the boar in this month, and the ram allowed to return to the flock again. Let the farmer keep out of the woods, for farming is not a branch of lumbering, nor are active lumberers likely to make thrifty husbandmen. Once for all, let the farmer forswear the woods. He may now thrash grain, and take his produce to market; the good wife ought to have her quota ready of cheese, butter, fowls, hams, sausages, mittens, socks, cloth, wool and feathers; these are all as good as money in town. Let all accounts be settled and debts paid, and the crops for each field be arranged for the ensuing summer.

The Admiral of Castile said, that he who marries a wife, and he who goes to war, must necessarily submit to everything that may happen.

A man recently purchased a link of sausage, "long drawn out," and was nearly choked to death by a piece of brass collar, marked "Fido." How the collar got into the sausage is the question.

## Tariff of Prince Edward Island.

ARTICLES.	Per cent. per Invoice	Other Duties
Blocks and Deadeyes,	£5 0 0	£
Butter, the cwt.,		0 9
Boots and Shoes,	10 0 0

### Equation of Time.

Owing to the inequality of the annual motion of the Earth, our summer half year is longer than the winter half year, by about 8 days. In this inequality and obliquity of the Ecliptic, we detect the cause of the difference of time between the Sun and a well regulated time-piece. The latter keeps *equal* time; the former is constantly varying and indicates only *apparent* time; and the difference between these is called *equation of time*.

The rotation of the Earth on its axis is completed in 23h. 56m. and 4s.; this space includes what is termed a *sidereal day*, seeing that any meridian on the Earth's surface will revolve from a fixed star to that star again, in this time. But a *solar day* occupies the time in which any meridian on the Earth's surface will take in revolving *from the sun to the sun again*, which is 24 hours, sometimes a little more, sometimes a little less; and this is owing to the fact that the Earth advances nearly a degree in its orbit, in the same time that it turns eastward on its axis.

**JOHN ROSS,***Teacher of Vocal Music,*

Residence—Murley's, Great George Street, Ch-Town.

**DR. FONTAINES'****BALM OF A THOUSAND FLOWERS.**

**F**OR the Tiolet, the Nursery, Bathing, and many medicinal purposes. Highly perfumed by its own ingredients Recommended by the faculty of almost every European city, and established under the patronage of every physician in London and Paris, and thousands of individuals who make daily use of it in New York, Philadelphia and Boston. It is the greatest luxury a lady or gentleman could wish, for the improvement of health, for comfort and personal embellishment, and its delicate, soothing sensation, and the delightful softness it imparts to the complexion.

We give a few of the prominent properties of the **BALM OF A THOUSAND FLOWERS**, already well established by actual experience.

*First—This Balm eradicates every defect of the complexion—* and establishes in its stead beauty and health, at the time when both by the changes of age, or freaks of nature, or disease, have been obscured or undermined.—it cleanses the skin, and draws to the surface all impurities, and every species of pimples and blotches; also removes tan, sunburns, sallowness and freckles imparting to the skin its original purity and an unsurpassed freshness rendering it clear, smooth and white.

*Second—It promotes the growth and increase of the hair, causing it to curl in the most natural manner; it cleanses the head from dandruff, giving vigor, health and life to the very roots of the hair.*

*Third—It is a superior article for shaving, being superior to all descriptions of soaps, creams, pastes, &c. As a dentrifice for cleansing the teeth it is by far the most medicinal of any compound yet discovered, preventing decay, relieving ulcers and cankers, and renders the teeth white as alabaster. For the nursery, and for bathing, for suffering infants, and for adults, to promote sweetness of body, cleanliness, health and strength, and to prevent disease, eruptions, &c. there is no article more suitable than this Balm. [It may be used in cold, warm, hard, or soft water.*

**CHARLES YOUNG,**  
Agent for P. E. Island.

Ch. Town, January, 1854.

CURES FOR ALL!!!

## Holloway's Pills and Ointment.

AN EXTRAORDINARY AND RAPID CURE OF ERYSIPELAS IN THE LEG  
AFTER MEDICAL AID HAD FAILED.

*Copy of a letter from Mrs. Elizabeth Yeates, of the Post Office  
Aldwick Road, near Bangor, Success, dated Jan. 12th, 1853.*

To Professor HOLLOWAY,

Sir,—I suffered for a considerable period from a severe attack of Erysipelas, which at length settled in my leg, and resisted all medical treatment. My sufferings were very great, and I quite despaired of any permanent amendment, when I was advised to have resource to your Ointment and Pills. I did so without delay, and I am happy to say the result was eminently successful, for they effected a radical cure of my leg and restored me to the enjoyment of health. I shall ever speak with the utmost confidence of your medicines, and have recommended them to others in this neighbourhood similarly afflicted, who derived equal benefit. I am, Sir, your obdt. servant,

(Signed) ELIZABETH YEATES.

AN EXTRAORDINARY CURE OF DROPSY, AFTER SUFFERING EIGHTEEN MONTHS.

*Copy of a letter from Mr. G. Briggs, Chemist, Goole, dated  
February 15th, 1853.*

To Professor HOLLOWAY,

Sir—I have much pleasure in informing you of a most surprising cure of Dropsy, recently effected by your valuable medicines. Captain Jackson, of this place, was afflicted with Dropsy for upwards of eighteen months, to such an extent that it caused his body and limbs to be much swollen, and water oozed as it were from his skin, so that a daily change of apparel became necessary, notwithstanding the various remedies tried, and the different medical men consulted, all was of no avail, until he commenced using your pills, and a strict attention to the printed directions, he was effectually cured, and his health perfectly re-established. If you deem this worthy of publicity, you are at liberty to use it.

I am, Sir, yours respectfully.

(Signed) G. BRIGGS.

MOST ASTONISHING CURE OF SCROFULOUS ULCERS.—A CASE  
CERTIFIED BY THE MAYOR OF BOSTON.

*Copy of a letter from J. Noble, Esq., Mayor of Boston.*

To Professor HOLLOWAY.

Dear Sir,—Mrs. Sarah Dickson of Liquorpond Street, Boston, has this day deposed before me that for a considerable

period she was severely afflicted with Scrofulous Sores and Ulcers in her arms, feet, legs, and other parts of her body: and although the first of medical advice was obtained, at the cost of a large sum of money, she obtained no abatement of suffering but gradually grew worse.

Being recommended by a friend to try your Ointment, she procured a small pot, and a box of the Pills, and before that was all used, symptoms of amendment appeared. By persevering with the medicines for a short time longer, according to the directions, and strictly adhering to your rules as to diet, &c., she was perfectly cured, and now enjoys the best of health.

I remain Dear Sir, yours truly,

Dated Aug. 12th, 1852.

(Signed) J. NOBLE.

AN ASTONISHING CURE OF CHRONIC RHEUMATISM AFTER BEING DISCHARGED FROM THE HOSPITAL INCURABLE.

Copy of a letter from Mr. W. Moon, of the Square, Winchester.

To Professor HOLLOWAY,

Sir, — I beg to inform you that for years I was a sufferer from Chronic Rheumatism, and was often laid up for weeks together by its severe and painful attacks. I tried every thing that was recommended, and was attended by one of the most eminent Surgeons in the town; but obtained no relief whatever, and fearing that my health would be entirely broken up, I was induced to go into our County Hospital, where I had the best medical treatment the Institution afforded, all of which proved of no avail, and I came out no better than I went in. I was then advised to try your Pills, and by persevering with them was perfectly cured, and enabled to resume my occupation, and although a considerable period had elapsed, I have no return whatever of the complaint.

Oct. 8th, 1852,

I am, your obliged Servant.

(Signed) W. MOON

*Holloway's Pills* are the best medicine now on sale in the British Colonies, the ingredients of which they are composed are so uninjurious, that they cannot harm the most delicate constitution. To valetudinarians they cannot fail to be of the utmost service, being composed entirely of medical herbs, the production of a person who has made it his study to alleviate the ills to which the human family are subject; they must, therefore, be hailed with delight, as supplying a want long felt in this country.

These Medicines are in Pots and Boxes, at 1s, 2½d., 2s 9d. 4s. 6d., 11s., 22. and 33s. each. There is a considerable saving in taking the larger sizes.

GEO. T. HASZARD.

Agent for P. E. Island.

Directions affixed to each pot and box.
