2nd do Richard Ibson, Toronto tp. 10
Best years old stallion, Wm Armstrong, Markham. 14
2nd do J R Torrance, Scarboro. 6
Best draught statinon, any ago, James Dalziei, Bierheim. Imploma Best 3 year old filly, John Guy, Fullarton. 18
Best 2 year old filly, John Guy, Fullarton. 18
Best 2 year old filly, John Guy, Fullarton. 19
3rd do John Crawford, Scarboro'. 9
3rd do J McCounachie, Clarke. 5
Best yearing filly, Geo Laddell, Whitby. 8
2nd do D McCounachie, Clarke. 5
Best yearing filly, Geo Laddell, Whitby. 8
2nd do D McCounachie, Clarke. 4
Best brood mare and foal, or evidence that a foal cas been raised, John Crawford, Scarboro'. 6
Best span of draught horses, geldings or mares, D Robertson, Queenston. 20
2nd do John Morrison, Scarboro'. 6
Best span of draught horses, geldings or mares, D Robertson, Queenston. 10
Norr.—The judges are of opinion that the several spans of draught horses are not up to the usual standard in this class, being much too light. They are also of opinion that it would be much better for exhautors of stallions and mares were not brought upon the show ground so high in flesh.

CATTLE.

Stock Department.

The Galloway Heifer, "Annie Laurie."

HEREWITH we present our readers with a portraiture of Mr. John Snell's Galloway Heifer abovenamed She took the first prize as a calf at the Provincial Show in Hamilton two years ago, the first prize as a yearling at the Provincial Fair in London

had taken the first prize in the two-year old class at the recent Provincial Exhibition in this city, when we instructed our artist to take a sketch of her for the engraver. It appeared, however, subsequently, that she was awarded the second prize. We dislike to find fault with judicial decisions, and shall not do so in this instance. yet we frankly confess it was with some surprise we learned that this fine animal bad been assigned the second place. She is certainly a very fine specimen of the Galloway breed of cattle. and we think no one who has an eye for prime stock will grudge her a place in our por. trait gallery of premium animals. The fol lowing is her pedigree:

LAPRIE "-Calved November 26th, 1863, bred by John Snell. Edmonton Chinguacousy, got by Black Jack, Dam Empress by Jack, imported by W. R. Graham, Esqr: Grand Dam Beauty, imported by W. R. Graham, Esqr.

"Oxford of Athelstane." Short-Horn Bull,

Wr continue our illustrations of the prize animals at the Recent Provincial Exhibition, by presenting herewith an engraving of the Hon. D. Christie's magnificent young bull, "Oxford of Athelstane," which. though a calf but ten months' old, most justly won the Diploma as the best bull of any age on the ground. Our artist has admirably caught the leading features of this beautiful young animal, which we last year, and we were under the impression that she hope may live to fulfil all the promise of excellence this subject, the Irish Furmers' Gazette says :- The

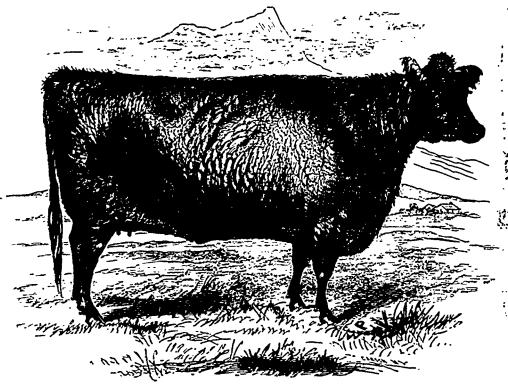

Brant; got by Oxford Lad [518], 5056, dam Pride of Athelstane (imp.), by Sir James the Rose (15290), g. d. Lady of Athelstane by Hymen (13058), gr. g. d. Playful by Fourth Duke of York [10167],-Place 3rd, by Fourth Duke of Northumberland (3649),-Place 2nd by Duke of Northumberland (1940),-Place 1st, by Second Earl of Darlington (1945),-Place, by Son of Second Hubback (2682),-a cow of Mr. Bates', Kirklevington.

Cows NOT IN SEASON.—It, answer to an inquiry on

. following is in good repute for the purpose: Fast the cow over night; then, in the morning, give her a hearty feed of nettles, mixed with a little herbage; being hungry, she will eat them clean, and the following day she will almost certainly seek the bull.

RAISING STOCK .- A correspondent of the Ulica Herald sends the following sensible hit in regard to raising stock : -" Every breeder of mules knows that a good horse colt cannot be expected from a mare that has borne mules. The common theory of this is that the blood of the mare becomes permanently affected by that of the foctus, giving mulish characteristics to her subsequent progeny. Applying this to the

permanently tainted when she is made to bear bad blooded calves? And can farmers expect ever to raise good stock from cows to which, for the purpose of making them milkers, they have been in the ty of Hon. D. Christie, The Plains, Brantford, Co. habit of using any runt of a built they could pick up?"

PEDIGREE OF THE GALLOWAY HEIFER, ANNIE he gave at the recent show. His pedigree as given cow, is it not likely that the blood of the cow is in the forthcoming Canadian short Horn Herd Book. is as follows.

OXFORD OF ATHELSTANE [520] .- Red and a little white, calved Nov. 10, 1865, bred by and the proper-

Is it Profitable to keep Poultry in the City?

To the Edilor of THE CANADA FARMER:

Sin,-The question is often asked of me, "Are chickens profitable when reared in a city ?" My experience and mode of treatment warrant me in saying, "yes." The following conditions I consider necessary :-- A warm, clean house; small grass yard to run in ; at all times a supply of pure water ; best grain in variety, say corn, barley, oats, buckwheat, wheat mixed, and so given in a self-feeding hopper, that they may feed whenever they wish-(I have a small one holding two, bushels, sufficient to supply thirty or forty chickens, proof against rat or mouse. and so constructed that no food can be wasted)lime screenings, gravel, ashes, a quantity of pressed graives (obtained at the candle-chandler's at two cents per 1b.). to be given once or twice a week. It stands as a substitute for worms, bugs, flies or meat, which are all essential to secure good laying and health. Have a stock to begin with free from disease and hardy. I consider Grey Dorkings the best.

Here is an experiment with twelve pure bloods, commenced 11th Nov., 1865,—ten hens and two cocks—debit and credit as follows:—

The original hens and their chickens have laid between 11th Nov., 1865, and 11th Nov., 1866, 803 dozen eggs, or 966 (which averaged 20c. per dozen in Hamilton market), exclusive of those set for hatching; 23 chickens killed at different times. Market value ascertained at the time—10 sold out of the stock for \$8, owing to their purity of blood; 30 slock still on hand. They have made 6 bushels of droppings, eaten 31 bushels of grain, and \$1.75 of graives.

RE-CAPITULATION.

31 bushels grain, 77c. per bushel	.\$23.87
Dr.	\$38.85
30 chickens on hand	7.50
6 bushels droppings	1.50
10 gold	8.00
23 killed, 25c. each	5.75
801 duz. eggs, 20c. per doz, 23 killed, 25c. each	\$16.10
· Ur.	

Had I felt disposed to increase the quantity of chickens reared, the profit column would have been proportionately great. I intend to do it another year.

W. H. MILLS.

Hamilton, 12th Nov., 1866.

PRICE OF LEONARD'S SAWING MACHINE.—We find that we were quite wide of the mark when we stated in our last that we thought the cost of this machine was about forty dollars. Mr. Leonard informs us that its price is seventy-five dollars when time is given, and ten per cent. off that figure for cash. We are at a loss to account for our erroneous impression.

IMPORTATION OF CHOICE SHORT HORNS.—Mr. John Snell, of Edmonton informs us that he has just imported from Kentucky the following Short Horns, selected from some of the best herds in the State. They are all red in color, and deep in the famous Duchess blood. From Jeremiah Duncan, Medora 4th, by Burnside, 4618, dam Medora 3rd, by Duke of Airdrie 2743. From Geo. M. Bedford, Zora 7th, by Meade Massic 5951, dam Zora 5th, by Grand Duke, 2933, and 6th Duchess of Goodness by Lord Derby, 3086, dam Goodness 3rd, by imp. Senator 2nd, 958. From H. W. Rice, Red Bud by Havelock 2958, dam Caroline by Master Mason 4161. From W. H. Renick, Lorena, by Gen. G. B. McLellan 5666, dam Cora by Star Davis 2258. From Abraham Renick, the Bull Calf Marmaduke, by Duke of Marlborough 3866, dam Mayflower . 3rd, by Airdrie 2478, the Sweepstakes Bull at the late Kentucky State Fair.

CANAD. WEST POLLTRY ASSOCIATION.—A Society with the above name has recently been organized in this lity, for the improvement and advancement of poultry interests. We have received from Lt. Col Hassard, the Honorary Secretary and Treasurer of the Association, a copy of its Rules, List of Members &c., and regret that the communication did not come to hand in time to receive a full editorial notice in our present issue. We are glad, however, to chronicle the formation of this Association. It is a movement that less been much needed. Our Local and Provincial preclists, and the general business of judging poultry, need the watchful eye of parties who understand the points of well-bred fowls. In other respect, we can see a wide field of usefulness open to such an orginazation We wish it success, and hope to give a fuller account of it in our next.

New Invention for Cleaning Lamp Glasses.—We have received a communication from the Rev. John Durrant, of Stratford, in which he informs us that he has taken out a pajent for a new device intended to clean the interior of lamp-glasses. A sample of the invention accompanies the letter. We have tried this lamp cleaner on glasses of differently shaped concavities, and find that it instantaneously and perfectly accommodates itself to them all. It needs no adjusting with slides or springs, like some of the contrivances for the same purpose, being strictly self-adjusting. It is a very simple affair, so much so indeed that it at first excites your curiosity as to whether it really will do the work assigned it. A trial, however, at once convinces you of its efficiency. Mr. Durrant informs us that it will be extensively manufactured forthy ith, and will probaby sell at \$1.50 per dozen to wholesale dealers, and 20 cents each retail. As a Canadian expedient for what has come to be a universal want and a necessity in every household, we are glad to speak well of this invention.

The Canada Farmer.

TORONTO, UPPER CANADA, NOV. 15, 1866.

Manufacture of Beet Root Sugar.

SEVERAL correspondents have lately sent us letters of enquiry on the above subject. One asks if the manufacture of sugar from the beet can be profitably carried on in this country. Others wish information as to the process by which sugar is obtained from the beet. More than one of the writers who have addressed us, appear enthusiastic on the subject, and evidently think it possible to "strike ile" in the direction of beet-root-sugar-making. We are somewhat surprised that this line of industrial enterprise should be attracting attention just now, as we know of no special reason why it should do so, and the almost simultaneous receipt of letters from various parts of the country, asking information on the subject, is a phenomenon we are unable to explain.

It is a thankless office to undermine and overturn castles in the air, yet this is what duty requires of us in the present instance. There is no good reason, so far as we know, to believe that sugar can be profitably manufactured from beets in this country. In France and Germany, protective duties and lowpriced labour have combined to build up this branch of business, but without these advantages, it would not flourish even there. This manufacture sprung up in France as a part of Bonaparte's scheme for destroying the colonial prosperity of Great Britain by excluding the produce of England's colonies. Colonial sugar was at the cnormous price of four and five francs a pound, and yet was in great demand. It having been sound that a crystallizable sugar could be obtained from the juice of the beet, the manufacture of it was encouraged by every advantage which monopoly and premiums could give it, until it became an established and remunerative industry.

In roughly calculating what profits might be made in this line of business, the mistake is often committed of taking the common mangeld beet as the basis than that of beet-root sugar-making.

of estimate. But it is a small white beet that is used for sugar-making, and the yield of this per acre is much less than that of the common mangold beet. In the Industrial Exhibition of 1851, among the produce of the Grand Duchy of Saxony, Pressian Saxony, Brunswick, Anhault and Thuringia, beet-root sugar was exhibited, with a notice that an acre would yield 6 tons of beet, yielding 51 cwt. of augar. Improved processes have since been introduce, so that a better exhibit could, no doubt, be made now; but it is only under highly favourable circumstances that this branch of manufacture can be made to pay. Another circumstance to be considered is, that the amount of sugar in the beet varies very much with the nature of the soil in which the plant is grown. In rich clay soils the bulbs bec me watery, and yield but little sugar. Highly-manured land gives a large produce per acre, but the roots contain only a small percentage of sugar. In soil well manured with horse and sheep dung, bulbs are produced which frequently show no trace of sugar, but whose juice, on the contrary, is strongly impregnated with nitre. saccharine property of the beet lessens by being kept in store. In three months there has been a loss of from 30 to 50 per cent, and even more in consequence of storing. The juice must be worked up very rapidly, or the sugar is lost. If the beet pulp remains only two hours without being put into the press, it will yield very little crystallizable sugar, though it is still capable of producing syrup. In France it is estimated that the average amount of white sugar obtainable from the beet is only about 41 per cent. Higher percentages have, however, been got in particular factories, even as high as ? and 8 per cent. Attempts have been made in England and Ireland to make sugar from the beet, but we are not aware that any of them have succeeded. We remember to have seen estimates in some of the British agricultural papers proving that sugar could only be made from the beet in England and Ireland at a downright loss. We imagine the loss would be even greater in this country. In addition to the advantageous circumstances of protection and cheap labour, the business of cattle feeding is in Germany combined with that of sugar-making from the beet, and is a considerable help toward making it pay. The capitalist farmers are the parties who carry on this double manufacture of sugar and beef. It is only on a large scale that it answers. The sugar factories are very extensive and costly in construction and machinery. Beet sugar refuse is considered worth about 20s. sterling per ton as cattle food. At some establishments, the molasses, after the sugar is extracted, are made into spirits, and thus a triple source of profit is obtained. We regret that we cannot furnish more precise data on this subject. A large manufacturing concern for the production of sugar from the beet was begun in Illinois a few years since, with the view of thoroughly experimenting on this subject. The results we have not met with in the course of our reading, and we are inclined to think they cannot have been very encouraging, since Brother Jonathan seldom keeps his money-making operations from the notice of the public. He is rather inclined to boast of them, and had the beet sugar experiment been attended with any high degree of success, we have no doubt it would have spread into other States beside Illinois by this time. If any, of our readers have in their possession trustworthy information on this subject, we shall be glad to publish it. As we have intimated, our impressions are very decidedly against the profitableness of the thing in Canada. The making of sugar from the beet on a small scale, so that each family could have its home made supply, after the manner of maplesugar making, is quite out of the question. Large capital and expensive works would be required, and much as Canada needs a fuller development of the manufacturing interest, we are in lined to this kits expansion must be sought in other channels, rather

Grand Ploughing Match.

The getting up and conducting of a Provincial ploughing match at the annual exhibitions of the Agricultural Association, having been repeatedly found by the directors to be attended with serious inconveniencies, and even to interfere with the arrangements and working of the show itself, the idea was accordingly abandoned; besides the land in the month of September is generally too dry and hard for satisfactorily testing the performance of competitors in this ancient and indispensable art. The managers of the Electoral Division Society, of the city of Toronto, felt desirous of supplying this desideratum, and by the liberal aid of a number of individuals they were enabled to carry their purpose into effect on the 31st of October, on a farm belonging to George Cooper, Esq., occupied by Mr. Robert Worm, close to the Davenport station on the Northern Railway, about five miles from the city.

The premium list was quite a novelty of its kind, comprising various useful articles presented by individuals desirous of encouraging the laudable undertaking, and of prizes in money offered by the Society, and patronized by the directors of the Provincial Association. The competition was accordingly open to the whole Province. The list embraced five classes :- The first open to all competitors, entrance fee \$6. Second open to all that had not taken a 1st or 2nd prize in either 1st or 2nd classes at any previous match, within the last five years, cutrance fee \$5. Third, confined to cast iron beam ploughs, open to all, entrance fee \$4. Fourth, boys under 18 years of age, that had not taken a 1st prize in any former match, fee \$2. Fifth, boys who had never competed in any former match, fee SI. A quarter of an acre was assigned to each competitor, and the time allowed for performing the work at the rate of 11 hours per acre; depth not less than six inches. plonghman was allowed one assistant to set his stakes, but not to touch the furrow with his hands; and to commence at the stake corresponding with his number, and to throw out two half lands, the whole of which to be judged.

Forty-three ploughs started at a given signal, at 11.15, a.m., and with the exception of three or four, had completed their task by 3.15, p.m. The field, consisting of 30 acres, was in sod, mostly of a lightish gravelly soil, having a tolerably uniform surface, and affording on the whole as good facilities, perhaps, for competition ploughing as can be usually obtained.

We have no space for critical remarks on individual performances. We have seen quite as good work done on previous occasions, but not, perhaps, with so high an average. There was no decidedly bad work, as used to be the case in the earlier stages of these competitions in Canada. In the first division the work was performed with great uniformity and thoronghness,-evincing a degree of skill and steadiness of purpose that could hardly be surpassed in any country. The ploughing in this, and in much of the second division, not only pleased the eye by its correct external proportions, but every inch of earth was thoroughly moved to a uniform depth of not less, perhaps, than seven inches. The short cast iron beam ploughs in the third division certainly failed to produce that clean and uniform finish to the furrows, which characterises the style of work of the ordinary swing ploughs. Yet much of the work done in this department was good, and the ground thoroughly moved. These short iron ploughs are excellent in rough, stumpy land, and probably for stubbles; but in stony cod, their action being unsteady, the results produced are certainly inferior, at least in appearance. The work of the boys in the fourth class was on the whole exceedingly commendable; and that of the three competitors in the fifth class, who had never performed in public before, unmistakably indiouted no falling off.

The judges were-for ploughing classes 1 and 3-Dr James Ross, Toronto , B. Wyncup, Willowdale ; and Robert Patterson, Elmdale. For classes 2, 4, and 5, James Bowman, Newton Brook; William Justin, Streetsville; and James Patton, Scarboro'. For the special prizes, Andrew Smith, V.S., Toronto; J. Smallpiece, Toronto; and Alex. Gibb, Toronto.

MEETING IN ST. LAWRENCE HALL.

A novel and very agreeable feature of this ploughing competition was a conversazione in the evening, in the St. Lawrence Hall. Refreshments were served by Mr. Webb, and a goodly company, including a sprinkling of ladies, partook of the social repast, and spent a very agreable evening in witnessing the presentation of the prizes to the winning competitors, and listonia delaborations. and listening to the addresses of the several speakers and the sweet strains of music. Phillip Armstrong Esq. President of the Electoral Division Society, oc cupied the chair, and after some explanatory remarks introduced the gentlemen appointed to distribute the

CLASS I.

The prize cards in this class were, after a few pre-fatory remarks presented by Col. R. L. Denison. 1st prize, Andrew Hood, Scarboro', silver mounted team harness valued at \$150—presented by R. Mal-

com, Toronto.

2nd prize, Simpson Rennie, Scarboro', a cutter presented by J. B. Armstrong, Guelph, valued at \$35

and \$10 cash, total \$45.

3rd prize, Dugald McLean, York township, set of barrows, valued at \$26—presented by H. Collard, Gananoque.

4th prize, Jas. McLean, York township, a plough, valued at \$19-presented by John Abell, Vaughan.
5th prize, Thos. Brunskill, Etobicoke, a stove, valued at \$12-presented by J. R. Armstrong & Co. Toronto.

Toronto.
6th prize, Jno. Coleman, York township, set of draining tools, valued at \$10—presented by Rice Lewis & Son, Toronto.
7th prize, Thos. Davidson. Eglington, lot of sashes valued at \$8—presented by Mr. Wagner, Toronto. 8th prize, Arthur Barrfet, Brooklin, a stove, valued at \$7—presented by Copp Brothers, Hamilton.
9th prize, Jas. McLean, Vaughan, a straw cutter, valued at \$6—presented by A. Anderson, London.
10th prize, Wm. Parkin, Trafalgar, a pump, valued at \$5—presented by John Ritchie, Toronto.
11th prize, Joe, Featherstone, Trafalgar, a table lamp, valued at \$4—presented by Noah L. Piper, Toronto.

CLASS II.

Rev. W. F. CLARKE, Editor of THE CANADA FARMER, after a brief address, presented the prize cards in this

class.

1st prize, David Tweedie, of Milton, a buggy (\$40 of this prize presented by the society), valued at \$100—presented by Wm. Gould, Milton.

2nd prize, Wm. Rennie, Markham, a gentleman's shaftoe saddle, valued at \$30—presented by Alderman Thompson, Toronto, and \$5 from the society.

3rd prize, Allan McLean, York township, pair of Scotch collars, valued at \$25—presented by Robert Nicells, Toronto, and \$5 from the society.

4th prize, D M. McLean, York Mills, suit of clothes valued at \$20—presented by Robert Walker & Son, Toronto.

5th prize, Wm. Armstrong, Scarboro', a straw cut-er, valued at \$16—presented by T. Haworth & Co.,

Toronto. 6th prize, Jno. McLean, York township, thorough-bred ram lamb, valued at \$12—presented by R. L. Denison, Toronto.

7th prize, Hugh Gillis, Vaughan, chest of drawers, valued at \$10-presented by Jacques & Hay, Toronto.
Sth prize, Thos. Kinsley, Davenport, silk and wool pautaloons, valued at \$7—presented by Geo. Haravet Const.

court, Toronto. 9th prize, Wm. Sangster, Etobicoke, a stove, valued at \$5-presented by J. G. Beard & Sons, Toronto. 10th prize, Jas. King, York township, a stable lantern, valued at \$4-presented by E Grantham,

11th prize, Jas. Rennic, Whitby, pair of boots, valued at \$3 50—presented by Mr. Meagher, Toronto. 12th prize, John Ross, Toronto, tea tray, valued at \$3—presented by Sparrow & Whatmough, Toronto.

Toronto.

CLASS III.

Prof. Buckland, after some remarks, presented the prizes to the winners in the 3rd class, as follows:

1st prize, Geo. Sheppard, Scarboro, a fanning mill, valued at \$30—presented by Patterson Bros.. Pattereon.

2nd prize, H. Chappel, Oro, a cooking stove, valued at \$20—presented by John McC.ce, loronto. 3rd prize, Michael Harrison, Cooksville, a steel mould-board plough, valued at \$15—presented by Amos Wright Eq., M. P. P., Richmond Hill.

4th prize, Wm. Brown, Toronto township, a plough valued at \$15—presented by Mr. Butterfield, Bradford.

5th prize, Jos. Chute, Woodbridge, three doz. of Sheep Tick Destroyer, valued at \$12—presented by

Sheep Tick Destroyer, valued at \$12—presented by Hugh Miller, Toronto.
6th prize, D. McLean, York Mills, a root cetter, valued at \$10—presented by W. Hewitt, Toronto.
7th prize, John Robinson, Sharon, a hay knife, straw knife, and screw wrench, valued at \$4 50—presented by Jagger & Ledyard, Toronto.
8th prize, John Todd, York township, a meerschaum pipe, valued at \$4—presented by G. W. Carlisle, Toronto. Toronto.

9th prize, Wm. Crew, Scarboro, a vest, valued at \$4-presented by W. S. Finch, Toronto.

CLASS IV.

Mr. Jas. FLEMING then presented the prizes to the fourth class:

fourth class:—

1st prize, Wm. Cox, Markham, a melodeon, valued at \$50—presented by R. S. Withams, Toronto.

2nd. prize, Robt. Reid, Markham, a silver cup, valued at \$10—presented by J. G. Joseph & Co.

Toronto and \$15 from the society, total \$25.

3rd prize, P. Cooney, Toronto. cash \$18—presented by the Society.

4th prize, Jas. Dickson, Scarboro', cash \$12—presented by the Society.

5th prize, Alfred Mason, Scarboro', cash \$10—presented by the Society.

sented by the Society.

6th prize, Wm. Brown, Etobicoke, cash \$8—presented by the Society.

7th prize, Allan McLean, York Mills, cash \$4—presented by the Society.

CLASS V.

Ald. Strachan-presented the prizes in the 5th class as follows: all the competitors being boys and the premiums being all paid in cash by the

1st prize, Jno. S. Philip, Markham, \$12. 2nd prize, Jno. Mantze, Markham, \$10. 3rd prize, Jno. Ash, Etobicoke, \$8.

The following special prizes were awarded:—
- Ist prize, Archibald McLean, York township, for the best groomed horses and kept harness—a silver mounted whip, valued at \$25—presented by R Malcom, Toronto.

Malcom, Toronto.

2nd prize, Robt. Ormiston, Whitby, for the best competing team—a patent swing pump, valued at \$25—presented by C. Powell, Newtonbrook.

Dr. Ross, of this city, and Mr. Stewart of Chicago, addressed the meeting, and the proceedings ended with the National Anthem by the splendid band of the 17th Regt., by which the proceedings were en livened at different times during the evening.

Keeping Goats for Milk.

Is ancient times large flocks of goals were kept both for meat and milk. The flesh of a young kid was highly esteemed by epicureans in the days of yore. Large use was also made of goats' milk. Wo moderners, for some reason or other, make but little use of this animal. Here and there a goat is kept as a curiosity, but rarely with practical, utilitarian objects in view. We observe that as one result of the cattle plague in Britain, the keeping of goats is being resorted to more extensively, and milch goats command high prices. Having experimented with one of these animals the past summer, we feel qualified to express an opinion as to their merits. The goat in question came under our observation in June last. having been bought by a neighbour shortly after her kid was weaned. She was then giving three quarts of milk daily. Some time afterwards her owner, requiring a larger supply of milk than her goatship could furnish, concluded to purchase a cow, and wo bought the goat. Our trial of her has been very satisfactory. At this date she gives three pints of milk daily, which is worth nearly twice the quantity of such milk as you usually get from vendors of the common article. We are inclined to think she is a rather better milch goat than the ordinary run of these creatures, but we see no reason why, with some attention to breeding, their milking qualities might not be improved. The milk undiluted is excellent in tea and coffee, imparting no unpleasant flavour. With the addition of one-half water, it makes a good article of diet for little children, for whom and for invatids it is supposed to possess qualities of a peculiarly beneficial nature. We detect no unpleasant smell from the creature, though we have heard it objected to keeping goats that they emitted an offensive odour. It may be that some goats, like some human beings, have this peculiarity. Nanny is a great pet, and makes herself very agreeable, never bunting or using her horns except in play. To prevent her jumping and climbing mischievously, we have thus far kept the fore and hind leg on one side strapped, just so as to embarrass her movements without hurting her. We have read somewhere that it is best to keep a pair, and to couple them as hounds are coupled, their dispositions being so contrary that they are never unanimous in going into a particular mischief, and so one checks the other. They have a greedy and not over particular appetite, cating anything almost that teeth can masticate or stomachs digest. We incline to think that mischievous and ill-natured bunting with which they are sometimes charged is the result of their being teased. They seem as capable of being influenced by kind treatment as any other animal with which we are acquainted, and on the whole, we incline to the opinion, that they are worthy of receiving more attention from stock-keepers than they are getting at present. Some time ago the following communication on this subject appeared in the American Agriculturist :-

the American Agriculturist:—

"In December, 1864, I purchased a pair of young goats to keep in the barn with my horses, as I heard that horses would be more healthy if stabled with goats. When the teamster landed the goats in the front yard, every neighbour was on the alert and horribly alarmed, expecting nothing short of the murder or maiming of half their children. Nanny had a kid the lart day of April, 1865, and has supplied our family with excellent milk ever since; and now in February, she gives a half pint every morning, which is worth more than a pint of such milk as I buy of the neighbours. And now the lady of the house says she would not take fifty dollars for Nanny if she could not get another. The goat has all the oats and hay she will eat, but she is rejoiced to get brakes, twigs, bark of small trees, acorns, and occasionally a 'chew of tobacco.' She has a small field to range in in summer, and I never have to chain or hamper her, as she is not breachy. I have a board with cleats nailed on at the pitching window in the barn, so that the goat can go in and out as she pleases. If cows become sick and unhealthy, don't you think we had better keep goats?"

LIVE STOCK IN IOWA .- It seems but as yesterday that Iowa commenced to be settled to any extent, yet it even now takes high rank in the scale of agricultural development and wealth. According to a report from the Auditor of the state, the live stock assessed in Iowa for the present year—excepting some half dozen counties not heard from—presents the following aggregates:

Cattle	700.598
Cattle	312,982
Mules,	13,751
Sheep,1	
Swinc,	

North Riding of Wellington Turnip

We have received from Messrs. C. & A. Sharpe, seed merchants, of Guelph, an account of the competition for the prizes given by them to the North Wellington Agricultural Society for the best crop of turnips in that Riding. It is accompanied by some very useful remarks, as regards the mode of cultivation of the turnip crop, which may be of some benefit, as well as interesting to our readers-Twelve competitors entered their names for the prizes offered by the Messrs. Sharpe. The Judges commenced their labours on Monday the 15th Oct., and menced their labours on Monday the 15th Oct., and finished on Wednesday night. They awarded the finished on Wednesday night. They awarded the first prize to Messrs. J. & R. Hunter, of the Township of Pilkington, and the second to Mr. David Foote, part of their duties, the judges deem it not out of at its highest speed. The cylinder revolves about

place to append a few remarks respecting the cultivation of this important crop :-

place to append a few remarks respecting the cultivation of this important crop:—

They would recommend turnip drills to be 28 inches apart, and the plants from 9 to 12 inches apart in the drill, according to the condition of the soil. In light soil the drills may be from 26 to 27 inches apart, and not more than 9 inches between the plants in the drill. By regulating the distance between the plants, according to the quality and condition of the soil, as many bushels per acre may be raised on light as on heavy land. Turnips should never be heed in wet weather. If they require thinning very bad, it may be done by hand, care being taken not to leave the plants too close, which inexperienced hand thinners are very apt to do. So soon as the land is dry hoc those that have been singled by hand first. In hoeing the first time let the plants fall, but leave the drills as high as possible. In hoeing the second time, draw the soil rather towards the turnips; this will keep the plants moist in dry weather, and drain off the plants in wet seasons like the present. After the second hoeing, run a double mould plough lightly between the drills, which in addition to the benefits above mentioned, will greatly assist in keeping down weeds. Barn-yard manure should be turned over in the spring and allowed to heat a week or ten days before being put in the drills. If the land is manured in the fall this process may be dispensed with; but manure put out in the morning should be covered in the same evening, if possible. The practice of exposing manure for days and weeks before ploughing it under cannot be too strongly condemued. A great many special manures are used. Wood ashes is particularly recommended; from 15 to 20 bushels per acre in addition to farmeyard manure. The ashes should be sown by hand at the back of every first furrow in drilling and they will be covered over by the second furrow. This manure is very beneficial in giving the plants a good start, and thereby preventing the ravages of the fly. Farmers cannot be too car

The largest turnips did not take any of the prizes. They were much farther apart in the drills than those than have got the prizes.

JAMES WHYTE, JOHN CARD, WM. BILBY, Judges.

More about American Farm Implements.

In resuming our brief notices of sundry farm implements that came under our observation at the Auburn Trial and State Fairs, we may first advert to Horse Powers. Without particularizing other machines of this class, we would call attention to the "Inclined Endless Chain Horse Power" of Messrs. R. & M. Harder, Cobleskill, Schoharie County, N. Y., to which the gold medal of the Society was awarded. It would take up too much space to enter into a minute description of this machine. Suffice it to say, that it is so constructed as to avoid the jerking, irregular action of other powers; its tension is remarkably even, and the judges report that, "it works more equally, more smoothly, and with less waste of power than any machine of the kind we have ever met with." It is also made in such a manner that it gets up sufficient speed for threshing, by a very slow and casy movement of the horses. The report of the judges respecting this machine is very minute and elaborate, showing by careful mathematical calculations its economy of power and general efficiency. Its weight is 1850 lbs.; price \$190 Am. cy. The same manufacturers obtained the gold medal for the best Combined Thresher and Cleaner. Of their machine, the judges say-"It is of great value, and has several features different from any Thresher and Cleaner within our knowledge." They sumup its peculiarities and excellencies as follows:

"The Thresher is overshot. The cylinder is of

1,100 times a minute, when the horses travel at the rate of 11 miles per hour. 2nd. The teeth, which are heavy, are not put into the cylinder with a screw, as is usual, but are driven in, and clinched on the inner side. By this arrangement, if the tooth breaks, another can be replaced in the same spot, which cannot so well be done when put in with a screw. 3rd The feed table ascends 21 inches next to the cylinder. at which angle the straw enters most readily between the teeth of the cylinder and concave, and stones and other hard substances which may be in the straw roll sale in this department was large and varied, includ-

4th. The ends of the cylinder shaft are of cast steel, and are a quarter of an inch more in diameter, as claimed by them, giving a wider bearing against the boxes. 5th. A dust flue is attached to the Thresher (when ordered), which is a very great relief to the operator. 6th. The concave is so adjusted that in raising it by means of the nuts, the front edge rises somewhat more rapidly than the hinder one, by means of which there is more room in front to receive the straw easily, when in its stiff and unbroken state, and allowing the back teeth to do the most thresh, ing when the straw has been bruised and softened, consequently less power is required to take through the same amount of straw. 7th. The feed table is easily removed, and can be as easily replaced. 8th. The cylinder

of which the cylinder continues to revolve freely when the horse power is suddenly stopped, which avoids the dangerous wrench which would ensue if the great velocity of the cylinder were suddenly arrested. 9th. It can be changed from right to left hand by a very simple and easy adjustment. 10th. The arrangements for separating the grain from the straw are unusually good, two forked arms in the separator are continually rising and falling. which keep the straw loose and facilitate the separation of the grain. It has a quick vibration of four inches. The end most remote from the cylinder is hung 44 inches higher than that which is nearest to it, and by a peculiar arrangement of the hangers, the jerk is materially improved. 11th. The sieves are larger than usual; they are five in number, shaken laterally. and are supplied with a very powerful stream of wind. 12th. The mechanical construction and execution are of the very best kind, and we have no besitation in saying, that in our opinion this machine embodies the greatest advances that have yet been made in the art of separating grain from the straw.

In our trial it threshed 250 bundles of wheat in 40 minutes, producing 11 bushels of clean wheat. It delivered the grain in a very clean and excellent condition. We fully believe it to be admirably adapted to meet the wants of farmers, and therefore we recommend to the Executive Committee to give a gold medal to this machine."

The above machine weighs 1,100 lbs., and costs \$210, or with dust fine attached, \$220, American currency. At the New York State Fair, the "Excelsior Threshing Machine and Straw Preserver" was exhibited in operation. It preserves the straw whole and straight ready for binding. This machine is made by Smith, Howard, and Langley, Hudson, N.Y. Its price we did not learn Wood mills, of similar construction to that of Mr Leonard, illustrated in our last issue, were exhibited at the fairs we attended, and seem to be coming into extensive use. Wheeler, at any desired point. F. W. Jennings & Co., Wil-Melick & Co, of Albany, exhibited a one horse saw mill for sawing cord wood, which appeared to do it. A new system of wire fencing was exhibited by good work It will cut from 10 to 15 cords of wood, Albert C. Betts of Troy, N. Y., which obviates many tised in the United States, and several kinds of mills twice in two, per day Price \$70. The same parties of the objections to this style of fencing, especially for crushing the cane, and of Evaporators for boiling showed a Clover Huller, capable of hulling from 5 to that arising out of the liability of cattle to get their down the syrup, were on exhibition. Among the

15 bushels of clover seed per day, with one horse. Price \$55.

At the New York State Fair, a large display of Dairy requisites was made. The chief exhibitors were Messrs. O'Neil & Co., of Utica, N. Y.; W. Ralph & Co. of the same place, and Messrs. Cooper of Watertown NY O'Neil's " Union Dairyman," and Ralph's " Oncida Cheese Vat," are well known in this country as very valuable utensils both for factories and large private dairies. The array of articles for

thermometors, lactometors, cheese presses and screws, bandage, anotta, cream guages, rubber hose, stencil plates with name of factory, &c. Our tin merchants who wish patterns for dairy requisites of any kind, can obtain them by corresponding with the parties whose names and addresses we have given.

Here it may be well to speak of a new style of tow Making Machine, which was on exhibition at the New York State Fair. In Vol. I., page 87, of THE CANADA F. EMER, we gave a cut and description of the first machine of this description, which was attached as a fixture to the milking-pail. The new machine is not affixed to a pail, and is made on a different principle from the original invention. The teat caps are of corrugated India-rubber, and the action of the human hand is very ingeniously imitated by the twist of the handle that works the machine. The accompanying cut will give an idea of

it. This machine is highly recommended, and we should think would be far more likely to work well than the one formerly noticed by us. It is manufactured by the "American Cow Milking Machine Company," 335 Broadway, N. Y. Price \$12, American currency.

Though not coming exactly under the head of implements, yet being shown in that department, we may notice fences and gates. Uncle Sam's Garden Fince" is a strong, useful, self-adjusting, portable and folding fence. It really consists of a series of gates very simply and cheaply hung, and can be opened liamsburgh, N.Y., are the proprietors and makers of

heads between the wires. Mr. Betts' plan prevents this by means of perpendicular wooden strips which are stapled 15 inches apart all along the line of fence between the main posts. He has invented a Staple Holder which, within almost the compass of an ordinary hammer, contains nearly 60 staples, and by means of which they can be driven very rapidly. A Staple Cutter, Guage Bar, and Improved Reel for paying off the wire, complete the set of tools for puting up this description of fence. The cost of the entire set is about \$100, American currency. With downward, without injury to the teeth of the Thresher. ing vats of all sizes, caus, curd knives and agitators, their help, two men can build 40 rods or more of

wire fence per day. Several styles of gates were exhibited, among them one which has been appropriately designated " The Farmers' Gate." and of which we gave an illustrated description in our issue of Dec. 1, 1865. We adhere to the opinion then expressed, "we consider this, on the whole, the best farm gate we know of" It is built without mortice or tenon, and is perfectly adapted to all gate purposes; it is exceedingly simple in its construction, and can be built by the most ordinary workman. It opens and shuts with the greatest ease, and when shut is securely fastened, both top and bottom; when open, entirely out of the way It is free from any tendency to sag, and cannot be blown open or shut, can be readily attached to any post, round or square, and its cost is so

shaft is provided with a ratchet coupling, by means | metallic cheese hoops, turned wood cheese hoops, | small that every farmer can afford to use it whereever an entrance is required. For simplicity, convenience, neatness, cheapness, durability and general utility, it cannot well be surpassed. We have had two of these gates in use for a year past, and find them perfectly satisfactory To all that still large class of farmers who allow themselves to be tor mented with "bars," we commend this gate. We do this the more cheerfully because it has been brought within reach on very easy terms. The drafts and specifications for building this gate have been reproduced in this country, and may be had by remitting One Dollar to "Box 96, Guelph P. O" They cost five dollars in the United States. By the help of the drafts and specifications, any handy farmer can make all the gates he requires, of any size from 3 to 11 feet wide.

A" Self-Adjusting Calk for Horse Shoes," was shown and seems to be a most useful invention. It consists of a shoe made similarly to the ordinary horseshoe, but with blocks raised on the heel and toe of the shoe. Through these, a tapering hole is drilled, and into this hole a cast steel calk is fitted. The calk is removable, and by keeping a supply on hand, the owner of a horse can put in sharp or dull ones in winter time to suit the state of the roads, without sending to the blacksmith, or having the shoes taken off and re-set. These shoes, all drilled and ready to go on the horse, can be bought at two cents per pound over ordinary machine shoes from the "Judson Horse Shoe Company, 194 Fulton Street, New

"Boynton's Improved Feed Rack for Fowls and Sheep," is a novel and useful invention. Its operation will be understood at a glance by the help of the accompanying illustration. It saves feed from waste, protects it from the weather, and is a very neat appendage of the poultry and sheep yard. It is made by G. W. Boynton, Auburn, N. Y. The price for fowl is \$5. For sheep, the size being larger, it is higher in price, but the exact cost of the sheeprack we do not know.

The culture of sorghum is now extensively prac-

latter " Cook's Sugar Evaporator," does equally well for both sorghum and maple syrup. It is made by C. C. Post, Hinesburgh, Vermont, and is in high repute among the maple sugar makers of that state.

A large supply of domestic implements competed for the patronage of the fair visitors to the shows. Sewing-machines, generally in busy and brisk operahes in the United States are now provided with these Devonshire, and Ireland, has its haunts on the Eastern and though its flesh is rich and fat, it does not soon valuable indoor labor-saving contrivances. Washing-side of the Province of New Brunswick, and in the produce satiety. In October it leaves the lakes, and

machines of all sorts and sizes were also exhibited. and the competition among them seemed to be pretty keen. It was even more keen in the matter of clotheswringers, by means of which the most laborious part of washing is reduced to mere child's play. At the Michigan State Fair, a number of competing wringers were put to a very severe test. An inch board tapering to a point was attempted to be passed through the

The only wringer that passed triumphantly through this ordeal, was the "Gipson Wringer," manufactured by the Shelby Manufacturing Company, Snelby, Uhio. The tapered inch board went between its rollers without difficulty several times, and after each time the rollers held a sheet of writing paper so tenaciously that it tore in pieces on being pulled. This is truly a "Universal Wringer," having expansive gearing so adjusted that it will either wring the thickest bed-quilt, or the finest muslin fabric.

Many other novel and useful articles might be named, but these notices have already become too extended. We will only mention one thing more: a new style of corn broom manufactured by "The Syracuse Patent Broom Company." This broom is so made that the brush is removable. Hence one handle will last a life-time. When the brush part is worn out, it can be replaced with a new one. We do not know the price of this broom, but if it be reasonable, it is well worthy the attention . Canadian manufacturers and traders.

In conclusion, we recom mend such of our readers as can spare the time and money, to visit the United States Exhibitions. parties interested in the manufacture and use of labour-saving implements, could not fail to pick up a great deal of valuable information, by acting upon this suggestion.

SHRINEAGE OF WOOL. A committee appointed by the Illinois Wool Growers' Association, made a report of their labours in superintending the scouring of

wool and awarding premiums thereon, at the late | in British waters weighing as high as seventeen | acre in the country. The vermin amount thus to annual meeting of that association. They give an claborate table of results which show that the fine wool fleeces of ten bucks and four ewes averaged 15 15 lbs. in the dirt, and 5 2-15 lbs. scoured, making the average shrinkage nearly two-thirds, (663 per cent), the greatest shrinkage being 781 per cent. and the least 51} per cent.; the shrinkage upon one coarse grade ewe 574 per cent., the single Cotswold ewe 45% per cent., and upon the three Southdown fleeces about 46 per cent.

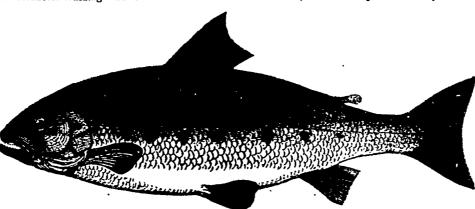

As will be seen by our reports on the last page, the price of wheat rules high. Spite of the tariff, our the rivers and harbours, returning to the sea as American friends are obliged to take our breadstuds. soon as the smelt take to the brooks.

Canadian Natural Kistoru.

The Salmon Trout.

Salmo Trutta, (Yarrel.)

THIS fine fish, which is said by naturalists to be tion, from several well-known manufactories, invited identical with the Salmon Trout of the Thames, the inspection and cruicism. Most well-to-do farm fami- Sea Trout of Scotland, and the White Trout of Wales, | cious table-fish of all the purely fresh-water varieties,

Gulf of St. Lawrence, and is, we believe, found nowhere else on this continent.

The Salmon Trout very much resembles the true Salmon (Salmo Salar), than which its body-colour is darker, and its fin-colour lighter. It is considered a sort of intermediate fish, between it and the Brook Trout (Salmo Fontinalis). The length of its head is as one to four of the length of the whole body, and the depth of the body to the length of the same. The teeth are small and numerous, occupying five rows on the upper surface of the month. On each side of the tongue there are three or four teeth, strong, sharp, and curving backwards, well fitted to secure living prey, or convey food toward the swallow. The dorsal fin-rays are twelve in number, the pectoral thirteen, the ventral nine, the anal ten, and the caudal nineteen. These fish go in shoals, leaping and and often enter rivers and estuaries in large numbers. or common sand-hopper, would seem to be a favourite article of diet with them. Specimens have been taken sides, and white on the belly. It is a truly beautiful

The White Fish.

This fish, properly speaking, belongs to the Salmon family, and abounds in the upper lake waters of this Province, the best being taken in the clear, cold depths of Lake Huron. It is, perhaps, the most deli-

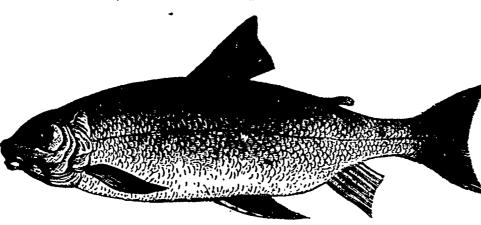

> enters the rivers in order to spawn, returning to its usual haunts by the middle of November. It inclines to go in shoals, and resorts to different parts of the lake, according to the season of the year, its movements probably being determined by the supply of food. This fish is chiefly a vegetarian, but in the lakes to the far north, preys on insects and can occasionally be taken with a hook and line. Now

and then an angler trolling for Lake Trout or throwing the fly for the Black Bass has hooked a specimen. and "Frank Forester" expresses the opinion that were his habits only studied and humoured properly, he might be regularly caught with the hook, and from his activity and strength would give much sport to his takers. Thus far, however, it has no reputatation as a game-fish. The average weight of the White Fish is from three to four pounds, though when very fat, it attains to seven or eight pounds, and in some localities has been taken of much larger size. In shape it is very deep as compared with the length and thickness. The head is narrow above, with a moderately wide frontal bone, and forming one-fifth of the length, exclusive of the tail. The eyes are large. The jaws and tongue are furnished with a few teeth, which are almost imsporting with much show of spirit and enjoyment, perceptible to the naked eye. The scales are large, irregularly orbicular, and about half an inch in Their food is miscellaneous, but the Talitris Locusta, diameter, with a bright, pearly lustre. The colour, in the shade, is blueish grey on the back, lighter on the

> fish, and no less useful than beautiful, affording their principal subsistence to several Indian tribes, and being a main article of diet at many of the fur-trading posts. In the rapids of the Sault St. Marie it is taken with scoop-nets, and speared by the Indians. common mode of capture however, is with the seine. RATS AND MICE.-The Gardeners' Chronicle says :-The following is a somewhat ludicrous calculation on the idea that there are one rat and ten mice per

pounds, but they are seldom, if ever, found more than 91,116,000 which would consume 182,232 bushels of corn daily, or 4,156,167 quarters and four bushels in a half-year, namely, 182 days and a half; and this would supply 5,831,424 people with a 2 lb. loaf each daily for six months, or 2,915,712 people daily with a 2 lb. loaf each the year round.

A notion has prevailed that Australian birds are almost destitute of song. Mr. Harper explodes this theory. He is now in Australia, and in a vein of enthusiasm describes the woods as resounding to their native songsters. A similar libel against Canada used to be retailed by tourists and others. It has, however, been pretty thoroughly refuted.

half that size in North American waters. The whole Gulf of the St. Lawrence abounds with them from one to seven pounds in weight. They ascend the rivers as far as the tide reaches, but no farther, the pure fresh water apparently not suiting their habits. They afford splendid sport to the amateur fisherman, being taken with a scarlet fly in the bays and along the coasts. A strong fish will often make a long run, and give an exciting time of it to the angler. They prey largely upon the smelt which they pursue into

Agricultural Intelligence.

The Great Corn Field of the West.

A written in the Cincinnati Gazette gives the statisties of the production of corn in the United States for the last twenty-five years as follows :-

In 1840, total crop. 377,531,875 In 1850, total crop. 592,671,104 In 1860, total crop. 830,451,707 In 1866, total crop, (estimated). 1,0.39,000,000

The increase being at the rate of four per cent. per annum, the aggregate crop of 1866 will be over one thousand millions of bushels. The following are the the staple, in comparison with other grains:

New England, New York, and New Jersey, 35,948,-890 bushels.

Pennsylvania, Maryland, Delaware, Virginia, North

Archisylvand, Maryland, 198,998,249 bushels.
Georgia, Florida, Alabama, Mississippi, Louisiana, Arkansas, and Texas, 147,425,726 bushels.
Ohio, Indiana, Illinois, Kentucky, Tennessee, Missouri, Michigan, Wisconsin, Minnesota, Iowa, and Kansas, 550,627,943 bushels.
This shows that holf the improper group of Indian

This shows that half the immense crop of Indian corn grown in the United States is produced in the valley of Ohio and Missouri. He estimates the crop of this year in Ohio at 91,000,000 bushels.

Mr. Lawes' Wheat Crop of 1866.

TO THE EDITOR OF BELL'S WEEKLY MESSENGER.

Sir.-There can be no doubt that, owing to the sig.—There can be no doubt that, owing to the long continuance of very unfavourable harvest weather, the wheat crop has suffered considerable damage, and that a very moderate produce has been harvested, both in bad condition, and at a heavy cost to the farmer. In a letter I wrote about a year ago I stated that, although upon many light soils the crop of 1865 had suffered both from the frosts of the wanter, and from the heat and drought of the summer. I still considered that though very inferior to the crop of either 1864 or 1863, it would prove to be upon the whole little, if any, below an average; and I showed that upon my own farm, both the experimental and the ordinary crops (though below either 1'61 or 1863) were considerably above the average of the previous 13 years.

The following are the results obtained this year on some of the most important plots of the experimental field. The selection is the same as in former years, field. The selection is the same as in former years, and this is the 23d wheat crop in succession on the same land. For comparison there is also given the produce of the three preceding years, as well as the average over the last 14 years, during the whole of which period (and in some cases longer) the same description and quantity of manure have been applied year after year on the same plot:

BUSHELS OF DRESSED CORN PER ACRE.

Plots	How manured each year.		Average of 14 years, 1652 1865.			
_		1863.	1864	1865	1860	
8	I nmanured Farmyard manure Artificial manure Ditto Ditto	17 ¼ 44 53 % 55 % 55 %	16 40 45½ 49% 51½	13', 37', 40', 43%	12 V 32 V 29 J 32 J 32 J 32 J	16% 85% 37% 89% 50%

WEIGHT PER BUSHEL OF DRESSED CORN. LBS.

3	Cnmanured	62.7	1 62 0	1 60 1 1	61.3	57 3			
2	Farmvard Manure Artificial Manure. D tio	63 1	63.5	61-6		598			
3	Artificial Manure.	62-6	631	61-0		0 63			
8	D tto	623	63.5	611	60 1	58.5			
9	Ditto.	62.1	62.6	61.5	60-6	67.8			

Thus the crop of 1866 is, under each of the very different conditions as to manuring, considerably less than that of either of the three preceding years, and also less than the average of the 14 preceding years. The produce without manure, and that by farmyard manure, are between three and four bushels, and manure, are between three and four bushels, and that by each description of artificial manure is more still below the average of the 14 years. Indeed, so far as the quantity of grain is concerned, the past season has been particularly unfavorable for the action of the artificial manures, and in this respect it presents a striking contrast to the three preceding years, but more especially to 1863, when exactly the same descriptions and amounts of artificial manure gave about 23 bushels more grain ner acre than in gave about 23 bushels more grain per acre than in the season just past. From the progressive decline in the produce from year to year since 1863 it will, perhaps, be supposed that the result is in great measure connected with a gradually declining con-dition of the land, and therefore not mainly the effect

and the indication of variation in the productive character of the seasons. That the results are not due to the changing condition of the land, but to the changing character of the seasons, is, however, evident from the fact that several times during the lest 14 years the crops on these same plots have been as bad as, or worse than, in the present season. Thus, in 1852, they were worse, in 1853 much worse, and in 1860 very nearly equal, as the following figures will show. The respective plots gave:

BUSHELS PER ACRE.

Plots.		1852,	1853.	1860.	1866.
27	Unmanured	26%	677 1977 237 237	274	12¼ 32¼ 29¼ 32½

The variation in amount of produce from year to year may therefore safely be taken as almost wholly referable to season.

The quality of the grain, as shewn by the weight per bushel, is seen to be considerably above the average of the last 14 years.

Turning from these experimental results to those obtained on my farm under ordinary management, I may mention that three separate fields give this year

may mention that three separate fields give this year 10, 42, and 46 bushels per acre respectively, against 38, 48, 48, and 51, obtained in four last years, thus indicating a considerable decline in amount of produce. On the other hand, the weight per bushel is somewhat higher in each of the three cases this year than in either of the four last years.

Upon the whole, I conclude that the wheat crop of 1866 will prove to be decidedly below an average, and judging from the produce of both in experimental and ordinary crops, and the relation which has been observed between them and the crops of the country generally for many years past, I should estimate the deficiency at not less than 10 or 12 per cent.

I am, Sir. yours, &c.,

J. B. LAWES.

Rothamsted, Herts, Oct. 8.

Mr A Noyes, of Mears, Mich., claims to have a potato which weighs six pounds.

Warren Co., Ohio, has 9,957 horses, 12,478 cattle, 23,102 sheep, and 24,603 hogs.

It is said that 500 pairs of working cattle were exhibited at the Litchfield Co., Conn., Fair.

An Oregon Farmer obtained forty bushels of flax seed from two acres of land. The seed was sold at \$1.50 per bushel.

A firm in Buffalo, N.Y., recently shipped 10,000 bushels of wheat to Toledo, O. This is reversing the natural order of things.

Mr. Goodrich originated and tested about 16,-000 seeding potatoes, of which number not more than three or four varieties are considered very val-

A rotation of four crops, common in parts of Maryland and Virginis, is Indian corn, wheat, clover, and wheat.

In the vicinity of Chatsworth, Ill., wells are bored with an eight inch augur and lined with drain The water in that region frequently rises nearly to the surface.

AMr. Scott, of Vermont, insists, against the general opinion, that giving meal to cows "spoils" them, and says he has not had a sick cow in eight years, since he quit feeding meal.

Trotting horses command high prices in New York. At a recent auction sale, Toronto Chief brought \$5,000, Blonde \$2,400, and a pair of black horses

An ointment of seven parts lard to one part of iodine, applied night and morning to the udder of cows troubled with garget is recommended by the Rural New Yorker.

Over 3,000 grade merinos have been sent to Virginia from Verment, within a few weeks. They were to be driven the whole distance, at the rate of about ten miles a day.

The number of entries at the Minnesota State Fair was 717. The display of live stock was very good for a new State, but that of grains was very poor.

The St. Paul Press says the quality of the wheat in Minnesota this year is much inferior to that of former years. The grain is shrunken. The average yield per acre, it is feared, will fall below aftern bushels.

A farmer in New York has ten acres of osier willow, from which he netted \$1,500 this year. About one ton to the acre is considered a good yield.

A proposal has been made to fertilize the grest Desert of Sahara, by complicated systems of river irrigation. The future alone will develop the practicability of such an enterprise.

The Ohio Furmer recommends wood ashes mixed with salt as a preventative or check for bloody murrain. A table spoonful of pulverized roll brimstone given in a meal slop is recommended when an animal is attacked with the disease.

T. C. Peters, of Maryland, says that the average yield of wool from an ordinary flock of sheep will be about one pound to twenty pounds of carcass, live weight, and that if more is obtained, it must be paid for in better care and keeping.

The Rural New Yorker thinks a crop of clover seed exhausts the soil more than the orap which is cut for hay, and advises letting the second growth rot on the land, or feeding it off, unless some remuneration is made to the land.

A correspondent of the Germantown Telegraph sprinkling fine gypsum over the seed, a few days before sowing. He thinks this the best possible stimulant of the germinating energy.

It is recommended to test grass seeds, especially clover, before sowing, by putting seeds, previously counted, in a small cup filled with good soil. Cover the seeds a half inch deep, and keep the soil moistand warm. In a few days the proportion of good seeds may be determined.

A Southern farmer suggests placing two barcovering with water. When one is emptied by feeding from it, fill again and commence feeding from the other. This softens the corn, and, in the opinion of the one suggesting it, makes it more easily digested by souring it a little.

SALE OF LONG WOOLED SHEEP .- At a late auction sale of Cotswold and Leicester sheep at Ann Arbor, Mich., by Mr. E. Wallington, 100 ewe lambs were sold at \$14.00 each, buck lambs sold at from \$30 to \$50 each, three imported ewes brought \$100 each. The whole number sold was 183, bringing \$3.510.

TRAFFIC IN ANIMALS.-Some further regulations on this subject were published in a supplement to the London Gazette of the 18th ult. They are to the following effect:- "1. That all cattle and any other animals exposed at any market in Scotland where foreign cattle are, or within the preceeding twentyeight days have been so exposed, or within one mile of such market, shall be slaughtered within four days. 2. That from and after the 22nd inst., no market fair, auction, exhibition, or sale of sheep or lambs shall be held in the several counties enumerated in schedule annexed to order of the 24th of March last, or in the county of Oxford. Provided that markets for the sale of sheep and lambs may be held in such counties with the license of the Privy Council; and sheep and lambs belonging to the owner or occupier of premises that are not situated within the limits of an infected place, if the sheep or lambs are free from disease, and have been in the possession of the owner or occupier not less than twenty-eight days, may be sold on such premises, &c."

CHEESE IN GEAUGA COUNTY, OHIO .- The Cleveland Herald says the extent of cheese manufacture in Geauga county is a matter of surprise to all who become acquainted with its extent and importance. There are seventeen cheese factories in operation there with an average number of six hundred cows to each factory, or ten thousand and two hundred cows in all connected with these establishments. The average yield of milk per cow from May to November is three hundred and fifty gallons, producing one pound of cheese to the gallon, or a total of 3,570,000 pounds of cheese. The amount made in private dairles is put at 892,500 pounds, constituting an aggregate for the county of 4,452,500 pounds. Most of the cheese made during the warmer months is of the Cheshiro style, being 15 inches in diameter and 10 inches high, weighing from 60 to 70 pounds each. This style of cheese is designed for the European market. For the home and Southern market a style varying from this is preferred.

Veterinary Department.

Injuries Incident to Frosty Weather.

FRACTURED BONES IN HORSES.

Denies the winter months we find that horses are very liable to injuries from slipping or falling upon the hard frozen ground. Some of these injuries prove of a serious nature, in many cases rendering an animal useless. The first we shall notice are fractures. The bones of the legs and quarters are very liable to fracture in the horse. When the bone is simply broken without being displaced, it is known as a simple fracture; when the bone is broken and the surrounding parts lacerated it is called a compound fracture, and when the bone is splintered it is pronounced a comminuted fracture.

A general opinion amongst horse owners is that broken bones in horses will not reunite; however, this is a mistake, for reunion will take place in them as readily oven if not more so than in the human being, but the great difficulty arises from the fact that we are unable to keep our patients in that state of quietude necessary for the complete reunion of fractured bones. Also another very important subject must be taken into consideration and that is the value of the injured animal, whether it is more profitable .to place it under treatment or to destroy it. In compound a actures of the limbs we generally recommend the destruction of the animal (without it is a very valuable stablion or mare), as it is invariably found to be the most profitable, and at the same time, perhaps, the most humane treatment we can have recourse to.

In simple fractures and especially in certain re gions they can be treated with good chances of success. The haunch bones are exceedingly liable to fractures, from horses falling on ice, or even from tlipping, and from being deeply covered with muscles it is often difficult to detect. There is sudden lameness, he drags his leg and is unable to bring it forward. In some cases he is almost unable to move, in others it is surprising how he can move along considering the nature of the injury. We have known horses to walk three miles after the fracture occurred and yet recovery took place. Last winter we were called to a case of fracture of the haunch bone, the accident occurred at Richmond Hill, and the poor animal had been forced to travel as far as Yorkville before he gave completely up. Another symptom of fracture in that region is the crepetus heard when the horse is made to move.

The treatment of fractures of the haunch bones can generally be undertaken with success. The horse should at once be placed in slings, and if there is swelling of the muscles, fomentations of hot water should be diligently applied. The horse should be fed on nutritious but not bulky food. It will be necessary to keep him in slings from seven to ten weeks, when he may be taken out and placed in a roomy, loose box, and for sometime he may require assistance to rise. The muscles of the haunch waste a great deal during the time he is in slings, and the reproduction of the muscular fibre is materially assisted by the application of repeated mild blisters. On no account should the horse be removed entirely from his slings in less than seven or eight weeks. After recovery takes place, for ordinary work, the horse is little the worse, with the exception that he is always a little lower in the injured hip. The prominence on the haunch, known technically as the anterior spinous process of the iliums is often fractured from the same causes as above alluded to, when not displaced, it is not necessary to place the horse in slings, a few weeks rest will generally suffice, reunion will take place. In some cases it happens, that a small piece of bone becomes detached and burrows into the muscle, it there acts as a source of irritation, setting up inflammation in the parts, causing swelling and soreness, which will open out and run matter for sometime. The treatment must be such as to get rid of the irritant, an incision must be made into the muscles and the offending agent removed when the parts will soon heal up.

Flowers in the Cemetery.

A CEMETERY is most certainly the right place for profusion of flowers. Of all out door monumental decoration these are by far most beautiful and appropriate. Those who have money to spend upon the last habitation of their friends and relations, and who plously desire to shew their lave and sorrow by some sort of outward sign, will act more wisely in paying some annual fee to the cemetery gardener to keep churchyard flower-beds trim and pretty, than in laying out a vast amount of money among stone-masons, resulting in ill-executed angels, or trophies of cannon-balls and swords and cocked hats, and other such insignia, hinting at the professional career of the deceased. The sums of money spent on these great ponderous symbolical monuments are often very large. But who that groaned in presence of some hideous specimen of sepulchral bad taste, some terrible combination of cherubs and skeletons, of scythes and hour-glasses, of broken columns and ponderous marble clouds, and who has felt the beauty of one of these flower-begirt graves, will not testify to the superiority of the gardener's work over that of the stone-mason? There is, too, a symbolism in the introduction of flowers here which makes them specially fit. These plants have come up from a root which uself was buried in the earth in order that the flower which we admire might bloom. They were put into the ground in the form of seed or bulb, with no beauty about them to win our admiration, but they come up in due time arrayed in such splendour of decoration as cannot fall to fill us with admiration first, and then, as we think longer, with hope. They are grasses of the field whose perishable nature has been made before now to typity the insecurity of human life. Moreover they suggest, at least, a certain continued supervision a daily tending and care, which favour the idea that those to whose memory they are sacred are still held in recollection by their friends.—All the Year Round.

Woodstock, Conn. In circumference they measure 110 inches, and the weight of the half dozen is nearly two hundred pounds.

BLACK KNOT ON THE PLUM.—A correspondent of the Boston Cultivator states that he has been very successful in removing or preventing the black knot, by burying iron turnings in the earth, and then promptly cutting off whatever of the black knot may appear Ho thinks that driving nails in the ground beneath the tree will answer the same purpose as the iron turnings. This is probably a remedy.

TRANSPLANTING THE RASPBERRY.—The Gardeners' Monthly states that the frequent want of success in transplanting the raspberry, complained of by the cultivators of this plant, is attributable to the fact that the planting is done too deep. A raspberry plant shoots up from the crown or from the roots, hence deep planting retards this operation or prevents the suckers from reaching the surface. To facilitate the growth of these, in their efforts to emerge from the soil, a light covering of earth only should be used. A depth of two inches will be found sufficient for the purpose and much better than a greater quantity.

A VINE NEAR THE DOOR.—The Massachusetts Ploughman well says that a traveller over a country road would instinctively have his eye caught and his thoughts somewhat tangled up by a fine vine growing vigorously near the door of a home. It does not matter how small or humble that home may be, it is raised in the esteem of any observing passer-by holding up the suggestive shelter of a vine. It expresses love in the house, thoughtfulness for what is at once graceful and appropriate, pure and healthy domestic sentiment, and a spirit of contented happiness which many an one goes the world over to find, and looks for in vain. Such a simple home ornament as this is a token for all men to see, that the dwellers beneath the roof it adds expression to, are persons of feeling for what is true and lovely, for native refinement and quiet happiness. There should not be a farmhouse in the land without a vine somewhere contiguous.

Miscellaneous.

A Story, with a Moral.

A gentleman of middle age, who had always been a farmer.—had cleared up and improved one of the best farms in Maine, crested new and convenient buildings, reared a family, and was enjoying the blessings with which he was surrounded,—became possessed with an idea that he would sell his farm. Friends told him he could live so much easier to go into the village where he could have a nice house, a garden, keep a cow, and if he chose, a horse, and live like a gentleman on the interest of his money; that he advertised his farm for sale. He found no want of purchasers; and the farm was soon disposed of for a handsome sum. Then the stock, farming tools, &c., were sold, and the place that he had wrought with his own hands, the buildings he had built for his own convenience and according to his own notions, the spot where he had raised his family and around which clustered so many dear associations passed into the hands of strangers. For a time the gentleman did not locate, as he desired to look round, find a place to suit him, and see where he could be happy the remainder of his days. At last he found a place that suited him, purchased it, and settled down to life again. But things did not go right. He missed his old farm and house, the silent but delightful company of his cettle, sheep, and other domestic animals, the scenes where he had passed so many happy years, and the society of his old neighbors, tried and true; he grew disconiented and was well nigh sick. His wife and daughters also, were not pleased with their new home (it was half a mile from town, with a little land, and was what many would call a very desirable place). Having remained long enough in his new place (he could not be said to have lived at all) to become satisfied he should never be contented, he resolved to have the old farm hack again. He went to the man who owned it, paid him five hundred dollars more than what he got, took possession again of his familiar fields and groves, and having learned a wholesome lesson from his transaction, is now at

Rabbits are prolific breeders. Ten couples introduced into Geelong, Australia, in 1859, have yielded 50,000 head for consumption. This is exclusive of the number preserved for the perpetuation of the breed. Why should not the breeding of rabbits prove profitable as a business?

Cheap Paint for Beildings and Fences.—Prof. Tillman, at a late meeting of the New-York Farmers' Club, said some questions having been asked about the best out-door paint, I would recommend as the cheapest and neatest covering for fences and rough work a mixture of lime paste and skimmed milk. The best preparation would be made by mixing lime with curd and using milk or whey for diluting the mixture. The reason why this compound will make a more permanent wash than ordinary whitewash is, that the coagulated casein in curd is dissolved in a solution of any alkaline earth, and the compound is not soluble in water. Glue can be mixed with a lime solution, but it will not resist the action of water, and it should not be used on surfaces exposed to rain.

WANTED: A DOMB, DRAF, AND BLIND WIFE.—Our friend Wetherell, of the Boston Cullivator, a grey-haired old bachelor, has taken to poetizing. His latest effusion is decidedly anacreontic in more senses than one. It contains among others the following stanzas:

"Oh, I would dwell where mortal voice Would never reach my ear, Where none could listen to each sigh And note the falling tear.

And I would want but one kind friend To cheer me in my home, But one to nestle by my side, And never from me roam."

Of course the "one kind friend" must needs be dumb, deaf, and blind. Well there's no accounting for tastes, and we can only wish our worthy contemporary "married and happy," according to his wishes as above expressed.

Morse Power .- A gentleman in Scotland has trained a couple of mice, and invented machinery for enabling them to spin cotton yarn. The work is done on the treadmill principle. It is so constructed that the common house-mouse is enabled to make atonement to society for past offences by twisting and recling from 100 to 120 threads per day. To complete this the little pedestrian has to run 101 miles. This journey it performs every day with ease. An ordinary mouse weighs only half an ounce. A halfpenny's worth of oatmeal at 1s. 3d. per peck serves one of these treadmill culprits for the long period of five weeks. In that time it makes 110 threads per day, being an average of 3.850 threads of 25 inches, which is nearly nine lengths of the ree! A penny is pand to women for every cut in the ordinary way. At this rate a mouse earns 9d. every five weeks, which is one farthing per day, or 7s 6d. per annum. Take 6d. off for board, and 1s. for machinery, there will arise 6s. clear profit from every mouse yearly. The mouse-employer is going to make application for the lease of an old empty house, the dimensions of which were 100 by 50 feet, and 50 feet in height, which, at a moderate calculation, will hold ten thousand mouse-mills, sufficient room being left, for keepers and some hundreds of spectators. Allowing £200 for rent and taskmasters, £10,000 to erect machinery, and £500 for the interest, there will be left a balance of £2,300 per annum. reeling from 100 to 120 threads per day. To combe left a balance of £2,300 per annum.

Toronto Markets.

"CANADA FARMER" Office, Nov. 15, 1866.

The produce market has been active during the past fortnight, the receipts on the street, though not so large as earlier in the sea son, being sun very fair. Barley and peas continue to be the leading stapies offering, the receipts of wheat being small.

LATEST CORN EXCHANGE REPORT

November 14.

Flour—Receipts nill, market weaker, caused partly by a de-cino in eastern markets and an advance in railway freights, sales, 100 barrets No. 1 at \$0.00, several tots offering at the price with only \$6.14 to \$0.00 offered. Harra offering at from \$7.50 to \$7.75, superior offering at \$2.25.

Wheat—Receipts, 12,038 bushels, market weaker, buyers deling unwilling to take heary stocks at present prices. Fall wheat held at from \$1.65 to \$1.73, sales, 2 cars at \$1.65 at Collingwood. Spring what offering at \$1.45 with \$1.43 offered, no sales, a car inferior offered at \$1.25 with no buyers.

Barley—Receipts by cars, 200 bushels; sales, 1 car at 54c; 2 cars at 56c, receipts are computed at 2,000 bushels, prices ranged from 56c to 57c.

Peas—Reccipis, 700 bushels, sales, 2,500 bushels at 80c; 1 car at 78c delivered; receipts are dull and light, 76c was paid.

Provisions-Dressed hogs from \$5 25 to \$6 25 and \$6 50 for extra heavy Butter store parked, 14c to 15c Land, 13c for shipping lots; choice dairy, 16c to 18c. Mess pork, \$22 prime mess, \$19.

THE CATTLE MARKET.

THE CATTLE MARKET.

The market has been fairly supplied during the week; the greater part offering being, however, of very inferior description. Farmers would do well to keep back interior stock at present, the market being perfectly glutted with that description of cattle, which sell at low figures. At the late fairs held in the West, there was a large number of cattle offering, but very few prime animals. In our market first-class cattle oring \$6 per 100 lbs, dressed weight; inferior, from \$4.50 to \$5.50. \$8eep have been in good supply at from \$3.50 to \$4.50 cach per car load. Lambs, from \$2.50 to \$4.50 cach, per drove. Calrey scarce and in demand at from \$3.60 to \$1.00 op per cares, according to size. Several beautiful haunches and saddles were to-day on view in the store of Mr. Britton, arcade.

mdes, skins, and wools.

There is no change in quotations of hides and skins. Business is very dull, especially in sheepskins, in which there is next to nothing doing.

Canada combing wool was quoted at 70c to 85c in New York on Saturday. The market was dull for all qualities, "a general feel-ing of distrust existing."

The following are the current quotations:—Green hides, \$6; calf, dry, 250; green calf. 12½c; cured, inspected hides, \$7.75 to \$8. Sheepsins, fresh, 75c to 80c, pulled wool now sell at 30c; fleeco wool, none offering.

Montreal Markets.—Nov. 14.—Laidlaw, Middleton & Coreport. Flour—receipts, 2,500 barrels; market considerably lower. Extra and fancy, nominal; sales, superfine, \$7 05 to \$7 15 now offering at \$7 10, closing dull. Wheat—U. C. spring, \$1 45 to \$1 50. Pras—90c to 95c. Rye—95c to 66c. Abts—first pots nominally \$7 20. Pork—mess about \$23 00. Butter—nothing delayer.

Belleville Markets.—Fall Wheat, limited receipts, \$1 20 to \$1 40; Spring Wheat, \$1 10 to \$1 23; Barley, dull at 630 to 550; Rye, firm at 560 to 570; Pear, declining at 600 to 650; Oats, 300; Drested Hops \$6 to \$7 50, Butter, 14c to 160; Eggs, 13c to 15c, Cheese, 10c to 11c.

Hamilton Markets.—Barley, No. 1, 50c to 53c; No. 2, 45c to 48c; Peas, common, 65c to 71c; Oats, 23c; Hope, 25c to 35c; Timothy Seed. \$2.50; Wheel—spring, \$1.25 to \$1.37, white winter, none, red winter, \$1.25 to \$1.35, amber winter, \$1.35 to \$1.55 Receipts by team—Flour, none, Wheat 2,000 bushels, Barley, 3,500 bushels, Oats, 1.000 bushels, Peas, 800 bushels.

London Markets.—Fall Wheat, \$1 70 to \$1 85; Spring Wheat, \$1 30; good to extra, \$1 60 to \$1 42, Barley, 45c to 52c, Peas, 65c to 69c; Oats, 27c to 28c.

Guelph Markets.—Flour, \$3 50 to \$3 75; Fall Wheat per bushel, \$1 50 to \$1 70, Spring do., \$1 25 to \$1 43, Midge Proof \$1 20 to \$1 35, Oats, 27c to 28c; Peas, 50c to 65c; Barley, 40c to 52c.

Galt Markets.—F W Flour per 100 lbs., \$3 75; Spring Wheat Flour, do., \$3 25, Fall Wheat, per bushel, \$1 45 to 10 \$1 70, Amber do do., \$1 20 to \$1 50, Spring do do. \$1 25 to \$1 45; Barley do., 40c to 62c, Oats do., 25c to 27c, Butter per lb., 14c to 15c; Eggs per doz., 10c to 15c.

Chatham Markets.—Flour per 100 lbs. \$3 25 to \$4 25, 19Acat. No 1 white per bushet, \$1 60 to \$1.75, red da do. \$1 45 to \$1.50; Spring da do. \$1 30 to \$1 42. Barley per 100 lbs. \$5c to \$1 08, Oats 20c to 22c, Beans, Soc to \$1, Pear, 40c to 50c,

Oswego Markets, Nov. 13.—Flour-Market unchanged. \$11 75 to \$12 for brands from No. 1 spring; \$13 50 from rod winter; \$14 50 from white, and at \$15 50 for double extra from prime white wheat.
