Pages wholly or partially obscured by errata slips, tissues, etc., have been refilmed to ensure the best possible imago/ Les pagcs totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon à obtenir la mailleure image possible.

This item is filmed at the reduction ratio checked below/
Ce document est filmé au taux de réduction Indiqué cl-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here art the best $\mathbf{q}$ ality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original coples are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol $\rightarrow$ (msaning "CONTINUED"), or the symbol $\nabla$ (meaning "END"). whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure zire filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la gônérosité dc:

Bibliotioque nationale du Canada

Les images sulvantes onई óte reprodultes avec le pius grand soin, sompte tenu de la conditic et de la netteté de l'exempiaire filmb, et un conformitt avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimbe sont filmes en commençant par le premier plat et en torminant soit par la derniere page qui comporte une empreinte d'impression ou d'illustration, solt par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la premidre page qui comporte une empreinte d'Impression ou d'illustration et en terminant par la dernière page qui comporte une teile empreinte.

Un des symboles suivants apparaitra sur la dernière image de chaque microfiche, selon le cas: le symbole $\rightarrow$ signifie "A SUIVRE", le symbole $\nabla$ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour âtre reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut on bas, en prenant le nombre d'images récessaire. Les diagrammes suivants illustrent la méthode.

## A SKETCH

 OF THE
## LIFE <br> 

or
J. P. BRISSOT.

Br the Editor.

He was born at the village of Ouarville, near Chartres, in Orleannois, on the 14 th of January 1754. His father was what the French called 2 Traiteur; that is, keeper of an eating house or an ordinary. He was intended for the profeffion of the law, and was articled to an attorney for that purpofe. But he grew difgulted with the chicane and turpitude he was daily obliged to witness, and therefore, after the five years of his articlehhip were expired, he left Chartres, and went to Paris.

An accident one night at the theatre at Paris placed him in the company of an Fuglifh gentleman. They became intimate, and from this gentleman he obtained fome knowledge of the Englifh language: ${ }^{\text {s }}$, which he afterwards improved by a refidence in Londqn.

He had received a regular claffical education, and a quired, by ftrita applieation, a tolerable knowledge of the German, Italian, and Spanih languages, fufficient to confult the authors who have written in thofe language i On his ar rival at Paris his fuft ftudy was jurifprudence, with an intention of becoming an advocate in parliament. No fcience however efcaped his attention. He attended lectures and experiments in every branch of fcience; wherein his active genius found ample exercife. Chymiftry was his favourite object of purfuit; but his circumftances were too limited to indulge much in it, The fmall patrimony, which he inherited from his father did not exceed forty pounds per annum.

$$
\text { OF } \mathrm{J}_{4} \mathrm{P}+\text { BRISSOTQ }
$$

In the year. 1757 he made his firft tour to London. During his ftay in London he beceme engaged in the conduct of a French newfpaper, at that time called the Courier de i'Europe, but fince the Courier de Londres. Some mifuncerftanding having happence concerning the ftamps (at the ftamp-office in London) for this paper, the proprietor took a refolution of printing it at Boulogne fur-mer; and Briffot was. appointed the Editor, and refided at Boulogne for that purpofe. He continued in this capacity at Bouiogne about two years. From thence he went to Paris; and was admitted Counfellor in Parliament.-Early in the year 1782 he went to Neufchatel to fuperintend the printing of one of his books (mentioned hereafter), This was the memorable period of the revolution at Geneva. Here he became acquainted with M. Claviere and M. du Rovray, who, with a numerous party, were expelled that city, and fought an afylum in Ireland.

In the autumn of this year, he marsied a
daughter of Madame Dupohe of Boulogre. This young lady had been recommended fo the celebrated Madame de Genlis, who cobtained in fituation for her in the nurfery of the Duke de Chartres, late Duke of Orleans, who Yuffered under the guilotine ; in which frtuation the continued fome time after her marriage. if is

At the beginning of the year 1783 hecvifited London a fecoud time. His view in this journey was to eftablith in Lonidon a Eyceuth, or Academy of Arts and Sciences, together with an office of general correfpondenee. In this undertaking he was encouraged by fome of the firf literary men in France; and 15 a Monfieur du Forge, muficiati at Paris, wats fo'captivated with the fcheme, that he advanced foup thoufand livest ( 1661. ) for one third fhate of the profts. Brifot was to have the fole management, and the other two thirds of the profits. Hetosk a houfe in Newman Street, Oxford Street \% and pablifhed a profpectus of his undertakitig. He fent for his wife aind his youngen brother (his
OF Ji, PRISSOT. vii
eldeft prother was a prieft): At this time he compnenced bis defcription of the fciences in England (mentioned bereafter) the be publithgd monthly. Havjug in one of his publications takemoccafion to vindicate the Chevalier de Launay editor of the Courier du Nord, printed at Maeftricht, the editor of the Courier de WIyurope, now M. du Morande, was fo highly offended by it, that he became from that time Briffot's moft determined enemy. It is to be obferved, that the Courier du Nord and the Courier de l'Europe were rival new \{papers. De Launay quitted Maeftricht, and went to Paris, where he was immediately put into the Baftile, and was never more heard of.

In the month of May, 1784 , Briffot was arrefted by his printer in London. Although he was at this time very well known to feveral perfons of rank and fortune, yet he was too delicate to apply to any of them for pecuniary affiftance. But after remaining a day or two in a lock-up houfe in Gray's Inn Lane, he fent
his brother to an intimate friend, who inflantly paid the printer his bill, and liberated hipe fot

The next morning Briffot fet out for Frances. leaving his wife and brother in England, aflur ing them he would quickly return, which he certainly intended. But in tịis he was feverely difappointed. Thus ended his literary enterprife" of eftablifhing a Lyceum in London, in which he embarked his whole property with a degree of infatuation and zeal that feemed to border upon infanity. During his refidence in London he became acquainted with one Count de Pelleport, author of feveral pamphlets againft the principal perfons of the French Court, par ticularly of one called Soirees d'Antoinette, for the apprehenfion of the author of which the French Court offered a thoufand pounds ( 1000 Louis) reward. Briffot, inftead of proceeding directly to Paris, ftopped at Boulogne, and refided there with his mother-in-law; here he refolved to continue his publication on the original plan. Du M—— knowing that Pelleport
was the author of the offenfive pamphilet and that Briffot and Pelleport were intimate, tefolved to obtain the reward, and gratify his refentment He applied to Pelleport, offering him the fuperintendance of a publication to be carried on at Bruges (near Oftend), the falary of which was to be two hundred pounds per annum. Pelleport accepted the offer. But it was neceffary to ftop at Boulogne, where fome final arrangements were to, be made. In the month of July Pelleport embarked for Boulogne with Captain Meredith. But the moment he landed, he was feized by the officers of the Police, who put him in chains and carried him to Paris, where he was fent to the Baftile. $\mathrm{Du} \mathrm{M}-$ was an agent of the Police of Paris. Information being given to the Police, that Briffot was at Boulogne, and that he was the intimate friend of Pelleport, he was immediatelly taken into cuitody, carried to Paris, and committed to the Baftile. However, it is certain that Briffot never wrote any thing againft either
cither the King or Queen of France. He :urfs.ancere in tio abhorrence of the arbitrary and defpotic principles of the French government, but with refpect to the private conduct of the King and Queen he never beftowed the fmalleft attention upon it. In this magazine of human vietims he continued about fix weeks. His whee applied to Madame Genliṣ in hisp favour, and Madame:Genlis moft generoufly made a point of it with the Duke de Chatres to obtain his liberty. The Duke de Chartres's intefference does not appear by any document; but Briffot's aequittal of the charge brought againd bim, appears in the following report of his examinationd; made to the French minifter, M. Breteuil, on the 5 th of September.
"The Sienr,Brifiot de Warville was convey" ed to the Bafile on the day;after the Sieur "de Pelleport, who was arrefted, at, Boulogne " fur-mer, arrived at Parishas In confegreace of " his connections with this man, rguitty of " writing libels, he was furpeced of having

- been his coadjutor. The atteftation' of a boy * in the printing office, from wherice one of - theft heels ifued, gave frength to fafpicions; " but this atteftation, tranfinitted from Lon"doin, is deftitute of authemticity; and the "Sieur Briffot de Warville, who Jas very ya"t tisfactorily anfwered to the finternogatories * which were put to him, ateributys his crimi" nation to the animofity of onemies whom he " onceives to have plotted aguint thim in " London. The Sieur Briffot de Wetarville is'a " man of talents, and of letters; he appears to "have formed fyftems, and to entertainextra"'ordinary principles; but it is certain that, for "the laft feven or eight months, his connec" tions with the Sieur de Pelleport had cealed, "and that the employed himfelf folely upon a ""periodical paper, which he obtained permifas fion to circulate and fell in France, 'after - so having fubmitted it to the examination of a st licenfer.?

It is proper to obferve, that the addition of 3 de
de Warville, which Briffot made to his nam(to diftinguifh himfelf from his eldeft brother) is a kind of local defignation, not uncommon. in many countries. William of Malmbury, Gecifry of Monmouth, Rapin de Thoyras, Joan d'Arc, \&c. \&c. But in the orthography he fubfituted the Englith $W$ for the French dipthong $O u$; the found of that dipthong being fimilar to our W. Thus Ouarville is pronounced Warville in both languages.

In a very thort time after his releafe from the Baftile he very honourably difcharged his pecuniary obligation to his friend in London.

In the year 1787 , which was the era of the foundation of the French revolution, the Duke de Chartres, now become Duke of Orleans by the death of his father, embraced the party of the Parliament againft the Court. Upon the principle of gratitude Briffot attached himfelf to the Duke of Orleans. As an honeft man he could not do otherwife.

We fhall here pafs by his tour to America, and fome other circumftances, becaule they are intimately connected win the account of his writings, which is fubjoinec.

Upon his return to France he found that his celebrity had not been diminiifhed by his abfence. He was elected a member of the Confituent Affembly, and was much engaged in the committees of refearch; of which he was the reporter. He was alfo elected a member of the Legiflative Affembly for the department of Paris. It muft be obferved, that the revolution caft a veil over the crimes of all thofe who had been obliged to leave their country. In this group who returned to France was $\mathrm{DuM}_{\mathrm{M}}$ - He oppofed Briffot in his election for Paris, but Briffot was elected by a majority of more than three to one. However Du M-'s party were exceffively mortified; and they unceafingly ciumniated Brifot in the moft opprobrious terms. M. Petion, mayor of Paris, and who was Brifot's friend and towifman, contributed
csptribyted murch the frengthen his intereft and aframdancys curinit ofy is

- Brifighsouwb difinguighed himfelf as one of the Angitude (50irgs friend of the Negroes) of wbognhe max a moft zealous advocate. In a Sphech whigh be delivered in the Affembly in
 thropyodt b:r.
AOF this speech the following is $\cdot a$ hort extract "idy ou have heard of enormities that freezo. you ; with horror ; but Phalaris fooke not of his brazen bull, he lamented only the dagger that his own cruelty had raifed againt him. The colonifts have related inftances of ferocity ; but give me, faid he, an informed brute, and I will foon make a ferocious monter of him. It was a white man who firt threw a negro into a burning oven: who dafhed out the brains of a child in the prefence of its father; who fed a flave with its own proper fleth, Thefe are the monAters that have to account for the barbarity of the revplted favages.-Millions of Africans have
perihaed on this foil of blood. $\mathrm{Ybu}^{t}$ break, at
 nature has given to thefe intands ; andifiyo thudder at the relation of their vengence this dreadful fruggle the crimes of the Whiter are yet the moft horrible. They are the ofe? fpring of defpotifm : whilf thofe of the Blacks originate in the hatred of flavery, and the thirft of " revenge. Is philofophy chargeable with thefe horrors? Does the require the blood of the colonitts ? Brethren, the cries, be jurt ; be beneficent ; and you will profper.-Eternal navery muft be an eternal fource of crimes ;diveft it at leaft of the epithet eterval; for anguif that knows no limitation of period can onty produce dépair."
Upon the abolition of the French monarchy, in the month of September 1792 , the Legiflative Affembly difolved itfelf. The conifltution being difilved by the abolition of the King, hocy conceived that it was the inhereit right of the peopte to choote a new repredentation, in

ordér fo frume a new conftitution, fuited to the withes of the people, and to the neceffity of the exifting circumftances of the times. In this general election Briffot was elected one of the deputies from the department of Eure and Loire. His abilities and talents became every day more confpicuous. He was chofen the Reporter of the Committee oir Public Safety ; in which fituation he conducted himfelf without reproach, until the treacherous conduct of Dumourier threw a fufficion on the whole of the Gironde party.
- Although affailed on all fides by his enemies, his characier afperfed and depreciated by the bafelt of calumnies, Briffot fhewed himfelf confiftent with his public principles of philanthropy.

In the dreadful maffacre of the 3 d of September, his opponents, particularly Du M—, fought every opportunity to accomplifh his. deftruction, oy accufing him of being a principal inftigator of thofe horrors. And it muft be
owned, that thefe repeated and continued calumnies weakened him in the public efteem. DuM- was perfectly acquainted with the Englifh method of writing a mandown.

When Condorcet moved for the abolition of royalty, Briffot was filent.
When the motion was made to pafs fentence + of death on the King, Briffot fpoke and voted for the appeal to the primary affemblies.

When Fayette was cenfured, Briffot defended him.

When the Duke of Orlears (M d' Egalité) was cenfured, Briffot defended him.

The two firft feem to have arifen in principles of humanity.

The two laft, unquefionably, arofe in the ftrongeft ties of gratitude and friendhip.

A confcientious man cannot fuffer a more fevere affliction, than when his private honour places him againft his public duty.

## Of BRISSOT's WRITINGS;

## AND PARTICULARLY OF THIS WORK.

Upon the fettlement of the American government after the war, he became an enthufiaftic admirer of the new conflitution of that great country. But fome French perfons, who had been in America, and were returned to France, had publihed their thoughts and opinions of America, in a manner that was nothing fhort of illiberality. The reader will find the principal names of thefe writers in the thirty-fecond chapter of the firft volume. Briffot was fired vith indiguation at this treatment of a people, whom he conceived could not in anywife have deferved fuch reproach; and, imagining that the general peace of 1783 had opened an honourable and free commuication of reciprocal commercial advantages between America and France, he wrote this volume with the view of a. fupporting and eftablihing that primary idea,
or theory of a French commerce with the United States.
Upon this point it is no more than ordinary candour to obferve, that all which Briffot recommends, explains, or relates, concerrning a French commerce with the United States, applies equally. and in fome points more than equally, to the Britifh commerce with them. Every Britifh merchant and trader may derive fome advantage from a gencral view of the principles which he has laid down for the eftablifhment and regulation of a reciprocal commerce between France and America. The produce and manufactures of England are infinitely better fuited to the wants of America; and therefore all his theory, which is directed to the welfare and improvement of France, muft ftrongly attach the attention of the Britih merchant and mechanic ; who, in this great point, have not at prefent any fuperiors, but have feveral rivals. Briffot's ambition was to make France the greateft and moft powerful rival. And cvery candid perfon
muft allow that he deferved much credit of his countrymen for the progrefs he made, in this firlt attempt, to open the cyes of the French nation to profpects of new fources of advantage. All that is further neceffary to fay of this work, is faid by Briffot himfelf in the introduction, from the tenth to the twentieth pages. In the laft French edition of Briffot's Travels in America, publifhed by himfelf, about feven or eight months before his decapitation, this volume is placed the laft of that work. We have followed the Author's arrangement, and collated the whole by the laft Paris edition.

Of the preceding volume, entitled "New Travels in the United States of America," we have nothing to add: the whole of the French edition is now before the reader.

Of Briffot's other works it is proper to mention the following.

The Theory of Criminal Laws, in two wo-lunites.-Although M. la Cretelle, at the conclufion of his Effay on the Prejudices attached to Infamy,
lufamy, fpeaks in flattering terms of this work, for he fays, that it exhibits an extenfible knowledge, and thews the writer's ambition afcends to great principles; yet to thofe perfons who have read Beccaria's Effay on Crimes and Punifhments, it will not appear that Briffot has added much novelty to the fubject.

The Neceffity of a Reform of the Criminal Lazus.
Wbat Reparation is due to innocent Perfons uniuftly accufed.

Thefe were two difcourfes which were crowned by the Academy of Chalons fur Marne, and were printed in the form of two pamphlets. The minitters of Louis XVI. were a good deal offended at the principles they contained, and they forbid the Academy propofing the difcuffion of fimilar fubjects at any of their future meetings.

This check ferved but as a ftimulus to Briffot to continue his fubject: He therefore, in two years afterwards, publifhed his Pbilofophical Library of the Criminal Laves. This work is b 3 now
now ten volumes. Briffot's view in this work was, to diffure and explain thofe grand principles of freedom which produced the revolution in England in the year $\mathbf{1} 688$, and the revolution in America in the year 1775. Before the diffolution of the monarchy in France thofe principles wcre almoft unknown to the French, and are fill almoft unknown to the other parts of Europe. But as feveral of the monarchs of Europe approved of the American revolution, it may be prefumed that their fubjects will not long continue ignorant of the motives and grounds of a meafure which was honoured with the patronage of their fovereigns. This circumftance alone fhould convince the Englifh, that many of the powers of Europe behold with pleafure the diminution of their greatnefs and confequence, and that very few of thofe powers are ever friendly to them, except during the time they are receiving a bribe, by virtue of an inftrument, commonly called a Jubfidiary treaty.

Of Dr. Price of London he was an admirer; but of Dr. Prieftley he was alfo an imitator for he amufed himfelf frequently with chymif. try, phyfics, anatomy, and religion. On the laft fubject there is a prefumption that he wrote but little; for in his Letter to the Archbi/hop of Sens (the only tract on religion, by him, that has come to the Editor's knowledge) he fays, " That religious tyranny had been proftrated " by the blows of Voltaire, Rouffeau, D'Alem" bert, and D'Iderot." His mind was capacious, and his comprehenfion extenfive. In his zeal to become an imitator of Prieftley, he publifhed a volume ConcerningTruth, or T'boughts on the Means of attaining $T$ ruth, in all the Branclues of Human Knowledge. Here was a wide field for the dilplay of Briffot's talents and induftry. His defign was to have carried on the work to feveral volumes, and to have invited the communications of the literati of all Europe, in all the different fciences, and, it may be added, fpeculations. But there was fuch a freedom of

$$
\mathrm{b}_{4} \quad \text { fentimeht }
$$

fentiment manifefted in the firft volume, that both the author and printer were alarmed with the terrors of the Baftile. Filled with thefe apprehenfions, he left Paris, and went to Neufthatel. There he printed his profpectus, and he caufed it to be alfo printed in.London. But when thefe copies were attempted to be circulated in France they were feized. Not a fingle number was permitted to be feen in any bookfeller's hop in France.

Finding the execution of his project thus rendered impracticable, he left Neufchatel, and went to London; where, in order to give currency to his free opinions, he altered the title of his book. Het propofed to publifh the remaining part periodically, under the name of A Defcription of the Sciences and Arts in England; great part of which was intencied to be devoted to an examination of, and to obfervations on, the Englifh conftitution. His friends folicited the French miniffry to permit this work to be reprinted at Paris. At frrft they obtained this
favour ; and the work went on as far as twelve numbers, or two volumes. After which it was prohibited ; not more to the authoi's mortification than to the injury of his pocket. M. de Vergennes, who was at that time minifter of France, had fo ftrong a dillike to every thing that was Englifh, that he would not endure the fmallert commendation upon any part of the Englih conftitution, or commerce, to be promulgated in France. He had begun to difcover, that the favourite idea of his matter, of feparating the Britifh colonies from the Britifl empire, might lead to an inveftigation of the principles of government at home, and prove extremely dangerous to a defpotic monarchy.

Notwithftanding he was thus difappointed a fecond time, he ftill purfued his defign; but under a fecond change of title. He publifhed two volumes under the title of Pbilofopbical Letters on the Hiftory of England. The title did not attach the public attention; becaufe two volumes under a fimilar name had been
publifhed in London, and had with fome art been impofed on the public, as the production of Lurd Lyttelton ; but they were written by Goldfmith, in fupport of tyranny and ariftocracy.

Every circumftance of cruelty and oppreffion met with the obfervation of Briffot. When the late Emperor Jofeph was punifhing Horiah, the leader of the revolt in Walachia, and iffuing his fhocking edict againft emigration, Briffot addreffed two letters to bim upon thofe fubjects, which were read throughout Germany. In one letter he affirmed, that Horiah was juftified in his revolt: in the other he held, that a privilege to emigrate from one country to another was a facred right derived from nature.

He was an enthufiaft in his admiration of the American revolution, and of the conduct of the Americans in: rifking every thing to emancipate themfelves from the tyranny of Great Britain. Upon comparing the new conftitu-
OF J. P. BRISSOT.
tion of America with that of England, he changed his opinion of the latter-be ceafed to approve of it.

Some French gentlemen, who had vifited America, having, when they returned to France, written fome fevere remarks on the Americans, Briffot defended the Americans, particularly in his book called A Critical Examination of the Travels of the Marguis of Cbatelleux. But as this work has been already mentioned in the preceding volume (fee chapters $3^{11}$ and $3^{2}$ ), it is not neceffary to fay any thing more of it here.

It muft never be forgot, that during the period of the French monarchy there were more intrigues always going on in the French court than in any court in Europe. At this time (the year 1787) the court was full of in-trigues-libidinous as well as political; for though the King had no miftreffes, the Queen had her favourites, and her party. Necker was difmiffed, and Calonne was appointed by her influence.
fluence. Montmarin fucceeded Vergennes, and the Duke of Orleans was at the head of the party that fought the overthrow of the new miniftry. When Calonne affembled the Notables at Verfailles, Briffot publifhed a pamphlet entitled No Bankruptcy; ar Letters to a Creditor of tbe State conserning the Impolibilty of a Natianal Bankruptcy, and the Means of reforing Crcdit and Peace. This pamphlet, which contained many fevere obfervations on Calonne's meafures and plans, and fome arguments in fupport of certain privileges claimed by the people, the Duke of Crleans was highly pleafed with. He made inquiry after the author, for the tract was anonymous, and having difcovered him, he ordered his chancellor to provide a fituation for him. He was made fecretary-general of the Duke's chancery. This did not faye him from minifterial refentment. A lettre de cachet was made out againf him, but having notice of it, he inflantly efcaped to the Netherlands. He was for feveral months editor of the

Courier Belgique, printed at Mechlin. It was during this voluntary exile that he formed his project of vifiting America. He communicated his defign to the Philanthropic Society of the Friends of the Negroes at Paris, and was by them affifted and recommended to feveral perfons it America. The produce of this vifit to America was the firft volume of this work, written upon his return to France. The French miniftry being changed before he left Europe, he embarked at Havre de Grace in the month of June 1788.

Intelligence having reached him in America of the rapid progrefs liberty was making in France, he returned to his native country in 1789 , in a confidence that his labours might become ufful to the general interef.

His firft publication after his return (except the preceding volume of his Travels in America) was $A$ Plan of Conduct for the Deputics of the People.
His knowledge and admiration of America naturally
naturally produced a friendhip with the Marquis de la Fayette, who introduced him into the club of the Jacobins.

We thall pafs by the feveral fteps and meafures of the revolution; for to give an account of all Briffot's concern therein, would be to write a large volume upon that event only. But the mention of a few circumftances which are attached to Briffot peculiarly, is indifpenfable.

By the intereft, or rather influence, of Fayette he was made a member of the Commune of $\mathrm{Pa}-$ ris. He was agent of the Police, and a member of the Committee of Infpection at Paris; and afterwards a reprefentative for the department of Eure and Loire.

He commenced a newfpaper, which he called Patriote Froulcais; in which he confantly defended the conduit of la Fayette. He atached himfelf to the party called the Girondifts.

To the Englifh reader this name may require fome explanation. The warm and moft
violent of the National Convention, having gained the confidence and fupport of the city of Paris by various arts, but principally by declaring, upon every opportunity, that Paris muft conftantly be the place in which the National Reprefentation muft hold their deliberarations; to balance againft this power of Paris, Condorcet, Petion, Vergniaux, Briffot, Ifnard, and others, all members of the Conventions, endeavoured to gain the commercial cities in their intereft. Bourdeaux was the principal of thofe cities which joined them; it is fituated on the river Garonue, locally pronounced Gironde, which being the center of a department, named from the river, the appellation of Girondifts was given to the whole party.

The whole was a fruggle for power: there was no other object whatever. It is a foolih, and an idle affertion, in thofe who fay, that Briffot and the party had engaged in a plot to reftore the monarchy of France. Whatever their opinions might have been in fome of the
early ftages of the revolution, perhaps from an apprehenfion that the people of France might hefitate at an abrupt propofition of a republican government, they were unqueftionably imocent of the charge, at the time it was made. Here follow, however, the documents as publifhed by authority, in juftification of the execution; which, like all othe fate papers, in every country, confits of the beft apology, or moft colourable pretence, for a thing that has been done by order of government.

Report againf Brissot, and the otber arrefted Deputies; made Ociober 3, 1793.

The Citizens of Paris, being informed that Amar was to prefent his Report from the Committee of General Safety this day, filled the galleries at a very early hour.

As foon as he appeared at the Bar, the applaufes were fo loud and continued that he was unable
OF J. P. BRISSOT.
unable to begin for more than a quarter of an hour.

At length, amidf the moft profound filence, he read his report.

He began by ftating, that, before he proceeded to the report which had been expected with fuch impatience, and would amply recompenfe the unavoidable delay that had prevented a more fpeedy gratification of the wifhes of the people, he was commanded by the Committee of General Safety to requeft that none of the members of the Convention fhould be allowed to go out till the Decree of Accufation had been adopted. This requeft was immediately complied with, and a decree being paffed, the Prefident gave orders to the Commander of the National Guards to allow no Members to go beyond the Bar.

Amar then affirmed that the gigantic arm of treafon had been uplifted to ftrike the reprefentative majefty of the people, and to level with the ground the unity and indivifibility of the Vol. II.

French Republic.-The arm of treafon Had betn nerved and fupported by the united energies of Briffot, Condorcet, Guadet, Vergniaud, and the other Deputies.

Briffot, the leader of this traitorous band, commenced his political career by being a Member of the Commune of Patis, to which he was introduced by La Fayette, to whofe defigns he had proftituted his pen.-At this mera of his life he made his appearance threc times in the Jacobin Club. -In the firf vifit he propofed thofe meafures which have proved fo difaftroas to the Colonies; in the fecond, he attempted to produce the affaffination of the people in the Champ de Mars; and in the third vifit he moved the declaration of war againf Great Britain.

Introduced into the Legillative Affermbly, he immediately entered into a coalition with Condorcet and the Girondine faction, whofe defigns he approved and fupported.' The confummation of the object of this coalition was to have
been produced by the furrender of the Republican body to the violation of the Allied Powers, aud by the deftruction of that unity and iadivifibility which can alone be expected to combat with offect the tyrants who would undermine the proud pillar of Liberty, and deftroy even the veftige of freedom from the face of the earth.

The Court made ufe of their influence to declare war at a moment when the armies and the fortified places were in a ftate of abfolute want, or entrufted to traitors chofen by a perjured King. They protected Narbome, the minifter, whom all France accufed of the meafures taken to render this war fatal to liberty; and in their Journals they calumniated the Patriots who had the courage to refift them. They defended Dietrifch, convicted of being an accomplice with La Fayette, and of having offered to give up Strafbourg; and while the chiefs of that faction protected the confpirators and traitorous Generals, the patriotic foldiers were pro-
fcribed, and the volunteers of Paris fent to be butchered.

During the time we were furrounded by the fatellites of defpots, when the Court was going to open the gates of France to them, after having caufed the intrepid defenders of liberty to be murdered at Paris, Briffot and his accomplices did all they could to counteract the generous efforts of the people, and to fave the tyrant. During and after the unhappy infurrection of the roth of Auguft, they endeavoured to prevent the abdication of Louis the XVI. and to preferve to him the Crown.

In the night of the roth of Auguft, Petion, fhut up in the Thuilleries, confulted with tine fatellites of tyrants the plan to maffacre the people, and gave orders to Mandat, Commander of the National Guards, to let the people come in, and then to cannonade them in the rear. A few days before, Genfonne and Vergniaud engaged to defend Louis XVI, on condition that
the three minifters, Roland, Claviere, and Servan, were recalled.

Petion and La Source made ufe of all their means to fend the federates from Paris. Brifo fot, Kerfaint, and Rouyer, according to the letters found in the Thuilleries, gave bad advice to the tyrant, and, in defiance of the laws, they dared to folicit places in the miniftry; under a promife to extend the deftructive authorities of the defpot.

The project to overturn the foundatiou of the Republic, and to murder the friends of Liberty, was put in practice in the Legiflative Affembly, by Briffot, in his infidious harangue on the 20th of July 1792, oppofing the abdication of the throne. We have feen Briffot and his accomplices Republicans unjer Monarchy, and Royalifts under the Republic; always conftant in their defigns to ruin the French nation, and to abandon it to its enemies. At the time the hypocritical tyrant, Louis the XVI. came into the Affembly to accufe the people, whofe maf-
facre he had prepared,-Vergniaud, like a true accomplice of the tyrant, told him-" That the Affembly beld it to be one of their moft facred duties to maintain all conftituted authonities, and confequently that of Royalty,"

When the Attorney General, Raderer, came to announce, with the accent of grief, that the citizens in infurrection had taken the refolution not to feparate till the Affembly had pronounced the forfeiture of the Crown, Prefident Vergniaud filenced the applaufes from the galleries by telling them, that they violated the laws in obftructing the freedom of upinion; and he told Raderer, that the Affembly was going to take into immediate confideration the propofal which he, Vergniaud, had made, fhewing the necefity of preferving the exiftence of the King.

Kerfaint feconded the motion, Geradet propofed to liberate Mandat, who was arrefted for having given orders to fire on the people; or, in the event that that commander was no more, to fend a deputation of twelve Girondift

Members, authorifed to choofe his fucceffor, in order by this means to keep the public force at the difpofition of that mifchievous faction.

In that memorable fitting of the roth of Auguft, the Girondift chiefs, Vergniaud, Guadet, and Gerifonne, took by turns the chair, and went to the galleries to flacken the energy of the people, and to fave Royalty, under the fhield of the pretended conflitution. They fpoke of nothing but obedience to the conftitutional laws to thofe citizens that came to the bar to protect their newly acquired liberty.

When the municipality came to invite the Affermbly to fend the proces-verbal of the great operations of the roth of Auguft, in order to prevent the calumnies of the enemies of liberty, Guadet interrupted the members who made that demand, by making a motion to recommend anew to the magiftrates the execution of the laws.-He blamed the Council of the Commune for having confined Petion in his own houfe: though they did it in order to render it

$$
\text { c } 4 \quad \text { impoffible }
$$

impoffible for that impoftor to make even in-- furrection fubfervient to act againft liberty,

When a deputation from the fuburb St. Aritoine came to announce the civic affliction of the widows and children maffacred on that day, the perfidious Guadet coolly anfwered them, "That the Affembly hoped to reftore public tranquillity and the reign of the laws."

Vergniaud, in the name of the extraordinary commiffion directed by that faction, propofed the fufpenfion of the King, who had been dethroned by the people, as a fimple confervatory act of royalty ; and feemed greatly affected at the events which had faved the country, and operated the ruin of the tyrants. He oppofed Choudieu's motion, tending to exclude from the Convention the Members of both the Legillative and Conftituent Affemblies; and with the fame cunning he prevented the regifters of the civil lift from being depofited on the table.
Guadet wifhed to have a governor named ta the fon of the late King, whom he called the Prince Royal.

Koyal. Briffot and his accomplices always affected to invoke the literal execution of the Conftitution, while the people, in the name of the martyrs who fell before the caftle of the Thuilleries, demanded the complete overthrow of the tyrant.

Verguiaud oppofed this demand, faying, that the people of Paris were but a fection of the empire, and affected to oppofe it in this mauner to the departments.-He likewife refifted the petition made by the Commons to put the tyrant under arreft. He ufed all his efforts with Briffot, Petion, and Manuel, to get Louis XVI. confined in the Luxembourg, from whence it would have been eafier for him to efcape than out of the tower of the temple.

Genfonne and Guadet had the fervility to publifh, at different times, that Louis XVI. had commanded the Swifs not to fire upon the people. From that time, the leaders of the Girondifts (Department of Bourdeaux), compelled to praife the events of the roth of Auguf,
continued, notwith ftanding, to undermine the Republic. They publifhed the feveretic fatires againt the Jacobing, againft the. Commons and people of Paris, and in general againft all thofe who contributed to the defruction of monarchy. Roland's houfe was filled with packets of libels, which were to be diftributed among the people, and fent into the departments.

Thefe guilty men protected all the confpirators, favoured the progrefs of Brunfwick with all their power, and were the agents of the Englifh faction which has exerted fo fatal an influence during the courfe of our revolution. Carra was in league with certain characters of the Court of Berlin. In his Journal Politique of the 25 th of Auguft, 1791 , he formed a wifh, on account of the marriage of the Duke of York with the Princefs of Pruffia, "that the Duke might become Grand Duke of Belgium, with all the powers of the King of the French." While Brunfick was preparing to decide the fate of the French nation by the force of arms,

Carra in the fame Journal reprefeated him as a great commander, the greateft palitician, the moft amiable Prince in Europe, formed to be the reftorer of liberty in all nations.-He publifhed, that this Duke, on his arrival at Paris, would go to the Jacobins, and put on the red cap, in order to intereft the people in favour of this fatellite of tyrants. Fimally, Carra was fo audacious as to propoife openly to the Jacobing, for the Duke of York to be King of the French.

From thefe and many other facts, too tedious to mention, there refults, that Carra and his affociate were iniquitous and deep diffemblers, penfioned by England, Pruffia, and Holland, to enable a Prince of that family which rules over thofe countries to obtain the crown of France. This fame Carra, together with Sillery, the difhonoured confidant of a contemptible Prince, was fent by the then reigning faction to Dumoufier, to complete that treafon which faved the almoft ruined army of the Pruflian defpot. Dumourier came fuddenly to Paris to concert with Briffot, Petion, Guadet, Genfonne, and Cạra,
the perfidious expedition into the Auftrian Ne therlands, which he undertook when the Pruffian army, wafting away by contagious diforders, was peaceably retiring-while the French army was burning with indignation at the inaction in which they were kept.

It was not the fault of this faction, if the motion often made by Carra to receive Brunfwick at Paris was not realized. He meditated, in the beginning of September $1 / 92$, to deliver up this city, without means of defence, by flying beyond the river Loire, with the Legiflative Affembly, with the Executive Council, and with the captive King. He was fupported in it by Roland, Claviere, and le Brun, the creatures and inftruments of Briffot and his accomplices.

But thefe perfidious minifters, having been threatened by one of their colleagues to be denounced to the people, it was then that Carra and Sillery were fent to Dumourier, to authorife this General to negociate with Frederick diforrench he in-
appointed a commiffion of twenty-four members to examine the papers found in the Thuilleres, in the guilt of which fome of thefe members were implicated; and they endeavoured, in concert with Roland, to conceal thofe which tended to difcover their tranfaction with the court. They voted for the appeal to the people, which would have been a germ of civil war, and afterwards wanted a refpite to the judgment.

They inceffantly repeated, that the Convention could do no good, and that it was not free. Thefe declamations milled the departments, and induced them to form a coalition, which was near being fatal to France.

They patronized an incivic piece, entitled L'ami des Loix.

On the 14th of January, Barbaroux and his friends had given orders to the battalion of Marfeillois to furround the Convention.

On the 20th, Valadi wrote to the other De-puties-" To-morrow in arms to the Conven-
tion-he is a coward who docs not appeas there."

Briffot, after the condemnation of Louis Capet, cenfured the Convention and threatened France with the vengeance of the European Kings. When it was his object to britig on war, he fpoke in an oppcite fenfe, and treated the downfal of all thrones, and the conqueft of the univerfe, as the fport of the French nation. Being the organ of the Diplomatic Committee; compored almoft entirely of the fame faction, he propoled war fuddenly againft England, Holland, and all the powers that had not then declared themfelves.

This faction acted in coalition with perfidious Generals, particularly with Dumourier. Genfonnet held a daily correfpondence with him : Petion was his friend. He avowed himfelf the C unfellor of the Orleans party, and had connection with Sillery and his wife.

After the revolt of Dumourier, Vergniaud, Guadet, Briffot, and Geufonine, wifhed to jultify

Juftify his conduct to the Committee of General Defence, afferting that the denunciatious mado againft him by the Jacobins and the Mountain were the caufe of his conduct ; and that Dumourier was the protector of the found part of the Convention. This was the party of whicly Petion, Briffot, Vergniaud, \&c, were the chiefs and the orators.
When Dumourier was declared a traitor by the Convention, Brifot,' in the Patriote Franfoife, as well as other writers, who were his accomplices, praifed him, in defiance of the law. As members of the Committee of General Defence, they ought to have given information relative to the preparations that were making in La Vendee. The Convention, however, was not made acquainted with them till the war became ferious.

They armed the Sections where Ariftocracy reigned, againft thofe where public fpirit was triumphant.

They affected to believe that a plot was meditated by the Republicans againft the National

Convention,

Convention, for the purpofe of naming the commiffion of twelve, who, in an arbitrary manner, imprifoned the magiltrates of the people, and made war againft the patriots.

Ifnard developed the views of the confpiracy, when he ufd this atrocious expreffion: "The aftonifhed travcller will feek on what banks of the Seine Paris once food." The Convention diffolved the commiffion, which, however, refumed its functions on its own authority, and continued to act.

The faction, by the addreffes which it fent to the departments, armed them againft Paris and the Convention. The death of numbers of patriots in the fouthern departments, and particularly at Marfeilles, where they perifhed on the fcaffold, was the confequence of thofe fatal divifions in the Convention, of which they were the authors.-The defection of Marfeilles foon produced that of Lyons. This important city became the central point of the counter-revolution in the South. The republican municipaVol. II. d
lity
lity was difperfed by the rebels, and good citizens were maffacred.-Every punifhment that cruelty could devife to increafe the torments of death was put in execution. The adminiftrative bodies were leagued partly with Lyons, and partly with foreign Ariftocrats, and with the Emigrants difperfed through the Swifs Cantons.

The cabinet of London afforded life and energy to this rebellious league. Its pretext was the anarchy that reigned at Paris-its ieaders, the traitorous deputies of the n -s vention.

Whilf they made this powerful diverfion in favour of the tyrants united againft us, La Vendee continued to drink the blood of the patriots.

Carra and Duchatel were fent to this department in quality of Deputies from the National Convention.

Carra publicly exhorted the adminiftrators of the Maine and Loire to fend trocps againft Paris. Both thefe deputies were at the fame time
d citint that lents of iftrative is, and with Swifs ife and pretext is-its e $C^{6}$ erfion in a Ventriots. departNational
iftrators againft he fame time
time connected with the Generals of the combined armies.

Couftard, fent alfo as a commiffioner, carried his treafonable projects to fuch a length, as even to furnith fupplies of provifions and fores to the rebels.-The miffion of the agents of this faction, fent to different parts of the republic, was marked by funilar traitorous meafures.

Perhaps the column of republican power: would ere this have meafured its length upon - the ground, if the confpirators had preferved much longer their inordinate power.-On the loth of Auguft the foundation of the column was laid, on the 3 ift of May it was preferved from deftruction. The accufed publifhed a thoufand feditious addreffes, a thoufand counterrevolutionary libels, fuch as that addreffed by Condorcet to the department of the Aifne. They are the difgraceful monuments of the treafon by which they hoped to involve France in ruin.
d 2
Ducc

Ducos and Fonfrede formed the flame of the rebellion, by their correfpondence and their fpeeches, in which they celebrated the virtues of the confpirators.
Several of thefe confpirators fled, and difperfed themfelves through the departments-They eftablifhed there a kind of National Convention, and invefted the adminiftration with independent powers-they encircled themfelves with guards and cannon, pillaged the public treafuries, intercepted provifions that were on the road to Paris, and fent them to the revolted inhabitants of the former provinces of Britanny. They levied a new army, and gave Wimpfen, degraded by his attachment to tyranny, the command of this army.

They attempted to effect a junction with the rebels of la Vendee, and to furrender to the enemy the provinces of Britanny and Normandy.

They deputed affaffins to Paris, to murder the members of the Convention, and particular-
ly Marat, whofe defruction they had folemnly fworn to accomplifh.-They put a poignard into the hands of a woman who was recommended to Duperret by Barbaroux and his accomplices. She was conveyed into the gallery of the Convention by Fauchet.-The enemies of France exalted her as a heroine. Petion pronounced her apotheofis at Caen, and threw over the blood-ftained form of affaffination the fnowy robe of virtue.

Girey Dupre, the colleague of Briffot, in the publication of the Fatriote Frangais, printed at Caen feveral fongs, which invited, in a formal manner, the citizens of Caen to arm themfelves with poignat is, for the purpofe of ftabbing three deputies of the Convention, who were pointed out by name.

Briffot fled with a lie added to his other crimes. Had he gone to Switzerland, as the falfe paffport frated, it would have been for the purpofe of exciting a new enemy againft France.

Rabaud St. Etierre, Rebećqui, Duprat, and Antiboul, carried the torch of fedition into the department of le Gard and the neighbouring departments.-Biroteau, Rouger, and Roland, projected their terrible plots in Lyons, where they poured the ample fream of patriotic blood, by attaching to the friends of their country the appellation of anarchifts and monopolizers.

At Toulon thefe endeavours were fuccefsful, and Toulon is now in the hands of the Englifh. The fame lot was referved for Bourdeaux and Marfeilles.-The reigning faction had made fome overtures to Lord Hood, whofe fleet they expected. The entire execution of the confpiracy in the South waited only for the junction of the Mareillefe and Lyonefe, which was prevented by the victory gained by the Republican army which produced the reduction of Marfeilleske

The meafures of the confpirators were exactly fimilar to thofe of the enemies of France, and particularly of the Englifh.-Their writings
differed in nothing from thofe of the Englifh minifters, and libellers in the pay of the Englifh minifters.

## Mr. PITT

Wifhed to degrade and to diffolve the Convention.

He wifhed to affaffinate the members of the Convention.

He wifhed to deftroy Paris.
He wifhed to arm all nations againft France.

In the intended partition of France, Mr. Pitt wifhed to procure a part for the Duke of York or fome other branch of his mafter's family.
He endeavoured to deftroy our colonies,

## The DEPUTIES

Attempted to do the fame.

The deputies procured the affaffination of Marat and Le Pelletier.

The deputies did all in their power to produce this effect.

The deputies obtained a declaration of war againft all nations.

Carra and Briffot entered into a panegyric of the Dukes of York and Brunfwick, and even went fo far as to propofe them for Kings.
The deputies have produced the deffruction of the colonies.

Briflot, Petion, Guadet, Genfonne, Vergniaud, Ducos, and Fonfrede, directed the meafures relative to the colonies, which meafures reduced them to the moft lamentable fituation.
d 4

Santhonax and Polverel, the guilty Commiffioners who ravaged the colonies with fire and fword, are their accomplices. Proofs of their corruption exift in the corretpondence of Raimond, their creature.

Of the numerous facts of which the faction are accufed, fome relate only to particular individuals: the general confpiracy, however, is attached to all.

Upon this act of accufation they were tried before the Revolutionary Tribunal, on the $3^{\circ}$ oth day of October, 1793. When the at of accufation was read to them in the Court, they refufed to make any anfwer to it, unlefs Roberfpierre, Barrere, and other members of the Committee of Safety, were prefent, and interrogated: they infifted upon thofe members being fent for ; which being refufed, and they ftill refufing to make any anfwer, the Judge fated to the Jury, that from the act of accufation it refulted that,
I. There
I. There exifted a confpiracy againft the unity and indivifibility of the Republic, the liberty and fafety of the French People.
II. That all the individuals denounced in the act of accufation are guilty of this confpiracy, as being either the authors of, or the accomplices in, it.

The Jury of the Revolutionary Tribunal, to whom thefe facts were fubmitted, brought in their verdict at eleven o'clock at night, on the $3^{\text {oth }}$ of October, againft

BRISSOT,

| Vergniaud | Sillery |
| :--- | :--- |
| Genfonee | Fauchet |
| Duprat | Duperret |
| Valaze | Lafource |
| Lehardi | Carra |
| Ducos | Beauvais |
| Fonfrede | Mainvielle |
| Borleau | Antiboul |
| Gardien | Vigee, and |
| Duchatel | Lacaze, |

who were declared to be the authors and accomplices of a confpiracy which had exifted againft the unity and indivifibility of the Republic,
public, and againft the liberty and fecurity of the French people.

The Prefident of the Revolutionary Tribunal immediately pronounced the fentence decreed by the conftitution :-That they fhould fuffer the punifhment of death-that their execation fhould take place on the fubfequent day, on the Place de la Revolution-that their property fhould be confifcated, and that this fentence fhould be printed and pofted up throughout the whole extent of the republic.

As foon as the fentence was pronounced, Valaze pulled a dagger from his pocket and fabbed himfelf.-The Tribunal immediately ordered that the body fhould be conveyed on the morrow to the Place de la Revolution, with the other deputies.

At cleven o'clock in the foreioon, on the $3^{\mathrm{Ift}}$, the execution took place.-The freets. were lined with foldiers, and every precaution taken to prevent the difturbance of the public tranquillity:

Duchatel,

Duchatel, Ducos, Fonfrede, and Lehardi, preferved a firm and undaunted air, and furveyed the engine of death with a compofed and unruffled countenance.

The deportment of Briffot was manly-he preferved a fixed filence, and fubmitted his head to the guilotine, after furveying ftedfafly, for a few moments, the Deputies, to whom, however, he did not fpeak.

Sillery faluted the people with much refpect, and converfed a fhort time with his confeffor, as did Fauchet.-Lafource died in a penitential manner.-Carra, Vergniaud, Genfonne, Duperret, Gardien, Duprat, Beauvais, Mainvielle, Lecaze, Boileau, Antiboul, and Vigee, died with firmnefs, and with the exclamation of " Vive la Republique."-The execution was concluded in thirty-feven minutes.

# INTRODUCTION, 

By J. P. BRISSOT de Warvile.

THE Court of Great-Britain had no fooner figned the Treaty acknowledging the Independence of her late Colonies in North America, than her merchants and political writers fought the means of rendering to her by commerce an equivalent for her loffes by the war.

Lcid Sheffield has predicted, in his Obfervations on the Commerce of America, "that England would always be the ftorehoufe of the United States; that the Americans, conftantly attracted by the excellence of her manufactures, the long experienced integrity of her merchants, and the length of credit, which they only can give, would foon forget the wounds which the minifterial defpotifn of London, as well as the ferocity of the Euglifh and German fatellites, had given to America, to form with it new and durable connexions \%."

[^0]This politician was the only one who appeared in that carcer; others followed it [Dr. Price, \&c.] ; and the debates, which the new regulations of commerce propofed for America, produced in Parliament, prove that the matter was known, difcuffed, and profoundly examined.

The Englifh nation refembled at that time a man who, coming out of a long delirium (wherein he had broken every thing that he ought to have held moft dear), eagerly ftrives to repair the ravages of his infanity.

As for us, we have triumphed, and the honour of the triumph is almoft the only benefit we have reaped. Tranquil under the fhade of our laurels, we fee with indifference the relations of commerce which nanature has created between us and the United States; -whilt, to ufe the language of vulgar policy, the Englifh, of whom we are jealous as our rivals, whom we fear as our enemies, ufe the greateft efforts to make it impofible for us to form new connexions with our new friends.

That the Englif will fucceed, there is no doubt, if our languor be not foon replaced by activity; if the greateft and moft generous faculties, on our part, do not fmooth this commerce, new, and confequently eafy to be facilitated : finally, if our ignorance of the ftate of America be not fpeedily diffipated by the conftant ftudy of her refources of territory,
ritory, commerce, finance, \&c. and affinities they may have with thofe of their own.

Our ignorance! This word will undoubtedly fhock,-for we have the pride of an ancient people : We think we know every thing, -have exhaufted every thing:-Yes, we have exhaufted every thing; but in what? In futile fciences, in frivolous arts, in modes, in luxury, in the art of pleafing women, and the relaxation of morals. We make elegant courfes of chemiftry, charming experiments, delicious verfes, ftrangers at home, little informed of any thing abroad : this is what we are; that is, we know every thing, except that which is proper for us to knorv *.

It would be opening a vaft field to thew what is proper for us to know, therefore I will not undertake it. I confine myfelf to a fingle point: I fay that it concerns us effentially to have a thorough knowledge of the ftate of America, and that, never-

[^1]thelefs, we have fcarcely begun the alphabet which leads to it. What I advance has been faid before by Mr. Paine, a free American, and who has not a little contributed, by his patriotic writings, to fpread, fupport, and exalt, among his fellow countrymen, the enthufiafin of liberty. I will remark, fays he, in his judicious letter to the Abbé Raynal, that I bave not yet feen a defription, given in Eurape, of America, of which the fidelity can be relied on.

In France, I fay it with forrow, the fcience of commerce is almoft unknown, becaufe its practice has long been difhonoured by prejudice; which prevents the gentry from thinking of it. This prejudice, which is improperly thought indeftructible, becaufe the nobility are improperly thought one of the neceffary elements of a monarchical conftitution; this would alone be capable of preventing French commerce from having activity, energy, and dignity, were it not to be hoped, that found philofophy, in deftroying it infenfibly, would bring men to the great idea of efimating individuals by their talents, and not by their birth: without this idea there can be no great national commerce, but ariftocratical men will abound ; that is, men incapable of conceiving any elevated view; and men contemptible, not in a ftate to produce them.

Finally, another prejudice, quite as abfurd, which has been combated a thoufand times, and is always
predominant,
predominant in France, withholds from the eyes of the public precious memoirs, and interefting difcuffions, which would inform France of her interefts.

Who is ignorant that it is to the freedom of debate and public difcuffion that England owes the fingular profperity which, till lately, has followed her every where, in commerce, in arts, in manufactures, as well abroad as at home? a profperity which the may enjoy in fpite of the faults of her minifters; for none but thefe have ever endangered it: and ir is to the freedom of debate that the has often owed her falvation from ruin. Who doubts that this liberty would not produce the fame happy effects in France; -that it would not deftroy falfe appearances;-ibat it would not prevent the deftructive enterprizes of perfonal intereft;-that it would not alarm mifchievous indrlgence, or the coalition of people in place with the enemies of the public welfare? Government feems at prefent to do homage to this it. fluence of the freedom of difcuffion. At length, it appears to relax of its feverity in the laws of the prefs; it has fuffered fome thackles, which reftrained difcuffion, to be broken, efpecially in political matters. But how far are we ftill from feeling the happy effects of the liberty of the prefs, rather granted to public opinion, than encouraged by a real love of truth.

By what fatality are energetic difcourfes of truth ineffectual? This ought to be pointed out; goB 3 vernment
vernment itfelf invites us to do it ; the abufes which render information ufelefs in France, ought to be laid open.

It is becaufe the liberty of thinking and writing on political matters is but of recent date.

Becaufe the liberty of the prefs is environed with many difyufting circumftances; and that an honeft man who difdains libels, but loves franknefs, is driven from the prefs by all thofe humiliating formalities which fubject the fruit of his meditation and refearches to a cenfure neceffarily arifing from ignorance.

It is becaufe the cenfor, inftituted to check the elevation of a generous liberty, thinks to flatter authority, by even exceeding the end propofed; fupprefles truths, which would frequently have been received; for fear of letting too bold ones efcape, with which he would have been reproached, multiplies objections, gives birth to fears, magnifies dangers, and thus difcourages the man of probity, who would have enlightened his fellow citizens; whillt this cenfor fanctions fcandalous productions, wherein reafon is facrificed to farcafms, and fevere morality to amiable vices*.

[^2]It is becaufe there are but few writers virtuous enough, fufficiently organifed, or in proper fituations to combat and furmount thefe obftacles.

Becaufe thefe writers, few in number, have but little influence; abufes weakly attacked and ftrongly defended, refift every thing which is oppofed to them.

Becaufe the neceffity of getting works printed in foreign preffes, renders the publication difficult; but few of them efcape from the hands of greedy hawkers, who monopolize the fale, to fell at a dcarer price, who poft the myftery, and a falfe rafity, to fell dear for a longer time.

Becaufe thefe books are wanting in the moment when they would excite a happy fermentation, and direct it properly, in giving true principles.

Becaufe they fall but fucceffively into the hands of
under the appearance of defending morality, it is turned into ridicule; and wherein great truths are difparaged by the contemptible dialogift who prefents them; wherein the end feems to have been to parody the greateft writers of the age, in. giving their language to a rafcally valet, and to encourage oppreffion, in bringing the people to laugh at their degradation, and to applaud themfelves for this mad laughter: finally, in giving, by culpable im pofture, to the whole nation, that character of negligence and levity which belongs only to her capital.
well-informed men, who are but few in number, in the fearch of new truths.

Becaufe the Journalifts, who ought to render them a public homage, are obliged, through fear, to keep filence.

Becaufe the general mafs, abandoned to the torrent of frivolous literature, lofes the pleafure of meditation, and with it the love of profound truths.

Finally, becaufe truth is by this fatal concurrence of circumftances never fown in a favourable foil, nor in a proper manner ; that it is often ftifled in its birth; and if it furvives all adverfe manœuvres, it gathers ftrength but flowly, and with difficulty; confequently its effects are too circumfcribed for inftruction to become popular and national.

Let government remove all thefe obftacles; let it have the courage, or rather the found policy, to render to the prefs its liberty, and good works, fuch as are really ufeful, will have more fuccefs; from which there will refult much benefit.

Does it wifh for an example? I will quote one, which is recent and well known : the law-fuit of the monopolifing merchants againft the colonifts of the fugar inlands. Would not the laft have, according to cuftom, been crulhed, if the difpute had been carried
carried on in obfcurity ? They had the liberty of fpeech, of writing, and of printing; the public voice was raifed in their favour, truth was triumphant; and the wife minifter, who had permitted a public difcuffion that he might gain information, pronounced for humanity in pronouncing in their favour.

Let us hope that this example will be followed; that government will more and more perceive the immenfe advantages which refult from the liberty of the prets. There is one which, above all others, ought to induce it to accelerate this liberty, becaufe it nearly regards the intereft of the prefent moment : this liberty is a powerful means to eftablifh, fortify, and maintain public credit, which is become, more than ever, neceffary to great rations, fince they have ftood in need of loans. As long as the attempts of perfonal intereft are feared by the obfcurity which covers them, public credit is never firmly eftablifhed, nor does it rife to its true height. It is no longer calculated upon the intrinfic ftrength of its refources, but upon the probability, upon the fear of the diforder, which may either divert them from their real employ, or render them fterile. The liberty of the prefs keeps perfonal intereft too much in awe not to fetter its meafures; and then public credit fupports itfelf if it be eftablifhed, is formed if it be ftill to be conftituted, and fortifies itfelf if it has been weakened by error.

Full of thefe ideas, as well as the love of my country, and furmounting the obftackes to the liberty of printing, I have undertaken to throw fome light upon our commercial affinutics with the United States. This object is of the greateft importance : the queftion is, to develope the mmenfe advantages which France may reap from the revolution which the has fo powerfully favoured, and to indicate the means of extending and confolidating them.

It appears to me that all the importance of this revolution has not been perceived ; that it has not bren fufficiently confidered by men of undertanding. Let it, therefore, be permitted me to confider it at prefent.

I will not go into a detail of the advantages which the United States muft reap from the revolution, which affures them liberty. I will not fpeak of that regeneration of the phyfical and moral man, which muft be an infallible confequence of their conftitutions; of that perfection to which free America, left to its energy, without other bounds but its own faculties, mult one day carry the arts and fciences. America enjoys already the right of free debate, and it cannot be too oft $n$ repeated, that without this debate, perfection is but a mere chimera. In truth, almoft every thing is yet to be done in the United States, but almoft every thing is there underftood: the general good is the common end of every individual, -this end cherithed, implanted, fo to fpeak,
bv the conftitution in every heart. With this end, this intelligence, and this liberty, the greateft miracles mult be performed.

I will not fpeak of the advantages which all America mint one day reap from this revolution; nor of the impoffibility that abfurd defpotifm fhould reign for a long time in the neighbourhood of li-berty.-I will confinc myfelf to the exmmation of what advantages Europe, and France in particular, may drav from this change. - There are two, which are particularly ftriking: the firft, and greateft of -he revolution, at leaft in the eyes of philofophy, is that of its falutary influence on human knowledge, and on the reform of local prejudices; for this war has oncafioned difcuffions important to public happinels, -the difcuffion of the focial compact,-of civil liberty, -of the means which can render a people independent, -of the circumftances which give fanction to its infurrection, and make it legal,and which give this people a place among the powers of the earth.

What good has not refulted from the repeated defcription of the Englifh conftitution, and of its effects? What good has not refulted from the codes of Maffachufetts and New York, publifhed and fpread every where? And what benefits will they ftill produce? They will not be wholly taken for a model; but defpotifm will pay a greater refpect, either:
cilher from neceffity or reaton, to the rights of men, which are fo well known and eftablifhed. Enlightened by this revolution, the governments of Europe will be infenfibly obliged to reform their abues, and to diminifh their burdens, in the juft apprehenfion that their fubjects, tired of bearing the weighr, will take refuge in the afylum offered to them by the United States.

This revolution, favourable to the pcople, which is preparing in the cabinets of Europe, will be undoubtedly accelerated, by that which its commerce will experience, and which we owe to the enfranchifement of America. The war, which procured it to her, has made known the influence of commerce on power, the neceffity of public credir, and confequently of public virtue, without which it cannot long fubfit : what raifed the Englifh to that height of power, from whence, in fpite of the faults of their Minifters, Generals, and Negociators, they braved, for fo many years, the force of the moft powerful nations? Their commerce, and their credir; which, loaded as they were with an enormous debt, put them in a ftate to ufe all the efforts which nations, the moft rich by their foil and population, could not have done in a like cafe.

Thefe are the advantages which France, the world, and humanity, owe to the American Revolution; and when we confider them, and add thofe we are obliged
obliged to let remain in obficurity, we are far from regretting the expences they occafioned us.

Were any thing to be regretted, ought not it to vanilh at the appearance of the new and immenfe commerce which this revolution opens to the French ? This is the moft important point at prefent for us, that on which we have the leaft information, which confequently makes it more neceffary to gain all we can upon the fubject; and fuch is the object of this work.

In what more favourable moment could it appear, when every nation is in a ferment to extend its commerce, feeks new information and fure principles? The mind is inceffintly recalled in this book to the mature of things, the firft principle of commerce.At a time when people, which an ancient rivality, an antipathy, fo falfely and unhappily called natural, kept at a diftance one from the other, are inclined to approach each other, and to extinguifh in the connexions of commerce the. fire of difcord ; this work fhews that thefe rivalities muft be effaced by the immenfity of the career which is opened to all.-At a time when all the parts of univerfal policy are enlightened by the flambeau of philofophy, even in governments which have hitherto profeffed to be afraid of it, the author of this work has let flip no opportunity of attacking falle notions and abules of every kind.

## 14

Never was there a moment more favourable for publifhing ufeful truths. Every nation does not only do homage to commerce, as to the vivifying fpirit of fociety ; but they employ in the examination of all thefe connexions and affinities,-that logic of facts, whofe ufe characterizes the end of the preient century,-that art truly philofophical, of confidering objects in their nature, and in their neceffary confequences:-never had well-informed men more contempt for thofe chimerical fyftems folely founded upon the fancies of pride, upon the little conceptions of vanity, and upon the prefumption of the falfe political fcience, which has too long balanced the deftiny of States. Never were fo many men feen united by the fame defire of an univerfal peace, and by the conviction of the misfortune and inutility cí hateful rivalities. At length it appears, that men perceive that the field of induftry is infinite ; that it is open to every ftate, whatever may be its abfolute or relative pofitions; that all ftates may thrive in it, provided that in each of them the fupport of individual liberty, and the prefervation of property, be the principal end of legiflation.

This work ftill concurs with the patriotic views which the Sovereign of France manifefts at prefent : he meditates important reformations. He directs them towards the happinefs of the peopie ; and confults the moft refpectable members of this people, whom he wifhes to sender happy, upon the means of
infuring
le for s not ifying minaat lof the 1, of ir nermed ftems n the umplong many verfal and pears, infiay be may fupon of
infuring the fuccefs of his good intentions. Therefore, could there be a more propitious moment, to offer to the prefent arbitrators of the national profperity, a work written with deliberation, on the means of eftablifhing a new commerce with a new people, who unites to an extenfive foil, and proper to nourifh an immenfe population, laws which are the moft favourable to its rapid increafe?

At fiff I had alone undertaken this work, depending on my own ftrength and laborious refearches : I had collected all the facts,-all the books,all the proofs which could be certain guides to my fteps; but I foon perceived the impoffibility of raifing upon objects of commerce a folid and ufeful theory, if it were not directed by the fkill which practice only can give, and poffefled by a man whofe judgment had been long exercifed by refiection, and whofe decided love of truth and the public welfare, had accuftomed to generalize his ideas. I found this man, this co-operator, of whofe affiftance I ftood in need, in a republican; to whom I am united by a fimilarity of ideas, as wel' as by the moft tender attachment. I have permifion to rame him, -he confents to it: I have conquered his modefty by the confderation of his intereft, and of the law which the particular circumftances of his fituation impofes on him: I have perfuaded him, that the belt means of deftroying calumny was to make known his principles and opinions on public matters.

It is M. Claviere, a Genevefe, exiled without any form from his country, by the military ariftocracy; which has fubltituted its illegal and deftructive regimen to the reafonable and legitimate influence of a people, diftinguifhed by their natural good underftanding, their knowledge, and their more fimple manners. What was his crime? That of having defended the rights of thefe people, with a firmnefs and ability, which the implacable hatred of his enemies atteft! This part does too much honour to my friend, not to confine myfelf to defcribe him in this character, the only one which has ever been productive of public gnod.
M. Claviere has, during his abode in France, given proofs of his knowledge in the philofophical and political part of commerce. It is to his abode among us that the pubiic is indebted for fome ufeful works on thefe abitract matters; works, as remarkable Sor their folidity of principle and truth of difcuffion, as for the clearnefs and precifion of ideas; works, whofe fuccefs proves that minds may be led to the contemplation of thefe matters, by fubftituting an exact and clear analyfis to the metaphyfical and obfcure jargon which reftrained them from it.

Finally, the prefent work will prove at once the extent of his knowledge, and that of the fincere philarthropy which animates him, even for the good of a country, where a man lefs generous would fee
nothing, perhaps, but the origin and caufe of his misfortunes. Oh ! how happy am I, to have it in my power to defend my friend againft cowardly calumniators, in putting him under the fafeguard of his own talents and virtues? And is it not a facred duty for me, as the calumny is public, to publifh the part he has taken in this work, wherein it is impoffible not to difcover the honeft man, in the man enlightened ? The friend of mankind in the propagation of the wifeft maxims? In the thinking philofopher, accuftomed to a fevere logic, to purfue the interefts of public good, whenever the light of truth can clear up fome of its afpects? This is not a vague eulogiam ; people will be convinced of it in reading the two chapters which concern the principles of commerce; a great number of notes in which he has had a part, and efpecially the article of tobacco, which is entirely his own. In general, he will be known in thofe new confiderations which the commercial man of reflection only can fuggeft to the philofophical politician.

The fame motive has guided us both in the compofition and publication of this work. It was the defire of being ufeful to France, to Free America, to Humanity; for nothing which paffes in the United States, neither ought to, nor can in future, be indifferent to humanity. America has revenged it by her revolution : fhe ought to enlighten it by her leVol. II.

C
giflation,
giflation, and become a perpetual leffon to all governments, as a confolation to individuals.

It remains to me now to fpeak of the fources to which we have had recourle, in the order of this work, \&c. \&c.

We have joined the information of intelligent perfons, whofe abode in America has given them an opportunity of gaining information, to that with which the public papers, the aits of Congrefs, of different legiflatures, and the different works publifhed in the United States, have fumihned us. Therefore credit may be given to all the facts which we advance.

In affociating our ideas, we have friven to give them an uniformity : we have, above every thing, endeavoured to exprefs them with that clearnefs which is fo difficult to introduce into matters of commerce and finance. The poverty of our language, and the fingularity of new circumftances which we had to deferibe, has fometimes led us to what is called neology. We muft create what we have not, and of which we ftand in need, without giving ourfelves any trouble about thofe grammarians, but triflingly philofophical, whom Cicero defcribes thus in his time: Controverfies about zvords torment thefe little Greeks, more defirous of contention than of truib*。

[^3]We have carefully avoided certain words much ufed in vuigar politics; and which give and perpetuate falfe ideas and deceitful fyltems. Such are there expretlions; powers fill the firf cbarader, bave the firft rank, the balance of trade, the jolitical balance of Europe, \&c. Thefe words, which ftir up hatred and jealoufy, are only proper to feed petulant ansbition, and, if I may ufe the expreffion, to put the policy of difturbance in the place of that happinefs. Minifters, wearied of thefe words and ideas, wiil attach a greater price to real glory,-that of making the people happy.

Many notes will be found in this work; we thought it neceffary to give this form to all the ideas, which, thrown into the text, might have obfcured the principal one.

A note relaxes the mind, in fufpending the chain of the principal thoughts; it excites curiofity, in announcing a new point of view; it forces the reader to a certain degree of attention, in obliging him to attach the note to the text, to reap any advantage from his reading.

We have in the fe notes indicated, as often as it has been poffible, the ideas of reform which may be ufeful to France. We hav: frequently quoted the Englifh nation and government. Let ant cur readers be furprifed at it. It is this nation which has made moft progrefs in the practice of fome good principles
of political economy. To what nation in Europe can we better compare France? If a rivality oughe to exift between them, is it not in that which is good? Ought not we from that moment to know all the good meafures taken in England? Ouglit people to be difpleafed with us for mentioning thefe meafures? The example of thofe who have already quoted England has encouraged us. 'They have naturalized in France, happy inftitutions, imitated from her rival.

If our criticifm appears fometimes roughiy expreffed, our readers will be fo good as to confider, that friends to public welfare can but with difficulty refrain from being moved by the afpect of certain abufes, and from fuffering the fentiment of indiguation which it excites in them to break forth.

Notwithftanding the numerous precautions we have taken to come at truth; notwithftanding the extreme attention we have given to this work, errors will undoubtedly be found in fome of the ftatements, and perhaps in the reafonings. Whether they be publicly difcuffed, or that we are privately informed of them, we thall fee thefe refutations with pleafure; we fhall joyfully receive thefe obfervations, and if they be well founded, we fhall be eager to retract. This is but a fimple effay on an important fubject. It may become a good work by the aid of a concourfe of lights.

## CHAP. I.

CE EXTERNAL COMMERCE; THE CIRCUMSTANCES WHICH LEAD TO IT, AND THE MEANS OF ASSURING IT TO A NATION.

COMMERCE fignifics an exchange of productions, either by barter, or by reprefentative figns of their value.

External commerce is that carried on between two or more nations. It fuppofes in them mutual wants, and a furplus of productions correfpondent thereto.

Nations, which nature or the force of things invites to a commercial intercourfe, are thofe which have that correfpondence of wants, and furplus of productions.

This familiarity enables them to trade together, directly or indirectly; a direct commerre is that which exifts between two nations, wathout the in tervention of a third.

$$
\text { C } 3 \quad \text { Commerce }
$$

Commerce is indirect when one nation trades with another by way of a third. This is the cafe of ftates which have no fea-ports, and yet wifh to exchange their productions for thofe of the Indies.

That nation, which having it in its power to carry on a direct commerce with another, yet makes ufe of an intermediate one, is neceffarily obliged to divide its profits. However, this difadvantage may fometimes be compenfated by other confiderations.

Such, for inftance, is the cafe of a nation which, in want of hufbandmen and manufacturers, prefers that frangers fhould themfelves come in fearch of its fuperfluities, and bring in exchange thofe of others: its wants of population impofes this law, and whillt thefe confiderations exift, it is both morally and phyfically better, that its inhabitants fhould be employed in cultivation, than become carriers of their own national productions, or of thofe of others.

It is impoffible that nations which already have communications with each other, fhould be ignorant of their mutual productions. Hence arifes the defire of acquiring them in thofe where they do not exift. Hence direct or indirect commerce, which is confequently the inevitable refult of the fate of things.

From the fame principle, it is the intereft of each mation to render its exterior commerce direct as foon as poflible, without doing an injury to its interior trade.

Direct importations, not being fubject to the expences and commiffions of agents, procure things at a cheaper rate.

A moderate price is the fureft means of obtaining an exterior commerce, the beft reafon for preference and the guarantee of its continuation *.

The

* It is vulgarly faid that a thing is dear when once it is above the accuftomed price; and it is efteemed cheap the moment that price is diminilhed.

By this it feems that the dearnefs of a thing is the comparifon of its ftated, with its ufual price. The laft is determined by five principal circumftances. Ift. The coft of the raw material. 2d. That of the workmauthip. $3^{\text {d }}$. The want the confumer has of the thing. 4th. The means he has of paying for it. $5^{\text {th. }}$ The proportion of its quantity with the demand there is for it. Thefe circumftances increafe or diminifh the profit of the feller; fometimes indeed they may prevent him from gaining at all. Circumftances which influence the moft are fcarcity and abundance, expreffions by which the proportion between the want and the quantity of productions are defignated.
If there be a furplus of them, they are naturally fold at a low price. Whence it appears, that nations having great quantities of raw materials, various manufatures and a numerous population, are more particularly invited to an exterior and $\mathrm{C}_{4}$ continued

## 24

 ON THE COMMERCE OF THEThe country which can produce and fell a thing at the cheapelt rate, is that which unites the favourable advantages of that production, whether it be with refpect to its quality, manufacture, or its low rate of carriage.

The advantages which render commoditics and raw materials cheap, are a fertile foil, eafy of cultivation, climate favourable to the production, a government which encourages induftry, and facilitates carriage by the conftruction of public roads and navigable canals: finally, a population not too numerous relative to the extent of country which offers itfelf to be cultivated *.

The
continued commerce, becaufe they have it in their power to carry it on upon better terms.

An article may be fold at a low price, and enrich him who furnifhes it ; as it may be fold dear, and ruin the feller. .This depends upon the relation there is between its value and the means of ite production. Every nation difpofed to exterior commerce in whatfeever article it may be, ought therefore to confider two things, the price at which it can afford fuch an article, and that at which it is fold by rival nations: if it cannot equal the laft, it ought to abandon that part of its trade.

* The fituation of the United States proves the laft affertion, which may at fir ${ }^{+}$light appear paradoxical ; things are cheap there, becaufe population is not in proportion to the extent of lands to be cultivated. In a good foil, a man may, by his latour, cafily fupply the confumption of ten men, or even

The fame circumftances are fill more favourable to the manufacture of things common, fimple, or little charged with fathion, if the raw material be a natural production of the country, in plenty, and eafy to be worked up; becaufe thefe manufactures require but few hands, or are carried on at that leifure which agriculture affords. Nothing can equal the cheapnefs of this workmanthip, and in general no induftry is more lucrative, or better fupported on eafy terms, than that whish is employed in the intervals of repofe from cultivation; in that cafe cheapnefs is neither the product nor the fign of mifery in the manufaturer: it is, on the contrary, che proof and confequence of his eafy circumftances *.

The moft neceffary conditions for manufacturing, at a cheap rate, articles complicated, or extremely fine and perfect, or which require the
more. Thefe ten men may therefore be employed for exterior confumption.

* Switzerland, and certain parts of Germany, offer a ftriking example of this fact. Merchandife is fabricated there, at a lower rate than in any other country of Europe, by means of this employment of leifure hours, and is capable of being tranfported to difant countries, without lofing its original advantage; even acrofs great ftates, where nature, left to her own energy, would be fill more favourable to the fame manufactures.

IMAGE EVALUATION TEST TARGET (MT-3)

union of feveral kinds of workmanfhip, are a conftant and affiduous application, and a numerous population ; one half of which mult be at a diftance from the labours of the field, and applied to manufacture alone.

Thefe manufactures ought, according to natural order, to be the productions of an excefs of population only, which cannot give its induftry to agriculture or fimple manufactures ; but in general they are the refult of the gathering together of the poor and wretched in great cities *,

Thefe

* 'Thefe manufactures are crowded with individuals, who baving no property, or hope of conftant employ in the country, or who are reduced by the allurements of gain and luxury, run into cities, and foon become obliged to fell their induftry at a mean price, proportioned to the number of thofe who are in want of employ. When cheapnefs of workmanßhip comes from this afflicting concurrence of the want of money in men without employ, it is not a fign of profperity. On the contrary, it is the refult and proof of a bad focial erganization, of too unequal a divifion of property, and confequently of an unjuft diftribution of neceffary employments, which compels induftry to change, from the fabrication of what is neceflary and ufeful, to that which is fantaftic, forced, and pernicious. Hence it follows that wretchednefs in any country is in proportion ta this cheapnefs of workmanhip.

It is equally evident from thefe reafonings, that new and well conftituted ftates ought not to defire manufactures
produced

Thefe manufactures cannot furnifh their productions but with difficulty and uncertainty for exterior commerce, when they are eftablifhed and fupported merely by forced means, fuch as prohibitions, exclufive privileges, \&c. by which natural obftacles, not to be deftroyed, are pretended to te combated. Countries exempt from them prevail in the end, and obtain a preference.

It fometimes happens, that obftacles caufed to manfactures by dearnefs of provifions, burthenfome imports, diftance from the raw material, and anfkilfulnefs, or fmall number of hands, are furmounted by ingenuity, or the ufe of machines; which make the work of one man equal to that of many, and render a manufacture capable of fupporting the commerce of populous countries, where fuch manœuvres and machines are not made ufe of, or known.

But thefe means are precarious, and fooner
produced by things fo badly arranged: they ought not to be anxious about them till the rate of population and excefs of ufeful labour naturally incline induftry to apply itfelf to improve and carry them on. Thefe reafonings againit low priced workmanfhip do not hinder us from agreeing, that there is a real advantage in the means of exterior commerce; and that in the actual ftate of things manufacturing and commercial nations may perhaps be obliged to feek for it, although it does not compenfate the interior evil by which it is produced.
or later give way to a more happy fituation, where climate, foil, and government efpecially, concur in favouring, without effort, all the activity and indultry of which men are fufceptible"。

Thus, in the final analyfis, the power of furnifhing at a low price belongs inconteftably to countries fo favoured, and they will obtain in all markets a fure preference to thofe to which nature has been lefs kind, let their induftry be ever fo great, becaufe the fame induftry may always be added to natural advantages.

Exterior commerce, naore than any other, is intimidated by fhackles, cuftoms, vifits, chicaneries, and proceffes; by the manner of deciding them, and the folicitations and delays they bring on.

The fate which would favour fuch a commerce fhould, in the firft place, deftroy all thefe obftacles. It is more to its intereft fo to do, as from exterior commerce refults an augmentation of the national revenue.

All things equal, relative to the price of mer-

[^4]chandife, and to the facilities with which direct exterior commerce can be carried on, it is more readily eftablifhed between two nations which have a fimilary of political and religious principles *, manners, cuftoms, and efpecially of language : thefe decifive means of connexion cannot be combated but by evident advantages from which there refults lefs expence and more profit. Commercial people generally place profit at the head of every thing.

Nations not having thefe affinities between them, ought, in order to compenfate for their deficiency, to give great encouragements, and tolerate to the utmoft degree the religious and political opinions of Atrangers, as well as their manners and cuftoms.

To obtain the preference in exterior commerce, neither treaties, regulations, nor force muft be depended upon. Force has but a mo-

[^5]mentary

mentary effect. It deftroys even that which it means to protect. Treaties and regulations aro ufelefs if the interefts of two nations do not invite them to a mutual intercourfe. They are ineffectual if that attraction does not exift. Treaties, regulations, force, all yield to the impulfe or nature of things*.

This force of things in commerce, is but the refult of the circumitances in which two nations are which attract one towards the other, and oblige them to enter into an alliance, rather

* Force of things. The political law which governs all, in politics as in phyfics. There is a general force whofe action is manifeft, which, in fitt: of wars, treaties, and the manocurtes of cabinets, governs all events, and carries away ment and nations in its courfe. It is this force of things which overturned the Roman empire, when it ftood upon a bafis difproportioned to its mafs; which in the 14 th century took from the Englifh one half of France, and in the 18th, has takert from them half of the new world;-which delivered Holland from the yoke of Spain, and Sweden from that of Denmark. It is this force which deftroyed the projects of fuch conquerors as Charlemagne, Zengis, and Nadir. They ran from place to place; they deftroyed mankind to build empires: Thefe empires died with them. This force acts upon commerce as upon revolutions. It is that which, by the difcovery of the Cape of Good Hope, bereaved the Venetians of their trade to the Indies, and made it pais over fucceffively to the Portuguefe, the Dutch, the Englih, and the French. Finally, it is the force of things which will decide the great queftion of the commerce of America.
than with any other nation. Thefe terminate in their mutual intereft : it is therefore neceffary, in order to create a perpetual commerce between two countries, to give each of them a preponderating intereft fo to do.

## C H A P. II.

OF EXTERNAL COMMERCE, CONSIDERED IN ITS MEANS OF EXCHANGE, AND ITS BALANCE.

WE are deceived in believing that commerce cannot be eftablifhed between two nations without gold or filver to balance their accounts. It will be interefting to enter into fome detail on this head, on account of the deficiency of coin in the United States, and the neceffity of reducing themfelves to the commerce of exchange, being the two principal objections ignorantly brought againft a trade with them *.

[^6]It has been frequently afferted that the balance will be againft them ; that they can only offer an exchange in merchandife. It is therefore necefíary to prove that this great word, balance, is infignificant; that a great commerce may be carried on without money, and that one of exchange is the moft advantageous of any.
When a nation pays with money the whole, or the balance of its importations, it is faid the balance of trade is againft it, by which a difadva:ntageous idea of its pofition is meant to be given. This is a prejudice eafy to be overturn-
things are to be created, and where, in every quarter, there are fuch quantities of lands to be cleared. In order that money fhould be plenty in this ftate of creation, mines would be neceffary; and at the fame time a want of hands, and induftry clogged with impediments, circumflances much mo e unfavourable to foreign commerce than the fearcity of money in an active and induftrious country. One fact feems to prove to us, that in independent America, money is found in the moft defirable proportion to population, at leaft by taking Europe for the term of comparifon. Contracts efteemed good, and of which the intereft is regularly paid, are fold there at the rate of fix per cent. per annum. Yet the clearing of lands muf produce a much greater benefit; why then is not all the money fwallowed up ? why remains there enough of it to fulfil thefe contracts, which produce no more than five or fix per cent? Is it not becaufe money is not fo fcarce there as people in France imagine ? - where the actual ftate of the Americans is confounded with the diftrefs in which they were when they combated for their liberty.
tation prefently becomes in proportion to exportation; an equilibrium is eftablifhed, and the pretended unfavourable balance has not duration enough to give a right of fuppofing even its exiftence.

There is as little truth and juftice in faying a nation has the balance of trade in its favour, when it receives in money balances due to it upon the amount of its exportations. This balance, exifting for a certain time, would heap up fpecie in the country, and at length render it very miferable. This has never been the cafe, yet it would have happened if this fyftem had the leaft foundation.

The circulation of money depends on too many caufes, to deduce from its abundance a certain figu of a favourable commercial balance ; a thoufand combinations and events, which have no relation to that balance, draw money from abroad or fend it there ; and in general, continued and various motions of commerce, the tables of exportation and importation, according to which the fign ef a favourable or unfavourable balance is regulated, are too uncertain and defective for the purpofe, as well as for forming a judgment of the quantities of coin or riches of a nation*.

- I will give a ftriking example of the deficiency of thefe calculations,

Let the tables for comparing the exportation and importation of raw materials, and of manufactured articles, be encreafed to what they may ;

[^7]let the greateft care and fidelity be employed to render them perfect, the refult will never be more certain or decifive; for as long as prohibi-
there be added to it thofe drawn from the Carnatic and from Oude, of which the Nabobs have the fhadow only of the property, from the revenue of the northern Circars, from the theft committed on the Emperor of Mogul, from 1771 to the prefent day, of his twenty-fix millions, from the perpetual increafe of territories and revenues, from the fale made in 1773 of the Rehillas to the Nabob of Ou le, which produced to the Englifh upwards of fifty millions ${ }^{\text {b }}$.

Finally, what will be the amount, if there be added to it the ellormous fums exported from the Indies by individuals, who have there enriched themfelves? The fortune of Lord Clive was beyond calculation ; that of Mr. Haftings, againft whom a profecution is now carrying on, is calculated at thirty or forty inillions. Another Governor has, according to feveral well-founded reports, recently paid upwards of two millions of livres to filence his accufers. It is true that a part of thefe immenfe riches have been employed to defray the expences incurred by the Engiifh in guarding their poffefions in India; that a more confiderable one has been fent into Europe under the form of merchandize; but it cannot be denied that a third part has been brought in gold and filver to our continent. What is the amount of it ? This is impoffible to flate. But whatever it may be, it renders the calculation of !dr. Neckar doubtful.-Let the inexhauftible riches of the Indies be judged of by one fact, and confequently the immenfe fource from

[^8] licit commerce, fhall exift, it will be impoffible
which the Europeans have drawn them, and by another confequence, the money which muft have come into Europe. Nadir Schah, who ennquered Deliy in $\mathbf{1 7 4 0}$, took from India about forty millions ftering e. This money was circulated in Perfia, and as that unhappy fate is torn by $u$ cifpotifin and continual wars ${ }^{\text {d }}$, produces but little, manufactures nothing, and is confequently debtor to exterior commerce, which comes almoft entirely into Europe, it fullows that two-thids of the fums ftolen from India by the freebooter Nadir, have paffed over to the fame quarter. Thefe events, unnoticed by political calculators, have certainly had great and univerfal influence upon the fluctuation and circulation of money. That which makes it fuppofed that no metals come from India, is the opinion that their importation is difadvantageous. But have the freebooters who have pillaged that country for the laft thirty years calculated this difadvanta:e? They Atrive to fecure their theft, and do not fpeculate like merchants: bulky merchandize wouid betray them.

With refpect to the flated fums of money which pafs from Europe to India, there is the fame defect in the calculations of Mr. Neckar. He takes no notice of the events which obliged the Englifh to remit confiderable fums to India: for inftance, the two wars againft the Marrattas wese roligioully expen? five, that aga ant Hyder Aily in $1 ; 69$ wis not lefs fo. A fingle conflagration at Calcutta coft nearly twenty-four millions of livres, which it was neceffiary to replace, yet there fums are far from balancing thofe which are exported from India.
© See Mackintoh's Voyages, Vol. I. page 341.
${ }^{d}$ See Mr. l'apper's Voyage, at the end of that of Mackintolh, Vol. II. page 454.
to know and fate exactly what comes in and goes out*; and if there be a country where no fuch laws exift $\dagger$, are exact reg fters of the exports and imports to be found in it ? And if they were, would it not be a conftraint which the private interefts of merchants would frequently oblige them to avoid?

Moreover, does it appear that, in thefe general balances, which are fuppofed to be paid in money, notice is taken of the operation of bankers, foreign government, and thofe who go abroad, in exporting the public fecie $\ddagger$. Knowledge
> *. This is a ftrong objection made by the adverfaries of Lord Sheffield, to which his Lordihip has not fatisfactorily replied.

> Nothing can be more impofing than the tables of importation and exportation, and of the balance of trade in GreatBritain, publifhed by Sir Charles Whitworth. Yet fee with what facility the Count de Mirabeau reduces to twenty millions of livres tournois, the ninety millions which Sir Charles Whitworth eftimates to be the annual balance of Englifh commerce ; and truft after this to cuftom-houfe calculations.-See Confiderations on the Order of Cincinnatus, in this volume.
> $\dagger$ Such a country does exiff. There are many States among the new Republics of America, which regifter veffels as they enter, becaufe duties are paid on importation; but there are none on exportation.
> $\ddagger$ It is very probable there are a number of particular caufes which
ledge is deceitful which is acquired from fuch confequences.

But how snpreciate-how eftimate the increafe of the riches and comnerce of a nation? -By its population. If this fenfibly augments, if eafe and the conveniencies of life become more general, if the caufes of indigence in an increafing people be feen to diminifh, or are confined to inability to work, occafioned by accidental illneffes; it is evident, that the revenues of that nation exceed its expences, and that the balance of trade is in its favour ; for if the value of its exportation were inferior to that
which infenfibly diminifh the quantity of coin in thofe nations which have the balance of trade conftantly in their favour. Were no fuch caufes to exift, the coniequence will be that fuch nations would be obliged to bury their gold and filver in the earth, to prevent its falling into difufe; yet neither of thefe cafes happen. Therefore money neceflarily paffes from fuch countries to others,

M, Cafaux has proved this to be true, with refpect to England, in his Confiderations on the Mechanifm of Socieiy. He there explains, that if the calculations of Sir Charles Whitworth be true, England ought to poffefs at this moment about four hundred thoufand millions of livres in gold and filver, as the fole balance of her commerce from 1700 to 1775. Yet it is certain that fhe is far from having that enormous fum, She has not even a fum in proportion to her population and contingencies. She fupplies that deficiency by an immenfe circulation of her ba.a': paper.
of its importation, a confiderable debt and impoverifhment would foon be the confequences : and impoverifhment falls immediately upon population. It is therefore by rational and well compofed tables upon this fubject only, that a minifter of found judgment, profound and extended in his plans, will be prevailed upon to govern himfelf. It is by them he will judge of the increafe and advantages of exterior commerce, as well as of national riches.

He will be very cautious of decorating with this title the amaffing of gold and filver, and equally fo of making it the token of riches, or of judging of their extent by the quantity of thofe metals. All fuch ideas are fordid, dangerous, and falfe; fordid, becaufe they attach to this fign the reprefentation of productions, and confequently the extenfion of commerce; dangerous; becaufe they accuftom men to look upon gold as real riches, to neglect the thing for its Shadow *, and make them ftrangers to

* Could gold and filver be preferved from adulteration and the attempts of tyranny and ignorance, they would have a much better title to be confidered as real riches. Gold being an univerfal agent, he who poffeffes it may emigrate to where.. ever he pleafes, and take his gold with him. This metal is therefore every thing, with nations unhappy enough to make
arbitrary their country; falfe, becaufe that difplay of figures announces the quantity only of money which continually difappears; and which, When carried to a certain degree, is of na farther confideration *.

Enquiries
arbitrary exceptions to general maxims, upon which public credit is founded. But how dearly do they pay for their ignorance of the advantages of public credit! How dearly do governments themfelves pay for their errors and outrages! All their meafures are forced-nature is liberal in vain; inceffantly employed in repairing evils which continually prefent themfelves, fhe has not time enough allowed her to add to our happinefs. When it was faid that money had no particular country, governments were emphatically told, that it was neceffary to do without great quantities of it: it will never be rejefted till the ineftimable advantages refulting from a refpect for public credit fhall be properly known. The lefs individuals love and heap up money, the richer, more enlightened, and better governed will a nation be. To be attached to money, to hoard it up, is a fign of an alarming crifis, of a deficiency of judgment and faith in adminiftration; from whence comes the proof of what has been faid in the text, that ' $a$ writer who extols gold as a fign of riches, and recommends it to his fellow citizens, is deceived, or has a bad idea of their fituation.' In the laft cafe he would do much better, if, inftead of preaching this pernicious doetrine, he encouraged government to give an immoveable ftability to national credit.
*It has not yet been remarked, that thoufands of millions is a vague expreffion, and does not furnifh a complete idea. The imagination cannot exactly conceive for fuch a fum an employ which would ferve as the meafure of its power and effect. It

Enquiries on the quantity of coin are like thofe on the balance of trade. To eftablifh both one and the other with fome degree of certainty, it is neceffary to affemble notions and details, of which the elementary principles vanifh, or inceffantly vary*.

The
is known what could be done with twenty or an hundred millions of men, but it is not known what could be effected with an hundred thoufand millions of crowns; yet they are heaped upon paper to give an idea of power.

- In general, the mafs of gold or filver is divided into three principal parts.-The firft under the form of money, ferves for daily and unavoidable expences. Each individual, as foon as he is charged with the fupport of himfelf and family, mult have at leaft fome pieces of money for daily exigencies, and the payment of impoits. To this muft be added that fum which is referved for cafualies.-This cuftom is more or lefs obferved inall countries, in proportion to the probability of difaftrous events. It is impoffible to calculate this firft part-It is however evident, that it ought to be in praportion to the population, and to increafe with it; and that a decreafe of population would foon take place, were many individuals totally deprived of a pecuniary contingency fufficient to procure them fuch neceflaries as cannot be difpenfed with, and which they neither make nor receive themfelves. It appears alfo, that this part of the coin remains in the country by reafon of its continued application in little fums to daily wants, and of the abfolute ftagnation of that which is laid up in referve.

The fecond part is deftined, under the fame form, to the great operations of commerce. It is equally impoffible to fex its quantity, on account of an infinity of combinations which continually

The proceedings in the adminiftration of finances are more ufeful and certain; by laying afide the pomp of falfe riches, and by confidering gold and fiver in a point of view relative to their
continually change and caufe thefe metals to pafs from one country to another. Daily charges, cuftoms, \&c. retain a part; but thefe objects belong equally to our firft divifion.

The third part contains uncoined gold and filver, under whatever forin they may have: it is, like the fecond, fubject to numbers of continual variations, which leave no fatisfactory means of determining its quantity.

To pretend to afcertain the quantity in the mafs, by payments of uncertain commercial balances, and by the addition of fpec:? produced from mints fince a new coinage has taken place, is not a more certain means, becaufe it would be equally neceffary to obferve the continual action of commerce upon thefe metals, under all their forms, and of the combinations it produces, which fucceffively arife from one another. In thus eftimating money it is forgotten, that it is an univerfal agent, which, by that character alone, mult neceffarily change its fituation perpetually; fince commerce has produced an affinity among men, by wants, which they have created to themielves, of their reciprocal productions. It is equally untbrerved, that different circumftances reduce gold to the ftate of an ingot ; that ronfequently the fame piece may pafs feveral times under the die in the courfe of a certain number of years. This is a reflection which M. Neckar feems not to have made when he ftated the money exifting in France at fo confiderable a fum. It will be known when the recoinage of the old Louis is finifhed, what we ought to think of his calculations. But the fum is far thort of 957 millions, as eftimated by that minifter. It is more
their particular properties. They fupply our wants as means of exchange only; they are notes to the bearer, which having every where the fame value, are every where negociable. Thus they are ambulatory ; they pafs, repafs, are accumulated or difperfed like the waves of the fea, continually agitated by fuccefive winds blowing from every point of the compafs. To undertake to make them ftationary, would be ftriving to change their nature, to deprive them of that property from which they derive their value: this ridiculous enterprife is, notwithflanding, a confequence of the fyftem which caufes them to be looked upon as real treafures. Their difappearance is dreaded, and yet their circulation is clogged, and the mind lofes fight of the ufe of the moft fimple and univerfal means of creating real riches, without which metals would be ufelefs, and confequently of no value.

O: the contrary, difdaining vulgar opinions, and feeing nothing in gold and filver but the means of exchange, but proper agents to faci-
than probable, that it will never amount to more than two thirds of it.
At this moment, fourteen months after the arre for a new coinage, it amounts to no more than 550 millions, and every thing indicates a rapid decline.
litate it ; the mind, freed from the fear of the want of them as riches, conceives the idea of doing without them as agents, at leaft about man's perfon *. What a vaft field is this opened to induftry! Thefe metals are in that cafe referved for the beft ufes to which nations who obtain them from abroad can put them to. They are fent out to feek materials for induftry, new commodities, and efpecially increafe the number of ci-

[^9]tizens; of every fpecies of riches this is the moft fure and fruitful. Thus when gold is reduced to its exact value, that its real ufe is known, the advantageous purpofes to which it is proper, are more juftly calculated. It is then perceived that paper credit may have the fame properties as gold itfelf; and to fucceed in giving them to it, nothing more is neceffary than to pruferve the moft inviolable refpect for the principles which fupport public confidence; for upon what bafis refts the value and general ufe of money, if it be not upon the certitude that it will be received every where in payment for things which men's wants may require, becaufe of its conventional value? why fhould a paper which prefents the fame conventional value, the fame certitude and folidity, be refufed in payment? I will add more-A more folid bafis than gold and filver has, may be given to paper money* : for we have no guarantee that the value of thefe metals will not be all at once diminifhed by the difcovery of new and rich

[^10]mines; we cannot calculate thcir quantities concealed in the earth, and men inceffantly rake up its boweis in fearch of th.m *. Therefore in countries where precious metals are fearce, but where lands may be fuccefffully cultivated, banks fhould be formed, whofe operations fhould chiefly reft upon title deeds and productions depofited; in a word, upon fuch objects only as gold and filver fhould reprefent + .

* Why fhould not difooveries be made in other countries, like that in the laft century by two thepherds in Norway, of the rich mines of Konnerg, where very confiderable maffes of filver are found? The King of Denmark has one of 560 lb . weight in his cabinet.
+ It is not true that much gold and filver are neceffary to eftablifh banks, or create notes which may be thrown into circulation. A proof of the contrary arifes from facts continually before our eyes. The multitude of bills of exchange which circulate and crofs each other in cvery direction, have not all of them, for origin and fecurity, a depofit of gold and filver. Neither are they all paid when due with thefe metals. Commerce produces an abundance of fuch papers, which falling due on the fame day are difcharged by each other without the intervention of fpecie; efpecially in cities where public banks are eftablifhed to facilitate this kind of payment. Thefe are called transfers, and the principal object of Caiffes d'Efcomptes and banks is to facilitate them by the payment of bilts fallen due by thofe who have flill fome time to run. In fine, thefe Caiffes d'Efcomptes and banks, are themfelves caufes and ftriking proofs of the litile difficulty there is in Cupplying,

In countries where thefe metals are already in circulation, but are ftill foreign productions, cafy and certain means thould be fought after to render exchanges lefs dependent on the fecurity or abundance of fpecie. Paper credit Thould be naturalized there, becaufe its infallible effect is to double or treble the quantity of current coin, and even to replace it entircly, where, as in England, public confidence has never received a wound. Thefe obfervations might be more extended if a treatife on the nature of banks and Caiffes d'Efcompte were in queftion. But this is not my prefent object ; I have confidered exterior commerce in its mcans of exchange only, like metals and paper credit, and in its balance for the purpofe of applying thefe principles to the relations and commerce of France and the United States: and more efpecially to clear up fome difficulties to the French, who feem to have a bad opinion of this commercial intercourfe, on account of the want of money
by confidence, the places of gold and filver. Firf eftablifhed by depofits in fpecie, they foon circulate their notes for fums more confiderable than thofe depofited: and what furety is there for the payment of fuch notes if it be not by other bills not due, which the Caifes and banks receive in exchange for their own notes payable at fight, to which pubiic confidence give the fame value as to gold and filver.
in America; and to encourage the independent Americans, who feem to dread the pretended inconveniencies arifing from its deficiency.
I think I have proved :
ift. That the balance of trade is but ant infignificant wotd : that the balance paid in fpecie is no proof of a difadvantageous commerce on the part of the nation which paysit, nor advantageous to thie nation which receives it *.

2d. That the tables of that commercial balance deferve no faith, and that the only me-

## C H A P. III.

APPLICATION OF THE FOREGOING GENERAL. PRINCIPLES TO THE RECIPROCAL COMMERCE OF FRANCE AND THE UNITED STATES:

That France has every Means of procuring a great Commerce, and thofe which muft affure it to her in the United States; that her Productions are proper for them; and that her particular inteitor Circumftances oblige her to engage in this Commerce.

THESE truths will not be contefted when the fertility of the foil of France fhall be confidered, her various and particular productions, and the temperature of her climate, which favours thofe the moft fimple and neceffary.

Thefe advantages conftantly affure her workmanfhip at a lower price than thofe of nations endowed with the fame activity, but which have not the advantages of fuch favourable circumftances.

Her manufactures are numerous, and her population is confiderable in comparifon with that of moft other nations. Yet thefe are far from
the degree tc which they may be extended; for in confidering Frence, room for a more extenfive population is foon difcovered, and an immenfity of means for a great number of manufactures, which only wait for the will of government to be eftablifhed.

What other nation has more activity ? more induftry? or unites to fo great a degree, all the advantages of civilization, and the matter and means of the moft varied and extenfive interior and exterior commerce, independent of completion: What other would have been able to refift, for fo long a time, the chain of misfortunes, and repeated faults of which the has been the victim? The force of her conftitution, rather than her apparent profperity, ought to be calculated by this refiftance. France is not what fhe might and ought to be. There is no doubt but the will become fo if the opens her eyes to her true interefts, if unfharkling her interior the does not neglect her exterior commerce, and particularly that which the United States wifh to open with her. The productions of her foil and induftry are proper for them. She can export in exchange from independent America the raw materials for which the may have occafion. Thefe two countries may therefore carry on a dire $\mathfrak{C l}$ commerce of ex-

E 3
change
cbange between then,, and fo much the mori advantageous, as the raw materials, which muft conflitute it, would coft them more in any other place. Thefe truths will not be doubted when the double catalogue of the refpective wants of France and the United States, ii of their importation and exportation, thall have been examined.
Intelligent patriots are of opinion, that it cannot be advantageous to France, in her prefent fituation, to engage in the commerce of the United States.-They obferve, that her manufactures being inferior to thofe of the Englifh, fhe will be worfted in the American markets; they add, that inftead of encouraging this commerce, government would perhaps act more wifely by preventing the interior abufes which ftop the progrefs of cultivation and induftry.

I am far from denying the neceffity there may be of firring to reform fuch abufes, and to. direct our efforts to culture and the improvement of manufactures; but it is eafy to demonftate, that exterior comnerce will in a very fhort time infallibly bring on fuch a reform, and that France in her prefent ftate is in the greateft need of this exterior trade.

In effect, an active and induftrious nation, whofe foil is fertile, ought always to have mar-
kets for the fale of its commodities to animate its induftry. Its culture and manufactures would languifh if the limits of its confumption were perceived. It is even neceffary that thefe markets fhould be fuperabundant; that one may fucceed the other, in cafe of unfufpected events, which might caufe a momentary change in the ordinary courfe of things.

What caufe has thrown Ireland into fo continued a ftate of languor, although one of thofe countries the moft favoured by nature, and the beft fituated for exterior commerce, if it is not the deprivation of that commerce? An embarraffing exuberance of productions was feared; the cultivation of them was prefently negle:ted, and this negligence increafed wafte lands. This ifland would at length have offered a fpectacle of the moft deplorable mifery, of a complete depopulation, if, by a reftitution of the liberty of commerce, an end had not been put to fo cruel a difcouragement which choaked induftry, by making it fear'a want of markets for the vent of its productions.

Let our patriots, therefore, ceafe to look upon foreign commerce as contrary to the reforms which are to revive our interior trade: to encourage the firft is not to proferibe the fecond, becaufe one cannot fucceed without the other.
$\mathrm{E}_{4}{ }^{-1} \mathrm{But}_{6}$

But, on the contrary, the feeds of activity are fown in the latter, by extending the boundaries of confumption.

Alas! is not France evidently in need of them ? Are not her magazines crowded with a fuperfluity of the moft neceffary productions, for which the has no market? Such as, amongtt others, her wines and brandes *. The United States offer to her an immenfe confumption; why does the refufe to fupply them?

Even if her wintes and brandies were not in fuch fuperfluity, it would be prejudicial not ta fupport the price of them by foreign confumptions. The greateft fcourge of induftry, and efpecially of manufactures, is the low price of thofe liquors which are feducing by their ftrength. On this account prudent manufacturers carefully avoid wine countries. It would be fuperfluous to give a detail of their reafons; but certainly the politician, the mof jealous of a free extenfion of individual enjoyments, will never become an advocate for the indulgence of men in thofe articles which deprive them of their faculties and reafon.

[^11]France

France ought to defire the commerce of the United States. She ought alfo to be anxious for it on account of her manufactures, to employ her population which is in want of work. Cons. fequently workmanthip is cheap; whence re, fults indigence, beggary, and frife *. Work and productions are increafed by opening new markets. Thus, for example, vineyards will remain, which a want of confumption would foon caufe to be deftroyed; thoufands of lap bourers, who languifh, will be employed, fociety will be increafed by thoufands of indivi, duals; more corn, more cloth, \&c. will be neceffary: hence an increafe of interior confumption and population.

When we examine the queftion, if exterior commerce be adyantageous and neceffiry to a nation; a newly conftituted ftate, whofe population is far from being in proportion to its foil, where there is Space and property in land for every one, mult be diftinguihed from that which is ancient, rich in productions as well as

[^12]58 ON THE COMMRRCE OF THE
wanen; or, to fpeak with more precifion, a fate where the unequal diftribution of property takes men from the fields, huts them up in cities, and proftitutes their faculties to the fancies of the rich.

Certainly fuch a new ftate cannot increafe its foreign commerce before it has cleared great quantities of lands, and is become confiderably peopled, and has a furplus of men and productions.

Such a ftate, while neceffary, will undoubtedly follow this counfel.

But this counfel would be improper to another ftate, which, advanced in its civilization, covered with a population without property, having manufactures and money in abundance ; whofe induftry and territorial riches wait for demands, and whofe culture languifhes for want of markets. A foreign commerce is neceffary to this fate to vivify it.

Such is the fituation of France; neither foil, induftry, activity, nor the thirf of gain, is there wanting; other pernicious caufes lacken her interior commerce. If the merchant has not a certainty of markets, he does not buy nor give orders ; the manufacturer employs fewer hands, has lefs occation for the productions of the earth.
flate perty up in fan. reafe great rably duc. tion, erty, nce ; for want fary here her not a give inds, the arth.
earth. Languor then defcends from manufactures to cultivation, and diminifhes population.

The reverfe will be the cafe in the fuppofition of a valt exterior commerce, and will lead to the improvement even of our manufactures; for the neceffity of improvin* to obtain a preference will oblige manufacturers to ftudy the tafte of the Americans, and to conform themfelves to it, to vary the productions of their induftry; and will oblige them not to relax, that they may not be furpafled by rivals.

It is here neceffary to make fome reflections on the general inferiority found in our matufactures, on comparing them with thofe of the Englifh. This fact has furnifhed Lord Sheffield with his principal argument, to maintain that America will always prefer the latter. It is neceffary to clear up this point, which feems not to be well underftood.

Manufactures of luxury, of conveniency, and of neceffity, muft be diftinguifhed in a manner hereafter pointed out. Lord Sheffield and all foreigners agree, that France has the advantage in the firft clafs of manufactures *. His Lordfhip

[^13] and
nip agrees even that France makes finer cloths than thofe of England; but with refpect to manufactures of convenience, or fuch as are intended for the confumption of the people, we muft, in fpite of patriotifm, agree on our part, that we are is: many articles inferior to the Englifh. This will appear by the fequel. It would be ridiculous and even dangerous to flatter the nation in this particular ; the illufion would keep it in a ftate of mediocrity. It is for a better conflituted patriotifm to prove to the nation, that it may rife above mediocrity, and to fhew it by what means this is to be effected. Should any body wifh to know the caufe of this double difference between the French and Englifh manufactures, it is as follows:

There is in England a greater number of men, among the people, in eafy circumftances, than in France, and who are confequently in a fituation to choofe and pay better for fuch articles as they like. It is a known fact, that the common people of England, although loaded
and which opens to us a great confumption, the raw material is in a great meafure one of our own productions; an advantage which puts it in our power to furmount many general inconveniencies, whofe effects are more fenfible upon our other articles of exportation, fuch as woollens, the production of which has lefs relation with the manufacture.
with taxes, are well clothed and fed ${ }^{*}$; the rags of mifery are not found with the poulle aut pot $\dagger$. The Englifh manufacturer having a greater demand for articles of neceffity, and being better paid for them, can make improvements in his manufacture.

Should it be required to know from whence comes the eafinefs of circumftances fo general in England: independent of the foil and pofition, and the advantages of that liberty which

- The goodnefs of things manufactured is fo generally requifite in England, thas merchandizes deftined for exportation are there diftinguifhed from thofe for interior confumption. 'There are great warehoufes wherein the fales are for exportation only; the object of others is interior confumption. Peo. ple who judge haftily conclude from hence, that thofe for exportation are badly manufactured. They are deceived, the difference is in the choice of materials. The Engli/mman fpares nothing for that which be confumes. The workmanihip is the fame; it would coft in general more to manufacturers to have two forts of workmankip, a good and a bad one, than to have one only which is good, and a manufacture eftablihed upon a bad kind of workmanhip would foon be decried. A fhoe deftined to foreign commerce is as well made as another ; but it does not laft fo long, becaufe the leather is not chofen from the beft kind; and fo of the reff.
$\dagger$ A memorable expreffion of Henry the fourth of France, who, in a converfation with his favourite Sully, faid, he hoped to fee the time when the pooreft of his fubjects would have it in their power to put a fowl into the pot for their Sunday's dinner.
reigns there, it refults from the confideration attached to induftry in the opinion of the public; from the laws fure protection accorded to every individual againft the agents of government ; and the haughtinefs and infolence, to which they are naturally inclined (becaufe in men of flender education thefe are the effect of power), being continually repreffed, and their being prevented from trampling upon the citizen, who muft be otres t. - He is obedient to the law, and not to him who puts it in execution *. In fine, it is the confequence of not blufhing to be a tradefman, artificer, or workman, from father to fon.

In France there are individuals exceffively rich ; but the people are poor. The firf have it in their power to pay extremely dear for arti-

* Thee and Thou as terms of contempt are unknown in England: Sir is the general defignation of every individual. A man accufed of the greateft crimes, and who has the moft miferable appearance, is never fooken to in the fingular number when he is interrogated by his judges; and as he becomes an object of pity when he is conviated, decent appellations, generally in ufe, are not clanged with refpect to him. Can one fuppofe that this refpect for man is prejudicial to public profperity? Man is elevated by it; it gives him energy, and inclines him to eafe. Contempt, which in other places is affected for the people, leads them to mifery, and retains them in it.
cles of luxury and fancy, which caufe an improvement of manufactures of this kind. Finer cloths, as it has been before obferved, are to be found in France than in England; but their quantity is not great, becanfe there is not an extenfive demand for thofe of the firft quality.

On the other hand, the property of the people being very inconfiderable, they pay badly. and the confequence is, that things of conveniency or neceffity are badly manufactured for them.

I will not here enter into the examination of caufes which occafion fuch a ftate of things, nor of the means of changing it. I will leave the difcuffion of fuch means for another chapter, but the following conclufions muft neceffarily be drawn from there' faqts: the perfection of manufactures depends upon the demand, and the demand upon the means of payment. Now becaufe the French have not thofe means, they muft be fought after in a foreign country. Thcreafe foreign demands for French manufactures, and they will be feen to improve very rapidly. This is the effect which the commerce of the United States will produce in France. Thefe States contain a people accuftomed to be well clothed, to make ufe of well manufac-: tured things only, and capable of paying for

64 ON THE COMMERCE OF THE good workmanthip by their productions. Charg' ed with the furnifhing of articles for American confumption, French manufacturers will frive to outdo their rivals; and they can eafily accomplifi this when Goverviment JBall be willing. Nature has given them the means. They will become fuperior in almoft every thing when once they thall no longer be obftinately counteracted.

Therefore the commerce with the United States will be the caufe of improvement in French cultivation and induftry. Confequently it is neceffary to embrace and purfuc it.

## С Н А P. IV.

THAT THE UNITED STATES ARE OBLIGED BY゙ THEIR PRESENT NECEGIITIES AND CIRCUM\& STANCE; TO ENGAGE IN FOREIGN COM~ MERCE.

SOME writers, among whom are found the celebrated Dr. Price and the Abbé Màbly, have exhorted the independent Americains, if not to exclude exterior commerce entirely from their ports; at leaft to keep it within very conitracted bounds. They pretend, that the ruin
of republicanifin in the United States can happen ouly from exterior commerce; becaufe by great quartities of articles of luxury and a frivolous tafte, that commerce would corrupt their morals, and without pure morals a republic cannot exift:
" Alas! What can the United States import " from Europe, continues Dr. Price; except it - be infection? I avow it, cries the Doetor, I " tremble in thinking on the furor for exterior " commerce, which is apparently going to turn " the heads of the Americans. Every nation "fpreads nets around the United States, and ca" reffes them, in order to gain a preference; " but their intereft dautions them to beware of " there feductions *:"

I am far from contradicting, in its bafis, the opinion of thefe politicians. Moreover, I think, with Dr. Price, that the United States will one day be able to produce every thing neceffary

* Price's Obfervations, page 76. See the Abbé Mably, what he fays of thefe obfervations, from page 146 to page 103 . See alfo what the Comte de Mirabeau has added to the Obfervations of Dr. Price; in his Refections printed at the end of his tranlation of this work, page 319. London edition, 1785.

He has, as a fevere philofopher, treated on exterior commerce, and made abftraction of the actual fituation of the Americans.

$$
\text { Vol. II. } \quad \text { and }
$$

and convenient, but I am alfo of opinion, that thefe two writers have confidered the independent Americans in a falfe point of view; that they have not fufficiently obferved the fate of their circumftances; in fine, that their circumfances and actual wants oblige them to bave recourfe to foreign commerce. This is a truth which I propofe to demonftrate; for I will prove that the independent Americans are in want of the necefflaries and conveniencies of life, and in fome ftates, of luxuries; and that their habits and nature, added to other circumftances, will always prevent their renouncing them entirely.

I will prove, that having no manufactures, they cannot themfelves fupply thefe wants, and that they can have no manufactures for a long time to come.

That although they already poffeffed them, they ought to prefer to national ones thofe of exterior commerce, and that they fhould rather invite Europeans to their ports than frequent thofe of the European ftates.

Finally, that by the fame reafon which makes it impoffible to exclude exterior commerce, in cafe of wants which alone it can fupply, it is equally fo to fix its boundaries.

When the nature of man is attentively con-
fidered, it is feen that it inceffantly difpofes him to render his life agreeable. If he has a property, he ftrives to improve it ; if the foil he cultivates be fruitful, and demands but little in advance, the defire of increafing his enjoyments ftimulates him to torture his land to draw from it its various productions. One idea put in pracice gives birth to another ; one want fatiffied creates a fecond, to have the pleafure of fatisfying this alfo. Such is the nature of man : his activity, which leads him from defires to enjoyments, from one change to another, is the fource of what are called manufactures. A manufacture is but the means of giving to a production of the earth, a form which adds to it a new degree of agreeablenefs and utility. Want and defire of manufactures are therefore in the nature of man ; fo that if we fuppofed Europe entirely annihilated, manufactures would foon rife up in America, becaufe each individual ftrives to render his exiftence agreeable by means the moft fpeedy and efficacious*.

Manufactures,

[^14]Manufactures, like the wants of civilized men, may (as was obferved in the laft chapter) be divided into three claffes: ift. Thofe of neeeffity; 2d. thofe of convenience; 3 d. thofe of fancy or luxury. Food, and the natural exigencies of mankind, are comprehended in the firft clafs.

It is from the wants of convenience efpecially , that manufactures have their origin. Without doubt, fkins of fheep were fufficient to defend men from the feverities of cold; a cabin or a hut from the intemperature of the atmof-
moved from a fate of nature, work up and manufacture the earth's productions. Thus $5 . \mathrm{m}$ their corn, before it is ripe, they extract a.gelatinous juice, with which they make palatable cakes. Therefore, before the arrival of Europeans, they knew how to make fermented liquors, tools, utenfils, arms, ornaments, \&c. They confined themiflves to thefe; , hunting took them from 2 fedentary life, and did not give them time enough to extend their ideas.

The paftoral life of the Arabians has conducted them one or two degrees farther in the art of manufacturing, becaufe that kind of life affords greater leifure, and gives more uniform and conftant productions. Thofe fhepherds whofe riches confift but in their flocks, and who live on milk alone, and are clothed with their wool only, have a paffionate defire for coffee, fherbet, and fugar. The defire of increafing their enjoyments is the caufe. Let it be therefore agreed, that man by his nature is inclined to enjoyment, and confequently to manufactures.
phere; but man is no fooner preferved from one evil, than he feeks to get rid of another. Skins are infufceptible of being well joined together, ufe makes them hard; a cabin is frequently thrown down, is confined and fmoaky ; whence arife the wants of conveniency, which are transformed into enjoyments, whofe accuftomed ufe changes them into neceffities.

When man has every convenience, he then thinks of ornament. Hence the wants of luxury ; they are entirely in the imagination, and procure imaginary pleafures only. Therefore to wear any laced clothes, or drink coffee out of a china rather than a delfen cup, is a want created by luxury or fancy.

The nature of thefe three kinds of want being pointed out, it is neceffary to know what thole of the Americans are. They have the two firft of them. Their habitudes contracted in their infancy from European emigrants, and their commerce with the Englifh, have accuftomed them to the kind of life and tafte of the latter, and it is well known that Englifh induftry has been particularly directed to neceffary and ufeful arts.

The independent Americans, at leaft thofe who inhabit great maritim: cities, have borrow. ed from the Englifh a tafte for luxuries; they F 3 feek
feek for gauzes, blond lace, filks, \&c. It is however with pleafure I obferve, that if this tafte of modes has infected London within thefe few years, its ravages have not been extended with the fame rapidity in the United States as in Europe: Their fituation, auftere religion, morals, and ancient habits, their rural or marine life, prevent their feeking after elegance and drefs, and keep them from oftentation and voluptuoufnefs. Although they may perhaps be changed a few degrees, the evil is not yet fenfible, at leaft in the Northern States *. Therefore our obfervations ought principally to reft upon the two firft claffes of wants. Now it is impoffible that the Americans fhould ever renounce them ; they will be perpetually led and attached to them by their nature and habitudes, and by the manner in which their population is increafed.

By their nature, becaufe they are men; and it has been proved, that man is endowed with

[^15]that activity which perpetually difpofes him to add to his enjoyments.

By their habitudes, becaufe, as it has been objerved, they contracted that of all thofe wants, and it is well known, that a tafte for pleafure is not to be exterminated when rooted by habitude. How can it be required of man to deprive himfelf of wine and liquors to which he is accultomed, and in which he places a part of his enjoyments, except we would render him unhappy? I will not quote hermits, fick perfons, or philofophers, who have had that empire over themfelves; but let not a like prodigy be expected in a whole nation. An affociation of three millions of philofophers has not yet been, nor will be feen to confine themfelves to the regimen of Pythagoras *, or the diet of Cornaro.

The fevere facrifice of tea, which the independent Americans made at the beginning of the war, will perhaps be alfo quoted. The enthufiafm of liberty and influence of example were able, during fome time, to overcome their

[^16]habitudes *; as religious enthufiafm has com, bated, fometimes fuccefffully, the paffions of an hermit. But there is no caufe powerful enough to produce a like effect, except in the crifis which makes the facrifice neceffary and eafy. The reafon of the dependence in which the Americans would put themfelves with refpect to the Europeans, and the fear of diftant cora ruption, are motives too feeble to carry men to that point of heroifm! It is not fufficiently demonftrated to them, that they cannot drink svine from Madeira without being fome day corrupted by it, and without preparing the way for great calamities.

The manner in which population is renewed and increafed in America, does not make it probable that its inhaoitants will ever be able to renounce the want of European productions.

A prodigious number of individuals émigrate every year from all parts of Europe to America, who carry with them wants and inclinations

[^17]which they have from education and habit. If they find them in America, they continue to gratify them ; if they are unknown there, they naturalize them, and it is the firft thing they go about ; for they do not fo much perceive the new pleafures they are going to enjoy, as thofe of which they are deprived; fo great is the force of our firft habits and cuftoms. Remembrance, although frequently mixed with the cruel idea of fervitude, abandons man in the grave only.

According to this inclination, natural to all men, let the immenfe variety of wants and appetites be calculated which are going to tranfplant themfelves from Europe to the United States ; and let it be judged, whether it be poffible to put bounds to or deftroy them.

To fucceed in this, it would not only be neceffary to fhut out foreign commerce from all the American ports: American induftry mult be circumfcribed, and the fource of their wants ftopped up; it would be neceffary to imitate the Lacedemonian law, which ordained that nothing fhould be worked up but with the heavy hatchet, the more effectually to banifh the luxury of elegant furniture. In a word, a miracle muft be operated upon the Americans, to take from them all remembrance of what they have been,

74 ON THE COMMERCE OF THE been, of all they have feen, fimelt, or tafted; and the fame enchantment muft deprive European emigrants of their ideas; as it would be abfurd to hope for a like prodigy, the force of tbings, which drags the independent Americans into exterior commerse, muft be fubmitted to*. All is reduced to two words; America has wants, and Europe has manufactures.
In the United States fome of the inhabitants fill up the leifure afforded by agriculture (in which the Europeans cannot hope to become their rivals) with an attention to manufactures. And they have others confined to the moft neceffary arts; connected with cultivation, fifheries, and the conftruction of veffels. But even thefe manufactures are but few in number, and infufficient for the wants of the United States. They are therefore obliged to have recourfe to Europe. It is not that they neither have, nor can have almoft all the raw materials employed

[^18]in our own manufactures. They have hemp, flax, and cotton *.

But, if they had raw materials in plenty, they ought to be advifed not to eftablifh manufactures; or, to fpeak more juftly, manufactures could not be eflablijhed; the nature of things ordains it fo. Let us difcufs this queftion, as it is an important one.

There are many reafons for men's engaging in a new country in agriculture rather than in manufactures. There, where two individuals can cafily live together, they marry, fays Montefquieu. The labour of the field offers to them more means of living together, of augmenting and fupporting their family, than working at

[^19]manufactures : in thefe the dependence of the workman, his precarious and changeable ftate, his moderate wages, and the high price of provifions in cities, where moft manufactures are eftablifhed, put it out of his power to think of having a companion, and if he has one, the profiect of mifery which the muft have before her eyes after his death, impofes on him a law contrary to propagation, to avoid the cruelty of caufing children to be brought into the world only to be unhappy*.

In a new country where land is not dear, where it requires not much in advance, or an expenfive cultivation, and is at the fame time fruitful, the number of little and happy families muft rapidly increafe.

What a difference in other refpects from this pure and fimple country life, where man is conftantly in the prefence of nature, where his foul is elevated by the fpectacle, where his phyfical principies continually regenerate by a fa-
> * Journeymen manufacturers, and in general men in a ftate of dependence, whofe fubfiftence is precarious, and who have children, certainly love them lefs than the inhabitants of the country who have a fmall property. The paternity is a burthen, and confequently often odious to the firft ; their children are ignorant of the foft careffes of paternal love. What kind of generation muft arife from fuch a connexion! lubrious air, and in reviving exercifes, where he lives in the midft of his relations and friends, whom he makes happy : what a difference from that to the life of manufacturers condemned to vegetate in difmal prifons, where they refpire infection, and where their minds are abforbed, as well as their lives abridged. This conduct alone ought to decide the Americans to reject the painful ftate of manufactures *.

Befides
> * The idea of property is one of the ftrongeft ties by which man is attached to life, to his country, to virtue, and I wilt add even to health. The fatisfaction of a manufacturer, who at the end of the week has a guinea in his pocket, is far from that of the little country proprietor, who is feldom poffeffed of fuch a fum ; but who gathers in his own field every thing neceffary. He loves it, fees it always with pleafure, takes care of its cultivation, and, by a confequence of this foft difpofition, he attaches himfelf to the animals which affif him in that cultivation.

> The labourer fees, as he works, the poffibility of increafing the number of his children; and he has the pleafing hope of leaving them after his death a little corner of earth which will keep them from indigence.

> The labourer is happy becaufe his contracts are with the earth only, which gives liberally and difintereftedly, whilft the intereft of the mafter who pays the manufacturer embitters the wages which he receives.

> The labourer is ftill happy, becaufe he is only amongft his equals; inequality is the fource of malice. The fuperior is malicious

Befides there will be, for a confiderable time to come, more to be gained in the United States,
malicious to fupport his oppreffion. The have is vindictive to deftroy and revenge it.'
The labourer is amiable and genercus, becaufe it would be neceffary to abandon all cultivation, if there were not between hurbandmen a reciprocity of fervices and confidence.

Perhaps it would not be difficult to prove that health and goodnefs are diminifhed in proportion to the increafe of manufactures, cities, property, and the defertion of rural life, and that vices and crimes are increafed in the fame proportion.

This is not the opinion of the fenfible and interefting author of the Study of Nature: "When I was at Mofcow," fays he, (Vol. III.) " an old Genevois, who was in that city, " in the time of Peter I. told me, that fince difficent means * of fubfiftence had been opened to the people by the eftab" lifhment of manufactures and commerce, feditions, affiffina" tions, robberies, and incendiaries, had been lefs frequent than " formerly."

But this would not have exifted, and there would have been the fame public and private virtue, if inftead of making the Ruffians manufacturers, they had been made proprietors of lands. Hufbandmen are honeft people, fays M. de St. Perre himfelf.-And workthops, as I have juft obferved, do not offer that neceffity of reciprocal fervice which gives the habitude of goodnefs; they prefent intereft fruggling againft intereft, rich and indolent ftupidity ftriving to cheat active indigence. If workfhops do not make men rafcals, they difpofe them to become fo ; they make them egotifts, infenfible, uncouth, and bad fathers.

Therefore, the fact quoted by this author does not prove, that manufactures-and man places himfelf in that fituation where the greatelt and moft fpecdy gain is to be acquired.

As population muft, for many ages, be difproportioned to the extent of the United States, land will be cheap there during the fame length of time *, and confequently the inhabitants will for a long time be cultivators.

## Thofe

that to prevent crimes, it is neceflary to eftablih manufactures; but that it is better to have manufactures peopled with degraded workmen, than forefts with banditti; 'tis a lefter evil, but it is fill an evil.

* An idea of the price of lands in the United States, may be formed from the following article taken from the Gazette of Philadelphia, of 9 th of December $1 ; 84$ : "Obferve that the "ground of Pennfylvania begins to be dear, and that the inha"bitants begin to emigrate to Kentucky."-By this advertifement there are offered to fale, " 25,000 acres of land, fitur" ated in the county of Northampton, State of Pennfylvania, " upon the Delawar.-A public road, a navigable river, fertile " foil, excellent for culture-meadows-places for mills-" great forefts-plenty of fifh-ponds, \&ec. at half a guinea an " acre.
" Another quantity of 25,000 acres, upon the Sufquehan" nah, with equal and even greater advantages, at the fame " price.-Good title deeds,-facilities of payment.-A referve " of three hundred acres only will be required in each diftrict " for the maintenance of the clergyman of the parim;-one " hundred

Thofe whom ambition, thirft of gain, or ig: norance, fhould incline to eftablifh manufactures, will, from that moment, be difanded from it by the dearnefs of workmanihip. This dearnefs is already very confiderable *, and may become fill more fo, as the caufe which occafions it muft naturally become more extended.

What is the caufe? It has already been intimated fo as to be forefeen.

Cities are built in ${ }^{\prime} 1$ quarters $\dagger$; lands are cleared and eftablifhments made every where. In the county of Kentucky, for inftance, where, in $17 \%$, there were fcarcely one hundred inhabitants, there are now nearly thirty thoufand; and thefe men have emigrated from inhabited coafts or countries. Thus hands are taken from the commerce and agriculture of thefe laft, which is confequently the caufe of the increafed price of workmanfhip.

> " hundred guineas when there fhall be fifty fainilies, to build a " parfonage houfe-ten guineas a year foz five years, and pro"vifion for the fchool-mafter."
> "Three, four, and five livres, are frequently paid in the cities of the United States for the day's work of a carpenter, lockfmith, \&c.
> + This is a great evil, as will be hereafter proved, and which will contribute more than any other to the ruin of republican fpirit.

From this dearnefs it has been concluded in Europe, that the people in America were wretched; a contrary conclufion ought to have been drawn. Wherever workmen govern; wherever they are paid a high price, the people are neceffarily happy; for it is of them that the various claffes of workmen are compofed.

On the contrary, wherever workmanthip is at a low price, the people are wretohed; for this cheapnefs proves, that there are more workmen than there is work to execute, mere want of employ than can be fupplied. This is what the rich defire, that they may govern the workmen, and buy the fweat of their brows at the loweft rate poffible *.

It is the reverfe in America, the workman gives the law, and fo much the better, he receives it too often every where elfe.

[^20]This dearnefs of workmanfhip is prejudicial to manufactures, and ftill fo much the better. Thefe eftablifhments are fo many tombs which fwallow up generations entire *. Agriculture, on the contrary, perpetually increafes population.

By preventing, or at leaft retarding the rife of manufactures within their provinces, the Americans will fop the decadency of morals and public fpirit : for if manufactures bring gold into the States, they bring at the fame time a poifon which undermines them. They refemble a number of individuals whofe nature and morals are at once corrupted: they form and accuftom men to fervitude, and give in a republic a preponderance to ariftocratical principles, and by accumulating riches in a fmall number of hands, they caufe republics to incline to ariftocracy.
: Therefore the independent Americans will do wifely to leave to Europe the care of manufac-

[^21]turing for them, becaufe the is irrefiftibly dragged into manufactures; and as their population and confumption muft rapidly increafe, it is not impoffible that Europe may one day confine herfelf to this kind of occupation, and that America may one day become her ftorehoufe of grain and raw materials, of which the will not be in need. In this cafe, nothing will be feen in Europe but cities and workfhops; in independent America, nothing but fields well cultivated. I will leave it to be decided which country would have the moft happy fate.

Under the fame point of view, the independent Americans will ftill act wifely by leaving it to the Europeans to furnifh them with neceffary articles; and in feldom frequenting the cities and fea-ports of the ancient continent. In effect, an European tranfported to independent America is in the proportion of one to one hundred, and fometimes to a thoufand.-His example has therefore but very little influence; the luxury of which he makes a parade in paffing by, excites lefs confideration or refpect than contempt and ridicule. If he leaves a remembrance of himfelf, it is foon effaced by the general motion: there are, moreover, fome Europeans, who, flruck and edified by the manners and cuftoms

84 on the commerce of the of free America, have good fenfe enough to refpect and conform themfelves to them.

It is the reverfe when an American goes on flore in Europe, almoft alone, with his fimplicity of manners in the midft of a vortex of men who efteem the eclat of exterior appearance only; who, agitated and led by the general ton, facrifice every thing to the furor of making a great figure by the brilliance of drefs, equipage, and pomp : this American muft at firft be torn down and tormented, becaule he finds himfelf thrown into a circle of habitudes contrary to his own. Afterwards he becomes familiarifed by little and little, and if he does not quite get a tafte for them, at leaft his attachment to a fimplicity of life and manners is neceffarily weakened. Carrying back with him to his own country this difpofition of mind, he introduces it infenfibly into the minds of thofe who are about him, upon which it has fome influenceupon the minds of his children and friends. Their tafte for fimplicity becomes lukewarm by his example, and the following age fees public virtues fall into indifference.

It will be lefs dangerous to the public fpirit of the independent Americans to admit the Europeans into theUnited States, than to go them-
felves into Europe; from which it refults that it would be very impolitic to encourage the former to become the carriers of their exterior commerce.
I have infifted upon this reflection becaufs there feems to have appeared in fome States a difpofition to give premiums for diftant navigation. They ought to reflect, that they have but few hands, and that as few as poffible fhould be taken from culture. They are in the fituation I have fpoken of in my principles of exterior commerce, where a nation gains by making carriers of others having lefs foil or employ. They fhould alfo recollect, that republican morals are better preferved in the bofom of agriculture than upon the fea and in foreign voyages, which give to men communications with other morals and governments.

It is a general queftion in the United States, by what means it is poffible to put bounds to exterior commerce, and ftop the progrefs of luxury : ftay at home,-cultivate, cultivate, I will repeat to them; this is the fecret whereby you will prevent the increafe of luxury; a fecrets much preferable to fumptuary laws and prohibitory regulations, which fome frates have it in sontemplation to make.

G 3
There

There is no power great enough to fet, by regulations, fuch boundaries to exterior commerce as will not be exceeeded: to circumfcribe it for inflance to merchandizes of convenience, without the importation of thofe of luxury. The nature or force of things only has fuch a power. That force has, as has been before explained, the union of the natural circumftances of a nation ; thefe circumftances alone mark the limits of commerce. A nation which cannot pay for luxuries with its own production, does not purchafe them. The favage can only procure with his furs, brandy, gunpowder, and woollen coverings; he buys neither filks nor laces.
If, therefore, the productions of the United States be fcarcely fufficient to pay for the importations of neceffity and convenience from Europe, merchandizes of luxury will not be imported: if thefe be carried to it, 'tis becaufe it can pay for them. There is no merchant who likes to ruin himfelf.

If, on the contrary, the United States have productions proper for the ancient continent, in quantities fufficient to procure, by their exchange, not only the moft neceffary and convenient things, but even thofe of luxury, nothing can hinder hinder the latter from being fooner or later im-: ported, by means of exterior commerce.

In truth, to increafe demands of this nature, the public opinion, which before treated oppro-; brioully a tafte for modes, muft totally change, and the particular opinions of certain fects equally yield to it.

But notwithftanding the powerful influence, of opinion upon merchandizes of luxury, the fate of this kind of commerce will be more particularly determined by the ftate of the independent Americans, for when rich they will adopt. them. This fact will appear certain, if what has been faid on the nature of the human heart be recollected, and its inclination to improve man's fituation, and to increafe his enjoyments.

Tafte for a rural life alone, if the Americans. preferve it, will retard the progrefs of luxury, which fprings up in cities, from fatiety, want of fomething to do, and from laffitude: employment preferves the country from thofe moral ills.

There is one laft confideration, which ought to perfuade the independent Americans to employ themfelves in cultivation, and reject both manufactures and exterior tranfports; which is, G 4 that
that in wifhing to undertake every thing at once, the fcarcity of money, neceffary at leat for the mechanical part of thefe operations, will always be more perceived, whilft, by giving themfelves up entirely to cultivation, they willprocure from their foil productions fufficient to pay for thefe manufactures from Europe, and to make up for the fearcity of coin ${ }^{*}$.

They

#### Abstract

*The independent Americans have but little money; this fcarcity crifes from two caufes; firft, from the kind of commerce they heretofore carried on with England, and afterwards from the ravages of a feven years war. As this commerce was purely one of exchange, and that in certain ftates, as Virginia, the importations always furpaffed the exportations; the refult was, that they could not but be debtors to England, and could not draw money from that inand.

It was a kind of commercial fervitude, which the Englifh looked upon as the pledge and guarantee of the dependence of the Colonies upon the mother country.

The money they had came from their illicit commerce with the Sugar Inlands and European powers. The war, afterwards, by changing labourers into foldiers, caufed a part of their lands to remain without cultivation. From that time exchanges increafed and money decreafed. The little of it remaining in America, came frift from money carried and expended there by the Englifh and French armies, and afterwards by the loans negociated in Europe by Congrefs.
But it is eafy to conceive, aftet what has been faid upon the quantity of coin, how a nation, which, by an extraordinary revolution, is all at once widely developed, its population ra-

They appear to be alarmed at this ; what has been faid upon the fubject of money ought to remove their fears. It has been demonftrated that a nation may carry on a very confiderable commerce without its aid. It will hereafter be feen that the United States produce many raw materials effent:ally neceffary to France, and that the can make their exports with greater advantage than thofe of any other country.

Thus it appears that thefe two countries may carry on together a direct trade of exchange without money, confequently an advantageous one; for the exchange between them of productions is more lucrative than an exchange of productions for money; although this opinion may not be adopted by men in general, who attach a greater price to gold than to merchandize, and continually forget its reprefentative value, to fubftitute for it a real one. It muft be inceffantly repeated to them that money would be abfolutely nothing without produc-
pidly increared, and is thereby obliged to continual advances, for clearing of lands, for building, making of roads and canals, to pay foreign debts, mofly in fpecie, and which has no mines, muft feel the fcarcity of money, and the reafon of it is clear: the want of it is at prefent fupplied, in Connecticut, by an exchange of commodities, or thefe againft labour.
tions; that a rich people is that which, by its induftry, increafes population, and has coufequently an abundance of productions; that the fecret of increafing the quantity of coin confifts only in the art of multiplying neceffary productions, and it is this to which the United States ought to incline, without being anxious about the money which they may have at prefent or in future.

Let us refume the different queftions contained in this chapter.

My object has been to make it appear that the United States, were forced by their neceflity and eircumftances to engage in exterior commerce.

To convince my readers of this, I have proved that the independent Americans had wants. of neceffity, of convenience, and even fome of luxury, which they could neither renuance nor fupply themfelves with.

That havisig no manufactures of their own, they were obliged to have recourfe to thofe of Europe: that they could eftablifh none for a long time, having but few hands, and that cull-: tivation ought to employ all their cares.

That according to phyfical, political, and moral relations, they ought to perfevere in apply-
ing themfelves to agriculture alone, and even give up all thoughts of tranfiporting to Europe, by their own means, their proper productions.

That this was the only means of preferving their republican morals, and of retarding the progrefs of luxury.

In fine, that by engaging in agriculture, and neglecting manufactures, they will lefs perceive the want of money, and will find the means of flipplying that want, and of carrying on a very advantageous exterior commerce of exchange of commodities.

Thefe different points being firmly eftablifhed, it is at prefent neceflary to prove, that of all the nations of Europe, France is the mof proper to enter into a commercial alliance with the United States, and that their neceffities and productions are correfpondent to each other. It is propofed to lay open this truth, by prefenting. the double table of reciprocal importations and exportations, to be made between France and: free America.

## CHAP. V.

OF THE IMPORTATION TO BE MADE FROM ERANCE INTO THE UNITED STATES, OR OF THE WANTS OF THE UNITED STATES, AND THE PRODUCTIONS OF FRANCE WHICLI CORRESPOND THERETO.

THE attentive reader will have already been able to judge, that if the independent Americans do not deviate from the career which is open to them, Europe will, for a long time, have to furnifh them with manufactured merchandize. It has been made to appear, that the clearing and cultivation of hands, and all that relates to interior commerce, fuch as roads and canals, offered to their induatry the moft favourable and ufeful employ, efpecially whilf impofts do not reftrain their movements, and that a free conflitution equally honours every individual.

It is now neceffary to take a curfory view of their wants, and to point out thofe articles with which France may pretend to furnifh them in competition
competition with other nations, if even the cannot do it more advantageoully than her rivals. I will follow, in this enumeration, the Englif publications which have treated upon the matter, and particularly that of Lord Sheffeld: he has omitted nothing, becaufe his country pretends to furnifh every thing *.
SECTION I.

WINES.
Wine becomes a real want of thofe who have once been acquainted with it. Happy or miferable, rich or poor, every body makes ufe of wine. Wine is the delight of the happy or of the rich. It helps the unfortunate to fupport his forrow; the poor think they find it an equivalent for the food they are without.

Eafe has lately been too general in the United States, not to have introduced the ufe of wine; and futurity, by augmenting their means, will only increafe their want of this liquor.

[^22]The

The wines which were moft generally confumed in the United States, were, as in England, Oporto, Madeira, and fome from Spain. French wines charged as in Britain, with enormous duties, were introduced by contraband only.

Liberty has caufed thofe Britannic fhackles to difappear. French wines are freely imported into the United States, and pay but little duty.

Such is the ftate of things, and it leads me to the difcuffion of three queftions:

Does it fuit the United States to cultivate vines, and to make wine?

Ought they not, in renouncing this cultivation, to give the preference to I'rench wines?

And what means ought the French is wie, in order to obtain and preferve this preference?

It would be abfurd to deny, that the United States can produce wine, becaufe the experiments hitherto made have been fruitlefs. Exrended as they are, and having countries as fouthern as Europe, it is impoffible there thould not be, in many places, a foil proper for the vine.

The little fuccefs of attempts may therefore, without hazarding too much, be attributed ei-
ther to the ignorauce of the cultivator, his want of perfeverance, or a bad choice of plants.

However that may be, if the Americans will hearken to the counfels of able obfervers, and reap advantage from the errors of other nations, they will carefully avoid the cultivation of vines. In every country where they have been cultivated, for one rich man, they have made a number wretched.

The long and confiderable advances which vines require, the preparation, prefervation, and fale, of their produce, have put all the good vineyard plots into the hands of rich people, who not cultivating thefe themfelves, pay the real cultivator very badly. The falary of the wretched vine-dreffer is every where inevitably fixed; the time he does not work not being calculated, and few wine countries offer any employ by which loft time may be filled up; and otherwife, the variations in the prices of the moft neceffary commodities occafioned by a thoufand caufes, by the abundance or even fcarcity of wine, are not confidered for him.

Would it be believed, that abundance is the moft unfortunate thing that can happen, either to the proprietor or the vine dreffer? In fact, the expence of gathering augments, and the price
price of the thing diminihes. There is more work to be done, more bands are neceffary, and they are paid more wages; more hogtheads are wanted, the expences of carriage greater, more fpace is required, the fale is lefs, and confequently the income*.

The fearcity of wines, or the flerility of the vineyard, is perhaps lefs unfortunate thian the abundance, at leaft to the proprietor. But it is cruelly felt by the vine-dreffer, and thofe wandering troops of day labourers, whom the

* The day's work of a wintager varies according to the fcarcity or abundance of wine, from fix to fifty fols. The price of hogheads has likewife variations in a different price, from three to fifteen livres, There are years wherein the price of the hoghead is higher than that of the wine which it contains.

The proprietor who eftablifhes his expences upon his revenues, is every year deceived by thofe of the vineyard. In one year he receives at the rate of 20 for 100 ; the fecond year his vineyard is perhaps deftroyed by haill; the third he is expofed to bankrupey, or to fuffer by it, or his wines tern four; the fourth he may have but a moderate produce, which will not compenfate for his preceding loffes. In ten years time a proprietor would fcarcely find an average year which was tolerably good; yet, as men love to exaggerate their riches and means, each proprietor calculates his revenve upon the higheft produce that his vineyard has ever yielded: the graateft part of them fpend in confequence, and are ruined. ingratitude of their foil, or a bad government, forces to go from home in fearch of employ.

The numerous variations which have an influence upon the produce of the vineyard, make it very inconvenient property, and triflingly advantageous*. The return muft be waited for when much has been gathered; payments muft be made when there has been but little. The proprietor muft therefore have other refources, whether it be to wait or to pay. The vinedreffer, unhappy enough to have a property $\psi$, without any of thefe refources, ruins himfelf fooner or later. He is obliged to fell at a low price $\ddagger$, or to confume his wines himfelf;

[^23]thence refults his ftupidity and idlenefs, his difcouragement, his dull and quarrelfome humour, and efpecially the ruin of his health. Too much wine in the time of abundance, no bread in that of fcarcity; -thefe are the two alternatives whicha divide his life.

Therefore countries covered with vineyards, are generally lefs peopled, and prefent a picture of a degenerated, weak, and wretched population. For the moft part they want hands to cultivate the vineyard in' a feafon when work cannot be delayed. It is done by thefe bands of ftrangers, of whom I have already fpoken; and who come to fell fome days work to the poor vine-dreffer.

The cultivation of a vineyard cannot be better compared than to thofe manufactures, of
alks him for both : the farmer fays I will aecommodate your, give me your note. The buthel of wheat is worth fix livres, oblige yourfelf to return me, at a certain epocha, the quantity of wheat which thall be fold for fix livres. He aiways take 3 care to fix the time when corn is at a low price. The obligation is paffed, the moment of payment arrives; the vinedreffer, who has corn, gives more than he has received. If he has none, be is ftill more embarraffed; the farmer preffes him, you have wine fays he, fell it me. But at what price? The farmer ofiers a very low one. It is refufed, he threatens, the poor vine-dreffer is obliged to ruin himfelf, and this fcene is annually repeated.
which the hopes of fuccefs are founded, upon the low price of workman/hip, and which enrich none but the undertakers, and retailers or fhopkeepers.

The pernicious influence of the vine is extended, in wine countries, to even thofe who do not cultivate it; for the cheapnefs of wine leads to exceffes, and confequently it becomes a poifon for all ranks of fociety, for thofe efpe, cially who find in it a means of forgetting their forrows.

Therefore, as I have already remarked, induftry carefully avoids thefe dangerous vineyard plots. None of the great manufactures, whofe fuccefs is the confequence of order, aff1duity, and labour, are feen in the neighbourhood of them.

The refult of all thefe obfervations is, that the Americans ought to proferibe the cultivation of the vine.

It would infallibly render miferable that clafs of fociety which thould apply itfelf to it, and in a republic there fhould be none who are wretched, becaufe want obliges them to difturb civil order, or, what is worfe, becaufe they are at the command of the rich by wh m they arc
paid, and who may make we of them to defroy republicanifm*.

Confidered with refpect to the proprietors, the vine ought ftill to be profcribed by the United States; becaufe every profeffion or calling, fufceptible of too great a variation of fortune, which fometimes heaps up riches to one perfon, and at other reduces to indigence individuals in eafy circumftances, ought carefully to be avoid-ed.-Economy, fimplicity, private virtues, are not attached to fuch changeablenefs. if it 2 olm

They are found in the bofom of mediacrity only, from eafinefs of sircumftances, founded upon that kind of toil whofe produce is conftant $t$. Such is that of agriculture in general; it embraces divers productions, which, in cafe of accident, replace each other $\ddagger$.

Finally,

* The mean Ianguage of Thopkeepers, who humbly offer their merchandize, has already begun to find its way into the American papers.
$\dagger$ The Indians are almoft all cultivators or weavers, which is the reafon why private morals have been better preferved among thefe people than any where elfe, in fite of the excefles of defpotifm.
$\ddagger$ What recompence would be confiderable enough for an ingenious man, who thould give to humanity the means of preferving potatoes for feveral years, efecially if the procefs

Finally, if it be infifted that wine is neceffary to man, let it not ftupify him; it fhould be ufed with moderation, ind its dearnefs alone may oblige men ts be moderate in the ufe of it. It beinitg greatly the intereft of the American Republies to remove all exceffes from individuads, in order to prevent this degeneracy, they ought to keep perpetually at a diftance from them a production, whofe dearnefs will prevent the abufe of it, whofe cultivation would render it cheap, and confequenily bring on dangerous exceffes both to policy and morals*.

The catalogue which I have juift gone over, of the evils and abufes occafioned by the culture of wines, will not induce the French to pull up theirs. But it ought at leaft to excite
were fimple and not expenfive? In that cafe want would be no longer feared. The embarraffment about the legiflation of corn would difappear, and mifery perhaps be driven from among men.

* It will be objected, that men employed in agriculture, have need of wine to fupport them in their labour. This is but an opinion: there are found, in countries where it is leaft ufed, vigorous and indefatigable men. In truth, wine contains an active fpirit which may fupply the want of fubftantial aliment, and it is for this reafon the peafants have recourfe to wine or brandy, which is more within their reach. Give them meat and potatoes, and they will eafily do without wine:

$$
\mathrm{H}_{3} \quad \text { them }
$$

## 102 ON THE COMMERCE OF THE

them to increafe in foreign markets the confumption of wines, in order to keep up their price, and confequently to diminifh a part of the evils which they produce. This will be doubly advantageous, by an additional exterior profit, and a diminution of interior ill. Nobody will deny that French wines mult obtain the preference in the United States. They are the moft agreeable, the moft varied, and wholefome, if moderately ufed; the leaft prejudicial, if ufed to excefs. They ought to be the bafis of our exportations to America; no nation can raife a competition with us. Lord Sheffield himfelf pays this homage to our wines; but in order to affure to them this advantage for ever, the art of making, preferving, and tranfporting them mult be improved.

In general we are at prefent far from this *:
ignorance,

#### Abstract

* I will quote, for inftance, the wines of Provence, which by their ftrength ought to be capable of fupporting the longeft voyages; and by their analogy to the wines of Portugal, would have the greatelt fuccefs in the United States, if they were properly trepared. "Thefe wines have hitherto been in the lowelt repute in the North, in the Indian and American colonies; and that becaufe, on one hand, the fitters out of veffels brought them without choofing, and on the other, the individual having no idea of the culture of vines, nor of the pre-

 the people, impoft on exportation; all concur to retard the progrefs of improvement.The United States (thefe ftates of fo new a date) already furnifh us the model of an inflitution, which alone would encourage the culture of corn and vines, and make the momentary inconvenieace of abundant vintages, which ruin the proprietor and farmer, difappear.

This inftitution, enfy to be uaturalized in France, would have two branches, a depofit in the public magazines of the productions of the earth ; certificate or billets of depofit which swould form an authentic title for the difpofing proprietor, transferable without formalities at the current price, like all other public effects.

It is thus, that in Virginia means have been

> paration of wine, mixed the white grape with the red, did not diftinguih the plants, the foil, nor fituation; cured it by rote, without paying attention to the difference of years and qualities; put into his tubs, to give, as he pretended, a higher flavor to his wine, all forts of deteftable ingredients, fuch as falt, lime, plaifer, and pigcon's dung; put it into bad cafks of chefnut-tree; left in them a year's fediment, and never drew off the wine, fo that it was always more inclined to turn four then any other wine, and therefore became little fit for a foreign voyage.

104 ON THE COMMERCE OF THE
found to fupply the want of money *, and to give," at the time of reaping, a real and ufeful value to tobacco, which, without that, waiting for a demand, lies heavy upon the proprietor.

This is not the place to examine this idea profoundly, aeither to deftroy the objections which will be made againf it. This project may conftitute the matter of a memoir by itfelf. I give here nothing more than the title $\dagger$.

People

* The Virginians have given another example which proves how eafy it is to do without money. Many countries near to the Ohio, having none of $i t$, the general affembly refolved, they hould pay their quota of imports in hemp and flax, which chould be depofited in the public magazines.
$t$ If it were withed that this project Chould furceed, it would be abrolutely neceffary to put awzy all poffibility of an abufe unpunifhed. It would perhaps be neceflary, that government fould take no part, nor have any influcice in it. This precaution will be exclaimed againft, but let us once more caft our eyes upon England. If there be a government upon earth whofe hands are tied, whofe fteps are watched, whofe adions are brought to light, to public cenfure, and confequently, whofe fecret attempts are lefs to be feared by the people, it is that of England. See what the aftonifhing Minifter, who is now at the head of affairs, propofes to hinder the intervention and influence of the Englifh government in the new plan of redemption of the public effects and of their decreafe. He infifts, that the commifioners who Thall be charged with it, fhall be always independent of gevernment; that they fhall be public agents? and that no force fhall confrain

People in the United States, complain of an abule in the commerce of the French wines, which abuie, it is of importance to remedy in '
frain them to alienate from its object the money defined to pay of or leffen the public debt.

This minifer clearly perceived, that the confidence of the people ought to be gained at any price, for the eftablifhment which exifts but by confidence; and that in fuch a cale, the facrifice of power would fignify nothing to a goveinment which is really willing to prevent abufes.

The advantages refulting from a pian like this are vifible. Public depofitories would fupply the defect of ability in thofe who could not lay up the productions of the earth. They would prevent fquandering, loffes, and fearcity, and eftablifh a more conftant uniformity in prices as well as in quantitics: want of confidence would at firft perhaps hinder the ufe of thefe magazines, caves, or cellars of thefe public refervoirs. But this would not long be the cafe, if fincerity, order, and economy, reigned in thefe eftablifhments. It is an advantage which might have been procured by means of provincial adminiftrations, and which perhaps will never be enjoyed but under their aufpices.

With refpect to the billets or notes of commodities or productions, it is feen how greatly they would increafe national richer, how quickly the mifery of the peafants would difappear, if thefe notes circulated as value in commerce, and if the vinedreffer could change his note of depofit for productions of which he was in need. The monopoly of rich cultivators would then be overturned; of cultivators who fuck up the whole fubfiftence of the vine-dreffer, and, by ayaricious ad.. yances, reduces him to their will.
the moft fpeedy manner, if we would not deftroy the comonerce in its origin. Illicit commerce produced there before the revolution good Bourdeaux wine, becaufe it is a property of fmuggling to give that which is of fuperior quality, and at a cbeaper rate.

Now, fince the peace, wines fent from France have not been, as it is afferted, of a good quality. It is poffible that from greedinefs they may fometimes have been adulterated. But this tranfient abufe which the merchant may eafily deftroy whenever he pleafes, by choofing in the United States commiffioners whofe reputation is untouched; this abufe, I fay, ought not to ftop the exportations of France.-Wine, if it be good, will always find confumers.-Nothing but intelligence and fincerity are neceffary to fucceed in this, for nature has done the reft for France.

The Americans prefer, in general, the wine which is carried to them in bottles, becaute they believe it lefs fubject to become fharp, or to change on the voyage. On the firft view, it feems advantageous to France to furnifh its wines with this envelope, becaufe it is a new opening for its glafs-ware. But if it be recol-fected, what a prodigious quantity of combufti-

BRANDY.

The rapid progrefs lately made in chymiftry, bas difcovered in moft of the fruits of the earth, the falts and fpirits which conftitute the effence of brandy; this difcovery has been turned to advantage; there refults from it a confiderable abatement in the price of that liquor, that is to fay a very great evil; this proves; by the way, that there are difcoveries in phyfics which fhould not be revealed without having firft confidered their moral and political effects, and having indicated to gövernment the means of preventing their inconveniencies ; it alfo proves,
that a chymift ought not to be a chymift only, but a politician alfo.

The brandies of France are generally looked upon as the beft, that is to.fay, the moft delicate and leaft pernicious: therefore they obtain the preference with people in eafy circumftances.

A great deal of brandy is confumed by the common people; but this is counter-balaneed at home and abroad by fpirits drawn from grain, fruit, or fugar.

Rum, which is produced from the latter, has had, and ever will have, in the United States, the preference over our brandies, by reafon of its cheapness. The Americans, efpecially the Boftonians, import melaffes from the fugar iflands and diftil it, and independently of their confumption, they re-fell a great part of it to the inhabitants of the fame iflands, who cannot - diftil it for want of combuftibles.
: Befide rum, the Americans make frong fit iits from grain, potatoes, \&cc. They are indebted for this to the Irih and Germans who have gone to fettle in the United States. A pernicious prefent thofe emigrants have made them:

- In Ifelard the cheapnefs of fuito nade from
grain, places them within the feach of the pooreft man. The loweft clafles of fociety ufe them to an incredible excefs; and this excefs contributes not a little to promote that quarrelfome humour which characterifes the Irilh, to plunge them into ftupidity, and hinder them from rifing to that degree of profperity to which the liberty of commerce they have laiely obtained ouglit to carry them.

The Americans would already have experienced a part of that degradation of which the exceffive ufe of ftrong liquors is the caure, if they were not almoft all proprietors, in eafy circumftances, and fathers of families; if inftruction and morals were not more generally propagated among them than among any other people; and, finally, if the quick and confiderable profits which workmen there obtain by the high price of' workmanthip, did not give them a faiutary ambition which keeps them from intemperanice *.

Thofe

* The temperance of the Americans proves, that a man is boneftaben bo is bappy. He is neither vicicus nor criminal, exceps when he is wretched. What therefore is the firft caufe of his vices and crimes? The caufe of his wretchednefs. The zeneoalogy of almoft all crimes is-no property or want of enploy-caufe of wetchednefs of the pcople-wretchednefs

Thofe of the United States *, where the pecple have gone from fimple and primitive manners, where luxury begins to reign; where fla-
the caufe of drunkennefs-drunkennefs the caufe of quarrels -of idlenefs, of mifery, of thefts.- Thefts caufe imprifonment and capital punihments.

The firf link only to which a defe? of property is attached, remains to be remarked. It is not neceffary to name it. But it arifes from this gencalogy, that in the actual order of things, the people being drawn into vices and crimes, are lefs culpable than they are imagined; confequently, they ought not to te fo feverely punifhed, and that government hould fupprefs too fevere pains. This truth cannot be too often repeated, and it ought to be joined to every circumftance when opportunity offers, feeing that the lift of bloody executions is every where augmented, and that narrow minds which fee the atrocity only of the crime, without perceeiving its raufe, inceffantly demand blood for expiation. There would ie but few fcaffolds if none but real criminals mounted them.

* See Smith's Voyage to the Southern United States, where a defcription of the life of the Caroliuians is given. This author makes it appear, that they drink to excefs the ftronget liquors, although the climate be extremely hot. By this they abridge their lives, and appear old in the flower of youth. This is one of the caufes of the mortality among the Englifh in the Eaft Indies; they have introduced there the ufe of wines and ftrong liquors, and they are victims to them. The Indians make no uie of thefe, and live to a great age.

In quoting Smith, the European readers ought to be put on their guard again@t Englifh partiality, which reigns throughout the work. very ftill exifts, are daily witneffes to the ravages caufed by the exceffive ufe of firits made from grain *.

A long habit is difficult, and often impoffible, to fhake off, efpecially when it procures enjoyments. Therefore, it is not to be expected that the Americans will ever renounce the ufe of thefe liquors. The philofopher fighs at this; commercial nations, which turn to profit the misfortunes and caprices of mankind, Atrive to take advantage of it. France will hawe the advantage $\dagger$, if fhe can reduce the price of brandies to the level of that of rum. Government, in order to aim at this point, has already perceived the neceflity of lowering the duties on the exportation of thefe firits.

But ought it to favour, with fo much complaifance, the diftillation and exportation of brandies? I do not think fo; this new opinion feems to be a paradox; it will ceafe to appear

* All brandits, except thofe from fugar and wine, are pernicions, efpecially when new. They cannot be drank without immediately difordering the body. 'The molt trifling excefs is fufficient to caufe death.
$t$ Lord Shefricld agrees that the brandies of France are preferable to thofe of Spain and Portugal, of which there is neverthelefs bume confumption in the United States.
fo, when it fhall have been examined with attention.

The diffillation of brandies, caufe a great decay of combultibles: one great evil in a country where comburtibles daily become more rare *.

The exportation of brandy produces but little to the revenue. To encourage this article, it has been neceffary to take off the import, which at prefent is no more than five fols per hogfhead, whilft wine pays a duty of at leaft an hundred fols, and in the Bordelois from that fum to twenty-eight livres $\dagger$.

Government

* All the provinces of France, hofe even to which nature has refufed the means of tranfporting their wood to others, feel the fcarcity of this article. Lorrain may be quoted as an inftance. The forefts of that province decay, as it is reported, in the profpestus of a price upon pit-coal, propofed by the academy of Nanci-the dearncfs of wood is exceffive there. The caufe of this inconvenience is not difficult to affign; it is the neceffary confequence of forges, glafi-houfes, falt-pits, \&c. The academy requires pit-coal to be fought for, to ferve inftead of wood. A more fimple means would be to deftroy forges and glafs-houfes, and to get iron and glafs from America.
$\dagger$ Government has, fince this work has been written, fufpended the duties paid by the wines of Bourdeaux and Languedoc. This fufpenfion was granted upon a remouftrance, importing

Governmeit ought to have done the reverfe, to have reduced the duties on wines, and auginented thofe upon brandies.

The exportation of braadies is prejudicial to the confumption of our wines, for it is the bafis of all made wines in countries where wine is not produced. It is put into a great quantity of water ; to which is added bay berries, every where to be found. Wine brandies are indifpenfable in this fabrication, no other can fupply their place, becaufe they only can give to artificial wines the winy tafte which is effential to make them drinkable.

What immenfe gain to ftrangers in this pro-cefs-and what lofs to France! A barrel of brandy which pays a trifling duty on exportati in, whofe tranfport cofts but little on account of its contracted bulk, may be added to five or fix tarrels of water, which coft nothing, and by the aid of fugared ingredients, which give colours, may enter into comperition with fix barrels of wine, that pay confiderable duties on
importing that there was an enormous quantity of wines at Bourdeaux, and which the holdeis dared not export, that they might not be obliged to advance the high duties. This proves, that impofts occafion a ftagnation.

> VoL. II. I exportation; port is very expenfive.

Therefore, in diftilling aind exporting brandies, we work for the intereft of our rivals; we give them an eafy means of doing without our willes. What folly! What would peoplic fay of an Alchymift, who hoving found the philofopher's ftcae, fhould communicate his fe-cret to his rivals, who would make ufe of it to his prejudice.

And yet this operation fo prejudicial to France has been favoured by government. It encourages diftillers; that is, it raifes up enemies againft the meliorating vineyards and wines; and efpecially againft the art of preferving the latter. It would be much more prudent and advantageous to difcourage diftilleries. In fact, the diftillation of brandies is for the yineyard proprietor a laft refource, which proves his ruin *.

SECTION

> * In the Orleanois, fix barreis at leaft of wine are neceflary to make one of brandy. The wine of this country, when it is drinkable, is fold on an average at thirty livres a barrel. The fix barrels produce one hundred and thirty livres, and reduced to brandy they fcarcely produce eighty. Thus the proprictor fuffers a lofs of one bundred. Brandies fent abroad where they diminian the fale of wine, can bear no exportation Buty.

## SECTION III.

ofls, olives, dry-fruits, \&
Thefe articles are fo many wants with the Americans of eafy fortune, and efpecially thofe in the northern States. Our fouthern Provinces, which produce fuch delicious fruits, cannot in this refpect fear any competition. They are alfo articles which have hitherto beft fucceeded in adventures made from Marfeilles.

Moreover, all that Eurofe will be able to furmifn of them, will find room in the United States; they wiil accompany our wines, and we can join with the fame eafe and certainty of fale, perfumeries, anchovies, verdigrife, \&c. as well as an hundred other little things taken by the Englifh from Marfeilles, and of which they have created a want to the Americans.
duty. Wines, on the contrary, pay a corifiderable one. Let thefe calculations be anfwered. The Englifh themfelves ought not to admit the brandies of France, becaufe, in filling England with artificial wines, they are prejudicial to their wine duty. The prohibition of brandies would, under this double arpeet; be advantageous to both countries.

116 ON THE COMMERCE OF THE
Lord Sheffield, in his work, makes Spain, Portugal, and Italy, furniih the United States with thefe commodities. I wifh he had been fincere enough to give the advantage to France. France is fo generally known to fell thefe productions in the States of America, that it is equally aftonifhing this writer fhould have been ignorant of it, or filent upon the fubject. This fact, by proving his partiality, ought toput readers upon their guard againft his affertions.
SECTTON NV.

CLOTHS.
People governed ly a free conftitution are naturally grave and deliberate. They prefer, in every thing they ufe, goodnefs to elegance, what is folid to that which is fubject to the caprices of mode. Therefore as long as the independent Americans enjoy their excellent conftitution, they will prefer clothes of cloth to thofe of the moft brilliant Ruffs.

Moreover its beauty, pliancy, ftrength, and duration, render it more generally fit for this
ufe in any climate whatfoever: cloth fecures the body from the exceffes of cold as well as from thofe of heat. It refifts rain; in a word it unites every convenience; and if it be the univerfal clothing of people in a middling ftate, ic offers equally to the rich, but reafonable man, a choice proper to fatisfy his tafte, and to proportion his expences to his means.

The manufacture of cloths is in the number of thofe complicated manufactures which employ throughout the year a great number of workmen by the day; therefore it will not be fuitable to the Americans, fo long as that clafs of men which produces thefe workmen fhall be able to employ themfelves more ufefully in the clearing of lands, and in cultivation in general.

A manufacture of woollen ituffs, proper for the clothing of the country proprietor, his family, and fervants, may, without doubt, be affociated into the labours of the field; but manufactures of this kind, although very important in themfelves, can only be applice to' coarfe and unfinifhed ftuffs. The interrupted leifure of the peafant permits him to do nothing which is complicated. Card, fpin, weave, and
bleach, is all that he can do*. If it be neceffary for him to go beyond thefe, he will find a greater advantage in felling his rave materials, or even with their firft preparatiens, if they be fimple, and to draw from the manufactures, properly fo called, the articles of which he is in need.

We owe little gratitude to thofe of our fpeculators who immediately after the peace difperfed our cloths in the United States. If one, fpark of public fpirit had animated them, they would have perceived the precious and honourable fervice which they were able to render to their country in thefe firft adventures, by giving to the Americans a great idea of the ftate of our manufactures. Thefe people were well difpofed, by the fuccour France had given them, to cherifh its inhabiants, to efteem their cha-
> * As long as there are lands to be cleared, the leifure which agriculture affords will be very thort, becaule every feafon is proper for this employ, except when too great a quantity of fuow fops the work. The intervals of leifure become regularly eftablithed, when the fyftem of cultivation is fixed, and the foil entirely difpofed thereto. Then undertakings are calculated upon cheir duration; but; in general, fimple work, which requires no workfhop, no confiderable apparatus, is that only which agrees with agriculture.

racter, were well difpofed to abjure the contempt and averfion with which the Englifh had infpired them for their rivals and their productions, and to give France the preference in every thing. Why has avarice, by a miferable calculation, rendered thefe good difpolitions of no effect? Men were willing to gain, to gain greatly; to make what is called a good froke, in taking advantage of the diftrefs of the Americans, and forcing them to take thofe commodities which were unfit for every other market *.

This difhonetty has counterbalanced the fervice rendered them; for the imprudent and wretched young man, whofe throat is cut by an ufurer, owes him no acknowledgment. A greater evil to France has been the confequence -her cloths have loft their reputation in the
> * I do not accule any body; but I can certify, upon the authority of the moft refpectable eye witneffes, that fome of thefe outcaft cloths fell at the end of fix months wear into flhreds.

> The Americans were fo ftruck by this, that Mr. Laurens, after having received two millions, which France lent to the United States, employed a part of that fum to buy Englifh cloths. Complaints were made; he anf.xered that it was his duty to buy better and cheaper cloths.

$$

United States. But let the Americans undeceive themfelves; let them not attribute to the nation the flult of a few individuals; let them not have al bad opinion of our cloths, becaufe fome bid ores have been fent to them. The fane accident would have happened to Euglifh cloths if, in a like cafe, there had been Englifh merchants aváricious enough, and fo far ftrangers. to the public good, as to fend their refufe to the United States \%.

* Englifh merclants love as well as others to get money, and there are among them thofe who, for the love of gain, would trample under foot every patriotic confideration. But the public fpirit of the generality of them puts, in England more than elfewhere, a check upon the fhameful enterprizes of avarice; confequently the greater part of the merchanis never abandon the national interefts in their fpeculations, neither the honour of Englifh commerce, nor the reputation of their manufactures. It is thus they are become the principal agents for furnifing every fpecies of manufacture to the whole world. When it happens that any of them facrifice national reputation to views of private intereft, honeft patriots generally prefer accufations againft them before a pubic tribunal, and then the culprit is not fuffered to anfiwer by clandeftine memoirs to public and fubffantial accufations; this obfcure and cowardly refource is held in too great contempt to be made ufe of. There remains nothing to the culprit but filence or falfehond; in both cafes he is diftionsured in the opinion of the public, which affects and marks every individual, without refpeet to rank, power, or riches

The Americans who come among us, ftudy the nature of the intercourfe which we thall one lay have with the United States; they know that our manufacturers poffefs all the mans which give to Englifh cloths their reputation; that they make them in the fame manner, and that the fuperfines are fuperior to thofe of England; that in general dying is better underfood with us, and carried to a greater perfection: in thort, that it depends but on fome circumftances eafy to be got over, to make the cheapnefs of our workmanhip affure us the preference to the Englifh with refpect to cloths.

Lord Shetfield, in avowing the fuperiority of our fine cloths, and of their cheapnefs, obferves, that the greateft confumption of the Americans is of commion cloths, with refpect to which France cannot enter into a competition with England. And he draws from it this confequence, that the inconvenience of dividing the demands to compofe affortments, and the confideration of the fmall quantity of fue cloth neceffary to form them, will caufe thefe to be ordered in England, notwithftanding the advantage there would be in getting them from France.

But why fhould we not furnifh common cloths to the Uniced States, fince the labour of our manufaturers is cheaper than that of England ? It is becaufe the Englifh wool is cheaper than odrs. The Englifh grow their own wool, and ftand in no need of foreign wool, except a little Spanih, indifpenfable to fuperfine cloths. On the contrary, we import more than half of the wool we manufacture into cloth. M. la Platiere fays there are thirty-five millions of fheep kept ia Great Britain, each of which, he affirms, produces on an average at leaft fix pounds of wool. It is the breed of fheep which gives to Eactand fuch an amazing fuperiority over all other nations in her woollen manufactures. France ought to encourage the breed of heep and the deftruation of wolves.". M. la Platiere faw this evil, and had courage to publifh it ia the Eucyclo-

[^24] pedie Methodique, Platiere was called a man of pretenfions. The fame title was given to Dr. Price in London when he predicted the lofs of the Colonies. The minifterial heads of that country laughed at the prophet, but the event proved he was right.

## SECTIONV.

## LINENS.

There are two principal feecies of linen-drapery, which are fubdivided into a multitude of others.

The firft fpecies contains linen properly fo called; that is to fay, linen which ferves ta make thirts, fheets, table linen, and all the linen made ufe of for every purpofe of cleanlinefs.

Thefe linens are made with hemp, flax, or cotton; this laft article is employed when the two former ones are fcarce, it is fometimes, mixed with flax.

The manner of making thefe linens is very fimple: they are made in all parts of Europe *: Thofe

[^25]There

## 124 ON THE COMMERCE OF THE

Thofe countries where religious or political defpotifm difoourages induftry; where the numerous inftitutions of charity, invented to divert the attention of defpair from mifery, nourifh idlenef $f_{s}$; thefe countries are the only ones wherein this manufacture does not merit the attention of the political obferver.

There is one who has obtained more than thirty theufand pounds fterling from government, and whofe manufacture employs two thoufand nien and women, and fix huadred chilčren.

This committee names infpectors to examine the fate of manufactures, and afterwards to make reports, or give a general defcription of their fituation, of the number of workmen they employ, of their produce, refources, wants, \&cc \|.

Still more ias been done in Ireland, to encourage the commerce of linen; great edifices have been built, and deflined to receive them, as rell as thofe who come to ofer them for fale. The moft cenfiderable market being at Dublin, three or four tinses a year, linen merchants from the North, who have bleach yards, come to Dublin with their afforments. They find in thefe edifices, places for their linens and for thenifelves to lodge in, all ai no expence. -They meet Englinh buyers or others, who go there to gather together all tbeir purchafes.-Like depofitories are effablifhed in the North; they are effentially neceffary to thofe manufactures, the articles of which are gathered in the country.-Wiere they exift, expences arc leff, and work is better paid for.

- \| When thefe infpectors are honeft, and men of underflanding, their repurts are evidences of fuccefs. Then example has a fingular influence upon indufry.

Every where elfe, the country people employ, more or lefs, the leifure which their kind of life affords them to $f_{p}$ in and weave linen. Moft of the farmers and proprietors who enjoy a little eafe, or who are not afraid of letting it appear, fow hemp or flax, and draw from their foil and the work of their hands the linen which covers their bodies and fupplies their family.

The Englifh have added other caufes to thofe which produce low-priced workmanhip: their aftonifhing induftry, their obferving genius, their ever calculating mind, have invented for the fpinning, Scc. of cuiton, and for weaving, feveral machines which fill furpafs the cheapnefs to be expected from the leifure of the inhabitants of the country.

As thefe machines are infenfibly introduced into countries, it may be expected that the low price of linen-drapery will be every where eftablifhed.

But notwithftanding the multiplication of thefe machines, nations which groan under a bad government, or are grown rufty in old and wretched habits, will-always depend, for that article of neceffity, upon thofe which have effablifhed bounds to their government, but

## 126 ON THE COMMERCE OF THE

nove for their induftry, which muft conftantly increafo.

It refults from thefe facts, that the United States will always have, in proportion to the increafe of their population and culture, lefs recourfe to Atrangers for that principal kind of linen-drapery whofe manufacture is fo well affociated with the labours of the field*.

Very fine linens muft be excepted; they are defined for luxury, and the individuals ernployed in manufacturing them are condemned to vegetate miferably in cities, rolling perpetually in the fame circle of mechanical labours $f$.
*The American women are renowned for their induftry in the conduct of their houfes; they fin a great deal of wool or flax; they would lofe their reputation and be defpifed, if their whole family were not almoft entirely clothed with the cloth and linen made in the houfe: if the phole interior of their ruftic habitation did not bear evident marks of their cleanlinefs and induftry.
† Manufactures are much boafted of, becaufe children are employed therein from their moft tender age; that is to fay, that men congratulate themfelves upon making early martyrs of thefe innocent creatures; for is it not a torment to thefe poor little beings, whom nature commands us to permit to take the air and their fports, until they are of riper years, and their ftrength is become confiderable-Is it not a torment to them to be a whole day, and almoft every day of their lives, employed
employed at thre fame work, in an obfeure and infected prifon? Mult not the wearincis and vexation which they fuffer, obAruct the opening of their phyfical and intellectual faculties, and ftupify them? Muft not there refalt from this a degenerate race, inclined to antom. :onifin and flavery? For moft nanafatores require no cther than mechanical labours, which a machine wourid perform as well as a man. It is therefore imporimbe that a man conderrned to this kind of employ. fhould not become a machine; and finidity and fervitude are joined to eneh other.- - Thefe truths cannot be too often repeated, not to difgut the Europeans with the mania of manu. foctares; tiey are too far advanced to retralt $;$ but to hinder the Americans from ever folkwing the dane career.

$$
3 \text { to }
$$

## 128 on the commence of tife

to fay, eloth made of thread of different colours; whether flax or cotton; or thefe two fubftances mixed with others.

The greater part of this drapery requires too complicated a procefs, too varied an apparatus, too continued a labour, to be manufactured otherways than in thofe particular eftablifhments, fituated from neceffity in the neighbourhood of cities, and which have no affinity with a rural life.

The-art of making well the tiffue, of mixing the colours, of contrafting them, of imagimary agreeable defigns, of preparing the linen when it is finifhed, \&c. this art extenfive, varied, and delicate, requires the greateft attention. . The moft important thing is to do a great deal in it at a little expence, and it is the point to which the Englifh are arrived, with refpect to that kind generally known under the name of printed callico.

This will be for a long time a confiderable article of commerce, between Europe and the United States, which confumes a great deal of it; and it is an article wherein French induftry, left to its natural force, and not being reftrained by any obftacle, need not fear
competition*. In this, as in moft other-articles, the mature of things is entirely in favour of France, and fuccefs depends wholly on the will of her government.

In the year 1785 the government of France invited, by an arret, forcign manufacturers of thefe linens to come and fettle in France.

But this invitation is not made in terms fufficiently clear, or flattering, to induce ftrangers to come and fettle amongtt us; efpecially not fuch as have a little energy and elevation in their characters, and it is of thefe alone that we are in need.

Among different favours granted them, there is one which entitles them to the enjoyment of their fiate or profeffon, and of their ufages; in

> * Lord Sheffield maintains in his work, that France has not even linen enough for her own confumption. A commercial dictionary, printed at Lyons in 1763 , affures on the contrary, that France fends a great deal abroad. If the compiler of the dictionary fooke truth, he might be anfwered according to the author of Les Etudes de la Nature-" Of " what ufe is it to a ftate to clothe foreign nations, when " ones own people are quite naked?"-Thefe two writers may be made to agrce, by faying that France, reftored to her energy, would eafily furnifh linens to foreigners and her own citizens, and that various interior caufes have hitherto prevented her from doing it.
Vol. II.
K
that

## 130 ON THE COMMERCE OF THE

that which foall not be coniruy to the lawis of the king dom, EPC.
But what fignifies all the vague expreflions of enjoyment, of ftate and profeflion, liberty and ufages ? What State is bere fpoken of? Is it of the politicial, civil, religious, or domentic ftate? Englifhmen, independent Americans, have a political fate, a political liberty, that is, a right to take part in the adminiftration of public affairs; is this ftate underfiood? Is the liberty of having a temple for communion, for marriage according to that communion, underfood by the liberty of ufages? Why are not, thefe ufages fieceified ?

And above all, what fignifies thefe words, in that which Jball not be contrary to the laws of the kingdom. If they convey a clear meaning, do not they completely deftroy the preceding favours granted? or, at leaft, do not they leave a great uncertainty upon that which is or is not granted?

Why is not a language claar and without evafion made ufe of, cfpecially in treating with ftrangers ? Inftead of an equivocal jargon, dangerous in its nature, becaufe it produces miftruft, and may give an opening for deceit, why not fay to them in clear term", "If you come within
within our ftates accompanied by your wive.: and children,-if you bring your manufactures, if you eftablifh yourlelves among us; you thatl cujoy all the rights of our fubjects? Thefe rights are, to polfefs property in the fulleft iccurity, and not to be deprived of it but by the daws, tribunals, \&c. If you fix your abode among us, your children will, without obnacle, be your hei., you thall alfe preferve your redigious opinions. When there thall be a certain number of you, you thall have a temple wherein to worflip, according to your own manner, the Everlafting Father; and you thall have minifters, and hold affemblies; thall intermarry according to your rules, \&e. If France be not agrecable to you, nothing, abfolutely nothing, Shall hinder you from leaving it, and carrying with you your riches." It Ahall be told that all this was meant to be faid by the arret: it was neceffary then to explain it clearly, and why were thefe obfcure words added, - in that which fball not be contrary to the laws of the kingdom?

How fhould a German, an Italian, an Englifhman, who fhould be tempted to eftablith themfelves ir France, be acquainted with your ancient laws and ordinances? Will they turn over your innumerable folios? Certainly they will

$$
\mathrm{K}_{2} \quad \text { not }
$$

not, they will ftay at home; you will therefore have failed in your intentions. On the other hand, do not they know that a century ago, and even fince that time, thoufands of ordinances were, and have been made againit the Calvinifts, and that thefe ordinances are uot yet repealed?. Ought not they to be afraid that thefe would be brought forth againft them if they gave the leaft offence? They will remain at home, and once more you have miffed your aim.

It is the more neceflary for monarchies not to difguife under a captious form the advantages by which they feek to cutice ftrangers; as free flates, fuch as Ireland and independent America, do not fubject emigrants to any capitulation or confraint : they offer them all the rights of citizens the moment they fet their feet on free ground: and what rights ! In Ireland that of voting at eleclions; in the United States, that of being elected themfelves; and confequently the moft feducing right, becaufe it is the moft proper one to maintain the dignity of a man who has dignity ; the moft proper to give it to him who has it not.

When a nation perceives the neceflity of enticing frangers to fettle in it, nothing ought to
be fpared, efpecially in ftates far advanced in civilization.

It is a means of regenerating morals, if it be poffible to regenerate them, and efpecially to encourage induftry: for in order to exift in a firange land, and to gain in it condideration and confidence, emigrants are forced to have good morals, probity, and exactitude. Their cxample cannot but have a falutary influence upon the nation which receives them into its befom.

Otherwife, having opinions, habitudes, and knowledge, different from thofe of that nation, they may help it to break its bad cuftoms, to give it a greater extent in its views, more cofmopolitifn, or of that character proper for approaching nations to each other, and for diminifhing national antipathies.

When the advantages which a country acquires by ftrangers who fix themfelves in it are confidered, it is aftonifhing to fee governments think fo little about them, and frequently not to refpect their rights. They ought, on the contrary, to protect a ftranger fo much the more as he feems lefs fupported by the laws than a citizen; that he is unacquainted with them ; that he may eafliy be the victim of artifice and chicanery; that it frequently happens

## 134 ON THE COMMERCE OF THE

that he does not underfand the language ; finally, that being alone, he has neither family, friends, nor patrons.

In this fituation, the flranger ought to be environed by the fafe-guard of a particular ad-miniftration, which mould watch over his fafety; but it is the reverie of this in many fates ${ }^{*}$.

Thus whiff we fee in thole fates who underftand their interests better, Frenchmen direct: the greateft part of their manufactures, few ftrangers are feen to come and eftaolifh themfelves amongst us.

I could quote, as a proof of what I advance, known facts, quite recent; but I will not write a book upon every article of exportation; I will: confine myself to laying that great liberty, and

* If a framer be fufpected, few examinations are made; he is arrefted-liberty is left to a citizen, or at leaf he is treated mildly; the ftranger is imprifoned: the fabaltern, infolent by reafon of the indifference of his fuperiors, treats him with feverity: for what is there to fear from him? Is the word with them all,-fet at: liberty-will that franger go and: make the temple of chicane ring with his complaints? He fears, left it may be a new foreft, -he flies, curling that in $\downarrow$ hospitable country.
few regulations*, are the two beft means of improving the linen manufactures in all countries, as well as in France:

## SECTION VI.

GILKS, RIBBONS, SILK-STOCKINGS, GOLD 1 ND SILVER LACÉ; \&C.

There ars upwards of feventy thoufand looms and frames employed in thefe articles, and one half of the filk made ufe of is produced in the kinglom.

The other ftates of Europe, except Spain and Italy, are obliged to procure from abroad the whole of the filk neceffary for the manufactures
> * I might quote, as a procf of what I have faid in the courfe of this work, that even the regulations which appear favourable to induftry, are prejudicial to it; the new arret paffed in favour of French linens, fubjects them to a ftamp duty, under the pretext of preventing fraud. The duty appears moderate, yet the manufacturers are fenfibly injured by it ; moreover it reftrains them, in fubjecting them to the caprices of revenue clerks; and ihis does not prevent fraud; therefore to prevent the manufacturer frem being robbed, his money is taken from him, and the robbery ftill takes place; he would prefer being left to defend himfelf againft thieves.

K 4 which
which they have eftablifhed, in imitation of thofe of France.

If there be added to the advantage which thefe circumflances give to the French, their fingular aptitude for the manufacture of every article of luxury; their incredible fecundity in varying thefe articles; the abfolute and general empire allowed them over the tafte and mode which prefide in thefe manufactures; an empire fo particular, as to be every where copied; no doubt will remain, that French filks, ribbons, filk-fockings, and lace, will be preferred to all others in the United States*.

It is not to be feared, that they will be manufactured there; from the cares, which the

[^26] infect that produces the filk, requires, to the arrival of the fluff in the warehoufe where it is to be fold, almoft all is workmanhip; and the workmauthip of Europe mult for a loug time, if not for ever, be even cheaper than that of the United States.

The confumption* of thofe articles cannct be

* Our defign being to difuade the free Americans from wifhing for manufactures, we ought not to lofe the prefent opportunity oi deferibing to them the abufes and inconveniencies infeparable from thefe eftablifhments. There is none which has had more fuccefs in France than that of filk. Yet fee the frightful defcription given of it by M. Mayet, direAtor of the manufactures of the King of Pruffia, in his Meinoir on the manufactures of Lyons. (Paris, Moutaid 1 -86.) He indicates as caufes of the decadency of thefe manufactures, the drunkennefs of workmen on Sundays, the infection of their difinal lodgings, bankruptries which are the refult of igno. rance and difhenefly, the ceffation of work during court mournings, which occafions fome woikmen to emigrate, and others to fteal, the mifconduct of revenue officers, the monopoly of filk, \&ic. abufes io much the more aiarming, fajs M . Mayet, as they are, for the moft part, the ofrsprings of luxury, and which àre produced either by acquired riches, or the thirft of acquiring them; it feems as if they could not but fpring up in manufactures.

Who can recommend the eftablihment of manufactures, on reading the following reflections of the fame author?
" The concurrane of manufaiures necefitates their
i3 8 on the commerce of the be very confiderable there*, if America taked advantage of that opening to which nature calls her. Ribbons excepted, the reft are proper for great cities only; where vanity being inceffantly excited, makes drefs a defirable atd almoft neceffary object. But thefe great cities will, without doubt, be very rare in the United States. It is fill more certain that the confumprion of filks does not, at prefent, form
" cheapnefs: to have a preference of fale; it is neceffary to " fell at a lower price; the wages of workmen muft there" fore be moderate, and théy muft gain no more than will © find them in neceffarics: the workman mult never be fuf" fered to enrich himfelf. In becoming rich, he becomes " difficult, exacting, enters into combinations; impofes laws, " becomes diffipated and ide, he caufes the price of work" manhip to increafe, and manufactures to fail." Tbus rich Atuff ought to be watered with the tears of the workman who manufactures them.

Ought not this laft phrafe to difguft the free Americans for ever with the mania of manufactures of luxury? -Let them reflect, that to fupport the filk manufactures of Lyons, the fame author propofes to the king of France, to facrifice his tafte for fimplicity of drefs, and to wear brilliant cloches, \&c.

* Lord Sheffield fays, that it is not the fifth part of Indian filks, \&ec. but what fignifies this calculation? The country which confumes the greateft quantity of filk ftuffs, does nc:; perhaps, confume the twentieth part of that which Lord Sheffield means by Indian filks.
there a confiderable article; that it will augment but verỳ flowly, and in a manner almoft mifenfible. The Americans ought undoubtedly to be congratulated upon it. Their manners will be good and fimple as long as they do not contract a want of thefe articles; but if they do not want them for themfelves, they will have occafion for them to form branches of their finuggling commerce with the'Spaniards. Nature invites them to earry on this commerce in an advantageous manner, both by fea and land *.

It is known that wetched individuals, who vegetate in South America, mafters and flaves; all figh after nothing but luxury, pomp, and drefs. Elegant and thining fuffs of France: her filks and laces will therefore be fought after, demanded, and bought up with avidity.

However it may be with refpect to this commerce, which exifts but in futurity, and whieb muft be preceded by other circumftances, there

* This commerce will be better eftablifhed by land-The riks there will be lef:- The great rivers which water thole immenfe countries will favour it. A maritime commerce muft be protected by a naval force, and the nature of things will hinder the Americans frum having one for a long time se come.

140 ON THE COMMERCE OF TIIF
is at prefent a certain confumption of filks, ribbons, \&cc. in the United States; and the French ought to be anxious to fupply them.

I will obferve upon this fubject, that if the French government ordered that the regular packet-boats going from France and America dhould 'receive as much merchandize' on board as their deftination would permit, little ventures of our filk, ftuffs, ribbons, gauzes, ftockings, \&c. would be frequently fent out, and theie articles would ferve better than any other to eftablifh uninterrupted connexions, and which by the infight they give, and the experiments which they afford an opportunity of making, conduct nature herfelf to thofe great commercial intercourfes to which we ought to afpire.

The facilities which packet-boats offer for the fending out of merchandize of value and of little incumbrance ought not to be neglected, fince, in this clafs of merchandize, we have things which have a decided preference. I will return to thofe packet-boats which it is important to keep up and to increafe, and it is to be wifhed, that no monopoly of right or fact may take poffeffion of them, in order to carry on one branch of commerce in exclufion of others.

Although a fine hat be called a beaver, it does not follow that Canada and the United Northern States are more favourable to the fabrication of hats than France. Hats, purely of beave., do not wear well, and are inconvenient on account of their weight. The fineft, handfomeft, and beft hats, contain but little of the fur of that animal, which we efteem at too high a price, when we think of the lofs of Canada. Wool, the furs of the hares and rabbits; the hair of goats, which is in fact wool, and camels hair, are more neceffary for making of hats than the fur of beavers.

The few hats of beaver made in the United States, will be fufficient for their confumption. -The Americans muf, however, be inceffantly told this great truth, that manufactures are not proper for them except in thofe articles which are immediately aflociated with agriculture, and which facilitate its operations. That of hats is not of this kind.

Europe

Europe will therefore furnilh hats to the Amcricans. And of what great importance is this object, when the rapid increafe of their population is confidered? It may be affromed, that every mation capable of fending them out merchandize, will fend them hats; but thofe of France will have the preference. This mas::facture had there its origin. The French alone have carried it elfewhere, like many other things, but it has never ceafed to improve in France.

French hats are always the beft fulled and dycd, and the moft agrecable. When government thall have refolved to do for wools that which it has done for mulberry trees, the manufacture of hats will be fo much the more advantageous, as we fhall be lefs tributary to fopeigners for the articles employed therein.

> S E C TIO N VIII.

LEATHER.
SHOES, BAOTS, SADDLES, SC.

To what caufe ought the great fuperiority af Englifh leather to be attributed over ours? Why is there in this leather-work of all kinds that that neatnefs, that feducing appearance, which we have not yet approached? It muft be repeated, that in England men hor the the profeffion of a tanuer, and pride themfelves upon it, whilf it is the contrary in France. An Englifh tanner, fhoemaker, or faddler, does not quit his trade whea he is rueh; but makes his riches ferve, in proportion as they augment, to give luftre to his profellion, to multiply his work(hops, to extend his affairs, to become important even in the article which has furnithed him the means of doing it. The leather which comes from the tanneries whofe owner is in eafy circumitances, is always well prepared, becaufe he can advance fums of money, and give to hides the time necefflary for their progrefs through his tan-yard. A poor tanner is always preffed by his wanting to take the leather out of the tan-pit, where it is neceffary it fhould remain a long time to acquire a good quality. In general, it is impoffible with this penury, unknown to the Englifh, that there fhould be time to manufacture or fabricate good merchandize. Thofe who employ the leather, acquire no reputation in their profefions but in proporfion to great provifions made before hand, which puts it in their power to furnigh nothing but leather

I4 ON THE COMMERCE OF THE
leather improved by being kept. It will be afked, how the wholefale dealers manage when they begin bufinefs? They find credit, if in their apprenticethips, which precede their eftablifhments, they have acquired a good reputition *.

* We may readily perecive, that this línpe of being fome day well eftablithed with great fuccours, is worth all the books of morality. The engravings of Hogartin, which reprefent the fate of the idle apprentice, paint, to the life, Inglifh manners. The intention of the worknan is not to besume Secretaire du Roi\|. He marries the daughter of the good mafter who has brought him up, and fucceeds him in the fame bufinefs which he has conributed to extenid.

It is not that the French tanner, who barters his profefion againft a brevet of Secretaire du Roi, or commiflary of war, ought to be blamed. He reafons well. He fees that no confideration is attached to talents and induftry, and he delays not to buy himfelf a title. It is therefore wrong to joke merchants and artizans, who, for money, get themfelves enregiffered in a privileged clafs. It is an evil to the ftate, but it is not the fiult of thofe who purchafe. The fault is due to the kind of difgrace from which government has not yet delivered the ignoble.

It ought to be obierved here, how fatal the fpeculation which eftablifhed this order of things has been to the nation. To procure money, offices were created; which, by ennobling, induces the ignoble to purchafe them; they are difgufted with

[^27]This credit is then fupported, not only by the certainty of fuccefs, but alfo by that of feeing them become a conftant means of confumption.

Such is the art of the Englifh to fupport and increafe their commerce in every thing, and every where. If we could put it in practice, all our commodities of leather would foon equal the perfection of theirs, fince we do not otherwife want materials. Their being beforehand with us, ought not to difcourage any body, but it is neceflary to the fuccefs of this rivality, that government mould deliver the tanners from the fhackles with which they have fettered them*, and fupprefs or diminifh the enormous
their fituation by being dihonoured, and for a few millions of livres, which this pitiful operation flowly procures, commerce is ruined by having its capital diminilhed: that commerce, which, by being fupported, would continually produce millions to the ftate.

* Two caufes have fingularly contributed to ruin the tanneries in France. The confiderable duties impofed fucceffively upon leather, (fuppreffed afterwards in part through prudence) and effentially the fevere infpection that the commis (in this cafe a kind of excifeman) may make every hour of the day and night at the tanners. Nothing difgufts a man, who has fome energy, more with his profeffion, than this difVol. II. L graceful
enormous duties with which the tanneries are loaded*.

SECTION
graceful fervitude, than the fear, than the conftraint which arife from the idea of being difturbed at every moment, by his firefide, by contemptible fatellites who live on the mifchief only which they do, and whom the certainty of impunity, intereft, and habitude, render unmerciful, infolent, and frequently perjured.

Confiderable proceffes have been feen to arife from thefe vifits, and very rich tanners to quit a profeffion which promifed them nothing but torment, anguith, lofs and law fuits. It will be a long time before the cvil which the farm has done to the tanneries be repaired. Interefted men; who think to confole us for real evils, which we fuffer, by thofe which the $>$ fuppofe among our neighbours, fay, and repeat, that the fame vexation of commis and of cuftoms, produce in England the fame $t$ fečts. This may fometimes happen, but there is a law to punifh them, without a hope of pardon, when they overleap the boundaries prefcribed to them. And thefe boundaries are much more contracted than ours, which the following fact will convince us.

Two officers of the excife, having taken it into their heads to follow a man carrying a hamper of wine to the houfe of a particular perfon, entered with him in contempt of the law; the mafter of the houfe called fome conftables and charged them with the officers: they were taken before Alderman Hamett, who read the act of Parliament to the culprits, and fent thein to prifon, for having violated the rights of citizens.

Mercure politique 1786, p. 286.

* The following is a lift of duties paid on leather, whether it be French or foreign; and it muft be here obferved, that

# SECTION IX. 

GLASS HOUSES.

Englifh glafs ware is brought to great perfection, and England makes it a great object of exportation. the leather of France is far from fupplying our wants. We get the greateft part of that which we confume from the Spanifh and Portuguefe colonies, from the Levant, and from the coaft of Barbary.

Green leather, French or foreign, pays on livres fols entering the kingdom by the hundred weight 15
Leather worked up or tanned, pays afterwards the following duties
Leather and fkins - 2 f. per pound
Goat fkins - 4
Ten fols per pound, which gives more upon leather - - 1
Goat fkins - - 2
General average - 46 and by the hundred weight - - 2210

Cuftom to the general farm

Leather and Ikins pay a duty of a third of their value. L 2

When

## 148 ON THE COMMERCE OF THE

exportatior. America ought to prefer Englifh glafs to ours, becaufe we ourfelves prefer it to

When in 1759 a duty was impofed, the king ordained that thefe two fols upon leather and fkins, and the four fols upon goat fkins, fhould be reimburfed to the manufacturer, when he fhould have fent his merchandize abroad.

But adminiftration demanded and obtained leave to reimburfe two-thirds only.

Since that time there has deen a new impoft of ten fols per pound, which makes the duty one fol more upon leather, and two fols upon goat fkins.

This new duty has completed the ruin of the tanneries.
There is another abufe, which merits to be obferved. It is that the adminiftration receives its duties undiminifhed upon leather half rotten, fcraped or tanned.

After thefe facts, it may be comprehended, that the tanners in France are reduced to a fmall number, and are in general miferable.

> An important note relative to the article of leather.

The note on the duties paid on leather, is true with refpect to the reality of the duties; but we have been convinced, fince the note was printed, that a middle price cannot be fettled between hides, and calf and goat. Jkins. There are at leaft two hundred of the two firft for one of the laft. We have been equally convinced, that the hundred weight of ikins bought at thirty-feven livres, and fotd after the tanning at fix-ty-four livres, fixteen fols, produces to the tanner a profit of no more than five livess five fols.

This eafly explains how the tanners have been ruined.
Tranglator.

erved. It nifhed up-
the tanners in general
that of our own manufactory, common bottles excepted, which we make better, and which are of a finer glafs than that of the Englifh. But although this opinion may hurt the intereft of thofe who have fuch eftablifhments, it is neceffary to fay, that France, far from encouraging them, ought to wifh for their deftruction. This kind of manufacture deftroys combuftibles, of which the rapid progrefs is alarming, when it is compared to the flownefs with which they are produced.

The Englifh, feated upon their coal mines, are little uneafy about the voracity of furnaces wherein glafs is melted; but although it be faid that we have the fame advantage, it is ftill permitted to doubt of it. And moreover it is not fufficient to have immenfe coal mines under foot, it is neceffary to be able to work them at a little expence. Glafs manufactories, placed within the reach of mines, fhould not be too far diftant from the fea, for the tranfports becoming expenfive, would give to the Englifh an advantage over us, who from every part of their ifland can eafily get to the fea. Finally, our own confumption of glafs-ware, much greater than that of the Engliih, may already be too confiderable, if it be compared with the

$$
\text { L } 3 \text { means }
$$

150 ON THE COMMERCE OF THE
means to which the ever growing fcarcity of combuttibles reduces us*.

To be fully convinced that we ought not to put glafs-ware into the lift of articles of exportation to America, it is only neceffary to reflect :pon the fituation of the United States. They have immenfe forefts to clear, confequently it is highly proper that they fhould eftablifh glafs manufactories, and increafe them as much as poffible. The labour employed to deftroy the woods for the clearing of lands, at the fame time that it difpofes the land to culture, will ferve for the production of a very extenfive object of manufacture, therefore the utility of this defruction is double to the Americans $\dagger$. It cannot be doubted, that this confideration
> * The fcarcity of wood, which begins to be manifeft, becomes fo much the more alarming, as combuftibles which have been attempted to be fubftituted for it have not fucceeded, and that luxury and population naturally irclined to increafe, efpecially with commerce, the confumption of combuftibles will be doubled.
> $\dagger$ This is what is done in New Jerfey for the forges. It is impoffible, fays the author of the Cultivateur Americain, to travel acrofs this province without meeting with fome little iron forges. If a proprietor has a great marh full of wood, and that he wifhes to clear it, he begins by making a dyke at one extremity to ftop the water of the rivulets which run acrofs day conceive the project of furnilhing Europe with glafs-ware, of adding this article to thofe which they can exchange for fuch European productions as are improper for little States to cultivate or manufacture within themfelves. It can be no more doubted, that France will gain greatly by feeing her glafs manufactories deftroyed by thofe of the Americans, who will fell us glafs-ware in exchange for our wines, cloths, printed linens, filks, \&c. In the mean time, it would undoubtedly be a falutary meafure, to open the kingdom to the importation of foreign glafs.

$$

152 ON THE COMMERCE OF THE
of nails amounts to confiderable fums. This will not appear extraordinary, when it is remembered, that all the houfes, all the enclofures of the Americans, are of wood, that they build a great number of Mi ips, which require frequent reparations.

It is the fame with refpect to faws, fhovels, hoes, and in general all the inftruments neceffary to agriculture and navigation.

The Americans are fingularly curious in the choice of the firft neceffity. They have therein the general tafte of the Englifh; they will have that only which is good. On comparing thofe which they make themfelves with the tools made in France, it muft be acknowledged that we are far from that perfection at which they are arrived in them : this perfection is owing to the eafe of the labourer, and to the confideration attached to agriculture. Imperfećtion is a neceffary confequence of reftraint and dimonour.

The Americans have attempted to make iron and fteel. Many manufactories have been fet up at New York, in New Jerfey, and in Penfylvania; it is true that thefe manufactures are few in number, but they will neceffarily increafe for the reafons which I thall hereafter give.

England

154 ON THE COMMERCE OF THE
afterwards exported to the colonies either in its natural fate or worked up.

The profit to the mother country was, according to his Lord/hip, $12,000,0<0$ livres, or thereabouts.

During the war, and fince the peace, fome exports of this kind have been made from France to the United States; but they did not fucceed. Accuftomed, according to the principles of monopolifers, who have hitherto directed our foreign commerce, to furnifh our colonies with brittle utenfils, and otherwife very imperfect, our merchants were willing to treat the independent Americans like their flaves in their iflands*; and the Americans refufed our

* The Chamber of Commerce of Marfeilles, in an inftruc. tion very well drawn up, addreffed in 1784 to the merchants, had recommended them to act contrarily-" Recollect," faid it, " that you have not ignorant or enflaved colonifts to treat " with, but a free people; and, confequently; zapidly tending " to perfection. If you wifh to fucceed, act with fidelity, " upon extended and liberal views," \&cc. \&c.

I have not read this inftruction. A man of letters, who bas refided a long time in the country, has given me the ideas of it, which I have related. We muft not be furprifed to find in the merchants of Marfeilles intelligence on commerce fo rare any where elfe. Lefs thackled, commerce muft offer more folid ideas. our merchandife. They faid, that we did not even know how to make nails; and, in ftrict truth, they were right in their affertion. They preferred the iron and fteel of England, although the duties on exportation increafed their dearnefs.

It is probable enough that the Englifh legiflature will fupprefs them, according to the advice of Lord Sheffield; and this, joined to the benefit of the œconomy procured by the difcovery of Lord Dundonald, and of Meffis. Watts and Boulton, for heating furnaces at half the common expence, will undoubtedly produce a reduction in the price of iron.

This diminution is one of the caufes which muft neceffarily hinder us from attempting a rivality in this particular with the Englifh; but there is another, which is Atill more decifive.

In fact, the obfervations made heretofore upon the neceffity of deftroying our glafs manufactories, apply naturally to that confiderable branch of iron-work, of which the workmanfhip is the leaft expence, and which requires a great

The fame energy is found in an excellent Memorial on the Franchifes of this city, lately publifhed againft the general farm, and of which we thall have occafion to \{peak.

156 on the commerce of the
quantity of combuftible materials. The United States are obliged to deftroy their immenfe forefts: France ought, on the contrary, to think of re-producing hers; therefore, the founderies and forges will offer in America the advantage of turning to profit woods, which, without thefe manufactures, it would be equally neceffary to burn : whilft in France, wood and charcoal, becoming every day more fearce and dear, renders thefe eftablifhments more expenfive. Now, as the abundance in which iroa mines are every where $\therefore{ }^{\circ}{ }^{n d}$ *, makes the price of iron depend almoft entirely on that of combur.tibles neceffary to melt it, it is evident that the United States have over us, and even over the Englifh, a confiderable advantage.

Moreover, forges are a part of the equipage neceffary to country labour ; for, if it were neceffary to feek at a diftance the utenfils of agriculture, the progrefs of clearing of lands would foon be ftopped-the productions would not pay the expences. Thefe would ftill be increafed by the repeated neceffity of fubflituting new utenflis to thofe which there would be no means

[^28]of repairing. As foon as a people have mines of iron; as foon as they are led by the nature of things, and by neceflity, to eftablifh founderies and forges, it is not a long time before they renounce all foreign aid in the articles of iron*; therefore, the Americans are, as I have obferved, already provided with thefe eftablifhments: and as Englifh induftry has eftablifhed and directed them, they are all at that degree of perfection which we have not yet attained.

Let it be remarked, that thefe manufactures being joined to a life of agriculture, and carried on in the midft of it for its ufes, can have none of the pernicious influences which ought to be feared in thofe complicated manufactures which are obliged to be concentrated in the inclofures of cities, whole deftructive employ exhaufts the natural firength of men, by corrupting their morals.

* Perhaps nails muft be excepted. Their price will be a long time in Europe lower than in America. If, as Mr. Smith afferts in his Treatife on the Wealth of Nations, a young man of twenty years of age can make 2,400 nails a day; let it be judged to what a degree of cheapnefs low-priced workmanfhip ought to reduce them; therefore, wherever workmanhip is dear, nails cannot be made. . Yet we read in the American Gazettes, that there has been eftablifhed in one of the States a manufacture of nails. Will this fucceed?Futurity will hew us.

Therefore,

358 on the commerce of the
Therefore, to refume this article-far from encouraging the exportation of iron manufactured in France, we ought, for our own intereft, to encourage the importation of foreign iron, becaufe manufactures of this kind take away combutthles from things more preffingly wanted, and from lefs deftructive manufactures, where workmanhhip produces a greater profit.

This, however, is not the cafe with every article of curiofity of iron, fteel, or copper work, wherein the workmanfhip exceeds the ,uther expences. They belong to that weak organifation which the Americans ought not to envy. But it muft not be diffimulated, that a competition with the Englifh will, on this head, be difficult to maintain : their great ability and addrefs in the diftribution of work and different proceffes, the invention of which has not been conftrained by any error * or falfe view

[^29]of the adminiftration of England, gives them over us a confiderable advantage; yet it is not impoffible
their effects? How many proceedings more ingenious and expeditious has this machine produced? Happily for England, there have not been found in her bofom thofe able minifters, who, feeing that this machine is of ufe in making money, have drawn from it the profound confeguence that every one would make falfe money if the free ufe of it were permitted: as if it was poffible to make falfe moncy for a long time; as if the more general ufe of the machine did not awaken the public, and even private intereft, and render them more attentive to abufes which might be committed; as if its ufe would act produce much more benefit to the revenue, than it could deprive it of by the falfe coinage of money, which can never be either extenfive or dangerous.-When therefore will thofe who hold the reins of empire calculate like fatefmen?

It is true that at prefent artifts are permitted to have mills, \&c. by conforming themfelves to certain formalities,-always formaiities! No other are required in England than thofe of being able to pay the expence of the machine,-and has England .perceived from it any pernicious effects? Has falfe money overturned public order, impoverifhed the nation, or diminilhed her revenues?

With what difficulty has the invention of the coining mill made its way into France? It is due to an induftrious Frenchman of the fifteenth century, named Briois. Perfecuted for this difcovery, he was obliged to take refuge in England ; the Englifh received him favourably, and put his invention into execution. Another Frenchman of the name of Warin, of the laft century, wifhed to procure the advantages of it to his countrymen, he experieured a like abfurd perfecution; and without impoffible for us to balance it, for this diftribution of work and proceedings are neither fecrets nor fuperior to French induftry. Let government adopt and follow the trivial maxim' Who will have the end will find the means.' Let it in confequence not interdict any of the means, and this induftry will not have to envy the fuccefs of oer rivals.
without the fupport of the Chancellor Sequier, he would have failed in his attempt.-I do not allow myfelf to fpeak of the perfection so which M. Droz pretends to have brought the coining mill at prefent; but by the vexations he fuffers, it may be judged that he has in fact fimplified that machine, that he has rendered fewer hands neceffary, and the coinage of money more perfect and expeditious; two advantages very precious in this art, as the expences of it cannot be too much reduced, and the exactitude and perfection of the ftamp of money are the fureft means of difconcerting coiners. What fatal genius is it therefore which purfues induftry in France? That of companies, of corporations, of privileges. As foon -3 a happy difcovery attacks their profits, they employ "even the bafeft means to defend them; intrigue, falfehood, feduction, are all legitimate with the people which compofe thofe affociations, whilft the man of genius, ftanding alone for the moft part, 'and who attaches too great a value to his time to proftitute it to thefe manouvres, generally experiences the moft humiliating difgufts.

JEWELLERY, GOLD AND SILVENSMITHSARTICLES, OLOCX-WORK, \&C.

If the inhabitants of the United States concentrate their labours and pleafure in a life of hufbandy; if they continue to feek happinefs; not in pomp, but in nature herfelf, and in a fimplicity of manners; in that fimplicity which naturally produces eafe, and the population and profperity of fates; they will not feek after, but difdain plate and jewels, to which we attach fo great a price. They will referve precious metals for miiits and commerce.

It is not however to be prefumed, that this order of things fhould long fubfift in great cities, and efpecially in frequented ports: Euros pean tafte and wants prevail in America*, and French induatry ought to be ansious to fupply

* Plate is ufed in the Southern States-magnificence is feen there; on which account, travellers having but little philofophy, feeak highly of them:-but obferve what is attached to this luxury,--flavery reigns in the South's and there are many poor.- There are none in the Northern States,-no plate is there ufed.

Vol. II.
M
their
their confumption, feeing that the French can underfell the Englifh in thefe articles.

But it is probable that the plated ware (copper plated with filver) invented in England, will take place in the United States of that of filver plate, as painted paper has replaced there much more expenfive hanging: this new fort of plate has for ufe all the advantages of the other, and cofts a great deal lefs.

How comes it that the Englifh are alrcady fo advanced in this branch of induftry, whilf there exifts in France but one or two manufactures where copper is plated on one fide only and filvered over on the other? How have the Englifh already carried this invention to fo high a degree of perfection? How have they made of it a matter of extenfive commerce, whilt we are reduced to the two manufactures wherein no progrefs is feen, and where the inferiority of the workmanhhip difgufts thofe who would otherwife find it to their advantage to make ufe of this kind of plate ?

Thefe manufactures have an exclufive privilege: there is the word-Government fearing left falfe money might be made in them, has forbidden even the plating on both fides.

Reafoning would here be fuperfluous: it is

## UNITED STATES OF ÁMERICA. 163

rufficient to open the eyes to fee which of the two adminiftrations has beft ferved its country; whether it be that of England, by not cramping induftry, and in not giving way to fears, whofe illufion is fhewn by the moft trifling obfervation, or ours, in following a contrary plan. Again, was it apprehended, that counterfeit crowns would be made my millions; as a facrifice is made to this fear of an induftr; which would certainly produce mary millions of them ?

Thus when we confider all thefe articles, wherein trifling confiderations fhall be our induftry, and condemn to mediocrity our means of profperity; when we thence turn our attention towards the different fpirit which god verns England, it is aftonifhing that induftry ftill exits in France, and that the nation does not fall into floth, and remain there. Let us give thanks unto nature, who has richly gifted us, and ber guardian ftrength has hitherto demonftrated itfelf fuperior to the malignant influence of the falfe fcience of our adminiftators*.

- A curious and more ufeful work would be, a faithful and more rational hiftory of all the errors into which the rage of $\mathrm{M}_{2}$

Shall we remain behind the Englifh and Swifs in clock-work? The Americans muft have watches; this admirable invention carrics with it fuch a degree of utility for even the poor clafles of fociety, that it ought not to be confidered as a fimple acquifition of luxury, efpecially in the United States, where the diftance of habitations one from another make the neceffity of it more fully perceived.

But watches muft be made good and at a cheap rate; thefe two conditions will affure them a prodigious fale wherever civilization exifts; time is there a precious property, and its price renders the inftrument neceffary which divides it: they will be made good and at
regulating and prohibiting has thrown adminiftration. It is very probable that the refult would be, that French cominerce has always profpered, in proportion to the inexecution of regulations; that in caufing them to be rigoroufly executed, foreign commerce has been favoured and enriched. The fpirit of invention and induftry which our prohibitory regimen ras developed on foreign nations, was never perhaps fufpefted; neither the innumerable quantity of workfheps which are there conftructed, in proportion to the multiplication of exclufive privileges in France. Thus, that of the India Compiany tras made Switzerland like the Eaft Indies, for the manufalure of mullins, and plain and painted linens.

## SECTION XII.

PIFFEREITT SQRTS OF PAPER, STAINED PAPER, \&C.

This ufeful production from old rags, thrown off by people at eafe, and gathered with care by the indigent, is daily improved in France*.

The

* The manufacturc of M. M. Johannot d'Aunonay, produces finer paper than any other manufacture in Europe, and the proof is fimple. - There is more demand from Ruffia, England, and Holland, for this paper than the manufacturer can furnifh; this \{carcenefs of paper d'Aunonay explains, for why, our Mopkeepers fill get paper from Holland. To diminifh this fcarcity, thefe good citizens have generoufly offered to communicate their procefs to all the manufacturers of paper in the nation, and even to form fehools, whereiry the art of paper-making may be taught. Many perfons have profited by thefe offers; the States of Burgundy have lately fent three pupils-Thefe manufacturers have proved that it was not more expenfive to make good and excellent paper than that of a middling quality. M. Le Clere, who has a great paper manufactory at Effone, found with concern, that his mainufactory coft him a great deal, and produced bad paper only: he communicated his regret to M. Johannot; the latter went to Effone and produced good paper with common pafte. This was certainly a great fervice done to France, and a good example given to the fordid avarice of monopolizers, who,

The Englifh themfelves buy our paper for printing, and our writing paper will not be long unequal to theirs, if it does not furpafs it *.

But if there be an object of commerce for which Europeans need not fear a reciprocal competition; if there be an article which offers to all European manufactures a certain and lucrative employ, it is that of paper: the confumption will always be equal at leaft to the production, and its numerous ufes infure a ftill greater confumption, in proportion as population, commerce, and knowledge, hall increafe.
who, not being able to do and embrace every thing, hinder others from ding it. May thefe generous patriots receive that honour which they deferve: may their example be followed every where and by all. This will be to them a more flattering eulogium, a more brilliant and lafting recompenfe than cordons and ribbons, unworthy of true merit, becaufe they are frequently the price of intrigue, and the ornament of mediocrity. The pleafure of well-doing, and the fuffrages of honeft men, are pure and unchangeable recompenfes. - The artift who does not know how to confine himfelf to thefe, will never do any thing which is great.

* Rags are more fcarce, and confequently dearer, in England than in France, and they are articles of illicit commerce between the two countries. There are very fevere laws againft this commerce, but it is, and ever will be, carried on, as long as there fhall be any thing to be gained by it.

Every mation ought therefore to obferve with. out jealoufy, that each country ftrives to have within it felf manufactures of this kind.

The Americans cannot however enjoy this advantage for a long time to cone: befides the dearnefs of workmanfhip, their population cannot furnifh them old rags in quantities fueficient to eftablifh paper mills whole prontictions would be equal to the confumption of the inhabitants.

Will their population ever fumilh them whith this fufficiency? This is a queftion difficult to refolve, In fact, in proportion to the knowledge which nations may acquire, and to the liberty of the prefs, which may be enjoyed in America, a prodigious quantity of paper muft be confumed there; but can the population of this country produce rags in the fame proportion? It camot reafonably be hoped that it will. It is therefore probable that the American markets will not for a long time be provided with any other than European paper, and that this will find a place there*.

[^30]But fince the ufe of paper is fo advantageous to men, fince it is fo varied, it behoves every nation to look upon foreign confumption as a fupplement only, as an open port in the cafe of a fufpention of interior commerce. It behoves cvery uation to keep paper at a moderate price within itfelf, and to attain this end, means mult be thought of to increafe materials which ferve to compofe this article, and to purfuc the happy attempts already made to do it*. Thefe refearches

* In the moment of writing this note, I have before me very interefting effays on vegetables, and on the bark of feveral trees, to transform them into paper; thefe eflays are due to the refearches of M. Dclille, to whofe care the manuficture of Montargis is indebted for a great part of its reputation. He has far furpaffed that Scheffer, whom our men of crudition have quoted with fo much enphafis.-On fecing the books which M. Deliile has printer', on paper made from a fpecies of mallows, and the bark of che linden tree; and on perceiving the advantages which might be reaped from this invention, at leatt in packing and ftained paper, of which fo great a confumption is made; we wifh that this invention may be more and more known, received and adopted, as a means of remedying the want of rags and the dearnefs of paper, which ought to have more influence than is commonly believed on the progrefs of knowledge.

It is almof impofible that this invention fhould not foon become genera!, and it is greatly the intereft of the free Ameficans to naturalize it among them.
fearches are fo much the more cffential, fo much the more urgent, as the happy invention of coloured paper for hanging is of a nature always to caufe a greater confumption of paper; and this manner of hanging with paper will fubfift for a long time, becaufe it gives a neat and agrecable appearance to apartments.

No other is known in the United States; it is there univerfal; almoft all the houfes are neat and decent.

## SECTION XIII.

## PRINTING.

The liberty of the prefs being a fundamental principle of the American conflitution, there can be no doubt that printing will increafe there.

Strong lies of lime and pot-a?h, and the intelligent ufe of vitrolic acid, are great means of reducing hemp and flax to that kind of fubfance extremely attenuated, foft and brittle, \%hich is proper for making of paper. It might be contrived by thefe means to fupply the want of rags by old cordage. Thefe would even ferve to make good paper, fince being reduced to tow, it may eafily be bleached. The attenuation to be feared for linen is not fo for the material of which paper is made:

But it muft be obferved, that extenfive printing requires workmen at a little expence; that is to fay, men without property, talents, or conduct; whom great cities produce and employ in work which requires neither intelligence nor emulation; and it has already been obferved, that the United States, unlefs the rage of great cities takes poffeffion of them, will contain but few of thefe wretched beings.

Printing will not therefore, it may be prefumed, be extended among the free Americans, at leaft beyond that which is neceflary for the public prints*. Their conftant and confiderable fale, permitting a greater expence in workmanfhip, confequently draws about the prefs many individuals, becaufe they have, in a good falary, a view of the means of becoming proprietors or traders $\dagger$.

The

- Gazettes are fingularly multiplied in the United States. They will become ftill more fo with an increafe of population, and this is an advantage, for they are what that excellent patriot Dr. Jebb called them, "Sentinels which watch over "p public liberty and the prefervation of truth."
t However, confiderable works are fometimes printed in the United States, and of which the edition is carefully enough corrected.-I have feen, for inftance, the Memoirs in Quarto of the Academies of Bofton and Philadelphia, of the laft year, which

The furnifhing of books of fcience and amufement mult therefore ir "o a condiderable object of importation into the United States. It is for France to appropriate to herfelf this commerce, and to encourage the impreflion of Enclihh books. Our workmanthip being cheaper than 'to of England, and the Englifh making ufe of our paper, our binding being lefs expenfive, why fhould wot all the books in which the Americans fland in need of be printed in France?

It will be faid that we do not enjoy the liberty of the prefs, --be it fo: - But it is only wich refpect to our bocks"; for undubtedly
winch proves at the fame time that free America is not fo totaty without typografhical eflablifhments, and that the inhabitants are not ail fuch idiots as a prejudiced German dreaned they were.

* Under the reign of Louis XIV. whofe ambition extended to cvery thing, it was ferinully atempted to make the French language univerfal. This abfurd pretenfion was ridiculouny fupported by the tyranny exercifed upon books and authors. This tyranny could not but produce bad ones, and corfequently difguft frangers, Happily fume judicious men had the courage to make facrifices, and to get their works printed abroad. It is thefe prohibited books which have entriched the French language and increafed the reputation of French literature. What authors are heard quoted in every country? Roufieau, Voltaire, Helvetius, Montefquicu, \&ic. that the adminiffation does not pretend to extend its coercive principles to books written in foreign languages; it would not attain its end, feeing that it does not do it with refpect to French books*; and by this impolitical rigour France would be deprived of a lucrative article of commerce, certain, and of continual increafe.

The Dutch, fo ative and vigilant in feiziner the rifing branches of commerce, have for a long time fpeculated on books in the United States: many bibles and books of prayer, for the ufe of the Americans, are printed in Holland. Lord Sheffield is obliged to acknowthat is to fay, men who have been patriotic c:ough to violate the tyrant's laws of the prefs.

* So that even more than half of the libraries in France are compofed of French books, printed abroad, for which there are two caufes-the cheapneis and goodnefs of the books; the ochavo leaf printed, is commonly fold in Switzerland to the public at nine deniers or a fol, and it cofts three or four fols in France. Prodibited books are fold at Paris at the fame price as books permitted, which proves the dearriefs of French printing.- i'or to the original price of prohibited bocks, there mult be added the expences of carriage, rifks of entry, the commiffions of difierent agents, \&ic.; with retpe to the goodnefs of the works, the beft, as I have already obferved, are primed abroad: Helvetius has faid with reafon, "On ne dit la servit, que duns les livers, proizibis, on ment dans liss autres."
$\$ 74$ ON THE COMAERCE OF THE
ledge, that printing in Holland is by far more cheap than that of England, and of courfe muft have the preference. They will fome day extend this commerce to claffical books*.

SECTION XIV。

SALT.
This article, fo neceffary to the Americans, and fo abuidant in France, mult not be forgotten in the enumeration of commodities to be imported into America. The Americans will for a long time be obliged to get it from Europe; not that they have no falt markhes upon the coafts, and falt pits in the interior parts of the country ; but thefe marhes, thefe falt pits, muft have hands to work them ; and hands are
> * A man of letters, who had remarked the dearnefs of Englih books in France, and how difficult it was to get them from England, thought or getting the beft Englifh works reprinted in Paris;-this was a fpeculation really patriotiche abandoned it after having got a few volumes reprinted, probably becaufe the confumption in France was not great enough, and that of England was not open to him. He might at prefent revive it, independent America prefents a great opening to him.
better employed in the United States*. The falt exported from Europe will for this reâfon be a long time cheaper than that of America: -moreover, its freight will coft but little, as veffels coming from Europe may be ballafted with it. The Americans ought to give the preference to French falt ; it is lefs fharp, lefs cortofive, and poffeffes a better quality for falting, than any other European falt.

The three millions of inhabitants which the United States contain at prefent, are fuppofed to confume fixty million pornd weight of falt, without reckoning that which is given to cattle, and that employed in falting provifions; of which great quantity is confumed in the United States, and with which they will carry or a commerce more and more confiderable: I will not at prefent go into a calculation of the immenfe riches which the furnihhing of made falt to foreign population, continually increafing, would produce to France. I ought to guard againft exaggerations: but it may not be im-

- Salt, during the late war, was very dear in America, it was worth twenty times its ordinary price.-The deprivation of this article was very fenfibly felt by the Americans, who confume much falted provifion, and give a great quantity of falt to their cattie. States of the North will never make any falt. It is therefore poffible that French falt may have a preference among them, as being cheaper: and more within their reach: the population of thefe States will be more rapid than that of the others, and the commerce more varied and extenfive.

## SECTIONXV.

GENERAL CONSIDERATIONS ON THE CATALOGUE OF FRENCH IMPORTATIONS INTO THE UNITED STATES.

I will extend no further the lift of articles, which French commerce may furnifh to the United States: there are many others which I omit, becaufe the bounds of my work will not permit me to examine any more than the principal ones.

If faith be given to the calculations of Lord Sheffield, and of other political writers, it appears that the amount of the exportations of Great Britain into free America was, uponran average, calculated upon three years, taken before 1773, near three millions fterling, upwards of feventy-two millions of livres tour- the progreffion of population, and clearing of lands? It is efpecialiy for this future fate of thing that France ought to prepare her means.

Let it be alfo obferved, that this commerce employed feven or eight hundred veffels, and about ten thoufand failors.

Ought France to let Alip fo important a commerce, and a means fo natural of fupporting her marine? For without commerce there can be no marine. Has not the, in the richnefs of her foil, in a variety of her manufactures, in the low price of her workmanhip, in the induftry and tafte of her inhabitants, in her population, and in the fituation of her ports, an infinity of means, fufficient to eftablifh in America a folid and extenfive commerce? It muft be continually repeated, that if it be wifhed that peace fhould reiga upon the earth, the words preference and competition, which are frequently fignals of difcord, muft be ufed with circumfpection. Why fhould there be any jealoufy with refpect to this commerce? In the courfe of time, independent America will offer a field wide enough for all the European manufac. tures.
Vol. II. $N \quad$ CHAP.

## C H A P. VI.

OF THE ARTICIES WHICH INDEPENDENT AMERICA MAY FURNISH IN RETURN FOR IMPORTATIONS FROM FRANCE.

ARRIVED at this part of my work, I cannot do better than confign to it the letter addreffed by M. de Calonne to Mr. Jefferfon, Minifter Plenipotentiary from the United States of America.

## LETTER

ADDRESSED TO M. JEFFERSON, MINISTER PLENIPOTENTIARY FROM THE UNITED STATES OF AMERICA TO THE COURT OF FRANCE.

Fontainbleau, 22d October, 1786. SIR,
The King's intention being to favour as much as poffible the commerce of the United States, I have the honour to communicate to you fome difpofitions made for that purpofe.

By a letter of the 9 th of January, 1784 , to the Marquis de la Fayette, I informed him, that inftead of two free ports, promifed by the treaty to the United States, the king had determined to grant them four, which has been ef-

DENT N FOR fected; and I promifed him to confider the cuftoms and duties on importation and exportation which fhackle commerce; obferving to him, that thefe objects required confiderable application ; they have not yet been completed. By another letter, I informed the Marquis, that his: Majefty had fuppreffed the duties on the exportation of brandy, a meafure which he hoped would be ufeful to A mérican commerce; I affured hin alfo, that the duties of the king and admiralty, payable by an American veffel on its arrival in a port of France, fhould be diminifhed; and afterwards that fuch of them as remained, fhould be reduced to a fingle duty, to be regulated according to the number of mafts or draught of water, and not according to the too uncertain eftimation of gauging. This reduction requires an exact knowledge of all the duties received in the ports, and as they are of various fpecies, the ftate which I ordered to be drawn up of them has not yet been given in.

You know, Sir, the king has charged a parN 2 ticular
ticular committee, to examine our commercial connexions with the United States, and that the Marquis de la Fayette has laid before it a project analogous to the ideas contained in your letter to the Count de Vergennes: but you muft perceive, how imprudent it would be to hazard, by a change of fyftem, the produce of a branch of revenue, which amounts to twen-ty-eight millions of livres, without falling upon any object of the firft neceffity. After an ample difcuffion of every thing which might at prefent favour the importation of tobacco from America to France, it has been decreed, not that the agrecment made with Mr. Morris fhould be departed from, but that, after the cspiration of it, no other of the fame import fhould be made; and that in the mean time the Farmers General thould be obliged to purchafe annually about fifteen thoufand hogtheads of American tobacco, coming directly from the United States in French or American fhips, at the fame prices as ftipulated in the contraet made with Mr. Morris.

You will recollect, Sir, that whilft the demands which had been made for whale oil were under confideration, the Marquis de la Fayette made a private arrangement with M. Sangrain, permitting permitting him to receive as much of that article as fhould amount to eight hundred thoufand livres tournois, and that I had granted paffports
your you be to ace of twenupon n amsht at from d, mot Morris he exmport time o purfheads m the ips, at ontract he deil were「ayette ugrain, mitting to exempt this firft quantity from all duties whatfoever. M. Sangrain made afterwards an agreemenit with the merchants of Bofton for whale oil, to the amount of four hundred thoufand livres a year, for fix years, for which his Majefty has promifed the fame favours as enjoyed by the Hanfe towns.

This manner having lately been examined under a more general point of view, the adminiftration, to which the committee has made its report conformable to the requeft of the Marquis de la Fayette, and to your opinion, relative to the entire abolition of all duties on oils, has difcovered that it cannot confent to it for the prefent, on account of engagements entered into with other powers. All that could be done was to infure, for ten years, whale oil, fpermaceti, and every thing comprehended under thefe denominations, coming from the United States in French or American Thips, the fame favours and moderation of duties as are enjoyed by the Hanfe towns.
His Majefty hopes commercial connexions between the United States and France will $\mathrm{N}_{3}$ become

182 ON THE COMMERCE OF THE
become extenfive enough to engage him to continue the effect of this provifionary decifion; and as it has been obferved in the committee, that a confiderable duty was paid upon the making of the moft favoured whale oils, and even upon national ones, his Majefty confents to abolifh this duty with refpect to the former, and upon fpermaceti coming immediately from the United States in French and American fhips; fo that fpermaceti and thefe oils will have to pay, for ten years to come, no more than feven livres ten fols, and the ten fols per pound, for all manner of duty; the laft augmentation of ten fols per pound to ceafe in 1790 .

It has been determined to gain particular information upon the confumption in France of rice from Carolina, and that encouragement fhould be given to the exportation of that article.

Upon the reprefentations which have been made, touching the confiderable duties paid on the entry of pot afh and pearl afh, as well as relative to thofe of beaver ikins and fur, and raw hides, his Majefty has fuppreffed all the duties on pot afh,-on the fur and fkins of beavers, and on hides, coming raw from the United States, on board American or French veffels.

He will alfo confider of proper encouragements to be given to every article of the 1 kin and fur trade.

His Majefty has equally confented to free from all duties mafts and yards of every fpecies, red cedar, green oak, in fhort, all timber proper for the confruction of veffels, coming from the United States in French or American thips.

The committee having alfo reprefented, that there was a duty of five per cent. upon the purchafe of veffels built abroad, and that this duty was prejudicial to the fale of American veffels, his Majefty has taken this into his confideration, and exempted the purchafe of all chips, which fhall be proved to have been conftructed in the United States, from every duty of the kind.

Trees, fmall fhrubs, and feeds of trees alfo, pay high duties, which his Majefty has agreed to abolifh upon fuch as fhall be fent from the United States to France, on board French or American hips.

It having been reprefented, that the State of Virginia had ordered arms for its militia to be made in France, it has been determined, that the prohibitions which have hitherto hindered $\mathrm{N}_{4}$
the
the exportation of arms and gunpowder, as well as the duties required in cafes of particular permiffions, fhould be abolifhed, and that whenever the United States fhall wifh to have from France arms, fufils, and gunpowder, they fhall have full liberty to do it, provided it be in French or American Ihips, and that thofe articles fhall be fubject to a very moderate duty only, foleiy for the purpofe of calculating the exportations.

Finally, his Majefty has received in the fame favouralle manner the demand made to the committes to fupprefs the confiderable duties hitherto paid on books and paper of every kind. His Miajelty fuppreffes all duties on articles of this kind, deftined to the United States, and put into French or American veffels.

It is with pleafure, Sir, I announce to you thefe difpofitions of his Majefty, which are a new proof to you of his defire to unite clofely the commerce of the two nations, and of the favourable attention he will always give to propoiftions which fhall be made to him in the name of the United States of America.

I have the honour to be, with a fincere attachment, Sir,
Your very humble and very obedient Servant, (Signed)

DE CALONNE. duties kind. les of and
, you are a lofely of the proin the
re at-
rvant, NNE.

Your nation, Sir, will undoubtedly fee, with pleafure, the facilities the king has juft given to the exportation of the wines of Bourdeaux, Guienne, and Touraine, and the fuppreffions of duties granted to that effect, by different Arrets of Couticil, with which the Marquis de la Fayctte will be able to acquaint you.

## EXPORTS of AMERICA.

I will treat but of a few of the articles which America furnifhes, on account of the attention which they all merit.

## SECTION I.

TOBACCO.
Of all the articles which Franoe may procure from the United States, tobacco is the moft important one to the inhabitants of the two countries. If it cannot be claffed with our moft urgent neceffities, it follows them fo clofe, that excepting cafes wherein the ufe of it excites difguft, the deprivation of it ordinarily difcovers the laft degree of mifery.

We muft not be furprifed at its general ufe. The man greedy of fenfations, has found one lively
lively enough in tobacco: it is perhaps the only one which he can enjoy at pleafure without injuring his health, diminilhing his ftrength, 9 fufpending his work or meditations. Tobacco awakens the mind agreeably, and obfervers who have remarked the innocent pleafure, the fpecies of inftantaneous comfort, which a little tobacco procures to a poor man, borne down by the weight of affliction, have always wifhed that fo fimple an enjoyment fhould be improved and become lefs and lefs expenfive; and they cannot reflect without horror on the crime of that fifcal induftry, which, hardened by monopoly to increafe its profits, adulterates fnuff fo much, as to make it pernicious to health.

The confumption of tobacco muft therefore become more and more confiderable, and the commerce of this leaf, already very important, cannot be decreafed but by the diminution of its cultivation; which the policy of America will never permit.

The cultivation of tobacco is by no means proper for the European States, which have acquired population enough to apply another kind of cultivation to all their good lands.

It is true the Alfaciens cultivate a little tobacco, and they boaft of it; but they would

J88 ON THE COMMERCE OF THE
make a greater profit if they cultivated their lands for provifions. This experience is decifive for France, where none of thofe rich lands exift which are fo well known in America. It is therefore the intereft of France to get tobacco from abroad, but it muft be paid for by her manufactures: fhe may enjoy this advantage more fully with free America than with any other country. I will not repeat the reafons of it; I will obferve only, that the free Americans, having an immenfe extent of lands which cannot be cleared but in the courfe of feveral centuries, mult have, for a long time to come, tobacco to fend to Europe, fince this production pays with ufury the expences of clearing.

It is true, that the cultivation of tobacco in America muft be faither and farther from the fea, and that the expences of carriage may become confiderable.

But different confiderations place this epocha at a diftance; firft, in cultivating tobacco in none but abfolute new lands, the cultivation is much lefs expenfive, and the produce confiderably more abundant ; confequently it will coft much lefs in a new foil than when the foil requires more labour and manure. Secondly, America,

America, interfected in every direction by rivers and lakes, has infinite refources for rendering water carriage every where eafy, and confequently never expenfive. It is eafy to multiply canals, and confequently communications: no part of the world is fo much favoured in this refpect as America. Thirdly, The banks of the Ohio and the Miffiftippi offer immenfe lands to be cleared; the Ohio falls into the Miffiffippi, which falls in its turn into the fea: thefe two rivers are almoft every where navigable, and the lands near them produce already excellent tobacco, and will continue to do fo for a long time \%. Fourthly, If the price of

* It is impoffible to view, without indignation, that narrow policy of Spain, which would fhut out the Americans from all communication with the fea by the Miffifippi. How is it, that the cannot perseive, that her mercantile interefts invite her, on the contrary, to favour this navigation, by erecting ftore houfes upon the banks of this river near to its mouth ? Is the ignorant of the advantages of depofitories? And with refpect to her political interef, is there a greater one for her: in thefe countries, than to make herfelf immediately neceffary to American eftablifhments, within the reach of the Ohio? Muft he wait till they adopt other means? What will be gained by creating difcontent among a free people? If it be wifhed that thefe people fhould not become powerful, they muft be deffroyed; and if this barbarity belongs not to the eighteenth century, it is neceffary to make friends of them. Expedients in politics are childih and vain.

## 190 ON THE COMMERCE OF THE

 tobacco hould be increafed, France would not feel the difference, if the free Americans, preferring the culture, continued to want European manufactures, and gave the preference to thofe of France. According to this fyftem, the exchange of merchandize, manufactured in France for the productions of the foil of America, may be ftill made with advanitage, if even thefe productions were fold in France below the firlt coft in America. We have long feen the French commerce of the Levant produce great profits, although the merchandize brought in return was fold at a lefs price in France than it coft at the place where it was produced. This circumftance ftill exifts.Therefore the fpeculation, moft to the intereft of France, is to take as much tobacco as the can confume from the Americans, and pay for it with her manufactures *.
> * The tobacco leaf, of which the farmers general had the entire monopoly, or exclufive fale, produced to the king a clear nett revenue, annually, of between twenty-eight and twentynine millions of liyses.

## SECTIONII.

#### Abstract

FISHERIES, WHALE OIL, \&C. SPERMACETI

 CANDLES.Among the articles of fubfiftence which nature has liberally given to men, fifh is one of the moft abundant, the moft eafy to be procured, and the moft proper to preferve their health and ftrength*. By what fatal privilege is this food confined in France almoft to the rich? Why does not fifh abound in all places, where this tribute of the fea can be received in its original ftate, and without being charged with the expences of too long a carriage? Since it is fo well known, that it is advantageous to a ftate, and to every clafs of citizens, to procure an abundance and a variety of eatables, let them come from where they will, or of whatever

[^31]nature they be, provided they be cheap and wholefome; why is this political rule departed from, with refpect to filh, to that aliment which nature produces every where with fuch fecundity? Whatever may be the motives which may repel it, by an overcharge of duties, they can proceed from nothing but a culpable iguorance.

Fully convinced of the benefit which muft refult to mankind from an abundance of provifions, and from the facility of producing this abundance, in receiving from each nation the fuperfluity which nature has given it, I fhall take great care not to copy the narrow fyftem of Lord Sheffield with refpect to filheries.His Lordfhip agrees, that the independent Americans have, for the great fifhery, natural advantages, with which it is impoffible for the Europeans to contend.

In fact, the Americans are near that part of the Atlantic where great fifh abound ; therefore their fifhery muft be lefs expenfive to them. If accidents happen, they are foon repaired; all their operations are more prompt and fure; having a better knowledge of thefe feas, they are expofed to lefs rifks than Europeans: finally , their proximity to the filheries, affures them
provifions them. aired; fure; they finalthem vifions provifions more frefh*, and puts it in their power to rcnew them more frequently; confequently their fifhermen enjoy more conflant health, and have older officers and failors among them : thefe are ineftimable advantages to America.

The Englifh have very few of thefe advan tages; the French fcarcely any.-But ought we to ccuclude with Lord Sheffield, from this: order of things; that American filh Thould be charged with duties, in order to fupport the national fifhery, agaiuft this competition; the nature of things dictates to France more wifeand advantageous means.- Fifh is nourifhing, -whatever is nourifhing is prolific: if the Americans fifh at lefs expence than the Freuch, fo much the better for the latt; fifh will be more abtindant, and at a lower price in France. Let France open her ports; the Americans will bring fifh into them, and will pay themfelves with either the productions of the foil of France ,

[^32]
## 194 ON THE COMMERCE OF the

or of her induftry; and the population to whickr this abundance and cheapnefs are favourable will increare the productions of French indurtry.

Moreover, it is neceffary, either to renounce exterior rommerce, or to confent that there thall be fomething to exchange on both fides. To wifh to eftablifh and encourage a commerce with a foreign nation, and not to leave it to the eare of furnifhing that which it collects with the greateft facility, is a manifent contradiction. The enlightened policy of commerce is not to invade all the branches of it, but to do nothing but that which can be done better and cheaper than any other. Therefore, fince the Americans have fifh on their coafts, fince they are in the neighbourhood of Newfoundland, leave to their induftry that branch which nature has given to them in preference; let us not difpute it with them; firf, becaufe it would be in vain to do it, and in the next place, becaufe France may reap, without filhing, more advantageoufly the fruit of the American fifheries.
"But," fays Lord Sheffield, " failors muft " be found for the navy; and the filherics are " the nurferies for them; therefore, the firh-
"t eries muft be fupported; and no filh con" fumed but that which we take ourfelves; on " which account premiums are neceffary."

There is no doubt but failors are formed in the fifleries, but it is not in throwing nets or hooks, in curing or preparing filh, that this is done; it is by a frequent and long exercife on board veffels in laborious manœuvres, in living, fo to fpeak, among rocks, and in feas, which the vicinity or nearners of oppofite coafts makes continually dangerous : now this exercife of vigilance, agility, and intelligence, is performed by the failor in coafting and fifhing on the coalts of his own country. Let coafting be frequent, and let not this fifhery be difcouraged in France, and it will not be neceffary, in order to form failors, to fend them fo far to take filh, which they cannot bring to Europe without great expence: by which the confumption is confequently limited, and which deprives us of the ineftimable advantage of receiving in abundance, that which the independent Americans can take at much lefs expence.

Without doubt the exetcife of the fifheries of the North forms intrepid failors; and this painful life mult be confented to. But when nature has placed men in a climate where they

$$
\mathrm{O}_{2} \text { have }
$$

have but a few fteps to make to the interior of the country*, to find an occupation exempt from dangers and lefs fatiguing; when they can get their bread upon land, under a clear and calm fky, if he reafons, how will he be engaged to truft his. life to boards, and to brave icy feas, to expofe himfelf during the fineft months in the year to perpetual forms, which affail thefe fifhing , banks, fo frequently ftained, by means of the moft fatal errors, with European blood?

It will be anfwered, by premiums + , by privileges,

* The French fifh but a part of the year; moft of the fifhermen are day labourers, employed on land, which they leave in the month of Fcbruary, and return to it in July.
+ Eugland gives confiderable premiums to her fihermen. -But the inconveniences and abufes of the firft premiums, render them of no effect. Thefe abufes are chiefly as follows: The filhing veffil muft go to a certain port; the equipage muft pafs in review before the Officers of the Cuftoms; the ftrip muft eomplete her cargo, or remain three months at fea to do it:-fo that if in the firft week fhe procured nine-tenths of it, the would be obliged to keep the fea for the other tenth. 'The fhip can take no inftruments but thofe proper for the fihery, to which the premium is applied; the cargo cannot be difcharged but in a certain port; there are general formalities to be obferved with refpect to the falt which the carries out and brings home; the owners are expofed to vexations from Cuftom-houfe Officers, to law fuits which they are obliged to
vileges, and by prohibitions or overcharges of duties, which are equivalent to prohibitions on foreign induftry.

But it muft not be forgotten, that articles of fubfiftence are here in queftion, that thefe forced means make them dearer, that their confumption is then limited, and their effect refrained; that in forcing nature in this manner, is doing it at the expence of population, for by this barbarous regimen, men are deftroyed inftead of being produced, whillt permiffion to bring into fea-ports the filh of thofe who have nothing better to do than to take it would infallibly increafe population.

Moreover, to whom are thefe premiums and all other favours, with which it is wifhed to combat the nature of things, diftributed? Does the individual of whom it is intended to make a failor enjoy any advantage from them? Let not men be deceived in this, they are the prey
carry on in courts of juftice, far from their refidence. -Judge if a poor fifherman can expofe himfelf to thefe inconveniencies; this is what has caufed fifheries to decine, efpecjally thofe of Scotland.-It is what has given fo much afcendancy to the Dutch, who have no premiums. It is that which has rendered premiums ufelefs. Other Governments adopt this method of giving premiums: the fame difficulties are attached to them, and yet people are aftonifhed that things go not on better.
of the navigator, who goes not out of his clofet but to walk about, and who directs his fteps fometimes toward the fea fide. He begins by taking his own hare, and be perfuaded that the wages which he offers to thofe whom he employs to conduct his perilous enterprize are parfimoniounly calculated: therefore the end is chot attained.

If there be an abfolute want of failors who have paffed their noviciate about the Banks of Newfoundland, and in the North feas, there is a more fimple and fure means, lefs expenfive, and what is more important, one which is exempt from deftructive confequences, to form them. Choofe from honeft families young, robuft, and intelligent men ; infure to them a perfonal recompenfe if, after a certain nunıber of voyages on board filhing veffels, they bing certificates of good behaviour, and of experience acquired by practice. Oblige them to go op board veffels belonging to nations or cities, to which thefe difficult fifheries are a neceffary refource, It is there they will acquire real knowledge. Thefe, added afterwards to failors exercifed in the coafting and in the fifheries on their own coafts, will form for the navy experienced failors.

Whale oil belongs to the fifheries: it is another
ther great article of commerce with the United States. All oil of this denomination is not yroduced by whales only; great quantities of it is drawn from feals, and other fpecies of fifh.

The ufe of this oil is much reftrained in France* : that of the white of the whale, and of which fuch fine candles are made, is little known there. The ufe of oil will become more general.

Lord Sheffield is of opinion, that found policy makes it neceffary that the Englifh fhould prohibit, or at leaft difcourage by duties, American oil. It was with this idea that the government of England impofed a duty of four hundred and fifty livres tournois per ton on oils imported by the independent Americans, to favour the oils of Canada and Nova Scotia.

This rigour fhould make this production, awhich has been hitherto profcribed, received in France. The introduction of it is fo much the more neceffary, as the French whale finhery is ruined. Bayon, formerly celebrated for this fifhery, has akandoned it; Dunkirk, which con-

[^33]tinues to fit out veffels, furnifhes but little of this oil, and at a very high price.

Whether the French go to the North, or towards Brafil, they will habour under a difad-vantage:-Without afylum in cafe of misfortunc, their navigation is always longer and more expenfive than that of other nations which carry on a whale filhery. It is therefore more to the advantage of France to receive American oil, and to pay for it with her wines and manufactures.

The French government foon perceived tl. neceflity of receiving the oils of America. Had not this been done, an emigration of American fihhermen into Canada and Nova Scotia would have been the confequence. This was near happening, fome time after the peace, in the ifland of Nantucket. In defpair on feefing the ports of England Thut, and not knowing where to fell their oils, which alone fupplied all their wants, the inhabitants had refolved to emigrate to Nova Scotia, when, on the moment of departure, they received a letter from the Marquis de la Fayette, whom they jufly looked upon as their patron and father. He perfuaded them to be patient until the French government fhould fupprefs or reduce the duties on oils, which
have been reduced for a limited time; but during this time the independent Americans are to enjoy, with refpect to their oils, all the advantages given to the moft favoured nation *; and this favour, joined to all their other advantages, cannot fail to give them a great fuperiority in this branch of commerce, as beneficial to France as to them,

The white of the whale mult be added, and the candles made with this fubftance; they are known by the name of fpermaceti candles, and ferve inftead of very fine bougies or wax candles. The American Colonies exported of thera, according to Lord Sheffield, to the amount of five hundred thoufand lives tournois, in the years 1768,1769 , and 1770 , calculating thefe candles at thirty-two fols a pound. It is probable, that thefe would be better made in France.

* Such are the dutics on whale oil, \&c. paid in France, ace cording to the tarifs of 1664, and 1667 ; whale bone, cut and prepared by the French, thirty fols per cwt . fins three livres per cwt. a barrel of oil of five hundred pounds weight, three livres.-Whale bone from foreign filheries, pays in the firlt inftance, nineteen livres, in the fecond, thiryy livres, and twelve livres in the third. The Hanfe Towns pay nine livres in the firft inftance, and feven livres ten fols in the third.-It is this laft duty which the American oils now pay.

> SECTION HI,

CORN, FLOUR, \&C.

Foreign corn and flour enter France on payiag a duty too inconfiderable to make any fenfible increafe in their price. The principles laid down in the preceding article, with refpect to articles of fubfiftence, muft be adopted for the commodities of corn and flour.

The corn merchant, the mof ufeful of all merchants (whatever the vulgar, who, from a want of information, confounds a dealer in corn with a monopolifer, may think of him), fears arbitrary exceptions, fudden prohibitions, and unexpected ftrokes of authority. This fate of uncertainty prevents the folid eftablifhment of the true fyftem of liberty, whence refult innumerable inconveniencies, which no other fyf? tem would bring on provided it were fixed, and that it afforded a certain bafis of calculation.

But how could a legiflation for corn be formed which fhould not be one of liberty, and which hould neverthelefs afford a like bafis?

This is impoffible: feeking, firf of all, the particular rules for every cafe, when thefe are of a nature not to be forefeen, is feeking for a chimera.

Not to fall into contradiction it is neceffary to choofe between arbitrary power and liberty. -But that which is arbitrary prefents nothing but a perfpective which is naturally difcouraging. No property is fafe under this fyftem: when it exifts, the merchant and the cultivator are obliged to hazard their property in a lottery, of which the chicaneries cannot be calculated; for it is neceffary to forefee the falfe informations, errors, and manœuvres, of an intereft different from their own, and even from that of the public, the attempts of power, $\& \mathrm{cc}$. ; and if all thefe confiderations ought to enter into the elements of their calculations, how can they found hopes on fuch a variable batis?

Liberty confifting, on the contrary, in the choice which every one may make of that which is moft agreeable to him, according to the circumftances of the moment. This is a general rule; it is applicable to every cafe, a ad the hope of gain is elways accompanied by the decifive certainty that an individual will be mafter of all his induftry, and of combining his fpeculations
fpeculations accordiug to circumftances, which human power cannot govern.

From this demonftrated truth, that in every ftate of circumftances, the firft thing needful to the commerce of grain is a fixed rule, refults the neceffity of embracing the fyftem of liberty, and of protecting it in its fulleft extent, without oppofing any reftrictive condition*.

Governments fhould be determined by the neceffity alone of this fixed rule, if the fyftem of liberty was not even demonftrated to be the beft in every refpect. But this fyftem is moreover the moft certain prefermative againft the altematives of ruinous abundance, and fcarcity ftill more ruinous, which are both calamities, wherever impofts are confiderable.

Lord Sheffield obferves, that Earope, not being conftantly under the neceflity of recurring to American corn, the United States cannot put corn and flour into the clafs of productions, which found an effential and durable com-
> * The Englifh fometimes proh vit importation or expor-tation.-But it muft be obferved, that the Englifh previoufly fix the price of corn, which determines prohibitions. This is therefore a fixed law, and which, confequently, deranges not fpeculators like an arbitrary law.
merce *. Lord Sheffield is miftaken. It is a truth, which every man of obfervation is acquainted with, that not a year comes forward without fhewing that fome one or more nations in Europe are in want of corn. This want of grain therefore being occafionally extended to all Europe, France ought to be anxious to become the magazine of it, fince England was fo formerly. Therefore it would be advantageous to conftruct in the free ports opened to the United States commodious depofitories to receive and preferve American corn. By this means

* We have no fimple exprefion in France for ftaple commodities; words by which the Englifh term thofe forts of productions of foil or induftry, fo naturalized as to form an effential part of national riches, and of which the commerce is favoured by great eftablifhments, fuch as public buildings, depofitories, and places or markets, deftined to thefe productions. Thefe are called the flaple, whence the expreffion flaple commoditics was naturally formed.

We have not, like the Englifh, the happy liberty of making words: their language becomes more rich, their elocution rapid, and we lofe ourfelves in long circumlocutions, to defcribe a thing of which we want the name; an inconvenience more pernicious to infruction than is believed. This remark is not at prefent ill timed: it is to thofe who conduct affairs, wholive amony them, whole vecation it is to treat thereon, to create words which explain them c!early and properly. corn would be always ready to be tranfported to the place where the beff price was to be had for it. Thefe free ports being derofitories where articles neceffary to the United States would be collected, the commerce of corn wouid thereby acquire a continuation advantageous to the two nations:-advantageous to America, becaufe the certainty of a place of depofit, fafe and little expenfive, would caufe grain to be fent more frequently; advantageons to France, becaufe, befides the continual pofferion of an important commodity, and which would guarantee it from every manœuvre of interior monopoly, thefe depofitories would furnifh the meaus of a coafting trade, almof continual, from the north of France to the fartheit vart of the Mediterranean.

France does not grow all the corn the confumes*; fhe is obliged to get it from the north, from Sicily, and the coalts of Africa;

* This is a fa.f, though contrary to the common opinion. A nother fact, which proves the neceffity of admitting corn at a low rate, fuch as the corn of America is, that three-fourths of the inhabitants of the province of Beauce, which produces fuch fine corn, eat black bread and no other, and of which they have not even enough. What muft this fearcity be in other provinces where no corn is grown? that of the United States ought to be more proper for her, for two reafons: Firft, it mult be cheaper, being the produce of a cultivating people. Secondly, the people have more various and general wants of frefh provifions than the fouthern countries of Europe. The American may receive wines, fine oils, and fruits of France, in exchange for his corn. The Neopolitan, the Sicilian, and the African, camot be paid in the fame manmer.

Finally, there is another conideration favourable to the importation of American corn: it may eafily arrive at Honfleur*; there it may be ftored up, and undergo all the procefles neceffary to its prefervation; proceffes which are become very fimple and little expenive $\dagger$. 'Thefe

* I quete Honfleur, becaule this port, from various circumftances, uielefs to mention here, is deftined ty nature to become the depofitory of a great commerce, and that efipecially of the United States with France. The project of making it a free port has beea under confideration; and it is to the greateft intereft of France that this project fhould be carried into execution.
or Thefe confift in nothing but: placing magazines in the open air, opened to dry winds, and conftrugted in fuch a manner as to be entirely remored. This operation, performed once a fortright, in proper weather, needs only to be repeated a certain number of times; after which the corn

Thefe eftablifhments would keep up a confiderable quantity of foreign corn within the reech of the capital, a greater advantage than may be imagined.

There are ftill other motives which ought to engage the French to encourage the importation of American corn. They have need of it for the vaft magazines which the land and fea forces, and frequently fcarcity, oblige them to keep ftored.

What hould hinder Government from forming magazines of American corn in the French fugar iflands, which tempefts, conflagrations, and other unforefeen accidents, expofe fo frequently to famine, becaufe contracted victualling is carried on by monopolifers, who fend but little in order to fell dear?
may be left in a heap, without fear of its heating. Experiments of this kind have been carefully made. The method of preferving corn ufed at Geneva may be quoted: The government has eflablifhed one of its greateft revenues in the fale of corn to the peoplc, and its interef has, confequently, led it to improve the art of preferving this commodity. Befides, in depofitories deftined whoily to the corn dealers, the fame corn never remains long enough to render its prefervation difficult. There is fome reafon to believe that the fals air of the fea is favourable for it.

## SECTION IV.

MASTS, YARDS, AND OTHER TIMBER FOR THE NAVY.

France, like other European ftates which have a royal navy and fleets of merchant fhips to keep in repair, imports timber from Livonia and Ruffia. This general magazine begins to be exhisifted; the quality of its mafts is not fo good as formerly. This commerce is, moreover, attended with the difadvantage to France of requiring confiderable remittances of money, without reckouing the inconveniences of a dangerous navigation, frequently interrupted by ice; alfo the competition of feveral nations, which their proximity and many other circumftances naturalize, fo to fpeak, in the ports and feas of the North; advantages which the French cannot have.

Thefe confiderations ought to determine France to turn her attention to the United States, to procure from them the timber neceffary for her navy, aud maft timber efpecially. There is but one objection to this, and it arifes om prejudice. It is pretended in France, that Vol. II. P the
the quality of American timber is very much inferior to that of the Baltic. Some people go fo far as to maintain that it is improper for the conftruction of veffels. I have reafon to believe that this judgment is not only hafty, but dictated either by ignorance, or the partiality of perfons interefted in the Baltic timber.

It is not in the laws of nature, that immenfe countries, whofe afpects are as varied as thofe of Europe can be, and in whofe foil there are the fame diverfities, fhould produce no timber but of a quality inferior to that of the timber of Europe.

Better directed inquiries, and a more attentive examination, will foon deftroy this prejudice againft the quality of American timber; a prejudice fo much the more difagreeable, as it would deprive the commerce between France and the United States of an article important to the two nations.

If France will inform herfelf ferioully of this matter, let her confult even the enemies of America; let her confult Lord Sheffield, fo moderate in his eulogiums, when it is neceffary to give them to the independent Americans. His Lordhhip fays exprefsly, "that the nego" ciators of the treaty of peace, who have ceded
" the territory of Penobfcot, to the eaft of " Cafco bay, belonging to Great Britain, de" ferve the fevereft cenfure; as this country " produccs, without contradiation, the beft " timber. The coaft," adds his Lordfhip, " is covered with timber proper for navigation " and other ufes, and in quantities fufficient to " the wants of Great Britain for centuries to " come. The white pine, known in England " by the name of the Weymouth Pine, or " the Pine of New England, abounds in this "territory; it is inconteftably the beft for " mafts, and grows there to a prodigious " height."
This is confirmed to us by men who have travelled and refided in the United States. Thefe men affiure us, that the States produce all kinds of timber of which we are in need, and that the white pine of the Conneclicut, Penobfcot, and Kenuebeck rivers is, at leaft, equal in quality to that of the north of Europe. The fhip-builders of Philadelphia efteem it fo much, that they begin to make uíe of it for fide planks above the furface of the water.

Green oak, of which there are fuch fine forefts in Georgia, unites the moft precious qualities; it may be procured from St. Mary's, $\mathrm{P}_{2}$ of
of a more confiderable fantling than that which comes from the Levant and the ifland of Corfica; it is compact, the worms never attạck it, and its duration is unequalled. The green oak of Carolina is the hardeft timber known ;-the veffels built with it are of a very long duration.
SECTIONV.

SKINS AND FURS.
In this trade Lord Sheffield looks upon the Uuited States as dangerous rivals to Canada; and it is not without reafon that his lordfhip is of this opinion.

The proximity of the great eftablifhments which the independent Americans form at prefent at Pitfourgh, and in many other places of their poffeffions beyond the mountains, muft infenfibly give them great advantages in this commerce, and make them partake with Canada a large fhare of the profits.

In fact, the regions fituated between the waters of the lake Ontario, and thofe of the Miffiffippi, interfected by the numerous rivers which fall into the South and North-Weft of Lake

Lake Erie, of the Michigan, and of the Superior, as far as the Ouifconfing *, and cven to the lac des bois; the great undertakings in which the Virginians are at prefent employed, to improve the navigation of the Potowmack, to the foot of the Alle-Gheny; the probability of another communication with the ultramontane waters; by means of the weftern branches of the $S u f$ quebannab; without omitting the facility with which the inhabitants of the flate of New York went to Niagara before the war, in going up the Hudfon's river from their capital to Albany, beyond that of the Mohawks, croffing the little lake of Oneida, and by means of an eafy carriage going down the river of $O /$ weego, in the mouth of which the Ontario forms an excellent harbour; all thefe reafons, and many others which relate not only to geography, but to climate, proximity, \&c. muft in a few years put the Americans in poffeffion of the greatelt part of the fur trade.

Thefe advantages will be fill more certain, when the Englifh fhall have evacuated the forts

214 ON THE COMMERCE OF THE of Niagara*, the great eftablifiment of the ftreight $\dagger$, and that of the Michillimakinack $\ddagger$.

The annual fales in London of furs from Canada, produced, in 1782, four millions feven hundred thoufand livres tournois, fomething more in 1783 , and in 1784 they amounted to upwards of five millions. All thefe furs are paid for with Englifh manufactures, and the fourth part is prepared in England, by which their value is doubled. Now this rich commerce; carried on by way of Quebec, will certainly fall as foon as the forts and the countries which they command fhall be reftored to the Americans. It is from this confideration that the reititution of thefe forts is withheld; to the period of which the Englifh look forward with pain.

* A very important one, which commands the fpace of the thirteen leagues which feparates the lakes Erie and Ontario.
+ A city founded by the French, on the heighi of St. Claire, which carries the waters of the lakes Michigan and Huron into the Erie.
$\ddagger$ A fort and eftablifhment at the point, in the iffand of this name, which commands the paffage of the falls of St. Mary, through which the waters of the upper lake fall into thofe of the Huron,

It is not poffible to fpeak of American rice without thinking of the pernicious inconveniences which its cultivation produces. The wretched flaves who cultivate it, obliged to be half the year in water, are expofed to fcrophulous diforders and a premature death. It is raid, that this confideration prevents the flates, wherein rice is produced, from abolifhing flavery. Free men would not devote themfelves willingly to this deftructive labour*.

Were this even true, and that in the fyftem of liberty means could not be found to reconcile this culture to the health of the labourers, a fufficient motive could not be drawn from it to condemn to death, or to cruel difeafes, a part

* Rice is cult:vated in Piedmont and in Italy, by people who have no habitations, and are known by the name of Bariditti, the fruit of the bad political conftitutions of that part of Europe. When thefe Banditti have finifhed their work, the Sbirres conduct them to the frontiers, for fear of the diforders to which their inaction and mifery might incline them.

216. ON THE COMMERCE OF THE
of our fellow creatures, born free, equal us *, and with an equal right to live. Were the culture of this commodity even abfolutely neceffary, this neceffity would give us no right over the lives of negroes, or it would be the effect of a ftate of war; for fervitude was never a right.

* They are of a different colour from that of the Europeans; but does the quality of man depend on colour? Are not the negroes organized as we are? Have not they like us every thing which belongs to the production of the fpecies, to the furmation of ideas, and to their development? If their blac': colour ought to have any moral effect, to bave any influence over th:ir fate, or to determine our conduct towards them, it fhould be that of inducing us to leave them where they are, and not to force them away from their country; not to punifh thern by the moft barbarous treatment on account of their colour; not to drag them into a foreign land, to condemn them there to the viie and painful life of animals. Do they come and offer themfelves voluntarily as flaves? Do they afk to leave thofe torrid zones, wherein nature feems to have circumfribed them by their colour, as the has done by us in more temperate ones by our white compl sions? Their wants being few, keep them in ignorance; we add every thing capable of changing it into imbecility, and we argue upon'this degradation, of which we are the culpable authors, to tranquillize ourfelves on the juft reproaches which nature makes us! Can we boaft therefore of our knowledge, as long as it-remains an accomplice in thefe horrors? See on this fubject, l'examen crititique des Voyages, de M. de Chaftelux.

There

There is a fpecies of dry rice no way dangerous to cultivate. Moreover the example of the Chinefe and the Indians, among whom the culture of rice makes not fuch ravages, ought to make us hope, that in imitating them life and health would be reftored to ment, of which we have never had a right to deprive them.

After having confidered this production as a man fhould coufider it, I muft now confider it as a merchant ought to do.

The French government has not yet taken a determined refolution relative to the introduction of American rice. It is a wholefome and fimple article of fubfiftence, proper to fupply the place of principal commodities. It cannot be too often repeated, that the multiplication of articles of fubfiftence ought to be encouraged; it would render life lefs painful to the people,' increafe population, and confequently natural riches.

If France wifhes to have a great and Yolid commerce with the United States, fhe ought to admit all the productions of the United States.

The Americans exported annually, during the years 1768, 1769 , and 1770 , to Great Britain and the fouth of Europe, a hundred and

218 ON THE COMMERCE OF THE
fifteen thoufand barrels of rice, worth fix millions and a half of livres tournois*. It is the moft confiderable article of exportation after tobacco, wheat, and flour. It deferves therefore that France fhould think of it for her commerce, and endeavour to bring it into her ports, to be diftributed there to other European markets.

## INDIGO.

The fame thing may be faid of the indigo of the Carolinas and Georgia; it makes a part of the important productions of the United States, and is confumed in Europe;-it is therefore neceffary to open for its reception all the French ports, and afterwards to give it eafy communications. The Englifh received of it annually, during the years 1768, 1769, and 1770 , to the amount of three millions of livrcs tournois $\dagger$. It was principally confumed in England, Iteland, and the north of Europe, by reafon of its low price. The indigo of St. Domingo is much dearer.

[^35]The

Thie Indigo of Carolina and Georgia has acquired a much better quality fince the firf quantities of it arrived in England; but I have not learnt that it is to be compared with the indigo of Domingo. Travellers fay, that Carolina produces indigo almoft as good as that of the French illands.

There are kinds of dying to which low priced indigo is proper; and, for this reafon, certain dyers ufe that of the Carolinas and Georgia. In thefe cafes, it will always have the preference. Therefore American indigo inould be admitted as long as there is a confumption for it, for the Americans will continue to cultivate it ; and fince this cultivation cannot be prevented, the moft advantageous thing is to frive to become agents in the general commerce of America.

FLAX-SEED.

North America fent to England and Ireland, during the years 1768,1769 , and 1770 , fiaxfeed to the amount of two millions and.a half of livres tournois;-it was all confumed in Great Britain. The advantage of paying for this feed with Irifh linens, gave it the preference to that of Flanders and the Baltic. Flax-
feed from thefe countries is, moreover, very dear.

It is the bufinefs of thofe French merchants, who may be interefted in the commerce with the United States, to confider what advantages they may derive from this commerce. If the culture of flax becomes extenlive in France, foreign feed ought to be preferred for two reafons: -the quality of the production is improved by it, and there is more advantage in fpinning flax in peopled and induftrious countries, than in letting it ripen to gather feed. It appears, that flax-feed comes not in abundance, but from countries where there are not hands fufficient to fpin, or give the firft preparation, even to the flax they produce; it is the! proper to cultivate it for its feed, which becomes a confiderable article of commerce: as long as this fate of things fubfifts, it muft alfo be proper for peopled countries to get flax-feed from abroad.

Flanders feems to be an exception; but the exportation of flax is there prohibited, for the purpofe of encouraging fpinning, \&c.; in this cafe Flanders, being a country very proper for the cultivation of flax, may leave to many cultivators of this plant no other refource than the commerce of the feed. It is probable, that if
the flax could be fent from Flanders, after the firt preparation for fpinning, nobody would think of gathering the feed.

## SECTION VII.

NAVAL STORES, SUCH AS PITCH, TAR, AND TURPENTINE.

Before the emancipation of America, England received confiderable fupplies of thefe articles from America, particularly from Carolina and the fouth. The quantities of thete articles amounted annually, during the years 1768 , 1769, and 1770, to twenty-feven thoufand feven hundred barrels of pitch; eighty-two thoufand four hundred barrels of tar; and twenty-eight thoufand one hundred of turpentine: the whole amounting, in the port of exportation, to one million two hundred and twenty-eight thoufand livres tournois.

Thefe fores were very valuable to the Englifh, as well for their commerce as for their proper confumption. Two confiderable manufactures, eftablifhed at Hull, were fupported by them ; tar was there converted into pitch, confiderable quantities of it were exported to
the
the fouth, where it was received in competition with that from the north of Europe. Turpentine, converted in thefe manufactures iuto oil or fpirit, furnifhed a confiderable object of commerce. England confumes a great deal of it in the preparation of colours, varnifhes, $\& c$.

The American revolution has not made the Englifh lofe fight of thefe ftores: the want they have of them makes it imprudent to truft wholly to the exportation of thefe articles from Ruffia and Sweden, where the Eng'iih have the Dutch for competitors. Moreover, the navigation of America, lefs dangerous than that of the Baltic, is not, like the laft, limited to a certain time of the year, it is confequently more frequent and lefs expenfive; fo that thefe ftores will come for a long time from America at a lower price than from the north. American tar is as good as that of Europe, thicker and more proper for making pitch; it is preferred for fheep, even at a higher price. American turpentine is inferior to none but that of France.

An Englifh merchant has taught the Ruffians how to furnifh is good turpentine as that from any other nation: this production will be in nerica merier and ferred erican lat of Affians from be in great great abundance there, by the numerous and immenfe forefts of firs in the neighbourhood of Archangel, where their corps are depofited.

This ftate of things fhews to France what value fhe ought to attach to the naval ftores which may be furnifhed from America. The quantities o. them exported from Charleftown becomes more and more confiderable*. The fandy foil near the fea, in North Carolina and the fouth of Virginia, produces a great quantity of firs, from which tar and turpentine are extracted; this is done without much trouble, and the facility of felling and preparing the trees is a great encouragement.

[^36]S ECTION.VIII.

TIMBER AND WOOD, FOR CARPENTERS AND COOPERS WOOK; SUCH AS STAVES, CASKHEADS, PLANKS, BOARDS, \& C.

France as well as England ought to be, for their own interefts, engag to favour the importation of thefe articles, of which the United States can furnifh fuch great quantities.

Timber fails in France, and will become more and more fcarce; population deftroys it:-yet timber muft be found for houfes, mills, \&c.hogtheads mult be made for fugars; calks and barrels for wine, brandy, \&cc. Thefe articles of timber are principally furnifhed from the North to the ports of France-but they become dear, their quality diminifhes, and the Americans have the advantage in the carriage *

The

- It is neceffary to give our readers an idea of the price of fome of thefe articles: an American very converfant in them has furnithed us with the neceffary particulars.

White oak planks, of two inches and a half thick, fawed by the hand, were fold, in 1785 , at fifteen piaftres, or two hundred and fixty livres ten fols tournois, the thoufand feet.

Ordinary

The value of thefe articles, exported from America to Great Britain only, amounted to two millions of livres tournois in the year $177^{\circ}$, according to a ftatement drawn up in the Cuf-tom-Houre of Bofton. The general exportations to the Englifh, French, American, and Spanifh iflands, and to the different parts of Europe, are immenfe, and become daily more confiderable. Were not this timber of a good quality, the increafe of this commerce would not be fo rapid. The French have in this refpect fome prejudices, which it is of importance to deftroy. If the American flaves are efteemed in making rum calks, \&cc. they will undoubtedly preferve our brandies.

Ordinary planks of fine white pine an inch thick, fourteen or fifteen feet long, and from a foct to fourteen inches wide, were fold at the fame time at feven piaftres, or thirty-feven livres tournois, the thoufand feet.-Thofe of a double thicknefs, double the price.
Planks, from two to five inches thick, and from fifteen to fixty feet long, at twenty-one pounds New York money, or two hundred and feventy-three livres tournois, the thoufand feet. The fame perfon faid he had feen curbs or bent time ber at ten thillings, New York money, a ton, the expence of cutting, \&c. not included.

VoL. II.

## 226 ON THE COMMERCE OF THE .

$$
\begin{gathered}
\text { SECTION IX. } \\
\text { VESSELS CONSTRUCTED IN AMERICA, TO BE } \\
\text { SOLD OR FREIGHTED. }
\end{gathered}
$$

It has been obferved that the bulk of the commodities which might be exchanged by the commerce between France and the United States, was, at an equal value, much more confiderable on the fide of America than that of France. There refults from ihis; that in thefe exchanges a great number of American veffels muft be fubject io return to America in ballaft. -This fate of things would certainly be prejudicial to the commerce between the two nations, if fome compenfation could not be eftablifhed which fhould remove the inequality.

This compenfation may be made in a very advantageous manner to both. The independent Americans conftruct veffels for fale : if it be agreeable to a nation to purchafe of another the articles which this manufactures at a lefs expence, and with more means, it follows, that the French ought to buy American veffels;
and, in fact, this commerce begins to be eftablifhed.

Lord Sheffield reprobatis this commerce with refpect to his own country.-" Its exift" ence," fays his Lordfhip, " depends on its "، navy; this depends as much on Englifh fhip" builders as on Englifh failors; therefore, of " all trades, that of fhip-building is the moft " important to be preferved in Great Britain," The advances, according to his Lordfhip, are of little confequence, and thefe veffels not being deftined to be fold to foreiguers, what they coft ought in be confidered fo much the lefs, as the expence is incurred in the country.

Lord Sheffield prefumes alfo, that hip-building will be encouraged in New Scotland, Canada, the Ifland of St. John, \&c. Finally, his Lordhhip declares, "that the encouragement " of fhip-building in the United States is ruin"" ous to Great Britain ; that it is the fame to " thofe who may purchafe American built ver" fels; becaufe, notwithftanding their cheap"' nefs, thefe veffels are little durable, from the "' nature of their materials." This obfervation relates particularly to veffels built for fale, which, his Lordfhip fays, "are very inferior to thofe which are befpoken."

It cannot be denied, that it is of confequence to a nation which attaches a great importance to its navy, to have fhip-builders. The repairs $\& c$. of which veffels are conftantly in want, would be badly directed, if there were not, in the clafs of workmen to whom this induftry belongs, men capable of conftructing a veffel, and habituated to this conftruction. What is ftill more, as foon as a nation has a navy, it is greatly to its intereft to poffefs every means of improving it; and the poffeffion of thefe means is fo much more fecure when there are eftablifhments in the country which, in this cafe, fupport emulation, by the conftant exercife of the art.

But it does not follow, that to preferve fuch an advantage, a mation ought to have no other veffels than thofe which are home built: it is here neceffary to diftinguifh hips belonging to the royal ravy from merchant fhips. The firft are alone fufficient to employ a requifite number of able builders, and to fupply every thing which the conftruction and repairs of veffels require. But merchant fhips, of which a confiderable number is wanted, may be procured from abroad, if thofe of an equal quality can be had at a price confiderably lefs.

Will it be faid, that a nation becomes fo
much the more powerful at fea, as the conftruction of veffels is encouraged in her ports? that under this point of view it is neceffary to be cautious not to furnifh the independent Americans the means of forming a navy, which would render them formidable? that it is at leaft unneceffary to haften thefe means?

If this confideration were true, it would in fome meafure impofe on France a law to encourage the United States to form their navy: for, however formidable her own may be, the has too many natural obitacles to remove for her navy to be the effect of any thing but painful efforts, and confequently that it fhould be an eftablifhment very difficult to maintain, -very expenfive, and fubjuct to long intermiffions. And fince it is neceffary to fpeak conftantly of a threatening rivality, -of an armed rivality, France has the greateft intereft, to balance more furely the force of her rivals, by calling to her aid the naval force of a friendly people, -of a people to whom nature has been prodigal in the means the has given them of having a confiderable one.

But the policy which refufed to purchafe American veffels, for fear the Americans fhould beccine formidable at fea, would be badly Q 3 founded.
$23^{\circ}$ ON THE COMMERCE OF THE
founded. A fure manner of retarding the eftablifhment of a navy, by a nation which poffeffes the means and materials; the power and activity which fuch a great eftablifhment requires, is to employ it continually in the conftruction of veffels for fale, and to habituate it to this kind of commerce. If this nation, and fuch is the pofition of the United States, has nothing to fear interiorly from any other power, it will certainly defpife all fuch military preparations, whofe profit and utility will not be fo immediately perceived, as the frequent gains of peaceful commerce. Therefore, let the independent Americans be perfuaded to build veffels for fale: let them not be provoked to build Mips for defenive and offenfive operations, and they will neglect the great means with which nature has furnifhed them, of having a refpectable navy: they will even neglect them, when greater riches, and a more confiderable population, fhall facilitate to them the ufe of their natural means.

Far from fuffering by this new arrangement of things, France would gain thereby. This idea will undoubtedly appear extraordinary, becaufe, in abandoning workmanfhip to American Thip-builders, France is deprived or it: but how

Eafily may the compenfate this apparent lofs! In fact, when nothing is to be had without labour, it is then confidered as real riches : siacrefore, it ought to be employed with a prucent economy, efpecially in the fyftem of national rivalities. The workmen who will not build veffels, will make cloth, with which veffels may be paid for. The expence of manufacturing thefe cloths will be paid at home, as that for the conftuction of veffels would have been; by which means, thefe will be had at a cheaper rate. This labour and expence will therefore produce greater advantages, and place the nation in a more defirable relation with its rivals.

Finally, Lord Sheffield, whofe narrow policy is here refuted, propofes that fhip-building fhould be encouraged in Canada, New Scotland, \&c. But do phyfical circumftances favour thefe countries as much as the United States? Can England reap real advantages from this encouragement? It is a queftion with which feveral writers have combated Lord Shéffield, and on which I cannot decide.

But if England had this refource, France would be without it. Veffels built in America will always coft her lefs than her own, or thofe
confructed elfewhere: fhe ought ther fore to favour the introduction of the firft.

A celebrated minifter, whon France has reaion to regret, thought as follows: his defign was to get a part of the veffels of the French navy confructed in Sweden; he thereby expected to make great favings: they will be greater and more real, in getting the veffels confructed in the United States.

The Englifh themfelves will not be able to refift the force of things; they will fooner or later return to the ufe of American veffels; for thefe coft but a third * of what Englifh veffels are built for; and cheapnefs is the firft law of comrnerce.

The bad quality attributed to American veffels is a fable, arifing from the following circumftances: in the contention for independence, the Americans built veffels in hafte, to arm them as cruifers: they were forced to make ufe of wood which was green, and unprepared; other things were either wanting to thefe veffels, or precipitately prepared. Confequently

[^37] the veffels were imperfect; but this imperfection was but accidental. A cruife is a lottery, wherein no notice is taken of the goodnefs and durability of the veffel. It is fufficient that it be a good failer, this is the effential quality.

Peace has re-eftablifhed the conftruction of veffels in the manner it ought to be; and there are American veffels built before the war, and fome thirty years ago, which for goodnefs and duration are not inferior to any Englifh veffel.

More progrefs bas been made in America than any where elfe in the art of fhip-building; this is eafily explained :-it muft not be forgotten, when the independent Americans are fpoken of, that they are not recovering from a flate of barbarity. They are men efcaped from European civilifation, employed, fo to fpeak, in creating their country and refources : no fhackles reftrain their efforts, every thing in Europe is looked upon as perfect, and made ufe of, without thinking of improving it. Thefe two effential differences caufe a very confiderable one in the intenfity of induftry.

Bofton has produced a man aftonifhing in the art of thip-building. Long and clofely employed in the fearch of means to unite fwiftnefs of failing in veffels to their folidity, Mr. Peck

234 ON THE COMMERCE OF THE
has had the greatelt fuccefs. It was, his hand which produced the Belifarius, the Hazard, and the Rattlefnake, which were fo particularly diftinguifhed during the late war by their fwiftnefs of failing. Veffels conftructed by this able builder have qualities which others have not ; they carry a fourth more, and fail fafter. Thefe facts are authenticated by a number of experiments.

The Englifh themfelves acknowledge the fuperiority of American fhip-building: "The "fineft veffels," fays Colonel Champion, " are " built at Philadelphia; the art of Thip-build" ing has attained in that city the higheft de© gree of perfection. Great veffels are built in " New York, alfo in the Chefapeak, and in " South Carolina: thefe laft, made of green "oal;, are of an unequalled folidity and dura" bility."

The American proverb fays: That to bave a perfect veflel, it muft bave a Bofton bottom and Pbiladelpbia fides.

The French, if connoiffeurs be believed, are yery inferior to the Americans in the minutix of fhip-building. This fuperiority of America ought not to furprife us : it will ftill increafe. The independent Americans who inhabit the coafts,
coafts, live by the fea, and pride themfelves in navigation. As they have competitors, their genius will never fleep, nor will its efforts be Thackled in any manner whatever. In France, the people are, and ought to be cultivators; the marine is but a fubordinate part, and by the nature of things, it muft enjoy but a very precarious confideration. Honour, which affects the head of every Frenc. man, is diftributed but at Paris and at Court; and there men are, and muft ftill be, far from perceiving the importance of attaching merit to the improvement of fhip-building: it muft therefore languih, or yield to that of the Americans. Hence it refults, that the French, in preferving every 1 thing which can maintain amongft them an able clafs of fhip-builders, muft buy veffels of the Americans; becaufe every convenience is united to that of facilitating their reciprocal importations and exportations, of which the bulks are fo different in one nation from thofe of the other.

This circumftance is attended with the advantage of procuring the French merchant an American veffel at a lefs price than if he had ordered it to be built, or if he bought it in America, becaufe it will always be more to

236 ON the COMMERCE Of the the intereft of the American to fell his veffel, than to take it back in ballaft.

Such is the fitnefs of American veffels for the French marine, and efpecially for merchant fervice; fuch is that fitnefs for all the European powers who have harbours and feaport towns, that I think a fure and commodious road in Europe would foon be afforted with American veffels for fale, if every thing which can encourage a like depofitory were granted to the port wherein this road might be. This market for veffels will be eftablifhed;-the Englifh reject it. France will, in a Thort time, encourage it.

## SECTION X.

GENERAL CONSIDERATIONS ON THE PRECEDING CATALOGUE OF IMPORTATIONS FROM THE UNITED STATES INTO FRANCE.

The lift which I have gone through of the articles with which the independent Imericans may furnifh Europe in exchange for her merchandize is not very long; but thefe articles are confiderable, and important enough in themfelves, to merit the attention of European merchants;
merchants: they are fufficient to deftroy the prejudices of thofe who, under the falfe pretext of the inability of the Americans to furnifh articles of exchange, difdain a reciprocal commerce with the United States. Thefe articles are not, however, the only ones which France may receive from them. Independently of pot-ath, fo precious to manufactures, and of which the fcarcity becomes daily more fenfible; iron, vegetable-wax, wool, flax, hemp, \&c. may increafe the number. The Englifh received of pot-afh to the amount of four hundred thoufand livres per annum, during the years 1768, 1769, and 1770; pot-ath being the produce of the wood burnt by the Americans, and as the burning of wood muft increafe with the number of people, the quantities of pot-afh muft have increafed with population.

I ought to hope that this work, once known in the United States, will excite the independent Americans to co-operate with me, in what I have propofed to myfelf, which is to fpread inftruction on every thing which relates to their country. They will make known to Europe, in a more extenfive and complete manner, every thing which can maintain that reciprocal commerce in favour of which I write:

238 ON THE COMMERCE OF THE
they will affemble in a work correfpondent to this, all that I have been able to expofe but imperfectly : they will realify my errors. I invite them to apply to this interefting fubject: 1 pray them to give it for a bafis, more philofophical, and philanthropical principles, than thofe which have hitherto directed the jealous indurtry of each fociety. For each, led on by a blind ambition, has wifhed to embrace every thing, to do every thing at home, and furnifh every thing to others; each has taken for principle to receive nothing from others, except it be gold; each has accuftomed itfelf to look upon every production, manufactured or unmanufactured, which it fent abroad as a profit, and all thofe which it received as fo many loffes. Such is the falfe principle, according to which all the European nations have directed their exterior commerce.

What would be the confequence of a like fyftem, if it continued to prevail? All nations would be ftrangers to each other, and exterior commerce abfolutely annihilated; becaufe it tends to take from this commerce that which fupports it. For the gold which is wifhed for in payment for exportations is refufed to thofe who would obtain it : all nations look upon the neceffity
nt to ut im1 inbject : ilofothofe indufby a every urnifh n for except look nma$t$, and loffes. which ir ex-
a like ations kterior ufe it which ed for thofe on the ceffity neceffity of giving it alike; that it is difadvan-tageous-and frive to avoid it. If, therefore, on one fide, none will take returns in kind, and on the other, nobody will difpoffefs himfelf. of his gold, what will become of exchanges? what will become of commerce?

Nature, which intended to make men fo many brothers, and nations fo many families; -nature, which, to unite all men by the fame tie, has given them wants, which place them in a ftate of dependence one on the other;-. this wife nature has, by the diftribution of her gifts, anticipated and condemned this excluive fyftem. She has faid to the inhabitants of Nantucket, The rock which thou inhabit is rude and formy; renounce, therefore, the defire of drawing from it the delicious wines and fruits which more calm and temperate climates produce. Look at the fea which furrounds thee,-that is thy property and thy treafure: I have made it inexhauftible; and if thou knoweft how to make ufe of it, if thou wilt confine thyfelf thereto, all the enjoyments of the other continent are thine: a fingle ftroke of a harpoon, dexteroully thrown, will produce a thoufand times more wine in thy cellar, than if by a painful

240 ON THE COMMERCE OF THE
a painful cultivation thou continueft obftinate, in acting contrary to my intentions.

Nature holds the fame language to the other inhabitants of the earth: the tells the French to ufe all their efforts in the fruitful foil which The has given them, and to ceafe traverfing foreign feas to obtain, at an immenfe expence and much rifk, the fifh and oil which the inhabitants of Nantucket procure with greater facility and more fuccefs and economy.

Why fhould not all nations underftand a language fo fimple, fo wife, and fo proper to produce univerfal harmony? But how are they to be made to underftand it? By what means are they to be prevailed upon to adopt it? What means are proper to engage nations which might have a direct commerce between them, to fign a treaty of commerce, which fhould leave each at liberty to furnifh that which it could export better and cheaper than others; and thus eftablifh exchanges on the immutable laws of nature?

As foon as nations fhall be enlightened enough to perceive the advantage of fuch a treaty, from that moment it will ceafe to be neceffary, and every other treaty will be fill lefs fo. It will then be feen, that they all cen- ter ina the fingle word liberty. It will be difcovered that liberty can put every thing in its place; that liberty alone, without negociation or parchment, can every where give birth to an advantageous induftry. Finally, that every where, and at all times, fhe has fported with thofe commercial conventions, of which politicians have fo ridiculoully boafted; of thofe converitions wherein the contracting parties are inceffantly on the defenfive with refpect to each other, inceffantly difpofed to deceive; and frequent!y multiply the feeds of war in a work of peace.

Under fuch a fyftem of liberty, there would be no longet occafion for craftinefs in national policy with refpect to commerce:--of what ufe would it be! No more ftrife; for it would have no object: no more jealoufy or rivality; no more fear of making others profper and become rich ; becaufe the riches of each ftate would be advantageous to the whole. In a word, according to this fyftem, each nation would wifh the other more means, in order to have more to give and more to receive. Commerce would become what it ought to be, the exchange of induftry againft induftry; of enjoyments againft enjoyments, and not againft Voc. II.
deprivations: finally, a fate of riches, without poverty on any fide.

What people have more right and title than the Aınericans, to be the firt in adopting fo philanthropical a fyftem, and which is fo conformable to the laws of nature; at leaft to do nothing which fhali retard it among them? Let their Congrefs, -that refpectable affembly, which may become the light of nations, and from whofe deliberations univerfal happinefs may refult,-remain faithful to the indications of this nature; let it interrogate her conftantly, and give every nation the fame falutary habitude.

If Europe refufes to admit the productions of the United States, let Congrefs,-rejecting the poor policy of reprifals,-open, by a great and republican refolution, their ports to all European productions. What evil can refult from this to the independent Americans? If European prohibitions rendered their means of exchange ufelefs, European merchandize muft of courfe be without a market in America; or, falling to a mean price in the United States, it would become profitable to the Americans, in paying for it even with gold.

The law may be given to an idle and de- graded nation, but never to one which is active and induftrious. This always punifhes, in fome manner or other, the tyrannical proceedings of cther nations. The force of things is alone fufficient to revenge it.

It is a misfortune to the United Sfates, in not having been able to eftablifh at firft the noble fyitem of which I have fpoken, and to be obliged to have recourfe to the miferable means of other governments, -that of impofing duties on foreign merchandize to pay their debts. Every impolition but a quit-rent upon lands is a fource of errors. The pretended protecting duties impofed in Europe are one confequence of thefe errors, and of which the effect leads government aftray, fo far as to perfuade them, that they poffefs a creative force equal to that of the Divinity himfelf. And what are thefe enterprifes by which men would force nature? Miferable hot-houfes,-wherein every thing is haftened to finifh the fooner; wherein induftry vainly exhaufts itfelf to fupport an unnatural exiltence; and wherein a vigorous whole is frequently facrificed to a corrupted part.

Jet the Americans carefully avoid thefe erroneous enterprifes;--to infure themfelves R 2 therefrom,

244 ON THE COMMERCE OF THE
therefrom; let them confider the fate of Euid rcpe. The Europeans have no longer any judgment in matters of impoft; fimple ideas are lof, and become impoffible to be realized by the metaphyfician which it is neceffary to employ to combat ignorance, prejudices, and habitudes: all ideas of juftice and propriety are confounded. A truth cannot be advanced without meeting, at every moment, falfe notions to combat. The man of information is fatigued, difgufted, and frequently at a lofs what to anfwer to objections preceeding from habits of error. He perceives with concern, that the laws of happinefs cannot be written, but upon tables from which there is nothing to be effaced: and fuch, I flatter myfelf, is the fituation of the Unired States. They are yet virgin ftates, they are unacquainted with the inftitutions which end in chaos, wherein the love of public good lofes all its force.

Montefquieu obferves, that the enterprifes of merchants are always neceffarily mixed with public affairs; but that in monarchies, public affairs are for the moft part fufpicious in the eyes of the merchants. But profperity and national glory depend on commerce, as much in monarchies as in other conftitutions. It is
therefore the intereft of monarchies to give to merchants that hope of profperity which they have in republics, and which inclines them with ardour to every kind of commercial enterprife.

Provincial adminiftrations are the fureft means of producing this happy effect. If they were alrear'y eftablifhed, the French would comprehend, how abfurd it is to imagine that the United States will not difcharge their public debt ; how impoffible it is that Republicans fhould make ufe of the difhonourable refource of bankruptcy and deception; and that their public fpirit, their morals, and intereft, require them to difcharge this debt, contracted for the moft legitimate and honourable caufe that ever exifted; and which is otherways but an atom when compared with their immenfe refources, French merchants would then give themfelves leis concern about the manner in which their merchandize was to be paid for in America. For in the improbable cafe of a want of American productions, or of precious metals, they have, as a laft refource, the paper of Congrefs and the States; which paper it is an advaptage to acquire, by the price at which it is obtained, by the intereft it bears, the certainty of its be$\mathrm{R}_{3}$ ing
ing paid, and by the confequent tranfmiffion which may be made of it in commerce to the Dutch merchant, to whom the paper of the whole world becomes neceffary the momeint it merits confidence.

I have mentioned precious metals. The Americans are in the neighbourhood of the countries which produce them. Thefe countries are the abodes of indolence, which difpenfes not with neceffaries. Skins; \&c. of animals, and fome metals, are every thing that can be given there in exchange for articles of fubfiftence, which the inhabitants have not the courage to make their lands produce; and for the neceffaries, for which they find it mare convenient to pay with gold than with their induftry. The independent Americans will become factors, advautageoufly placed between European manufactures, and the inhabitants of regions condemned by nature to the ftorile productions of metals. All the powers of Spain cannot prevent this, nor ought even to undertake it. This new comfideration proming to the French payment, fo foolifhly defired in gold, bught to encourage them: to prepare for a commercial connexion with the United States. 70 ", mimer sen

AND REPLECTIONS ON THE SITUATION OF THE UNITED STATES.

It will be proper to finih this volume by fome explanations of the pretended troubles which agitate the United States, Thefe explanations are neceffary to deftroy the unfavourable impreffions which muft be made by the unfaithful recitals of gazette writers, who, from fervile prejudices or mean intereft, affect to fpread duubts of the happy confequences of the revolution. If we believe thefe people, the independent Americans are plunged into inextricable embarraffments, forced to become bankrupts, given up to the moft violent anarchy, expofed to the tomahawk of the implacable Indians, $\&$ How is it poffible to refolve to carry onia commerce with people whofe fituation issfo deplorable? Ought not their ruin to be feared rather than their forture hoped for, in the connexions which it is wifhed to form with them?

* It is necaflary to refute thefe fatfehoods. It
$\mathrm{R}_{4}$ is

248 ON THE COMMERCE OF THE
is fo much the more fo, as ignorance eafily leads people, little acquainted with republican conftitutions, into error ; and that, led aftray by the prejudices of their educations, a greak number of Frenchmen look upon this form of government as a fate perpetually in a ferment, wherein life and property are continually expofed to the greateit dangers.

Thefe prejudices lead to the belief of the moft puerile and abfurd fables. The leaft attention is not paid to circumftances. Would the United States have a Congrefs of magiftrates if it were true that the people were at war with them? For how could Congrefs and the magiftrates defend themfelves? They have no other defence but the refpect which each individual has for the law, this is their only force. It is the obligation that the conftitution impofes on them in common, with the meaneft citizens, of being obedient to the law, as the laft means which conftitute their only fafety, and which maintains, in all cafes and every where, the authority which the people have confided in them, They cannot employ a phyfical force farther than the people are willing to lend them, becaufe they have neither an army nor foldiers in pay,

A diverfity of opinion exifts wherever there
are men. It belongs not to one confitution more than to another; but the effence of a republican government is to leave to each individual the liberty of expreffing his fentiments on every fubject.

In the United States, legillation is more and more formed in proportion as things relative to each other are verified, extended, and multiplied. Is it aftonifhing that debates fhould arifo, on account of the different laws which are propofed, difcuffed, and adopted ? Thefe debates become public, animate converfation, and make it highly interefting. But is this anarchy ?

The word anarchy is one of thofe words which has been moft abufed and mifapplied. It is therefore neceffary to explain it.

Where anarchy reigns, there is neither chief, goverument, laws, nor fafety. Each individual becomes the defender of his own perfon, the focial contract is broken, and there is no longer any confidence or tranfactions, becaufe there can be no more contracts. Authority, changing at every inftant, its rules, principles, 0 d aim, becomes cruel or contemptible; it deftroys, or is deftroyed, Such a fate exifts not long; or if it does exift, it foon divides fociety into armed herds, enemies to each other, and which

250 ON THE COMMERCE OP THE
fubfintibut in proportion as they fear and counterbalance each other's ipower.

- Is any thing like this feen in the United States? Are there difputes even about the principles of the conftitution, the fundamental laws, or the propofed end ? Has not every thing relative to this been long fince agreed upon? The prefent debates relate wholly to fome rutes of adminiftration: it is upon the oen. manner of ferving the public caufe, and of fupporting it, that minds are fin a falutary agitationg and this angitatienf hinders not more the regular courfe of priblic affairs and tranfactions, than the debates in the Englifh Parliament hinder the monarch from haming to offices and conferring rank thaf they Aop the courfe of juftice, or are impediments to the affairs of cevery clafs of citizeris. . Jr
The word marchy is proper to ftates which, like Egypt, have twenty-four fóvereigns', and neither laws no governmento lwis applicable to the degenerated conftitutions of A fia, where the adminiftration is divided into feveral departmenteg findependent of each others traverfing one mwother in their viefosadodipretenfions, the operations of one part intepfor ing itwith thofe of the other, all having the power of making particular
ticular laws, or of fufpending the effect of thore which exiff: There a real anarchy reigns, becaufe it is not known where' the government is, nor in whom the leginative poiver is vefted. This incertitude brings on diforder, renders property unitable, and endangers perfonal fafety.

None of thefe evils exift in the United States. America is not yet gnawed by the vermin which devour Europe, by indefructible ment dicity : thieves render not her forefts dafiger2 ous; her public roads are not fained with bröad thed by affifing: How fhould there be affaffints and robbers? There are no beggars, no indigent perfons, no fubjects forced tro fleal the fub: fiftence of others to procure sine to themfelves. Every man finds there lards to produce him articles of fubfiftence: it is hot loaded with taxes, but renders to each, with uffory, a'feconpenfe for his labour. A man who can live eify and foonourably, never cencentes to difhaddar himfelf by ufelef erimes, whichlelever himplo the tor ments of remorfe, difloriout, and the vengeance of fociety:

The ravages of cthe feven yearg War were undoubtedly terrible; but as foon as the faulchion could be converted into a plough-hare, the
the land became fertile, and mifery difappeared. The American foldiers were citizens; and they were alfo proprietors before they became foldiers; they remained citizens in uniform, and returned to their profeffions on quitting it; they did not fight for inoney, nor by profeffion, but for their liberty, their wives, children, and property; and fuch foldiers never refembled the banditti of the old continent, who are paid for killing their fell cw-creatures, and who kill on the high ways for their own account, when peace obliges their mafters to difband them. There has been feen in America (what the allnals of the world prefent not in any ftate, except that of Rome) a General, adored by his foldiers, diveft himfelf of his power as foon as his fervices became no longer neceffary, and retire into the bofom of peace and oblc.sity; a numerous army, which was not $\downarrow$ id, was feen generoully to coufent to difband without payment; the foldiers to retire, each to his home, without committing the leaft diforder, and where each tranquilly retook either bis plough, or his firft trade or profeffion; thofe trades which we in Europe look upon as vile.

The following advertifement is taken from the American papers, in which there are 2 thoufand others of a like nature.

Two brothers, Captains who diftinguifhed themfelves during the war, returned at the peace to their trade of hat-making;-they inferted in the gazette an advertifement as follows:
" The Brothers Bickers inform the public, " that they ar returned to their old profeffion " of hatters, which they had abandoned to de" fend the liberty of their country. They " hope that their fellow-citizens will be pleafed, " in confideration of their courage and fervices, " to favour them in their bufinefs, and prefer " them to others." What European captain would put his name to a like advertifement?

This is what refults from liberty; but what is inconceivable in moft European flates, a mis litary fpirit reigns there, and its prejudices are predominant. War is the road to glory, ambition, and fortune; and to preferve to this profeffion its luftre and preponderance, it is an eftablifhed principle, that a fanding army is neceffary to maintain order in fociety ; that it ought always to threaten the citizens, although peaceful, to keep them in fubmiffion to authority. This ufelefs burden, this pernicious fpirit, is unknown
known to the United States:-public fpirit, much more favourable to good order, takes its place, and peace and fafety reign without marechauffée, or fpies, or that police which difparages the morals and characters of citizens. Public fpirit fupplies the place of all there means, whilf they will never fupply the want of public fpirit; nor, like it, produce the hapfinefs of fociety.

In vain will prejudiced men exclaim, that this is declamation-I offer them facts. It is neceffary to read the American gazettes, not thofe altered by the Einglifh gazette-writers, but thofe which are printed in America; thefe only can give a juft idea of the fituation of the United States.

The American fhould rather defpife Europe, in remarking to us the continual flaughter we make of thieves and affaffins; "in comparing the immenfe uumber of dungeons, prifons, hofpitals, and eftablifhipents of every kind, inftituted to cure or palliate the incurable ulcers of the old inflitutions. In comparing this difgufting lift with the very few murders and thefts committed in the United States, with the hofpitals, truly domefic and humane, which are eftablifhed there, with the happinefs of each

American family and their fimple manners, and in proving to us, by their example, that a wife liberty regulates the focial man, and renders ufelefs thofe ruinous machines with which he, is crufhed, left he fhould do any harm.

Thefe are the men, the laws, and the government, which Europeans have calumniated, Thefe men who are deftined to regenerate the dignity of the human fpecies!-Thefe laws which foourge nothing but crimes,-which punifh them every where, and are never filent in the face of power!-This government, which is the firft that ever prefented the image of a numerous family, well united, and completely happy; wherein power is juft, becaufe it circulates through every hand, and refts in none; wherein obedience, becaufe it is voluntary, anticipates command; wherein adminiftration is fimple and ealy, becaufe it leayes induftry to itfelf; wherein the magiftrate has little to do, becaufe the citizen is free, and that a citizen always refpects the law and his fellow creatures! Thefe are the prodigies which we calumniate; we, Europeans, enflaved by antiquated conftitutions, and by the habitudes given to us by prejudices, of which we know not either the barbarity or the frivoloufnefs! We fpeak well, but act badly ; why, therefore, do
4.6 ON THE COMmbrce of the
we calumniate men, who not only fpeak but act well? If it be not permitted us to have theit virtues, nor to enjoy their happinefs, let us not decry them; let us refpect that fuperiority to which we cannot attain.

It will, perhaps, be objected, that the government of England has deferred the coniclufion of a treaty of commerce with the United States, under the pretext that their conftitutions were not yet fufficiently eftablifhed. But can it be imagined that the Englifh, who trade in Turky, with the Algerines, and at Grand Cairo; were ferious when they decried and rejected commercial connections with the United States, under the pretence that their legiflation was not yet well enough eftablifhed ?

It cannot be doubted that the difference of pofition between the French and Englifh merchants, refpecting their governments, has a great influence upon their reciprocal profperity; and for this reafon, it thould be inceffantly repeated to the French government, that if it wifhes to infure profperity to its commerce; it ought to adopt the means, which are, liberty of activg,-tbe right of protefing againft the attempts made on that liberty, 一and the certainty of juftice, -without refpect to perfors:-thefe are
the bafis of the genius, induitry; and greatnefs of a ftate; and without which, a great commerce cannot exift : this bafis may be eafily conciliated with the French conftitution.

Paris, February, 1789.

Note--There are feveral Captains who have not as yet returned the Schedules of the numbers of their Diffrifts, namely;-in Greene County, three-in' Davidion, onoand South of French-Board, one Diftrict.

Seftember 19th, 179 I.
W. BL O UNT.

By the Governor,
Diniel Smith, Secretary:
Truly fated from the original Returns depofited in the Office of the Secretary of State.

> T. JEFFERSON.

Otober 24, 1791.
In point of fize the towns in the United States may be ranked in this order; Philadelphia, New York, Bofton, Baltimore, Charleftown, \&c... In point of trade, New York, Philadelphia, Bofton, Charleftown, Baltimore, \&c.
rritory of Obio, as aptains of ifitricts.

thedules of the widion, onc-

U N T.
depofitSON. \&c. In Boston,

From the precediug tables it is indubitable, that the number of inhabitants in the United States confiderably exceeded Fọur Milligñs, iti the year 179 r ;-exclufive of thofe in the Northern territory, and fome other diftricts. If to this we add, Dr. Frankliu's calculation," That ihe number of the inhabitants of America is double every twenty years," this number muft be increafed to confiderably above Eight Milfions in the year 181.1 ; exclufive of emigrants from the Old World.

The Englifh reader, we hope, will not be offeinded, if, in this place, we fay a word or two on the population of Great Britain. It is a cur: rent opinion, that the population of our illand is yearly increafing. The fact is quite the reverfe: but the affertion would fignify nothing, if there were not inconteftable proofs of it. The proofs are thefe.

Number of houres in England and Wales, taken from the return of the furveyors of the Houre and Window, Duties; wherein they are ftated diftinctly, charged, chargeablis and excufed.
Total of Houfes in 1759 - - 986,482

Total of houfes according to the hearth-books in 1690, as fated by Dr. Davellant (fee his works, vol. i. page 38) - . - - 1,319,215

In Scotland the number of houfes paying the houfe and windew duties was, in 1777, only 16,206.
If the diftinct returns of the parifhes are examined, it will be manifeft, that a calculation of five perfons to every houfe is a large allow. ance. From all which this refult is obvious ——That the number of inhabitants in England and Wales is confiderably fhort of Five Mileions!-That, perhaps, including Scotland, the whole Illand of Great Britain does not exceed that number.

The curofity of the prefent moment may allow us to calt our eye upon France, concerning this fubject. The intendants of the provinces of France were ordered ii the year $\mathbf{1}_{771}$ and 1772 to make a return of the number of inhabitants in their refpective diftricts. The return of $17^{2}$ ftates the number to be 25,741,320. Sec Recberches fur la population de la France, par M. Mobeau.

It would be a riyht meafure in every government to caufe a furvey to be made annually of
the number of inhabitants. It is done at Na ples by order of the King, and is publifhed annually in the Court Calendars. America will probably follow the example.

Obfervations on the Population of America. Written by Dr. Benjamin Franklin. Printed at Pbiladelpbia in the year 1755.

Tables of the proportion of marriages to births, of deaths to births, of marriages to the numbers of inhabitants, \&c. formed on obfervations made on the bills of mortality, chrifenings, \&c. of populous cities, will not fuit countries; nor will tables formed on obfervations made on full fettled old countries, as Europe, fuit new countries, as America.

For people increafe in proportion to the number of marriages, and that is greater in proportion to the eafe and convenience of fupporting a family. When families can be eafily fupported, more perfons marry, and earlier in life.

In cities where all trades, occupations, and offices, are full, many delay until they can fee how to bear the charges of a family; which charges are greater in cities, as luxury is more common; many live fingle during life, and continue fervants to families, journeymen to trades,
trades, \&ec. hence cities do not by uatural generation fupply themfelves with inhabitants; the deaths are more than the biths.

In countries full fettled, the cafe muft be nearly the fame; all lands being occupied and improved to the height; thofe who cannot get land, muft labour for thofe who have it; when labourers are plenty, their wages will be low ; by low wages a family is fupported with difficulty; this difficulty deters many from marriage, who therefore long continue fervaints and fingle.-Only as cities take fupplies of people from the country, and thereby make a little more room in the country, marriage is a little more encouraged there, and the births exceed the deaths.

Great part of Europe is full fettled with hufbandmen, manufacturers, \&c. and therefore cannot now much increafe in people. Land being plenty in America, and fo cheap as that a labouring man, whô underftands hurbandry, can in a fhort time fave money enough to purchafe a piece of new land fufficient for a plantation, whereon he may fubfift a family, fuch are not afraid to marry; for even if they look far enough forward to confider how their children when grown are to be provided for, they fee that
more land is to be had at rates equally ealy, all circumftances confidered.

Hence marriages in America are more genetal, and more generally carly, than in Europe. And if it is reckoned there, that there is but one marriage per annum among one hundred perfons, perhaps we may here reckon two ; and if in Europe they have but four births to a marriage (many of their marriages being late), we may here reckon eight; of which, if one half grow up, anid our marriages are made, reckoning one with another, at twenty years of age, our people mujt at leaft be doubled every twenty years.

But notwithftanding this increafe, fo vaft is the territory of North America, that it will require many ages to fettle it fully; and until it is fully fettled, labour will never be cheap here, where no man continues long a labourer for others, but gets a plantation of his own; no man continues long a journeyman to a trade, but goes among thefe new fettlers, and fets up for himfelf, \&c. Hence labour is no cheaper now, in Pennfylvania, than it was thirty years ago, though fo many thoufand labouring people have been imported from Germatiy and Ireland.

In proportion to the increafe of the Colonies,
a vaft demand is growing for Britifh manufactures; a glorious market wholly in the power of Britain, in which foreigners cannot interferc, which will increafe in a fhort time even beyond her power of fupplying, though her whole trade fhould be to her colonies.

## Of the Weflern Tirritory.

It is a miftake in thofe who imagias that the new State of Kentucky comprifes the Weftern territory of North America. That new flate includes but a fmall part of this great domain. The State of Kentucky is defcribed to be bounded on the fouth by North Carolina, on the north by Sandy creek, on the weft by Cumberland river, making about 250 miles in length and 200 miles in breadth; whereas the whole Weftern territory is iafinitely more extenfive. The limits are unknown; but that part of it, which was furveyed by Captain Hutchins, geographer to the Congrefs, he has given us a fhort account of. From his account, becaufe it is known to be authentic, we have extracted the following.

The part he furveyed lies between the $33^{\mathrm{d}}$ and 45 th degrees of latitude, and the 78 th and

94th degrees of longitude, containing an extent of territory which, for healthfulnefs, fertility of foil, and variety of productions, is not perhaps furpaffed by any on the habitable globe.
" The lands comprehended between the river Ohio, at Fort Pitt, and the Laurel mountain, and thence continuing the fame breadth from Fort Pitt to the Great Kanhawa river, may, according to my own obfervations, and thofe of the late Mr. Gift, of Virginia, be generally, and juftly defcribed as follows.
" The vallies adjoining to the branches or fprings of the middle forks of Youghiogeny, are narrow towards its faurce,-but there is a confiderable quantity of good farming grounds on the hills, near the largeft branch of that river. -The lands within a fmail diftance of the Laurel mountain (through which the Youghiogeny runs) are in many places broken and ftony, but rich and well timbered; and in fome places, and particularly on Laurel creek, they are rocky and mountainous.
" From the Laurel mountain, to Monongahela, the firft feven miles are good, level farming grounds, with fine meadows; the timber, white Oak, Chefinut, Hickory, \&c.-The fame kind of land continues foutherly ( 12 miles) to the
the upper branches or forks of this river, and about 15 miles northerly to the place where the Youghiogeny falls into the Monongahela.-The lands, for about 18 miles in the fame courfe of the laft-mentioned river, on each fide of it, though hilly, are rich and well timbered.-The trees are Walnut, Locuft, Chefnut, Poplar, and Sugar or fweet Maple. The low lands, near the river, are about a mile, and in feveral places two miles wide. For a confiderable way down the river, on the eaftern fide of it, the intervals are extremely rich, and about a mile wide. The upland for about 12 miles eaftwardly, are uncommonly fertie, and well timbered; the low lands, on the weftern fide, are narrow; but the uplands, on the eaftern fide of the river, both up and down, are excellent, and covered with Sugar trees, \&c.
" Such parts of the country which lie on fome of the branches of the Monongahela, and aerofs the heads of feveral rivers, that run into the Ohio, though in general hilly; are exceedingly fruitful and well watered. The timber is Walnut, Chefinut, Afh, Oak, Sugar trees, \&cc. and the interval or meadow lands are from 250 yards to a quarter of a mile wide.
" The lands lying nearly in a north-wefterly
direction direction from the Great Kanhawa river to the Ohio, and thence north-eaterly, and alfo upon Le Tort's creek, Little Kanhawa river, Buffaloe, Fifhing, Weeling, and the two upper , and two lower, and feveral other very confiderable creeks (or what, in Europe, would be calted large rivers), and thence eaft, and fouth-ealt to the river Monongahela, are, in point of quality, as follows.
"T The borders or meadow lands, are a mile, and in fome places near two miles wide; and the uplands are in common of a molt fertile foil, capable of abundantly producing Wheat, Hemp, Flax, \&c.
"The lands which lie upon the Ohio, at the mouths of, and between the above creeks, alfo confift of rich intervals and very fine farming grounds. The whole country abounds in Bears, Elks, Buffaloé, Deer, Turkies, \&cc. An unqueftionable proof of the extraordinary goodnefs of its foil! Indiana lies with the territory here defcribed. It contains about three millions and an half of acres, and was granted to Samuel Wharton, William Trent, and George Morgan, Efquires, and a few other perfons, in the year 1768.
" Fort Pitt fands at the confluence of the Allegheny

Allegheny and Monongahela rivers; in latitude $40^{\circ} 31^{1} 44^{\prime \prime}$; and about five degrees wertward of Philadelphia. In the year 1760, a fmall
 town, called Pittfburgh, was built nearFort Pitt, anc about 200 families refided in it; Gut ypon the Indian war breaking out (in the month of May ", 63 ) they abandoned their houles, and retired into the fort.
"In the year 1765 the prefent town of Pittfourgh was laid out. It is built on the Eattern bank of the river Monongahela, about 200 ards from Fort Pitt 200 yards from Fort Pitt.
"The junction of the Allegheny and Monongahela rivers, forms the river Ohio, and this diccharges itfelf into the Miffiflipp, (in latitude $36^{\circ} 43^{\prime}$ ) about 1188 computed miles from Fort Pitt. The Ohio in its paffage to the Minfippi, glides, through a pleafant, fruitful, and healthy country ; and carries a great uniformity of breadth, from 400 to 600 yards, except at its confluence with the Miffifippi, and for 100 miles above it, where it is 1000 yards wide The Obio, for the greater part of the way to the Miffiflppi, has many meanders or windings, and rifing grounds upon both fides of it.
"The reaches in the Ohio are in fome parts
from two to four miles in length, and one of them, above the Mukingum river, called the Long Reach, is fixteen miles and an half long. The Ohio, about iod miles above, or northerly of the Rapids, (formerly called the Falls) is in many places $y 00$ yards wide; and as it approaches them, the high grounds on its borders gradually diminifh, and the country becomes more level. Some of the banks, or heights of this river, are at times ovetflowed by great frethes, yet there is fcarce a place between Fort Pitt and the Rapids (a diftance of $70_{5}$ computed miles) where a good road may not be made s and horfes employed in drawing up large barges (as is done on the margin of the river Thames in England, and the Seine in France) againft 2 ftream remarkably gentle, except in high frethes. The heights of the banks of the Ohio admit them every where to be fettled; as they are not liable to crumble away.
"To thefe remarks, it may be proper to add the following obfervations of the ingenious Mr . Lewis Evans. He fays that ${ }^{6}$ the Ohio river, as the winter fnows are thawed by the warmith or rains in the fpring, rifes in vaft floods; in fome places exceeding 20 feet in height, but fcarce any where overflowing its high and upVol. II.
right banks. There floods,' Mr. Evans adds, - continue of fome height for at leaft a month or two, according to the late or early breaking up of the winter. Veffels from 100 to 200 tons burthen, by taking the advantage of thefe floods, may go from Pittfburgh to the fea with fafety, as then the Falls, Rifts, and Shoals, are covered to an equality with the ref of the rivers;' and though the diftance is upwards of 2000 miles from Fort Pitt to the fea, yet as there are no obftructions to prevent veffels from proceeding both day and night, I am perfuaded that this extraordinary inland voyage may be performed, during the feafon of the floods, by rowing, in fixteen or feventeen days.
" The navigation of the Ohio in a dry feafon, is rather troublefome from Fort Pitt to the Mingo town (about feventy-five miles), but from thence to the Miffiffippi, there is always a fufficient depth of water for barges, carrying from 100 to 200 tons burthen, built in the manner as thofe are which are ufed on the river Thames, between London and Oxford;-to wit, from 100 to 120 feet in the keel, fixteen to eighteen feet in breadth and four feet in depth, and when loaded, drawing about three feet water.
adds, onth or ing up Q tons floods, fafety, overed rs;'2000 cre are oceedd that e pery row-
ry feato the ), but always trrying in the e river d;-to fixteen feet in three
" The Rapids, in a dry feafon, are difficult to defend with loaded boats or barges.
[But inftead of the carrying place now ufed, it is intended to fubftitute a canal on' the contrary fide of the river.]
" Moft of the hills on both fides of the Ohio are filled with excellent coal, and a coal mine was in the year 1.760 opened oppolite to Fort Pitt on the river Monongahela, for the ufe of that garrifon. Salt fprings, as well as iron ore, and rich lead mines, are found bordering upon the river Ohio. One of the latter is opened on a branch of the Sioto river, and there the Indian natives fupply themfelves with a confiderable part of the lead which they ufe in their wars and hunting.
" About 584 miles below Fort Pitt, and on the eaftern fide of the Ohio river, about three miles from it, at the head of a fmall creek or run, where are feveral large and miry falt fprings, are found numbers of large bones, teeth and tufks, commonly fuppofed to be thofe of elephiarts :-but the celebrated Doctor Hunter of London, in his ingenious and curious obfervations on thefe boines, \&c. has fuppofed them to belong to fome carnivorous animal, larger than an ordinary elephant.
"On the north-weftern fide of Ohio, about is miles below the Cherokee river, on a high bank, are the remains of fort Maffac, built by the French, and intended as a check to the fouthern Indians. It was deftroyed by them in the year 1763. This is a high, healthy, and delightrul fituation. A great variety of game ; -Buffaloe, Bear, Deer, \&cc. as well as Ducks, Geefe, Swans, Turkies, Pheafants, Partridges, \&c. abounds in every part of this country.
" The Ohio, and the rivers emptying into it, afford green, and other Turtle, and filh of various forts; particularly Carp, Sturgeon, Perch, and Cats; the two latter of an uncommon fize, viz. Perch, from 8 to 12 pounds weight, and Cats from 50 to 100 pounds weight.
" The lands upon the Ohio, and its branches, are differently timbered according to their quality and fituation. The high and dry lands are covered with red, white, and black Oak, Hickory, Walnut, red and white Mulberry and Ahh trees, Grape vines, \&c.; the low and meadow lands are filled with Sycamore, Poplar, red and white Mulberry, Cherry, Beech, Elm, Afpen, Maple, or Sugar trees, Grape vines, \&cc.; and below, or fouthwardly of the Rapids, are feveral
large Cedar and Cyprefs fwamps, where the Cedar and Cyprefs trees grow to a remarkable fize, and where alfo is a great abundance of Canes, fuch as grow in South Carolina. The country on both fides of the Ohio, extending fouth-eafterly, and fouth-wefterly from Fort Pitt to the Miffiffippi, and watered by the Ohio river, and its branches, contaius at leaft a million of fquare miles, and it may, with truth, be affirmed, that no part of the globe is bleffed with a more healthful air, or climate ; watered with more navigable rivers ánd branches communicating with the Atlantic Ocean, by the rivers Potowmack, Jamés, Rappahannock, Miffiffippi, and St. Lawrence, or capable of producing, with lefs labour and expence, Wheat, Indian Corn, Buck-wheat, Rye, Oats, Barley, Flax, Hemp, Tobacco, Rice, Silk, Pot-alh, \&c. than the country under confideration. And although there are confiderable quantities of high lands for about 250 miles (on both fides of the river Ohio) fouthwardly from Fort Pitt, yet even the fummits of moft of the Hills are covered with a deep rich foil, fit for the culture of Flax and Hemp; and it may alfo be added, that no foil can poffibly yield larger crops of
red and white Clover, and other ufeful grafs, than this does.
"On the north-weft and fouth-eaft fides of the Ohio, below the great Kanhawa river, at a little diftance from it, are extenfive natural meadows, or favannahs. Thefe meadows are from 20 to 50 miles in circuit. "They have many beautiful groves of trees interfperfed, as if by art, in them, and which ferve as a thelter for the innumerable herds of Buffaloe, Deer, \&c. with which they abound.
" I am obliged to a worthy friend, and countryman, for the following juft and judicious obfervations. They were addreffed to the Earl of Hilliborough, in the year 1770 , when Secretary of State for the North American department; and were written by Mr. Samuel Wharton of Philadelphia, who at time refided in London, having fome bufinefs there with Mr. Strahan, Mr. Alimon, \&c.
"No part of North-America," he fay", " will " require leis encouragement for the produc" tion of naval ftores, and raw materials' for " manufactories in Europe; and for fupplying " the Weft-India illands with Lumber, Provi" fions, \&c. than the country of the Ohio;" and for the following reafons;

" Firft,

" Firft, The lands are excellent, the climate " temperate, the native Grapes, Silk-worms, and " Mulberry-trees, abound every where: Hemp, " Hops, and Rye, grow fpontaneoully in the " valleys and low lands, lead, and iron ore are " plenty in'the hills, falt fprings are innumer" able; and no foil is better adapted to the cul" ture of Tobacco, Flax, and Cotton, than that " of the Ohio.
"Second, The country is well watered by " Several navigable rivers, communicating with " each other; by which, and a thort land car" riage, the produce of the lands of the Ohio " can, even now (in the year 17\%2) be tent " cheaper to the fea-port town of Alexandria, " on the river Potomack in Virginia (where "General Braddock's tranfports landed his " troops), than any kind of merchandife is fent " from Northampton to London.
"Third, The river Ohio is, at all feafons of " the year, navigable with large boats, like the "' weft country barges, rowed only by four " or five men; and from the month of Febru" ary to April large hips may be built on the "Ohio, and fent to fea laden with Hemp, Iron, " Flax, Silk, Tobaço, Cotton, Pot-afh, \&c. " Fourth, Flour, Corn, Beef, Ship-Plank, T 4 " and
"s and iother ufeful articles, can be fent down ststhe Itreamlof the Ohio to Weft-Florida, and 0 frominthence to the Weft-India illands much "cheaper, and in better order, than from New "York or Philadelphia to thefe iflands? nt Wifth, Hemp, Tobacco, Iron, and fuch Pe bulky articles, may alfo be fent down the 4 : Aream of the Ohio to the fea, and at leart $50^{\circ}$ "f per cerit cheaper than thefe" articles were * ever carried by a land carriage, of only 60 44 miles, in Pennifylvania; where waggonage " 4 is cheaper than in any other part of North - America,

- Sixth, The expence of tranfporting Euro-- pean manufactories from the fea to the Ohio, " will not be fo much as is now paid, and " "thuft ever be paid, to a great part of the -counties of Peninfylvania, Virginia, and Ma"ryland. Whenever the farmers, or mercthants of Ohio, thall properi'y undetfand "c 'the bufinefs of tranfportation, they will build " fehooners, Doops, \&ic. on the Ohio, fuitable " for the Wert-India, or European markets; eor, Gy having Black-Walnut, Cherry-tree, ONak, \&c. properly fawed for foreign markets, wh ach ad formed into rafts, in the manner that ff isl ind w done by the fettlers near the upper
" for Flour, \&c. thither. Boats carrying 800
"' or 1000 barrels of Flour, may go in about " the fame time from the Ohio (even from " Pittfburgh) as from Philadelphia to Pennfa"cola, and for half the above freight, the Ohio " merchants would be able to deliver Flour, " \&c. there in much better order than from "Philadelphia, and without incurring the da" mage and delay of the fea, and charges of " infurance, \&c. as from thence to Pennfa${ }^{66}$ cola.
" This is not mere fpeculation; for it is a " fact, that about the year 1746 there was a " great fcarcity of provifions at New Orleans, " and the French fettlements, at the-lllinois, " fmall as they then were, fent thither in one " winter upwards of eight hundred thoufand " weight of Flour."
"I thall now proceed to give a brief account of the feveral rivers and creeks which fall into the river Ohio.
"Canawagy, when raifed by frefhes, is paffable with fmall battoes, to a little lake at its had;-from thence there is a portage of 20 miles to lake Erie, at the mouth of Jadághque. This portage is feldom ufed, becaufe Canawagy has farcely any water in it in a dry feafon.

[^38]* Bughaloons is not navigęble, but is remarkable for extenfive meadows bordering upon it.
" Fresch Creek affords the neareft paffige to lake Erie. It is navigable with fmall boats to Le Beuf, by a very crooked chaniel; the portage thence to Prefquile, from an adjoining peninfula, is $\mathrm{I}_{5}$ miles. This is the ufual route from Quebec to Ohio.
" Licking and Lacomic Creeks do not afford any navigation; but there is plenty of coals and fones for building in the hills which adjoin them.
" Toby's Creek is deep enough for batteaus for a confiderable way up, theuce by a thort portage to the weft branch of Sufquehanmah, a good communication is carried on between Ohio and the eaftern parts of Pennfylvania.
" Moghulbughkitum is paffable alfo by flat bottom boats in the fame manner as Toby's Creek is to Sufquehannah, and from thence to all the fettlements in Northumberland county, $\& c$. in Pennfylvania.
" Kifhkeminetas is navigable in like manner as the preceding creeks, for between 40 and 50 miles, and good portages are found between Kihkeminetas, Juniatta, and Potomac
rivers.
rivers.-Coal and Salt are difcovered in the neighbourhood of thefe rivers.
" Monongahela is a large river, and at its junction with the Allegheny river ftands Fort Pitt. It is deep, and gentle, and navigable with battoes and barges, beyond Red Stone creek, and fill farther with lighter craft. At fixteen miles from its mouth is Youghiogeny ; this river is navigable with batteaux or barges to the foot of Laurel hill.
" Beaver Creek has water fufficient for flat bottom boats. At Kifhkuikes (about 16 miles up) are two branches of this creek, which fpread oppofite ways; one interlocks with French Creek and Cherâge,--the other with Murhingum and Cayahoga; on this branch, about thirty-five miles above the forks, are many Salt-fprings.-Cayahoga is practicable with canoes about twenty miles farther.
cc Murkingum is a fine gentle river, confined by high banks, which prevent its floods from overflowing the furrounding land. It is $25^{\circ}$ yards wide at its confluence with the Ohio, and navigable, without any obftructions, by large battoes or barges, to the three Legs's, and by fmall ones to a little lake at its head.
"From thence to Cayahoga (the creek that
leads
leads to lake Erie) the Mulkingum is muddy, and not very fwift, but no where obftructed with falls or rifts. Here are fine uplands, extenfive meadows, Oak and Mulberry-trees fit for thip building, and Walnut, Chefnut, and Poplar trees, fuitable for domeftic fervices.-Cayahoga furnifhes the beft portage between Ohio and lake Erie; at its mouth it is wide and deep enough to receive large lloops from the lake. It will hereafter be a place of great importance.
" Mufkingum, in all its wide-extended branches, is furrounded by moft excellent land, and abounds ir. fprings, and conveniencies parcicularly adapted to fettlements remote from fea navigations;-fuch as falt fprings, coal, clay, and free ftone. In 1748 a coal mine oppofite to Lamenfhicola mouth took fire, and continued burning about twelve months, but great quantities of coal ftill remain in it. Near the fame place are excellent whetfones, and about eight miles higher up the river, is plenty of white asd blue clay for glafs works and pottery.
" Hockhocking is navigable with large flat bottom boats between feventy and eighty miles; it has fine meadows with high banks, which feldom overflow, and rich uplands on its bor-

286 APPENDIX.
ders. Coal and quarries of freeftone are found about $I_{5}$ miles up this creek.
"Big Kanhawa falls into the Ohio upon its fouth-eatern fide, and is fo confiderable a branch of this river, that it may be miftaken for the Ohio itfelf by perfous afcending it. It is Alow for ten miles, to little broken hills, the low land is very rich, and of about the fame breadth (from the pipe hills to the falls) as upon the Ohio. After going 10 miles up Kanhawa the land is hilly, and the water a little rapid for 50 or 60 miles further to the falls, yet batteaus or barges may be eafily rowed thither. Thefe falls were formerly thought impafiable; but late difcoveries have proved, that a waggon road may be made through the mountain, which occafions the falls, and that by a portage of a few miles only a communication may be had between the waters of great Kauhawa and Ohio, and thofe of James river in Virginia.
*T Tottery lies upon the fouth-eaftern fide of the Ohio, and is navigable with batteaux to the Ouafoto mountains. It is a long river, has few branches, and interlocks with Red • Creek, or Clinche's River (a brauch of the Cuttawa); and has below the mountains, efpeci-
ally for 15 miles from its mouth, very good land. Here is a perceptible difference of climate between the upper and this part of Ohio. Here the large Reed, or Carolina Cane, grows in plenty, even upon the upland, and the winter is fo moderate as not to deftroy it. The fame moderation of climate continues down Ohio, efpecially on the fouth-eaft fide, to the Rapids, and thence on both fides of that river to the Miffiffippi.
"Great Salt Lick Creek is remarkable for fine land, plenty of buffaloes, falt fprings, white clay, and lime ftone. Small boats may go to the croffing of the war path without any impediment. The falt fprings render the waters unfit for drinking, but the plenty of frefh fprings in their vicinity, makes fufficient amends for this inconvenience.
"Kentucke is larger than the preceding creek ; it is furrounded; with high clay banks, fertile lands, and large falt fprings. Its navigation is interrupted by fhoals, but paffable with fmall boats to the gap, where the war path goes through the Ouafioto mountains.
" Sioto, is a large gentle river, bordered with rich flats, or meadows. It overflows in the fpring, and then fpreads about half a mile,
though when confined within its banks it is fcarce a furlong wide.
${ }^{\text {s^ }}$ If it floods early, it feldom retires withith its banks in lefs than a month, and is not fordable frequently in lefs than two months.
" The Sioto, befides having a great extent of moft excellent land on both fides of the river, is furnithed with falt, on an eaftern branch, and red bole on Necunfia Skeintat. The fream of Sioto is gentie and paffable with large battoes or barges for a confiderable way, and with fmaller boats, near 200 miles, to a portage of only four miles to Sandurky.
"Sandufky is a confiderable river abounding in level land, its ftream gentle all the way to the mouth, where it is large enough to receive floops. The northern Indians crofs lake Erie here from ifland to ifland, land at Sanduiky, and go by a direct path to the lower Shawanoe town, and thence to the gap of the Ouafioto mountain, in their way to the Cuttawa country.
" Little Mineami river is too fmall to navigate with batteaux. It has much fine land and feveral falt fprings; its high banks and gentle current prevent its much overflowing the furrounding lands in frefhes.
"Great
"Great Mineami, Affereniet or Rocky river, has a very fony channel; a fwift ftream, but no falls. It has feveral large branches, paffable with boats a great way; one extending weftward towards the Quiaghtena river, another towards a branch of Mineami river (which runs into Lake Erie), to which there is a portage, and a third has a portage to the wefl branch of Sandulky, befides Mad Creek, where the French formerly eftablifhed themfelves. Rifing ground, here and there a little ftony, which begins in the northern part of the peninfula, between the lakes Erie, Huron, and Michigan, and extends acrofs little Mineami river below the Forks, and fouth wardly along the Rocky river, to Ohio.
$\because$ Buffaloe river falls into the Ohio on the eaftern fide of it, at the ditance of 925 com puted miles from Fort Pitt. It is a very confideratle branch of the Ohio; is 200 yards wide, navigable upwards of 150 miles for battoes or Barges, of 30 feet tong, 5 feet broad, and 3 feet deep, datrying about 7 tons, and can bc navigated much farther with large canoes. The ftrean is moderate. The lands on both fides of the river are of a mof luxuriant quality, for the produetion of Hemp, Flax, Wheat, Tobacco, \&c. They are covered with great variety of

$$
\text { VoL. II. } \quad \text { U }
$$

lofty, and ufeful timber; as Oak, Hickory, Mulberry, Elm, \&c: Several perfons who have afcended this river fay, that falt fprings, coal, lime and free ftone, $\& c$. are to be found in a variety of places.

6 The Wabath is a beautiful river, with high and upright banks, lefs fubject to overflow than any other river (the Ohio excepted) in this part of America. It difcharges itfelf into the Ohio, one thoufand and twenty-two miles below Fort Pitt, in latitude $37^{\circ} 41^{\prime}$. - At its mouth it is 270 yards wide; is navigable to Ouiatanon ( 412 miles) in the fpring, fummer, and autumn, with battoes or barges, drawing about three feet water. From thence, on account of a rocky bottom, and fhoal water, large canoes are chiefly employed, except when the river is fwelled with rains, at which time it may be afcended with boats, fuch as I have juft. defcribed (197 miles further) to the Miami carrying place, which is nine miles from the Miami village, and this is fituated on a river of the fame name, that runs into the fouth-fouthweft part of lake Erie.-The ftream of the Wabafh is generally gentle to fort Ouiatanon, and no where obftructed with falls, but is by feveral rapids, both above and below that fort,
fome of which are pretty confiderable. There is alfo a part of the river, for about three miles, and 30 miles from the carrying place, where. the channel is fo narrow, that it is neceffary to make ufe of fetting poles, inftead of oars. The land on this river is remarkably fertile, and feveral parts of it are natural meadows, of great extent, covered with fine long grafs.-The timber is large, and high, and in fuch variety, that almoft all the different kinds growing upon the Ohio and its branches (but with a greater proportion of black and white mulberry trees) may be found here.-A filver mine has been difcovered about 28 miles above Ouiatanon, on the northern fide of the Wabafh, and probably others may be found hereafter. The Wabarh abounds with falt fprings, and any quantity of falt may be made from them, in the manner now done at the Saline in the lllinois country: -the hills are replenifhed with the beft coal, and there is plenty of lime and free flone, blue, yellow, and white clay, for glafs works and pottery. Two French fettlements are eftablifhed on the Wabafh, called Poft Vincient and Ouiatanon; the firft is 150 miles, and the other 262 miles from its mouth. The former is on the eaftern fide of the tiver, and confifts
of 60 fettlers and their families. They raile Indian corn, wheat, and tobacco of an extraordinary good quality ; fuperior, it is faid, to that produced in Virginia.' They have a fine breed of horfes (brought originally by the Indians from the Spanifh fettlements on the weftern fide of the river Miffiffippi), and large focks of fwine and black cattle. The fettlers deal with the natives for furs and deer k kins, to the amount of about 5000 l. annually. Hemp of a good texture grows ipontaneoully in the low lands of the Wabalh, as do grapes in the greateft abundance, having a black, thin ikin , and of which the inhabitants in the autumn make a fufficient quantity (for their own confumption) of well-tafted red-wine. Hops large and good are found in many places, and the lands are particularly adapted to the culture of rice. All European fruits;-apples, peaches, pears, cherries, currants, gooberries, melons, \&c. thrive well, both here, and in the country bordering on the river Ohio.
"Ouiatanon is a fmall ftockaded fort on the weftern fide of the Wabafh, in which about a dozen families refide. The neighbouring Indians are the Kickapoos, Mufquitons, Pyankifhaws, and a principal part of the Ouiatanons.
aile tra, to fine In-veftocks deal , the of a low reatnd of ake a tion) good e par-

All cherhrive lering out a g In-ankinons.

The

The whole of thefe tribes confift, it is fuppofed, of about one thoufand warriors. The fertility of foil, and diverfity of timber in this country, are the fame as in the vicinity of Poft Vincient. The annual amount of 1 kins and furs obtained at Ouiatanon is about 80001 . By the river Wabalh, the inhabitants of Detroit move to the fouthern parts of Ohio, and the Illinois country. Their rout is by the Miami river to a carryingplace, which, as before ftated, is nine miles to the $\mathrm{V} / \mathrm{J}$ abafh, when this river is raifed with frefhes; but at other feafons, the diftance is from 18 to 30 miles, including the portage. The whole of the latter is through a level country. Carts are ufually employed in tranfporting boats and merchandife from the Miami to the Wabahh river.
"The Shawanoe river empties itfelf on the eaftern fide of Ohio, about 95 miles fouthwardly of the Wabath river. It is 250 yards wide at its mouth, has been navigated 180 miles in battoes of the conftruction of thofe mentioned in the preceding article, and from the depth of water, at that diftance from its mouth, it is prefumed, it may be navigated much further. The foil and timber of the lands, upon $\mathrm{U}_{3}$ this
this river, are exactly the fame as thofe upon Buffaloe river.
" "The Cherokee river difcharges itfelf into the Ohio on the fame fide that the Shawanoe river does, that is, 13 miles below or foutherly of it, and is miles above, or northery of the place where Fort Maflic formerly ftood, and 57 miles from the confluence of the Ohio with the river Miffiffippi. The Cherokee river has been navigated 900 miles from its mouth. At the diftance of 220 miles from thence, it widens from 400 yards (its general width) to between 'two and three miles, and continues this breadth for near thirty miles farther. The whole of this diftance is called the Mufcle Shoals. Here the channcl is obftructed with a number of iflands, formed by trees and drifted wood, brought hither, at different feafons of the ycar, in frethes and floods. In paffing thefe intiads, the midde of the wideft intermediate water is to be navigated, as there it is deepeft. From the mouth of the Cherokee river to Mufcle Shoals the current is moderate, and both the high and low lands are rich, and abundantly covered with oaks, walnut, fugar-trees, hickory, "\&c. About 200 miles' above thefe Choals is, what is called, the Whirl, or Suck, occafioned,
occafioned, I imagine, by the high mountain, which there confines the river (fuppofed to be the Laurel mountain). The Whirl, or Suck, continues rapid for about three miles. Its width about 50 yards. Afcending the Cherokee river, and at about 100 miles from the Suck, and upen the fouth-caftern fide of that river, is Highwafee river. Vaft tracts of level and rich land border on this river ; but at a fmall diftance from it, the country is much broken, and forme parts of it produce only pine trees. Forty miles higher up the Cherokee river, on the north weftern fide, is Clinche's river. It is I 50 yards wide, and about 50 miles up it feveral families are fettled. From Clinche's to Tenefee river is 100 miles. It comes in on the eaftern fide, and is 250 yards wide. About to miles up this river, is a Cherokee town, called Chota, and further up this branch are feveral other Indian towits, poffeffed by Indians, called, the Overhill Cherokecs. The navigation of this branch is much interrupted by rocks, as is alfo the river called French Broad, which comes into the Cherokee river 50 miles above the Tenefee, and on the fame fide. r 50 miles above French Broad is Long Ifland (three miles in length) and from thence to the fource of the Cherokee river is
$\mathrm{U}_{4} \quad 60$

60 miles, and the whole diftance is fo rocky, as to be farcely ravigable with a canoe.
"By the Cherokee river, the emigrants from the frontier counties of Virginia, and North Carolina, pafs to the fettlements in Weft Florida, upon the river Miffiflippi. They embark at Long Illand.
"I will now proceed to give a defcription of that part called the Illinois country, lying bet ween the Miffifippi wefterly, the Illinois river northerly, the Wabaif eafterly, and the Ohio foutherly.
"The land diat the confluence, or fork of the rivers Miffifippi and Ohio, is above 20 feet higher than the common furface of thefe rivers; yet fo confiderable are the fpring floods, that it is generally overflowed for about a week, as are the lands for feveral miles back in the country. --The foil at the fork is compofed of mud, earth, and fand, accumulated from the Ohio and Miffiflippi rivers. It is exceedingly fertile, and in its natural ftate yields hemp, pea-vines, grafs, \&c, and a great variety of trees, and in paricular the afpen tree, of an unufual height and thickneefs.
" For 25 miles up the Miffifippi (from the
Ohis)
dows, and numberlefs herds of buffaloe, deer, \&c.
" The high grounds, juft mentioned, continue along the eaftern fide of the Kafkafkias river, at a fmall diftance from it; for the fpace of five miles and a half, to the Kalkalkias village; then they incline more towards that river, and rum nearly parallel with the eaftern bank of the Miffifippi, at the difance of about three miles in fome parts, and four miles in other parts from it. Thefe are principally compofed of lime and free-ftone, and from 100 to 130 feet high, divided in feveral places by deep cavities, through which many finall rivulets pafs before they fall into the Mifliflippi. The fides of thefe hills, fronting this river, are in many places perpendicular,-and appear like folid pieces of ftone mafonry, of various colours, figures, and fizes.
" The low land between the hills and the Miffiffippi, begins on the north fide of the Kafkafkias river, and continues for three miles above the River Mifouri, where a high ridge terminates it, and forms the eaftern bank of the Miffiffippi.-This interval land is level, has few trees, and is of a very rich foil, yielding fhrubs and mpit fragrant flowers, which, added
to the number and extent of meadows and ponds difperfed through this charming valley, render it exceedingly beautiful and agreeable.
" In this vale ftand the following villages, viz. Kalkafkias, which, as alread $\bar{j}$ mentioned, is five miles and a half up a river of the fame name, rumning northerly and foutherly.-This village contains 80 houfes, many of them well built; feveral of ftone, with gardens, and large lots adjoining. It confifts of about 500 white inhabitants, and betw'een four and five hundred negrces. The former have large ftocks of black cattle, fwine, \&c.
"Three miles northerly of Kafkafkias, is a village of Illinois Indiaus (of the Kafkarkias tribe) containing about 210 perfons and 60 warriors. They were formerly brave and warlike, but are degenerated into a drunken and debauched tribe, and fo indolent, as fcarcely to procure a fufficiency of akins and furs to barter for clothing.
"6 Nine miles further northward than the laft mentioned village, is another, called La prairie du Rocher, or the Rock meadows. It confints of 100 white inhabitants, and 80 negroes.
"Three miles northerly of this place, on the banks
banks of the Miffiffippi, ftood Fort Chartres. It was abandoned in the year 1772, as it was rendered untenable by the conftant wainings of the River Miffiffippi in high floods.-The village of Fort Chartres, a little fouthward of the fort, contained fo few inhabitants, as not to deferve my notice.
" One mile higher up the Miffiffippi than Fort Chartres, is a village fettled by 170 warriors of the Piorias and Mitchigamias (two other tribes of the Illinois Indians). They are as idle and debauched as the tribe of Kalkarkias which I bave juft defcribed.
" Four miles higher than the preceding village, is St. Philip's. It was formerly inha.bited by about a dozen families, but at prefent is poffeffed only by two or three.-The others have retired to the weftern fide of the Miffiffippi.
" Forty-five miles further northwards than St. Philip's (and one mile up a fmall river on the fouthern fide of it) ftands the village of Cahokia. It has 50 houfes, many of them well built, and 300 inhabitants, poffeffing 80 negroes, and large focks of biack cattle, fwine, \&c.
" Four miles above Cahokia, on the weftern
or Spanifh fide of the Miffiffippi, ftands the village of St. Louis, on a high piece of ground. It is the moft healthy and pleafurable fituation of any known in this part of the country. Here the Spanifh commandant and the principal Indian traders refide; who, by conciliating the affections of the natives, have drawn all the Indian trade of the Mifouri; part of that of the Miffiffippi (northwards), and of the tribes of Indians refiding near the Ouifconfing and Illinois rivers, to this village. In St. Louis are 120 houfes, moftly built of ftone. They are large and commodious. This village has 800 inhabitants, chiefly French;-fome of them have had a liberal education, are polite, and hofpitable. They have about 150 negroes, and large ftocks of black cattle, \&c.
" Twelve niniles below, or foutherly of Fort Chartres, on the weftern bank of the Miffiffippi, and nearly oppofite to the village of Kafkafkias, is the village of St. Genevieve, or Miffire. It contains upwards of 100 houfes, and 460 inhabitants, befides negroes. This and St. Louis are all the villages that are upon the weftern or Spanifh fide of the Miffiffippi.
" Four miles below St. Genevieve (on the weftern bank of the Miffiffippi), at the mouth
of a creek, is a hamlet, called the Saline. Here all the falt is made, which is ufed in the lllinois country, from a falt fring that is at this place.
" In the feveral villages on the Miffifippi, which 1 have juft deferibed, there were, fo ${ }^{\circ}$ long ago as the year 1771 , twelve hundred and feren-ty-three fencible men.
" The Ridge which forms the eaftern bank of the Miffiffippi, above the Mifouri river, continues northerly to the Illinois river, and then directs its courfe along the eaftern fide of that river, for about 220 miles, when it declines in gentle flopes, and ends in extenfive rich favannahs. On the top of this ridge, at the mouth of the Illinois river, is an agreeable and commanding fituation for a fort, and though the ridge is high and feep (about 130 feet high), and rather difficult to afcend, yet when af. cended, it afiords a moft delightful profpect. -The Miffiffippi is diftinctly feen from its fummit for more than twenty miles, as are the beautiful meanderings of the Illinois river for many leagues ;-next a level, fruitful meadow prefents itfelf, of at leaft one hundred miles in circuit on the weftern ide of the Miffiffippi, watered by feveral lakes, and chaded by
fmall groves or copfes of trees, feattered in different parts of it, and then the eye with rapture furveys, as well the high lands bordering upon the river Miffouri, as thofe at a greater diftance up the Miffiffippi.- In fine, this charming ridge is covered with excellent grafs, large oak, walnut-trees, \&c. and at the diftance of about nine miles from the Miffiffippi, up the lllinois river, are feen many large favannahs, or meadows abounding in buffalo, deer, \&xc.
" In afcending the Miffiffippi, Cape au Gres particularly attracted my attention.-It is about 8 leagues above the Illinois river, on the eafterr ficie of the Miffiffipni, and continues above five leagues on that river. There is a gradual deícent back to delightful meadows, and to beautiful and fertile uplands, watered by feveral rivulets, which fall into the lllinois river between 30 and 40 miles from its entrance into the Miffifippi, and into the latter at Cape au Gres. The diftance from the Miffiffippi to the River Illinois acrofs the country, is leffened or increafed, according to the windings of the former river ;-the fmalleft diftance is at Cape au Gres, and there it is between four and five miles. The lands in this intermediate fpace between the above two rivers are rich, almoft

304 A P PENDIX.
beyond parallel, covered with large oaks, walnut, \&cc. and not a fone is to be feen, except upon the fides of the river.-It is even acknowledged by the French inhabitants, that if fettlements' were ouly begun at Cape au' Gres', thofe upon the Spanifh fide of the Miffiffippi would be abandoned, as the former would excite a conflant fucceffiou of fettlers, and intercept all the trade of the upper Miffiffippi.
" The lllinois river furnihes' a communication with Lake Michigan, by the Chicago river, and by two portages between the latter and the Illinois river; the longeft of which does not exceed four iniles.
" The Illinois country is in general of a fuperior foil to any other part of North America that I have feen. It produces fine oak, hickory, cedar, mulberry-trees, \&c. fome dying roots and medicinal plants; -hops and excellent wild grapes, and in the year 1769 , one hundred and ten hogheads of well-tafted and frong wine were made by the French fettlers from thefe grapes,-a large quantity of fugan is alfo annually made from the juice of the maple-tree; and as the mulberry-trees are long and numerous, I prefume the making of filk will employ the attention and indufliy of the fettlers, when
the country is more fully inhabited than it is at prefent, and efpecially as the winters are much more moderate, and favourable for the breed of filk worms, than they are in many of the fea coaft provinces.-Indigo may likewife be fuccefffully cultivated (but not more than two cuttings in a year); wheat, peas, and Indian corn thrive well, as does every fort of grain and pulfe, that is produced in any of the old colonies. Great quantities of tobacco are alfo yearly raifed by the inhabitants of the lllinois, both for their own confumption, and that of the Indians; but little has hitherto been exported to Europe. Hemp grows fpontaneoully, and is of a good texture; its common height is io feet, and its thicknefs three inches (the latter reckoned within about a foot of the root), and with little labour any quantity may be cultivated. Flax feed has hitherto been only raifed in fmall quantities. There has however been enough produced to thew that it may be fown to the greateft advantage. Apples, pears, peaches, and all other European fruits, fucceed admirably. Jron, copper, and lead mines, as alfo falt fprings, have been difcovered in different parts of this territory. The two latter are worked on the Spanifh fide of Vol. II.

X
the
the Miffiffippi, with confiderable advantage to their owners. There is plenty of fifh in the rivers, particularly cat, carp, and perch, of an uncommon fize.-Savannahs, or natural meadows, are both numerous and extenfive ; yielding excellent grafs, and feeditig great herds of buffaloe, deer, \&c.-Ducks, tcal, geefe, fwans, cranes, pelicans, turkies, pheafants, partridges, \&c. fuch as are feen in the fea coaft colonies, are in the greateft varicty and abundance.-In fhort, every thing that a reafonable mind can defire is to be found, or may, with little pains, be produced here.
" Niagara Fort is a moft important poft. It fecures a greater number of communications through a larger country than probably any other pafs in interior Amcrica; -it ftands at the entrance of a ftrait, by which lake Ontario is joined to lake Erie, and the latter is connected with the three great lakes, Huron, Michegan, and Superior. About nine miles above Fort Niagara the carrying place begins. It is occafioned by the ftupendous cataract of that name. The quantity of water which tumbles over this fall is $u_{i}$ paralleled in America;-its heighth is not lefs than 137 feet. This fall would interrupt the communication between
the lakes Outario and Erie, if a road was not made up the hilly country that borders upon the ftrait. This road extends to a fmall poft eighteen miles from Fort Niagara. Here the traveller embarks in a battoe or canoe, and proceeds eighteen miles to a finall fort at lake Erie. It may be proper alfo to add, that at the end of the firft two miles, in the laft-mentioned diftance of 18 miles, the ftream of the river is divided by a large ifland, above nine miles in length ; and at the upper end of it, about a mile from lake Erie, are three or four inlauds, not far from each other; -thefe iflands, by interrupting and confining the waters difcharged from the lake, greatly increafe the rapidity of the fream; which indeed is fo violent, that the ftiffert gale is fcarcely fufficient to enable a large veffel to ftem it; but it is fuccefffully refifted in fmall battoes, or canoes, that are rowed near the hore.
"Lake Erie is about 225 miles in length, and upon a medium about 40 miles in breadth. It affords a good navigation for mipping of any burthen. The coaft, on both fides of the lake, is generally favourable for the paffage of battoes and canoes. Its banks in many places have a flat fandy fhore, particularly to the eaftward of

## IMAGE EVALUATION TEST TARGET (MT-3)

Photographic Sciences Corporation
the peninfula, called Long Point, which extends into she lake, in a fouth-eaftern direction, for upwards of 18 miles, and is more than five miles wide in the broadeft part; but the ifhmus, by which it joins the continent, is fcarcely 200 yards wide. The peninfula is compofed of fand, and is very convenient to haul boats out of the furf upon (as is almoft every other part of the thore) when the lake is too rough for rowing or failing; yet there are fome places where, in boifterous weather (on account of their great perpendicular height), it would be dangerous to approach, and impoffible to land. Moft of thefe places are marked in my map with the letter X .
" Lake Erie has a great variety of fine fifh, fuch as fturgeon, eel, white fifh, trout, perch, $\& c$.
" The country, northward of this lake, is in many parts fwelled with moderate hills, but no high mountains. The climate is temperate, and the air healthful. The lands are well timbered (but not generally fo rich as thofe upon the fouthern fide of the lake), and for a confiderable diftance from it, and for feveral miles eaftward of Cayahoga river, they appear quite level and extremely fertile; and except
where extenfive favannahs, or natural meadows intervene, are covered with large oaks, walnut, afh, hickory, mulberry, faffafras, \&c. \&c. and produce a great variety of Ihrubs and medicinal roots.-Here alfo is great plenty of buffalo, deer, turkies, partridges, \&c.
" Fort Detroit is of an oblong figure, built with fockades, and advantageoully fituated, with one entire fide commanding the river, called Detroit. This fort is near a mile in circumference, and enclofes about one hundred houfes, built in a regular manner, with parallel ftreets, croffing each other at right angles. Its fituation is delightful, and in the centre of a pleafant, fruitful country.
" The ftrait St. Clair (commonly called the Detroit river) is at its entrance more than three miles wide, but in afcending it, its width perceptibly diminifhes, fo that oppofite to the fort (which is 18 miles from lake Erie) it does not exceed half a mile in width. From thence to lake St. Clair it widens to more than a mile. The channel of the ftrait is gentle, and wide, and deep enough for Thipping of great burthen, although it is incommoded by feveral inlands; one of which is more than feven miles in length. Thefe inlands are of a fertile foil, and $X_{3} \quad$ fr $m$
from their fituation afford a very agreeable apm pearance. For eight miles below, and the fame diftance above fait Detroit, on both fides of the river, the country is divided into regular and well cultivated plantations, and from the contiguity of the farmers houfes to each other, they appear as two long extended villages. The inhabitants, who are mofly Freuch, are about 2000 in number; 500 of whom are as good markfmen, and as well accuftomed to the woods, as the Indian natives themfelves. They raife large ftocks of black cattle, and great quantities of corn, which they grind by windmills, and manufacture into excellent flour.The chief trade of Detroit confifts in a barter of coarle European grods with the natives for furs, deer-1kins, tallow, \&c. \&xc.
" The rout from lake St. Clair to lake. Huron, is up a ftrait or river, about 400 yards wide. This river derives itfelf from lake Huron, and at the diftance of 33 miles lofes itfelf in lake St. Clair. It is in general rapid, but particularly fo near its fource;-its channel, and allo that of lake St. Clair, are fufficiently, deep for thipping of very confiderable burthen. This atrait has feveral mouths, and the lauds, lying between them are fine meadows. The
country on both fides of it, for 15 miles, has a very level appearance, but from thence to lake Huron, it is in many places broken, and covered with white pines, oaks, maple, birch, and beech."

## Thougbts on the Duration of the American Conmonzvealtb.

There is a greater probability that the duration of the American commonwealth will be longer than any empire that has hitherto exifted. For it is a truth, univerfally admitted, that all the advantages which ever attended any of the monarchies in the old world, all center in the new; together with many others, which they never enjoy. The four great empires, and the dominions of Charlemaign, and the Turks, all rofe by conquefts; none by the arts of peace. On the contrary, the territory of the United States has been planted and reared by a union of liberty, good conduct, and all the comforts of domeftic virtue.

All the great monarchies were formed by the conqueft of kingdoms, different in arts, manners, language, temper, or religion, from the conquerors; fo that the union, though in fome

$$
\mathrm{X}_{4} \quad \text { cafes }
$$

cafes very ftrong, was never the real and intimate connection of the fame people; and this circumftance principally accelerated their ruin, and was abfolutely the caufe of it in fome. This will be very different in the Americans. They will, in their greateft extent and population, be one and the fame people; the fame in language, religion, laws, manners, tempers, and purfuirs; for the fmall variation in fome diftricts, owing to the fettlement of Germans, is an exception fo very dight, that in a few ages it will be unknown.

The Aflyrian and Roman empires were of very flow growth, and therefore lafted the longeft; but fill their increafe was by conqueft, and the union of diffonant parts. The Perfian and Macedonian monarchies were foon founded and profently overturned; the former not lafting fo long as the Affyrian, nor a fixth of the duration of the Roman ; and as to the Maredonian, it lafted but fix years, This advantage of a llow growth is ftrong in favour of the Americans; the wonderful increafe of their numbers is the natural effect of plenty of land, a good climate, and a mild and beneficent government, in which corruption and tyranny are wholly unknown. Some centuries are already paft fince their firf fettlement,
fettlement, and many more will pals before their power appears in its full fplendour ; but the quicknefs of a growth that is entirely natural will carry with it no marks of decay, being entirely different from monarchies founded by force of arms. The Roman empise perithed by the hands of northern barbarians, whom the mafters of the world difdained to conquer ; it will not be fo with the Americans, they fipread gradually over the whole continent, infomuch that two huudred years hence-there probably will be nobody but themfelves in the whole northern continent; from whence therefore fhould their Goths and Vandals come ${ }^{\text {N Nor can }}$ they ever have any thing to fear from the fouth; firf, becaufe that country will never be: populous, owing to the poffeflion of mines: fecondly, there are feveral nations and languages planted and remaining in it : thirdly, the moft conliderable part of it lies in the torrid zone; a region: that never yet fent forth nations of conquerors.

In extent the habitable parts of North America exceed that of any of the four empires, and confequently can feed and maintain a people much more numerous than the Affyrians or the Romans. The fituation of the region is fo
advantageous
advantageous that it leaves nothing to be wifhed for; it can have no neighbours from whom there is a poffibility of attack or molefation; it will poffefs all the folid advantages of the Chinefe empire without the fatal neighbourhood of the Tartars.

It will have further the fingular felicity of all the advantages of an ifland, that is, a freedom from the attacks of others, and too many difficulties, with too great a diftance, to engage in enterprifes that heretofore proved the ruin of other monarchies.

The foil, the climate, production, and face of the continent, is formed by nature for a great, independent, and permanent government : fill it with people who will of themfelves, of courfe, poffers all forts of manufactures, and you will fint it yielding every neceffary and convenience of life. Such a vaft tract of country, poffeffing fuch fingular advantages, becoming inhabited by one people, fpeaking the fame language, profeffing the fame religion, and having the fame manners; attaining a population equal to that of the greateft empire; fprung from an active and induftrious nation, who have transfufed into them their own induftry and fpirit, and feen them worthy of their original ; inhabiting a foil not dangeroufly
dangerounly fertile, nor a clime generally conducive to effeminacy; accuftomed to commerce: fuch a people muft found a commonwealth as indiffoluble as humanity will allow. Suffice it for England, that fle will have been the origin of a commonwealth greater and more durable than any former monarchy; that her language and her manners will flourih amoug a pcople who will one day become a fplendid fpectacle in the vaft eye of the univerfe. This flattering idea of immortality no other nation can hope to attain.

And here let me make an obfervation that fhould animate the authors in the Englif language with an ardour that cannot be infufed into thofe of any other nation; it is the pleafing idea of living among fo great a people, through almoft a perpetuity of fame, aud under almoft an impoffibility of becoming, like the Greek and Latin tongues, dead; known only by the learned.-Increafing time will bring increafing readers, until their names become repeated with pleafure by above an hundred millions of people!

A STATE OF THE COMMERCIAL INTERCOURSE BETWEEN THE UNITED STATES OF AMERICA AND FOREIGN NATINNS. WRITTEN IN THE MONTH OF JUNE I792. BY THOMAS JEFFERSON, ESQ. SECRETARY OF STATE TO THE SAID UNITED STATES.

The countries with which the United States have had their chief commercial intercourfe, are, Spain, Portugal, France, Great Britain, the United Netherlands, Denmark, and Sweden, and their American poffeffions; and the articles of export which conflitute the bafis of that commerce, with their refpective amounts, are-

Bread fuff, that is to fay, breadgrains, meals, and bread, to the anDols. nual amount of - - . - - 7,649,887 Tobacco - - - - - $4,349,567$ Rice - - - . . . - . 1,753,796 Wood - - . . - . . 1,263,534 Salted filh - - - - - - 941,696

minions - - - - - - 1,172,692
Denmark and its dominions - - 351,394 .
Sweden and its dominions - - 14,325
Thefe Imports confift moftly of articles on which induftry has been exhaufted.

Our Navigation, depending on the fame commerce, will appear by the following ftatement of the tonage of our own veffels, entering into our ports, from thofe feveral nations, and their poffeffions, in one year, that is to fay, from October 1789 , to September : 790, inclufive, as follows:

> Tons.

| Spain $-M_{2}$ | - | - | 19,695 |
| :--- | :--- | :--- | ---: |
| Portugal | - | - | - |

Of our commercial objects, Spain receives favourably our bread fuff, falted filh, wood, fhips, tar, pitch, and turpentine. On our meals; however, as well as on thofe of other foreign countries,
tries, when re-exported to their colonies, they have lately impofed duties of from half a dollar to two dollars the barrel, the duties being fo proportioned to the current pice of their own flour, as that beth together are t's make the confant fum of nine dollars per barrel.

They do not difcourage our rice, pot and pearl afh, falted provifions, or whale oil : but thefe articles being in fmall demand at their markets, are carried thither but in a fmall degree. Their demand for rice, however, is increafing. Neither tobacco nor indigo are received there. Our commerce is permitted with their Canary lllands, under the fame conditions.

Themfelves and their colonies are the actual confumers of what they receive from us.

Our navigation is free with the kingdom of Spain; foreign goods being received there in our thips, on the fame conditions as if carried in their own, or in the veffels of the country of which fuch goods are the manufacture or produce.

Portugal receives favourably our grain and bread, falted filh and other falted provifions, wood, tar, pitch, and turpentine.

## APPENDIX.

For flax-feed, pot and pearl afh, though not difcouraged, there is little demand.

Our hhips pay 20 per cent. on being fold to their fubjects, and are then free bottoms.

Foreign goods (except thofe of the Eaft Indies) are received on the fame footing in our veffiels as in their own, or any others; that is to fay, on general duties of from twenty to twenty-eight per cent. and confequently our navigation unobftructed by them.-Tobacco, rice, and meals, are prohibited.

Themfelves and their colonies confume what they receive from us.

Thefe regulations extend to the Azoies, Madeira, and the Cape de Verd Illands, except that in thefe meals and rice are received freely.

France receives favourably our bread fuff, rice, wood, pot and pearl affes.

A duty of five fous the kental, or nearly four and a half cents, is paid on our tar, pitch, and turpentine. Our whale oil pays fix livres the kental, and are the only foreign whale oils admitted. Our indigo pays five livres on the kental ; their own two and an half: but a difference of quality, ftill more than a difference of. duty, prevents its feeking that market.

Salted

Salted beef is received freely for re-exportation, but if for home confumption, it pays five livres the kental. Other falted provifons pay that duty in all cafes, and falted fifh is made lately to pay the prohibitory one of twenty livres in the kental.

Our hips are free to carry thither all foreign goods which may be carried in their own or any other veffels, except tobaccoes not of our own growth; and they participate with their's the exclufive carriage of our whale oils and tobaccoes. .

During their former government, our tobacco was under a monopoly; but paid no duties, and our hips were freely iold in their ports, and converted into national bottoms. 'The firlt National Affembly took from our thips this privilege: they emancipated tobacco from its monopoly, but fubjected it to duties of eighteen livres fifteen fous the kental, carried in their own veffels, and twenty-five livres carried in ours, a difference more than equal to the freight of the article.

They and their colonies confume what they receive fram us.

Great Britain receives our pot and pearl athes free, while thofe of other nations pay a duty of
Vol. II. Y two
two thillings and three-pence the kental. There is an equal diftinction in favour of our bar iron, of which article, however, we do not produce enough for our own ufe. Woods are free from us, whilft they pay fome frmall duty from other countries. Our tar and pitch oay 11 d . fterling the barrel; from other alien countries they pay about a penny and a third more.

Our tobacco, for their own confumption, pays is. $3^{\text {d. fterling the pound, cuftom and ex- }}$ cife, befides heavy expences of collection. And rice, in the fame cafe, pays 7 s .4 d . fterling the hundred weight; which rendering it too dear as an article of common food, it is confequently ufed in very fmall quantity.

Our falted fifh, and other falted provifions, except bacon, are prohibited. Bacon and whale oil are under prohibitory duties; fo are our grainy, meals, and bread, as to internal confumption, unlefs in times of fuch fcarcity as may raife the price of wheat to 50 s . ferling the quarter, and other grains and meals in proportion.

Our fhips, though purchafed and navigated by their own fubjects, are not permitted to be ufed, even in their trade with us.

Whils

While the veffels of other nations are fecured by ftarding laws, which cannot be altered, but by the concurrent will of the three branches of the Britifh legiflature, in carrying thither any produce or manufacture of the country to which they belong, which may be lawfully carried in any veffels, ours, with the fame prohibition of what is foreign, are further prohibited by a ftanding law. (12 Cai. II. 28. §. 3) from carrying thither all and any of our own domeftic productions and manufactures. A fubfequent a $\mathfrak{t}$, indeed, authorifed their executive to permit the carriage of our own productions in our own bottoms, at its fole difcretion; and the permiffion has been given from year to year by proclamation, but fubject every moment to be withdrawn on that fingle will, in which event our veffels having any thing on board, ftand interdicted from the entry of all Britilh ports. The difadvantage of a tenure which may be fo fuddenly difcontinued was experienced by our merchants on a late occafion, when an official notification that this law would be ftrictly enforced, gave them juft apprehenfions for the fate of their veffels and cargoes difpatched or deftined to the ports of Great Britain. The minifter of that court, indeed, frankly expreffed
his perfonal conviction that the words of the order went farther than was intended, and fo he afterwards officially informed us; but the embarraffments of the moment were real and great, and the poffibility of their renewal lays our commerce to that country under the fame fpecies of difcouragement as to othei countries where it is regulated by a fingle legiflator ; and the diftinction is too remarkable not to be noticed, that our navigation is excluded from the fecurity of fixed laws, while that fecurity is given to the navigation of nthers.

Our veffels pay their ports is. gd. ferling per ton, light and trinity dues, more than is paid by Britifh fhips, except in the port of London, where they pay the fame as Britifh.

The greater part of what they receive from us is re-exported to other countries, under the ufelefs charges of an intermediate depofit and double voyage. From tables pubiifhed in England, and compofed, as is faid, from the books of their cuftom-houfes, it appears that of the indigo imported there in the years 1773-4-5, one third was re-exported; and from a document of authority, we learn that of the rice and tobacco imported there before the war, four-fifths were re-exported. We are affured, indeed,
indeed, that the quantities fent thither for reexportation fince the war, are confiderably diminifhed, yet lefs fo than reafon and national intereft would dictate. The whole of our grain is re-exported when wheat is below 50 s. the quarter, and other graius in proportion.

The United Netherlands prohibit our pickled beef and pork, meals and bread of all forts, and lay a prohibitory duty on fpirits diftilled from graill.

All other of our productions are received on varied duties, which may be reckoned on a medium at about three per cent.

They confume but a fimall proportion of what they receive; the refidue is partly forwarded for confumption in the inland parts of Europe, and partly re-fhipped to other maritime countries. On the latter portion they intercept between us and the confumer fo much of the value as is abforbed by the charges attending an intermediate depofit.

Foreign goods, except fome Eaft India articles, are received in veffels of any nation.

Our hips may be fold and naturalized there with exceptions of one or two privileges, which fomewhat lefferr their value.

Denma.k lays confiderable duties on our to-

$$
\mathrm{Y}_{3} \quad \text { bacco }
$$

bacco and rice carried in their own veffels, and half as much more if carried in ours; but the exact amount of thefe duties is not perfectly known here. They lay fuch as amount to prohibitions on our indigo and corn.

Sweden receives favourably our grains and meals, falted provitions, indigo, and whalo oil.

They fubject our rice to duties of fixteen mills the pound weight carried in their own veffels, and of forty per cent. additional on that, or 22,410 mills, carried in ours or any others, Being thes rendered too dear as an article of common food, little of it is confumed with them. They confume more of our tobaccoes, which they take circuitoully through Great Britain, levying heavy duties on them alfo; their duties of entry, town duties, and excife, being 4 dols. $34^{\circ}$ cents. the hundred weight, if caried in their own veffels, and of forty per cent. on that additional, if carried in our own or any other veffels.

They prohibit altogether our bread, fifh, pot and pearl afhes, flax-feed, tar, pitch, and turpentine, wood (except oak timber and mafts), and all foreign manufattures.

Uuder fo many reftrictions and prohibitions,
our navigation with them is reduced almoft to nothing.

With our neighbours, an order of things much harder prefents itfelf.

Spain and Portugal refure to thofe parts of America which they govern, all direct intercourfe with any people but themfelves. The commodities in mutual demand between them and their neighbours muft be carried to be ey.changed in fome port of the dominant country, and the trarfportation between that and the fubject fate muft be in a domeftic bottom.

France, by a ftanding law, permits her Weft India pofleffions to receive directly our vegetables, live provifions, horfes, wood, tar, pitch, and turpentine, rice, and maize, and prohibits our other bread ftuff; but a fufpenfion of this prohibition having been left to the colonial legillatures in times of fcarcity, it was formerly fufpended occafionally, but latterly without interruption.

Our frefh and falted provifions (except pork) are received in their iflands under a duty of three colonial livres the kental, and our veffels are as free as their own to carry our commodities thither, and to bring away rum and molaffes.
$\mathrm{Y}_{4} \quad$ Great

Great Britain admits in her iflands our veged tables, live provifions, horfes, wood, tar, piteb; and turpentine, rice, and bread ftuff, by a proclamation of her executive, limited always to the term of a year. She prohibits our falted provifions: fhe does not permit our veflels to carry thither our own produce. Her veffels alone may take it from us, and bring in cxchange, rum, molaffes, fugar, coffee, cocoa nuts, ginger, and pimento. There are, indeed, fome freedoms in the ifland of Dominica, but under fuch circumftances as to be little ufed by us., In the Britih continental colonies, and in Newfoundland, all our productions are prohibited, and our veffels forbidden to enter their ports; their goverinors however, in times of diffrefs, have power to permit a temporary importation' of certain articles in their own bottoms, but not in ours.

Our citizens cannot refide as merchants or factors within any of the Britifh plantations, this being exprefsly prohibited by the fame fatue of 12 Car. II. C. 18 , commonly called the Navigation act.
${ }^{-1}$ In the Danih-American poffeffions a duty of five per cent. is levied on our corn, corn-meal, rice, tobacco, wood, falted fifh, indigo, horfes, mules,
mules, and live ftock ; and of ten per cent. on our flour, falted pork and beef, tar, pitch, and turpentiine.

In the American iflands of the United Netherlands and Sweden, our veffels and produce are received, fubject to duties, not fo heavy as to have been complained of; but they are heavier in the $\mathrm{D} \cdot{ }^{-c} \mathrm{ch}$ poffeffions on the continent.

To fum up thefe reftrictions, fo far as they are important :

## 1ft. In Eurofic-

Our bread ftuff is at moft times under prohibitory duties in England, and confiderably dutied on exportation from Spain to her colonies.

Our tobaccoes are heavily dutied in England, Sweden, and France, and prohibited in Spain, and Portugal.

Our rice is heavily dutied in England and Sweden, and prohibited in Portugal.

Our fifh and falted provifions are prohibited in England, and under prohibitory duties in France.

Our whale-oils are prohibited in England and Portugal.

And our veffels are denied naturalization in England, and of late in France.

## 2d. In the Wef Indies.

All intercourfe is prohibited with the poffef. fions of Spain and Portugal.

Our falted provifions and fifh are prohibited by England.

Our falted pork, and bread ftuff (except maize), are reccived under temporary laws only, in the dominions of France, and our falted fifh pays there a weighty duty.

## 3d. In the Article of Navigation.

Our own carriage of our own tobacco is heavily dutied in Sweden, and lately in France.

We can carry no article, not of our own production, to the Britifh ports in Europe.

Nor even our own produce to her American poffeffions.

Such being the reftrictions on the commerce and navigation of the United States, the queftion is, in what way they ray beft be removed, modified, or counteracted?

As to commerce, two methods occur. 1. By friendly arrangements with the feveral nations with whom thefe reftrictions exift: or, 2. By the
the feparate act of our own legiflatures for countervailing their effects.

There can be no doubt, but that of thefe two, friendly arrangement is the moft eligible. Intead of embarraffing commerce under piles of regulating laws, dutics, and prohibitions, could it be relieved from all its fhackles in all parts of the world-could every country be employed in producing that which bature has beft fitted it to produce, and each be free to exchange with others mutual furpluffes for mutual wants, the greateft mafs poffible would then be produced of thofe things which contribute to human life and human happinefs; the numbers of mankind would be increafed, and their condition bettered.

Would even a fingle nation begin with the United States this fyftem of free commerce, it would be advifable to begin it with that nation; fince it is by one only that it can be extended to all. Where the circumftances of either party render it expedient to levy a revenue, by way of impoft, on commerce, its freedom might be modified, in that particular, by mutual and equivalent meafures, preferving it entire in all others.

Some nations, not yet ripe for free commerce,
in all its extent, might fill be willing to mollify its reftrictions and regulations for us in proportion to the advantages which an intercourfe with us might offer. Particularly they may concur with us in reciprocating the duties to be levied on each fide, or in compenfating any excefs of duty, by equivalent advantages of another nature. Our commerce is certainly of a charater to entitle it to favour in moft countries. The commodities we offer are either neceffaries of life, or materials for manufacture, or convenient fubjects of revenne; and we take in exchange, either manufatures, when they have received the laft finifh of art and induftry, or mere luxuries. Such cultomers may reafonably expect welcome, and friendly treatment at every market; cuftomers too, whofe demands, increafing with their wealth and population, muft very fhortly give full employment to the whole induftry of any uation whatever, in any line of fupply they may get into the habit of calling for, from it.

But fhould any nation, contrary to our wifhes, fuppofe it may better find its advantage by continuing its fyftem of prohibitions, duties, and regulations, it behoves us to protect our citizens, their commerce, and navigation, by counterprohibitions,
prohibitions, duties, and regulations alfo. Free commerce and navigation are not to be given in exchange for reftrictions and vexations: nor are they likely to produce a relaxation of them.

Our navigation involves ftill higher confiderations. As a branch of induftry, it is valuable; but as a refource, effential.

Its value, as a brauch of induftry, is cubanced by the dependence of fo many other brauches on it. In times of general peace it multiplies competitors for employment in tranfportation, and fo keeps that at its proper level; and in times of war, that is to fay, when thofe nations who may be our principal carriers, fhall be at war with each other, if we have not within ourfelves the means of traufportation, our produce muft be exported in belligerent veffels at the increafed expence of warfreight and infurance, and the articles which will not bear that, muft perifh on our bands.

But it is a refource for defence that our navigation will admit neither neglect nor forbearance. The pofition and circumfances of the United States leave them nothing to fear on their land-board, and nothing to defire beyond their prefent rights. But on their fea-board, they are open to injury, and they have there,
too, a commerce which muft be protected. This can only be dọne by poffeffing a refpectable body of citizen-feamen, and of artifts and eftablifhments in readinefs for thip-building.

Were the ocean, which is the common property of all, open to the induftry of all, fo that every perfon and veffel thould be free to take employment wherever it could be found, the United States would certainly not fet the example of appropriating to themfelves, exclufively, any portion of the common ftock of occupation. They would rely on the enterprize and activity of their citizens for a due participation of the benefits of the feafaring bufinefs, and for ke eping the marine clafs of citizens equal to their object. But if particular nations grafp at undue fhares, and more efpecial!y if they feize on the means of the United States to convert them into aliment for their own ftrength, and withdraw them entirely from the fupport of thofe to whom they belong, defenfive and protecting meafures become neceffary on the part of the nation whofe marine refources are thus invaded, or it will be difarmed of its defence; its productions will lie at the mercy of the nation which as poffeffed itfelf exclufively of the means of carrying them, and its politics may be influenced by thofe who
command its commerce. The carriage of our own commodities, if once eftablifhed in another channel, cannot be refumed in the moment we may defire. If we lofe the feamen and artifts whom it now occupies, we lofe the prefent means of marine defence, and time will be requifite to raife up others, when difgrace or loffes fhall bring home to our feelings the error of having abandoned them. The materials for maintaining our due fhare of navigation are ours in abundance; and as to the mode of ufing them, we have only to adopt the principles of thofe who thus put us on the defenfive, or others equivalent and better firted to our circumftances.

The following principles being founded in reciprocity, appear perfectly juft, and to offer no caure of complaint to any nation.

Ift. Where a nation impofes high duties on our productions, or prohibits them altogether, it may be proper for us to do the fame by theirs, firft burthening or excluding thofe productions which they bring here in competition with our own of the faine kind; felecting next fuch manufactures as we take from them in greateft quantity, and which at the fame time we could the fooneft furnifh to ourfelves, or obtain from other countries; impofing on them duties
lighter at firft, but heavier and heavier afterwards, as other channels of fupply open. Such duties having the effect of indirect encoaragement to domeftic manufactures of the fame kind, may induce the manufacturer to come himfelf into thefe flates; where cheaper fubfiftence, cqual laws, and a vent of his wares, free of duty, may enfure him the higheft profits from his 1 kill and induftry. And here it would be in the power of the flate governmente to co-operate effentially, by opening the refources of encouragement which are under their controul, extending them likerally to artifts in thofe particular branches of manufacture, for which their foil, climate, population, and other circumftances have matured them, and foftering the precious efforts and progrefs of houfehold manufacture, by fome patronage fuited to the nature of its objects, guided by the local informations they poffefs, and guarded againft abufe by their prefence and attentions. The oppreffions on our agriculture in foreign ports would thus be made the occafion of relieving it from a dependence on the councils and conduct of others, and of promoting arts, manufactures, and population, at home.

2d. Where a nation refufes permiffion to our merchants and factors to refide within certain
parts of their dominions, we may, if it Chould be thought expedient, refufe refidence to theirs in any and every part of ours, or modify their tranfactions.

3d. Where a nation refufes to receive in our veffels any productions but our own, we may refufe to receive, in theirs, any but their own productions. The firft and fecond claufes of the bill reported by the committee are well formed to effect this object.
$4^{\text {th }}$. Where a nation refufes to confider any veffel as ours which has not-been built within our territories, we fhould refufe to confider as theirs any veffel not built within their territories.

5th. Where a nation refufes to our veffels the carriage even of our own productions to certain countries under their domination, we might refufe to theirs, of every defcription, the carriage of the fame productions to the fame countries. But as juftice and good neighbourhood would dictate, that thofe who have no part in impofing the reffriction on us, fhould not be the victims of meafures adopted to defeat its effect, it may be proper to confine the reftriction to veffels owned or navigated by any fubjects of the fame dominant power, other

VoL.II. $Z \quad$ than
than the inhabitants of the country to which the faid productions are to be carried.-And to prevent all inconvenience to the faid inhabitants, and to our own, by too fudden a check on the means of tranfportation, we may continue to admit the velfels marked for future exclufion, on an advanced tonnage, and for fuch length of time only, as may be fuppofed neceffary to provide againft that inconvenience.

The eftablifiment of fome of thefe principles by Great Britain alone has already loft us, in our commerce wich that country and its poffeffions, between eight and nine hundred veffels of near 40,000 tons burthen, according to fatements from official materials, in which they have confidence. This involves a proportional lofs of feamen, hipwrights, and fhip building, and is too ferious a lofs to admit forbearance of fome effectual remedy.

It is true we muft expect fome inconvenience in practice, from the eftablifhment of difcriminating duties. But in this, as in fo many other cafes, we are left to choofe betwesn two evils. Thefe inconveniences are nothing when weighed againft the lofs of wealth and lofs of force, which will follow our perfeverance in the plan of indifcrimination.-When once it thall
be perceived that we are either in the fyftem o: the habit of giving equal advantages to thofe who extinguiil our commerce and navigation, by duties and prohibitions, as to thofe who treat both with liberality and juftice, liberality and juftice will be converted by all into duties and prohibitions. It is not to the moderation and juftice of others we are to truft for fair and equal accefs to market with our productions, or for our duc thare in the tranfportation of them; but to our means of independence, and the firm will to ufe them. Nor do the inconveniencies of difcrimination merit confideration. Not one of the nations before mentioned, perhaps not a commercial nation on earth, is without them. In our cafe one diftinction alone will fuffice, that is to fay, between na-tions who favour our productions and navigation, and thofe who do not favour them. One fet of moderate duties, fay the prefent duties, for the firf, and a fixed advance on thefe as to fome articles, and prohibitions as to others, for the latt.

Still it mult be repeated, that friendly arrangements are preferable with all who will come into them ; and that we fhould carry into
fuch
fuch arrangements all the liberality and fpirit of accommodation, which the nature of the cafe will admit.

France has, of her own accord, propofed negociations for improving, by a new treaty on fair and equal principles, the commercial relations of the two countries. But her internal difturbances have hitherto prevented the profecution of them to effect, though we have had repeated affurances of a continuance of the difpofition.

Propofals of friendly arrangement have been made on our part by the prefent government to that of Great Britain, as the meffage ftates; but, being already on as good a footing in law, and a better in fact, than the moft favoured nation, they have; not as yet difcovered any difpofition to have it meddled with.

We have no reafon to conclude that friendly arrangements would be declined by the other nations with whom we have fuch commercial intercourfe as may render them important. In the mean while, it would reft with the wifdom of Congrefs to determine whether, as to thofe nations, they will not furceafe exparte regulations, on the reafonable prefumption that they
will concur in doing whatever juftice and moderation dictate fhould be done.

## THOMAS JEFFERSON.

P. S. Since writing the above, fome alterations of the condition of ou commerce with fome fovereign nations have taken place. France has propofed to enter into a new treaty of commerce with us, on liberal principles; and has, in the mean time, relaxed fome of the reftraints mentioned in the Report. Spain has, by an ordinance of June laft, eftablifhed New Orlcans, Penfacola, and St. Auguftine, into free ports, for the veffels of friendly nations having treaties of commerce with her, provided they touch for a permit at Corcubion in Gallicia, or at Alicant; and our rice is by the fame ordinance excluded from that country.

> THE FOLLOWTNG ARE SOME OF THE PRINCIPAL ARTICLES OF EXPORTATION FROM THE UNITED STATES OF AMERICA DURING THE YEAR ENDING IN SEPTEMBER 1792.

Three millicns one hundred and forty thoufand two hundred and fifty-five bufhels of grain (principally wheat).

One million four hundred and fixty-nine thoufand feven hundred and twenty-three barrels of flour, meal, bifcuit, and rice (reducing calks of various fizes to the proportion of flour barrels).

Sixty million fix hundred and forty-fix thoufand eight hundred and fixty-one feet of boards, plank, and fcantling (inch board meafure).

Thirty-one million feven hundred and fixty thoufand feven hundred and two flaves and hoops.

Seventy-one million fix hundred and ninetythree thoufand eight hundred and fixty-three mingles.

Nineteen thoufand three hundred and ninetyone and a half tons of timber.

Eighteen thoufand threc hundred and feventyfour pieces of timber.

One thoufand and eighty cedar and oak hip knees.

One hundred and ninety-one frames of houfes.

Seventy-three thoufand three hundred and eighteen oars, rafters for oars, and handfikes.

Forty-eight thoufand eight hundred and fixty mook or knock down cafks.

One hundred and forty-fix thoufand nine hundred and nine barrels of tar, pitch, turpentine and rofin.

Nine hundred and forty-eight thoufand one hundred and fifteen gallons of fpirits, diftilled in the United States,

One hundred and fixteen thoufand eight hundred and three barrels of beef, pork, bacon, mutton, oyfters, \&c. (reducing calks of various fizes to the proportion of beef and pork barrels).

Two hundred and thirty-one thoufand feven hundred and feventy-fix barrels of dried and pickled fifh.

Seven thoufand eight hu:dred and twentythree
three tons twelve cwt. and 4 lb . of pot arhes and pearl afhes.

One hundred and twelve thoufand four hundred and twenty-eight hogheads of tobacco.

Fifty-two thoufand three hundred and eightyone hogfheads of flax feed.

Forty-four thoufand feven hundred and fiftytwo horfes, horned catii, - nules, and fheep.

The preceding extrae from the copy of an authentic official return of all the exports from the United States of America, within the year ending in September laft, conveys an idea of the wealth, importance, and progreflive profperity of that country, far furpaffing what has been heretofore entertained on the fubject:
P. S. From the ift of January 1793 , to the Ift of January 1794, there were exported from the port of Philadelphia 422,075 barrels of flour.

OF THE CIVIL LIST, AND REVENUE OF THE
UNITED STATES.
Abfract of an Eftimate of the Expenditures of the Civil Lift of the United States, for the
year 1793, reported Ly A. Hamilton, Secretary of the Treafury to the Houfc of Reprefentatives.

| Prefident's Salary | $\begin{aligned} & \text { Dollars. } \\ & 25,000 \end{aligned}$ |
| :---: | :---: |
| Vice-Prefident's ditto | 5,000 |
| Chief Juftice | 4,000 |
| 5 Affociate Juftices | 17,500 |
| All the diftrict Judges, | 21,700 |
| Congreis | 143,591 |
| Treafury Department | 55,050 |
| Department of State | 6,300 |
| Department of War | 11,250 |
| $\left.\begin{array}{l}\text { Commiffioners of old ac- } \\ \text { counts }\end{array}\right\}$ | 13,300 |
| Loan Offices | 13,250 |
| Weftern Territory | 11,000 |
| Amount of Penfions | 5,267 |
| Contingencies | 20,264 |
| Total | 352,466 |
| In Britifh Money $\quad f_{0} \cdot \boldsymbol{\wedge} 9$, | ,304170 |

## THE REVENUE.

The American revenue, for 1793 , is ftated to be $4,400,000$ dollars, exclufive of what may
arife from the falc of lands in the Weftern territory; there is likewife upwards of the value of $5,000,000$ dollars in bullion, lying in the Bank of the United States.

FINIS.

[^0]:    - Thefe are not Lord Sheffield's words. They are M. Briffot's; and contain bis deferipticn of Lord Sheffield's fupfofed fentiments, from a perufal of that Nobleman's Obfervations on the Commerce of America. Edit.

    Vol. II. B This

[^1]:    * This affertion will perhaps appear fevere and falfe, even to perfons who think that we excel in phyfics and the exaft fciences. But in granting this, is it thefe kinds of fciences to which a man who reflects ought at firl to give himfelf up? Does not the ftudy of his focial and civil ftate more nearly concern him? Ought not this to interef him more than the number of ftars, or the order of chymical affinities ?-It is, however, the fcience of which we think the leaft. We are paffionately fond of poctry: we difpute ferioufly about mufic ; that is, we have a great confideration for playthings, and make a plaything of our affuirs.

    $$

[^2]:    * We may put in the rank of thefe productions which difhonour the cenforihip, the comedy of Figaro, a fcandalous farce, wherein, under

[^3]:    * Verbi controverfia sorguet Greculos bomines contentionis cupidiores quarn verifatis.

[^4]:    * Favouring, in political economy, fignifies, for the moft part, not to fhackle induftry with too many regulations; however favourable certain of thefe may be, they reftrain it in fome refpect or other. Trade is never better encouraged than when left to itfelf.

[^5]:    * Religious confiderations nad formerly a confiderable influence on civilifed men, and on commerce. The Catholic fled from the Proteftant, the Puritan fufpected the Quaker. A reciprocal hatred reigned between the feits. To day, mankind being more enlightened, all fects connected by commerce, and experience having hewn that probity has almoft always been independent of religion, it is no more required to know whether a man goes to the temple, or to confeffion-It is afked if he fulfils his engagements $w$ :th honour. Yet this relation muft ftill be counted among commercial connexions.

[^6]:    * The.fcarcity of money in the United States of America has been greatly exaggerated in France. It muft be fcarce in all new ftates, where nothing thackles induftry, where fo many
    things

[^7]:    a The detail of this calculation is given in The Defeription of the Indies, Vol. I. page 249. It is neceffary to take notice here of an error crept into that work, which is, that the fuin total is there given in pounds fterling, inftead of livres tournois.

    $$
    \mathrm{D}_{2} \quad \text { there }
    $$

[^8]:    b See Mackintofh's Voyage to the Eaft-Indies, Vol. I. page 340.

[^9]:    * It is aftonifhing, that among fo many travellers who have gone over the Ulited States of America, not one of them has given a detail of the manner of exchanging feveral neceffaries of life; they are reciprocally furnifhed in the country with what they are in want of, without the interference of money. 'The taylor, thoe-maker, \&cc. exercife their profeffions in the houfe of the hulbandman who has occafion for their commodities, and who, for the mot part, furnithes materials, and pays for the workmanfhip in provifions, \&ic. - This kind of exchange extends to many objects; each of thefe people write down what they receive and give, and at the end of the year they clofe an account confifting of an infinity of articles, with a very fmall fum; this could not be effested in Europe but with a great deal of money. Thus it appears, that an ealy means of doing without great fums of money is given to country people by inftructing them in writing and arithmetic; that confequently the fovereign who thould eftablifh fchools for the purpofe of teaching this moft neceffary art and fcience, would create a confiderable means of circulation without the ufe of coin, and that this expence, which feems to alarm fo many governments, is in fact one of the molt lucrative fpeculations which the treafury could make.

[^10]:    * I fay, paper-money, without attaching to this expreffion the idea of conitraint to receive it as fuch; this obligation diminifhes its value-I would fay paper credit, if the word credit did not feem to exclude its principal quality, that of being always fufceptible, and in an inftant, of being converted into money without the leaft lofs.

[^11]:    * Such is the fituation of Aunis and Saintonge-plentiful vintages are there literally feared, and thefe provinces are at this moment overcharged with wine, for which they have na exportation: the people are miferable in the midft of abundance. See Note, Chap. V, Sect. !̣.

[^12]:    * Means are every day fought to diminih and prevent crimes-Let property or employ be given to thofe who are without them : this is the fecret-It muft notwithftanding be agreed, that property is preferable to employ in workfhops; under this point of view, commerce with the United States, in opening to us a great market, will be a means of diminifh ing mendicity and vices in France.

[^13]:    * Our manufactures of filk have proportionably a much greater fale abroad than that of our woollens. It is that, independent of tafte, or, if we will, of farhion, which we poffers,

[^14]:    * Perhaps the character and life of favages, who are fuppofed to have no manufacturers among them, will be oppofed to thefe reafonings ? Mien are deceived in judging thereby; for thefe people, which we look upon as only one degree re-

[^15]:    * Luxury is certainly to be found in Virginia; and when we fpeak of luxury with refpect to free America, it is neceffary to diftinguih carefully the Southern from the Northern States; cities from the country; maritime cities from interior ones. By thefe diftinctions many contrarieties in the accounts of fuperficial travellers may be explained.

[^16]:    * It is not that we ought not to believe that one of the great means of regenerating the old people of the Continent, and of fupporting republicanifm in the United States, would be to give to children fuch an education as Pythagoras exercifed at Crotona. - Sce the Life of Pythagoras.

[^17]:    * It is affured that abftinence from tea was not every where fititufully obferved, which appears yery probable on reflecting that there was a party which faip would have violated it. I have known feveral perfons whom the deprivation of tea had made ill for a long time, although they had tried illufive means, by fubftituting the infufion of agreeable fimples for that of the tea-leaf.

[^18]:    * It is with regret that I write this fact, on confidering it philofophically, but it appears to have been demonftrated politically. No perfon wifhes more than I do to fee the United States feparate themfelves from all the world, and in this fituation to find again the aufterity of the Spartan regimen, without its cruel principles of military difpofition. It would be a fmart ftroke in politics; but this unhappily is no more than a dream.

[^19]:    * The four Southern States gather great quantities of cotton. Their poor are clothed with it winter and fummer. In winter they wear cotten fhirts, and clothes of wool and cotton mixed. In fummer their hirts are linen, and their outward clothes of cotton. Women's drefs is entirely of cotton, and made up by themfelves, women of the richeft clafs excepted; yet a woman of this clafs has a deal of cotton worked up in her houfe, and this callico equals in beauty that of Europe. Thofe from the South furnifh a deal of cotton to the States of the North, which cannot grow it, the climate being too cold.

    There is fcarcely any part of the United States without good flour and faw mills, The Northern States have others for flattening iron. It is in the conftruction of mills efpecially, that the Americans diftinguilh themfelves, in varying their employ and utility, and in their diftribution.

[^20]:    * Tobe convinced of this truth, look at England and F rance; workmanhip is very dearin London but cheap in Paris. The workman in London is well fed, clothed and paid; in Paris he is quite the contrary:
    "It frequently happens," faid an American one day to me, "that I meet in the United States a ploughman, conducting bis " plough and horfes, and eating a wing of a turkey and apiece " of good white bread. I have feen, added he; a veifiel arrive " at New York, full of Scotchinen, not one of whom was un" employed the next day."

    Vol. II.

[^21]:    * There are feveral manufactures at Amiens, and it is remarked, that the hofpitals are more filled with manufacturers than with mafons or other like artizans. A manufacturing life makes more people ill and their complaints more dange'rous; it is becaufe this kind of workmen becomes fooner debauched, and goes fooner to the hofpital, being moftly fingle, and without any domeftic attachment.

[^22]:    * I will not defcend to the minutiz his Lordhhip has done, but I will prove, in every important article, the French, if they know how to profit by their naturil advantages, muft obtain a preference.

[^23]:    * It is a proverb in France, that there is no property worfe conditioned than that of the vineyard.
    $\dagger$ The fituation of a vine-dreffer is different according to the cuftom of countries. In fome he is hired only by the day, and there he is completely wretched. In others, as in Switzerland, he has half of the produce. But an unjuft and tyrannical tax, laid on by the proprietors themfelves, reduces this half to a quarter part.
    $\ddagger$ Such is nearly the fituation of moft of the vine-dreffers of Aunis, who are proprietors. They are at the mercy of the rich farmers of that country. When winter comes, the vinedreffer has neither bread nor money. He goes to the farmer, Vol. II. H afks

[^24]:    * In the tiane of the monarchy there was ar office called Louvetiric, or Mater of tie Firench King's wolf-hounts, and bis aflociates received a trifing recompence for the head of every wolf they killed: or whom this foet is well attelted. There is a finall diflrict, the fub-delegate of which put into his account the price of ten thoufand wolves heads. The guantity appeared extracrdinary to the minificr. The affain was examined. The fub-delegate was difothrged. "But he who prompted him to the aet went unpunihed.

[^25]:    *. If there be a country where the manufacture of linens is encouraged, it is in Ireland, particularly fince its refurrection jinto the political world. Parliament has eftablifhed a committee which is particularly empooyed about this manufacture, and which grants very confiderable fuccours to manufacturers.

[^26]:    * Yet Lord Sheffeild gives for competicion with France, England and Spain. It is to be obferved that England cannot undertake with advantage thofe manufactures wherein gold and filver are introduced, nor in general thofe which have for their bafis the ufe of brilliant metals. Fire is neceffary as an agent in fuch manufactures, and a coal fire is prejudicial to them. The atmofphere in England is perpetually charged with fulphureous vapours, where contakt tarnilhes, in a very little time', gold or filver lace, \&rc. and this perhaps is the motive, which more than manners, has banifhed, and will for ever exclude this kind of luxury from England; and it is not a misfortune.

[^27]:    If A petty title of bought diftinction, which, in the language of ridiculous pride, is conftrued into nobility.

[^28]:    * It is now proved, that there are many of them in America. Mines of tin, and of very good copper, have alfo been difcovered there.

[^29]:    * Thofe falfe views cannot be too much deplored-thofe narrow ideas-thofe fears of ignorance, which fnatch from the hands of induftry the happy inventions which are proper to enrich a whole nation! Who can calculate the riches that England owes to the fole application of the coining-mill, or engine and dye, whofe free ufe has been left to all the manufactures which it was capable of improving in accelerating

[^30]:    * Rags are exceffively dear in America: but the time is arriving when, by an increafe of population, they will become plenty. In Ponnflivania they already make very good paper:

[^31]:    * Such is the powerful influence on population, of the abundance of articles of fubfiftence, and eipecially that of fifh, that it is principally to this article of life that the empire of China owes the incredible number of its inhabitants.

[^32]:    * Such is the advantage of the Americans, that they furnifh provifions to the fedentary fimeries of tice Englifh. According to Colonel Champion, the provifions of Europe are more dear, and not fo good; the differnce in favour of the Americans is in the proportion of four to feven; and it cannot be othetwife.

    Vot. II.
    0
    or

[^33]:    * By fatements which deferve fome faith it appears, that in i $_{7} 84$ the importation into France of whale oil, and that of other fifh taken by the French, was $1,610,6-9$ lb.-Foreign oil $2,748,09 \mathrm{lb}$. Portugal furnifhed almort half of the laft.

[^34]:    * A great river which falls into the Miffiffippi, at feven hundred leagues from the fea.

[^35]:    * The exportation from Charlefowr, from December 1784, to December 1785 , amounted to 67,713 barrels.
    t The exportation of dye-ftuff, made in 1785 , from Charleftown, amounted to 506,920 pound weight.

[^36]:    * In 1782,-2041 barrels of pitch, tar, and turpentine, were exported from Charleftown. In 1783,-14697 barrels. I know not how many barrels the exportation of 1784 amounted to; but that of 1785 confifted of 17,000 . The fame increafe is obferved in other articles. The moft confiderable is rice, afterwards indigo; - the other articles are, tobacco, deerIkins, timber, wheat, butter, wax, and leather. This exportation amounts to near four bundred thoufand pounds fterling.

[^37]:    - In New England the conftructors of veffels make their bargains at the rate of three pounds ferling per ton, carpenter's work included. On the Thames, the price is nive pounds fterling for the work alone of the carpenter.

[^38]:    : Pughaloons,
