Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.						L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

Nova Scotia Public Archives

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Nova Scotia Public Archives

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents.
Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

DR. WM. DOUGLASS'S ALMANACK For 1743,

TOUCHING ON

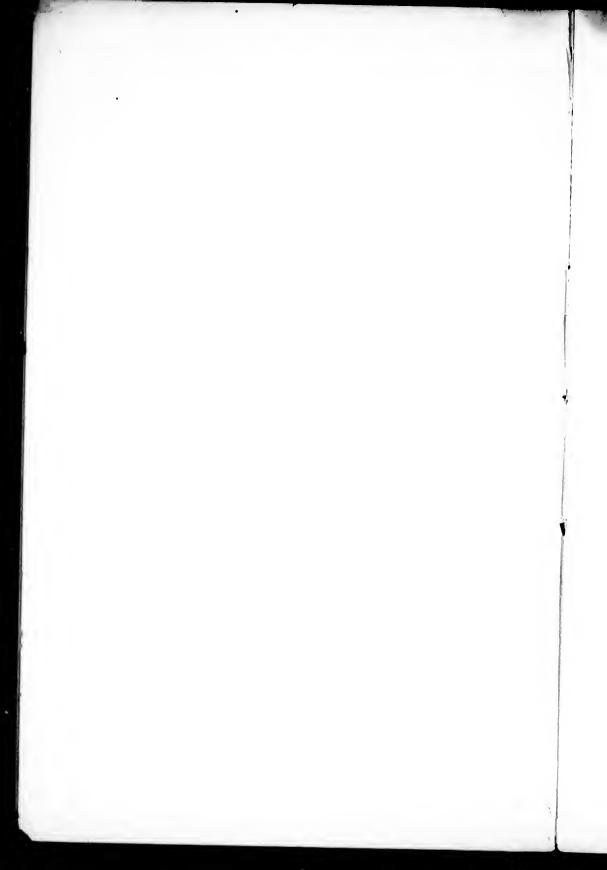

THE SUBJECT OF MEDICINE IN MASSACHUSETTS BEFORE HIS TIME.

 $\mathbf{B}\mathbf{Y}$

SAMUEL ABBOTT GREEN, M.D. 1380-1313

[REPRINTED FROM THE PROCEEDINGS OF THE MASSACHUSETTS HISTORICAL SOCIETY, FEBRUARY, 1884.]

> CAMBRIDGE: JOHN WILSON AND SON. Unibersity Press. 1884.

DR. WM. DOUGLASS'S ALMANACK.

AT a meeting of the Massachusetts Historical Society held on Thursday, Feb. 14, 1884, Dr. Samuel A. Green, in presenting a copy of William Nadir's Almanack for the year 1743, spoke as follows:—

This almanac has been in the possession of my family for several generations, and it is only recently that I have been enabled to identify the handwriting and establish beyond doubt the name of the original owner. The following entry is made among the notes, under date of March 2:—

"Peter Fanuil Esq' dyed of a complication of diseases, a very fat squat man, & has bin Exceeding charitable amogst us, and a great Loss in this Tow."

Again, under date of March 10: -

"M! Peter Fanenil Esq! burried a very Large funeral went roud ye Town house gaue us gloues at ye funeral but sent ye gloues on ye 11. day, his Cofin coner[d] wth black velvet, & plated wth yellow plates."

In the first volume (page 73) of the Proceedings, it is recorded that the gift of "A MS. Journal of a Gentleman in Boston, from the year 1729 to the year 1749, from Mr. Joshua Green," was made to this Society on July 29, 1794. The person presenting it was my great-grandfather; and with the laudable curiosity of a dutiful descendant I set about an examination of the manuscript, which consisted of three folio volumes made up mostly of items about the weather. There are entries here and there of some interest, but generally they are of a meteorological character. All the internal evidence goes to show that the Journal was kept by Benjamin

Walker, Jr.; and not only is the handwriting identical with that in the almamae, but often the expressions are very similar, leaving no doubt that it was Walker who made the marginal notes. He refers as follows to the benefactor of the town of Boston, and mentions a physical peculiarity not generally known:—

"Thursday 3. [March, 1743.] Peter Fannil Esq! between 2 & 3 a clock in y afternoon dyed of a dropsical complyca, he was a fat squat Lame [man,] hip short went with high heeld shoe (In my opinion a great loss too This Town aged 42.8 m) & I think by what I have hear'd has done more Charitable deeds than any man y ener liv'd in this Town & for whom I am very sorry.

"March 10. Peter Fauuil Esq burried. Bearers Mess" Tom Lechmere Josh. Winslow Jn Wheelwright And. Oliver Jn Gooch Jn Gooch Jn

Wendall went round ye Town house

"Thursda 10. Burried Peter Faneuil Esq' in 43d year of age a fatt corpulen brown squat man hip short lame fro childhood."

Benjamin Walker, Jr., the writer of this Journal, was the son of Benjamin and Palsgrave Walker, and born in Boston on Jan. 24, 1679-80. He was a shopkeeper, and associated in business with his younger brother John. His family is mentioned in Sewall's Diary (vol. iii. pp. 371, 372); and additional facts concerning it are given in "The New England Historical and Genealogical Register" (vol. xv. pp. 53, 54). I have but little doubt that he was a kinsman of Isaac Walker, the partner of my great-great-grandfather, Joshua Green, and that these papers came through this mercantile connection. Their firm were extensive owners in a tract of land, known as "the Green and Walker grant," and comprising a large part of the present towns of Heath and Rowe, in Franklin County of this State.* The sons of these partners, Joshua Green, Jr., and Edward Walker, after the dissolution of their fathers' firm by death, kept up the same business, under the same style of Green and Walker; and this fact undoubtedly explains the drift of the Journal and this little pamphlet.

The almanae bears on the title-page the name of William Nadir as the author, and to it are appended the mysterious letters L. X. Q. It is well known that this name was the pseudonym of Dr. William Douglass, a Scotchman by birth, who came to Boston in the early days of his professional career. He had received his medical instruction in Paris and Leyden, and was a man of good education and many accomplishments,

^{*} Holland's History of Western Massachusetts, vol. ii. pp. 382, 419.

though of a peculiar disposition that kept him continually in controversy. It was wittily said of him once that he was always positive and sometimes accurate. He was well versed in the natural sciences, and much interested in astronomy. Dr. Douglass opposed strenuously, both by tongue and pen, the introduction of small-pox inoculation, though he lived to modify his views on this subject. He took up his abode at Boston in the year 1718, at which time he was the only physician here who had received the Doctorate of Medicine.

He writes, under date of Feb. 20, 1720-21, to his compatriot, Dr. Cadwallader Colden, who had settled at New York, also in the year 1718:—

"You complain of the practice of Physick being undervalued in your parts and with reason; we are not much better in that respect in this place; we abound with Practitioners, though no other graduate than myself, we have fourteen Apothecary shops in Boston; all our Practitioners dispense their own medicines."*

Dr. Douglass appears to have been fairly successful as a physician, and in a little more than two years after the date of this letter he was the owner of a large tract of land in Worcester County, which is now included within the limits of Douglas,—a town named after him, though the final s is dropped. In the year 1735 he was one of a small number of persons who formed a medical society in Boston, the first association of the kind in the country.

In a letter written by him to the assessors of the town of Boston, and dated April 23, 1747, he says:—

"Further I may observe to you that I am or Soon must be in the Decline of Human life: therefore do not endeavor to increase my Fortune, having no family to provide for: but shall yearly lessen it, by dooing charities in my life time by donations and bounties." †

I have been thus explicit with Dr. Douglass's affairs in order to show that it is not improbable that he was the "certain gentleman of the town of Boston," alluded to in the printed Journal of the House of Representatives, July 7, 1739, and about whom a query was raised by our Corresponding Member, Mr. Moore, of New York, in a letter to the President of this Society,‡ written two years ago.

Proceedings, vol. xix. p. 250.

^{* 4} Mass. Hist. Coll., vol. ii. p. 164.

[†] The Boston Medical and Surgical Journal, vol. eiv. p. 538: June 8, 1881.

The entry in the Journal is as follows: -

"Information being given to the House by the Member from Worcester, that a certain Gentleman of the Town of Boston, [was] well disposed for the Encouragement and Support of a Professor of Physick within this Province, and for that good Purpose would chearfully contribute out of his own Estate a considerable Sum of Money, provided this Court will join therein in making a Grant of Lands, or otherwise establish a good Fund for the valuable Ends aforesaid; and the same being considered;

"Ordered, That the members of Boston, Charlestown, Roxbury, and Chelsea be a Committee to treat with the Gentleman, hear him on his Proposals, and report their Opinion of what may be proper to be done

for the encouragement of so good a Scheme."

The member from Worcester who brought the subject before the House was Colonel John Chandler, and as Dr. Douglass was a large land-owner in Worcester County it is not unlikely that Colonel Chandler knew him personally. fact, I am aware, has but little weight, but I mention it for what it is worth; and in the absence of positive testimony it would seem as probable as not, that Dr. Douglass was the "eertain gentleman of the town of Boston," who offered to endow a medical professorship at that time. The offer, however, does not seem to have been accepted, as no further trace of it is found in the proceedings of the House, or elsewhere. This attempt is by no means the earliest one in Massachusetts to promote medical education, as Mr. Moore supposes. Nearly a century before this time Giles Firmin, a man learned in medicine, had given instruction in this branch of science. The apostle Eliot, under date of Sept. 24, 1647, writes to Mr. Shepard, the minister of Cambridge, and expresses the desire that -

"Our young Students in Physick may be trained up better than yet they bee, who have onely theoreticall knowledge, and are forced to fall to practise before ever they saw an Anatomy made, or duely trained up in making experiments, for we never had but one Anatomy in the Countrey, which Mr. Giles Firman (now in England) did make and read upon very well, but no more of that now."*

An anatomy is the old name for a skeleton; and Mr. Firmin may be considered, in point of time, the first medical lecturer in the country. His instruction, doubtless, was crude, and comprised little more than informal talks about the dry bones before him; but even this was a great help to the learners. At any rate, it seems to have excited an interest in the subject; for

^{* 3} Mass. Hist. Coll., vol. iv. p. 57

the recommendation is made at the session of the General Court, beginning Oct. 27, 1647, a few weeks later than the date of Eliot's letter, that—

"We conceive it very necessary y^t such as studies physick, or chirurgery may have liberty to reade anotomy & to anotomize once in foure yeares some malefacto^r in case there be such as the Courte shall alow of." *

Edward Johnson, in his "Wonder-Working Providence" (London, 1654), written about the year 1650, describes Harvard College at a period near that time, and says that "some help hath been had from hence in the study of Physick" (page 165). It is very likely that Cambridge was the place where Giles Firmin had "read upon" or lectured on his skeleton.

Even much earlier than this, at the very planting of the Colony, attention had been given to the need of physicians and the importance of medical knowledge. In the first general letter of instruction to Governor Endicott and his Council, from the Governor and Deputy of the New England Company, dated Gravesend, April 17, 1629, it is written,—

"Wee hane entertained Lambert Wilson, Chirurgion to remaine [with] yo" in the service of the plantacon, wth whom wee are agreed that hee shall serve this Companie and the other Planters that li[ve] in the Plantacon for 3 yeares, and in that tyme, apply himself to cure but also for the Indians, as from tyme to ty[me] hee shalbe directed not only of such as came from hence for the genall an [d] pticuler accompts by yo'selfe o' yo' successo' & the rest of the Councell; And moreover hee is to educate & instruct in his Art one or more youths, such as yo" and the said Councell shal[1] appoint that may bee helpfull to him and if occasion serve succeed him in the Plantacon, we youth or youths fitt to learn that pfession lett bee placed with him, of we Mr Hugessons Sonne if his father approne therof may bee one, the rather because hee h[ath] bin trayned vp in litterature, but if not hee then such other as yo" shall judg most fittest &c." †

Here we have the germs of a medical school, which, to be sure, did not fructify at once. But who shall say that they were not fostered and kept alive during this long series of years, in a regular line of descent, under the various and varying fortunes of the Colony and Province, and finally developed into the noble institution known to-day as the Harvard Medical School? Whatever other responsibilities may

^{*} General Court Records, vol. ii. p. 175. † Sutfolk Deeds, lib. i. p. xii.

rest upon the shoulders of the founders of Massachusetts, or whatever other faults may be charged to their account, it cannot be said that they were unmindful, in theory at least, of the liberal benefits that accrue from the school of rational medicine.
