HARBORS, PIERS AND BREAKWATERS :—Return to Address, Shewing the amount expended by the several Local Governments on all Harbors, Piers and Breakwaters in the Dominion, prior to 1867, and since July, 1867, by the Dominion Government, and also the amounts expended on all such works by any local Companies, Municipal Authorities, Railway Companies, Harbor Commissioners, or any other Companies or persons, before or since July 1st, 1867.
- No. 71... OTTAWA RIVER, SLIDES, DAMS, &c. :—Return to Address, Shewing the sums expended on capital account as well as the amounts chargeable to income, in the construction of Slides, Dams, Piers, Booms, and other works, to facilitate the passage of Timber and Saw Logs on the Ottawa River and its tributaries, up to 31st December last.
- No. 72... LACHINE CANAL :—Return to Address, Copies of all correspondence, letters or telegrams between the Government and the proprietors of land in the vicinity of the proposed enlargement of the Lachine Canal, from 1st March, 1874, to the 1st March, 1875, &c., &c.
- No. 73... CIVIL SERVICE EMPLOYÉS, P.E.I. :—Return to Address, A complete Return of all dismissals from, and appointments to, the Civil Service of Prince Edward Island, as well as the salaries attached thereto. [*Not printed.*]
- No. 74... CUSTOMS AND EXCISE :—Return to Address, Receipts from Customs and Excise for the months of May and October, in the year 1874. [*Not printed.*]
- No. 75... CHATHAM BRANCH RAILWAY :—Return to Address, Copies of all correspondence, memoranda, propositions, Reports to Council, and Minutes of Council in relation to aiding the Chatham Branch Railway, or in connection therewith. [*Not printed.*]
- No. 76... ST. PETER'S CANAL :—Return to Address, Copy of the Report of Mr. Perley, C.E., on the enlargement of St. Peter's Canal. [*Not printed.*]
- No. 77... MARINE HOSPITAL, SYDNEY, C.B. :—Return to Address, All plans, correspondence, documents and tenders in possession of the Government, relative to the proposed erection of a Marine Hospital at Sydney, C.B., &c. [*Not printed.*]
- No. 78... ORDNANCE LANDS, FREDERICTON :—Return to Address, All papers, correspondence, telegrams or Orders in Council connected with the sale of certain Ordnance Lands at Fredericton, N.B., to the Fredericton Branch Railroad Company, or to Temple & Burpee, &c.
- No. 79... QUEBEC AND GULF PORTS Co. :—Return to Address, All papers and correspondence, advertisements for tenders, if any, with terms of renewal or extension of subsidy to Quebec and Gulf Ports Company for service between St. Lawrence and Pictou, &c. [*Not printed.*]
- No. 80... HARBORS AND BREAKWATERS, P.E.I. :—Return to Address, Copies of the Reports of the Dominion Government Engineer appointed to survey and report upon Harbors and Breakwaters in Prince Edward Island. [*Not printed.*]
- No. 81... SUPREME COURT, N.B. :—Return to Address, All decisions made since the 1st of January, 1875, by the Supreme Court of New Brunswick, with reference to the jurisdiction of the Local Government or Municipal authorities in that Province in granting or withholding licenses for the sale, or regulating the sale of spirituous liquors. [*Not printed.*]

- No. 82... **PILOTAGE, AN ACT RESPECTING** :—Return to Address, Correspondence with Boards of Trade or other parties, Minutes of Council, &c., in relation to the effect of an Act entitled "An Act respecting Pilotage," having reference to the effect upon Trade and Navigation of the said Law as effects collisions, and the responsibility of pilots and owners of vessels in such cases. [Not printed.]
- No. 83... **MONTREAL HARBOR DUES** :—Return to Address, Copies of instructions given to Collectors of Customs in Ontario, to collect Montreal Harbor Dues on all freight landed at the Port of Montreal; also a statement of the rate of Dues so levied, and the principle on which they are computed. [Not printed.]
- No. 84... **BRITISH MERCHANT SHIPPING** :—Return to Address, All Papers and correspondence had with Her Majesty's Government in relation to the Legislation which was under the consideration of the Imperial Parliament in relation to British Merchant Shipping from 1871 to the end of 1874, in connection with the so-called Plimsoll movement; also in connection with the proposed Legislative measure in relation to merchant shipping at present proposed by Her Majesty's Government; also, all papers, Minutes of Council and despatches had between the Government of Canada and Her Majesty's Government, protesting against any Legislation being had by the Imperial Government which would affect Canadian shipping. [Not printed.]
- No. 85... **CANADIAN PACIFIC RAILWAY, EASTERN TERMINUS** :—Return to Address, Correspondence between the Canadian Government and the Government of the Province of Quebec, on the subject of Railway connections between the Eastern terminus of the Canada Pacific Railway and the Province of Quebec. [Not printed.]
- No. 86... **LUNENBURG, N.S.** :—Return and two further Returns to Address, Copies of all letters in connection with appointments to, and resignations or dismissals from office, and the appointment of successors in the County of Lunenburg, Nova Scotia, since the 1st October, 1873. [Not printed.]
- No. 87... **PENITENTIARIES** :—Seventh Annual Report of the Directors of Penitentiaries of the Dominion of Canada, for the year 1874.
- No. 88... **BRITISH COLUMBIA, CROWN LANDS** :—Copies of Orders in Council relative to Acts of the Legislature of British Columbia. 1. "An Act to amend and consolidate the Laws affecting Crown Lands in British Columbia;" and 2. "An Act to make provision for the better administration of Justice, and as to their disallowance." [Not printed.]
- No. 89... **BRITISH COLUMBIA STEAMSHIP CO.** :—Return to Address, All correspondence or letters (if any) between the Government and the "British Columbia Steamship Company," relative to a subsidy for carrying the Mails between San Francisco and Victoria. [Not printed.]
- No. 90... **IMMIGRANTS, MONTREAL** :—Return to Address, Any papers showing the number and condition of Immigrants now in the City of Montreal without employment. [Not printed.]
- No. 91... **GRAVING DOCK, QUEBEC** :—Return to Address, Copies of all papers, documents, letters and correspondence, having reference to the selection of the site for the construction of a Graving Dock in the Port of Quebec. [Not printed.]
- No. 92... **RIDEAU CANAL** :—Return to Address, Statement of Leases of Water Power made by the Department of Public Works between the Dominion Dam at the Whitefish and Kingston Mills on the Rideau Canal, both inclusive; date of lease or leases; time such lease or leases expire; quantity of power rented and approximate power used during past year under each lease; with copy of reports and papers, if any, submitted by the Superintendent Engineer of the Rideau Canal during the past twelve months to the Department of Public Works on this subject. [Not printed.]
- No. 93... **GREAT WESTERN RAILWAY CO.** :—Copies of correspondence and accounts *in re* duties refunded to the Great Western Railway Company. [Not printed.]
- No. 94... **MILITIA SERVICE EXPENSES** :—Return to Address, Statement of all sums of money expended in 1870-'71-'72-'73 and '74, for the Militia Service, including the Mounted Police, either for payment of men, expenses attending camps, or for clothing, ammunition, drill sheds, or other incidental or ordinary expenses of the Department in Ottawa. [Not printed.]
- No. 95... **POSTMASTERS (INSTRUCTIONS)** :—Return to Address, Instructions issued to the Postmaster in cities, towns and villages, by the Postmaster General, under authority of section 42 of the Act 31 Vict., cap. 10, with reference to dutiable goods brought into the Dominion through the post office. [Not printed.]

REPORT,
RETURNS, AND STATISTICS
OF THE
INLAND REVENUES
OF THE
DOMINION OF CANADA,
FOR THE
FISCAL YEAR ENDED 30TH JUNE, 1874.

Presented to both Houses of Parliament by command of His Excellency.

FELIX GEOFFRION,

Minister of Inland Revenue.

OTTAWA:
PRINTED BY I. B. TAYLOR, 29, 31 & 33 RIDEAU STREET.

COMMISSIONER'S REPORT.

To the Honorable

The Minister of Inland Revenue.

SIR,—Herewith I have the honour to submit statements of Revenues collected by this Department for the fiscal year ended the 30th June, 1874, together with the usual information as to the cost of collecting the same, and the statistical details respecting the sources whence the Revenues were derived.

The following summary comparison shows the accrued Revenues for the years ended June 30th, 1868, 1871, 1872, 1873 and 1874, respectively.

	1867-68.	1870-71.	1871-72.	1872-73.	1873-74.
Excise.....	\$3,078,212	4,301,389	4,762,378	4,513,194	5,612,582
Revenue Public Works.....	486,811	579,132	592,961	636,798	672,120
Culling Timber.....	70,886	63,228	74,512	79,767	95,913
Bill Stamps.....	119,712	184,255	189,161	201,496	209,233
Total.....	\$3,755,621	5,128,004	5,619,012	5,431,255	6,589,848

The total Revenue accrued during the fiscal year just closed was \$6,589,848 as against \$5,431,255 for the previous year, and \$5,619,012 for the year 71-72, being an increase of 21 $\frac{1}{3}$ % as compared with the former, and of 21 $\frac{1}{2}$ %, as compared with the average of the three previous years.

This increase as compared with 1872-73 has occurred as follows :—

Upon Excise.....	\$1,099,388
“ Revenue Public Works.....	35,322
“ Culling Timber.....	16,146
“ Bill Stamps.....	7,737

The increased Excise Revenue arises :—

Upon Spirits.....	\$678,224
“ Tobacco.....	387,714
“ Petroleum.....	36,663
“ Manufactures in Bond.....	6,226
“ Seizures.....	1,240

\$1,110,067

From which, However, there is to be deducted :—

Decrease on Malt Liquor.....	\$1,027
do do.....	3,567
do on other Receipts.....	6,085

\$10,679

This increase is chiefly due to three causes :—

1st.—To the additional rate of Excise duty imposed on Spirits and Tobacco by the Act of last Session, which was in operation during two and a half months of the fiscal year.

2nd.—To the withdrawal of excisable goods from bond during the first half of April—presumably in anticipation of an advance upon the then existing tariff, and

3rd.—To a natural increase in the quantities of excisable goods consumed by a population growing in numbers and in wealth.

To the first of these causes we may attribute about \$104,000 of the increase. The extent to which the second and third causes operated may be approximately estimated from a comparison of the quantities of the several articles consumed during a series of years. The results of estimates so made as will presently be shown, justifies the conclusion that from all sources the Revenue of the fiscal year 1873-4 was enhanced to the extent of \$526,611, by duties collected on goods that will be consumed during the current year and on which the duties that would have been collected, had their entry for consumption been postponed until they were required under the normal conditions of trade, would have amounted to \$680,046, by which amount the Revenue of the year now current, may be said to have been anticipated.

To avoid, as far as possible, turning from one Return to another, the results of the several statistical tables, 1871-74, have been condensed so as to exhibit a general history of the development of each source of Revenue during the four years.

SPIRITS.

The following statement gives the transactions in Spirits (in proof gallons) during the last fiscal year, and during the three years immediately preceding it.

1	2	3	4	5	6	7	8	9
Fiscal Year.	In warehouse at commencement of period.	Manufactured during the year.	Taken for consumption.	Exported.	Used in Bonded Factories.	Otherwise accounted for.	In warehouse at end of period.	Memo. of Revenue accrued thereon.
	. gals.	P. gals.	P. gals.	P. gals.	P. gals.	P. gals.	P. gals.	\$
1870-1..	869,282	5,303,171	4,219,245	271,333	187,938	1,493,937	2,673,416
1871-2..	1,493,937	4,870,326	4,569,949	431,673	203,466	18,332	1,140,843	2,884,067
1872-3..	1,140,843	5,547,517	4,476,404	327,532	262,540	82	1,621,802	2,825,140
1873-4..	1,621,802	5,433,741	5,479,809	197,676	281,090	1,125	1,095,843	3,503,364

By these figures it appears that the quantity produced during the year was only 5,433,741 gallons as against 5,547,517 during the twelve months ended 30th June, 1873,

or as against an average yearly production of 5,240,335 gallons during the three years immediately preceding. The quantity entered for consumption was 5,479,809 as against 4,476,404 for 1873, and as against an average annual consumption during 1871, '72 and '73 of 4,421,866 gallons.

On comparing columns Nos. 2 and 8, it will be seen that the quantities of Spirits in bond, which during 1873 rose from 1,140,843 proof gallons at the commencement of the year, to 1,621,802 at its close, were, on the 30th June, 1874, reduced to 1,095,843 gallons.

Of the last-mentioned quantity, it has been ascertained that about 763,875 proof gallons were held by distillers, and 331,968 by dealers.

It has also been ascertained that of the stock of duty-paid spirits in hand at the close of each of the undermentioned years, the distillers held—

1874.....	639,409 proof gallons.
1873.....	239,128 "
1872.....	261,408 "

If the average held in 1872 and 1873, viz. 250,263 proof gallons, is accepted as the normal quantity of duty-paid spirits kept on hand to meet the ordinary requirements of trade, the quantity (389,146 proof gallons) held in excess of this on the 30th June, 1874, may fairly be considered as having been withdrawn for speculative purposes in anticipation of a change of tariff.

Dealers in spirits were in all probability influenced by the same motives as the distillers, and this quantity may therefore be increased in proportion to the quantity held in hand by them; and we shall thus arrive at an estimate of the extent to which the revenue of the past year from this source was enhanced at the expense of the fiscal year now current.

The total quantity thus arrived at is 556,478 proof gallons, which at 63 cents per gallon, comes to \$329,595; but if reckoned at the rate of duty now collected, it comes to \$417,358.

Deducting the quantity above estimated from the whole quantity entered for consumption, we have 4,923,331 proof gallons as the estimated actual consumption of 1873-74. This is about eight per cent. in excess of the average quantity taken during the two preceding years, and that average was somewhat more than seven per cent. in excess of the quantity taken in 1870-71.

It will be seen on reference to column No. 5 of the above statement, that the quantity of spirits used in bonded manufactures, chiefly in the manufacture of vinegar, has steadily increased from 187,938 proof gallons in 1870-71, to 203,466 gallons in 1871-72, 262,540 gallons in 1872-73, and 281,090 gallons in 1873-74, while the quantity exported has decreased from 271,333 proof gallons in 1870-71, and 431,673 gallons in 1871-72 to 197,676 gallons in 1873-74.

MALT AND MALT LIQUOR.

The following statement shews the transactions in malt during the year ended 30th June 1874, and three preceding years:—

	1	2	3	4	5	6	7
	In Warehouse at commencement.	Manufactured during the year.	Taken for consumption	Exported.	Otherwise accounted for.	In Warehouse at end of period.	Duty accrued.
	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	\$
1871.....	10,864,430	33,206,876	27,671,497	6,524,850	92,441	9,782,518	276,715
1872.....	9,782,518	42,479,199	29,981,647	8,765,786	132,845	13,381,439	299,816
1873.....	13,381,439	44,133,995	33,955,694	10,193,631	504,068	12,862,041	339,557
1874.....	12,862,041	31,504,005	34,369,016	6,233,367	113,308	4,650,355	343,690

It is thus shewn that the quantity of malt taken for consumption has been steadily on the increase since 1871. The quantity exported, which rose from six and a half millions of pounds in 1871 to over ten millions in 1873, fell during the past year to 6,233,367. It is known to the Department that the early closing of many of the malt-houses last spring was due to the short supply of barley during the closing months of the malting season, and that several of the large maltsters were compelled to import barley from Europe, to enable them to meet the requirements of their trade. This short supply was not so much the result of a short crop as of an active demand for exportation, the foreign buyer outbidding the Canadian maltster. This has resulted not only in reduced exports, but the quantity in warehouse on the 30th June, 1874, was so far reduced that it amounted to only 4,650,355 pounds as against 12,862,041 pounds in 1873, and 13,381,439 in 1872.

Of the quantity entered for consumption during the last fiscal year, 28,685,003 pounds were used in the manufacture of malt liquor, and 3,632,093 pounds in the production of spirits.

Of the whole revenue collected from malt, \$10,246 was refunded to brewers, who used syrup or sugar in combination with malt, and who, under a strict interpretation of the law, would therefore be liable to pay a duty of three and a quarter cents per gallon on the beer produced, in addition to the malt duty. From this liability they have been relieved by a general Order in Council. The sum of \$3,125 has also been refunded, under section 109 of 31 Vic., cap. 8, to brewers who have exported malt liquor. Deducting these two amounts from the total collected, we have a net revenue from malt and malt liquor, exclusive of license fees, of \$366,963.

The quantity of beer and porter made during the year was 10,771,519 gallons as against 11,060,521 gallons produced during the previous year 1872-73. Of this, 536,000 gallons were brewed from sugar, or syrup, and malt combined, and the duty of three and a quarter

cents per gallon gave a revenue of \$17,420, which is included in the total revenue above stated.

The exports of malt liquor in 1873-74 amounted to 104,000 gallons, as against 85,361 gallons exported during the previous year, so that 10,667,519 gallons were held for consumption in Canada, as against 10,975,160 gallons in 1872-73, shewing a reduction of 307,641 gallons.

It may be stated here that the use of "Glucose" for the production of malt liquors, in combination with malt, is largely on the increase. This article is a preparation of corn starch, converted into a species of sugar by the addition of sulphuric acid.

TOBACCO.

The following statement shows the transactions in Tobacco (stated in lbs.) during the four years ending with 1873-74.

1	2	3	4	5	6	7
Year ended 30th June.	In Warehouse 1st July.	Manufactured during the year.	Taken for Consumption.	Exported.	Otherwise accounted for.	In Warehouse 30th June.
	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.
1870-71.....	2,069,075	8,089,792	6,427,839	682,434	3,048,594
1871-72.....	3,048,594	7,470,393	7,863,582	701,763	1,953,642
1872-73... ..	1,953,642	6,451,119	6,264,208	640,458	9,548	1,490,547
1873-74.....	1,490,547	8,805,275	8,494,193	483,336	12,989	1,305,304

To the above quantities are to be added the quantity of leaf tobacco taken for consumption in a raw state during the same years, which will give the following additional columns.

	8		9	10
	Raw Leaf taken for Consumption.		Total Tobacco taken for Consumption.	Duty collected thereon.
	Canadian.	Foreign.		
	Lbs.	Lbs.	Lbs.	\$
1870-71.....	45,626	323,145	6,796,610	1,035,795
1871-72.....	52,486	260,031	8,176,099	1,252,487
1872-73.....	50,408	325,223	6,489,839	1,013,557
1873-74.....	113,797	277,634	8,885,624	1,401,271

It is shown by columns two and four of the above table that the production of tobacco has closely approximated to the demand for consumption, the quantity in warehouse at the end of the year being less than the quantity in warehouse at the beginning of the year by only 185,243 pounds. But the quantity produced was in excess of the previous year's production by 2,229,985 lbs. It is not likely that this excess is wholly due to the increased demand of the consumers. Probably the holders of tobacco in bond were influenced by the same *instinct* as to the possible increase in the tariff as the holders of spirits, and that the revenue from tobacco for the now current year has been to some extent anticipated. The average consumption for the two preceding years (1871-72 and 1872-73) as stated in column 9 above, was, 7,332,969 lbs., and the average of the three years (1871-72 and 73) was 7,154,182 lbs. The quantity taken in 1873-74 was \$1,552,655 in excess of the largest of these, and may, therefore, be considered as an exceptional increase due to the anticipated rise in the tariff. The average annual increase during five preceding years appears to have been about 418,000 lbs. per annum, and accepting this as the probable normal rate of increase we find that the exceptional increase in the past year was 1,134,655 lbs., which at 15cts. per pound gives \$170,198 as the amount by which the revenue of that year was enhanced at the cost of the revenue for 1874-75. Reckoned at the rate of duty now collected (20 cts.) it comes to \$226,931, which represents the loss to the revenue of the current fiscal year.

To the report which I had the honor to submit with the statistical statements for 1871-72 I appended a statement (B) showing the quantity of imported and home manufactured cigars and tobacco entered for consumption during a series of four years. This statement was intended to show the effect which the changes in the tariff had had on this branch of trade. As there have been further changes in the tariff I now append an extension of the statement referred to (B) which now embraces a comparison for six years ended on 30th June, 1874, the result of each year being compared with 1869. It is not probable that the more recent changes had a very great effect on the trade of 1874, still it is quite perceptible.

From this statement it appears that the consumption of imported cigars in 1873-74, was, as to quantity, nearly 301 per cent. in excess of that of 1869, while the consumption of Canadian cigars increased by 100 per cent. It will however be observed that on the previous year the consumption of the imported article was 357 per cent in excess of 1869, while the consumption of Canadian cigars had in that year increased only 57½ per cent. so that as compared with 1872-73 there was a very decided decline in the consumption of imported cigars and a corresponding increase in the consumption of those manufactured in Canada.

The revenue from imported cigars in 1873-74 had increased over 1869 by 439¼ per cent., and the revenue from those of Canadian manufacture had increased by 221 per cent.

The consumption of imported manufactured tobacco in 1873 74 was in excess of the consumption of 1869 by 9.15 per cent., and of the consumption in 1872-73 by 176½ per cent. This, however, was due to the exceptional tariff in the Province of Manitoba, where

the Customs Duty prior to 1st July, was only nominal. This was largely availed of by dealers, who exported large quantities of Canadian manufactured tobacco to the United States, which, together with other tobacco of foreign production, was imported into Manitoba, and then entered for consumption under the exceptional tariff referred to. Of the tobacco so entered, a considerable portion has since been brought back to Montreal and other parts of the Dominion, the holders claiming that they had satisfied all claims of the Dominion tariff. Large profits were probably made on these transactions, for the cost of transit both ways absorbed only a small portion of the duty that was evaded.

It will be seen that, notwithstanding the large increase in the quantity of imported tobacco, the revenue derived from it, as compared with the revenue of 1869, shews a decline of $26\frac{1}{2}$ per cent.

The consumption of home manufactured tobacco in 1873-74, shews an increase of 57 per cent. over that of 1869, while the revenue derived from it shews an increase of $154\frac{3}{4}$ per cent. The increase over the previous year was $29\frac{1}{4}$ per cent., but this was, without doubt, exceptional.

The total consumption of imported and home manufactured cigars in 1873-4, is very nearly 200 per cent. in excess of that of 1869. The revenue has increased $353\frac{1}{2}$ per cent. The total consumption of manufactured tobacco is very nearly 53 per cent., and the revenue therefrom, has increased $130\frac{3}{4}$ per cent.

PETROLEUM.

The following table shews the excise transactions with reference to this article, during a period of four years :—

	In Ware- house at commence- ment.	Manufac- tured.	Taken for Consump- tion.	Exported.	Allowed for Waste.	Light- houses free.	In Ware- house at end of period.	Duty accrued including Inspection Fees.
	Galls.	Galls.	Galls.	Galls.	Galls.	Galls.	Galls.	\$
1870-71.....	565,281	10,755,791	4,445,709	5,531,780	158,514	20,015	1,165,054	247,361
1871-72.....	1,165,054	12,323,991	4,398,315	8,076,885	392,976	77,238	543,631	233,996
1872-73.....	543,631	14,602,087	4,516,490	9,597,525	206,363	88,543	736,797	237,776
1873-74.....	736,797	6,752,282	5,202,175	1,065,787	248,714	69,777	902,626	274,439

By the above statement it appears that the quantity refined in 1873-74 was less by 7,849,805 gallons than was refined in the previous year, while the quantity exported was less by 8,521,739 gallons. These figures show a serious decline in this branch of industry, resulting, probably, from over production in previous years both in Canada and in the United States.

The entries for consumption shew an increase in 1873-74 of 685,685 gallons, or about 15 per cent. over the previous year; and of 748,771 gallons or $16\frac{1}{2}$ per cent. over the

average consumption of the four previous years. The revenue increased nearly 15½ per cent. over 1872-73, and 14½ per cent. over the average of the three preceding years.

MANUFACTURES IN BOND.

The revenue derived from duties levied on goods manufactured in bond shows a steady increase from year to year:—

In 1870-71, it was.....	\$20,288
1871-72 „	24,840
1872-73 „	33,329
1873-74 „	39,480

PUBLIC WORKS.

Canals.

The revenue collected from Public Works by this Department in 1873-74, was \$672,119, as against \$636,797 in the previous year, being an increase of \$35,322 or 5½ per cent.

Of this increase the greater portion, \$31,500, accrued upon the canals, the revenue from which amounted to \$491,143, as compared with \$459,993 for 1872-73. From the following figures it appears that while the tolls from the Welland Canal increased during the fiscal year nearly 17 per cent over the previous year the tolls collected on the St. Lawrence Canals remained nearly stationary, and that the aggregate collections on the Ottawa, Rideau and Chambly Canals have very materially declined. This is due to the depression in the sawn lumber trade between the United States, by way of Lake Champlain, and the Ottawa Valley.

The figures are as follows:—

	1872-73.	1873-74.	Increase.	Decrease.
	\$	\$	\$	\$
Welland Canal.....	259,461	302,891	43,430	
St. Lawrence Canal.....	98,121	100,741	2,620	
Chambly Canal.....	34,961	27,130		7,831
Ottawa Canals.....	31,728	45,990	14,262	
Rideau Canal.....	28,126	9,238		18,888
Burlington Canal.....	6,626	4,523		2,103
St. Peter's Canal.....	970	630		340
Total.	459,993	491,143		

It is proper to explain that the apparent increase on the Ottawa Canals is due to the increasing number of through let passes issued to barges going through from Ottawa to Whitehall.

The statistics for the fiscal year, relating to the Welland Canal, indicate a general increase of traffic on that work. But it is now known (January 1875) that the increase has not continued through the season of navigation, which will show a small decrease as compared with the previous season. In so far, however, as relates to the business of the fiscal year, the following figures will indicate the articles upon which the increase took place:—

	1872-3.	1873-4
	\$	\$
Tolls upon Vessels	31,749	34,246
do Passengers	516	616
do Produce of Forest.....	38,402	39,462
do do Animals.....	662	532
do do Agriculture.....	103,299	119,090
do do Manufactures and Merchandise.....	84,782	106,895
Total Revenue.....	259,410	300,841
Fines and Damages.....	51	2,050
Total.....	259,461	302,891

The decrease in the revenues of the Ottawa, Rideau and Chambly Canals, amounts to \$12,457, the whole of which is accounted for by the diminished quantities of sawn lumber sent to market through these works.

With the statistical returns for 1871-72, there was printed a series of statements (Appendices, C. D. E. and F.,) showing the quantities of the principal articles carried through the Welland Canal and the quantities carried over the United States routes competing with that work. These statements were prepared for the purpose of showing the effect which the reduction of tolls on the Erie Canal, made in 1870, had then produced on the course of trade, for which that route is the competitor. With the same object these statements are now reproduced (see C. D. E. F.,) and extended to the latest date up to which the necessary information can be obtained. These comparisons now cover a service of six years in so far as relates to the Canadian works, but I have been unable to obtain the particulars with reference to the competing routes in the United States for the season of 1874. The year preceding the reduction of tolls on the New York Canals, (1869) is

however, included, and with the business of that year all the comparisons are made, the result of which is given below :—

The comparative increase or decrease in the tonnage of flour, wheat, barley, corn, oats and rye moved through the Welland and Erie Canals may be stated as follows :—

	1870.		1871.		1872.		1873.		1874.	
	Increase %	Decrease %	Increase %	Decrease %	Increase %	Decrease %	Increase %	Decrease %	Increase %	Decrease %
New York Canals	2.95	44.67	29.15	35.54
Welland Canal	18.43	32.59	23.73	7.18	23.55

The movement of *Heavy Goods*, including iron, salt, coal and iron ore shows the following general result :—

	1870.		1871.		1872.		1873.		1874.	
	Increase %	Decrease %	Increase %	Decrease %	Increase %	Decrease %	Increase %	Decrease %	Increase %	Decrease %
New York Canals	15.09	1.12	18.01	21.94
Welland Canal	2.35	5.81	5.11	25.13	44.44

Comparing the tonnage of similar articles of vegetable food cleared downwards at Buffalo and Tonawanda, with the quantities cleared eastward at Port Colborne, we have the following result :—

	1870.		1871.		1872.		1873.		1874.	
	Increase %	Decrease %	Increase %	Decrease %	Increase %	Decrease %	Increase %	Decrease %	Increase %	Decrease %
At Buffalo and Tonawanda... ..	1.45	67.62	67.95	75.95
At Port Colborne..... ..	17.15	33.30	26.61	9.45	26.26

The quantities of vegetable food passed through the Welland Canal in transit between ports in the United States, has decreased, as will be seen from the following statement, though the decrease in 1874 is less as compared with 1869 than in the preceding year. There has, however, been a decided increase in the quantities of heavy goods.

	1870.		1871.		1872.		1873.		1874.	
	Increase %	Decrease %	Increase %	Decrease %	Increase %	Decrease %	Increase %	Decrease %	Increase %	Decrease %
Vegetable goods	0·04	13·94	6·19	29·86	14·04
Heavy goods	1·20	5·32	15·46	13·70	23·46

On reference to the statement on page xxxi (Statement E) it will be seen that there has been a very decided falling off in the quantities of vegetable food sent eastward from Oswego in 1872 and in 1873, as compared with 1869. The decrease in 1872 was 37 per cent., and in 1873, 52·04 per cent.

A statement (G, page xxxiii) has been prepared comparing the quantities of vegetable food transported over the canals of the State of New York with the quantities transported over the two principal lines of railway in competition with the canals, for the trade between the seaboard and the lakes; from this statement it will be seen that the quantities carried by railway have steadily increased, and more rapidly than by canal, notwithstanding the reduction of the canal tolls by one half. This may be, and doubtless is, in some measure due to the business obtained by the railways at way stations, but it is mainly due to the largely increased share which the railways have managed to obtain of the through business.

On reference to the returns made by the railways to the State authorities, and to the canal statistics submitted to the State Legislature, I find that of the total tonnage of freight carried to tide-water by the canals and railways, the State canals carried—

In 1859.....	68·9 per cent.
1869.....	47·0 „
1870.....	38·9 „
1871.....	38·9 „
1872.....	40·1 „
1873.....	34·9

The quantities were as follows :—

	Total Tonnage.	Proportion by Canal.
1859	5,485,076	6890
1869	12,453,174	4705
1870	15,148,274	3895
1871	15,844,152	3896
1872	16,631,609	4012
1873	18,200,208	3497

From the above it will be seen that while in 1869—the year previous to that in which the tolls were reduced on the State canals—the canals carried 47 per cent. of the whole tonnage, this proportion fell to somewhat less than 39 per cent. in 1870, and in 1873 it had fallen to less than 35 per cent. Thus, while there had been a decrease in the proportion of business taken by the canals of 22 per cent. during the ten years prior to 1870, in which there had been no change in the canal tariff, there was a decrease of 12 per cent. during the four years succeeding the change made in 1870.

From the statement (G) above referred to it appears that, with reference to vegetable food, there was in 1873 an increase in the quantity carried from the lakes to tide-water by New York State Canals as compared with the quantity carried in 1869, of 33.97 per cent. ; the increase on the Welland Canal was in 1873 only 7.18 per cent., but in 1874 it was 23.55 per cent. In comparison with these figures the increase on the New York Central and Erie Railways was 87.25 per cent.

The quantity of grain transhipped at Port Colborne in 1874, and two preceding years, is given below. The total number of grain-laden vessels lightened at Port Colborne in 1874 was 207, as against 175 in the previous year. The number entirely unladen without entering the canal was 98, as against 120 in 1873. The quantity of grain lightened was as follows :—

	1872.	1873.	1874.
	Tons.	Tons.	Tons.
Wheat	9,425	14,327	15,168
Corn	7,405	5,930	7,187
Barley		123	

The quantity of grain discharged from vessels which did not enter the canal was as follows :—

	1872.	1873.	1874.
	Tons.	Tons.	Tons.
Wheat	21,121	36,930	26,981
Corn	43,163	31,115	32,970

The canal statistics for the season of navigation, 1873, are printed with the accompanying returns, commencing at page 123. Similar returns have been completed for the season of 1874, which are now in the hands of the printers, but as they cannot be printed in time to include them in this book they will be issued as a supplement thereto.

Comparing the season returns for 1874 with those for 1873 (a summary of which will be found in Statement H), it will be seen that the aggregate revenue has declined as compared with 1873 by \$2,104.05. Of this the decrease in—

The Welland Canal is.....	\$875 43
Chambly „	149 03
Rideau „	1,868 45
Ottawa „	2,663 74
	<hr/>
	5,556 65
	<hr/>

As against this there has been an increase in—

The St. Lawrence Canals of.....	\$2,942 88
Burlington Bay Canal of.....	502 18
St. Peter's Canal.....	7 54
	<hr/>
	\$3,452 60

and the decrease in the whole revenue is therefore \$2,104.05 as above stated.

SLIDES AND BOOMS.

The revenue accrued from these works in 1873-74 is \$130,775 as compared with \$127,172 in 1872-73. The uncollected balances have increased from \$125,961 to \$160,446. A large portion of these balances consist of disputed claims against the mill owners at the Chaudière for boomage, the payment of which has been from time to time delayed under various pleas.

HYDRAULIC RENTS AND MINOR PUBLIC WORKS.

The balances now outstanding on these accounts have increased during the year from \$174,940 to \$188,264. These balances will undoubtedly be greatly reduced upon settlement, as it is evident from the replies received by the Department to the peremptory demands for payment made in accordance with your instructions, that many of the parties have reasonable claims for a reduction of the amounts charged in the books. There are, however, a large number of claims, payment of which ought to be enforced without further delay.

The amount accrued under the head of rents in 1873-74 is \$33,516 as against \$33,805 accrued in 1872-73. In addition to this \$4,752 has accrued on minor public works such as Harbors, Bridges, Ferries, &c., and the sum of ten thousand dollars has been paid in to the credit of this Department on account of the purchase of the old Post Office buildings at Montreal.

CULLING TIMBER.

The fees accrued from culling and measuring timber in 1873-4 amounted to \$95,912. In the previous year they amounted to \$79,766, but the amounts actually collected were \$92,772 and \$81,038 respectively. The cost of the Supervisor's office and its branch in Montreal including the fees paid to the Cullers was \$83,442, being \$5,442.40 in excess of the estimate. This excess is entirely due to the largely increased quantity of timber culled beyond what was foreseen at the time the estimates were prepared.

In consequence of the representations made to the Department in relation to the culling of timber, among which were arguments in favor of extending the system of culling to all kinds of sawn lumber and to all parts of the Dominion, a circular was prepared asking a series of questions bearing on the subject. This circular was addressed to 433 persons engaged in the trade from only 16 of whom replies have been received.

BILL STAMPS.

The revenue from Bill Stamps in 1873-4 was \$209,233, being an advance of \$7,791. This has been about the average yearly rate of increase from this source, and is below the rate that might reasonably have been expected from the great extension that has taken place in the financial transactions of the Dominion as indicated by the bank returns.

WEIGHTS AND MEASURES AND GAS.

As stated in my last report arrangements were made in England for supplying the standards and apparatus necessary for giving effect to the provisions of the Acts 36 Vic., Cap. 47 & Cap. 48. It was expected that the Primary Dominion Standards would be delivered in Ottawa sometime in June, 1874. If this had been accomplished the Proclamation of the law might have been issued in time to bring it into operation on the 1st January, 1875. Unforeseen delays, however, occurred, both as to the making of the standards and their comparison with their Imperial prototypes by the Warden of Standards at the Standard Department Westminster, and it was not until December, 1874, that the Dominion Standards and models mentioned in the above cited Acts could be deposited in compliance therewith. The Proclamation was then published and the Inspection laws will, therefore, go into operation on the 1st July, 1875.

The transactions of this Department in relation to this branch of its duties have so far related only to the purchase of the Standards and apparatus. There will be no returns of revenue on account of this service until after the first of July, 1875, and as the business up to that time will be merely of a technical character it is deemed expedient to submit a special report in relation thereto, which will contain an account of the progress made down to the 31st December, 1874.

An account of the expenditure for this service will be found in statements Nos. 8 and 9. Appendix B, pages 198 and 199.

INSPECTION OF STAPLE ARTICLES.

By the Act of last session, 37 Vic., Cap. 45. the Act passed in the previous session (36 Vic., Cap. 39) was repealed, and some important changes in the law were made,

among others the inspection of butter was made optional, and the clauses respecting the inspection of Petroleum were expunged. As it had been foreseen that important alterations would be made in the law, it had to some extent remained inoperative, and inspectors under it were appointed at only the more important places.

Since the General Inspection Act of 1874 was passed, this Department has given effect to its provisions. Boards of Examiners have been appointed, and Inspectors selected from such candidates as were certified efficient have been appointed, and under them the appointment of deputies has been approved. The appointments which have been made will be found (in Schedule I) at page xxxviii.

Prior to the close of the fiscal year, to which this report relates, no complete returns had been received as to the quantities of articles inspected. These returns are now coming in, and if the inspection is generally carried out, will form an important addition to the statistical returns of the Department.

THE EXCISE OUTSIDE SERVICE.

The greatly enhanced excise duties, now levied on the principal articles subject to excise, has increased the responsibilities of the Department in relation to their charge and collection. The duty imposed on spirits now greatly exceeds the value of the untaxed article, and the temptation to evade the revenue is proportionately increased, and although the duty on tobacco is not so great in proportion to its value Ex-Duty as the duty on spirits, still the duty in most cases exceeds the untaxed value of the article on which it is imposed.

The equitable charge of these important taxes largely depends on the intelligence and technical knowledge of the Collectors and their subordinate Officers, and it is, therefore, obviously necessary for the protection of the manufacturers, as well as for the safety of the revenue, that these officers should be thoroughly competent, not only as mere clerks but as regards such technical knowledge as is required of them.

Under the regulations, approved by the Order in Council of September 24, 1866, the examination of candidates for appointment in the Inland Revenue outside service is provided for, as is also the examination of such officers as had been appointed prior to that date. It is therein specifically stated that those already in the service, who, after not less than six months notice, failed to pass a satisfactory examination, should be superseded. It was, however, evident that it would hardly be possible, all at once, to find men who possessed all the requisite technical knowledge, and appointments were therefore made subject to the condition that the appointees should—when required—submit themselves, to, and pass in a satisfactory manner, the prescribed examination. Persons so appointed were thus afforded an opportunity for acquiring a knowledge of their duties, and they entered the service upon the express understanding that after a sufficient time had elapsed the examinations would take place.

Under the regulations above referred to Examining Boards were formed at the principal places, and examinations held as follows :—

At Ottawa.....	Oct. 25th., 1866.
do ..	Nov. 27th., 1866.
do ..	Feb. 20th., 1867.
At Toronto.....	Nov. 24th., 1866.
do ..	May 14th., 1867.
do ..	Feb. 27th., 1868.
do ..	Sept. 15th., 1869.
At London.....	April 23rd., 1867.
do ..	Nov. 2nd., 1869.
At Kingston.....	May 6th., 1867.
do ..	Oct. 26th., 1869.
At Montreal.....	Feb. 22nd., 1869.
do ..	Oct. 12th., 1869.
do ..	Dec. 8th., 1869.
At Quebec.....	Dec. 14th., 1869.

During these examinations 115 candidates, either in the service or desirous of entering it, were examined, and of these :

Fifteen obtained first-class certificates.

Forty-six obtained second-class certificates.

Thirty-six obtained third-class certificates, and

Eighteen failed to obtain any place.

Subsequent to 1869 the examinations were, for reasons which it is not now necessary to state, discontinued until 1873, when with the approval of the then Minister of Inland Revenue, they were resumed, but were only opened to such candidates as were already in the service.

Great care has been exercised in the preparation of the Examination Papers, with a view to testing the practical knowledge of the candidates, and the extent to which they had availed themselves of the opportunities afforded them for qualifying themselves for their duties.

The result of these last examinations was that out of seventy who presented themselves :

Six obtained first-class certificates.

Fourteen obtained second-class certificates.

Twenty-nine obtained third-class certificates, and

Twenty-one failed to obtain any position.

Of the officers above enumerated three have been transferred to the inside service and forty-one have been removed from the Outside Service by deaths, resignations, super-

anuation or otherwise, and there are some who, although examined, were not appointed, so that we have now on the Pay Rolls of the Outside Service :

Eighteen first-class officers.

Forty-two second-class officers.

Fifty-two third-class officers, and

Twenty-seven who failed in their examinations.

There are also *twenty-one* officers on our Pay Rolls who have had an opportunity for passing an examination, but who have refused to present themselves, and *twelve* who have not yet been required to do so, making an aggregate of 172 Excise Officers now on our Pay Rolls.

As a full account of these examinations, with schedules of the results, has been prepared, and together with the examination papers, will be submitted as a supplement to this report, I shall in this place only observe further that the examinations have been entirely successful in showing the relative fitness of the parties examined, and that with no greater exception than is sufficient to establish the rule, the results may be accepted as an equitable guide to the manner in which the members of the Outside Excise Service of this Department should be disposed of.

All of which is respectfully submitted.

I have the honour to be, Sir,

Your obedient servant,

A. BRUNEL,

Commissioner.

DEPARTMENT OF INLAND REVENUE,

January 10th, 1875.

B.—STATEMENT shewing the Comparative Consumption of Imported and Home Manufactured Cigars and Tobaccoduring a series of six years ended 30th June, 1874.

	Imported and entered for Consumption at Custom's Tariff.				Manufactured and entered for Consumption at Excise Tariff.				Total entered for Consumption at both Excise and Customs Tariff.

Commissioner.

INLAND REVENUE DEPARTMENT,
OTTAWA, 31st July, 1874.

No. 18.—STATEMENT showing the Amount voted and the Expenditure authorized for each Service for 1873-74.

Expenditure authorized by this Department.	Over Expended.	Under Expended.	Service.	Vote.
\$ cts.	\$ cts.	\$ cts.		\$ cts.
158,766 08		5,333 92	Excise Salaries	164,100 00
38,683 41	*1,183 41		„ Contingencies	37,500 00
1,784 82		2,215 18	Preventive Service	4,000 00
31,101 08	*2,131 08		Canals, Salaries and Contingencies.....	28,970 00
16,063 84	*238 84		Slides and Booms.....	16,426 00
83,442 40	†5,442 40		Cullers	78,000 00
2,936 26		7,063 74	Minor Revenues	10,000 00
4,894 38		5,105 62	Weights and Measures	10,000 00
800 00		9,200 00	Inspection of do	10,000 00
828 19		171 81	Inspection of Staples.....	1,000 00
687 70		2,012 30	Commission to Customs Officers.....	2,700 00
19,720 40		54 60	Departmental Salaries.....	19,775 00
8,131 04		6,868 96	„ Contingencies.....	15,000 00
7,000 00			Minister's Salary.....	7,000 00
2,160 52			Bonus to Departmental Officers.....	2,160 52
377,600 12	8,995 73	38,026 13		406,630 52

* There is an apparent over-expenditure on several branches of the outside Service, in consequence of their having been charged with Printing and Stationery, whereas the vote for Departmental Contingencies was intended to cover such expenditure, and not having been charged therewith shows a considerable surplus.

† The Cullers' expenditure is in excess of the vote taken under that head, owing to an unexpected increase of business, the Revenue therefrom having also exceeded that of last year some \$16,000.

A. BRUNEL,
Commissioner.

Ice	0 05								

NOTE.—Coal to pass up all Canals, except the Welland Canal, free of Toll, as per Order in Council, June 7th, 1869.

Iron Ore, Kryolite or Chemical Ore, through one section or all the Canals, per ton, 5 cents.

Iron and Salt having paid full Toll through the whole line of the St. Lawrence Canals, or through the Lachine Canal St. Ann's Lock, Ottawa and Rideau Canals, shall be allowed to pass free through the Welland Canal; and if Tolls shall have been paid at the Chambly Canal, such Toll shall be refunded at Montreal or Kingston Mills upon the Iron or Salt leaving the Canal.

Wheat, Flour, Corn, Barley, Peas, Oats and Petroleum, having paid full Tolls through the Welland Canal, shall be allowed to pass free through the St. Lawrence Canals, or through the Ottawa and Rideau Canals, St. Ann's Lock, the Lachine Canal, and the Chambly Canal, provided always that the articles to be entitled to the exemption shall go downwards through the whole length of the Canal to Montreal, or pass upward from Montreal through the whole length of the Ottawa and Rideau Canals to Lake Ontario.

All articles, goods or merchandize not enumerated above to be charged to Class No. 4.

No Let Passes to be issued to steam tugs or other small vessels for less than 25 cents as a minimum charge, but such vessels not carrying freight or passengers can obtain, on payment of \$30, a season "Let Pass," which will pass them up and down the Canal as often as desired.

No. 38.—Continued.

STANDARD FOR ESTIMATING WEIGHTS.

Railroad Ties, 16 or 50 cubic feet	1
All other Woodenware or partly manufactured Wood, 40 cubic feet, as per Tariff	1
Traverses, 40 cubic feet or 5 pieces	1
Floats, 50 lenial feet	1

No. 38.—Continued.

NOTICE.

The following Way Rates to be levied on Vessels and Property passing the several Sub-Divisions of the Canals.

WELLAND CANAL.		Rate.
1.	From Port Maitland, Dunnville and Port Colborne to Port Robinson or Allanburg, not passing the Lock, each way	
2.	From Chippawa Cut, or any part thereof, to Dunville, Port Maitland or Port Colborne.	
2.	From Dunnville to Port Colborne	
4.	From Thorold to St. Catharine's or Port Dalhousie	
5.	From Maitland, Dunnville, Colborne or Port Robinson to Marshville and intermediate places	
6.	From Marshville or intermediate places, to Port Maitland, Dunnville, Port Colborne and Port Robinson	
7.	From Port Robinson to Allanburg or Thorold	
8.	do do St. Catharine's or Dalhousie	
9.	From St. Catharine's to Port Dalhousie	
10.	From Dunnville to Maitland	
11.	From Port Robinson through the Lock and Chippawa Cut	
12.	From Port Colborne to Port Maitland	
13.	From Chippawa Cut through Lock to Port Robinson	
14.	From Colborne, Dunnville, Maitland and Marshville to Thorold	
15.	do do do do St. Catharine's	
16.	Through the Chippawa Cut only	
17.	Through the Port Robinson Lock only	
ST. LAWRENCE CANALS.		
The Navigation to be divided into four sections, viz : Edwardsburg, Cornwall, Beauharnois and Lachine :—Tolls to be levied on all vessels and property in proportion to the number of Sections passed through.		
CHAMBLY CANAL.		
Vessels and Property passing from Sorel to Chambly, to pay		
do	do Chambly to St. John's, to pay	
OTTAWA AND RIDEAU CANALS.		
The Navigation of these Canals is divided into four sections : " Carillon and Grenville," " Ottawa," " Smith's Falls" and " Kingston Mills." Vessels and freight passing one section to be charged one-fourth ; two sections, one-half, and so on.		
GENERAL.		
NOTE.—Any fraction of a ton freight to be charged one ton, and portions of Sections to be charged as a whole Section on all the above Canals.		
The passing of Saw Logs or other Lumber through any of the Canals, or Sections thereof, is to be at all times governed by the regulations for their management.		
HARBOR DUES.		
Vessels receiving or discharging freight at the premises of the Welland Railway, at Ports Colborne or Dalhousie, are to be free from Harbor Dues ; but all other vessels discharging or receiving cargo at Port Dalhousie, Port Colborne or Port Maitland, shall pay on every ton of freight so received or discharged—Two cents.

NOTE.—Coal to pass up all Canals, except the Welland Canal, free of Toll, as per Order in Council, June 7th, 1869.

Iron Ore, Kryolite or Chemical Ore, through one section of all the Canals, per ton, 5 cents. Iron and Salt having paid full Toll through the whole line of the St. Lawrence Canals, or through the Lachine Canal. St. Ann's Lock, or Ottawa and Rideau Canals, shall be allowed to pass free through the Welland Canal; and if Tolls shall have been paid at the Chambly Canal, such Tolls shall be refunded at Montreal or Kingston Mills upon the Iron or Salt leaving the Canal.

Wheat Flour, Corn, Barley, Peas, Oats and Petroleum, having paid full Tolls through the Welland Canal, shall be allowed to pass free through the St. Lawrence Canals, or through the Ottawa and Rideau Canals, St. Ann's Lock, the Lachine Canal, and the Chambly Canal, provided always that the articles to be entitled to the exemption shall go downwards through the whole length of the Canal to Montreal, or pass upward from Montreal through the whole length of the Ottawa and Rideau Canals to Lake Ontario.

All articles, goods or merchandise not enumerated above to be charged to Class No. 4. No Let Passes to be issued to steam tugs or other small vessels for less than 25 cents as a minimum charge, but such vessels not carrying freight or passengers can obtain, on payment of \$30, a season "Let Pass," which will pass them up and down the Canal as often as desired.

16. Through the Chippawa Cut only.....	1 00
17. Through the Port Robinson Lock only.....	1 00
ST. LAWRENCE CANALS.	
The Navigation to be divided into four sections, viz.: Edwardsburg, Cornwall, Beauharnois and Lachine. Tolls to be levied on all vessels and property in proportion to the number of Sections passed through.	
CHAMBLY CANAL.	
Vessel and Property passing from Sorel to Chambly, to pay.....	1 00
do do Chambly to St. John's, to pay.....	1 00
OTTAWA AND RIDEAU CANALS.	
The Navigation of these Canals is divided into four sections: "Carillon and Grenville," "Ottawa," "Smith's Falls," and "Kingston Mills." Vessels and freight passing one section to be charged one fourth; two sections, one-half, and so on.	
GENERAL.	
NOTE.—Any fraction of a ton freight to be charged one ton, and portions of Sections to be charged as a whole Section on all the above Canals.	
The passing of Saw Logs or other Lumber through any of the Canals or Sections thereof, is to be at all times governed by the regulations for their management.	
HARBOR DUES.	
Vessels receiving or discharging freight at the premises of the Welland Railway, at Ports Colborne or Dalhousie, are to be free from Harbor Dues; but all other vessels discharging or receiving cargo at Port Dalhousie, Port Colborne or Port Maitland, shall pay on every ton of freight so received or discharged—Two cents.	

The information necessary to the completion of Tables E and G, appended to my Report of the 10th of January last, having, since its publication, come to hand, those Tables are reprinted herewith in order to afford a comparison with the figures of 1873.

SUPPLEMENT No. 2

TO THE

ANNUAL REPORT

OF THE

DEPARTMENT OF INLAND REVENUE

FOR 1874.

OTTAWA:

PRINTED BY MACLEAN, ROGER & CO., WELLINGTON STREET.

1875.

SUPPLEMENT TO THE ANNUAL REPORT
OF THE
DEPARTMENT OF INLAND REVENUE,
FOR 1874.

To the Honourable
The MINISTER OF INLAND REVENUE.

SIR.—The accompanying papers respecting the examination of officers employed in the outside service of this Department are those referred to in the annual report, which I had the honor to submit, under date 10th January 1875; and, as will be seen, they embrace so much of the submission approved by the Order in Council of September 26th, 1866, as has reference to this subject. This extract will be found in Appendix A.

When these returns were in course of preparation, I had some doubts as to whether the names of the unsuccessful candidates should be published, but after full consideration I submit that the natural disinclination of most men to have their failures made public should be respected, and I therefore propose to follow the practice of the Civil Service Commission of Great Britain, and give the names and classification only of such as succeeded in passing. The number of marks obtained in each subject by those who failed, are however given, but without the names.

In Appendix B will be found the examination papers used at the examination of 1873-4, and the conditions under which the examinations are carried on. These papers have been changed for each series of examinations, and are treated as confidential, until after the completion of the examinations at which they can be used, so that the candidates have no knowledge of the questions submitted to them beyond what is set forth in the general conditions, until the sheets are successively placed before them during the progress of the examinations.

The questions are almost exclusively of a technical character, having special reference to the business which the officers of the Departments are required to transact—it being assumed that the candidates will have passed the Civil Service examination before entering the service, in compliance with the conditions embodied in the Order in Council of September, 1866.

Appendix D an analysis of the examinations held in 1873-4, the papers used being those printed in Appendix B. The highest number of marks attainable in these papers was fixed at 1,500, and the classification of candidates has been made as follows :—

- 1st Class—those obtaining 1,200 and upwards ;
- 2nd Class—those obtaining 900, and under 1,200 ;
- 3rd Class—those obtaining 600, and under 900 ;

Those who did not obtain 600 were considered as unsuccessful.

In Appendix E will be found a list of the passed candidates placed in order of merit. This list includes all who have been examined under the Order in Council of September 24th, 1866. The number of marks obtained by those who failed to pass in either of the three classes are also given.

Of the persons enumerated in this schedule, forty-one have been removed from the service by deaths, resignations, superannuations and otherwise, and three have been transferred to the inside service. The remainder, except those who were not appointed, are still in the service, so that there are now on the pay rolls :

- Eighteen first-class officers,
- Forty-two second-class officers,
- Fifty-two third-class officers, and
- Twenty-seven failed in examination.

There are also twenty-one officers on the rolls who have refused to present themselves for examination, and twelve who have not yet had the opportunity of doing so.

The experience obtained during the past eight years justifies the belief that by insisting on officers qualifying themselves for their duties before their appointment is confirmed, and by testing their qualifications by examinations, we force their attention towards the duties they will have to perform and the character of the qualifications necessary for their proper performance. This of itself is a decided gain. But the full measure of advantage to the service will not be realized until it has been established by the practice of the Department, that unless those who are probationally appointed can pass the prescribed examinations with credit their appointments will be cancelled, nor until it has been discovered that efficiency leads to promotion, and that without it there can be no advancement in the service, not even for those who, having been permanently appointed before examinations were established, are not likely to lose their present places.

If it is discovered that efficiency is not essential to promotion, or that the existence of efficiency is assumed without being submitted to some uniform and sufficient test, and that the best places are filled by persons who have not been subjected to that ordeal, the chief incentive to the acquisition of knowledge especially applicable to the service, will be removed, and the usefulness of the examinations will be greatly impaired, if not entirely destroyed.

The fitness of a candidate for employment in the outside (Excise) service of this Department depends on :—

- 1st. His moral character and habits.
- 2nd. His proficiency in the ordinary rudiments of education.
- 3rd. His knowledge of accounts, book-keeping, and of ordinary mathematical and arithmetical computations.
- 4th. His technical knowledge of the subjects immediately affecting the manufacture of articles subject to excise.

Of these qualifications the two first should be tested in the manner directed by the regulations respecting the Civil Service Examinations. The others should be tested by the special examinations for the Excise branch of the service. The conditions of which are sufficiently explained in Appendix B.

It is a substantial proof of the value of past examinations as a test of efficiency, that the most important positions in the outside service are filled by gentlemen who obtained a high standing in their examinations. This will be seen by reference to Appendix E, which is submitted as contradicting more emphatically than any mere theory could do, the impression that examinations are not reliable as the means of arriving at an estimate of the practical qualifications of the persons examined.

It will be seen that of the twenty-one names who obtained first-class certificates—

- One* has been raised to the position of Chief Inspector ;
- Five* to the rank of District Inspectors ;
- One* has been selected as Chief Accountant in the Department ;
- Two* are Collectors of Inland Revenue ;
- Four* are Deputy Collectors ;
- Two* are Bookkeepers for the two principal divisions ;
- Four* are first-class Excisemen, and *two* have resigned their places in the service.

It is true that men who have not succeeded in these examinations, or who have not submitted to them at all, have been placed in good positions in the service. This, however, has been due to influences entirely apart from their merit ; and with scarcely an exception, promotions or appointments made regardless of qualifications, have resulted in disappointment and discomfit to the Department and in injury to the service.

As a rule, those candidates who have failed in the examinations, as well as a considerable number of those who shirked them, may be considered as incompetent, and as likely to remain so. The expediency, therefore, of enforcing the conditions under which they were appointed now demands a careful consideration, and the adoption of some more rigid rule as to admissions into this branch of the service than has hitherto prevailed, is obviously necessary if its efficiency is to be regarded.

The collection of Excise duties with even-handed justice depends very largely

upon the technical knowledge of the officers who levy them, and demands a great deal more than a mere knowledge of accounts. As a rule, duties of customs may be fairly determined by reference to invoices and price lists, but Excise duties are levied on quantities determined by the officers, and the determination of those quantities during and after the process of manufacture demands technical skill and a general knowledge of the processes through which the articles pass, as also of the quantities that ought to be produced from the raw material. Without such knowledge there is always a danger that the revenue may suffer. For it must be borne in mind that manufactures subject to Excise are carried on in buildings in the possession and under the control of those whose pecuniary interest it is to evade the revenue. On the other hand, there is no small danger that the over-zeal of the ignorant officer may lead him into doing injustice to the manufacturer, or he may do, or neglect to do, things, that may cause endless trouble and litigation.

It is, of course, impossible for an officer to perform the duties incident to the survey of malhouses or distilleries unless he has so much mathematical and arithmetical knowledge as will enable him to compute quantities in the several forms in which such quantities have to be arrived at.

A knowledge of bookkeeping is equally necessary, for accounts of a high order are required to be kept by persons licensed under the Excise laws, and it not unfrequently happens that disputes respecting quantities liable to duty are settled—as prescribed in the law, by an examination of the manufacturer's private books, which can only be effected in a satisfactory manner by officers who have a thorough knowledge of at least the principles of commercial bookkeeping.

Again, a knowledge of the laws by which the Department as well as manufacturers subject to Excise are equally governed, is obviously of the utmost consequence, and essential to the due protection of the Revenue, the officer administering the law, and of the manufacturer.

When duties of Excise were first imposed in Canada, it would have been unreasonable to look for officers having such a combination of general knowledge as I have indicated. There was, therefore, no alternative but to use such material as was available, and take the risk of whatever loss or inconvenience might arise during the process of educating them. Fortunately, while the duties levied were moderate in proportion to the value of the goods on which they were imposed, the risk was not great. But under existing rates it is very different, and I submit that the time has arrived when the qualifications necessary for the proper performance of the duties to be discharged may reasonably be required of those who seek appointments in the service.

A certain amount of training may still be necessary in the purely technical part of the Excise officer's duties after he enters the service, but only to a very limited extent if it becomes known that admissions into this service are regulated by the

same principles as prevail with reference to obtaining employment in any respectable profession.

Indeed there does not appear to be any reason why this branch at least of the Civil Service—demanding as it does so much knowledge of a special nature—should not be considered as a profession for which aspirants must be duly qualified before they can enter upon a profitable practice of it; and I venture to believe that it will be so considered, and that abundance of duly qualified persons will be available for it within very brief delay, after it has been fairly established that none other can enter it, that those who do so are dealt with in accordance with their merits, and that there are in the service some prizes worth having, which can be reached by merit and in no other way.

It requires but little argument to shew that such a consummation would be of great advantage to the public service, and especially to those who, as producers of excisable goods, are, by the law, made to act as collectors of so large a portion of the revenue.

Respectfully submitted.

I have the honor to be, Sir,

Your most obedient servant,

A. BRUNEL,

Commissioner.

DEPARTMENT OF INLAND REVENUE,

February 10th, 1875.

APPENDIX A.

So much of the submission approved by Order in Council of the 24th September, 1866, respecting the organization of the Excise Service as relates to the examination of outside officers.

The importance of the duties which the officers of excise are required to perform makes it exceedingly desirable that their qualifications for the correct performance of these duties should be tested by a careful examination. The necessity for such an examination is fully recognized in the British Excise Service, where also the RIGHT of the competent, trustworthy officer to promotion from one grade to another as vacancies occur, is fully admitted and acted upon.

This RIGHT to promotion constitutes one of the most powerful incentives to the faithful performance of duty, and to the acquirement of such qualifications as will enable the officer to pass the examinations which precede all promotions. There every admission into the service is into the *lowest* grade, but to those officers who can pass the required examinations, and whose character will stand the test of the rigid scrutiny to which all are subjected, a general rise in the service is assured.

At the outset here a process of educating officers of excise in their duties will be necessary, and some must of course at once take the highest position, for it is not probable that many will present themselves who already possess all the necessary qualifications. Yet it is essential to the efficiency of the service that there should be a careful examination of all candidates, in order that those who are manifestly unfit may be rejected, and that the best material available may be elected and classified. It is also desirable that examinations for promotions should be established, and that promotions should follow efficiency and good conduct as a matter of RIGHT.

It is submitted, therefore, that an Excise Board of Examiners be constituted, consisting of:—

The Commissioner of Customs and Excise,
The Assistant Commissioner of Customs and Excise,
The Inspector of Excise,

All as *ex-officio* members, and any two of whom may form a quorum.

For the convenience of candidates, it is proposed that a local member of the Board shall be appointed at Quebec, one at Montreal, one at Kingston, one at Toronto, and one at London. One of the *ex-officio* members, with one of the local members, may then form a board for the local examinations.

Before, however, the candidates are examined by the Excise Board constituted as above, it is submitted that such as desire appointments as Collectors, Deputy Collectors, or District Inspectors, should pass the usual examinations for the Civil Service, and it is further submitted that all candidates for employment in the Excise shall produce, before being admitted to any examination, satisfactory credentials as to character.

With a view to placing the officers already holding appointments in the Excise in the position for which they are best qualified, and in order that those who are manifestly unsuited to the service, may be otherwise disposed of, it is proposed that six months notice of the intention of the Department to call upon them to submit to an examination be given, intimating also that all such as then fail to establish their qualification for holding office will be superseded. It is believed that every officer who is worthy of holding his appointment will, with such notice, be able to qualify himself sufficiently to retain employment in one or other of the grades of the service.

The following course of examination is proposed:—

District Inspector, Collectors and Deputy Collectors of Inland Revenue. To

pass an examination by the Civil Service Board of Examiners, and in addition thereto an examination in the following subjects by the Excise Board of Examiners:—

1. Book-keeping by double entry.
2. Arithmetic including decimals.
3. As to their knowledge of the Excise laws.
4. In computing the contents of vessels.
5. Gauging.
6. Mensuration of superficies and solids.
7. Computing the quantities of commodities in bulk.
8. The use of Syke's Hydrometer.
9. Use of the slide rule.
10. General knowledge of the processes of distillation, brewing and manufacturing tobacco.

For candidates for appointment as Excisemen:—

The examination by the Civil Service Board, and in book-keeping by double entry, to be dispensed with, unless the candidates desire to be so examined.

It is not proposed to insist that in order to be qualified for the subordinate appointment the candidates must be *proficient* in *all* the above-mentioned subjects, but that they shall be classified in each, in accordance with the degree of proficiency they exhibit, and that such proficiency—all other things being equal—shall determine their claim to receive appointments, and, at the outset, the grade in which they may be employed.

 APPENDIX B.

EXAMINATION FOR EXCISE.

CONDITIONS.

- 1st.—Candidates are not allowed to use any books or manuscript for reference.
- 2nd.—They must not leave the room until the questions placed in their hands have been disposed of.
- 3rd.—The number of hours to be devoted for each subject will be specified upon the Examination papers, and upon the expiration of the time so allotted, the papers with such answers as the Candidates can give must be given in. They should therefore refrain from occupying time upon questions with which they know themselves to be unacquainted.
- 4th.—When questions require arithmetical computation, the work must be given in full.
- 5th.—The answers must be given on separate sheets. The subject and number of question is in every case to be prefixed.
- 6th.—The first sheet of questions is to be signed in full by the Candidate: to all other sheets his initials will suffice.
- 7th.—Each Candidate will be assigned a number on entering upon the Examination, and he must see that this Number is attached to each sheet as handed in.
- OTTAWA, November 15th, 1873.
-

Persons heretofore appointed under the Department of Inland Revenue, subject to Examination, will be examined in the following subjects before their appointment is confirmed.

1. Book-keeping by Double Entry.
2. Laws relating to the Inland Revenue.
3. Arithmetic, including Decimals.
4. Mensuration of superficies and solids, and computation of the capacity of vessels.
5. Cask gauging.
6. Malt gauging.
7. Computation of the quantities of commodities in bulk.
8. Specific gravity of fluids, and the use of the Hydrometer.
9. Use of the Slide Rule.*
10. Distillation.
11. Malting.
12. Manufacture of Tobacco.
13. Manufacture of Petroleum.

The subject of Book-keeping is obligatory only upon such Excisemen as intend to qualify for promotion to the Special Class, and upon all Officers above the rank of Excisemen.

* The Candidates will be questioned as to their knowledge of Calliper Gauging and of the Slide Rule as adapted to that purpose; but as slide Rules are not yet in common use in Canada, the Examination beyond that point will be directed to ascertaining whether the Candidate is acquainted with the uses to which the instrument may be applied, and with the principles on which it is constructed.

No. 1.

BOOK-KEEPING BY DOUBLE ENTRY.

Time—1½ Hours.

Journalize the following transactions:—

I, John Wilson, commenced business on the 1st January, 1873, with Assets and Liabilities as follows:—

	\$	cts
1 Assets—Due to me by A. Johnson.....	500	
Promissory Note of A. Smith, due 1st March.....	1,000	
Stock of Spirits on hand per Inventory.....	5,000	
Cash on hand.....	1,000	
2 Liabilities.—Due to Anson & Co.....	250	
Due to J. Thomson, for which he holds my Promissory Note, due 18th February.....	1,000	
3 Bought Spirits for cash.....	500	
4 Sold Spirits to J. Adams and Co., 3 months.....	250	
5 Sold Spirits for Cash.....	50	
6 Received Promissory Note from A. Johnson on payment of amount due.....	500	
7 Bought of J. Stephens & Co., Spirits, 6 months.....	375	
8 Paid out Cash for Office Expenses.....	50	
9 Accepted J. Stephens & Co.'s Draft, due 10th July.....	375	
10 Purchased Spirits from J. Stephens & Co.....	500	
11 Lent Cash to A. Smith.....	100	
12 Paid Cash for Insurance.....	50	
13 Discounted A. Johnson's Promissory Note for \$500, on which I allowed for Discount.....	6	90
—the net proceeds being placed to my credit in the Bank of Mon- treuil.....	493	10
14 Consigned to J. Taylor & Co., to be sold on my account and risk, Spirits, per Invoice cost.....	1,250	
15 Paid J. Stephens and Co., Cheque on Bank of Montreal.....	475	
And was allowed a Discount of.....	25	
—in payment of a cash purchase of Spirits made this day, and invoiced at \$500, on 3 months.....		
16 Received from Taylor & Co., Cash on account of Consignment.....	500	

17	Received Account Sales from J. Taylor & Co., shewing Consignment to have realized net.....	1,400
18	Received of J. Taylor and Co., their note at 30 days in full of amount realized on Consignment.....	900
	Memo. —On taking Stock this day, I find the value of Spirits on hand, at market prices, to be \$5,250.00.....	

After posting these items, make out Trial Balance and Balance Sheet, and state net gain or loss on the transactions recorded, and present pecuniary position.

(Add the following columns of figures horizontally and vertically. Time 45 minutes.)

30,247	50	35,876	24	5,476	32	42,357	89	32,654	73

No. 2.

INLAND REVENUE LAWS.

Time—1 Hour.

1. What is understood by the expression, "*Subject to Excise*"?
2. Define the meaning of the term "*Distillery*," as interpreted by the Inland Revenue Laws?
3. State the various methods of charging and computing the duties upon Spirits, and give the *maximum* quantity of sound grain which may be used to produce a gallon of "*Proof Spirit*"?
4. To *whom* must all applications for *Licenses* be made; and *whose* approval is required before such *Licenses* can be issued?
5. In what respect does this preliminary process differ in the case of a "*Bonded Manufacturer's License*"?
6. What should a "*Distiller's Stock Book*" show?
7. What is a *couch frame*, and of what form must it be made?
8. How many bushels of Barley by "*Dry Gauge*" are held by law to be equal to 100 bushels of the same commodity properly saturated with water for the purpose of malting?
9. At what regular periods is it provided that the duties upon goods manufactured subject to Excise, shall be paid or bonded?
10. What length of time may goods remain in bond without payment of Excise duty?
11. With what precautionary conditions is it necessary to comply before a brewer can recover a drawback of Excise duties upon Beer exported?
12. What is the object and use of *Permits* for the removal of Spirits; by whom are they granted; and what information should they contain?
13. To what penalty is a manufacturer liable who neglects the payment of duty upon articles subject to such duty, at the proper time for such payment.
14. Is an Officer of Inland Revenue entitled to have access to the private books of account of a manufacturer, or only such books as are kept in accordance with the requirements of the Inland Revenue Act?
15. What is the nature of the specification required by law to accompany application for license by a bonded manufacturer?
16. May Excisable Goods be entered for exportation *ex. Warehouse* from any Inland Revenue Division? If not what conditions are necessary?
17. Under what conditions may Excisable Goods, having been exported in bond, be re-imported into Canada?
18. What Acts or parts of Acts govern the Inland Revenue procedure as to Petroleum?
19. Specify the conditions imposed by the law as to the "*fire test*" of Petroleum?
20. May Raw-leaf Tobacco be imported indiscriminately at any "*Customs Port of Entry*."

No. 3.

ARITHMETIC.

Time—1½ Hours.

1. What is the difference between notation and numeration?
2. What is the use of the cypher 0, as it is not a digit or significant figure?
3. What is the difference between a decimal number and a decimal fraction, and what is meant by the decimal point?

4. What is a vulgar fraction, and name various kinds, with examples; also name difference between vulgar and decimal fractions?
5. Can vulgar fractions be reduced to decimal fractions? If so, reduce the following complex vulgar fraction to a decimal, and name the kind of decimal fraction produced:

$$\frac{\frac{3}{17} \times \frac{4}{11} \times \frac{8\frac{1}{2}}{\frac{3}{11}} \times 3\frac{1}{7}}{19\frac{1}{2}} \div \frac{4}{17} \times \frac{5\frac{1}{2}}{8\frac{1}{2}} \times 4\frac{3}{8} \times 10$$

6. Multiply .0003 by 1.10001 and divide the product by .0005?
7. Reduce $\frac{3}{4}$ of a Wine Gallon to the decimal fraction of an Imperial Gallon, to five places of decimals?
8. What is the value of the ratio 5 : 9, and what are the parts of a ratio called?
9. What is meant by compound proportion?
10. Suppose a rectangular vessel 10 feet long, 3 feet wide, and 2 feet 6 inches deep, to contain exactly 500 wine gallons, what will be the depth of a vessel 15 feet long and 5 feet wide, to contain 1,000 imperial gallons?
11. What is the fourth proportional to 3.06, .0001, and 2, to 6 places of decimals?
12. What is meant by the square root of a number, and what is the difference between the square of 2,916 and the square root of the same number?
13. Extract the square root of .1, also 1.11011, each to four places of decimals?
14. Extract the cube root of 3,375 and show whole of process?
15. The Malt used in a brewing of Beer is 2,500 lbs, but by using the patent masher it is found that 2,375 lbs. will produce the same quantity: what is the per centage saved by using the masher?

No. 4.

MENSURATION.

Time—2 Hours.

1. What is the rule to find the area of a right-angled triangle?
2. Suppose the area of a triangle to be 96 and the base 12, what is the perpendicular?
3. How would you find the area of a triangle, having the three sides given?
4. What is the area of a triangle in Winchester bushels whose sides are 50, 40 and 30 feet respectively?
5. What is the area of a trapezium or figure of four sides, whose opposite angles are not equal to two right angles, and whose sides are 25, 34, 35 and 16 respectively?
6. How may the area of any irregular polygon be found?
7. If the diameter of a circle is 1 inch, what is the area?
8. If the area of a circle is 100 square inches, what is the length of diameter to two places of decimals?
9. Give the rule to find the area of an ellipsis, and what is the area of an ellipsis whose diameters are 36 and 25?
10. Give the rules for finding the solidity of a cylinder, cone and pyramid?
11. What are the cubical contents of a vessel in the form of a frustrum of a cone whose top diameter is 130 inches, bottom 142, depth 54.
12. What is the solidity of a vessel in the form of a hopper whose top sides are 30 and 36 inches, and bottom 2 and 8 inches respectively, depth 42 inches?
13. The length of a cask is 30, bung diameter 24, and head diameter 18 inches; what will be the inches on the diagonal rod at which the capacity of the cask is indicated?

No. 5.

CASK GAUGING.

Time—2 Hours.

1. State what is meant by cask gauging ?
2. How many varieties of casks are there, and what varieties are in most general use ?
3. How would you distinguish to what variety a cask may belong ?
4. May two casks having the same dimensions vary materially in their capacity ?
5. How many modes are there of determining the capacity of casks; and name them ?
6. Is the diagonal rod to be relied upon in determining the contents of all casks; and if not, why ?
7. Supposing a cask of the first variety to have the following dimensions, head diameter 26 inches, bung 33 inches, and length 40 inches; what is its capacity in wine and imperial gallons ?
8. Had the cask given in the preceding question been of the third variety, what would its capacity have been in wine gallons ?
9. It was found in taking the dimensions of a cask that the diameters varied as follows, viz.: the cross head diameters were, 21.4 and 21.6 at one end, and 20.9 and 22.1 at the other; the middle or bung diameters were 30.3 and 31.1 inches, the length of cask 39 inches: what was its capacity in wine gallons, supposing it to be of the second variety.
10. The bung diameter is 28.6, the contents of cask 116 gallons, the wet inches 20: what is the ullage (the cask lying) ?
11. The length of a standing cask is 40 inches, the capacity is 115.323 wine gallons, and the wet inches 31.2: required the ullage ?
12. Might a cask be so constructed as to deceive an officer in computing its true capacity ? If so, name the mode or modes in which it could be done ?

No. 6.

MALT GAUGING.

Time—2 Hours.

1. When is the first gauge with a view to the charge of duty to be taken ?
2. Can a gauge of the quantity of barley, wetted, be taken, supposing the water to be first put in the steep cistern ? If so, explain how.
3. What is the second gauge upon which the duty may be calculated, and what other gauges may be taken during the process of converting grain into malt in order to protect the revenue ?
4. When is the process of malting completed, and when should the final gauge be taken ?
5. How are the kiln and floor gauges to be compared, and what ratio should exist between grain steeped and malt produced in bushels ?
6. In a steep of 70 bushels barley, dry gauge, what quantity should the several gauges represent, and how many pounds of malt should at least be charged with duty, as produced from that quantity ?
7. How would you proceed to determine the approximate weight of a large quantity of malt stored in granaries in the absence of suitable appliances for weighing it within the time at your disposal ?
8. The following are the dimensions of a cask in the form of a frustrum of a cone:

- top diameter 6 feet 6 inches, bottom diameter 7 feet 10 inches, average dip 30 $\frac{1}{4}$ inches: how many Winchester bushels?
9. In a cistern which is perfectly cylindrical, but which has a drip of two inches, the dry cistern gauge of a quantity of barley is as follows:
- | | |
|--------------------------|-------------|
| Diameter of cistern..... | 120 inches. |
| Dip at highest side..... | 60 inches. |
- How many bushels barley does it contain; and assuming that no frauds have been committed, what quantity would you expect to find by
- | |
|------------------------|
| The wet cistern gauge. |
| The couch gauge. |
| The floor gauge. |
| The dry malt gauge. |
10. In a cistern of the form of a frustrum of a cone, whose top diameter equals 64 inches, bottom diameter equal 73 inches, and depth equal 50 inches, I find the wet cistern dip is 23 inches: how many bushels dry grain does the wet cistern gauge represent?
11. In a floor of malt which is not rectangular, I find the sides to be 13, 16, 14 and 19 feet respectively, five dips were 6.3, 4.1, 5.7, 6.4 and 7 inches: how many Winchester bushels were there?
12. How would you proceed to inch a cistern in the form of a frustrum of a cone, and what would be the area in bushels of the 13th inch, from the bottom in the cistern of the dimensions given in No. 10?

No. 7.

COMPUTATION OF COMMODITIES IN BULK.

Time—2 Hours.

1. Name the weight in pounds of one bushel of the undermentioned commodities, as determined by statute, viz: Wheat, Barley, Malt, Indian Corn, Rye and Oats.
2. How many cubic inches are there in a Winchester bushel, also in an Imperial bushel?
3. Will all Barley weigh the same number of pounds to the bushel; name one kind that generally exceeds the usual weight?
4. A rectangular bin for Malt has the following dimensions: opposite sides, each 148 inches, ends 114 inches, depth of bin 30 inches, but in one corner of bin is a hopper, two sides of which are formed by the sides of bin, the other two are sloped, the top dimensions are 40 and 45 inches, the bottom 10 and 3 inches, depth same as bin: how many Winchester bushels will the bin hold supposing the hopper to remain empty?
5. A lot of Indian Corn is thrown up in the corner of a granary, the walls form a right angle, and the Corn is 100 inches high and extends 20 feet along each side of the wall at the base, and 6 feet at top, the slant side being dressed evenly: how many Winchester bushels in the heap?
6. A bin of Oats in the form of a parallelepipedon, 20 feet long, 13 feet wide and 5 feet deep: how many Imperial bushels does it contain?
7. How many cubic feet would 21,000 Winchester bushels of Rye occupy?
8. A bin in a granary contains 1,000 bushels of Rye and Oats, mixed in the ratio of 3 bushels Rye to 7 bushels of Oats: how many pounds of each in the bin?
9. In a granary 20 feet wide a lot of Malt is thrown up against the end extending along the side walls, at the base 15 feet, and evenly sloped up to the height of 8 $\frac{1}{2}$ feet against the end wall: how many Winchester bushels in the heap?
10. Is Grain commonly bought by weight, or by measure?

No. 8.

USE OF HYDROMETER AND SPECIFIC GRAVITY OF FLUIDS.

Time—1 Hour.

1. In proof spirits what ratio is water and absolute alcohol combined by weight?
2. What are the weights per wine gallon of absolute alcohol, proof spirit and water respectively?
3. Can the indications of the Hydrometer in testing spirits be affected by the addition of any soluble matter having a greater specific gravity than water; if so, name them?
4. What circumstances might occur, either by design or accident, that would cause error in result when testing spirits?
5. In testing spirits how is the Hydrometer used, and what other instrument is used in connection with it?
6. Having determined the indications by these instruments, how would you proceed to ascertain the strength?
7. If required to test a car load of spirits contained in casks, varying in both size and strength, how would you proceed?
8. Will the mixture of one volume of water and one volume of spirits 50 O. P., make two volumes, and what will be the strength of mixture?
9. In testing the accuracy of a Hydrometer with one known to be correct, how would you proceed?
10. In testing a sample of spirits the temperature was found to be 60 °, Hydrometer indication 34.2, and another sample, temperature 55 °, Hydrometer indication 30.8, what would be the strength of each, and the difference in proof gallons between 100 wine gallons of the former and 98 of the latter?

No. 9.

DISTILLATION.

Time—1 Hour.

1. In the distillation of Spirits from Grain which is not malted, how many operations are necessary—name them in the order in which they occur?
2. What is the minimum and maximum time necessary to complete the operations of mashing and fermentation respectively?
3. What kinds of grain are commonly used, and in what proportions, in the manufacture of Spirits?
4. When and where are the Spirits tested and charged with duty?
5. In the ordinary supervision of a distillery, what are the principal daily precautions which should be taken by the officer in charge for the prevention of fraud?
6. Is there any further process necessary to the completion of the manufacture of Spirits, the product of raw Grain, after having been charged with duty, if yes, name the apparatus used and the precautions which should be taken to prevent fraud in connection with this operation or operations?

No. 10.

MALTING.

Time—1 Hour.

1. What is the object of Malting Grain, and what powerful agent is formed in the transformation of grain into malt?
2. What are the chief requisites to produce the germination of grain.
3. In malting Grain, how many operations are necessary, and name them in the order in which they occur?
4. How would you distinguish between Barley which had been dried in a kiln and Malt?
5. Does Barley when malted increase in bulk; and is there also an increase in weight?
6. Suppose in gauging a couch you find 170 bushels, how many bushels of malt would you expect by gauge, and how many pounds weight?
7. How is the fitness of the Grain to go on the kiln known; and what would be the consequence if germination were not stopped?
8. What is the minimum and maximum time necessary to convert Barley into Malt, and give the usual time taken for each operation?
9. At what time is the duty usually levied on Malt, and what gauges may the duty be calculated from?
10. In the conversion of one steep of Barley into Malt, how many gauges is it necessary for an officer to take to prevent fraud?

No. 11.

TOBACCO.

Time—1 Hour.

1. What are the names of the different products of Raw Leaf Tobacco when manufactured, and subject to Excise duty in Canada?
2. Define what is meant by Cavendish Tobacco?
3. Explain in as concise a manner as possible the process of Cigar making?
4. Are stems made use of in the manufacture of Cavendish; if so, what process do they undergo previously to being used?
5. How many pounds of Cavendish Tobacco may be manufactured from 100 lbs. of Raw Leaf when the stems are used, and how many without?
6. When is the manufacture of Cavendish Tobacco supposed to be completed, and what length of time is necessary to complete the manufacture of Cavendish from Raw Leaf?
7. What is meant by "Casing" Tobacco, and what ingredients are generally used?
8. Do you think it difficult to keep a proper survey over a Tobacco manufactory, and if so, give your reason?
9. How would you proceed to take stock in a Tobacco manufactory after six months operations in order to arrive at a tolerably correct conclusion as to the condition of affairs, and to what expedient might the manufacture resort in order to hide fraud?

No. 12.

MANUFACTURE OF PETROLEUM.

Time—1 Hour

1. What products of crude petroleum are subject to Excise?
 2. When is petroleum first chargeable with duty?
 3. Give the process which it undergoes before being chargeable with duty, and is any subsequent process necessary to the completion of its manufacture?
 4. What is the average of Refined petroleum for illuminating purposes, obtainable from crude, and what does the difference consist of?
 5. In addition to being charged with duty, is it subject to any other provisions of the law, if so, name them?
 6. What Instrument is necessary for testing illuminating oil, and describe how used?
-

APPENDIX C.

ANALYSIS of Excise Examinations held during 1873 and 1874.

Place of Examination.	Date.	No. of candidates examined.	No. entitled to First Class Certificates, over 1,200 marks out of 1,500.	No. entitled to Second Class Certificates, over 900 marks out of 1,500.	No. entitled to Third Class Certificates, over 600 marks out of 1,500.	Unsuccessful; less than 600 marks.

52. Decimal division of Lineal Standards more difficult.....	xxv
53. Measurement of Alcohol.....	xxv
54. Sykes' Hydrometer reliable only within a narrow range of temperature.....	xxv
55. Serious discrepancies in quantities caused by changes of temperature.....	xxv
56. Experiments have been instituted by the Department which show that the revenue may be seriously affected by this question.....	xxv
57. Mural Standards.....	xxvi
58. Proposal to open communications with municipal authorities in relation to laying down Mural Standards.....	xxvi
59. Considerations that have influenced the selection of instruments.....	xxvi

REPORT.

To the Honorable the
MINISTER OF INLAND REVENUE.

SIR,—I have now the honor to submit my second report respecting the INSPECTION OF WEIGHTS AND MEASURES AND GAS, and the progress made in obtaining the standards and apparatus necessary for giving effect to the laws in relation thereto.

1. In my first report on this subject I gave a detailed account of the arrangements I had made with the respective manufacturers, and the time at which they had promised delivery. I stated—see p. xxv., § 30—that they had made a somewhat reluctant promise to have the DOMINION STANDARDS delivered at the Standards Department, Westminster, sufficiently early to permit of their being verified and thereafter delivered here some time in June, 1874. The Warden of Standards cautioned me that we must be prepared for a good deal of delay, as the makers of instruments of precision usually met with unforeseen difficulties in the execution of work which demands so much nicety in its manipulation, and for the performance of which only a limited number of operatives possess the requisite skill.

Reference to
 first Report.

2. The apprehensions thus raised have been fully justified by the result. There has been so much delay that all calculations as to the time for putting the Inspection laws in force were defeated, and a postponement to six months beyond the time originally proposed became inevitable.

Delay in deli-
 very of Stand-
 ards caused
 delay in issue
 of proclama-
 tion.

I had no intimation of the impending disappointments, and up to the end of May, 1874, assumed that the parties were making such progress with their work as would insure an approximate fulfilment of their engagements, but not then hearing of the delivery of any of the Standards, I communicated with the WARDEN on the subject, and also with the makers who had the work in hand.

More anxiety was felt respecting the lineal Standards than the others as being the most important and most difficult to construct, and in order to facilitate their completion it became necessary to assent to some modification of the terms of the order given to Messrs. TROUGHTON & SIMS, as stated in my first report.

3. In a letter written by the Warden of Standards, under date the 8th of June, 1874, he informed me that several unsuccessful attempts had been made to construct the bars of Baily's metal of the "Tresca" Section. Immediately on receipt of this letter I enquired by cablegram whether the

Explanations
 as to abandon-
 ment of Tresca
 section for
 Lineal Stand-
 ards.

use of Platinum would expedite the delivery, and received an answer in the negative. In another letter written on the 26th June, the Warden informed me that the bars could be made of Bailey's metal if the "*Tresca*" section was abandoned, and that he thought this would be the best decision to arrive at.

The Imperial lineal Standards are plain square bars of the above-mentioned metal. The "*Tresca*" section had been selected for the Dominion Standards upon the recommendation of the WARDEN and other scientific gentlemen, as an improvement in the form of the Imperial Standards, no one at the time supposing that the adoption of this form would involve any practical difficulty.

The reasoning upon which this conclusion was arrived at is very fully given in Appendix C to this report, which is a translation of M. Tresca's paper referred to in the account of the proceedings of the Metric Commission at Paris.

Inasmuch as the anticipated advantages did not appear to be of such importance as to justify delay, and as bars made identical with the Imperial Standards would fully meet the requirements of the law, and since bars of the improved section can be substituted if deemed advisable at a future time, a telegram was sent to the WARDEN OF STANDARDS on the 6th July, the day on which I received his letter, as follows:—

"Abandon *Tresca* section if that will expedite delivery."

That form of Standard was therefore abandoned, and under date 16th July the WARDEN wrote that he had given instructions that the lineal Standards should be "made of Baily's metal, similar in quality and form to the "Imperial Standard Yards."

Further de-
lays.

4. But notwithstanding the change above mentioned, there were still many disappointments. It was not until the 30th September that the delivery of two of the Standard Yards was announced, and on the 21st of October the WARDEN wrote informing me that he had sent back the two bars **A** & **B** first delivered, to be re-cut, but that he had verified the third Standard **C**. The verification of this third Standard **C** was not, however, completed till the 28th of October, and it did not arrive in Ottawa until the 12th October, while the **A** & **B** Standards did not arrive until the third of December.

In the mean time unexpected delays occurred in the delivery of the other primary Standards, and notably so as to the primary cubic foot Standard for Gas measures, as to the verification of which there has been some unexplained difficulty. It was not despatched from London till the 12th of November, and did not arrive in Ottawa until the tenth of December.

5. The following statement shows the date of delivery of each of the Dominion Standards :—

October 8.—Three Platinum-iridium Avoirdupois lbs., **A B C**, and three Platinum-iridium Troy Ounces, **A B C**.

November 12.—Three Standard Gallons of Gun Metal, respectively marked **A B C**.

November 12.—The Standard Yard **C**.

December 3.—The Standard Yards **A & B**

Statement of dates at which the Standards were delivered

Delivery of Gas Standards

The Gas Standards were delivered as follows :—

July 27.—The Model Photometer and Testing Apparatus.

October 25.—The Standard ten and five feet Gas-Holders, and two Standard Meters, one for one hundred and one for twenty lights.

December 10.—The Standard Cubic Foot Measure.

7. The requirements of the law respecting the deposit of the primary Standards were complied with immediately after the completion of their delivery and the receipts of the Speaker of the Senate, and of the Speaker of the House of Commons, for the Standards placed in their custody have been filed in this Department.

8. So soon as the delivery of the primary Standards had been completed, steps were taken for the issue of the proclamations mentioned in the Acts which were published on the 18th of December. All the papers in connection therewith, will be found in Appendix "A" to this report. Under the proclamations so issued the laws take effect on and after the first day of July, 1875.

9. A very full account of the verification of the primary Standards by the WARDEN OF STANDARDS will be found in Appendix "B." The following general description will serve for their identification.

(a) LINEAL STANDARDS.

These consist of three bars of Baily's metal; each bar is about 38 inches in length, the section being a square the side of which is about one inch.

Each bar when it arrived in the Department was contained in a mahogany case lined with green cloth, secured by an ordinary lock, and by seals bearing the impress of the official seal of the Standards Department at Westminster.

In addition to the designating letters **A B C** engraved respectively on each bar, there is also engraved on each in capital letters the following :—

MR. BAILY'S METAL. STANDARD YARD. TROUGHTON & SIMS, LONDON.

Lineal Standards: their relation to their Imperial prototypes.

The designating letter is placed in the same line with and to the right of the word "*Standard*," and at a distance of about one inch therefrom; that part of the inscription being near the midlength of the bar; the words "*Mr. Bailey's metal*," being near the left end, and the words "*Troughton and Sims*," near the right end of the bar.

At a distance of one inch from each end of each bar, a circular well is sunk in midbreadth of the side of the bar which bears the inscription; the wells are 36 inches from centre to centre. At the bottom of each of these wells there is inserted a gold stud, the surface of which is in the axis of the bar, and upon the surface of the studs the lines are cut, which define the length of the STANDARD YARD. These lines consist of two longitudinal lines and one transverse line; the latter defining the length, the exact place on this line at which the length is to be measured, lies between the two longitudinal lines.

The following are the relations which these bars bear to the Imperial Standard, No. 6, which is known as the "Accessible Representative of the National Standard." It will be understood that these computations are based upon the dilation to which it has been ascertained the metal of which the bars are made is subject under change of temperature. This as determined by Mr. Sheepshank, whose determinations have been adopted by the Standards Department, is equal to 0.000009453 for each degree of Fahr.,* when the temperature does not vary very much from 62°. Thus determined the Dominion Standard:

- A—At temperature 61.91° Fahr., is identical with Imperial Standard at temperature - - - - - 62°
- B—At temperature 62.16° Fahr., is identical with Imperial Standard at temperature - - - - - 62°
- C—At temperature 61.45° Fahr., is identical with Imperial Standard at temperature - - - - - 62°

Or both bars being at a temperature of 62° Fahr.:—

- A=Imperial Standard + 0.0002941 Inch.
- B= " " —0.0005419 "
- C= " " —0.0018668 "

The exact length of these Standards in terms of the Imperial Standard may be stated as follows:—

- A=36.00002841 Inches.
- B=35.99994581 "
- C=35.99981332 "

* In Appendix XII to the Fifth Report of the Standards Commission, page 194, this coefficient is given as 0.000009453. The Warden has made it 0.000009476. See page 29, Appendix B.

(b.) STANDARDS OF WEIGHT.

These consist of three Standard avoirdupois pounds and three Standard troy ounces, all of platinum-iridium. They are contained in three bronze boxes, the covers of which are secured by four screws with countersunk heads, and in the centre of each cover there is a key for removing the screws. In each box there is a Standard pound and a Standard ounce. These three boxes with their contents arrived at this Department in an outer case, well secured and sealed with seals bearing the impress of the official seal of the Standards Department at Westminster.

Standards of Weight: their relation to their Imperial prototypes.

The Standard pounds are respectively designated by the letters **A B C** and the Standard ounces are similarly designated; each is contained in an inner casket of silver, gilt. The ounce and pound **A** being in one box, **B** in another and **C** in the third. These Standards were made by Mr. Oertling, London, but they do not bear any inscription except the letters above given.

The following are the relations which these Standards bear to the Imperial

Standard made of platinum and known as P. S. :—

The density of the Imperial Standard P. S., is stated to be 21·15722.

The mean density of the Dominion Standards has been ascertained at the Standards Department to be 21·4148.

Weighed in vacuum* :—

A = P. S. — 0·02306 Grains.

B = P. S. — 0·01688 „

C = P. S. — 0·01643 „

The weight of the Dominion Standards weighed in vacuum in terms of P. S., is as follows :—

A = 6999·97694 Grains.

B = 6999·98312 „

C = 6999·98357 „

Or in terms of the Imperial Commercial Brass Standard known as W, weighed in Standard air :—

A = W + 0·62611 Grains.

B = W + 0·63243 „

C = W + 0·63284 „

And their weight in Standard air in terms of the Imperial Commercial Standard W is as follows :—

A = 7000·62611 Grains.

B = 7000·63243 „

C = 7000·63284 „

* See Summary, page 55, Appendix B.

In terms of the Imperial Standards the Troy ounces weigh in terms of P. S.:—In vacuum.

A = 479·99197 grains.

B = 479·99234 do

C = 479·99129 do

And in terms of W.:—In Standard Air.

A = 480·03648 grains.

B = 480·03685 do

C = 480·03580 do

In addition to the above a Standard Kilogram has been obtained and placed in the strong box in this Department with the Dominion Standards of weight and lineal measures.

This Standard was received in an ordinary packing case, but it was also inclosed in a mahogany box which was sealed with the official seal of the Standards' Department.

The STANDARD KILOGRAM was verified by comparison with a Standard kilogram whose value in terms of the French Standard is accurately known. The result, as stated by the WARDEN, is that the kilogram delivered to this Department is equal to the French Commercial Standard, plus 5·21 mgr., which is sufficiently near for all practical purposes.

(c.) STANDARDS OF CAPACITY.

Standards
of Capacity:
their relation
to their Im-
perial proto-
types.

These consist of three Standard Gallons.

They were received from the Express Company packed in two wood cases, within one of which was found a strong iron fire-proof box, and in the other, two sheet iron japanned boxes. The former was sealed with two wax seals, bearing the impress of the official seal of the Standards Department. The latter were each similarly sealed with four seals. Each of these boxes has on its lid a brass plate bearing the following inscription—on the fire-proof box :—

DOMINION OF CANADA. STANDARD GALLON. A. 1874. L. OERTLING - - LONDON.

And on the other two boxes a similar inscription, the designating letters being changed to B and C respectively.

These Standards are of gun metal. They are cylindrical in form, having an internal diameter of about 7.5 inches, and a depth of about 6.25 inches. They are made with two handles cast solid with the measure. On the edge of **A** there is engraved at one extremity of a diameter drawn, nearly at right angles to the handles, the verification mark of the Standards Department (a portcullis) and at the other the letters **V R** surmounted by a crown. Under the crowned initials and on the outside of the measure, there is the following inscription :—

A.

IMPERIAL STANDARD GALLON.

DOMINION OF CANADA.

A. D. 1874.

L. OERTLING, LONDON.

Each of the Standards is furnished with a disc of thick glass.

The strong box in which **A** is contained is lined with wood and green baize, and is secured by a *Chubb* lock of superior quality.

Inside each of the iron cases which contain **B** and **C** there is an inner box of mahogany, properly lined, in which the Standards, with the glass discs, are placed. Both outer and inner cases are secured by good locks.

B has engraved on the edge the same verification marks as there are on **A**.

Under the the crowned initials and on the outside of the measure there is the following inscription :—

B.

IMPERIAL GALLON.

DOMINION OF CANADA.

A.D. 1874.

L. OERTLING, LONDON.

C has no verification marks on its edge, but on the outside of the measure between the handles there is the following inscription :—

C.

IMPERIAL STANDARD GALLON. 1

DOMINION OF CANADA.

A.D. 1874.

L. OERTLING, LONDON.

The Standard Gallons have the following relations to the Imperial Standard :—

		Grains. Asser'tnd Errors.
A contains of Standard Water, the corrections for temperature and barometer pressure being made. - - - - -	69981.03	—18.97
B contains of Standard Water - - - - -	69961.71	—38.29
C contains of Standard Water - - - - -	69972.26	—27.74
The true Standard contains of Standard Water, 70000.		

(d) GAS STANDARDS.

Gas Standards their relation to their Imperial prototypes.

These Standards arrived in ordinary packing cases, and their verification is attested by the Official Seal of the Standards Department attached to each of them. They consist of :

(1.) A Model Photometer, combined with an apparatus for testing for Sulphuretted Hydrogen.

(2.) A set of Chemical Apparatus for testing for Ammonia and Sulphur.

(3.) A cubic foot bottle. This is in the form shown in Appendix B (page 55,) the official seal being at the lower aperture d'. This bottle as marked has *no error*. Its use is to test the accuracy of gas-holders or meters by passing through them such number of *cubic feet* of air as may be deemed expedient. The arrangement by which this is accomplished is shown in the drawing opposite page

(4.) A ten foot gas-holder It is shown in the drawing at page ... The total error of this instrument is stated by the WARDEN as follows :

	Cubic Feet.
Ascertained capacity.....	9.992
Total error of scale from 0 to 10 feet.....	0.008

(5.) A five foot gas-holder of similar construction as No. 4. The error of the instrument is stated as follows :

	Cubic Feet.
Ascertained capacity.....	4.996
Total error of scales from 0 to 5 ft.....	0.004

(6.) Test meters for 100 lights, and for 20 lights. These have practically *no error*.

Standards deposited.

10. The Standards described above have been deposited as follows :—

Those designated **A** in the Department. The Lineal Standard and the Standards of Weight in a strong fire-proof box, secured by two of Chubb's locks. The Gallon is in the strong box above described.

Those designated **B** were delivered to the Honorable the Speaker of the Senate.

Those designated C were delivered to the Honorable the Speaker of the House of Commons.

The Gas Standards and Models are deposited in this Department, as required by the 36th Vic., Cap. 48, Sec. 4.

11. The particulars given of the construction and verification of the Dominion Standards, of the results arrived at by the Warden of Standards, and the processes by which he arrived at them will be found in full in Appendix B to this report. It will be seen that the Warden's measurements and weighings are of a highly scientific character, and give with the utmost precision attainable the true relation which these Standards bear to their prototypes—the Imperial Standards.

Account of construction and verification of Standards given by the Warden.

12. In defining the exact length of the Lineal Standard, refinements in the methods of measurement were used which are neither necessary nor practicable in testing the measures in common use. Such refinements are however necessary when dealing with primary Standards, for if avoidable errors were tolerated at the fountain head it is difficult to say what magnitude they might assume by the time the instruments in practical use were reached.

Care exercised in verification of Primary Standards.

13. But while it is apparent that refined scientific verifications cannot be applied to measures in common use, it is desirable to insure as much accuracy as is possible, and the errors tolerated should be within specified limits. In order that the Inspector may know whether those limits have been overstepped it is essential that the errors of his Standard should be carefully ascertained and truly stated for his information.

Most refined methods of measurement necessary in such verifications.

14. In scientific weighings the true weight of a Standard or other body is its weight in *vacuum*, for it is obvious that when weighed in any fluid whether air or water, the weight of the fluid displaced by the body weighed, is an apparent reduction of its weight, and that this reduction is in proportion to the size of the body weighed. A true result could not therefore be obtained in comparing a Platinum Standard with a brass or iron weight in air, unless the weight of air displaced by each were taken into account.

Primary Standards of weight must be compared in vacuum.

15. The Platinum-Iridium Standards, therefore, are only to be used for the verification or restoration of the Departmental bronze Standards, and since these approximate very nearly to the average density of the material commonly used for commercial weights, they may be used for verifications without regard to the displacement of air, which would cause no appreciable error. The Imperial Standard W., to which reference has been made, is a brass weight of a density approaching very nearly to that of the Departmental and Inspection Standards of the Dominion, and is considered equivalent to 7000 grains, weighed in air at a temperature of 62° Fahrenheit, the barometer being at 30 inches.

Platinum-Iridium Standards to be used only for verification and restoration of Departmental Standards.

Standards of Capacity should be verified by the weight of Standard Water they will hold.

16. The Imperial Standard for the gallon is a weight of 70000 grains, *i.e.*, ten pounds avoirdupois, which is the weight of standard water the measure should contain, and for all accurate comparisons it is more convenient to verify such measures by weighing than by comparing them with standard measures. There may be some difficulty in obtaining distilled water of absolute purity, but any error arising from that source will be less than errors due to the waste of water in changing from one measure to another, the loss by moisture remaining in the vessel and other similar causes. Clean rain water at a temperature of 60° to 65° will give results very near the truth.

General statement of Standards delivered.

17. Below I give a general statement of all the Dominion Departmental and Inspection Standards which have been received up to the date of this report.

Dominion Standards.

I.—DOMINION STANDARDS as mentioned in the Act, and which have been disposed of in the manner prescribed therein namely:—

- | | |
|---|---|
| <p>A 1—STANDARD YARD of Baily's metal, line measure, lines traced on Gold studs.</p> <p>A 1—STANDARD AVOIRDUPOIS pound of Platinum-Iridium.</p> <p>A 1—STANDARD TROY OUNCE of Platinum-Iridium.</p> | <p>} Fitted in a strong iron box and to be kept for important official verifications.</p> |
| <p>A 1—STANDARD GALLON of Gun metal, cylindrical in form, and of equal height and diameter. This is fitted in a fire-proof box, and will only be used for important official comparison.</p> | |
| <p>B C 2—STANDARD YARDS of Baily's metal, line measure, lines traced on Gold studs.</p> <p>B C 2—STANDARD AVOIRDUPOIS pounds of Platinum-Iridium.</p> <p>B C 2—STANDARD TROY Ounces of Platinum-Iridium.</p> <p>B C 2—STANDARD Gallons of Gun metal, cylindrical in form, and of equal height and diameter.</p> | <p>} Each of these two sets has been placed in a suitable box cased with metal ready for sealing. B has been delivered to the Speaker of the Senate, C to the Speaker of the House of Commons, in compliance with terms of the Act.</p> |

Standard Metre.

STANDARD METRE, and STANDARD KILOGRAM.—These are fitted in the strong box with the **A** set of Dominion Standards of weight and lineal measure.

II.—DEPARTMENTAL or Secondary STANDARDS in conformity with Sec. 9 Departmental of the Act. or Secondary Standards.

(a) & (b) Ten feet bed and two rods.

(a) 1 six feet bed and one rod.

(a) & (b) 2 Sets each of 20 Avoirdupois weights, viz :—

50lbs.	30lbs.	20lbs.	10lbs.
5	3	2	1
0.5	0.3	0.2	0.1
0.05	0.03	0.02	0.01
0.005	0.003	0.002	0.001

also :—

(a) & (b) 2 Sets of 10 Avoirdupois weights, viz :

8oz.	4oz.	2oz.	1oz.
8drams.	4drams.	2drams.	1dram.
$\frac{1}{2}$ dram.	$\frac{1}{2}$ dram.		

(a) & (b) 2 Decimal Sets of Grain weights, each set consisting of :

1000gr.	600gr.	300gr.	200gr.
100 "	60 "	30 "	20 "
10	6	3	2
1	0.6	0.3	0.2
0.1	0.06	0.03	0.02
0.01	0.006	0.003	0.002
.001			

(a) & (b) 2 Sets of Decimal Troy weights, each set consisting of 24 weights, viz :

500oz.	300oz.	200oz.	100oz.
50 "	30 "	20 "	10 "
5 "	3 "	2 "	1 "
0.5	0.3	0.2	0.1
0.05	0.03	0.02	0.01
0.005	0.003	0.002	0.001

(a) 1 Set of Metric weights, viz :

20kilos.	10kilos.	5kilos.
.2 "	1 "	0.5
0.2	0.1	0.05
0.02	0.01	0.005
0.002	0.001	0.0005
.0002	0.0001	

(a) & (b) 2 Sets of Measures of Capacity, each set consisting of :

Bushel.	Half Bushel.	Peck.
Gallon.	Half Gallon.	Quart.
Pint.	Half Pint.	Gill.
Half Gill.	Half Gill.	

With suitable glass Discs.

The following instruments for this part of the equipment are still under construction :

- (a) & (b) 2 Yard Standards divided into sixteenths and into feet,
each foot into inches.
One inch divided into 12ths.
One inch divided into 10ths.
One inch divided into 16ths.
- (a) & (b) 2 One Foot Standards divided on one side into inches.
One inch into 16ths.
One inch into 10ths.
On the other side divided into 10ths and 100th.
- (a) & (b) 2 chains 100 feet divided into feet.
- (a) & (b) 2 chains 66 feet divided into 100 links.
- (a) 1 Standard Meter sub-divided.
One inch divided into 100ths for testing micrometers.

Gas Standards III.—STANDARDS for measurement and testing quality of Gas in conformity with the "Gas Inspection Act," section 4.

Primary Standards for Departmental use.

- 1 Apparatus complete for testing the purity of Gas.
1 Photometer complete with Gas holder, Meter, minute Clock,
and all necessary appliances.
1 Ten feet gas holder.
1 Five feet do
1 Cubic foot test bottle with transferring apparatus.
1 Gas meter for 100 lights.
1 do for 20 do.

Thermometers IV.—STANDARD THERMOMETERS and BAROMETERS.
& Barometers.

- 6 Standard Thermometers with cylindrical bulbs, Fahrenheit
scale.
6 do do Centigrade scale.
3 Short do Fahrenheit scale.
3 do do Centigrade scale.
1 Standard Barometer graduated on Glass.
1 do do do Brass.

Weighing and V.—WEIGHING and COMPARING Apparatus.
Comparing
Apparatus.

- 1 Balance to carry 60 lbs. in each pan and to turn with .1 grain.
1 do 20 lbs. do do do .05 grain.
1 do 5 lbs. do do do .02 grain.
1 do 2 lbs. (or a kilogram) in each pan and to turn
with .001 grain.

- 1 Balance to carry 1000 grains in each pan and to turn with .001 grain.
- 1 Engraving machine for marking Standards and for engraving stamps on such articles as would be injured by a punch.
- 3 Callipers for measuring diameters in Metric and in English measures.
- 1 Comparing apparatus for line or end measures.

The following instruments belonging to this part of the equipment have not yet been delivered :—

- 1 Comparing apparatus for line or end measures, for use with the long Departmental Standards.
- 1 Cathetometer.

VI.—OFFICIAL STANDARDS for DISTRICT INSPECTORS.

As it is proposed, to delay the appointment of District Inspectors until there has been some opportunity for training those appointed as Deputies, and from among whom it may be found expedient to select some of the higher officers, the construction of the Official Standards has not been urged forward. The following instruments have, however, been delivered, and will be available for use at the places where the District Inspectors will ultimately be stationed, viz. :—

14 Sets of Avoirdupois Standard Weights designated by letters from A to N, each consisting of:—

50lbs.	30lbs.	20lbs.	10lbs.
5	3	2	1
8oz.	4oz.	2oz.	1oz.
8drams.	4drams.	2drams.	1drams.
$\frac{1}{2}$	$\frac{1}{4}$		

14 Balances to carry 50 lbs. in each pan and turn with .5 grains.

14	do	5 lbs.	do	do	do	.2	do.
14	do	1 pound	do	do	do	.1	do.

The undermentioned instruments are still required for completing the part of the equipment, and are under construction:—

14 Sets Measures of Length.

- 1 Divided yard line measure.
- 1 10 feet end measure bed and 2 rods.
- 1 Chain 100 feet divided in feet.
- 1 do 66 do do 100 links.

14 Sets Weights for decimal division of the pound.

0.5lbs.	0.3lbs	0.2lbs	0.1lbs.
.05	.03	.02	.01
.005	.003	.002	.001

Troy Weights.

500oz.	300oz.	200oz.	100oz.
50	30	2	10
5	3	2	1
0.5	0.3	0.2	0.1
.05	.03	.02	.01
.005	.003	.002	.001

14 Boxes of Grain weights from 1000 grains down to 0.1 grain.

14 Sets Measures of Capacity.

	1 Half Bushel	1 Peck
1 Gallon	1 Half Gallon	1 Quart
1 Pint	1 Half Pint	1 Gill.

Comparing and Weighing Apparatus.

1 Comparing apparatus for end or line measures.

VII.—INSPECTION STANDARDS AND APPARATUS FOR THE USE OF THE DEPUTY INSPECTORS.

Inspection Standards.

The orders for the equipment necessary for the local offices were not given until the vote for this service included in the estimates for the current fiscal year had been approved by Parliament. So soon as the estimates were passed, communication was held with the makers and orders were given late in the month of June, 1874. Up to the present time the undermentioned articles have been delivered.

24 Standard yards with comparing apparatus.

30 Complete sets gun metal weights.

30 Sets gun metal measures of capacity, from one gallon down to one half gill.

30 Balances to carry 5 lbs in each pan and turn with 0.2 grains.

60 do 8 ozs. do 0.1 grain.

The whole of the comparing apparatus are I am informed completed, but in consequence of considerable damage having been done to the first lot sent out—due to faulty packing—I delayed the forwarding of the remainder until instructions could be given to insure more satisfactory packing.

I am in receipt of a statement from the Standards Department under date 18th March, showing the number of Local or Inspection Standards that had been submitted for verification up to that date. It is as follows:—

<i>Weights and Measures.</i>		Number.
Standard yards and comparing apparatus	- - -	42
Avoidupois weights, sets from 50 lbs. downwards	- - -	30
Measures of capacity from one gallon down to one half gill	- - -	30
Balances. { For 50 lbs. } { do 5 lbs. } { do 8 ozs. }	And under - - - -	30

<i>Gas Inspection Apparatus.</i>		Sets.
Photometers, &c.	- - - - -	8
Gas measures	- - - - -	5

18. The following are the orders that have been given for Inspection Standards :—

Orders given for Inspection Standards.

June 25th, 1784. To Mr. OERTLING, London.

To Mr. Oertling.

One hundred sets of Standard weights, and measures of capacity, together with one hundred sets of the requisite balances.

These instruments were, by the conditions of the order, to have been delivered as follows :—

Thirty sets on or before the 1st November, 1874.

Thirty sets on or before the 1st April, 1875.

The remainder on or before the 30th June, 1875.

Mr. Oertling was also requested to make proposals for constructing the 'Portable Kits' necessary for the Deputy Inspectors. He was requested to take the French *Portable Kit* as the basis of his calculations, but to make some modifications necessary for adapting it to our service. A specimen set was made and submitted to me last January. I carefully considered and tested its suitability and found that it would be necessary to make some further alteration. Early in February I wrote to Mr. Oertling explaining my views and desiring him to proceed at once with the construction of thirty such *Kits* as modified, which should be delivered by the end of May next. I do not propose to order any further supply of these until we have had some experience with the first lot.

To Messrs. TROUGHTON & SIMS,

To Troughton and Sims.

One hundred sets of sub-divided Standard yards with comparing apparatus. The whole were to have been delivered before the 1st January, 1875, but for reasons above stated only twenty-four have been as yet received.

GAS STANDARDS AND TESTING APPARATUS.

25th June, 1874. To Messrs. ALEXANDER WRIGHT & Co., Westminster:

To Alexander Wright & Co.

Twenty sets of Standard Gas-holders and Meters.

25th June, 1874. Mr. W. SUGG, Westminster :

To Wm. Sugg.

Twenty Photometers and testing apparatus.

Three additional sets were ordered on the 22nd January.

19. It will be understood that the instruments ordered as above stated, will not nearly complete the equipment necessary for the whole Dominion, but it was necessary to confine the orders within the limits drawn by the amount voted in the estimates. A further amount has been placed in the estimates for the ensuing year and additional orders will be given.

The orders will not complete the equipment for the whole Dominion.

Amendments
to Gas Inspec-
tion Act last
session.

20. I may here explain that under the Gas Inspection Act of 1873, the Gas Companies were bound to provide and maintain the testing apparatus at their own expense, in accordance with the models placed in the Department. It is obvious that more perfect uniformity will be secured if the instruments are all made by the same persons and from the same designs. I therefore addressed a circular to the several Companies asking whether they would purchase the apparatus themselves or obtain them through the Department. With some few exceptions the replies were in favor of the latter alternative. Some of the Companies have not yet made any reply. Uncertainty as to how many of the Companies would consent to obtain the apparatus through this Department was the controlling reason for limiting the order to twenty sets, the whole number required being THIRTY.

Gas Inspec-
tion Act of
1875.

21. The Act passed during the recent Session of Parliament, relieves the Gas Companies of the cost of the Photometer and testing apparatus, instructions will therefore be given for the construction of the additional number required, but it will hardly be possible to obtain them before the First of July, and there will be some unavoidable delay in supplying the less important places.

Want of
Equipment
necessitates
large Inspec-
tion districts
at the outset.

22. Since for the reasons previously stated, the equipment necessary for all the inspection districts which it may ultimately be found necessary to establish will not be available before the law comes into operation, it will be necessary to make the first appointment of inspectors, chiefly with reference to the Inland Revenue Divisions as already constituted. In this way the whole Dominion will be brought under the operation of the law. These Divisions will subsequently be sub-divided so as to embrace areas of more manageable dimensions. This subdivision may be carried out as rapidly as circumstances will permit, and it is hoped that with the sums already placed at the disposal of the Department, a complete system of inspection will be established at all places of importance by the First of January, 1876.

Penalties
should not be
imposed for
use of un-
stamped
weights and
measures until
parties have
had the oppor-
tunity of hav-
ing them
stamped.

23. In the meantime, and until this has been effected, it will be unreasonable to impose penalties for the use of unstamped weights and measures, in cases where the parties using them have in consequence of the insufficient number of inspectors appointed been unable to have their weights, &c., verified.

Verification of
all the weights
and measures
in Canada will
require con-
siderable time.

24. To verify and stamp all the weights and measures used in the trade and commerce of Canada, is a work involving a large amount of labour, and scattered as they are over an immense territory, a corresponding amount of time will be necessary for its accomplishment. Considerable time will therefore necessarily elapse before weights and measures in complete accordance with the law will be in universal use.

25. Some anxiety has been expressed by a few individuals as to the inconvenience that may be occasioned by the introduction of the Imperial measures of capacity in place of those now in use, and there is also an impression that the changes will affect lineal measures and weights as well as measures of capacity. There is no real foundation for such anxiety. There will be no change in the value either of weights or lineal measures, and in so far as the change relates to measures of capacity, it is a much less serious affair than may be imagined.

Anxiety as to effects of adopting Imperial Gallon.

26. The change in the bushel, half-bushel and peck has hardly any significance, because all articles of commercial importance, such as wheat, corn and other grain, as also seeds, are and have long been bought and sold by weight, the bushel being nothing more than a name signifying a number of pounds determined by law as far back as 1859, and giving no accurate notion of the capacity of the measure named. Goods sold by dry measures of capacity are comparatively of small value. Generally the custom is to heap the measure, and the difference between the quantity heaped on such measures by one dealer and the quantity heaped on them by another, or the quantity that should be heaped on, is frequently greater than the difference between the Imperial and the Winchester bushel, which is only 67.772 cubic inches—that is, the Imperial bushel exceeds the Winchester bushel by a little more than 3 %.

Change of Bushel Standard has little significance.

27. The change from the old wine gallon to the Imperial gallon has more importance, but it is believed that no serious inconvenience will be felt—certainly none that should outweigh the advantages that will ultimately result from the change.

Change of Gallon more important.

28. The change is not compulsory until 1880. Up to that time the old wine gallon may be used by those who desire to do so, upon the condition that in all bargains affected by it, it shall be specifically mentioned. Without discussing the expediency of this delay, it may be mentioned that it has been allowed in order that the parties interested may be able to accommodate themselves to the change, and choose their own time within the limit stated for purchasing new measures.

Change not compulsory till 1880.

29. It fortunately happens that the one measure may be converted into the other by the addition of a fifth or the deduction of a sixth. The relation, therefore, which the wine gallon bears to the new Standard is for all practical purposes—and as defined by law—so easily stated that there is little doubt but traders will rapidly acquire the habit of thinking and dealing in the more convenient measure.

The relation of one measure to the other understood.

30. It is more convenient because there is an increasing tendency among traders to determine quantities of fluids by weight rather than by measure.

Greater convenience of the

Imperial Standard. This is especially the case with reference to spirits and petroleum, and it is certain that quantities may be so determined with much greater accuracy than by any system of measuring or gauging whatever. The wholesale business in petroleum has long been regulated by weight, and the large distillers have for several years past put up their spirits by weight. In practice the only accurate method of determining the capacity of vessels used for the delivery of fluids is by weighing them when empty, and when full of standard water. The difference being the weight of water they will contain.

Now the Imperial gallon offers this advantage : It holds exactly ten pounds avoirdupois of standard water, and as clean rain water approximates when at the ordinary temperature, very nearly to standard water, we have a convenient link, decimally expressed, connecting weight with volume, and therefore a ready means of determining the exact capacity of any vessel without any arithmetical computation. Similarly the quantity of any fluid in Imperial gallons may be determined with the greatest exactness by determining its specific gravity. This is very readily done by the use of a gravity hydrometer which can be read by any person of ordinary intelligence, and gives at once the weight per gallon in pounds, avoirdupois, of the fluid in which it is immersed. For the specific gravity of any fluid represents the weight per gallon by removing the decimal point one place to the right.

The Wine Gallon not so convenient. 31. The capacity of a vessel in wine gallons or the quantity of any fluid in wine gallons may, it is true, be computed from specific gravities, but to do this either a troublesome arithmetical computation is necessary or a reference to tables.

Relation of the Wine Gallon to the Winchester Bushel very inconvenient. 32. For reasons already given but little value is attached to the relation of the gallon to the bushel, but as the bushel has been legalized and is sometimes used or referred to it is obviously more convenient that the gallon should be an aliquot part of it. With the old system this is not the case, for the Winchester bushel contained 9.30918 + wine gallons. The Imperial gallon is the exact eighth part of the Imperial bushel. Heretofore we have had two different systems of measures of capacity—the Winchester for dry measures, and the wine measure for liquids.

The United States the only country that retains the Wine Gallon and Winchester Bushel as Standards. 33. Except Newfoundland, the United States is the only country in which the wine gallon is now retained as the legal Standard for liquid measures of capacity, and the Winchester bushel as the Standard for dry measure. In so far, therefore, as the adoption of the Imperial gallon as our standard of capacity affects the external trade of the Dominion the temporary inconvenience that may be felt in our trade with the United States will be more than compensated by the convenience gained in carrying on our trade with other countries.

34. On reference to the Trade and Navigation returns it will be found that in 1872—excluding exports of Petroleum which as already stated are regulated by weight—of the whole trade in fluids measured by the gallon only 20 % was with the United States, while 37·4 % was with Great Britain, and the remainder 42·6 % was with France and other countries, where the Standard is neither the Imperial nor the wine gallon, but in most cases the *Litre* of the metric system.

Our trade with Great Britain compared with our trade with other countries.

In 1874—when the exclusion of petroleum from the computation has but little significance because the exports of that article had almost ceased—the trade in liquids with Great Britain amounted to 40·45% of the whole, with the United States 31·23% and the remainder, 28·32%, was with France and other countries.

35. I have included the West India Islands and Demarara among the countries that have adopted the Imperial Standards, because on reference to the transactions of the Standards Department at Westminster, I find that, from 1851 to 1864, thirty-seven sets of Imperial Primary Standards have been verified for those colonies. But it is, of course, quite possible that the old measures may still be tolerated in some cases much as they will be tolerated here for some time to come.

West Indies have adopted Imperial Standards.

36. No other Standards but those of the Empire are known or tolerated in Australia or New Zealand, and they were adopted in Vancouver's Island when that Colony was organized. The adoption of the Imperial Standard by Canada very nearly effects complete uniformity throughout the English speaking portions of the British Empire, embracing a population approaching 50,000,000.

Imperial Standards prevail in Australia and New Zealand.

37. Although the use of the French or metric system of weights and measures has been permissive in Canada since April, 1871, this Department is not aware that they have been used by any one. Only one communication has been received on the subject, and there does not appear to be much probability of the system being carried into general use. It has been adopted to some extent by scientific men who desire to record the results of their researches in terms that will at once compare with the terms used for similar purposes by the leaders of science in Europe.

The permission to use this metric system not yet availed of in Canada.

38. For sufficient reasons the metric system has been legalized in Germany, Italy and in some other states, and there is little doubt but it will be thoroughly established at an early day in such States as are composed of an aggregation of small states which had previously their own separate systems each differing from every other. Under such circumstances it was easier to adopt a uniform system differing from them all than to adopt any one of those previously in use, especially when the system adopted had simplicity and perfect symmetry to recommend it.

Metric system adopted in Germany and some other states.

No similar reasons for its adoption in Canada.

39. But no such reasons exist for adopting the metric system in Canada. We have already standards of length and weight which are and have long been common to the whole Empire, and by which the greater part of the international trade of the world is regulated.

The metric system will probably become *International*.

40. Although there does not appear to be any probability of the French or metric system coming into common use in Canada in the near future, there are reasons for believing that among civilized nations it will, within a comparatively short time, become the *International system*, and that there will be but two systems, the *French* and the *British*. In my first report (*vide* page vi) I referred to the International Metric Commission sitting at Paris, and to the proposition for the establishment of a permanent International Bureaux that should be charged with the verification and preservation of the International Standards. A diplomatic conference on this subject has been sitting at Paris during the past winter, and several of the Nations Represented have agreed to the proposition, the terms of which will be found in Appendix C. For the present, however, Great Britain and Holland have declined to sign the convention.

English foot the standard of lineal measures in Russia.

41. In Russia the English foot of twelve inches—the inch divided into tenths—has been the lineal standard since 1831. The Russian *Arsheen* is exactly twenty-eight inches and several of the Russian units of weight are evenly divided by the avoirdupois pound; for instance the Pood is 36 pounds. There are therefore reasons for believing that the English system is as likely to make its way in Russia as the metric.

The standards of the United States are practically the same as those of Canada.

42. The United States has practically the same standards as Canada, the only difference in details being the gallon. These standards, therefore, prevail as to lineal measures among a population of nearly one hundred and seventy millions, and as to weight, among an English speaking population of about eighty-five millions.

The permission to use metric weights and measures makes it necessary to provide metric standards.

43. It is, however, obviously necessary to provide for any requirements that may arise under the provisions of the law which *permits* the use of the metric system here. To that end a standard metre and kilogram have been procured, as also a complete set of the metric weights, measures and apparatus used by the local inspectors in France, all of which have been deposited in this Department for reference. This I submit is all that is necessary, for it would be inexpedient to place a double set of standards in the hands of the local inspectors, so near each other as to be easily confounded, and yet sufficiently wide apart to make a material difference in prices.

For commercial transactions reference to tables of equivalents

44. Whatever commercial transactions may be based on the metric system, whether they relate to our domestic trade or to our foreign commerce, can very well be adjusted without direct reference to a material metric standard

by the much easier reference to a table of equivalents in English weights or measures which will certainly find a place wherever it is likely to be needed.

more convenient than reference to material standards.

45. Without changing the existing laws it is possible to make the multiples and sub-multiples of existing standards approximate very closely to a decimal system. The bushel as a measure of grain, seeds and some other articles, ceased to be a legal term on the first of January, 1874. From that time the "Cental" of 100 lbs., has been the only legal unit for expressing quantities of grain and other articles specified in the Act 36 Vic., Cap. 47. The "Cental" is identical with the hundred weight as established by law in 1859, and may be considered as taking the place of the old hundred weight of 112 lbs.

Possibility of devising a decimal system of weights under existing laws.

46. From 1858 up to 1874, grain and seeds had practically been bought and sold by weight, for the Act 16 Vic., Cap. 193, defines the bushel as equal to so many pounds of each of the varieties of grain and seeds mentioned. In weighing grain its weight is first ascertained and stated in pounds, and it is obviously much easier to convert it into centals than to convert it into bushels of 60 lbs., 56 lbs., 48 lbs., 34 lbs., &c., according to the kind of grain weighed. Nevertheless the trade has been slow to accept the change, and may almost be said to have opposed to it a passive resistance, for we find that nearly all the newspapers, claiming to give especial prominence to matters of commercial interest, still use the term bushel in the market quotations, and the Board of Trade at our chief commercial centre has recently asked for the inspection of weights of 60 lbs to be used in the wheat trade.

The cental of grain.

47. Although special agreements are sometimes made with reference to the old ton of 2,240 lbs. (the "long ton" as it is commonly called) two thousand pounds is the legal ton and has been since 1859. It would be convenient if some popular name were assigned to the half ton, expressing a decimal multiple of the cental, and then a decimal subdivision of the pound would effect a complete decimal system of weights. As a step in this direction, standard decimal sub-multiples of the pound have been obtained, and it remains to be determined whether their use shall be legalized.

The ton of 2,240 lbs still used.

48. The Act past last session requiring that the capacity of casks, used for the delivery of certain fluids, shall be inscribed on them and imposing on inspectors of weights and measures the duty of determining the contents of such casks in cases of dispute justifies a consideration of the expediency of assigning distinctive names to casks of various sizes. Malt liquor is usually sold—when not bottled—by the hogshead, barrel, half barrel, &c., but more valuable liquids are sold by the gallon, and are delivered in casks nominally known as puncheons or barrels, but no particular attention appears to have been given to obtaining uniformity of size. A hogshead of beer is commonly understood to be 64 wine gallons, a barrel 32 wine gallons, and a half barrel

The Act 38 Vict., cap. 36 as to casks.

16 wine gallons, but a puncheon of spirits varies from 100 to 120 wine gallons, and the barrel from 32 to 42 wine gallons ; sometimes it contains 45 wine gallons. A great number of brewers casks have been tested, and it has been found that when no capacity is inscribed on them, the hogshead holds about 60 wine gallons, the barrel about 29 wine gallons, and the half barrel from 14 to 15 wine gallons, and it has been ascertained that very few brewers inscribe the reputed capacity on their casks.

Denominations of casks to be legalized.

49. It is probable that when the Act above referred to, comes into operation —1st July next—the capacity of all casks not marked by officers of the Excise, will be correctly marked by those using them, and practically it may not then be of much consequence whether a so called barrel contains thirty, or any other number of gallons, but as the denominations of casks have a place in commercial language, it will be convenient to have some definite meaning attached to the name, and if this can be made to express some convenient multiple of the gallon so much the better.

A puncheon, as I have stated, varies from 100 to 120 wine gallons ; 100 gallons would therefore be a reasonable, and at the same time a most convenient quantity to be signified by that term.

A hogshead is now understood to hold 64 wine gallons, but does not usually hold more than 60 wine gallons. This is exactly 50 gallons, which is a very convenient quantity for expressing the capacity of this kind of cask.

A barrel now implies 32 gallons, but the brewers' barrel very rarely holds more than 30 wine gallons, or exactly 25 gallons, which may be adopted as its proper capacity

The half barrel which now holds from 14 to 16 wine gallons is not a convenient term, and the term RUNLET might be substituted, its capacity being fixed as 10 gallons.

A keg may be understood as meaning five gallons.

Decimal arrangement suggested.

50. We should then have

	Gallons.	Kegs.	Runlets.	Barrels.	Hogsheads.	Puncheon.
50 lbs. water =	5	= 1				
100 " =	10	= 2	= 1			
250 " =	25	= 5	= 2.5	= 1		
500 " =	50	= 10	= 5	= 2	= 1	
1000 " =	100	= 20	= 10	= 4	= 2	= 1

Decimal sub-multiples of the gallon desirable but difficult to introduce.

51. A decimal division of the gallon would add to the convenience of the scale, but it would be more difficult to adopt, for the quart and pint have a very wide application: such a subdivision has obtained some favour in England under the denominations of *decigallon* and *centigallon*; but it would hardly be desirable to take any steps in that direction until the Imperial authorities have legalized the change, and whenever a suggestion for a decimal division

is entertained it may be found convenient to make the pint the tenth part of the gallon, and such a pint would be very nearly identical with that heretofore used which contained 1.042 pounds of water, while the tenth of a gallon would be exactly one pound of water. Five quarts—almost identical with the quart of the old wine measure—would then be a gallon.

52. A decimal division of lineal measures is not so easy; the FOOT and the INCH have obtained so strong a hold in the minds of the people, and enter so fully into all mechanical calculations, that a decimal division, either of the yard or foot, appears to be almost hopeless. A decimal division of the inch is steadily making its way and has so far been adopted that almost all good lineal measures divided into inches have the decimal divisions of the inch on one side as conspicuously marked as the binary divisions.

Decimal division of lineal standards more difficult.

53. The measurement of spirits and alcoholic mixtures takes into account their strength as well as their bulk. Their measurement therefore requires the use of a gravity instrument commonly known as a hydrometer, which may be considered as having an intimate connection with weights and measures; as being the connecting link between weight and measure.

Measurement of alcohol.

54. Sykes' hydrometer is the only legalized instrument for this purpose in Canada, and under certain conditions it gives results sufficiently accurate. But the instrument was designed and constructed for use in climates where the temperature has a comparatively limited range, and errors due to changes of temperature which assume considerable magnitude here, were deemed to be of little consequence. In Canada a very large proportion of the whole of the spirits charged with duty is produced during the winter, and moved under removal bonds. It is no uncommon occurrence to charge the duty on spirits when at a temperature of 65° and to remove, warehouse, or ex-warehouse, the same spirits at a temperature of from ten to fifteen degrees below zero.

Sykes' hydrometer reliable only within a narrow range of temperature.

55. The attention of the Department was directed to this matter during the extreme cold weather of the past winter when it was stated that the discrepancy in the quantity of spirits removed from Toronto to Montreal as between the measure determined in Toronto and the measure determined in Montreal frequently amounted to four per cent. This on a single car load of 50 o.p. alcohol represents nearly one hundred dollars of duty.

Serious discrepancies in quantities caused by changes of temperature.

These allegations induced the Department to take measures for definitely ascertaining the magnitude of the alleged errors with a view to finding a remedy, and a number of experiments were made from which it was ascertained that Sykes' hydrometer is only reliable within very narrow ranges of temperate, and that the tables used with it for corrections for temperature take no account of the contraction of liquids by cold. Now the contraction of alcohol is in this climate an element of considerable importance, and no instrument can do justice between parties that does not take this element into account.

Experiments have been instituted by the Department which show that the revenue may be seriously affected by this question.

56. The experiments instituted by this Department are not yet so far advanced as to justify a definite statement as to the result, but I am warranted in saying that the errors in estimating quantities under extreme changes of temperature, such as I have above indicated, may affect the revenue to the extent of from \$61,000 to \$70,000, and that the trade transactions of the country may be affected by them to many times that amount.

It is proposed to follow up the enquiries already instituted, and for that purpose some instruments have been designed for measuring with the greatest degree of accuracy attainable the dilation and contraction of alcohol and spirits generally due to changes of temperature. This will occupy a good deal of time, but it is believed that in view of the high duties now charged on spirits and of the extremes of temperature to which our climate is liable, a thorough investigation of the subject is desirable.

Mural Standards.

57. In my first report (page xii) I referred to the laying down of *Mural Standards*. It is believed that such standards would be of considerable value to engineers, architects, surveyors and builders. The ten feet and six feet standards, of which a description will be found at page 39, Appendix B, are mainly for the purpose of enabling the Department to have such Mural Standards accurately laid down.

They will consist of a standard of one hundred feet divided into ten parts, one of such parts being subdivided into feet and one of the feet into inches; and a standard of sixty-six feet divided into ten parts, and one of such parts will be subdivided into ten links. The first mentioned standard will be available for verifying the ordinary builders' chain or tape; the latter for verifying the surveyors' chain.

Proposal to open communication with municipal authorities in relation to laying down Mural Standards.

58. Such standards should be placed where they will not be worn out by excessive traffic, and where they will be free from disturbance by frost, and should, of course, be sheltered from the weather. It is suggested that communication may be opened with the municipal authorities of the cities and towns of the Dominion inviting them to co-operate with this Department by providing suitable places for laying down these standards.

Considerations that have influenced the selection of instruments.

59. In closing this report I beg to state that in arranging the equipment of the Standards' branch of the Department I have anxiously avoided incurring any expense for instruments not necessary for carrying out the intentions of Parliament as indicated by the Statutes. But while acting on this principle I have been influenced by a desire to select the instruments necessary for the ordinary work of the service, with a view to forming the nucleus of a scientific establishment which, in course of time, may be developed into a department that will be competent to undertake such work of a scientific nature as has relation to the branches of science applied to the establish-

ment and maintenance of the Standards. The Department would thus ultimately become to Canada what the *Conservatoire des Arts et des Meters* at Paris and the *Standard's Department* at Westminster are to France and Great Britain.

The documents that have been printed as Appendices to my reports and the character of the instruments used will show that the construction, préservation and use of the primary standards require the application of some of the highest branches of science. I make no pretensions to more than the rudiments of such knowledge and am conscious that if the object I have suggested is attained at all it will be attained under more competent direction than my own. Nevertheless I have thought it desirable, when incurring the expenditure necessary for carrying on the Inspection of Weights and Measures, to keep the greater object in view and I feel assured that if this course is persevered in our Standards' Department may be made a valuable branch of the public service and worthy of the growing consequence of the Dominion. It is for you to determine how far I shall be permitted to go in the direction indicated.

I have the honor to be, sir,

Your most obedient servant,

A. BRUNEL,

Commissioner.

APPENDIX A.

INLAND REVENUE DEPARTMENT,
OTTAWA, 15th December, 1874.

The undersigned has the honor to report that by an Act passed in the 36th year of Her Majesty's reign, chaptered 47, and intituled: "An Act respecting Weights and Measures," it is amongst other things in effect enacted that the Minister of Inland Revenue shall cause to be prepared three sets of primary standards of length and weight, each set consisting of:—

1. A Standard Yard,
2. A Standard Pound, Avoirdupois, and
3. A Standard Ounce, Troy,
4. A Standard Gallon,

1. Report to Privy Council by the Minister of Inland Revenue, that Dominion Standards of weights and measures have been received.

And shall cause the same to be verified and authenticated in such manner as he shall deem best; and it is further enacted that the Governor, upon being satisfied of the accuracy of the primary standards, may, by Order in Council, declare the same to be the legal and only primary standards of length and weight for Canada, under the name of "The Dominion Standards," and as such the units or standards of weights and measures from which all other weights and measures defined by that Act shall be computed and ascertained; and from and after the date of such Order in Council all primary standards of weights and measures theretofore established and legalized by the Legislature of the late Province of Canada, or by the Legislatures of Nova Scotia, New Brunswick and British Columbia, shall be transferred to, and remain in the possession of, the Department of Inland Revenue; and it is further enacted, that the Minister of Inland Revenue shall also cause to be prepared two sets of secondary standards of the weights and measures defined and established by this Act, and of the requisite multiples and proportions thereof; and the Governor in Council, upon the report of the Minister that the same have been duly verified and authenticated by comparison with the Dominion Standards, may declare such secondary standards to be legal secondary standards of length, weight and capacity, under the name of the "Departmental Standards."

And it is further enacted, that as soon as the Dominion and Departmental Standards have been received, legalized by the Governor in Council, and deposited as above provided, and the necessary apparatus for use in connection therewith has been obtained by the Minister of Inland Revenue, the Governor may, by proclamation, fix a day, giving not less than six months previous notice, upon, from and after which all contracts, bargains, sales or dealings, made or had in any part of Canada, for work to be done, or goods, wares or merchandise, or other things to be sold, delivered or agreed for by weight or measure, where no special agreement is made to the contrary, shall be deemed and taken to be made and had according to the standard weights and measures fixed and defined by the said Act.

The undersigned further reports that he has caused to be prepared, in accordance with the said in part recited Act, three sets of primary standards of length and weight, each set consisting of—

1. One Standard Yard,
2. A Standard Pound Avoirdupois,
3. A Standard Ounce Troy,
4. A Standard Gallon,

Which have been respectively duly verified and authenticated in the manner deemed best, being as follows:—

By careful verification and comparison of the said standards, by the Warden of Standards, with the Imperial Standards in his custody at Westminster, England, an account of which verification and comparison duly attested by the said Warden's hand and seal of office, is lodged in the Department of Inland Revenue.

He recommends that your Excellency in Council, being now satisfied of the accuracy of such primary standards, may declare the same to be the legal and only primary standards of length and weight for Canada under the name of "The Dominion Standards," and as such the units or standards of weights and measures, from which all other weights and measures defined by the said in part recited Act shall be computed and ascertained.

The undersigned further reports that he has also caused to be prepared two sets of secondary standards of the weights and measures defined and established by the said in part recited Act, and of the requisite multiples and proportions thereof, and that the same have been duly verified and authenticated by comparison with the Dominion Standards.

He recommends, therefore, that Your Excellency in Council may declare such secondary standards to be legal secondary standards of length, weight and capacity, under the name of "The Departmental Standards."

(Signed,) F. GEOFFRION.

DEPARTMENT OF INLAND REVENUE,
OTTAWA, December 15th, 1874.

2. Report to Privy Council by the Minister of Inland Revenue, that models of Gas Standards and apparatus have been received.

The undersigned has the honor to report, That by an Act passed in the 36th year of Her Majesty's reign chaptered 48 and intitled :

" An Act to provide for the Inspection of Gas and Gas Meters."

It is amongst other things in effect enacted : That after the date fixed by the proclamation to be issued under this Act the only standard or unit of measure for the sale of Gas by Meter, "shall be by the cubic foot, containing sixty-two pounds and three hundred and twenty-one thousandths of a pound, avoirdupois weight, of distilled water weighed in air at the temperature of sixty-two degrees of Fahrenheit thermometer, the barometer being at thirty inches ; except as relates to contracts made before the passing of this Act, and in which a different unit of measure is adopted, which contracts, if renewed, shall adopt the unit of measure above prescribed."

And it is further enacted :

" That within so short a period as may be after the passing of that Act, models of gas holders measuring the said cubic foot, and such multiples and decimal parts of the said cubic foot as the Minister of Inland Revenue shall deem expedient, and from time to time models of such further multiples and decimal parts of the said cubic foot as the Minister of Inland Revenue shall from time to time think necessary, shall be carefully made with proper balances, indices and apparatus for testing the measurement and registration of meters ; and such models shall be verified under the direction of the Minister of Inland Revenue, and when so made and verified, shall be adopted in the Department of

"Inland Revenue; and copies of the models so deposited, verified as
 "aforesaid, shall be used under such regulations as may be approved by
 "the Governor in Council for testing and verifying all meters used
 "within the Dominion," and,

"That models of the apparatus described in schedule 'A' of that Act
 "for testing the illuminating power and purity of Gas, shall also be
 "procured, and, after having been approved by the Minister of Inland
 "Revenue, shall be deposited in the Department of Inland Revenue;
 "and copies of the said models shall be used in the manner described in
 "part two of the schedule 'A,' and in such further instructions, not
 "inconsistent therewith, as may be from time to time directed by Depart-
 "mental Regulations, for testing the illuminating power and purity of
 "Gas," and

"That so soon as the models and apparatus therein mentioned have
 "been obtained and approved, the Governor in Council may issue a
 "proclamation fixing a day not less than six months from the date of
 "such proclamation, upon which the provisions of this Act respecting
 "inspection shall go into operation."

That in accordance with the above mentioned provisions, models of
 Gas holders measuring the said cubic foot, and such multiples and decimal
 parts of the said cubic foot, as the Minister of Inland Revenue has
 deemed expedient, have been carefully made with proper balances,
 indices, and apparatus for testing the measurement and registration of
 meters, and that such models have been verified under the direction of
 the undersigned, and have been deposited in the Department of Inland
 Revenue, and further, that the models of the apparatus described in
 schedule "A" of the said Act for testing the illuminating power and
 purity of Gas have also been procured, and having been approved by
 the undersigned have been deposited in the Department of Inland
 Revenue.

The undersigned, therefore, recommends that in pursuance of the said
 Act a proclamation may issue fixing the first day of July one thousand
 eight hundred and seventy-five as the day upon which the provisions of
 the said Act respecting inspection shall come into operation.

(Signed,) F. GEOFFRION.

DEPARTMENT OF INLAND REVENUE,
 OTTAWA, December 15th, 1874.

The undersigned has the honor to bring under the consideration of
 Your Excellency in Council, the Order in Council bearing date 15th
 December, instant., by which, in pursuance of the 36th Vic., Cap. 47,
 intituled: "An Act respecting Weights and Measures," the Dominion
 and Departmental Standards therein mentioned have been received and
 legalized.

He further reports that in pursuance of the 8th Section of the said
 Act, one set of the Dominion Standards has been placed in the custody
 of the Speaker of the Senate, one set in the custody of the Speaker of
 the House of Commons, and one set in the custody of the Minister of
 Inland Revenue, under such regulations as to precautions against injury
 and deterioration as have been determined by order of Your Excellency
 in Council.

The undersigned therefore recommends that in pursuance of the
 authority contained in the said Act, Sec. 12, a proclamation may be
 issued fixing the first day of July, one thousand eight hundred and

seventy-five, upon, from, and after which all contracts, bargains, sales or dealings made or had in any part of Canada, other than Prince Edward Island, for work to be done, or goods, wares or merchandize or other things to be sold, delivered or agreed, for weight or measure, when no special agreement is made to the contrary, shall be deemed and taken to be made and had according to the standard weights and measures fixed and defined by the said Act.

(Signed,) F. GEOFFRION.

Copy of a Report of a Committee of the Honorable the Privy Council, approved by His Excellency the Governor General in Council on the 18th January, 1874.

4. O. C. making regulations as to the protection of the Standards.

On the recommendation of the Honorable the Minister of Inland Revenue the Committee advise that in pursuance of the Act 36 Vic. Chap. 47, intituled, "An Act respecting Weights and Measures," and Section 8 thereof, the following Regulations as to precautions against injury and deterioration be determined and adopted in respect to the sets of the Dominion Standards in the custody respectively of the Speaker of the Senate, of the Speaker of the House of Commons and of the Minister of Inland Revenue, under the said Act.

Certified,

W. A. HIMSWORTH,
Clerk Privy Council.

REGULATIONS :

1st. As to the Standards deposited in the custody of the Speaker of the Senate and the Speaker of the House of Commons.

The cases containing the Standards so deposited shall be sealed with the seal of the Speaker, and shall be placed in a strong box or boxes each secured by two good locks neither of which can be opened by the key of the other ; one of the keys of each box shall be retained by the Speaker and the other by the Minister of Inland Revenue. The strong box or boxes so secured shall be placed in a fire proof vault to which access can only be had by the Speaker or his nominee for that purpose.

2nd. As to the Standards remaining in the custody of the Minister of Inland Revenue.

The cases containing such Standards shall be placed in a strong fire proof box or boxes secured by a lock or locks of the best description, the keys whereof shall be kept by the Minister of Inland Revenue or his Deputy, and the said fire proof boxes shall be placed in a secure room in the Department of Inland Revenue, the keys of which shall be kept by the Minister of Inland Revenue or his Deputy.

ORDER IN COUNCIL.

GOVERNMENT HOUSE, OTTAWA,
FRIDAY, 18th day of December, 1874.

Present : His Excellency the Governor General in Council.

5. O. C. declaring legality of Standards.

WHEREAS, by an Act passed in the 36th year of Her Majesty's reign, chaptered 47, and intituled : "An Act respecting Weights and Measures," it is amongst other things in effect enacted ; that the

Minister of Inland Revenue shall cause to be prepared three sets of primary standards of length and weight, each set consisting of—

1. A Standard Yard,
2. A Standard Pound, avoirdupois, and
3. A Standard Ounce, Troy,
4. A Standard Gallon,

and shall cause the same to be verified and authenticated in such manner as he shall deem best; and it is further enacted that the Governor, upon being satisfied of the accuracy of primary Standards, may, by Order in Council, declare the same to be the legal and only primary Standards of length and weight for Canada, under the name of "The Dominion Standards," and as such the Units or Standards of weights and measures from which all other weights and measures defined by that Act shall be computed and ascertained; and from and after the date of such Order in Council, all primary Standards of weights and measures heretofore established and legalized by the Legislature of the late Province of Canada, or by the Legislatures of Nova Scotia, New Brunswick and British Columbia, shall be transferred to and remain in the possession of the Department of Inland Revenue; and it is further enacted, that the Minister of Inland Revenue shall also cause to be prepared two sets of Secondary Standards of the weights and measures defined and established by this Act, and of the requisite multiples and proportions thereof; and the Governor in Council, upon the report of the Minister, that the same have been duly verified and authenticated by comparison with the Dominion Standards, may declare such Secondary Standards to be legal Secondary Standards of length, weight and capacity, under the name of "The Departmental Standards;" and it is further enacted that, as soon as the "Dominion" and Departmental Standards have been received, legalized by the Governor in Council, and deposited as above provided, and the necessary apparatus for use in connection therewith has been obtained by the Minister of Inland Revenue, the Governor may, by Proclamation, fix a day, giving not less than six months previous notice, upon, from and after which all contracts, bargains, sales or dealings made or had in any part of Canada for work to be done, or goods, wares or merchandise, or other things to be sold, delivered or agreed for by weight or measure, where no special agreement is made to the contrary, shall be deemed and taken to be made and had according to the Standard weights and measures fixed and defined by the said Act.

And whereas the Hon. the Minister of Inland Revenue has caused to be prepared, in accordance with the said in part recited Act, three sets of primary Standards of length and weight, each set consisting of—

1. One Standard Yard,
2. Standard Pound, avoirdupois,
3. A Standard Ounce, Troy,
4. A Standard Gallon,

which have been respectively duly verified and authenticated in the manner deemed best, being as follows:—

By careful verification and comparison of the said Standards by the Warden of Standards with the Imperial Standards in his custody at Westminster, England, an account of which verification and comparison duly attested by the said Warden's hand and Seal of Office, is lodged in the Department of Inland Revenue.

And whereas the said Minister of Inland Revenue has recommended that His Excellency in Council, being satisfied of the accuracy of such primary Standards, may declare the same to be the legal and only primary Standards of length and weight for Canada, under the name of "The

Dominion Standards," and as such the Units or Standards of weights and measures defined by the said in part recited Act shall be computed and ascertained.

His Excellency the Governor General in Council, on the recommendation of the said Minister of Inland Revenue, has been pleased to declare, and doth hereby declare such primary Standards to be the legal and only primary Standards of length and weight for Canada, under the name of "The Dominion Standards," and as such the Units or Standards of weights and measures from which all other weights and measures defined by the said in part recited Act shall be computed and ascertained.

And whereas the said Minister of Inland Revenue has further reported that he has also caused to be prepared two sets of secondary Standards of the weights and measures defined and established by the said in part recited Act, and of the requisite multiples and proportions thereof, and that the same have been duly verified and authenticated by comparison with the Dominion Standards.

His Excellency the Governor General in Council, on the recommendation of the said Minister of Inland Revenue, has been pleased to declare, and doth hereby declare, such Secondary Standards to be legal Secondary Standards of length, weight and capacity, under the name of "The Departmental Standards."

W. A. HIMSWORTH,
Clerk, Privy Council.

DUFFERIN.

[L.S.]

CANADA.

6 Proclamation of date at which Acts respecting weights and measures shall take effect.

VICTORIA, by the grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, &c, &c., &c.
To all to whom these presents shall come, or whom the same may in any wise concern—GREETING :

A PROCLAMATION.

T. FOURNIER,
Attorney General,
Canada.

WHEREAS in and by an Act of the Parliament of Canada, passed in the thirty-sixth year of Our Reign, chaptered 47, and intituled: "An Act respecting Weights and Measures," it is amongst other things in effect enacted: That the Minister of Inland Revenue shall cause to be prepared three sets of primary standards of length and weights, each set consisting of—

1. A Standard Yard,
2. A Standard Pound, Avoirdupois,
3. A Standard Ounce Troy,
4. A Standard Gallon,

and shall cause the same to be duly verified and authenticated in such manner as he shall deem best; and it is further enacted that the Governor, upon being satisfied of the accuracy of the primary Standards, may, by Order in Council, declare the same to be the legal and only primary standard of length and weights for Canada under the name of "The Dominion Standards," and as such the units or standards of weights and measures from which all other weights and measures defined by that Act shall be computed and ascertained; and from and after the date of such proclamation all primary standards of weights and measures theretofore established and legalized by the legislation of the late Province of Canada, or by the Legislatures of Nova Scotia, New Brunswick and British

Columbia, shall be transferred to and remain in the possession of the Department of Inland Revenue ; and it is further enacted that one set of Dominion Standards shall be placed in the custody of the Speaker of the Senate, one set in the custody of the Speaker of the House of Commons, and one set in the custody of the Minister of Inland Revenue under such regulations as to precautions against injury and deterioration as may be determined by order of the Governor in Council ; and it is further enacted that the Minister of Inland Revenue shall also cause to be prepared two sets of secondary standards of the weights and measures defined and established by the said Act, and of the requisite multiples and proportions thereof ; and the Governor in Council, upon the report of the Minister that the same have been duly verified and authenticated by comparison with the Dominion Standards, may declare such secondary standards to be legal secondary standards of length, weight and capacity under the name of " the Departmental Standards ; " and it is further enacted, that as soon as the Dominion and Departmental Standards have been received, legalized by the Governor in Council, and deposited as above provided, and the necessary apparatus for use in connection therewith has been obtained by the Minister of Inland Revenue, the Governor may by Proclamation, fix a day, giving not less than six months previous notice, upon, from and after which all contracts, bargains, sales or dealings made or had in any part of Canada for work to be done, or goods, wares or merchandize, or other things to be sold, delivered or agreed for, by weight or measure, where no special agreement is made to the contrary, shall be deemed and taken to be made and had according to the standard weights and measures fixed and defined by the said Act :

And whereas the Minister of Inland Revenue, in accordance with the above in part recited act caused to be prepared three sets of primary standards of length and weight, each set consisting of

1. A Standard Yard,
2. A Standard Pound Avoirdupois,
3. A Standard Ounce Troy,
4. A Standard Gallon,

and caused the same to be duly verified and authenticated in such manner as he deemed best, that is to say : By careful verification and comparison of the said Standards by the Warden of Standards with the Imperial Standards in his custody at Westminster, England, an account of which verification and comparison duly tested by the said Warden's Hand and Seal of Office is lodged in the Department of Inland Revenue :

And whereas the Governor upon being satisfied of the accuracy of the primary standards was pleased by Order of His Excellency in Council on the Eighteenth day of December instant to declare the same to be the legal and only primary standards of length and weight for Canada under the name of " The Dominion Standards " and such the units or standards of weights and measures from which all other weights and measures defined by the Act now in recital shall be computed and ascertained :

And whereas in further accordance with the provisions of the said in part recited Act one set of Dominion Standards has been placed in the custody of the Speaker of the Senate, one set in the custody of the Speaker of the House of Commons, and one set in the custody of the Minister of Inland Revenue under such regulations as to precautions against injury and deterioration as have been determined by order of the Governor in Council :

And whereas in further pursuance of the said in part recited Act the

Minister of Inland Revenue has also caused to be prepared two sets of secondary standards of the Weights and Measures defined and established by the said in part recited Act and of the requisite multiples and proportions thereof :

And whereas the Governor in Council was pleased on the Eighteenth day of December, instant, upon the report of the said Minister that the same had been duly verified and authenticated by comparison with Dominion Standards to declare such secondary standards to be legal secondary standards of length, weight and capacity under the name of "The Departmental Standards."

And whereas the Dominion and Departmental Standards hereinbefore mentioned, have been received legalized by the Governor in Council and deposited as provided and required by the said hereinbefore in part recited Act :

NOW KNOW YE, and we do by this Our Royal Proclamation, in pursuance of the said in part recited Act, and by and with the advice of Our Privy Council for Canada, proclaim, declare and fix the first day of July, which will be in the year one thousand eight hundred and seventy-five, as the day upon, from and after which all contracts, bargains, sales or dealings made or had in any part of Canada, other than Prince Edward Island, for work to be done, or goods, wares or merchandise, or other things to be sold, delivered or agreed for by weight or measure, where no special agreement is made to the contrary, shall be deemed and taken to be made and had according to the Standard weights and measures, fixed and defined by the said hereinbefore in part recited Act, intituled, "An Act respecting Weights and Measures."

Of all which Our loving subjects and all others to whom these presents shall come, or whom the same may in any wise concern, are hereby required to take notice and govern themselves accordingly.

IN TESTIMONY WHEREOF, We have caused these Our Letters to be made Patent, and the Great Seal of Canada to be hereunto affixed, WITNESS, Our Right Trusty and Well Beloved Cousin and Councillor the Right Honorable Sir FREDERIC TEMPLE, Earl of Dufferin. Viscount and Baron Clandeboye of Clandeboye, in the County Down, in the Peerage of the United Kingdom, Baron Dufferin and Clandeboye of Ballyleidy and Killeleagh, in the County Down, in the Peerage of Ireland, and a Baronet, Knight of Our Most Illustrious Order of Saint Patrick and Knight Commander of Our Most Honorable Order of the Bath, Governor General of Canada, and Vice Admiral of the same :

At Our Government House, in Our CITY of OTTAWA, this EIGHTEENTH day of DECEMBER, in the year of Our Lord, one thousand eight hundred and seventy-four, and in the Thirty Eighth year of Our Reign.

By Command,

R. W. SCOTT,
Secretary of State.

DUFFERIN,

A PROCLAMATION.

T. FOURNIER,
Attorney General,
Canada.

WHEREAS in and by an Act of the Parliament of Canada, passed in the 36th year of Our Reign, chaptered 48, intitled: "An Act to provide for the Inspection of Gas and Gas Meters," it is amongst other things in effect enacted, that after the date fixed by the Proclamation to be issued under the said Act, the only standard or unit of measure for the sale of Gas by meter, shall be the cubic foot containing sixty-two pounds and three hundred and twenty-one thousandths of a pound *avoir-du-poids* weight, of distilled water weighed in air at the temperature of sixty-two degrees of Fahrenheit's thermometer, the barometer being at thirty inches, except as relates to contracts made before the passing of the said Act now in recital, and in which a different unit of measure is adopted; which contracts, if renewed, shall adopt the unit of measure above proscribed; and it is further enacted, that within as short a period as may be after the passing of the said Act, models of gas-holders measuring the said cubic foot and such multiples and decimal parts of the said cubic foot as the Minister of Inland Revenue shall deem expedient, and from time to time models of such further multiples and decimal parts of the said cubic foot as the Minister of Inland Revenue shall from time to time think necessary, shall be carefully made with proper balances, indices and apparatus for testing the measurement and registration of meters; and such models shall be verified under the direction of the Minister of Inland Revenue, and when so made and verified shall be deposited in the Department of Inland Revenue; and copies of the models so deposited, verified as aforesaid, shall be used under such regulations as may be approved by the Governor in Council, for testing and verifying all meters used within the Dominion: And that models of the apparatus described in Schedule A of the said Act for testing the illuminating power and purity of Gas shall also be procured, and, after having been approved by the Minister of Inland Revenue, shall be deposited in the Department of Inland Revenue, and copies of the same models shall be used in the manner described in part two of the said Schedule A, and in such further instructions not inconsistent therewith, as may be, from time to time, directed by Departmental regulations for testing the illuminating power and purity of Gas: And it is further enacted that so soon as the models and apparatus therein mentioned have been obtained and approved, the Governor in Council may issue a Proclamation fixing a day, not less than six months from the date of such Proclamation, upon which the provisions of the Act now in part recited respecting inspection shall go into operation:

And whereas in accordance with the above in part recited Act, models of gas holders measuring the said cubic foot, and such multiples and decimal parts of the said cubic foot, as the Minister of Inland Revenue has deemed expedient, have been carefully made with proper balances,

indices and apparatus for testing the measurement and registration of meters, and such models have been verified under the direction of the Minister of Inland Revenue, and have been deposited in the Department of Inland Revenue :

And whereas models of the apparatus described in Schedule A of the above in part recited Act, for testing the illuminating power and purity of Gas have also been procured, and having been approved by the Minister of Inland Revenue, have been deposited in the Department of Inland Revenue :

And whereas the models and apparatus herein mentioned have been obtained and approved as required by the hereinbefore in part recited Act :—

NOW KNOW YE, that we do by this our Royal Proclamation, and by and with the authority of the above in part recited Act, and by and with the advice of our Privy Council for Canada, proclaim, declare and fix the first day of July, which will be in the year one thousand eight hundred and seventy-five, as the day upon which the provisions of the above in part recited Act, intituled, "An Act to provide for the Inspection of Gas and Gas Meters," respecting inspection shall come into operation, except in the Province of Prince Edward Island.

Of all which our loving subjects and all others to whom these presents may come, or whom the same may concern, are hereby required to take notice and to govern themselves accordingly.

IN TESTIMONY WHEREOF, We have caused these Our Letters to be made Patent, and the Great Seal of Canada to be hereunto affixed. WITNESS, Our Right Trusty and Well Beloved Cousin and Councillor the Right Honorable Sir FREDERIC TEMPLE, Earl of Dufferin, Viscount and Baron Clandeboye of Clandeboye, in the County Down, in the Peerage of the United Kingdom, Baron Dufferin and Clandeboye of Ballysiddy and Killeleagh, in the County Down, in the Peerage of Ireland, and a Baronet, Knight of Our Most Illustrious Order of Saint Patrick, and Knight Commander of Our Most Honorable Order of the Bath, Governor General of Canada, and Vice-Admiral of the same :

At Our Government House, in Our CITY of OTTAWA, this EIGHTEENTH day of DECEMBER, in the Year of Our Lord, One Thousand Eight Hundred and Seventy-four, and in the Thirty-Eighth year of Our Reign.

By Command,

R. W. SCOTT,

Secretary of State.

APPENDIX B.

VERIFICATION OF WOODEN MEASURING RODS
FOR THE GOVERNMENT OF CANADA.

1. These measuring rods have been constructed by Messrs. Troughton and Simms, and are intended to be used for surveying purposes in Canada. They consist of

- 50 yard end measures, divided into feet.
- 10 ten-foot end measures, also divided into feet.

They are made of pine wood with very straight grain, and as free as possible from knots. They are of rectangular form. The ends are protected by plates of brass, about 0·1 inch thick, squared and continued for about 1·25 inch along the upper and lower surfaces, where they are secured to each surface by four brass screws, the heads of which are levelled flush with the surface of the rods. Other rectangular plates of brass are similarly screwed on the upper surface, and are engraved with transverse lines showing the divisions into feet, and marked "1 ft.," "2 ft.," &c. All the rods have a thin coating of French polish upon them, to protect them from dirt and damp.

2. The yard rods are about 1·25 inch wide and 1 inch thick. They are engraved "1 yard" on the brass plates upon the upper surface of the rod at the right-hand side, immediately below which they have been numbered 1 to 50 with the engraving apparatus of the Standards Department. They are also engraved T & S on the brass plates upon the under surface of the rods at the left-hand side. Each yard measure may thus be identified.

3. The whole series of yard measures has been tested as to their length with the commercial standard of length of the Standards Department, described at page 104 of the Appendix to the Fifth Report of the Standards Commission. The comparisons were begun on 4th February, 1874, and were completed on 23rd February. Each yard measure has been compared by placing it upon the steel roller supports with its surface marked "1 yard" uppermost, and bringing the projecting rectangular contact pieces of the standard against the two ends of the measure. As these ends are about twice the thickness of the rectangular contact pieces, it has been thought necessary to take one reading in each of the following positions :—

1. With the comparing surface of the contact pieces at the upper part of the defining ends of the yard measure.
2. With the comparing surface of the contact pieces at the middle part of the defining ends of the yard measure.
3. With the comparing surface of the contact pieces at the lower part of the defining ends of the yard measure.

Three additional readings were taken according to the ordinary method of reversing the ends of the yard measure compared. Six readings of each yard measure have thus been taken, and the mean error has been determined from the mean of the six readings. The mean results are as follows :—

1. Description of these measuring rods.

2. The yard measures.

3. Method of comparing them.

4. Mean results of comparisons of yard measures

4. Mean results of Comparisons of Yard End Measures

23	- +0'006	48	- +0'006
24	- +0'003	49	- +0'005
25	- +0'002	50	- +0'002

As the limit of error allowed for the verification of end measures of 1 yard in 0.01 inch in excess or deficiency, it is here shown that every one of these yard measures is correct in standard length far within the allowed error. It should also be stated that there was not a single instance of the maximum error allowed being found in any one of the six separate readings.

In order to check these results, a further comparison of some of these yard measures has been made with Mr. Sheepshank's comparing apparatus for end measures, by placing the yard measure and an end standard yard successively upon Vs between a fixed brass stud 0.5 inch in diameter, and a smaller stud pressed forward by a very fine screw having a micrometer head, marked with divisions each equal to 0.0001 inch. The result of thus testing a smaller measuring surface has been to show an error of only about one half of that stated in the preceding table.

5. Test of the straightness.

5. These yard rods were also tested as to their straightness by placing them upon a true plane of gun metal. Almost every one was found to be slightly twisted or warped, notwithstanding the greatest care had been taken by Messrs. Troughton and Simms to procure the most perfectly seasoned wood in the first instance, and afterwards to select the straightest rods out of a considerable number roughly prepared. Mr. Simms is of opinion that no further warping or twisting will occur.

6. As to allowance for difference of temperature of the deal measures and bronze standard.

6. It was deemed necessary to ascertain how far the excess in length of the deal measures might be attributable to their temperature being somewhat higher than that of the bronze standard with which they were compared, or to any difference from standard temperature in either the bronze standard or the deal measures.

For the purpose of more accurately determining the temperature of the measuring axis of the wooden rods and of the bronze standard bar,

three standard thermometers were placed close to them and upon the same level. The bulb of one (a) was inserted in the middle of a rectangular piece of pine wood of the same section as the wooden measure; the bulb of a second (b) was inserted in a rectangular piece of bronze similar to the standard bar; and the bulb of the third (c) was left exposed to the air of the room. All being placed in position over night, it was found that early in the morning the three thermometers read alike. But when the room became warm after the fire was lighted, the temperature of the metal was raised more slowly than that of the air or the wood, and its thermometer read from 1° to 2° C. less. A still greater amount of difference was found as the observations proceeded, when the effect of the heat of the observer also acted upon the three thermometers. Thus, on February 23, on beginning the observations, the three thermometers read as follows:

(a) $16^{\circ}8$ C. (b) $15^{\circ}1$ C. (c) $17^{\circ}7$ C.

The greatest difference was found after seven yards had been compared, when the thermometers read—

(a) $17^{\circ}2$ C. (b) $15^{\circ}5$ C. (c) $18^{\circ}2$ C.

At the end of the observations, when 30 more yards had been compared, the thermometers read more nearly alike, viz.:

(a) $17^{\circ}6$ C. (b) $16^{\circ}6$ C. (c) $17^{\circ}9$ C.

It was next to be considered what effect such difference of temperature produced upon the difference in length of the wooden measures and the bronze bar.

According to Kater (as quoted in *Annuaire du Bureau des Longitudes*, 1872, p. 405), the coefficient of linear expansion of pine wood for 1° C. between 0° and 100° is 0.00004959, which is equal to an increase in length of 0.000178 inches in a deal yard for every additional 1° C. According to Mr. Sheepshanks, the bronze of which Baily's metal consists dilates 0.000341 inches in the yard for 1° C. Whence it is seen that for every 1° C. a pine wood yard dilates 0.000163 inches less than a bronze yard, or only about half as much; and that it requires a difference of temperature between the two yards of not less than 6° C. to cause a difference in length between them amounting to 0.001 inches, assuming them to be equal in length when both are at the same standard temperature. It follows that as the differences of temperature actually found in the comparisons of the Canadian deal measures with the bronze standard were less than 6° , and that the mean temperature during the observations did not differ to this extent from the standard temperature of 62° F., any such differences of temperature may be entirely disregarded in the results of the comparisons.

7. The verification of the lines marking the foot measures on the brass plates of the deal yard measures was made by means of the comparing apparatus constructed for the use of inspectors, each foot being thus compared. The legal allowance for errors in both end and line measures of 1 foot is 0.005 inches in excess or in deficiency. As, however, the thickness of the lines by which the foot measure is defined is itself about 0.01 inches, a very accurate comparison was found to be impracticable. But in no single instance was an error of 0.005 in. found outside of the defining line of the foot measure. All the foot measures may, therefore, be deemed to be correct standard measures within the limit allowed by the law.

8. The 10-foot deal measuring rods are somewhat larger in section than the yard measures, being about $1\frac{1}{2}$ inch in breadth and rather more than an inch thick. In other respects they are similar in construction.

struction to the yard measures, except that they are engraved T & S on the brass plate on the *upper* surface at the left hand end of the rod. They have been numbered 1 to 10 with the official engraving apparatus, immediately below the engraved "10 ft." at the right hand end of the rod.

9. Their verification.

9. The verification of the ten 10-foot measures was effected by comparing them with the 10-foot standard, not only as to the total length, but also as to the ten separate feet marked both upon the brass plates of the deal rods, and upon the standard bar.

The 10-foot standard is both a bed measure and a line measure. (See its description, Appendix XX. to Fifth Report of Standards Commission, 1870, p. 229.) As the length of the wooden measures was found to be generally in excess, they could not be placed in the bed measure, that is to say, between the upright terminations, and were, therefore, compared with the defining lines of the standard. Each measuring rod was placed upon the standard, with its left-hand termination adjusted to the 0 line of the standard bar, and when in this position was viewed vertically through a lens. The other termination was then similarly viewed, and any difference in length was measured by means of the vernier of a small square steel measuring bar with finely graduated divisions, placed as near as possible.

Four observations were made with each 10-foot measure; two of them when the measure was placed upon the standard with the graduations uppermost, the second of these being made with the terminations reversed, and two more with the graduations underneath the rod. The mean of the four observations was taken to determine the ascertained error of each measure of 10 feet. The mean results were as follows:—

MEAN RESULTS OF COMPARISONS OF 10-foot End Measures.

Ascertained Error.		Ascertained Error.	
	inches.		inches.
10 Feet No. 1	- +0·012	10 Feet No. 6	- +0·008
" 2	- +0·018	" 7	- +0·014
" 3	- +0·016	" 8	- +0·009
" 4	- +0·016	" 9	- +0·000
" 5	- +0·010	" 10	- -0·004

As the legal allowance for error in the verification of a 10-foot end measure is 0·05 inch in excess or in deficiency, it will be seen that all these 10-foot measures are correct according to the standard within the limit of error allowed. The maximum deviation in any one comparison of these measures (No. 2) was found to be 0·025 inches.

Similar unavoidable deviations from straightness were found in these 10-foot measures to those observed in the yard measures; but the greatest deviation of the measuring surface from the straight line did not exceed 0·15 inch.

In the comparisons of the separate line measures of a foot marked on these 10-foot measures, no deviations from the standard were found to exceed 0·01 inch.

10. Official verification marks placed on the measuring rods.

10. Upon the completion of the verification of all the wooden measures, the official mark of verification, consisting of the Crown with V R and a portcullis underneath, was cut with the engraving apparatus on the brass plate upon the upper surface of each rod and on the left-hand side very near the end.

H. W. CHISHOLM,
Warden of the Standards.

Standards Office,
28th February, 1874.

POSTSCRIPT TO ACCOUNT OF VERIFICATION OF
WOODEN MEASURING RODS FOR CANADA.

1. Since the account of the verification of the deal measuring rods for Canada was written, my attention has been directed to "General Roy's Account of the Measurement of a Base on Hounslow Heath" (Phil. Trans. 1785, Part 2), when deal measuring rods were employed. It is stated that extraordinary care and pains were bestowed in the construction of these deal rods, in order to render them the best that had ever been made. With the view of procuring well-seasoned pine wood of sufficient length and perfectly free from knots, a New England mast, and one of Riga wood, were obtained from the stock of old wood at Deptford dockyard, and were cut up for the purpose of constructing the measuring rods. Although the New England white pine had the advantage of being lighter, less liable to warp, and less affected by moisture, it was found to be faulty in some parts and knotty in others, and the Riga red wood was selected, as being extremely smooth and perfectly straight-grained.

1. Deal measuring rods used in 1784, for measurement of base on Hounslow Heath. Phil. Trans. 1785, p. 425.

2. It was at first contemplated to make the measuring rods 25 or 30 feet in length, and one of 25 feet was actually constructed; but being found unweildy, it was finally determined to construct the rods 20 feet in length.

2. Mode of their construction.

Different opinions were entertained as to the best mode of construction for the practical use of the rods in measurements; either by contacts or butting the end of one rod against another, or by the adjustment of coincident lines. Both methods were tried, a sufficient number of rods being constructed to admit of experiments being made. It was found, however, that the adjustment of coinciding lines required such extreme care in manipulation, and such nicety of apparatus, and also took so much time, that this mode of measurement was given up, and the method of contacts was adopted as the only practical alternative.

For the actual measurement, three measuring contact rods were constructed, together with a standard rod, with which the others were from time to time compared. The deal rods were 20 feet 3 inches in length, reckoning from the extremities of their bell metal tipplings. They were about 2 inches deep and $1\frac{1}{4}$ inch broad. Being trussed both laterally and vertically, they were rendered perfectly inflexible, at least so far as could be observed. The standard rod was trussed laterally only.

Two narrow pieces of ivory, each fastened with two screws, were inlaid into the upper surface of the rods, so that their rectangular extremities reached within $1\frac{1}{2}$ inch of the extremities of the tipplings, and thus accurately determined the required intermediate distance of 20 feet.

Each of the lips of the bell metal tipplings extended exactly $1\frac{1}{2}$ inch beyond, and terminated in flat curves of $3\frac{1}{2}$ inch radius. Thus, when any two of the rods lying in the same plane and in the same line were brought in contact, the space between the ivory rectangular extremities must be exactly 3 inches.

3. The length of 20 feet upon these rods was determined from a compared and identical copy of the brass standard scale of the Royal Society, 42 inches in length, by marking off 40 inches of this scale six times successively by means of a beam compass. This was effected by taking, in the first instance, a large plank, cut from the New England mast,

3. Verification of their length from the Royal Society's standard brass scale.

upwards of 30 feet long, 9 inches broad, and 3 inches thick, which was set edgewise on stands, and in that position planed perfectly smooth and straight. A silver wire was then stretched very tight along the middle of the plank from one end to the other, and six spaces of 40 inches each were marked off close to the side of the wire. Seven brass pins about 0.1 inch in diameter were then driven into the wood at the several points marked, when their heads were levelled with the surface of the plank and polished. During the whole of this operation and that which followed, the thermometer, lying by the side of the brass scale, continued steady at or very near 63° Fahr.

A fine dot was then made on one of the extreme pins, and the silver wire was stretched over the dot and as nearly as possible over the middle of the other pins, and made fast. The measure of 40 inches, taken with the utmost care from the brass scale, was then marked off by placing one point of the beam compass in the dot, and describing a short faint arc with the other point on the surface of the second pin. The beam was then moved, and one point placed in the intersection of the arc and wire, when a dot was made with the other point on the third pin, under the middle of the wire. In this manner, the six times 40 inches, were marked off, alternately with dots and arcs; a method found in practice by Mr. Ramsden to be more accurate than using dots only.

By means of a beam compass, sufficiently large to take in 20 feet, which was constructed by Mr. Ramsden, and trussed laterally like the measuring rods, the exact length of 20 feet thus obtained was transferred to two strong bell metal cocks firmly screwed into the stand of the standard rod, and close to one side of it, with their upper surfaces in the same plane with the surface of the measuring rods, when they were placed upon the stand. The distance of 20 feet was then transferred from the bell metal cocks to the inlaid ivory pieces on the measuring rods, and fine transverse lines were afterwards cut on the ivory, coinciding with marks accurately made for that purpose.

The bell metal tippings were subsequently adjusted so as each to extend $1\frac{1}{2}$ inch beyond the lines on the ivory pieces, and any two of the rods, lying in the same plane and also in the same straight line, when brought in contact with each other, comprehended in the space between the two lines on the inlaid ivory pieces, a space of exactly three inches. Each of the deal rods thus formed a line-measure of 240 inches, and an end-measure of 243 inches.

The three measuring rods were numbered by a cypher on the surface of the metal tippings at each end, 1, 2; 3, 4; 5, 6; and that being the order in which they were to be applied in actual measurement, they were adjusted in this order. Each rod, when finished, was found to weigh about 24 lbs.

4. Supports of deal measuring rods.

4. For the purpose of measurement, the rods were supported upon tripods of white deal, with legs extending about three feet apart, braced diagonally, and surmounted with a table or platform $11\frac{1}{2}$ inches square. Their total height above the level of the Heath was about $\frac{1}{2}$ feet, but the height of the platform was adjustable by means of a screw. One of these stands supported the two ends of the rods in contact.

Further details of the apparatus for levelling and adjusting the height of the measuring rods, and the mode of using them for measurements, are contained in General Roy's account.

5. Injurious effects of moisture on their length.

5. The deal measuring rods, on their completion in London, were compared and found to agree with the standard. When brought to the camp at Hounslow Heath, the weather became rainy after the first measurements, and the measuring rods being taken back to the camp,

on 19th July, 1784, were found each to exceed the standard by $\frac{1}{30}$ inch. They were again measured on the morning of 23rd July, at the temperature of 61° F., and were found still in excess $\frac{1}{30}$ inch; and also in the evening after the measurements, when their mean excess was $\frac{1}{87}$ inch, the temperature being then 54° F.

After further use of these measuring rods and many other comparisons, the disappointment was great to find that notwithstanding the pains taken to obtain the best deal measuring rods, their length was liable to alteration according to either the humid or dry state of the atmosphere. But as so much progress had been made in the measurement of the base with these rods, it was determined to proceed with them in their existing state, and afterwards to have them carefully painted or varnished before again using them. The measurement with the rods was continued until August 3, and during this period their excess was not more at any time found than $\frac{1}{40}$ th inch. At the conclusion of the measurements the rods were compared and found to agree with the Standard, the temperature then being 75° F.

6. For the purpose of comparing the measuring rods, which were constantly exposed to the open air during the day, as well as to the moisture of the air during the night, when lying under an oil-cloth canopy, the standard rod was kept closely shut up in its chest, and was thus considered to be free from the effects of atmospheric changes. But subsequent experiments led to the belief that its length was also increased by moisture, thus augmenting the observed expansion of the measuring rods. A computation was made that for the whole apparent length of 1,370 rod measurements of the length of the base, amounting to 27404.31 feet, the total error by expansion from humidity was not less than 24.223 inches, or 2.02 feet, at the mean temperature of 63° F. The obvious conclusion drawn was that deal measuring rods were unfit for very accurate measurements.

7. No experiments appear to have been made for determining the rate or expansion by heat of these deal measuring rods, as the mean temperature of the air during the measurements with the deal rods on Hounslow Heath was considered to differ very little from that at which the length of the deal measuring rods was laid off, viz. 63° F. The comparisons of expansion were made only between the damp measuring rods and the dry standard rod. That the expansion was due to moisture was shown by the facts that not only was the observed expansion less when the temperature of the air was higher (16th July, morning t. 48° F., expansion $\frac{1}{30}$ inch; evening t. 62° F., expansion 0), but also that on the morning and evening of the same day, July 17th, when the temperature was the same, 62° F., the expansion was found to vary from $\frac{1}{30}$ to 0 inch.

The mean temperature on each day when measurements were made was as follows:—

Date.	Number of Rods measured.	Mean Temperature.
1784, July 16	105	55° F.
" 17	195	62
" 23	240	57.5
" 24	270	63.6
Aug. 2	270	66.7
" 3	290	65.5
	1,370	63°

8. Subsequent construction of tubular glass measuring rods.

8. The alterations in the length of the deal measuring rods led to the suggestion that glass rods should be substituted for them in the final measurement of the base. It was found impossible to make solid glass rods of the length required, and after some experiments it was determined to construct glass tubular rods, and use them for measuring the base.

The glass tubes, like the deal measuring rods, were 20 feet in length. Their external diameter was nearly an inch, the thickness of the glass being about $\frac{1}{8}$ inch, and they were made quite straight. They were kept from bending by being placed in cases of white deal, and supported at the end, and at intervals of 5 feet, in grooves fitted to receive them. These grooves were made in transverse pieces of wood, which strengthened the box, being firmly fastened by screws to its top and bottom. The middle of the tube was made fast to the middle of the box by means of pack-thread, immersed in liquid glue, wound round the tube and forced into a mahogany collar.

9. Construction of 100 feet steel measuring chain.

9. The preliminary rough measurements of the base line on Hounslow Heath were made with a 100 feet chain, constructed to measure as accurately as possible. It was made of steel, and on the principle of a watch chain, each link being a foot in length, and connected with the adjoining links by two cast-steel pins. The handles at each end of the chain were of brass, the termination forming a straight line at right angles to the length of the chain, and having a small semicircular cavity in the middle of the line.

10. Mode of using the chain.

10. Five persons were employed in using this chain; two at each end for its adjustment and one in the middle. The zero or rear end of the chain being strained back so as to coincide with the point of commencement, the length of the first chain was measured and marked by a steel arrow placed in a semicircular cavity at the other end. The chain was then drawn on till the cavity at the rear end could be applied to the first arrow; and so on until the required number of chains was measured.

In making these measurements, the rear end of the chain was fastened to the steel arrow placed in the semicircular cavity, by means of an iron plate with projecting prongs for embracing the brass handle, and of a hold-fast forced into the ground. The other end of the chain was brought over a wooden frame carrying a pulley, over which a rope passed, having a 14 lbs. weight suspended at one end, whilst a forked iron hook at the other end grasped the straight part of the brass handle of the chain. By these means the chain was always kept at the same degree of tension during the measurements.

11. Double measurement of base with glass rods and steel chain finally adopted

11. A resolution having been taken entirely to reject the results of the measurements with the deal rods, it was finally agreed to determine the length of the base by a double measurement with the glass rods and the chain, carried out by both at once. The number of stands and other parts of the apparatus were, therefore, augmented, so as to allow of the chains being placed two lengths in advance, and the glass rods to follow in succession on the same stands. The operation of the double measurement commenced on 18th August, when the length of 10 chains or 1,000 feet was measured, and was completed on 30th August, 1784.

12. Verification of glass rods and steel chain.

12. The standard length of the glass rods, as well as of the steel chain, was verified by comparison with the brass standard scale. The mean temperature during the verification of the glass rods was 68° F., and that of the steel chain 66° 5' F. They agreed with each other, therefore, only at these temperatures.

13. Construction of microscope pyrometer for determining rates of expansion.

13. Their respective rates of expansion were determined by experiments made upon two 5-foot rods of the same steel and glass as were employed in the rods used for the actual measurement of the base. The expansion

apparatus, a microscope pyrometer constructed by Ramsden, consisted of two micrometer microscopes fixed to a strong deal frame, to which two deal troughs, upwards of 5 feet in length, were firmly screwed. A third trough of copper was placed between the two deal troughs, to be used as a boiler. The heads of the micrometers were divided into fifty divisions. There were 71·27 threads of the screw in an inch, and the 100th part of a revolution, or half a division, answered to a movement of a little more than 0·00014 inch.

14. The experiments with the pyrometer were intended to show the expansion answering to 60°, 120°, and 180° above 32° Fahr., or freezing point. But as no sensible difference was found between the expansion at the lower and the upper part of the scale, it was resolved to take the mean rate of expansion between 32° and 212° F. by observations of the rods when surrounded first by pounded ice, and then by boiling water.

14. Expansion experiments made.

15. The coefficients of expansion for 1° F. and the total expansion for 1° F. of 27,400 feet, were found to be as follows :—

15. Coefficients of expansions found.

	Coefficients of Expansion.	Total Expansion of 27,400 Feet.
Standard brass scale	0·000010383	inches. 3·38938
(Supposed of Hamburgh plate brass)		
5-foot brass rod, of English plate brass...	0·000010518	3·45788
5-foot brass trough do	0·000010525	3·46062
5-foot steel rod	0·000006358	2·09062
5-foot cast iron prism	0·000006183	2·02760
(Used with pyrometer.)		
5-foot glass tube, 0·93 inch diameter.....	0·000004308	1·41658
3·37 feet solid glass rod, 0·6 inch diameter.	0·000004491	14·7686

16. After allowing for the reductions for temperature of the measuring rods, and for corrections of the inequalities of the ground reduced to the mean level of the sea, (which was taken to be the mean between the high and low spring tides in the Thames at the Nore), the ultimate determination of the length of the base at Hounslow Heath was determined to be 27404·7219 feet of the standard brass scale, at the temperature of 62° Fahrenheit.

16. Ultimate determination of length of base.

17. The difference between the actual measurement of the base with the deal measuring rods, and that by the glass rods as compared with the steel chain measurements, was finally stated as follows :—

17. Difference between measurements with glass and deal rods.

Length of 1,370 deal rods of 20 feet each = 27,400 feet.		
Excess for expansion of standard brass scale, from 62° to 63° F. - - - - -	inch.	= 3·389
Computed expansion of deal rods from humidity -		24·223
Total excess - - - - -		27·612
Length of 1,370 glass rods of 20 feet each = 27,400 feet.		
Excess for expansion of standard brass scale, from 62° to 68° F. - - - - -	inch.	= 20·336
Computed expansion by heat of glass rods - above 62° =	inch.	5·989
Deduct for contractions - below 62° =		1·802
		4·187
		24·523
From which deduct space by which the 1,370th glass rod overshot the 1,370th deal rod - -		17·875
Total excess - - - - -		6·648

18. Unsatisfactory explanation of this difference.

18. It thus appeared that instead of an excess of 27,612 inches attributable to expansion, as first computed, the total excess of measurement with the deal measuring rods was finally found not to exceed 6.648 inches; and deducting the expansion of the brass scale, and allowing for the expansion of the deal rods by their temperature being increased from 62° to 63°, amounting to 0.005 inch (taking Kater's coefficient of expansion of deal, see p. 5, to be 0.00004959 for 1° C., or 0.00002755 for 1° F.), the expansion of the deal rods from humidity must have been only 4.164 inches, and not 24.223, as was first computed. The causes of the difference were not closely investigated by the Ordnance survey officers in 1784, although it was suggested that it might have arisen from the shortening of the deal rods by constantly being butted against each other. Upon the whole, and considering that no allowance was made for the variations in length of the deal rods from alterations in temperature, these experiments in the use of deal measuring rods for survey purposes were not brought to so satisfactory a result as might be wished, nor can be deemed so conclusive against their use as was then thought. In the case of the deal measuring rods now constructed for Canada, the slight coating of French polish upon them will tend to prevent their length being affected by the humidity of the air, as was found to be the case with the Ordnance deal measuring rods. Nor are they intended to be used for so important a purpose as the measurement of the primary base of a trigonometrical survey for the whole country.

7, Old Palace Yard,
10th July, 1874.

H. W. CHISHOLM,
Warden of the Standards.

AN ACCOUNT

OF THE

CONSTRUCTION AND VERIFICATION OF STANDARD
WEIGHTS AND MEASURES FOR THE GOVERNMENT
OF CANADA.

1. The Standard Weights and Measures ordered to be constructed for the Government of Canada, in order to provide in the first instance for the practical inspection and verification of weights and measures in general use, under the Canadian Acts 36 Vict. cap. 47 and 48, are described at p. 23 of the First Report of the Commissioner of Inland Revenue on the Inspection of Weights, Measures and Gas, dated 20th January, 1874, as follows, each Standard bearing the stated distinguishing letter, viz. :—

1. Number and denominations of Canada Standards.

PART I.—STANDARDS OF LENGTH.

Dominion Standards.—Three Standard yards (A) (B) (C).
A Standard metre.

Departmental Standards.—(a). A subdivided yard and metre line measure, on the same bar.

(a) (b). A sub-divided 10-foot bed and line measure and two 10-foot end-measuring bars.

(a). A six-foot subdivided bed and line measure and a 6-foot end-measuring bar.

(a). A 100-foot chain divided into feet.

(a). A 66-foot chain divided into 100 links.

Comparing Apparatus.—A new micrometrical comparing apparatus for Standards of length.
A comparing apparatus with eye-piece for bed or line measures.

PART II.—STANDARDS OF WEIGHT.

Dominion Standards.—Three Imperial Standard pounds avoirdupois, of platinum-iridium, (A) (B) (C).

Three Standard troy ounces, of platinum-iridium, (A) (B) (C).

A Standard kilogram of gun-metal \mathcal{K} .

Departmental Standards. — (b). A set of Avoirdupois Standards, from 50 lb. to 0·001 lb., and from 8 oz. to $\frac{1}{2}$ dr., all of gun-metal.

(Note.—A similar set (a) is already provided).

(a) (b). Two sets of troy Standards, from 500 oz., to 0·001 oz., all of gun-metal.

(a). A set of Metric Standard weights, from 20 kilograms to 1 mgr. of gun-metal.

And two sets of decimal grain weights, from 1000 grains to 0·01 grain, (series 8, 3, 2, 1).

Official Standards.—Fourteen sets of avoirdupois Standards, similar to the Departmental Standards (A to N).

PART III.—STANDARDS OF CAPACITY.

Dominion Standards.—Three Standard gallons, of gun-metal, (A) (B) (C).

Departmental Standards —(a) (b). Two sets of Standard measures of Capacity, from 1 bushel to $\frac{1}{2}$ gill, of gun-metal.

PART IV.—STANDARD GAS MEASURES.

A cubic foot bottle.

A 10-feet gasholder.

A 5-feet ditto.

A test gasmeter of 100 lights.

A " " 20 "

Apparatus for testing the illuminating power and purity of gas. Standard Photometer, &c.

PART I.—STANDARDS OF LENGTH.

I.—DOMINION STANDARDS.

2. Bronze Standard yards, A, B and C. Their construction.

2. The three Dominion Standard yards A, B, and C, have been constructed by Messrs. Troughton and Simms, and are in every respect similar to the series of Imperial Standard yards, constructed by the Commission for restoring the Imperial Standards, as described by the Astronomer Royal in his account of the construction of the new National Standard of length (Phil. Trans. 1857, Part III). The Imperial Standard yards are made of bronze, known as Baily's metal, composed of copper 16 parts, tin $2\frac{1}{2}$ parts, zinc 1 part, their form being that of a solid square bar 38 inches long, and 1 inch square in transverse section. Near to each

end a cylindrical hole is sunk to the mid-depth of the bar, the distance between the centres of the two holes being 36 inches. At the bottom of each hole, is inserted a gold plug or pin about 0.1 inch in diameter, and upon the surface of this pin, in these Standard yards, three fine lines are cut at intervals of about 0.01 inch transverse to the axis of the bar, and two lines at nearly the same interval parallel to the axis of the bar. The measure of length is given by that portion of the middle transverse line which is between the two longitudinal lines, and more exactly the point midway between them. In the Canada yards, a single transverse line only is cut.

The three Canada Standard yards are distinguished by the letters A, B, and C, engraved on them severally in the middle of the upper surface of the bar. They are also engraved, in smaller capitals :—

Mr. Baily's Metal.

Standard Yard.

Troughton & Simms,
London.

3. The Government of Canada already possesses a similar bronze Standard, one of the copies of the Imperial Standard yard, made by the Standards Commission, and transmitted to Canada in 1857 by the Astronomer Royal. It is distinguished as "Bronze 16." Its standard temperature is 61°.94 F. at which temperature it was determined to be of the length of the Imperial Standard at the normal temperature of 62° F.

3. Bronze Standard yard No. 16 now in Canada.

4. The coefficient of expansion of Baily's metal for 1° F. at ordinary atmospheric temperatures, was first determined in 1850, by Mr. Sheepshanks, a member of the Standards Commission, to be 0.00000947, and this determination was accepted by the Commission. This coefficient is equivalent to the absolute expansion of 36 inches of bronze for 1° F. = 0.00034102 inch. It was obtained from nine comparisons at different temperatures, ranging from 36°.06 to 70°.46 F. (the actual mean temperature being 56°.55 F.) of the two Standard yards distinguished as Bronze 12 and Brass 2; from which comparisons also the coefficient of expansion of brass for 1° F. was determined to be 0.00000956,* equivalent to an absolute expansion of 36 inches of brass for 1° F. = 0.00034439 inch.

4. Determinations of rate of expansion of Baily's metal hitherto made Airy, p. 49. Clarke, p. 212.

A later determination of the rate of expansion of one of these bronze Standard yards was made in 1865 at Southampton, by Captain Clarke, of the Ordnance Survey Department, and is described by him in the published book, entitled "Comparisons of Standards of Length. London 1866."

Captain Clarke made a series of comparisons between the Ordnance

* The results of the several comparisons by Mr. Sheepshanks may be stated as follows :—

Comparisons.	Temperature, Fahr.			Coefficient of expansion for 1° F.
	Extremes.	Difference.	Mean.	
(1) (2)	36.06. 67.82	31.76	51.94	0.000009553
(3)	70.14. 45.85	24.29	58.00	9528
(4)	41.95. 70.46	28.51	56.21	9501
(5)	54.23. 65.87	11.64	60.05	9416
	Mean		56.55	0.000009476

bronze Standard yard No. 27, and the Swedish iron yard No. 55, the result being found as follows:—

	Coefficient of Expansion for 1° F.
Mean result of 50 comparisons from 38°·69 to 99°·16 F. or mean <i>t.</i> 68°·93	0·0000098870
Mean result of 27 comparisons from 54°·18 to 96°·20 or mean <i>t.</i> 75·19	0·0000098277
Mean <i>t.</i> 72°·06	0·0000098574

A still more recent determination of the rate of expansion of this alloy has been made in 1874 at Paris by M. Fizeau with his expansion measuring apparatus. Two small pieces of Baily's metal similar to the metal of the Standard yards, were furnished to him by Messrs. Troughton and Simms, and their expansion was observed by M. Fizeau, beginning in each case from the lowest temperature of about 10° C. (50° F.) up to higher temperatures varying from 35° C. (95° F.) to 64° C. (147° F.) The results were found to be as follows:—

	Number of experiments.	Mean <i>t.</i>	Resulting Mean coefficient of expansion for 1° C.	Variation of coefficient for 1° C.	Coefficient of dilatation for 1° C. Mean <i>t.</i> 16°·6 C.
1st piece	4	34·750 C.	0·00001790,325	} 1,350	0·00001765,91
	3	26·577	1779,287		
	4	34·767	1789,727		
2nd do	3	25·390	1776,640	} 1,395	1765,19
Mean				1,37	0·0000176,55

Or when reduced to Fahrenheit's scale, a coefficient of expansion at the mean temperature of 62° F. of 0·00000980,83, with a variation of 0·76 for 1° F. mean temperature.

It will here be seen that M. Fizeau's determination agrees very nearly with that of Capt. Clarke, and that both assign a higher rate of expansion to Baily's metal than was found by Mr. Sheepshanks. As, however, each of the three determinations were made with very great care and by experienced observers, but with different portions of the bronze alloy, the conclusion to be drawn is that each Standard bar of this alloy may have its own rate of expansion, differing more or less from the mean rate, and that the exact rate should be determined for each bar separately in all cases where great accuracy is required. It will also be desirable to determine a mean rate for ordinary temperatures, when the expansion of a sufficient number of bars of this alloy has been authoritatively determined. This mode will also afford the means of determining the mean variation of the rate of expansion of Baily's metal at other ordinary temperatures of the atmospheric air, higher or lower than the temperature fixed upon as normal, say 62° Fahr. or 16°·6 C. at which its mean rate of expansion shall have been ascertained.

5. Mode of verifying A, B, C.

5. Each of the Standard yards A, B, and C has been carefully compared under the microscopes of the Standards Department with the Standard yard No. 6, known as the Generator, which is of the exact length of the Imperial Standard, and was at first intended to be made the Standard, all the other copies having been compared with it. The Standard yard No. 6 is described in the Astronomer Royal's account as

Airy, p. 80.

“accessible representative of the National Standard.” It was re-compared with the Imperial Standard in 1869, and the two standards were found to be still identical in length.

5th Rep.
Stand. Comm.
App. VII.
p. 103.

6. With the view also of observing the rate of expansion of the three Canada Standard yards, they have been compared with No. 6 at three temperatures, differing considerably from each other, first at an ordinary temperature, or about 57° F., and afterwards at temperatures less than 40° F., and exceeding 80° F.

6. And of observing their rate of expansion.

For this purpose the stone shelf upon which the microscopes rest, together with the microscopic apparatus, were kept as nearly as possible at a constant temperature of 57° F., which was about the temperature of the air in the comparing room, by coverings of woollen cloth and cotton wool. The temperature of the microscopes was ascertained from a Standard thermometer, having its bulb enclosed in a bronze case and placed in contact with each microscope; whilst the temperature of the stone shelf was in like manner determined by a Standard thermometer having its bulb enclosed in a stone case. During the comparisons, the greatest variation in the temperature; thus ascertained did not exceed 0°·2 Fahr. for a whole week.

The comparisons were made in the comparing room in the old Norman tower, which has double windows. The two microscopes used rest upon a stone shelf 20 feet long, 1½ feet broad, and 3 inches thick, which is fixed to the stone wall of the room 4 feet in thickness; it was consequently considered that there could be no risk of alteration of the distance between the microscopes during the experiments, which lasted about three hours on each day.

7. The Standard bars were placed on the usual rollers and lever frames, so that the friction of longitudinal movement was reduced to a minimum. No alteration of the relative position of the two bars was made during their comparisons, except for any slight focal adjustment that was found requisite. In every case the Canada yard was next the observer. It was found that as the bars were compared in water there was not the same necessity of changing their relative positions as is generally done when the bars are compared in air.

7. Position of Standard bars during the comparison.

8. In these comparisons the greatest precautions were taken for ascertaining the exact temperature of the bars. Thermometers constructed by three different makers were used in order to avoid as far as possible the risk of any mechanical error in the construction of these instruments. All these thermometers were verified at the Royal Observatory, Greenwich, and their errors most accurately determined. Amongst them were four very sensitive thermometers, made by Negretti and Zambra (16111, 16112, 16113, 16126), of the same form and graduation as those recently supplied to Canada by this firm; two made by Troughton and Simms, valuable from their age and constancy; and four Standard thermometers made by Mr. Hicks. Each of the thermometers, 16112 and 16113, had their bulbs encased in a short bar of bronze of the same section as the Standard bars, and they were placed in the same horizontal plane as the measuring axis of the Standard bars. The other thermometers had their bulbs covered with bronze shields, and were placed upon the Standard bars. All the comparisons were made with the Standard bars in water undisturbed for 24 hours, and contained in a metallic trough. This trough lay in a second and larger trough, also filled with water; and both troughs were covered with thick plate glass, in which small holes were made for the purpose of reading the defining lines with the microscopes. In order to keep the water from the defining lines, and from

8. Mode of observing the temperature.

interfering with their view through the microscopes, small lead tubes were fixed in the wells, so as to be water-tight.

Owing to the uncertainty which always exists in different mercurial thermometers as to the relative rates of expansion of the glass tube, and of the mercury, which to some extent affects the truth of their indications; it was thought better to assume both bars to be of the same temperature, when any very small difference was indicated by the thermometers; more particularly considering that the bars had lain side by side in water, and in the inner comparing trough during the previous night, and that the temperature of the air in the comparing room had not varied more than 0°·2 Fahr.

9. Comparisons of A with Standard yard

9. The following are the results of the comparisons of A with the official Standard yard No. 6, each result on the several days being the mean of three comparisons, and each of these comparisons the result of three separate readings of each defining line:

COMPARISONS OF STANDARD YARD A with No. 6.

Number.	Date.	t. of air.	Mean t. of bars.	Mean Results of Comparisons.	Probable Error of Mean Results.
(1)	1874, Nov. 2	57·2	57·2 F.	A = No. 6 + 0·00005616 in	+0·00001268
(2)	" 3	57·2	57·6	+0·00001604	+0·00000880
(3)	" 5	57·0	82·5	-0·00000437	+0·00000989
(4)	" 6	57·0	36·9	-0·00007435	+0·00001690

The result of comparison (3) shows that the rate of expansion of A is less than that of No. 6. The result of comparison (4) when ice was placed in the outer trough, and iced water in the inner trough, appears to show a contrary result, although the difference is really very small indeed. But it will be seen from further experiments with the Standard bar C that, after being exposed to a higher temperature, the rate of cooling of these new bronze bars is found to differ considerably from that of the older bars, and serves to explain the apparent anomaly.

As the probable error of comparison (2) is almost half that of (1), double weight should be given to (2). The mean result of both comparisons is therefore at t. 57° 5 A = No. 6 - 0·00002941 in. Comparing this result with that of (3) the relative increased length of No. 6, t. 82° 5 is 0·00003378 in. or an absolute increase of 0·00000125 in. for 1° F., equivalent to 0·00000608 for 4°·5, the difference between 57°·5 and 62° F. As this difference is very small, and 0·00000608 in. within the probable error of the result of the comparisons of A with No. 6, it may here be disregarded. The result of comparisons (1) (2) is therefore

$$\therefore A \text{ at } 62^\circ \text{ F.} = \text{Imperial Standard yard} + 0\cdot00002941 \pm 0\cdot00001009 \text{ in.}$$

Or, according to Mr. Sheepshank's determined rate of expansion of bronze.

$$A \text{ at } 61\cdot91 = \text{Imperial Standard yard at } 62^\circ \text{ F.}$$

10. Experiments for observing the relative expansion of the two bars.

10. Some further comparisons were made on Nov. 4 with a special view of observing the relative rate of expansion of the two bars, it being assumed that during the experiments which occupied about three hours, no change took place in the distance of the two microscopes, as is explained on p. 11, and was indeed proved by the constancy of the

bronze and stone-cased thermometers placed in contact with the microscopes and stone shelf.

in.
MEAN value of div. of MICROMETER = 0.00003190.

	Readings from Middle of Field.	
	No. 1. Microscope.	No. 2 Microscope.
1874, Nov. 4, 12.30 P.M. <i>t.</i> of bars = 56° 80 F.		
A	Div. -173.6	Div. -140.3
No. 6	-358.0	+ 43.6

Three readings only of each defining line were taken, it being of importance to make the comparisons as rapidly as possible in order to escape any variation of temperature. The figures give the means of the three readings.

By arrangements previously made, the water was then removed from the troughs, and warm water substituted, without in any way disturbing the bars which remained on their rollers, and three hours were allowed to elapse, when the following second comparison was made :

	Microscope No. 1.	Microscope No. 2.
Nov. 4, 3.30 P.M. <i>t.</i> of bars = 83° 80.		
A	Div. - 64.0	Div. + 29.3
No. 6	- 276.0	+303.3

Here, for a difference in temperature of 27° F. (83° 8—56° 8).

d.	d.	in.
A expands 279.0 or for 1° F.	10.33 =	0.00032984
No. 6 „ 341.6 „ „	11.54 =	0.00036812

Whence mean absolute expansion of 36 inches of bronze for 1° F. = 0.00034898
 Coefficient of expansion of bronze A = 0.00000916
 „ „ bronze No. 6 = 0.00001022
mean = 0.00000969

As, however, this is the result of only a single comparison of the relative rates of expansion of the two bars, no great reliance can be placed upon it, as indicating the exact difference of their expansion, but it appears to be conclusive as to the rate of expansion of the older bar No. 6 being greater than that of the new bar A.

Had time allowed, a series of exhaustive experiments on the relative expansion of these bars could have been made, but it was of great importance to verify and despatch these new Standard yards to Canada as soon as possible. A further determination of the rate of expansion of these bronze bars will, however, be made during the comparison of the Canada bronze metre, which was cast at the same time as the yards. It will also be very desirable that some future determinations of the rate of expansion of each of them should be made from time to time, with the view of ascertaining whether there is any or what variation in their coefficients of expansion.

11. Comparisons of B with Standard yard No. 6.

11.—COMPARISONS OF CANADA STANDARD YARD B with STANDARD YARD No. 6.

Number.	Date.	t. of Air.	Mean t. of Bars	Mean Results of Comparisons.	Probable Error of Mean Results.
	1874.	°	°	in.	
(1)	Oct. 29	59.0 F.	58.4 F.	B = No. 6—0.00005713	0.00001349
(2)	" 30	60.0	58.8	—0.00005103	1658
(3)	" 31	61.0	81.5	—0.00017990	0603
(4)	" 31	61.0	B = 35.0, No. 6 = 34.0	—0.00006454	0966

The last comparison was made with the bars in melting ice, and allowance is made for the greater contraction of No. 6 for 1° F., assumed according to Mr. Sheepshanks' determination to be equal to 0.00034102 inch.

It would here appear from comparison (3) that the rate of expansion of B is less than that of No. 6, an increase of temperature in the two bars of 22.7 F., showing an increase in No. 6 of 0.00012865 in., or 0.0000567 in. for 1° F. This is equal to a difference of the coefficients of expansion of the bars of only 0.00000016 for 1° F.

The difference of the rate of cooling of the two bars, as proved by the comparisons of C, render the results of comparison (4) unsatisfactory.

The determination of the Standard length of B is taken from the mean of comparisons (1) and (2).

∴ Canada yard B at 62° = Imperial Standard yard—0.00005419 in.; ÷ 0.00001520; whence at the temperature of 62.16 F. B = Imperial Standard yard at 62° F.

12. Comparisons of C with Standard yard No. 6.

12.—COMPARISONS OF C with STANDARD YARD No. 6.

Number.	Date.	t. of Air.	Mean t. of Bars.	Mean Results of Comparisons.	Probable Errors of Mean Results.
	1874.	°	°	in.	
(1)	Oct. 12	62 F.	61.73 F.	C. = No. 6 + 0.00018668	0.00001335
(2)	" 13	62	38.85	+ 0.00020986	1972
(3)	" 14	65	88.03	+ 0.00014625	1323
(4)	" 15	65	66.37	— 0.00293459	1043
(5)	" 16	62	61.85	— 0.00004334	1342
(6)	" 19	65	60.20	+ 0.00010324	0104

Of these comparisons, (2) was made on October 13, when the bars had been kept in water cooled with ice after the conclusion of the comparisons on the previous day. Comparison (3) was made at 5 p.m. on October 14, after the bars had been kept in warm water as nearly as possible of the temperature of 90° C, from 10 p.m. on October 13. After the conclusion of comparison (3) the bars were left undisturbed in the water, which was left to take its own temperature for comparisons (4), (5), and (6). The three last comparisons have been made only for the purpose of observing the rate of cooling of the water, and its effect on the relative length of the two bars. They tend to show that the

newly cast bar C expands by heat a little less than the older bar, the greatest excess of C being at the lowest temperature. They show also that the newly cast bar C cools much more rapidly than the old bar after being heated, and that at least four days appear to be required to restore the equilibrium of temperature.

The determination of the Standard length of C is to be based on comparison (1), and is as follows :—

∴ Canada yard C, at 62° F. = Imperial Standard yard at 62° F.—0·00018668 in., +0·0000133 ; whence Canada yard C, at 61°·45 = Imperial Standard yard at 62° F.

Standard Metre.

13. This Standard metre has been constructed for the Government of Canada by Messrs. Troughton and Simms. It is made of bronze, and is in every respect similar to the Standard yards constructed for Canada, except that the total length of the bar is 42 inches (1·0665 metre), and that the total length of a metre is shown by its defining lines. It bears the following engraved marks upon its upper surface :—

Mr. Baily's metal.	Standard Metre.	Troughton & Simms, London.
--------------------	-----------------	-------------------------------

14. The Canada bronze line Standard metre, here designated as BM, has been verified by comparison with the length of a metre at 0°C marked by defining lines upon the bronze subdivided metre of the Standards Department, SS. An account of the verification of SS by comparison with the platinum line Standard metre of the Royal Society, is contained in Appendix XII. to the Fifth Report of the Standards Commission, 1870, p. 185, where it is shown to have been found at 0°C = 1·00000313 metre, or 0·00313 mm. in excess of the primary Mètre des Archives, denoted as A.

COMPARISONS OF CANADA BRONZE METRE BM WITH BRONZE STANDARD METRE SS.

Number	Date.	t. of Compared Bars.	Results of Comparisons.	Bar next Observer.
(1)	1874, Nov. 11, 12.30 p.m.	54°·6 F.	BM - SS mm. 0·01138	BM
(2)	" " 4.30 p.m.	37°·5	-0·00632	SS
(3)	" 13, 12 noon.	52°·6	-0·01240	SS
(4)	" 14,	52°·1	-0·01174	SS
(5)	" 17,	51°·3	-0·01213	BM
(6)	" "	37°·5	-0·00678	BM

Whence, at mean t. 52°·6 BM = SS - 0·01191
 " " t. 37°·5 " = " - 0·00655

Here the rate of expansion of BM is evidently less than that of SS as SS is relatively longer than BM at 52°·6 than at 37°·5, its increased relative length being 0·00537 mm. when at a temperature higher by 15°·1. This is equivalent to a relative increase of length of 0·000035mm. for 1°F., or of a difference in their coefficients of expansion of 0·00000035. It will presently be shown that the results of further experiments of the rates of expansion of these two bronze bars show a very nearly equivalent difference, viz., 0·00000032.

The normal temperature of Metric Standards of length being 0° C. or 32° F., the relative increase in length of \overline{SS} from 32° to 37°·5 F., or for 5°·5, would consequently be 0·00195 mm. ; whence—

$$\begin{aligned} &\text{at } t. = 32^\circ \text{ F. } \overline{SS} = \overline{SS} - 0\cdot00460 \\ \text{and as } & \text{,, } \overline{SS} = \overline{A} \div 0\cdot00313 \\ & \text{,, } \overline{SS} = \overline{A} - 0\cdot00147 \end{aligned}$$

15. Further comparisons of the expansion of the two bronze bars.

15. A considerable number of further observations were made of the relative lengths of \overline{SS} and \overline{SS} at different temperatures, in order to determinate the rate of expansion of each of these bronze bars in a more satisfactory manner than could be effected with the experiments on the rate of expansion of the Canada Standard yard **A**, as compared with the Standard yard No. 6 ; the experiments were conducted in the mode and with all the precautions already described in § 10.

In experiments on the rate of expansion of metallic bars, it is very difficult to obtain a number of results agreeing nearly with each. The experiments now made were the first attempted here, and discordances appeared in the separate results which could not well be explained. Four series of observations were made with the two bars on Nov. 11, 13, 14, and, 17, the observed temperatures ranging from 54°·6 F. to 37° F. each with lowered temperature; and four series on Nov. 18, 19, 20, 23, with extreme temperatures from 49°·2 to 99°·5, each with raised temperature.

The mean results of the experiments are as follows :—

Coefficient of expansion of

$$\begin{aligned} \text{Bronze bar } \overline{SS} \text{ for } 1^\circ \text{ F} &= 0\cdot000009205 \text{ at mean } t. 56^\circ\cdot9 \text{ F} \\ \text{,, } \overline{SS} \text{ ,, } &= 0\cdot000009520 \text{ ,, } 53^\circ\cdot8 \text{ F.} \end{aligned}$$

The last determination agrees very nearly with the results of Mr. Sheepshanks' experiments on the rate of expansion of the bronze bars constructed for the Commission for restoring the Standards ; and it is to be observed that the bronze bar \overline{SS} is one of the bars which remained in the hands of Messrs. Troughton and Simms out of those bars from which the Imperial Standard yard was selected. But although the general results of both series of experiments tend to show that the rate of expansion of these bronze bars increases at a higher temperature, neither of the sets of experiments, or those by Captain Clarke tend to establish, so far as they extend, any normal mean difference of the coefficient of expansion for every variation of temperature of 1°, as found by M. Fizeau.

II.—DEPARTMENTAL STANDARDS.

Subdivided Yard and Metre on the same Bronze Bar.

16. This measuring bar is now being constructed similar in every respect to the subdivided yard and metre bar of the Standards Department, described at p. 34 of the Appendix to the Second Report of the Standards Commission, 1869, where it is thus described :—The bar upon which the yard and the metre are marked is of Baily's metal, $42\frac{1}{2}$ inches long and 1 inch high and wide. It is engraved "Troughton and Simms, London, 1867." The yard is divided into 3 feet 16 nails and 36 inches; 4 additional inches are marked, making 40 inches in all, the first of these being divided into hundredths of an inch, the second into twelfths, and the third into sixteenths. The metre is divided into decimetres, and the last decimetre into centimetres, an additional centimetre is divided into millimetres. The divisions up to 36 inches are marked upon gold studs let into and made level with the upper surface of the bar, and by very fine lines cut across two other lines, the gold studs being in the middle of the breadth of the bar, and in a trench depressed about $\frac{1}{32}$ inch below its upper surface. There is a slip of gold let into the bar extending beyond each line defining 36 and 40 inches, and upon which both the measure of a yard and metre and of the smaller subdivisions are marked.

16. Subdivided yard and metre bar.

Fig. 2. TRANSVERSE SECTION OF THE BAR.

Fig. 1.—RIGHT-HAND END OF UPPER SURFACE OF BRONZE BAR, WITH YARD AND METRE SUBDIVISIONS.

Figures 1 and 2 show a portion of this bronze bar full size.

17. The verification of the Canada bronze sub-divided bar will be effected by comparing it under the microscopes with this bronze subdivided bar of the Standard Department, which is designated as SS (old English letters, SS , being used where the metric measures marked upon it are referred to, as has already been shown in the account of the verification of the Canada bronze metre). Since the original construction in 1869, as before described, the lines marked on SS, defining the tenths of inch 36–37, twelfths of inch 37–38, and eighths of inch 38–9, have been engraved with small figures 1, 2, 3, &c., in order more readily to distinguish them when seen under the microscopes. Inch 39–40 has also been divided into tenths, similarly numbered, and the tenth 3–4, opposite to the defining line of the metre, has been subdivided into tenths, in order to facilitate the comparison of the length of the metre with its equivalent in Imperial length.

17. Its comparison with SS .

The value of every Imperial Measure defined upon SS has been determined with the greatest possible precision, in terms of the Imperial Standard yard at 62° F., as shown in Appendix VII.

of the Fifth Report of the Standards Commission, 1870 (pp. 102, 106, &c). In like manner, the value of every Metric measure defined upon **SS** has been determined in terms of the primary Mètre des Archives at 0° C, as shown in Appendix XII. of the same Report (p. 186, &c.) In the verification of the Canada subdivided bronze bar **BMI**, it is not proposed now to verify every sub-division, but to limit the requisite comparisons to the principal unit measures, viz, the Imperial yard, 3 feet, and the first inch, and to the metre with the first decimetre, centimetre, and millimetre.

The results of these comparisons will be stated in a supplementary paper.

Auxiliary Standard Bronze Slider Bar.

18. Auxiliary Standard bronze slider bar.

18. Although not mentioned in Mr. Brunel's first Report, I have thought it necessary that his Department should be furnished with an auxiliary Standard bronze bar, to be constructed by Troughton & Simms, and containing the Imperial measure of a foot and additional inch with subdivisions, and the metric measure of a decimetre, and additional centimetre with sub-divisions, marked with very fine lines upon it. This bar is about 16 inches long, $\frac{1}{2}$ inch broad, and $\frac{1}{4}$ inch thick, and is made to slide in a groove cut along the whole length of the upper surface of a bronze bar similar in form to the Standard yards. Such a sliding bar measure was found to be indispensable for verifying the absolute length of the several subdivisions of the principal standards of Imperial and Metric length, by ascertaining first the relative length of these subdivisions, and then their entire length, as compared with that of the principal unit of length. It is fully described, and an illustrated drawing of it given, in the before-mentioned Appendix VII. to the Fifth Report of the Standards Commission, p. 107.

The Imperial scale, marked by fine lines upon the slider bar, consists of 1 foot divided into 12 inches, and each inch into tenths, with an additional inch divided into tenths and hundredths.

The Metric Scale consists of 1 decimetre divided into 10 centimetres, with an additional centimetre 1-0 divided into millimetres.

The several subdivisions are distinguished by small figures 1, 2, 3, &c., engraved on the bar.

The measures marked upon the slider bar do not require verification, as this scale is to be used only for the purpose of comparing the relative lengths of two similar measures on another measuring bar. It will, however, be carefully examined as to graduation and workmanship.

Standard Subdivided Inch.

19. Standard subdivided inch.

See Appendix VII. Fifth Report Standards Commission, p. 98.

19. For the purpose of verifying the divisions of micrometers, it has been found at the Standards Department very convenient to be furnished with a small bar of bronze, having a slip of silver let into its upper surface, upon which very fine lines are cut, defining the Standard length of an inch; with divisions into tenths numbered 1, 2, 3, &c., and the first tenth being subdivided into hundredths of an inch. The bar is about 2 inches long, 1 inch wide, and $\frac{1}{2}$ inch deep. I have therefore ordered a similar bar to be constructed by Messrs. Troughton and Simms for the Canadian Department.

20. Its verification

20. It is proposed that the whole length of the inch and the first tenth and first hundredth of an inch on this small bar should be verified in the same manner as the previously described Standard subdivided bar **SS**.

Standard 10-foot Measuring Bars.

21. The subdivided Standard 10-foot measuring bar, constructed by Messrs. Troughton and Simms for the Canadian Government, is similar to the Standard 10-foot measure of the Standards Department, described in Appendix XX. to the Fifth Report of the Standards Commission (p. 229), where the form of this Standard bar is shown, as here seen in Fig. 3:—

It is made of steel, and is a 10-foot bed measure, as well as a line measure of 10 feet divided into feet, and the first foot into tenths, by lines engraved on the upper surface of the steel bar. Very fine lines are also engraved upon gold studs on the upper surface of the bar at 0 foot

- 1 "
- 4 "
- 5 "
- 7 "
- 10 "

FIG. 3.—STANDARD SUBDIVIDED 10-FOOT BED AND LINE MEASURE.

for microscopic measurements in cases where great precision is required. These studs are not shown in the Figure, having been added since it was engraved.

The 10-foot measuring bar for Canada is marked *a*.

22. The measures defined by the engraved lines on the steel bar, and the bed measure, were verified by comparison with the Official Standard 10-foot measure. The comparison was made in the same manner as that of the Official Standard, described in the before-mentioned Appendix XX., the two measures being placed under the microscopes, upon steel roller frames, supported upon a strong deal frame. In order to secure the two bars being at the same temperature, they were placed in position 48 hours before the comparisons were made, and were surrounded throughout their length with a thick coating of cotton wool. Both the bars being made of similar metal, no reduction for temperature was requisite, and indeed the precise coefficients of dilatation of the bars have not been determined.

According to Mr. Sheepshanks, the coefficient of linear expansion of cast-steel for 1° Fahr. at ordinary atmospheric temperatures, is 0.0000575, and the absolute expansion of 1 foot of cast-steel, for 1° F., = 0.000069 inch.

23. In comparing the defining lines of the two measuring bars under the microscopes, the breadth of the lines on the Canada bar, was found to be 0.0019 inch, being considerably less than the lines on the Official Standard. It was, therefore, necessary to compare the *middle* of each line by bisecting it as nearly as possible, as well as by taking readings from the outsides of each line, and thus to ascertain the middle of the defining line. That portion of the length of each line was taken for comparison which was nearest to the angle of the bed measure. The result of each of four comparisons is shown in the following table, each result, being the mean of 12 readings of each defining line, stated

21. Standard 10-foot bed and line measure.

22. Mode of verification of lines engraved on steel bar.

23. Comparison of 10-foot line measure with the Official Standard.

in parts of an inch, and computed from one division of the micrometers being equal to 0.0000319 inch :—

Date of Comparison.	Results of Comparisons.	t.	Part of line measured
1874, Aug. 12	(1) Canada 10 feet. $a =$ Official Standard 10 ft.	in +0.00163	19.0 C. Middle.
" "	(2) " "	+0.00142	19.0 Apparent left.
" "	(3) " "	+0.00177	18.9 Middle.
" "	(4) " "	+0.00186	18.9 Apparent right.
	Mean	+0.00167	

The true length of the Official Standard, when at the Standard temperature of 62° Fahr., has been found to be 0.00191 inch in excess of 10 feet of the Imperial Standard yard, and it follows that the Canada 10-foot measure at 62° F., is 0.00358 inch in excess of the true measure.

∴ Canada 10-foot bar at 62° Fahr. = 120.00358 inches of the Imperial Standard yard; when measured from the middle of the defining lines engraved on the steel bar. It is also, when thus measured, of the true length of 10 feet at the temperature of 56°.81 Fahr. But when measured from nearly the outside of each defining line, it is of the true length of 10 Imperial Standard feet, when at the normal temperature of 62° Fahr.

24. And of defining lines on gold studs with SS.

24. Since the original verification of the Official Standard 10-foot measure in October, 1870, very fine lines have been cut by Messrs. Troughton and Simms upon gold studs on the upper surface of the bar, at 0, 3, 5, 6, 9, 10 feet. It will be seen that these distances differ from those similarly marked on the Canada 10-foot bar, and as they have not yet been accurately verified, it was necessary to verify the several distances marked on the gold studs of the Canada bar by comparison with the subdivided Standard bronze yard S. S.

In these comparisons, the actual temperature of each bar was determined from a Standard thermometer having its mercurial bulb inserted in a case of similar metal to that of the bar, according to the method shown at p. 68 of the Appendix to my Seventh Annual Report for 1872-3. The two thermometers were placed between the two bars, the mercurial line being in the same horizontal plane as the measuring axes of the bars, and the metallic case being in contact with the bar of similar metal.

The following table shows the results of the several comparisons, the mean of 20 observations being stated in each case :—

Date of Comparison.	Serial Number	Canada bar $a =$ Official Standard bar.	Canada bar next Observer.	Official bar next Observer.	Temperature.	
					Canada Steel bar	Official Bronze S. S.
1874 Sept. 1	(1)	10.7 feet $\underline{\underline{36.0}}$ in.	in. -0.00104	—	19.35 C.	19.35 C.
" 14	(10)	" "	—	-0.00141	18.80	19.10
" 3	(2)	7...4 feet $\underline{\underline{36.0}}$ "	-0.00016	—	19.72	19.80
" 13	(9)	" "	—	-0.00015	17.30	17.30
" 4	(3)	5.4 feet $\underline{\underline{36.24}}$ in.	-0.00030	—	19.82	20.00
" 10	(8)	" "	—	-0.00069	18.40	18.50

" 14	(7)	" "	—	-0.00134	18.60	18.20
" 4	(5)	1.0 foot $\underline{\underline{36.24}}$ in.	+0.00029	—	19.80	20.00
" 14	(6)	" "	—	+0.00033	18.69	18.69

Here, after converting the Centigrade to the Fahrenheit scale,

From (5) (6), Canada 0..1 foot ($t = 66^{\circ} \cdot 65 \text{ F.}$) = Bronze SS 24..36in. ($t = 66^{\circ} 83 \text{ F.}$) $\cdot 1 \cdot 0 \cdot 00031$ in. Taking as before the expansion of 1 foot of the steel bar for 1° F. to be $0 \cdot 000069$ in., and that of bronze to be $0 \cdot 0001136$ in., according to Mr. Sheepshanks' determination, there should be deducted from the length of the two bars in order to determine their true length at the Standard temperature of 62° F. viz. :—

From the bronze bar, expansion for $4^{\circ} 83 \text{ F.} = 0 \cdot 00055$ in.
 From the steel bar, expansion for $4^{\circ} \cdot 65 \text{ F.} = 0 \cdot 00032$

Difference to be added to steel bar + 0.00023

Whence at 62° F. Canada foot 0..1 = Bronze SS. 24.36 in. + 0.00054
error of „ at 62° F. — 0.00004

\therefore Canada foot 0..1 at $62^{\circ} \text{ F.} =$ Standard foot + 0.00050

From (4) (7), Canada 3 feet 1..4 ($t. 66^{\circ} \cdot 56 \text{ F.}$) = bronze SS 3 feet, 0..36 in. ($t. 66^{\circ} \cdot 38$)— $0 \cdot 00131$ in.

in.
 Expansion of 36 inches of bronze for $4^{\circ} \cdot 38 \text{ F.} = 0 \cdot 00149$
 „ „ steel for $4 \cdot 56 \text{ F.} = 0 \cdot 00095$

Difference = + 0.00054

Whence, at 62° F. Canada 3 feet 1..4 = bronze SS 3 feet 0.36 in. — 0.00077
Error of SS 3 feet at 62° F. — 0.00009

\therefore Canada 3 feet 1..4 at $62^{\circ} \text{ F.} =$ Standard yard — 0.00086

From (3) (8), Canada foot 4..5 ($t. (66^{\circ} 4 \text{ F.})$) = bronze SS foot, 24..36 ($t. 66^{\circ} 65 \text{ F.}$)— $0 \cdot 00050$ in.

in.
 Expansion of 1 foot of bronze for $4^{\circ} \cdot 65 \text{ F.} = 0 \cdot 00053$
 „ „ steel for $4^{\circ} \cdot 40 \text{ F.} = 0 \cdot 00030$

Difference = + 0.00023

Whence at 62° F. Canada Foot 4..5 = bronze SS. foot, 24.36 in. — 0.00027

 62° F. = 10 Standard feet, —0·00078
 Or at t. 63°·13 F. = 10 Imperial Standard feet.

5. Two 10-ft. end measuring bars, *a*, *b*. 25. The bed-measure of the 10-foot measuring bar is accompanied by two 10-foot measuring bars, marked *a* and *b*, which are end measures. They are formed from steel rods 1½ inch in diameter, planed away to the following sectional form :—

Fig. 4.—SECTION OF 10-FEET END-MEASURING BARS.

As more particularly described at page 229 of the Fifth Report of the Standards Commission. These are thus end measures, the measuring surfaces being the square planes shown at *x*.

The two Canada measuring bars were verified by being compared under the microscopes, with the Official Standard 10-foot measure. For this purpose, the two spherical contact pieces were applied to their measuring surfaces, the whole operation being conducted in the same way as that of the verification of the similar 10-foot end bars of the Standards Department, shown at p. 231 of the above-cited Report. The mean results of 12 separate measurements of each bar with the two microscopes on 26th September, were as follows :—

10 feet bar <i>a</i> = 10-foot Standard	in.
	—0·00595
Error of „ at 62° F.	+ 0·00191
∴ Error of <i>a</i> , at 62° F.	—0·00404

10 feet bar <i>b</i> , = 10-feet Standard	in.	-0.00592
Error of „	at 62°F.	+ 0.00191 . in.
Error of <i>b</i> ,	at 62°F.	-0.00401

The temperature of each bar during the operation was 67°28 F., but as the bars are of similar metal, no correction for temperature is required.

Standard 6-foot Measuring Bars.

26. There are two 6 feet Standard measuring bars, which have also been constructed by Messrs. Troughton and Simms for the Government of Canada, viz. :-

26. Standard 6-foot measuring bars

1. 6 ft. subdivided bed and line measure, marked *a*.
1. 6 ft. end-measure, marked *a*.

The first of these bars is of the same shape and material as the official steel 6 ft. bed (see 5th Report, page 229) but is smaller in section, the bar being 1½ inch by 1½

The 6 ft. bed measure is divided by defining lines cut on its inner edge into six separate feet, the first foot 0.1 being sub-divided into inches, and the first inch into tenths of an inch. This bar has no gold studs, bearing very fine defining lines for microscopic measurement, like the 10 feet measure.

The 6 ft. end-measuring bar is of the same shape and material as the Standard 10 ft. end-bars shown in transverse section in Fig. 4, but is made somewhat lighter.

27. The 6 ft. bed was verified by comparing it with the official 6 ft. bed measure, the length of which was determined most accurately in 1870. Both beds were adjusted to the foci of the microscopes Nos. 1 and 2, after having been placed on the large steel rollers which were specially prepared for such standards. Twelve separate readings of each microscope were taken on two days, with the following mean results :-

27. Verification of 6-foot bed measure and line subdivisions.

—	1874.	t.	—	inch.
(1)	Sept. 19	63°32 F.	6ft. bed, <i>a</i> = official 6 ft bed	-0.00289
(2)	„ 24	65°12	„ = „	-0.00258
Mean				-0.00273
Error of official 6 ft. bed, - at 62° F.				-0.00335
∴ Mean error of Canada 6 ft. bed <i>a</i> at 62° F.				-0.00608

As both bars are of steel, no correction for temperature is required. The error of this 6 feet bed measure, at its normal temperature, is larger than could be wished, and should be allowed for in all Departmental comparisons. But it is considerably within the legal allowance of error, viz. :

	in.
For 6 ft. bed measures	0.05
For 6 ft. line measures	0.07

The following comparisons of the foot sub-divisions of the Canada 6 ft. were also made :—

	foot.		foot.
(5) Sept. 25 65·48 F. Canada 6ft. a.	0.1 =	Official Standard 6 feet	0.1 --0·00409
(6)	65·48	1.2 =	1.2 +0·00042
(7)	65·48	2.3 =	2.3 +0·00039
(8)	64·40	3.4 =	3.4 --0·00146
(9)	64·04	4.5 =	4.5 +0·00025
(10)	64·04	5.6 =	5.6 --0·00147

As however the sub-divisions on our official 6 ft. Standard measure have not been yet verified, the above results can only be accepted as giving an approximate value of these foot sub-divisions. It is not probable that the errors of our foot sub-divisions amount to the breadth of a defining line on these measures, viz., 60 divisions of the micrometer or 0·0019 inch.

28. And of 6-foot end-bar.

28. The 6 ft. end-bar was compared with our Standard 6 ft. *bed* by means of the spherical contact pieces described in Appendix VII. to the Fifth Report of the Standards Commission, page 100.

The mean results of 12 readings of each defining termination with the two microscopes were as follows :—

Canada 6 ft. end-bar a,	=	Official Standard 6 ft.	—	0·00523	in.
		Error of „	at 62° F.	+ 0·00691	
∴ Ascertained error of Canada 6 feet end-bar					in.
a, at 62° F.	-	-	-	-	+0·00168

100-foot Chain Measure.

29. 100-foot chain measure.

29. This chain measure is now being constructed by Messrs. Troughton and Simms, and an account of its construction and verification will be contained in a supplementary paper.

66-foot Chain Measure.

30. 66-foot chain measure.

30. The same observation is applicable to the 66-foot chain measure as to the 100-foot chain measure.

III.—COMPARING APPARATUS.

New Micrometrical Comparing Apparatus for Standards of Length.

31. New micrometrical comparing apparatus for Canada.

31. A new micrometrical comparing apparatus has been constructed for Canada by Messrs. Troughton and Simms, in which the raising or lowering of the supporting frame of compared Standard bars, for adjustment under the microscopes is effected by the simple arrangement of two brass eccentrics with flanged edges, connected by two brass rods. This method is similar to that adopted for the model of the new comparing apparatus for subdivided yards, described in Appendix III. to the Seventh Annual Report of the Warden of the Standards for 1872-3, p. 8. It enables a far simpler and lighter carriage to be substituted for the heavy carriage used with the micrometrical comparing apparatus of the Standards Department at Westminster. In other respects, the microscopes, and method of using them in this new apparatus, are similar to those of the Standards Department.

A drawing of the new comparing apparatus is shown in Fig. 5.

a is a strong rectangular slab of slate, its dimensions being 52 inches by 28, and 3 inches thick. It is to be supported at a convenient height

FIG. 5.—NEW MICROMETRICAL COMPARING APPARATUS FOR STANDARD MEASURES OF LENGTH.

upon solid masonry. The two microscopes m, n , are fixed to a with screws and lewises at the exact distance of a yard from each other, and are removable so as to be fixed at a metre's distance or less. A double microscope d is placed upon a between m and n , and is steadied merely by its own weight. It can thus be moved and used for all intermediate distances. This double microscope is similar to that constructed by Messrs. Troughton and Simms for the Standards Department, as described in Appendix XII. to the Fifth Report of the Standards Commission, 1870 (p. 187), where a drawing of it is shown. It has a moveable eye-piece with a double lens, which is made to slide in a groove upon a horizontal plate, and it is furnished with two micrometers. At the lower end of the microscope there are two object glasses, each of which is composed of a double lens and slides upon a horizontal plate made exactly parallel to that upon which the eye-piece moves. When these glasses are pulled out to the greatest extent, a measuring field of about 0.8 inch or 2 centimetres in length is obtained. The three microscopes are illuminated by small lamps, l, l, l , placed behind them, so that the light passes through an oval hole in the microscope stand and falls upon a lens, and is thus thrown upon the defining lines of the Standard bar under comparison in the vertical line of the optical axis of the microscope.

The iron carriage for supporting the Standard bars rests upon three wheels, two of which are grooved and fitted to parallel guides fixed on a , so that the carriage may be moved backwards and forwards in a line at right angles to the measuring axis of the Standard bars, when they are in position under the microscopes. This is effected by turning the wheel handle w of the screw s . The Standard bars to be compared are placed upon lever rollers, resting upon the rectangular brass plate b , the upper surface of which is adjusted to a horizontal plane.

The two eccentrics, x, x , act together by means of the connecting rods c , and raise or lower the supporting plate b by the action of the lever handles h, h ; there are tightening screws to the two eccentrics for fixing the position of the plate b , when the focal adjustment of the microscopes is completed.

32. Mode of using this apparatus.

32. This micrometrical apparatus is intended to be used for comparing Standard measures of length in the same manner as the micrometrical comparing apparatus of the Standards Department, described in Appendix VII. of the Fifth Report of the Standards Commission, where directions for the arrangement of the bars, (p. 100), the adjustment of the microscopes, and the mode of making observations may be found.

A contact apparatus, similar to that of the Standards Department, which enables the micrometrical apparatus to be used for comparing Standard end-measures, has also been furnished by Messrs. Troughton and Simms.

Model of Inspectors' Comparing Apparatus with Eye-piece and Standard Subdivided Yard.

33. Comparing apparatus with eye-piece and Standard subdivided yard.

33. This apparatus, which has been constructed for the Canadian Government by Messrs. Troughton and Simms, is exactly similar to that described in Appendix III. to the Seventh Report of the Warden of the Standards for 1872-3, as a model of a comparing apparatus and subdivided Standard yard, for the use of Local Inspectors of Weights and Measures. It consists of a flat brass bar engraved upon the bevelled edges of its upper surface, with line divisions of a Standard subdivided yard, and supported in a horizontal plane upon two uprights of a cast-iron stand. Two brass eccentrics with flanged edges are also fixed to

these uprights, and are connected by two brass rods. They serve to support a mahogany plane, upon which a measure to be compared is placed, and is raised immediately under the standard by turning a lever handle, so as to make the defining lines of the two measures coincide. Upon a slender brass bar, parallel with and immediately over the Standard, a magnifying eye-piece is made to traverse, and can be turned over from side to side so as to enable optical comparisons to be made with greater accuracy.

This apparatus is more particularly described in the paper above referred to, and is represented in the following figure:—

Fig. 6.—COMPARING APPARATUS WITH EYE-PIECE AND STANDARD SUBDIVIDED YARD.

The iron stand is intended to be screwed down to the bottom of a wooden box, made so shallow as not to interfere with comparisons, and when not required for use it is protected by a wooden cover.

34. The Standard subdivided yard of this apparatus is divided upon one bevil into eighths and one eighth into sixteenths, as shown in the figure. On the other bevil, the yard is divided into 3 feet and 36 inches; and the first inch is divided into tenths, the second inch into twelfths, and the third inch into sixteenths. There is a small supplementary inch measure on a separate piece of bevilled brass, which is divided to the edge on one side into sixty-fourths of an inch, and on the other side into hundredths of an inch. These minute subdivisions afford the means of reading off, with the aid of the magnifying glass, any error in a compared measure to a fraction of the hundredth of an inch by estimation.

34. Verifi-
cation of the
Standard
measure of this
apparatus.

The Canada subdivided yard has thus been compared with the similar Standard measure of the Standards Department, and has been found correct within the limits of error allowed.

Cathetometer.

35. The cathetometer, now being constructed by Messrs. Troughton and Simms for Canada, is similar to that constructed for the Standards Department.

35. Catheto-
meter.

This is an instrument of precision for reading very accurately the relative height or distance from each other of the defining lines of a graduated measure of length placed in a vertical position, or for measuring the height of a column of mercury, &c. For such purposes it is furnished with two telescopes and levels, and with an Imperial and a Metric graduated scale. It will be further referred to in a supplementary paper.

Callipers for Measuring Diameters, &c.

36. There are two of these callipers, which are constructed upon the principle of those used at Woolwich Arsenal for measuring the diameter of shot and of the bore of guns. Means are thus provided for both outside diameters.

36. Callipers
for measuring
diameters.

and inside measurement. The largest of these callipers will measure 25 inches outside measurement, and $21\frac{1}{2}$ inches inside. The smaller measure 5 and $4\frac{1}{2}$ inches respectively. The callipers are parallel steel bars, moving upon a graduated scale, which is furnished with a vernier for minute differences.

Engraving Machine for Marking Verification Stamps.

37. Engraving machine for marking verification stamps.

37. This engraving machine has been constructed by Messrs. Troughton and Simms, and is precisely similar to that now used in the Standards Department.

It consists of an arrangement of angular bars in the form of a pentagraph, by means of which the movement of a pointer at one of the angles gives a corresponding movement to a revolving drill, thus enabling any letters or figures engraved upon a fixed plate upon which the pointer rests to be engraved upon a plate or Standard placed under the revolving drill. The motion of the drill may be effected by means of a treadle, but this power is hardly sufficient to give a clean engraved cut, and a greater mechanical power should be applied, such as that of a steam engine, or as used in the Standards Department, a turbine, in order that the drill may revolve with the requisite rapidity.

PART II.—STANDARDS OF WEIGHT.

I.—DOMINION STANDARDS.

Standard Avoirdupois lbs. of Platinum-iridium.

38. Standard avoirdupois lbs. of platinum-iridium. Their construction.

38. The new primary Standard weight for Canada is a copy of the Imperial Standard lb. made by Mr. Oertling of an alloy of platinum-iridium, viz., pure platinum, 9 parts, pure iridium, 1 part. This is the same alloy of platinum-iridium as that determined upon as the material of the new International Metric Standards now being constructed at Paris by the Metric Commission. This primary platinum-iridium lb. is marked **A**, and is intended for the use of the Standards Branch of Inland Revenue Department at Ottawa.

Two similar Standard lbs. were at the same time constructed for the Canadian Government, one marked **B**, to be delivered to the custody of the Speaker of the Canadian Senate, and another, marked **C**, to the custody of the Speaker of the Canadian House of Commons.

A fourth and similar Standard lb. was at the same time constructed for the Standards Department at Westminster, and is marked **S**. It is intended to serve as a substitute for PS, the Imperial Standard lb., in those cases where reference to a platinum standard lb. is requisite in any official comparison, and thus to avoid, as far as possible, the use of the primary Standard of Imperial weight.

These four lbs. were made from a single ingot of platinum-iridium furnished by Messrs. Johnson and Matthey, of Hatton Garden. In order to obtain the best alloyed metal, two ingots were in the first instance melted. No. 1 weighing 144 oz. 12 cwt.; was cast in a mould; No. 2, weighing 176 oz. 14 cwt., was cut off from a larger ingot, which had been left to cool in the furnace. The two ingots were sent to the Standards Office for inspection, in order that the density of each should be determined. The density of each ingot was found to be as follows:—

△	at 0° C. of No. 1 (cast)	= 21.339
△	„ No. 2 (cooled)	= 20.495

The ingots were then returned to Messrs. Johnson and Matthey, and after having been well steam hammered and annealed, were again sent to the Standards Office for determination of the density, which was then proved to be—

Δ at 0°C. of No. 1 = 21.380
 Δ „ „ No. 2 = 21.343

It would thus appear that the manner in which the metal is dealt with immediately after being melted is unimportant, so long as it is well hammered and annealed afterwards. The cast ingot thus forged and annealed, until the metal was considered to be homogeneous and of normal density, was next turned to a cylindrical shape, and from it the four lbs. were constructed of a form as nearly as possible similar to the Imperial Standard lb. of platinum, the following Figure of which is taken for Appendix V to the Fifth Report of the Standards Commission; p. 34, viz. :—

FIG. 7.—IMPERIAL STANDARD POUND OF PLATINUM, CYLINDRICAL WITH A GROOVE.

Height : : : : = 1.35 inch.
 Diameter : : : : = 1.15 „

39. The density of chemically pure platinum and of pure iridium, as well as that of the alloy of platinum-iridium containing 10 per cent. of iridium, was determined, in 1873, by M. Saint-Claire Deville, at Paris, as follows, after the metal had in each case been freed from air by forging and rolling :—

Pure platinum, hammered,	Δ at 0°C =	21.402
„ „ annealed,	„	21.396
Pure iridium	„	22.194
Platinum-iridium, hammered	„	21.449
Another specimen, annealed	„	21.429

According to these two last determinations, the mean density of hammered and annealed platinum-iridium may be taken to be 21.439.

40. The co-efficients of linear expansion of pure platinum and of pure iridium, as well as of the alloy containing 90 per cent. of platinum and 10 per cent. of iridium, have been determined as follows by M. Fizeau, from small pieces of the alloyed metal, and by his peculiar process, a description of which will be found in Appendix XII. to the Fifth Report of the Standards Commission, p. 182 :—

	At 40°C.	Variation for 1°C.
Co-efficient of expansion of pure platinum for 1°C.	0.000009055	0.000000106
„ „ iridium	6831	94
„ „ platinum-iridium	8830	100

This determination of the expansion of hammered and annealed platinum-iridium is the mean result of two separate comparisons made by M. Fizeau on 30th January and 13th March 1874.

A ordinary temperatures, that is to say, about 62°F. or 16° C., the mean co-efficient of linear expansion of platinum-iridium may therefore be taken at 0.00008566 for 1° C.

41. Computations of weight of air displaced by Standard weights.

41. The method of computing the weight of air displaced by Standard weights, when compared by weighing in air, is described at length in Appendix V to the Fifth Report of the Standards Commission, p. 35 ; and Tables are there given for facilitating the calculations similar to those used by Professor Miller in his labors for verifying the restored Imperial pound and its standard copies. Amongst them are Tables of logarithms of the ratio of density of brass, bronze, and platinum at 0°C. to their density at higher temperatures, computed from an assumed mean co-efficient of their linear expansion.

42. Table of logarithms of ratios of density of platinum-iridium.

42 A similar table of logarithms of the ratio of density of platinum-iridium at 0°C. to its density at other temperatures, has not hitherto been computed ; and the following table has been constructed and used in the working out of the weight of air displaced by the platinum-iridium lbs. during their comparisons.

Logarithms of the ratio of the density of platinum-iridium at 0°C. to its density at t°, with their arithmetical complements, assuming the co-efficient of linear expansion of platinum-iridium for 1°C. at the mean temperature of atmospheric air in comparing room, or 16°C. to be 0.00008566, according to M. Fizeau's determination. Whence co-efficient of cubic expansion for 1° C. at 16° C.=0.00002570, and Log 1.00002570=0.00001117.

t.	Log. P--1.	10-log. P-I.	—

29	3239	761	
30	3351	649	

43. The preliminary comparisons of the four platinum-iridium lbs., before their final adjustment, were made at the Standards Office by weighings in air against one of the four gilt bronze Standard lbs., and their difference in weight from the Imperial Standard in a vacuum was computed by allowing for the weight of air displaced by each Standard lb. and for the ascertained error of the gilt bronze lb. This enabled the weight of each platinum-iridium lb. to be finally adjusted as nearly as possible to the weight in a vacuum of the Imperial Standard lb., which is a platinum weight. After this final adjustment, each of the platinum-iridium lbs. was verified by weighing it in air against the Imperial Standard P.S. The weighings were made by Gauss's method of alternation, in the interchangeable pans X and Y. Two complete comparisons were made, the first before weighing the platinum-iridium lbs. in water, in order to ascertain their density, and the second comparisons after the completion of the hydrostatic weighings.

43. Final adjustment and verification of platinum-iridium lbs

Two sets of weighings in water, for determining the density of each weight, were made against different Standard weights, different thermometers and barometers being used. The near accordance of the results is to be noticed as satisfactory. Previously to the weighings, the platinum-iridium weights were cleaned with alcohol, and carefully examined under a lens. The surfaces were found to be free from air-holes, and the weights to be in every respect excellent Standards.

44. The weighings of A, and the results are as follows :—

44. Comparison and determination of density of A

FIRST COMPARISONS OF PLATINUM-IRIDIUM LB. A with P.S.

Date of Comparison.	Weighings.	Results.		
		div. PS-10	gr. 1 d.	gr. A
1874, July 21	(1) A in pan. X 33·5 (3) A in pan. Y 32·5 Mean resting point. 33·0	(2) PS in pan Y 52·7 (4) PS in pan X 54·5 53·6 (5) For value of a division, 0·01 gr. added 48·4	1 d. = 0·00174	A = PS·0·01792 in air. t. = 18° 85' C. m.m. b. = 755·23

Here, A displaced weight of air = gr. 0·39118 and P S = gr. 0·39603 ; excess displaced by PS = gr. 0·00485. Whence in a vacuum A = P S — gr. 0·02277.

Weighed in water against bronze gilt Standard grain weights in air on August 5, t. of water 17° 45, t. of air 17° 95, b. = m m. 755·97 ; A = gr. 6674·45312 ; whence $\Delta A = 21·42171$

And against bronze Standard avoirdupois oz. and dr. weights on August 7, t of water 17° 48, t. of air 16·90, b. = m m. 764·37 ; A = gr. 6674·40523 ; whence $\Delta A = 21·41737$

∴ Mean density of A at 0°C = 21·41954
Log. $\Delta A = 1·3308102$

1874, Aug. 12	$(1) \begin{matrix} \text{gr.} \\ \text{A} + 0.01 * \\ + \text{X} \end{matrix} \left. \begin{matrix} 33.55 \\ 34.40 \end{matrix} \right\}$ $(2) \text{PS} + \text{Y} \quad 44.25$ $(3) \text{A} + 0.01 \left. \begin{matrix} 33.975 \\ + \text{Y} \end{matrix} \right\}$ $(4) \text{PS} + \text{X} \quad 46.20$ $(5) \text{PS} + 0.01 \left. \begin{matrix} \text{gr.} \quad 45.225 \\ + \text{X}. \quad 53.005 \end{matrix} \right\}$ * Gilt Grain weight = 0.01037 gr.	$\text{A} + 0.01 \text{ div. PS} \quad 1d = 0.00157$ $\text{div.} \quad - 5.625$ $\text{A} = \text{PS} - 0.01888$ in air. $t. = 17^{\circ} 88 \text{ C.}$ mm. $b. = 753.63$

Here, **A** displaced gr. 0.39180 of air and PS gr. 0.39666; excess by PS = gr. 0.00486. Whence in a vacuum $\text{A} = \text{PS} - \text{gr. } 0.2374$.

Another comparison was made on the same day without adding any balance weight to the pan of **A** as a counterpoise to PS, viz. :-

$(1) \text{A} + \text{X} \quad - \quad 30.4$	$(2) \text{PS} + \text{Y} \quad - \quad 49.95$	$\text{div.} \quad \text{A PS} - 10.225$	$\text{gr.} \quad 1d \text{ div.} = 0.00175$	$\text{gr.} \quad \text{A} = \text{PS} - 0.01792$
$(3) \text{A} + \text{Y} \quad - \quad 30.7$	$(4) \text{PS} + \text{X} \quad - \quad 52.05$			in air.
30.55	$(5) \text{No. 4} - 0.02 \quad 40.65$	$\text{gr.} \quad 51.00$		$t. = 17^{\circ} 86 \text{ C.}$
	added to A .	40.65		mm.
				$b. = 753.87.$

A displaced gr. 0.39261 and P S gr. 0.39748 of air; excess by P S = gr. 0.00487. Whence in a vacuum, $\text{A} = \text{P S} - \text{gr. } 0.02279$.

The mean result of the three comparisons is that in a vacuum $\text{A} = \text{P S} - \text{gr. } 0.02310$, or $\text{A} = \text{gr. } 6999.97690$.

45. Comparison and density of **B**.

45. The operations with the platinum-iridium lb. **B** are as follows :-

FIRST COMPARISON of PLATINUM-IRIDIUM LB. **B** with PS.

1874, July 21	$(1) \text{PS} + \text{X} \quad - \quad 49.25$	$(2) \text{B} + \text{Y} \quad - \quad 34.65$	$\text{div.} \quad \text{B} - \text{PS} - 6.65$	$\text{gr.} \quad 1d. = 0.00174$	$\text{gr.} \quad \text{B} = \text{PS} - 0.01157$
	$(3) \text{PS} + \text{Y} \quad - \quad 50.25$	$(4) \text{B} + \text{X} \quad - \quad 38.25$			in air.
	49.75	36.45			$t. = 19^{\circ} 21 \text{ C.}$
		$(5) \text{No. 4} - 0.01 \quad 31.25$			mm.
		added to PS.			$b. = 755.20$

B displaced gr. 0.39050, and P S. gr. 0.39552 of air; excess by P S = gr. 0.00507. Whence in a vacuum $\text{B} = \text{P S} - \text{gr. } 0.01737$.

Weighed in water against bronze gilt Standard grain weights in air, $t.$ of water = $17^{\circ} 47$, $t.$ of air = $18^{\circ} 17$, $b. = \text{m m. } 755.97$, $\text{B} = \text{gr. } 6674.49310$; whence

$$\Delta \text{B} = 21.42389$$

And against bronze Standard avoirdupois oz. and dr. weights, $t.$ of water = $17^{\circ} 51$, $t.$ of air = 16.90 , $b. = 764.37$, $\text{B} = \text{gr. } 6674.60533$;

$$\text{whence} \quad \Delta \text{B} = 21.43009$$

\therefore Mean density of **B** at $0^{\circ} \text{C} = 21.42699$

$$\text{Log. } \Delta \text{B} = 1.3309612$$

SECOND COMPARISON of B with PS.

1874, Aug. 13	(1) B + X - 32·15	(2) PS + Y - 43·00	B $\hat{=}$ PS - 7·16875	div. 1 d. = 0·00168	gr. B = PS - 0·01206 in air. t. = 17°·84 C. mm. b. = 750·44
	(3) - - 35·15	(4) - - 45·90			
	(5) B + Y - 30·85	(6) PS + X - 49·05			
	(7) - - 32·45	(8) - - 50·00			
	<u>32·65</u>	<u>46·9875</u>			
		(9) PS + 0·02 gr. 61·15			
		- X.			
		(10) - - 60·95			
		<u>61·05</u>			

B displaced 0·39001 gr. and PS 0·39499 gr. of air; excess by PS = 0·00498 gr. Whence in a vacuum, B = PS - 0·01704 gr. The mean result of the two comparisons, and giving double value to the second comparison, is that in a vacuum,

$$B = PS - 0·01688 \text{ gr., or } B = 6999·98312 \text{ gr.}$$

46. The weighings of C and their results are as follows:—

46. Comparisons and density of C.

FIRST COMPARISON of PLATINUM-IRIDIUM LB. C with PS.

1874, July 21	(1) C + X - 35·75	(2) PS + Y - 49·60	C $\hat{=}$ PS - 7·0	div. 1 d. = 0·00174	gr. C = PS - 0·01218 in air. t. = 19°·42 C. mm. b. = 755·10
	(3) C + Y - 36·75	(4) PS + X - 50·90			
	<u>36·25</u>	<u>50·25</u>			
		(5) No. 4 - 0·01 46·00 added to C.			

C displaced 0·39018 gr., and PS 0·39512 gr. of air; excess by PS = 0·00494 gr. Whence in a vacuum, C = PS - 0·01712 gr.

Weighed in water against bronze gilt Standard grain weights in air, t. of water = 17°·45, t. of air = 18°·16, b = 755·97 mm. C = 6674·48273 gr., whence $\Delta C = 21·42325$

And against bronze Standard avoirdupois oz. and dr. weights, t. of water = 17°·46, t. of air = 16°·77, b = 764·37 mm., C = 6674·55444 gr. or $\Delta C = 21·42689$

$$\therefore \text{Mean density of C at } 0^\circ \text{ C} = 21·42507$$

$$\text{Log } \Delta C = 1·3309222$$

SECOND COMPARISON of C with PS.

1874, Aug. 13	(1) C + X - 36·45	(2) PS + Y - 46·6	C $\hat{=}$ PS - 7·025	div. 1 d. = 0·00158	gr. C = PS - 0·01108 in air. t. = 17°·88 C. mm. b. = 750·44
	(2) - - 36·30	(4) - - 46·4			
	(5) C + Y - 31·30	(6) PS + X - 49·5			
	(7) - - 32·30	(8) - - 50·05			
	<u>34·0875</u>	<u>48·18375</u>			
		(9) PS + 0·02 gr. 61·15			
		- X.			
		(10) - - 63·00			
		<u>62·075</u>			

C displaced 0.38999 gr., and PS 0.39493 gr of air. Excess by PS=0.00494 gr. Whence in a vacuum C=PS-0.01602 gr. Giving double value to the second comparison, the mean result is that in a vacuum, C=PS-0.01639gr., or C = 6999.98361gr.

47. Compari- 47. The operations for verifying S were as follows :
sons and density of S. FIRST COMPARISON of PLATINUM-IRIDIUM Lb. S with PS.

1874, July 21	(1) PS+X 46.15	(2) S+Y 35.5	div. S-PS-5.2875	1d.=0.00174	S=PS-0.00320 in air. t.=19° 62 C. mm. b.=755.09
	(4) PS+Y 47.00	(4) S+X 36.5			
	46.575	36.0			
		(5) 0.91 gr. added. 31.5			

S displaced 0.38988 gr., and PS 0.39482 gr. of air ; excess by PS = 0.00494 gr. Whence in a vacuum S=PS-0.01414 grg.
Weighed in water against bronze gilt Standard grain weight in air, t. of water = 17° 47 C., t. of air = 18° 15, b. = gr. 755.83 mm., S=6674.50271 gr.; whence Δ S = 21.42400
And against bronze Standard avoirdupois oz. and dr. weights, t. of water = 17° 48, t. of air = 16° 77, b. = 764.37 mm., S=6674.55444 gr.; whence Δ S = 21.42630

∴ Mean density of S at 0° C.= 21.42515
Log Δ S=1.3309238

SECOND COMPARISON of S with PS.

1874, Aug. 14	(1) S+X 32.40	(2) PS+Y 47.85	div. S-PS-6.00625	1d.=0.00205	S=PS-0.01230 in air. t.=17° 03 C mm. b.=767.94
	(3) - 33.15	(4) - 49.85			
	(5) S+Y 36.80	(6) PS+Y 44.75			
	(7) - 37.75	(8) - 45.70			
	35.25	47.375			
		(9) No. 8-0.01 gr. added to S 36.00			
		(10) - 35.50			
		35.50			

S displaces 0.40045 gr. and PS 0.40508 gr. of air. Excess by PS =0.00463 gr.; whence in a vacuum, S=PS-0.01693 gr.

A third comparison of S with PS gave the following results :—

1874, Aug. 20	(1) S+X 29.40	(2) PS+Y 48.75	div. S-PS-6.85625	1d.=0.00173	S=PS-0.01185 in air. t.=18° 01 C mm. b.=769.87
	(3) - 30.35	(4) - 47.40			
	(5) S+Y 35.00	(6) PS+X 44.60			
	(7) - 33.75	(8) - 42.60			
	32.125	45.8375			
		(9) No. 8-0.02 gr. added to S 31.90			
		(10) - 32.85			
		32.375			

§ displaced 0.39997 gr., and PS 0.40503 gr of air. Excess by PS = 0.00506 gr. Whence in a vacuum, $S = PS - 0.01691$ gr.

Mean result of the three comparisons, in a vacuum, $S = PS - 0.01599$ gr. or $S = 6999.98401$ grains.

48. As, however, these platinum-iridium Standard lbs. are required only as reference Standards, for purposes in which the greatest accuracy is required, and where the weighings are to be reduced to a vacuum, it is requisite for all practical comparisons of Standard weights, made of brass or bronze, by ordinary weighings in air, to refer them to a secondary Standard brass or bronze lb. valued in terms of W, a theoretical lb. of brass of the mean density of brass or bronze weights. Such a Standard lb. made of bronze gilt, verified directly with PS by Professor Miller in 1854, and approved by the Standards Commission, which completed in that year their labours of restoring the lost Standards, has already been furnished to the Canadian Government. It is No. 9 of the series of 30 Standard lbs. constructed by Mr. Barrow of Baily's metal amalgam-gilt. Its density and Standard weight, as determined by Professor Miller and stated in his account of the construction of the Imperial Standard lb., p. 945, will be found in the following tabular statement in § 49; and it is to be remarked that the ascertained density of the gilt bronze lb. No. 9, 7.37614, is very much less than that of any other of the weights of the same series, the average density of the 30 gilt bronze Standard weights being 8.20765. It would be interesting to determine the standard weight of this Canadian lb. in a vacuum at the present time in terms of PS, by comparison with one of the new platinum-iridium lbs., in order to see whether any or what alteration has taken place in its weight, since Professor Miller's comparisons in 1854. It was shown at p. 26 of the Appendix to my Sixth Annual Report, that a similar Standard lb. of gilt bronze belonging to the French Government, when recompared with PS at the Standard's Office in August 1871, was found to have increased in weight 0.07382 gr. since its original verification in 1854; this increase being attributable to oxidation of the bronze, notwithstanding the gilding of its surface.

48. Canada secondary Standard gilt bronze lb. No. 9, verified by Professor Miller in 1854.

49. We have next to determine the weight in Standard air ($t. = 62^\circ$ F. $b. = 30$ in.) of each of these platinum-iridium lbs., in terms of the commercial Standard lb. of brass W, the density of which is taken at 8.1430, or about the mean density of brass and bronze weights; W being considered to be equal to PS in a vacuum, and to displace 1.04706 gr. of Standard air. (See Fifth Report of Standards Commission, Appendix XX., p. 235.) The results of the computation will be found in the following table, which includes also similar information as to the gilt bronze lb. No. 9, as found by Professor Miller in 1854.

49. Weight of these lbs. in a vacuum, and in Standard air.

Designation of Imperial Standard pound.	Density at 0° C.	Log Δ .	True weight in a Vacuum in terms of PS.	Weight of Standard air displaced.	Weight in Standard in terms of W.
			grains.	gr.	gr.
PS (platinum) ..	21.15722	1.3254586	7000	0.40282	0.64424 too heavy.
W (brass)	8.14300	0.9107844	7000	1.04706	7000
A (plat.-iridium)	21.41954	1.3308102	6999.97694	0.39789	0.62611 too heavy.
B "	21.42699	1.3309612	6999.98312	0.39775	0.63243 "
C "	21.42507	1.3309222	6999.98357	0.39779	0.63284 "
S "	21.42515	1.3309238	6999.98401	0.39779	0.63328 "
W 9 (gilt bronze)	7.37614	0.8678292	7000.11611	1.15591	0.00726 "

The mean density of the four platinum-iridium lbs. is 21.41418, and $\log \Delta = 1.3309044$.

The results in the last columns are computed as follows :

$$\begin{array}{r}
 \text{In a vacuum } A=W-0.02306 \text{ gr.} \\
 \text{In standard air, } W \text{ displaces weight of air } 1.04706 \text{ gr.} \\
 \text{A " " " } = \underline{0.39789} \\
 \\
 \text{Excess by } W., \text{ causing apparent increase of weight of } A + 0.64917 \text{ gr.} \\
 \\
 \text{Whence in Standard air, } A=W \quad \quad \quad + 0.62611
 \end{array}$$

According therefore to what was stated in § 9, the true weight in Standard air of the secondary Standard gilt bronze lb. No. 9, intended to regulate commercial weights, was found by Professor Miller 0.00726 gr. less than the commercial brass Standard pound W.

PLATINUM-IRIDIUM STANDARD TROY OZ. WEIGHTS.

50. Construction of platinum-iridium troy ounces, A, B, C.

50. At the same time with the four Standard pounds four troy ounce weights were constructed by Mr. Oertling, from the same ingot of platinum iridium. Three of them, marked respectively A B and C, were constructed for the Canadian Government, and the fourth, designated as S, for the Standards Department. The form and size of these troy ounce weights are as follows :

Fig. 8.—PLATINUM-IRIDIUM STANDARD TROY OZ.

Height = $1\frac{1}{2}$ in., diameter of base = $\frac{1}{2}$ in. diameter of knob = $\frac{1}{4}$ in.

51. Mode of their verification.

51. The Standard weight of each of the new platinum-iridium Standard troy ounce weights, after they were finally adjusted, has been ascertained by comparison with two of the auxiliary platinum weights used by Professor Miller in determining the true weight of the new Imperial Standard avoirdupois pound PS from the platinum troy lb. T. Some delay has occurred in the construction of the platinum-iridium troy oz. S, and its verification has not yet been completed. The two auxiliary platinum weights are denoted as G and R, and their true weight in a vacuum, in terms of the Imperial Standard PS are shown at p. 45 of Appendix V. to the Fifth Report of the Standards Commission, to be as follows :—

$$\begin{array}{r}
 \text{G} = 439.96067 \text{ gr.} \\
 \text{R} = 39.99616 \\
 \hline
 479.95683
 \end{array}$$

The density of all these auxiliary weights is stated by Professor Miller, (Construction of New Standard lb., p. 815,) to be the same as that of the troy lb, T, viz. : $21.1661 \text{ Log } \Delta = 1.3266525.$

52. Separate determinations of the density of each of the platinum-iridium troy oz. weights were made by hydrostatic weighings, in the same manner as the platinum-iridium pounds. But the probable error of such a determination of the density of so small a weight as 1 oz of platinum-iridium, compared with that of a 1 lb. weight, is found to be so large, (arising chiefly from the greater influence of the suspending wire upon the observed weight of the troy oz. in water,) that it has been considered to be more satisfactory to follow the precedent of Professor Miller's determination of the density of the smaller auxiliary platinum weights, and to assume the density of each of the troy oz. weights to be the same as the mean density of the four platinum-iridium troy lbs., viz.:

$$\Delta = 21.41418. \quad \text{Log } \Delta = 1.3309044.$$

In the actual comparisons of the platinum-iridium troy oz. weights, all the weighings were made with Oertling's balance No. 4. The balance weight used with the platinum Standard weights G and R was the Standard gilt grain weight gr. 0.03 = gr. 0.02956. Hence G + R + gr. 0.03 = gr. 479.98639, here denoted by Z.

53. The results of the comparisons of A with Z, both before and after the hydrostatic weighings, were as follows:—

53. Comparison of A with platinum Standards Z.

FIRST COMPARISON OF PLATINUM-IRIDIUM TROY OZ. A. with Z.

Date.	Weighings.				Results.		
1874 Aug. 21	(1) A 54.05	(2) -	- 44	div. A-Z + 5.80	gr. 1d. = 0.001 0	gr. A = G + R + 1.003537	
	(3) 55.15	(4) -	- 42				
	54.60		43			In air, t. = 18° 23 C mm. b. = 771.71.	
		(5) Z + 0.01	52.95				
		(6)	53.00				
			52.975				

Here, A displaced 0.02750 gr., and Z 0.02784 gr. of air. Excess by Z = 0.00034 gr., whence in a vacuum A = G + R + 0.03503 gr., or A = 479.99186 gr.

SECOND COMPARISON OF TROY OZ. A (after weighing in water) with Z.

Date.	Weighings.				Results.		
1874 Sept. 2	(1) A 51.00	(2) Z	- 38.4	div. A-Z + 6.2125	gr. 1d. = 0.00097	gr. A = G + R + 0.03559	
	(3) 50.55	(4)	- 38.3				
	50.775		38.35			In air, t. = 18° 18 C. mm. b. = 760.	
		(5) Z + 0.01	49.0				
		(6)	48.3				
			48.65				

Here A displaced 0.02705 gr., and Z 0.02840 grain of air. Excess by Z 0.00035 gr. Whence in a vacuum, A = G + R + 0.03524 gr., or A = 479.99207 gr.

The mean of the two comparisons is therefore,

$$A = 479.99197 \text{ gr.}$$

A is consequently 0.00803 gr. less than 480 grains, the true weight of a Troy oz.

54. Comparisons of B with Z.

54. FIRST COMPARISON of PLATINUM-IRIDIUM TROY Oz. B with Z.

Aug. 21	(1) B - 53.80 (3) - 55.25 <hr/> 54.525	(2) Z - 42.25 (4) - 44.00 <hr/> 43.125	div. B-Z - 1.577	gr. 1d. = 0.00095	gr. B = G - 1 - R - 1 - 0.03499
		(5) Z - 0.01 53.50 (6) - - 53.75 <hr/> 53.625			In air. t. = 18° 23 mm. b. = 771.71

As before, excess of air displaced by Z = 0.00034 gr. Whence in a vacuum, A = G - 1 - R - 1 - 0.03466 gr., or A = 479.99148 gr.

SECOND COMPARISON of PLATINUM-IRIDIUM TROY Oz. B with Z.

Sept. 2	(1) B - 50.20 (3) - 51.01 <hr/> 50.625	(2) Z - 37.40 (4) - 37.65 <hr/> 37.525	div. B-Z - 1.655	gr. 1d. = 0.00100	gr. B = G - 1 - R - 1 - 0.03612
		(5) Z - 0.01 47.6 (6) - - 47.4 <hr/> 47.5			In air, t. = 18° 18 C. b. = 760 mm.

As before, excess of air displaced by Z = 0.00035 gr. Whence in a vacuum, B = G - 1 - R - 1 - 0.03577 gr., or B = 479.99260 gr.

Mean of the two comparisons,

$$B = 479.99234 \text{ gr.}$$

Whence B. is 0.00766 gr. less than the true weight of a troy oz.

55. Comparisons of C with Z.

55. FIRST COMPARISON of PLATINUM-IRIDIUM TROY Oz. C with Z.

Aug. 21	(1) C 54.25 (3) 54.50 <hr/> 54.375	(2) Z - 43.50 (4) - 42.90 <hr/> 43.20	div. C-Z - 1.57875	gr. 1d. = 0.00091	gr. C = G - 1 - R - 1 - 0.03463
		(5) Z - 0.01 53.90 (6) - - 54.55 <hr/> 54.226			In air, t. = 18° 23 C. mm. b. = 771.71.

Here, excess of weight of air displaced by Z = 0.00034 gr. Whence in a vacuum C = G - 1 - R - 1 - 0.03429 gr., or C = 479.99112 gr.

SECOND COMPARISON of C with Z.

Sept. 2.	(1) C 49.6 (3) 50.5 <hr/> 50.05	(2) Z - 38.25 (4) - 38.90 <hr/> 38.575	div. C-Z - 1.57375	gr. 1d. = 0.00095	gr. C = G - 1 - R - 1 - 0.03498
		(5) Z - 0.01 49.2 (6) - - 49.1 <hr/> 49.15			In air. t. = 18° 18 C b. = 760 mm.

Excess of air displaced by Z=0.00935 gr. Whence in a vacuum C=G+R+0.03463 gr., or C=479.99146 gr.

Mean of the two comparisons :—C=479.99129 gr.

Or 0.00871 gr. less than the true weight of a troy ounce.

56. The following is a summary of the results of all the comparisons :—

56. Check comparisons of A+B+C with Σ.

gr.
A=479.99197
B=479.99234
C=479.99129

Total - - 1439.97560

The total weight of the three platinum-iridium troy ounces has been checked by a further comparison with the following platinum auxiliary Standard weights used by Professor Miller (See Appendix V. to Fifth Report of Standards Commission, p. 45), viz. :—

gr.
D=1239.88654
M= 79.99290
N= 79.99366
S= 39.99661

1439.86971

Together with gilt grain weight gr. 0.05=0.04962
and gr. 0.03=0.02956

Total 1439.94889=Σ

COMPARISON OF TROY OUNCES A + B + C with AUXILIARY WEIGHTS

Σ

1874.	(1) A+B-C=56.75 (3) -56.60	(2) Σ - 11.00 (4) - 9.25	div. A+B+C=Σ +23.25	gr. 1d. 0.0119	A+B+C=Σ+gr. 0.02776 In air. t. = 180.38 b. = 760 mm.
	56.625	10.125			
		gr. (5) Σ + 0.0335.30 (6) - 34.75			
		35.025			

Here, A + B + C displace 0.08130 gr. and Σ 0.08231 gr. of air. Excess, by Σ = 0.00099 gr. Whence in a vacuum A + B + C = Σ + 0.02677 gr. or A + B + C = 1439.97566 gr.

The very close accordance of this result with that of the total of the previous weighings of A, B, and C. appears to be quite satisfactory.

57. It remains only to state the weight in Standard air of these platinum-iridium ounce weights in terms of the commercial Standard pound of brass W, or their error as compared with $\frac{480}{7000} W$, which displaces 0.070199 grain of air, whilst the platinum-iridium troy ounce weight displaces 0.02728 gr., showing excess by W = 0.04451 gr., viz. :—

57. Weight in Standard air of A, B, C, in terms of W.

Platinum-iridium troy oz. A = $\frac{480}{7000} W + 0.03648$
B = " W + 0.03685
C = " W + 0.03580

Standard Bronze Kilogram C.

58. Standard Bronze Kilogram C. 58. This Standard Kilogram has been constructed of bronze by Mr. Oertling. Its form is cylindrical, with a knob, the cylinder having a groove cut in it at two-thirds of the height (as shown hereinafter in Fig. 9). It is here distinguished as C.

59. Its Verification, and determination of density. 59. It has been verified by comparison with the gilt bronze kilogram B which was constructed in order to be the British Commercial Standard unit of metric weight. The value of B in a vacuum, in terms of the primary unit of metric weight, the platinum kilogramme des Archives A, was found in 1869, by comparison with the platinum kilogram K of the Standards Department, (see p. 171 of App. xii. to Fifth Report of Standards Commission,) to be as follows:—

$$B = A + 10 \cdot 34 \text{ mgr.}$$

This comparison of C with B also enables its value to be determined in terms of the French brass kilogram L, which serves as the Standard in France for adjusting the kilograms used in commerce.

It was shown by Professor Miller (Account of Construction of Imperial Standard lb., p. 894), that from a comparison made in 1850,

$L = A + 89 \cdot 5$, in air $t. = 18 \cdot 9$ C, $b = 763 \cdot 80$, in which it was computed that L displaced 150·83 and A 63·94; whence in a vacuum

$L = A + 2 \cdot 61$. The density of each of those Standard kilograms was thus assumed to be ΔA at 0° C. = 20·5487.

ΔL at 0° C. = 8·2063.
The density of B was found by Professor Miller, from hydrostatic weighings, to be ΔB at 0° C. = 8·3291.

In our Standard air ($t. = 62^\circ$ F., $b. = 30$ in. (See p. 172 of App. xii. to Fifth Report),

A displaces 59·25 milligrams of air.
L " 151·75 " "
B " 146·23 " "

Whence in air,

$$\begin{aligned} L + 2 \cdot 61 - 151 \cdot 75 &= A - 59 \cdot 25, \text{ or } L = A - 89 \cdot 89 \\ \text{and } B + 10 \cdot 34 - 146 \cdot 23 &= \text{ " } \text{ or } B = A - 76 \cdot 64 \\ \therefore B &= L + 13 \cdot 25 \end{aligned}$$

Allowing for the excess of weight of B (2·61), the true excess of weight of B, both in a vacuum in terms of A, and in air in terms of L, may therefore be taken to be 10 milligrams, or

$$B = 1000 \cdot 010 \text{ grammes.}$$

The results of the first comparisons of C, after careful adjustment with B, were as follows:

		Value of 1 div.			
		mgr.	div.	mgr.	mgr.
(1)	1874, Oct. 3	C + 10·380	B - 9·81	0·144	or + 1·41
(2)	" 6	" + 6·480	" - 5·28	0·145	" - 0·77
(3)	" 8	" + 6·480	" + 0·71	0·162	" + 0·12
(4)	1874, Nov. 6	" + 15·31	" + 15·31	0·151	" + 2·31

Whence the value of \mathcal{C} in terms of \mathcal{R} were found as follows :—

- (1) $\mathcal{C} = \mathcal{R} - 8.97$ mgr.
- (2) " " " - 7.25
- (3) " " " - 6.36
- (4) " " " + 2.31

It is thus seen that the weight of \mathcal{C} gradually increased as its surface became oxidised. It was, therefore, considered desirable that the oxidation should continue until the surface of the metal was more fully oxidised. Meanwhile the kilogram was returned to Mr. Oertling to have its weight slightly reduced, by removing a portion of the metal from underneath its base with a fine file.

The further comparisons of \mathcal{C} were as follows :—

It was thought advisable also to compare \mathcal{C} with the platinum kilogram \mathcal{E} as a check upon the comparisons with \mathcal{R} , and to ascertain that \mathcal{R} had not altered in weight since its comparison with \mathcal{C} in 1869 :—

		mgr.	div.	mgr.	mgr.
(5)	1874, Nov. 16	$\mathcal{C} - 9.72 \pm \mathcal{R} - 7.418$	1	$= 0.197$	$\mathcal{C} = \mathcal{R} - 8.26$
(6)	" 21	" " " - 13.437	1	$= 0.170$	$\mathcal{C} = \mathcal{R} - .44$
(7)	" 23	$\mathcal{C} - 1.87.48 \pm \mathcal{E} - .206$	1	$= 0.161$	$\mathcal{C} = \mathcal{E} - 86.80$

Comparison (5) was taken in air, $t = 53^{\circ}.95$ F. $b = 29.7$ in. before weighing \mathcal{C} in water for determining its density. Comparison (6), in air, $t = 52^{\circ}.9$ F $b = 30.2$ inches, was taken after the weighing in water. The mean result is—

$$\text{In air } t = 53^{\circ}.43, b = 29.95, \mathcal{C} = \mathcal{R} - 7.85 \text{ mgr.}$$

The density of \mathcal{C} being very nearly the same as that of \mathcal{R} , viz. : $\Delta \mathcal{R} = 8.3291$, no correction for weight of air displaced is requisite. As, therefore, in ordinary air—

$$\begin{aligned} \mathcal{C} &= \mathcal{R} - 7.85 \text{ mgr.} \\ \text{and } \mathcal{R} &= \mathcal{L} + 13.25 \\ \therefore \mathcal{C} &= \mathcal{L} + 5.40 \end{aligned}$$

Weighed in water $t = 14^{\circ}.34$ C. on Nov. 18th, 1874, against bronze gilt grain weights of known density, in air $t = 14^{\circ}.34$ C, $b = 757.51$ mm., $\mathcal{C} = 880.19051$ grammes ;

$$\therefore \Delta \mathcal{C} \text{ at } 0^{\circ} \text{ C.} = 8.3374 ; \log. \Delta \mathcal{C} = 0.9210307.$$

Again, weighed in water, $t = 14^{\circ}.26$ C. on Nov. 19, 1874, against the same series of bronze gilt grain weights, in air $t = 15^{\circ}.14$, $b = 753.297$ mm., $\mathcal{C} = 880.19378$ grammes ;

$$\therefore \Delta \mathcal{C} \text{ at } 0^{\circ} \text{ C.} = 8.3377 ; \log. \Delta \mathcal{C} = 0.9210506.$$

These two determinations agree very closely, the mean result being as follows :—

$$\Delta \mathcal{C} \text{ at } 0^{\circ} \text{ C.} = 8.3375 ; \log. \Delta \mathcal{C} = 0.9210406.$$

In comparison (7), $t = 10^{\circ}.5$ C., $b = 764.58$ mm., \mathcal{C} displaced 149.92 mgr., and \mathcal{E} 59.11 mgr. of air. Whence—

$$\begin{aligned} \text{In a vacuum } \mathcal{C} &= \mathcal{E} + 4.01 \text{ mgr.} \\ \text{And as } \mathcal{E} &= \mathcal{A} - 1.56 \\ \mathcal{C} &= \mathcal{A} + 2.45 \\ \text{And as } \mathcal{A} &= \mathcal{L} - 2.61 \\ \mathcal{C} &= \mathcal{L} - 0.16 \\ &61 \end{aligned}$$

	mgr.
But in Standard air, \mathbb{L} displaces	151.75 of air.
\mathbb{C} displaces	146.38 „
Excess by \mathbb{L} - - -	+ 5.37
	<hr/>
$\therefore \mathbb{C} = \mathbb{L}$	+ 5.21

This last result is to be taken as showing the true weight of \mathbb{C} in air. It agrees so nearly with the final result of the comparisons with \mathbb{B} as to prove that this gilt bronze kilogram has not varied in weight since its comparison with \mathbb{C} in 1869.

The weight of \mathbb{C} thus shown in relation to the brass commercial Standard kilogram in France \mathbb{L} is sufficiently near for all practical purposes. The error tolerated in France in the verification of Local Standard kilograms is 20 mgr. in excess or deficiency; and in commercial kilograms when compared with the local Standards, 150 mgr. (see p. 89 of Appendix to Second Report of Standards Commission, 1869.)

II. DEPARTMENTAL STANDARD WEIGHTS.

60. Avoirdupois Standards, *b*. 60. Only one set of Departmental Standard avoirdupois weights has been recently constructed for Canada by Mr. Oertling, their material being bronze. The series is as follows:—

lb.	oz.	dr.*
50	8	8
30	4	4
20	2	2
10	1	1
5		$\frac{1}{2}$
3		
2		
1	lb.	lb.
0.5	0.05	0.005
0.3	0.03	0.003
0.2	0.02	0.002
0.1	0.01	0.001

Each weight is marked *b* in addition to its denomination. The set of weights of the same series as this set, which was verified here in December, 1872, and issued under Indenture No. 1,506, is to be distinguished as the *a* set of Canada Departmental Avoirdupois Standards. The set (*b*) is packed in two mahogany boxes having brass plates engraved to show their contents, in the following form, viz:—

Standard Avoirdupois
Weights.
50--30 lb.
L. Oertling, London.

Their shape is the same as that of the official Standard bullion weights of this Department, viz: cylindrical with a knob.

61. Their verification,

61. These Standard weights were verified by comparison with the Reference Avoirdupois Standard set of this Department, *R*, which were re-verified in 1872, since which year they have been set aside for special comparisons. The errors and values of these Canada Standard weights have thus been determined from *R* in terms of *W*, the brass commercial Standard unit of weight.

They have been adjusted as nearly as possible to the weight of R, and their errors may be disregarded not only in departmental comparisons, but even in comparisons requiring greater precision.

The following is a tabulated list of the values and errors of these Canada Standard weights, which bear the official stamp of the Standards Department :—

ACTUAL VALUES and ERRORS of DEPARTMENTAL STANDARD AVOIRDUPOIS WEIGHTS, *b*.

Standard Troy Decimal Bullion Weights.

62. Two sets of troy decimal bullion Standard weights have been constructed by Mr. Oertling, of bronze, and of the following series, viz. :—

- Oz.
- 500
- 300
- 200
- 100, &c., to
- 0.001

62. Standard troy decimal bullion weights.

Each set is marked respectively *a* and *b*, and is packed in a mahogany box having a brass plate engraved thus :—

a
Standard Troy Weights.
500—0.001 oz.
L. Oertling, London.

Their shape is the same as that of the platinum Troy ounce, viz., a conic frustum with a knob, that being the form adopted by Mr. Brunel for troy weights in Canada.

63. Their verification.

63. Both sets have been verified by comparison with the official bullion Standards of this Department, which have been recently verified (*See* Eighth Annual Report of Warden of the Standards, p. xii). The weighings were made in the finest balances of the Department, and by Gauss's method of alternation. Subsequent check comparisons of these weights showed no greater probable error than one division of the balances in which they were compared.

Each of these Canada Standard Bullion weights bears the verification mark of the Standards Department. The errors are very small, and may be disregarded in all comparisons of Departmental Standards. Their values in terms of $\frac{5760}{7000}$ of our commercial brass pound W are given in the following tabulated statement:—

ACTUAL VALUES and ERRORS of CANADA DECIMAL BULLION STANDARD WEIGHTS.

Standard Metric Weights.

64. One set of Metric weights has been constructed by Mr. Oertling, consisting of the following series, marked *a*, viz :—

20 kilo.	500	50	5	0.5	0.05	0.005 gramme.
10	200	20	2	0.2	0.02	0.002
5	100	10	2'	0.1	0.01	0.002'
2'	100'	10'	1	0.1'	0.01'	0.001

The weights from 20 kilos to 0.5 gramme are of bronze, the smaller weights of platinum.

Their shape is the same as that proposed by the Standards Commission to be adopted in this country as a distinctive shape for metric weights, viz. : cylindrical with a knob, the cylinder having a groove cut at two-thirds of its height, as shown in the following figure :—

Fig. 9.— FORM OF STANDARD METRIC WEIGHT.

65. This set of metric weights has been verified by comparing in the first instance the kilo. *a* with the gilt bronze kilogram \mathfrak{K} , the true weight of which has been shown in § 59 to be 1000.010 grammes.

The values of the other weights from 20k. to 0.001 gr. *a*. were subsequently determined by comparison with 1k. *a*.

The check comparisons showed that there was no greater probable error in the values so ascertained than 1 division of the balances in which the weighings were made.

All the weights of the set have been most carefully compared, and their errors, which are small, are shown in the following tabulated statement:—

ACTUAL VALUES and ERRORS of STANDARD METRIC WEIGHTS *a*.

DECIMAL GRAIN WEIGHTS.

66. Decimal grain weights *a*, *b*.

66. Two sets of decimal grain weights from 1,000 to 0.01 grain, in the series 6, 3, 2, 1, have been made by Mr. Oertling for Canada. Each set is contained in a small square mahogany box, one box containing the decimal grain weights marked *a* is labelled

Canada
Departmental Standards,
Grain Weights,
1000 to 0.01 grains, *a*
1874.

The other box containing the set of decimal grain weights marked *b*, has a corresponding label.

The weights 1000—10 gr. are of hard brass, which is one of the best metals of which Standard grain weights can be made. The weights 5—1 gr. are of platinum wire, and those below 1 grain are of aluminium wire.

7. Their verification

67. Both sets of Canada grain weights have been compared with the official Standard gilt grain weights, the values of which were most carefully deduced from the bronze gilt lb. No. 34, in 1870 (*v*, 8th Report, p. xvi). The errors, which are very small, are given in the following tabulated statement:—

ACTUAL ERRORS and VALUES of CANADA GRAIN WEIGHTS, *a.* and *b*

Denomination.	Actual Error.	Actual Value.
Grains.	Grains.	Grains.
1000 (a)	-1-0'01439	1000'01439

The weights 6...0.01 grain of the (b) set are marked with a dent

Fig. 10.—FORM OF SMALL GRAIN WEIGHT (b) SET.

It should be remembered that the accuracy of all comparisons of Standard weights depends on the value of the small weights which must be necessarily used in determining differences of Standards compared ; and it is thus evidently of importance that Mr. Brunel should at once possess a *verified* set of small grain weights. With this view this Department has obtained from Mr. Oertling the above two sets of weights and has verified both sets ; although no order for grain weights, appears to have been given in this country by Mr. Brunel, or to be comprised in the list stated in his First Report. Their cost is small.

III.—OFFICIAL STANDARD WEIGHTS.

68. Fourteen sets of official Standard avoirdupois weights.

68. Fourteen sets of bronze avoirdupois weights have been made by Mr. Oertling of the following series viz. :—

lb.	oz.	dms.
50	8	8
30	4	4
20	2	2
10	1	1
5		$\frac{1}{2}$
3		
2		
1		

There are thus no *decimal parts of the avoirdupois pound*, similar to those of the Departmental Standards. The 14 sets are lettered successively A to N, each weight having stamped upon the distinctive letter of its set. They are of the same shape as the departmental avoirdupois weights, and each set is packed in three boxes thus :—

50	- -	30lb. in 1 box.
20lb.	-	1oz. in 1 „
8	- -	$\frac{1}{2}$ dm. in 1 „
—		
3 boxes.		

69. Their verification.

69. All these weights were carefully verified by comparison with our official Standard avoirdupois set S, the very slight errors of S having been recently determined (Eighth Report Warden, p. xi.), and being so small that they may be entirely disregarded for all practical purposes. All the Canada weights have been adjusted so as to show no appreciable difference in weight from S, and no table of errors is therefore proposed to be given for these weights. They are excellent official Standards.

PART III.—STANDARDS OF CAPACITY.

I.—DOMINION STANDARDS.

70. Three Standard Gallons, A, B, C.

70. Besides the two gallon measures which accompany the two sets of Departmental Standard Measures of Capacity, herein-after referred to, there have been provided three bronze Dominion Standard Gallon measures which have been verified by the more accurate method of weighing their contents of distilled water. These three Dominion Standards are of the same shape as the Departmental Standards, viz., cylindrical, having a diameter of $7\frac{1}{2}$ inches, and height of $6\frac{3}{4}$ inches, and they are engraved respectively A, B, and C. One of the gallons (A) is fitted in strong iron fireproof box, made by Chubb & Son, the other two Standard gallons are fitted in mahogany boxes, placed in thin sheet iron boxes, which are furnished with locks and keys, and labelled Dominion of Canada Standard Gallon, B, or C.

71. Their verification.

71. These three Standard gallon measures have been verified by several comparisons of the weight of their contents of distilled water, $t=62^{\circ}$ F. $b=30$ inches, with the Official Standard 10 lb. weight O, the unit of the weight of a gallon of distilled or pure water, at the normal temperature and barometric pressure.

In the following weighings of each of the Standard gallons for Canada, Oertling's balance No. 1 was used. The Canada gallon, with its glass disc, was first accurately counterpoised with a similar bronze Standard gallon and its disc. It was then filled with distilled water and weighed against the Standard 10-lb. O added to the counterpoise. The

true weight of O in Standard air, in terms of the brass commercial Standard W, has been found to be 70,000·546 grains (see Fifth Report, Standards Commission, Appendix V., p. 65). The corrections for temperature and atmospheric pressure are calculated from the Tables at pp. 79-81 of Appendix VI. to the Fifth Report of the Standards Commission, and from p. 51 of the Appendix to the Sixth Report of the Warden of the Standards, these Tables having been furnished or approved by Professor Miller, and computed from Regnault's determination of the weight of atmospheric air.

							Mean	69,972·26

II.—DEPARTMENTAL STANDARDS OF CAPACITY.

72. Two complete sets of Imperial Standard Measures of Capacity, ^{72. Two set} to be denoted respectively *a* and *b*, have been constructed of bronze by ^{of measures of} capacity, *a*, *b*. Mr. Oertling, each consisting of the following 10 measures :—

- Bushel
- $\frac{1}{2}$ " Peck
- Gallon
- $\frac{1}{2}$ " Quart
- Pint
- $\frac{1}{2}$ " Gill
- $\frac{1}{2}$ "

Each measure is marked with its denomination and the inscription " Dominion of Canada, 1874." The figures 1 or 2 stamped on the bottom rim of the measure, further distinguish the set to which it belongs.

A special glass disc is furnished for each measure, and each set is packed in three strong mahogany boxes, viz. :—

- Bushel in 1 box
- $\frac{1}{2}$ Bushel to peck in 1 "
- Gallon to $\frac{1}{2}$ gill in 1 "

3 boxes

73. Their verification.

These sets are of the usual form and quality of local Standards supplied in this country to inspectors of weights and measures.

73. With the exception of the gallon measure of each set, these measures were verified by *measuring their contents* of water in the manner described at p. 79, of Appendix VI. to the Fifth Report of the Standards Commission, that is to say, by transferring the water contained in the Official Standard measure into the Canada Standard. On the present occasion, however, the result of this method of comparison was checked by re-transferring the contents of the Canada measure into the Official Standard. Two results were thus obtained, the mean of which gives the ascertained error of each measure stated in grains weight of water, as follows, viz. :—

—	Bush.	½ Bush	Peck.	½ Gall.	Quart	Pint.	½ Pint	Gill.	½ Gill.
<i>a set.</i>									
Standard into Copy ..	—38	—137	—45	—11	—	—1·9	—	—2	—1·4
Copy into Standard ..	—19	—130	—56	—15	—3	—1·2	—1·3	—	—1·1
Mean	—28·5	—133·3	—50·5	—13	—1·5	—1·5·5	—1·1·5	—1	—1·2·5
<i>b set.</i>									
Standard into Copy ..	—147	—121	—141	—25	—7	—5	—13·5	—2	—1
Copy into Standard ...	—23	—14	—33	—11	—2	—3	—2	—	—10·5
Mean	—135	—117·5	—137	—7	—4·5	—1	—10·75	—1·0	—0·25
Error allowed in excess or deficiency	280	140	70	25	10	10	8	8	4

This method of verification gives sufficiently accurate results for all departmental comparisons, but as occasions may arise when greater precision may be required, the gallon measure of each set has been verified by the more accurate method of *weighing its contents of distilled water*.

The weighing was made in No. 1 balance, according to the method stated in the Fifth Report of the Standards Commission, pp. 79-80. From the weight of the contents of water in the gallon thus determined, the precise contents of each of the other measures may be ascertained at any future time.

$$\begin{aligned} \text{Contents of gallon (a)} &= \text{Standard gallon} - 46\cdot2, \text{ or } = 69953\cdot8 \text{ gr.} \\ \text{" " (b)} &= \text{" " } - 79\cdot8, \text{ or } = 69920\cdot2 \text{ gr.} \end{aligned}$$

The errors of these gallons *a* and *b* are greater than is allowed by the official regulations, but time did not permit any re-adjustment of these measures to be made, and consequently these errors should be considered in all comparisons of *a* and *b*.

Each measure, excepting the gallon, has stamped on its edge the verification marks of this Department. On the gallon measure these marks were engraved by means of the engraving machine. The deficient supply of water to the turbine did not allow all the measures to be thus engraved without too great delay.

PART IV.—STANDARD GAS MEASURES.

74. Description of Standard gas measures.

74 These Standards comprise a Standard cubic foot "bottle," the cubic foot being the unit of gas-measure, together with

- a 10 cubic feet gas holder,
- a 5 " "
- a 100 light wet test meter,
- a 20 " "

CUBIC FOOT BOTTLE.

75. The unit of gas measurement, the cubic foot, is a conical brass vessel similar in shape to the Standard cubic foot bottle of this Department, as shown at p. 132 of the Fifth Report, Standards Commission. It has, however, a glass tube affixed by a brass cap to the upper end of the bottle, upon which the defining limits of the measure of a cubic foot is marked by a fine line, thus :—

Fig. 11.—STANDARD CUBIC FOOT BOTTLE.

The cubic foot bottle is furnished with a special apparatus by means of which the air may be expelled from the interior of the bottle as water

enters, and transferred to any instrument, for instance, a gasholder, which may be required to be tested. The principle of this apparatus is similar to that shown at p. 136 of the above quoted paper.

76. Its verification.

76. The Canada cubic foot bottle was verified by weighing its contents of distilled water, as defined by the lines on the glass tube ($t=62^\circ$, $b=30$ inches) in Kater's large balance, with the following results:—

No. of Comparison.	Date.	Weight of Contents of Distilled Water.			Correction for $t-b$.	Weight of Contents of Distilled Water $t=62^\circ$ $b=30$ inches.
		grains.	t.	b.		
	1874.					
1	Oct. 17	436247.39	60.57	29.91	-39.57	436207.82
2	„ 21	436253.39	59.70	29.60	-68.19	436185.20
					Mean	436196.51

The legal contents of the cubic foot at the stated normal temperature and barometric pressure are 62.321 lbs. or 436.247 gr. weight of water.

After each comparison (1) and (2) a temporary mark was made on the glass tube g , showing the height of the water in the tube when the bottle contained a cubic foot of water $t=62^\circ$ $b=30$ inches. At a mean distance between these two temporary marks the final mark was made, thus V—R, with a diamond. The cubic foot bottle as marked has therefore no error.

Should the glass tube g be broken, any one of the six spare marked glass tubes which accompany the "bottle" may be substituted for it.

The official seal of verification is placed upon the Canada cubic foot bottle on the lower part, immediately above the line marked d' .

Standard Gasholders.

77. Standard gasholder.

77. The Standard gasholders are similar in shape and principle of construction to the official gas measuring Standards of this Department, as shown and explained at pp. 131-2 of Appendix VIII. to the Fifth Report Standards Commission. They are, however, much less costly instruments, and are not so elaborately finished as the Standards themselves, although by careful use and occasional reverification they ought to give results practically as accurate as those obtained by the Standard gasholders of this Department.

78. Their verification.

78. The verification of the gasholders was carried out according to the official directions given on p. 136 of Appendix VIII. to the Fifth Report. But a larger number of comparisons was made on account of the primary character of these gas measuring instruments.

The following extracts from the official register of gas-measuring Standards will show the errors, &c., at $t=62^\circ$ $b=30$ inches of the Canada Standards.

10-Foot Gasholders.

Ascertained capacity of Canada Standard	=	9.992	Cubic feet.
Total error of scales from 0 to 10 feet	=	-0.008	

5-Foot Gasholder.

Ascertained capacity of Canada Standard	=	4.996
Total error of scales from 0 to 5 feet	=	-0.004

STANDARDS DEPARTMENT, BOARD OF TRADE, LONDON.

VERIFICATION OF CANADIAN STANDARD 10 C.FT. GAS HOLDER.

Alex. Wright and Co., Engineers, Westminster.

DOMINION OF CANADA.

DEPARTMENTAL STANDARD GAS-METER AND CUBIC-FOOT APPARATUS.

Messrs. Wright and Co.

The errors of the individual feet of the respective scales were found to be as follows. It should be remembered, however, that the values of these individual feet cannot be ascertained with great accuracy, as there are certain unavoidable practical difficulties in the verification of parts of the scale (for instance, in the determination of temperature of the particular foot measured) which prevents the parts having the same proportional accuracy as the whole run of the scale. Thus, if an accurate measure of 1 cubic foot is wanted, recourse must be had to the "bottle" measure.

Subdivision of 10-Feet Gasholder.

Ascertained capacity of each foot marked on the scales of the 10-foot gasholder.

Scale reading of Canada Gasholder.		cubic feet.	or error =
0 ... 1	=	0.990	-0.010 cubic foot.
1 ... 2	=	1.000	—
2 ... 3	=	1.000	—
3 ... 4	=	1.000	—
4 ... 5	=	1.000	—
5 ... 6	=	1.000	—
6 ... 7	=	1.000	—
7 ... 8	=	1.000	—
8 ... 9	=	1.000	—
9 ... 10	=	1.000	—

Subdivisions of 5-Feet Gasholder.

Ascertained error of each foot marked on the scales of the 5-foot gasholder.

Scale reading of Canada Standard Gasholder.		cubic foot.		or error=
0 .. 1	=	1.010	+	0.010 cubic foot.
1 .. 2	=	0.994	—	0.006
2 .. 3	=	1.001	+	0.001
3 .. 4	=	1.004	+	0.004
4 .. 5	=	0.997	—	0.003

The errors of the several feet marked on the scales of the 5-foot gas holder are larger than is desirable, but considerable delay would have arisen in substituting other scales. These errors, as well as those previously stated, should always be allowed for in the use of these gasholders.

Each of the scales of these gasholders is attached to its respective bell by means of an angular brass plate. This plate bears the official stamp in fusible metal, so affixed as effectually to prevent the removal of any one of the scales without breaking the fusible metal stamp.

Test Gas-meters.

79. The test-meters are similar in shape and principle of construction to the official Standard test-wetmeters, as shown in the diagram on p. 141 of Appendix VIII. to the Fifth Report. These instruments were all made by Messrs. Wright & Co., of Westminster.

The verification of the test meters was made according to the methods explained at pp. 255-256 *et seq.* of the above-mentioned paper.

The test-meters have practically no error, as the "water line" marked upon each of their three glass tubes after their verification thus, V—R, shows their true measuring capacity of 10 cubic feet and 5 cubic feet at one complete revolution of their respective drums or wheels ($t.=62^\circ$ $b.=30$ inches). They are most excellent Standards. The index of each meter was tested by "spinning up," as it is technically called, that is to say, by causing each of the wheels which moves a dial of the index to revolve 100 times.

Each meter has a brass plate affixed to it for bearing the official stamp, in fusible metal, thus :—

(SS denote the Official Seals over Screw Heads of Brass Plate.)

The verified index of each meter is also securely guarded by the official stamp on sealing wax.

APPARATUS FOR TESTING THE ILLUMINATING POWER AND PURITY OF GAS.

Standard Photometer.

80. Standard Photometer.

80. This photometer appears to be an instrument of considerable excellence. The details of its construction and method of use are explained in the paper and diagram supplied by its maker, Mr. W. Sugg, of Westminster. It is similar in principle of construction to the photometer known as Letheby's 60-inch open photometer. As this Department, however, has neither the appliances nor the legal authority for the accurate official verification of a Standard photometer, this instrument has been approved by this Department as generally agreeing with the requirements of the Canadian Act of 36 Vict. c. 48, and as having been carefully made in accordance with Mr. Brunel's directions.

The meters, clocks, and measuring glasses, accompanying the photometer, were, however, verified in this Department, in accordance with the arrangements made with Mr. Brunel, as explained in the marginal notes at pp. 42-3, in Appendix VI. of his First printed Report of this year :—

81. Verification of its gas-meter.

81. *Verification of Three Light Wet Meter forming part of the Standard Photometer for Canada, made by Mr. Sugg.*

This meter has a clock attached to it, and is so arranged that by the observation of one revolution ($=\frac{1}{12}$ foot) its error per cent. and the rate per hour can be determined. The clock was timed by comparison

with the seconds pendulum of the late Sir J. South, which is now used in the Standards Office as the seconds measurer. The indices were tested to the extent of their registering, power, *i.e.*, 1 foot; the water line was adjusted to that previously marked by Mr. Sugg.

Quantity passed through Meter as shown on scales of 10 feet Gasholder. Cubic feet.	Works at a pressure of	Rate per Hour. Cubic feet.
Mean 10.0095	0.25 inch.	5

“The water line at which the observations were made was marked with a diamond thus V—R. On the 15th instant the capacity of the meter was tested at the above water line and at its normal rate (5 ft. per hour), and found correct. This meter does not possess any greater accuracy than may be found in the ordinary meters supplied with photometers.”

The photometer was approved by this Department, and was stamped with the official stamp impressed upon fusible metal on the middle of the brass plate on the front of the Photometer stand, as shown in the following figure :—

Fig. 12.—OFFICIAL STAMP ON STANDARD PHOTOMETER.

GLASS MEASURES SUPPLIED WITH SULPHUR TESTING APPARATUS.

82. These measures comprise three flasks, containing 10 fluid ounces each, and three open graduated lipped measures of 20 ounces each. The form of these measures may be seen in the following figures :—

82. Description and verification of these measures.

Fig. 13.—GLASS MEASURING FLASK. Fig. 14.—GRADUATED GLASS MEASURE.

The capacity of each of these measures was verified by discharging the contents of the Standard 10 oz. Burette into them several successive times. The open-lipped measures are of the kind usually supplied to apothecaries, and can only be used for the most ordinary chemical purposes. The 10 fluid oz. flasks, containing 4,375 grains weight of water, are more accurate measuring instruments, and their ascertained mean errors are as follows :—

No. 1. Flask	=	+ 12	grains weight of water at 62° F.
No. 2. "	=	+ 12	" "
No. 3. "	=	+ 20	" "

The method adopted in this Department for verifying such glass measures is explained at page 93 of the Fifth Report of the Standards Commission. The diamond mark V—R on these measures attests their verification in this Department.

APPENDIX C.

NOTE

ON THE FORM WHICH IT IS ADVISABLE TO ADOPT FOR THE METRES TO BE CONSTRUCTED BY THE INTERNATIONAL COMMISSION.

By **M. TRESCA.**

The International Commission on the Metre has been entrusted with the duty of constructing a fundamental standard, and copies as nearly as possible similar, for the several States interested. All that relates to the construction of these standards is therefore invested with great interest, and the question has presented itself whether the shape of the bars intended to form the metres should not form the subject of a special study.

In a work published in the month of April last, Baron Wrede presented a series of remarks on the advantages of the tubular form in view of the rigidity of the rules; since then we have had an opportunity of verifying such tubular rules, and, while admitting the great advantages which they possess as respects the facility with which they acquire the temperature of the circumambient medium in consequence of the thinness of their walls, it was impossible for us to avoid taking into serious consideration the grave defects which they present with regard to the position of the external surface on which the divisions are traced. Indeed, these divisions cannot be usefully placed except on the plane of the neutral line; and it was while seeking to reconcile the double condition of great rigidity and a good position of the subdivisions, as well as an easy distribution of heat throughout the whole mass, that a specially favorable section, which the object of this note is to explain, was brought under our notice.

I.—*Remarks on the Rigidity of the Bars employed in the Construction of the Standards.*

The metre of the archives, made of platinum, has a rectangular section of twenty-five millimetres in width by four in thickness, otherwise a section of 100 square millimetres, corresponding to that of a square, the side of which measures ten millimetres.

Rigidity of bars employed in the construction of the Standards.

The deflexion which would result when it is held in the hand, if its wider face were kept horizontal, compels the operator instinctively to hold it on the edge, in which position the rule is possessed of much greater rigidity; but when it is necessary to replace the rule on a flat surface, it must as a matter of course pass through intermediate positions in which that rigidity varies, and whatever precaution may be taken in that proceeding, if that form were adhered to, it would be impossible ever to be certain that all injurious deformation had been sufficiently avoided.

The platinum metre of the Conservatoire is of the same width, but its thickness is reduced to 3.5 millimetres.

Most of the brass metres constructed by Gambey have a rectangular section of thirty millimetres by seven; their minimum rigidity would therefore be notably greater if the co-efficient of elasticity were the same.

The standard yards constructed in England, of Baily's metal, have a much larger square section of one inch to the side, or twenty-five millimètres by twenty-five. Their section is therefore 6.25 times greater than that of the metre of the archives, and their rigidity is not only satisfactory and equal when the rule is placed on any one of its four faces, but it is also known that the rigidity is still the same when the faces are inclined at 45°, which does away with all fear of torsion during the operation, with great advantage to the preservation of the rule.

With regard to the standard end rule, this arrangement is everything that could be desired, if, as in the case of Baily's metal, the material of the rule is not of any considerable value; but when it is proposed to use platinum, the price of which is extremely high, having recourse to a section six times greater, is no longer a matter of indifference, and it becomes at once advisable to adopt a section which, with equality of area, will ensure to the rule the greatest degree of rigidity.

We thus admit that the question of economy is not without its importance, and although the cost price of a standard must be looked upon as a matter of secondary importance as respects the choice to be made, it is not unadvisable to seek, the area of the transverse section being given, what shape will give the most favorable results with regard to rigidity.

To obtain this, a considerable height of the section would be favorable, and if it is desired that the rigidity should be about the same in the two directions, the tendency is to adopt a square transverse section, or a section derived from that square form.

It is thus evident, in this first point of view, that if all the material of a square were collected into diagonal mouldings in the form of a letter X, it would, so far as rigidity is concerned, be utilized in much the most advantageous manner.

II.—*Special Importance of the Plane of the Neutral Line.*

Special importance of the Plane of the Neutral Line.

In the construction of graduated measures, the question of the shape which it is expedient to adopt is much more complex. Thus it is known, to speak only for the present of the deflexion to which the rule may be subjected between the points on which it rests, that the only length in which no sensible change occurs, is that running along the plane parallel to the supports, and passing through the centres of gravity of all the transverse sections. Outside of this plane all convex longitudinal lines are lengthened, and all concave lines are shortened, and to a greater extent in both instances according as the deflexion is greater, and as the external faces are more remote from the plane of the medium line.

In a square section, for instance, the deflexion is, all other things being equal, inversely proportionate to the square of the height, and the shortening of the upper concave face is proportionate to that same height, so that in a word, the final variation in length takes place in inverse proportion to the thickness.

To avoid this influence, which is by no means to be neglected, recourse has been had, in the case of a certain number of standards, to different arrangements which admit of the tracings which define their length being placed on the medium plane. In some instances, wells are excavated to the depth of one-half the thickness of the bar, and at the bottom of these wells the length is marked by the tracings. In others, the whole of the

extremities are reduced to one-half their normal section, thus preserving projections one-half less in height, on which, in like manner, are marked the tracings which define the measure.

In both cases, a small portion of the medium plane of the rule is exposed, so as to avoid the influence resulting from its greater or less thickness.

We have considered that this partial alteration of the transverse section of the rule in a greater or less portion of its length was not devoid of inconvenience, in view of the interruption which would result from it with respect to certain longitudinal lines of molecules, and we have endeavoured to solve the problem by causing to remain exposed throughout its whole length a part of the medium plane, wide enough to allow of the terminal tracings being marked upon that plane at a slight distance from its extremities. In short, this entails the employment of an exactly prismatic shape, the strict section of which is so arranged that the horizontal plane which contains the centre of gravity forms a species of tablet, accessible to tracing tools and to examination by the microscope.

III.—*Various Shapes corresponding with the foregoing conditions.*

The question being thus put, the solution which first presents itself is one consisting in making a groove along the upper face of a rectangular rule, and to make that groove deep enough and wide enough to allow of the centre of gravity of the remaining section being precisely placed on the plane forming the bottom of the groove. Various shapes corresponding with foregoing conditions.

In this way a section would be obtained in the form of a letter U, the centre of gravity of which would be necessarily placed below the middle of the height, so as to compensate, in the equation of matter, by a diminution of height the influence of the portions preserved in the upper part of the piece.

To avoid this inconvenience, we might also lighten the rectangular section below, and supposing the two grooves to be symmetrical in relation to the vertical axis of the rectangle, we should have a section in the shape of a letter H, the horizontal moulding of which might be placed near the middle of the height, and correspond along its upper face with the position of the centre of gravity of the section.

This double modification may be easily introduced in a section in the first instance rectangular or square; and it will be at once apparent that in the latter case the solid will present great rigidity in the transverse direction, as setting aside the slight defects of symmetry which the solution entails, it will be found to possess the general characteristic of double T irons, made use of for the very same reasons in large buildings.

Thus the material is tolerably well distributed, for it is in greater part assigned to the outer portion of the section, at least in so far as the two uprights of the H are concerned. As to the intermediate moulding which must necessarily be wide enough to allow of its being reached by the tracing tool, it will of course have but a very slight effect on the amount of *vis inertiae*, for which reason it is advisable to shorten that moulding as much as possible, at the same time widening out the lateral faces. We shall shortly see that in this way greater utilization of the material is attained, and this leads us, in view of the best position to be given to the plane of the neutral line, to the form of the letter X, which has already presented itself to us as the most advantageous in respect of rigidity.

IV.—*Influence of the foregoing conditions on the effects of inequalities of temperature or of pressure.*

It is not only in view of the flexion consequent upon the weight of Influence of

the foregoing conditions on the effects of inequalities of temperature or of pressure.

the rule, but also, and above all in relation to the variations and inequalities of the temperature, that it is advisable to consider the plane of the neutral line.

If a bar is heated more on one of its horizontal faces than on the other the former will necessarily attain a greater relative length; the whole bar curves as if its were formed of two metals with different degrees of dilatation, but between the upper and lower face the plane of the neutral line preserves a medium length, independent of the difference between the two extreme temperatures; it dilates or contracts, so to speak, on its own account, without being otherwise influenced by the molecular action going on beyond its limits.

A yet more exact idea of what occurs under such circumstances will be formed if the complete analogy of the effects produced with those resulting from a mechanical action applied along the length of one of the extreme faces only, is admitted; let us say along the lower face for example.

It is clear that if that face is compressed it cannot yield to the compressing action without including in its deformation the adjacent layers, as far as the layers of the neutral line, and without causing beyond that layer corresponding prolongations, in such way that the transverse sections would throughout the whole length of the bent solid, continue perpendicular to the deformed plane of the neutral line, as has been so clearly shown by Baron Charles Dupin, and as is admitted as an indisputable basis in all calculations relative to flexion. If, therefore, our bar is compressed along the length of the inferior face that face will become concave, and will be shortened, the opposite face will become convex, and will be lengthened, whereas the layer of the neutral line, although yielding to the general curvature, will be subject, in its length, only to a variation reduced to a minimum, and, so to speak, unworthy of notice.

The act of compression to which we have just alluded will naturally present itself in practice in consequence of the friction of the rule on the plane supporting it, whenever the temperature happens to fall, and in case the support should contract more than the rule itself. The rule would then assume a convex shape, in consequence of which it would only bear on its extreme points.

General Morin has demonstrated that in the case of a rule of iridiated platinum, the coefficient of elasticity of which is known, this delay of contraction is devoid of any appreciable influence, when the surfaces in contact are covered with plumbago. But it is unnecessary to have recourse to this arrangement as respects the surface of the neutral line as its length continues absolutely independent of these local effects, and this is an additional and essential reason for seeking to place on that surface the whole length intended for the definition of the standard.

In what precedes, we have supposed the inequalities of temperature or the difference of contraction to be equivalent to a shortening of the inferior face. If the action were reversed the curvature would still be produced, but the convexity being towards the lower part, the rule instead of bearing on its extreme points would rest on the plane of support at about its middle, and its inferior face, bearing on but a single point, would dilate freely without its being necessary to take friction into account at all.

Generally speaking we have ascertained, at any rate, by what precedes, that if the friction which counteracts the contraction were excessive the length of the neutral line would not thereby be affected, and that in consequence tracings upon that line present a degree of security which no other arrangement could ensure.

V.—Questions of Symmetry.

The explanations which precede have already explained the manner in which we were induced to seek a shape like the letter H or the letter X, which left the neutral surface exposed, and, as nearly as possible, provided for the required great rigidity. Questions of Symmetry.

The horizontal moulding was intended to receive the tracings on its superior face, but it appeared to us that further advantage would result from the placing of those tracings in the very centre of the section, and to effect this we set to work, as a supplementary condition, to arrange the upper face of the moulding so that it might be placed exactly in the middle of the total height of the solid.

Although in the course of our examination we made calculations with respect to a large number of sections, we shall here reproduce only the details of the calculations relating to the section in the shape of the letter X, measuring 20 millimetres to the side, the moulding having everywhere a thickness of 3 millimetres, measured horizontally with the exception of the lower legs which must necessarily be subjected to a slight reduction in order to meet geometrically the conditions above set forth.

VI.—20 millimetre X shaped section.

This section is represented on an enlarged scale by Figure 1.

It being admitted that the exposed part of the neutral plan should be placed at the middle of the height, and that for facility of tracing, it is advisable that that part should have a width of 4 millimetres, we traced two inclined lines reserving that width, forming together a V, the opening of which at the upper part measured 12 millimetres; the 4 millimetres remaining on each side being intended to form the upper moulding, measuring 3 millimetres in thickness, vertically, and corresponding to the leg A of the same thickness, thus determining the position of the outer wall. The upper half of the section being thus defined, we reproduce it

symmetrically in the lower part, adding, however, the horizontal moulding D, also 3 millimetres in thickness. The unsymmetrical position of this horizontal moulding would tend to lower the centre of gravity, through which we have learned by theory that the plane of the neutral line must pass, and to compensate for that influence it became necessary to remove a little of the material from the lower legs, which is done by chamfering them parallel to their original walls, as is shown at G.

The shape thus drawn is rather complex, but it has the advantage of assigning a greater part of the section towards the summits to the great advantage of the rigidity of the bar. We shall further see by calculation what this favorable influence exactly is, and we shall give its value in figures.

With relation to the numerical data of the section upon which we finally decided, it will suffice to calculate, in the first instance, the thickness of the band G, in order subsequently to ascertain the value of the total *vis inertiae* with relation to the neutral axis.

VII.—*Ascertaining the Thickness of the Lower Leg.*

Ascertaining
thickness of
lower leg.

This thickness must be calculated so that the centre of gravity may be placed at the middle of the height of the solid, so that designating by x the thickness to be removed from the original horizontal thickness, it will suffice to calculate x so that the total of the power of all portions of the surface situated above the medium axis, and in relation to that axis, shall be precisely equal to the total of the power, calculated in relation to that same axis, of all the lower parts.

This condition evidently resolves itself into the more simple condition that the total of the power of D and E shall be exactly equal to that of G, whence we immediately have—

$$2 \times 3 \times 1.5 + \frac{1}{2} 1.2 \times 3 \times 2 = 7 \times x (3 + \frac{1}{2})$$

Whence we get—

$$x = 0.277.$$

Thus it is seen, that the lower legs must be reduced as to their horizontal thickness by rather more than the quarter of a millimetre to meet the requirements of the question. These figures of $x = 0.277$ will be made use of in the calculation of the *vis inertiae*.

VIII.—*Area of Transverse Section.*

Area of transverse section.

We can at once calculate the total section by dividing it into various geometrical figures, starting with the original shape, to which we must add the moulding D E, and from which we must subsequently subtract the parallelogram G.

The following are the figures of quadrature:—

4 areas A	=	$4 \times 3 \times 10$	=	120
4 „ B	=	$4 \times 1 \times 3$	=	12
4 „ C	=	$4 \times \frac{1}{2} (1.2 \times 3)$	=	7.2
2 „ D	=	$2 \times 2 \times 3$	=	12
2 „ E	=	$2 \times \frac{1}{2} (1.2 \times 3)$	=	3.6
				154.8

From which must be subtracted,

$$2 \text{ areas G} = 2 \times 0.277 \times 7 = 3.9$$

$$\text{Final area S} = 150.9$$

Thus we find that the section is equal to 150.9 square millimetres, or one and one-half time that of the metre of the archives.

The density of irridiated platinum, like pure platinum, being equal to 21.15, the weight of a rule 102 millimetres in length, will be

$$P = 150.9 \times 1.02 \times 21.15 \times 10^{-3} = 3^k, 255.$$

In practice, a maximum weight of 3^k , 40 might be counted upon.

IX.—*Calculation of the vis inertiae of the Section.*

Calculation of
the *vis inertiae*
of the section.

In the same way we shall proceed to ascertain the value of the *vis inertiae*, first taking into consideration the symmetrical solid, and then making the necessary additions and subtractions. The following is the calculation:—

$$4 \text{ degrees of } vis \text{ inertiae } A = 4 \times \frac{1}{3} \times 3 \times 10^8 \times 10^{-12} = 4.000 \times 10^{-9}$$

$$4 \text{ degrees of } vis \text{ inertiae } B = 4 \times \frac{1}{3} \times 1 \times (10^8 - 7s) \times 10^{-12} = 0.876 \times 10^{-9}$$

4 degrees of <i>vis inertia</i> C = $4 \times \frac{1}{12} \times \frac{1.2}{8} (10^4 - 7^3) (40-21) 10^{-12}$	= 0.464×10^{-9}
2 degrees of <i>vis inertia</i> D = $2 \times \frac{1}{3} \times 2 \times 3^3 \times 10^{-12}$	= 0.036×10^{-9}
2 degrees of <i>vis inertia</i> E = $2 \times \frac{1}{4} \times 1.2 \times 3^3 \times 10^{-12}$	= 0.016×10^{-9}
Total	= 5.392×10^{-9}

From which we subtract,

2 degrees of <i>vis inertia</i> G = $2 \times \frac{1}{3} \times 0.277 (10^3 - 3^3) \times 10^{-12}$	= 0.180×10^{-9}
	I. = 5.211×10^{-9}

Before proceeding to calculate the deflexion and the deformation, we shall compare these figures with those relating to a certain number of sections already in use, or which might be proposed for adoption for the international standards.

For each of these sections we shall give the values of S and I, and we may remark that the deflexion *f*, in the case of a bar resting on its extremities being given by the formula

$$f = \frac{5}{192} \frac{P l^3}{2 E I},$$

the inverse fraction

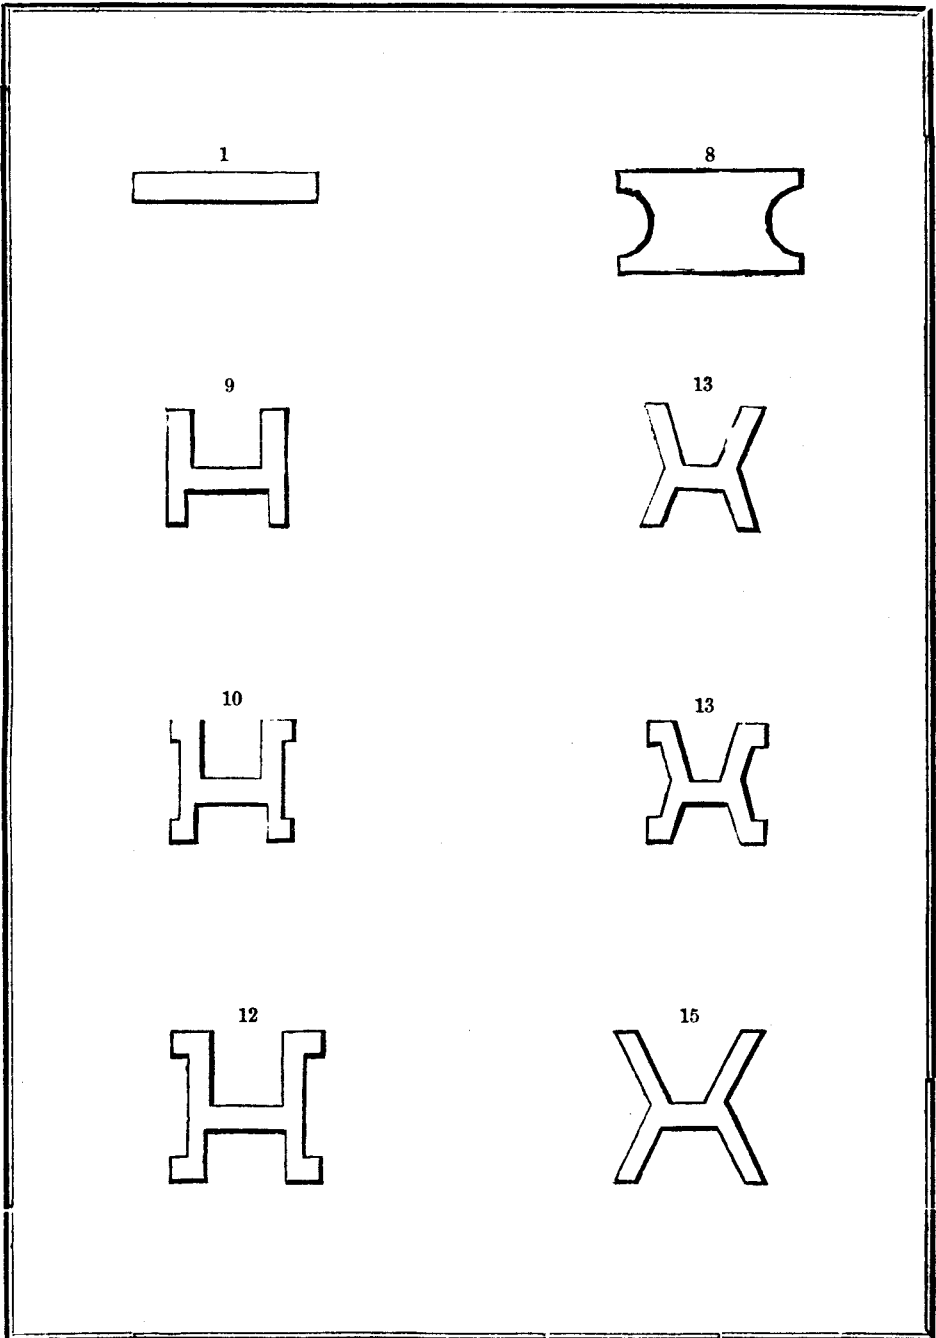

$$\frac{192}{5} \frac{2 E I}{l^3} = \frac{192}{5} \cdot \frac{2 E}{l^3} \frac{I}{S}$$

gives us the degree of rigidity of each bar under the action of its own weight $P = S d$. Instead of considering the formula in all its terms, it is sufficient to calculate as respects each bar the proportion I : S to ascertain the relative rigidity, the other terms remaining the same for all bars of the same length and of the same material, let the section be what it may.

X.—TABLE of numerical data of various Sections.

Sections.	Transverse Area of Section S.	<i>Vis Inertia</i> . I.	Co-efficient of Rigidity I:S	Proportions between the degrees of <i>Vis Inertia</i> .	Proportions between the co-efficients of rigidity.

SECTIONS.

It will be seen by this table that the section proposed, shewn of its true size in Fig. 2, is the most advantageous as respects the value of I : S ; that is to say, that it is the one which is subject to the slightest deflexion from the weight of the piece itself ; and, although it weighs only one-and-a-half time as much as that of the archives, its rigidity with reference to external action is found to be forty times greater.

Fig. 2.

In this respect there is no exception, except the section of the English yard, which for each metre would require a weight of platinum exceeding 13

kilogrammes.

We have now to complete these comparative data by a study of the bar itself with relation to its mechanical properties ; this we propose to do after offering a few remarks on the mode of suspension to be adopted during the observations.

XI.—*Manner of Suspending the Bar.*

Manner of suspending the bar.

We have already seen that the influence delaying dilatation or contraction on the face in contact with the support has no effect on the length of the plane of the neutral line, and that therefore no serious danger need be apprehended from allowing the standards of length to rest on a plane surface, when the length is so traced in a proper manner.

We might with excessive prudence cause the metre to rest on the plane of the neutral line of a support of like dilatation, if it should be considered that immediate contact with a less favorably arranged support should still possess an influence over it.

General Morin has besides shewn that in the case of a metal with a high co-efficient of elasticity, this inconvenience is but little to be feared if we consider the rule as acting in all its parts in the same direction, in virtue of its elasticity.

Thus, therefore, the plan of supporting the rule on a plane might be proposed and supported by argument ; but the conditions bearing upon temperature are of such high importance, that the employment of rollers seems to be especially prompted by the advantage which is obtained in this respect by removing the bar as much as possible throughout its whole length from every point of contact ; and this advantage cannot be better attained than by the employment of two isolated rollers, placed so as to diminish as much as possible the deflexion both between those supports, and in the projecting parts of the rule.

Bessel, in a note of great importance, has ascertained the most favorable conditions of this mode of suspension. Baron Wiede in company with M. Edlund also arrived at them by a somewhat different process, and the result is, that the best method of suspension on two rollers consists, in the case of a graduated rule, in placing the rollers at a distance of 0.559380 of the total length of the rule from each other.

The deflexion is then absolutely ascertained, and it was necessary for us to examine whether its absolute value would, in the case of the proposed section, present the least inconvenience.

XII.—*Deflection of the Bar under its own Weight.*

Deflection of the bar under its own weight

If by P, we designate the total weight of the bar, by L its total length consisting of a central space l , and of two lateral or external spaces l' , so that we find $L = l + 2l'$; if in addition by E and by I, we designate respectively the co-efficient of elasticity of the material, and the *vis inertiae* of the section, we easily find as the deflexion f between the supporting points the value :—

$$f = \frac{1}{192} \frac{P l^4}{2 L E I} \left\{ 5 - 24 \frac{l'^2}{l^2} \right\}$$

and, in accordance with the indications of Bessel :—

$$l' = 0.39385 l$$

$$f = 0.000651 \frac{P L^3}{2 E I}$$

Taking $L = 1.02$ metres, $P = 3.255$ kilogrammes, $E = 25 \times 10^9$, $I = 5.213 \times 10^9$, we shall have :—

$$f = 0.00000863 \text{ metre, or } 8.63 \text{ microns.}$$

This deflexion is so small that it ensures every security in the employment of the proposed section. It is well, however, to observe that in theory, each of the extremities of the bar is lowered beneath the points of support, after having been slightly raised, to the intermediate point the tangent of which is horizontal.

This new deflexion f' in relation to the points of support is given by the following :—

$$f' = \frac{1}{12} \frac{P l^4}{2 L E I} \left\{ -\frac{l'}{l} + 6 \frac{l'^3}{l^3} + \frac{3l'^4}{l^4} \right\}$$

and substituting l' : l its value

$$f = 0.000366 \frac{P L^3}{2 E I} = 0.00000485$$

or 4.85 microns.

These two deflexions are, moreover, of the same denomination, and the loss of level resulting from them between the extreme points and the central point of the bar measures $8.63 - 4.85 = 3.78$ microns.

A bar subject to such an imperceptible degree of deflexion clearly meets all the requirements of the problem with perfect security.

XIII.—*Application of Bessel's theory to the measurement of the shortening between the two extreme points.*

Generally speaking, in applications of the theory of the resistance of materials, the calculation of the deflexion is alone calculated, it being admitted on the one hand, that the neutral line preserves its original length, and on the other, entirely passing over the difference in length between that bent line and its projection. If that double hypothesis is sufficient in ordinary cases, the same cannot be said of that which we are now examining, and Bessel has ascertained for the method of suspension which we have just considered, the shortening resulting from flexion only, between the two extreme points of the neutral line. It is indispensable that for a standard the shortening should be of such a nature that it shall exercise no influence whatever over the comparisons.

Designating this shortening by ΔL , Bessel has for the same values of l and l' , which precede made the following calculation :—

$$\Delta L = \left[\frac{P}{L E I} \right]^{\frac{1}{2}} \left[\frac{L}{2} \right]^{\frac{11}{2}} \times 0.0000836$$

In the particular case of our section

$$P = 3.255; L = 1; E = 25 \times 10^9; I = 5.213 \times 10^9$$

Whence we have—

$$\Delta L = \frac{3.255^2 \times 0.0000836}{625 \times 10^{18} \times 5.213^2 \times 10^{-18} \times 2^7} = 0.000000004$$

The shortening of the projection consequent upon the curvature of the bar only amounts to 4 ten-thousandths of a micron, in other words to an amount entirely unworthy of notice.

A bar so constructed, therefore, presents all the rigidity necessary to ensure that comparisons may be made from it with all the certainty which can be desired. Absolutely no inconvenience can result from causing the bar to rest on two rollers, the distance from each other of which has been indicated.

Baron Wrede calculated that a graduated metre of the dimensions of the platinum prototype of the archives might be subject to a shortening between the extremities consequent upon the curvature of the rule equivalent to 7 tenths of a micron; the rigidity of our rule is forty times greater, the shortening is, therefore, reduced to 1,600 times less, and thus in proof we arrive at the total of 4 ten-thousandths of a micron, the result of our direct calculation.

Supposing that the distance between the points of rest was equal to one metre, the shortening between the extreme points would be notably greater, but would not exceed the amount of 0.29 micron shown by the calculation.

XIV.—*Application to Standard End Metres.*

Application to
Standard End
metres.

Similar conditions of rigidity and of conductivity are necessary for the Standard end metres which the Commission has to construct, although but of secondary importance. And it would appear to be advisable to adopt the same general section simply altering the position of the horizontal moulding so as to place it symmetrically with reference to the upper and lower faces.

Although it is advisable that the ends of the metre should be formed of small globe gudgeons, it is considered that the thickness of three millimetres is sufficient to allow of these gudgeons less than a millimetre in length being taken out of the length and substance of the moulding (Fig. 3).

In this way the most favorable conditions for the making of comparisons will be ensured; the transmission of heat will go on with like facility through the metal of the mouldings; the necessary rigidity will be secured.

The points of supports will be arranged in the same manner, and the centre of the faces or gudgeons of the Standard end metres so constructed will be placed exactly at the same height as the tracings of the graduated metres, all which circumstances combine to recommend such a form of construction.

If, however, that diameter should be deemed to be insufficient the thickness of the central moulding might be increased; thus in Fig. 4 a diameter of four millimetres instead of three has been given to it.

XV.—*Various advantages offered by the proposed section.*

Various
advantages
offered by the
proposed section.

The object of the foregoing examination has simply been the attaining of the two ends already pointed out, the securing of great rigidity with an exposed neutral line. Some secondary advantages presented themselves to us, but were not really invested with their true importance, until after we had conversed on the subject with some of our colleagues in the Commission on the metre.

While seeking to present them here in their entirety, we must assign to them their attributes in these supplementary remarks at the risk of making a few repetitions. These advantages will be successively considered in geometrical, mechanical, thermal and economical points of view; we shall have to point out also in what respects the shape proposed is to be preferred in respect to good workmanship, and in respect of the security which it affords in relation to the unvariableness of the Standards.

In a geometrical point of view, we attach great importance to the absolute constancy of the section throughout the whole length of the bar; it is clear that that constancy most completely meets the considerations which form the basis of the theory of the resistance of materials in which no exact conclusion can be arrived at if the section varies abruptly in any point. Molecular action is thus better defined, continuity between the different lines of molecules is more certain, and abnormal deformations are less to be apprehended.

By tracing the section within a square, we also obtained a geometric form as nearly as possible symmetrical.

In a mechanical point of view the condition of maximum rigidity, and that of rigidity similar in the two rectangular directions, are not in our opinion the most important.

The principal condition, and that to which all others should be considered subordinate, consists in the obtention of a very slight degree of molecular tension at all points, let the mode of the suspension be what it may, and throughout all changes of temperature during that suspension; we consider that we have realized that condition, and especially that we have succeeded in causing the molecular tension to continue constantly null throughout the distance which the metre is to measure, without regard to the manner of suspension, and even if the rule should be placed on a surface with a different degree of dilatation.

The value of the greatest molecular effect developed in the bar during its suspension on rollers, may be sought for: that maximum effect corresponds to the resting point and to the upper and lower faces, that is to say, to the distance $v = 0.01$ of the plane of the neutral line; designating it as R to the square metre, we easily find—

$$R = \frac{v}{81} \frac{P L}{L} \left(1 - \frac{v}{L} \right)^3 = 157500 \text{ kil.}$$

This amounts to $0^{\text{k}}16$ to each square millimetre.

Now it is proved by the new experiments which we made in company with M. Broch, that the elasticity of iridiated platinum is not changed by a force of 30 kilogrammes to the square millimetre. By shewing that the true force does not exceed the two-thousandth part of this minimum force we establish beyond all question that all points of the bar will be constantly maintained in a condition of the most complete molecular stability.

With respect to the thermal question we must enter into greater detail if we are to reproduce the remarks of the physicists who have been so good as to communicate them to us.

1st. The equal thickness of the several mouldings favors the equal distribution of temperature throughout the whole mass of the rule.

The greatest obstacle to exact comparisons will always be found in the difficulty of attaining a perfectly even temperature; this is sufficiently proved by the fact that a difference of the one-hundredth part of a degree nearly corresponds to a difference of one-tenth of a micron in the length of

the platinum bar. It is, therefore, of the highest importance that the influence of the circumambient medium, to keep which at an even temperature every effort will be made, should be communicated in like manner to all parts of the rule; and in this respect no arrangement could be more certain to attain the desired result than that upon which we have decided, in view of the even thickness of all the mouldings which, when united, constitute our section.

2nd. The distance included between the two traced lines is subject at all points to like conditions of temperature.

This could not be obtained by the use of pits, or by a reduction of the section at the extremities only, as those two solutions do not prevent the distance which constitutes the theoretical Standard from being, in a way, imprisoned throughout nearly its whole length in a mass of material which renders the communication of the temperature to the interior, to say the least, uncertain.

3rd. The distance between the traced lines being included exactly in the plane of the neutral line cannot be influenced by any delay of dilatation resulting from contact with the support. We have already expressed ourselves on this point with sufficient care to obviate the necessity of returning to it.

4th. The thermometer is to a certain extent enveloped by the material of the metre during the observations.

It is evident that the V shaped groove in the upper part constitutes a sort of resting place for the thermometer, where it necessarily identifies itself with the temperature of the walls and base of that groove.

All these reasons go to shew that the shape proposed is that most advantageous in respect of the equality of temperature without which every comparison would be necessarily vitiated. It may be that in this consideration lies the principal reason of the favor with which our arrangement has been accepted.

In the economic point of view, it will suffice to remark that if we are not to attach preponderating importance to a low cost price, the case is materially altered, if we seek for a given outlay, to utilize in the most advantageous manner, the quantity of material corresponding to that outlay. The section possessing the greatest rigidity recommends itself in this point of view, and the selection of a continuous section allows of the total length being shortened to 102 centimetres, which certainly no one would venture to recommend if the pit system were adopted.

So far as good workmanship is concerned, the proposed shape, although less simple, gives guarantees which a rectangular section, with or without pits, could never do.

It is undeniable that the form could not be obtained with all indispensable geometrical exactness without having recourse to all the resources of the forge, of the roller, of planing, and of wire-drawing appliances.

The bar being forged in the condition of a square stem, the rolling mill might prepare the four grooves only, which process would ensure in all the parts the requisite homogeneity, and the more certainly because all the angles of the section are obtuse, thus rendering the displacement of the material in the transverse direction more easy.

After having submitted the rough beginning so obtained to one or more annealings, longitudinal planing or filing will allow of the definite shape being very nearly approached, and in the course of that operation the very slightest defects will be brought out and exposed. While necessary for securing the geometrical form, this planing will constitute a most valuable and certain means of investigation, will thoroughly expose all defects, and will settle the distinction between the rules which have perfectly succeeded, and those which it is advisable to reject.

No massive form could give the same security, which will be further completed by a series of annealings and of applications of the wire-drawing apparatus, subsequent to which the material may be considered to be thoroughly kneaded, and in a condition of equilibrium which will be rendered absolutely permanent by a final extremely prolonged annealing.

The very complication of the operations to be gone through will not allow of a half solution being deemed sufficient; the metal, which has satisfied all their requirements, will, in that way alone, have given evidence of its quality.

The use of pits will not allow of the bottom being polished with the necessary degree of perfection; the case is entirely different in respect of our groove, and this will allow of the use of the gold stud being dispensed with, to the great advantage of the exactness of the Standard.

As respects the unvariableness of the Standard, our colleague, M. Wild, has found in the exposure of the plane of the neutral line throughout its whole extent a final reason, because that arrangement will allow of the reproduction on that plane of the exact length of a prototype of quartz or of beryl, without there being any reason to fear any variation of that length, which participates in all the properties of the neutral plane, whether consequent upon flexion or delay of dilatation or of contraction.

In conclusion we are not prepared to say whether the accessory advantages which we have just enumerated are not in their entirety more weighty than the special reasons which we took as our point of departure.

XVI.—*The use of solids with the neutral line exposed.*

We should depart from our subject if we sought here to enumerate the different applications which might be made of solids with the neutral line exposed, in the arts, but we cannot however refrain from pointing out that their fundamental property certainly recommends them for the making of slides or other moveable pieces in instruments of great precision.

The use of solids with the neutral line exposed.

It was with this same point in view, that we at first proposed to cause the lower face of the meter to rest on the neutral plane of its support, for which we should have selected a substance of a similar degree of dilatation.

We still believe in the efficiency of this arrangement, which we only abandoned out of respect to the general opinion, manifestly favorable to the employment of rollers, but reserving to ourselves, however, an opportunity of instituting a comparison as to the influence of the two modes of suspension.

APPENDIX D.

SPECIAL COMMISSION ON THE METRE.

DRAFT OF CONVENTION NO. 1.

(As finally revised.)

* * * * *

* * being desirous of ensuring the International unification and perfection of the metric system, have resolved to conclude a Convention to the following effect, and have appointed as their Plenipotentiaries

* * * * *

Who, having communicated to each other their plenary powers, found to be in good and due form, have agreed to the following provisions :

CONVENTION.

Article 1.

The high contracting parties engage to establish and maintain, at their common cost, an *International Board of Weights and Measures*, permanent and scientific, of which the seat of affairs shall be at Paris.

Article 2.

The French Government will take the necessary steps to facilitate the acquisition, or if need be the construction, of a building specially devoted to the purpose, in accordance with the conditions established by the Regulation attached to this Convention.

Article 3.

The International Board will carry on its operations under the exclusive direction and superintendence of an *International Committee of Weights and Measures*, placed in its turn under the authority of a *General Conference of Weights and Measures*, composed of delegates from all the contracting Governments.

Article 4.

The General Conference of Weights and Measures shall be presided over by the President, for the time being, of the Academy of Sciences of Paris.

Article 5.

The organization of the Board, as well as the composition and powers of the International Committee, and of the General Conference of

Weights and Measures, are established by the Regulation attached to this Convention.

Article 6.

The International Board of Weights and Measures will be entrusted with—

1st.—All comparisons and verifications of new prototypes of the metre and of the kilogramme.

2nd.—The preservation of the international prototypes.

3rd.—Periodical comparisons of the National Standards with the international prototypes and their tests, as well as of the standard thermometers.

4th.—The comparison of new prototypes with the fundamental standards of non-metric weights and measures used in the different countries and in the sciences.

5th.—The stamping and comparison of geodesic rules.

6th.—The comparison of standards and of scales of precision, the verification of which may be desired either by Governments or by learned societies, or even by artists or learned men.

Article 7.

The staff of the Board shall consist of a Director and two Deputies, and such number of employes as may be necessary.

So soon as the comparison of the new prototypes shall have been completed and the prototypes shall have been distributed to the several States, the staff of the Board shall be reduced in such proportion as shall be deemed expedient.

The Governments of the high contracting parties shall be notified by the International Committee of appointments to the staff of the Board.

Article 8.

The international prototypes of the metre and of the kilogramme, as well as their tests, shall be deposited in the office of the Board; access to the place of deposit will be reserved to the International Committee exclusively.

Article 9.

All outlay entailed by the establishment and installation of the International Board of Weights and Measures, as well as the annual expenses of maintenance and of the Committee, will be defrayed by contributions from the contracting States, to be ascertained in accordance with a scale based upon their existing population.

Article 10.

The sums representing the share to be contributed by each of the contracting States shall be paid, at the commencement of each year, through the Department of Foreign Affairs of France, into the Treasury of Deposit at Paris, from which they shall be withdrawn as they are required by orders signed by the Director of the Board.

Article 11.

Governments who shall avail themselves of the right reserved to every State to accede to this Convention shall be held to the payment of a contribution, the amount of which shall be fixed by the Committee, upon

the basis established by Article 9, and which shall be devoted to the improvement of the scientific material of the Board.

Article 12.

The high contracting parties reserve to themselves the right of making by common consent any modifications of this Convention, the usefulness of which may be proved by experience.

Article 13.

Upon the expiration of a period of twelve years, any one of the high contracting parties may withdraw from this Convention.

Any Government availing itself of its right to put an end to it, so far as it is itself concerned, shall be bound to notify its intention one year in advance, and by so doing shall renounce all its rights of co-proprietorship in the international prototypes and the property of the Board.

Article 14.

This Convention shall be ratified in accordance with the constitutional laws peculiar to each State; the ratifications shall be exchanged within six months, or less if possible. It shall be put in execution upon, from and after the 1st January, 1876.

REGULATION.

Article 1.

The Office of the International Board of Weights and Measures shall be established in a special building presenting every necessary guarantee of quiescence and stability.

In addition to the place appropriated for the deposit of the prototypes, it will comprise halls for the reception of the comparing instruments and of the balances, a laboratory, a library, a record room, work rooms for the officers, and lodgings for watchmen and servants.

Article 2.

The International Committee is entrusted with the acquisition and adaptation of the building, as well as with its fitting for the services for which it is intended.

In case the Committee should not be able to acquire a suitable building, it shall cause one to be constructed under its superintendence and in accordance with plans prepared by it.

Article 3.

At the request of the International Committee, the French Government will take the necessary steps to cause the Board to be recognised as an institution of public utility.

Article 4.

The International Committee will cause the necessary instruments to be prepared, such as:—Comparing instruments for graduated and end standards, apparatus for ascertaining absolute dilatation, balances for weighing in the air and *in vacuo*, comparing instruments for geodesic rules, &c.

Article 5.

The outlay for the acquisition or construction of the building, and for fitting and for the purchase of instruments and apparatus, shall not exceed in all the sum of 400,000 francs.

Article 6.

The estimate of the annual expenditure is as follows:—

A. For the first period of the completion and of the comparison of the new prototypes:

(a) Salary of the Director	15,000 fr.
" two Deputies, at 6,000 fr.....	12,000
" four Assistants, at 3,000 fr.....	12,000
Allowance to a resident machinist	3,000
Wages of two office servants, at 1,500 fr.....	3,000
	45,000
(b) Indemnity to learned men and artists, who, at the request of the Committee, may be entrusted with special work; maintenance of the building, purchase and repairs of apparatus, fuel, light and office expenses	24,000
(c) Indemnity to the Secretary of the International Committee of Weights and Measures.....	6,000
	75,000

In case of need, the annual estimate of the Board may be modified by the International Committee at the instance of the Director, but shall in no case exceed the sum of 100,000 francs.

Any modification which the Committee shall deem it expedient to make, within the above limit, shall be communicated to the contracting Governments.

The Committee may authorise the Director, at his request, to transfer the amounts allowed him in the estimate from one heading to another.

B. For the period subsequent to the distribution of the prototypes:—

(a) Salary of the Director	15,000 fr.
" a Deputy	6,000
Allowance to a resident machinist	3,000
Wages of an office servant.....	1,500
	25,500
(b) Office expenses.....	18,500
(c) Indemnity to the Secretary of the International Committee.....	6,000
	50,000

Article 7.

The General Conference, mentioned in Article 3 of the Convention, will meet at Paris, upon the call of the International Committee, at least once every six years.

Its object is to discuss and educe measures necessary for the propagation and perfection of the metric system, as well as to sanction any new fundamental meteorological discoveries which may have been made in the interval between its meetings. It will receive the report of the

International Committee on work done, and will proceed, by ballot, to the renewal of one half of the International Committee.

Votes at meetings of the General Conference shall be taken by States, each State being entitled to one vote.

The members of the International Committee sit by right in meetings of the Conference; they may be, at the same time, delegates from their respective Governments.

Article 8.

The International Committee, mentioned in Article 3 of the Convention, shall be composed of fourteen members all belonging to different States.

It shall be formed, in the first instance, of the twelve members of the old permanent Committee of the International Commission of 1872, and of the two delegates who, at the appointment of that permanent Committee, received the greatest number of votes after the members elected.

At the time of the renewal by one half of the International Committee, the retiring members shall, in the first place, be those who may have been elected to fill vacancies during the interval between two sittings of the Conference; the rest shall be selected by lot.

Retiring members shall be eligible for re-election.

Article 9.

The International Committee will direct the works for the verification of new prototypes, and generally all meteorological works which the high contracting parties shall decide to have executed in common.

It is further entrusted with the duty of seeing to the preservation of the International prototypes.

Article 10.

The International Committee will proceed to its organization by the election, by ballot, of its president and secretary. The Governments of the high contracting parties shall be notified of the appointments so made.

The president and secretary of the Committee and the director of the Board shall belong to different countries.

When once organized, it shall not be competent to the Committee to proceed to any new election or appointment until three months after a notice shall have been transmitted to each member from the office of the Committee.

Article 11.

Until the new prototypes have been completed and distributed, the Committee shall meet at least once a year; after that time their meetings shall take place at least once in every two years.

Article 12.

Questions before the Committee shall be decided by a majority of votes; in case of an equal division the president's vote shall decide. Decisions shall not be binding unless the number of members present is equal to at least one more than one half the number of members composing the Committee.

Saving the foregoing condition, absent members shall have a right to appoint members present their proxies to vote for them, and such proxies must produce proof of their authority so to vote. The same rule shall apply to appointments by ballot.

Article 13.

In the interval between one session and another, the Committee shall have the right to proceed by correspondence.

In such case, in order that the decision may be binding, all the members of the Committee must be called upon to express their opinion.

Article 14.

Any vacancies which may occur in the International Committee of Weights and Measures shall be filled provisionally by the Committee such elections shall be had by correspondence, each member being called upon to take part in the same.

Article 15.

The International Committee shall prepare regulations in detail for the organization and direction of the work of the Board, and shall fix the fees to be paid for extraordinary work provided for by Article 6 of the Convention.

Such fees shall be applied to the perfecting of the scientific material of the Board.

Article 16.

All communications between the International Committee and the Governments of the high contracting parties shall be transmitted through their diplomatic representatives at Paris.

In all matters in which the decision shall rest with any branch of the French Government, the Committee shall apply to the Department of Foreign Affairs of France.

Article 17.

The Director of the Board and his Deputies shall be appointed by ballot by the International Committee.

The persons employed shall be appointed by the Director.

The Director may take part in the deliberations of the Committee.

Article 18.

The Director of the Board shall have access to the place of deposit of the international prototypes of the metre and of the kilogramme, only by virtue of a resolution of the Committee, and in presence of two of the members thereof.

The place in which the prototypes are deposited shall be constructed so as not to open except by means of three keys, one of which shall be held by the Director of the Archives of France, a second by the President of the Committee, and the third by the Director of the Board.

The standards included in the class of national prototypes shall alone be used in the ordinary work of comparison by the Board.

Article 19.

The Director of the Board shall every year lay before the Committee:
1st, A financial report respecting the accounts of the preceding term; in

respect of which, after they have been audited and found correct, he shall receive a discharge. 2nd, A report on the condition of the material. 3rd, A general report on the work done in the course of the past year.

The International Committee shall transmit to the Governments of all the high contracting parties an annual report respecting all its scientific, technical, and administrative proceedings, and those of the Board.

The President of the Committee will report to the General Conference the work done since its last meeting.

The reports and publications of the Committee and of the Board shall be prepared in the French language. They shall be printed and communicated to the Governments of the high contracting parties.

Article 20.

The scale of contributions mentioned in Article 9 of the Convention shall be established in the following manner :

The number of the population expressed in millions shall be multiplied by 3 in the case of States in which the metric system is compulsory; by 2 in the case of those in which it is permissive only; by 1 in the case of other States.

The total of the products so obtained will furnish the number of units by which the total expenditure is to be divided. The quotient will give the amount of the unit of expense.

Article 21.

The cost of the preparation of the international prototypes and of the standards and tests intended to accompany them will be borne by the high contracting parties according to the scale established by the preceding article.

The cost of the comparison and verification of standards applied for by States who are not parties to this Convention shall be determined by the Committee in accordance with the tariff of fees established in virtue of Article 15 of this Regulation.

Article 22.

This Regulation shall have the same force and effect as the Convention to which it is attached.

TEMPORARY PROVISIONS.

Article 1.

All the States which were represented upon the International Commission on the Metre, which met at Paris in 1872, whether they are or are not contracting parties to this Convention, will receive the prototypes which they ordered, and which will be delivered to them with all the guarantees established by the said International Commission.

Article 2.

One special object of the first meeting of the General Conference of Weights and Measures mentioned in Article 3 of the Convention, will be the sanctioning of the said new prototypes and their distribution among the States which have applied for them.

In consequence the delegates of all the Governments which were represented upon the International Commission of 1872, as well as the

members of the French section, will, of right, take part at that first meeting to join in the sanctioning of the prototypes.

Article 3.

The International Committee mentioned in Article 3 of the Convention, and constituted as specified in Article 8 of the Regulation, is entrusted with the duty of receiving and comparing together the new prototypes in accordance with the scientific decisions of the International Commission of 1872 and its permanent Committee, saving any modifications which experience may suggest in the future.

Article 4.

The French section of the International Commission of 1872 will continue in charge of the work entrusted to them for the construction of the new prototypes, with the assistance of the International Committee.

Article 5.

The cost of the making of the metric standards prepared by the French section will be repaid by the Governments interested according to the cost price in each case as ascertained by the said section.

Article 6.

The International Committee is authorized to organize immediately, and to make all preliminary researches necessary for carrying the Convention into effect, without incurring any expense previous to the exchange of ratifications of the said Convention.

REPORT

OF THE

POSTMASTER GENERAL,

FOR THE

YEAR ENDING 30TH JUNE,

1874.

PRINTED BY ORDER OF PARLIAMENT

OTTAWA:
PRINTED BY I. B. TAYLOR, 29, 31 & 33, RIDEAU STREET.
1875.

SCHEDULE.

Accompanying this Report are the following Documents therein referred to:

PART I.	Ontario and Quebec.	Nova Scotia.	New Brunswick.	Manitoba.	British Columbia.	Prince Edward Island.
	Page.	Page.	Page.	Page.	Page.	Page.
No. 1.—Post Office Revenue and Expenditure for the year ending 30th June, 1874.....	19	20	21	22	23	24
No. 2.—Detail of all payments made and charges incurred for Mail Transportation during the year ending 30th June, 1874.....	25	64	75	82	83	85
No. 3.—Detail of all charges for Salaries and Allowances, and of Post Office Revenue collected at the several Post Offices and Way Offices throughout the Dominion, for the said year.....	87	148	166	180	182	184
<i>d.</i> —Report of all charges for commission on sale of Postage Stamps by vendors in cities for the said year.....	189	189	190	190
No. 4 <i>a.</i> —Account of travelling expenses incurred in the service of the Post Office Department for the said year.....	191	192	192	193	193
<i>b.</i> —Account of sums paid in discharge of Tradesmen's Bills, for articles supplied for the service of the Post Office Department for the said year.....	194	197	198	199	199	200
<i>c.</i> —Account of sums paid for Rents and Taxes on account of the Post Office Department for the said year.....	200	201	201	202
<i>d.</i> —Report in detail of the Expenditure of the Department for Stationery, Printing, and Advertising for the said year.....	203	207	208	209	209	210
<i>e.</i> —Account of sums paid for Fuel and Light for the use of the Post Office Department for the said year.....	211	212	212	213	213
<i>f.</i> —Account of sums paid for miscellaneous disbursements on account of the Post Office Department for the said year.....	214	216	217	217	218	218
No. 5.—Report of all contracts made for the transportation of the Mails in the Dominion of Canada for the said year.....	220	262	270	274	274
No. 6.—See below, Part II.						
No. 7.—See below, Part II.						
No. 8.—See below, Part II.						
No. 9.—Report of all cases occurring of the loss or abstraction of Letters containing money sent through the Post Office within the said year.....	276

REPORT

OF THE

POSTMASTER GENERAL

FOR THE YEAR ENDED 30TH JUNE, 1874.

To His Excellency the Right Honorable Sir Frederic Temple, Earl of Dufferin, K.C., K.P., K.C.B., Governor General of Canada.

MAY IT PLEASE YOUR EXCELLENCY,—

I have the honor to submit to Your Excellency, to be laid before Parliament, the accompanying Returns and Statements composing the Report of the Post Office of Canada for the year ended the 30th June, 1874, and, as has been customary, to offer some preliminary observations and statistical tables as a summary of the information to be drawn from these Returns, and of the general progress of the Department during the year.

Since the date of the last annual Report much has been accomplished both in giving increased efficiency to the internal management of the Department and additional facilities to the public.

The system of free-delivery by letter-carriers in the principal cities, of letters and papers coming by mail has been commenced at Montreal and Toronto, and preparations are in active progress for extending the system to such of the other cities as may have a population and postal business sufficiently large to warrant the very considerable expense attendant on the measure.

At the same time greater expansion has been given to the arrangements for the reception of letters by street boxes, with increased frequency of collection.

As respects dead letters it had long been the usage to return to the writers only such letters as appeared to be of special importance or value—and all others were destroyed—but it is obvious that such an attempted discrimination, made upon a very cursory examination of these letters, could not be entirely satisfactory in the results; and from September last the system has been changed, and all dead letters which have originated in Canada are now returned to the writers, except in cases wherein it may be found impossible to ascertain the addresses of the senders. Dead letters, which have originated in other countries are returned unopened to the Post Office Administration of the country of origin.

There has been some additional expenditure required for the clerical force employed in this work, but this outlay will, it is estimated, be covered by the collection of postage due on the letters returned, and by the discontinuance of the charge heretofore incurred for advertising dead letters, which appeared to be no longer necessary when, as a rule, they are all to be returned to the writers.

It is believed that this change of system in the treatment of Dead Letters has, on the whole, been attended with very satisfactory results.

An alteration has been introduced in the mode of dealing with the sale of postage stamps in cities and other places by stamp vendors, which will have the effect of securing more effectually the prompt collection of this large item of postal revenue and of lessening at the same time the cash responsibilities of the Postmasters. It had been the usage for the City Postmasters to sell postage stamps to the public directly from the Post Office and to receive from the stamp vendors their payments for stamps sold by them, so that all the money receipts for postage stamps sold in their cities passed through their hands and formed part of their accountability.

The change of system already carried into effect in the principal cities is this, that the sale of postage stamps at the city Post Offices will be discontinued, and all stamp vendors will be required to pay into the Bank, to the credit of the Postmaster-General, the purchase money for such stamps as they may from time to time want. The stamp vendor will present to the Postmaster the Bank certificate and receive the equivalent in postage stamps.

In this way the Postmaster will remain the custodian of the postage stamps required for the supply of his city, but will be relieved from the onerous responsibility of receiving and accounting for the purchase money.

The same system as regards the payments by stamp vendors, will be applied to all places where it may be found expedient to authorize other persons than the Postmasters to sell postage stamps to the public.

New and commodious Post Office buildings have been completed by the Department of Public Works and transferred for occupation at Toronto and Victoria, British Columbia.

The frequency of mail travel on the main post route, between Winnipeg and the United States, over which the mails pass between Manitoba and the other Provinces

has been increased to a daily mail from January, 1875, the United States Post Office having, in concert with this Department, made their service daily also to the frontier.

In January last a Postal convention was entered into with the United States (of which a copy is appended to this Report) for the reduction of postal charges and general simplification and improvement of the postal intercourse between Canada and the United States.

Under the arrangements of this Convention each country gives conveyance over its post routes to the closed domestic mails of the other, free of charge, when passing in transit through its territory; and letters, newspapers and other ordinary mail matter, posted and prepaid in either country the ordinary domestic rates of that country, will be delivered at destination in the other without further charge for postage.

The effect of the reduction of postal charges on the large correspondence between Canada and the United States, will no doubt be felt for a time in the Post Office revenue, but the increase of business which may be expected to follow will soon, it is anticipated, cover any immediate loss.

The following tabular statement will exhibit the main features of the Post Office business of the Dominion for the past year:—

TABLE shewing the Number of Post Offices, Extent of Mail Travel, Number of Letters and Newspapers, &c., the Postal Revenue and Expenditure, Money Order and Post Office Savings Bank Business, in the Dominion of Canada, for the Year 1874.

Totals	\$1,476,207 76	\$1,695,480 34	705	\$6,815,329 66	266	\$2,340,284 00	\$3,204,965 46

Post Office Savings Banks are in operation only in Ontario and Quebec.

The number of Post Offices on the establishment was 4,706 in January, 1875, having increased to that figure from 3,756 in January, 1870, or 25½ per cent.

The number of miles of post route has increased from 29,430 in 1870, to 38,087 in 1875, or 29½ per cent.

The number of letters and post cards annually passing by mail has increased in the same period from 24,500,000 to 39,358,500, or 60 per cent.

The postal revenue has augmented from \$1,010,767 in 1870 to \$1,476,207 in 1874* equal to 46 per cent.

The postal expenditure has also increased from \$1,155,281 in 1870, to \$1,695,480 in 1874—equal to 47 per cent., or within about 1 per cent. of the augmentation in the revenue.

A comparison of these figures will indicate how large has been the extension of the business of this Department within the periods embraced by the dates above given.

The gross Postal Revenue included in the Accounts for the year ended 30th June, 1874, was as follows:—

For Ontario and Quebec	\$1,238,900 55
New Brunswick	86,276 39
Nova Scotia	117,910 89
Manitoba	3,996 90*
British Columbia.....	13,590 55
Prince Edward Island	15,532 48
	\$1,476,207 76

Of this amount \$1,084,287.95 was pre-paid by postage stamps.

* For three-quarters of a year only.

CORRESPONDENCE WITH THE UNITED STATES.

The amount of correspondence passing between Canada and the United States, as indicated by the returns of the postage collected thereon, continues every year to increase.

In the year ended 30th June, 1874, the postage arising on letters was as follows:—

Collected in Canada	\$236,932 79
Collected in the United States	241,584 12
	\$478,516 91

This correspondence passed in the mails exchanged with the United States at the points in Canada shown in the following statement:—

REGISTRATION.

The number of registered letters passing by post in Canada appears to have been 1,562,000 within the year.

The list of casualties affecting this class of letters was larger than usual. This arose chiefly under the head of Registered letters lost or embezzled by persons in the service of the Post Office. Upwards of a hundred registered letters were abstracted at once from the safe of the Toronto Post Office by a confidential clerk in the employ of the Department, who, when he found detection impending, absconded and left the country, but subsequently acknowledged his criminality, and, as an evidence of repentance, made restitution of the amounts contained in the letters stolen.

DEAD LETTERS.

The number of dead letters received in the year ended 30th June, 1874, was 508,160.

Of this number there had originated in Canada, 438,643 ; and in other countries, 69,517.

Amongst these dead letters were 3,557 registered letters which had failed of delivery from various causes.

A special record is kept in the Dead Letter Office of the return to the senders of all registered letters, as well as of all letters containing enclosures of value.

As before noticed, all dead letters originating in Canada are now opened and returned to the writers.

* These figures exhibit a further number and amount of withdrawals, not paid directly to Depositors, but paid over to the Receiver General to be inscribed on their behalf, in 5 per cent Dominion Stock.
 † These amounts do not include the interest (which may be approximately stated as \$60,000.00), accruing on Depositors' balances for six months ended 31st December, 1874, the first half of the Fiscal year.

POST OFFICE SAVINGS BANK.

During the year 1874 twenty-six new Savings Bank Offices were opened, the number being now 268.

The total balance due to depositors does not increase, having remained almost stationary since June, 1873.

In the deposits bearing interest at four per cent. there was, however, some advance, but the gradual withdrawal by depositors of money held by them at five per cent., under a system abandoned in 1871, constitutes a constant drain on the general balance. Since the 30th June, 1873, the sum of \$260,000 has been so withdrawn from the Post Office Savings Bank, and this exhaustive process will continue until the whole of the five per cent. portion of the fund shall have been extinguished.

After six years and nine months operations the deposits in the Canada Post Office Savings Bank appear to have reached a point beyond which their increase will only be very gradual, and may be expected to fluctuate with the general financial condition of the country from time to time.

In the first years of the existence of the institution considerable sums arising from the accumulated savings of previous years were attracted to the Post Office Savings Banks on account of the comparative security offered, subsequent deposits being smaller and not such as to swell the balance in the bank at the rapid rate of earlier years.

Moreover, the facilities to Post Office Savings Bank depositors, under a system adopted in 1871, for applying their Savings Bank money in sums of \$100 to inscription in a five per cent. Dominion stock, redeemable at par, whilst affording to the depositors an opening for advantageous investment, have caused the removal of considerable sums from the Post Office Savings Bank.

In the past three years the amount so withdrawn, or passing through the Post Office Savings Bank for investment in the Dominion stock at the higher rate of interest, was \$1,144,400.

It must be borne in mind also that the labouring and artizan classes in Canada have opportunities not generally enjoyed by the same classes in older countries, of becoming the owners of real property, and that it is an ambition with the working man in Canada to acquire property and own at least the house he lives in, or the farm on which he works.

That portion of the thrifty working man's wages, which, in some countries, he might place, and be satisfied to leave, in a savings bank at a low rate of interest, the same man in Canada would be likely to devote to periodical payments on the purchase of a house or farm.

It seems reasonable to conclude, therefore, that while the Post Office Savings Bank in Canada may continue to attract the savings of those to whom its advantages are made known, or the temporary investment of trust funds on the score of safety, it

will be regarded by the majority of depositors as but a means of accumulating, prior to investment of a more profitable or permanent character elsewhere, either in Government or other securities, or in real property, such for instance as the \$380,000 now annually invested in Dominion stock through the medium of the Post Office Savings Bank as above noticed.

The number of depositors holding accounts in the Post Office Savings Bank on the 31st December, 1874, was 25,492, being an increase of 590 during the year.

The cost of maintaining the Post Office Savings Bank, as respects management and charges of all kinds, has, since its commencement, averaged something less than one-half of one per cent. on the balance due to depositors year by year. No losses by fraud or otherwise have occurred since the Post Office Savings Bank commenced operations.

One case of fraud upon a depositor occurred during the past year, through his successful personation, supported by the presentation of his pass book by the person perpetrating the fraud. The offender fled the country before the fraud was discovered

D. A. MACDONALD,

Postmaster General.

POSTAL ARRANGEMENT BETWEEN THE UNITED STATES AND THE
DOMINION OF CANADA.

The Post Office Department of the United States of America, and the Post Office Department of the Dominion of Canada, being desirous of effecting, by means of a new arrangement, the unification of the Postal systems of the United States and Canada, in respect to correspondence exchanged between them, the undersigned, duly authorized for that purpose by their respective Governments, have agreed upon the following Articles :—

ARTICLE I.

Correspondence of every kind, written and printed, embracing letters, postal cards, newspapers, pamphlets, magazines, books, maps, plans, engravings, drawings, photographs, lithographs, sheets of music, &c., and patterns and samples of merchandize, including grains and seeds, mailed in the United States and addressed to Canada, or, *vice versa*, mailed in Canada and addressed to the United States, shall be fully prepaid at the domestic postage rates of the country of origin, and the country of destination will receive, forward and deliver the same free of charge.

ARTICLE II.

Each country will transport the domestic mails of the other by its ordinary mail routes in closed pouches through its territory, free of charge.

ARTICLE III.

Patterns and samples of merchandize, not exceeding the weight of eight ounces, may be exchanged in mails between the two countries, under such regulations in regard to the forwarding and delivery of the same, as either of the Post Office Departments shall prescribe, to prevent violation of the Revenue laws. They must never be closed against inspection, but must always be so wrapped or enclosed that they may be readily and thoroughly examined by postmasters. The postage on each pattern or sample shall be ten cents, prepayment obligatory.

ARTICLE IV.

No accounts shall be kept between the Post Office Departments of the two countries in regard to international correspondence of any kind exchanged between them, but each Department will retain, to its exclusive use, all the postage it collects on mail matter of every kind sent to the other for delivery.

ARTICLE V.

The Post Office Departments of the United States and Canada shall each return to the other all dead letters, unopened and without charge, monthly or oftener, as may best suit the regulations of each Department.

ARTICLE VI.

The expense of transporting the mails between the frontier exchange offices, where the conveyance is by water, shall be borne equally by the two Departments; but when the transportation is by land, the expense shall be borne by each in proportion to the distance travelled over the territory of each country. All contracts for such transportation shall, before they go into operation, be approved by the Post Office Department of each country.

ARTICLE VII.

All offices now exchanging mails shall continue to act as offices of exchange under this convention. The two Departments may at any time, by mutual agreement, discontinue any of the said offices of exchange, or establish others.

ARTICLE VIII.

The existing arrangement for the exchange of registered letters between the two countries shall continue in full force; but the registration fee on registered letters sent from the United States to Canada shall be the same as the registration fee charged in the United States for domestic registered letters.

ARTICLE IX.

This arrangement, except so far as it relates to letter postage, shall take effect from the first of January, 1875. The reduced letter rate will come into operation on the first of February, 1875. It shall continue in force until terminated by mutual agreement; and it may be annulled at the desire of either Department, upon six months' previous notice given to the other.

Done in duplicate and signed at Ottawa, the 27th day of January, 1875; and at Washington, the 1st day of February, 1875.

(Signed),

D. A. MACDONALD,

Postmaster-General of Canada.

(Signed),

MARSHALL JEWELL,

Postmaster-General of the United States.

I hereby approve the foregoing postal arrangement, and in testimony thereof I have caused the seal of the United States to be affixed.

(Signed),

U. S. GRANT.

By the President,

(Signed,)

HAMILTON FISH,

Secretary of State.

D. A. MACDONALD,
Postmaster-General.

REPORT No. 9.—Report of all cases occurring within the year ended 30th June, 1874, of the abstraction from or loss of Letters containing Money sent through the Post in Canada; showing the particulars of each case, and stating the result of the proceedings instituted therein by the Department.

CLASS I.—REGISTERED LETTERS.

No.	Name of Writer.	Where Mailed.	When Mailed.	Alleged Contents.	Address of Letters.		Evidence of Loss or Abstraction.	Result of Proceedings Instituted in each case by the Department.
					Name.	Place.		
1	Miss E. Cunningham.	Norwood.	Aug. 3 1869.	\$ 11 00	J. Cumming.	Johnsonville, N.B.	Stated not to have been received by person addressed.	The Postmaster of Campbellton, N.B., having failed to continue the registration of this letter, made good its contents.
2	Barre Pagé.	Cap Santé.	Mar. 31 1873.	8 00	O. Belanger.	St. Saurveur de Quebec.	do	The Postmaster of Cap Santé, having failed to continue the registration of this letter, made good its contents.
3	M. Pirt.	Quebec.	July 3	50 00	Mrs. M. Pirt.	Leaskdale, Ont.	Stated to have been received without contents.	No trace. Evidence that money was enclosed unsatisfactory.
4	H. Connacher.	Black Point, N.B.	do 4	50 00	Messrs. W. & R. Brodie.	Quebec.	do	These letters were contained in the Mail from Campbellton for Quebec of the 7th July last, and supposed to have been stolen by late Postmaster of St. Flavie. See Cases No. 1 and No. 148, Class I.
5	J. B. McKenzie.	Campbellton, N.B.	do 5	75 00	do	do	do	
6	do	do	do 7	65 00	do	do	do	Investigation failed to prove that this letter had been tampered with whilst in charge of Post Office.
7	A. W. Z. Des Brisay.	Dalhousie, N.B.	do 7	260 00	Messrs. Whitehead & Turner.	do	do	
8	The Postmaster.	Campbellton, N.B.	80 00	Messrs. W. & R. Brodie.	do	do	This letter was clearly proved to have disappeared at the Teeswater Post Office, and the Postmaster was accordingly obliged to bear the loss himself.
9	Mr. Mowbray.	Wingham.	do 19	50 00	James Findlay.	Lumley.	Only \$40 stated to have been received.	
10	S. Waldo (P.M.).	Teeswater.	do 25	60 00	Gordon, McKay & Co.	Toronto.	Stated not to have been received by person addressed.	

11	Mr. McElroy, jr	Richmond, Ont.	Aug.	7	323 00	Gillespie, Mo farr Montreal... & Co.	Only \$223 stated to have been received.	Investigation failed to show that this letter had been tampered with whilst in charge of Post Office.
12	L. Bergeron	Bord à Plouffe	do	8	6 00	R. Bergeron	do	Supposed to have been stolen by the Assistant Postmaster at Sheenboro, who absconded.

These letters were stolen on the 10th August, 1873, from the Toronto Post Office, by William Cuppage, late Chief Clerk in the office of the Post Office Inspector of the Toronto Division. Cuppage, finding that suspicion attached to him, fled to the United States and subsequently confessed the crime, and made good the amount of money contained in the letters which was refunded to the parties concerned.

REPORT No. 9.—Class 1, Registered Letters.—Report of all cases occurring within the year ended 30th June, 1874, of the abstraction from and loss of Letters containing Money sent through the Post in Canada, &c.—Continued.

(These letters were stolen on the 10th August, 1873, from the Toronto Post Office, by William Cuppage, late Chief Clerk in the office of the Post Office Inspector of the Toronto Division. Cuppage, finding that suspicion attached to him fled to the United States and subsequently confessed the crime, and made good the amount of money contained in the letters which was refunded to the parties concerned.)

This letter was supposed to have been stolen by Railway Mail Clerk McLean, through whose hands it would have passed. See Case No. 100, Class No. 2. These letters were supposed to have been stolen by the acting Postmaster at Sheenboro' who absconded.

REPORT No. 9.—Class I, Registered Letters.—Report of all cases occurring within the year ended 30th June, 1873, of the abstraction from and loss of Letters containing Money sent through the Post in Canada, &c.—Continued.

Contained in mails made up at Penetanguishene on 1st Dec., 1873, for offices on the line of the Penetanguishene and Sault Ste. Marie winter route—lost from the Couriers boat which sunk in the Georgian Bay, near Byng Inlet, on the 4th Dec., 1873.

No evidence to show that letter had been tampered with whilst in charge of Post Office.

Lot No. 4 Office, Prince Edward Island, entered by burglars and letter stolen.

No evidence to show that letter had been tampered with whilst in charge of Post Office. Envelope not preserved.

The Mail bag containing these letters was lost through the ice at River Pabos, on night of 18th December, 1873.

The Belleville Postmaster having failed to report immediately the mail in question, made good contents.

This letter was received at the Shigawake Post Office, but was burned when that office was destroyed by fire on the 26th December, 1873.

REPORT No. 9.—Class 1, Registered Letters.—Report of all cases occurring within the year ended 30th June, 1874, of the abstraction from and loss of Letters containing Money sent through the Post in Canada, &c.—Continued.

 RECAPITULATION.

Classification of Cases.	Registered.	Unregistered.
1. Letters stated not to have been received by persons addressed; but, for want of registration, no trace obtainable, and no positive evidence that loss occurred in the Post Office.....	151
2. Letters contained in mail packages stated not to have reached offices for which they were intended; cause of failure not discoverable.....	11	
3. Letters lost, embezzled, or misdelivered in the Post Office, the contents of which were made good by the officer responsible.....	111	9
4. Letters the contents of which (or a portion thereof) were lost or stolen, and afterwards made good by the officer responsible.....	4	1
5. Letters the contents of which (or a portion thereof) were stated to be missing, no evidence being forthcoming to account for the discrepancy.....	19	
6. Letters supposed to have been stolen from the Post Office.....	13	17
7. Letters accidentally destroyed while in course of Post.....	36	
8. Letters stolen by officers of the Post Office Department, who were arrested for trial, but subsequently escaped from jail.....	4	6
9. Letters stolen by Post Office employees who were tried, convicted and sentenced for the offence.....	7	14
10. Letters of which contents were made good by the Postmaster at whose office registration failed.....	9	
11. Cases still under investigation.....	1
