Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured covers/
Couverture de couleur
- Covers damaged/
Couverture endommagée
- Covers restored and/or laminated/
Couverture restaurée et/ou pelliculée
- Cover title missing/
Le titre de couverture manqué
- Coloured maps/
Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black)/
Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations/
Planches et/ou illustrations en couleur
- Bound with other material/
Relié avec d'autres documents
- Tight binding may cause shadows or distortion along interior margin/
La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure
- Blank leaves added during restoration may appear within the text. Whenever possible, these have been omitted from filming/
Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.

<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
12X	16X	20X	24X	28X	32X

The copy filmed here has been reproduced thanks to the generosity of:

Metropolitan Toronto Library
Canadian History Department

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Metropolitan Toronto Library
Canadian History Department

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

ADVERTISEMENT.

IT is hoped this work will be found more complete, comprehensive, and accurate, than any thing of the kind hitherto attempted in this Province. It is, however, scarcely possible to avoid some errors, from the very nature of the undertaking, but we hope they are few. Great attention has been paid to the astronomical calculations. The prognostications of weather can never be quite certain although there may be just grounds for the expectation of a particular kind of weather, at a certain period to come, by reason of planetary influence. These calculations are at least amusing, and are therefore inserted according to ancient usage.

The MILITIA APPOINTMENTS being taken from the Adjutant General's Office, are of course accurate. Indeed, every thing depending upon the statements obtained from the Public Offices in York, must be correct, since the heads of the various Departments have, with much kindness, given every facility towards the satisfactory completion of this undertaking;—for which they have the Proprietor's warmest acknowledgements.

A general, though necessarily a brief, account of CANADA,—together with a few useful instructions to Emigrants, and a great number of valuable Tables are added, with a view of rendering this work a useful Companion to every class of Persons in this Country.*

Since the first establishment of this work several important additions have been made, amongst which the STATISTICAL TABLES, formed from the ASSESSMENT ROLLS, and the POPULATION RETURNS, are perhaps the most valuable, as they will shew at one view, when the whole are collected, what are the resources of the country, in a manner that must be perfectly clear and indisputable; and, a comparison of years, will prove the amount of increase, or decrease.

A very comprehensive CHRONOLOGY has been likewise added, to mark some interesting epochs in the History of the World.

CHARLES FOTHERGILL.

YORK, U. C. }
November 1st, 1825. }

Printer to the King's }
Most Excellent Majesty. }

* It will, indeed, be found particularly useful to occasional visitors, and travellers through the country, being a matter-of-fact book compiled from the most authentic sources.

ALMANAC

FOR THE YEAR

1826.

EPOCHS, AND COMMON NOTES.

EPOCHS.

Of the Julian Period	6539
Of the Mundane Era	5829
Since the Birth of Christ, according to Chronologers,	1830
Of the Vulgar Christian Era,	1826
Since the Discovery of America,	334
Since the treaty which confirmed the possession of Canada to the British Crown,	63
Since the British acknowledgement of the Independence of the United States of America, at the Peace of 1783	43
Since the Division of the Province of Quebec into Lower and Upper Canada,	35
Of the Reign of His Majesty Geo. IV	7

CHRONOLOGICAL CYCLES.

Dominical Letter	A.	Solar Cycle	15
Lunar Cycle, or Golden Number,	3	Roman Indiction	14
Epact,	22	Julian Period	6539

MOVEABLE FEASTS.

Septuages	Jan. 22	Low Sunday	April 2
Quinquages, or Shrove Sunday	Feb. 5	Rogation Sunday	April 30
Ash Wednesday, or 1st day of Lent	Feb 8	Ascension Day, or Holy Thursday	May 4
Mid. Lent Sunday	March 5	Whit Sunday	May 14
Palm Sunday	March 19	Trinity Sunday	May 21
Easter Day	March 23	Advent Sunday	Decr. 3

COMMENCEMENT OF THE SEASONS.

Spring—Sun enters ♈, March 20.

Summer—Sun enters ☊, June 21.

Autumn—Sun enters ♎, September 23.

Winter—Sun enters ♏, December 21.

 SOLAR AND LUNAR ECLIPSES.

IN THE YEAR 1826.

May 21st.—The Moon will be Eclipsed, to us invisible, at 6 m. past 10 o'clock in the morning.

June 5th.—The Sun will be Eclipsed, at 44 m. past 0 h in the evening;—to us invisible.

Oct. 30th.—The Sun will be again Eclipsed at 6 m. past 8 o'clock in the evening;—here also invisible.

Nov. 14th.—The Moon will be Eclipsed, though to us invisible, at 56 m. past 10 o'clock in the morning.

Nov. 29th.—The Sun will be Eclipsed for the third time this year, though to us invisible, at 25 m. past 6 o'clock in the morning—ending but a short time before it rises.

 THUNDER AND LIGHTNING.

To determine the distance of Lightning, count the number of Seconds between the flash and the clap of Thunder, and allow rather less than a quarter of a mile for each second.

The middle of the room is the safest situation in a Thunder Storm, and lower rooms are more safe than upper chambers.

The Planet Venus will be the Morning Star until the 10th of March; then the Evening Star to the 23d of December.

Jupiter will be the Evening Star from February 28th to September 18th, then the Morning Star to the end of the year.

THE SUN WITH THE SEVEN PLANETS.

☉	The Sun,		♃	Mars,
☿	Mercury,		♃	Jupiter,
♀	Venus,		♄	Saturn,
♁	The Earth,		♁	Georgian Sidus.

THE TWELVE SIGNS OF THE ZODIAC.

♈	Aries,		♎	Libra,
♉	Taurus,		♏	Scorpio,
♊	Gemini,		♐	Sagittarius,
♋	Cancer,		♑	Capricornus,
♌	Leo,		♒	Aquarius,
♍	Virgo,		♓	Pisces.

MOON'S RISING AND SETTING.

At four days old it sets at and shines till, about 10 at night. 5—about 11, 6—about 12, 7—at near 1 in the morning	15,—at full, it rises about 6 in the evening 16—at 1-4 after 7, 17—at 1-2 after 8, 18—at about 10, 19—at about 11, 20—at about 12,
---	--

N. B. This table is sufficiently accurate for the purpose it is wanted for, that of ascertaining moonlight evenings.

OF THE CHANGES OF THE MOON.

Many persons, understanding that the mean time between one new Moon and another is 20 days, 12 hours, 44 minutes and a fraction, imagine that, to find the full or quarters of the Moon, they have only to add a half or fourth part of that time; and when they do not find the changes marked in the Calendar to correspond with this method, they impute it to mistake in the calculation of those changes. It is, therefore, necessary to put them in mind, that the great inequality of the Moon's motions renders the above rule extremely inaccurate, so that nineteen times in twenty it must fail in giving the true conjunction or change.

EXPLANATION OF THE CALENDAR,

The First Column contains the Days of the Month; the Second the days of the Week; the Third Aspects, Holidays, Anniversaries, &c; the Fourth, Prognostications of Weather, the Fifth, the Places of the Moon; the Sixth and Seventh, the Rising and Setting of the Sun; and the Last the Rising and Setting of the Moon.

TABLE OF THE DIAMETERS, &c. OF THE SUN
AND PLANETS.

Names of the Planets.	Diameters in English Miles.	Mean distances from the Sun, as determined from observations of the transit of Venus, in 1761	Annual period round the Sun.	Diurnal rotation on its axis.	Hourly motion of its orbit.	Hourly motion of its equator.	Inclination of axis to orbit.

*THE whirling tempest raves along the plain;
And on the cottage thatch'd or lordly roof,
Keen fastening shakes them to the solid base—
Huge uproar lords it wide The clouds commix'd,
With stars swift gliding sweep along the sky,
The cattle from the unvisited fields return.
And ask, with meaning low, their wonted stalls,
Or ruminant in the contiguous shade.*

*NOW Shepherds to your helpless charge be kind,
 Baffle the raging year, and fill their pens
 With food at will; lodge them below the storm,
 And watch them strict; for from the beilow'ng east,
 In this dire season, oft the whirlwinds wing
 Sweeps up the burden of whole wintry plains,
 At one wide waft, and whelms the hapless flock.*

THESE naked shoots

*Barren a-lances, among which the wind
 Makes wintry music, sighing as it goes,
 Shall put their graceful foliage on a gain,
 And more a-p ring: and with ample spread,
 Shall boast new charms, and more than they have lost,
 All Nature feels the renovating force
 Of Winter, only to the thoughtless eye,
 In ruin seen.*

*As yet the trembling year is unconfirm'd,
 And winter oft at eve resumes the breeze.
 Chills the pale morn. and bids its driving sleets
 Deform the day delightless; so that scarce
 The bittern knows his time, with bill ingulph't
 To shake the sounding marsh; or from the shore,
 The plovers when to scatter o'er the heath.
 And sing their wild notes to the listening waste.*

*FROM brightening fields of æther fair disclos'd,
 Child of the Sun, refulgent SUMMER comes,
 In pride of youth; and felt through NATURE'S depths;
 He comes attended by the sultry hours,
 And ever fanning breezes, on his way;
 While, from its ardent look, the turning SPRING
 Averts her bashful face; and earth and skies,
 All smiling, to his hot dominion leaves.*

*ECHO no more returns the cheerful sound
 Of sharpening scythe; the mower sinking, heaps
 O'er him the humid hay, with flowers perfum'd,
 And scarce a chirping grass-hopper is heard
 Through the dumb mead. Disreassful NATURE pants.
 The very streams look languid from afar;
 Or, through th' unshelter'd glade, impatient seem
 To hurl into the covert of the grove.*

*THE SUN has lost his rage; his downward orb
 Shoals nothing now but animating warmth,
 And vital lustre that, with various ray,
 Lights up the clow's, those beautiful robes of Heaven,
 Incessant roll'd into romantic shap's,
 The dream of waking fancy! Broad below,
 Cover'd with ripening fruits, and swelling fast
 Into the perfect year the pregnant earth
 And all her tribes rejoice.*

*CROWN'D with the sickle and the wheat-n sheaf,
 While AUTUMN nodding o'er the yellow plain,
 Comes jovial on; the Doric reed-voice more,
 Well pleas'd, I tune.—whit'er the Wintry frost
 Nitreous prepar'd: the various blossom'd Spring
 Put in white promise forth: and Summer suns
 Concocted strong rush boundless now to rise;
 Full, perfect all, and swell my glorious theme!*

*HENCE from the busy joy resounding fields,
 In cheerful error, let us tread the mass
 Of Autumn uncorfin'd; and taste, reviv'd,
 The breath of orchard big with bending fruit—
 Obedient to the breeze and beating ray,
 From the deep loaded bough a mellow shower
 Incessant melts away The juicy pear
 Lies, in a soft profusion, scatter'd round,*

'TIS done! dread WINTER spreads his latest glooms,
And reigns tremendous o'er the conquer'd year,
How dead the vegetable kingdom lies!
How dumb the tuneful! Horror wide extends
His desolate Domain—Behold proud man!
See here thy pictur'd life: pass some few years,
And pale concluding WINTER comes at last,
And shuts the scene!

BRIEF ANNALS OF PUBLIC EVENTS,

FROM THE
DISCOVERY OF AMERICA,
TO THE
DIVISION OF THE PROVINCE OF QUEBEC
INTO
Upper and Lower Canada.

It has been judiciously remarked by the author of the American Annals, that the remarkable discovery of a New World, (which has been receiving inhabitants from the old for more than three hundred years,) and those events, and actions, which are connected with it, can now be accurately ascertained, without having recourse to such legends as have darkened and disfigured the early annals of most nations.

It is the purpose of the Compiler of these Annals to confine himself, (after noticing the Discovery of Columbus.) to such events as relate to Canada only.

BRIEF ANNALS,

&c. &c.

Anno Domini 1492.—ON the 3rd day of August, CHRISTOPHER COLUMBUS set sail from *Palos* in *Spain*, with three vessels and ninety men; and on the 11th of October following, discovered land on one of the *Bahama* Islands. This was the first certain knowledge possessed by modern Europeans of any part of the *New World*.*

1497.—Henry VII. of England gave permission to John Cabot to take six ships, with all things necessary for a voyage of discovery in *North America*. Early in *June*, in the same year, having his son, *Sebastian*, with him, he discovered part of *Newfoundland*; he next saw and named the *Island of St. John*; and, continuing a westerly course, he afterward arrived at the *Continent*, along the coast of which he sailed, northerly, as far as 67 and a half north latitude.

It is remarkable that no further attempts towards discovery were made by the English for upwards of sixty years afterwards, if we except the proposed expedition of *Elliot* and *Ashurst*.

1502.—*Hugh Elliot* and *Thomas Ashurst*, merchants of *Bristol*, with two other gentlemen, obtained a patent from *Henry VII.* for the establishment of Colonies in the countries then lately discovered by *Cabot*; but it is not known whether they availed themselves of this permission, or made any voyage to the *New World*.

1506.—*Jean Denys*, a Frenchman, sailed with his pilot, *Camart*, a native of *Rouen*, from *Hartuer* to *Newfoundland*, and drew a map of the *Gulf of St. Lawrence* and the adjacent coast.

1508.—*Thomas Aubert*, who made a voyage in this year from *Dieppe* to *Newfoundland*, was the first who sailed up the great river *St. Lawrence* to the country of *Canada*. This man carried off some of the natives, and exhibited them in *Paris*.

1517.—The cod fishery on the banks of *Newfoundland* had, by this time, attracted the attention of several European nations for there were Fifty Spanish, French, and Portuguese ships employed in it this year.

* We say *modern*, because we are believers in the success of the famous expedition of *Maboc*, from *Wales*, in the 12th century. *Ed.*

1522.—Newfoundland, settled by different nations before any part of Canada, is said to have contained at this period about fifty houses.

1527.—The scheme for discovering a passage to the East Indies by the North West, being resumed in England, a voyage was made, at the advice of Robert Thorne, of Bristol, with two ships, furnished out by Henry VIII; but it proved unsuccessful, and even disastrous, for one of the ships was lost. Hakluyt says, this *Master Thorne* was "a notable member and ornament of his country," and that he exhorted the King with "very waightie and substantial reasons, to set forth a discoverie even to the North Pole."

1535.—Cartier, discovering now the river of Canada, which gradually obtained the name of St. Lawrence, sailed up this noble stream more than three hundred leagues to a great and swift fall, rapid; formed alliances with the natives; took possession of the territory; built a fort; and wintered in the country, which he called *New France*. He, at this time, visited Hochelega, which he called *Mount Royal*, (afterwards *Montreal*), a large Indian settlement. This was the first attempt made by the French to form a settlement in America.

Barlevoix says, the name of St. Lawrence was first given to the river next to the Gulf, and then to the river of Canada.

On this expedition of Cartier's, he carried off Donnacona, a chief of the natives, and Hakluyt says, "The poore King of the country, with two or three of his chiefs companions, coming aboard the French shippes, being required thither to a banquet, traiterously carried away into France, where he lived four years, and then dyed a Christian there."

1538.—A voyage was made from England to Newfoundland, by 120 persons, 30 of whom were gentlemen of education, and character, at the head of whom, according to Hakluyt, was "One Peter Hore of London, a man of goodly stature and of great age, and given to the studie of Cosmographie, &c." Cape Breton was discovered during this voyage, but the expedition was equally so disastrous, through famine, that the survivors were constrained to support life by feeding on the bodies of their dead companions.

1540.—François de la Roque, Lord of Roberval, a nobleman of France, and the King of France's Lieutenant General and Vice-Roy of Canada, sent out Cartier, with five ships, to Canada, this time intending to follow him with two other ships, fitted out at his own expence, for the purpose of colonizing some part of the coast of the St. Lawrence.

1542.—The Lord Roberval, himself, arrived in Canada this year, and built a fort, and wintered about four leagues above the Island of Anticosti (which was at first called the Isle of Bacchus.) Puelias says this fort was "faire and strong."

2th century. Ed.

1546.—The first Act of the English Parliament relating to any part of America was made this year.—this was to protect and encourage the English fishery on the Banks of Newfoundland.

1549.—In this year, Lord Roberval, accompanied by his brother and a numerous train of adventurers, again embarked for the river St. Lawrence; but they were never heard of afterwards:—a disaster which so discouraged the government and people of France, that for more than 50 years no further measures were taken for supplying the few settlers which remained in Canada.

1576.—Martin Frobisher was sent out by Queen Elizabeth, with three small ships, and discovered Elizabeth's Foreland, and the straits, which still bear his own name. He entered a bay in N. L. 63 degrees, and carried off one of the natives, whom, Hakluyt says, "for very cholera and disdain, bit his tongue in twaine within his mouth."

1577.—The discovery of supposed Gold ore by Frobisher, in his voyage of last year, encouraged the Society of Adventurers to send him out, with three other ships, to explore the coast of Labrador and Greenland, with an ultimate view of discovering a passage to India; but he again returned without success, though he brought away nearly 200 tons of his supposed gold, and with it a man, woman, and child, of the natives—but Stow says in his Chronicle that "neither the man, woman, nor child lived long; nor did his gold prove ore, but drosse."

1578.—Frobisher sailed again for this northern Continent, with no fewer than *fifteen*, ships in search of gold, and was foolish enough to carry home immense quantities of the same glittering stones (most probably *mundic*, *mica*, or *talc.*) to the utter ruin of many adventurers.

1581.—The French trade to Canada was renewed, after an interruption of nearly 50 years.—The cause of which interruption was the carrying off the Indian king or chief in 1535, by Carter, an outrage that could not be forgiven by the natives, who would have no dealings, or intercourse with the French for so many years afterwards.

1583.—Sir Humphrey Gilbert, by virtue of a commission which he carried from Queen Elizabeth this year, took possession of St. Johns in Newfoundland, and two hundred leagues every way around it, for the Crown of England, and published laws for the government of the territory. This formal possession, in consequence of the discovery by the Cabots, is considered the foundation of the right and title of the Crown of England to the territory of Newfoundland, and the fishery on its banks.

The renewal of the French trade with Canada was so auspicious, that three ships, one of them of 180 tons, were employed this year in that trade.

1586.—Sir Walter Raleigh introduced the fashion of smoking Tobacco in England. It had been carried thither for the first time in 1575 by Sir John Hawkins, but was then considered as a mere drug; and Stow says in his Chronicle that “all men wondered what it meant.” But Raleigh, and a Mr. Law, had learnt the practice of smoking, through pipes made of clay, from the Indians of Virginia. This singular plant appears to have been used in all parts of North America. In the account of Cartier’s voyage in 1535, it appears that it was used in Canada, and a particular account is given of the manner of preserving it: “There groweth a certain kind of herbe, whereof in summer they make a great provision for all the year, making great account of it, and only men use of it, and first they cause it to be dried in the sunne, then wears it about their neckes wrapped in a little beastes skinne made like a little bagge, with a hollow piece of stone or wood like a pipe: then when they please they make poudre of it, and then put it in one of the ends of the said. cornet or pipe, and laying a cole of fire upon it, at the other ende, sucke so long that they fill their bodies full of smoke, till that it cometh out of their mouth and nostriles, even as out of the tonnell of a chimney.”—Hakluyt, iii. 224.

1591.—The *Walrus* or *Morse* must have been common in and about the Gulf of St. Lawrence; for this year, we find that a fleet of ships was fitted out from the port of St. Malo, in France, for Canada, and to hunt for *Morses* about the bay of St. Lawrence, whose teeth were sold at a much dearer rate than ivory. They also obtained oil in vast quantity from the bodies of those animals. An English Voyager in Hakluyt says, there were 15,000 of these creatures killed, this year, by one small bark at Ramea, an island lying within the straights of St. Peter, back of Newfoundland, in N. Lat. 47.

1593.—George Drake, an Englishman, made a voyage up the Gulf of St. Lawrence, to the Isle of Ramea, and carried home intelligence of the profitable trade of the French and others in these parts of America.

1598.—The Marquis de la Roche received a commission from Henry IV. to conquer Canada; but returned without doing any thing of consequence, and shortly afterwards died of vexation.

1600.—On the death of La Roche, his patent was renewed in favor of M de Chauvin, who made a voyage up the St. Lawrence as far as *Tadousac*, where he left some of his people; and returned with a freight of Furs. The following year he sailed again and proceeded as far as *Trois Rivieres*.

1603.—Pierre du Gast, Sieur de Monts, a gentleman of the bed chamber to Henry IV. of France, received a patent of the American territory from the 40th to the 46th deg. N. Lat. constituting him Lieutenant General of the country, with power to colonise it and subdue and convert the natives to Christianity.

Samuel Champlain of Brouage in France, anchored at Tadou-
sac this year, and made discoveries in the neighbouring territory.

1608.—Champlain, being sent out at the head of a colony with
three ships for the purpose of making a permanent settlement, this
year laid the foundation of Quebec, the future capital of Canada,
after having examined all the most eligible situations in Acadia and
along the river St. Lawrence. Subsequent experience has proved
the wisdom of his choice. Champlain says that Quebec was the
Indian name of the place. "Trouvant un lieu le plus estroit de
riviere, que les habitants du pays appellent Quebec, j'y bastir et edi-
fier une habitation, et desfricher des terres, et faire quelques jardi-
nages."

1612.—The English colony in Conception Bay, Newfoundland,
this year consisted of 54 men, 6 women, and 2 children.

1621.—This year Acadia first received the name of *Nova Scotia*;
its whole territory being granted by that name to Sir Wm. Alexan-
der, of Minstry, by King James I.

1627.—The Colony of Quebec, by direction of Cardinal Riche-
lieu, then sole Minister of France, was taken out of the hands of
the French Protestants, and together with its trade, placed under
the management of one hundred persons called the "*Company of
One Hundred Associates*," at the head of which was the Cardinal
himself, with the Marshal Desiat, and other persons of eminence.
Charlevoix thinks nothing could have been better planned; and
that France would have been the most powerful colony in Ameri-
ca, had the execution been answerable to the design.

1630.—A commission having been given by Charles I. to David
Kertk, and his valiant kinsmen, to conquer the American Domi-
nions of France, Kertk had attacked Canada in July 1628, and still
carried on his military operations with vigour.—Louis and Tho-
mas Kertk, appearing again at this time off point Levi, sent an offi-
cer on shore to Quebec, to summon the city to surrender; Cham-
plain, then in chief command, knowing his means to be inadequate
to a defence, surrendered the city by capitulation. The terms of
this capitulation were very favourable to the French colony; and
they were so punctually and honourably fulfilled by the English,
that the greater part of the French chose to remain with their cap-
tors, rather than go, as had been stipulated, to France.—"Thus
was the capital of *New France* subdued by the arms of England,
just one hundred and thirty years before its final conquest by the
celebrated Wolf."

1632.—Charles I. by the treaty of St. Germain, resigned the right
which he had claimed to *New France, Acadia and Canada*, as the
property of England, to Louis XIII. King of France. Chalmers
says, the signal event of the capture of Quebec was unknown when
peace was re-established in April, 1629; and assigns this as the

reason why King Charles, at that treaty, absolutely restored to France, those territories generally and without limits; and particularly *Port Royal, Quebec* and *Cape Breton*. From the restitution of these territories to France, may be dated the commencement of a long train of evils to the British Colonies, and to England, in this transaction, in the judgment of the able historian, last quoted, may be fairly traced back the colonial disputes of latter times, and the American revolution.

1635.—Rene Robault, having become a Jesuit, resumed a project, which had been interrupted by the English conquest of Quebec, of founding a college in that city: a seminary that had been planned ten years before. This institution succeeded; and, it is said, was of essential service to the colony.—Many Frenchmen were now encouraged to embark with their families, for Canada.

M. Champlain died at Quebec this year—he was justly regretted by the whole colony of New France, of which he might be said to be the parent. He had penetration, courage, constancy, probity, and patriotism—Charlevoix says of him, that he was “*un historien fidele et sincere, un voyageur, qui observe tout avec attention, un esrivain judicieux, un bon geometre, et un habile homme de mer.*”

1639.—A Nunnery of French Ursulines was founded at Quebec, *Madame de la Peltrie*, a pious Catholic lady, devoting both her time and fortune to this design, went to Quebec with three Ursulines, attended by Le Jeune, Superior of the Jesuit mission into Canada. Entering the city under a general discharge of cannon, they proceeded with much triumph, amidst the acclamations of the people, to the church, where *Te Deum* was sung, with great solemnity, for their arrival. Charlevoix says that this *Madame de la Peltrie* had such zeal for the conversion and comfort of the native Canadians, that she actually cultivated the earth with her own hands, to increase her power of doing good. The Hospital, called *L'Hotel Dieu*, was founded the preceding year at Sileri, by *Madame la Duchesse d'Aiguillon*.

1642.—*MAISONNEUVE*, a gentleman of Champaign, who, the preceding year, brought over several families to Montreal, now entered with them into possession of their new habitation, and Chapel, on this island, with many religious ceremonies.—In 1640 the French King had vested the property of the island in 35 associates, of whom *Maisonneuve* was one; and on the 15th of October, 1641, he was declared Governor of the Island.—*Charlevoix Nouvelle France.*

1647.—The French in Canada, in their trade with the neighbouring Indians, had, for several years, been obstructed by the *Mohawks*. Unable to subdue that formidable tribe without assistance, about this time, they sent M. Maric as an agent to solicit

aid from the Massachusetts, with offers of liberal compensation, but the government of that colony rejected the alluring proposal. It is said this Marie was a *Jesuit*, and offered a large sum for assistance: but the English gave the very wise answer that the *Mohawks* had never injured them, and they would have nothing to do with the business.

1648.—The Colonists of New England sent to the Governor and Council of Canada a proposal of perpetual peace between the Colonies, though the mother countries might be at war; although the French were much pleased with the proposal, and anxious to conclude an agreement of this kind, the business terminated without success, because the English were firm in their determination not to assist the French against the *Iroquois*.

1649.—In the month of March, one thousand *Iroquois* suddenly attacked the Huron village of St. Ignatius, containing 400 persons, all of whom, three only excepted, were massacred.

1654.—About this period the *Eries*, a numerous tribe of Indians which inhabited the borders of Lake Erie, were so effectually exterminated by the *Iroquois*, that were it not for the name of the Lake, we should have no memorial of their former existence.—*Charlevoix* calls them "la nation des Eriez, ou du Chat"

1655.—The *Onondagas* sent deputies to Quebec to solicit Missionaries of the French, a number of whom were accordingly sent to that tribe, and many of the heads of it became converts to the Christian Religion.

1660.—Francis de Laval, Abbot of Montigny, being appointed Bishop of Canada, came over and brought, for the first time, some Monks of other orders besides the *Jesuits*.

1664.—The Rev. John Eliot completed his translation of the Bible into the Indian language, which was printed at Cambridge, and entitled "Mamusse Wunneetupanatamwe Up-Biblum God Navesioe NUKKONE TESTAMENT Kah Wonk WU-KU-TESTAMENT"

1665.—M. de Courcelles being appointed Governor of New France, transported the regiment of Carignan Salieres to Canada this year. It consisted of 1000 foot, a great number of families, numerous mechanics, hired servants, horses (the first ever seen in Canada,) cattle, and sheep were brought to this country at the same time. The 100 associates in whom the property of the Colony was vested, had grown weary of the expence of maintaining their colony; and from the year 1644 abandoned the Fur-Trade to the inhabitants, reserving to themselves, as their right of lordship, an annual payment of 1000 Beavers.—Reduced at length to the number of 45 associates, they made a total resignation of all their rights, 1662, to the French King; who, soon afterwards, included New France in the Grant which he made of the French Colonies in America, in favour of the West-India Company formed by the great Colbert.

1666.—The Mohawks, having greatly annoyed the French, were attacked this year by a French army of 28 companies of foot and the whole militia of the Colony. This formidable body of troops marched upwards 700 miles, in the depth of winter, from Quebec into the country of the Mohawks, with a view of utterly destroying them; but the Indians retired, with their women and children, into the depth of the woods, leaving only a few ancient SACHEMS in the villages, who chose rather to die than desert their habitations. These were murdered by the French, and their villages burnt; yet, nothing of political importance was gained by this expedition, which was commanded by M de Tracy, in person, who was then upwards of 70 years old.

1667.—Peace was at length established between the French and the Five Nations, which continued for several years, and they cultivated a mutual trade. The Sieur Perot, a French Missionary, travelled more than 1200 miles to the westward of Quebec, making proselytes amongst the Indians as he went along.

1670.—A terrible disease broke out amongst the Indians in the northern parts of Canada, it swept off whole tribes, particularly the tribe of *Atlikanegues*, which has never since been heard of.—Tadousac, the chief mart of the Indian fur-trade with the French, was deserted: as also Trois-Rivieres, where the small-pox carried off 1500 Indians at once.

1671.—A grand Congress of the French, and of many Canadiant Indians, was held this year at the Falls of St Mary; where the Indians professed submission to the King of France, in a formal manner.

1672.—M. de Courcelles, Governor of Canada, built a fort on the north side of the outlet of Lake Ontario, (near the modern Kingston,) as a barrier against the Iroquois, pretending, however, that he merely intended it as a place of trade, and for their mutual accommodation.

1673.—The Count Frontenac completed the fort on Lake Ontario, begun last year by Courcelles, and called it after his own name. The French likewise built a fort at Michilimackinac.—Father Marquette, in company with one Joliet, a citizen of Quebec, employed by M. Talon, for the discovery of the Mississippi, entered that noble river on the 17th of June, and descended it to a point within three days journey of the Gulf of Mexico, when they returned to Canada. The French had received information of this river from the Indians. Ferdinand de Soto had discovered the country on the Mississippi 130 years before, but the Spaniards did not see fit to settle it.

1674.—Quebec was made a Bishopric.

1678.—M. de Sale re-built the Fort Frontenac with stone, He also launched a Bark of ten tons on Lake Ontario, and in the year

following another vessel of 60 tons on Lake Erie. About this time he likewise inclosed a little spot of ground at Niagara with stockades, intended for a Fort.

1680.—The Father Hennépin, with M Dacan, sent out on discovery by M. de la Sale, ascended the Mississippi, from Canada, as far as the falls of St. Anthony

1682.—M de la Sale descended the Mississippi to the sea, and took possession of all the country watered by that mighty stream, in the name of Louis XIV; calling it, in honor of the King, *Louisiana*.

1683.—The French erected a Fort between the Lakes Erie and Huron.

1684.—M. de la Barre, with a large army from Canada, made an unsuccessful expedition into the country of the Five Nations. De la Barre found it necessary to conclude his campaign with a treaty. He was met, at the place appointed, by the *Oneidas*, *Onondagas*, and *Cayugas*; the *Mohawks* and *Senékas* refusing to attend. Seated in a chair of state, surrounded by his own Indians (principally the *Hurons* of Lorette) and the French officers, he addressed himself to Garangula, an Onondaga Chief, in a very haughty speech, which he concluded with a menace to burn the castles of the Five Nations, and destroy the Indians, unless the satisfaction, which he demanded, was given.

Garangula who sat at some little distance before him, with his pipe in his mouth, and the *Great Calumet of Peace* before him, did nothing but look at the end of his pipe during this harangue — when it was finished, after walking five or six times round the circle, in silence, he stood perfectly upright, and thus answered the French General:—

“Onnuntio, I honour you, and all the warriors who are with me honour you—Your interpreter has finished your speech. I now begin mine.—My words make haste to reach your ears; hearken to them.—Onnuntio, in setting out from Quebec you must have imagined that the scorching beams of the sun had burnt down the forests, which render our country inaccessible to the French; or, that the inundations of the Lakes had shut us up in our castles; but now you are undeceived; for I and my warriors have come to assure you that the *Senékas*, *Cayugas*, *Onondagas*, *Oneidas*, and *Mohawks*, are yet alive.” After ascribing the pacific overtures of the General to the impotence of the French, and repelling the charges brought against his countrymen, he added “We are born free; we have no dependence either on the Onnuntio or the Corlar.” This speech, which affords an interesting specimen of the

* Titles given by the Indians to the Governors of Canada, and of New York.

spirit and eloquence of the aboriginals, has this fine conclusion—
“ My voice is the voice of all the Five Nations,—Hear what they say ; open your ears to what they speak—The *Senekas*, *Cayugas*, *Onondagas*, and *Mohawks*, say, that when they buried the hatchet at Cataracuy, in the presence of your predecessor, in the very center of the Fort, and planted the tree of peace in the same place, it was then agreed that the Fort should be used as a place of rendezvous for merchants, and not as refuge for soldiers—Hear, Onnuntio, you ought to take care, that so great a number of soldiers, as appear now, do not choke the tree of peace, planted in so small a fort, and hinder it from shading both your country and ours with its branches. I do assure you, that our warriors shall dance to the Calumet of Peace under its leaves, and that we will never dig up the ax to cut it down, until the Onnuntio or the Corlar shall either jointly or separately endeavour to invade the country, which the Great Spirit had given to our ancestors.—This belt confirms my words ; and this other, the authority, which the Five Nations have given me.”

Enraged at this bold reply, De la Barre retired to his tent, and prudently suspended his menaces. Two days after, at the conclusion of the peace, the Indian chief and his retinue returned to their country, and the French army embarked in their canoes for Montreal.

1685.—The inhabitants of Canada amounted to 17,000 ; three thousand of whom were supposed to be capable of bearing arms. Chalmers says, these numbers were taken from an accurate account made by order of the government.

1687.—In this year the French Cabinet took measures to destroy, as was intended, at one blow, the whole British interest in North America. M. Denonville, who had succeeded De la Barre, took the field at the head of 1500 French and 600 Indians. The *Senekas*, who had refused to meet De la Barre at the late treaty, were known to be most firmly attached to the English, it was therefore determined either to extirpate that tribe, or so to humble them, as to render them examples of French resentment to all the other Indians.

Denonville commenced his march from Cataracuy on the 23d of June. In this campaign, the scouts of the French army had advanced as far as the corn of the villages without seeing a single Indian ; though they passed within pistol-shot of 500 *Senekas*, who laid on their bellies, and suffered them to pass and repass, without disturbing them. But, on a sudden, when the invading army had approached within a quarter of a league from the chief village of the *Senekas*, the war shout arose, in terrific effect, intermingled with a discharge of fire arms from all sides. This surprise threw the French into confusion, and the *Senekas* fell upon them

with great fury; but the French Indians being rallied, in the end repulsed them. In this action there fell about 100 of the French, 10 French Indians, and 80 Senekas. The next day Denonville continued his march with the intention of burning the village; but he found it already in ashes. The Senekas had burnt it and fled. Two old men only were found in the castle, who were cut into pieces and boiled, to make soup for the French allies, (see *Colden* p 78.) The valour of the Indian plantations, which they effected in destroying the corn of the French army was next employmentually accomplished; and thus ended the *extirpating* campaign of Denonville!

Before Denonville returned into Canada he built a Fort, with four bastions, at Niagara, in which he left a garrison of 100 men, with provisions; but it was soon afterwards abandoned.

1689.—On the 27th of June, the Senekas, Cayugas, Onondagas, and Oneidas, renewed their covenant with the English. *Colden* says this renewal was previous to the arrival of Count Frontenac, who came over on the 2d of October, this year, as Governor of Canada, at the advanced age of 68 years, in the room of Denonville, who was recalled.

A body of 1200 Indians of the *Five Nations* invaded the Island of Montreal on the 26th of July, burnt all the plantations, and made a horrible massacre of men, women, and children, throwing the whole French Colony into the utmost consternation; inso-much, that Valreues, the commandant at Cataracuy was ordered by Denonville to abandon that place—*SMITH* (in his *N. York*, p. 56) says, that 1000 French were slain in this invasion, and 26 carried off and burnt alive. *Charlevoix's* account is horrible—“*ils ouvrirent le sein des femmes enceintes, pour en arracher le fruit, qu'elles portoient, ils mirent des enfans tout vivant a la broche, et con-traignirent les meres de les tourner pour les faire rair.*”

In a conference held this year between the English Colonies and the *Five Nations*, the latter promised to preserve “the chain (which united them) *inviolable*” and said “we wish that the sun may always shine in peace over all our heads, that are comprehended in this chain.”

1690.—An unsuccessful attack on Quebec was made this year by the English forces, from the Colonies, under the command of Sir *W. Phips*. The fleet did not arrive before that fortress until the 5th of October. The largest ships carried 44 guns. A simultaneous attack on Montreal, by way of Lake Champlain, at the same time, was designed, but the army was compelled to retreat by sickness (as it is said;) and the fleet, after many disasters, arrived at Boston on the 19th of November.

1693.—Count Frontenac invaded the country of the *Mohawks* from Canada; but his army, after encountering the greatest hard-

ships, and losing 80 men killed, and 30 wounded, found it necessary to return without accomplishing any thing material. A great quantity of Fur had been accumulated by the French at Michillimackinac; but the Five Nations had so effectually blocked up the passage between that place and Canada, that they had remained useless for several years. At length, however, a fleet of 200 canoes, laden with furs, arrived at Montreal, and Colden says this arrival "gave as universal a joy to Canada, as the arrival of the *Galleons* give in Spain."

At this period Canada contained, by computation, 180,000 souls. There were six churches in Québec.

1694.—*Decanesora*, who had for many years the greatest reputation among the Five Nations, as a speaker, arrived in Canada, with many other deputies, to hold a treaty with the French. "This *Decanesora* was grown old," says Colden "when I saw him, and heard him speak; he had great fluency, and a graceful elocution that would have pleased in any part of the world. His person was tall and well made; and his features, to my thinking, resembled much the *busts* of *CICERO*."

It is not clear how this treaty terminated, or whether there was any made: for, we find this same *Decanesora* very soon afterwards assuring an English conference, at Albany, of a fact that could not be very satisfactory to the French. Addressing Gov. Fletcher of New York, the orator gave the following passage, as part of his speech to the Gov. of Canada—"Onnuntio, we will not permit any settlement at *Cataracui*: you have had your fire there thrice extinguished. We will not consent to your rebuilding that fort, but the passage through the river shall be free and clear. We make the sun clear, and drive away all clouds and darkness, that we may see the light without interruption."

1695.—The Five Nations having now positively refused to accede to the terms proposed by the French, Count Frontenac determined to compel them to submission. Having previously sent out 300 men, in the hope of surprising them on their hunting ground, between Lake Erie and Cataracuy Lake (now Ontario) and at the same time to view the old French Fort there; he, in the summer of this year, sent out a considerable body of French and Indians, to repair the fortifications at Cataracuy, in which

* Here is an apparent inconsistency.—A. D. 1685—it is said there were only 17,000 inhabitants by a census *accurately* taken. Now, in 1693, only eight years afterwards, 'tis said there were 180,000 by *computation*. The only way for accounting for this extraordinary difference is to suppose that the first census comprehended the *white* population only, and that in the latter statement, all the Indian tribes were included.—*Ed.*

work they were completely successful, and restored its former name, *Fort Frontenac*.

1696.—The Count Frontenac having secured his Fort at Cataracuay, resolved to make the Five Nations feel his resentment — Having assembled all the regular troops and the militia of Canada, at Montreal, together with the *Owenagungas*, the *Qualoghies* of Loretto, the *Adirondacks*, *Sokokies*, *Nepiciriniens*, the *Praying Indians* of the Five Nations, and a few *Utawawas*, he marched with this formidable army from that Island on the 4th of July. After twelve days march the French army arrived at Cataracuay. On approaching Onondaga, the Indians hearing of the formidable power of the French, by a *Seneka* deserter, thought it prudent to retire, after setting fire to their poor fort and bark cottages. All the French did here was to destroy a very extensive field of corn. The *Chevalier de Vaudieul* was dispatched with 6 or 700 men to destroy another field of corn, belonging to the *Oncidas*, at no great distance, which was accomplished; and these feats, with the capture of 35 *Oncidas*, who staid to welcome the French; in one of their little forts, were all the achievements of this grand enterprize. The fact was, the French experienced the insurmountable difficulty of supporting so large an army in a wilderness, and they were obliged to return to Montreal on the 10th of August, without doing any thing more.

1698.—Count Frontenac died, aged 78 years. *Charlevoix* speaks thus highly of him. "He retained all the firmness, and all the vivacity of his best years; and died, as he had lived, beloved by most, esteemed by all, and with the glory of having, without scarcely any succours from France, sustained and augmented a colony, open and attacked on all sides, and which he had found on the point of ruin."

1699.—*M. de Calliers*, succeeding the Count Frontenac, as Governor of Canada, terminated the disputes between the French and the Five Nations, by agreeing to have an exchange of prisoners at Onondaga. *Colden* says, this peace was esteemed by the Canadians as the greatest blessing heaven could grant them, "*for nothing could be more terrible than this last war with the Five Nations*". When the French Commissioners came to Onondaga, *Decanesora* met them without the gate, and complimented them with three strings of wampum, "*By the first he wiped away their tears for the French; who had been slain in the war; by the second he opened their mouths, that they might speak freely; by the third he cleaned the mat, on which they were to sit, from the blood that had been spilt on both sides.*"

1705.—A recent misfortune of the Canadians, in the loss of a large and richly laden ship, proved eventually a signal benefit; for it compelled the colonists to raise hemp, and flax which, by permission of the French Court, they manufactured into linens and stuffs,

to the great advantage of the colony. This ship was called the *Seine*, and was captured by the English. She was bound to Quebec, and had on board the Bishop of that City, a great number of ecclesiastics and laymen of large fortunes, with a general cargo of the estimated value of 1,000,000 *livres*.

1709.—A plan was formed by Lord SUNDERLAND, Secretary of State, for the subversion of the French power in Canada, Acadia, and Newfoundland by joint forces from England, and her Colonies in America, but it was not carried into effect.

1710.—Col. Schuyler, impressed with a deep sense of the necessity for vigorous measures against the French, made a voyage from N. York to England, on purpose to convince the Ministry of the absolute necessity of reducing Canada to the crown of Great Britain. He was accompanied by Five Indian Chiefs, who gave their assurances of fidelity to Queen ANNE, and solicited her assistance against their common enemy, the French. The appearance of these *Sachems* in England excited much interest.

1712.—The Merchants of Quebec raised 50,000 crowns for the purpose of completing the fortifications of that City.

1714.—At this period, Canada could not raise more than 4,484 men able to bear arms, from the age of 14 to 60; but she had, besides, 28 companies of marines, who were paid by the King of France, and these contained 627 soldiers — (Charlevoix.)

1715.—*Ginseng* was discovered in Canada this year, by Father LASELAN, a Jesuit.

1727.—John Thomas, a praying Indian of the *Mohawks*, who had been amongst the first converts to Christianity, and always a steady friend to the English, died this year at the advanced age of 110 years.

1749.—Acadia, being ceded to Great Britain by the treaty of *Aix la Chapelle*, changed its name to Nova Scotia. Parliament, aware of its importance, resolved to colonize it forthwith, and voted £40,000 in aid of that purpose. Advantageous terms being offered, 3760 adventurers accepted them, and settled at the bay of Chebucto. Every soldier and seaman was allowed 50 acres; an Ensign 200; a Lieutenant, 300; a Captain 460; and every officer of higher rank, 600 acres; together with 30 for every servant. They were furnished with instruments for fishing and agriculture, had their passage free, and provisions found them for the first year after their arrival — (Hewett.)

At this time the Militia of Canada amounted to 12,000 men, the regular troops to 1000; and the companies of marines to 628. — (*Univ. Hist.* XL. 190)

1755.—This year was remarkable for a terrible Earthquake that was felt throughout a great part of America. Its motion was undulatory, and it occasioned a great deal of mischief in towns and villages. Its course was from the N. West to the S. East. Its ex-

tent upwards of 1000 miles. until it passed into the ocean in the direction of the West India Islands from the Chesapeak Bay.

1756.—M. de MONTCALM succeeded the Baron Dieskau in the chief command of the French Forces in Canada.

1757.—It was in this year, at the capture of Fort William Henry, that the horrible massacre of many hundred unarmed British officers and soldiers, by the Indians in the French service, was permitted by MONTCALM and his officers; to their eternal disgrace, and in direct violation of a solemn compact.—(For a shocking account of this butchery see Carver's Travels.)

At this period the whole colony of Louisiana is said to have contained no more than 10,000 souls, whites and negroes. Montreal contained about 5,000 Inhabitants.

1758.—By the acquisition of Fort William Henry, the French had now full possession of the Lakes Champlain, and George; and by the destruction of Oswego they had acquired the dominion of those other Lakes which connect the St Lawrence with the waters of the Mississippi. The first afforded the easiest admission from the northern colonies into Canada, or from Canada into those Colonies; the last united Canada to Louisiana. But the strong arm of Britain had not yet been put forth with all the energy of its power, guided by the wisdom and foresight of the immortal CHATHAM, who had been recently placed at the head of a new administration, and it was not long before the aspect of affairs was changed in this part of the world.

Adm. BOSEAWEN arrived with a formidable fleet at Halifax, and Gen. ABERCROMBIE was shortly at the head of 50,000 men, the most powerful army, till then, ever seen in America.

Louisburgh, and the whole of Cape Breton; Isle Royal; St. John's, and their dependencies, were speedily conquered and taken possession of by Boscawen and Gen. Amhurst. Fort Frontenac, on Lake Ontario, which then possessed 60 pieces of cannon, 16 mortars, a large number of small arms, and a vast quantity of provisions, military stores, and merchandize, surrendered at discretion to a force under Col. Bradstreet, who had been dispatched on this service by Gen. Abercrombie, from before Ticonderoga. Nine armed vessels likewise fell into the hands of Col. Bradstreet, who destroyed both the Fort and the vessels, and such stores as he could not carry away. Fort du Quesne was captured by Gen. FORBES, who named it Pillsburg in compliment to the popular minister.

1759.—This was a memorable year for Canada; in which the vast and daring project which had been so often formed, and abandoned, was at length carried into effect; that of making an immediate and entire CONQUEST of the COUNTRY by GREAT BRITAIN; which was accomplished by the immortal WOLFE and his brave ASSOCIATES, in the TAKING OF QUEBEC. We cannot pretend to go into any detail of this famous achievement in a work like this.

Whilst the operations were carried on against Quebec, Sir Wm. JOHNSON secured the conquest of Upper Canada, by the capture of Niagara, and the defeat of the entire French force in that quarter. Quebec contained, at the time of its capitulation about 10,000 souls.—(*Precis sur l'Amerique*) Gen. Wolfe, who expired in the arms of victory, was only 33 years of age.—He possessed those military talents, which, with the advantage of years and opportunity of actions, “to moderate his ardour, expand his faculties, and give to his intuitive perfection and scientific knowledge, the correctness of judgment perfected by experience, would have placed him on a level with the most celebrated generals of any age or nation.” After he had received his mortal wound, it was with reluctance that he suffered himself, to be conveyed into the rear.—Leaning on the shoulder of a Lieutenant, who knelt down to support him, he was seized with the agonies of death; but, hearing the words ‘they run,’ he exclaimed, ‘Who run?’ ‘The French,’ replied his supporter, ‘Then I die happy,’ said the General, and expired.—A death more glorious, say Bolshain, is no where to be found in the annals of history. MONTREAL was every way worthy to be a competitor of WOLFE. He had the truest military genius of any officer, whom the French had ever employed in America. After he had received his mortal wound, he was carried into the city; and when informed, that it was mortal, his reply was, ‘I am glad of it.’—On being told, that he could survive, but a few hours, ‘So much the better,’ he replied, ‘I shall not then live to see the surrender of Quebec.’

1760.—The fall of Quebec did not produce the immediate submission of Canada. After the battle on the Heights of Abraham, the French army retired to Montreal.—This army, the command of which devolved on M. de Levi, still consisted of ten battalions of regulars, and it was reinforced, after the action, by 6,000 Canadian Militia, and a body of Indians. With these forces an attempt was made for the recovery of Quebec; but it was unsuccessful. On the 8th of September, Montreal, Detroit, Michilimackinac, and all other places within the government of Canada, were surrendered to his Britannic Majesty; and the destruction of an armament, ordered out from France in aid of Canada, completed the annihilation of the French power on the continent of North America.

1763.—By the second article of the *Treaty of Fontainebleau*, France renounces and guarantees to Great Britain all Nova Scotia and Acadia, and likewise CANADA, the Isle of Cape Breton, and all other Islands, in the Gulf and River of St. Lawrence.—By the same article it was stipulated that the French in Canada may freely profess the Roman Catholic Religion, as far as the laws of Great Britain permit; that they may enjoy their civil rights, retire when they please, and may dispose of their Estates to British Subjects.

A Proclamation was issued by his Majesty the King of Great Britain, in the month of October, declaring the Government of Quebec to be "bounded on the Labrador Coast by the River St. John, and from thence by a line drawn from the head of that river through the Lake St. John to the south end of Lake Nipissing;—from whence the said line, crossing the River St. Lawrence and the Lake Champlain in 45 degrees N. Latitude, passes along the Highlands, which divide the rivers that empty themselves into the said River St. Lawrence from those which fall into the sea; and also the north coast of the Bay of Chaleurs, and the coast of the Gulf of St. Lawrence to Cape Rosiers, and from thence crossing the mouth of the River St. Lawrence by the west-end of the island of Anticosti, terminates at the aforesaid river St. John."

In testimony of the 'Royal' sense and approbation of the conduct and bravery of the Officers and soldiers of the army and to reward the same,—the Governors were empowered to grant lands, without fee or reward, to such reduced Officers, as had served in America during the late war, and to such private soldiers, as had been, or should be, disbanded in America, and were actually residing there, &c. &c.—(see the Procl.)

To a Field Officer,	5,000 Acres.
a Captain,	3,000
a Subaltern, or Staff Officer,	2,000
a Non Commis'd. Officer,	200
a Private,	50

At this time Canada contained upwards of 65,0000 Inhabitants.—(Stokes.)

The exports from Great Britain to Canada, amounted this year to £8,623, 15s. 11d.

1765.—It may be remarked that Canada and Halifax submitted to the famous Stamp Act which occasioned so much turmoil in the Provinces now constituting the United States.

1773.—The Shawanese Indians, including men, women, and children, were reduced to 600.—(Am. Annals.)

1774.—A committee of the American Insurgents was appointed to seduce the Canadians from their loyalty to the Crown of Great Britain; and Ministers of the Gospel were employed, as agents, for this abominable purpose. The form of the circulars used on this occasion is preserved in the American Annals

1775.—The revolted Colonies, by a Public Address, called on the people of Canada to unite with them. Gen. Schuyler afterwards tells them, that he has received positive orders from Congress "to cherish every CANADIAN!"

The famous discomfiture of MONTGOMERY and ARNOLD in their attack on Quebec, in which the former lost his life, occurred late (November) this year.

1776.—Early in the summer, Canada was entirely freed from the presence of the Insurgent Army of the Americans, under Gen. Arnold, who had continued the blockade of Quebec for some time.

1780.—The 19th of May was distinguished by the phenomenon of a remarkable darkness in the northern parts of America; and is still called 'the dark day'. In most parts of the country where it prevailed, the darkness was so great that persons were unable to read common print, determine the time of day, dine, or manage their domestic business, without additional light. It commenced between 10 and 11 A. M. it appeared to grow by a succession of clouds from the northward, and was most pitchy about 2 o'clock P. M. The Mem. of Acad. says, 'Candles were lighted up in the houses; the birds, having sung their evening songs, disappeared and became silent; the fowls retired to roost; the cocks were crowing all round, as at day break; objects could not be distinguished but at a very little distance; and every thing bore the appearance and gloom of night.'

1783.—The Province of Quebec contained by enumeration, 113,000 Inhabitants, English and French; exclusive of 10,000 *Loyalists*, who had recently settled in the upper parts of the Province. (Coll. Hist. Soc. VI. 49.)

1786.—Lord DORCHESTER (Sir Guy Carleton) arrived at Quebec with the Commission of Captain General and Governor of Quebec, Nova Scotia, New Brunswick, and their dependencies, and the Island of Newfoundland.

1791.—By an Act of Parliament, the Province of Quebec was divided into two separate Provinces, to be called, 'The PROVINCES of UPPER and LOWER CANADA. On this occasion a very interesting debate took place in the House of Commons:—

Mr. PITT said it appeared to His Majesty's Ministers, *first*, that the only way of consulting the interest of the internal situation of the Province of Quebec, and of rendering it profitable to Great Britain, was to give it a Legislature, as near as circumstances would admit, according to the principles of the British Constitution. In the next place, it appeared to them that *there was no probability of reconciling the jarring interests and opposite views of the inhabitants, but by giving them two Legislatures.* It was conceived this form of Government was best adapted to put an end to all the difficulties of a legal sort, and to render the regulations more useful to the subjects of that county. *He believed there was such a rooted opposition of interests of one description and the other, that if there was a Constitution, consisting of a House of Assembly, in which the parties might be nearly balanced, the consequence, at least for a long series of years, would be a great degree of animosity, and a great degree of confusion.* It seemed to his Majesty's servants the most desirable thing, if they could not give satisfaction to all descriptions of men, to divide the Province, and to contrive that

one division should consist, as much as possible of those who were well inclined towards the English Laws, and that the other part should consist of a decided preponderancy of the ancient inhabitants, who were attached to the French Laws. It was in Upper Canada particularly, that they were to expect a great addition of English inhabitants. The consequence was, that if it was not divided from the rest, the Canadians, forming a majority of five to one, the grievance would be every year increasing, in proportion as the population increased. It was intended to give a FREE CONSTITUTION to Canada, according to *British ideas of Freedom*. This could not be done without a division of the Provinces, to prevent the clashing of opposite interests, which must otherwise necessarily ensue.

Many of the difficulties and serious inconveniences, even at that time foreseen by Mr Fox, as likely to arise from this division of interests in the Canadas, having been actually experienced, (to such a degree as to render necessary an appeal to the Imperial Parliament, on the part of Upper Canada) It is now proposed, (1822) to re-unite the Provinces under one Legislature, and, it is expected, that this important question will be finally determined in the next Session of the British Parliament.

York, Upper Canada, }
 November 1, 1822, }

A

SKETCH

OF THE PRESENT STATE

OF

CANADA.

DRAWN UP EXPRESSLY FOR THIS WORK,

BY

CHARLES FOTHERGILL.

1823.

A SKETCH, &c.

THE geographical position of this vast country may be thus generally stated — It is bounded on the East by the Gulf of St. Lawrence, and Labrador* ; — on the North, by the Territories of Hudson's Bay ; — on the West, by the Pacific Ocean ; on the South, by unexplored Indian countries ; and part of the United States of America, viz *Missouri, Illinois, Indiana, Michigan, Ohio, Pennsylvania, New York, Vermont, New Hampshire*, the *District of Maine*, and by the British Province of New Brunswick.

These boundaries describe a large and magnificent portion of the globe we inhabit ; large enough for the foundation of an Empire which may become hereafter the arbitress of the destinies of the new world, embracing with her mighty arms the whole width of the great continent of America — Secured in her rear by the frozen regions of the north, and with such a front as she possesses towards the south, it is impossible but, with the adoption of wise and decisive measures, she must be able hereafter to hold a far more imperious sway, in regard to the countries of the south, than was ever held by the Tartars (in their best days,) over Asia ; or, by the northern hordes of Europe, over the Empire of Rome, at the period of the overthrow of the then mistress of the world. The foundation stone of this Empire has been laid by the Queen of the Ocean, and it depends on the prudence and wisdom of her councils, and on the loyalty, ambition, temper, skill, industry, bravery, high qualities, and perseverance of Canadians, no matter of what origin, how far the fairy vision which is kindled up in fancy, may be realised — But this is not a time, nor a place, for the indulgence of reverie, however splendid or enticing, and we must be content with present realities. — To the contemplation of these realities, forming altogether so promising an embryo, let us proceed.

We have only to cast our eyes transiently over a map of North America to be immediately assured of the singularly advantageous situation of the settled parts of Upper Canada. — Seated like a gem in the bosom of a country that is neither scorched by the sultry summers of the south, nor blasted by the tardy, bitter-biting, winters of the north ; surrounded by the most magnificent Lakes, and possessing the most extensive internal navigation in the known world, it would be difficult, perhaps impossible, to find, in any other region of the globe, a tract of country of the same magnitude with so many natural advantages, as that part of Upper Canada which lies

* *Labrador* has been strangely annexed (in 1809) to the Government of *Newfoundland*, though the sea will continue to roll through the straits of *Belleisle* in despite of artificial arrangements, and unnatural connexions.

between the Lakes Ontario, Erie, and Huron, and the Ottawas, or Grand River, nine tenths of the whole extent of which are calculated for almost every description of agricultural labour, with such a prospect of success as, perhaps, no other part of this continent could realize.—A part of this tract of country, commencing in the neighbourhood of Kingston, and running westward nearly 500 miles to the Sandwich frontiers, by a depth, northward, of from 40 to 100 miles, is, *alone*, capable of supplying all Europe with grain of every description; besides being rich in cattle; and producing silver, lead, copper, iron, lime, marble, gypsum, marble, free stone, coal, salt, wool, hemp and flax (of the best quality,) tobacco, and timber of every description; besides furs, game, fish, and many other valuable productions.*

Much has been said, at a distance, against the climate of this fine country. Those, however, who have removed to it from Great Britain are agreeably disappointed in finding it more pleasant, (because not so moist and unsettled) than that which they have left. It might be said, with no great impropriety, that the present inhabitants of Canada have but two seasons,—Summer and Winter,—for Winter has no sooner disappeared, which generally happens by the middle of April, than the whole animal and vegetable creation starts into renewed life with a rapidity and vigor that leaves the season of spring with such doubtful limits as to be scarcely perceptible, or deserving a specific character; again, in the fall of the year, the months of September and October are generally so fine and summer like, and these being succeeded by what is so aptly termed the *Indian Summer*, in November, (that month which is so gloomy in England, and said to be so fatal to Englishmen) that we should have great difficulty, were it not for an artificial calendar, in saying when it was Autumn.†

To convey a more just and certain idea of the severity of an Upper Canadian Winter, it may be well to mention that the chain of shallow Lakes which run in an easterly, and south easterly direction from Lake Simcoe, towards the Midland District, are seldom or never frozen so hard as to bear a man with any heavy burden with much safety until about Christmas; and they are again

* It must be understood that we are always speaking of the settled parts of Upper Canada, unless especially mentioned to the contrary.

† We say *present*, because we have no doubt of a further amelioration of climate as the woods are cleared away and the waters diminish.

‡ In the Western District, the culture of both Cotton and Indigo has been attempted, on a small scale, with success; and Vineyards and Hop gardens may be laid out advantageously in almost any part of the Upper Province.

open before the middle of April. Owing to the want of a proper explanation by travellers, and others, attempting to describe this country, an erroneous idea has been formed in England that our Great Lakes are frozen over in winter; whereas they are always open, frequently exhibiting a beautiful and striking phenomenon during the inclement season, by reason of the water being warmer than the atmospherical air; in consequence of which, an evaporation, resembling steam, and in every variety of shape, in clouds, columns, and pyramids, may be frequently observed ascending with uncommon grandeur and magnificence from the vast surfaces of Ontario, Erie, Huron, and Superior, as from so many immense boiling caldrons. We recollect an eminent landscape-painter and designer in England, who, when about to design a landscape, was accustomed to seat himself in an armed chair, in the centre of a large room, and, by means of tobacco and a pipe, send forth column after column of tobacco-smoke, in rapid succession, with a view of assisting his imagination in the combination of forms, by noticing the new and singular and grotesque shapes into which the smoke would embody itself.—Those artists who may require aids of this description, would do well to secure some eminence overlooking one of the great Lakes, just enumerated, whereon to build an observatory; for, nothing can be more grand than the spectacle to which we have alluded.

It is the small, and nearly stagnant, bays, and for a few yards only from the shores, where the water is shallow, that any part of the Great Lakes is frozen in winter. The earth too, is seldom frozen at a greater depth than from 12 to 18 inches, and the snow rarely lies in greater depth than from 18 inches to two feet, unless where it is drifted. It is very seldom the roads are in any permanent condition for the use of the *Sleigh* or *Carriole* before the second week in *January*; and they are again broken up towards the end of *March*, a fact which sufficiently indicates the duration of snow, and of sharp frosts. It is proper, however, to remark, that the winters of Lower Canada, (being in a higher latitude) are both more severe and of longer duration. There is a difference of at least one month in the length of the inclement season at *Quebec*; and on the shores of *Lake Ontario*, and farther westward, to the *Sandwich* frontier, this favourable difference is still greater. In *Upper Canada* a labouring man, if he chooses, can at all times work out of doors; but, in the *Lower Province* there are days of particular severity, in the winter season, in which it would be impossible for him to pursue out doors work.

There are natural phenomena in the climate of *CANADA* which remain unaccounted for, and are sufficiently puzzling even to the most philosophical genius. Of these, the *Indian Summer*, which almost uniformly commences and terminates in the month of *November*; and the *tertian intervals* of fine weather, throughout the

winter, after two or three nights of intense frost, deserve to be particularly mentioned.

The *Indian Summer*, as it is termed, consists of many days, (the Indians say there must be fifteen smoky days to constitute one of these summers.) of delightfully mild, serene weather, with a misty, hazy atmosphere, though the haze is dry and soft, appearing to rest chiefly on the horizon.—In the evening of these days, the sun generally goes down with a crimson flush on the western heavens. The general temperature of the atmosphere, during this season, is singularly grateful to animal sensation; and, those of other regions more to the southward, on the approach of hoary-headed winter, avail themselves of this charming season for the prosecution of their interesting journey; and it is at this time the rivers and lakes of Canada are covered by innumerable flocks of wild fowl of every species known to this quarter of the world, gathering with their families for winter quarters.

By what is termed *tertian intervals* of fine weather, through the winter season, is meant a very extraordinary and certain phenomenon that may be relied upon with the same surety as the diurnal motion of the planets. The greatest intensity of frost is always remittant at the end of the third day; that is, the inhabitants of Upper Canada never suffer the extreme severity of their climate for more than two or three days at any one time; being perfectly assured, on feeling any extreme degree of cold, that it will mitigate within three days, and that several days of mild weather will succeed.—It may require several years of attentive observation to ascertain the number and duration of the intervals of mild or severe weather that usually occur in a Canadian winter between the 43d and 49th degrees of North Latitude; but it would prove a subject of very interesting and instructive inquiry to any gentleman of sufficient leisure to pursue it in the country.

So many persons have been deterred from emigrating to CANADA through a false notion of its climate being frightfully severe, that it seems to be a duty incumbent on those who speak or write for the instruction of others at a distance, to endeavour to remove the erroneous impression. Those who arrive from Europe, and settle in Upper Canada uniformly express their satisfaction at the change, in this particular, at least. There is generally a clearness, dryness, and brilliancy in the atmosphere, so captivating, after the catarrhal moisture which saturates the air of northern Europe, that it is impossible for the newly inducted emigrant not to rejoice in the change—whilst the starry hosts of heaven appear with a splendor far more dazzling than any thing he has before seen, and the mode of travelling in winter in carriages or sleighs, the easiest and most delightful in the world, gives him ready access to distant markets, whether of business or pleasure.

It may be readily supposed that in such a vast extent of country every description of soil, and every variety of surface, as to mountains, hills, vallies, and plains, must occur. Speaking of the inhabited parts of Canada, the Lower Province is the most mountainous, and the Upper Province the most level and champaign; indeed, from the division line on Lake St. Francis to Sandwich, a distance of nearly six hundred miles, nothing like a mountain occurs, although nearly the whole extent of country passed through, between those places, is gently undulated into pleasing hills, fine slopes, and fertile vallies. There is, however, a ridge of rocky and generally barren country, running north-easterly, and south-westerly, through the Newcastle and Midland Districts, towards the Ottawas, or Grand River, at the distance of from 50 to 100 miles from the northern shore of Lake Ontario, and the course of the River St. Lawrence; a ridge which divides and directs the course of innumerable streams, those on one side running to the northward, whilst those on the other run to the southward, and empty themselves into Lake Ontario or the River St. Lawrence.—This ridge has an elevation of not less than 100 feet above the level of Ontario, and is rich in *Silver, Lead, Copper, and Iron.**

Farther to the north, beyond the French River, which falls into Lake Huron, are immense mountains, some of them of vast and unknown degrees of elevation. Many of the mountains which describe the great vally of the St. Lawrence, are from 3000 to 4000 feet, above the level of the river; and that part of the chain which approaches the City of Quebec, on the northern side of the river, is worthy the attention of geologists and mineralogists, in a particular manner, from the hope there is every reason to entertain that these mountains yield several rare, and valuable, kinds of earth for pigments, which may hereafter become articles of commerce.—When in Quebec, in the year 1816, the writer of this *Sketch* was shewn several fine specimens, in the Seminary of that City, which had been procured in these mountains: at no great distance from Quebec; amongst which may be mentioned a rich brown, resembling the *Vandyke brown* of artists; a yellow, equal to that of *Naples*; and an extraordinary fine blue, of a tint between that of *Indigo* and the costly *Ultra marine*. The subject is mentioned in this place with a view of exciting further inquiry, and experiment; because, at present, the artists and colourmen of London are principally supplied with their most valuable pigments

* Passing this ridge, towards the north, the explorer descends into a wide and rich valley of great extent; which is again bounded on the north by a rocky and mountainous country of still higher elevation.

from Italy.—But, as the object of this little sketch is to give the stranger a general idea of the nature of that part of the country in which we are writing, we must go back to the soil of Upper Canada, and speak of its quality; which, in its wild or uncultivated state, may be known by the species, and fine growth, of the timber with which it is covered.

The best lands are those which produce the *hardest* timber, such as *Oak*, *Maple*, *Beech*, and *Elm*, *Black Walnut*, &c. though *Bass-Wood*, when of luxuriant growth, is also an indication of good land; and so is *Pine*, where it is large, clean, tall, and thrifty.—Many of the *Cedar swamps*, where the Cedars are not stunted, and are intermingled with *Ash* of large growth, contain soil of the richest quality, and are calculated for the finest *Hemp grounds* in the world.

It may give a just idea of the general richness of the soil to state, that we have frequently heard of instances where 50 bushels of *Wheat* per acre have been produced on a farm, even where the stumps (which would probably occupy one eighth of the surface of a field) have not been eradicated; we know, indeed, of some instances where 60 bushels, and one in the Town of *York*, where *One Hundred Bushels* of *Wheat*, have been obtained from a single acre; and, in the District of *Newcastle*, many examples may be found wherein *Wheat* has been raised on the same ground, for 16 or 18 years successively, without the application of manure!—The general average of the returns of *Wheat* crops, however, throughout Upper Canada, is not probably, more than 25 bushels per acre, owing to the space occupied by stumps, and the indifferent skill of the ordinary farmers. The winter wheats are found to be most productive, and they weigh the heaviest.

Of *Indian Corn* or *Maize*, from 60 to 80 bushels per acre, is not an uncommon return; and of *Pumpkins*, of the largest kinds, we have instances of more than a *ton weight* being produced from a single seed.

But there cannot be a more certain indication of the depth and richness of the soil than the fine growth of the timber which it produces; and, we have not unfrequently measured particular trees of that species of *white oak* which grows in low moist places, and which is usually called *swamp oak*; that gave circumferences of 16 to 17, and 18 feet, and an altitude of from 30 to 40 feet to the first bough. And we have more than once, on the rich lands to the northward of *Rice Lake*, found *White Pine* trees that gave a diameter of *five feet*, and altitude of *two hundred*! These are facts that determine at once the depth, richness, and vegetative power of the soil, since these giants of the forest are not nourished by the heavens which they pierce, but by the earth from whence they spring.

Vegetation is so rapid in this country that *Barley* sown the last

week in *July*, has been reaped in the second week of *September*, for several years successively, and on land that was deemed poor and exhausted, and a more abundant crop has been seldom witnessed.

From every observation and experiment that has been made, no doubt can be entertained of the great fertility of this happy soil, not only every vegetable production which thrives in similar latitudes in Europe prosper here; but others, which require either greater heat, or greater care, are found to succeed in CANADA, without any particular attention. The finest *Melons* and *Cucumbers* are brought to perfection in the open fields, and *Tobacco* is cultivated with the greatest success. Even the *wild Grapes* become ripe by the first or second week in *September*; so that there is every reason to believe, if vineyards were cultivated, the inhabitants of this country might add a variety of choice wines to their list of articles of home consumption, and foreign trade. We have drunk of a wine very nearly resembling, and but little inferior to, that of *Oporto*, which was made from the common wild grape of the country.

It is remarkable, throughout this country, that the soil and growth of timber upon the immediate banks of the rivers and lakes is inferior to that of the country farther back; and it appears that all the larger rivers and lakes have a second bank at some distance behind that which at present bounds the waters. This is even the case with the *St. Lawrence* and the *Great Lakes*. On another occasion, when our limits are not so circumscribed as they necessarily are at present, we may venture upon an explanation of these phenomena.

In all newly discovered countries, that are thickly wooded, the navigable waters are the great thoroughfares along which the inhabitants must conduct their business. The first settlements are therefore formed along the banks of the principal rivers and lakes; extending backwards, only by slow degrees, as the lands in front are occupied. In Canada, a remarkable exemplification of this kind of progress has been seen. A long straggling settlement from a hundred and fifty miles below *Quebec*, to *Sandwich*, being a distance of more than a thousand miles, was formed before the people ever thought of penetrating into the interior for any other purpose than that of hunting, or bartering with the *Indians*. Even at this day the most remote settled *Townships*, from the frontier waters, with the exception of the road from *York* to *Penetanguishene*, is not more than from 40 to 60 miles. It is not, therefore, in this country, as it is in the back parts of the *United States*, where an emigrant, purchasing land, has frequently the painful necessity of commencing his establishment at a vast distance from any neighbours. In Canada there is abundance of the most fer-

the land in every variety of situation, in the midst of, or closely adjoining to, active settlements, that may be had from Government on the payment of the undermentioned fees.

50 ACRES,	Gratis.	Sterling.
100 ———	£ 12

The Provincial Government have it not in their power to grant more than 1,200 Acres to any single individual without a special order from the Imperial Government of Great Britain. The above fees are payable in three equal instalments; the *first*, on locating the land; the *second*, on the completion of the settlement duty; (for the performance of which a period of two years is allowed,) and the *third* when the Deed is executed, until which time a Location Ticket given by the Surveyor General is held by the occupant.*

The settlement duty required, is to clear and fence five acres on every hundred acres granted; to build a house not less than 16 feet by 20; and, to clear one half of the road in front of each lot: an allowance for road, independent of the full quota granted being left by the Surveyor in every instance; so that no lot is without a public high-way.—On the 21st of February, 1820, His Excellency, the present most exemplary LIEUTENANT GOVERNOR was pleased to direct that the clearing of half the road, and cutting down without clearing, *one chain* in depth from the road, along the front of each lot, should be considered, and admitted, as part of the five acres per hundred; so that, now, there is about 3 1-2 acres of what is called *slashing*, and only 1 1-2 acres of perfect clearance upon each lot required. The present expense of mere settlement duty,

* It must be continually borne in mind that we are to be supposed as *always* speaking of the Upper Province.

if hired, and paid for in money, is about \$25 for every hundred acres.

There is a line of very fine Townships, beautifully watered, running through the Newcastle and Midland Districts, now under survey, that are to be granted on the *old fees*, as ordered in Council on the 5th of January 1819.—These townships are named.

*Eldon,

Some of these Townships are on the same level with, and others of them are even to the southward of, lands granted long ago; so that the advantages secured by those who may be inclined to settle in these new Townships, (on account of the low fees and the excellent water communication which they possess,) are important. Those of the above Townships which are situated upon the larger Lakes, and upon the river Ottonhee, which falls into the Rice Lake, are the most attractive to settlers whose pursuits are those of Agriculture.

Every facility is given to the Settler, who can take the numbers of vacant lots, in any particular Township, and go and judge for himself as to the situation and quality of the land, before he makes his location; so that, if he makes an improper choice, he has no one to blame but himself. To save trouble and expense to

the poor emigrants, who arrive in this country for the purpose of settlement, Country Land Boards are established in every District where there are any vacant lands belonging to the Crown, for location; and these Land Boards are empowered to grant Tickets for 50, 100, and 200 acres; but not for a larger quantity.—If more than 200 acres is required, the applicant must petition the Land Council at York. The applicant must satisfy the Board that he is not an *Alien*, and he is required to take the Oath of Allegiance.

The New Townships are formed out of recent purchases by Government from the *Indians*, who receive their payments annually, in cloathing, ammunition, and such articles as they require. It must be interesting to many readers to see a statement of some of these purchases; the following are the most recent:—

1818, October,	The LAKE HURON purchase, of 1,592,000 Acres,	<i>per Annum.</i> £ 1,200 0
	The MISSISSAUGA purchase, of 648,000 Acres	522 10
November,	The RICE LAKE purchase, of 1,561,200 Acres.	740 0
1819, April,	The LONG WOOD purchase, of 552,190 Acres,	600 0
1820, February,	The MOHAWK purchase, (Midland District) of 27,000 Acres,	450 0

Being 4 680,390 Acres, at the annual charge of £3,512 10s. which is defrayed by an appropriation of part of the amount received for fees on the Grants of Land to Emigrants. This system prevents any complaints, or even a murmur of any kind, from the *Aborigines* of the country, who live on the best terms with their white neighbours.

Whilst engaged in this part of the subject, it may not be amiss to give a word or two of advice to Emigrants of all classes, from one who has seen a good deal of the country.

It must always be taken for granted that whoever leaves England, no matter where he goes, he must experience some change for the worse; for if he is no otherwise affected than in his feelings, he must suffer a temporary laceration that may jaundice every first view he may take of the new country to which he goes; and it is not pretended that even CANADA is so heavenly a land as to do away at once with all such views and feelings, although the writer of this account has but little hesitation in stating that it speedily takes fast hold of the affections of the new comer; and that if a fair comparison is made between the advantages and disadvantages possessed by the various Colonies of Great Britain in different parts of the world, and that those things are coolly and candidly weighed, the decision must be in favour of CANADA;

which is undoubtedly, one of the most fertile and magnificent regions of the Globe; peopled by the subjects of Great Britain; in the full possession of British Laws, and immunities; and, with a Constitution nearly on an exact model with that of England; but without the vexatious operation of a *tythe system*, with scarcely any taxes, and with many other privileges it would be tedious to name on this occasion. Were it not for the difference of scenery and climate, a man emigrating from England to this country would scarcely feel sensible of any immediate change, since he finds the same laws, manners, customs, language, and very often the same faces, which he had formerly known.

With all these superior advantages and enjoyments, which are such as can be had in no other colony, some individuals may be found to undervalue them, and be discontented, but these instances serve as lessons to others.—Let one of them be here named—A man who arrived in this Province from the north of England with a few pounds. In his pocket settled on a farm between York and Lake Simcoe; the industry and economy of five or six years, in this new situation, made him comparatively independent—He had a sufficient quantity of land cleared, and a saw mill, to bring him a handsome income; and he lived at his ease, and with plenty.—But it is the nature of man to be restless and dissatisfied; so it was in this instance.—Although he had never enjoyed so much affluence at any former period of his life, this man grew uneasy; he thought of England, of his former abodes, his home, his ancient friends, and his recollections became insupportable; he sold his farm, his mill, his stock, and once more set his face towards England:—the voyage was passed, a few hours brought him into the midst of the scenes of his youth; he again took a farm, stocked it, again tried the fluctuations of markets and fairs, and was again bankrupt, *fatally* bankrupt, for now there was *nothing* left, and this foolish man ended his days in a work house! Frightful exchange for the ease and independence of a CANADIAN YEOMAN!

Those who are labouring under the bitter feelings of expatriation should consider that the same sun, and the same moon and stars which shine on the scenes they have left behind, gladden creation here; and that the *Great Father of all*, who is the same *yesterday, to day, and for ever*, is alike present every where. Let the beautiful reply of the immortal HOWARD, which he gave to an expostulating friend on the eve of his departure for the southern parts of Russia, where he died, be always in our recollection. "*The road to Heaven is quite as short from Cairo, as it is from London*!!" And let them consider themselves as the workmen employed by Omnipotence to lay the foundation of what is to become hereafter a mighty Empire, in which their children's children are to have an inheritance and a name, and that what are now the beautiful fields and gardens of England, once looked as a wilderness in

the eyes of our forefathers. Of what value is that religion, or philosophy, which for ever chains its possessor down to present, and to painful, realities? Let us be wise, and learn how to appreciate those advantages and blessings which we actually enjoy in this our adopted country, and sorrow, regret, and despondency will be for ever banished from our dwellings!

But the instances of men taking the gloomy side of the question, (notwithstanding the exertions of some evil disposed persons to induce such a view,) in this fine country, are rare; particularly amongst the lower class of society, to whom the advantages are much greater than any other country affords. His land, (a Freehold of Fifty Acres) costs him nothing; a few months labour for others, should he have no money at all, (at the high rate of wages, hitherto, in this country) enables him to stock his farm, on which he may keep a yoke of Oxen, or a pair of Horses, constantly employed, besides leaving timber sufficient for fire wood for many years. He should, however, be careful not to destroy his timber in a heedless manner, by burning it in large log heaps, after he has a few acres cleared. Some of the finest timber in the world is often considered so great an eye sore, that the sooner it can be utterly destroyed the better it is thought; but if, in making the clearance, the top and under brush only, were burnt in the field, and the heavy timber was cut into cord wood, or split into rails; instead of being consumed in one universal conflagration, it would be much better for the small freeholder; and afterwards, when the whole projected clearance was made, and it became necessary to attack the reserved trees, only to thin them out, in the same manner that is practised in the wood lands of England, taking those trees only which have arrived at maturity, and leaving the young thrifty wood to improve,—several generations must appear and disappear before any serious inconvenience could arise from the want of fuel. Of course there is not the same necessity for such economy on the larger grants. After all, there is the comfortable assurance of abundance of coal in various parts of the country; and, from the many navigable waters intersecting it in almost every direction, that useful article can never be very expensive.

For a great number of years to come there will be an ample range for a large stock of cattle and pigs in the woods, and on the plains; so that the small occupier will be freed from the necessity of having any part of his fifty acres in pasture, unless it should be his choice to have it otherwise. Swedish Turnips are found to answer extremely well, and to stand the utmost severity of the climate; with a couple of acres under a crop of this invaluable root, and the straw of his *Maize*, *Wheat*, *Barley*, or *Oats*, he may maintain, comparatively, a large stock of horned cattle through the winter; and in the summer the only expense attending them will be an oc-

casional visit, to see that all are going on well. Pigs grow very fat whilst running at large in the woods, especially towards the fall of the year. All the taxes, or assessments, put together, which a man of this description has to pay, would not amount to more than a few shillings; and, as to raiment, it is customary to grow wool and flax sufficient for the cloathing of his family. Sugar he manufactures himself, so that he has only a little *tea* to purchase, should he require, through custom, the use of that luxury. Many of the people in country situations use the young shoots of the *Hemlock Tree*; and others, herbs of the forests of agreeable flavour, in lieu of tea, without any bad consequences, or disrelish. If he is a *Tobacco-smoker*, or *cheerer*, he may raise as much as he pleases in his own garden.

Wages, compared with what they are in Great Britain, are still very high in this country; and hitherto, in the Upper Province, it has not been difficult to procure work. In many parts indeed, there is yet a scarcity of labourers. It is true that money is not now plentiful; but there is scarcely any thing that the older residents have to spare in payment of wages that is not useful, nay absolutely necessary to one going onto a new farm; and *two years* being allowed by Government for the performance of settlement duty, (which in favourable weather may very often be done in *one month*) the poor emigrant has plenty of time to earn a yoke of oxen, and a cow or two, a few pigs, seed corn, and potatoes, &c. &c. besides the necessary provisions in pork and flour, until his own crops are ready; and should he not prove an expert axeman, even to hire men to do his settlement duty for him, which is often the case. Several instances have occurred where English rustics, by *thrashing alone*, (where every *ninth* or *tenth* bushel was allowed for the labour) have earned wherewithal for the cropping and stocking their new farm.

In consequence of these advantages, there are many individuals, particularly in the new settlements in the district of Newcastle, who have abundance and to spare, upon the smallest Grants, of fifty acres, after being no more than three years in the Province. All the poor emigrant, who arrives at Quebec or Montreal, has to do, is to push forward as speedily as possible for the Upper Province; he must not suffer himself to be deterred by its apparent distance, and he must stop his ears against all the insinuations and seductions that will be used in his passage up the country, especially by Americans, along the whole course of the St. Lawrence, who will try every art to seduce him into the United States. Let him ever bear in mind what he may have been frequently told,— and with much truth, that Upper Canada is the best “poor man’s country in the world;” and let him determine on making actual experiment for himself; and, if he has only industry, perseverance and integrity, we will not only answer for his success, but that neither himself nor children will ever have occasion to repent the

choice which he has made. Such a man may in a short time realize every object of a reasonable ambition, and become one of the most free and independent men on earth.

In many places, particularly at *Port Hope*, and at *Cobourg*, in the District of Newcastle, preparations have been made for the reception of poor Emigrants by the erection of suitable buildings, and every facility being in readiness for securing an early location in a desirable situation amongst the new Townships back of the Rice Lake, to which there is an excellent road from *Port Hope*.— This fine part of the country is principally settled by persons from Scotland and Ireland, and from the English counties of Yorkshire and Cumberland.

The Court House, where the Land Board for the District sits regularly once in every fortnight, is between the two villages of *Cobourg* and *Port Hope*, in both of which there is a handsome church of the established religion, besides a School house; and fairs are held twice a year at both places. There are two excellent grist-mills, one at each village; and, at *Port Hope* there are, besides a Saw mill, Oil mill, Fulling mill, three Breweries and Distilleries, two Tanneries, a Hat manufactory; Millwrights; several excellent Stores, in which every description of useful merchandize may be had on moderate terms; two blacksmith's shops, Pot and Pearl Asheries, Cabinet-makers, Carpenters, Masons, Coopers, Shoemakers, Tailors, and several other useful mechanics. *Cobourg* and *Port Hope* are only seven miles distant from each other, by a good road; and between the two another village, named *Amburst*, in which the Court house is situated, has been laid out by Capt. BURNHAM, in which are already two taverns, several mechanics, and some neat houses.

Port Hope, at which a wharf and commodious harbour on Lake Ontario is now projected, is the most convenient depot for the Townships in the rear of *Hope* and *Hamilton*, and for the Upper Ferry on Rice Lake, and is the place where the greatest trade is carried on. *Amburst* is the most convenient for the Middle Ferry on the Rice Lake, and for those who may have to ascend the river *Otonabee*; *Cobourg*, in which there is also excellent accommodation, and several good stores, is the most convenient for the Lower Ferry on the Rice Lake, and to those who may have business in the lower parts of the Township of *Otonabee* and *Asphodel*, with the new Townships in the rear, and down the River *Trent*.

It will be seen by a reference to a Map of this country, that the villages just mentioned are most advantageously situated nearly in the centre of the north coast of Lake Ontario; and it is impossible they can fail to become, with the gradual improvement of the country, places of great public consequence hereafter. It should not be forgotten, likewise to mention, that these villages, with their respective neighbourhood, and the Rice Lake, already possess an extensive circle of good, and even polished, society.

We have been the more particular in these remarks, because we are quite satisfied that the District of Newcastle offers the finest field for enterprise, and merits more attention from emigrants, than any other part of Canada.

Should this slight and hasty *sketch* fall into the hands of any of the poorer class of emigrants, before they can have made any settlement, it may be well to give them some idea of the expense they must be at, before they can be said to be at all comfortable in their new abode.—At the present time it will cost the emigrant pretty nearly as follows:—

For building a Log-House, with a shade for his Oxen, and a Pig sty,	} 7 10 0
—For this sum his house may have two apartments, a stone chimney and hearth,* and two glazed sash windows.	
Clearing, Fencing, and Sowing five acres of land; if he has to pay cash for it,	} 15 0 0
Seed for the first crop, with the price of two axes, two hoes, two brush hooks, two forks, one spade and one shovel,†	} 4 0 0
Yoke of Oxen and Chain, from £10 to	15 0 0
An Ox Sleigh,	1 10 0
A Cow £3, Sow with Pigs, £1, 5,	4 5 0
Two Ewes with Lamb, \$2 each,	1 0 0
‡ Some necessary articles of Household Furniture,	10 0 0
Putting up a Log Barn,	5 0 0
Two Kettles for making Sugar,	3 0 0

Prov. Cur'y.—£66 5 0

* This expense of a stone chimney, &c. has been questioned by several persons unacquainted with the work required, and from parts of the country where the proper materials are scarce—but we know, from experience, that where workmen accustomed to the laying of mis-shapen stones, and the materials are at hand, the labour can be done for the price here stated.

† A Plough should not be required for several years, because the best management of cleared lands is to sow down with good grass seed, either with the second or third crop, and to keep it in grass until the stumps begin to rot, when the plough may be put in with full effect.

‡ We would say to the emigrant, about to embark, *bring no furniture*, the carriage of which will cost more than it is worth in this country, but be provided with plenty of good substantial wearing apparel, which is here generally flimsy and very expensive.

Any able-bodied man may earn the above amount within the two years allowed him for the performance of settlement duty, and if he should choose to work himself, with his oxen, in clearing, sowing, fencing, or in erecting the buildings, a considerable part of the above mentioned sum may be saved. But it is now supposed that the man is a stranger to the sort of labour required, and that he has no money but what he earns in this country. The two first crops, with the increase of his stock, ought to go far towards paying the whole of the above amount.

A friend of the Author's has published a plan in London, by which he conceives that a number of those people now subsisting on parochial relief in England, may be removed to, and employed in, this country with great advantage, both to the public and themselves.*—The money required in aid of this scheme, is not to be paid to the people, but is to be laid out within two years, in provisions and supplies of implements and stock, under the direction of certain managers. The cleared lands to constitute a mortgage to secure the payment of what is then the debt of the colonist. "During the laying out of the money and the clearing of the lands, some slight restrictions on the employment and alienation of the property will be imposed on the owners of it; but, after the repayment of the capital employed, each individual in the settlement will be free from all-interference. The time of such repayment, within ten years, will depend on the exertions of the settlers, who may receive their deeds on redeeming their lands."

The projector assumes a family, of the description to which he alludes, to consist of five persons, and that the sum of £200, managed with ordinary prudence, will enable such a family to acquire a prosperous settlement in Canada in two years, without any exposure to privations, and within ten years the money might be repaid, without inconvenience, by the family to which it was loaned. The author gives a detailed account of the expenses, with the manner in which he conceives the important business should be conducted, and sums up the total expenditure for 100 such families, thus:—

For the journey to the coast for 100 families, at	}	£2000
£20 each family, 1st February, 1822,		
For the voyage to Montreal, March 1822,	}	3000
For the expenses to be incurred between May and		
June, 1822,	}	5000
Item, between June and October, 1822,		
		4500

* This plan differs from those lately suggested for diminishing the public burthens of England, as it relies for success on the personal exertions of the colonist, uncontrolled by the perpetual presence of superintendants; and as a boon or charity is not intended to be given them.

Item, between October, 1822, and January, 1823,	2100
Item, between January and May, 1823,	1500
Item, between May and July, 1823,	1000
Item, in July, 1824,	900
	<hr/>
	£20,000

The quantity of land required for 100 families, on this plan, is half a township, or 31,500 acres; which will be divided in the following proportions:—

	<i>Acres.</i>
For the Settlers	10,000
For the Managers,	5,000
For the Clergy and Schools,	4,000
For the Crown and Civil Government,	4,000
For the Town Plot, to belong to the Parish and Managers	2,000
For the Surveyors,	1,500
For the Parish advancing the Capital	5,000
	<hr/>
	31,500

The Managers should be competent to give the settlers proper directions for the sale of so much of their household goods as cannot usefully be carried with them; and, for the purpose of the present sketch, the whole party will be assumed to be safely landed at Montreal, in May.

Under favourable circumstances, the people will be placed on their lands early in June, prepared to clear away for a spring crop. With common industry, three such persons as we ought to presume our able settlers to be, will not find it difficult to get five acres sown in proper time in 1822; from which they may expect to raise about 80 bushels of wheat, 80 bushels of Indian Corn, with the usual quantity of Pumpkins, musk and water melons, 100 bushels of potatoes, and a quantity of corn stalks and straw, with garden productions; during the summer, before the crops are harvested, the people will be employed in preparing five acres more for an autumn season, and this cleared ground, with the former five acres, will be ready for wheat in the first autumn. After having sent a proportion of this first crop to market, a certain quantity turned into flour, salted their pigs, and put up a warm hovel for their cattle, they will in the winter of 1822—23 again be occupied in clearing more land for the ensuing spring. The quantity which may be then prepared will be about 10 acres which will be sown with oats, Indian corn, barley, pumpkins, and turnips, and planted with potatoes. Besides this work, they will sow the first ten acres, with seeds for a meadow; during the second summer, 5 acres more will be pre-

in the two

pared for the second autumn; and the several seasons will bring their own works on the lands previously cleared.

Having thus, in the second autumn, 10 acres of wheat land, and 10 acres of meadow, with additional occupations for the winter of 1823.—24, on this increase, they will be able to clear for the third spring only 5 acres more; so that in the third harvest of 1824, such a family as we have assumed will possess 30 acres of cleared land, and 70 uncleared; 10 acres of the 30 will be sown with wheat, 10 with spring crops, and 10 will be in meadow.

Their produce at the close of the third autumn, may be stated thus, at a low estimate:

From 10 acres of wheat, about	250 bushels
2 ditto of oats	70 ditto
2 ditto of Indian corn	100 ditto
2 ditto of barley	70 ditto
2 ditto of potatoes	300 ditto
2 ditto of turnips	200 ditto

Pumpkins, in number about 5000, which are planted in the Indian corn hills.

Not more than ten tons of hay can be expected from the meadow, incumbered as it will be with stumps of trees, for several years. To this must be added the natural increase of the stock, together with the abundance of water and musk melons in the corn fields, and of garden productions, and an ox and several hogs in salt.

After this third autumn of 1824, the repayment of the capital advanced will begin; it will arise out of the production of the harvest of 1825, and the rate at which it will be made, may be judged of by the foregoing statement.

“It appears to me impossible,” continues this ingenious writer, “that upon equal capital any set of men of the class here contemplated, can be placed so advantageously, both to themselves and to the country, in any other part of the world as in UPPER CANADA.”

The author illustrates his argument by an example, after the following manner:—

“In 1795, the parish of Barkham, in Berkshire, contained 200 inhabitants, of whom about 40, besides the sick, received relief to the amount of £75 a year. The average expense of supporting the families of labourers in Barkham was then about £25 each; making the rate of £75 to be divisible amongst a number of people equivalent to three ordinary families, which may be said to be the number in excess in the want of employment.—If the parish could be disburdened of these three families, and employment should not vary, those left behind would receive wages equal to their full support, until paupers again super-abound.

"The means for settling three families in Upper Canada is assumed to be a loan of £600, to be repaid in ten years, as before stated, and this sum will be raised easily by a mortgage of the rates under the sanction of an Act of Parliament.—Thus the rates will be lowered forthwith to the interest of that loan; viz: to £30 a year from £75; and they will decrease continually in proportion as the loan shall be repaid, and as the town plot and other land apportioned to the parish shall become marketable. This will be variable in point of time; and the amount of the proceeds will depend on the general prosperity of the whole settlement; it can hardly fail of making a very considerable return within seven years of the colonists quitting England. According to the expenditure of Barkham, the rates for a surplus population of one hundred families is £2500 a year. Upon this income it would be easy to borrow £20,000 under the authority of an Act of Parliament. The interest on which being taken at £1000 a year, the parish from which the colonists could proceed, would make a present annual saving of £1500.

"Since the publication of the foregoing sketch, several individuals in England, in Canada, and in Nova Scotia, otherwise well disposed towards the views of the writer, have objected, that "under the present depressed state of agriculture, the settler will not be able to repay the capital advanced." This should not, certainly, be a subject of mere conjecture. In fact, it may be reduced to calculation. The "York Market prices for the preceding week" are given in the Upper Canada Gazette of the 23d of May, 1822, now before the writer; from which it can easily be shewn, in the article of wheat only, that there will not be any difficulty for an industrious man to raise the required instalments.

Suppose a farmer and his two able sons, such as the writer has known many in the country, and who left England four years ago, nearly destitute, about to clear and to fence off, for a crop, ten acres of good, heavily timbered land, in order to raise a small sum of money. The question will be, can they "in the depressed state of agriculture," produce, not a surplus of corn, but a surplus of money?

In what follows, the farmer and his sons are presumed to buy every article at the market price, and to dispose of the produce at the same; any practical man will at once notice that, if the party were established on their farm, and living upon their own produce, as in Canada the farmers universally do, the money expenditure would not be one third of what it is here estimated at; for instance instead of giving five pence for a gallon of flour, the farmer would send wheat to the miller, and receive in return his proportion of flour, toll being deducted for working it. The same in regard to his whiskey; and with respect to his beef and pork, he would never have occasion to go to the butcher, as he has here been sup-

posed to do, and so forth.

The first expense will be for axes, about	£2 10 0
Brush hooks	0 10 0
Provision, &c. for seven weeks for three men, (the time required for the job in question.) and for one man during one week, which will be necessary in order to 'drag' the wheat in	3 10 0
Seed wheat	2 5 0
Provisions, &c. during the time they are reap- ing the wheat	0 16 0
Provision for carrying the wheat	0 5 0
-----threshing	1 0 0
Keep for the oxen when lodging and getting in the seasons, independent of 'browse,' a most capital feed, well known to the 'after- noon' Canadian farmer, as well as to the early settler	1 0 0
Taxes of all descriptions for 10 acres of land, and a yoke of oxen	0 1 6
Wear of clothes, &c. and trifling incidental ex- penses	2 0 0
<hr/>	
Total expense, according to the York market	13 17 6
Wheat off 10 acres, 250 bushels, at 2s. 6d. per bushel, or £5 a load	31 5 0
<hr/>	
Clear surplus for the settler	£17 7 6

In the next year the expenses will be diminished.

Provision for a man whilst burning the stub- ble, and dragging in the seed on the same 10 acres	1 0 0
---	-------

The oxen this year can keep themselves in the woods entirely,
as they have not to work in the spring.

	£	s.	d.
Seed wheat,	2	10	0
Provision whilst reaping,	0	16	0
Ditto. ditto. carrying,	0	5	0
Ditto. ditto. threshing	1	0	0
Taxes	0	1	6
Wear of clothes, &c.	£2	0	0

Clear surplus for the settler,	£22 2 6
	<hr/>

If these simple calculations be not correct, they may easily be contradicted and exposed. If it should be thought a high-estimate, let half this surplus be taken, as nearer the probable result; and it cannot then be doubted that in the course of ten years the great majority of the settlers will be free from any incumbrance. The only objection to this calculation seems to be, that "the York market prices," may be reduced by the access of so many new growers of corn.* But it is conceived that a very great falling off may be admitted, without risk of destroying the prospects of these colonists, who have ten years allowed for the repayment of their debt.

"To a settlement of this description, the managers should devote their whole attention; and a leader of intelligence would be amply remunerated by the share of wild lands to be apportioned to him in respect of a colony of from 500 to 2000 families." The necessity of a personal residence amongst the people during the time of distributing the lands, needs little illustration, after the excellent example shewn by Capt. Williamson, in the settlement of a part of Sir W. Pulteney's estate in the Genesee country, in the State of New York, a short notice of which deserves a place here.

Mr. Morris had bought the land at 5 pence per acre, and, in 1791 sold *one million* of acres to Sir Wm. Pulteney at 1 shilling per acre, or for £50,000. With other purchases, Captain Williamson, the manager, had possession of 1,500,000 acres of land, bounded on the north by Lake Ontario. After building 10 mills, with a great number of houses, and making several hundred miles of road 800,000 acres were re-sold at the price of from one to three dollars per acre before the summer of 1795. The produce not only refunded the purchase money and the whole amount of the o-

* It is a very favourable evidence in support of the author's plan, for us to state, that the prices quoted from the York Market in the spring of 1822, were very unusually low, and such as may be scarcely expected to recur. The average price of wheat for the last seven years in Upper Canada cannot be taken at less than four shillings currency per bushel.

ther expense incurred, but also yielded a net profit of £50,000 Sterling.

The *Plan* here alluded to is not altogether original on the part of our friend B—, since that famous *Patriot Mr. Gourlay*; projected a scheme nearly similar in the year 1817; and it has always been a subject of regret to the writer of this *sketch*, that one so well qualified to promote the agricultural interests, and encourage fresh accessions to our population, from other parts of the British Dominions, should have intermeddled with politics; since, on many questions of political economy, and especially on the subject of the *Poor laws* of England, that eccentric Being was a perfect adept, whilst in *Politics* he became not merely bewildered, but actually insane. However, as to the introduction of British Paupers into the forests of Canada, no one anxious to witness the prosperity of this country, can have any objection, at least on this side the water, if they come as well provided as our friend B— proposes, viz: with £200 sterling for each family of 5 persons; but we think the expences are over rated, and have no doubt that such a family, (particularly where this species of emigration was carried on extensively) could be removed, and settled down comfortably, with all that was necessary to preserve it from becoming any kind of burthen whatever to others, for £100 sterling*— We are quite certain there are many persons, on whom the most perfect reliance could be placed, who would be very glad to undertake the removal and settlement, in this country, of 200 such families for the sum of £20,000 sterling.

Whilst on this subject, it ought to be mentioned that there is now a man in the District of Newcastle, who came out a little more than two years ago, without a single shilling in his pocket, his health and the use of his hands were all his dependence. A short time since, this same man disposed of a yoke of capital Oxen and a fine Cow which he had earned over and above what he required upon his little farm, on which he had besides, two excellent Cows and a large stock of Pigs, left for store pigs and for breeding, after having packed fourteen barrels of pork. He had also purchased a Reserve Lot from a neighbour, on which he had sown several acres of Fall Wheat; and in the following year, (his third) he proposes building a good framed house, together with a large barn. The means for accomplishing all these results, so vast for one in his original mean circumstances, have been earned in an honest and fair way by farming on shares, as it is here termed, that

* In the second edition of "Sketches of Plans for settling in Upper Canada, &c." the author admits that he had over-rated the expense for the passage and settlement of each family upon his arrival in this country.

is, he has a certain share, as may be previously agreed upon, of the produce of a farm (whose owner cannot conveniently work it himself,) for his labour and expense in cultivating it, a practice that is common in many parts of Canada.

Here, then, is an instance of a man who, without friends, without capital, without credit, realizes what is, comparatively, a comfortable independence in three years! Many more instances of a similar kind might be adduced, were it necessary, to shew with what rapidity and ease an industrious, honest man, though poor, may elevate himself above the reach of want in this highly favoured country; and if a single unaided individual can so prosper, surely half the sum mentioned by our friend B—already allotted to, expended with prudence and economy, would establish a family of five persons in Canada, so as to be no longer burthensome to the parish which sent them out, or, to this country, which received them into her bosom. Enough, if it is conceived, has now been said to shew the advantages held forth in Canada to the poorer classes of society, on an occasion where the limits for discussion are so much narrowed by the necessity of regarding other subjects.

The field which is here presented to men of an higher order, and to capitalists, is so extensive, and requires so much detail, as well as argument and illustration, to demonstrate, that we cannot pretend to enter upon it with any fullness on this occasion; nor would it, indeed, be altogether a fit subject for discussion in a mere sketch like this; However, as it is not improbable (his little work may fall into the hands of persons anxious for some information on this head, a few brief remarks shall be added, reserving a fuller statement for another, and a more enlarged opportunity.

Of the liberal professions, Clergymen are the most required, and Lawyers the less needed. Such a provision has been made by the Imperial Government for the established Church, without any demand or tythe from the people, as must eventually make the Canadian Clergy (should things remain so happily constituted as they now are) the most powerful, wealthy, and influential body to be found in any country, ancient or modern, no less than *one seventh of the whole soil being set apart for its use and support.* It is true the income, at present derived from this vast appropriation, is scarcely worth the naming; but it is every day increasing, and it is impossible to say to what extent it may hereafter arrive. There are a great many situations in various parts of the Province, where Clergymen who *would be active* in the performance of their important duties are much wanted.

An act of the provincial parliament prevents English or Scottish Attornies from practising here until they have served a Clerkship of the same duration as is required from Law-Students in this country, viz.—*Five years actual service*, under articles, to a Practising

Attorney of this Province. Regular Barristers, however, or any person who has been called to practise at the Bar of any of His Majesty's superior Courts, not having merely local jurisdiction in England, Scotland, or Ireland, or in any of His Majesty's Provinces in North America, on producing testimonials of good character and conduct, to the satisfaction of the Law Society of this Province, may be called by the said Law Society to the degree of a Barrister upon his entering himself of the said Society, and conforming to all the rules and regulations thereof.

There are several openings in country situations, in different parts of the Province, where skilful *Medical Men* are much wanted, and in which they could scarcely fail to realize handsome properties; but the labour in such situations is severe. A *Medical Board* is established at York to examine all candidates who have not graduated in the regular manner at some eminent British, or Foreign University; and no pretender to knowledge in this important profession is allowed to practise here without having previously satisfied the *Board* of his ability, and obtaining a licence for that purpose.

Of all professional men, or those of the middle ranks of Society who are not possessed of much wealth, there are none to whom so many advantages are offered in this country, as to the *Half Pay Officers* of the British Army and Navy. They become immediately independent. Entitled by the regulations of Government to receive from 500 to 1200 acres of land, according to their rank, from an Ensign to a Colonel, if in the Army; and, from a Midshipman to a Captain, if in the Navy; on payment of a Fee scarcely worth the naming (£2 18s. 6d.) they are immediately placed on a footing with the Country Gentlemen, as to real estate, whilst their half pay, drawn at stated intervals, gives them an advantage possessed by very few in this country.—Their Bills almost always bear a premium of from 5 to 10 per cent. this, with the difference of Currency, and the certainty that *One Hundred Pounds*, will go farther in the purchase of all the little luxuries for the table, and for the conveniences of life, than *Two Hundred Pounds* will obtain in England; besides the almost total freedom from Taxes, Assessments, and many other expenses that must be incurred by Gentlemen of this class in Great Britain, altogether give them extraordinary advantages; and we have often thought, that in no other part of the Globe could they settle down so advantageously as in this Province. Besides, by their attainments, and rank in life, they are immediately eligible for many honorable stations and employments, which add to their influence and consequence, if not to their wealth; and such Gentlemen will have the additional satisfaction of finding much of that kind of society to which they have been accustomed, in almost every part of the Province, for there are now but few of the settled Townships in which there are not some half pay officers, either of the Army or Navy.

We purposely neglect saying any thing of Merchants and Tradesmen, because if any such persons embark *speculatively* in this country without being previously well acquainted with it, and the mode of transacting business, it will be undoubtedly to their severe cost and loss.—Mechanics of almost every description are certain to do well, if honest, *sober*, and industrious.

To the small capitalist of from £5000 to £20,000, and upwards, the field that is opened in Upper Canada is *alluring, splendid, and dazzling!!* But it is such a subject that it is difficult to know where to begin, and, still more so, where to stop! neither do we feel very willing to open the stores of our budget in this particular to the whole world, further than by touching generally on a few of those subjects to which such a capitalist should direct his attention, and by earnestly requesting him "*to come and see,*" when we promise him he shall know more. Capital alone is wanting to place Canada in the rank which her natural wealth and position entitle her to maintain in the scale of nations; and, as the right arm of Great Britain; and we would venture to insure a certain number of capitalists to the amount above named, a quadruple return for the sum expended, within the term of ten or a dozen years! It cannot be expected we should state the mode of procedure on this occasion.

There is a great deal in knowing the signs of the times, and in being able to take advantage of those signs.—He who has a spare capital, and wishes to increase it, should be "a discerner of the times."—General WASHINGTON is said to have excelled in this particular, and to have secured many advantages from the adroitness with which he managed his own interests in the fluctuations of the land market, which at a certain period engrossed the attention of all classes in the United States of America.

The buying and selling, the parcelling out and settling, and locating land, may be called the staple business of all new countries, and that in which both individuals and the State are most deeply concerned. Much therefore, nay, almost every thing, depends upon the way in which it is managed.—It is an idle and absurd opinion that land jobbing is injurious to a country. When carried on extensively it is the very best thing that can happen to any young district, or territory; it imparts life, spirit, and enterprise, and converts what would otherwise become a stagnant, putrid marsh, into a living fountain of all that gives strength and power to Empire. The whole history of the United States, and especially the account of the settlement of the Genesee Lands, in the State of New York, to which we have already alluded, affords striking illustrations of this argument. The present times are very favourable for making extensive purchases of land in Upper Canada:—the price, owing to that general depression in the value of all kinds of property which succeeded the late war, being nearly as low now

as it was at the first settlement of many parts of the country. The Province is now just emerging, like a new creation, into that general notice which it deserves, and the value of lands *must speedily rise in an extraordinary ratio*. The growth of Canada has never been forced; and, though it may have been considered tardy in comparison with that of the United States, its advancement has been natural, wholesome, and regularly progressive.

The usual mode of setting apart the Crown and Clergy Reserves in Upper Canada, is certainly very much against those Capitalists who may wish to embark in undertakings of this kind, and even against others who may desire to settle down together, and form a little community of their own. But it is probable the Provincial Government might be induced to vary from the common practice of allotting Reserves, on being convinced that it would be productive of public and private advantage, to any material extent, in any particular vicinity.

Sometimes an entire Township is offered for sale, as is the case at present, in the District of Newcastle, in that of *Seymour*, through which the River Trent, one of the finest streams in the Province, and abounding with Mill seats, runs in its course from the Rice Lake to the Bay of Quinte, on Lake Ontario. This Township is admirably calculated for the formation of a beautiful and rich settlement; it is in the immediate neighbourhood of the *Marmora Iron Works*, and surrounded on all sides by thriving settlements; this tract of land, a great part of which is of the first quality, may now be purchased at a price, and on terms, that would insure a noble fortune to a Capitalist of sufficient means to carry the proper plan of settlement, and resale, into full effect.

In this Township there are about 47,000 acres, exclusive of Reserves. There are also the following additional tracts, now advertised for sale, on very liberal terms, viz:—

<i>Blandford</i> , about	20,000	<i>Acres</i>
<i>Houghton</i> , --	19,000	
<i>Middleton</i> , --	14,000	
<i>Southwold</i> , --	17,000	
<i>Yarmouth</i> , --	11,903	
<i>Westminster</i> --	9,237	
<i>Sheffield</i> , --	56,688	

The whole of which, together with *Seymour*, are appropriated for the endowment of a College in this Province.

But there is scarcely any part of the Province where a man of judgment, and with the necessary funds, might not lay out his money with a certainty of enormous advantage. As we have before hinted, it would not be quite proper to go into *detail* on an occasion like this; but we should be rejoiced to hail the arrival of men of capital in this Province, not merely for their own sake,

but for the general good of the country, which would naturally grow in wealth and power, in the same ratio with the success of private individuals.

To those who might wish to embark in a commerce of raw material, or in the extensive manufacture of staple articles of home consumption, there is here also a fine field for enterprise; since there are none of those restrictions which gave so much umbrage in the *United States* before their separation from the British Crown; and which were so much dwelt upon by the famous Dr. PRICE, in his work on *Civil liberty*, as being a just cause of discontent and remonstrance. Of the precious and valuable metals Government reserves *Gold and Silver*, only. Grantees are put into the full, free, and uncontrolled possession of all the *Copper, Lead, Iron, Tin*, or other *metallic*, or *mineral* substances which may be found on their lands, together with *Coal*, and all other substances whatever; and the more this country is searched, by men properly qualified, the richer it will be found in valuable mineral productions.

The history of the Establishment of the *Marmora Iron Works*, now the property of the enterprising & patriotic CHARLES HAYES, Esquire, is alone sufficient to shew the liberality of Government, and the hopes that any other capitalist may reasonably entertain of success in laying the foundation of future wealth, so far at least as the patronage, and encouragement of Government in this country is concerned or desired.

There are several Manufactories of a domestic nature in which large capitals are required, the want of which is at present seriously felt by all classes of people in this Province. Of these, *Salt*, (which may be obtained by going to a sufficient depth in almost every part of the country) stands the first in the list of necessity, since the Upper Canadians are not only supplied with great irregularity, but they pay at least *double* what they ought to pay for this indispensable article, and are under the control, in this res-

* A great deal of enterprise and public spirit has been shewn of late in the *Western District*, where the *Tobacco crops* have been increased so considerably as to allow the exportation of many *hundred hogheads*, during the last season;—We have heard of a single cultivator having 40 acres under this valuable crop—It is hoped some provisions, favourable to the Canadian grower will be made by the Imperial Parliament at home; as the markets of the Lower Province are much too limited for the disposal of a tenth part of what will shortly be raised in the West.

Amongst the Domestic Manufactories, that of coarse woollen cloth is one of the most considerable. In the narrow District of *Gore*, alone, from 2 to 3000 pieces are annually made; and, throughout the country it is a trade, together with the weaving of linen, rapidly increasing.

pect, to a serious and alarming extent, of a people who are always rivals, and sometimes enemies. At one period, during the last war, SALT was sold in this country at from \$10 to \$15 per bushel, and even now it is frequently 5, 6, & 7¢ per barrel, in situations, where it ought not to exceed \$2 per barrel. The culture of Tobacco, Hemp, Flax, and Wool, and Rape for the manufacture of Oil for exportation, also, the establishment of Paper Mills (which are very much wanted;) of Nails, and Screw Factories; Glass-Houses; Potteries; and a Manufactory of Coarse Paint. All promise abundant returns for the outlay of capital; and, to be of the most beneficial consequences to the country.

Nature has designed this country to become rich, not merely by her agricultural, but also in her commercial advantages; for no country in the world is possessed of so many public highways, by water communication, as Upper Canada. The rivers of a country may be compared to the arteries and veins of the human body, as being alike the channels for communicating health, and vigour, and life, between the respective parts.

The River St. LAWRENCE, which we shall here consider as arising from the Great and Magnificent Basin of LAKE SUPERIOR, (more than 1500 miles in circumference,) has a course to the sea of nearly 2000 miles, varying from 1 to 90 miles in width, of which distance, including the Lakes ONTARIO, ERIE, and HURON, it is navigable for ships of the largest class, very nearly 2000 miles, and the remainder of the distance is navigable for barges, batteaux, and vessels drawing little water, of from 10 to 15, and even 60 Tons burthen. Into this great artery, as it were, of the finest part of the country, fall many other rivers of such extent as would be esteemed waters of great magnitude and of the highest importance in any other country.

Some of these Rivers are the outlets of regions of vast extent which are watered by a countless number of Lakes and minor streams. Of these the Saguenay, which falls into the St. Lawrence below Quebec; and the Ottawa, or Grand River; whose embouchure is divided into two branches by the Island of Montreal; and the Trent, or River Otonabee, which is the outlet of a long chain of Lakes, in the north west country towards Lake Huron, and which falls into Lake Ontario near Kingston, are the most considerable.*

But it would be impossible in a sketch like this to mention or describe a fiftieth part of the Lakes and rivers which open and fer-

* The Bay of Quinte is, in fact, rather the mouth of the River Trent, or Otonabee, than a Bay of Lake Ontario; as there is not only a perceptible current down its centre—but it has no side communication with the lake for many miles, until it arrives at what is termed the upper gap.

utilize the extensive region of Upper Canada. No one who looks at any existing map of the Province can form any idea either of their number or magnitude. Such a detail must be reserved for another occasion, and for a larger work.

The principal new Settlements that have been formed, are the Perth, on the waters of the Rideau, in the District of Bathurst; the Rice Lake Settlement in the District of Newcastle; and the Talbot Settlement, in the London District. But, during the administration of the present Lieutenant Governor, nearly fifty new Townships, averaging upwards of sixty thousand acres each, have been surveyed within a space of five years, and there are very few of these without some inhabitants. The population of Canada is increasing with great rapidity. Including the Military, and also the Aborigines of the country, both Provinces cannot contain much less than One Million of Souls?

But it is very difficult to get at the truth, in this respect, notwithstanding an Act of the Provincial Parliament of Upper Canada compels the inhabitants of each Township, through their Town-Clerk, to make an annual return. The census is usually taken in so careless and slovenly a manner, in the country, that it is seldom or never accurate, and the error is always in under-rating. In the Lower Province, the census is generally made by the resident Clergy.

It is probable the settled parts of Upper Canada contain about 200,000 souls. The largest towns are York and Kingston, of which Kingston is the most populous, containing 2,300 inhabitants. Many other towns are growing into note, of which the following are the principal:—

Coruwall,	Port Hope,	Niagara,
Prescott,	New Market,	St. Davids,
Brockville,	Penetanguishene,	Queenston,
Perth,	Dundas,	Chippeway,
Gannanoque,	Ancaster,	Waterloo,
Bath,	Barton,	Port Talbot,
Belville,	Grimahy,	Amherstburgh,
Hallowell	St. Catherine's,	Sandwich,
Coburg.		

The Militia of Upper Canada has become formidable, not merely for numbers, but for quality and metal; and there are not more loyal, nor better disposed men towards the British Government in any part of the Empire; no, not in the heart of England: and

* A return has been lately made for Lower Canada, which, if true, will oblige us to be more moderate in calculating the round numbers for both Provinces; but, believing our present estimate to be near the truth, we shall await a more perfect return before we alter the amount here calculated.

the last war with the United States having given them immortal honour their spirit is of so high and confident a character, that it will be extremely difficult for any foreign enemy to subdue it — It is no longer a problem whether the Canadas will prove an easy conquest to the United States of America. One Hundred and Fifty Thousand Canadian Militia, (which both Provinces have now at command) as well disposed as they certainly are, with the troops of Provincial Cavalry and Riflemen which have been voluntarily raised, under the orders of an able General, from the nature of the country may bid defiance to any number that may be brought against them. — And here we purposely say nothing of His Majesty's Regular Troops, and the aid to be derived from the Indians.

The ABBE du PRADT was never more mistaken than in his assertion, at p. 479. of his famous work on the Colonies, where he says, in his usual pompous and conceited phraseology: — "Acadia and Canada will have ceased to belong to England on the day that the United States will be able to establish an army of 50,000 men." That experiment has been tried; even whilst the Canadian Hercules was as an infant in his swaddling clothes. We hope it will be long before it may be necessary to evince a greater maturity of strength, either defensively or offensively.

Nothing is more tempting, and nothing is more dangerous and fallacious, to minds of a certain grasp than analogous reasoning. — It requires a penetrating and comprehensive genius, especially in politics, to apply such a mode of reasoning with any hope of drawing safe and just conclusions. DU PRADT adds to the assertion just quoted, "The English will find themselves in a position, with respect to the Americans, equivalent to that which they formerly found themselves in France. They will be in the same circumstances in Canada as they were in France during the time that they held possession of Guienne and Normandy, as the Swedes were in Finland since a Petersburg existed, but with this difference, that Guienne and Finland are situated only at the distance of a few leagues from England and Sweden, whereas the United States are by the side of Canada, and England is distant a thousand leagues from it."

This amusing and interesting Frenchman forgets a very important fact; that a given extent of country, (especially one like Canada possessing so much wilderness, with strong natural boundaries or barriers,) like a fortress of certain extent, requires only a certain number of men to garrison it; more than the number wanted is generally an incumbrance, (when straightened in a siege,) rather than a benefit, as they only serve to consume the means of a protracted defence. We think it was the famous GUSTAVUS ADOLPHUS of Sweden, who said that he would not desire a larger army than 40,000 men fit for actual service, to accomplish any military object; as such a force would always enable him to choose his positions. It is indeed worthy of remark how few men,

comparatively, were actually engaged in all the most memorable battles, both of ancient and modern times. But to return, M. du PRADT never reflected that, unlike Guienne or Normandy, or Finland, the Canadas were destined to become in a few years a match single handed, against any neighbouring foe; and of this fact there cannot now be much doubt, whilst nothing could be more preposterous than to suppose the two French provinces which have been named were a match for all France; or, that Finland was capable of defending itself against the enormous power of the Russian Autocrat. Enough, however, has been said on this subject here.

The exports of Canada are already considerable; and, from the encouragement held forth by the "*Trade Act*" passed during the last Session of the Imperial Parliament, in favour of this country, it is but reasonable to expect they will be greatly increased in a short time. Since the last war with the United States the exports from the two Provinces have averaged (including Furs and Peltry*) about £1,500,000, and from 600 to 700 ships are now employed every year in the foreign and coasting trade. The tonnage employed during the present year (1822) by the Custom House returns at Quebec, is no less than £145,942!

The prices of Provisions in the Upper Province are at present (1823) still rather low. In the York Market, Beef 2d.—Mutton 3d. to 4d.—Veal 3d. to 3 1-2,—Pork 2d.—Turkeys 2s 6d.—Geese 1s. 10d. 1 2 to 2s. 6d.—Ducks 1s. 10d. 1 2 per pair.—Fowls 1s. 3d. per pair.—Butter 7d. 1 2.—Eggs 3d. 1-2 to 6d.—Fine Flour 4s to 6s per Barrel.—Salmon of 15 to 16 lb. wt. about 1s. 3d. each,—abundance of other fish cheap.

Many of what, in some countries, may be called luxuries can be had here in their proper season, at very moderate price, such as Oysters, Cod fish, Venison, and Game in abundance.

The domestic animals of Canada admit of great improvement, and it is strongly recommended, from the success of some experiments which have been already made, to attend to this improvement rather by judicious selection and crossing, than by importing fine breeds from the too highly refined stock of England; excepting only a few Stallions of the large improved Coach, or Cart Horses of England, which are much wanted to give weight and power to the spindleshanked, flimsy, horses imported into the Upper Province from the United States; and, to give size to the tight, compact, hardy, invincible, little horse of the Lower Province.

* These valuable products to a very large amount are annually carried into the United States; from various parts of Upper Canada, in a way that is unknown at Montreal or Quebec, and consequently do not appear in the Custom House Books there.

It has often been asserted that the pony of Wales, and the Gal-
laway of Scotland, are superior, for their size, to any other horses
in the world. But the writer of this article has no doubt that horses
can be found in Montreal and Quebec of 14 hands high, and under,
that for drawing, or carrying heavy weights, and for bottom, and
sheer hardihood, would far surpass the horses of any other country,
not even excepting any part of Great Britain, so justly renowned
for the excellence of its Ponies as well as for the matchless charac-
ter of its Hunters and Race Horses;—since the little horses of
Lower Canada are every day performing what would be deemed
great exploits were they recorded in the Sportsman's Magazine.—
But excellent as these horses are, their inferior size renders them
unfit for many purposes of draught.

The horned cattle of this country merely want good wintering,
and more attention, than is now generally paid, to a judicious
cross in breeding, to be every thing that a farmer could desire.

Sheep are for the greater part, imported from the United States,
and have more or less of the 'Merino' in their breed; too much
so, in our opinion, to be so profitable in this climate, and with the
careless management they receive, as they may be. It is thought
that the improved 'Cheviot', whose fleece is weighty, and possesses
a long staple, might be introduced into Canada with great success,
and it is well worth while to make the experiment.—It is to be la-
mented that the different breeds of sheep are not more generally
cultivated than they are in Canada, as the climate is very favorable
to the growth of wool, which might hereafter become a valuable
article of export.

There are those who wish for an importation of the largest
breed of English Hogs, to give weight to those of this country, as
well as to render them of a more 'kindly nature,' as a breeder would
term it. But, there is not the smallest doubt that a skilful and at-
tentive farmer, who is a good manager, may have a breed of Hogs,
without leaving Canada, equal to every thing that he may desire.
Hogs which arrive at the weight of 300 lbs are surely heavy enough
for ordinary consumption, and we have frequently known instan-
ces of their arriving at such a weight in Canada, without any par-
ticular attention being paid.

So much has now been said on subjects that may be deemed, in
general, foreign to a publication of this nature, that the writer is a
fraid of enlarging his sketch until he knows how far it may prove
acceptable to the public. Should he have the happiness to find
his plan approved, he will undertake to work up, by degrees, what
is now nothing more than a rough outline, very hastily sketched,
into a more finished picture, for the succeeding volumes of this
work, which he is desirous of rendering as useful a companion as
he can make it to all ranks of people who visit, or who may intend
to visit, as well as to those who reside, in this Province.

Before he concludes, however, as a great deal has been said, of late, in disparagement of the plan, adopted by Government, which grants no more than 50 Acres, without the payment of Fees, to ordinary applicants, the writer cannot help repeating that the liberality of the British Government, in this particular, is without a parallel in the history of the world, ancient or modern. What man has ever been more highly extolled than the famous WILLIAM PENN? whom all writers, of all parties, and opinions, have agreed to characterize as a liberal, humane, and virtuous legislator; and even PENN did not think fit, in that golden day of cheap gifts, in land matters, to part with portions of his vast territory without a price, which even then was deemed so trifling as to be little more than nominal, and his fee upon his larger grants of 1000 acres was 430 *livres**; and, to those who could not pay for more, he granted 50 acres, "for the annual quit rent of one sol, ten deniers and a half per acre," equal to one penny, or four shillings and two pence, on the whole fifty acres, annually quit rent—NOT A FREEHOLD!*

The example of WILLIAM PENN is chosen, because no one has ever yet objected to the wisdom of his policy.—However, not to go further into this subject on the present occasion, as the wealth of Upper Canada is at this time chiefly agricultural; we will conclude in the eloquent language of the author from whom we have just quoted.

"Every thing depends upon, and arises, from the cultivation of land. It forms the internal strength of states; and draws riches into them from without. Every power which comes from any other source except the land, is artificial and precarious, either in natural or moral philosophy. Industry and commerce, which do not act immediately upon the agriculture of a country, are in the power of foreign nations, who may either dispute these advantages through emulation, or deprive the country of them through envy. This may be done either by establishing the same branch of industry among themselves, or by suppressing the exportation of their own unwrought materials, or the importation of those materials in manufacture. But a state well manured, and well cultivated, produces men by the fruits of the earth, and riches by those men.—This is not the teeth which the dragon sows to bring forth soldiers to destroy each other; it is the milk of Juno, which peoples the heavens with an innumerable multitude of stars."

9.

A BRIEF VIEW
OF THE GOVERNMENT OF BRITAIN
 DURING THE PERIOD IN WHICH IT RANKED AS A PROVINCE OF THE
 ROMAN EMPIRE,
 FROM THE INVASION OF JULIUS CÆSAR,
 FIFTY-FIVE YEARS BEFORE CHRIST,
 TO THE
 ARRIVAL OF THE SAXONS, A. D. 449.
 SKETCHED EXPRESSLY FOR THIS WORK, BY
 CHARLES FOTHERGILL.

We agree with the learned BORLASE, who has adduced unquestionable evidence of the fact, that the large and beautiful Island of Great Britain, the most renowned in the world, was known to, and partially settled by, the *Phoenicians* at a very early period, even when the greatest part of Europe remained an unexplored wilderness, rude and wild as the remotest fastness of America.—It was inhabited for many ages; and, as Dr. HENRY observes, was the scene of many wars, revolutions, and other important events, before it was invaded by the Romans under JULIUS CÆSAR in the year, before CHRIST, 55.

But it is not our purpose to plunge into the gloom and doubt of so remote an antiquity.—We have no desire, especially in this place, to peer and pry into the darkness of unwritten History, or to gaze on the creations of fancy, when unimpeachable records, and substantial forms, are near.

From the retreat of JULIUS CÆSAR, to the invasion of CLAUDIUS, a period of *ninety seven years*, but little is known of the Monarchs, Princes or Chiefs of the Island.—Neither AUGUSTUS, TIBERIUS, nor CALIGULA, (although the latter Emperor had collected an army of no less than 200,000 men on the opposite coast of *Gaul*) attempted the invasion.

At the period of the invasion of CLAUDIUS, we hear much of CARACTACUS, a native Prince, who seems to have been worthy of the fame which has been bestowed upon him by every historian of that age; and, after him, the renowned BOADICIA, Queen of the *Iceni*,^a who was at one time, and in one engagement, at the head of 230,000 men.—From the defeat of this immense army to

^a The *Iceni* inhabited the Counties of Suffolk, Norfolk, Cambridge, and Huntingdon

† V

A. D. 207, the southern parts of Britain were chiefly under the rule of Governors sent thither from Rome; amongst whom, *AGRICOLA* was the best, and the most famous:—he not only defeated the *Caledonians* in many battles, but was the first who circumnavigated the island, and determined its entire coast.

It was in the year 207 that the emperor *SEVERUS* arrived in England, where he remained for four years, and built the stupendous wall, from sea to sea, across the island towards the north, which bears his name:—it was for the purpose of checking, if not to prevent, the inroads of the Scots; and vestiges of the vast undertaking may still be traced.—*Severus* died in the city of York, on the 4th of Feb. 211, and three immense Tumuli, called *Severus's Hills*, which were raised by his army, remain as an imperishable monument, within a mile and a half of the city walls, to this day.*

After the departure, from Britain, of the two new Emperors, *CARACALLA* and *GETA* to the accession of *DIOCLESIAN* in 284, the Government remained in the hands of a regular succession of Roman Vicegerents, though but little is known of that long and dark period of our history.

It was about this time that the *Franks* and *Saxons* began to figure on the stage of politics, and of war, acting chiefly as pirates. We hear of considerable numbers of these people distinguishing themselves under *Alcicus*, in his opposition to *CONSTANTIUS*, when *London* was fortunately preserved from utter destruction, in the year 296.

CONSTANTINE the Great, began his reign and splendid career at York, A. D. 306. His mother *Helena*, is said to have been a daughter of *COIL*, one of the native Kings of Britain.—Many have affirmed that this Emperor was born in the island, † and his warmest panegyrist exclaims, with much energy, “*O fortunate Britain! more happy than all other lands, for thou hast first beheld Constantine Caesar!*”

After the death of this great Prince, the government of Britain fell to his eldest son, who was likewise named *Constantine*, and who was slain in the year 340.

Gratianus Funarius, the father of *Valentinian*, appears as the Roman Governor of Britain, under the Emperor *Constantius* in 354.

* There is a tradition amongst the country people of that part of Yorkshire, which the writer of this sketch has often heard, still remaining, which affirms that these hills were raised by earth carried from a hollow, (in which a village called *Hole gate* now stands) in the helmets of the whole Roman Army!—Two of these Hills, or *Tumuli*, are not less than 100 feet high, with proportional bases!!

† *Vide* Usser. de primord. Eccles. Brit. c. 8.

From the year 367 to 375 the excellent and brave Theodosius was Governor. From that period to 381, when he assumed the *Purple*, the Emperor Maximus, who had married the daughter of a British Prince, held the government. Both Theodosius, and Maximus were very much beloved by the people.

From the date of 393 to 412 we hear of Chrysantus, and Victorinus, as the military representatives of imperial Rome; and, from 418 to 421 we find Gallio, a general of great ability, acting as governor — Afterwards, to the arrival of the Saxons in 449, began the most disastrous and melancholy period in the whole history of our country, harrassed by incessant attacks from the marauding Scots, and the yet more barbarous Picts, she became the prey of horde after horde of lawless savages from the north, till she had little left for the breechless vagabonds to plunder.

During this unhappy period, the *Britons* appear to have been without either order, law, government, or any chiefs worthy of the name; all was confusion, famine, pestilence, rapine, and plunder. The *ROMAN* had turned pale, and his empire, and name, and greatness, were tottering before the threats, and actually falling before the power, of the terrible *ATTILA*!

OFFICERS OF THE BRITISH GOVERNMENT,

WHILST UNDER THE DOMINION OF ROMAN EMPERORS.

THAT the reader may form some distinct idea of the state of the country and its government, in the early part of its history, we here subjoin some lists of Officers, and notes from the *Notitia Imperii*, a work of great antiquity and rarity.

Under the government of the Honorable the Vicegerent of Britain, are

Consular governments of those parts of Britain, called,
Maxima Caesariensis,*
Valentia;

Presidial Governments of those parts of Britain, called
Britannia Prima,
Britannia Secunda,

This honorable Vicegerent hath his Court composed in this manner:

† A Principal Officer of the Agents, chosen out of the *Ducenarii*, or under Officers,

* The two most northerly provinces were governed by consulars, as being most exposed to danger.

† Under the lower empire there were many incorporated bodies of men of different professions; and these incorporated bodies were called *Scholæ*.

 Two Chief Accountants, or Auditors,
 † A Master of the Prisons,
 A Notary,
 A Secretary for despatches,
 An Assistant, or Surrogate,
 Under Assistants,
 § Clerks for Appeals
 Serjeants, and other inferior Officers,

There were also *Nine Military* stations, with the necessary officers, under the command of the Count of the Saxon Shore.

The Count of Britain had also a court, composed after the manner we have mentioned, with the addition of a *Register*.

Under the Government of the honourable the Duke of Britain, were the *Prefects*, viz:—

Prefect of the Sixth Legion	Prefect of the Scouts
— — — Dalmatian Horse	— — — Directores
— — — Crispian Horse	— — — Defensores
— — — Guirassiers	— — — Solenses
— — — Borearii Tigresiensis	— — — Pacenses
— — — Nervii Dietsenses	— — — Longovicarii
— — — Watchmen	— — — Derventiouenses

Also, along the line of the *Wall*,

The Tribune of the 4th Cohort

a Cohort of Carnovii

1st Cohort of Frixagi

1st Cohort of Batavi, and Tungri, and

of the 4th Cohort of Gauls, and the 2d of *Dalmatians, Dacians, Moors, Spaniards*, and many others.

He had also a body of men in armour; and, in his court was a principal officer from the courts of the Generals of the Soldiers in ordinary attendance, who was changed yearly.

OF THE SAXON HEPTARCHY.

Upon the establishment of the *Saxons and Angles*, in South Britain, after the year 460, the whole of that part of the I-land was divided into the seven following Kingdoms; viz:—

I—*KENT*, founded by *Hengist* in 455—It terminated in 823.

II—*Sussex*, or the *South Saxons*, was founded by *ELLA* in 491, and ended about the year 600.

† The master of the Prisons was called *Commentariensis*, from his keeping an exact calendar of all the prisoners in all the prisons under his inspection.

§ The *Exceptores* were a particular order of Clerks or Notaries, who recorded the proceedings and sentences of the Judges upon appeals.

- III.—EAST ANGLES, founded by UFFA, in 751, and ended in 792.
- IV.—WESSEX, or the *West Saxons*, founded by CERDIC in 519, and ended about 1012
- V.—NORTHUMBERLAND, established by ICA in 547, and ended in 827.
- VI.—ESSEX, or the *East Saxons*, founded by EREENWIN in 527, and ended in 810.
- VII.—MERCIA, founded by *Cridla*, in 584, and ended in 824.

**HIS MAJESTY'S MINISTERS WHICH FORM
THE CABINET.**

EARL OF ELDON.—*Lord High Chancellor.*

The office of the Lord Chancellor is to keep the Great Seal; not to judge according to the common Law, as other Courts do; but to dispense with such parts as seem in some cases to oppress the subject, and to judge according to equity, conscience and reason. Wherefore he is said to have two powers—the one absolute, the other ordinary; the meaning of which is, he must observe the form of proceeding in other Courts; yet, in his absolute power, he is not limited by the written law, but in conscience and equity. He may issue Writs of Habeas Corpus at all times. He has power to collate to all Ecclesiastical Benefices in the King's gift, rated under £20 per annum in the King's books; his oath is to do justice to all persons, poor and rich; the King truly to counsel, and to keep the King's counsel, and not to suffer the rights of the Crown to be in any way diminished. The Lord Chancellor and Lord Keeper are the same in power and precedence. Both are appointed by the King's delivery of the Great Seal; they differ only in

this—the Lord Chancellor hath also letters patent, the Lord Keeper none.

EARL OF HARROWBY,—*Lord President of the Council.*

The Lord President of the Council holds his post by Letters Patent *durante bene placito*. By the Stat. 21 Hen. y 8th. he is to attend the King's person: to manage the debates in Council; to propose matters from the King at the Council, and to report to the King the resolutions thereupon.

EARL OF LIVERPOOL, K. G.—*First Lord Commissioner of the Treasury.*

The Lord Treasurer, whose office is now executed by five Lords Commissioners, hath the appointment of all Officers employed in Collecting the Revenues of the Crown; he hath the nomination of all escheators, and the disposal of all places and ways relating to the Revenue, and of the Kingdom; and power to let Leases of the Crown Lands. The office of Chancellor of the Exchequer is always held by one of the Lords Commissioners of the Treasury. (except upon some very particular occasions when the Lord Chief Justice of the King's Bench is appointed to act as such) He is styled Chancellor and under Treasurer of the Exchequer; he has custody of the Exchequer Seal; he has also the controlment of the Rolls of the Lords of the Treasury; and he sits in the Court of Exchequer above the Barons of Exchequer. He has many lucrative offices in the Court of Exchequer in his gift.

EARL OF WESTMORELAND, K. G.—*Lord Privy Seal.*

This great officer is so called from his having the Privy Seal in his custody, which he must not put to any grant without warrant under the King's Signet. This Seal is used to all Charters, Grants, and Pardons signed by the King before they come to the Great Seal.

Right Hon. ROBERT PEEL,—*Secretary of State for the Home Department.*

Until the Reign of Henry VIII. there was only one Secretary of State; and until the Reign of Elizabeth, the Secretaries were never of the Privy Council. From that time to the present there have been two Secretaries of State, and sometimes three; and thus a Council has seldom been held without the presence of at least one of them. From the death of Queen Anne to the Rebellion of 1745. there was a third Secretary for Scotland; and from 1768, to the loss of America in 1782, there was one for the Colonies. In 1795 there was another appointed under the denomination of the War Department. The Department of the two Secretaries,

were, previous to 1782, divided into Northern and Southern; but are now divided into one Foreign, and the other, Domestic: with the Home Secretary, all grants, pardons, and regulations in civil matters of any kind are made and executed. To the Foreign Secretary belong all dispatches to and from other Courts, and all business appertaining to the same. They have the custody of the Privy Signet, because the King's private letters are sealed with it. There are four Clerks of the Signet, who are to make out grants, patents, &c. which have the sign manual, to which the Signet being added, it is a warrant to the Privy Seal; as the Privy Seal is a warrant to the Great Seal. The Paper Office belongs to the Secretary of State, where all letters, papers, memorials, and negotiations, are deposited and preserved.

Right Hon. GEORGE CANNING.—*Secretary of State for the Foreign Department.*

EARL BATHURST, K. G.—*Secretary of State for the War Department and the Colonies.*

DUKE OF WELLINGTON, K. G. G. C. B. &c.—*Master General of the Ordnance.*

Right Hon. F. J. ROBINSON.—*Chancellor of the Exchequer.*

VISCOUNT MELVILLE.—*First Lord Commissioner of the Admiralty.*

THE power of Lord High Admiral hath, since the Reign of Queen Anne, been executed by Commissioners. The Statute of Charles II. ascertains his authority in these words:—"That the Lord High Admiral for the time being, shall have full power and authority to grant Commissions to inferior Vice Admirals or Commanders in Chief of any squadron of ships; to call and assemble Courts Martial, consisting of Commanders and Captains; and no Court Martial where pain of death shall be inflicted, shall consist of less than five Captains at least.—the Admiral's Lieutenant to be, as to this purpose, esteemed as a Captain, and in no case wherein sentence of death shall pass (by the articles for regulating the Government of His Majesty's Ships of War, or any of them, except mutiny) there shall be execution of such sentence without leave of the Lord High Admiral, if the offence be committed in narrow seas; but, in case any of the offences aforesaid be committed in any voyage beyond the narrow seas, then execution shall be done by order of the Commander in Chief. He appoints Coroners to view dead bodies found on the coasts, and Judges in the High Court of Admiralty. To him belong all fines and forfeitures of all transgressions at sea, and at the sea shore; and in port from the first bridge on rivers to the sea, goods of Pirates, waifs, wrecks, &c. Since the revolution, the maritime laws have undergone alterations and revisions, and the office of Lord High Admiral has been considerably abridged of its perquisites. Of late years this high office has always been in commission, and still remains an

office of great honor, power, and emolument. The first Commissioner of the Admiralty has a salary of £3,000 per annum, and the six Commissioners £1,000 a year each, and all of them (the youngest Commissioner excepted) has a house in the Admiralty.

Right Hon. CHAS. WATKIN WILLIAMS WYNNE,—*President of the Board of Control.*

Right Hon. C. B. BATHURST,—*Treasurer of the Navy.*

Right Hon. LORD BEXLEY,—*Chancellor of the Duchy of Lancaster.*

Right Hon. THOMAS WALLACE,—*Master of the Mint.*

NOT OF THE CABINET.

Attorney General,—SIR R. GIFFORD, Knight, M. P.

Solicitor General,—SIR J. S. COPLEY, Knight, M. P.

ACCOUNT OF SOME OF THE PRINCIPAL OFFICERS OF HIS MAJESTY'S HOUSEHOLD.

Lord Chamberlain,—DUKE OF MONTROSE.

The office of Lord Chamberlain is to take care of all the officers and servants (excepting those belonging to the King's bed-chamber, who are under the Groom of the Stole) belonging to the King's chamber, who are sworn into their places by him. He hath the oversight of the officers of the wardrobe at all His Majesty's houses; and the removing of wardrobes or beds; of tents, revels, music, comedians, huntsmen, messengers, of all handicrafts and artizans; and what is not common to other nations, although a layman, he hath the oversight of the King's Chaplains, and of all the Heralds, Physicians, Apothecaries, &c.—It is his place to inspect the charges of coronations, marriages, public entries, cavalcades, and funerals; and all furniture for, and in, the Parliament houses, and rooms of addresses to the King.

Lord Steward—MARQUESS OF CONYNGHAM.

The Estate of the King's Household is entirely committed to the Lord Steward, to be ruled and governed by his discretion; and all his commands in Court are to be obeyed; his authority reaches over all officers and servants of the King's Household, except those of the King's Chamber, Stable, and Chapel. Under the

Lord Steward, in the country-house, are the Treasurer of the Household, Comptroller, Cofferer, Master of the Household, Clerks of the Green Cloth, &c. It is called the Counting-House, because all the accounts and expences of the King's Household are daily taken and kept in it. The Board of Green Cloth was kept in it.

Master of the Horse.—DUKE OF DORSET.

The Master of the Horse hath the charge and government of all the King's stables and horses—He hath also power over equeries and pages, footmen, grooms, farriers, smiths, saddlers, and all other trades in any way relating to the stables. He has the privilege of applying to his own use one coachman, four footmen, and six grooms, in the King's pay.—In any solemn cavalcade he rides next behind the King.

SUMMARY OF THE WHOLE HOUSE OF COMMONS
IN ENGLAND.

40 Counties in England, send	- - - -	80 Knights,
25 Cities (Ely, none; London, 4)	50 Citizens,
167 Boroughs, 2 each.	334 Burgesses,

CIVIL LIST

OF

UPPER CANADA

NOTE.—It is proper here to remark that the "*York Almanack, and Royal Calendar,*" is not an *Official* publication; and, therefore, any arrangement in the various Lists of Public Officers, as presented in this work, cannot in any degree affect the *precedence* which any such Officer may be entitled to. The Editor has taken every pains in his power to give correctness to the work, and he would desire to be found within the rules of propriety in respect to arrangement.—Any hint from respectable authority will be attended to in future editions.

In order to find the distance from any place, in the foregoing Tables and Lists, to another, deduct the smaller from the larger number of miles, and the product gives the distance:—thus, do you want to know how far it is from York to Coteau du Lac, by the main road; deduct 931 from 1253, and there remain 322 miles, the true distance; or, if it be a Cross Road, and you want to know how far it is from York to another place named,—say to Raleigh; see how far York is from Halifax (by the List that is given) and how far Raleigh is from Halifax,—deduct 1253 from 1427, and the result is 174 miles, the true distance from York to Raleigh.

As these Tables and Lists are taken from those used in the Post Office, it must be presumed they are as correct as the present state of the country will admit of.

1824.—Returns for Fitzroy, Pakenham, Tarbolton, Darling, & Levant not correctly given in the preceeding list.	600

Total actually Returned. 158,331

From the manner in which these returns are made, it is certain the numbers are, in nine instances out of ten, under rated; on an average, perhaps, of one third on the grand total.—This arises from the slovenly way, to save the trouble of going from house to house, but too frequently adopted by the Assessors, or other persons, employed for the purpose of obtaining the Census. However, a considerable improvement has been noticed since last year, in this particular, and we will hope for still greater accuracy hereafter. In the

Under-rating of numbers, not reported, throughout the settled parts of Upper Canada, taken at one third of the whole,	43,250
Number of Indians using Imported Goods,	5,000
Army, Navy, and Strangers, do. do.	5,000
Probable total of the U. C. Population from the best returns hitherto obtained, which consume Imported Goods,	188,492

ADDENDA.

The following statement of the Population of *Kingston, Pitts-
burgh, and Wolfe Island*, having been received at the moment
this sheet was about to be worked off, the Editor stopped the
Press to insert it here, that the work may be as perfect as the
documents received, will permit.

*List of the Inhabitants of the Town and Township of Kingston,
and Townships of Pittsburgh, and Wolfe Island, for 1823.*

(Signed)

JOHN WILSON FERGUSON,
TOWN CLERK.

Kingston, January 5th, 1823.

A SET
OF
STATISTICAL TABLES
FORMED FROM THE
ASSESSMENT ROLLS
OF THE
PROVINCE.

NOTE.—Could it have been foreseen that documents of so much importance, (as the ASSESSMENT ROLLS of the PROVINCE undoubtedly are) were generally formed in that slovenly manner in which they have been found to be executed, notwithstanding the form and provisions of the STATUTE in such case made and directed,—we should certainly have used more caution in promising *accurate* STATISTICAL TABLES for the whole Province, in this work.—But, it was impossible to conceive that what so materially concerned every *Township* and *District* in the country, could, in many instances, have been so carelessly and imperfectly attended to. Yet so it is, and it will require at least another year before this important and interesting section of our work can be brought to any thing like a state of perfection. In the mean time, however, many valuable deductions may be made from what is here given.

REMARKS.

The total valuation of the property enumerated in the foregoing Tables, appears to be £2,203,094 0 0 (*errors excepted*)—on which the rate of one penny in the pound is collected for the local uses of the several Districts.

A comparison of years with this statement, (which is as perfect as the accuracy of the documents from which we have had to compile, would admit,) as succeeding editions of this work make their appearance, will shew the gradual increase and improvement of the resources of the country.

But, it is our duty to declare that, from long observations we are obliged to conclude, in general returns of this nature, either through dishonest motives, and a desire to pay as little tax as possible, on the part of the *assessed*, or, through the carelessness of those employed to make the returns, the reports are *below the true numbers by about one third* with the exception of the number of Houses, Shops and Mills.

Assuming this as a fact, (of which we, ourselves have no manner of doubt) for the amusement of our readers, as well as for the information, of strangers, we shall here place in round numbers the *real* amount of several items in a general aggregate; and, a most interesting statement it is!

UPPER CANADA, from the best evidence that can be at present obtained, has now,

* 1,016,020 Acres of Land under cultivation.

314 Grist Mills,

417 Saw Mills;

(All these Mills are wrought by water)

480 Merchant's Shops exclusive of Store Houses.

* 30,774 Horses of three years old and upwards.

* 30,817 Oxen of four years old and upwards.

* 75,273 Milch Cows; and, at least,

* 60,000 Young Cattle from two to four years old.

547 Carriages for Pleasure.

The items marked with an asterisk (*) have the *one third* alluded to, added—The return of Grist and Saw Mills, being more free from suspicion, from the nature of the property, remains, in this view, as sent by the Assessors.

In the preceding quantities we have considered it wholly useless to mention the number of acres of *wild or uncultivated* land; because the returns are ridiculously below the real amounts, of which we will here give the most satisfactory proof.

There are at least 260 Townships of land actually surveyed in UPPER CANADA;—these, according to instructions from the Surveyor General's Office, average about 66,000 acres each; so that we have unquestionable evidence to shew that 17,160,000 acres have been actually surveyed in this Province. To say the least of it, *three fourths* of that quantity have been located, and, yet, what is the number of acres of wild land returned in the assessment rolls?—Why about 2 millions?

The stranger ought to be informed that, as the common *log-houses* of the country pay no tax, they are not mentioned in any of the re-

turns.

turns.—We intended to have given an abstract from the Act of Parliament, containing the scale by which the various kinds of property is valued; (far below the true value; but, as there is a column in the returns from the *Western District* sufficiently accurate for our present purpose, we decline occupying more space with that detail.

Amongst the curious and interesting reflections occasioned by a review of the foregoing tables, there is one well worthy of attention, from the extreme singularity of the fact which gives rise to it—Notwithstanding the wise provisions of the Statute 27, HENRY VIII, ch. 6; and 32, HENRY VII, ch. 13, in the succeeding Reign, when England was threatened with invasion by the Spanish Armada, in 1588, after a general survey, ordered for the express purpose, ELIZABETH could find no more than 50,000 serviceable horses throughout her entire kingdom.

Here, in a country almost covered with wood, and apparently but ill adapted, in its present state, for the breeding of horses; and settled (with the exception of a few Frenchmen on the Western frontier,) but little more than thirty years, we have nearly as many horses as were to be found in all England at a most flourishing period of its history;—and, in both Canadas together, there is now beyond a doubt, at least three times the number of horses that were returned to the patriotic Queen ELIZABETH, on the momentous occasion alluded to.

As a much better idea of the number of *Merchant's Shops* in U. C. can be had from the returns of Licences made to the INSPECTOR GENERAL, than from the tables of assessments already given; we shall subjoin a list of them, together with the number of *Tavern Licences*, and *Distilleries*, and then close this section of the work, which it is hoped, will be brought nearer to perfection in another edition, when more accurate returns shall have been made from the several Townships and Districts of the Province, under the operation of some recent and more effective enactments of the Legislature.

The number of SHOP LICENCES issued between the 5th day of January, 1-24, and the 4th day of October, 1825, so far as the District Inspectors have reported the same.

Is, 263, amounting to	1578	0	0
Deduct allowance to Inspectors,	157	16	0

Nett Revenue,—£1420 4 0

Number of TAVERN LICENCES, issued for the same period,

Is, 476, amounting to	1105	0	0
Allowance to Inspectors.	110	10	0

Nett Revenue,—£ 994 10 0

Number of STILL LICENCES, issued for the same period.

Is—Contents of the Stills 8286 1-2 gallons,

The Duty amounting to	1085	16	3
Allowance to Inspectors	102	11	7 1-2

Nett Revenue,—£ 932 4 7 1-2

Nett Total,—£3346 19 7 1-2

VALUE OF GOLD AND SILVER COINS.

- ▲ Grain of Gold, about 2d.
- ▲ Penny weight, about 4s.
- ▲ Grain of Silver, about half a farthing.
- ▲ Penny weight, 3d.
- ▲ An Ounce, about 5s.
- According to the weight of English Coins, the Mint value of a lb. of Gold is 44 guineas and a half, or £46 14s 6d.—a lb. of Silver, £3 2s—the oz. of Gold £3 17s 10 1 2d and the ounce of Silver, 5s 2d, so that the value of the Standard Gold is 15 times that of Silver, and 1 14th more.
- * The value of a lb. of Gold as Bullion, in Oct. 1809, was £55 10s

Sallow	59	36	14
Sycamore	59	36	14
Elm	50	31	4

N. B. All the Woods were very good of the sort, except the Elm, and all very dry; the measure is English, and the weight Avoirdupois.

It is probable that the woods of Canada are lighter, (except those grown on plains and exposed situations,) than similar species produced in England.

GOLDEN RULES.

TO RENDER YOUNG TRADESMEN RE-SPECTABLE, PROSPEROUS, AND WEALTHY.

1.—Choose a good and commanding situation, even at a higher rent or premium; for no money is so well laid out as for situation, provided good use is made of it.

2.—Take your shop door from off the hinges at seven in the morning, that no obstruction may be opposed to your customers.

3.—Clean and set out your windows at eight o'clock, and do this with your own hands, that you may expose for sale the articles which are most saleable, and which you most want to sell.

4.—Sweep before your house; and, if required, open a foot-way from the opposite side of the street, that passengers may think of you while crossing, and that all the neighbours may be sensible of your diligence.

5.—Wear an apron, if such be the custom of your business, and consider it a badge of distinction, which will procure you respect and credit.

6.—Apply your first returns of ready money to pay debts before they are due, and give such transactions due emphasis by claiming discount.

7.—Always be found at home and in some way employed; and remember that your meditating neighbours have their eyes upon you, and are continually gauging you by appearance.

8.—Re weigh and re measure all your stock, rather than let it be supposed that you have nothing to do.

9.—Keep some article not usually kept, or sell some current article cheap, that you may draw customers and enlarge your intercourse.

No. 8.

The dimensions of a Statute Acre may be learned by inspecting the following Table, which contains different breadths and lengths in Statute Perches and Feet, of a quadrangular piece of ground containing an acre.

BREADTHS AND LENGTHS OF A STATUTE ACRE,
IN PERCHES AND FEET.

BREADTH		LENGTH		BREADTH		LENGTH	
<i>Perches.</i>		<i>Per Feet.</i>		<i>Perches</i>		<i>Per Feet.</i>	
10	16	0		28	5	11 $\frac{1}{4}$	
11	14	9		29	5	8 $\frac{3}{4}$	
12	13	5 $\frac{1}{2}$		30	5	5 $\frac{1}{2}$	
13	12	5 $\frac{1}{3}$		31	5	2 $\frac{1}{2}$	
14	11	7 $\frac{1}{4}$		32	5	0	
15	10	11		33	4	14	
16	10	0		34	4	11 $\frac{1}{4}$	
17	9	6 $\frac{3}{4}$		35	4	9 $\frac{3}{4}$	
18	8	14 $\frac{2}{3}$		36	4	7 $\frac{1}{2}$	
19	8	6 $\frac{1}{10}$		37	4	5 $\frac{1}{3}$	
20	8	0		38	4	3 $\frac{2}{9}$	
21	7	10 $\frac{3}{4}$		39	4	1 $\frac{2}{3}$	
22	7	4 $\frac{1}{2}$		40	4	0	
23	6	15 $\frac{1}{2}$		41	3	14 $\frac{7}{8}$	
24	6	11		42	3	13 $\frac{5}{7}$	
25	6	6 $\frac{1}{2}$		43	3	11 $\frac{7}{8}$	
26	6	2 $\frac{7}{13}$		44	3	10 $\frac{1}{2}$	
27	5	15 $\frac{5}{10}$		45	3	9 $\frac{1}{6}$	

10—Keep up the exact quality or ^R your of all articles which you find are approved of by your customers, and by this means you will enjoy their preference.

11—Buy for ready money as often as you have any to spare; and when you take credit, pay to a day, and unasked.

12—No advantage will ever arise to you from any ostentatious display of expenditure.

13.—Beware of the odds and ends of stock, of remnants, of spoiled goods, and of waste, for it is in such things that your profits lie.

14.—In serving your customers, be firm and obliging, and never lose your temper, for nothing is got by it.

15.—Always be seen at Church or Chapel on Sunday; never at a Gaming Table; and seldom at the Theatres or places of amusement.

16.—Prefer a prudent and discreet, to a rich and showy wife.

17.—Spend your evenings by your own fire side, and shun a public house or a sottish club as you would a bad debt.

18.—Subscribe with your neighbours to a book club, and improve your mind, that you may be qualified to use your future affluence with credit to yourself, and advantage to the public.

No. 10.

A TABLE to shew how many Plants, or Trees, may be planted on an Acre of Land, at different distances.

IN A SQUARE ACRE ARE,

4 roods, each rood 40 rods, poles or perches,
 160 rods, 16 feet and a half each,
 4 840 square yards, 9 feet each,
 43 550 square feet, 144 inches each,
 174,240 squares of six inches each, or 36 inches,
 6,272,640 inches, or squares of 1 inch each.

AN ACRE WILL CONTAIN

<i>Trees or Plants,</i>	<i>Number of Feet asunder.</i>		<i>Square feet to each.</i>
108 and 350 feet over,	at	20 feet asunder, or	400

19.—Take stock every year, estimate your profits, and do not spend above their fourth

20.—Avoid the common folly of expending your precious capital upon a costly architectural front; such things operate on the world like paint on a woman's cheeks—repelling beholders, instead of attracting them

21.—Every pound wasted by a young tradesman, is two pounds lost at the end of three years, and sixteen pounds at the end of twenty-four years

22.—To avoid being robbed and ruined by apprentices and assistants, never allow them to go from home in the evening, and the restrictions will prove equally useful to servant and master

23.—Remember that prudent purchasers avoid the shop of an extravagant and ostentatious trader; for they justly consider that if they must deal with him, they must contribute to his follies.

All the different denominations of the above Coins pass current. Two pence farthing is allowed for every grain under or over weight, on English, Portuguese, and American Gold; and Two pence and one fifth on Spanish and French — Payments in Gold above £20, may be made in bulk; English, Portuguese, & American, at 89s. per oz; French and Spanish, at 87s 6 1/2, deducting half a grain for each piece.

No. 19.

To turn any given Currency into any Currency required.

RULE I.—Let the value of the Spanish Dollar be expressed in Shillings, or Pence, in each of the Currencies, writing them in form of a Fraction,

and making the $\left\{ \begin{array}{l} \text{required} \\ \text{given} \end{array} \right\}$ Currency the Numerator $\left\{ \begin{array}{l} \text{of the Fraction.} \\ \text{Denominator} \end{array} \right\}$

Reduce this Fraction to its *least terms*, and it will serve as a constant Multiplier, by which any such of the *given* Currency being Multiplied, it will be converted into the Currency required.

N. B. When the Fraction is not an improper one the *Multiplier* will become a Divisor.

EXAMPLE—To form a rule for changing Sterling at 4s. 6d. per Dollar into New York at 8s. per Dollar.

Here Sterling is given and York required : The Dollar in $\left\{ \begin{array}{l} \text{York is 8s. or 96 Pence Numerator,} \\ \text{Sterling 4s. 6d. or 54 Pence Denominator.} \end{array} \right.$

Therefore $\frac{96}{54}$ is the Multiplier sought, which reduced to its least terms becomes $\frac{16}{9}$ or $1\frac{7}{9}$, therefore if Sterling be Multiplied by 16 and divided by 9 the result will be York, thus, $\frac{16}{9}$ is the same as 2 into $\frac{8}{9}$, but $\frac{8}{9}$ is the same as 1 less $\frac{1}{9}$, therefore 2 into $\frac{8}{9}$ is equal to 2 into 1 less $\frac{1}{9}$; which is that Rule, expressed shorter thus—
 $\frac{16}{9} = 2 \times \frac{8}{9} = 2 \times 1 \frac{7}{9}$.

No. 20.

Disorder from Heat in a Hot Climate.

One drachm Camphor, desert spoonful of Brandy, half an ounce of Sugar; rub the camphor and brandy together, then add the sugar; when well mixed, add one pint of boiling water by degrees; cover up, keep till cold, and take a quart or half a pint or all, in a day after, James's powder. If a tendency to putrefaction, two drachms sweet spirit of vitriol to the pint.

JAMES'S POWDER—Pulvis antimonalis, according to the last Dispensatory—Take going to bed, 4 or 5 grains; if necessary as far as 17 grains a day, at three or four times, may be taken.

No. 21.

Powder for Rheumatism when first coming.

Pulvis Ipecacuanha Compositus, of the last London Dispensatory—In common cases with no violent pain, 10 grains at going to bed; in great pain, 20 grains, wash down with diluting liquors.

No. 22.

For Rheumatic Pains, or the Lumbago.

Dissolve as much salt in water as will make it swim an egg, rub it in with your hand on the part affected before a fire, for 15 or 20 minutes, just before going to bed; it is uncommonly effective.—A. YOUNG.

No. 23.

A Cement which equally resists both Fire and Water.

Make a pint of milk coagulate on the fire by means of an acid till it is quite clear; filtrate it, and separate perfectly the caseous particles; mix with the whites of four or five eggs, which beat well separately, and then again anew; then mix it with quick lime reduced to an impalpable powder in such quantity that the whole may form a consistent mass to be adopted as a cement.

[G. E. Skoge Act. de L'Acad. Swez. Vol 34, p. 1.]

No. 24.

To Extinguish Fire.

For preserving buildings from fire, Mr. Hartley's celebrated method of plates which is cheaper and more effectual than other modes that have been tried, is of the utmost importance in all buildings to be applied as a partial security in the spots most liable to be set on fire.—To put out a fire an experiment has been tried which deserves further enquiry.—A modern traveller gives this account at Augsburg:—"We saw an experiment for extinguishing fire; they had made a fabrick of boards set round with taggets, dry cloven wood and other combustibles, when all was thoroughly on fire, they threw in a little barrel, it made a small explosion, and the fire immediately abated; but continuing still to burn at

one end, they threw in another barrel and it was all extinguished. The same I am told, has since been performed in England. If I mistake not, the Society of Arts offered a premium for something of this sort, and in consequence, some experiments were made long after this author wrote, which was in 1722, and Mr Godfrey, the chemist, produced a ball or barrel, which exploding had the same effect, and was very satisfactory; but the composition was a secret which died with the great Mr. Boyle. It is to be regretted that other, and greater premiums are not given to re-discover so valuable an art.—A. Young.

No. 25.

To render White Wash durable.

White Wash of Lime is rendered fixed and durable without cracks if made with water, in which common salt is dissolved.— [Lavasseur Annales des Arts et Man.]

No. 26.

Method of preparing a cheap substitute for Oil Paint, by M. LUDICKE.

It often happens that people do not choose, or cannot employ Oil-Painting in the country, either because it does not dry soon enough and has an insupportable smell, or because it is too dear.— M. Ludicke employed with the greatest success the following method, for painting ceilings, gates, doors, and even furniture.

THE PROCESS.

Take fresh curds and bruise the lumps on a grinding stone, or in an earthen pan or mortar, with a spatula; after this operation put them in a pot with an equal quantity of lime well quenched, and become thick enough to be kneaded; stir this mixture well, without adding water, and you will soon obtain a white coloured fluid, which may be applied with as much facility as varnish, and which dries very speedily; but it must be employed the same day, as it will become too thick the day following. Ocre, Armenian Bole, and all colours which hold with lime, may be mixed with it according to the colour which you wish to give to the wood; but care must be taken that the addition of colour made to the first mixture of curds and lime may contain very little water, else the painting will be less durable.

When two coats of this paint have been laid on, it may be polished with a piece of woollen cloth or other proper substance, and it will become as bright as varnish. It is certain that no kind of painting can be so cheap, and besides other advantages, in the same day two coats may be laid on and polished as it dries speedily and has no smell. If it be required to give it more durability in places exposed to moisture, go over the painting after it has been

polished with the white of an egg, this process will render it as durable as the best oil painting.

No. 27.

Weather Boarding — To PAINT.

Three parts air-slacked lime, two of wood ashes, and one of fine sand or sea coal ashes, sift through a fine sieve, add as much lin-seed oil as will bring it to a consistence for working with a painter's brush; great care must be taken to mix it perfectly, it is impenetrable to water, and the sun hardens it — [Patterson Society Trans. Vol. XII. p. 256.]

No. 28.

To Paint Boards, &c.

Melt twelve ounces of rosin in an iron pot; add three gallons of train oil; and three or four rolls of brimstone; when melted thin, add as much Spanish brown ochre, first ground fine, with as much of the oil as will give your colour; lay it on with a brush as hot and thin as possible, and some days after the first coat is dry lay on another. It will preserve the plank for ages. — [Bath Papers, vol. ii, p. 144.]

Dr. Parry recommends this improvement:—

Take twelve ounces of rosin, and eight ounces of roll brimstone; each coarsely powdered, and three gallons of train oil. Heat them slowly, gradually adding four ounces of bees-wax cut in bits. Frequently stir the liquor, which, as soon as the solid ingredients are dissolved, will be fit for use. What remains unused will become solid on cooling, and may be re-melted on subsequent occasions. — [Bath Soc papers, Vol. XI p. 240.]

No. 29.

Cracks in Iron Vessels.

Six parts of yellow putter's clay, one of filings of iron, and lin-seed oil sufficient to form the whole into a paste of the consistence of putty. — [Kitchley]

No. 30.

A useful recipe for making Family Wine.

Take black currants, red currants, ripe cherries, (black hearts are best) raspberries, each an equal quantity, or nearly so: if the black currants are most abundant, so much the better. — To four pounds of mixed fruit well bruised, put one gallon of clear soft water; steep them three days and nights in open vessels, frequently stirring up the mass; then strain through a hair sieve. The remaining pulp press to dryness. Put both liquors together, and to each gallon of the whole, put three pounds of good, rich, moist sugar of a bright yellowish appearance; let the whole stand again three

days and nights, frequently stirring up as before, after skimming the top; then turn it into casks, and let it remain, full and purging at the bung-hole about two weeks. Lastly, to every nine gallons put one quart of good brandy, and bung down. If it does not soon drop fine, a steeping of isinglass may be introduced, and stirred into the liquor, in the proportion of about half an ounce to nine gallons.

N B. Gooseberries, especially the largest, rich flavoured, may be used in the mixture to great advantage: but it has been found the best way to prepare them separately, by more powerful bruising or pounding, so as to form the proper consistence in pulp, and by putting six quarts of fruit to one gallon of water, pouring on the water twice, the smaller quantity at night, and the larger the next morning.

This process, finished as aforesaid, will make excellent wine, unmix'd; but this fluid added to the former mixture, will sometimes improve the compound.—[Bath Soc. papers, Vol. XI. p. 224]

*THE Account of a TERRIBLE EARTHQUAKE, which con-
 vulsed and ravaged a great part of Canada, in the year
 1662.—Written and preserved by the Jesuits in their
 College, at Quebec; now republished in this place, for
 the purpose of ascertaining its causes, further confir-
 mation of so extraordinary a catastrophe, either by geo-
 logical evidence, or traditionary lore from the Indians.*

EVENT.

It was on the 5th of February, 1662, about half past
 five o'clock in the evening, that a great rushing noise
 was heard throughout the whole extent of Canada.—
 This noise caused the people to run out of their houses
 into the streets, and their habitations had been on fire ;
 but, instead of flames and smoke, they were surprised
 to see the walls falling back wards and forwards, and
 the stones moving, as if they were detached from each
 other. The bells wanded by the repeated shocks.—
 The roofs of the buildings bent down first on one side
 and then on the other. The timbers, rafters, and planks,
 cracked. The earth trembled violently, and caused the
 stones of the palisades and palings to dance in a manner
 that would have been incredible had we not actually seen
 it in several places. It was at this moment that every
 one ran out of doors. There were to be seen persons
 flying in all directions, children crying and screaming in
 the streets ; men and women seized with fright, stood
 horror struck with their hands raised before them, un-
 able to move, and unable to cry for refuge from
 the rattling walls and trembling earth, which threatened
 every instant to crush beneath death, or sink them into
 a profound and unrescuable abyss.

Some threw themselves on their knees in the snow,
 striking their heads, and calling upon their saints to re-
 lieve them from the dangers with which they were sur-
 rounded. Others passed the rest of this dreadful night

in prayer; for the earthquake ceased not, but continued at short intervals, with a certain undulating impulse, resembling the waves of the sea; and the same qualmish sensation, or sickness at the stomach, was felt during the shocks, and experienced in a vessel at sea.

The violence of the earthquake was greatest in the forests, where it appeared as if there was a battle raging between the trees; for not only their branches were destroyed, but even their trunks are said to have been detached from their places, and dashed against each other with inconceivable violence and confusion—so much so, that the Indians, in their figurative manner of speaking, declared that all the forests were drunk.

The war also seemed to be carried on between the mountains; some of which were torn from their beds, and thrown upon others, leaving immense chasms in the places from whence they had issued, and the very trees with which they were covered cut down, leaving only their tops above the surface of the earth; others were completely overturned, their branches buried in the earth, and the roof only remained above ground.

During this general wreck of nature, the ice, upwards of six feet thick, was rent and broken up in large pieces, and from the openings, in many parts, there issued thick clouds of smoke, or dust, mixed with sand, which floated up to a vast considerable height. The mountains were either covered with a layer of snow, or with sulphur, many rivers were totally dried, others were destroyed from their channels, and their waters entirely corrupted. Some of these waters were yellow, others red, and the great river of St. Lawrence appeared entirely white, as far down as Tadoussac. The extraordinary phenomenon must astonish those who know the size of the river, and the numerous body of water in various parts, which must have required such an abundance of matter to whiten it.

They write from Montreal that during the earthquake, they plainly saw the stroke of the pestilence, or

passed, jump up, as if they had been dancing; that of two doors in the same room, one opened and the other shut, of their own accord; that the chimneys and tops of the houses bent like the branches of trees agitated by the wind; that when they went to walk, they felt the earth following them, and rising at every step they took, sometimes striking against the heels of the feet; and other things, too many to detail, and deserving witness.

Even Three Rivers they were, that the first shock was the most violent, and commenced with a noise resembling thunder. The houses were agitated in the same manner as the tops of trees during a tempest, with a noise as if they were crackling in the gale.

The first shock lasted but an hour, or rather better, though its greatest force was properly not more than a quarter of an hour; and we believe there was not a single shock which did not leave the earth as open as air or less. As for the rest, we have remarked, that though this earthquake continued almost without intermission, yet it was not always of a great violence. Sometimes it was like the pitching of a large vessel, with a frequent heaving at her anchors; and it was this motion which occasioned many to have a giddiness in their heads, and qualms in their stomachs. At other times, the motion was hurried and irregular, creating sudden fits, some of which were very violent; but the most common was a slight tremulous motion, which occurred frequently with little noise.

Many of the French, who are, and Indians, who were eye-witnesses to the scene, state, that a great way up the river of Trois Rivières, about eighteen miles below Quebec, the hills which bordered the river on either side, and which were of a prodigious height, were torn from their foundations, and plunged into the river, causing it to change its course, and spread itself over a large tract of land recently cleared; the broken earth mixed with the water, and for several months, changed the colour of the great River St. Lawrence, into which that of Trois Rivières discharges itself.

In the course of this violent convulsion of nature, lakes appeared where none ever existed before; mountains were overthrown, swallowed up by the gaping earth, or precipitated into adjacent rivers, leaving in their place frightful chasms or level plains.—Falls and rapids were changed into gentle streams, and gentle streams into falls and rapids.—Rivers in many parts of the country sought other beds, or totally disappeared.—The earth and the mountains were violently split and rent in innumerable places, creating chasms and precipices whose depths have never yet been estimated.—Such devastation was also occasioned in the woods, that more than a thousand acres in one neighbourhood were completely overturned; and where, but a short time before, nothing met the eye but an immense forest of trees, now were to be seen extensive cleared lands, apparently just turned up by the plough.

At Tadoussac, (about 120 miles below Quebec, on the north shore,) the effect of the earthquake was not less violent than in other places; and such a heavy shower of volcanic ashes fell in that neighbourhood, particularly in the River St. Lawrence, that the waters were as violently agitated as during a storm.

Near St. Paul's Bay, (about 30 miles below Quebec, on the north shore,) a mountain, about a quarter of a league in circumference, situated on the shore of the St. Lawrence, was precipitated into the river; but, as it had only made a plunge, it rose from the bottom, and became a small island; forming, with the shore, a convenient harbour, well sheltered from all winds.

Lower down the river, towards Point d'Alouette, an entire forest of considerable extent was loosened from the main bank, and slid into the River St. Lawrence, where the trees took fresh root in the water.

There are three circumstances, however, which have rendered this extraordinary earthquake particularly remarkable.—The first is its duration, it having continued from February to August, that is to say, more than six

months, almost without intermission! It is true, the shocks were not always equally violent. In several places, as towards the mountains near Quebec, for three or four days, and trembling motion continued successively for a considerable time. In others, as towards Tadoussac, the shock continued generally for two or three days at a time with much violence.

The second circumstance relates to the extent of the earthquake, which we believe, was universal throughout the whole of New France, for we learn that it was felt from Isle Perlee and Gaspe, which are situated at the mouth of the St. Lawrence, to beyond Montreal, as also in New England, Acadia, and other places more remote.

As far as it has come to our knowledge, this earthquake extended more than 600 miles in length, and about 300 in breadth. Hence 180,000 square miles of land were convulsed on the same day, and at the same moment.

The third circumstance, which appears the most remarkable of all, regards the extraordinary protection of Divine Providence, which has been extended to us, and our habitations; for we have seen near us the large openings and chasms which the earthquake occasioned, and the prodigious extent of country which has been either totally lost or hideously convulsed, without our losing either man, woman, or child, or even having a hair of their heads touched.

It appears from this, that the People of Quebec had not then received any account of the devastation which the earthquake had committed in Upper Canada, and of course were unacquainted with its real extent.

* The Lakes of Upper Canada are innumerable, and we cannot pretend to notice an individual part of them in this place. We can only give an estimate of their total extent, and of which the limits are already partially settled. In our next, we hope to add the dimensions of other Lakes.

ALTERATION RESPECTING THE FEES ON LAND.
 Since the foregoing Acts have been passed, all duties imposed by the Legislature the last year, amount to an average of the present Grants of Fifty Acres, and at the same time to reduce the Fee on Two Hundred Acres to their former standard. The following is the Order in Council.

Executive Council Chamber,
 York, 21st January, 1820

ORDERS

His Excellency the Lieutenant-Governor in Council, His Majesty's Commissioners having recently attended their duty to the class of Emigrants, it was Resolved, that we by gratuitous Grants of Fifty Acres of Land, to convey them to their respective locations. That from the first day of May next, no Grants be without any quantity of Land or other than privi-

Two hundred Acres, and the Fee on Two Hundred Acres
was raised in order to convey the greater part of Fifty Acres
the remainder being retained for the Two Hundred Acres
retained to the Crown Four hundred and One Acres being
the whole Fee in 1810 and the Fee on all other Grants,
Township surveyed that year, to be retained as mentioned
by the Order in Council of 14 January, 1808.

N. S. Passmore of private Grants for Fifty Acres, may, by
paying the Fee on One Hundred Acres, receive a Grant of the
adjoining Fifty Acres, if void.

JOHN SMALL,
Clark Executive Council

OMISSIONS.

Alexander Fraser is Deputy Clerk of the Crown for the Eastern
District.

John Stuart, District School Master, is same
John Wilson, Teacher, is District.

John Harris is Treasurer of the London District.
David Robertson is Schoolmaster for the Western District.

The Hon. George F. Mackenzie, and Peter Buchanan, Esq. have
been sworn in, and have taken their oaths as Executive Council
men.

L. P. Sherwood, J. James B. Bellan, Jas. Stone, and E. Hal-
lock, Esquires, and the Rev. - Dalry, are Members of the Board
of Education for the Johnsons District.

The following names are to be added to the Trustees of Public
Schools in the Johnsons District, viz. - E. Sherwood, J.
James B. Bellan, and E. Hallock, and the Rev. - Dalry.

Wm. Dalry, Esq. is Commissioner for taking the Oath of Al-
legiance in the Western District.

George Day, Esq. is a Member of the House of Assembly for
the County of London.

The Hon. George F. Mackenzie, and Peter Buchanan, Esq. are
Members of the House of Assembly.

Alexander MacArthur, Esq. is Treasurer of Marine Roads.

The Hon. Dalry, Esq. and Mr. Buchanan, Esq. are Treasurers of the
Western District.

T. D. Campbell, and George Hallock, is Clerk of the District
Court for Johnsons.

Jas. Murray, Esq. is Treasurer of the London District.

GENERAL CHRONOLOGY

OF

REMARKABLE EVENTS;

FROM THE

CREATION OF THE WORLD,

TO THE

PRESENT TIMES.

COMPILED FOR THIS WORK
BY CHARLES FOTHERGILL.

BEFORE CHRIST.

- 4004 THE Creation of the World, according to the Hebrew text of the Scriptures.
- 4003 The Birth of Cain, the first born of woman.
- 3317 Birth of Methusalem, who died at the age of 969.
- 2948 Birth of Noah, who died aged 950.
- 2348 The Universal Deluge.
- 2247 The Building of the Tower of Babel, the Confusion of Languages, and the Dispersion of Mankind.
- 2217 Nimrod, supposed to have built Babylon, and to have founded the Babylonish Monarchy; and Assur to have built Nineveh, and founded the Monarchy of Assyria.
- 2188 Menes, (in Scripture *Misraim*,) founds the Egyptian Monarchy.
- 1897 Sodom and Gomorrah Destroyed by Fire from Heaven.
- 1856 The Kingdom of Argos, in Greece, Founded by Inachus.
- 1823 The Death of Abraham.
- 1822 Letters Invented by Memnon, the Egyptian.
- 1571 Moses Born in Egypt.

- 1556 Cecrops founds the Kingdom of Athens.
- 1546 The Kingdom of Troy Founded by Scamander.
- 1493 Cadmus introduces Letters into Greece, and builds Thebes.
- 1491 Moses leads the Israelites out of Egypt.
- 1480 The Foundation of the City of Troy.
- 1452 The Pentateuch, or Five Books of Moses, written.
- 1383 Ceres taught them at Athens to Sow Corn.
- 1307 The Olympic Games instituted by Pelops.
- 1252 The City of Tyre, the capital of Phœnicia, built.
- 1233 Carthage Founded by the Tyrians.
- 1184 Troy Taken by the Greeks, (according to the Arundelian Marbles, 1209.)
- 1115 The Mariner's Compass said to be known in China.
- 1079 Saul, King of Israel.
- 1055 David, King of Israel.—Death of Saul.
- 907 Homer flourished; and Hesiod, nearly about the same time, as some suppose.
- 869 The City of Carthage Built by Dido, about this time.—Enlarged by her about 864.
- 779 The race of Kings ended at Corinth, and was succeeded by the Prytanes, or Annual Magistrates.
- 757 Isaiah begins to Prophesy, and continues to do so till his death, in 696.
- 752 Rome Founded by Romulus.
- 721 Samaria Taken by Salmanazar.—The Ten Tribes of Israel Carried into Captivity, and the End of the Kingdom of Israel.
- The First Eclipse of the Moon on record, according to Ptolemy, this year, 3 hours 20 minutes before midnight, on the 19th of March.
- 601 A great Battle between the Medes and Lydians; they are separated by an Eclipse, predicted by Thales. (Newton, Chron. 525.)—End of the Assyrian Empire.
- 587 The City of Jerusalem Taken by Nebuchadnezzar, after a siege of 18 months.
- 572 Tyre Taken by Nebuchadnezzar, after a siege of

13 years.—Æsop, the Fabulist, is supposed to have flourished.

- 566 The First Census at Rome—84,700 Citizens.
- 538 Babylon taken by Cyrus, and the Kingdom of Babylon Terminated.
- 526 Learning Encouraged at Athens—A Public Library first Founded.
- 509 The Tarquins Expelled from Rome—The Regal Government Abolished, and the Consular Established.—Heracitus, the Philosopher, flourished.
- 490 The Battle of Marathon, and the Persians defeated by Miltiades.—Theano, the Philosopher, flourished.
- 480 The Spartans, under Leonidas, cut to pieces at Thermopylæ.—The Victory of Salamis, gained by the Greeks over the Persians.—The Poet, Pindar, flourished.
- 445 A Law for the Intermarriage of the Patricians and Plebeians at Rome.—Military Tribunes Created, with Consular Power.—Herodotus, aged 39, reads History publicly, and is honoured at Athens.
- 440 Comedies Prohibited at Athens.—Phidias, the Sculptor, flourished; as well as the empiric Physician, Acron.
- 413 The death of Herodotus.—Alcibiades accused at Athens—flies to Lacedæmon.
- 397 Zeuxis, of Heraclea, the Painter, flourished.—The Lake of Alba drained by the Romans.
- 391 Thucydides, the Historian, Died, aged about 80.
- 385 Rome Taken by the Gauls, under Brennus.—Ctesias, the Physician and Historian, Died.—Damon and Pythias, the Philosophers and Friends, flourished.
- 368 The Celestial Sphere brought from Egypt into Greece by Eudoxus.
- 356 Alexander the Great Born at Pella, in Macedonia.—Diana's Temple, at Ephesus, burned by Erostratus.
- 348 The Death of Plato, aged 81.—The Sacred War

- Concluded by Philip.—A Comet appeared in Greece.
- 336 Philip Murdered by Pausanias; and Alexander the Great King of Macedon.
- 332 Alexander Takes Tyre, and Builds Alexandria.
- 324 Alexander Dies at Babylon, aged 33.—The Death of Diogenes, the Cynic, aged 90.
- 322 The Deaths of Aristotle, aged 68; of Demosthenes, aged 60; and of Demades and Hyperides, the Athenian Orators.
- 294 270,000 Effective Men in Rome.
- 293 Death of Menander, the Comic Poet, aged 52.—The First Sun Dial erected at Rome, by Napius Cursor, and their Time divided into Hours.
- 288 Death of the Sculptor, Praxiteles, and of the Peripatetic Philosopher, Theophrastus, aged 85.
- 283 The Library of Alexandria founded.
- 277 The Septuagint Translation made, by order of Ptolemy Philadelphus. (*Playfair, 285*).
- 266 Silver Money First Coined at Rome.
- 264 The Death of Zeno, the Founder of the Stoic Philosophy, aged 98.—The First Punic War begins.—The Arundelian Marbles composed.
- 247 Jesus, Son of Sirach.—A Census at Rome,—251, 212 Citizens.
- 242 Carthaginians Defeated.—End of the First Punic War.
- 236 The Tartars Expelled from China.
- 216 The Romans Totally Defeated at the Battle of Cannæ, by Hannibal.
- 170 Jerusalem Taken by Antiochus, and the Temple Plundered.—Paper Invented in China.
- 167 The First Library Erected at Rome, consisting of Books brought from Macedon.
- 146 Corinth Taken by the Consul Mummius.—Carthage Taken and Destroyed by Scipio.
- 135 The History of the Apocrypha Ends.—Antiochus Besieges Jerusalem.

- 1752 The New Style Introduced in England.
- 1753 The British Museum Established at Montague-House — Deaths of Doctor Berkley and Sir Hans Sloane.
- 1759 Guadaloupe Surrendered to the English. — The Allies Defeat the French at Minden. — General Wolfe Takes Quebec. — Boscawen Defeats the French Fleet off Gibraltar — The Jesuits Expelled from Portugal. — Death of Handel.
- 1760 The British Troops Take Montreal and Canada.

1761.

1765

1766

1767

1768

1769

1770

1761. The English Take Pondicherry and Bellisle.—
A Process against the Jesuits in France.—Deaths
of Doctor Sherlock, Bishop Hoadley, Doctors S.
Hales and Leeland, and of Samuel Richardson.
- 1765 The Regency Bill Passed in England.—Deaths
of the Duke of Cumberland and of the Chevalier De
St. George; and also of the Poets Doctor Young
and David Mallet; and of the Mathematician, Doc-
tor Simpson
- 1766 The American Stamp Act Repealed.
- 1767 The Jesuits Expelled from Spain, Genoa, and Ve-
nice.—The Discoveries of Carteret in the South
Seas.—Severe Frost.—Riots on account of the high
price of Bread, at Seven pence Farthing.
- 1768 Act making the Irish Parliament Obedient; Passed.
—Mr. Wilkes returned for Middlesex, but his Elec-
tion declared Void.—Riot in St. George's Fields —
Captain Cook returned from his First Voyage.—
The Royal Academy Established.
- 1769 Mr. Wilkes' Second and Third Elections declared
Void.—The Shakespeare Jubilee at Stratford—
Transit of Mercury.—Spittlefields Weavers Hang-
ed for a Riot.
- 1770 Poland, which had been for some years a prey to
anarchy, was this year afflicted with another dread-
ful scourge, the Plague, which made great havoc.
The neighbouring Powers, who had long had their
eyes upon this country, found this a convenient op-
portunity to draw forces round her, on pretence of
defending themselves against the introduction of
that dreadful disorder into their dominions; but in
reality, to be ready to act when an opportunity
offered.
- The Emperor Joseph, of Germany, wishing to ac-
quire popularity, set apart one day in the week at
Vienna, to receive Petitions, or Complaints from
his subjects of all ranks without distinction.

1770 This year the Marriage between Louis, Dauphin of France, afterwards Louis XVI. and the Arch-Duchess Maria Antoinette, took place, and which formed a close connection between the Courts of Austria and France, by no means agreeable to the people of the latter country.

Settlement of the Falkland Islands by the British. — Election of Mr. Wilkes, for the Third Time, by a majority of nearly 1000.

Bingly, the Printer, who had been committed for refusing to answer Interrogatories, was Discharged, after two years Imprisonment, on a motion of the Attorney General.

At the Grand Fire Works at Paris, played off on the Marriage of the Dauphin, an alarm taking place, the crowd pressed so much to get away, that nearly 3000 persons were killed, drowned, crippled, or wounded. The deaths alone were 712. This accident was said to be ominous, which it really proved to be.

The Court of Chancery, in the Case of Miller *versus* Taylor, for Selling Thomson's Seasons, determined that Taylor should account to Miller for the Profits on the Books he had sold; by which means, the question respecting Literary Property was finally determined.

1771 The King of Poland Carried Off from the midst of his Capital by a small party of desperate Poles.

This Session the Great Question respecting the Printing the Debates came on. Some of the Printers of Newspapers were called up to the House for disobeying the standing orders of the House, in Printing their Debates. The Printers did not attend. The Speaker, by order of the House, issued a Warrant to take them into custody, and a messenger was sent into the City to arrest them. The

1771 Messenger who arrested Miller was carried before the Lord Mayor (Crosby,) and Aldermen Oliver and Wilkes, who discharged the Printer, and held the Messenger to bail. The House of Commons, in a rage, committed their two Members, Crosby and Oliver, to the Tower, where they remained during the sitting of Parliament. The Printers have ever since continued to print the Debates, and the House of Commons have not thought proper to expose themselves to the like opposition again.

The Royal Academy Met for the First Time in the New Apartments, given them by the King, at Somerset House.

Lady Elizabeth Sutherland, (since Marchioness of Strafford,) then only Six Years Old, was, by the House of Lords, admitted as Countess of Sutherland.

The Lord Mayor and Alderman Oliver Visited in the Tower by many of the Nobility and Gentry; and the Common Council determine to keep a Table for them during their confinement.

The Lord Mayor carried, by Habeas Corpus, before the Chief Justice of the Common Pleas, but the Chief Justice declared he could give no relief.

A Solemn Hearing before the Court of Common Pleas respecting the Lord Mayor. The Court determined they could not give any relief.

Captain Cook, in the Endeavour, returned to Spithead, from his Voyage Round the World.

A Court of Escheats was held before the Lord Mayor, to recover the property of a Bastard, who died intestate, for the King. Such Court had not been held before in the City for 150 years.

An Oak Tree fell-d in Kent, which sold for £106.

A Tea Tree, in the garden of the Duke of Northumberland, in full flower; being the first which had flowered in England.

1772 This year disclosed one of the most infamous Treaties that ever disgraced the States of the Continent. The Balance of Power has employed the attention of the Politicians of Europe for nearly a century, but in this transaction it appears to have been totally lost sight of.—The House of Commons, from their conduct in the Middlesex Election, had lost much of their credit with the Public; and the Printers set them at defiance for this year; and ever since, they have Published the Debates, in defiance of their standing orders.

The Body of Thomas Beaufort, Duke of Exeter, who died in 1427, was found in the Ruins of the Abbey of St. Edmonsbury, wrapt in lead.

By an Account made up to this period, it appears, that from March 25th, 1741, to Dec. 1771, there have been received into the Foundling Hospital 16,694 Children!

Lord Mansfield and the King's Bench determined, that Money standing in the Books of the Bank, in the name of the Husband and Wife, the Husband alone has a right to Transfer.

A Woman was Executed at Lisbon for the Murder of Thirty-three Infants committed to her care.

They write from the Archipelego, that no less than 700 Houses, and 5000 Inhabitants, have been Destroyed, since Christmas, by Earthquakes.

War, 1765 to 1772,	7,783
Total—	29,131

1774 Independence of the Crimea Acknowledged — Russia, by the great plan of Peter the Great, in founding the City called after him, had secured a port at the Baltic; and now, by the last treaty with Turkey, has obtained a free passage for her fleet into the Mediterranean.

Louis XVI. Ascends the Throne at the age of 20.—Turgot was made Minister of Finance — Louis, unfortunately for himself and Europe, displays too much inclination for despotic power.

The Bostonians, in America, throw a large quantity of Tea, sent to their town by the East India Company, into the sea.

The Congress of America issues a spirited Declaration of Rights.

Judges first sent to the East Indies.

A Fine of £2000. laid by the Quarter Sessions on the County of Nottingham, for not raising their Militia last year.

A Letter to the Speaker of the House of Commons, in the Public Advertiser, voted by the House of Commons a Breach of Privilege. The Printer ordered to attend next day.

He attended, and gave up the Rev. Mr. Horne as the writer. Mr. H. was ordered to attend, who, on the 17th, did so, and demanded to have Evidence brought against him; and there not being any, except the Printer, who was in custody, he was discharged. Mr. Horne is since known by the name of Horne Tooke.

This day the great cause respecting Literary Property was finally determined, when the House of Lords resolved, that the Statute of Queen Anne alone secured literary property; by that Statute, the Common Law Property being done away.

1774

1775

Great
Brit-
ain.

1774 The First Unitarian Church was opened by the Rev. Mr. Lindsey, who, from conscientious motives, had quitted the Church of England and a good living.

The Society of Antiquaries obtained leave to open the Tomb of Edward I. in Westminster Abbey. — They found the body in perfect preservation, and most richly dressed.

The English Evacuated Falkland's Island, leaving an Inscription to support their claim to the same.

INSTANCES OF LONGEVITY. *Aged.*

Mr. William Beaby, near Dungarven, in the County of Londonderry. He was an Ensign at the Battle of the Boyne and Aghmash, 136	
Allen Duncan, at Nize, Scotland,	112
Mr. Tice, of Hogley, in Worcestershire,	125
Shelah M'Allister, of Londonderry,	118
Hugh Cuming, of Rathlarland, in Ireland,	114

By a Return made to the Congress of America this year, it appears, that the number of persons in the Revolted Colonies was 3,026,678, the Colony of Georgia was not included in the estimate.

The number of Newspapers published this year appears, by the books of the Stamp office, to be 12,300,000.

1775 Never did a new Parliament meet in this country, from which the People looked for more important measures. The fate of North America, and the power of legislation for that great country, were now to be determined. The Earl of Chatham, although almost worn out by the gout, attended, and proposed a plan of Reconciliation, which he supported with all his powers of oratory, but which was rejected by a great majority. He made a second motion, but that met the same fate. — Petitions from the West India Islands, from the Merchants,

1775 and from the American Congress, were all disregarded; and there now appeared a firm resolution in the Ministry to enforce obedience by arms.

In this debate, Mr. Fox exerted himself with his accustomed abilities, and he soon after became the leader of the opposition.

Nine Women Burned in Poland as Witches.

A Farmer, near Bingley, digging in his field, discovered a Copper Chest, containing 100 weight of Roman Silver Coin, some as old as Julius Cæsar.

Captain Cook, in the Endeavour, returned from his Second Voyage of Discovery.

The Baronets of Nova Scotia appeared in the Badges of their Order at Court, which had been laid aside many years.

The Americans Defeated in an Attack on Quebec.

	John Dyer, of Burton, Lancashire,	-	112

A Pleasure Boat of Fifteen Tons, built of Iron, Lanch'd in the River Foss, in Yorkshire, several persons embarked in her.

1778 Ministers announce to the House that the French had acknowledged the Independence of the United States. On the Duke of Richmond's arguing in the House of Lords, a few days afterwards, that England should do the same, the great Earl of Chatham rose, with apparent heat, to answer the Duke, declaring his objection to what he called the Dis-memberment of the Empire, when he fell into convulsions, and died in a few hours.

Pondicherry Taken by the English, which may be said to have extinguished the French Power in the East.

A Woman, who proved afterwards to be a lunatic, laid hold of the King as he was getting out of his chair at St. James's.

Nootka Sound Discovered by Captain Cook.

The Sandwich Islands Discovered.

The Courts of Session at Edinburgh unanimously gave their opinion in favour of the Unlimited Freedom of Negroes in this country, which went much farther than the Courts of England had done.

Messrs. Franklin, Dean, and Lee, publicly received at the Court of France, as Ambassadors from the United States of America.

The Count d'Artois and the Duke de Bourbon had a Duel at Paris. The Count having grossly insulted the Duchess of Bourbon, the King banished him to Choisi.

A party from on board an American Privateer, commanded by Paul Jones, landed and Burned one of the Ships in the harbour of Whitehaven. He had just before landed near Kirkcudbright, in Scotland, and pillaged the house of Lord Selkirk. They carried off his Lordship's Plate.

The King of Prussia opened the Campaign, at the head of an Army of 200,000 men.

A Verdict of £300. given against Three Officers of the Customs, for seizing goods which were not Contraband.

	John Aragus near Ragusa,	123
	Mrs. Mary Pollard, of Barbadoes,	115

1780 Lord George Gordon, at the head of 20,000 men, carries up his famous Petition to the House of Commons; the rejection of which occasions very serious riots.

An Account was received of the melancholy Death of Captain Cooke, the celebrated Circumnavigator, at the Island of Owy-hee, in the South Seas.

From the Province of Tucuman, in America, they write, that they have now a Negro-woman living there, who, from authentic testimony, must be 175 years old.

During the night, an extraordinary phenomenon appeared in the sky: the light resembled a great fire, and the elements seemed in a flame, and flashes of sparkling fire seemed to shoot from the horizon. The same appeared in France and Germany.

The Court of King's Bench, in the cause of the City of London against the Inhabitants of Richmond, determined, that the Owners of Lands have no property in the soil of a navigable river.

The Earl of Surrey, afterwards Duke of Norfolk, Recanted the Errors of the Church of Rome before the Archbishop of Canterbury.

A Man under sentence of death, having been released from Newgate by the Rioters, prudently surrendered himself to Mr. Akerman, the keeper, and was granted a Free Pardon.

A Cluster of Syrian Grapes, grown in England, was presented to the Duke of Portland, which weighed 11 lb. 10 oz.

Newgate Burned by the Mob.

The Resolution and Discovery, armed ships, ar-

Aged.

1780 rived at Sheerness, from their voyage of four years on discoveries. They lost both their Captains in the voyage—Captain Cooke killed, and Captain Clarke died of a consumption.

In Queen's County, Ireland, Mr. John Woodworth,	112
At Carrickfergus, in Ireland, Mr. James O'Brian,	114
Doctor Hutton proved by Experiment, that a Hill has the greatest power of Attraction at one fourth its height.	
1781 Mr. Burke moved to bring in his Bill of Reform, in which Mr. William Pitt, then just of age, made	

1781 his Maiden Speech, and a motion was made by Mr. Fox, respecting the American States.

The Clarendon Printing Office at Oxford was Founded.

It was determined in the Exchequer, that Milk, Calves, Potatoes, Peaches, Melons, Pines, Exotic Trees and Shrubs, were Titheable.

The Exclusive Right of the King's Printer to print the Forms of Prayer, was fully established in the Exchequer.

One Townsend, a Lieutenant of a Privateer, executed for Murder on the High Seas, by ordering a gun to be fired into a Neutral Ship, which killed the Captain.

1782 A Dreadful Fire broke out at Constantinople, wherein 40,000 Houses were Burned; and the Plague raging both in the Capital and the Province, would have excited pity; but the savage heart of Catharine only induced her to take advantage of these misfortunes. She not only drew her troops to the Turkish confines, but the Emperor of Germany did the same; and the latter refused to renew the treaty with Turkey, which was nearly expiring.

The Marquis of Rockingham's Administration, which was so justly popular, was formed this year.—An Act, disqualifying Officers of Customs, Excise, &c. even from voting for Members of Parliament, was passed, as did Mr. Burke's Bill of Reform in the Household.—Mr. Pitt, about the same time, made a motion for a Reform of Parliament, which was lost by a majority of 20 only.

The City of London paid £27,000. for damages done in the City by the Rioters of 1780.

Rodney Defeated the French Fleet.

The Royal George man of war, 100 guns, overset at Spithead, and 800 persons perished.

Many Emigrants from Geneva having come to live

1782land, His Majesty ordered £25,000. to be paid to settle them there.

A Monument was erected in Guildhall, to the memory of the Earl of Chatham.

Died at Preston, near Hull, Valentine Catesby, aged 116.

1783 Several Cities, Towns, and Villages, and upwards of 40,000 Persons, of Naples and Sicily, were destroyed this year by earthquakes.—Of the town of Castel Nova, the following account is given:—That an inhabitant of that place, being on a hill at no great distance, looking back, saw no remains of the town, but only a black smoke—4,000 people perished in that town.

The Parliament of England, in fact, ceded the right of Taxing Colonies; and France had introduced into the minds of her people, both civil and military, those notions, which in the end, brought about the Revolution.

After eight years' struggle, the United States of America were acknowledged to be Independent.

His Majesty created a new Order of Knighthood for Ireland, to be called Knights of the Illustrious Order of St. Patrick.

It was determined in the Court of King's Bench, when two parties, not in partnership, drew a bill to their order, both must endorse it, to make it negotiable.

It appeared by official returns, that 43,683 men, exclusive of officers, were killed or died in the military service in America.

At the Interment of the Archbishop of Canterbury, at Lambeth, a coffin of a Bishop of Ely was found; the date on the plate 1570; the body and clothes were perfectly sound.

A woman at Koningsburgh brought to bed of six children.

1783 It was determined in the Court of King's Bench, that an inn keeper is bound to keep his guests in security; and therefore, a verdict was given to a gentleman who had been robbed in an Inn.

A member expelled the House of Commons, who had been proved guilty of perjury.

INSTANCES OF LONGEVITY. *Aged.*

At Paris, Joseph Butler, 114

In Russia, Hadel, a gentleman who served under Prince Sobieski. 124

1784 Muslins First Manufactured in England.—Mail Coaches First Established.

Several of the Estates Forfeited by the Rebellion of the year 1745, were restored to the families.

Some thieves broke into the house of the Lord Chancellor; and, among other things, carried off the Great Seal of England.

The *Holl* for Westminster having been kept open forty days, a Scrutiny was demanded.

A beautiful Coach, imported from England, and belonging to Lord Muskerry, was tarred and feathered by the mob in Dublin.

Died at Llan Vier, in Anglesea, Hugh Rowland Hughes, aged 114.

1785 The Parliament assembled in January. Mr. Pitt, the Chancellor of the Exchequer, and now Prime

Great Minister, had pledged himself to bring forward the *Brit-* subject of Parliamentary Reform: he did so early *ain.* in the Session, and suffered the question to be carried against him by 278 to 174—a fine specimen of Mr. Pitt's character.

Animal Magnetism first introduced into France.

A Frost lasted 115 days.

The Court of King's Bench determined, that an Officer on Half Pay is not subject to a Court Martial.

1785 In a Salute fired by one of our India Ships in China, a loaded gun was inadvertently fired, which killed a native; the Government demanded that the gunner be given up; he was soon strangled.

Came on, at Shrewsbury, the trial of the Rev. Dr. Shipley, Dean of St. Asaph, for a libel in publishing Sir W. Jones's Dialogue on Government; when the Jury returned the following verdict:—
"Guilty of Publishing, but whether a Libel or not, the Jury do not find."

By an edict of the Emperor of Germany, Vassalage was entirely abolished in Hungary.

An important Cause was tried before the Court of Session in Scotland, respecting literary property. The Proprietors of the Encyclopedia Britannica had printed a great part of Mr. Gilbert Stuart's History in their Work; the Court determined, they were subject to the penalty of the Acts.

A Frenchman, of the name of Blanchard, had been up in Balloons two or three times, when he and a Mr. Jefferys ascended from Dover Castle, with a view to Cross the Channel to Calais: They succeeded, but gained the land with considerable difficulty.—Pilatre de Rosier and another, ascending in a balloon, called a Mongolfier, it took fire; they fell from a considerable height, and both perished.

1786 The life of the King of Prussia had been spent in wars, and plans to aggrandize himself at the expense of his neighbours; yet the insatuated world has bestowed on this man the title of GREAT.

The Halswell East India ship lost; nearly 100 persons perished.

The right of Vicars to clover seed, turnip seed, and all small tithes, was this day settled in the Court of Exchequer.

A Plague in Levant; nearly 800,000 persons perished.—Crown Lands, to the value of £102,627, ordered to be sold.

1786 Mr. Fox recovered £2000. damages against the High Bailiff of Westminster for not returning him as member for the City of Westminster.

An Earthquake in the North of England.

Margaret Nicholson made an attempt to Assassinate His Majesty as he was getting out of his carriage at St. James's, but did him no harm.

A man contrived, by a most ingenious scaffolding, made of twigs, to bring down the Weather-cock from the old Abbey Church of St. Albans; he was a basket maker.

The Countess of Strathmore, who had, since her first husband's death, married a Mr. Robinson Stoney, was forcibly carried off by him, and other armed men. She was brought up to the King's Bench on the 23d, by habeas corpus, and released, and her husband committed to prison.

 their independence, but were defeated. The Prince
 of Denmark quitted Norway, and the Diet elected
 the King of Sweden to be their king.

It was agreed by the allied powers that the King
 of Sardinia should be restored to his dominions, of
 which he took possession, and acted with great
 prudence, for he took no cognizance of what had
 passed in his absence. This was an act of justice
 in the allies, but to this they added a flagrant act
 of injustice, for they bestowed on him the dominion
 of Genoa, the constitution of which had been pro-
 mised by a British Officer.

The Thermometer, exposed to a north-eastern
 aspect, stood 19 deg. below the freezing point in En-
 gland.—In Ireland the winter was nearly as severe.
