

**Nictaux Falls Neglects.**  
A lady of this place left some clothes hanging upon the clothes-line in the yard near the house over night, and upon coming from the window in the morning she discovered several pieces were missing by their absence. Suspecting the direction they had taken, though it best to remain silent about the loss until necessary proof could be obtained. But a pleasant surprise awaited her. About six weeks after the loss, a young man came to the house carrying a parcel which proved to be the missing clothes, and the owner confessed himself to be the thief, and humbly asked forgiveness, and expressed willingness to pay the value of the clothing. A price was named, and the thief dismissed upon the condition that his future conduct should prove his sincerity, and that he be not seen upon the street at "night-time" for one year. Quite a number of articles that had been missed by other parties in the neighborhood were carried to their owners the following week by the same person. Day we note that this seems an indication of a better state of morality for Nictaux Falls.

During the frosts of last week the ice in the mill-pond, breaking up very suddenly, raised the water, and carried quite a large quantity of shingles and staves down the river, causing quite an excitement for some time. A number of men and boys, going in pairs, succeeded in bringing to shore a large percentage of them.

The ice storm of Thursday last was the cause of quite an accident, Thomas Shaw being the sufferer. Coming down a steep hill about nine o'clock of Thursday evening he fell out his head severely, also broke his collar-bone, after which he walked to his home about a mile distant. In the morning, Dr. Spanglow, of Middleton, was sent for, who saw the patient and diagnosed the head. The patient in doing as well as can be expected, yet will have to keep very quiet for some weeks.

Of the Nictaux Division we can report an increase of members, also an increase of interest. While it seems to implant the principles of temperance in the minds of our young people, it is becoming a "Mutual Improvement Society," both intellectually and socially. They have recently cleaned and beautified their hall, and the "old store" has given place to a new one bought of R. D. Deane and manufactured by C. Parent of Sackville. The division is now preparing for a public entertainment to be held in the near future.

**Lower Granite Notes.**  
The recent winter weather has made things lively for those engaged in hauling out wood and timber. Everyone thus interested expects an old-fashioned winter, and less of work will certainly be done. The recent mild winters have been great loss to this country now it is disposable at the season.

Heavy gales have lately interfered with the fishing industry of Victoria Beach. Last Friday a number of boats were out on the bay when a blinding snow storm came up and all met with loss of fish and gear and in most cases had to be blown away from being swept. No one unacquainted with the healthy weather of this coast by these have been in pursuit of their hazardous occupation.

The schooner *Edna B.*, Capt. Chute, has been made a good season's work and added materially to the exchange of the coast. The large schooner *John Young*, of this place, sailed for Philadelphia for the winter in Thomas Co. The schooner *John Young*, Capt. Johnson, has been laid up in Boston, Dec. 1st, carrying very heavy weather in the bay, expiring away from Westport, where repairs were made and she proceeded on her voyage.

**Granville Ferry Items.**  
Mr. Quigley blacksmith, has lately set up business on the Caribbean wharf, and is said to be a thorough workman. Two new dwelling houses have been added to the village of Granville Ferry during the past season, owned by Mr. A. J. Morris, and Mr. Alfred Young. Mr. Far, painter, a new citizen of the village, is engaged remodeling his house after the modern style of architecture.

Mr. Saunders, school-teacher, and some of the teachers have a musical and dramatic entertainment on Thursday evening last. They drew a good audience, and the music well pleased with the evening's treat.

The barquentine *Granville*, recently launched at Granville Ferry, is now loaded with lumber and ready for sea at Annapolis, bound for Havana. Captain John White is master. She is a fine model, and throughout built in every respect. Her register tonnage is 544. Capt. J. H. Hall is the skipper, and she is bound for the West Indies and other ports. She is to be a brigantine of about 300 tons. Messrs. Waterhouse and Miller steam saw-mill is located in the ship-yard and does the sawing.

**Belleisle Hits.**  
Winter has come to stay, without a doubt. We had quite a fall of snow last Friday. It was glacially warm, and those who had small wood piles, and that class an unusual success.

Mr. Sylvester Bell is very busy fitting a contract for ship-timber, for parties at Granville Ferry. It seems the only timber has to be taken so far to be considered, when we have every facility here, near ash.

Some farmers think there is no money in poultry, but Mr. W. H. Bustin, the best turkey raiser, informed us there would realize \$40 for her poultry this season. Who can beat it, or say there is no money in it if properly handled.

Mr. A. J. Bustin is getting ready to take a course of instruction at the Military School. We wish him success and a good time.

**Bear River Hits.**  
Sixteen inches of snow have fallen here since last Friday. It seems the only timber has to be taken so far to be considered, when we have every facility here, near ash.

Mr. James N. Ferguson is here opening the iron mine for an American company. He expresses himself very much pleased with the quality of the ore and the quantity will not be wanting.

The "Coe" boys visited our town on Thursday. They were accompanied by their father, and they were very well received. They were very much pleased with the quality of the ore and the quantity will not be wanting.

**Sitting Bull Killed.**  
Washington, Dec. 15.—Indian Commissioner Morgan this evening received from Indian Agent McLaughlin a despatch dated Fort Yates, N. D., stating that the Indian police arrested Sitting Bull at his camp and he was shot and killed. Several other Indians were killed, including Sitting Bull and his son Crowfoot. Several others were wounded. The bodies were returned for some time, but maintained their ground, and were taken to the United States camp, with all the women, children and property. Sitting Bull, following probably 100 men, deserted their families and fled up the Grand River.

—Dr. Robertson, specialist for old complaints, at Wilkes, N. S., begs of the people to give the faculty doctors a fair trial before resorting to him. He has adopted the plan of manufacturing medicine to order, helping thereby to benefit the chronic disease of every type—except true consumption of lungs—has allowed all the cases of cures are effected by restoring the blood, and building up the weak and debilitated system by a judicious course of medicine, changing the conditions of the system. He cures dyspepsia, acid stomach, with disease of the heart, liver, kidneys, spleen, brain, etc., takes, sick headache, nervous debility, neuralgia, falling hair, blood, and skin diseases, etc. He has a factory open at the above statements will place of business at Wilkes, N. S., as requested. See, Wilkes, N. S.

We believe you will hear from those who have tried it in less than three days. Norton's Magic Lotion will be best sold in Montreal in the province.

**Correspondence.**

**The Farmer Awakening and What it Means.**  
Mr. Editor:—When "American Farmer" was being put upon the press, had nothing to say to the wisdom of publishing the following hopeful sentences, which will be found at the end of the book, "The Century which has seen in America the greatest political revolution in what may be called the 'Last Crusade,' is drawing to a close; but there is space in it yet to see an even more holy war—a victory which will confer upon all the blessings of that equality in economic rights, without which we can scarcely be called free-men." Though I wished it very much, I felt that it was more than probable that the awakening necessary for vigorous and independent action of any considerable importance was too far away. But the awakening has come, and what does it mean? Let us, for a moment, compare the situation of the United States agriculturist today, as far as his political position and aims as to legislation, with six years ago.

Six years ago the farmers of America were not only in a state of political apathy, but they were in a state of economic depression. They were not only in a state of political apathy, but they were in a state of economic depression. They were not only in a state of political apathy, but they were in a state of economic depression.

**A Fugitive from Justice Committed Suicide in Nova Scotia.**  
HE and HIS WIFE TAKE POISON ON DECEMBER 15TH, 1890.

The Associated Press reports on Monday contained the following despatch from Boston: "The police are very anxious to ascertain the whereabouts of Marshall Gilroy, alias A. C. Stewart, charged with fraudulently obtaining over \$50,000 within the last few months from Mrs. Mills, an aged widow of Newham. Mrs. Mills, at the death of Gilroy's parents, was his step-mother. His crimes brought him to the state prison, where he professed to have experienced a religious change. Upon his release he visited Mrs. Mills and obtained several sums, ostensibly to aid him in his business. He succeeded in raising more money upon forged checks for the bank. He has been located in Vermont, Nova Scotia, New York, South Framingham, Mass., in the latter place living with a woman not his wife, and has now disappeared."

**Provincial Paragraphs.**

**Scandal fever of a malignant type is prevalent at Alberton, P. E. I.**  
Mr. Charles Moore, of Digby, committed suicide at that place on Tuesday night. He had been drinking heavily for some time past, and in a fit of despondency placed a revolver to his head and fired, resulting fatally.

An explosion occurred on board the steamer *Nevefeld*, in the powder magazine, at the place on Tuesday night, which resulted in the death of one man, and wounding several others.

The 15,000 cubic feet space allotted to Canada at the Jamaica exhibition, twice as much as that of Great Britain and the United States together applied for, has all been taken up, so that Mr. Adams, M. P., the Canadian commissioner, can accept no more exhibits. This speaks well for the industrial activity of the Dominion.

James Brown, who lives near Weymouth, Digby county, in cutting down a willow tree on Thursday last near his place, found a pure gold coin four thousand dollars in a hollow of the tree. Part of it is in his hands and the rest in a box. Mr. Brown died at that place a few years ago, supposed to be worth considerable money which was never found. It is alleged that part of the money hid by Mrs. Payne more her death.

William Wallace Blanchard, was hanged at 9 o'clock at Sherbrooke, Quebec, on the 12th inst., for the murder of Charles A. Calkin on the 18th of November 1889. Both had been drinking and quarrelled about a boat when Blanchard shot Calkin. After receiving absolution from the Priest, Blanchard rose, thanked the people for kindness shown him, and said that he was a man of good character and a man of good character and a man of good character.

WEEKLY MONITOR

Miscellaneous

The Best Boy Story. That is what a lawyer said about the boy who stole the pig.

We have had a good many boys with us from time to time, said Mr. Alden, the senior member of a large hardware establishment in Market street, Philadelphia.

What may surprise you is that we never take country boys, unless they live in the city with some relative who takes care of them and keeps them home at night, for when a country boy comes to the city to live, everything is new to him, and he is attracted by every show window and unusual sight.

The city boy, accustomed to these things, care little for them, and, if he has a good mother, he is at home and in bed at good season. And we are very particular about our boys, and before accepting one as an apprentice, we must know that he comes of honest, industrious parents.

But the best boy we ever had is now with us, and a member of the firm. He is the one man in the establishment that we couldn't do without. He was thirteen years old when he was apprenticed to us, and he was with us for seven years, acting several years as a salesman. When he first came, we told him that for a long time his wages would be very small, but that if he proved to be a good boy, his salary would be increased at a certain rate every year, and, as it turned out, every year, according to the agreement, we should have been paying him five hundred dollars a year, we paid him \$300, and he had never said a word about an increase in salary.

From the outset, he showed that he had an interest in the business. He was prompt in the morning, and if kept a little over time at night, it never seemed to make any difference with him. He gradually came to know where everything was to be found, and, if information was wanted, it was to be had from Frank Jones, that every one applied. The entire establishment seemed to be mapped out in his head, and everything is catalogued and numbered. His memory of facts was equally remarkable. He knew the name of every man who came to the store to buy goods, what he bought and when he came from. I used often to say to him, "Jones, your memory is worth more than a gold mine! How do you manage to remember it?"

"I make it my business to remember," he would say. "I know that if I can remember names, and call him by name when he comes into the store, and ask him questions, he is going to keep me as a customer."

And that was the exact case. He made friends of buyers. He took the same interest in their purchases as he took in the store, and would go to no end of trouble to suit them and to fulfill to the letter every wish they were promised.

"Well, affairs went on this way until he had been with us eleven years, when he came to take his share of a partner. We knew that he had no extravagant habits, that he neither used tobacco nor beer nor wine to the theatre. He continued, at the beginning, to board at home, and even when his salary was at the very lowest he paid his mother two dollars a week for her board, and he always had a few dollars in his pocket, and we thought it was very probable that he had laid up one or two thousand dollars, as his salary for the last two years had been twelve hundred dollars. So, when we made him the offer to become a partner in the business, we suggested that he would be more satisfactory if he could put some money in the firm, he replied:

"If ten thousand dollars will be any good to you, I will give you that much. I have saved up my salary \$8,000, and my mother will let me have \$200."

I can tell you that when that fellow said he could put in \$10,000, and that the most of it was his own money, he had never spent a dime, or twenty-five cents, or five cents, or a necessary thing, and kept his money in a bank where it gathered a small interest. I am a great believer in the story which says that I always kept my place, in big letters, up in the store. On one of his last letters, it was in fact that which is least, the faithful also in that which is much, and on the other:

"He that is diligent in business shall stand before kings, and not before men."

That is what I have always believed in, and I have seen the literal fulfillment of these two texts. He has been faithful in the smaller things as well as in the greater ones, and diligent in business. This kind of boy always succeeds," concluded Mr. Alden.

A small boy of five, who had listened to the story with eager eyes, as well as ears, said:

"But we don't have any kings in this country, Mr. Alden, for diligent boys to stand before."

"Yes, we do," laughed Mr. Alden. "We have more kings here than in any other country in the world. We have money kings, and business kings, and railroad kings, and land kings, and merchant kings, and publishing kings, and some of them wield an enormous power. This is a great country of kings."—Wide Awake.

A ROYAL EVENING.—One of Queen Victoria's maids of honor, Lady Bloomfield, some years ago told the world how life passes much the same as it does in the palace of a known state from its isolation.

After dinner there is an evening to be spent, and the queen spends it precisely as Madam Avenue does. The queen, who, at that time sang and played very well, took her place at the piano, played something from Mendelssohn, and then proposed a game, which was sung to her accompaniment. Others of the company played and sang. Some of the ladies did fancy work. The conversation turned upon the topics of the day.—New York Ledger.

Every sensible man, who has the means and opportunity, occupies himself in the quiet hours of recreation. He does not defer his period of pleasure until the closing months of a worn-out life. He is too wise to expect immortality of nature—the recognition of an utterly exhausted body. He has had his comfort and enjoyment in the possession of the means to procure all the comforts of life, which he wisely uses to prolong his days.

When she was sick, she sang to Castor, when she was blind, she sang to Castor, when she became blind, she sang to Castor, when she had children, she gave them Castor.

Children Cry for Pitcher's Castoria.

Agricultural

Those who are intending to prepare quarters for their poultry will derive much benefit from the following hints in the Mirror and Farmer.

It is not necessary that poultryhouses should be expensive. More failures have resulted from the attempt to make poultryhouses all the modern conveniences than from any other source. In a cold climate, where snow covers the ground a portion of the time, and the warm weather, the great difficulty is to keep the house warm and comfortable without the aid of stoves, which may be expensive. Yet, in the face of the fact that it requires very close walls to keep out the cold, a majority of those who build poultryhouses put in a ventilator, which left open all the season to assist in freezing the fowls on the roofs at night. Ventilators to poultryhouses have done more damage to poultry in winter than anything else. If the air of the poultryhouse in winter is full, some expense may be made for the ventilation, but the severe cold winds up the sides, and in a short time turns all liquids to solids, and the poultryhouse can be simply purified and ventilated by leaving the doors and windows open during the day and using dry dirt on the roof, and down as an absorbent, but the ventilator at that point of the poultryhouse should never be left open after cold weather sets in.

It is well known that fowls object to be kept exposed to winds over their heads, and the cold winds up the sides, and in a short time turns all liquids to solids, and the poultryhouse can be simply purified and ventilated by leaving the doors and windows open during the day and using dry dirt on the roof, and down as an absorbent, but the ventilator at that point of the poultryhouse should never be left open after cold weather sets in.

The Household.

A Few Christmas Presents. Here is a way to make a case for letters. Take a piece of card board about 10 inches square and line with silk, covering the outside with plush or velvet.

A beautiful lamp screen is made of cork pink plush lined with pale blue satin. On the plush is painted a design of marguerites and ferns and on the satin a branch of apple blossoms. Finish the bottom with small silk balls the shade of the plush. Hang on a brass standard.

An elegant toilet set can be made by using four handkerchiefs, three-quarters of a yard of valencienne lace and one and one-half yards of valencienne lace, one and one-quarter yards of yellow satin, three yards of yellow ribbon. Pretty and suitable handkerchiefs may be bought for twenty-five cents apiece. Have them small and very sheer. I have allowed for their measure thirteen inches. Have stamped and embroidered on yellow satin, initials on one and a simple design on one corner of each of the others. Join the three handkerchiefs with the insertion. Put a full ruffle of lace about three inches wide all around the cover. Make a nest of the yellow satin for under the cover and a small square piece of the same. Then a ruffle of the darkest shade of green and add it gradually over the cushion. Make large loops of the ribbon and put one on the pin cushion and one on the cover.

A glove case may be made of plaid ribbon, one inch wide, and may be blue and pink, olive and coral, or golden brown and yellow. Five strips of the darkest shade, measuring thirteen inches in length, are placed side by side and securely fastened to a board; the lightest shade is cut into strips of seven inches long and passed in and out of the strips on the board, and when done, fastened all round with needle and thread. Now bind the edges with 1 1/2 inches wide, and cover the other side with satin of the same color. Turn in the edges, sew neatly together and fold exactly in half. Place the plaid ribbon
