This item is filmed at the reduction ratio checked below/ Ce document est filmé au taux de réduction indiqué ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

## National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol $\rightarrow$ (meaning "CONTINUED"), or the symbol $\boldsymbol{\nabla}$ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont le couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivents apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole $\rightarrow$ signifie "A SUIVRE', le symbole $\boldsymbol{\nabla}$ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

THE BRITISH EMPIRE, BY MONTGOMERY MARTIN, ESQ.

## R EPORT.

Tue Colonial Office, in Downing Street, has received annually for a scries of ycars a "Blue Book" in manuscript from each Colony, containing a variety of commercial, financial, ecclesiastical, and general information for the use of Government. The "Blue Books" were commenced about the year 1828. Three blank books, with ruled columns and printed headings, are sent to each Colony every year ; the blank columns are filled in by returns from the different departments, under the authority of the Colonial Secretary in each settlement; these returns are then sent in duplicate to Downing Street, and one of the three copies is retained in the Colony for the use of the Governor. In 1836-7, a Committee of the House of Commons, then sitting to inquire into the financial condition of the Colonies, examined witnesses with reference to the feasibility and expense of reducing these "Blue Books" into a form adapted for publication. In consequence perhaps of the time and expenditure, which the arrangement and publication of a vast mass of documents would occasion (about $£ 10,000$ ), nothing was done by Government; and, in pursuance of an object which has occupied a third of my life at home and abroad (namely, to make the condition of the Colonies of the Empire fully known to, and their importance appreciated by, the British public), I solicited permission from the Serretary of State to prepare, with my own assistants, and at my own expense, such a work as the Committee of the House of Commons was desirous of possessing. His Lordship's reply to my application was as follows :-

From Sir George Grey, M.P., Under-Secretary of State for the Colonies.

## "Colonial Office, Downing Street, 7th February, 1838.

" Sir,
"I am directed by Lord Glenelg to acknowledge the receipt of your letter of the 2nd instant, and to acquaint you in reply that his Lordship has much pleasure in complying with your request for access to the information in this office, comprised in the "Blue Books" annually transmitted from the respective Colonies. Mr. Meyer, the librarian, has received his Lordship's directions to submit them to your inspection, on your application to him for that purpose. Lord Glenelg will also be happy to afford you access to any other statistical information in this office respecting the Colonies.
"I am, Sir, your most obedient servant,
" To Robert Montgomery Martin, Esq., \&c. \&c."
" Grorge Grey.
An office was assigned for my use in Downing Street, and, by the courtesy of Mr. Meyer, I was supplied with upwards of two hundred and fifty volumes of "Blue Books," and with various documents of a public nature. The materials which these books contained were carefully examined, and the facts which I deemed it useful to publish were collated and arranged in a tabular form, together with an immense mass of facts collected from every public department, and from every quarter deemed authentic, so as to present consecutive views of the progress or decline of each Colony in population, education, religion, crime, commerce, shipping, staple products, finances, and in every thing which can portray the physical, moral, and intellectual condition of so large a part of the British Empire.

At the East India House also an apartment was assigned me, and the commercial returns from Bengal, Madras, and Bombay for forty years, were, by the urbanity of Mr. Peacock, placed before me. Mr. Melville, Secretary to the East India Company; Mr. Irving, Inspector-General at the Custom House ; Mr. Woodhouse, of the Plantation Office; Mr. Covey, Registrar-General of Shipping; Mr. Brown, Registrar-General of Merchant Seamen ; Mr. Porter, of the Board of Trade; and the Courts of Directors and Secretaries of
the different public Companics connected witu our transmarine possessions, all granted me their invaluable aid towards the preparation of this work.

The Colonies are arranged geogruphically, and divided into Books, thus :-
Book I.-Possessions in the West Indies.-Jamaica, Trinidad, Tobago, Grenada, St. Vincent, Barbadoes, Antigua, Dominica, St. Lucia, St. Christopher, Montserrat, Nevis, Tortola and the Virgin Isles, New Providence, and the Bahamas, the Bermudas, \&c.

Book II.-Possessions in South America.-Demerara, Essequibo, Berbice, Honduras, and the Falkland Islands.

Book III.-Possessions in North America. - Canada (Upper and Lower), New Brunswick, Nova Scotia, Cape Breton, Prince Edward Isle, Newfoundland, Labrador, and the Hudson Bay Territories.

Book IV.--Possessions in Asia.-Bengal, Madras, Bombay, Ceylon, Penang, Malacca, and Sincapore.

Book V.-Possessions in Austral-Asia.-New South Wales, Van Diemen's Island, Swan River, and Southern Australia, \&c.

Book VI.-Possessions in Africa.-Cape of Good Hope, Mauritius and Seychelles, St. IIelena, Ascension, Sierra Leone, the Gambia, Accra, Cape Coast Castle, \&c.

Book VII.-Possessions in Eurore.-Gibraltar, Malta and Gozo, Corfu, Cephalonia, Santa Maura, Ithaca, Zante, Paxo, Cerigo, and Heligoland.

Eacl Colony forms a separate chapter, which is again subdivided into numbered sections, according to a system which will shew at a glance under each head of Population, Commerce, Finances, \&c. all the information which could be obtained relative to these subjects. In the Appendix a similar plan has been adopted, the documents belonging to each Book being classified according to their respective geographical arrangement.

In the West India Appendix will be found the general trade of the West Indies in the aggregate, and of each island for a series of years as regards the exports to England, and the duties levied there on sugar, coffee, rum, \&c. Full details of the recent reports relative to education among the emancipated negroes, of sickness in the West Indies, of the prices of tropical produce, \&c., will also be found in this Appendix. The Appendix to the hook on North Amcrica contains several important statements relative to the lands granted in Canada, aggregate statements of the trade of the Northern Colonies, the value of Spanish dollars, \&c. The Asiatic Appendix supplies a great variety of information, some of which was obtained at the East India House after the text was printed. The documents respecting the British feudatory, stipendiary, and dependent chiefs-the classified population of different districts-the rates of pay and regulations of the army-the commerce, coins, weights and measures, \&c. of the Anglo-Eastern Empire, are all of the highest value. There will be found in the Austral-Asian Appendix copious details relative to population, crime, the treatment of convicts, secondary punishments, \&c., in addition to the abundant facts given in Book V. The judicial, mercantile, and banking charters are given in the Appendix of the book to which the Colonies belong possessing such charters. Thus the Colonial Bank charter is in the West India Appendix, the British Guyana Bank charter under South America, the Hudson Bay charter under North Amencit the East India Company charter under Asia, and the Ionian Islands charter under the Europe Appendix. An Emigration Appendix, with a variety of data as to emigrants, rates of wages, regulations, icc., has been added, and at the conclusion is given a General Appendix of several docaments relating to shipping, filuances, \&c. not applying specifically to any one Colony.

In order to render the work more complete for reference, a brief view of the manner in which each Colony has been acquired by Great Britain, and of its chief physical features,
granted me

dies in the gland, and ts relative the prices the book granted value of ion, some ocuments opulation ce, coins, st value. pulation, abundant n in the Thus the charter fia Comix. An nlations, il docay. catures,
has been prefixed to the vital statistics. A full account of the history, geography, \&c. of each settlement will be found in my "History of the British Colonies," in five large octavo volumes, and in my "Colonial Library," in ten smaller volumes. A large statistical chart shews, in an aggregate form and in round numbers, as being more easily retained by the memory, the condition of the Colonies in 1836, the latest year in which the "Blue Books" are complete, and as accurate as existing documents will permit. In some of the columns, viz. those of religion and property, estimates have been obliged to be resorted to, in place of actual returns to Government.

A map of the world coloured, to shew the geographical position of our Colonies, has been appended by Mr. Wyld, geographer to the Queen.
The seals of each Colony, chastely designed by Mr. Wyon, chicf engraver of the Royal Mint, are now, for the first time, laid before the public. The centre of the colonial seal is alone given : it is surrounded by the royal arms, as observed in the engraving of the Upper Canada seal, plate 1. I am indebted to Mr. Freebairn's skill with the patent anaylyptograph for the beautiful engraving with which this branch of the work is illustrated. My prineipal assistant, Mr. Frederick Medley, bestowed great care on a work which required unremitting industry, attention, and zeal-qualities which were rendered more useful by his personal knowledge and appreciation of the value of the Colonies. While adverting to the different individuals who have contributed towards the preparation of this work, I should not omitto mention the excellent typographer, Mr. Nicol, of the Shakspeare Press, Pall Mall.
A tabular Index, after a new and compendious plan, will enable the inquirer to find in a moment the pages in the Book and in the Appendix relating to any sulbject on which he may desire information.

With respect to the numerous tables and data, which the following pages present, they may be relied on as the nearest approximation to truth yet attainable. The "Blue Books" are, of late years, more perfect than when they were first established; and great credit is due to the gentleman in the Colonial Office with whom the statesman-like idea originated, and to those also who, undeterred by difficulties or disappointments, have succeeded in reducing the plan to a system, which every future return will bring to a greater degree of accuracy. It may be observed, perhaps, that the gaol returns from several Colonies shew sometimes a great and sudden change in the anmual number of prisoners. This can only be accounted for by supposing that occasionally the whole of the gaols in the Colony are included in the return, and in some years, only those prisoners confined in the chief town.

There are about three million figures in the volume, and a nearly equal number was required to form the additions, subtractions, \&c. In order to get as much information as possible into a given tabular space, shillings, pence, and fractional parts, lave been excluded, which will account for any slight apparent discrepancy in the summing up of the totals, and which it did not appear advisable to alter.

As the work may be deemed an official record, I have considered it right to abstain from all comment on the multiplicity of facts now collected and printed, and to suppress even an Introduction which I had prepared on ancient and modern colonization, and on the political and commercial importance of Colonies to England.

The statements contained in the following pages speak for themselves: they constitute the most extraordinary record of a Colonia' Empire that man ever witnessed-an empire which has been the growth of ages, yet is still in its infancy, and on whose extension and improvenent, so far as human judgment can predict, depends the happiness of the world.

London, January, 1 S39.
ROBERT MONTGOMERY MARTIN.

## THE COLONIES, \&c.

## BGOK I.-POSSĖSSIONS IN THE WEST INDIES.

CHAPTER I.-JAMAICA.

Section I.-The Island of Jamaica is situated beveen the parallels of $17^{\prime \prime} 35^{\prime}$ to $18^{\circ} 30^{\prime}$ north latitude, hil $76^{6}$ to $78^{0} 40^{\prime}$ west longitude, 4000 miles southwest of England, 90 west of St. Domingo, the same distance south of Cuba, and 435 north of Carthagena on the South American continent. It is 150 miles long, 55 broad, and contains about $4,000,000$ acres. 1I. Jamaica was discovered by Cristopher Columbus, on the 2nd May, 149-1, during his second expedition. It was called Xaymaca in the Florida language, signifying abundance of wood and water; and St. Jago, alias St. James, by Culumbus, in honor of the patron saint of Spain. Columbus took formal posession of Jamaica for his sovereign; but owing probably to the apparent hostility of the aborigines, by Whom it was then densely peopled, the Spaniards formed no settlement. In 1503 the Spaniards first pegan to colonize Jamaica. In 1558 the aborigines entirely perished, and slaves were then introed. In 1605 Sir Anthony Shirlcy made some datory incursions on the Spanish settlers then tered in various parts of the island, and in 1638 . or Capt. William Jackson made a descent on paica, beat the Spaniards at Passage Fort, and npelled them to pay a large sum of money for the servation of their capital. The island remained in possession of the Spaniards until the 3rd May, 5 , when Jamaica was conquered from the Spaniards a large armament, fitted out by Oliver Cromwell, commanded by Gen. Venables and Admiral Penn. m thence to the ?resent period Jamaica has reined in the possess on of Great Britain.
The following is a list of the slave insurrections in island: 1678. Rebellion caused by the prolongaof martial law. 1684. Ditto-first serious one. 6. Ditto-sanguinary at Clarendon. 1702. Ditto. tern districts. 1717. Ditto-causing great alarm. to mention districts or particular events, it may ufficient to name the years in which the insurrecis occurred:-In 1722, 1734, 1736, 1739, 1740, $5,1758,1760,1765,1766,1769,1771,1777,1782$, $5,1796,1798,1803,1807,1809,1824,1832$. ing the latter rebellion 200 were killed in the , and about 500 executed. The expense of putdown the rebellion of 1700 , was $£ 100,000$. It estimated that the expense of 1832, (exclusive of value of the property destroyed, viz. $£ 1,154,583$ ) $£ 161,596$. The British parliament granted a loan $\$ 500,000$ to assist the almost ruined planters.
the following are the names of the Governors, at.-Governors, \&ce., of Jamaica, with the years n they commenced their administrations: Gov. D'Oyley, 1660 ; Gov. Lord Windsor, 1662 ; t.-Gov. Sir C. Lyttleton, Knt., 1662 ; Pres. Col. mas Lynch, 1664 ; Gov. Sir 'T. Modyford, Knt., 4; Lieut.-Gov. Sir T. Lynch, Knt., 1671 ; Lieut., - Sir H. Morgan, Knt., 1675 ; Gov. Lord Vaughan, 5; Lieut.-Gov. Sir H. Morgan, Knt., 1678; Gov.

Charles Earl of Carlisle, 1678; Lieut.-Gov. Sir. H. Morgan, Knt. 1680; Gov. Sir Thomas Lynch, Kint. 1682; Lieut.-Gov: Col. Hender Molesworth, 1684 ; Gov. Christopher Duke of Albemarle, 1687; Pres. Sir Francis Watson, 1688; Gov. William Larl of Inchiquin, 1690 ; Pres. John White, Esq., 1692 ; Pres. John Bourden, Esq., 1692 ; Lieut.-Gov. Sir W. Beeston, Knt., 1693 ; Gov. William Sclwyn, Esq., 1702 ; Lieut.-Gov. P. Beckford, Esq. 1702; Licut.Gov. T. Handasyd, Esq. 1702 ; Gov. Lord Archibald Hamilton, 1711; Gov. Peter Heywood, Esq., 1716; Gov. Sir Nicholas Lawes, Knt., 1718; Gov. Henry Duke of Portland, 1722 ; Pres. John Ayscough, Esq., 1722 ; Gov. Major-Gen. Robert Hunter, 1728 ; Pres. John Ayscough, Esq., 1734; Pres. John Gregory, Esq., 1735. Henry Cunningham, Esq. was appointed Governor in 1735, but Pres. Gregory was succeeded by Gov. Edward Trelawny, Esq. 1738 ; Gov. Charles Knowles, Esq 1752 ; Licut.-Gov. Henry Moore, Esq. 1756 ; Gov. George Haldane, Esq. 1758 ; Lieut.-Gov. Henry Moore, Esq. 1759 ; Gov. W. H. Lyttleton, Esq. 1762 ; licut.-Gov. R. H. Elletson, Esq, 1766 ; Gov. Sir William Trelawny, Bart., 1767; Lieut.-Gov. Lieut.-Col.J.Dalling, 1773; Gov. Sir Basil Keith, Knt., 1773 ; Gov. Major-Gen. J. Dalling, 1777 ; Gov. Maj. Gen. Archibald Camphell, 1782; Licut. Gov. Briga-dier-Gen. Alured Clarke, 178.4 Gov. Thomas Earl of Effingham, 1790; Lieut. Gov. Major-Gen. Williamson, 1791 ; Lieut.-Gov. Earl of Balcarras, 1795 ; Lieut.-Gov. Lieut.-Gen. G. Nugent, 1801 ; Lieut. Gov. Lieut. Gen. Sir E. Coote, 1806; Gov. Juke of Manchester, 1808; Licut. Gov. Licut.-Gen. E. Morrison, 1811; Gov. Duke of Manchester, 1813; Licut. Gov. Major-Gen. H. Conran, 1821; Gov. Duke of Manchester, 1822 ; Iicut. Gov, Major-Gen. Sir John Keane, 1827 ; Gov. Earl of Belmore, 1829 ; Pres. G. Cuthbert, Esq., 1832 ; Gov. C. H. Earl of Mulgrave, 1832 ; Gov. Marquis of Sligo, Dec. 1833 ; Lieut. Gen. Sir Lionel Smith, 1836.
III. Jamaica is somewhat of an oval shape, with an elevated ridge called the "Blue Mountains," (towering in some places to nearly 8,000 feet above the level of the sea, running longitudinally through the isle E. and W., and occasionally intersected by other high ridges, traversing from N . to S. ; approaching the sea on the $S$. coast in gigantic spines, of sharp ascentdifficult of access, and clothed with dense and sombre forests ;-on the N. declining into lovely mounds and round-topped hills, covered with groves of pimento, and all the exquisite verdure of the tropics,-the coup d'eil presenting a splendid panorama of high mountains, embosomed in clouds, and vast savannahs or plains, hills and vales, rivers, bays, and creeks. The middle part, called Pedro's Cockpit, lying between Clarendon and St. Ann's Parishes, is spread for an extent of many miles, with an infinite number of round-topped hills, whose surface, covered with lo e lime-stonc, or honey-comb roek, is clothed with fine
ccdar and other trees, of enormons bulk; the dalcs or cockpits meandering hetween these hummocks contain a rich soil, of great depth, where the suc.culent Guinea grass forms a perfect carpet of eververdant beauty.

From Fort Morant (conspicuous under a stecp hill,) to Port Royal, there is a narrow spit of land, called the palisades, composed of sand, overgrown with mangroves; behind this is the harbour of the chief commercial town. St. Jago de la Vega, or Spanish Town, Co. Middlesex, on the S.W. side of the island, about 16 miles from the sea, and 16 from Kingston, is the seat of Government, but Kingston is in reality the capital of the island. Kingston is situated on a gentle slope of about one mile in length, which is bounded on the $S$. by a spacious basin, through which all vessels must advance beneath the commanding batteries of 'ort Royal. The extended inclined plane, on the verge of which Kingston stands, is enclosed on the N . by the lofticst ridge of the Blue Mountain chain, termed Liguana, which, forming a semi-circle, terminates in the E. at the narrow defile of Rock Fort,-from thence a long neck of land stretches far away to Port Royal, forming the S. barricr of a beautiful haven; in the $W$. the semicircle terminates at a contracted pass upon the edge of an impracticable lagoon, from thence the main land sweeping round to Port Henderson, and the projecting saltfond hills secure an harbour, in which the navies of Furope may safely ride. The entrance is dcfended on the E. point of the delta of Fort Royal by the formidable ramparts of Fort Charles, thickly studded with heavy ordnance; on the W. side, by the cannon of Rock Fort, while the low raking shot from the long level lines of Fort Augusta, which face the narrow channel, would sweep a hostile navy off the ocean. For nine miles around Kingston is an alluvial plain, surrounded by a scries of irregular mountains, some of which to the $E$. and N.E. are of considerable elcuation,-constantly cloud-capped, and appearing as if made up of several hills piled one upon nnother, with various elevations, picturesque valleys and chasms, impressing the mind with an idea of volcanic origin, or that some convulsion of nature had caused the strange irregularity displayed.

The streets in Lower Kingston are long and straight, with a mathematical regularity like the new town of Fdinburgh, the houses in general two storics, with verandahs above and below. The English and Scotch churches are really elegant structures, particularly the former, which is built on a picturesque spot, commanding a aplendid view of the city, the plains around it, the amphitheatre of mountains, and the noble harbour of Port Royal.

On a plain at the top of the declivity on which Kingston is built are the fine barracks, called Up Park Camp, and not far hence on a still more conspicuous spot, is the residence of the naval com-mander-in-chief on the station, called the Admiral's Pen. The heights of the principal places above the level of the sea, are thus computed:-Blue Mountain Peak, 7,770 feet; Ridge of ditto, 7,163; Portland Gap ridge, 6,501; Portland Gap, 5,640; Catherine's Peak, 4,970; Abbey Green House, s.d. 4,233; Clifton House, s.A. 4,228; Flamsted House, 3,800; Sheldon House, 3,417; Middleton House 2,340; Stoney Hill, Bucks, 1,360; Green Castle, 1,328; Hope Tavern, 699.

It is asserted, however, that the three very remarkable peaks on the grand ridge of Blue Monntains at the eastern part of the island called the Coldridge, have their respective summits $8,184,7,656$, and 7,576
above the level of the sea, and there are other mountains in this ridge exceeding a mile in height. Catherine's Pcak, about seven miles and a half N. of Kingston, is stated to be 5,075 feet, and Hardwar Hill to the westward of it ncarly of equal elevation, forming the summits of another grand ridge which crosses the island diagonally. The mountains to the W. in the counties of Middlesex and Cornwall do not reach to the height of a mile, rarcly exceed half a mile; Leman's mountain, in the county of Middlesex, six miles N. of Spanish Town is 2,282 feet high, and the Bull's Heall, in Clarendon, near the centre of the island on the meridian of Carlisle Bay, is 3,140 fcet. In the W. the Dolphin's Head, S. of Lucea is 3,450 fect. On the S. E. coast Yallah's Hill, which is within the point of the same name, is only 2,706 feet. The greater proportion of the mountalns are of conical form, with steep declivitics, approaching very near the shore on the N. coast, and leaving plains of about 12 miles wide on the $S$. ; the dark and deep ravines between the lofty mountains, denominated Cockpits, are closely shut in by dense woods, and offer a marked contrast to the lower mountains, which are cultivated with coffice, pimento, cotton, capsicums, \&c., in all their variety, affording delightful country retreats from the coast.

The beauty of the island is further enhanced by its numerous rivers, upwards of 200 of which have bcen enumerated ; few, however (owing to the mountainous and hill and dale nature of the country), are navigable for vessels of any burthen, although they might be made so by means of locks, \&c. In St. Elizabeth parish, Black River, which flows for the most part through a flat country, is the deepest and least rapid, and is navigable for flat-bottomed boats and canoes for about 30 miles. The other chief rivers on the $S$. side are the Rio Cobre and Rio Minho, and on the N., Marthabrex, White, Ginger, and Great River, \&cc.The precipitate current of the streams renders them the better adapted for mechanical purposes, their quick agitation over the falls preserves their zest and sprightliness for animal drink, and prevents the too great evaporation and formation of damps and mists, which would otherwise be occasioned.

Springs are extremely numerous, even in the highest mountains; about Kingston, and on the N. side, they are generally impregnated with calcareous carth, and in the latter stalactites are met with. Several are of a medicinal nature in Vere and Portland; the most celebrated is one of a aulphureous nature in the E parish of St. Thomas, giving name to a village called Bath. There is a cold and a hot spring; the latter runs by many rills out of the side of a rocky cleft that conflnes the middle part of the sulphur river to the E., as it flows towards the S.; it is very hot at its source, naturally light, and plentifully charged with volatile particlea of mineral acid, combined with sul. phurcous stcam, slightly engaged in a calcareous base. The cold spring differs only in being more abundantly charged with sulphur; the use of both is exceed. ingly beneficial in cutaneous disorders, obstructions of the viscera, \&cc.

Of the harbours it may be sufficient to state, thai the Jamaica shore has 16 principal secure havens besides 30 bays, roads, or shipping stations, which alford good anchorage.

The island is dlvided into three counties-Midde. sex, Surrey, and Cornwall, each of which is subdi. vided into parishes, nine, scven, and five. Cornwall contains $1,305,235$ acres, 3 towns, 5 parishes, 6 villages Middlesex, 672,616 acres, 1 town, 9 parishes, 13 vil

Middlesex contains St. Jago de la Vega, or Spanish Town, situate in a noble plain, and adorned with many fine buildings in the Castilian style; Surry contains Kingston and Port Royal, and likewise the villages of Port Morant and Morant Bay, the latter of considerable importance on account of its shipping; Portland parish, in this county contains Port Antonio, one of the most commodious and secure in the island; St. Gcorge Parish contalins Annotto Bay; Cornwall county has Montego Bay on the N. W. coast, on which coast Falmouth, 20 miles cast of Montego Bay, is also situate. The other places worth notice are Carlisle and Blucficld Bays on the S. and Marthabre and Lucea harbours on the N. coast. The chief headlands of the island are Port Morant, at the east end of Jamaica, and two promontories on the W. end, the coast along which is bold and high.
The roads through the island are in general narrow but good. By the old laws the width of the roads was ordered as follows:-Width in standing wood, 60 feet; width of wood in one side, 40 feet; width of open ground, 24 feet. The making of some roads in the island have cost $\mathbf{f} 700$ per mile.

It may be necessary to say a few words respecting the position of the military stations, \&c. in Jamaica, eapecially on the south side of the island, where four out of five regiments are stationed. To begin withFort Augusta.-This strong fortress is built upon low neck of land, or peninsula, joined to the hills at port Henderson by a narrow isthmuis of sand, hav:ing coral formation for its base. The buildings of the rt occupy the whole arca of the point of the peninha, which is surrounded by the sea, except to the est, the south face of the port being washed by the ep water of the ship channel, while the cast and prth fronts are environed by the shallow waters of a goon. The fort is considered healthy, owing to the evalence of the wind from the S. and S. E. The rracks are two stories high, well ventilated, and ntain generally four service companies.
Up-Park Camp contains the only government barcks in Jamaica, and they are indeed highly creditable the island. They aresituate about two miles north Kingston, at the extremity of the plain of Liguana, hich gradually rises above the level of the sea, is ell cultivated, extremely fertile, about one mile and half south of the Long Mountain, with an elevation 800 feet, covered with brush wood, and exceedingly seep towards Kingston. The height of the camp bove the sea shore is about 200 feet, and it covers an regular square of between 200 and 300 acres, sloping wards Kingston. The barracks consist of two long rallel lines of buildings, extending from E. to W. that to the S., or scaward, comprising the officers' uarters), two stories high, and six-feet basement, an ceellent hospital, a splendid bath of 40 feet clear and ur deep, containing 70,000 gallons of running water. his fine bath is supplicd with water from Papine tate, four miles and a half distant ; the pipe conveyg it is six inches in diameter, with a velocity of 12 ches, and discharging 4,500 gallons per hour. This entiful supply of so indispensable an clement enbles the soldiers to irrigate their neat gardens, which re laid out in the camp, and which furnish the garrion with a constant supply of vegetables. The whole intonment, at 60 fect distance, is surrounded by a all of six l'ect high, surmounted by an iron palisadg ; 1,284 Europeau soldiers are encamped with com-
fort, and the atiached offices are spacious, lofty, and commodious.

Stoney Hill garrison, eapable of holding 500 menis situate 2000 fect above the level of the sea, on the ridges of a chain of mountains (in a lepression between a more elevated chain), running in a curved direction from E. to W., and enjoying a most beautiful and picturesque view of the inclined alluvial plain of Liguana, of the city of Kingston, of Port Royal, of Fort Augusta, and of the aljacent country. The barracks, hospitals, \&e. are, generally speaking, situate on small detached eminences, and are nine miles north of Kingston, seven of which cross the plain of Liguana; the remainder of the road is rather an abrupt ascent to the garrison, but practicable for wheeled carriages of every description. This post commands the grand pass, which intersects the island from N. to S., and is therefore justly considcred of great importance. The government ground at the station amounts to 83 acres.

Port Antonio, situate at the extremity of the island, 80 miles from Kingston, is nearly insulated; -its fort exhibiting a half-moon battery, with a magazine in the rear, 144 feet long, by 21 wide. The barracks are placed upon a kind of peninsula, forming on cither side a bay, and capable of containing upwards of 50 men. The buildings are new and elevated, commodious, and commanding a fine view of the sea.

Falmouth, or Marthabre, 15 miles E. of Montego Bay, has a small fort at Point Palmetto, with a good set of artillery barracks, and an hospital, stores and quarters, open to the sea breeze. It is a bar harbour ; channel very narrow, intricate, not more than 16 or 17 fect deep, but within a regulardepth of from five to ten fathoms. The town of Falmouth is built on the W. side of the harbour.

Maroon Town is situate in the interior, between the parishes of Westmoreland and St. James, on a very high mountain, affording a most desirable station, in a military as well as in a sanatory point of view. The barracks, delightfully placed in the midst of verdant mountains and springs of the most delicious water, are capable of accommodating upwards of 200 men , with an excellent hospital for 20 pa tients.

Montego Bay is situate at the foot of a range of mountains which nearly surround the town, except on the sea side. The barracks for 100 men , and an hospital for 40 patients, are complete and comfortable. The N. point is in Lat. $18.30 \frac{1}{2} \mathrm{~N}$. It is a good bay, sheltered from all winds, from the N.N.E. round to E. and W. and open to those from N. and W. It is distant 15 miles from-

Lucea, or Fort Charlotte, which is built on the N. E. extremity of a peninsula, bounded on one side by the beautiful bay and secure harbour of Lucea, and on the other by the sea. The mountains of Hanover and Westmoreland rise abruptly and majestically high immediately behind the town of Jucea, about one mile from the garrison. The highest peak, termed the Dolphin's Head, serves as a good land-mark to the mariner.

Savannah Le Mar. This is a fine station, in the midst of a highly-cultivated country. From the seashore the ground springs a little towards the N . pretty level, and intersected by several fine rivers; towards the $E$., at the distance of 12 miles, the mountains begin to rise near the coast, running nearly northerly upwards of 16 miles, when they turn to the W. and incline, after running several miles further, towards the S., where they terminate not far from the
ocean, and embrace within their border a beautiful and highly-cultivated amphitheatre. The town of Savannah le Mar is situated on the heach, from which a low alluvial flat extends for several miles; in this plain, about one mile from the town, is an excellent range of barracks. The station is now healthy, and the harbour good; but requiring a pilot, on account of its intricate entrance.

Apostles' Battery is a small fort, erected on a high rock, on the shore opposite to Port Royal.

Port Royal, situate nearly at the extremity of a tongue of land, which forms the boundary of the harbours of Kingston and of Port Royal. Towards the sca, the tongue is composed of coral rocks, covered with sand, which the tide frequently inundates, as a great part of the town of Port Royal is only a few feet above the sea level. The royal naval yard lies to the N., the naval hospital to the S. W., and the works of Fort Charles, and the soldiers' barracks, to the south. ward. The fortifications are extremely strong, and the situation (though low) healthy from its openness to the sea-breeze. The harbour is capable of containing 1000 large ships with convenience. The European reader will remember that it was on this spot the former Port Royal stood ere it was overwhelmed by the earthquake of 1692 , and with 2000 houses buricd eight fathoms under water.

Spanish fown. The eapital of Jamaica is situate at the extremity of an extensive plain, extending far to the S., S.E., and W., but with the mountains closely approaching the town on the N. and N. W., and distant from the sea at Port Royal Harbour six miles. The Cobre, a river of considerable depth, passes the city at the distance of about a quarter of a mile on the N. E. The barracks are good, well situate, and capable of holding 317 men ; the hospital, however, will not accommodate more than 36 patients. The buildings of the capital, as beiore observed, are in the magnificent style of Spanish architecture, and the city has an imposing appearance. The population is about 5090 . The King's House is one of the most splendid louildings in any of $0: 1 \mathrm{r}$ colonies; it was erected and furnished hy the British Colonists at a cost of $£ 50,000$. It is situated in the S . of the great square, facing an immense pile of buildings, containing under one roof the House of As. sembly, the Supreme Court, and almost all the Government offices of the island.
IV. Jamaica presents every indication of voleanic origin, but there is no voleano in action; a small lake of hlackish water, about 3000 feet above the sea, and entirely encireled with hills, has the appearance of an extinct crater. The precipi" jus cones, conical tumuli, abrupt declivities, and irregular masses of enormous rocks acattered over the island, suthiciently denote the powerful operation of fire. The soil is generally deep and fertile; on the north of a chocolate colour, in other parts a bright yellow, and everywhere remarkable for a shining surface when first turned up, and for staining the skin like paint when wetted; it appears to be a chalky marl, containing a large proportion of ealcarcous matter. There is a soil in the island termed "Brick Mould," which is deep and mellow, on a retentive under strata; this, next to the ash mould of St. Christophers, is con-idered the best soil in the W. Indies for the sugar canc. A red eartl abounds most in the hilly lands, and a purple loam sometimes mixed with a sandy soil in the savannahs and low-lands; but the highest mountains are remarkable for having on their summits a deep black rich soil. The principal soils on the interior
hills and mountains of Jamaica may be enumerated thus:-A red clay on a white marl; a ditto on a grit; a reddish brown ditto, on marl; a yellowish clay mixed with common mould; a red grit; a loose conchaccous mould; a black mould on a clay or other sulhstrate; a loose black vegetable mould on rock; a flne sand; and the varietics of all the foregoing. The mountain land in general, when first cleared of its wood, possesses more or less a deep surface of rich black mould, mixed with shell, a soil which will grow any thing.
The brick mould soil of Jamaica (which is a compound of very fine particles of elay, sand, and black mould, ) is of very great depth, and is considered by far the best for cultivation; it is always easily laboured, so inexhaustible as to require no manure, in very dry seasons it retains a moisture aufficient to preserve the cane root from perishing, and in very wet it suffers the superfluous waters to penctrate, so that the roots are never in danger of being rotted. Next in fecundity is the black shell mould, previously mentioned, which owes its fertility to the mineral salts and exuvir intermingled with it. The soil about Kingston on the alluvial plain, consists of a layer of deep mould, chiefly composed of decayed vegetable matter, with a portion of marl and some carbonate of lime, entirely free from gravel, and highly absorbent of water: the substratum varies, being sometimes of a compact aluminous carth alone, in other places mixed with gravel ; in sinking a shaft, layers of aluminous earth and gravel are found, running horizontally, approaching to pure clay at the bottom, and at four feet from the surface a strata of finely divided silica. About Stony-hill garrison, the surface is similar to what is frequently met with in elevated situations in Jamaica, namely, a superstratum of rich dark mould, varying in depth from two to 20 inches, with a substratum of argillaccous and red earth, evidently containing a mixture of carbonate of iron; and in n'any parts the surface of the ground studded with lime stones of a very large size. Silver and gold mica is frequent, especially among the hills between St. Catherine's and Sixteen Mile-Walk, and when washed down with the flouds mistaken for gold sand :-ncar Spanish Town it is found incorporated with Potter's clay. Mixed and purplish schistus are common in the mountains of St. John's, and about Bull Bay, and the hard lamellated amianthus is found in large detached masses, having all the appearance of petrified wood. The lower mountains E. of Kingston are principally composed of a whitish bastard marble, with a smooth even grain, taking a good polish, and frequently used in Jamaica for lime stone. Long Mountain, near Kingston, is entirely composed of carbonate of lime. White frce atone, quartz of different species, and lime stone are abundant,-suberystalline spar is found in small detached masses, and rock spar, very clear, may be seen formed into rocks of prodigious size in the mountains of St. Ann's, where it is observed to constitute whole strata. When exposed any time to the weather the surface grows opaque, and of a milky white. Friable white marl and clammy marl, or cldoo earth, (of an apparently smooth, greasy, and cohesive nature, ) are found, and the latter sometimes caten by the negroes when they are diseased, to the great detriment of health.
The lead ore of Jamaica is extremely rich and heavily impregnated with silver; several varieties have been found, and indeed, worked at Liguana, where also striated antimony is obtainable ; in the lower mountains of Liguana every variety of copper ore ( 14 dif-
may be enumerated arl ; a ditto on a rl; a yellowish clay 1 grit; a loose con1 a clay or other sub. ould on rock; a fine he foregoing. The first cleared of its leep surface of rich soil which will grow

## JAMAICA.-METEOROLOGY.

ferent species) is in profusion, in particular the green and livid, and the shining dark copper ores; in the more mellow matrices, yellow mundick (marchasites), is largely mixed. In the mountains above Buil Bay, a dark iron sand, nttracted by the magnet, is found : neither gold nor silver ore has yet been discovered, though it is certain the natives possessed those metals in abundance when first visited by Columbus and the early Spanish settlers. In the river Minho in Clarendon particles of gold have been found after heavy rains. Brown states that gold and silver ores have been discovered at Liguana; and Gage speaks (in 1655) of the mines producing "some gold, though drossic."
V. The heat of Jamaica is by no means so fearful as has been represented; even on the const it is tempernte, the medium at Kingston throughout the year being 80 F . and the minimum 70. As the country is ascended the temperature of course decreases; eight miles from Kingston the maximum is 70 , and at the distance of fourteen miles, where the elevation is 4,200 feet, the average range is from 55 to 65 F . the minimum in winter 44, and a fire in the evening not only agrecable but necessary. On the summits of the mountains the range in summer is from 47 at sunrise to 58 at noon, the minimum in winter 42 . The heat of a tropical climate is materinlly mitigated by unremitted breezes from sea or lnnd, and by vast masses of clouds, which, interposing between the sun's rays and the earth, prevent any great inconvenience theretrom. The air is remarkably light and enlivening, producing great cleerfulness even in old age, and so equal in its pressure that it rarely varies more than n inch at any time of the year. Although the temerature alternates cight or ten degrees on the south ideof the mountains, and more so on the north, it is not bject to the sudden and detrimental transitions exerienced in South Carolina, and other parts of the nited States. From July to October is the hurricane eason, but severe storms at the Windward Caribbee les are not felt at Jamaica. The quantity of rain lling in the year is nearly 50 inches. For two or hree months preceeding the May rains, lightning and hunder are prevalent, but not very mischievous; and fom Novemter to March, when the sea-breeze is iregular northerlv winds blows, becoming colder as hey recede towa. ds the west; during this season the $r$ is delicious, resembling the finest English vernal cather. The sensons are divided into four,-viz. ernal or moderate rains, in April and May, lasting x weeks; the second, hot and dry, including June, uly, and August; the third, hurricane and rainy loths, embracing September, October, and November; nd the fourth, serene and cool, comprising Dccemer, January, February and March.
There is, however, considerable difference of climate either side of the island; on the south it may be id that spring ranges through the months from ovember to April; summer from May to August, d winter from September to October; while on the orth side winter ranges from October to March ; the orth has a larger supply of rain than the south, but stributed in smaller and more frequent showers, and is cooler, and with a vegetation of greater bulk and Eight. At Stony Hill garrison, nine miles from Kingon, and 2000 feet above the sea, the thermometer inges during the hot months from $74^{\circ}$ to $82^{0}$, and aring the cold months from $66^{\circ}$ to $73^{\circ}$. The followg Meteorological Register for Up-Park Camp is Om Sir J. Mc. Gregor's office.-Military Med. Dept.

On the southern side of the island, the sea breeze from the south-eastward comes on in the morning, and gradually increases till noon, when it is strongest; at two or three in the afternoon its force diminishes, and in general it entirely ceases by five o'clock. About eight in the evening the land breeze begins; this breeze extends to the distance of four leagues to the southward of the island. It increases until midnight, and ceases about four in the morning.

The sea and land brecze are pretty regular from the latter end of Janual $y$ in itil May. In the middle of May the sea-breeze gene' .ly prevails for several days and nights, especiall . Jout the times of full and change of the moon, and thus they continue throughout June and part of July: from that time the seabreeze diminishes, and veers round to S . by W. or S. S.W., with frequent calms. August, September, and October, have generally strong gales of wind, with much rain.
In December, January, and February, when the north winds prolominate, their force cheeks the seahrceze. The southern coast is that, which, of course, is least exposed to these winds, being sheltered in a great measure by the mountains. When combined with the land breeze they render the air very cold and unhealthy.

On the northern side of the island, during the greatest part of Suly, and the whole of August, the southerly or sea-breeze, generally blows hard off the land, with frequent squalls; but in October northerly winds prevail, and frequently extend over all the Bahamas and Cuba; and for some time on the north side of Jamaica, where the current of air is forced upwards by the mountains, and its strength spent in the heights; but it occasionally reaches the southern coast, particularly in the neighbourhood of Kingston, and has been known to continue for some days.

During the winter season the land－breeze is more general off the shone than in summer；and it some－ times continues through the day as well as night． Westerly winds prevail also all over the whole space between Jamaica and Cuba，and even so far as the 1sland of Hayti．
On the south side of the island，during the month of November，southerly winds generally blow，and have been known to extend from the Mosquito shore． These winds are usually faint；nor do they reach the land until it be heated by the sun，and soon after mid－llay are often expelled by a fresh land－breeze， which also abates in a few hours．
The return of the sea－brecze $\ln$ autumn is gradual； it first approaches the cast end，then advances a little， not unfrequently reaching Morant Point a fortnight or more before it is felt above Kingston．It also con－ tinues to blow a week or two later on the east end of the islond than at Kingston，；and has been known in some years to prevail there in the day－time，during the whole time it was unfelt at the former place．
That the climate of Jamaica has undergone great change since the cultivation of the isle is most true． From Mr．Needham＇s journal，kept at Mount Olive，in the parish of St．Thomas in the Vale， 1 find that the thermometer is noted January 5th at $50^{\circ}$－＂whole day cold．＂Governor Modyford，in a letter to Lord Arlington，then，in 1665，Secretary of State，observes， with regard to the healthiness of the island，that ＂the officers of the old army，from striet saints，are turned debosht devils；＂and，＂really，my Lord，＂he adds，＂no man hath died but an account hath been given－$y^{t} \mathrm{e}$ gott his deccase either by surfcitts or travelling at high noone in a hott day－or being wett with rain，and not changing in season．The Spaniards， at their first coming，（I mean those who trade with the Royall Company）wondered much at the sickness of some of our people；but when they understood of the strength of their drinks，and the great quantity they charged themselves with，and the little observa－ tion of time and seasons，they told me they wondered more they were not all dead．Their health and cheer． fulness depending upon their teraperance，which being my natural disposition，I doubt not，but will continue me capable to serve his Majestie，＂\＆c．\＆c．Of late years the yellow fever has almost，if not quite，disap－ peared from Jamaica and the other West India Islands．
That the climate is not inimical to the human con－ stitution is evident from the long ：ives and good health which Europeans and negroes enjoy who live tempe－ rately，－and indeed intemperance，which in more temperate elimates would be punished with deatb， here too often and too long escapes with impunity． A negro and a negress recently died at Jamaica，aged each 140 years ！

At Trelawney－Maroon Town，which is sltuate on a very high mountain in the interior of the island，be－ tween the parishes of Westmoreland and St．Janres the thermometer seldom or ever rises higher than 71 or 72 at noon，falling during the night and eariy part of the morning as low as 50 and 52．The troops stationed here have for several years enjoyed as good if not indeed a better state of health than they would perhaps have experienced in any other part of the world；and，in 1795，when the yellow fever was at its acme in Jamaica，the men and officers of a newly－raised regiment（83rd）did not lose a man by fever at this station．That there have been periods of great sick－ ness and mortality in Jamaica is too true．The cons－ parative health of the different Military stations at a period of unusual sickness－namely，for six years
ending in 1822，is thus shown：－

| Station． $\begin{gathered}\text { Average } \\ \text { Strengh }\end{gathered}$ |  | Deaths． | Ratio． |
| :---: | :---: | :---: | :---: |
|  |  | 1100 | 1 in 5 |
| Stony Hill | 1878 | 163 | 1 in $11 \frac{1}{2}$ |

| Savannah le Mar | r 331 | 47 | 1 in 7 |
| Montego Bay | 117 | 10 | 1 in $10 \frac{1}{3}$ |

The following detall shows the strength of the European troops employed in Jamaica，the number of denths， and the annual ratio of decrement by death per cent． per annum，from the year 1818 to 1828 inclusive；by which it will be observed that，in 1828，the ratio of loss was small，owing to the judicious arrangements of Sir James M＇Gregor，seconded by the Medical Staff．

| Yrs． | Ratio of Strength．Dee．Loss． |  |  | Yrs． | Strength． | Dec． | Ratlo of Loss． |

VI．We have no authentic accounts of the Indian population on the island when first visited ly Co－ lumbus；all accounts agree in representing it as densely peopled－within half a century they had all ceased to exist！Las Casas says－＂They hanged these unfortunates by 13 ，in honour of the 13 Apos－ ties ；－1 have heheld them throw the Indian infants to their dogs，－I have heard the Spaniards borrow the limb of an human being to feed their dogs，and next day return a quarier to the lender ！＂The original Spa－ nish colony consisted of 70 persons，whose numbers were rapidly inereased by emigration，until the riches of the main land caused Jamaica to be comparatively neglected，and the incursions of freebooters rendering property insecure checked population．It would ap－ pear that the Spaniards began early to import negro Haves，but on the capture of the Island by the British In 1655，Venables stated the whole population to be， not more than 1,500 Spaniards and Portuguese，and an equal number of negroes and mulnttoes，although Spain had been 146 years in possession of the island． The troubles in England during the commonwealth and the early years of the rectoration，contributed materially to people our western colonies，and the following is a census of the whole island about seven yeara after the conqueat：－

The B．B．（blue books）at the Colonial Office afford no details of the present state of the population． The only return given is the following，in which the births are out of all proportion to the burials，parti－ cularly if the above table of the increase by birth and decrense by death of the slave population be examined； where the deaths（especially of the males）preponde－ rated so much over the births．A complete census of Jamaica，made yearly，ia much to be desired．

A Statement of the Number of Shaves for whom Compensation has been claimed，and of the Number of Clahns preferred for such Compensation，and of the Amount of Compensations awardorl in each of the classes of Pradial－attached，Priedial－unattached， and Non－Pradial．［Parliamentary Return to the House of Lords，March，1838．］

Number of cialms having reference to each division． Preedial atiached，5562；Predial unattached，1794：Non． predlal， 9075 ．The nverage value of each slave sold from 18242 to 1830 was 410 ． 158 ． $21 / l$ ．；and the average compensa－ tion awarded was $19 l$ ． $15 s$ ． 4 ？$d$ ．on each slave．

It is impossible to state with accuracy the actual population of Jamaica；no recent census has been completed；the number of whites is estimated at 35,000 ；of maroons，about 1,200 ；of free coloured， 70,000 ；and the apprentices，olim slaves，as above． Half a million of mouths，would give seventy－eight persons to the square mile，a remarknbly small pro－ portion，particularly in comparison with Barbadoes， where there are six hundred to the square mile．

VII．The elforts for the extension of religion have been great：the outlay by the colonial goverument for the purpose is considerable，viz．，nearly 25,000 l． per annum．The Bishop of Jamaica（whose see ex－ tends over the Bahamas and Honduras）has $4,000 l$ ． sterling per annum，and the Archdeacon 2，000l．ditto． There are 21 rectors，and altogether of clergymen of the established chureh，57．The Scots Presbyterian clergymen are in number four，the Wesleyan ditto， about 24，the Baptist ditto 16，and the Moravian 8. The crown livings in Jamaica were in the gift of the governor，in virtue of his station as such．They sre now in the gift of the bishop．Pluralities are not pernitted．The apprentice is entitled to clemand the gratuitous services of the clergy．

No return in the Colonial Office of the Dissenting Missions；the following relates to the Established Church alone：－

Note. The valuc of the Livings are cxpressed in Jamaica currency, and include the fixed salaries, fees, value of parsonage houses and glehes, or the allowances made for the same by the larochial Vestrics. The letter $L_{\text {, indicates that the place is only licensed for Divinc Worship, and not a consecreted chapel. In some cases }}$ the congregations far exceed the accommodation, vide Portland.

The Church Expenditure amounted, in 1832, to 41,928l.; 1833, 37,998l.; 1834, 40,009l.; 1835, 37, í $6 l$. ; 1836, 59,859l. Total, 217,410l.
VIII. Education is rapidly extending under the aid of the home and local government, as well as with the assistance of private individuals. In the expenditure budget of the island for 1831 , there is nearly 10,0001 . allotted for free schools. In 1821, the public or free schools and scholars were, Schools, 23 ; Male Scholars, 1,12! ; Female, 912 ; Total, 2,037. In 1827, the number of Schoiars was 3,500 .
The Expenditure for the Schools, in 1332, was 9,034l.; 1833, 9,595l.; 1834, 9,592l.; 1835, 9,776l.; 1836, 10,692l. Total, 48,689l.
A detailed rejort of the state of Educetion in Jamaica in 1837, was made to Government in 1838 by J. C. Iatrobe, Esq. who was sent out by the secretary of State to enquire into the subject. From this report the two following tables are derived. The number of persons receiving instruction stated in the first table-" gives rather too favourable an impression of the state of education"-(Fept. p. 15).

Three-fourths of the scholars in attendance upon day schools, are free childen of apprentices-and onefourth childre of poor free coloured people and of Maroons. Mr. Latrobe remarked universally throughout his tour of the en.tire island, that the children of the coloured classes of every shade, evinced a remarkable facility for the attainment of the rudiments of such branches of instruction as are taught them-particularly in writing and arithmetic-their progress in these being "truly extraordinary"-[p. II Rept.] Many of the country schools are carried on almost entirely through the agency of the more advanced day scholars.
The great majority of the Sunday and Evening schools are attended by young or adult apprentices. The want of private schools of a superior order, in which the higher classes of the island could receive a liberal education, is much dwelt on by Mr. Latrobe, and the absence of a college, or some institution sanctioned by the legislature, deplored. The private seminaries are little better than the dame schools in England.

## JAMAICA．EDUCATION．

Numher of Scholars receiving Instruction in the variona Schools throughout the Island of Jamaica，and the Amount of Apprentices attending the lay Schools in 1837．（Mr．Latrobe＇s lieport to Lord Glenelg， House of Commons，February $6,183 \%$. ）

Note.-There are three Gaols in Jamnica, viz. County Gaol of Middlesex, at St. Jago de la Vega; the County Gaol of Surry, at Kingston ; and the County Goal of Cornwall, at Montego Bay. The hours of labour nre from 6 to $10 \mathrm{~A} . \mathrm{m}$., and from 12 to $4 \mathrm{p}, \mathrm{m}$. Debtors are allowed 2s. 6 d . per day. Free Criminuls 1 s .3 d . per day, and apprentice criminals 5 s. per week. 'here is also a workhouse in each parish.
X. A Govenor, or Captnin-General, (appointru by the Crown), aided by an Executive and Legislative council of 12, and n House of Assembly answering to the home House of Commons, (first convencd in 1664,) form the government of the island. The Council is nppointed hy the King, from among the most respectable colonists. The Lieutenant-Governor, Chief Justice, Attorney-General, and the Bishop, are all ex-officio Members of the Council, each member of which is removable at the pleasure of his Majesty. The Assembly consists of 45 mcm bers, each of the parishes scnding two representatives ; and Spanish Town, Kingston, and Port Royal, one additional member each; a representative should possess a freehold of $£ 300$. per annum in any part of the island, or a personal estate of $£ 3000$; an elector must be of age, and possessed of a freehold of $£ 10$. per annum in the parish for which he votes. Persons of colour are now adnitted to all the privileges of white persons, and there are no civil disabilities from religious differences. The Governor has the title of his Excellency, and is invested with the chief civil and military authority; he is also Chancellor, Ordinary, nud Vice-Admiral. On his death or absence, the government devolves on the Deputy or LieutenantGovernor, if there be any; otherwise on the senior Councillor, who rises in rotation to the presidency, and has n salary of $£ 1000$, per annum. The Governor whose salary is about $£ 4,200$ per annum, has the disposal of such appointments as his Majesty does not reserve to himself or his Ministers; and as to such offices so reserved, whenever a vacancy occurs by leath or removal, the Governor may appoint to them till they are tilled up from home, and his appointee, till superseded, takes all the emoluments.

The Couneil, who are by courtesy severally addressed in the colonics by the title of Honournble, consists of 12 members. They are appointed by mandamus from the King, and hold their offices during his Majesty's pleasure ; but if at any time by death, aisence from the island, or suspension, the Council should be reduced to less than the number limited by the instructions to the Governor, he may appoint as many persons out of the principal freeholders, inhabitants of the island, to be Members of the Council, as will make up such number; which persons so appointed may act as Councillors until they are disapproved, or others are appointed ly his Majesty. The Governor may, however, suspend any of the Members
of the Council from sitting, voting, or nssisting therein, if he find just cause for so doing; bat he must, by the first opportunity, signify to the English Government any vncancy in the Council, from whatever cause it may arise.
The duty of the Council is to give ndvice to the Governor or Commander-in-Chief for the time being, when required; it stands in the same relation to the Governor in the colony as the Privy Council in England does to his Majesty; it is also a constituent part of the Legislature of the colony, corresponding with the British House of Peers; and it sits as a Court of Error or Appeal.
The General Assembly are the Representatives of, and chosen by, the people, and correspond with the British House of Commons; its utmost duration is seven years. The laws and statutes of England passed previously to the settlement, unless they are from their enactments inapplicable to the local circumstances of Jamaica, apply to the colony. Statutes passed in England since 1728, unless they relate to trade and navigation, are not in foree there. The Assembly have all the privileges of the House of Commons in England; they have the sole power of levying tazes, and the distribution thereof, with the exception of an manual permanent revenue to the Crown of $£ 10,000$; the salary of the Speaker of the Assembly is $£ 1000$. per annum.
The Governor, with the advice and consent of the Council, may, from time to time, as occasion requires, summon the General Assembly together, and may, of his own authority, adjourn, proroguc, and (issolve it.
The Council and General Assembly, with the coneurrence of the King, or his representative the Governor, may make laws, statutes, and ordiannces for the public peace, welfnre, and good government of the colony, so that they be not repugnant, but as near as conveniently may be agreeable to the lnws and statutes of Great Britnin
By an order in Council, dated 15th January, 1800, it is declared, that in all cases when his Majesty's confirmation is necessary to give validity and effect to any nct passed by the legislature of any of his Mnjesty's colonles or plantntions, unless his Majesty's confirmation thereol be obtained within three years from the passing of such act in any of the said colonies or plantations, such aet shall be considered dis. allowed.

By the English statute， 6 Gco．111．c．12，all the British colonies are declared to be dependent upon the Imperial Crown and Parliament of Gruat 13ritain， who have full power to make laws to bind such colonics in all cases whatsocver．Bot by the 18 Geo．III．c．12，the King and Parliament declared， that thenceforth they would not impose any duty payable in the colonies，except for the regulation of commeree，the produce whereof should always be applied to the use of the colony in which it is levied． Kingston is a corporate town，since 1802，having a mayor， 12 aldermen，and 12 common councilmen， chosen on the second Wednesday in January．The following is a description of the city scal ：－On ose side，the arms，crest，supporters and mottos，legend －－＂Sigillum commune rivitutis de Kingston，in Ja－ muica．＂Reverse－Britannia，in the dress of Minerva， bolding in one hand the trident，and in the other a mirror retlecting the rays of the benign intluence of Heaven on the produce of the island；behind her the British lion supporting her shield；a conche shell at her feet，and at a distance a ship）under sail ；legend －＂Hos fovet，hos curat servatque Britannia miter．＂ Britaia，the mother country，cherishes and protects these fruits．

The jurisdiction，both civil and criminal，of the Su－ preme Court is co－extensive with those of the Courts of King＇s Bench，Common Pleas，and Exehequer，（and Insolvent Debtors），in Eugland，taken collectively，and it has also the power of hearing and decidiug on infor－ mations for the breach of any act of Parliament or As－ sembly relating to trade and navigation，or for laying any duties or customs on the import of goods，wares， aud merehandizes into，or on the exportation thereof from the island；also on informations for land under the quit rent acts，and all escheats．It is likewise a court of appeal from the inferior Courts of Cominon Pleas．
This Court sits in the capital of St．Jago de la Vega，or Spanish Town，three times in the year，for three consecutive weeks each time，commencing re－ spectively on the second Monday in February，the first Monday in June，and the first Monday in October in each year．
The Chief Justice is nominated by the Government in England，and has a patent of office under the great seal of the island；and the Assistant Judges are ap－ pointed either by his Majesty＇s Ministers or by the Governor of the island．There are eight or ten As－ sistant Judges，who sit in rotation with the Chief Iustice；they have each a salary of $£ 500$ ，per annum West Indian currency．All the judges hold their offices during his Majesty＇s pleasure，and are remov－ able by the sign－manual enly；but they may，upon sufficient cause，be suspended by the Governor，with the consent of a majority of a board of the Council， till his Majesty＇s pleasure be known．There is an Attorncy and Solicitor－General，Clerk of the Crown， Clerk of the Court，and Solicitor for the Crown， attached to the Court；and from erght to ten or twelve barristers in practice．A Provost Marshal， and seven Deputies，act in the like number of aisi－ tricts．
The jurisdiction of the Assize Courts is limited to their respective countics of Surry and Cornwall；and the Justices in the Courts to be held respectively betore them have the same power，authority，and jurisdic－ tion that the Justices of Assize and Nisi Prius，Jus－ tices of Oyer and Terminer，and Justices of Gaol Delivery have in England．
The Justices of Assize receive no salary，sre ap－
pointed by the Governor，liy a commission under the broad seal of the island．＇They，like the Judges of the Supreme Court of Judicature，hold their places during his Majesty＇s pleasure（quamdiu se bene gresserunt）， and can be removed ly his sign manual only；but， upon sofficient cause，may be suspended by the Governor，with the consent of the majurity of a Board of Council，till his Majesty＇s pleasure be known．
The several inferior Courts of Common Pleas in the island of Jamaica have jurisdiction over all causes （whereis any frechold is not concerned）to the value of $f^{2} 0$. with costs and no more，but by the aill of a justicius from the Chaucellor，who is the Governor， they may hold Pleas to any amount．They are， however，absolutely restricted from intermeddling with or determining actions where the title to land is concerned．＇These Courts are held at the same time，and in the same place of the respective precincts，as the Justices of the Peace hold the Quarter－Sessions，once in every three months；some of them have the privilege of sitting oftener．The appointment and removal of the Judges of these Courts are under the control of the Governor，and an appeal lics against their decision to the Supreme Court of Judicature．

Every precinct has a Court of Sessions，held quar－ terly．All mamer of delts，trespasses，and other matters，not exceeding the value of 40 s ．wherein the titles of land are not concerned，may be heard and determined by any Justice of the Peace of the island within their respective preeincts，without appeal；and after judgment，the Justice may grane a warrant of distress，and，for want of sufficient distress，may im－ prison the defendant in the common gaol of the pre－ cincts till he pay the debt and charges．
The Governor holds a Court，with the same powers of judicature that the Lord High Chancellor has in England，and the proceedings of the Court are similar to those of the English Court of Chancery． The Court is held about three times a－year．
The Court of Error is held by the Governor and Coumeil for hearing Appeals，in the nature of Writs of Error，from the Supreme and Assize Courts．These Appeals，or Writs of Error，are allowed and regulated by his Majesty＇s instructions to the Governor．An appeal also lies from the judgment of the Court of Chancery，to his Majesty in his Privy Council．On an appeal to the King in Council，the proceedings must be transmitted，and the party uppealing must proceed，within a year after the pronouncing of the deeree or order appealed ngainst．

The Court of Vice－Admiralty has two distinct jurisdictions；by one of which it is an Instance Court for deciding all maritime causes，and by the other a Prize Court：its practice is similar to that of the High Court of Admiralty in England，to which Court， or to the King in Council，an appeal lies from its decision．The Judge is appointed by the Govern－ ment in Eugland，and holds his oftice during his Majesty＇s pleasure；hut may he suspended by the Governor for good cause，with the consent of a ma－ jority of $u$ board of Council，till his Majesty＇s pleasure be known．
The Court of Ordinary is for de c．mining ecclesi－ astical matters and probates of wills，$i$ id the Governor alone presides in it as judge．
The English Bankruptey Laws sre not in foree in Jamaica，but there is min Insolvent Dehors＇Act，by which a debtor，on making oath that he is possessed of no property above bare neecssaries，and delivering his books，if he has any，into the hands of the Deputy

Marshal, is exonerated from all demands against him in the island after suffering three months' imprisonment. Any person leaving the island must give thrce wecks' notice on account of creditors. The parishes, which are more like counties as to their extent, are under the supervision or government of a chicf magistrate (termed the Custos Rotulorum) and bench of justices, who hold sessions of the peace every month, and Courts of Common Pleas, for trying aetions to the extent of 20l.; debts not excecding 40 s. are determined by a single justice. Each parish has a rector and ehurch officers, according to the number of churches or chapels in the parish; the vestries consist of the Custos, two magistrates, ten vestrymen, and the rector (the vestrymen are elected annually by the freeholders); the vestries have the power of assessing and appropriating local taxes, allot labourera for repairing the lighways, appoint way-wardens, nominate persons called constables for the collection of publie and parochial rates, and regulate the police of their several parishes. Their powers correspond with the civil duties of Lord Lieutenant and Custos Rotulorum of an English county. There is a Board of Forts and Fortifications, a Board of Public Accounts, and a Board of Public Works, all managed by commissioners. The Council and Assembly are ex-afficio Commissioners of Correspondence. There is a Coroner for each parish, elected by the freeholders.

The laws of the Coiony may be judged of generally by the preceding remarks.-OD occasions of pressing cmergency the Commander-in-Chief may summons a general Conncil of War, in which the Members of the House of Assembly sit and have votes, and with their consent prociaim Martinl taw : his power is tilen dictetorial, and all the inhabitants are subject during the exercise of this power to martial law. The Governor has no power of staying execntion or suspending proccedings in civii cases, he can pardon all crimioai offences but those of murder and high treason; his power herein consists in respiting until the picasure of the King is made known. In criminai proceedinga-the learned Queen'a Counsel, Wm. Burge, Esq., late AtcorneyGeneral, and now Agent for Jamaica, says that the Gnvernor, as representative of his Sovereign, may virtue of Attorney-General to enter a Noti Prosequi, or by virtue of Her majestys gentence. The writ of Habeas Corpus is granted under the same circumstances as in Engiand, excepting in cases of aliens, who must in the first inatance appeal for redress to the aliens, who must in the first instance appeal for red forss 14 days,
Governor in Councit, and if remaining unheard Governor in Council, and if remaining unheard for 14 days,
the Writ of Habeas Corpus may then be applied for. Ail the Writ of Habeas Corpus may then their birth free-born
free-bord subjects in Jamaica are from the frec-bord subjects in Jamaica are from their bith of naturdenizens of Engiand. Aliens may receive letters of natur-
alization from the Governor under the provision of 35 , alization from the Governor under the provision of 35,
Chap. AI, c 3. The law of descent and the law governing t:e distribution of personal property in cuses of intestacies are is unisou with those of England.

Lands in the hands of the ineir or devisee are assets for the payment of all classes of debt owing by the aneestor or estator by means of a auit in the Court of Chancery: and they aiso stand charged with specialty and stmple contract debts when the latter have been put on judgment, and notice of a writ of extent has been served pursuant to the 24 Geo. 11, c. 19. Pcrsodal as acts, unless specialiy exempted, are aiways appiiced in the first instavce in the exoneration of the real estate. A judgment recnvered in Eagland or residentere by defanlt, or in contruas evidence in the colony without going into the merits on which it was pronounced: the onus of impeaching the jodgment devolves on the defendant. There is no outlawry in the coiony. The fore'gu appointment of Guardians to Minors, and Committees or Curators to idiots or Lunatics gives no controi neer property in the colonr, as the Coloniai Court of Chancery experty in the colonr, as the Coloniai court of Chancery excrcises original jrindiction give no effect to an assignment and certificate under an Engish or Foreign Commission of Bankruptcy against a creditor not claiming under the commission,--and they would prevent the creditor claiming under it from pursuing the bankrupt personalis. An English certifieate is beid to bear the recuvery of a delto owing in respect of a consign. ment made by a piaintiff to a defendant resident in England:
and it is supposed that a similiar effect would be given to a ccrtifcate when the debt was contracted in Engiand. A foreign certificate is no bar to the suit of any coionial creditor desirous of proceeding personaiiy against the bankrupt (then in tha colony) for dcbts proveahia but not proved under the foreign commission. With respect to the ciaims of foreign and coionial creditors, if the bavkrupt were resident in the island or repruaented there, the colonlaicreditors vould obtain preference both as to the personal and real property, by putting the demand in suit, but If the bank rupt be absent and unrepresented by Attorney, then prefer ence would be obtained by attachment ander 23 Car. II c 23. The notice of an insoivent debtor that he intended to take tine bevefit of the Insoivent act not sufficient for the protection of foreign creditora. There is no law in force in the colony aimilar to 21 James I. Which makes personal property ieft in tbe possessios and apparent ownership of a commercial person or trader (not the real owacr) liabie to the creditor of auch person in case of insolvency: neither is the above statute ever acted upon in the colooy. Arreats on Meane Process in aii actions upon civli contract or intent, are autiorized, except upon Membera of the Legislature: persona possessing a freehold of five acres planted or a peuse worth £ito per Annum, and generaliy such as are exhouse worth empted by the law of Engiand. Special ball required in all emptcd by the law of Engiand. Special bail required in all cases of arrest on Mesne Process. No pro ing can be
sustaiced in the Colonial courts upon proc issued by them, but served upon the party out of the Colony.

Persois having property in the island, who have once resided in the coiony, and are unrepresented, may be proceeded against by foreign atiachment under the 33d. Car. It c. 23-but no remedy lies if they have never been in the island and are unrepresented. The Britioh statutea of frauds and limitations extend to the coiony. Tie island Acts 10 Ann, c. 12 and 29, Geo. I11. c. 33, s. 4, deviare, that bonds, judgments, bills, mortgages and other writings obii gatary, to be void if no payment has been made, or if not demanded within 20 years from the time they became duc or from the last day of payment: Infants, persons under coverture or of unsound memory, may bring their action within tiree years after the removal of their disability.
Mortgages are conventional;-an estates gencraily con veyed in fee to the Mortgagee, and the requisite forms al a solemnitics are the same an in England. Deeds to be vatid must be recorded in the Secretary's office, and in certa cascs as between the Vendea and Mortgagee within 90 daotherwise priority will be loat. Wills are generally regis tered as also Deeils. Personal property in the istand would pasa under a wili executed in a foreign country according pas under a wili executed in a there is no jurisdiction io the colony competent to pronounce a sentence of divorce Connsel must previousily have been called to the bar in Eugland before entitied tn piead in the isiand. Acta remain in manuacript. The originals of all acts are Acts remain in manuacript. The origipals of all acts are
recordied in the laland Secretary's office, and coples are sent recorded in the isiand Secretary's office, and coples are
to the Secretary of State for the Coloniea lo England.
XI. The military establishment of the island generally comprises the head-quartera of four European regiments of the line; one West India regiment, com. posed of Caffres or W. Coast African negroes; a strong detachment of Artillery, altogether comprising about 3000 men ; and of colunial militia, from 10 to 12,000 men at arms, comprising in Middlesex County, a regiment of horse of 11 troops, well equipped and mounted, and nine infantry regimints; in Surry County, a regiment of horse of eight troops, and six regiments of infantry, with artillery; in Cornwall County, a regiment of horse of six troops, and six regiments of infantry; and to each regiment are attached two ficld-pieces and a company of artillery; with a major-commandant of artillery to each county; the whole well appointed, and proving a most efficicnt force in case of internal insurrection or foreign aggression. All white nualcs, from the age of 15 to 16 , are obliged by law to provide themselves with suitable clothing, and to cnlist in either the cavalry or infantry of the militia. Substitutes are not allowed. When on permanent duty (which occurs on the proclamation of martial law) the militia receive pay 2s. 6d. a day and rations; arms and ammunition are found by the govermment.

Transient Poor's Tax Tonnage:-On Vessels entering from places beyond the Tropics, each voyage, $6 d$. Trading to places within the Tropics, $3 d$. Trading Coastwise onee each year, 2d. Customs; Tonnage; To pay Officers :-On entry of every Vessel (not Coastwise) exceeding 40 tons, $4 s .2 d$. per ton. On Coasting Vessels, and Vessels not exceeding 40 tons, once in each year, $4 s .2 d$. per ton. Revenue Duties, ( 1 Geo. II. cap. i.) :-Upon the Importation of all Spanish and Madeira Wines, $6 l$. per ton. Wines of Western

Islands, 12l. French, Rhenish, or Portugal Wines, 5l. Beer, Alc, Cider, Perry, 2l. Mum or Metheglin, 3l. Brandy, Arrack, or other Spirits, 1s. 6d. per gallon. Refined Sugar, 6d. per lb. Tobacco, 4d. Indigo, 3d. Cocoa, in Island vessels, 15s. per cwt. In other vessels, $20 s$.

Additional Duties.-Upon the importation of all Spanish and Madeira Wine3, $9 l$. $15 s$. per Tun. Wine of Western Islands, 11l. 2 s . Freneh, Rhenish, or Portugal Wines, 22l.63. All other Wines not before enumerated, 22l. 1s. Brandy, Arrack, or other Spirits, 6s. 8d.; of United Kingdom, 5s. $8 d$. Beer, Cider, \&e., $3 l .5 \mathrm{~s}$. Tea, $1 \mathrm{~s} .8 d$. per lb. Cattle Duty :Every head of Horned Stoek imported, not being from Great Britain or Ireland, $2 l$.
Excluding the shillings and pence (as given in the Parliamentary Return) the total ways and means thus given for Jamaica in 1831, is $489,743 l$.

Jamaica Expenditure (as laid before Parliament in the return whence the foregoing statement is derived) defrayed by the Island in 1831 :-Governor, $5,500 l$.; Chief Justice, 4,000; Assistant Judges, 3,400; Speaker of Assembly, 1,400; Governor's Seeretary, 3,000; Officers of His Majesty's Customs, 23,390; Clergy of Established Church-Curates' stipends, 8,000; Reetors' ditto, 11,718; Registrar and Appositor to the Diocese, 475 ; Annuitants, being widows and orphans of the Clergy, 2,000; Expenses of building Chapels, 1,400 ; Total, 23,593l. Ditto Presbyterian ; Presbyterian Institutions, 301 ; Support of Kirk in Kingston, 700 ; Presbyterian Charity Schools, 200; Total, 1,201l. Ditto Roman Catholic, 200; Charitable Institutions, 14,656; Army Expenses, 157,032; Clerk of Supreme Court and Provost Marshal, 1,160; Seeretary of Commissioners of Public Accounts, 1,000; Secretary of Ditto Correspondents, 300 ; Clerk of Board of Works, 400; Commissioners of Stamps, 1550; Deputy Receiver General and Secretary at the Outports, 1,560; Marshals of Militia Regiments, 1,050:-Pay, 14000 ; Contingent Aecounts, 20,645; Rations, 72,000; ditto to 1st April, 1831, 35,700; Repairs of Barraeks, 10,483 ; Lodgings for Officers, 2,090; Island Pay, ditto, 997 ; Sundry Wharfage, Water, \&e. for Troops, 1,115; Total, 15\%,032l. Alien and Bonding Office, 600 ; Island Agent, 2,542; Captains of Forts, 669; Officers of Assembly, 6,146; Island Botanist, 560; Engineer and Surveyor of the Public Works, 740; Storekeeper, 500; Receiver General, 7,000; Law Expenses and Gaols, 14,874; Roads, Bridges, and Public Buildings, 25,850; Print. ing, 7,159; Militia Arms, and Gunpowder, 8,594; Board of Works, 8890; Premium on Inerease Slaves, 8120; Registry and Vestry Returns, 5,378; Maroons and Superintendent of Maroon Towns, 2,300; Miscellancous, 10,000; Interest on Public Loans, 16,900 ; Total, 370,000.

The Jamaica Budget for 1832 gives the Taxes and Internal Duties at 207,367l.; Duties on vessels and cargoes, 95,970 ; the certificates in circulation were $399,205 l$. ; and the loan certifieates, including 64,4151 . loan deposits was $250,035 l$. Of the expenditure, the mililary amounts to $184,143 l$. besides $222,729 l$. for the general defence of the Island, of which $176,691 \%$. was incurred for martial law in 1832 . The civil expenditure was $85,078 l$., of which $15,544 l$. was for interest. Mr, Burge says,-"The annnal expenditure of Jamaica is $489,849 l$. ; to this must be added $10,000 l$. whis is annually raised, and is a perpetual revenue granted to the Crown, and made applicable to the orders of the Governor in Council, and over which the House of Assembly exercises no superintendiug
control.'

Local Revenues.-St. Catherine's, 7,335l. ; Kingston, (by Corporation) 33,400t; St. Thomas-in-theVale, 3,637l.; ditto, (Road Tax,) 3464l.-7,103l.; Vere, 5600l.; Portland, 2,723l.; Hanover, 7,483l.; Manchester, $3,801 \ell$; St.'Thomas in the East, Parochial, 7,866l., RoadTax, 5,187l.-13,053; St. John's, 2,500l.; St. Ann's, Parochial, 7,513l., Road Tax, 4,910l.-12,423l.; Westmoreland, 11,075l.; Total, Local Revenues in Jamaica, 196,496l.

This Amount is expended in each Parish, in Pa. rochial Affairs, for the Support of the Poor, Payment of Officers of the Parish, Repairing Buildings, \&c.
XI. The trade of this important island is very considerable.

[The Blue Book for Jamaica are the worst returns n the Colonial Ottice; there is a slovenliness, a total want of decorum to the home authorities manifested $n$ every document; almost invariably there is no umming up of the totals. This conduct is not conined to the Colonial Office returns: the Registrar General of Shipping has stated a sinilar negligence prevails in his returns. The foregoing table must
therefore, I fear, be considered only as an approxi$r$ ation to correctness. Some of the years are derived from the Custom House documents, or parliamentary papers; others from the Blue Books at the Colonial Office, and others from the Board of Trade returns. It is to be hoped that the authorities of Jamaica will in future pay more attention to the important subject of statistics.-R. M. M.]

A General Return of Exports from the Isiand of Jamaica for 55 Years, ending 31 st December, 1830. (Appendix to Slavery Papers in 1838.)

Custom House, Kingston, Jamaica, December 30, 1837.
XII. The monetary system in the West Indies is ery irregular. In no two islands are the denominaion and value of the coins alike; and these, again, fary in proportion to the sterling money-thus:

| ca | Sterling. 1001 |  | Doll. Car.$l=6 s .8 d .$ |  |
| :---: | :---: | :---: | :---: | :---: |
| Barbadoes | 1001. | 1351. | 1 | $6 s .3 d$. |
| Windward Isles, except Barbadoes | $100 t$. | $175 l$. | 1 | 8s. 3d. |
| Leeward Isles | :00l. | 2001. | 1 | $9 s .0 d$. |

As regards Jamaica this is the nominal par of exhange. In real transactions of buying or selling
bills, the exchange is thus adjusted: If bills bear a premium, say 20 per cent, then a bill for $100 l$. ster ling is said to be equal to $120 l$. sterling; this latter sum, turned into Jamaica eurrency at 40 per cent. makes a bill for 100l. sterling require about $168 l$. currency. Gold-Doubloons, equal to 16 dollars; half doubloons, 8 dollars; pistole, 4 dollars; Joe, $16 \frac{1}{2}$ dollars; half joe, 8 dollars ; dollar, 1 dollar ; sovereign, 5 dullars; half sovereign, $2 \frac{1}{2}$ dollars; half pistole, 2 dollars. Silver-Dollar equal to $6 s .8 d$. curreney ; half dollar, $3 s .4 d . ;$ maccaroni, $1 s .8 d_{.}$; shilling sterling, 1 s .8 d. ; sixpence sterling, 10 d. ; half crown sterling, $4 s .2 l$. ; two bits piece, $1 s .3 d$. tenpenny piece-

10l.; fivepence, 5rl.; bit, $7 \frac{1}{l} l$. No copper coins in circulation in this tsland, silver and gold alone. Puper currency.-Amnunt in circulation bearing interest, none. Amount in circulntion not bearing interest, $239,518 l$. stg. Metallic currency estimated at $100,000 l$.

The distribution of the certificates in circulation, from 1822 to the year 1832, is as follows:-Of 1822 , (646l.; 1825, 6535l.; 1826, 41,203l.; 1827, 79,922Nl.; 1828, 61,741l.; 1829,39,965l.; 1830, 96,499l.; 1831, $10,825 l$.; 1832, $12,000 l$.; and of 1832 , comprising $1 i$. 2l. and $3 l$. certificates in circulation, was $49,86+4$.

Amount of paper money in circulation in 1833 :Certificates not bearing interest (A.) (checks foreirculation of various denominations as low as $1 l$.currency, purporting to be payable in cash to bearer on demand at the public treasury of the island. There is, bowever, no specic in the chest to cover any part of the sum.), 285,713l. 11s. 5 d .; certificates bearing interest (B.) (certificates of $50 l$.currency eacl, issued under the authority of commissioners. They bear interest at G jer cent., but have no time specified for payment.), 32,700l.6s.9d.; certificates bearing interest (C.) (certificates of loans which have fallen due, and are payable to bearer on demand at the public treasury.) 24,8571 . 2 s .10 d . ; total, $343,271 / \mathrm{l}$ 1s, sterling. The legal rate of interest is six percent.; the Government borrow at five.

Course of Exchange paid on Merchants drafts on London, at 90 days, during the year 1836. In January, 16 per cent. premium ; February, 15 to 16 ; March, 14 to 15; $\Lambda$ pril, 14 ; May, $13 \frac{1}{2}$; June, $13 \frac{1}{2}$; July, 12 to 13 ; August, 12 to 13; Sejtember, 16 ; Octoler, $16 \frac{1}{2}$; November, $16 \frac{1}{2}$ to 17 ; December, 19.

The Colonial Bank for the West Indies, which has its head quarters in Jamaica, was incorporated by charter on the 31st May, 1836, with a capital of $2,000,000 l$. sterling, in 20,000 shares of $100 l$. each, 25 per cent. paid up before commeneing business. Its management is confided to a chairman, vice-chairman, thirteen other directors, and threc auditors.

Five directors and one auditor retire in rotation annually, each however being eligible to be re-elected. Five shares give one vote; ten shares two votes; twenty shares three votes; forty shares and upwards four votes, for a director, \&ec. ; and twenty shares form the qualification for a director.

All the business and procecdings of the bank managed and directed under the immediate orders of these directors, et yearly stated mectings, and at public general mectings of the proprietors, called by at least twenty days' notice in the public newspapers in London. Special general meetings may be called in a similar manner by any ten subscribers, each possessing $1000 l$. stock or upwards. Subscribers entitled to vote may vote loy proxy, but which proxy must be a subscriber, and produce a written authority to the secretary for that purpose. The practical banking operations of the Colonial Bank are confined to the British West Indies, and its capital can only be applied to the legitimate and defined system of banking. The words of the charter itself, which are-
"To carry on the business of bankers, by dealing generally in bullion, money, and bills of exchange, and lending money on commercial paper and government sccurities, and in such other lawfol ways and means as are usually practised among bankers; but it shall not be lawful for the said corporation to lend or advance money on the security of lands, houses, or tenements, or upon ships, nor to deal in general wares or merchandise of any nature or kind whatsoever ;" moreover, " and further, that the said corporation shall be bound to make up and publish in somenewspaper or newspapers, circulating in each of the colo-
nies, where a bank sladt be established, and also in the London Gazette, once in every year, an account or statement sliewing the whole amount of its delits and assets at the close of the past year, and slowing also the umount of its notes pryable ou demand, which had been in circulation during such month of every year, together with the amount of specie, distinguishing each kind, and other ussets immediately available in every such month for the discharge of such notes; and that the said corporation shall furmish copies of such ycarly amount or statement to the res. pective Governors of such Island or Colony, In which a jrincipal bank or banks shall be established."

According to the terms of the clarter, the hank is allowed to possess lands, houses, and tenements, and ships, so far as may be necessury for carrying on the business of the establishment every where, but for that purpose only; and of course it has the power to purchase and to sell the same.

The shares are of course transferable, and the charter lays down simple rules in order to save expense in this operation. Silver, not gold, is taken as the standard of value. The notes of the bank are payable "in silver of acknowledged weight and fineness," and dollars are taken as the fomblation and medium of jay. ment, those being the almost universal currency of the whole Western World. The lowest note that the hank can issue is to the value of live dollars. The head quarters of the bank is in London.

The system upon which the bank is established is wholly that which is designated the Scotch system. One peculiar feature of which is lending money at legal interest in what is denominated cash creclits, granted on adequate personal security; these credits are not things of a day, a month, or a year, they exist for a life time at the will, or on the life and the solveney of the individual bolding them, or of his securities. If a security dies or becomes insolvent ancther is required and procured, and the credit proceeds. It is gone about thous: the individual in any business or in any station reguiring such a credit, comes to the bank and says, I want a cash credit for $100 l$, for $1000 l$. or for $10,000 l$., and here with my own personal security, is that of two or more friends to your satisfaction. Satisfied with the security offered, a simple bond is entered into, the credit is granted, and from that moment the indivldual operates upon it; he draws ont as he wants, and le pays in as he is able, and at the end of the year if the balance is against him, he is merely charged the interest for that sum, according to the time in which such balance has arisen.

The rate at which the Colonial Bank discount mercantile bills, and advance money on loans, is five per cent. per annum. Besides this, the bank allow interest on deposit accounts, according to the Scotch system, which is ot two kinds-First, money deposited by any one to-day, and which may be drawn out tomorrow, or when the depositor pleases, in order to meet his engagements; Secondly, sums lodged on rcceipt accounts, which it is generally known will run for a year, when the depositor comes and receives his interest, adds it, and probably more or less to the sum, deposits the whole, and gets another receipt, beariag intercst. This system is most extensively followed hy the peasantry and labouring population in Seotland, beginning from $5 l$. or $10 l$., and runniug up to 200l. In 1826 it was ascertained that the amount of money thus deposited in banks by this portion of the population of Scotland was upwards of 13000000 . sterling. On such deposits a higher rate of interest than the other can be allowed.

There are four dependent or minor branches in Jamaica, besides the head branch in Kingston, viz. Montego Bay, Falmonth, Savamahi la Mar, and St Thomas in the East. It is intemed to establish branches in Cuha, at Havannali and St. Jago de Cuha. There are agents in New York, Quehec, I Laliliax, and St. John's New Brunswick, \&c.

This hank is chietly indebted to Mr. James Mc Queen for its projection, and to James Irviar, Esq., for its establishment. It is calculated to effect great good in the West Indies.

There are two local lanks in Jamaica.
Xlli. At an early period the sugar cane was extensively cultivated by the Spaniards in Jamaica; and in 1/i71 'Traphan speaks of the numerous complicated sugar works, like a town or village, in various parts of the island. In 1788, M. Martin, a Fruch botanist, introduced the Otaheite cane into Cayenne and Martmico, from the Isie of Vrance, whither it had been hrought by laugainville.

Although the Spaniards at first attended to the cultivation of sugar, it was subsequently ne glected. In the year 1743, the chief productions of Jamaica were cocon, indigo, and hides; the cultivatio's of sugar hat just re-commenced. The inerease in the growth of this staple article of the island has been as follows :172.2, 11,000 hogsheads were exported; 1739, 33,155; $174+35,761 ; 1768,55,000 ; 1774,78,304 ; 1790$, 10.5,400; 1802, $140000 ; 18.32,1,200,000$ cwts. Gov. Knowles's calculation, in 1755 , was $2,124,431$ acres ungranted, out of which 400,000 are plantable; of these, 100,000 are fit for growing sugar, and the rest for eoffec ; the remaining $1,72 \mathrm{k}, 431$ consist of barren mountains, \&c. A return was male about the year 175.3, of properties in the parish of St. Andrew's, and their produce, to the Board of' 'Trade. In this, an estate called Norbruok, the property of Charles Long, lisq., is thus entered :-"2.2.2.2 acres, 55 hogsheads of sugar, nine puncheons of rum ; five acres in coffee, producing $2972 \mathrm{cwt}$. ; 100 acres in provision ground; 500 in pen and pasture ; five servants, 153 negroes, and 86 head of cattle. Indifferent land-some parts rocky and mountainous." This estate, in the return of 1793, is put at sixty hogsheads. The cultivation of Jamaica in 1818, aecording to Mr. Robertson's survey, was, in sugar plantations, (i39,000 acres; in breeding farms or pens, 280,000; and incollee, pimento, ginger, \&c. 181,000. Total, 1,100,000.

The ruantity of sugar now made in Jamaica is very great, and the importations into great Britain have for some years averaged $1,400,000$ cwts.; which, rated so low as 21 s. per ewt., would give nearly one million and a half sterling. The Jamaica sugar is of a very fiue quality; and by the improved systems of culture and manufacture coming into operation, there is little doubt but that the quantity and quality may yet be more extended. The quantity of rum made from the sugar is also very great; the annual average exportations to England may be taken at $3,500,000$ gallons, which may be estimated in valuc at $1,000,000 l$. sterling. The Jamaica rum is an excellent spirit. Of coffee, and that too of excellent quality, the quantity grown in Jamaica is very great; and the importation into Great l3ritain nearly $90,000,000$ lbs. yearly, which, at the low value of 1 s . per pound, is wother million sterling. The coffce-plant was first introduced into Jamaica by Sir Nicholas Lawes, in 1728, where it was
cultivated on an estate called Temple I Hall, in Lingunnea. An act of legislature of the island was pussed, to encourage its growth ; and in 1732 , collee was advertised in a Jamaica paper at a pistole a pound. In 1752, there were exported $60,000 \mathrm{lbs}$; and in 1775 , $440,000 \mathrm{lhs}$. Until 17 Ns , little attention was paid to this singular berry. In the four years ending 30th september, 179-1, the average exportation of colfe was $1,603,066 \mathrm{lbs}$; in $14(1)$, it amounted to $22,000,000$ lbs.; and during three years ending 30 h of Septemher, 1807, the average exportation was more than $28,500,000 \mathrm{llis} .$, which, at 6 l . per ewt., its cost in Jamaica, produced more than 1,700,000l.
The coffee plant thrives in alnost every soil about the mountalis of Jamnica, and in the very driest spots has frequently produced very abundant crops. The produce of sugar, coffee, \&c., may be seen under the head of exports.

Cotton, indigo, and cocoa were at one time extensively cultivated; but they have principally given place to sugar and colfee. Blome, who published a short account of Jamaica in 1672, mentions the exist. ence of sixty cocon walks. At present there cun searecly be said to be a plantation in the whole island. Various drugs, dye stutls, and spices, are of excollent quality. Aloes, cochimeal, spikenard, cancla, liquo. rice root, castor oil mut, vanilla, jeppers, arrow root, ginger, ipecacuanha, scammony, jalap, cassia, cuphorhia, senna, \&e., all attest the fruitfulness and capabi. lities of the soil and elimate. The cultivated vegetnbles of Europe arme at great perfection. Maize is the principal corn grown, and together with calivances, the yam and swect potatoc, cassava, \&e., form the chief food of the negroes. Various grasses thrive, but Guinea grass ubounds ; and, in consequence of its indispensable importance in feeding the cattle which supply manure for the sugar plantations, it is considered next in importance to the sugar cane. It was introduced into the island in the carly part of the last ct acury by accident, having been forwarded with some Guinea hirds that were sent as a present. The birds died, the seed was thrown away, the grass sprung up, and the cattle were observed to devour it cagerly. Attention was accordingly paid to the subject. It now grows ail over the island, thriving in the most rocky places, and rendering (like sainf in) lands productive that were beretofore considered barren, and making good hay, if salted or sprinkled with sca-water when being ricked. The native and exotic grasses are excellent for cattle and horses; in particular that called the Scotch grass, which vegetates rapidly, and grows to the height of five or six fect, with long and juicy joints. Five horses may be fed for a year on an acre of this vegetable, allowing each, every day, 56 lbs. of grass.

Of vegetables, potatoes (Irish and sweet), yams, cassava, peas and beans of every variety, artichokes, beet-root, carrots, and parsnips, cucumbers and tomatoes, radishes, celery, choco, ochro, Lima beans, Indian kale, calalue, various salads, cabluage trees (200 fect ligh !) \&c., all flourish in abundance ; and indeed, it may be said that autumn is perpetual in Jamaica, for every month presents a fresh collation of froits and vegetables, and some species are at maturity all the year round. The bread-fruit tree, cocoanut, plantain and banana, alligator pear, the delicious mcllow fis, pine, cashew, papaw, and custard apples, orange, lime, lemon, mango, grape, guava, pomegranate, soursop, shaddock, plums, tamarind, melon, wall and chestmut, mulherry, olive, date, citron, and many other delicious fruits, all arrive at perfection.

## JAMAICA-CAIM IN DEPENDENCLES.

Prices of Produce in 1836. [B. B.]-Horncd cattle, 20l. each; sheep, $3 l$. ; goats, $2 l$. ; swine, $2 l$. ; milk, 1s.3il. per quart ; salt butter, $2 s$. Gel. per ih ; cheese,
 mutton, $2 s .1 \mathrm{ll}$; ; pork, $1 s$. ; rice, $10 \mathrm{l} l$. per quart ; cotfee, $1 \mathrm{~s} .8, l_{\text {. per quart; }}$ ten, 15 s . per lh.; sugar, 10d.; snlt, 5 d .; wine, per bottle, from 3 s . $4 d$. to fis. Sill. ; brandy, $1 l$. per gallon ; beer, $1 s$. $8 l l$. per bottle ; tobacco, $5 i$. per cwt.
Wages for Labour. [3. B.]-Domestic, per week, $16 s .8 d$. ; predial, per day, 2s. Gid. to $3 \mathrm{~s} .4 d$.; trades, $5 s$.
It is difficult to form a definite idea of the amount of property in any place. Mr. Colyuhoun, in 1812, estimated Jamaica thus:-Negroes, $19,250,0001$; cultivated lauds, ( 809,450 acres) 16,189,000l.; uncultivated, ( $1,914,812$ acres) $1,914,812 l$. ; buildings, utensils, \&e., on estates, $12,709,450 l$. ; stock on estates, $4,800,000 l$. ; houses, stores, merchandize and furniture, 2,000,000l.; colonial shipping, 42,000 ,; metallic money, 220,0001 .; forts, barracks, \&c., $1,000,0001$. ;-total, $5 \times, 125,298 l$. sterling. The same authority estimated the productions annually raised, including cattle, esculents, \&c., at 11,169,661l.; exports to the United Kinglom, $6,885,3391$.; and to the other places, $384,32 \cdot 2$. It will be observed, thercfore, that in the following statement I have undervalued the ycarly creation and total amount of property in Jamaica.
Nature and value of property annually createl, moveable and immoveable, in sterling money (1834).

Mr. Bridges estimates the 'internal value and intrinsic cost of Jan:aica,' in 1826, thus:-" Slaves, $24,000,0 c 0 l$. ; lands, patented, $18,000,000 l$. ; forts and barracks, $1,000,000$. ; private buildings, $12,000,000 \mathrm{l}$.; stock, \&c., $5,000,0001$.; gold and silver coin, $200,000 l$.; total, $60,200,000 l$. sterling." There scems to be no calculation for roads, wharfs, bridges and other items.
Property annually rreated or prepared.-Sugar, $1,500,000 \mathrm{cwt}$. at $205.1,500,000 l$. ; rum, $3,000,000 \mathrm{gal}$ lons, at ls. Gil., $225,000 l$. ; molasscs, 50,000 gallons, at 10 ll . 2,083l.; coffee, $20,000,000 \mathrm{lbs}$. , at $7 l . .500,08.3 l$.; pimento, $5,000,000 \mathrm{lbs}$., at $4 d ., 83,000 l$.; cotton, 50,000
lbs., at 6.l., 1250l.: vegetable food, nt 3l. per ninums each [I take the totnl pepulation of Jamaica at $\cdot \mathbf{0 0 , 0 0 0}$, some say it is nearer 500,0000 .] 1,200,0007. ; animal food und fish, at $5 \%$, per anmun each, $2,000,00010$; Donestic manufactures - Carpentering, tailoring, smithing, \&e., $2,000,0006$; income nod sundries, 1,000,000l.
Praperly moveable and immoreahte--land: Acres cultivated or patented ['There are $2,233,732$ acres of land in Jamaica for which quit rents are paid to the crown. Mr. Burge thinks that nt least $2,000,000$ acres are cultivated.] 2,2:10,000, at 10l, $22,400,0001$; ; acres ungranted, or waste, $2,000,000$, nt 5 fis, $500,000 \mathrm{l}$. Public property, viz., forts, barracks, ronils, wharfs, hospitałs, gnols, buildings, \&c., $10,000,000 l$. Domestic property: dwelling houses, stores, furniture, plate, cloihes, equipages, \&e., $5,000,000$. Horned cattle, horses, sheep, swinc, poultry, \&c., $1,000,0001$. Ma': chinery, agricultural and manufacturing implements, ships, boats, roads, \&c., $5,000,0000$. Metallic money ins circulation, $100,000 l$.

Total amount ammaily crented property, $8,581,283 /$. Total amount of moveable and immoveable property, $44,900,000 l$. Tinking the number of slaves in the island, in round numbers, at 300,000 , and valuing then at $30 l$. cach, there would be a sum of $9,000,000$. to neld to this. Happily, however, it is no longer neecssary to make such calculations.
XIV. The Caymans which are a dependency of Jamnicn are three small istes, in Int. 19. 20. N.: from thirty to lorty leagues N. N. W. from Point Negrill, on the westward of Jamaica, the Grand Cayman being the most remote. Cayman-braque and Little Cayman lie within five miles of each other, and about 34 miles N. from the Grand Cayman, which is about one mile and a half long, and one mile broad, and containing about 1,000 acres. Grand Cayman (the only island inhabited) is so low that it cannot be seen from a ship's quarter-deck more than 12 or 15 miles olf, and nt some distance the lofty trees on it appear like a grove of masts emerging from the oceas. It has no harbour, but the anchorage on the S.W. coast is moderately good; on the other, or N.E. side, it is fortified with a reef of rocks, between which and the shore, in smooth water, the inlabitants have their craals, or pens, for keeping turtle in. The soil towards the mildle of the island is very fertile, pro. ducing corn and vegctables in pienty, while hogs and poultry find nmple provender.
Columbus discovered these islands on his return from Porto Bello to Ilispaniola, and observing the coast swarming with turtle, like ridges of rocks, he called them Las Tortugas.

The Caymans were never occupied by the Spaniards, but hecame the general resort of adventurers or rovers, (chiefly lrencl2,) for the sake of the turtle.

In 1655, when Jamaica was taken by England, the Caymans were still uninhabited. Mr. Long states them to have reckoned in 1774 to the number of 106 white men, women, and children. The bishop of Jame:ca in 1827 cstimated the inhabitants at 1,600 .
The present race of inhabitants are said to be descended from the English Buccancers, and, being inured to the sea, form excellent pilots and seamen: they have a chief or government officer of their own choosing, and they frame their own regulations; justices of the peace are appointed from Jamaica, but in no other way are the inhabitants interfered with hy the anthorities in the chief settlement to which they undoubtedly belong.

## Charter it.-TRINIDAD.

Srction 1,-Trinidad exteuds from J.at, 9.30 to 10.51 N , and Long. 60.30 to 61.20 W . separated from the province of Cumana, on the $S$. American contiment, by the gulf of I'aria; 90 mites long by 50 broad, with an area of 2.100 square miles, or 1536000 acres.
11. Christopher Columbus, was the discoverer of this fertile isle, on the 31st July, 149x, daring his third yoyage. Aceordhg to some, It was named Trinidal by Cohumbus, while distant 13 leagues S. E. from it, on account of the three mountain tops seen in that position: according to others, in conformity to the piety of the times, in honour of the Iloly Trinity, The island was then densely peopled by Caribs of a mikl disposition, of much industry, finely formed, nod of a lighter colour than the aborigines or inhabitants of the other islands. These people remained unmolested until the Spaniards took possession of Trinidad in 1588, when they fell a sacrifice to the cupidity and religious bigotry of the Castilians, who, as in Jamaica, drafted ofl to the mines those who escapud a more sanguinary death by tire or the sword ; but a few, indeed, were saved by the ajostle of the New Worldthe benign, the eloquent, the heroic las Casas. The occupying Spaniards forcel the Indians to cultivate, as servants, that which they once held as masters, and negroes were brought in from Africa to aid their Jabours. Sir Walter Raleigh visited Trinidad in 1595, and states that the inhabitants then cultivated evcellent tobacco and sugar canes. The Spaniards, to divert his attention, described to him the El-Dorado, where the rivers were full of gold dust; but, on Raleigh's return from exploring the Orinoeo, heentered into a treaty with the Indlians (then at mortal enmity with the Spaniards), marched with them, attacked and carried by assault the capital of San Josef, and put the garrison of 30 men to the sword : the Finglish Government disowned this action of hostilities. Spain paid little attention to her valuable possession, being then fully occupied with conquests on the contiguons continent. In 1676 Trinidad was captured by the French, but almost immediately restored to Spain. The population and trade of Trinidad were subsequently almost extinguished, and, in 1783, the island contained but a very small number of inhabitants considering its long setilement; viz, whites 126 , free coloured 295, slaves 310, ard Indians 2,032; while its sole commerce consisted in bartering cocoa and indigo for coarse cloths and agricultural implements with the smugglers from St. Eustatia.
The number of inhabitants, as will be seen under the head of population, rapidly increased; and, as a mixed society, containing the germs of so many evil passions, required vigorous control, a strong government was formed under Don Josef Chacon, a naval captain, one of whose earliest measures was the expulsion of the dissolute monks, the prevention of the demoniacal inquisition, the granting of fertile lands to nev colonists, with advances from the royal treasury to purchase cattle and implements of husbandry, and the providing freedom and safety for mercantile speculations. The revolution in France, and the disturbances in her colonies, added numbers and wealth to Trinidad; the whole face of the island was changed; and, in four years, the magnificent capital of Port of Spain usurped the place of a few miserable fishers' palm-leaved huts. 'Trinidad was then a sixth dependant on the government of Caraccas.

On the 16 th of F'ebruary, 1797, Almiral Harsey, with four sail of the line, appeared off Trinidad; the Spanish Rear Admiral, Apodaca, who then anchored at Chugaramus with three tirst rute ships of the line and a time Irigate; instead of giving battle to Ilarvey, hurned his ships,-and retreated to Port of Spain. General Sir Ralph Abercrombie, with 4,000 men, marched to l'ort of Spain, and, alter a few discharges of artillery, Trinidad became a British colony.
The following is a list of the Governors of Trinidad since its occupation hy the Iritish:-1s(1). General (then Colonel) Sir Thomas Picton. 1802. Three Commissioners for the otllee of Governor and Com-mander-in-Chiet,-Colonel Fullerton, Ceneral Picton, and Commodore Hood. I 80:I. Major-General Hislop. 181?. Sir 12. Woolford, Bart. IN:2n. Major-General Sir L. Grant. $1 \times 33$. The Right Hon. Sir G. F. Ilill, Bart. [The appointment of three Commissioners in $1 \times 02$ did not succeed as was expreted, for they soon disagreed in the measures necessary to carry on the government.]
III. I'rinidad apmears, at a distance, like an immense ridge of rocks along its whole N. front: but, on enter. ing the Gulf of l'aria, one of the most magnificent, variegated, richly loxuriant panoramas that nature ever formed, is presented to the eye of the voyager ; To the E. the waves of the mighty Orinoco dispute for the empire of the ocean with contending billows; the lofty mountains of Cumana rise from the bosom of the horizon In stupendous majesty; and on the W: appear the cape, headlands, mountains, hills, vallics and plains of Trinidad, enamelled with eternal verdure, and presenting a coup $d^{\prime}$ ril of which the old world atfords no parallel. The view from the blockhouse is magnificent, the deep blue waters of the gulf with the white-sailed light canoes in the distance; to the left the splendid capital of Trinidad, in front the mountains of Cumana; and, on the right, the ficturesque valley of Dicgo Martin, extending across the island to the Atlantic, with its carefully cultivated fiehs and deep foliaged woods. The batteries of Fort George rise in succession from the gulf shores to the barracks, 1,200 fect above the level of the sea,-a range of slightly clevated mountains occupy the N . coast ; a group of finely wooded tlat or round topped hills the centre; and a chain of fertile evergreen downs the $S$. coast of the island. The fecundity of the soil, its gigantic and magnificent vegetation, (compared with which the loftiest Enropean trees are like dwarfish shrubs, and our loveliest flowers uppear pale and inanimate,) its beautiful rivers, enclianting slopes, forests of palms, groves of citrons, and hedges of spices and perfumes,-its suc. culent roots, delicious herbs and fruits, abundant and nourishing food on the earth, in the air, and in the water;-in fine its azure skies, deep blue seas, fertile glades, and elastic atmosphere, have each and all combined to crown Trinidad with the appellation of The Indian Paradise.

Puerto D'Espana, or Port of Spain, the capital of Trinidad, embosomed in an amphitheatre of hills, is one of the finest towns in the West Indics. The numerous buildings are of an imposing appearance, and constructed of massive cut stone. No houses are allowed to be erected of wood, or independent of a prescribed form : the streets are wide, long, (shaded with trees), and laid out in parallel lines froin the land
to the aen, intersected, but not intereepted by cross atrect, thas catching every breeze that bows; and ns in most tropical countifen, there io a delightiol embowered puidic walk. Among the principal buildings the Ironestant chureh stants conspicuonsly and beautifully situate, with a large enclessel lawn in tront, surrounded on two sides by the hest housen of the capital ; the literior of the church is superl), sud at the aame time elegant, its swerging rowf num aisleless sides being variegated with the various rich wools of the island, tastefully arrangelf ; there is niso a splendid Roman Catholic church, and well situate; and an extensive market-place, with inarket honse and sham. bies, all built since the burning of the town li 1804 , of handsome cut stone.

The port of Spain is diviled bato barrios or dis. tricts, each under the superinteminnce of alealdes or magistrates and oflicers, who are responsible for the cleanliness of the strects, for the regulating and order of the markets, and for the due excention of the law in their several divisions; bence the pulicy and good orler established in the capital is admirable. Thest. James' barracks for the accommodution of 600 mon are substantially, and I may add, beautifully erected, on a the plain, about a mile froms the copital.

Fort George commanals the pass leading to Diego Martin's valley, and in the event of war, 11 tew judiciously disposed fortitheations at the other entrances to the interior of the country woold render the island impregnable. The entrenchnents are elevated along several ridges and round backed divisions, with a variety of surface : some parts of which are sulliciently tlat for the crection of military works, and on the best of these, at the elevation of 1000 feet, is the Block. house harracks, ealculated for 200 men. Fort Gcorge is inaccessible from behind, and not commanded by uny hill in its neighbourhood, it is admirably fortifled by batteries that are disposed, as it were, along the two sides of an aeute angled triangle terminating on a point at the Blockhouse redoubt, each commands the other, according to the situation in which they are placed.

The highest range of lame (about 3,000 feet) is to the N . near the sea; in the centre of the isle is a less clevated gromp of mometains, to the $\mathbf{S}$. a series of lovely hills and mounds appear in delightful contrast to the northern shore; and as on the contiguous coast of Cיmana, the chain of mountains in the N. of 'Trinidad runs E. and W. Las Cuevas has a double summit, with a magnificent platiorm in the centre, from which there is a view of the occan E. and W.; four delightful vallies, watered by numerous rivulets, add beauty to this charming landscape.
On the W. coast the principal navignble streams are the Caroni, Chagunas, Barrancones, Comera, Gmaracura, and Sissaria; the first is navigable from its mouth in the gulph, to its junction with the Aripe, (also navigable) a distance of six leagues; the Guanaba, like the Aripo, flows into the Caronn, int has less water; there are many other streams on the $W$. coast, whicls being navigable for small trading vessels, afford great facilitics for the cultivation of land, and the transport of its produce. The N. and E. coasts are well furnished with rivers and rivulets of pure and erystalline water; the principal on the E. coast are the Rio Grund", Oropuche, and Nariva, (called by the Crcoles Mitan, from its flowing through a grove of cocoa trees). This latter has been sailed up seven and a half leagucs, and found navigable for a 250 tons ship, at less than a league from its source. Guaturo, to windward of the island, is large, but not navigable
to any grent extent, for more than amall boats; further $s$, is the the river Normpa, whille in every directhn limpla brooks run mumnuring over gebbly bells to the oevom, through fotty forests und the meast pieturespue acemery.
The gulf of Paria, formed by the $W$, shore of "TriniIlad, and the opposite conast of Cumana (which in 30 leagues loug nud 15 ditto from N. to S.), may bo suld to form one vast harbour, ns ships may abshor all over the gulf in from three to six fathom whter on gravel and mud somutings. The prinelpal ports are, first, the harlour of Burt Royal, Chughramm, on the N.W. peninsula of the island, at the entrane of the N . muith, three leagues W . of l'ort of Spain, and comprehending a space of nhont seventy squara miles ; it is estemed the best and saticst port in the island, is capable of recelving the largest ships of war has from tour to 10 fathoms soundings of gravel and mud, or ouze, with bold and steep northern shores.
lort of Spain, on the W . cooast, which gives its mame to the capital, is the nest best harbour, and ha one of the must extensive lonys in the work; the surrombing fortified hefghts completely command the town, and a the stone quay, rming severnl hinn dred yards linto the sea, has a strong lattery at its extremity. All the W, coast is a series of bays where vessels may muchor in safety at all times. The Ca. reenage, not having more than from two to four fathoms, is only fit for small vessels; and Gasper Grande is an islde within the months, where the spa nish ships of war were wont to anchor under the safeguard of a hattery intended for the protection of the passage. The N. and E, consts are not eppally will turmshod with harbours and roalsteads, which is the more to be regretted, as the wind biows for three. fourths of the year from the E. and N. The prinejpal ports to the N. are the Maqueribe and Las Cuevas, (where fort Abercrombie is situate); to the N. F. are the ports of Rio (irande, Theo, and Comana; ons the E., is Balandra Bay, or Boat Island, where safe auchorage may ht all times be found for small vessels; further E. are Guinsereck nad Mayaro Bay ; the safist port on the l .. const is Guaiguaire, from its being sheltered by a point of land against E. winds, and its entrance to the S. from which the winds are neither frepuent nor vident.
Trinidad, as viewed from the Gulf of Paria, presents an alluvial country in an active state of formation: the primitive foundations of the land arranged ina form nearly scmilunar, incline as with outstretched arms to rcceive into their bosoms the greater portion of the alluvies from the mouths of the mighty Orinoco ; the currents, deeply charged with this alluvint soil, trive along the elifly sides of the northern rilge and southern shores, (from which they borrow in their coursc), to deposit their lading at the bottom of the gulf where the metropolis, at the base of its benntiful mountain stands. The tides, (which there rise higher by several feet than in any other part of the West Indies,) flow muddy and foul, and ebh with clear waters, which may be seen at some distance from the shore; each extent of new formation heing marked by muddy banks of Mangrove bushes; in this way Port of Spain-like, as Dr. Ferguson says of the ancient Ostia, that was built upon the sid, may become in time an inland city, the metropolis of many other towns crected on the fertile and llourishing country. It has been ohserved, that the land encroaching on the sea on the coast S.W. of Trinidal inereases the territorial extent of the island; and, at
ins small boats: fur
 urmoring over pehbly foreste und the mont
be $W$, shore of 'trini. $f$ Cumana (which is om N. to S.), triny he as shlps may ancliars to six fathom whtor, The principal prots Roynl, Chumaretimbs, sland, at the sutraned i W. of l'ort of Spain, about seventy stuate and safiest port in the he Jargest ships of war, somblings of graves 1 and stee'p northern
coast, which gives its best harbour, and las ys in the world; the completely command 1, ruming several hana strong battery at its 4 a series of bays where $t$ all rimes. The Caran from two to fuur II vessels; and Gaspur nouths, where the Sjaanchor under the satic$r$ the protection of the ts are not epually well oadsteals, which is the wind blows for three. and N. The principal aeribe and Las Cuevas, (situate); to the N. E. loco, mad Cumana: ma oat Island, where safe found for small vessels; Nayaro Bay ; the safest guaire, from its being fainst E. winds, and it: the winds are nelther

Gulf of Parin, presents e state of formation: he land arranged in a as with outstretched ms the greater portion ths of the mighty Ori. arged with this alluvial of the northern ridge which they borrow in ading at the bottom of at the base of its bean. des, (which there rise any other part of the (d loul, and chlh with cen at some distance new formation being Mangrove bushes; in as Dr. Ferguson says built upon the ssa, city, the metropolis of ae fertile and tlourishved, that the land enast S. W. of Trinidal of the island; and, at
tome distant day, the Culf of Parin will he a mere hannel for the conveyance of the waters of the Orioeo and Guaraplehe to the ocean.
IV. The ialand (as also Tohago) is evidently a section f the opposite continent, formel either by a volemile ruption or oceanic eruption-the sanue strata of earth, he aame rocka, fossila, \&c. are common to both. The nucleus of the mountains is a very dense argilla. coun schistus, becoming laminated and frinble when rposed to the atmosphere, and changing to the nicacembas achistus in the inferior liyers and near the sels of rivers; in the interstices of which latter, purieularly to the northward, are found great guantities if sulphureous pyrites in cuble crystals. There is no ranite on the island (while the Caribhean chain of romintains are princlpally composed of that subtance) ; but blocks of milky guarta, of dificrent izes, are found in every valley, beneath which there - frequently to be found a light layer of sulphate of fime; on the precipitons sides of the mountains, ashed by the torrents, may be seen layers of a conrse rgile, mixed with ferruginous sand. "This the ntcnec of calcareous masses in Trinidad. 'Tohago, and Cumana offers a strong geological contrast to the Antilies, or Caribbean Mountsins. Gyes:nm and mestone are rare in Trinidad. One quarry of aleare us carbonate, situate at the foot of a hill simar the Ort of Spain, is mixed with veins of silex and hete. ogeneous substances. Considerable puantilies of ulverating feldspar are found on the rising ground, vashed by the rains, llear the Guapo mouth wad on sleft hanks. The micaceons schistus has sometimes transition lato talcous schistus; thus giving nut netuons nppearance to the soil. Near the const ure mind rocks of a bluish calcarcous mature, veined with hite calcarcous carhonate, chrystalized, rather hard, and resting on congulated clay, with pebbles of prianlive rocks. The magnetic needle indieates the preence of iron In many rocks; but volcanic convulsions ave produced different effects from similas eruptions © Europe : thus gypsum is foumd nbounding in sulhur and pyrites, mingled with granite. No vestires f arganic bodies have been discovered; maritime ad land shells (many of unknown and extinet species) re found in the great nlluvial plains; and, although sadrepore are urifted on the coast, no coral banks xist. On the surface of the soil of the vallies where vers run, rounded pebbles are ohserved; lut in the lains they disappear : this is particularly the case on e E. and very rare on the W. coast. There are veral extensive vallies and plains of a deep and ferle argillaccous vegetative earth, without a rock or ven pebble to be seen.
There are several craters in Trinidad. \& © Cape cla Brea is a submarine volcano, which werionally oils up, and discharges a quantity of petreolum; the E. part of the island and Bay of Mayaro is other, which, in March and Jure, fives several denations resembling thunder,- $\dagger$ ins: are succeeded flames and smoke, and, some : inutes after, pieces bitumen, as black and bi:! int as jet, nre thrown shore. Near the forest of point lcacos, on the mmit of a hill of argillnceous clay, M. Levynsse und a great ramber of little mounds, about two ct high, whose truncated and open-coned tops exled a gas smelling like sulphurated hydrogen; one ne, of six feet high, on the most elevated part of the II, continually discharged whitish matter, of an uminous taste; a sound was heard, indicating a tluid a continual state of agitation, and globules of an astic gas evaporated contimully ; the scum at the
top was cold; four poles, mensuring sixty feet, did not touch bottom, nud disappeared on being let go. There is meither atone nor sand within the circumference of a leagne of the cone; lint handsome rounded pehbles were found round the hill, together with small calcnreons stones, encrusted with anlphor of a priamstic form. Contiguous to this crater, and ell. compasset by a marsh of mangroves, which commil. nicute with the sea, is another hillock, with a circular shallow envity full of a boiling liculd like alum; in dull aubterrancous anumd was hearil, the cartl was fonme to tremble under the feet of the explorers, und two poles pushed into the erater disappeared In an instant; detonations like ilistant cannon are heard every year in the montli of Mareh. It is re markable that earthquaken, felt violently in the Antilles in 1797, were not perceived at Trinidad or in Cmmana, and when the latter province was shortly after desolated by terrible carthyuakes, the shocks were alighty felt in Trimbad, but not at all in the Antilles.

Forty miles $S$. of the l'itch lake are several mud voleanocs, in a plain not more than four feet above the general surface; the largest is about $1: 00$ feet in diameter, $n$ :- has hoiling mul constantly bubbing, but never asurfowing, remalning constantly within the surace of the ernter. When the old craters cease to act, new ones invariably appear hin the vieinity ; thus embling the mud volcanoes witnessed by Hiumbolet. some of ice mud volcanoes the iw ont salt vater, hear loadul with argillaccous earth:durng the hotl t months of the dry season, cold mul is thrown tw 1 . • :efight of thinty feet, and the voleano is mapynos a asle to whthin fitty paces.

The precioas metals hb " not been found in Trinid. . 2 t the magnet dise - ....... iron lis the greater part . its t urks and pebbles; $u$ very bri'liant white inetal, pecitu: gravity ten), more ductile $\mathrm{n}_{\mathrm{i}} \mathrm{I}$ malleable than silver has been found, and M. Vaur,. . . "tought it either a new metal or composed of acvernl others; crystals of sulphate of copper have been foumd encrustal with almon among llints, as also arsenic with sulphurated burytes for a matrix ; schistose plumbago has been discovered, and near it a mine of coal, about fiv wiles from the sea-shore; but the most remark. able mineral phenomenon is the Asphulttem, or l'iteh Lake, situate on the leeward side of the island, on a sinall peninsula, jutting into the sea about two miles, (opposite the l'arian Mountains on the Continent,) and clevated so fect above the level of the ocean. The headland on which it is sitmate, when seen from the sea, resembles a dark scoriaccous mass; but, when more closely pxanined, it is found to consst of bituminous scorias, vitrified sand, and earth, all cemonted together. In some places beds of einders are found; and a strong sulphureous smell pervades the ground to the distance of eight or ten miles from the lake, and is felt on approaching the shore.

The lake is bounted on the N. W. by the sen, on the $S$. by a rocky eminence, and on the $E$. by the usual argillaceous soil of the country; it is nearly circular, and better than half a leagne in length, and the same in breadth, occupying the highest part of the point of land which shelves into the sea, from which it is separated hy a margin of wood; the varicty and extrordinary mobility of this phenomenon is very remarkable, groups of benutiful shrubs and flowers, tufts of wild pine apples and aloes, swarms of magnificent butterilies and brilliant humming birds enliven a scene, which would be an enrthly represer ${ }^{+\pi t i n n}$ of Tartarus without them. With regard to $n_{i}$
where a small islet has been seen on an evening, a gulf is found on the following morning, and, on another part of the lake, a piteh islet is sprung up to be in its turn adorned with the most luxuriant vegetation, and then again engulphed.

The usual consistence and appearance of the asphaltum, (except in hot wheather, when it is actually lituuid an inch deep, ) is that of pit coal, but of a greyish colour, melting like sealing wax; ductile by a gentle heat, and, when mixed with grease, oil, or common pitch, acquiring tluidity, and well adapted for the preserving the bottoms of ships against the destructive effects of the worm termed the teredo navalis. Sometimes the Asphaltum is found jet black and hard, breaking into a dull conchoidal fracture, but, in general, it may be readily cut, when its interior appears oily and vesicular.

Deep crevices or funnels, inclining to a conic form, and sometimes six fect deep, are found in various parts of the asphaltum, (pitch), filled with excellent limpid running water, and often containing a great quantity of mullet and small fish. Alligators are said to have been seen in these extraordinary chasms. The bottom of some of these canals are so liquid that marked poles thrust in disappear, and have been found a lew days after on the sea shore. Near Cape La Brea, to the S.W. (the place where this lake is) Capt. Mallet observed a gulf or vortex, which, in stormy weather, gushes out, raising the water five or six feet, and covering the surface, for a considerable space with the bituminous substance. A similar gulf is said to be on the coast, at the bay of Mayaro.

Pieces of what was once wood, are found completely changed into bitumen; and the trunk of a large tree, on being sawn, was entirely impregnated with petreolum; where the petreolum mixes with the earth it tends greatly to fertilize it, and the finest fruits in the colony come from districts bordering on this singular lake; the pine apples, in particular, being less fibrous, larger, more aromatic, and of a deeper golden colour than are to be had any where else. [For a detailed account of the pitch lake, and mud volcanoes see Vol. VI. of my Colonial Library.]
V. The dry and rainy seasons into which the tropical year is distinguished is more marked in Trinidad than in the Antilles. The dry season commences with the month of December, and ends with that of May, the E. N.E. and N. winds then become less cool; the heat increases and it is at its height by the end of June, storms commence and augment in frequency and violence during August and Scptember, and in October they occur almost daily, accompanied by torrents of rain ; there is seldom any fall of rain during the right, but a heavy shower without wind usually precedes sun-rise by half an hour during the season. Hurricanes are unknown in Trinidad or Tohago.

The hygrometer varies much in different seasons; during the rainy season it is usually between 85 and 90 ,-in the spring between 36 and 38 in the day, and about 50 at night; on an average there falls about sixty-two inches of water during the winter, and about ten inches (including the heavy dews, which may be estimated at six inches) during the spring. The October rains are very gentle; in November they are less frequent and more slight; and from the end of December to the beginning of June of some years, there does not fall a drop of rain during the day : as the island has become cleared, the quantity of rain falling has diminished.

During even the hot and stormy season the thermometer rarely stands at Port of Spain before sun-
rise, so high as 74 and in the country oceasionally as low as 68 ; from sun-rise to sun-set 84 to 86 , falling in the evening to 82 or 80 ; in Angust and September when the air is saturated with moisture, the mereury rises sometimes to 90 -rarely above that height. When during the winter there is wind with the rain the mornings are less hot, as are also the evenings, when the rain has been preceded by thunder during the day; but the temperature of the whole island varies with the clevation above the sea and the aspect of the place, especially in spring, when the thermometer descends to 60, and sometimes to 50 , in places of moderate elevation; on the whole it is less moist than Guyana, and not so dry as Cumana, and being an island, the winds are more constant, and the atmosphere therefore more Irequently renovated; the vallies of Santa Anna, of Maraval, Diego Martin, Aricagua, and the heights of St. Joseph, to the N.W., as also the vallies on the N. coast, enjoy a mild temperature, and their inhabitants breathe during nearly the whole year a fresh, pure, and very clastic air, by reason of the simultaneous action of the evaporation of rains, dews, and winds, on the well-known castern principle, by which liquids are cooled, and even ice formed, by solar evaporation or exposure to a current of air. From the coolness of the night, it is the ordinary custom to have a blanket folded up at the foot of the bed to draw up when necessary, during a residence in the country or in the high lands. The beneficial and abundant dews (arising from the numerous rivers of the island and surrounding ocean) cool and invigorate the atmosphere, and give a vigo. rous luxuriance to the vegetation of an isle, which, were it otherwise, would be nearly barren. The following table affords a Meteorological Register of Port of Spain :-

＊These natives of the eastern hemisphere were brought to the west for the purpose of cultivating rice， and perhaps with the idea of forming a free labouring population；ne Chinese women were induced to ac－ company them；the men soon became discoutented，and there now remain but a few of them as fishermen．

The Slave Population，according to a larliamentary Return，was in numbers， from 1816 to $18: 8$ ，ns follow：－

|  |  |  | $\begin{aligned} & \text { 高 } \\ & \stackrel{\rightharpoonup}{\circ} \end{aligned}$ | Increase by Birth． |  | Decrease by Death． |  | Decrease by Mannmis． sion． |  |

IX. Prisoners of Trinidad throughout the Year. [B. B. Colonial Office.]

X. The administrative functions are vested in a Lieutenant-governor and an exccutive and legislative committee. The executive council consists of three official members (viz. the Colonial Sccretary, the Colonial Treasurer, and Attorney.gencral), selected from the legislative councils; they have no powers, and no other functions than counsellors of the Governor, who may follow their advice or not, as he pleases. The legislative council consists of twelve members, six of whom are styled official, holding offices and salaries at the pleasurc of the Crown, viz. the Chief Justice, the Colonial Secretary, Attorneygeneral, Colonial Treasurer, Public Prosecutor, and Collector of Customs, and six are styled non-officiul, selected from amongst the inhabitants, the whole removable at the pleasure of the Crown. The Governor presides at the board, has a vote, and a casting vote in addition, and no measure can be introduced or proposed at the board which he objects to.
The Cabildo, in its authority and functions, resembles our municipal corporations; it has power to raise revenues which are derived from licenses to the dealers in spirituous liquors, to hucksters, \&c., and from a tax on carts, and on meat and fish sold in the town of Port of Spain, thus realizing about 10000 l . per annum, with which the streets and markct-house are kept in repair, and the salarics of the police officers paid. All other salaries are paid out of the Colonial Treasury. The laws are principally Spanish, executed after the Spanish form, with some modifications; the titles of Aictlde, Alguazil, \&c., are always used instead of the corresponding terms in English.

The Cabiido is composed of the Governor, two Alcaldes In Ordinary, the Procurator Syndic, and ten Regidors. Of the latter two are perpetnal ; the remaining eight serve in succession as the Alcaldes, four going out of office annunily. After having (in conjunction with the remainder of the Cabildo) elected four others as their successons, whose names are then submitted to the Governor for his approval. The office of Coroner does not exist. There is no power of arrest in the colony upon mesne process except on the suthority of the lloman Law, when a person is suspectus de fuga. Every individual about to ieave the island must oitain a pasa from the Governor, and advertize his intention to leave; any creditor may then apply to the Coioniai Secretary's Officer, and stop the pass.
The Alguacil, Mayor or Provost Marshal, is appointed by the Governor, and removable by him. He gives yecurity in 2000 1 . He excentes processes, \&c. by deputies, and receives rees according to a tariff. In cach district there are Alcaldes de Barrio elected by the Cabildo Board from among the freeholders for one year. They receive no salary or emulnments, entertain civil canses or picas of delt to the amount of 20
doliars (with an appesl to the Chief Judge if made within five days after sentence). and they are also entrusted with the government of the puice of their respective districts. There Is no Jury in the "Court of Criminal trial" which has under its jurisciliction ail criminai offences committed in the island with the exception of petty thefts, \&cc. The Court is composed of the Cuticf Judge (with a salary of 20001 . pet annum) as Presideut; of the Assessor of the Governor ; of the Alcaldes in ordinary the Assessor of the Govecretaries) of the civil tribunal (wionct in the The Attorney Ginal whon nct in the same capacity herer the prisoner the Cencral prosccutes; counsel is heard takes the opininn of each member of the Court individualiy, be. ginning with the junior member. The judgment in ali cases is final, cxcepting death senten ies, when an appeal lies to the Governor in Conncil.
Every freeman of the island is enrolled in the militia, which is composed of artillery, cavalry, and infantry, with a very numerous staff. Their appearance on the great plain before St. Anne's is really superb; the muster is about 4500 , and a more efficient state of discipline is kept up than perhaps in any of the other islands. The Governor is of course Com. mander-in-Chief; there are two Brigadiers-Generals, an Adjutant, Commissary, Paymaster, Mustermasier, Irovost-Marshal, and Judge Advocate-General, with deputies to cach; Physician, Surgeon, and Apothecary General ; and of Field Officers, two Colonels, twenty-one Lieutenant-Colonels, twelve Majors, and fifty-seven Captains.
The militia strength for 1835 was as follows [B. 13 . Colonial Office] : 1st. Division.-Cavalry, 23 staff, 13 officers, 25 non-commissioned officers and privates. Infantry, 85 eflicers, and 1485 non-commissioned officers and privates. 2nd Division.-Cavalry, 5 staff, 3 officers, 31 non-commissioned officers and privates. Infantry, 40 officers, and 856 non-commissioned officers and privates. 3rd Division.-Cavalry, 4 officers, and 28 non-coinmissioned officers and privates. Infantry, 11 cfficers and 271 non-commissioned officers and privates. 4th Division.-Cavalry, 10 officers and 36 non-commissioned oflicers and privates. Infantry, 11 officers and 225 non-co:amissioned officers and privates. 5tlı Division.-No Cavalry. Infantry, 3 officers and 61 non-commissioned officers and privates. Total. Cavalry, 28 staff, 30 officers, 120 noncommissioned officers and privates. Infantry, 150 ollicers, 2898 non-commissioned officers and privatrs.
The uniforms are various and splendid. The artillery is blue, with red facings and gold lace; the royal Trinidad light dragoons blue, facings bulf, and lace silver; mounted chasseurs and light infantry, green
uniform ings; al The fine the rest forces o Colonel, dollars; Quarter ter-Mas Corpora second, liable to rourt ma tence of ceeding ment. A martial, inimical and goo are the $h$ line, and

The Vara of
of Castille

Engish Inches. . 32-952

The measures used in surveying in Trinidad is the quarrée, containing 185264 varas of Castile, or 3 and 1-5th English acres; consequently 100 quarrée are equal to 320 acres.
The side of a square of a quarrée, or 3 and $1-5$ th English acres, is equal to 373 8-11the English feet; 4083 Spanish ditto ; 350 French ditto, or 136 and 1-10th Spranish varas.

XIV. The vegetation of Trinidnd is of the same splen. did character as that found on the main land. Botanists specity on the island aspen rush, or Cyperus haspan -Commelina hexanilra, panax chrysophitla-l'itex capitata, Justicia secunda, solanum hirtum, restrum latifoliun, Allamanda cathartica, Macroeneum coccineum, froplichia paniculata, spathr iea corymbosa, rotinia rubiginosa lupinis villosis, gi fcine picta, Bigonia humilis, tabernamontana undulat t, Zapogom", mentosn, (roton gossypifolium, tragia corniculat. "elen scandens, \&c. \&c. The forests contain the finc wood for ship building and for ornamental purposes, amongst which the red cedar, and a great variety of palms are conspicuous. The nutmeg, cinnamon and clove, have been introduced into the island and flourish, particularly the former. The encao, or cocoa, (whence the delicious thea bromn, or divine beverage is made) is indigenous to the new world; in Mexico, the beans served, even in Humboldt's time, for small coin, as cowries do in India-six beans being equivalent to one halfpenny English; and the Castilians, whether in America or Spain, soon learned to consider chocolate a necessary of life,-indeed, it was seriously disputed for some time among the churchmen of Rome whether it were lawful to consume so nourishing a beverage on a fast day; but the inclinations of the palate naturally prevailed over scruples of conscience, and it was even finally served to the Creole ladies by their alaves in the chapels of Mexico during divine service. The cocoa tree somewhat resembles that producing the English cherry, fifteen fect in height, delighting in a new and productive soil near the margin of a river, and requiring shelter from strong sunshine or violent winds, for which purpose the plantain trees, Musu Paradisiaca, or coral bean tree, Erythrina, (which the Spaniards call Mudre di Cacao) are planted between every second row, giving most luxuriant appearance to a plantation, the long are stems of tropic: with the rich green if the cacaos below, and here and here brilliant and burning with the golden foliage of the Bois inmortel, a lofty umbrageous tree, which in he flowering season is covered with clusters of scarlet plossoms of exceeding brightness, and shining like rilliant velvet in the sun-rays; while the lovely outterfly plent (so called from its perfect similitude o the insect) fluttering on its almost invisible stalk, dds beauty and variety to the prospect.
As it would be advisable to extend the cultivation f cacao to Ceylon and other of our Eastern settlenents, the following description of the cultivation of his nutritious nut is given. Seedling plants should e raised in the dry and sheltered spots of a nursery round. The aeeds are sown in sinall raised mounds, t regular intervals, two seeds being deposited in each hound, lightly covered with mould, and sheltered
from the scorching sun with plantain leaves, or some other cool and umbrageous canopy. If the season be dry moderate watering should be used, and if both sceds germinate, the weakest plant must be destroyed. When the shrub attains fifteen or eighteen inches in height, (which will be the case in ten or twelve weeks) its transplantation to the fixed location is necessary. The plants must be arranged in straight rows, in a quincunx form, with a distance between each of sixteen feet, should the soil be rich, and of not less than thirteen if less fertile. Transplantation in dry wea. ther, earth removed with the plants and the tap root decp set when replaced. The cacao delights in the shade; a vertical sun destroys it, therefore it is imperntively necessnry to plant between every second row either the pinntnin tree or the coral bean tree, (crythrina). When the tree is nbout two ycars old it usually puts forth from tive to seven branches from the top, all beyond five are cut away; in about six months more flowers commonly appear, which must be also destroyed; indced, it is usual to repeat this abscision anmually, until the fifth year, in order that the productive power of the tree may be finally perfected in greater strength. A great number of flowers fall without fructifying ; the fruit, while growing, is green, but ns it ripens the pod changes to a bluish red, approaching to purple, with pink veins; in some varieties the fruit pod becomes of a delicate yellow or leinon colour. When over ripe the pods sometimes burst, and the seeds fall from their gelatinous pulp. The crop may he said to last throughout the year, but the prineipal gatherings of the fiuit are in June and towards the end of Pecember. No muripe pods must be gathered. The ripe pods are broken with a mallet or eut open, and the sceds separated from the pulp with a wooden spatula; to separate the seeds entircly from the pulp, they are placed in a hole with some dry sand, und left until n very slight lermentation comes on the sand, being frequently stirred and re. plenished to absorb the moisture from the seeds; when at the end of three or four days the process is completed by spreading out the cacao nuts on rush mats, or upon a platform in the sun to dry, care being taken to prevent rain reaching the sceds. When quite dry and hard the nuts may be lightly packed in bags or boxes, nud kept in a dry or airy place for use or exportation.

The following calendar of the fruits of Trinidad for the year, will demonstrate the variety of delicious food which this valuable colony yields. January produces sappidilloes, pomegranates, sour-sops, plantains, bananas, papas, or papaws. The vegetables areokros, capsicums of all kinds, which indeed are common every month in the year; cocoa nuts, which are seldom used but for cakes and puddings, ground down; pigeon or: Angola peas, sweet potatoes, yams of different sorts, and tanias. Februnry, the vegetable called chicon, or christophini comesan. March, grenadilloes are added to the former list. April, Java plums, mangoes, mamme sauoctas, pines of several varicties, the Otaheitan groseberry, Jamaica plums, cerasees, and bread fruit. May, water-melons and cashew apples. June is much the same in her productions; pigeon peas nre now nearly out of season. In July, the avocado pear comes in; it is also known by the name of the alligator pear, or subaltern's butter, from its inside resembling very yellow fresh butter both in consistence and colour.

In August, the only new fruit is the yellow hog plum; the other fruits in seasnn are the mamme sapoctas and avocado pears. September produces
sugar and custard apples, sea-side grapes, and Portuguese yams. The fruit and vegetables of October are nearly the same as September; and the only differenee in November is the hread fruit being ripe again. December brings in guavas, and that most excellent production, sorrel. This plant has a sueculent stalk, and grows from three to four feet high. There is a blossom, not unlike the common English colutnbine; there are two varicties, white and red ; the blossoms, when slightly fermented, produce a delightful beve. rage, or, stewed with sugar, make tarts or jam. All the orange and lemon tribe, shaddocks, and forbidden fruit, plantains, and bananas, may be had every month in the year, but they abound most from April to September. Mountain cabbage is always in season, and is a most delicious vegetable.

Previous to 1783 the whole produce of Trinidad was a very small quantity of cocoa, vanilla, indigo, arnotto, cotton and maize, not more than sulficient to employ a small schooner two or three times a year for its conveyance to St. Eustatia. In 1787 the first sugar plantation was formed, and in 1802 the cultivation and produce of some of the principal articles was as follows:-192 sugar plantations yielding 1.5161 hogsheads; (the hogshead in 1802 weighed 1200 llss ; it has since been made to contain 1400 to 1500 ths.) 128 coffee ditte, $358660 \mathrm{Jbs} ; 57$ cocoa ditto, 97000 lbs.; 101 cotton ditto, 263000 Jbs . ; employing shipping annually to the amomnt of 15000 tons. In I 807 there were exported to England, British Ameriea, and to the United States, 1823: hogsheads of sugar, or 21234600 lbs ; 460000 gallons of rum ; and 100000 gallens of syrup; there were made besides in the same year, 500000 lbs of collec ; 355000 lbs . of cocoa, and 800000 lbs . of cotton.

Protuce of Trinidad frim 1790 to 18:37.

The annals of no conntry present such an extraor dinary increase of cultivation, and consequent production of wenth.
'The resources of the island are in fact very great : the mountanous portion which cannot be cultivated forms less than one thirticth of the surface; by a incasurement in 1799 it was found that there may be formed on the territory 1313 sugar, 945 colfce, 301 cocoa, and 158 cotton-plantations of 100 squares, or 320 acres cach.

One four horse power steam engine at Beos Bar, Fast coast, for turning stone rollers to bruise the pulp of the cocon nut, and hydraulic press, to extract the oil, 800 t gallons of oil made in 1835, velue 1560 A smal! tile manufactory on the Coroni river, 25000 tiles, value $87 \%$. Ditto at Barancon, 70000 tiles, value $243 l$. There are nine boats employed in the whate tishery; 30 whales were caught this year, value 1100 .

CIAPTER III.-TOBAGO.

Section 1.-Tobago is situate in 11. 16 N. lat. 6i), 30 W . tong, the western end distant but six miles from Trimidad, and the castern 24 leagues from Gramada; it is the most southerty of the Caribee islands; i.) length it is about 32 miles, in an E N.L., direction; and in its greatest breadth 12 miles, embracing a mountainous arcu of 44 square miles.

1I. Tobago, or I'obecto, was discovered by Columbus in 1496 , and thus named after the pipe used by the islanders in smoking the herb now so extensively used in the Old World, and then termed Kohiba.When first visited it was found to be peopled by a race since well known under the denomination of Caribs, who were continually at war with another nation called Arrawaks, residing on the main land. The Tobagians sometime after left the island and retired from the pursuit of the Atravaaks to St. Vincent; where, it is said, they lived in peace with the Indians inhabiting that isle. In 1580 , the British tla, was planted on the island; in 1608 , James the First claimed its sovercignty ; no effectnal coloniza. tion however then took place. A small British Colony is said to have settled on the island from barbadoes, in 162.5 ; but it was subsequently abanloned. A description of Tobago is said to have suggested the scencry of Crusoe's Island to De Foe. The isle was granted to the Earl of Pembroke in $162 x$, by Charles the First. Some Dutch navigators visited Tolago on their return voyage from the Brazils, and, struek with its alvantageous situation for trade with the continent, as also with the beauty of its climate and the richness of its soil, a company of Flushing traders formed an estabishment on the almost deserted isle in 1632, founding the colony with 200 persons, and naming it New Walcheren in honour of their native home; but, in 1631, before the Hollanders had time to fortify themsclies, the jealousy of the Spaniards of Trinidad
was roused, and, aided by some native Indians, the Duteh were atfacked, and those that escaped the ouslaught were conducted as prisoncrs to Trinidad, the rising walls of the fortress of New Walcheren razed, the cannon and stores carried ofl, and the platitations utterly destroyed. Eor nearly 20 succeeding years, the island remained untenanted, hut oceasionally frequented by seamen from Martinique and Guadaloupe to tish for turtle, or by the lindians of St. Vincent and the other Autilles, who tonched there on their frequent expeditions against the Arrawaaks of the Orinoco. Some say that the Courlanders arrived on the N. coast of Tobago, in 1648 .

In 16.5 , some merchants at Flushing, named the Lampsins, obtained a charter from the government of the United Provinets, anthorising the occupation of Tobago, for their sole use, with the privilege of appoiutiug a Governor and Magistrates, but giving a veto to the Dutel government at home, on the nominution of the former. The spirit of commerce was then at its height in Holland, and Tobago, and New Walcheren, soon became not merely an agrieultural colony, but one of the most thriving commercial emporiunss in the West Indies. Shortly atter the Duteh occupation, a vessel arrived at Tobago with colonists from Courland, James the First of England having previously granted Tobago to his godson the Duke of Courland, Nearty 100 families were thus landed on one of the most beautilul parts of the istand termed Courland Bay; in a few days the catending colonists came to blows, but the belligerents at lenyth agreed to leave each other quiet until their respeetive governments at home should decide to whom the island be. longed. The Courlanders were neglected, partly owing to the Duke being imprisoned and cleprived of his territorics by the King of Sweden, while the lampsins strongly re-inforced their triculs; the re-
sult was that, in 1659, the Inter forced the Courlanders to relinquish fort James, which they had built in Courlnad Bay. The ellorts of the Duke of Courland to recover Tobago, on the restitution of his states, werc inelfectual, notwithstunding the inanifesto of Charles II. In his favour, 17th Noveniber, 1664 , when declaring war agninst Hollnad;-the Lainpains therefore remained in penceable possession for some years. No mention was made of Tobngo at the trenty of Breda; nnd during the interval of the first and second war between Fingland and Hollmat, the Governor, Hubert de Beveren, nad the colonists, amount. ing to 1200 , plnced Forts James and Lampsinberg in a good state of defence, while the commeree and cultivation of the island rapidly increased.

Nevertheless Tobago was shortly afterwards plundered, nnd sacked by Sir Tobias Bridges, at the hend of the Barbadian privatecrs, and aubsequently the Jutch having declared war agninst the French, the Duke D'Estrees attacked and deleated Admiral Binkes, in Scarborough Bay, and pillaged the islnnd. Four months after J'Estrees again appeared off lort Lampsins, landed his infantry, and attacked Binkes in the fortress, who, after a gallant defence was, together with a grent part of his little garrison, blown up by the explosion of a powder-magazine, and on the 24th Dec. 1677, the Hollanders were compelled to nbandon a colony which they had commenced under such favourable auspices, in 160.4 . In 1678, the Duke of Courland rencwed his pretensions, nnd for many years strenuous, but unavailing efforts were made to induce colonists to settle in the island. In 1737, the house of Kettler, sovereigns of Courland, being extinct by the death of Ferdinnnd, son of Jnmes, England claimed the reversion of Tobago. In 1748 , by the treaty of Aix-la-Chapelle, it was stipulated that St. Lucia should belong to France, and that Tobago, Grerada, St. Vincent, and Dominica should be considered as neutral islands, that the suhjects of all Europenn powers should have the right to establish themselves, and carry on commerce in nnd with those islands, but that none of the contracting parties should place garrisons in them. Whether Tobago was then inhabited or not, it is hard to say. The chroniclers of the jsland nssert, that, in 1757 the ship Stirling Castle, touched at Tobago; and on Mr. Thompson, a midshipman, landing, he found an old French hermit on the island, who had been living alone on it for 21 years.

At the pence of 1763, Luuis the XV. ceded Tobago in perpetuity to England, and on the 20th of May, 1765 , a commission was appointed for granting lands on the island. The prosperity of the island dates from this period, large capitals were invested by enterprising British colonists, and agriculture and commerce rapidly progressed; but the miseries of war had not yet terminated; during our contest with North America, in 1781, Tobago was captured by the Marquis de Bouille, and ceded to France by the treaty of Versailles, in 1783. While Tobago remained in the possession of France, a few French settlers established themselves in the island, and on the breaking out of hostilities bet ween England and France, General Cuyler, in March, 1793, at the head of 2,000 men. took possession of the island for great Britain, in whose possession it has ever since remained.
III. Tobago has been termed the "Melancholy Isle," because when viewed from the N . it seems to be only a mass of lofty, gloomy, mountains, with black precipices, descending abruptly to the sea; on nearer approach the island exhibits a very irregular aspect ; it is principally composed of conical hills of
basaltic formation, and of ridges which descend from the interior, (where they rise in a distinet manner from a common base or dorsal ridge 1,800 feet high, and running 20 miles out of the 32 that the island is long,) toward the sea, terminating sometimes in nbrupt precipices; the ravines are deep and narrow, nnil end generally in small alluvial plains. The N. W, part is the least mountainous, terminnting in the N . in nbrupt precipices, with the dark island of Little Tohago, and the dangerous rocks called St. Giles's. The S. terminates in broken plains and low lands, the whole aspeet, like 'Trinidad, heing calm and magnitleent, with occasional beantiful mounds of isolated hills, so close that few levels for marsh or swamps present thenselves, the delightful vales everywhere exhibiting the effects of a rotatory and undulating motion of vast currents of water, and forming with the contiguons mountains truly picturesque scenery. The ishand is well watered by rivulets and streams arising in the interior, and passing over the low lands to the coast, where they are occasionally obstructed, which however a little attention would prevent.
Scarborough, the principal town, is situate on the S. W, side of Tubago along the sea shore, (at the base of Fort George Hill), and extends, with little uns. formity, casterly towards the Fort, the distance from the lntter place being upwards of half a mile. On the S . and S . W. the descent to the sea is gradual, and at the bnse of the lill appronching the town are several scattered country houses. Fort Gcorge llill, (the road to which is ateep and towards the W.) rises to the height of 422 feet, of a conical shape, and crowned by "Fort King George," the chief inilitary station in the island. On the windward aide are me merous excellent bays, and on the northward is situate "Man-ol'-Wnr Bry," eapncious, safe, and adapted to the largest ships. At Courland Bay (on the N. side, six miles from Fort King George), which approaches the leeward extremity, the hills, covered with rich forests, are bolder and more abrupt than on the $S$. side, and consequently, the cultivation more seattered: the " Richmond," a large river, passes through the dis. trict. Extending from Courland to Sandy Point, on the S. side, are several estates on the low lands in grod cultivation, owing to the number of rivulets watering the shore. Sandy Point district (or as it may be termed Garden), forms the western extremity of the island, and is the only level land of any extent in Tobago. The castern distriet is chiefly composed of high mountains, clothed with noble trees, nnd but thinly cultivated.

Man of War, Courland, Sandy loint and King Bays, are adapted to the largest sized sinjs ; Tyrrells, Bloody, Mangrove, Englishman's, and Castara's Bays, have good anchorage for vessels up to 150 tons bur then; Halifax Bay admits vessels of 250 tons-ibut a shonl at the entrance requires a pilot.
IV. On a complete view of the island, as compared with the adjacent continent, the observer is impressed with the belief that it formed, at sume distart day, a hold promontory of main land, from which it has been violently disscvered. There is, in fact a general physiognomical resemblance between Tobago and Trinidad, except that there are not scen those large blocks of hyaline quartz in the former that are found almost every where in the latter, on the summits of mountains as well as on the plains; the rounded pebbles found in the beds of rivers are generally of quartz or frcestone, some of hynline quartz, others of amphiobolic schistus, \&e. Neither sulphur nor corbonate of lime have been seen. The hill above Scarborough appears to be a hed of basalt and schistose rock, with a loose
s which descend from in a distinct manner ridge 1,800 feet high， the 32 that the lsiand inating sometimes in are deep and narrow， tal plains．The N．W， terminating in the N ． dark island of Little ：ks called St．Giles＇s． ains and low lands，the cing calm and magui－ if mounds of isolated for marsh or swainps tful vales everywhere catory and undulating ter，and forming with y picturespue scenery． rivulets and streans ing over the low lands ceasionally olstructed， a would prevent．
town，is situate on the aea shore，（at the base ends，with little un－ ort，the distance from Is of half a mile．On to the sea is gradual， roaching the town are ses．Fort Gcorge Hill， towards the W．）rises a conical shape，and ge，＂the chief inilitary windward side are mil－ he northward is situate s，safe，and adajited to d Bay（on the N．side， ge），which approaches 1s，covered with rich brupt than on the $S$ ． vation more scattered； passes through the dis． to Sandy Point，on the Iow lands in good cul－ frivulets watering the ；it may be termed Gar－ ty of the island，and is in Tobago．The east－ I of high mountains， it thinly cultivated． ndy Point and Kiug sized ainips ；Tyrrells， s，and Castara＇s Bays， up to 150 tons bur els of 250 tons－but a pilot．
c island，as compared observer is impressed t some distant day， from which it has is，in fact a general veen Tobago and Tri－ en those large blocks hat are found almost ummits of mountains inded pebbles found $y$ of quartz or free． hers of amphiobolic pr corbonate of lime Scarborough apprars se rock，with a loose
and heavy super－stratum．The soil is a rich dark｜rade blows all the year about the island．The island mould，and resembles（particularly in the E．part）being scen towards evening，the mariner cautious of that of its neighbourlug isle，with the advantage of approachlug，should stand under easy snil to the the vegetative earth being deeper on the bilis of southward，as the current sets to the N．W．；coming Tobago．
V．Though moist，hy heing impregnated with saline particles，Tohago is not unhealthy，particularly if proper attention were paid to preventing the exits of the mountain streams．The rainy season hegins in June，and gradually becomes heavy until Septemher， the violence of the rains then abate，showers con－ tinuing，at intervals，to the ead of December or begin－ ning of January，when the season termed＂croptime＂ legins．The island is out of the usual range of hur－ ricanes－the winds are S．E．and S．during the greater part of the year；in December and January they pre－ vail from the N ．－often very strong and cold．So deeidedly salubrions are the high lands of the interior， that Dr．Ldoyd the principal inedical officer，re；orted to Sir Janes M＇Gregor，in 1827，＇＇that on sume of the estates in the interior，no European resident had been binried for upwards of ten years．＂
The currents round the island are very uncertain， especially in the Trinidad chanuel．At new and full meon the rise of the tide is four feet．The N．E．decrease，of the slave population from 1819 to 1832.

The Slave Population，according to a Parliamentary Return，was in numbers， from 1819 to $1 \times 32$ ，as follows：－

| 器 | No．of Slaves Registered． |  |  | Increase by Birth． |  | Decrease by Death． |  | Decrease by Manumission． |  |

VII. Churrhes, Licings, \&e. of Toharo in 18:36.-2 Churches, I at Scarhorough, in the parish of St. John, having a congregation generally of 300 persons. 1 at St. Path; valued $\mathbf{4 0 0}$ per annum; having ac. contmodation for about 500 persons.-There are also 2 chapels; 1 at Plymouth, which will contain about 400 persons; of whom 300 generally attend: 1 at Golltsbro; which will contain about 300 persons, 200 generally attend. There are likewise 5 dissenting places of worship. Note.-The eongregation varies much at Scarborough, and still more in the country, aceording to the state of the road and the weather, and the number of ehildren to be baptized; it Scarborough, in absence of the rector, tivine service is performed only twice in the month; at Plymouth ouce, at Goldshorough once; in fise weather the chapel at Plymouth is insufficient for the congregation. [B. B.]

There are besides the ahove, four private schools, on connected with the Moravians In Sandypoint; on with the Wesleyans II Scarboro'; another with th Wesleyans at Mr. St. Gcorge's, and a school at Mr Pelier's estate, open to all, supported at the experic of the estate.

At l'lymouth and Goldsbro', and Sandy Point the scholars are generally apprentleed hbourers o Sundays, and the chideren of apprenticed labourers on week days, abont 1.5 nuprenticed, belonging to Golda (irove listate attend the school there in the evenime evening school is not yet kept at l'lymouth and Golds: bru', for want of lamps ; the number at ['ymout varies from 20 to $1: 20$ on Sundays. The estates in the neighbourhood have contributed f'40 to the en largement of Plymouth school. [B. B. for 18.36.]

| 1837 |  |  |  |

This return of produce is derived from the Exports as the Colonists refused to make any return to the Colonial Office. There are 72 sugar estates worked by steam, waitr, and wind mills.
Pricrs of Produce and Merchandize during 1836, in Tobago.-Horned Cattle 13l. each; Horses, 30l.;

Sheep, $1 l .4 \mathrm{~s}$; Goata, 1 ll .; Swine, 1 ll . 5 s .; Milk, 8d. per quart ; Fresh Butter, 4s. per pound; Salt Butter, 2s. 6d.; Cheese, 1s. do.; Wheat Bread, 4d.do.; Beef, 9d. do. ; Mutton, 1s. do.; Pork, 8d. do.; Rice, 11. 12s. per ewt. ; Coffee, 1s. per pound; Tea, 7s. do.; Sugar, 1l. 5s. per cwt; Salt, 6s. per buahel ; Wine, 501 . per pipe; Brandy, 8s. per galion ; Beer, $6 l$. per hdd.; Tohaceo, 2l. 8s. per ewt.

Wages for Labour.-Domestics, 1/. 12s. per month ; Predin, 1s. $4 d$. per day; Trades, 4s. per day. [B. B.] There is no paper currency, and but little coin in the island.
Almost every kind of plant that grows on the Antilles, or on Trinidad, flourishes at Tobago. The orange, lemon, and guava, pomegranate, fig, and grape are in perfection; the two latter yield fruit twice a year, (if proned three weeks after the fruit has been gathered) and all the culinary plants of E.urope arrive at perfection. The cinnamon and pimento (some say also the nutmeg) trees grow wild in different parts of the island-and the cotton of Tohago is of excellent quality.

## CHAPTER IV.-GRENADA

Section I. Grenada, the most aoutherly of the Antilles, is situated between the paraliels of 12.20 and 11.58 N . Latitude. and 61.20 aml 61.35 W . Long., nearly equi-distant from Tobngo ( 60 miles) and the nearest point of the continent of South America; its greatest len aih, N. and S. about 25 miles, (and at either extremity narrowing to a point)-in its greatest breadth 12 , in circumference 50 iniles, and containing about 80,000 acres.
II. Christopher Columbus, during his third voyage in 1498, discuvered Grenada, and found it fully occupied by a warlike rpie, (the Charibs) among whom the Spaniards never attempted to form a settlement, and who remained for a century after in peaceable possesssion of their native home. In 1650 the French Governor of Martinique, Do Pn, ,uet, collected 200 hardy adventurers, for the purpose of seizing on the island, which from the manly character of the natives, was considered an enterprize of difticulty and danger.
The natives received and entertained the French with the utmost kindness and cordiality, who pretended to open a treaty with the chicfs of the Charibs for the purchase of the country; "soms kuives and haichets, and a large quantity of'gluss beads, besides two bottles of brandy for the chief himself uere giren to the Charibs; and it was then asserted that the island was fairly ceded to the French nation, by the natives themselves, in lawful purchase I
Du Parquet thus established a colony in Grenada, built a fort for its protection, and left the government of the island to a kinsman, named Le Compte. Within eight months after this period we find a war of extermination carried on hy the French against the Charibs. Du Parquet, sent a reinforcement of 300 men from Martinique, witi crecers to extirpate the natives altogether; but Le Compte seens not to have wanted any incitement to acts of barbarity ; for Du Tertre admits that he had already proceeded to murder, withont mercy, every Cbarib that fell into bis hands-not sparing even the women and children.

The manner in whieh the unfortunate aborigines
were destroyed may be judged of by a circumstance which Father Du Tertre relates of one expedition. ' Forty of the Charaibes were massacred on the spot. About forty others, who nad escaped the sword, yan towards a precipice, from whence they cast themselves headlong into the sea, and miscrably perished. A beautifui girl, of twelve or thirteen years of age, who was taken alive, became the object of dispute between two of our officers, each of them claiming her as his prize; a third coming up put an end to the contest, by ahooting the girl through the head. The place from which these barbarians threw themselves into the sea, has been calied ever since le Morne de Sau. tenrs, (Leapers' Hill.) Our people, having lost but one man in the expedition, proceeded in the ne: $t$ place to set fire to the cottages, and root up the provisions of the savages-and having destroyed or taken away every thing belonging to them, returned in high spirits.' No wonder that the whole native population was soon extipated. Du Parquet sold the island to Count Cerillac for 30,000 crowns.

It may well be imagined that cultivation made but little progress. So late as 1700 the island contanind no more than 251 whites and 525 blacks, who were employed on three plantations of sugar and fifty-two of indigo.
After the peace of Utrecht, the government of France began to turn its attention towards her West India possessions. Grenada, however, for many years, partook less of its care than the rest. By a smuggling intercourse with the Dutch, the Grenadians changed their circumstances for the better-increased their numbers-and a great part of the country was settled. In 1762 Grenada and the Grenadines are said to have yielded antunlly, in flayed and muscovado sogar, a quantity equal to about 11,000 hogsheads of muscovado of fifteen cwt. each, and about 27,000 pounds of indigo.

Grenada aurrendered on capitulation in February, 1762, and, witt: ita dependencies, was finally cedel to Great Britain, by the definitive treaty of Paris, on the 10th of Februnry, $1763-\mathrm{St}$. Lucia being restored at

ion in February, finally ceded to of Paris, on the eing restored at
the same time to France. The chief stipulations in favour of the inhabitants, as well by the treaty as by the articles of capitulation, were these:-First, That as they would hecome, by their surrender, subjects of Great Britain, they should enjoy their properties and privileges, and pay taxes, in like manner as the rest of His Majesty's subjects of the other British Lecuard lslands. Secondly, With respect to religion, they were put on the same footing as the inhabitants of Canada-viz. liberty was given them to exercise it according to the rites of the Romish Church, as far as the lau's of Great Britain permitted. Thirdly, Such of the inhabitants of Grenada as chose to quit the island, should have liberty to do so, and eighteen months allowed them to dispose of their effects.

A Legislative assembly was granted by England, and the Grenadians resisted the impusition of the $4 \frac{1}{2}$ per cent. duties. The Crown, however, persisting in its claim, and the inhabitants in opposing it, issue was jo! red hetore the judges of the Court of King's Bench in England. The case was claborately argued in Westminster-hall four several times; and in Michaelmas Term, 1774, Lord Chief Justice Manstield pronounced judgment against the Crou'n. The consequence was, that the duty in question was abolished not only in Grenada but also in Dominica, St. Vin. cent and Tobago.

On the 2nd. of July, 1797, a French armament, consisting of a lleet of twenty-five ships of the line, ten frigates and 5000 troops, under the conmand of the Count 1)'Estaing, appeared otr the harbour and town of St George: the whole force of the island was composed of 90 men of the 48th regiment, 300 militia of the island, and $t 50$ seamen from the merchant ships; and its fortifications consisted chicfly of an entrenchment, which had been bustily thrown up round the summit of the llospital-hill. This entrenehment the Count D'Estaing invested the next day, at the head of 3000 of his best forces, which he led up in three columns, and, atter a desperate conflict and the loss of 300 men carried the lines. Never did so small a body of men make a nobler defence against such inequality of numbers. The governor (Lord Macartney) and the remains of his little garrison immediately retired into the old fort at the month oi the harbour, which, however, was wholly untenable, being commanded by the Hospital-hill battery, the guns of which, having been most unfortunately left unspiked, were now turned against them. At day break the Freneh opened a battery of two twenty-four pounders against the walls of the old fort. In this situation, the governor and the inhubitants had no alternative but an unconditional surrender; and the Count d'Estaing heeame master of the isla.id.

Gremada and the Grenadines were restored to Great l3ritain, with all the other captured islands in the West Indies, (Tobago excepted) by the general pacification which took place in 1783. Iu 1795 an insurrection, fermented it was said by the French Revolutionists, broke out Mureh 1795, which was not finally terminated until July 1796 . During the continuance of the disturbance the greatest distress prevailed, and the most horrid murders were perpetrated by the infatuated rebels; wherever they appeared devastation followed them ; and from the direful etfects of their cruelty and rapine Grenada has never recovered the flourishing state which it had previously enjoyed.
List of Governors, Lieut.-Governors, \&cc. who have held the Government of Grenada, siace the cession of the Colony to Great Britain, in the year 1763 :-Brig.-

Gen. Robert Melville, Capt.-Gen. Commander-inChief in and over the southern Charibbee Islands of Grenala, Dominica, St. Vincent, and Tobago, 176.4; Ulysses Fitzmaurice, Sen. Lieut.-Governor of St. Vincent, 1768 ; Brig.-Gen. R. Melville, again, 1770 ; F. Corsar, Esq. President, 1771; U. Fitzmaurice, Lieut.-Gov. of St. Vincent, again, 1771 ; Brig.-Gen. W. Leybourne, Gov. S. C.Islands, 1771 ; F. Corsar, Esq. l'resident again, 1775; W. Young, Lieut.-Gov. Tobago, 1775; Sir G. (afterwards Lord) Macarthey, K. B. Gov. 1776 ; Lieut.-Gen. E. Matthew, Gov. $17 \times 4$; W. Lucas, Fs $\mathrm{w}_{\mathrm{j}}$. Pres. 1785 ; S. Williams, F.sq. Pres. 1787; J. Camphell, Esc. I'res. 1788 ; S. Williams, Esq. again Pres. 1789 to 1793 ; N. Home, Esq. Lient.Gov. 1793; K. M'Kenzie, Esq. Pres. 179."; S. Williams, Esq. again Pres. 179.; A. Ilousto:1, Visq. Lieu.Gov. 1796 ; Col. C. Green, Gov. 1797 ; S. Mitehell, Esq. Pres. 1798 ; Rev. S. Dent, l'res. 1801; G. V. Hobart, Esq. Lieut.-Gov. 1802; Rev. S. Hent, again Pres. 1802; Maj.-Gen. W. D. M'Lean Clephane, Lt.Gov. 1803; Rev. S. Dent, again Pres. 1803; A. C. Adye, Kisq. Pres. 180.1 ; Brig.-Gen. F. Maitland, Gov. 1805; J. Harvey, Esq. Pres. 1 807: A. C. Melye, Esil. again Pres. $1 \times 08$ to 1809 ; Major-Gen. F. Maitland, Gov. 1810 ; A. C. Allye, Ksq. again I res. 1810 to 1811; Col. G. R. Ainslic, Vice-Gov. 1812; J. Harvey, Esci. Pres. $1 \times 13$; Maj.-Gen. Sir C. Shipley, Gov. 1813 to 1815; G. Paterson, Esp. P'res. 1815; Maj. Gen. Phineas Riall, Gov. I816; A. Houstoun, Esq. Pres. 1817 to 1819; Maj.-Gen. I'. Riall, (resumed) Gov. 1821; G. Paterson, Esp. Pres. 1821 to 182:"; Sir J. Camplell, K.C.I3. Gov. 1826 to $1 \times 31$; A. 11oustoun, lisø. Pres. 1829; F. Palmer, Esf. I'res. 1831.

11I. The general aspect of Grenada is extremely lovely, but mountainous and pieturespue; the interior and N . W. coast consist of successive piles of conical hills or continuous ridges, romeded in their outline, and covered with vast forest trees and hrush. wood; from N. to S. the island is traversed by one eontinued though irregular range, rising in some places to a very considerable elevation, often to 3,000 fert above the level of the sea, but everywhere accessible. From this chain, but particularly from one very re.markable and magniticent spot in the centre of the island, N. E. of St. George'a called the Gramd Etınes, numerous small rivers and streamlets have their souree irrigating the country in every direction. One of the most prominent features in this wild romantic district is Mount St. Catherine (Morne Miehel) which, clothed with a splendid vegetation, towers to an altitude of 3,200 fect above the ocean level. Several mountain ridges extent from the great chain towards the windward or S. E. side, forming rich und picturesque vallies, but nearly the whole of the windward coast from the S. termination of the range of mountains at loint Callevigny, about five miles from St. George, till it reaches the leeward boundary, loses the rugged und precipitous features and deep bold shore (as seen on the leeward side), and consists of a level alluvial plain with nmmerous cornl reefs.

The rivers, as before observed, are numerous, but not large; the principal are those of Great Bucolet, Iuguisue, and Antoine on the windward, und St. John's and Beau Scjour, on the leeward. Several hot chalybeate and suphurous springs exist, the former heing the most numerous; one of these, at Anmandale in St. George's parish, is very renarkable for its heat and strong metallic imprecration; the mercury rises to 86 , and sinee the earthquahe of 1825 , both the temperature and impregnation have been very sensibly increased. A hot siring in St. Audrew's
parish emits considerable quantities of earbonic acid gas, possessing analogous qualities to the famous grotto del cane: It contains iron and lime, and yossesses a strong petrifactive quality. Some of the warm sulphurous springs in the hilly parishes of St. Mark and St. John's are hot enough to boil an egg. Near the centre of the island, at an elevation of 1,740 feet, amidst the mountain seenery, is situate the Grand Etang, an almost perfectly circular fresh water lake, two mile and a half in circumference, and fourteen feet deep, with a hottom composed of a superstratum of soft mud, arising from decayed vegetable suhstances, (especially Loti, which grow in great profusion around the margin, over a light cold argillaceous bed). Around this singular lake is a superb sylvan amphitheatre of mountains, clothed in all the verdant grandeur of a tropical forest. Another lake (Antoine) of nearly similar size, (covering sixty Einglish acres), and form, is situated on the E. coast only half a mile from the sea, and but 43 feet above its level, It is about 50 feet in lepth, having no commomication with the sea, constantly increasing towards the eentre, in the shape of an inverted hollow cone, and inereasing in size for the last sisty years: from these circumstances, and the formation of roeks, and the quantity of scoria found near its brink, there is every reason to suppose it the crater of an exhausted volcano. The inhabitants state that there are subterraneous communications between this lake and different parts of the island, and that during the great eruption of the Sontfricre in St. Vincent, in 1812, the waters of lake Antoine were not only in continual agitation and undulation, but that considerable quantities of lava and sulphir were thrown upon the surface of the water from beneath. On the S . shore, near Point Saline, there are extensive salt ponds.

This island is divided into six parishes or districts, Sts. Patrick, Andrew, John, Mrrk, Davidand George. The three first named are the least mountainous, and the most productive in sugar, cocoa and coffee. St. John and Mark are mountainous; and the two latter named rather less so. St. George contains the eapital of that name, and the fortitications and military posts of Richmond Hill, Fort King George, Horpital Ilill. and Cardigan lIeights; it is also the chief scaport, the residence of the Governor, and the station of the Courts of Judicature, \&e. The district is situate on the S. and W. part of the island embracing e6 spuare miles, and extending along the King's high-road 11 miles and 28 chains from the river Douce to the river Chemin. It has 28 sugar estates, 20 coffee settlements and eight coffec plantations. The population of the eapital and parish is about 10,000. St. Darid's lies towaris the S. E., and forms several points and some hays capable of receivilng small craft; it extends from the river Chemin to the river Crochu nine miles and 50 chains along the King's high road, and contains 12 sugne and severnl provision estates. Sl. Androv's, situate on the F. side, extend 3 from the river Ciochil to the river Antoine, 11 miles and 66 chains along the high-road, it comprises the town and port of Girenville formerly called la Baye, and contains 37 sugar plantations, and cight coffice and cocoa settlements.
Pafrick, situate on the N. F.., contuining 16 square miles, extends bine miles and $4 t$ chains along the high road, from, the river Antoine to the riser Duguesne. In this parish is the town of St. Patrick, formerly, and now known by the name of Sauteurs; it contains 26 of the richest sugar plantutions in the island.. St, Mark, the smallest and least considerable
in the island, is situate on the N. W. extending four miles and 43 rhains along the high-road, from the river Duguesne to the river Marant, which separates it on the S. side, from the parish of St. John. St. John's, on the W, side, extends from the river Maran, to the river Donce, six miles and 36 chains; Charlotte town is situate in this parish, which is the next in magnitude and population to the town of St. George. It contains sixteen sugar estates, and cieven cocoa and coflee settlements. St Geurse, the capital, is situate within an amphitheath of hills. Were it not for the military works on Richmond LIill, which are seen nt a great distance, it would be difficult to ascertain from the sea where George Town and harbour are placed, but on approaching the base of the fortitied hills an opening is discerned into a spacious and excellent harbour The houses are well and tastefully built of stone or briek, with sashed windows and tiled roofs, with the streets well ventilated, and a spacious handsome square in the centre, and the shops equal to many in London. The town is divided into upper and lower the latter or carenage, being principally oceupied with stores, ship-yards and wharfs. The strects leading from the one to the other are extromely rugged and steep. Constitution Hill, leading to the market-place, is at on angle not far removed from the perpendicular. The carenage of Grenada is one of the best that can be conceived both for the convenience and sceuring of shipping; it is completely lant-loched; there is a suf. ficient depth of water and good holding.ground; it is protected by the latteries on shore, nud it is exempt from hurricanes. The harbour is said to be capmble of contaming 1,000 ships, of 350 tons each secure from storms. The military posts and works under the controul of the Ordnance Department, consist of Fort (iporgr', and its citaciel, which protects the an chorace in in the Bay, defends the entrunce inso the larbour, and eommands the Town. Hospifnh HillA position to the $N$. of the town, fortified by three redoubts which defend the approashes from that direction and overlook fort St. (ieorge. Riehmond Hill, a chain of forts to the li. in rear of Fort Benren viz., fort Mathew, Fort Frederisk and its citadel, liort lucus, Fort Atolphus, mud Cariligan Buff, which de. fend the approaches to the town from the E, nud s, and also from the town to Richmond Hill.
The following pmblic work was commeneed in 18.36, Whater Works for supplying the Town of st, George the water rising in the glebe land commonly called the Priest's Spring, hrought in cast iron pipes to town, the shipping to be supplied at I'rince's Wharf, and the inhabitants by branch cast iron pipes, strcet wells, and fountain at the market-square, with a reservoir at the spring heads, and a reserve cistern near the long room. The estimuted expense is $4,600 \%$. eurrewey, or $1,8.101$. sterling. The amount of exnenditure ilp to the prescnt date is about 600/. sterling: The work is in an advaneed state, the main pipe laid, the shipping receiving supply, and wells supply the infabitants on the carenage side of the town, on 31st Decmber 18:36. [13. 13. p. 51.]

The population consists of 4,000 . of whom 320 are whites, and 2,000 free colonred. The dependencies of Grenada are, the island of Carriacou, and such of the small islands called Grenadines, as lay betwern it and Grenadn. Carrincou constitutes a parish, containing, arcording to estimate, 6,913 acres of land; it is abont 19 miles in circumference. In the town of lliltsborough is a chureh and rectory. The sland is. in general, fertile, and well-eultivated,

Cotton was formerly the chief article of cultiva-
tion, and Hight of tl sugar; atl good seaso is, howeve which mar cause of tl wood, whic out proper planting.

of whom $3 \div 0$ The dependen－ acou，and such as lay betwerll a a parish，con－ res of land；it It the town of The island is
de of cultiva
tion，and about $1,000,000$ liss anmually exported． Bight of the principal estates are now cultivated in sugar；and the average produce of that article in a good season，is upwarils of $2,000,000$ liss．The islund is，however，greatly exposed to suffir from droughts， which mars the best ifforts of industry．＇The chicl cause of this calamity is supposed to be the want of wood，which has gradually become exhansted，with－ out proper maans having been used to renew it by planting．

IV．The geology of the island，（according to Dr， Simpson in his ：eport to the Army Medical Board， is very complicated and irregular；the mountains，and different parts of the low lands，so far as they have been examined，consist of strata，or rather mingled portions of red and grey sumdstone，greywacke， irregular alternations of hornhlende，hard argillaceons schist，and a variety of gheiss．In various spots（as at Richmond Hill）an impertect species of granite，or nodules of the same，interbedded in a coarse loose red sandstone are frequently met with，and sometimes in argillaceous schist；a very coarse porphyry is atso sometimes seen ；immediately behund Richnond Hill on the estate 0 ：Mount Parnassus，limestone is found and a quarry was at one time worked for agricultural purposes．Basaltic rocks are met with on the N．W coast，and it is snid magnesin limestone also．At Point Salines（the extremity of the ishand）fuller＇s earth，of the very finest quality，is procurable in abundence；and at la forfune，in the parish of st l＇atrick，momerous specimens of the naturat maternet sulphur in its native state，but not crystallised，is alnost everywhere met with．Ja line，it may be said that the great mass of mommtans consist of sandstone greywneke，hornblende，antargillaceous schist，bat the stratifieation is so diversified，and the face of the country so rugged od abropt，as to hid deliance to any regular definition．In one place they are hori－ zontal，in another vertical，and in almost all they are suddenly and abruptly intersected by each otharim－ap－ paring as if they had been soparated and ngain min－ ghed together by some great ennvision of nature One remarkahle chitf on the river St．John，about one mile and a hadf from st．George＇s presents s curnous arrangement，hich Dr．Simpson is in clined to ascribe to voleanic origin：immediately under the soil is a stratum of pudding－stone－to that sucreeds obe of iron pyites，（exhibiting regular prisms），then one of alluvial formation，and lastly one of brown sandstone；in some of the less cle－ vated sitnations，the strata are extromely thin，mu merons，and more regular；in one clitf near（iovern－ ment House，（not more than es liet high，）are seen rumbing from s．E．．to N．W．，at a very obtuse ingle with the horizon，at lenst 60 distinct strata of white， grey，and brown sandstone，alternatiog with loose sand und gravel，and wemr she surface mixed with athevial soil．The bed of the sen on the s．W． point of the island is composed of phosplate of lime or a species of coralline，but its eflects are not ob－ servable on the surface of the water．No shells are found in any of these formations；but the red sand． stone of Ciram $\$ /$ al and Callevigny，in the parish of St．George（which is much used for buidding），is
ickly studde：with beantiful chrystals of emrburet of iron ；and in the Callevigny sandstone vegetnble remains，such as the leaves nad statis of trees，we not uncommon．Neither the sandstune，nor the very in－ perfect species of granite found elliervesee with acids． The soil varies with the extermal features of the com． try ；in the low lands，consisting of rich black mould
on a substratum of light－coloured clay，while in the high and contral situations the soil is of a dingy red or brick colour．

V．Locality，as may be supposed，intluences mate rially the temperature and bealth of Grenada； 8.2 $F$ ．may be considered the medium heat throughout the year in the low country；but in the high lands the mercury，which at St．George，stands at 86，wil be 10 degrees lower at the Grand litang at the same moment．＇The quantity of ruin which falls is very considerable，and throurhout the year showers are frequent：hurricanes are comparatively mild and un－ frefucut，but earthifuakes，or shocks，are sometimes felt．The climate is much improved in common with the whole of the West Indies of hate years．

Note．－The apparent decrease whieh occurs in the Slave Population Return of 1834，contrasted with that ol 1833 ，is attributed to the children under six years of age，who，under the provisions of the Abolition Aet，became emancipated on the lst August，1834．

The white population was，in 1829 ，town of St． 84 males， 3 females；St．Andrew， 94 males， 8 I ，males； Gcorge， 177 males， 107 females；parish of St．George，St．David＇s， 38 males， 11 females；Carriacou Isle， 90 maies， 28 females；St．John＇s， 38 males， 3450 males， 4 females．Total，white males， 596 ；females， females；St．Mark， 25 males， 10 females；St．l＇atrick，205．Coloured males， 1562 ；females，2，224．

The progressive decrease of the Slave Population was，from 1817 to 1831，as follows ：－

| $\begin{aligned} & \dot{9} \\ & \text { ís } \\ & \text { ís. } \end{aligned}$ |  | $\begin{aligned} & \dot{\ddot{0}} \\ & \underset{\sim}{x} \end{aligned}$ |  | $\begin{aligned} & \text { ず } \\ & \text { © } \end{aligned}$ | Increase by Birth． |  |  | Decrease by Death． |  |  | $\begin{aligned} & \text { Decrease by Manu- } \\ & \text { mission. } \end{aligned}$ |

900 retigion as gencrally as prossible, under all the disadvan. tages we are placed in, the mis. sionary makes regular romuds of pastoral visits to the several parishes in due order. I pon
1500 these visits the greater phit of the sabbath is oceupied in in. 1500, culcating religious instruction amongst the mumerous attentants 900 who eonsist almost wholly of ap. prenticed labourers. 'The heares
are taught to repeat the Ap. creed, the commandments, and other elementary prayers by heart, before a:id after the celebrution of the liturgy. Then immediately follows a sermon, which is delivered both in English and lirench, inculcating the moral preeepts of the gospel. Alter the scrmon, one hour is devoted to catechetieal teaching, in which the pastor is assisted by competent inembers of the congregation. Finally, the religious duties close by the performance of the baptisms and marriages.

The number of baptisms during the year was 37 t, the grear majority of persons baptized being the children of apprentires. The number of marsiages was 37 , of which 27 took place amongst the apprelle tices. With regard to marriages, the R.C. pastor
deems it right to ubserve that there is no doubt it wou! dend much to facilitate and encourage the in ercas ( $f$ marriages amongst the apprentices, if a law was passed empowering the clergy of the diflerem denominations to administer the marriage rite to the members of their congregations respectively.

Even though Roman catholic priests can now perform this rite legally, still it does not secure civil rights to the parties ; and Roman catholies are con sequently obliged to have their marriages solemniad both by the rectors of the established church mud thei own pastors, which operates as no small obstacle to the general reception of this religions rite, which is one of the best promoters and supporters of ull moral feeling. * There are eight private schools. There are also twelve estate schools, one other private school, and a Sunday school. + At present there are no day schools established in Carriacon.
$\ddagger$ 'There are here two private schools. There is regularly a sumday in the l'resbytery open to all classes, and Sunday schools would be opened in every parish il there were some means.
X. The people are ruled by a lieutenant-Governor, Council and House of Assembly, whose powers are similar to those described under Jamaien, \&e. The Council consists of 9 members, and the Assembly of 27. A fricholl, or life estate of 50 acres in the country, and of $50 l$. house rent in the capital, qualities for a representative. An estate of ten acres in lice, or for life, or a rent of $10 \%$. in any of the comentry towns; and a rent of $20 \%$. out of any frechold, or life estate in the capital, gives a vote in the election of the representatives. The law courts, besides those of Chancery, in which the Governor presides, are the Court of Grand Session ot the Peace, held twice a year, in which the person first named in the commission of the peace presides; the Court of Common Pleas, in which a professional judge, with a salary of 600l. presides; the Court of Exehequer, Iately fallen into disuse; the Court of Admiralty, and the Court of Error, composed of the gुovermor and council, for trying appeals. In oul eraes the common statue law of lingland is the rule of justice, unless when particular laws of the island interiere.

The Revenue of Grenada lor 1836 as regards internal taves and levies on property, was as follows:Fised laxes raised per money hill, vi\%. on 3750 illartached apprentices at $3 s .4 /==625 / . . ; 33 \mathrm{~s}$ suddlehorses and mules at $298.1 \mathrm{l} .=495 / . ; 1869 \mathrm{fil}$. reuts of houses at $2 t$ per cent, $=4216$. $20,369,805$ lhs. sugar, valued at $162,95 \times 1 . ; 733,0 \times 7$ gallons of 5um, $32,582 l . ; 234,183$ gallons of molasses, $79391 . ; 13,714$ lhs. of colfee, 4572 ; $215,567 \mathrm{lbs}$ of cocon, $2,395.0$; $43,840 \mathrm{lbs}$ of cotton, $731 l$. ; total, 207,0622. Taxed nt $2 \mid$ per cent. 46591 . Total out of $7,017 \%$. fixed revenue, 6,2001.

There are seven regiments of Militia, viz:-St. George's consisting of 21 Oficers and 389 NonCommissioned Officers and l'rivates. St. John's,
1.1 Officers and $10 x$ Non Com. Officers and Privates. St. Patrick, 14 Onticers and 70 Non Com. Oificers and l'rivates. ist. Andrews, $1:$ Ohicers and 9.1 Non Com. Onicers and Jrivates. | Dollar | 17 | - | - | 9 | -- | - | 12 |
| Bitt | - | - | - | - | 9 | - | 1 |

A Joe, value $3 l$. 12 s., has a $G$. stamped in the middie of the face side. A Joc, value 3 s . fi ., has a G . stamped in three places near the edge of the face slde. When a Joe is plugged, the initials of the workman's name are stamped upon the plug.

The British and Colonial currency, established by proclamat' n in May, 1797, consisting of British halfcrown, 6s. 3id.; shilling, 2s. ful.; sixpence, 1s. $3 d_{\text {d }}$; Colonial Moneta, marked IV, 2s. 6ul. ; VIII, 1s. 3 ll .; XVI. 7ht. No paper curreacy. The coin in circulation estimated at 50,000 .
XIV. In 1700, more than twenty years after the sovereignty had been vested in the crown of France, there were found on the whole island only 64 horses, 569 horned cattle, three plantations of sugar, and 52 of indigo. Ahout 14 years afterwards, however, an netive commercial intercourse was opened with the island of Martinique, cultivation was rapidly extended, and notwithstanding the interruption which these improvements sustained by the war in: 17.4, Grennda was found in 1753 to contain $2,29 \mathrm{~N}$ hrses or mules, 2,556 horned cattle, $3,27 \mathrm{x}$ shecp, 902 goats, 331 hogs, 83 sugar plantations, \&e. ; and in 1762 , when it surrendered to the British arms, it is said to have yielded aunually, together with its dependencies, the Grenadines, a quantity of clay and Muscovado sugar, equal to 11,000 hogsheats, of 15 cwt . each, and $27,000 \mathrm{lbs}$. of indigo.

Totat.

Average prices throughout the yen. Horned cattle, 81. ench; horses, 24l.; sheep, 11.10 s ; goats, 15 s, ; awine, 16.5 ; milk, du. per quart; lresh butter, 2s. Fill. per 113.; salt hutter, If. per firkin; cheese, Is, 36 . per Ib. ; whenten bread, Id.; heef, sd.; mutton, $9 l$.; pork, क.ll.; rice, $1 /$. 5 s . per 100 lbs ; coffee, 9 ll . per lb; ; tea, bis.: sugar, refined, sil.; salt, 2s, per loushel; wine, Maleirn, first quality, 55\%, per pipe; brandy, ess. per gallon; beer, 5l. 5s, per hagshead ; tubnceo, 26.10 s . per 100 lbs .

Commencing with the year rntecedent to the abnlition of slavery, we have the nurcunt of the chief staple commodity of the colony-sugar-as returned into the Treasurer's office, as follows, viz.-1א33. $24,551,632 \mathrm{llss}, 1434.22,577,543 \mathrm{lbs} .1835 .20$, 249,18411 3. 1336. 19,051,563 lbs. 1837. 18,811,371

Ths, This dimhution has heen gradual, and in five years amounts to $5,7 \cdot 13,26,7 \mathrm{lls}$., cqual to one-fourtls nearly of the crop made in $1 \times 33$. It must he admitted that the previous elfecta of the cane-吕y have had some influence in the falling off; but it must also be borne in mind that in 1833 and 143.t, the blast was at its height, and that it was gradhally dixappenring in 183. and 1836; yet the reduction continues, for the crop of the latter falls off $1,197,62 \mathrm{~s} \mathrm{lhs}$. The rom and molnsses, made in the same years, we prote from the saine souree, as follows, viz. - 1833. R14, (1)/6 gallons of rum, 491,058 gallons of molasses. 183.3 814,299 rum, 392,273 molanses. $1 \times 35$. 7.19,73. rum, 226,101 molasses. $1836.516,954 \mathrm{rum}, 160,178 \mathrm{mo}$. lasses. $1 \times 37$. 670,761 rum, 223,968 molasses. Ex. hihiting a difference on runs of upwards of one thiru, and on molnsses three-fourths, comparing the yems 1833 and 1837,-Grenada Fice I'ress.

## CHAPTER V.-ST, VINCENT.

Section 1. This most beautiful of the Caribbee 1slands, about $1 \times \frac{1}{2}$ miles loug, nad I! broad, containing $\mathrm{k} 1,2 \mathrm{2sf}$ neres, is situate in 13.10 .15 N . Lat. 60. 37. 57 . W. Long, nearly equidistant from Grenada and Barbadoes.
II. St. Vincent was discovered by Columbus, during his third voynge, on the 22d day of January, 1498 , [St. Vincent's day in the Spnnish calendsr] ; but it does not appear that he took any formal possession of it ; the native inhabitnants, the Caribs, being very numeroue and warlike. In 1672, this island, with Barbadors, St. Lucin, and Dominica, was included in one goverument, by King Charles 11., although no steps wore tahen to occupy St. Vincent, unless oceasional visits, both by English and French, for the purpose of olitaining wood and water, may be deemed such. Atout 1675, a ship from Guinen, with a cargo of slaves, was wreched, either ou this islund or on Bequia, and a number of the megroes escnped into the woods; these intermingled with the natives, nund hene,, $n$ it is supposed, origionted the black Caribs. In 1i19, the French sent over some settlers from Martinico, a few of whom succeceded in establishing themsedves in the leewned pint of the island. In 1723, Geurge 1. granted this island and St. Lucin to the Duke of Montague, who made a feeble attempt to take possession of it, but his expectition failed; and, by the treaty of Aix-la-Chapelle, in 1748, it was declared neutral, and the aacis at proprictors left in ammoIested possession. The French, however, continued in their settlensents until 1762, when it was taken by Gieneral Monkton nul Adnimal Rodncy; and in 1763, by the peace of Praris, the islard was ceded in perpetuity to Great Britain, without much considerntion for the native proprictors. The lands were directed to be sold to defray the expenses of the war, and 20,538 acres produced 162,5841 . sterling. In 1772, a war with the Caribs commencel, which was turminated by a treaty in 1773, when certain lands were alloted them. In 1779, the island was taken by a small body of troops from Martinico, who were joined by the Caribs, which circumstance, coupled with unfortumate political dillerences, cansed the surrender to be made without a struggle. The con-
querors, however, made no nlteration in :e government, probably contemplating only a temporary possession. In lise the dreadful hurricane occurred, which destroyed the church, and a great proportion of the buildings in the island, besides occasioning serious loss to the planters. St. Vincent was restored to Great Britain at the general peace in 17×3; at which time it contained 61 sugar estates, besidus other sinall plantations of cotton, colfee, and cocta. In 179i, the doctrines of liberty and equality, which prevailed in France, were disseminated in the West India Islands, through the infernal agency of Victor Hugues, whose emissaries excited the Caribs, and some of the French inhabitants, into an insurrection, whish contimed for upwards of two years. Many sanguinary contests took place, with various success, which camot be detailed within the limits of this work; hut, ultimately hy the judicions measures of Sir Raljh Abercrombie, and General Hmater, the French were subdued, and the Caribs removed til Runttan, an islnnd in the Bay of Honduras. The devastation ocensioned hy the enemy, cost the pro. prietors, at least one-thiril of the value of their properties; but uninterrupted tranquillity has since prevailed, nul the fine tract of land in Charlotte parish. called the Carib country, consisting of 5,000 acres, has been put into cultivation, and grently inereased the prosperity of the island.

In 1812, the island suffered from an eruption of the Souffriere voleanic momntain, which had been tranquil for nearly a century (from 1718 .) It was about 3,000 feet high, with a ernter half a mile in diameter, and 500 feet in depth; in the centre was a conical hill, 200 feet in diameter, and 300 in height, the lower half skirted with luxuriant vegetation, the apper with pure virgin sul, hur; various evergrechs, nad aromatic shruls, covered in exuberant fertility, the sides of the capncious crater, the interior of which presented a scene of Alpine seclusion and peacefulness that can scarcely be imngined. From the fissures of the cone, a thin white smoke exuded, ofe casiomully tiuged with a light hlue dame; at the base were two small lakes, the one sulphureous nnd alumi. mous, the other pure nad tasteless. At noon, on the

[Sce Col, lib. West Inilies, vol, ii.]

The following is a list of the Governors, Deut. Guvernors, sc. who have alministered the government of St. Viacent, since the cession of the colony to Great Britain, in 176:3:-13rigo-Gen. 12. Melville, Cept.-Gels, mid Gov.-in-Chief in and over the Southern Charibbec Islands of St. Vincent, Grenada, Dominica, and Tobago, 1763 ; Brig.-Gen. W. L. Leyhorne, Gov. of the Southern Charibhee Islands, as aloove, 1771 ; V. Morris, Esq. Gov. 1771; F. Lincoln, Pisf. Gov. 1783; J. Seton, lisq. Guv. $17 \times 7$; W. Bentiack, Es!. Gov. 1798; 1). Ottley, lisq. [res. 1799; 11. W. Isentinck, lisu. I'res. Is0'; Sir G. Beckwith. K. IJ. Gov. IR06; IR. l’aul, lisy. Pres, l807; Sir C. Mrishane. Kuight, Gov. 1812; 12. Panl, Fisf. I'res. 1816; Sir C. Brishane, K. C. 13. Gov. $1 \times 17$; Sir W. J. Struth, Kinght, l'res. Ise9; Right Hon. Sir 6. F'. Hill, liat. Giov. 18,31; Capt. George Tyler, K.IH.,IR.N., $1 \times 33$.
III. The mountains of St . Vincent are bold, sharp, and abrupt in their terminations, with deep intervening romantie glens, and bound by a lofty and rocky const. The connected chain of high monn. tains rims from N. to S., clatled with immense trees, breaking into subordinate masses tuwards the sea, of a less clevated deseription, and intersected by deep ravines in the interior, which gradually widen on the approach to the shore, and become vallies capable of cultivation, as they are generally well supplied with water; this feature is principally descriptive of the morth-western side of the island. The telicious Valley af liucament is five miles long and one wide, entirely open to the sea, with lofty mountains at the upper part and sides-and throughout the vale a chear and rapid river. On the N. E. the surface is more level and less broken, and there is a large tract of land at the buse of the Souffirere mountain, gradually declining towards the sen, which forms an extensive plain of upwards of 6,000 acres, and is the most productive land in the colony. The soil in the vallies is a rich tenacious loan, and occasionally a the black monld; on the ligher regions it assumes a more suidy character, and is less fertile; the lands adjoining the Soufficere are also clay at the bottom, but the surface having heen covertd with the sand ejected by the voleano, in 1812, it presents the feature of a loose porous sujerficies. The character of this island, Mr. Shephard thinks, is decidedly volcanic, traces of strata which have undergone the action of fire, are visible everywhere, and huge masses of rock, dis. placed from their origimal situations, indicate the powerful ngency which alone could have etfected such a change; there is not a primitive ruck in the islath, an opinion which is supported by branches of trees and other substances, being frefiuently discovered in large masses of rock at considerable depths, which must at une time have heen in a state of fusion ; a remarkable instance is to be seen at the tunnel at Grand Sabic.

The famed hotanic garden, about a mile from King. ston, occupies 30 acres of ground, in the form of an oblong square, the lower part level, but soon becomiuge a gradual ascent until it terminates in a stecp hill, a bantiful monutans stream forming its northera boumdisy, near the upper part of the gadern, and in the rente stands the Governor's honse, commanding a
splendid view-immediately below, the capital of the island-in front of the deep blue sea, and the Grenadine ivle:- in the distance a magniticent vista, bounded on each side by a long and spaclous avenue of lufty forest trees.

The roads on the windward const are tolerably good for thirty miles, their track in general ls near to the sea-side, except in cases of high land, whell it is necessary to pass along the Indentations of the vallies. On the leeward coast, for a distance of 23 miles, they are much inlerior, the hills beng much higher, the circuity of the track is proportionally incrensed; the Intter are little frequented, the passage by sea in canoes being inore easy and commodious. The highways are kept in repair by the proprietors of the estates who have adjoining portions allotted them by an Act of the leegislature, of which they are required to ex. prod an estimated quantity of labour, and for which they are allowed a certain sum from the treasury, on a certifleate from the Way wardens of the parish, who are nominated by the Justices at the libhruary Sessions in cacls year.

The idhu! is divided into five parishes, St, George, Charlotte, St. Andrew, St. Mavisl, and St. Inatick Within the first, stanls the capital, Kingstown,which is situaterl in 13. N N. Lat, ©il. 17 W. Lante. near the S . W. extremity of the island, about a mile along the shore ut a deep und benutiful bay protected by a battery on the S., or Cane Garden lowint, and by Fort Charlotte on the N. W. which are the chief defences of the islund. The fort (distant one mile from Kingstown, in a direct line, and two miles by the eircuitonsness of the road), is situated on $n$ rock nhove the level of the sea, and well fortified, it contains barracks for 600 men, and has 3.4 pieces of artillery of ditlerent descriptions, besides several outworks, for the protection of detached buildings.

The ruad to Fort Charlutte is very steep-so much so, that in looking from the mess-ruom windows, the sea is seen perpendicularly below, with the Island of Becpuia and the Gremalines in the distance;-Old Woman's l'oint, furming the opposite horn of the Bay of Kingstown and Dorsetshire IIII, about two miles of gradual ascent to windward from the town of Kingston, which it overlooks with an imposing aspect. The garrison was furmerly stationed here, but latterly removed to the opposite promontory, as a more commanding site. Herkshire Hill, on which is placed Fort Charlatte, is a promontory or high projecting neck of land, overhanging the sen, and nearly perpendieular on three of its sides. It completely commanuls the Town and llay of Kingston, and can be casily separated from buth should it be necessary to cut ofl the intercourse.

The town, behind which the monntains gradually rise in a semi-circle, terminating at the greatest height in Mount St. Andrew, consists of three strects, intersected by six others. "here are about 300 of the larger sized houses, the lower stories of which are in general built with stone or brick, and the upper of wood, with shinghed roofs, while the close adjoining sugar plantations form (particularly when viewed from the harbour), a very beautiful prospect. The public buildings are substantial, but wot elegant. The chureh is a large heavy brick buidding, capable of containing 2,000 persons, it has an excelfontly toned organ, a splendid chandelier, and very handsome pulpit, and bishop's throne. The expenses of this buibl Ing, which was opened for disine service in $18: 0$ anmunted to upwards of $17,000 \mathrm{l}$. comeney of which Govemment contributed $i, 000 \mathrm{l}$, sterling, ont of the

purchase noney of the Carib lands. The old building was destroyed by the hurrricane in 1780 .

The Court house is built of stone, and contains two rooms on the upper story appropriated for the sittings of the Council and Assembly, with two Committeerooms ; below the Courts of Justice are held. Here also are the Public Offices of the Registrar and the Marshal ; this building stands in front of the Market Place, and is inclosed with an iron railing; behind it the Gaol, the Cage, and the Treadmill are placed. In the front, close to the sea-side, stand the MarketHouse, and the depôt for the Militia Arms. The Wesleyan Missionaries have a commodious wooden Chapel, and the Romanists have commenced a brick Church.

St. George's parish extends from Kingstown $\mathbf{N}$. to the river Jambou, and contains 9,337 acres of land in sugar estates; it has seven rivers capable of turning mills. The different ridges in this parish having bcen cleared of their wood by the earlier aettlers, the clouds are attracted by the more 1 fty mountains in the interior; and it has been deemed prudent to preserve the timber on an elevated situation, called the King's Hill, from future destruction, by an especial Act of the Legislature.

At three miles from Kingstown is the small town of Calliagua, consisting of 59 houses, and 400 inhabitants, its chief attraction is the commodious harbour, and very convenient beach for shipping produce. There is a singularly insulated rock on the northwestern side, 260 feet above the level of the sea, on the top of which, Fort Duvernette is constructed; it ascended by a staircase cut out of the solid stone. On Dorsetshire Hill there are barracks for troops, but in such a dilapidated state, as not to be habitable. Some distance above Calliagua, towards the interior is the Vigie, (or look out) a very commanding situation. The different ridges are here concentrated into one elevation with three conical hills, where the Caribs fixed their camp. Eastward is the very extensive vallcy of Maniaqua, which has only one singular cieft, or opening, with almost perpendicular sides, through which the river Jambou flows to the sea. Some persons have conjectured that this valley is an exhausted crater, which has been thus drained of ita waters; the position is too low to maintain this hypothesis, as the volcanic craters in all the Islands, are aituated on the most lofty mountains.

Charlotte Parish is bounded on the S. by Saint Georse's, and northerly by uncultivable lands, it contains 11,849 acres in cultivation, and that part of it called the Carib country, which was only partially settled in 1804, is the most productive in the island. The southern part consists of a portion of General Monckton's grant of 4000 acres, which he sold for $30,000 l$. sterling, and which was subsequently disposed of in lots by the speculatora. This parish is so well supplied with rivera, notwithstanding aeveral were absorbed at the time of the eruption of the Souffriere, that all the mills are worked by water ; and the estates are generally larger than in the other parishes. A tunnel 200 feet long was cut through Mount Young, in 1813, which greatly improved the means of commu. nication with the newly settled country: and a stupendous work was afterwards undertaken by the owner of the Grund Sable estate, in cutting another tunnel through the same mountain, lower down and nearer the aea, for the convenience of shipping the produce. The material to be perforated proved to be stone instead of terrass, as was expected-and 360 feet in leugth were accordingly blasted by
drilling in the solid rock, at an expense of about 5,000l. currency.
St. Andrew's Parish is the first on the leeward side adjoining the town, it contains 4,096 acres and the vallies heing narrower, the estates are amall and more compact, neither is it so well supplied with water, except in Bucament Valley, which is one of the most extensive and fertile in the island. In this parish is the small town of New Edinburgh, where the depot for the commissariat stores is crected.

St. Patrick is the next in order, on the western coast, containing 5,426 acres, with the two small towns of Layou and Barouallie; here the land becomes much more precipitous and difficult of cultivation, and the fertility decrease3.
The last is St. Davic's, containing 4,i98 acres, whose characteristic features are the same as the preceding; in Washilabe Valley, and also at the S. point near to the entrar ce of Chateaubelair Bay, are some fine specimensof basaltes; the vicinity of the Souffriere and other lofty mountains ensures the planters in this quarter plenty of rain, and the facilities of shipping produce, compared with the bold eastern coast, are very great, and reduce the expense and risk of an estate considerably.
IV. The island stands high in reputation as a healthy station; hills and vallies, wood and water in abundance, are so disposed as to contribute to its salubrity ; the hills being of a conical shape, there are no livid surfaces of uncultivated shrubs to harbour miasm, and be swept down occasionally on the inhabitants below with destructive effect. The vallies are not deep or filled with jungle and brushwood, impervious to the sun's rays, but the woods being composed of large trees, and growing from the base to the summit of the mountains, form an agreeable shade, cooling the breeze as it passes through them. Composed as St. Vincent is, with aloping surfaces, and gravelly subsoil, there is hardly any flat ground in the island, and the perpetually flowing streams from the mountains and hills, while they tend to temper the air, make the general scene ever verdant and cheerful. Hurricanes have heen severely felt in thia island. On the morning of the llth August, 1831, St. Vincent was visited by a severe gale of wind or hurricane, which did very great injury to the plantations on the N . and W. sides of the island, destroying the greater part of the sugar works, and other buildings in the beautiful vale of the Charaib country, to windward, as well as at Chateauhelair and other places in the leeward quarter. Nineteen vessels were driven on ahore in Kingston bay, of which the greater part were got off in a few weeks, and aeven others were totally wrecked in different parts of the government. The gale commenced in Kingstown from the N. shortly after daylight and went round to the N.W.; it then shifted to the S. W., and subsided ahout one o'clock, in the afternoons; but in other parts of the island it commenced much earlier, and its violence was much greater. The estimate of the losses, as taken by the Committces of the Legislature, amounted to 163,4201.
There are at the disposal of the Crown in St. Vincent, of land saleable and fit for immediate culture about 2,500 acres in the N. E. quarter; at the N. end about 500 ; at the N.W. 600 ; and in the intcrior of the parishes of St. Gcorge, St. Patrick, St. Andrew, and St. David, $500 ;-$ in all 4,100 , and as much more remotely situated and difficult of access.

V . The following complete metcorological table, thnugh given for Kingstown in St. Vincent, will enable the European reader to form a general idea of the climate of the Caribbee islands :-

The aborigines of the island were undoubtedly the yellow Caribs, probably emigrants from Guyana. When St. Vincent was visited by Europeans, two distinct races of men were discovered ; they were of different origins, and their appearances and manners plainly corresponded with those of different portions of the globe. One of these tribes had evidently descended from the aborigines of the island, those of the other tribe were evidently intruders, and the great difficulty consists in accounting fairly and fully for their introduction. It is supposed that about 1675 , a ship from Guinea carrying out negroes from that country forsale, foundered on the coast of Bequia, a small island near to St. Vincent, and that the slaves who escaped from the wreck were received by the inhabitants as brethren. But this was not all, the proprietors of the island gave their daughters in marriage to these strangers, and the race which sprang from this mixture were called Black Caribs, having preserved more of the primitive colour of their fathers, than the lighter hue of their mothers. The yellow Caribs are of a low stature, the black are tall and stout, and this doubly savage race speak with a degree of vehemence which seems like anger.
At length some difference arose between these two classes, of which the French in Martinico resolved to avail themselves, and as is usual to profit by the ruin of both parties ; but the smallness of the numbers sent against the Black Caribs, and the defection of the Yellow Caribs, who refused to supply such dangerous allies with any of the auccours which they had promised them to act against their rivals, together with the impossibility of coming up with enemies who kept themselves concealed in the woods, were circumstances which combined to disconcert this rash and violent enterprize; the Gallic invaders were thercfore forced to reimbark, after losing many valuable lives :-but the triumph of the Black Caribs did not prevent their suing for peace, they even subsequently invited the French to come and live with them, swearing sincere friendship: the proposal was accepted, and in the year 1719 many of the French
inhabitants of Martinico removed to St. Vincent. When the French came, they brought their slaves with them to clear and till the ground; the Black Caribs, shocked at the idea of resembling persons who are degraded by slavery, and fearing that in process of time their own colour, which betrayed their origin, might be made a pretence for enslaving them, took refuge in the thickest part of the woods, and in order to create and perpetuate a visible distinction between their race and the slaves brought into the island, and likewise in imitation of the practice of the Yellow Caribs, they compressed, so as to flatten, the foreheads of all their new born infants, and this was thereafter concluded as a token of their independence. The next generation thus became as it were, a new race, they gradually quitted the woods, erected huts, and formed little communities on the coast ; by degrees they claimed a portion of the territory possessed by the Caribs, and having learned the use of fire-arms, which they procured from the French traders, on being refused a friendly participation in the landed property, established themselves as a separate tribe, elected a chief, re-commenced hostilities against the Yellow Caribs, and by force brought their adversaries to terms of accommodation, by which it was agreed to divide equally the lands situated on the leeward coast. It happened, however, after this division, that the Black Caribs experienced a most mortifying disappointinent, for most of the new planters from Europe, and from the French settlements in the West Indies, landed and settled near the Yellow Caribs, where the coast is most accessible. This decided preference occasioned a new war, in which the Yellow Caribs were always defeated, and at length obliged to retire to the windward part of the island, some fled to the Continent, and some to Tobago, the few that remained lived scparately from the blacks, who became the sole masters of all the lands on the leeward shore, assumed the right of conquerors, and obliged the Europcan planters to re-purchase the lands, for which they had already paid the Yellow Caribs. A Frenchman having produccd to a Black Carib Chief a deed of
land that he had purchased of a Yellow Carib, was told he did not know what the paper contained, but pointing to hia own arrow, said if he did not give him the sum he demanded, he would set fire to, and burn down his house that very night. Shephard's St. Vincent.

While these differences were in progreas, and while the French was gradually gaining a footing in the island, George the first granted it to the Duke of Montague, who in 1723, sent ont a small armament to take possession, but the English on their arrival found the French influence under the appcarance of protection so predominant, and the determination of the natives to admit no Europeans to a permanent settlement there so fixed, that they were glad to abandon their alleged proprietorships; and when the Duke, at a subsequent period endeavoured to establish his claim before the Privy Council it was disallowed.
Notwithstanding the difficulties created by the Caribs,
the French prevailed by means of continual reinforcements of men and money, and superior skill in agriculture and commercial affairs; ao thatin less than 20 years, 8010 whites, and 3,000 black alaves, were employed in the cultivation of the commodities for exportation, which yielded a sum equal to $63,625 l$. aterling. The expedition which was sent against Martinico in 1762, under General Monckton and Admiral Rodney, subsequently captured St. Vincent, and a war between the Bricish and Caribs soon followed. The result of several severe contests was (as stated under the general history of the island) the final aubjugation of the Yellow and Black Carilss, and their deportation to the number of 5,080 from the island to Ruattan in Honduras Bay, after costing the colonists in expenses and losses $900,000 l$. sterling, and a considerable sacrifice of European life.

X. The Government of the Island, is in the Governor, Council and Assembly, the former is Chancellor, Ordinary and Vice Admiral. His duties are regulated by instructions from Her Majesty, which are said to have been originally framed in the time of Charles II. for the Island of Jamaica, and have been adopted for the other Islands; to these may be added His Majcsty's Proclamation of the 7th of October, 1763 , which may be called the foundation of the insular constitution, by this authority the general assemblies are summoned, and the powers of enacting laws, as near as may be to the laws of England, are given, the authority for erecting Courts of Judicature, with the liberty of appeal, is also recognised in this document, which was promulgated after the treaty of Paris.

The Council consists of twelve Members, five or six of whom are usually named in the Governor's Commission, and the remainder supplied by the recommendation of the Governor, or by mandamus ; five in number constitute a board, and when the original number is reduced to seven, the Governor has the power of nomination to supply the vacancies.
The council sit in two capacities, Privy and Legislative, in the former the Governor presides, in the latter the senior member, under the title of President, on whom also the temporary Government devolves on the absencc, or death of a Governor. Since the appoiniment of a Bishop, he has been sworn in exofficio a member in Council in all the Islands composing his diocese, and where the date of his appointment has preceded that of a Governor, he is also Ordinary.
The Assembly consist of nineteen members, three for each of the five parishes, two for the town of Kingstown, and the like number for the Grenadines; the qualification of Members for the Parishes and Islands, is 50 acres of land in cultivation, or producing an income of $300 l$. currency a year, and for the town, a house of the yearly value of 1001 .; the tities of the candidates to their property must appear to have been registered in the office twelve months, except in cases of wills, and conveyance of property executed in Great Britain. Electors must have a freehold of ten acres, or a house in Kingstown of twenty pounds yearly value, or of ten pounds elsewhere, registered in like manner. Elections take place under the authority of a writ issuing from the Governor and Council, on an application from the Speaker, to the Provost Marshal General, and the whole regulations, on this subject, ure prescribed by an Act of the Legislature, which passed in 1786; these three branches assimilate their proceedings as near as possible to those of Great Britain; their meetings are quarterly, and the Acts that are passed proclaimed by the Marshal, and enrolled in the Registrar's Officc. These Acts may be divided into three classes, the first temporary and purely colonial, which take effect immediately on their publication; the second, such as have a clause annexed suspending their operation until Her Majesty's pleasure be known; and the third, the permanent laws, which if not confirmed in two years from their enactment, are to be considered as disallowed. In strictness the Governor is not allowed to pass any law, repealing one which may have received the royal approbation, without a suspending clause ; but this in the cases of the old laws, has been frequently overlooked. The Attorney-General has a salary of 5002 . currency per annum, which is in part given to him for framing the bills, which may be required, but he is not obliged to introduce them to either house, and a considerable difficulty has fre-
quently occurred from the want of an accredited person, as the organ of Government, who might introduce the measures proposed by the crown through the Colonial Secretary to either house. At present the Governor communicntes hy Ictters with the Prcsident and Speaker, but no member is intrusted with the charge of carrying any bills through the different stages prescribed by the Legislature.
The supreme court for civil causes is called the Court of Queen's Bench and Common Pleas, where the Chief Justice presides; his salary is 2,000l. cur rency. There are three other Assistant Justices, who are not professional persons, and act without any salary. This court holds its sittings for the trial of causes once in every month, from March to August, when executions for debt can be obtained in about ten weeks, from the entering day. The proceedings are regulated by a Court Act. The Court of Sessions for the trial of criminal offences is held twice a year The Chief Justice is President, and the Members of Council and Judges sit according to seniority. The Court of Error for appeals from the Queen's Bench and Common Pleas, is composed of the Governor and Council. The Governor is also sole Chancellor, and from these two last Courts an appeal lies to her Majesty in Council.
The Registration of real property is requisite, and the deeds of conveyance must be acknowledged either personally, or by attorney, before the Registrar. The Provost Marshal General executes an office corres. ponding to that of Sheriff, and inqueats are regularly held by the Coroner in all necessary cases.

The commerce of the Island is regulated by the officers of Her Majesty's Customs; a Collector, Comp. troller, and three Waiters constitute the establishment; the regulations of trade have been much sim. plified, and amended of late years, by the repeal of several hundred Acts, and consolidating their provisions under six or eight distinct heads. The fees on shipping are now abolished, and the salaries of the officers are defrayed from the dutiable articles imported from foreign ports.
The Militia consists of all the free inhabitants be. tween the ages of eighteen and fifty-five, as follows: Southern Regiment-1 Colonel; 1 Lieut.-Colonel 1 Major; 8 Captains; 11 Lieutenants ; 5 Ensigns; 1 Adjutant; 1 Quarter Master; 1 Surgeon ; 8 Staff Sergeants; 28 Sergeants; 7 Drummers; 479 Rank and File. Northern Regiment-1 Colonel; 1 Major; 4 Captains; 3 Lieutenants; 3 Ensigns; 1 Adjutant; 1 Quarter Master; 1 Staff Sergeant; 6 Sergeants; 162 Rank and File. Queen's Company-1 Major; 2 Captains; 2 Lieutenants; 2 Ensigns; 1 Adjutant; 1 Quarter Master; 2 Surgeons; 3 Sergeants; 1 Drummer; 90 Rank and File. Bequia Company-1 Cap. tain; 1 Lieutenant; 1 Ensign; 1 Surgeon; 2 Sergeants; 1 Drummer; 34 Rank and File. Troop of Cavalry-1 Major; 1 Captain ; 1 Lieutenant; 1 Ensign; 1 Adjuteat; 1 Surgeon; 2 Drummers: 20 Rank and File. Total-2 Colonels; 1 Lieut.-Colonel; 4 Majors; 16 Captains; 18 Lieutenants; 12 Ensigns; 4 Adjutants; 3 Quarter Masters; 5 Surgeons; 9 StaffSergeants; 39 Sergeants; 11 Drummera; 785 Rank and File. Grand Total 909. These assemble for exercise once in every month, at the different stations in the island. The legislature has endeavoured to keep up an effective force of white persons by re quiring the plantera to keep one white person for every fifty alaves, under a penalty of 50 l . for each deficiency.

the protection of
the Island, since the peace has been reduced to one wing of a regiment, with $n$ few artillery men, during the war two regiments were the complement, which the Government undertook to furnish, in consideration of the assistance that was given by the Colony at different periots, towards builting the forts and barracks, and of maintaining the roads thereto at the public expense of the colony.
The Police is excellent, especially in the town of Kingstown ; it is regulated by three Town Wardens who are annunlly appointed, and a Chief Constahle, with very extensive powers; the tread-mill aflords an efficient mode of punishment, heretofore unknown in St. Vincent.
The dependencies within the Government of St. Vincent, are the islands of Bequia, 3,700 acres, with a very fine harbour, called Admiralty Bay; Union, 2,150 acres; Mustique, 1,203; nnd Canollan, 1,777 scres. There are also the lesser islands of Balliceanx and Battawia, Myera, Petit St. Vincent, Islet n Quatre, Isle of Wash, Church Island, Petit Nevis, Three Ra-
miers, Pillories, Savan, Petit Permula, Detit Canoman, Barharoux Island, or Pet it Curacoa, 'Two Tatlia Quays, Two Balcines, Two Catholies, Prune Island, Four Tobngo Quays, Imbrella Quay and l'etit Martinique. Thecultivation in all these islands is very mueh redueed, from the woods having been ent down, and the consequent decrease ol rain; the seas abound with tish; many whales make their appearance in Fehruary and March, and the nir is remarkably fine ard salubrious.
XI. The revenne of the island raised by an nnnual tax act, by which assessments oll all the staple commodities of the island are made, and a proportionate per centage on the incomes of merchants and other persons, which a poll tax on unattached slaves; Commissioners to carry the act into execution, are named for each parish, and the returns arc directed to be given in to the Trensurer in January, from whence the rates are ealculated according to the estimnted expences of the island, and submitted to the As. sembly.

To Elsewhere ln 1824, i200l.

Statement of the quantity and value in sterling money of various articles of merchandize exported from the colony of St. Vincent during the year 1834. Arrow root, $62,160 \mathrm{lbs}$. value $3,014 \mathrm{t}$. ; cocoa, colonial, 5,460 lbs., 1171 .; copper, old, $7,717 \mathrm{lbs} ., 1871 . ;$ cotton wool, colonial, $102,000 \mathrm{lbs}$., $1,868 \mathrm{l}$.; fruit, value 31 l .; hides, number $171,106 l$. ; molasses, 382,880 gallons, $28,023 l$.; spirits, rum, 278,785 gallons, $16,309 l$. ; spirits, shrub, 475 gallons, $43 l$. ; succades, value $274 l$.; sugar, colonial, $24,661,168 \mathrm{lbs}$. $256,806 l$.; tortoiseshell, $12 \mathrm{lbs} ., 12 l$. ; wine, $263 \mathrm{gal}-$ lons, 179l.; wood, value 72l.; miscellaneous articles, 210l. Total, 307,251l.

In 1834, the value of the imports was 384,387 l. stg. The value of the exports, in 1832, was $255,343 l$., of which sugar was $21,917,056 \mathrm{lbs}$., value $200,454 l$, ; rum, 369,877 gallons, value $26,698 l$.; molasses, 391,190 gallons, value $21,594 l$.

Xlll. Current value of coins in circulation within this government. Silver Coins.-Spanish dollar, 10s., half dollar, $5 \mathrm{~s} . ;$ Carolus, 2 s .; Pistareen, 1s. 6 d. .; Quarter Colonial coin, 4 dwts. 9 grains 2s. 6d.; English shilling, 3 dwts. 16 grains $2 s$. $3 \frac{1}{2}$.
Gold Coins.-Doubloon 17 dwts. 8 grs. 16 dol. $£ 800$ Half do. 8-16-8-400 Guinea 5-8-445ths 280 Sovereign 5-34-435ths $261 \frac{1}{2}$ Copper Coins.-English penny-picce and stampee, $2 \frac{1}{4} d$. each; ditto, halfjenny, $1 \frac{1}{8} d . ;$ dog, $1 \frac{1}{2} \mathrm{~d}$.

The gold coins in circulation are exclusively Spanish and Portuguesc, the Doubloon at the value of sixteen dollars with the aliquot parts in proportion; the Johannes pass by weight at 9 shillings the pennyweight; formerly this coin was the most common throughout the islands, each Colony mutilating their own by plugs and various marks, to prevent exportation ; from these practices the coin became so deteriorated, that in 1818 it was called in at a considerable loss, and Doubloons came into more general circulation. The silver coins are the dollar which passes at

10 shillings currency, and Colonial coins of one-fourth, one-eighth and one-sisteenth : the British silver oceasionally forms part of the commissariat issues, from which source nearly all the bullion of the country arises, but it is speedily collected by the merchants for remittances to Europe, and is thercfore of little benefit as a general circulating medium ; the English copper money, and Colonial coin, named Stampees and Black Dogs, complete the catalogue. The sterling value of the dollar being four shillings and four pence, gives 230l. 10-13ths, as the currency value of 100l. The exchange in 1836 was gencrally $235 l$. cur. ( 470 dollars ) $=100 l$. stg. There is no paper currency in the island, and the amount of coin in circulation is not ascertainable.
The following enumeration of the fruits, esculents, \&c. in season throughout the year will demonstrate the great variety of vegetable food which our West Indian islands afford :-
'January. - Sappadillos, pomegranates, papaws, sour-sops, plantains, okros, peppers, cocoa-nuts, pigeon or angola peas, swcet potatocs, yams, creole ditto, tanias, cotton. Fehruary.-Sappadillos, soursops, chicou. March.-Sappadillos, sour-sops, granadillos, custard apples, guavas, plantains, cerases, Ceylon ditto, sweet potatoes, yams. April.-Sappadillos, Java plumbs, mangoes, mamme-sapotas, pine-apples, Otaheite gooseberries, Jamaica plumbs, cerasees, Ceylon ditto, bread-fruit, silk cotton, galbaseeds for fences. May.-Sappadillos, mangoes, granadillos, water-Melons, cashews, pinc-apples, Otaheite gooseberrics, Jamaica plumbs, Ceylon cerasecs, silk cotton. June.-Mangoes, Java plumbs, Jamaica ditto, cashews, Ceylon ccrasecs, pigeon peas, (nearly out of season) cloves. July.-Mangoes, mamme-sapotas, granadillos, cashews, avocado pears, cerasees. Au-gust.-Mangoes, mamme-sapotas, avocado pears, hog plumbs. Scptember. Sugar-apples, sca-side grapes, granadillos, hog plumbs, pompions, portuguese yams, tanais. CHAPTER VI.-BARBADOES.

Secition I. The Island of Barbatoes is situate at the extremity of the great American Archipelngo in Lat. 13.5 N . Long. 59. 41. W. extending nhout $2: 2$ miles in length and 141 m breadth, with a surfuce of 106,470 acres.

Il The early discovery of Barbadoes is involved in obscurity; the island remained unknown and unnoticed lur a century atter the discoveries of Columbus, and the first indication of its existence in the charts of European navigators, was A.D. 1600 . It is said to have been first visited by the Portuguese, who, findiug it uninhabited, mad rude in appearance, named the isle Los Burbulos, or as some say m reference to the number of fig trees which from their spreading branches were likened to luxuriant beards. The original discoverers left some swine and plants on the isle and abantoned it. In 1605, an English ship, the thive, returning trom Guinea, accidentally touched at Barbadoes, landed a part of the crew on the spot, where the Hole Toun was afterwards built, erceted a cross, took possession of the island, and inseribed on several trees, 'James, King of' England, and of this island.' Finding no retreshments the crew was reimburhed, and the adventurers proceeded to St. Christopher, where an Englisin colony had recently becn formed. The island was then neglected for nearly 20 years, when some Dutch men-ot-war haviog visited it, reported favourably of its adaptation for cultivation. These particulars having reached Sir Wm. Conrteen, an enterprising London merchant, he endeavoured to effect a settlement on Barbadues. The beauty and fertility of the island became also much talked of in England in consectuence of a ship of Sir Wm. Courteen's having put in there, in stress of weather, and the mariners, in returning lome, expatiated on the advantayes of the place. The spirit of colonization was at this time exceedingly active in England, and the Earl of Marlborough (aiterwards Lord High 'I'reasurer), obtained from James I, a patent for the island to him and his heirs tor ever. Sir Wın. Courteen having obtained the sanction of the noble patentec, fitted out two large ships with men, arms, and ammunition, and every thing suited to the establishment of a new colony. One vessel only arrived at Barbadoes, and a town was commonced in February 1625, at the
spot where the Olire had tonched twenty years before, and named Jumes's (by some called Hole) town. In 1627, James Ilay, Earl of Carlisle, stimulated by the representations of 'Thos. Warner, who had been engaged in forming a settlement at St . Christopher applied to and olstained from Charles 1. (who had then newly ascended the throne), a grant of all the Caribbee islands, to be formed into a palatinate or proprictary government, under the name of Cariola. The Earl of Marlborough strenuously opposed this grant, as affecting his prior right to Barbadoes, and litigation commenced between the two noblemen, which was compromised on Lord Carlisle agrecing to settle on the Larl of Marlborough and his heirs for ever, an annuity of 300 l . in lieu of his claim. The Earl of Carlisle's patent passed the great scal the 2nd of June 1627, and the preamble of this singular charter runs as follows:-

- Whereas our well-beloved coubln and counceller, James Lord Hay, Baron of Sabley, Viscount Doncaster, Earl of Carlisle, endeavonring, with a laudable and pious design, of propagating the Christian Religion, and also of the enlargepropagatilge the critories of our dominlons hath humbly pellment of the ternitories of our dominhons hath humbly peti-

propince, or the greater part "f them therpunt" to be rutted, and in such form, nid when and as olten as he or they, in lifs or their discretion, whall think fit and hest. Amil these laws must ail inen, for the time being, that do live within the inmitg of the said provinee observe, whether they he bound to sea, or from thence returoing to Engiand, or any other of our dominlons, or any other place aijpolnted, upon such Imposition, penalties, imprisor anents, or restraint ; and if it behoveth, and the quality of the offenee requireth, either upon the body or death itself, to be exeented by the said James Earl of Carlise, and his heirs ; or by his or their de. puty, Judges, magistrates, officers, anal ministers, necording to the tenure and tulue metaning of these presents, in what rase soever, and with sich power as to him, the sald Janes Earl of Cartisle, or hifs heirs, stiall deem best. Allil to diso Eanse of ail offences or riots whntsoever, efther by sea or land, whether before juciginent receivel, or after rensitted, amd, whether before judigment received, or after rensitted,
treed, pardoned or forgiven. And to do and performall and treed, pardoned or forgiven. And to do and perform all nnd every thing or things; which, to the fulfiling of justlee, rontr, or manner of proceeding, in their tribumats may or doth helong or appertain, although express mention of them in thene presents bo not mate; yet we have granted fail power, by virthe of these presents, them to be mate ; whieis laws no absoltecly prociamed, hat by strenget of right suppuried, as they are granted, we wili enjoin, chargeann command, nil and every sibjuet anll liege peopice of us, our heirs and successors, as far as them they ibl concern, inviotably to keep and observe cader the pains therefor expressed; so ns, uotwithstanding, the uforrsatid thes be
 as connentrot and agreriabte as may be to the linces, statutes, customs mad rights, of our kimghom of E:ughund.'
A And beenuse in the govermment of no great a province uftentimes sadden oceasions do fall out, to which it ahnil be neelful to nppiy a rementy betore the free inhabitants of the said province can be called; and for that it alnait not aiways be needful, in such cases, that all the peopte be called together; we wilt and ordnin, and by these presents, for us, our heirs and suceessors, have granted to the sald James Eari of Carlisic, and bis heirs, that he by himself, or his magistrates and omicers, in that cnac lawfuliy prorerred, may make decrees and ordmmecs both de and profitable from time to time, that they may be esteemed, kept and observed, within the aaid provinec, as well for keeping the peace as for the better government of the people there fiving, to that they may be puniely known to all whom they do concern. Which ordianaces we will, within the sald provinees, inviolably to be kept, upon pain in them expreased; so that these jaws be agreeable to reason, and not repugnant nor against it, but, as far as may be, ngrec. gble to the laws and statutes of our kingiom of England; and ao thut those huss extend not to the hurt or discommodity of any persom or persons, pither to the binding, construiaing, burthening, or tuking auny, either their liberty, goods, or rhattets.'
-We also of our princely grace, for us, our heirs and successors, wifi siraightiy charge, make and ordain, that the ssid province be of our allegiance; and all and every aubject and liege people of us, our heirs, and suceessors, brought or to be bronght, nad their elimiren, whether then burn, or afterwards to be forn, become natives and suljects of us, our heirs and sucecssors, nul ot us free as thry who were born in Englumt, anil so their Mheritance withln our kingdom of England or other of our dominions, to seek, receive, take, holl, buy and possess, and use and enjoy them as their own; had to give. sell, allen and bequeath them at their pleasure : "nd ulso freely, quietly, and pertrenthly, to hane and possess all the liberties, frunchises and privileges of this kingdom und them tor enjoy as liege peopte of England, whether born or to be hom, without impediment, molestation, vexation, injury or troubie of us, war heirs and saccessors; any act or statute to the eontrary notwithstanding.'

Charles soon forgot that he had ever made this grant to Lord Carlisle, and in February 1628, being much pressed by the earl of Pembroke, the unfortunnte monarch made over Barbndocs to his Lord Cham. berlain, the Larl of l'embroke, in trust for Sir Wm. Courteen, who, really for his zealous energy, deserved to have had the island bestowed on him in the first instance. Scarcely had this grant been made when the Earl of Carlisle returned from a foreign embassy, and to appease his lordship's resentment at the breach of fiith eviaced towards him, the irresolute monarch revoked the charter or patent, granted to the Earl ol Pembroke, and restored the proprietary rights to his favourite, Carlisle. The proceedings just mentioned
ad the good effect of stimulating the Earl to improve the territory bestowed on him, he contracted with a company of Loudon merchants for n grant of 10,000 acres of land, on conlition of receiving from each settler forty pounds of cotton nonunlly, and the privllege of nombnting a governor, or chlef. Wolferstone, a native of Bermudn, was commissloned by the Earl of Carlisle as governor, with the power of Governor-Commander-in-Chief nad Captain, to do justice, decide controversies, keep his Majesty's peace, and punish offenders, necording to the laws of Liogland nud the nature of their crimes. Sixty-four settlers (each entitled on landing to 100 acres of land) arrived in Carlisle llay 35 th of July, 1628 , commenced the erection of woolen houses, threw a bridge ncross the river which interseeted the ground, nnd laid the foundation fur Bridgetown, the present capital. The Earl of Pembroke's men, who were settled on the leeward of the island, refinsed to obey the windward. or Carlisle Bay Settlers. Arms were ultimately had recourse to, the windward men triumphed, and while the latter were asserting their right of jurisdiction in Barbudoes, the Enarl of Carlisle had a new royal patent, made out in England, confirming in the most explicit and unequivocal manner the former grant. Sir Win. Tufton was appointed Governor-Commander-inChief, in Felbruary, 1629. A military lorce was sent out to keep the leeward men quiet. A council of twelve settlers, appointed to assist the Governor in holding a Courts General Sessions of the Peace, laws were enacted suitable to an infant settlement, and the cultivated or occupied parts of the isle divided into six parishes, viz. Christ Church, St. Michacl, St. James, St. Thomas, St. Peter, and St. Lucy.

In 1645 the island, under the prudent rule of Mr . Bell, was divided into four parishes, (George's, Philips,' John's, and Andrews, were ndiled to the before-mentioned) a church built in each, and an officiating minister appointed. A general assembly was instituted, composed of two deputies eleeted in each parish from the majority of freeholders. The island was divided into four circuits, in each of which a eourt of law was constituted - defensive fortifications erected around the isle-the militia constituted a formidable force of 10,000 infantry and 1000 cavalry -the total population of the island had increased to 150,000 persons of all colours and scxes, and the value of property was quadrupled in seven years. This prosperity was not owing to sugar culture, for Ligon who visited the island in $16-47$, says, that the plantation of the cane had only then recently begun ; but it would appear that Barbadoes carried on an unrestricted foreigu intercourse with Holland and other countries. The number of slaves in the island at this period is not on record, yet here, as elsewhere, the evils of the system were early folt, for in 164911 formidabic insurrection touk place at Barbadoes, and a general day was appointed for the massacre of all the white inhabitants. The plot was discovered by a negro, in gratitude to his master, the day before its contemplated execution, and twenty-eight of the leading negroes were gibbeted, according to the custom of the times.

In 1650, Lord Carlisle, (the son of the first patentce), hearing much of the wealth of the island, which he considered patrimonial property, and desirous of reaping some advantages from the same, executed a lense to Francis Lord Willoughby, of Parham, an active royalist officer, conveying to his Lordship all his right and title to the colony for 21 years, upon condition that the protits arising from
the proprietary right should be mutually shared betweell them. Charles II., (then in exile), deslrons of secaring the West Indies for his crown, appointed Lord Willoughty Governur and I,ieutenant-General of Harbadoes, and of all the Caribbee Islands; nud the Legislature of Harhadoes on his Loriship's arrival, passed an Act, neknowledging his Majesty's right to the severelgnty of the island, nul that of the Earl of Carlisle, derived from his Majesty, and trunsferred to I.oril Willoughby. Barbadoes, al ways distinguished for Its loyalty, exerted itself on this occasion, and equipped severnl ships of war, which compelled the neighbouring islands to submit to the nuthority of the crown, as emanating from the chief W. I. Government at llarbadoes. Cromwell, as it mny be suppused, did not quietly permit this reluge to his roynd opponent, and a formidable squadron, under the conmand of sir George Ayscue, containing a large body of troups, was dispatched for the purpose of reducing the refraetory colonists in obedlence to the Commonwealth, and with a vlew of erippling the power of Holland, with which Barbadoes and the other W. I. possessions carried on a lucrative traflic; the far-fimed navigntion laws were passed, by which the ships of any foreign nation were prohibited from trading with any of the English plantations, without a license from the Council of State.
The Barbadians for some time gallantly defented themselves against Cromwell, and it was not until the Parliamentary forces had laisl waste a large portion of the island, the defection of Col. Modiford, and that many had been slain on both sides, that the island was subdued by the Cromwellian power. Sir Ceorge Ayscue was appointed Governor, after the reduction in 1652 , and proceeded to subdue the other islands that had malntained their allegiance to the royal authority. On the restoration of Charles 11. , Lord Willoughby, who had been banished for life from the island, appointed Col. Humphry Walround, a faithful old royalist, superseding Col. Modiford, who proceeded to Jamaica, to be Deputy-Governor, and President of the Council of Barbadoes. Charles II. conferred the dignity of Knighthood on 13 gentlemen of Barbadoes, in testimony of their attachment to the royal cause.

Lord Willoughby, in 1662, as lessee of the Earl of Carlisle, renewed his claims on the island. Lord Kinnaird, the kinsman and heir of the Earl of Carlisle, brought forward demands on the settlers amounting to $60,000 \mathrm{l}$, and the heirs of the Earl of Marlborough, who were entitled to a perpetual annuity from the same quarter, claimed a large sum for arrears. To satisfy these claims, now urgently made, a large number of the Barbadians, (by Mr. kendal) agreed to lay a duty of $4 \frac{1}{2}$ per cent. on all native commodities, the growth and produce of Barbadoes, when exported from the island. This impost was estimated at $10,000 l$. a-year. Many Barbadians protested against the perpetual rent-charge of 10 per cent. on their plantations; but after being submitted to the decision of the Privy Council, it was finally agreed, that the $4 \frac{1}{3}$ per cent. fund should be applied towards providing a sufficient compensation to the Earl of Kinnaird, for surrendering his right to the Carlisle charter,-to provide for discharging the Earl of Marlborough's annuity-one moiety of the surplus to be paid to Lord Willoughby for the remainder of his lease, the other moiety to the Creditors of Lord Carlisle, until the expiration of Lord Willoughby's contract, when, after a salary of $1,200 l$. a-year for the future Governor of Barbadoes, the creditors of the Earl of Carlisle were to receive the
entire balnued, until their demands were llequidated. Inder these conditions (agreed to by all partles), the proprictary Government was dissolved, and the so. vercignty of llarbadoes annexed to the Ilritish crown. Some of the hombitants of Harbudows long protested ngainst the limposition of the if per cent. duties, but the rigorous nud prudent administration of lord Willoughby brought intermal peace to the island, while his lurdship extended the power of Britaluin the western hemisphere. Lord Willoughby was lost in a hurricane, nent Guadnloupe, while employed in rechucing severnl islands to subjection. Col. Chrls. topher Codrington became Deputy-Governor in 16ifis, and his administration was distingulshed by vigilance? and circumspection. In lifig, the windwned and leeward isles were formed into distinct governments, Guadalonpe heligg the line of demarcation, and the commerce of the leeward isles was given to sir W. Stapleton, while Lord Willoughby retalned that of 13nrhadoes and the windward islands, which he kept until 1673.

In 1722, on the mpointineut of Governor Worsley, a salary of 6,000l. sterling per nanum was fixed on his Excellemey, and provided for by a capitation tax of $2 s$. fot. on ench slave-and by a tax on lawyers, patentees, and public oflicers, \&c.-a hurthen which the colonists soon found themsclves unable to defray. The administration of Lord Howe (commencing in 1733), seems to lave been generally applnuded; under his auspices a free press was established in llarbadoes, and he died at his government in 1735, beloved by all who knew him. In 1780, Barbadoes was ravaged by a territic hurricane, which lasted for 48 hours, and devastated the island: such was the violence of the wind, that a 12 pound carronnade was blown from the pier-head to the wharf, a distance of 140 yards. Of 11 churches and two chapels only three were left standing ; and not more than 30 houses of the extensive capital of Bridge-town; the Mole-head, which cost the colonists $20,000 l$. was destroyed, and the castle, battery, forts, town-hall, prison and cells demolished; the loss of lives amounted to 3,000 , and of property to $1,018,928 l$.

The events which have since occurred do not require detail.

The following is a list of the rulers of Barbadoes since its establishment as a colony: 1625 , W. Deane, Gov.; 1628, C. Wolferstone, do.; 1629, J. Powell, do.; 1629, R. Wheatly, do.; 1629, Sir W. Tufton, do.; 1630, H. Hawley, do.; 1633, R. Peers, Dep.Gov.; 1636, Hawley, do.; 1638, W. Hawley, do. ; 1639, H. Hawley, Gov.; 1640 , Sir II. Hunks, du.; 1641, P. Bell, do. ; 1650, F. I.ord Willoughby, do.; 1651, Sir G. Ayscue, do.; 1652, D. Scarle, Dep.-Gov.; 1660, T. Modiford, Gov.; 1660, H. Walrond, Pr.; 1663 , Francis Lord Willoughby, Guv.; 166f, H. Willoughby, H. Hawley, Samuel Barwick, Joint Govs. ; 1667, William Lord Willoughby, Gov.; 1668, C. Coddrington, Dep.-Gov.; 1670, W. Lord Willoughby, Gov.; 1670, C. Coddrington, Dep.-Gov.; 1672, W. Lord Willoughby, Gov.; 1673, Sir P. Colleton, Bart., Dep.-Gov.; 1674, Sir J. Atkins, Gov.; 1680, Sir R. Dutton, do.; 1683, Sir J. Witham, Dep.-Gov.; 1684, Sir R. Dutton, Gov.; 1685 , E. Steed, Dep.-Gov.; 1690, J. Kendall, Gov.; 1694, F. Russell, do.; 1696, F. Bond, Pres.; 1698 , R. Grey, Gov.; 1702, J. Farmer, Pres.; 1703. Sir B. Granville, Gov.; 1706, W. Sharpe, Pres. ; 1707, M. Crowe, Gov.; 1710, G. Lillington, Pres.; 1711, R. I.owther, Gov. ; 1714, W. Sharpe, Pres.; 1715, IR. Lowther, Gov.; 1720, J. Frere, Pres.; 1720, S. Cox, do.; 1722, H. Worsley, Gov.; 1731, S. Bar-
wick, Pres.; Viscount Ho Ilon. R. Byn Sir T. Robins do. ; 1753,12 1766, s. Rou S. Rous, Pre J. Dotln, I're J. Dotln, I'r Frere, I'r.; 1 Pr.; 1794, G 1801, Pranc 1803, J. Ince

III．Barbndoes，although gencraily level，except in the N．E．quarter，called Scotland（which is about 1,100 fect above the sea）has a very beautiful appenr－ ance，owing to its extent of cultivation，and sloping fields or terraces．In some deep vallies there are the remains of the primitive foresta which formerly covered the whole island．The base of the island is calcareous rock，formed of madrepores，and other ma－ rine concretions，and is probably of volcanic origin， like the greater numher of surrounding isles．Bridge－ town the capital extends along the shores of the beautiful Bay of Carlisle for nearly two miles in length and half a mile broad，with about 20,000 houses． The handsome and spacious barracks of St．Ann＇s with their fine parade，are at the southern extremity of the town．The square，with Nelson＇s statue，is well laid out，and many of the houses are handsome． The Government－house，called Pilgrim，is about half a mile from Bridge－town．The fort of St．Anne， though small，is capable of making a good defence； it contains several excellent magazines stored with ammunition，and an armoury，with many thousand stand of arms in perfect order．The soil varies much； in some districts it is sandy and light，in others a rich black earth，and in several places spongy．Here and there is found a red clay of considerable depth， and the light whitish earth broken into a grey mould， or hardened into lumps resemble chalk，but actually consist of indurated argilla，by exposure to the weather．
IV．Owing to the flatness of the island，leaving it open to the sea－breeze，and its extensive cultivation， Barbadoes is peculiarly healthy；nnd the details given of the range of the thermometer，\＆c．，unter St． Vineent will，with some modifications，answer for Barbadoes．
The returns under the section on climate in Jamaica shew the mortality of the troops on that island；the following document，drawn up by Deputy Inspector－ General of Army Hospitals，Henry Marshall，Esq．，will also to some extent indicate the climate of Barbadoes and the Windward islands．
Strength of the British army serving in the Wind－ ward and Leeward islands，from 1796 till 1805，and from 1810 to 1828 inclusive，together with the annual centesimal ratio of mortality from 1796 till 1828 ， being a period of 33 years．

Xl .Th
The situation of Codrington College is one of the schools in England; all of them are fed during the most delightful that can possibly be conceived ; surrounded by hills on every side, possessing the superior advantages of the sea breeze, an unbounded view of the Atlantic, and refreshed by a clear stream of water, collected in front into a small lake. The students receive their board and education for 356 . per annum, and are examined and ordained by the bishop if intended for the church.

At the central school, about 160 white children are lay, and the major part are well clothed. The beneficial effects of this charity are already confessed on all hands; principles of sobricty and devotion are instilled into their minds, and habits of regularity and peaceful subordination are enforced. From this class of boys the master tradesmen, mechanics, overseers, and even managers, are now supplied. A girl's school has also been founded, under the auspices of the Bishop; they are both favourite institutions, and the

are fed during the othed. The beneready confessed on and devotion are ts of regularity and . From this class chanics, overseers, d. A girl's scheol e auspices of the stitutions, and the neither pains nor
expense in strengthening or maintaining them. There is also a large school for coloured children, with coloured managers, established under the Bishop's superintendence; and several more have been opened by the Bishop, at the Government expense;-every colour are admitted-the nnly conditions being cleanliness and constant attendance. Instruction is gratuitous.
IX. The government of the island is constituted in a manner similar to that already described under Jamaica; namely, a Governor, a Legislative Council, and a Representative Assemby. The Governor's legislative authority is entirely negative, he can only recommend subjects for consideration to the Assembly, and his concurrence is required before any bill can become law; each concurrence, however, not being valid beyond three years, unless sanetioned by the royal confirmation. In his executive capacity the Government is entitled to nominate, and of course remove the officers of militia; the right, however, is seldom exercised beyond the choice of Colonels, who nominate their Lieutenant-Colonels, Majors, and Captains, who in turn appoint their subalterns. The Governor, with the consent of the Council, has power to dissolve the General Assembly, and to issue writs for a new election; with the concurrence of five members he may suspend any member of Council, unless it be an extraordinary occasion requiring secrecy, when his power is absolute, subject to explanation at home. If there be less than seven Members of Council resident in the island, the Governor may fill up the number (to twelve,) pro tempore, for the dispatch of business. As Chancellor, his Excellency has the custody of the great seal, and presides in the Courts of Error and Equity, in which courts the Judges being Council, he only sits primus inter pares, his vote or opinion being of no greater consequence than that of any other member. As Orilinary he takes probate of all testamentary writings; in cases of litigation establishes or annuls the will; and in default of executors appointed by the testator. His Excellency issues letters of administration according to the rules of law. As Viee-Admiral he issues his warrant to the Judge of the Vice-Admiraliy Court to grant commissions to privateers. Barbadoes, St. Vincent, Grenada and Tobago, are consolidated into one general Government; and Antigua, Montserrat, St. Christopher, Nevis, Tortola and Dominica into another general Government ; the former called the Windward Island Government, and the latter the Leeward Island, LieutenantGovernors are oppointed to each; and Governor-inChief at Barbadoes and Antigua. The militia force is strong and well appointed; there are six regiments of several battalions each, together with a corps of life guards, and a numerous and brilliant staff. In 1666, Barbadoes had an effective military force of 20,000 infantry and 3,000 cavalry composed of the colonists.
$X$. The income is raised as in the other islands. The following was the Barbadoes' gross Revenue and Expenditure, in $£$ sterling from 1821 to 1830 :-

|  |  | Expenditure |  |  |
| :--- | :---: | :---: | :---: | :---: |

When sail is exquisitely mountainous the most lov luxuriant ca laid-out man

Years.
N.B.-It is to be regretted that the Barbadoes Blue Books, like those of Jamaica, afford by no means the satisfactory documents to statistical science that the importance of the subject demands.

Section I．This very beautiful island is in lat． 13.50 N ．，long． 60.58 W ．，about 32 miles in length， from N．to S．，and 12 broad，and contains 37,500 acres of land．

II．It was discovered on St．Lucia＇s Day，and first settled on by the English about 1635，since which period it has undergone various changes，being sometimes declared neutral，（as by the treaty of Aix－la－Chapelle，） next in the possession of the French，then captured or transferred to the British，and vice versa．By the treaty of Paris in 1763，St．Lucia was allotted to France ；and Dominica，St．Vincent，Grenada，and Tobago to England；during the American war，in 1779 ，it was taken by the British，but restored to the French by the peace of 1783 ，it was conquered at the commencement of the French revolutionary war in 1794，evacuated in 1795，and retaken in 1796；by the treaty of Amiens it was restored to France in 1801，and recaptured hy us in 1803．The detail of the hard fought battles for the acquisition of this isle would be out of place，it may suffice to state that the fortune of war，in 1803 finally left it an English colony，with a French population，manners，language， and feelings．
III．The first approach to this island，（which is divided longitudinally by a ridge of lofty hills，）from the $S$ ．is very remarkable．
Two rocks，called Sugarloaves，rise perpendicularly out of the sea，and shoot to a great height in parallel cones，which taper away towards the summit．These mountains，which are covered with evergreen foliage， stand on either side of the entrance into a small but deep and beautiful bay．Behind this，the mountains， which run N ．and S ．throughout the island，rise in the most fantastic shapes．

When sailing along the shore the variety of scenery is exquisitely beautiful；the back ground continues mountainous，but every three or four miles appear the most lovely little coves and bays，fringed with the luxuriant cane－fields，and enlivened by the ncatly laid－out mansions of the planters；while the fiotillas
of fishing and passage，or drogher boats，with their long light masts and latteen sails，add life and anima－ tion to the scene．On the west coast there is an excellent harbour，called Little Careenage with three careening places，one for large ships，and the others for frigates．It is accessible only to one vessel at a time，（the entrance defended by several batteries）but capable of holding thirty ships of the line．

The plains throughout the island are well watered， and the mountains clothed with fine timber．

Castries，the only town in the isle，is situate at the bottom of a long and winding bay of the same name．The fort is situate on the summit of Morne－ fortune，which is about two miles of exceeding steep road，or path，from Castries．

Pigeon Island is six miles distant from the harbou：－ of St．Lucia，and，in a military point of view，is of great importance to the colonies，being within a short distance of Martinique，and commanding a view of every ship that may enter or depart from that island； －it is moreover valuable for a very fine and extensive anchorage between it and the N．part of St．Lucia． The isle is about half a mile in length N．and S．and a quarter broad，the side towards the sea（W．）is a perpendicular cliff，from the ridge or erest of which there is a gradual descent to the opposite shore，and level ground enough to erect a barrack for 500 men． A barrack and hospital has been constructed on this healthy spot，and it is one of the most salubrious that can be expected in a tropical clime．St．Lucia is divided into Basseterre，the low or leeward territory， and Capisterre，the high or windward territory．The former is well cultivated and most populous；but the climate is unwholesome from the abundance of stag－ nant waters and morasses．The latter division is also unwholesome，but it becomes of course less so as the woods are cleared away．Indeed the health of all tropical countries will be found to be in proportion to their cultivation．

IV．In 1777 the island contained whites， 2,397 ； free coloured， 1,050 ；slaves， 10,752 ；total， $14,199$.

The Slave Population，according to a Parliamentary Return，was in numbers， from 1816 to 1831 ，as follows：－

VIII. The inhabitants have their affairs administered ances for Stationary, \&c. These expenses are paid by a Governor and Council, with French laws, where they are not adverse to the British.
St. Lucia Militia in 1836.-Northern Battalion: Regimental Officers-1 Lieutenant-Colonel; 1 Major ; 9 Captains; 10 1st. Lieutenants; 9 2nd. Lieutenants. Staff Officers-1 Pay-Master; 1 Sergeant-Major; 2 Assistant Surgeons; 1 Adjutant; 1 Quarter Master. Staff Sergeants-1 Sergeant Major; 1 Assistant Serjeant Major; 1 Quarter Master Sergeant; 22 Sergeants; 14 Buglers and Drummers; 494 Rank and File. Southern Batt.-Regimental Officers-l Lieu-tenant-Colonel; 2 Majors; 8 Captains; 8 1st. Lieutenants ; 8 2nd. Licutenants. Staff Officers-1 PayMaster; 1 Surgeon ; 1 Adjutant ; 1 Quarter Master ; 1 Sergeant-Major; 22 Sergeants; 16 Buglers and Drummers; 447 Rank and File.
The Expenditure of the Militia consists in the payment of contingencies ; viz:-Companics; Drummers; from a fund established in each Battalion; which is created by the payment of Fines on absentees from Parade; and the fees of Officers' Commissions. The Army, and accoutrements of Soldiers are furnished by Government. The Soldiers pay for their own clothing, and those that are unable to pay, the Colony provides for them.
The forces of the Alien Corps, which is composed of Martinique Refugees, consist of 1 Captain Commanding; 5 Lieutenauts; 15 Sergeants; and 369 Rank and File. This Corps is unarmed, it not being considered advisable to place arms in their hands; they clothe themselves, and are no expense to the Colony. (From B. B. for 1836, page 45.)
IX. The income is derived from custom duties, a capitation tax, licences, fines, stamp duties, \&c. The poll tax is 20 livres on all adults between the ages of 16 and 60 . Buglers and Fifers; Camp Colour; Adjutant Allow-

XI. Accounts are kept in pounds, shillings and pence; but the value of the circulating medium is thus stated :-12 deniers $=1$ sol ; 2 sols and six deniers = 1 dog; 6 dogs or 15 sols $=1$ bit ; 8 dogs, or 20 sols 1 livre; 9 livres $=1$ current dollar: 10 livres $=1$ round dollar; 20 livres $=$ one pound currency. There is no paper money in circulation.
The Weights in use are the French pound and quintal; the pound $=2$ marc (Paris) ; the mare $=$ 8 oz .; the oz. $=8$ gros $=$ the gros $=72$ grains; the quintal $=100$ French lbs.; the French lbs. $=17$ oz. 9 dr . English; quintal of 100 French lbs. $=109$ English.
The Measures are (land or square measure) ; the carre, containing 3 acres, 78 perches, 28 feet square (Paris measure) or 10,000 square paces; the acre $=$ 100 square perches, or 2,644 paces, 11 feet; the perch $=26$ paces, 5 feet, 72 inches square, or 9 sfuare toises; the square toise $=36$ square feet, or 2 paces, 11 feet, 72 inches square; the square pace $=12$ square feet, and 30 square inches; the square foot $=144$
square inches; the square inch $=144$ square lines, Loing measure: the toise $=6$ feet French; the foot $=12$ inches; the inch $=12$ lines; the French foot $=12$ and 2 -3rd inches British. Cloth measure : the aune or ell $=3$ feet 8 inches; and it is subdivided into one-half, one-third, one-fourth, and one-eighth; the ell $=1$ yard $10 \frac{1}{2}$ inches. Wine measure: gallon $=2$ pots ; 1 pot $=2$ pints (Paris measure), 1 pint $=2$ chopines; 1 chopine $=2$ roquils; 1 roquil $=2$ muces. Dry measure : the barrel $=44$ quarts, or 55 pots; the half barrel $=27$ pots; the quarter ditto $=13 \frac{3}{2}$ pots; the half quarter ditto $67-8$ th pots.
XII. The number of stock in the island is, horses 578 horned cattle, 2,239; sheep, 1,741; and goats, 594.
The quantity of agricultural produce in 1831 was, sugar, 5,561,815 hogsheads; coffee, 149,571 hogs. heads ; cocoa, 33,515 hogsheads; rum, 90,687 galls.; molasses, 224,700 gallons. The number of acres of land under each crop was-in sugar canes, 4,752; coffee, 696; cocoa, 316 ; provisions, 4,049 ; pasture, 4,685-total, 11,321; leaving uncultivated-acres, 26,134.

Prices of Produce and Merchandize in 1836.Horned cattle, 13l. each; horses, 25l.; sheep, 15 s. goats, 10 s ; swine, $1 l$. 10 s .; salt butter, $4 l .10 \mathrm{~s}$. per firkin; cheese, 10s.; beef, 6l. per barrel; mutton, 18 . per lb .; pork, $7 l$. per bnrrel ; rice, $1 l$. 5 s . per 100 lbs.; coffee, $4 l$. per ditto ; tca, $6 s$. per lb.; sugar, fill. per ditto; salt, $9 s$. per barrel; wine, $12 s$. per dozen bottles; tobacco, $3 l$. 10 s. per cwt.
Wages for Labour.-Domestic, 2s. per day ; predial, $2 s$. per ditto; trades, 3s. per ditto.

Sugar, 22 s

CHAPTER VIII．－DOMINICA．

Srction 1．The island of Dominica is situated in 15．25．N．，61．15．W．，about twenty－nine miles in length， and sixteen in breadth，and containiag 275 square miles，or 186,436 acres．
1I．Dominica was the first land seen by Columbus on his second voyage，after having been 20 days at sea from the Canaries：it was made on Sunday，the 3 rcl ． of November 1493，and so named by the great navi－ gator；but its right of occupancy was claimed by the three kingdoms，of England，France，and Spain．The right of possession remained undecided，and Dominica was considered a neutral island by the three crowas， till the year 1759，when，by conquest，it fell under the dominion of Great Britain；it was afterwards celled to England by the treaty of Paris，Vebruary 1763. On the cession of the island to the linglish，commis－ sioners were appointed under the great seal，and sent out there with anthority to sell am dispose of the laads by public sole，to English suijects in allotments ＇of not more than 100 acres of such land as was cleared；and not exceeding 3 co acres of woorls to any persons who shonld be the best bittler for the same．＇ These allotments were disposed of for the benefit of the crown，and were confirmed to the purchaser by grants，under the Great Seal of England，with con－ ditions in each grant，＇that every purchaser should pay down 20 per cent．of the whole purchase moncy， together with sixpence sterling per acre，for the expence of surveying the land；and that the remainder of the purchase money should be secured by bonds， to he paid by equal instalments，in the space of five years，next after the date of the grants．That each purchaser should keep on the lands，so by him pur－ chased，one white man，or two white women for every 100 acres of land，as it became cleared，for the purpose of cultivating the same．Or，in default thereof，of non－payment of the purchase money，the lands were to be forfeited to Ilis Majesty，his heirs，
and successors．＇The commisaioners were also cm－ powered to execute leases to the French inhabitants， of such lands as were found in their possession on the surrender of the island；which lands were again leased to those inlobitants，who were desirous of keeping them in possession，on consideration of thrir taking the oaths of allegiance to bis Britannic Ma－ jesty．
These leases were executed for a term not less than seven，some 14 years，and others for 40 years abso－ lute，renewable at the time limited for the expiration of the same．With conditions in every lease，＇That the possessor，his heirs，or assigns，should pay to his Majesty，his heirs，or successors，the sum of two shillings sterling per annum，for every acre of land of which the lease shonld consist．And that they should not sell or dispose of their lands without the consent and approbation of the Governor，or Commander in－ chief of that istand for the time being．＇The Com－ missioners were likewise empowered to make grants， under the Great Scal of Ints to poor settlers，to such English suhifets as should be deemed fit objects of his Majesty＇s bounty，in allotments of not more than 30 acres of land to any one person．With authority also，to the said commissioners，to reserve and keep such lands，in the most convenient parts of the island as they should think proper，for fortifications，and the use of llis Majesty＇s army and navy；together with a houndary of 50 fect from the sea shore，round the whole island；and reserving all mincs of gold and silver，which might thereafter be discovered there，for the use of his Majesty，his heirs，and suceessors．

By these measures 96,314 acres（halt the island，） were disposed of in lots of from 50 to 100 acres， which produced $312,090 l$ ．sterling．The prosperity of the island rapidly increased under a system of free trade；hut the happiness of the inhabitunts was inter－ rupted on the capture of the island，by a large French
forec，from Martinigue，under the Marquis de Bouille， in 1778，after a gallant resistance on the part of the 13 ritish colonists，by which they secured for them． selves highly honourable terms；these advantages were，however，frustrated by the tyranny and ra－ pacity of the new French Governor，the Marquis Duchilleau，whose memory is deservedly held in the deepest scorn．After five years，our colonista were rejoiced on the restoration of the islnnd to England at the pence of 1783．Wuring the war of 1805，a devns－ tating descerit was made on the Island of Dominica by a formidable French squadron；and although Rosenu，the capital was burned，the colony was pre－ served to Great Britain by the skill of Sir George Prevost，and the gallant behaviour of the colonists． The island has ever since remained under the domi－ nion of Grent Britain．
In 1802，the 8th W．1．（black）regiment mutinied took possession of the Cahrites，and from the lower fort opened a fire on H．M．S．Magnificent，then at anchor in Prince Rupert＇s bay．The marines were landed，joined the royal Scotch and 68th regiments， and，after two days skirmishing，the 8th W．I．was subdued with great loss．

III．Dominien is one of the volcanic isles of the West， with lofty rugged mountains，and fertile intervening valleys，watered ly about 30 fine rivers，and number－ less rivulets，springs，and waterfalls，which descend with great impetuosity from the hills，and，under the umbrageous canopy of lofty and magnificent forests， form the most romantic cascalles．The height of the elevations have been thus noted：－Morne Diablotin， or Terre Firme， 5,314 feet above the sea；Laroche， 4，150；Coulishoune，3，379；Outer Cabrite， 542 ； Inner ditto，430；Morne Crabier，485；Morne Bruce， 465 ；Daniole，329．The heights of the forts and hatterics are Scots＇Head， 231 feet；Melville＇s， 147 ； Magazine Bat．320；Hospital ditto， 440 ；Fort Young， 440 ；Fort Shirley，153；Barracks，at Douglas Bay， 126；Grand Savannah，170；Layon，160．About six miles from Roseau，almost in the centre of the island，and on the top of a very high mountain，sur－ rounded by other more lofty hills，is a large lake of fresh water，covering a space of several acres，and in some places unfathomable；it spreads into three dis－ tinct branches，and has a very extraordinary appear－ ance．Roseau，the capital，is situate in the parish of St．George，（about seven leagues from Prince Rupert＇s Bny），on a point of land on the S．W．side of the islandl，which point forms two bays－Woodbridges to the N．and Charlotteville to the S．＇The landscape behind the town is beautifully grand；indeed the whole prospect from the edge of Morne Bruce，a lofty table－rock occupied by the garrison，is one of the very finest in the West Indies．The valley runs up for many miles in a gently inclined plane between mountains of irregular heights and shapes，most of which are clothed up to their cloudy canopies with rich parterres of green coffee，which perfumes the whole atmosphere，even to some distance over the sea；the river rolls a deep and roaring stream down the middle of the vale，nnd is joined at the outlet of each side ravine by a mountain torrent，whilst at the top，where the rocks converge into an acute angle，a cascade falls trom the apex，in a long shect of silvery foam．Beneath，the town presents a very different appearance from what it does at sea；the streets are long and spacious，regularly paved，and intersecting each other at right angles；there is one large square， or promennde ground，and the shingled roofs of the houses，tinged with the intense blue of the heaven
above them，seem like the newest slates，and remind one of that clear and distinct look which the good towns of lirance have when viewed from an emi－ nence．

The roadstend of Roseau（it can scarcely be called a harhour）is very capacious and sufe，except in the hurricane months，（from the end of August to Octo－ ber），when the sca，from the southward，tumbles into the bay in a terrific manner，sometimes rising to an alarming height．On the last day of September， 1780，the sea suddenly rose to the height of 21 feet perpendicular above ita usual level，destroying several houses in front of the beach and wreeking many vessels．The fortifications of Rusenu，inmely Young＇s Fort，Melville＇s Battery，Bruce＇s Hill，and Fort De－ moulin，are very strong and commanting positions． Prince Rupert＇s Bay，on the N．W．of the island in St．John＇s parish，is three miles broad，one and a half deep，and safe and commodious enough for the whole British navy at all scasons：it is surrounded by two high mountains，called the Calrittes，the inner of which is about 500 ，and the other 600 feet in perpen－ dicular height，ioth out of the reach of any other elevated land．Fort Shirley lles betwen the two Cabrittes，with a rich plain of 100 acres in extent at its base，and in time of war the fortifications on these lheights might be rendered as strong as Gibral－ tar．The grand Savanna，nine miles from Prince Rupert＇s Bay，and twelve from Roscau，is a fine fertile elevated plain，upwards of a mile in extent，and at a good distance from the ueighbouring mountains， whose terraces jut out from their breasts：around whose declivities flourish the richest verdure，while murmuring cascades of babbling brooks，burst through the luxuriant vegetation，or roll along the hilly ave－ nues，surrounded by magnificent piles of rocks，some－ times black and bare，sometimes green，with countless traccries of lovely creepers，interspersed with gigantic ferns and lofty palms．
IV．Dominica，is volcanic ：the soil in some places is a light brown coloured mould，which appears to have been washed down from the mountains，mixed with decayed vegetable matter．In the level country， towards the sea coast，and in many districts of the interior，it is a fine，decp，black，mould，peculiarly adapted to the cultivation of the sugar cane，coffice， cocoa，and all other articles of tropical produce． The under stratum is a yellow，or brick clay，in some parts；in others，it is a stiff terrace，and frequently very stoney．Large quantitics of excellent frecstone have been quarried in the Savanna，and at one time it formed an article of export to Guadaloupe and elsewhere．
Several of the mountains of this island are conti－ nually burning with sulphur，of which they emit vast quantities．From these mountains issue various springs of mineral waters，（whose virtues are extolled for the cure of many disorders）which iu some places are hot enough to cook an egg in less time than boiling water．The sulphureous exhalations from these springs are very strong，often too intensely pe－ netrating for continued respiration，while the soil，or sulphur and sand，around them in the Souffrieres，is too hot for the feet，and scarcely firm enough to tread upon．Owing to the dense vegetation of the island， and the gencral apathy of $W$ ．I．planters for any thing but sugar and coffee，we know nothing further of the geology of Dominica．It is stated that gold and silver mines exist，and that the latter metal was at one time to be found in abundance．

The wet season commonly sets in about the end of August，and continues till about the beginning of January，but with frequent intervals of fine weather． The severity of the rniny season is usually in the months of September and October，when very heavy continual rain falls for days together；sometimes for two or three weeks．The island，indeed，is seldom without rain in some part or the other；and often， during a promising day，the traveller meets with such sudden and heavy showers，that almost in an instant wet him to the skin，in spite of either umbrella or great coat．When the rains are violent and of long continuance，they do great mischief in the island among the plantations，carrying away large tracts of land，with coffee，plantain trees，sugar canes，and ground provisions，which are all hurried into the sea． To the towns also they do great drmage，cnusing the rivers to overflow their banks，or breaking out in fresh places，sweeping off houses，or whatever else stands in the way of these destructive torrents．
Thunder and lightning is seldom so severe in Do－ minica as in many parts of the West Indies；neither are esrthquakes so frequent or so destructive．It has been asserted，that soon after the English first took possession of the island，it was split in several places by one of those awful convulsions of nature ；and in particular，a large chasm was made in a mountain
called Demoulins，so decp，that，although it was several times attempted，it never could be fathomed； the traces of this remarkable circumstnace lave， however，long since disappenred．

V1．Dominica，in 1692，contained 938 Cnribs，and 319 French occupled the part of the coast which had been abandoned by the natives，nud which they cal－ tivated by the aid of 23 free mulattos，and 338 slaves． At the peace of 1763 ，the isinnd contained 600 whites， and 2，000 blacks；in 1773，3，350 whites， 20,000 negroes；and，in 1788 ，the population consisted of 1,236 whites； 445 free negroes ；and 14,967 slaves． Total，16，648．In 1792，the negroes were－males， 6,438 ；lemales， 5,214 ；male nnd female children， 4,462 ；totnl， 16,244 ．In 1798，the number of slaves was 14,967 ．In 1805， 1,594 whites， 2,822 free co－ loured， 22,083 slaves．

The slave population since 1817 ．

X．There is a lieut．Governor，a Legislative Council $\mid$ This latter court was revivel and regulated by the law of eight，an Executive，a Comeil of 12，and a Repre－of Doininica，mumber 7．1，passed in 1817．It is a sentacive I，egislative Assembly of 20 Mcmbers ．The court of record，and the process and proceedings are general business is managed as in the other colonics．conformable to those of the court of common pleas． The militia in 1836 consisted of 10 Lieut．－Colonels： 3 Majors； 17 Captains； 21 Leutenants ；EEAsigns ； 1 Surgeon； 1 Quarter Master ； 5.1 Serjeants ； 13 Drum－ mers ； 864 Rank and File；＇lutal，1092．An excel－ lent hody of men．
The laws in force in the island are the common statute law of England，so far as is nuplicabie to eir－ cumstances；acts of parliament declared or manl－ festly intended to apply to the island，or to the colonies in general ；and the acts of the island house of assembly，when not repugnant to the laws of Great Britah and sanctioned by the crown．The courts of civil jurisdiction are those of chancery，common pleas， complaints，error，adiniralty，and the merchant court．

The eomplaint court is for the recovery of debts，up to 25l．The court of common pleas consists of a clicef and four other judges．The court of grand ses－ sions of the pence consists of the Lieut．－Governor （not befig commander－in－chief），the Members of Council，the Spellier，and all the Justices of the Peace who are Members of the House of Assembiy．The Chief Justice presides，and the other judges seldom interfere．The court sits twice yearly，Any three Justices of the Court（being Menthers of Council） may at any time take bail，as in the English Court of King＇s Bench．The preceding and the Court of Queen＇s Bench have alone criminal jurisdietion in the island．

XI．The revenue is raised generally as in the other West Indian colonies．

SII. Dominien is one of the hest watered of the Cariblee islands, und, with its rich soil, may be naturally expected to hase $n$ laxuriant vegetation. The woods athord a large supply of excollent timber, consisting of hocus-wood, bully-trec, mastic, cimmmon, rose-wood, yellow-sanders, bastaddmahognay, from wood, several species of cedar, mal various other sorts uselul for buiddug houses, vessels, mal conoes, -for furniture, for dyeing, and other needsary purposes. 'Ihe trees are of meommon height, and by fiar execed in loftiness the tallest timber ion liugham; their topes seem to touch the very elouds, which nipgen as if skimming swiftly ower the upper brameles. Many are of emormons gith: and the sects of ditlerent trees, being seattered by the wind, fall into the heart of the same plont, and thes beoome incorporated with the tree on which they are seeng growing. The cireumference of the body of the gam-tree is wenerally very grent, and its timber is, on that account, mule into canoes, by digging or lorning wat the inside, and shaping the low into form. The gam falls from the body nue branches of the tree in grent puantitios, in substance like white wax: it was lound very serviecuble to the phanters of that island, during the time it was in the possession of the French; the gom being used instemed of oil (which conld not then be had) to bum in lamps in boiling-houses when making sugar. 'The Romish priests of Dominien use it likewise in their consers nt funcrals, and other ceremmies of their ehured, on aceonnt of its delightfal aromatio smedl when burning. It is supposed to comain virtues which might he valuable in medicines, were they better khown.
The timber also of this thee, as well as that of severnl uthers in the woods, make good shinghes for covering houses, and staves for sugar und cothe consks. Several fine sloops and wehoners have likewise been buit here, and estermed for their strenth mad durability. Cabhage-trees are in great plonty, mod serviconbli, as their trunks, suwed or split, make good laths or rails for cuttle-pens, being very durnble. The branches and henves are used for thutehing of houses;
and the cabbage part of them is excellent cating when boiled, it tastes mush like the bertom part of an artibhoke. It also makes a good pickle.

The size of the ferns, whole forests of which are fonnd in the dips and rocesses of the hills, is very remarkuble: seme of them rise to the height of 2 Foct, with their branches as thaely piomaled, and their colour as vivid mod fresh, as the dwarlish nad lowly, hat howly, linglish ferm. In 1792, there were 31, bit, ucres in actual coltivation ; 20,770 urrs atjobinins. and 30,175 neres purtly deared. There were $5: 2$ suga and 29t colliee estates. The whate of the handed property mal buildings therem was $3,1001,0001$. sterling.

11．Antigun was diseovered by Christopher Cohnin lans，un his secomd voyage，in 1.193, mul maned by him，from a chureh in Soville，Smata Maria do la An－ tigun．Next to Barbaloes and St．Christopher it is the oldest British colong in the lewwarl islos，having bern setted by Sir＇Ihomas Wiurner，with a few lith－ ghish monilies in 1 tite．Antign was granted to lord Willoughty，of l＇arhum，by Clarles II，in Ititis．In lififi a Fremeh nemment from Martininue and Con－ thampor，ussisted hy some Caribs，got tomporary pos－ session of the island，mid plumdered the phaters un－ mereitully．By the treaty of Bredn，the ishand was in 16 ses timally setted muler the British deminion， and by menns of free trade，mad benenth the ampioces of the Codrington fanily，mpilly prosperal．

111．Antigun is neurly of an ovnl shape，with un extremely imexglar eonst，indented with mumerous bays，nul almost surmmed by ishets，rocks，nud shons，which remier the noproach io it very dunger－ ous on every side exerpt on the s．W，More than one hall of the istand on the $N$ ． li ，is low，in some phaess ruther marshy，mut interspersed with gentle acelivitios mod swollang eminemers，which，if hess demeded of trees，would present the henntifal hill und date seemery of logelane，＇fowards the s．and S．W． the elevation of the hand gradunlly inerenses，lommeng romed backed hills of a moderate hecight，gelomally running bir mud W，intersected ly endivated valleys， mul partinlly clothed with smmil trees nod brush－ wond．＇The grentest eleration（computed nt 1910 feet）is on the Shachertey ronge of mountains，called Boregios Hill，about six miles to the W．of Nomks Hith．＇Ihu highest distriet may be suid to tuke its rise from linhouth，and formene with vinious elevations to Five fland Burbour，The height to the： N．Fi，and S．W．is ont emonidernble，bit on the latter part the hills we ocensionally bold and precipitous， forming bumerous ravines and vallies，their summits being extremely irregnlur，sometimes romme，－at
 of the ishand may，ns a gemeral fonture，be said to con－ sist of bromd slopes，and repontedly ocemring undula－ tious．

No isiand in the W．Indies s＇mu houst of so many excellent hays und harhours，hut they me all，exceple
those of St．John，lingash Harhour，and Finhouth， （which repuite pilots）dittientt of meess．＇Jhe other hays und harhours ure st．Fredoman＇s（at the entrance of linglish IIndour），Rembezoms Bay，Morris Buy， Pive Ishand Inthour，Iadesenth Bny，I＇mom，Nom． sudh，and Willoughly harloums，and ladian Crook， contipuons to Procman＇s Bay．St，John＇s，the copital， is irregularly haid out，pretty large，nuil built on the N．W．side of the island，it the heme of a large but not deep lumbor，the $N$ ．side of which is partly formed by mu devated renek，cilled dat Ishame，nhout． midway if the hathour，noll eomected with the main land by a consewny，which is subuncred nt high－ water．From St．Johu＇s to the extreme N，mid N．E． of the island the land is generully very low，inter－ spersed with mumeroms pomels and morshy hollows； bit，with these exceptions，the surine of the whole is suthiciontly varided to prevent the acemmation and stapmation of water on its surface．Monks－hill（11
 Finlmouth lany，mul，as it asceuls，hecomes precipit－ ous till sarmomoted by Grent liomge lont，at the height of bise fort，commanaling to the N．and N．Fi． un extensive viow of 11 hiphly enttivated eomitry， werlooking the bay below the peninsula of Nititle （iromad，linglish llathomr，mad the Nidger，whist in the distant horizon are to be seen Cimalaloner，Mont－ serrat，null in clear wenther Novis mud St．Cluisto－ pher．linglish llarlumr is a very complete dock－ yard，on a small senhe，survounded hy hitls，the one of whioh nt the N，bi，the musul hospital is sitmote． W＇ith the exception of a fiew semuty rivulets momeng the hills，the whole ishand is destitute of rumbing water，and the wells，heretotore dry，have prowed Imaekish；punds，mud tanks are，therelore，the maile－ stay al the planters．＇the plan of horing for whter shoulid he mentere．

IV．＇The soil of the high lands is of a red chay，negil－ laceous，with n subst ratum of marl ；in the low lands it． is a rich dark mould，oll a substrutum of elny．The most superticial stratu oceupy the N，mal li，parta， and nee of in enlemreoms formution，nul the outline of the distriet is in romud hills mod kinolls，similar to thase linume in the chalk distriets of binglame． ＇Ihrough the stratum of mat which uppen＇s ont the surfine ron layers and irmpular masses of limestome， contuinhur a variety of lossil shells，mobules of enterne－ ous spur，cellular mul charystalized gumeta，chomedouy， ugate，nud coral－lines，both in a culeneone mad silici－ ons state．A endemreous sumdstome is niso limmil in this marl formation，composed of silicious particles， carbomate at lime，mid n little axyde of itom．A brecem also fergently mpents，consisting of un ag－年htimation of thaments of dillerent colsured purphy．
rics．No bones of the larger animals have been found in this formation．The coarse chert，or flint，is seen in irregular masses on the surface，breaking into sharp angular blocks，and containing a great quantity of petrified wood and casts of shells．Petrified wood is also found on the surface of the conglomerate and marl formations，often so delicate and beautiful，that the colour of the wood and the distinctive form of its fibre are perfectly preserved．Agate，cornelian，and chalcedony，are frequently seen intermingled in the same specimen．Nitrate of potass，like a hoar frost， covers the flat oozy shore which bounds the bay of Falmouth on the N．and E．On a general view，the geological formation of the island may be said to con－ sist of marl，conglomerate chert and trap．Marl forms the greater part，and extends over the whole N．and N．E．part ；trap，the S．W．；conglomerate， an intervening section，extending inland from St． John＇s Harbour，and chert，embracing a section with the latter segment．Dr．Nugent divides the island into four distinct classifications．The range of moun－ tains，or rather highlands，in the S．W．quarter， consisting of unstratified conglomerate，composed of masses of trap，breccia，wacke，porphyry，greenstone，\＆c． which are embedded in a clay matrix with brownish decomposing chlorite baldagé．Parallel with this range inland，a different formation appears，consisting of a claystone conglomerate，containing silicified wood， coralline chert，agate，amygdaloid，porphyry slate， bloodstone，\＆c．in a matrix of an intense green colour． The N．and E．districts have a calcareous formation subordinate to the lowest beds，of which，and nearly in the centre of the island，are extensive irregular masses of coarse chert，containing a prodigious quan－ tity of casts of shells．The fossils and petrified woods found in Antigua，when polished，are exquisitely beautiful．

V．Owing to the elevation of the land，and the absence of dense and lofty woods，visible in Jamaica，Domi－ nica，\＆c．，the climate of Antigua is dry，and the rainy season so uncertain，that sometimes a great part of the hurricane season passes away without rain．The dry season generally commences in January，continu－ ing to April or May，and from June to the end of the year the rains arc usually abundant．In consequence of the dryness of the climate，the temperature is less subject to the variations observed in the other islands； heavy dews are not often experienced，and the ther－ mometer seldom ranges more than 4 degrees in the 24 hours．On the ridges，or hills，the temperature is considerably modified by the sea breezes，or trade winds，which occasionally shift a few points to the N．and South．

A meteorological table for 1836 shewing an annual medium of temperature of 79.68 ，and a total annual fall of rain of 35.58 ．The most severe huricanes were those of $1681,1707,1740,1772,1780$ ，and 1792. A dreadful earthquake occurred in 1689，and com－ mitted great destruction in Antigua．

Meteorological Table．－From a journal kept in St．Peter＇s parish，in latitude 17 deg． 8 min ．N．Tongiturle 61 deg． 48 min ． W．，from 1st．December，1833，to ist December，1834．

ANTIGUA,-IOPULATION.
Census of antigua, taken in 1821 ; similar numbers are given for 1828. [B. B.]

Note.-These returns would appear to be for the established church alone, exeept in marriages.
The average population to the square mile in Antigua may be taken at 334. The greatest bulk of the population is employed in agriculture; there are none employed in manufactures, excepting of sugar, molasses, and rum. There has been no census of the population since 1821. The disproportion between the burials and the baptisms is accounted for from the circumstance, that many of the Wesleyans bring their children to the church to be baptized, but generally inter their own dead. The population may be estimated at 35,300 persons.

Antigua totally abolished slavery in August, 1834, without waiting the intermediate apprenticeship, as in the other slave colonies. Every fact, therefore, relative to the island must prove interesting. It will be perceived that the tables of education and religion are very complete. All accounts agree in a favourable representation of the progressively improving moral character of the negroes. Their physical condition is not deteriorated; and the value of property in the island has risen.

A statement of the number of Slaves for whom compensation has been claimed, and of the number of claims preferred for such compensation, and of the amount of compensation awarded in each of the classes of prædial-attached, prædial-unattached, and non-prædial. [Parliamentary return to the House of Lords, March, 1838.]

Number of elaims having reference to each division. Predilal Attached, 178; Predial Unattached, 82; Nonpreedial, 822.

＊There has been no change in the parochiai division in the island for more than 100 years．
$\pm$ Re－opened，after repair and enlargement，on 1st．January， 1837.
$\ddagger$ This chapel has lately undergone considerable repairs in consequence of the hurricane of 1835.

The amount of population given in this return appears to be in a great mcasure conjectured；there being no recent census to refer to．St．Gcorge＇s church has been enlarged this year，at the expense partly of the parish and partly of the Society for the Propagation of the Gospel in For ign Parts．
Fees to the Clergy．－The vestry assembles，when the acting churehwarden lays before them an estimate of the ways and means for the year．The number of acres and of slaves in the parish show the amount of the tax on each．This amount，with all items，is settled by the majority；the churchwarden delivers the accounta and collects the money．One of the principal disbursements is the minister＇s salary ； abput 200l．sterling is provided by an act of the island， and it is customary for the vestry to make a volun－
tary addition to it，generally from 60l．to 100l．per annum．This，with a parsonage house，and some－ times a horse，is sufficient to make a clergyman com－ fortable；and the minister is under the necessity of avoiding conduct which would be offensive to his parishioners，while a portion of his income depends on the good will of his flock．The salary of the clerk is also on a liberal scale，being from 75l．to 120l．per annum；he acts as vestry clerk in kceping the ac－ counts and collecting the taxes．The surplice fees are liberal；three guineas is a common fee to a clergyman，and not unfrequently one guinea and a half to the clerk，as a wedding fee．Tbis，with $3 l .13 s .6 d$ ．to the governor for a license（few white people being marrice by banus），makes matrinsony an expensive business．［B．B．］

Private schools: besides those under the direction St. John's Town, ceased to exist in August last, when of the Wesleyans and Moravians, there are about the Act by which they were established expired ; they eight private schools; at one of which, eight poor have since been restored with some changes, but were girls are boarded and educated at the expense of the parish of St. John. None in St. Paul's, St. Peter's, St. George's or St. Philip's, but one for the more wealthy in the parish of St. Mary.
The national school houses belnng to the Christian Faith Society ; books for the schools generally, are supplied by a district committee of the Christian Knowledge Society, and the ladies' Association in England. The publicly endowed eentral sehools in
not re opened until January 18\%7. St. Paul's, which is used also as a temporary chapel-of-ease ; the infant school-house at English Harbour, is lent by the hon. Lady Guy, and the infant schools are supported partly by a grant of $25 l$. sterl. from the Ladies Association in England, partly by local contrlbutions, partly hy assistance from the Christian Faith Society. St. Peter's ; the schools on the estates of the Rev. N Gilbert, are supported entirely hy himself. The as-
sistance received from the local, or branch association of the Christian Faith Society, in 1836, amounted to nearly $20 l$. sterl.; but besides this, the assistance given to each separate school by private individuals in the loan of houses, allowances of provisions, \&c. would, if calculated, amount to a considerable sum. The principle of small payments from the scholars, has been tried with some, but not general success. In the national schools in St. John's Town, the sum of about 20 guineas, or rather more, was thus received in 1836, by payments from the senior classes of threehalfpence, sterl., and from the junior of half that sum weekly. In some, also, of the rural schools, the plan has succeeded. It will probably become general by degrees. The total number under school instruction, by this return, is less than by the last; there has been a falling off of about 200 , or about one in eleven; which may be accounted for from various incidental causes, but chiefly from the temporary failure of certain pecuniary supplies, on which the remuneration of the teachers depended; these supplies are now returning, and the schools in consequence are beginring to flourish again. Besides regular schools, there is also much desultory instruction going on, by means of which, individuals unnoticed in the parochial re. turns, are learning to read on estates, at the intervals of their work, from their acquaintance or friends or some private teachers. On the whole, education is spreading in Antigua, as fast, probably, as is desirable. More excitement might unsettle the moral and industrious habits of the people and give rise to dis. content, though there is still room for the quiet and
gradual extension of Christian instruction, so that all may read the seriptures and worship the supreme Being intelligently.
There is a very general countenance of religious instructors and instruction in most of the islands, and in Antigua particularly.

There are Sunday and infant day schools carried on by the Church of England, the Moravians and the Methodists. The majority of the clergy are intent on the great duties of their calling: of the missionaries too much can scarcely he said. A too rigid adherence to high church principles has done much injury to the establishment, and exhibited the inadequacy of the episcopal system to the religious requirements of the slave population. The abandonment of the West Indies by the Church Missionary Society, has been of essential disservice; still there is much doing by exemplary and devoted men in the establishment, by going about on the estates, and preaching in the negro houses in a truly missionary spirit. The appointment of assistants or helpers (called by the negroes " God. fathers,") to exercise a certain surveillance over their Hocks on the plantation, has tended very much to give effect to their ministrations. By these and other means, the character of the negroes has been much improved, and their outward attention of religion greatly increased; add to this, the refusal of all the ministers and missionaries to bury any whose names are not inserted as members in their books, produces an anxiety, on this, if on no other account, $t$ be enrolled among the professors of religion. [B. B.]

Note.-No return for 1830. An augmentation of prisomers in the two last years is given in all the gaol returns, owing probably to some mistaken mode of filling up the Blue Book columns.
X. Antigua is legislated for by a Governor, Legislative Council ( 10 members), and House of Assembly, consisting of a Speaker and 25 members, representing the capital town (St. John's) and twelve divisions, or six parishes, into which the island is divided. The Governor of Antigua is also Governor and C'omman-der-in-Chief over Montserrat. Barbuda, St. Christo. pher, Nevis, Anguilla, the Virgin Islands and Dominica; he, however, generally remains stationary at Antigua. The Governor is chancellor of each island by virtue of his office, but commonly holds the court in Antigua. In hearing causes from the other islands he acts alone; but in cases which arise in Antigua he is assisted by a council, and by an act of the Assembly of this island, the President and a certain number of the Council may determine chancery causes during the absence of the Governor. He has an Executive Council of 12 members to assist him in his government. The other courts of this island are a Court of King's Bench, a Court of Common Pleas, and a Court of Exchequer.

The militia consists of a brigade of artillery, a squadron of light dragoons, and a windward and leeward regiment of infantry.

Return of Militia [B. B.]-Artillery.-1 Colonel; 1 Lieut.-Colonel; 1 Major; 4 Captains; 8 Lientenants; 1 Adjutant; 1 Quarter-Master; 1 Surgeon; 8 Serjeants; 8 Corporals; 3 Buglers; 170 Gunners; 1 Assistant Quarter-Master. Total, 208.

XIII. Antigua is most bountifully supplied with / eel (like a serpent); silver, luck, and ink (sheddiug a variety of edible vegetables and fruit. The yam, sweet potatoe, cassave, cabbage, turnips, carrots, radishes, eddoes, squash pumpkin, cucumber, plantain, ochro (spinnage), \&c. are among the former; and among the latter are the orange, mango, guana, shaddock, sweet lemon, pine apple, sapadillo, pomegranate, grenadilla, plum, grape, almond, alligator (and other) pears, melon, citron, banana, cashew, dildoe, redcaps, soursop, bread, and jackfruits, \&c.

Sugar is the staple of the island; but other productions are now being attended to. Among the medicinal plants, spices, and trees, are a species of absinthium, aloe perfoliata, amomum zinziber, anisum vulgare, dolichas pruriens, datura stramonium, fæuiculum dulce, glycirrhizza glabra, guaicum officinale, several species of menthæ, rosmarinus officinalis, quassia excelsa, and ricinus communis. Guinea grass is extensively cultivated.
The coast, bays, and harbours are plentifully supplied with excellent tish. Among the most numerous are the herring, mackarel, baracouta (of great size) ; glouper (sometimes 50 pounds); toad (poisonous); mauget, hedgehog, hog-fish (poisonous) ; jew-fish (large and dear) ; snapper, flatfork, squerrel, chubb, snitt, flounder, mullet, parrot (coloured like the bird), ink when caught) fishes ; abacore (a large size) ; shark (plentiful); doctor (has a lance in the tail); sprat (two varieties, one poisonous) ; king, fry, whitening (poisonous); wattee, hind, comaree, convalby, old wife, queen mullet, cobbler, ten pounder, garr, bolalwe, reay, shew, and crawtish cat (a curious fish with five prongs, which, if left on the skin, sucks blood). The king fish taken young is termed coramour, and, when kept in a fish pond, or crawl for some time, is esteemed a great delicacy, as is also the mud fish (rcsembling tench), commonly found in the water-courses. The mangrove oysters are considered a tantalizing dainty, and trunk lobsters, cockles, \&c. are excellent.
Barbuda.-This island, the property of the Cod. rington family, is situated 36 miles N. of Antigua, about 20 miles broad, with 1,500 inhabitants; the interior is level, the soil fertile, and the air of great purity. It was first settled by a party of colonists from St. Kitt's under Sir Thomas Warner, whom the Caribs at first compelled to retreat; but the English finally returned, and quickly began cultivation. The chief trade of the colonists consist in raising cattle, swine, poultry, horses, and mules, for sale in the neighbouring islands. There is a good roalstead; but the coast is dangerous.

## CHAPTER X．－NEVIS．

Section I．This delightful little island，one of the leeward Caribbees，is scparated from St．Kitt＇s by a strait，almost two miles broad and full of shoals，in latitude $17^{0} 14^{\prime} \mathrm{N}$ ．longitude $63^{\circ} 3^{\prime} \mathrm{W}$ ．It was first colonized by a few Englishmen，in 1628，under Sir Thomas Warner ：and it is termed by Smith，in his amusing natural history of Nevis，＂the mother of the English Caribbec Isles．＂
II．Nevis is a single mountain，about four miles in length，three in breadth，eight leagues in circum－ ference，with an area of 20 square miles，springing by an easy ascent，as it were，out of the sea，and evidently of volcanic origin．The summit has the appearance of a crater．At a short distance from Clarke＇s hill there are several hot springs，containing neutral salts in solution．Their heat varics from 100 to 108 Farenheit．At the base of the mountain is a border of level land，extremely fertile and well planted． The appearance of Nevis is perhaps the most capti－ vating of any island in the West Indies．From the $S$ ．and $W$ ．it seems to be nothing but a single cone rising with the most graceful curve out of the sea， and piercing a fleecy mass of clouds which sleep for ever round its summit．It is green as heart can con－ reive，perfectly cultivated，and enlivened with many old planters＇houses of a superior stylc，and churches peeping out in the most picturcsque situations ima－ ginable．A complete forest of evergreen trees grows like a ruff or collar round the neek of the high land，
where cultivation ccases．On the $N$ ，and the E ．the cone is not so perfect ；it falls off in one direction in a long slope，which terminates in a plain towards the Narrows of St．Kitt＇s，and is broken to windward into one or two irregular hills．Columbus is said to have given the present name to this island，from the moun－ tain of Nieves in Spain．Edwards supposes that a white smoke issued in that age from a volcano now extinct，hut perhaps the vapours which rest on the summit may more probably have suggested the notion of snow．
Charlestown，the seat of government，is a larger， smarter，and more populous place than the capital of Montserrat．It lies along the shore of a wide curving bay，and the mountain begins to rise immediately behind it in a long and verdant acclivity．The court house is a handsome building，with a square in front； it contains a hall on the ground floor for the assembly and the courts of law，and another room up stairs for the council．

The island is divided into five parishes，and it has three tolerable roadsteads．

Nevis at one time had a very large white population． In 1673，there were 1,411 men able to bear arms，and 1,739 negroes．In $1707,1,104$ whites， 3,676 negroes． In 1720，2，358 whites，5，689 negrocs．In 1730，1，296 whites， 5,646 negroes．In $1788,1,514$ whites， 140 free coloured， 8,420 slaves．The white population is now estimated at 500 ．

III．Slave Population from 1817 to 1831.
and ink（shedding （a large size）；shark （in the tail）；sprat king，fry，whitcning aree，convalby，okd under，garr，bolaiwe， rious fish with five sucks blood）．The pramour，and，when －some time，is es－ b the mud fish（re－ n the water－courses． dered a tantalizing ；，\＆c．are excellent． operty of the Cod－ iles N．of Antigua， 0 inhabitants；the nid the air of great party of colonists Warner，whom the ；but the English a cultivation．The st in raising cattle， es，for sale in the bod roadstcad；but

Wages for Labour. - Domestic, 1t. 2s. 6d. per month ; predial, 1s. per day; trades, $2 s$.
The chief production of the island is sugar, the cultivation of which adds much to the richness of the scenery when contrasted with the mountain forests. There are five stesm-engines, 40 wind, and 45 cattle mills for the manufacture of sugar, rum, molasees, \&c.

## CHAPTER XI.-MONTSERRAT.

Section I.-Montserrat in 16.47. N. lat., 62.13.25. W. long., 22 S. W. of Antigua, the same distance N.W. of Guadaloupe, and S. E. of Ncvis, is about 12 miles long, $7 \frac{1}{2}$ broad, and 34 in circumference, containing 47 square miles, or about 30,000 acres.
II.-The isle was discovered and named by the sailors of Columbus, Montserrat, a name expressive in the Spanish language of its broken and mountainous
appearance. In 1632 it was first settled on by Sir Thomas Warner, under the protection of the British Government; about 1664, in the beginning of the reign of Charles II. it was taken by the French, but restored to the English at the peace of Breda, and has continued ever since under our flag.
III.-Like many other islands in its vicinity, Montserrat most probably owes its origin to a volcanic
eruption：like them it runs from S．E．to N．W．，is equally mountainous，broken，and intersected；on the N ．the extremity of the mominain chain terminates in a bold head－land coast，close to which vessels may approach with safety，but there is no landiug，and scareely any anchorage along the coast ；the land slopes gently down to the shore，or rather ascends from It，like the $\mathbf{W}$ ．side of the island，hy a succession of round conglomerate hills，overtopping each other in pleasingundulations until they reach the mountain base．

On the S．there is no approach for vessels of any description until they get to the westward；the sea for a mile or two is studded with immense rocks and shelving banks of coral，which prohihit even the ap－ proach of boats ；at this point the island springs up at once，and nearly perpendicular，to the height of 1500 feet；from thence the mountains begin to ac－ cumulnte，throwing out branches nearly at right an－ gles E．and W．，of unequal magnitude，as if for sup－ parters，to those orighally formed；subsequently they advance and shoot up to 2500 fect，stretching across to the N ．extremity，and terminating in the abrupt head－land nbove mentioned．
The mountains in many places are totally inaccessi－ ble in consequence of their declivities forming stecp precipices of clay－stone，and beng separated from each other by immense perpendicular chasms，several hun－ dred fect decp．These gullies，and the mountains，are richly clothed to the very summit with lofty woods， and all the variety of beautiful shrubs and plants pe－ culiar to a tropical mountain region．On the S．W． side of the chain ia a small souffriere，situate 1000 feet above the sea in a dell，formed by the approximation of three conlenl hills；the scenery around which is grand and beautiful．No marshes exist，but a amall lake is situate on the top of a high hill on the west
side of the mountains，ahout two miles from Plymouth， which remains full the whole year．

Plymouth，the eapital，is small，but extremely well built，and the houses constructed of a tine grey－stone， have a suhstantial and comfortable appearance．

IV．The same geological features mark Montserrat as are to be found in the neighbouring isles；many of the rocks might be termed vast masses of clay of varl－ ous hues and colours．The conical hills abound with carlonate of lime，iron pyrites，and aluminous earth． The superstrative soil is in general dry，light，thin， gravelly，and thickly covered with bloeks of clay and sandstone，except in the vallies where the loamy earth is deposited by rains．
$\mathbf{V}$ ．The Montpellier of the $\mathbf{W}$ ．is the term given to this Indinn isle，which has long been celebrated for the peculiar elastleity of its atmosphere，the majestic grandeur of its picturesque and lofty mountains and bewitching scenery．The temperature of course varies necording to locality．On the windward and leeward sides，and according to the elevation aloove the sea，the air ls generally cool and dry；the acasons are similar to those of the neighbouring isles ；it is subject to hur－ ricanes，but their visitation are not severe or frequent．

VI．This island，like many of our W．I．posses－ sions，was at one time more densely peopled by Eu－ ropean colonists than it is at present．In 1648 there were 1000 white families，with $n$ militia of 360 effec． tive Europeans．In 1673，there were 1,175 men alle to bear arms，and 523 negroes ；in 1707，whites， 1,545 ， negroes， 3,570 ；in 1720 ，W．1，688，N． 3,772 ；in 1724， W． 1,000 ，Militia， 500 ，N． 4,400 ；in 1730，W． 1,515 ， N．5，616；in 1733，N．6，176；in 1787，W．1，300， Free coloured， 260 ，slaves， 10,000 ；in 1791 ，ther were ahout 1300 W ．，and $10,000 \mathrm{~N}$. ；in $1805, \mathrm{~W}$ ． 1，000，free coloured， 250 ，slaves， 9,500 ．

The increase and decrease of the Slave Population，since 1917，was－

those who are best acquainted with the fact，that great mortality has prevailed among the children on plantations since the year 1834．The return below， of births and deaths，is not to be taken as complete， because some of the negro children die before they are baptized，and others of the negroes who live at a dis－ tance from the clergyman，bury their dead without any application to him．Another hindrance to the completion of this information，is，that of there not being any minister appointed for the new parish church of St．George．
The correct number of persons employed in agri－ culture，will not be ascertained until after the ycar 1840；because they are now the predial unatached， who are sometimes cmployed in agriculture，and at other times at different occupations．

In the united parishes of St．Anthony and St．Pa－ trick，—Births， 222 ；Marriages， 28 ；Deaths， 36 ．In

CHAPTER XII.-ST. CHRISTOPHER.

Section I. In 17.18, N. Intitude, 62.40. W. Ion.. gitude, 72 miles in circumference, and containing 68 square miles, is situated St. Kitt's or St. Christopher, called by the Caribs Licmuiga, or the fertile isle, and in shape somewhat like ltaly-as an outstretched leg.
II. This singular looking but beautiful spot was discovered by Columbus, in 1493, and, ns stated by some, received its name from the great navigator himself, by reason of his being so pleased with its fertile appearance; others say its name is derived from a part of Mount Miscry, bearing a resemblance to the statues common at that period on church porches, of St. Christophes carrying our Saviour on his shoulders. The island was then densely peopled by Caribs, who remained for some time after its discovery in possession of their native home, subject to the occasional visits of the Spaniards for water, with whom they are stated to have been on terms of friendship-a very doubtful fact, unless the Spaniards did not require the land or persons of the Caribs.

In 1623, Warner (afterwards Sir Thomas) settled on the island, with his son and fourteen Londoners, and found three Frenchmen residing in tranquillity with the natives. Warner returned to England for more recruits, and, on his return in 1625, landed the same day with M. D'Enambuc, who had arrived from France with a party of colonists. The Caribs took alarm-made war on the Europenn invaders-were discomfited with the loss of 2,000 in killed and wounded, leaving 100 foes dead from their poisoned arrows. The English and French agreed to divide the islund between them, and articles of partition were signed 13th of May, 1627. The island was divided into upper and lower portions-the former and most extensive, ealled Capisterre, belonging to the French; and the lower, called Basseterre, alone inhabited by the English.

Don Frederick de Toledo, a Spaniard, proceeding to Havannah, with 15 frigates and 24 ships of burden, attacked the colonists in 1629, burned and plundered in every direction, and carried otf 600 Englishmen as prisoners ; but the flow of emigration wns so great to the West Indies at this period, that in the following year the number of English settlers amounted to 6,000. Jealousies, bickerings, and at length hostilities began between the English and French settlers, which were stopped by the latter compelling the former to return within their line of demnrcation; but, although it was agrced that if France and England went to war the colonists of St. Christopher should remain neutral, the resolution was broken on the commencement of hostilities in Europe, and a terrible battle, which lasted several days, ended in favour of the French colonists, who assumed the mastery of the whole island, and gallantly defended their acquisition in the following year agninst a large linglish force (sent to recover possession), in the contest for which Lord Belamont and Colonel Lauvren were slain, all their officers wounded, eight colours lost, 700 British troops killed and drowned,
and many taken prisoners. At the peace of Breda, the English colonists were restored to their portion of the island-and for 20 years the French and English lived in peace; but in 1689 the former entered the territory of the latter, put to death nll who opposed, and, by the aid of fire and sword, forced the English, to fly from the colony. In the following year Gencral Codrington and Sir F. Thornhill, with a large force from Barbadoes, drove the French from St. Christopher's, and for scveral ycars the English, in turn, remained masters of the whole island; but by the treaty of Ryswick, restitution was made to the French of the part they had formerly possessed-this they retained until 1702, when the island was captured by the English; and by the trenty of Utrecht, in 1713, entirely ceded to the British crown. Most of the French removed to St. Domingo, and the sale of the crown lands produced a large sum for government, of which $40,000 l$. was voted as a marriage portion for the daughter of Gcorge II. St. Kitt's rapidly increased in prosperity, notwithstanding the effeets of a terrific hurricane in 1722, which destroyed $500,000 l$. worth of property. In 1782, the Marguis De Bouille, with 8,000 troops, and supported by the Count De Grasse with 29 sail of the line, captured the island ere $\operatorname{Sir} \mathrm{S}$. Hood, with 22 snil of the line, could effect any thing for its relicf. The treaty of pence, signed at Versailles in the following year, restored St. Christopher's to Great Britain, in whose possession it has since remained. In 1805, a large French force landed at Basseterre without opposition, levied 18,000 . as contribution, and sailed away with six merchant ships which they found at nnchor in the bay, and burned as soon as they got out to sea.
III. St. Kitt's presents to the eye an irregular oblong figure, through the centre of which runs a regular series of mountains from N. to S . in the midst of which stands Mount Misery, 3,711 feet in perpendicular height, and, although evidently a volcanic production, clothed with the finest wood and pasture, almost to the very suinmit. From the foot of Mount Misery and the adjoining hills the country has a uniform sloping dircction, stretching from a centre to a circumference, hounded by the coast, every inch of which is in a high state of cultivation. There is no plain in the island deserving the name of a swamp, and the great declination of the land towards the sea carrics ofl my superabundant moisture. On the W. side, brimstone hill rises gradually from the sea to a height of 750 feet ; its F. prospect for two thirds of its nltitude has n somewhat conical appearance, and then suddenly projects into two peaks, the N. one being called Fort George, the S. Fort Charlotte or Monkey Hill. $\Lambda$ t the foot and between these prominences is a plain of quadrangular shape, compassing nbout an acre of land, having on its E. skirts the barracks (denominated Bedlam), for 220 men. The fortitications are very strong, and there is a tank within the rmparts capmble of containing 90,000 gullons of water. Monkey hill is the $\mathbf{S}$. termination
of a range of great mountains, which increase in height towards the N., and thicken together in enormous masses in the centre of the island. The apex of this rude pyramid is the awful crag of Mount Misery, which is bare, black, and generally visible whilst the under parts of the mountain are enveloped in clouds. It may, indeed, be termed a tremendous precipice of 3,000 feet, shooting slantingly forward over the mouth of a volcanic chasm, like a vast aerial peninsula. The vale of Basseterre is exquisitely buelutiful when viewed from the hills of Mary Cayon, it has been said that there is no place on earth which can surpass the richness and cultivated beauty of this lovely scene. Nothing can be better disposed for completing the effect than the plantations ure; the tall and moving windmills, the houses of the proprietors, the works and palm-thatched cottages of the negroes embosomed in plantain groves, present the appearance, as indeed they are the substance, of so many country villages in England. On one side is Basseterre, with the ships, on the other the ocean to windward, the mountains behind, in front the broken peninsular termination of the island to the $S$., the salt lakes gleaming between the opening of the rocks, and Nevis towering majestically over all.

There are four rivers in the isle, two at Oldroad, in the parish of St. Thomas, middle island; another at the small village of St. Mary's (Cayon), and the fourth (Pelhans) at Palmetto point, Trinity parish. In rainy weather few plantations are without their running streams. In the low lands springs are plentiful, but some of their waters unfit for drinking, owing to strong saline impregnations. The water in common use (as is the case in most of our West India possessions) is rain water, collected from the houses, preserved in large tanks, and of wholesale quality.
IV. This isle is unquestionably of igneous origin ; immense layers of volcanic ashes are lound in every parish, and the soil is chiefly of a dark grey loam, extremely porous. At Sandy Point, St. Ann's parish, there are alternate layers of this loam and ashes, to
the depth of 75 feet, on a substratum of gravel. This compost is considered the best in the West Indies for the cultivation of sugar. Clay is found in considerable quantities in the high or mountain land, while the low lands are entirely deficient of it. Among the mountains in the centre of the island there is one which contains mines of sulphur, and there is another not far distant from Fort Charles, in which there is said to be a mine of silver. In the N.E. there are very fine salt ponds, which produce most excellent salt; one of these is more than 100 acres in extent, surrounded with several lesser ponds. The structure of Brimstone Hill consists of granite, limestone, primary rock, schistus, volcanic ashes and madrepores, with a very small proportion of alluvial deposits on a few spots.
V. From the smallness of the isle and its elevation above the sea, St. Kitt's ia extremely dry and healthy; the mean temperature on the coast is 80 , but the mornings and evenings of the hottest days are agreeably cool. The coldest month is Fcbruary - the warmest August. The winds for the greater part of the year are from the N. E. and S. E.; and although the isle is, from its position, within the range of the hurricanes, yet by these storms the air is tempered and purified, and health is the natural result. The rains that fall are more frequent than heavy, and the bracing qualities of the atmosphere are pourtrayed in the ruddy complexions of the inhabitants and the vigorous strength of body which they possess.
VI. The number of inhabitants was at one period, particularly as regards whites, very numerous. In 1673 , there were in the island 496 men able to bear arms, and 352 negroes; in 1707, whites 1,416 , negroes 2,861 ; in $1720, W .2,740$, N. 7,321 ; in $1724, W$. 4,000 , militia 1,200 , N. 11,500 ; in 1730, W. 3,677 , N. 14,663; in 1733, W. 3,881, N. 17,335; in 1787, W. 1,912 , free coloured 1,908 , slaves 20,435 ; in $179 \times$, slaves 20,435 ; in 1802, by computation, W. 4,500, free coloured 500, slaves 25,000 ; in 1805, W. 1,800, free coloured 198, slaves 26,000 .

Remarks on the preceding Table by the Moravian Missionaries. - St. Peter and St. George's Basseterre. On account of the severe afflictions, and the loss of two valuable ministers, which our mission in St. Kitts has sustained in the past year, we are sorry to remark, that the schools in the Basseterre district are, at pre. sent, not in that order which formerly was maintained, only one minister having been here for nine months, which never has been the case before.
cerning defraying the expenses of these schools, that the negroes themselves pay a sinall part. Some assistance is afforded by the several estates on which schools are established, and the rest is made up from the mission fund.

St. John's, Capisterre. - On account of the poor state of the parents here, we have no support from them for being able to keep private schools.-There is also one private night school.

St. Mary, Cayon.-It is to be remembered, con-

Respecting the expenses of the schools: the cha- |raised by voluntary subscription. There are several pels being used as school-houses, generally throughout the island, and school-books, cards, scriptures, \&c. being furnished in various ways gratuitously, the expense cannot be sscertained, and is not entered; $6 i$. 14 s . sterl., has been collected in the different chnpels; the remainder is received from England, chiefly through the Wesleyan Missionary Committee, and all small evening schools, where the young people especially, are instructed in reading and writing, and a knowledge of the first principles of religion by eatechizing. And on all estates visited by the missionaries, amounting to between 40 and 50 , efforts are made to teach the young apprentices the rudiments of religious knowledge.

fact，the cssential oil that resides in the rind of the fruit，and casily extracted by expression or distillation． There are varicties also of the lemon，citrus limon； but the most elegant of this genus is citrus tuberosa， or citron tree，the fruit of which imparts to spirits an agreeable flavour．The shadlock and forbidden fruitare of the citrus tribe．The shaddock is supposed to have been transplanted from Guinea，in Africa，by a Cap． tain Shaddock，whose name it still bears throughout the West Indies．The fruit has all the appearance of belonging to the orange species，and is divided in the same manner，by a thin skin，into several quarters， but it is as large as a melon，and of a most agreeable and refreshing flavour，between sweet and acid．The outer coat or skin is extremely thick，of a hitterish taste and a pale ycllow，or citron colour，very like，in appearance，to the skin ol＇a lemon．There are two species of the shaddock；the pulp or inside of one is white－that of the other a beautiful pale red ：the last is considered the most wholesome．This fruit a Eu－ ropean may indulge in with safety－and it is almost the only one in this climate，excepting the orange， that will not injure him on his first arrival．The for－ bidden fruit is a species of the shaddock，only smaller and more delicate，while the outer skin is less eoarse． Its juice and the flavour of the inside are quite deli－ cious in a West Indian climate．The grenadella is
another excellent fruit，contained in a soft husk， which is produced by a large passion flower；the husk is filled with a sweet and most agreeable liquid；and the manner of eating it is to cut off one of the ends， and mix up in it Madeira wine and sugar，stirring it all up together；this renders it safe and wholesome for the stomach．It is of the size of a small melon． The laurus persect，or avocato，vulgarly called alligator pear，comes to fine perfection here；it is a pulpy fruit，resembling in appearance a large－sized awan＇s egg；the pulp，or vegetable marrow as it is called，is enclosed in a light green papyraceous skin，and con－ tains a large irregularly formed sced，that is immedi－ ately surrounded by brownish membraneous coverings．

## CHAPTER XIII．－－TORTOLA AND VIRGIN ISLES．

Section 1．－The Virgin Isles were discovered by Columbus in 1493，and so nained by him in honour of the 11,000 virgins of the Roman ritual．Except－ lug Anegada，they are a cluster of lofty islets and rocks，to the No．of 50 ，to the N．W．of the Leeward Islands，extending about 24 leagues E．and W．，and 16 N ．and S．Tortola，the capital is in 18.20 N ． Lat．，and $64,39 \mathrm{~W}$ ．Long．

II．The Virgin Isles are divided between the Eng－ lish，Danes and Spaniards；the Eastern division be－ longs to the former，and the islands in our possession are named Tortola，Virgin Gorda，or Penniston．＇some－ times corrupted into Spanishtown，Jos van Dykes， Guana isle，Beef and Thateh islands，Anegada，Nichar， Prickly Pear，Camanas，Ginger，Cooper＇s，Salt，St． Peter and several other smaller islands．

The earliest occupant of the British Virgin Isles， were a party of Dutch Buccaneers in 1648 at Tortola． A stronger party of English Buccaneers expelled the Dutch in 1666，and took possession of the Duteh fort in the name of England，and shortly after Charles II． almexed them to the leeward islands Government，in a commission，granted to Sir William Stapleton．

III．Throughout the Virgin Isles a series of pre． cipitous and rugged mountains and rocks run E．and W．The shores are indented with bays，harbours， and creeks，affording shelter for a large extent of shipping．Large tracts of waste land，with pasturage accessible by mountain tracks，oceupy the interior； and are therefore of difficult aecess．

The ehief town，Tortola，is situate on the $S$ ．side of the island，close to the water＇s edge，in the western bight of a magnificent harbour or basin，and forming one long street，curving at the base of a projecting point of land．In front of the town and harbour is a chain of small islands，extending far to the southward． and forming the passage called Sir Francis Dra ${ }^{\circ}$ Channel．The harbour of Tortola，extending thos in length 15 miles，and in breadth $3 \frac{1}{2}$ ，perfectly land－ loeked，has been seen in war time affording shelter to 400 vessels waiting for convoy．

IV．The population in 1720 was，of whites， 1122 ； negroes，1509．In 1787，whites， 1200 ；free negroes， 180；slaves， 9000 ．In 1805，whites，1300；free coloured， 220 ；slaves， 9000 ．

The slave inhabitants were，from 1818 to 1828.

V. Churches, Livings, \&ণ. of Tortola and Virgin Isles. -There is one Cluurch in the parish of St. George, (comprising uie Virgin Islands). The value of the Living is $250 l$. sterling. The Church will contain about 200 persons; 40 of whom generally attend.

There is no Chapel connected with the establishment, but divine service is performed by the rector, in the gaol on the Sabbath morning, and at King's Town in the evening; and since February, 1836, at which time a catechist was appointed for Spanish Town, Divine service is performed there twice on the Subbath day in the school room.

There are also three Methodists Chapels in the island of Tortola. [B. B.]
VI. Schools, \&c. 1836.-In the parish of St. George, (comprising the Virgin Islands,) there are two free schools, containing 95 scholars, viz., 60 males and 35 females. The master receives $30 l$. sterling, which is paid by the Society for promoting the Gospel in foreign parts. One school is at King's Town, which is supported by Government, to which is attached an Infant School, containing 52 scholars-also one free school at Spanish Town containing 65 scholars. [B.B.]

VIII. Up to 1773 the government of these islands was entrusted to a Leputy-Governor, with a Council, who exercised in a summary manner both the legislative and executive authority; but, in the latter year, a local legislature, similar to that of the other islands, was conferred on them, with courts of justice, in consideration of the inhabitants voluntarily (1) offering to pay an annual impost of $4 \frac{1}{2}$ per cent. to the crown upon all the natural productions of the islands. They are now under the Government of St. Kitts, but possessing in Tortola a Council and Assembly of their own.

Relurn of Militia in 1836.-Infantry.-1 Colonel ; 1 Lieut. Colonel; 4 Captains; 6 Lieutenants; 4 Ensigns; 1 Adjutant; 1 Surgeon; 1 Judge Advocate; 1 Provost Marshal ; 32 Non-Commissioned Officers; 300 Privates. Cavalry.-1 Captain; 1 Lieut.; 1 Cornet; 4 Non commissioned Offices, and 17 Privates, composing a company of Horse. [B. B.]
IX. Revenue, 1836.-Amount received for liquor, sugar, bread, hawker's licences, \&c. 120l.-Duty on exportation of cattle, horses, and sheep, 20l.-Amount received for stamp duty, 1131 .-Amount of duties received from collector of Her Majesty's customs, 8241.

The principal articles of Export ln 1828 were, sugar, 959 logsheads 1 rum, 4 puncheons ; molasses, 20 puncicens ; cotton, 980 bales; employing a shipplng luwards of 3,632 tons, and outwards of 3,184 tons. in war time these isiads afford a valuable retreat for shipping.
XI. The Virgin Isles are celebroted for a great variety of fish, viz., rock ish, groopers, barracoutas, hogg and jar fish, bonetas, albacore, congo eels, bone fish or 10 pounders, colonels, whippers, snappers, pangies, old wives, angel fish, rock leveromous, mango, swapers, silver fish, diamond, gold laces, bass fish, turtle, hedge hogs, rainbow, grunts, margarets, grass fish, \&c. Fish is generally sold at $3 d$. sterling per lb., but the value principally depends on the quantity and quality in the market. [B. B. for 1835.]
In Spanish Town there are between 30 and 40 mines which have been opened, some of which are at present filled up; the mines appear principally to be copper, and black lead, some gold and copper have many years back been taken out, the ore of some appear to be copper; they are principally situated on the East part of the valley, at a place called Red Point. None have ever been disturbed for upwards of 80 years, except occassionally by a few persons, who may go there through curiosity to see them, and take a
little of the ore. The lead is of a superior quality. There is an arsenic mine at Collins Hill. The silver mine has been worked until it was stopped by government. Upon the top of Red Point Hill, there are a quantity of quartz. There have been a quantity of chrystals taken out of this mine. There is no person alive at this day, who is able to state the quantity of gold and silver taken out of the mines. [B. B. 1835.]

Prices of Produce and Merchandize in 1836.Horned cattle, 6l, each; horses, $10 l$.; sheep, $1 l .4 s$. goats, $10 s . ;$ swine, $1 l$.; milk, $1 d$. per pint; fresh butter, 1 s . per lb. ; salt butter, 2s. per lb.; checse, 1s. $6 d$. per lb .; wheaten bread, $4 d$. per lb. ; beef, $6 d$. per lb. ; mutton, $7 \frac{1}{2} d$. per lb. ; pork, $6 d$. per ll . ; rice, $4 \frac{1}{2} d$. per lb . ; coffec, $1 s$. per lb. ; tea, $8 s .3 d$. per lb . ; sugar, $9 d$. per lb. ; salt, $1 d$. per lb.; wine, $2 l .10 s$ per dozen ; brandy, $8 s .3 d$. per gallon; beer, $12 s$. per dozen; tobacco, 1s. $9 d$. per lb.

W'ages for Labour:-Domestic, 12l. 10s. per annum;

ןredial, for extra labour, 1s. per day; trades, 2s. per day. [B. B.]

Coin in circulation, about $1,000 l$. No paper money.
Area of the several Virgin isles in acres-Anegada 31,200; Tortola 13,300; Spanish Town 9,500; Jos Van Dykes 3,200; Peter's Island 1,890; Beef Island 1,560 ; Guana Island 1,120; and 40 other isles, with areas varying 900 down to tive acres cach, comprising in the whole 58,649 acres; of which there were in 1823 under sugar canes 3,000 acres; cotton grounds

1,000 ; provlsions 2,000 ; pasture land 33,500 ; forest or brushwood land 11,440 ; and of barren land but 7,257 acres. The quantity of stock on the island is given at horses 240 ; mules and asses 529 ; horned cattle 2,597 ; sheep 11,4.12; goats 3,225; pigs 1,825; poultry $4+, 050$; and of fish caught within the year $15,8.37,371 \mathrm{lbs}$; and yielding altogether an annuud production of property to the extent of $100,000 l$. sterling; and with a total aggregate of moveable and inmoveable property of nearly one million sterling.

## CHAPTER XIV.-ANGUILLA.

Section I. Anguilla, or Snake Island (so called the whole country lies before you, gently sloping infrom its tortuous or eel-like form), is situated between $18^{0} \mathrm{~N}$. latitude and $64^{0} \mathrm{~W}$. longitude, 45 miles to the N. W. of St. Kitts, and separated from St. Martin's by a narrow chamnel. The island is in length about 30 miles, and in breadth scarcely more than three miles.
II. In 1650, it was discovered and colonized by the English, in whose possession it has ever since remained, subject, however, to transient incursions from the French and from pirates, and to a brutal attack and pillage from the marauders under Victor llugues, in 1796; in every instance, bowever, the islanders have displayed a noble spirit of independence and bravery. In 1745, the colonists, although then only about 100 strong, repulsed a body of 1,000 French who came to attack them, and obliged them to retire with the loss of 150 men. In 1796, the latter retaliated in a manner worthy of the atrocities of the revolution. Two ships of war were sent with 400 picked troops, by Victor Hugues, of " red-hot memory," with directions to burn every settlement, and exter. minate the whole of the inhabitants (British) in the island. These emissaries set about their work in goud earnest, and committed the most barbarous atrocities on the defenceless inhabitants, but were happily interrupted by the arrival of Captain Barton, in the Lapwing man-of-war, who brought the French ships to action, sinking the one and taking the other.
III. Anguilla is flat, without mountains or rivers, and with a deep chalky soil. It presents a very singular appearance for a West Indian island. A little wall of cliff of some 40 feet in height generally rises from the beach, and, when you have mounted this,
wards in a concave form, and sliding away, as it were, to the south, where the island is only just above the level of the sea. The Flat island and St. Martin's terminate the view in this direction. Nine-tenths of the country are entirely uncultivated; in some parts a few coppices, but more commonly a pretty species of myrtle (called by the negroes, maiden berry) seems to cover the vhole soil; the roads are level grassy tracks, over which it is most delightful to ride, and the houses and huts of the inhabitants are scattered about in so picturesque a manner, as to bear a great resemblance to many scemes in Kent and Devonshire. Indeed there are scarcely any of the usual features of West Indian landscape visible; neither of those prominent ones, the lively windmill or the columnar palm, are to be seen, and there is a rusticity, a pas. toral character on the face of the land, its roads, and its vegetation, which is the exact antipode of large plantations of sugar. In the ceritre of the island is a salt lake, yielding annually $3,000,000$ bushels, a great part of which was wont to be exported to America. The soil yields freely sugar, cotton, maize, and provisions, and many cattle are reared. The climate is extremely healthy; and the people (amounting, in 1819 , to, whites, 360 ; coloured, 320 ; and slaves, 2,451 ) strong and active. At one time the island was more densely peopled. In 1673 it had 500 men capable of bearing arms; in 1724 there were 360 whites and 900 negroes. The colonists have a chief, or head magistrate, who is confirmed in his office by the Government of Antigua, and a Deputy is sent to the St. Kitt's Assembly.

## CHAPTER XV.-THE BAHAMAS.

Section 1. This singular group of isles, reefs, and quays, termed the Lucayos, from the Spanish words los cayos (Anglice, the keys), or Bahamas, extend in a crescent like form; from the Matanilla reef in 27.50. N . latitude and 79.5 . W. longitude ; to Turk's Island in 21.23. N. latitude and 71.5. W. longitude, a distance of about 600 miles, not including various sand banks and coral reefs, stretching to a great extent castwards.
II. One of the Bahama isles, St. Salvador (Guanahani), is celebrated as being the first land discovered by the immortal navigator, on the 12th of October, 1492, when he made this advanced post of a new world. The Bahamas were then densely peopled hy the Indian race, who were soon shipped off to work in the mines of Peru and Mexico, when the Spaniards began their search for gold. In 1629, New Providence was colonized by English (the natives were then to-

Salvador (Guouna. rst land discovered 12th of October, ed post of a new ensely peopled by ipped off to work hen the Spaniards 1, New Providence ves were then to-
tally extinct), who remained there till 1641 , when the Spaniards drove them from the islands, murdered the Governor, and committed many acts of cruelty. In 1666, the Finglish again colonized in the Bahamas, and New Providence remained in their hands till 1703, when the French and Spaniards again expelled them, and destroyed their plantations. The Bahamas now became a rendezvous for pirates, whose proceedings, so hurtful to commerce, were only finally suppressed by Capt. Woodes Rogers, of the Britisli navy, who was established as Governor, and soon reduced the outlaws to obedience. After this some of the other islands became inhabited, and remained quietly in our possessies. intil the American war, when, in 1776, Commodore Hopkins, with a squadron from Philadelphia, attacked and plundered the settlement, and carried off the Governor. In 1781, the Spaniards took possession of the isles, but they were restored to the British crown by treaty in 1783, having, however, heen previously captured for England by the enterprising Col. Devanx, of South Carolina. The Bahamas have ever since remained in our possession.
1II. Amidst a group of several hundred islets none are elevated; they are evidently the work of the coral insect, who, with all his apparent insignificance, has created many beautiful and habitable spots for the dwelling nnd culture of man. Some of the Bahamas are inhahited, others present to the eye a few plantations, the remainder are tenantless, though doubtless suited for culture, if there were an abundant population desirous of obtaining food. Geuerally speaking, the Bahamas are low and flat, indeed little elevated, even in their highest points, above the level of the sea, nevertheless, their verdant appearances render them extremely prepossessing. The ocean close to the isles is of an unfatiomable depth; reefs of rocks, or rather walls of corsl, bound the islands after the manner observable in the South sca isles. It will be sufficient to particularize a few of the principal of our possessions in the group.

New Providence, from its harbour and relative situation with respect to the Florida channel, is considered the most important of the Bahamas, and on it is situate Nassau, the seat of government for the isles, and the head quartcrs of the naval and military establishments. The island is about 21 miles in length from E. to W., and seven in breadth from $N$. to S., inostly flat, and covered with brushwood and extensive lagoons; a range of hilly rocks runs along part of the island, at a very short distance from the sea, in a direction $E$. and $W$. C' this ridge many of the luildings of Nassau are constucted, including the government house, and at its extremity to the W. are the barracks and Fort Charlotte; another ridge, called the Blue Hills, runs in a direction nearly parallel with the former, and at about two and a half miles distance.

The principal works of defence in the Bahamas are at Nassau, in the island of New Providence, constructed to protect and defend the harhour and town, it being the seat of government of the Bahamas.
Fort Charlotte is the main work, having an attached work on the west front, called Fort D'Arcy; it is situated at the western extremity of a ridge of hills, which run nearly parallel to the bay or harbour, with the town of Nassau between. This work is built of the natural porous stone of the islands, and of its superstructure by that cut from the ditch; a portion of the height of the escarp and contrescarp being formed by slopes given to the cuttings in the natural rock. It is of a bad construction, with an unfinished
open ditch, with low contrescarp on the south front. Fort D'Arcy has no ditch or contrescarp, and an escarp is completely exposed to its hase; its area is occupied by a aplinter proof magazine for 500 barrels, and a general store for the ordnance service. In Fort Charlotte are several casements, with galleries of commmication to them, cut out of the solid rock, but they are very damp and untit for habitation. I'here is also a large powder magazine in the north front; it is capable of maintaining near 30 guns and three or four inortars. In case of necessity it could only be maintained for a few days, nccording to the force brought against it, since its faulty construction would be taken advantage of by an enemy.

Fort Stanley.-The main object of this work, in conjunction with a detached stone casemated battery, called Fort Stanley on the hill, and castward of Fort Charlotte and the water battery of four 24 -pounders, on traversing platforms at the foot of the hill on the sca shore, having its rear open, is to defend the western entrance to the harbour ; it also commands a part of the town, and the main western road which runs along at the foot of the hill. It may be considered as the citadel of the garrison.
The next work of defence is Fort Fincastle, situated on the same ridge of hills and immediately in the rear of the town, which it completely commands. It is a stone work, inounting four 18 -pounders on traversing platforms, and two short gins on platforms, of splinter proof casemated, for the troops and magazine, hoth of which are very small. It has no ditch, and the escarp towards the W. is of an inconsiderable height and exposed to its foot; its object is to defend the harbour and town, and to occupy, in connection with Fort Charlotte, from which it is distant between 1,700 and 1,800 yards, the high and advantageous ground in rear of the town. Upon these two forts are cstablished signal stations, by which the town and garrison are apprized of the approach of vessels of every description.

Commanding the eastern entrance to the bay or harbour of Nassnu is Fort Montague, situated on a point of land about two miles eastward of the town, it is a low quadrangular stone work of old construction, without a ditch, mounting four heavy guns on traversing platforms, at the angles; having a amall building in the area for troops, and another over the entrance as a magazine.

On Potter's Key, a small island in the harbour, was formerly erected a two-gun battery, closed in the rear by a double block house; the latter ads fallen into a ruinous and quite irreparable state, and the battery is not kept up. The intention of this work was to rake any vessel, on passing Fort Montague, and by a musketry fire prevent boats passing upward on either side of the island. There are now the remains of a block house on Hog Island, opposite to the town, long since disused and now uninhabitable. At the water's edge stands the old Fort Nassau, in the town; it is a dismantled square fort, having regular sides, with bastions connected by curtains, formerly was the only defence in the place, and gave shelter to the garrison. It has for many years past been in a ruinous and condemned state; rhere has been a project to take it down, and on its site to build iron barracks; but it would be more desirable to remove the materials, and employ them in carrying out an embankment, and forming a whaif or quay, which would open Heming's Square to the influence of the sca breezes. There are barracks enough for the garrison required, at head quarters ; and it will become essentially necessary to
form posts for the protection of the inhabitants and their property in the out island settlements, where at present they are exposed to deprectations from pirates, slaves, and adventurers. [11. B. for 1836.]

Hoo Ialand is little more than a reef of rocks, which forms part of the N. harbour of New Providence. Rose Isiand, to the N. point, and E. of New Provldence, is ahout nine miles long and a quarter broad. It affords protection to "Cochrane's Anchorage." Harmour Island is five miles long and $t$ wo broad, lat. $25.29 \mathrm{~N} . \operatorname{long} .76 .34 \mathrm{~W}$., very healthy, and a favourite resort for convalescents. Turk's Ialand, lat. 2132 N. , long. 71.05 W ., principal mart, for salt-making, peculiarly healthy, and a point of military importance In regard to St. Domingo. Nortu and Soutil Biminis. These isles are ahout seven miles long, in lat. 25.40 N . long., 79.18 W ., healthy, well wooded and watered, capacious anchornge, and in the event of a war, highly important for the protection of the trade of the gulf of Florida, to the E. of which they are situate. The anchorage on the gulf side can admit any class of shlpping. Those not mentioned above are in chief-Andros, long (22 lengues) and irregular, to the W. of New Providence eight leagues. Between them a tongue of ocean water runs in S.E. as far ns lat. 23.21 , called the Gulf of Providence : aceess dificult from reefs. Off its S.E. end are the Fspirito Santo Isles. The Berry Islands, an irregular group. Several small harbours formed by them, where refreshments may be had. The S.E. of these islands nre der minated the Frozen Keys, and the N. the Stirrup Keys. Off the northernmost of the latter there is anchorage on the bank, in lot. 25.49. The Great and Little Isaacs. W. $\frac{3}{3}$ N., 48 miles from Little Stirrup Key, is the casternmost of three small keys, called the Little Isaacs, and five miles further is the westernmost key of the same name: these are from 50 to 60 or 70 feet in length ; the middle key is not so large. These keys are situated on the western end of the Gingerbread Ground, which extends five lengues E . hy S . from the weathernmost rock, or Little Isanc, is about five miles wide near the cast end, and has some dangerous sharp rocks upon it, with only seven to nine feet water. The Naranjos, or two Orange Keys, lie four miles within the edge of the bank, in lat. 24.55, and long. 79.7. Eleutheaa extends E. nine leagues, S.E. four ditto, and S. $\frac{1}{2}$ E. twelve leagues. Guanahani, or Cat Isiand, n.W. eight leagues and a half E. $\frac{1}{2}$ S. from Powel's Point, in Eleuthera; it thence extends south eastward 15 leagues, having a breadth of three to seven miles. Eleven miles S.E. from Cat Island is Conception Island, of about sever miles in length, N.E. and S.W., and three miles in breadth. Yuma, or Long Island, 17 leagues in length from S.E. to N.W. S. by W., $17 \frac{1}{2}$ leagues from the $\mathbf{S}$. point of Long Island, is Cayo Verde, or Green Key. From Cayo Verde the edge of the bank forms a great and deep bay to the N.W., in the S.W. part of which is Cayo de Sal, at the distance of 10 leagues from the former. Egg Island is small, in lat 25.31 . There are many smaller keys and rocks too numerous to mention.

An idea of the number and extent of the isles will be conveyed by the following statement of the lands in the Bahamas, from an official return dated in 1827.

Remaining in possession of the Crown, 2,431,000 acres in the Bahama lsies.
IV. The Bahamns are formed of calcareous rocks, which are composed of corals, shells, madrepores, and various marine deposits, hardened into solid inasses in the revolutions of ages. The deposits appear to have been thrown up in regular strata, nt various periods; and their upper surface, deeply honey-combed, hears evident marks of having been long covered by the waters of the ocean. No primitive formation has been found, and the bases of the islands are evidently coral reefs, originating with the Molusce, which, unpossessed of locomotive rowers, have organie functions destined for the secretion of the lime required for their colcareous coverings. Marl is formed on many of the out islands, and here and there strata of argillaceous earth may be met with. Meteoric stones have been diseovered rudely sculptured with human features by the aborigines; but whether found on the islands or brought thither, it is impossible to say; and at 'Turk's Island a great number of calcareous balls have been found, all bearing an indentation, as though they had been suspended to a pedicle. Their origin or nature is equally unknown. In confirmation of the idea that these islands lane been raised from the bottom of the ocean on pillars of coral, after the manner of the enstern and southern hemisphere, it may be stated many of their salt-water lakes and ponds communicate with the ocean, as shewn by their sea fish. Some of them are so deep as not to allow soundings ; and the water in them rises and falls with the tides on the coast.
V. Situated at the mouth of the gulf of Florida, placed by geographical position without the tropics, removed from the excessive heat of a vertical sum, and the intense cold of a northern winter, the Bahamas enjoy a climate mild, equable and delightful. To the islands within the torrid zone they are nearly akinin the little variety of scason, the natural productions of the earth, and the manners and customs of the people; but the decided difference in the mean annual temperature, and the more robust and healthy appearance of all classes of the community, gives to the

VII. Churches, Livings, \&c. in 1836. [B. B.]Christ's Church, in the Island of New Providence; value of living, $340 l$., Church will contain from 700 to 800 persons, from 400 to 500 generally attend. There is a parsonage-house, a chapel which will contain 400 persons, about 250 generally attend. St. Mathew, in the Island of New Providence; living 340l., Church contains from 300 to 400 , about 250 attend. St. John's Harbour, Egg Current Island; living, $270 l$., Church contains 400 persons, a Chapel which will contain 60, about 50 attend. St. Patrick Eludlcin; living, vacant, the Chapel will contain 400 persons, from 50 to 60 attend. St. Salvador, vacant, St. Andrews at Exuma and lugged Island, vacant. St. Paul's at Long Island, vacant. St. David's at Crooked Island, vacant. St. George at the Caicos, vacant. St. Thomas at Turk's Island, 270l., Church will contain 260 persons. House rent is allowed. St. Peter at Abuco, vacant. St. Christopher, district of Watling's Island and Rem's key, vacant. St. Stephen, district of St. Andrew's Island, vacant. Grand Bahamas, and the Beng Islands, vacant. Most of these Churches are Protestant. There are nine Dissenting places of worship, including the Scotch Kirk.

VllI. In 1832 the number of male scholars in the Bahamas was 549 ; females, 568 ; total, 1117. Four were puhlic schools; four Sunday schools; two day and one frce school for infants. The public schoolroom in the town of Nassau is capable of containing 200 pupils. The Wesleyans have two Sabbath and two Catechetical schools in New Providence. In the former, (in 1832) 24 white and 281 coloured children and adults receive gratuitous instruction in reading and writing, by 10 white and 18 coloured teachers. They have also 10 Sunday schools in the out-islands, where 630 whites and coloured children are in. structed.

X. As in the other West India possessions, the government of the Bahamas is nodelled after that of England ; viz. a House of Assembly or Commons, consisting of 30 members, returned from the several islands; an Executive and Legislative council of 12 members, approved by the crows, and a governor, who is com-mander-in-chief of the militia, and has the power of summoning and dissolving the legislative body, and of putting a negative on its proceedings. The electors are free white persons of 21 years of age, who have resided 12 months within the government, for six of which they must have been householders or treeholders, or in default of that have paid duties to the amount of $50 l$. To become a representative, the person must have 200 acres of cultivated land, or property to the value of $2,000 l$. currency.
There are several courts at law, such as the Supreme Court, which holds its sessions in terms of three weeks, with the powers of the common law courts at Westminster, and its practice modelled on that of the King's Bench, the Courts of Chancery, Error, ViceAdmiralty, \&c.

Nassau, in New Providence, as hefore observed, is the seat of government and the centre of commerce; it possesses a fine barbour, nearly land locked, and on the S . side of which the capital extends over a rather steep acclivity to the summit of a ridge, the W. of which is crowned by a fortress of considerable strength, where the garrison is kept. The island is divided into parishes, each of which has its church, clergy, and school, liberally provided for. The streets are regularly laid out, the public buildings good, and activity and cleanliness immediaicly attracis the eye of a stranger.

Governors of the Bahama-, from 1613 to 1838 .Chillingworth, 1673 ; Clark, 1677 ; Lilburne, 1684 ; Bridges, 1687; Cadwalader Jones, 1690; Trott, 1694 ; Nieholas Webb, 1697; Elias Hasket, 1700; Ellis Lightfoot, —; — Birch, 1704; Woods, Rogers, 1717 ; George Phenney, 1721 ; Woods Rogers, (again) i72s; Richard Fitzwilliam, 1733; John Tinker, 1738 ; William Shirley, 1759; Thomas Shirley, 1767; Montford Brown, 1774 ; John Maxwell, 1779 ; James E. Powel, (lieut.) 1784; John Earl of Dunmore, 1786 ; John Forbes, (licut.) 1797 ; William Dowdeswell, 1797 ; John Halkett, 1801 ; Charles Cameron, 1804; Lewis Grant, 1820 ; Sir J. C. Smith, 1829 ; B. T. Balfour, (lieut.) 1833; Lieut. Coll. William G. Colebrook, 1835.

The miiitary strength of the colony is shown as folJows :-New Providence regiment of militia; 1 colo-
nel ; 1 lieut.-colonel; 2 majors; 1 adjutant; 1 quar-ter-master; 2 surgeons; 1 serjeant-major; 1 military marshal ; 7 captains; 13 lieutenants; 26 sergeants; 27 corporals; 3 drummers; 326 privates:-total, 412.

New Providence Marine Corps:-1 major; 1 quar-ter-master; 1 surgeon; 1 military marshal; 2 captains; 4 lieutenants; 10 serjeants; 8 corporals; 129 privates:-total, 157.

The regular troops amount to about 600 men .

Rates at which gold, silver, and copper coins pass current in the Bahamas, by act of Assembly passed in the sixth year of his late Majesty's reign.-Sovereign, 1l. $16 \mathrm{~s} .1 l^{13} l l$.; half ditto, $18 \mathrm{~s} .5 d .7-13$ ths; silver crown, $9 s .2 d$. . $11-12 t h s$; half ditto, $4 s .7 d .5-13$ ths ; silver shilling, 1s. 10d. $2-13$ ths; ditto $6 \mathrm{~d} .=11 \mathrm{~d}$. $1-13 \mathrm{th} ; 9 \mathrm{~d} .=5 d .1-26 \mathrm{th}$; half ditto, 2d. $1-52 \mathrm{nd}$; copper jenny, $2 d$. ; hall ditto, $1 d$.

The amount of gold coin in circulation, may be estimated at, in sterling $10,000 l$.; silver coin in circulation, estimated at $26,000 l$; copper coin, 501 . : total, $36,050 \mathrm{l}$. In the public bank there is in cash and notes about $12,000 l$. sterling. The debt of the colony is $18,297 l$. at six per cent interest. [B. B. for 18.3i.]

XIV．European and tropical vegetables and fruits $\mid$ sponges of good quality abound on the island shores， thrive and are abundant ；beef，mutton and poultry good and plentiful ；the shores abound with fish，and there is turtle enough among the Bahamas to supply all Europe ；almost every island has pretty good water； ambergris is occasionally found；cotton was formerly an abundant article of exportation，and there is searcely a spot in any of the islands that is not co－ vered with aluxuriant vegetation．

Ship timber of a most excellent quality，is abun－ dant oll many of the Bahama islands；logwood，bra－ zilletto，fustic，green ebony and satin wood，are pro－ duced in considerable quantities for building or plank－ ing vessels；the cedar，horseflesh，madeira，mastic， and other durable woods，in great plenty，and there is an inexhaustible supply of very superior firewood；
and the water from the wells at New Providence，has the desirable quality of keeping good at sea for any length of time．

The agrieultural stoek in the Bahamas in 1831，con－ sisted of 1,165 horses，asses，and mules；3，250 horned cattle； 5,975 sheep and goats；and 3,755 swine． The quantity of produee raised was 30,350 bushels of Indian corn（at 4s． $4 d$ ．market price per bushel）； $74,250 \mathrm{lbs}$ ．of potatoes and yams（at 6 s ．per cwt．）； 3,225 bushels of peas and beans（at 5s．10d．per bushel）；38，465 dozen of pine apples（at $2 s$ ．per dozen）； 22 tons of cotton（at $5 d$. ．per pound）； 30,500 melons and pumpkins（at 3 v ．per dozen）； $31,300 \mathrm{lbs}$ ．of oere（at $2 d$ ．per lb. ）；and 19 tons of eassada or cassava，at $10 s$ ．per cwt ．

## CHAP'TER XVI.-THE BERMUDAS OR SOMER ISLES.

Section I. The Bermudas, or Somer Isles, exceeding 300 in number, lie in the Atlantic Ocean, in latitude 32.20 . N. longitude 64.50 . W. about 600 miles F. of South Carolina, the nearest point of North America, and containing about 12,000 acres.
11. They were diseovered in 1522 , by J. Bermudez, a Spaniard, who found them uninhabited. May, an Englishman, is said to have been wrecked there at an earlier period, and, with his companions built a vessel, in which he returned to England. Sir George Somers was wrecked upon them in 1609 , and made his way to Virginia in a vessel constructed of cedar, which did not contain an ounce of iron, excepting one bolt in the keel. They were settled shortly after from Virginia and England, but disputes for some time prevailed respecting the rights of the Virginia Company. They have ever since remained in the uninterrupted possession of England, and at one time attracted great attention for their salubrity and picturesque scenery.
III. When viewed from a ship at sea, the Bermudas appear to have but a trifling elevation compared with the bold and lofty aspect of many of our West India Islands; indeed the surface is very irregular, scldom presenting any lofty elevations, the highest land not exceeding 200 feet. The principal islands (St. George's, Ireland, St. David, Somerset, Paget, Longlird and Smith's), together with the minor islands, lie in such a manner as to form several bays, some of which are capacious and deep enough to afforl harbour for the whole British navy, but difficult of ingress and egress; St. George's, the main island, Somerset and Ireland, form a chain, with very little interruption, for about 30 miles long, seldom exceeding in breadth two miles (resembling a shepherd's crook), running nearly E. and W., St. George's being the E. and Somerset and Ireland the W. ; it appears, in fact, as if an extensive island had disappeared in some convulsion of nature, leaving above water only a long narrow ridge, without either mountains or vallies, rivers, forests, or plains. Groves of cedars are here and there detached on little plateaus of rising ground; and the numerous basins (some sixteen miles in circumference) formed by the islands give very much the appearance of lake scenery. The island of St. George, the military station of the colony, and formerly the seat of government, is about three miles long, and at no part exceeding half a mile broad: it lies at the entrance of the only passage for ships of burthen. The harbour of St. George, when once entered, is said to be one of the finest in the world, and capuble of containing the whole British navy. It is completely land-locked. The entrance to the harbour of St. George is narrow, and is protected by a fort called Cunningham. After passing this entrance, the town presents one of the most beautiful landscapes the eye ever rested on. The square tower to the little church-the white and yellow houses-the clear and cloudless sky above, with the dark foliage of the cedar-clad hills in the rear,combine to make the scene most enchanting. To the westward of the town is a hill called Fort George, where is situated the telegraph. The streets are
extremely narrow, which, however, is undoubtedly an advantage in all warm climates, as it creates much pleasant shade, and without which, walking in the middle of the day would not be bearable. The houses are low, scarcely ever exceeding two stories, and built substantially of Bermuda stone. The barracks are situated on a hill to the eastward of the town, and are very commodicus, and would probably comfortably accommodate 3,000 troops. There are few springs in the island, and consequently the people depend on rain, for the purpose of catching which they have large tanks, built of stone, and covered with Roman cement. The air being free from smoke, and the roofs of the houses newly whitewashed, the water thus caught is very pure, and is really as delicious as any I ever tasted. The government have large reservuirs of water on the north side of the town, for the supply of the navy. The fortifications for the protection of this end of Bermuda, are the already mentioned Fort Cunningham, at the mouth of the harbour, and a fort called Catherine, not quite completed, situated at the N. E. extremity of St. George's Island. The dock yard is situated at the W. end of Ireland Island, and distant about 15 miles from St. George's. For about three miles the course lies between St. George and Long-bird Islands; after passing which we arrive at the westernmost outlet of St. George's Harbuur, a narrow passage about the eighth of a mile wide, called the Ferry. To protect this opening, a Martello tower, with one gun, erects its head. The ferry is so seldom used for the ingress or egress of vessels, from the shallowness of the water and strength of the current, that the above mentioned fortification is quite as strong as necessary. The tide runs with much force. The rocks on the N . of the island present a very formidable appearance, and certainly do away with the necessity of the work of man's hands, for no vessel could approach within 10 or 15 miles of this side of Bermuda without the certainty of being shipwrecked, and the lives of its crew placed in the greatest jeopardy. Nine miles $N$. is a rock, which, at low tides, presents a surface of about 40 feet in circumference, called the North Rock. Shoals surround it for many hundred yards, and the water, when the wind is boisterous, breaks over it with a terrific noise. This rock, placed as it were as a beacon, seems to say, "Hitherto shalt thou come, and no further ;" for it must be a miracle indeed if a ship gets nearer shore than it, for the coral shoals lie thick in every direction in its neighbourhood. It is not often that vessels are wreeked on the North Rock, because careful mariners know the danger of passing Bermuda to the northward, as all books of navigation recommend the south side as being the safest. The shore presents rather a sterile appearance, and even the cedars, which have the misfortune to be growing near the water, have a dead dingy appearance. The sterility arises from the spray of the sea, the salt from which, acted upon by the sun, causes the grass, \&c., to wither and die away. The shore is principally inhabited by fishermen and shipbuilders; the produce of the occupation of the former
being the principal sustenance of, and the business of the latter, in its various ramifications, affording employment to shop-keepers, mechanics, labourers, and snilors. About midway between the Ferry and the dock yard is one of the houses appropriated as a residence for the governor for the time being; it is scarcely secn from the water; but near it is a hill called Mount Langton, on which is a flag. staff, by which communication is kept up between St. George, Somerset, and the dock yard. A few miles beyond this is the residence of the admiral, King's Hill, or Clarence Lodge. Ireland Island, on which the dock yard is, is about one mile in length, and perhaps a quarter broad, and is nearly all occupied by the buildings required for the officers, artizans, and for storehouses. The hospital is situated on the highest part of the island, and is very large and commodious. The officers' residences are built in the English style, and are very comfortable. The most important work is a breakwater, similar to that at Plymouth. Several hundred conviets are employed on it. The dock yard is kept in fine order.

The Bermudas are, in fact, the Gibraltar of the West Indies, and Washington was very desirous of annexing them to the Republic, to make them, as he said, "a nest of horncts to annoy English commerce."
IV. A stone called "Bermuda rock," and peeuliar to the place, forms, with few exceptions, the basis of the islands and minor rocks; it is extremely porous -so much so as to be unfit for filtering stones; at first sight it closely resembles loose sandstone, but on minute inspection it will be found to consist of a congeries of comminuted shells cemented together, and occasionally including larger and tolerably perfect portions of shells; the layers of this stone are stratified, and the dip varies very much in the direction it takes and the angle it forms with the horizon; the stone is easily wrought with axes and saws, is naturally friable, but bccomes harder when exposed to the atmosphere, and changing from a whitish to a bluish grey colour; it is used in the principal buildings; for when covered with cement or lime it is impervious to the rain or damp, and was therefore at one time an article of extensive export to the United States of America.
Lieut. Nelson says that the whole group is composed of calcareons sand and limestone, derived from comminuted shells and corals, and the different varieties are associated without any definite order of
position, the harder llmestones occasionally resting upon loose satid. The arrangement of the beds is often dome-shaped, but in many instances the strata are singularly waved.
The bottom of the basin within the zone of coral reefs is stated to consist of corals, calcareous sand, and soft calcareous mud resembling chalk, and considered by the author to have been derived from the decomposition of zoophytes.

Uader the head of encroachments, he describes the banks of detritus thrown up by the sea, and the progress which, under certain eircumstances, the loose sand makes in overwhelming tracts previously fertile. He states that wherever the shrubs and creepers have been destroyed, the sand has spread rapidly, but that it is invariably stopped as soon as it arrives at a plantation or row of trees.
The soil is of a reddish brown colour, and in some places, as at Ireland Isle, bearing strong marks of oxyde of iron. Round the coast there are some districts with a strong tenacious blue clay; in others a micaceous, kneadable brick earth ; and again, an argillaccous soil, with luxuriant pasturage. There is no other point in the geology worth noticing.
V. The clinate is favourable to European health, and may be said to be a perpetual summer. The metcorological register for the year is-

An Account showing the Expense of the Convict Hulk Establishment at Bermuda, from the 1st of January, to the 30th of June, 1837; the Labour of Convicts during that period; the Number of Prisoners confined; and the Number of Days' Labour performed by such Prisoners on the lublic Works. [Report of J. A. Capper, Esq., to Lord Melhourne, 27th February, 1838.-Commons' Paper.]

X. The colonists have their own Legislative Assembly (36) and Council of eight members. There is no militia.
X1. Taxes in Bermuda in 1836. [B. B.]-On Rum and other Spirits, $2 \frac{1}{4} l$. per gallon; Wine, $1 l .10 s$, per pipe; Cider, Ale, or Mum, 3s. per barrel, if by inhuhitants; double duties by all other.

Powder Duty.-A tax levied on vessels the property of colonists ; taxes on personal property, $2 \frac{1}{2}$ per cent., sc. \&c.

Local Revenues. - St. George's, 217l.; Hamilton, 101l.; Smith's, 62l.; Devonshire, 91l.; Pembroke, 369l.; Paget, $112 l$. ; Warwick, $154 l$. ; Southampton, 87l. ; Sandy's, 152l. ; Total raised from Pew Rents, Parish Rates, Spirit Licenses, and Dog Tax. Expended in salary of Rector, and support of Poor, \&.c.
Conmarative Yearly Statement of the Revenve of Bermuldas. [B.B.]-1827, 12,23+l.; 1828, 13,789l.; 1829, 14,390l.; 1830, 17,902l.; 1831, 13,484l.; 1832, $14,930 l . ; 1833,14,577 l . ; 1834,15,408 l$. ; 1835. 16,726l.
Revenue of Bermulas for 1836.- Custom Duties received under Acts passed previous to 18th George 3. chap. 12. 213l.; Custom Duties received under Aets passed subsequent to the above, 4,389l.; Colonial Liquor Duty, permanent, 517l.; Colonial Annual Supply Bills, 5,383l.; Parliamentary Grant, 4,049l.; Drawn for upon Receiver-general of Customs in aid of Customs, Salaries, and ineidental Expenses, 7661 .; Miscellaneous, 1,313l.; Total, 16,630l.

Comparatire Yearly Statement of the Expentiture of Bermudas.-1827, 10,405l.; 1828, 27,813l.; 1829, 15,834l.; 1830, 15,445l.; 1831, 16,201l.; 1832, 15,406l.; 1833, 12,380l.; 1834, 14,835l.; 1835, 18,171l.

Expenditure of Bermudas for 1836.- Governor's Salary, \&c., 2,785l.; Civil Officers, 865l.; Customhouse Salarics, 2,595l.; Judicial Department, 1,400t.; Ecelesiastical Department, 1,823l.; Misccllaneous, 9,869l.; Total, 19,437l.

Recapitulation of the Establishment.-Paid by Great Britain in sterling money: Civil Establishment (exclusive of Customs Department), 2,799l.; Customs Department, 766l.; Judicial Establishment, 1,300l.; Ecelesiastical Establishment, 49:l.; Total, $5,363 l$. ['aid by the Colony ii sterling money: Civil Establishment (exclusive of Customs Department), 8.52l.; Contingent Expenditure, 1,692l.; Customs Depurtment, 1,828l.; Contingent Expenditure, 190l.; Ju-
dicial Establishment, 100l. ; Contingent Expenditure, 1961.; E.celesiastical Establishment, 1,326l.; Contingent Expenditure, 491.; Miscellancous Expenditure, 7,839l.; Total, 14,073l. By Great Britain, 5,363l.; by the Colony, 14,073l.; Grand Total, $19,437 l$. [B. B.] The Governor's salary is $2,199 l$. from parliamentary grant, $533 l$. from the Colony, from quit rents $52 l=2,78.1 l$.

British Expenditure for Commissariat Department, 183G. [13. B.]-Provisions and Forage, 5,277l. Fuel and Light, 89l. Miscellancous Purehases: for Hos. pital, 102l.; for Commissariat, $17 l$.; Total, 119l. Pay of Persons in the Commissariat (excluding Officers and listablished Clerks), 622l. Money Allowances to Commissariat, 145l. Rent and Contingent Expenses for Commissariat, $178 l$. Regimental and Staff Pay Allowances: No. 1, Pay, 7,271l.; 2, Money Allow. ances, $380 l$.; 3, Passage Moncy, Expenses of Courts Martial, and Contingencies, 129l.; 4, Half-pay, Widows' Pensions, 162l.; 5. Chelsca Pensions, $130 l$. ; Total, 8,072l. Pay of Commissariat $0^{\text {ficers and Es- }}$ tablished Clerks, 837 l . ; Commissariat Half-pay, 268l.; Total, 1,1056. Imprests to Navy Departments 24,950l.; ditto to Convict Establishment, 861 l.; Total, 41,422l. Advanced on account of the Expenses of the Commissioners of Compensation under the Act for the Abolition of Slavery, and to be replaced from the Fund upon which such Expenses are specially charged by that Act, 406 l . Total Amount, 41,828l.

British Erpenditure for Oidnumce Department, 1836. [1B. B.] Money Allowances, 113l. Drafts drawn for -Pay and Allowances Royal Artillery and Koyal Engineers, 2,910l.; Rations and Stoppages (ditto), 1,140l; Barrack 1)epartment - Pay, Rent, Repairs, and Contingencies, $547 l$.; Imprests for Storekeeper's Department, $907 l$.; Military Works, $5,354 l$.; Total, 10,858l. Grand Total, 10,971l.
bills are not drawn by the Commissariat expressly for the pay and allowances of the troops, who are usually paid in dollars reccived from Jamaica and other stations. Those that are drawn are almost entirely to pay for mavy and army supplies. In the course of the year 1836 , bills to the extent of 9,0001 . for navy, and $6,518 l$. lor army services, were drawn, at the fixed period of $1 \frac{1}{3}$ per cent. The amount of ocluance drafts on the militury chest is stated above.

The par of exchange is 150 per cent. There is no paper money, and the mount of coin is not ascertaiuable.

# BOOK II.-POSSESSIONS IN SOUTH AMERICA. 

## CHAPTER I---BRITISH GUIANA.

Section I. British Guiana, embracing the settlements on the rivers lissequibo, Demernra and Berbice, and covering an nrea of nearly 100,000 square miles. Under the Demerarn and lissequibo districts, 70,000 square iniles; and within the Berbice territory, 25,000 ditto. Extends ahout 200 miles from E. to W. along that alluvial portion of the South American Continent termed the 'Main,' which is formed by the deltas of the rivers Amazon and Orinoco, having for its boundaries on the E. the mouth of the river Courantyn, in latitude 6.10 . N. longitude 56.25 . W.; on the W. the boundaries of Colombia, between the Barymn and Pomeroon rivers, about latitude 8 . N. longitude 60 . W., and to the southward, or inland, about 100 leagues, or perhnus to n mountain range (the Cordilleras) extending on the eastward to within two degrees of the equator. Some consider the river Baryma, in latitude 8.35 . N. longitude 60.10. W., the Western boundary; others the Pomeroon river, Intitude 7.40. N. longitude 58.50 . W.; lut the limits have never yet been completely settled.
II. The territories on this coast are called, 1st, Spanish; 2nd, British ; 3rd, French, and 4th, Portuguese Guiana. The lst lying on both sides of the Orinoco, and extending S. and S. W. to the Rio Negro, nnd the Portuguese settlements, is bounded on the E. by the river Baryma in 8.50. N. latitude, 60.5. W. longitudc. 2nd. British (formerly Dutch) Guiana described in the text; and 3rd, French Guiana (called Cayenne, from the name of the island on which the chief town stands) extends from the boundary of British Guiana on the W. to Vincent Pincon's Bay, near Cape North, in latitude 2.35 . N. longitude 51. W.; (this bay the Portuguese have confounded with the bay of the great river Oyapoko, which joins the sea in N. latitude 4.35., W. longitude 51.20.) and 4th, Portuguese Guiana, it is alleged, extends from Cape North, between the parallel of 1 nnd 2.25 N . latitude, to the junction of the grent river Amazon with the Rio Negro or black river, thus cutting off the southern parts of French, British, and Spanish Guiana, from 51. to nearly 65. W. longitude, 800 miles, and having for its S. and S.W. boundary the grent river Amazon.

A detail of the early history of this part of the South American Continent would be out of place in a work whose chief object is to enable the British public to form a correct view of the position, magnitude and importance of our colonies; the leading points of the European settlement and English aequisition will therefore suffice. So early as 1580 , the Dutch attempted to form small settlements nlong this coast on the banks of the Amazon, Orinoco, and Pomeroon rivers (for trading purposes), on the latter mamed river they had a factory called Nieww Zcaland, and in 1581 the States-General of I Iolland privileged certain individuals to trade to the const. These proceedings were viewed with a jenlous eye by the Spaniards, who, aided by the Indians, drove the Zea-
landers from their stetion; the persevering elinracter of the Dutch would not ollow a first check to daunt their efforts, their commander, Joost Vnn Den lloog, succeeded in gaining possession of a small island at the junction of the Mazerooni and Cayuni, called Kykoveral; and in 1602, Jan Van Peere, a nntive of llushing, attempted to open a trade with the Indians of the Orinoco, but was defeated by the Spaninrds; the Zealanders, however, about this time, effected a settlement on the banks of the Essequibo, in 1613 they reported their colony to be in a llourishing condition, and in 1621 , the Duteh government undertook to supply the colonists with negro slaves from Africa; for the prosecuting of which trade a company was formed and a monopoly granted. Jan Van Peere, with his companions, when driven by the Spariards from the Orinoco, commenced colonizing on the banks of the Berbice river, and cleared a large extent of territory between the rivers of Berbice and Courantyn. In 1657, the Zcalanders colonized on the river Pomeroon and the ereek Morocco, and erected thercon the towns of New Zealand and New Middleburgh. lissequibo, in 1665, was taken by the English, and alterwards plundered by the French; but both were expelled from the Dutch settlements, in the following year, by an expedition from Hollnud. It is said that, in 1662 , after its settlement, the whole coast whs ceded by Charles II. to Lord Willoughby, the then Governor of Barbadoes, who named the principal river wherein Paramaribo is situate, and, in fact, the whole colony. Surryham (in honour of the Earl of Surry, the term being afterwards changed into Surrinam), and that the colony was purchased from the heirs of Lord Willoughby by the British crown, and exchanged with the Dutch Government for New Holland, in North America (now New York). In 1669, the whole of Dutch Guiana was transferred from certain gentlemen in Amsterdam, Flushing, \&cc., who claimed to be proprietors, to the Dutch West India Company. In 1712 , the French took possession of Berbice, ly force, from the Dutch proprictors; but, in 1714, returned it to its former owners, on the payment of a sum of money. At this period, the StatesGeneral contracted for the supply of negroes to the colony, in the proportion of two-thirds male and one-third female, at the rate of $250 l$. each.

In $17 \cong 0$, the propriet is of Berbice, not having a capital equal to the cultivation of which the colony was capable, raised $n$ fund of $3,200,000$ tlorins, divided into 1,600 shares of 2,000 florins each, to be employed solely in cultivated sugar, cocoa, and indigo ; 50 per cent. was to be repaid is 1724, the remainder when required by the directors, who consisted of seven proprietors (afterwards increased to nine) of 20,000 llorins each, residing nt Amsterdam ; the former proprictors of Berbice were also to be paid 800,000 tlorins, or allowed to purchase 400 shares. From this period the colonies rapidly flourished nud extended;
colfee cultivation was introduced from Surimam, and a tort built at the jumetion of the Canje. A passage from the river Amazon to the lissequiho was diseovered in 1736 , by a Portuguese, named Silva de Rosa, who had been privinte accretary to the Viceroy of Brazil; but, having killed a nobleman in a duel, he fled with some negroes in a canoe along the Rio Branca, Tacusn, Moan, and across the lake Amucn; thence entering the Rippanouny, and tinally reaching Essecuibo.

In 1741, the planters in Essefuiho, thinking the bow lands near the sea more productive than the upper country, over which they had previously settled, hegan emigrating to the former ; and, in 1745, the Directors of the Chamber of Zealand gave permis. sion to form pluntations on the uninhanited coast of the river bemarara. A most disastrous negro insurrection took place in llerbiee, in 1763 , from which the colony was bot relieved until alter eleven months desolation, and only then by the arrival of $n$ strong aquadron from Holland. Cuurts of policy and of civil and criminal justice were established for Demerara 1773 , on an island named llorsden, about 20 miles up the river; hut, the following year, the seat of goverimment was removed from thence to the east point of the mouth of the river, and named Stabroek, now George Town. In 1781, the colonies on the Essequibo and Demerara were plaeed under the pro. tection of Great Britain, by a squadron of Aliniral Lord Rodney's fleet; hut, in 1783, the French took $t$ ( mporary possession of the whole Duteh settlements, which, in 1796, sarrendered to the 13ritish forees under the orders of Sir lialph Abererombic, and commanded by Major-Gen. White. These settlements were, however, restored to the Ihutch by the treaty of Amiens, in 1802, but ngain taken possession of by England on the breaking out of the war in 1803; since which period they have belonged to Cireat Britain. In 1812, nill distinctions between the colonies of Essequibo and Demerara, whether of jurisdiction or otherwise, were nbolished-the ollice of commander of Essequibo was done nway with, the courts of eivil and eriminal justice of both colonies mited at Demerara, and the judicial established at Fort lsland dis. continued; the name of the capital was also changed from Stabrock to Gcorge Town, and a board of police appointed for its internal management, the financial representations of Demerara and Eissequibo comhined with the College of Kiezers, and the right of suffrage extended to all persons paying income tax on 10,000 florins, or possessing 25 slaves. In 1807, the slave. trade was only finally abolished. By an nidditional article to a convention signed at London, August 13, 1814, Demerarn, Essequibo, and Berbice were finnliy ceded to Great Britain, with the condition that the Dutch proprictors had liberty, under certain regulations, to trade with Holland. The year 1818 witnessed the first introduction of trial by jury and the commission of oyer et terminer. In 1820, alter much angry dispute relative to the enormous and illegal exactions of lees, a tariff of the same was fixed, and a petition to the crown, praying for an enquiry into judicial abuses, agreed to, which enduiry was ordered. A serious insurrection of the slaves took place on the east coast of the Demerara river, in 182.3, which was finally suppressed, and Mr. Smith, a Missionary of the London Society, condemned to death for inciting the negroes to rebellion-a sentence which was commuted at home to total banishment from the West Indies: Mr. Smith died in prison pending the sentence. In 1831, the colonies of De-
merara, lissequibo, and Berbice were united into one government, and called British Ginyana.

Governors of British Guyana-I Memerarn and Ein. sequibo.-Giov. Beaujon, from capture in 1796 to restoration in 1802 ; Lient. Col. Nicholson, Acting Gov. fron capture in 1803 to arrival of Gov. Ileanjon, 1804; Gov. Meanjot, from 1804 to Octoher, 1805 ; Brig, Gien. Montgomery, Acting Gov., from Gov. Beadjon's death, in 1 sos, to arrival of lieut. Gov. Henthack, 1806; Henry lientinck, liag,, lieut. Gov.
 and Col. Nicholson, Acting Govs, during nbsence of licut. Gov. Dentinck, August, 1807, to end of 1808 ; Henry Bentinck, Eisq. Gov., Junuary, 1809 to 1812; Major Gen. Carmichaci and Major Gen. Murray, Act. ing Govs. 1812 to 1813, on nhacnee of Gov. lientinck: Major Gen. Muriuy, Licut. Gov., 1818 to 1824; Major Gen. Sir B. 11. Urban, Lieut. Gov., 1824 to 1831; Mnjor Gen. Sir B. 1), Lirban, Gov. of British Guiana, 1831 to 18333 ; Licut. Col. Chambera and Col. Sir C. F. Smith, deting Govs. 1833, on resigna. tion of Sir B. D. Urban; Major Gen. Sir J. C. Suyth, Gov. June, 1833, to March, 1838; Major Orange, Acting Gov, 1838 , on death of sir J. C. Smyth; Henry Light, Visq. from May, 1838.
Berbice.-Gov. Van Batenburg, from cajture in 1796 to restoration in 1802; Lieut. Col. Nicholson, Acting Gov. from capture in 1803 to 1804 ; Gov. Van Batenburg, from $1 \times 0.1$ to 1806 ; Lieut. Col. Nicholson and Brig. Gen. Montgomery, Acting Govs. from end of 1806 to 1809 ; William Woodley, lisq. Licut. Gov. from Mareh, 1809, to Jammary, 1810: Mnjor Gen. Dalrymple, Acting Gov. 1810 ; IRobert Gorlon, Esp. Lient Cov. end of 1810 to middle of 1812; l3rig. Gen. Murray, Aeting Gov., 1812 to 1813, on governor's absence; Robert Gordon, Esq. Lieut. Gov. Fehruary to June, 1813 ; Major Grant, Aeting Gov., 1813, on Licut. Gov. Gordon's resignation; Major Gen. John Murray, Lieut. Gov. August to December, Isi3; Major Grant, Acting Gov. December, 1813, to January, 1814; II. W. Bentinck; Esp. Lieut. Gov. January, 1kII, to November, 18211 ; Major Thistle. thwayte nad Col. Sir Jno. Cameron, Acting Govs. November, is:20, to Marel, 1821, on death of Lieut. Gov. llentinck; Harry Beard, Esy. Lient. Gov. March 1821, to March, 1825 ; Major Gien. Sir B. D. Urban, Aeting Gov. Murch, 1825, to July, 1826, on Lient. Gov. Beard's nbsence; IIenry Beard, Fisq. Lieut. Gov, Joly, 18:26, to union of the colony with Demerara and Esseruibo, in 18:31, as British Guinma.
111. With the exception of ranges of sandstone hills, (some on the west bank of the Demerara river from 100 to 150 feet high, and nearly perpendicular) extending 20 to 30 miles inland, and rarely more than 40 or 50 feet above the level of the rivers and erecks; the whole country inhabited by the liurojeans is perfectly flat and alluvial, bearing a striking resemblance to Holland and Flanders, and, like those comntries, drained by canals and sluices, with lofty dikes or mounds of mod, of considerable thickness, embanking ench estate, and kept, together with the numerous bridges, in repair by the proprictors of the land in which they are situate.

As the country is ascended from 80 to 100 miles inland, its fine savunnahs are interrupted hy, in some places, a beantiful hill and dale territory, varied with high and frequently rocky land-presenting a strong contrast to the rather monotonous scenery which a dead llat possesses, and which those who have visited Bengal and the delta of the (ianges, as contrasted with the upper provinecs, will readily understand.

Further southward, at the Coomarow l'all (vide river Eissequibo), the granitic table-land belonging to the Cordillera rises to the height of 6,0100 foct above the level of the sea, at 3,000 miles distunt from the ucenn.

The whole face of the const of Gitiann, from the Maranon to the Orinoco, is low, nud generally bordered with a samdy flat, extending far out to seaward; moreover the various large rivers by whleh it la intersected, contmally bring down from the apper country vast quantities of allovial mutter, which, on depo siting, form in margin of low ground, covered with mangrove bushes, appearing an inareessible harrier at low water, but completely hideden at full tide. Abont 500 paces within these mangroves, the low and level savannahs commence, extending irregularly inland and every where intersected by rivers, rivitets and creeks, with a dense, luxnriant nud magnitleent vege. tation. The alluvial that may he considered to termi nate at the sand-hills, the general breadth from the sea being about 30 miles, although the firet indica tions of rock are about 70 miles indand from (icorge Town, consisting of apparently a porphyritic sand stone under water. The plantations are regularly ranged on either side of the great rivers, or along the coast, in allotments of from 500 to 1,000 neres each. The Dutch West Imin Company parcelled the allotments out into, 500 acres conditional grants, with an additional 500 acres behbed the first nllotment, when two-thirds of the latter were cultivated. Snles and divisions of patrimony have caused some changes in the area of the estates, the dwelling-houses, elevated on piles of timber, are generally close to the river's brink, with a wharf or landing-place, opposite, for the convenience of shipping produce; buildings of dilferent descriptions are scattered about in cvery direction; sugar-mills driven by wind, or by stcam, and on the coffee plantations, lomies or barns, three stories high, form a pieturesque prospect, in addition to the numerous boats sailing up and down the rivers and erecks; while the insulated, well-tilled plantations, excellent brick-mnde and avenued ronds, with numerous white bridges, nfford a most pleasing indication of an industrious and intelligent community. The physical aspect of the colony may be further judged of by its Rirers. The three grent rivers within British Guiana, are the Essequibo, Demerara ant Berbice, with their numerous trihutaries: to begin with the most westerly, the Essisquiso, situate nine miles west of the Demerara river, at its embouchure from one site of the main land to the other, is from 15 to 20 miles wide, and covered with many beautiful low, and bushy islands, with shoals or sandy spits, extending from the north parts of the islets a consideraole distance to seaward, and dividing the navigation into four separate channels. The most castern island is termed Leguan, (containing 24 sugar estates), between which and the east side of the river is the ship channel, a wide passage, but much encumbered with shoals; to the westward is a long and narrow island, called Wakenaam, containing 18 sugar estates, its dimensions are about nine miles long and 3 broad; to the north-west of the latter and near the west shoics is a small islet, termed Tiger Island (containing three sugar estates). Hog Island, is the largest in the Es. sequibo ; its south end extends nearly to Fort Island A succession of other islands (one termed Fort Island about 15 miles from the mouth), extend to the south ward and further up the river, from 25 to 30 miles, between all of which there are channels, but from the extensive deposits of mud, it is difficult to state the soundings for any length of time, the depth of water
on the whole coast belig continually undergoing a change, acroriling to the heaviness of the raina or the therution of the wimis that blow on the shore. From liort lalent, "he lissequibo rins ucarly south for about (10) miles, whe re it is joined by the large river Cayuni, which runs nearly south west, afterwaris north west throngh the province of Cobomblan Guyana, where it is supposed to join some of the literior hranches of the Oriroco ; a little further, or inland, the lissequibo is gomed by the Mnzaroond river, which makes a considerable sweep to the north west, mul then returns so as to form a large penimsula, inclosing lofty moun. tains and conslderable creeks or rivule ts ; indeed for *0 miles Inland the brealth of the Mazarooni is so grent, and the wooded islunds nut creeks so name rous, that it has more resemblance to $n$ lake than a siver, und the influence of the tides is felt, at least in the lissegniho, 100 miles from the ocenn.

The Demanama Roven, is situate to the south east of the Essequibo, 16 miles from leguan island, and nhout 57 miles westward of the bar of the berhice river, in 6.40. N. Lat, nud $57.4 \mathrm{~K}^{\circ} \mathrm{W}$. l.on $_{6}$, nearly three miles broad at ${ }^{\prime}$ 's mouth, and becom' nar rowerns it is ascended. The rapital of Bror, h Gui nna, in lat. 6.49:20. N. sung. 58.11.30. Fijght-house] W, formerly called Shabroek, now salled Gcorge 'Town is situate anidst a densi foline, on its E . or right bank, hbout one male and a halt from a small fortifiention, built of mut. and fascit . , with twi, iw platiorms, and termed Fort William l'rederick. if it were not for the tropical scenery aromad $r_{\text {, w ge }}$ Town, it might be mistaken for a l)uteh city é cept close to the river the houses, raised on supports to prevent damps, are widely scatter $\therefore$ " ilt of wood after the Duteh style with a stom, com ured accord ing to the fashion of the owne 1 , surscunded by a garien and lofty trees, and separated from each othe by canals, dykes, or lofty mud embankinents. The most ancient part of the capital Stabroei, runs buck from the river towards the forest, cotsisting of two rows of houses full a mile long, with a broal and shaded road between them, and a canal in the rear of ench line of houses, communicatila with the river. In consequence of the searcity of fresh water, each house is provided with a large cistern, and pipes leading into it, for the preservation of rain water. The barracks, hospitnls and public buildings in Demerara, nre in evidence of the cnste and munificence of the colonists, at whose cost they have been erected. George Town, is divided into districts, thus: Kingston, joining Fort w:linm Frederick; Cumingshurgh, North and South. "io sengen, which is subdivided into Robs Town and xacey's Town. Stabropk, a district in itself, and ancient part of the Dutch capital ; also en Rust and Charles Town, which are bounded by plantation 1 a l'enitence; to the eastward of Fort William Fre whick, is situated Camp House, the reaidence of " 1 . gevernor, a few hundred yards to the east 0 : waic $x$ is the residence of the ordnance storekeeper. Between Camp House and the ordnancce department, a little to the south, are placed two splendid hospitals, with kitchens, cisterns, \&c. for the military; ncarly opposite to which, the new military barracks have been lately crected; they cannot be surpassed in accommodation in any part of her majesty's dominions; two for the men and officers, witl kitchens, servants' apartments, cisterns, \&c. \&c. To the east of the ordnance departinent, are the quarters of the engineers' ; and adjoining the engincers' quarters are the York and Albany barracks, built by the colony, for the accommodation of 200 men and ofi-
cers. Facing the river, in the district of Stabrock, unw public huildings of bricks, stuceoed, have been erected by the colony to accommodate all the public otheers; they liave cost the colony upwards of $50,000 l$. sterling: near to the latter is the scotel church, a very handsome modern building, to the east ward of which is the town grard-house, \&e. The river is mavigable by shipe of burden for 100 miles up, as far as the caterncts, and aflording an excellent harbour, capable of lolding the whole mavy of Grent Britain; but unfortumately the bar will not allow vessels that draw more than 18 fect to go over it. For 30 miles inland, along the banks of the Demerarn river, the country consists of extensive level mendows or snvanmals; several sand-hills then upear, und as the river is ascembed, the comutry becomes more loroken nud mountainous.
The genera! dircetion of the river, ascending it, is sonth, with a slight inclimation to east; the rapits in a straight liur, leing not more thun 70 linglish statute miles south by cast of (icorge lown, bit lot hy the course of the river. The difference of level between the water abowe and below the rapids is only 12 feet, and the river deseribes at them a very considerable are of a cirele, the chord of which is about one mile mod a hatf; the rapids are descemded safely in small emnors.

The Benmer Rover. Fifty-seven miles cast of the Demerarn, raches the Athntic in 6.2 .1 N . Lant. : at its luxuriant looking entrance, a little to the north of fort St. Andrew, it is about three miles wide, with low cleared land on both sides, covered with trees, and at a distance rescmbles in mumber of istands. In the middle chamed lies Crab ishand (so) enlled from its mumerous crubs), about one mile in circumferener, with a spit of land ruming out to the north and south tivithing the river into two mavignble channels ; the cust with 17 to 20 feet, the west with but eight to 13 feet water. Eight miles north of Crab island is a lan of sand, with only seven feet on it at low water, thus lessening the importance of the harboner. Nenp tides at Berbice rise from eight tu nine feet, nad springs II feet; in September before the equinox, they rise 15 feet; the flood sets strong to the west, num the ebl to the enst. 'The times of high and low water at fill and change of moon nobsg this coast are seven
 off loort Amsterdam, 6ib. 10 m .; Fort Zeclandia, 7 h. ; at Demerara bar, genernlly at half-past four ; and at Fort l'rederick, at uve.

There are several small erecks on the coast, but navigable only by bats, and a shallow that extcuding nlong the shore remiurs it impossible for vessels, except those of small draught, to npprosch within a lengue of the const. Muterately sized ships can go up the river Berbice as far as Fort Nassan, which is at the distance of 50 miles in a straight line from the entrance, anl vessels drawing 1.1 feet water muy, it is said, sail 200 miles up the Berbice. The Canjee river, or creek, waters the Berbice district, and is maviguble for schooners, for 50 ) miles, but its course is then im.. peded by falts und cuturacts. Ahout 10 miles bolow its head there is a ereck, commmionting with the Courantyn river, by which despatehes have been conveyed from Surinm to British Guima by the ludians. The banks of the river are low, and covered with nusmerous plantations, as also along the biomiles of sea coast territory of Berbiee, the roads through which, close along the sea const, commanienting with bemerara, we kept in exeellent repair at the expense of the individual proprictors through whose estate they
pass, and may be said to be almost entirely formed of brick. The arrly lutch settlers constructed a fortress 50 miles up the river, called \%elandica, but this was subseguently abamboned, and New Amsterdam built on the side of the river Conijee, nt its conthener with the river Berbice, two miles above Crab island, on the cast hank of the river, where it is intersected hy cumals, and has all the advantuge of the tides

Three strong butteries protect the entrance of the river; two on the E. side, and the other, York Redoubt, on the W. side, opposite Crab Island. Fort St. An drews, nenrly four miles from the entrunce of the river, and two from New Amsterdum, is like Fort Wiltiam Frederick in the Jemerarn river, a small, low fortiflention, consisting of four lastions, surrounded by a ditch or fosse, and mounted with 18 twelve. pounders. An extensive savanuah or swamp extends in the rear of the fort (which is sepurated from New Amsterdam by the Canjee river or creck), so that it commot be commanted from any medjecent point. Sixty miles E .. of Berbice river lies the Courantyn, about three miles wide at its entrance, with the navigntion obstructed by many small islands and quicksmods. Thi islets are fortite, covered with trees, and lating on the W., side good chenn nuchorage in five fathoms. The W. bunks of the river (which form the li. boumdary of therbiee) are under British jurisdiction, and have a smiling apperance of cultivation. Besides the foregoing, there are momerous other rivers, which in Ginima nre termed erefks, though they would be considered large rivers in limope. Amoing the primejpal is the Mabnien croek, nlumt 20 miles to windwnal or enst ward of the Demerna, betwern that and Abary creck; the Mahacony is nlso on the li, or wimbaril coast, not far from the Mnhaien; the Boesary is on the leeward const, near the lissequibo. Along the interior or sonthern fortion of the colony there are numberless small rivers nul creeks, intersecting wild and almost impenetrable forests, which, during the miny season, compty themselves in torronts into the larger rivers, lisseguibo, Cayoui (of which we know very little), Mazarooni, lemerura, Berbice, \&e., which latter rivers generally flow towards the ocenn in discoloured streams at the rate of six or seven knots nu hour.
IV. Little is known of the geological stata of Guimas. An alluvial that, as before olserverl, extomis along the sen coast for nbont 30 males inland, tormi matiag at a range of sand hills. Vithorts lave recently been made to obtain whter by boring at George 'lown. In $1 \times 30$ Major Staples sumb a shaft of $1 \cdot 10$ feet at Comingsburgh; on arriving at the micucouss sub). stratum, hudienting a primary formation, a clonr spring of water, strongly impregunted withiron, burst forth, At 12 feet below the alluvial surface, an irregular stration of fallen trees (of $n$ kind culled the Courida, nuld still known on the const) was discovered, ill a semi-carbonized atate; ant, at 10 feet depth, blue clny; at 50 lect below the surfuce, mother similar stratum of decaying wood, 12 fect thick; ninc fiet devorr, a compact of whitish grey clay; 31 ditto, yellow same, mixed with clay; six ditto, violet -coloured clay, diminishing in shades to yellow light st taw, nal ngain merging into slate-colourct clay ; the reminder to in tepth of 120 leet from the surfines, is urgile, the lower part lecing of that smootl sompy surfuce indicating the purest wodgewood clay. Mr. Hillhouse says, that it seems evident from this, that some nges ngo, this contiment was habitable 50 feet below the present surfuce, an: that it was then covered with minmense forest of Couridas, which was ite-

Vifis of puarta ber very common traversing the great masses of granite, nud most perspictoos along the chmonel of the rivers in the dry season, the dirertion of all the stratn in linian becing almost mitumbly from N. E , in S. W, Vast pumbities of irom are ine with in the monntains, the suil of which (as also that of many parts of the interior), consists of a stromg and lertile loam, béng a mixture of chay, samd, mill veretuble mouli, with little ralcareons curli, hit much formginous mattor, giving to the soil "redrlish luma in semer places. 'The soil of some of the upland savanumbis is composed of chay umb gravel very closes, and though appurbutly sterile, yidhare foud lor ibe immense lereds of cattie and horses that depasture aloue the Rion Branco. Of a vers pure white clay. This day may he similar to the khari
 vols. I \& : of " Bastern Imdir.") 'there are inmenso masses forming the high bank of the fissegnibo nbuve the falls, which would prohably prove a vahmbar artiele in the manufacture of stontesware or porcelain, as would ulso the luge blocks of milk-white quartz found in various places. Some indurated ciays, of grent. hardsess, have bern lombl mixed with smal, mide, cal.
 of particles of a metaline brillinuey. Thess indura. tions, whel ure of varions degrees of hardorss, ise in horizontal st rata, brenhing into diagonal plates; they are foumil along the colen of the whter, mud Ir. Hancock thinhe mer embed fom the aitermate inhlucuse of the sum nud water, assisted by n deposition of hetero. gemous carthy mutters. Silistmeses of a matic
mature which have the appearance of ores are also very abundantly met with in the mountains, but still more plentiful among the falls and rapids of the river. Rock crystal is found upon several mountains of De. merara, growing, (if it may be so said) out of beds of quartz; Dr. Hancock only met with one species, and that always crystallized into hexagoral columns, and generally terminated by a single pyramid with from three to six faces. These columins are commonly found solitary, but are sometimes met with in groups standing together as it were agglutinated. They are perfectly transparent, of a water colour, taking a finc polish, and nearly as hard as agate. Red agate is found in the Rio Mow opposite, and not far distant from a crystal mountain. Much of the land at Moroko is thickly scattered over with siliceous gravel stones of an iron colour. At this range of mountains primitive rock in smaller or larger portions is every where to be seen; no traces of a sccondary formation are visible; on most of them are found large masses of indurated clay scattered in loose masses amongst the granite, but no calcarcous matter or organic bodies are to be found, and they appear as if undisturbed since the creation of the world. The Conoko mountains (helonging to the chain of the cataracts of the Orinoco) form an insulated group, seated on the elevated plains, which separate two great systems of rivers; the tributary streams of the Essequibo flowing N. E. and those of the Tacutu, Baranco, \&c. S. W. towards the Rio Negro and Amazon. From the summit of these mountains can be seen the spot where the Tacotu and Rapanooni take their risc. The soil here is also of a pure white clay, (not chalk) giving to the Rio Branco and other rivers a milky colour, owing to the quantity of clay therein diflused, and in sucha minute state of subdivision as to require several days hefore the waters become transparent by deposition. In tine, as regards gcological science, British Guiana presents a wide field for the geologist, and in reference to the agriculturist a great diversity of soil, the three leading features of which are first, the clayey alluvial soil of the const, extending cight to ten miles inland; second, hitls of siliceous sand or gravel, which with intervening fertile savannabs extend to the falls 50 miles intand; third, a rich primitive soil; and, hastly, a momitainous country, with divers coloured ochres, indurated clays, and vasious mixtures of loamy earth and vegetable mould on heds of granite to a vast extent, all offering fool and the means of oltaining evely necessary and comfort of life to the hand of the industrious and skilful emigrant.
V. The mortality of Europeans, on the carly settle. ment or colonization of Guinna, was very great, partly owing to torrid heat acting on a moist soil and luxurions vegetation pregnant with animal and vegetable decomposition, and partly owing to the intemperate habits of the settlers, and their non-conformity with the customs of the country and the dictates of nature. Of late years, however, as the coast became cleared, and a free circulation of air was admitted, the health of British Guiana has matcrially improved, and may now be considered as good as the nature of a low country will permit in any zone, particularly when we consider the extraordinary quantity of rain which falls annually. In 1830 there leh, in five months, six feet eight inches of rain at Gcorge Town. It is diflicult to ascertain accurately the quantity of rain throughout the year, not only because Demerara is suliject to two rainy scasons, but from the variation which takes place in cleared and drained land, on the sea-coast or
in the interior. In the dry season, and when the sea brecze jurevails, there is rarely any moisture observable in the morning, the thermometer $F$. avcraging about 82 during the night, with no very material difference in the shade during the day. At the distance of 20 miles from the sea, or where the country is not extensively cleared, the trees and plants will be found every morning dripping with dew, the thermometer falling to 76 or 78 ; and a blanket is acceptable at nights. As the country is ascended (or southernward towards the Equator), the vicissitude of climate is yet greater; and on the table land, 300 miles inland, the climate is described to be delicious, and the influence: of the monsoons regularly felt in the periotical fall of rain. Two wet and two ilry seasons mark the revolutions of the ycar, cach continuing for three months : the wet emhrace the months of December, Jamary, and February; and then June, July, and August, during which periods the thermometer is lower than at any other time, and the land winds (which are, of course, less healthy than the sea brecze) prevail. The dry scason is exceedingly delightful; the morning twilight commencing at four, gradually unveils a deep azure sky, over which the sun crosses cloudlessly from the ocean to the inland mountains, helind which it sets. 'Ille invigorating sea breezesets in at ten, giving animation to nature, and continuing to blow with increasing vigour till sunsct, at six P.M., when it gradually dies away, but trequently returns again during the night.

During the wef season the wind is often from S. to W., and the rain then descends in torrents, sometimes for two or three days without intermission, in the interior and on the coast. At these periods, our sailors say it only leaves off raining to commence pouring. It appears to be admitted that the moisture, and conscquently the fertility, of I3ritish Guiana is greater than that of the contiguous coast of the Orinoco, und may be accousited for by waters of the Essequibo, Demerara, and Berbice having less declivity than those of the mighty Orinoco. Yellow fever (if in reality it ever did exist there) has for some years been unkuown in Giniana; but agues, and what we term in India jungle fevers, are prevalent among new comers, if they rashly expose themselves to the night air or vertical sun. Demerara has hecon cited as one ol the strongest instances of a deleterious atmosphere, particularly among our West Iudia colonics; but when we come to examine facts, it turns out otherwisc. The range of mortality, cven among the labouring slave population, is ahont 1 in 37 to 40 ; but in Lonton and Franer it is equal as regards the whol: population, rich and pionr ; and in other countries it is even more: thus, in Naples, 1 in 3.4; Wirtembergh, 1 in 33 ; Paris, 1 in 32 ; Berlin, 1 in 34 ; Nice, 1 in 31 ; Madrid, 1 in 29 ; Rome, 1 in 25 ; Amstertum, 1 In 24: Vienna, 1 in 22 ? 1 Thus that which is termed our most muhealthy West India colony has, even as regards its working population, a greater duration of life than the rich and poor of some of the principal parts of Furope! On six years, ending $1 \times 32$, the increase on 40,892 Creule population was $3,67 \mathrm{~K}$, or nine per cent. The following comparison will put this point more clearly. In the Appentix to the Report of the Committee of the House of Commons on the Factory Bill, it appears that in a number of 10,000 deaths, in a healthy cominty (Rutland), moder 20 years of age, 3,756 died ; muder 40 years of age, 5,031 died ; livad to 40 years and upwards, 4,969 . In Lomdon, mider 20 years of age, $4,5 \times 0$ died; unter 40 years of age, 6,111 dicel ; lived to 40 years and upwards,
ad when the sea sture observable avcraging about terial difference distance of 20 intry is not ex－ is will be found he thermometer is acceptable at or southernwart of climate is yet miles inland，the nd the influence periodical fall of mark the revolu－ or three months ： cember，Jannary， ly，and August， ter is lower than ds（which are，of eze）prevail．The il ；the morning Ily unveils a deep $s$ cloudlessly from behind which it $s$ in at ten，giving ng to blow with p．s．，when it gra－ urns again during
s often from S ．to orrents，sometimes termission，in the hese periods，our ing to commence that the moisture， British Guiana is 5 coast of the Ori－ by waters of the wing less declivity Yellow fever（if has for some years ues，and what we valent among new selves to the night been cited as one rious atmosphere， lin colonies；but turns out other－ ameng the labour－ 37 to 40 ；but in regards the whote： other countries it 11；Wirtembergh， in 34；Nice， 1 in 5 ；Amsterdum， 1 t which is termed lony has，even as reater duration of of the principal ending $1 \times 32$ ，the on was 3,678 ，or parison will put pendix to the Ke－ of Commons on number of 10,000 ），mader 20 years f age， 5,031 dicel； 69．In london． under 40 yours ars and upwards，

3．889．In the town of Preston，under 20 years of age， 6,083 died ；under 40 years of age，7，462 died； lived to 40 years and upwards， 2,538 ．In the town of Leeds，under 20 years of age， 6,213 tied；under 40 years of age， 7,441 died；lived to 10 years and un－ wards，2，559．In the town of Bolton，neder 20 years of age， 6,113 died ；nader 40 years of age， 7,459 died； lived to 40 years and upwards， 2,511 ．Contrast this with Jemerara，where it appears，by the last registra－ tion，that the deaths during the triennal period were 7，016，of whom died，under 20 years of age， 1,929 ； died，under 40 years of age， $3,3.59$ ；and $3,6.37$ lived to upwards of 40 years of age．Supposing，then，the number of deaths to have been 10,000 ，instead of 7,016 ，the result would be－died under 20 years of age， 2,749 ；died muder 40 years of age， 4,788 ：and lived to 40 and upwards， 5,212 ；being 2.43 in favour of the duration of life in the colony of Demerara，as compared with a healthy county（Rutland）in Eingliund， and a still greater and increasing dillerence in favour of the colony，as compared with the towns betore mentioned．

In the hurricane months，when the Carribbee islands are ravaged with territic tempests，vast masses of clouls advance towards the south；the mountains inland reverberate with pealing thomer，and the night is illumined with faint lightning coruscations；brici storms succeed；but，happily，the Barbadian hurricane is unfelt．The length of the day in Guyana is about 13 hours．In the hot seuson，the thermometer ranges from 84 to 90 ，on the const；and， 20 miles inland， seldom exceeds 80，during the warmest part of the day，falling at night to 60 ，or even 50 ．

At six，A．at，the water was generally from eight to ten degrees warmer than the uir ；at two，p．M．，air rate to two degrees warmer tlan water；at six，r．s．， water two to three degrees warmer than air．

According to Mr．Hillhouse，who has repeatedly visited the interior，the chimate of the region inhabiteil by the Indians is much more sabubrious than that of the coast；though，approaching nearer to the line，its superior clevation causes a decrease of temperature， and the surface of the earth is always kept cool，from the thick shade of the forest with which it is univer－ sally covered．

It is a common ohservation，that the air of the rivers is muhealthy ；but this only applies to that part of them which runs through the swamp land and level with the sea const．Here the exbalations and vapours aceumulate，and the sea breeze is not always suf－ ficiently constant or powerful to dissipate them． Throughout the whole extent of the salt or brackish water，fever and ague prelominates；but，beyond the influx of the tide，the banks of the rivers are so pro． verbially healthy，that，were the population ten times more numerous than it is，there would be little em－ ployment for a physician．

As we approach the high sand lills of the interior， the natural drainage is so perfect，and the torrents of fresh water supplied by the creeks form so strong a current，that all impurities are quickly drained from the vallies，and the surface water is instantly absorbed by the sands．The water of those crecks that are unifurmly shaded from the sun，is about five degrees colder than that of the river．

The breadth of the river，by exposing a great surface to the influence of the sun，canses its inereased tem－ perature．During the night，therefore，whieh is seven or eight degrees cooler than the day，the water of the river becomes comparatively a warm bath；and the tune of its lowest comparative temperature is about noon，when the heat of the air is greatest，nod the river has not yet recovered the heat it lost during the night．Bathing，therefore，in the heat of the day，is more bracing to the system；but bnthing in the morning is most congenial to the leelings，as there is scarcely any difierenee between the temperature of the air and the water，for two hours after sm－rise．

The evaporation in the neighbourhood of the line being supposed ten times greater than near the poles， the rains are in propurtion much more heavy and fre． quent．In these regions vegetation would cease，were the supply of moisture only equal to that of temperate climates；and，upon the hills，where the water rums
off more rapidly，a greater quantity of rain is required than in the vallies，where it stagnates，and is absorbed in superior proportion by the earth．We aecordingly find that，upon the hills of the interior，the clouds discharge three times as much rain as falls upon the enast，and without causing any inconvenience．This disproportion between the rains of the coast and the interior，would not be so great，but from the circum． stance of the vast traet of low land，from which the forest has been cleared for cultivation．Wuody countrics are always the most hunid；and，in a plain without trees，the elouds will pass over without dis－ charging any rain，from the wart of points of attrac－ tion．The importance of this fact has not hitherto met with sufficient consideration．A plain in the tro－ pics，without rain to moisten it，soon becomes a sterile desert；and nothing will attract the electricity of the clouds，and cause them to burst，but the intervention of groups or rows ot tall trees．It is a point，there－ fore，worthy the consideration of the colonial legisla－ ture，to preserve a portion of bush standing on the coast for the attraction of rains，or to oblige the dif－ ferent estates to plant tall fruit or forest trees on their side－lines，as there is no doubt that the more the country is cleared of bush，the drier it becomes，and the less fertile，and this more particulary with regard to the sugar cultivation．

In the interior，the direction of the winds is by no means so uniform as on the coast．From the month of April to July，they blow more from the S． than from any other point；and these land winds， which oceur at intervals throughout the year，hy im－ peding the course of the clouds as they are propelled by the sea brecze，are another cause of the increased rains．

From the superior salubrity of the elimate，and the simple habits of the lndians，it is reasonable to sup－ pose that，prior to the introduction of rum，they enjoyed great longevity．The native intoxicating beverages are so mild and diureti－，that little incon－ venience results from their excesses with them；but their system of computation is so defective，that they can neither ealculate their own age，or those of their otfspring．

Early ，uberty is common in all hot latitudes；but it does not seem to shorten the period of existence， thouglt the appearance of age comes on sooner．The Indian girls are marriageable at 12 or 13，and the boys at 15 or 16 ．At 25 years the women lose all the appearanee of youth；but the men at 40 are not older in appearance than Europeans of the same age．

Upon the whole，there is no doubt，that if the hand of cultivation reached to the hills of the interior，and a few artificial improvements were added to the ad－ vantages of local situation，the climate of the ludians would be the most healthy and agreeable of any within the tropies－with fish，flesh，fowl，and vegetables in abundance，pure water，no fevers，and no mosquitoes．
V1．In estimating the population of births and denths in the African population of the West India Colonies， it nust be remembered that the African is as much a stranger to the West India climate and soil as the Eu－ ropean is，and，indeed，experience teaches that the superior civilization and food of the European renders him much better enabled to withstand vieissitudes of climate than his dark coloured brethren．The de－ crease of the African slave population（especially when we consider manumissions，the prevailing disparity of the sexes，and the arts to which the African women resort to prevent ther being mothers）is not therefore to be wondered at，but it will be found to be over balaneed by the increase of the crcole population，or Colonial born African descendants．

Demerara and Essequibo contains 11 parishes， whose names and extent are，St，Mary＇s，extending from Abary Maicony，and to Mahaica，thence to Plantation lowlands inclusive，and embracing the settlements on the banks of the Maicony and Mahaica creeks；St．Paul＇s，from plantation Northbrook to Cuming＇s lodge，inclusive；St．Ceorge and St．An－ drew unitel，emhrace George Town and the planta－ tions on the Cumingsburgh canal ；St．Matthew，from George Town up the east bank of the river as far as the settlements extend，including those in canal No． 3；St，Mark，from plantation Mindenburgh along the W ．bank of the river as far as the settlements ex－ tend，iueluding those on eanals Nn． 1 \＆ 2 ；St．Swithin， from plantations La Grance to Jalousie inclusive； St．Luke，from plantation Blakenburgh inclusive to the Essequilo river，and along the E．bank upwards as far as the settlements extend；St．Peter compre－ hends Leguan and Hog islands，in the mouth of the Essequiho river；St，James，Waakenham and Troolic islands，in ditto；St．John，from Schoeven creek to Capoey ditto，on the W．eoast of Essequibo river，ill－ cluding the settlements on the intervening crceks and on Tiger island；Trinity，from Capoey creek to the Pomeroon river，and as far as the British settlements extend．

Summary of the Slave Population of the united Colony of Demeraia and Essequibo，from the year 1817 to the year 1832，at intervals of three years．

General Census and Appraisement of George Town， October 31， 1829.

According to the return in the Onlice of Compensa tion under the Aet for the Abolition of Slavery，there were 69,579 apprentices； 3,352 aged and invalids； 9,893 children under 6 years of age，in 183．4；of the $69,579,36,582$ were males，and 32,997 female＇s， 3,463 were tradesmen，and 4,871 were domesties； 7,418 were registerell as non－pradials，and obtain their release in Augnst $18.38 ; 2,050$ labourers and artificers arrived during $1 \times 37$ ．The serviees of 191 persons were appraised，for the purpose of purcha－ sing their release from apprenticeship in 18：17，of whom 151 were pradials，and 40 notr－pradiats．The average price at which the prodials were valued is 92.4 guilders，that of the non－predials 379 guiders． The population of British Guiana，is supposed to ex－ ceed $100,00 \mathrm{C}$ ．The sexton of George Town，gives a return of $\varrho^{\prime} 4$ burials in 1837 ；vi $\%$ ． 428 white per－ soms，including 97 seumen； 126 apprenticed labou－ rers ；and 360 unapprenticed coloured persons．

The Slave Population in each parish of Demerara and Essequibo, 31 st May 1832, was-

ber 31,1829 ; and

ice of Compensa of Slavery, there ed and invalids; in 183.4; of the 32,997 females, were domestics; ials, ant obtain 0 labourers and services of 191 pose of purchahip in 1837, of 1-prodials. The were valued is Is 379 guilders. supposed to exTown, gives a .128 white perrenticed laboupersons.

Number of elaims having reference to each division, Pred...1 Altached, 422; Preedial Unattached, 831; Non. predial, 1, sus.
The native Indians of this coast have Iong engaged the attention of liuropeans, and received the protection of the British govermment. When this part of the Sonth American continent was first visited by the
mariacrs of the old world, it was found densely peopled; but few now remain of the aboriginal inhabitants.

The principel tribes in and around British Guiana, are, the 1. Arrawaks ; 2. Accawai ; 3. Caribisce ; 4 . Warrows, and 5. Macoosies. The first mentioned border on the coast line; the second are removed further inland, and in stature, colour and some other respects, are like the first; the third, inhabit the upper country between the Essequibo and Cayuny, they are described as having the manliness and intrepidity of all highland tribes, and as being fairer than the Arrawaks or lowlanders. According to tradition, they once inbabited the $\mathrm{W}^{\circ}$. I. islands; it is more probable, however, that the W. I. islands were originally peopled by the Carabisce from the main land. The fourth or Warrows, occupy the coast between the Pomeroon and Orinoco, and are a black, short, hardy race of tishermen and sailors, subsisting chiefly by boat-building. The tifth or Macoosies, reside in the decp recesses of the forests of the interior, and are numerous, very industrious, extremely cumning, and implacable in their revenge; probably they are the aborigines of the country, and flecing before more civilized tribes, as we find to be the case in every part of the eastern hemisphere.

It is diflicult, if not impossihle, to estimate the mumber of Indians south of the Rippanooney; abont 5,000 consider themselves under the protection of the British government, receiving triemmial presents and anuual supplies; about $20,1,00$ are migratory, unattached to any particular government, and moving at pleasure from the Orinoque to the Brazils, Cayenne or Surinam, as necessity (i. e, want of food) or incli. nation may dictate. [ $A$ tull description of the natives will be found in the popular edition of this work; vol. i. West Indies of Coloninl Library.]

There are six protectors of Indians in British Guiana, under whom are six postholders and assistants, on the different rivers. The postholders receive $158 l$. a year, and a house; their assistants each 72l. per annum. The protector's duty is to overlook that of postholders in the performance of their duties, to endeavour to make prace between the Indinu tribes when
at war, and to transmit quarterly returns to the Lieutenant-governor. They receive no salary, and are generally merchants and planters along the coast. The postholders are instructed to keep their posts or sta. tions in good order, to attaeh the Indians to their posts, to prevent, as far as in them lies, quarrelling or fighting between the tribes, to obtain passes, signed by the Lientenant-governor or l'rotector of dudians, for all persons passing the station, and to give in quarterly returns of all occurrences at their posts,
VIl. Throughout the West India colonies considerable efforts have been made by the local governments and legislatures, for several years hack, to promote religion and education, and by none more so than Guiana; in Demerara and Essequibo (intependent of

Berbice) there are attached to the Established Chureh of Fingland, seven rectors and one curate; to the Chureh of Holland, two ministers; to the Chureh of Scotland, five ministers; ann to the Roman Catholic Church, twu pricsts; twdve catcehists, or schoolmasters, one being attached to each parish chureh ol the linglish and seotch persuasion; hesiles four schuols in (icorge 'Iown for free hoys and girls, and slave boys and girls, to which there are two masters and two mistresses. The ammal sum paid to the clergymen, catechists, sehoolmasters and mistresses, from the colonial fund, amounts to 135,150 guilders, equal to abont 10,000 .; the Roman Catholic clergyman is placed on the same footing as the clergy of the Established Church, or those of the Dutch or Scoteh prer. suasion.

Return of the Number of Churches, Livings, Re, of Demerara and Esserfibo. [B. II.]

* 15\% . allowed for house rent.

There is no glebe or parsonage honse to any of these parishes.
There have been expended between the years 1824 and 1831, upwards of 350,000 guilders, equal to about 26,000 l., on the building of churches and parsonages; independently of which, large sums have voluntarily been contributed by individunls for that purpose. On the estimate for the year $1832, n$ sum of 200,725 guilders, equal to $14,337 l$. was placed for the support of the establishment for that year alone. The expense for 1827 (which, with several other documents, I have been favoured by the Hon. H. E. F. Young, Government Secretary at British Guiana) was 221,350 guilders $=15,810 l$.

These expenses are horne solely by the inhabitants, by taxes levjed on them hy the Court of Poliey, combined with the financial representatives of the community. There are 36 paid elergymen of the Church of England, Scotland and Rome. The parishes are exelusively desirnated Kipiscopalian or Presbyterian, and are allotted to those persunsions nearly equal. From England, through the Bishop of the diocese, by means of the l’arliamentary Grant or otherwise, there has been received in 1837, about $5,000 l$. to. warls chapels and schools. From the colonial funds in 1837 , there has been paid 3,407 , towards the erre. tion of schools or the procuring of teachers. The amuunt raised from private contributions or defrayed
by the Missionary societies, has been, during $183 \%$, very considerable, not less than that rnised by thr colony, but it is difficult to arrive at a correct estimate. There were in $1837,1,516$ marriages. One church, in the parish of All Saints district of Berbice, extending about four miles along the cast bank of the River Berhice, and all atong the left hank of Canje Creek, as far as the settlement extends, the cultivation on which does not extend beyond eight miles; the population is about 4,701 souls, and the living is worth 7,000 guiders per annum. The church will contain abont 400 persons and is generally well fiied. Their tenets are thoroughly Protestant ol the old school. There are likewise 10 chnpels, which will contain from 450 to 8.50 and are gencrally well attended: Protestant.

Among the linglish Colonists the Episcopalian is the principal crecd, and each parish has its rector, under the diocese of Barhadoes; the Duteh have their Lutheran ehurch and minister, the Romish their chapel and ministor, all paid (as I have belore said) and supported by the colony ; and there ure 13 active and useful missionaries crdeavouring to instit Christianity into the negro population.

Vlli. Nchools, Demerara and Essequibo.-Vhere are two public schools in the parish of st. George, ont

There is a sheriff in each of the three districts into which the colony is dividet. The sheriff and three justices of the peace constitute an inferior criminal court. Not less than three inferior courts are required by law to he held in each district every month. The couvictions in 1837 , were 345 . There are 15 special justices; the punishments intlicted by thein during 1837, amounted to 5,170 , of which 40 were cases of corporal pithishment by flogging. From January 1835 to December 1837 , floggings by sentence of the inferior courts, have amounted to the lollow-
ing numbers, each number denoting a period of three months; 60, 8i, $4 x, 26,42,46,29,27,15,28,8,8$. l'rom July 183.i, (when the power of intlicting floggings w o vested exclusively in the special justices appointed from lingland,) to December 1837, the apprenticed labourers so pinnished, were, according to the subjoined numbers, which denote also a period of three months, $167,153,1: 27,8.4,140,71,21,6,10,3$. From 1835 to 1837 , there have been hut five or six cases of tloggings under sentence of the supreme criminal court. There are upwards of 90 ordinary jus-
iecs of the peace, they have bo juristiction unless nssembled colleginliter, with a sheriff ns president; they linve power however, to commit for trial. Vinch special justice has two prid constables. There are 76 paid policemen resident in the two towns, nud they are placed under the respective sheriffs. There are I,561 unpmid spueinl constables, selucted ill is3.1, chiefly from amongat the labourers in the conntry ly the specinl magistricy ; they are called upon to act in
cases of emergency only, There nre 32 an unpaid hend. boroughs, selected about the smme time, from nomongst the manngerf, and overseers, by the specinl mngis. tracy as alove. George Town is divided into 11 wards, in encls of which a town comeillor ia selected by the inhabitants; the town councillors select $n$ mnyor; the mayor and town council have the distribution of the town funds, nad constitute a court for the trial of petty offences within the town.

No returns for 1830 or $183 \%$.
X. Form of goveriment,-Duteh and Finglinh. it $\mid$ the perios of the capture of Demerarn in $1 \times 03$, the furm of governinent of the colony was peculiar: it comsisted of n Court of Policy of eight members-four ollicial uprointed by the Sovereign, and four from monongst the inlahitanis by the College of Kiczers. Olicial members-the Govermor, the Commander of Fissuguito, the l"isenl of Demerara, the tiseal of Eissefuibo; two members returned from the district of Demerarn, and two from the district of lisserguibo. Einch district hnd $n$ College of Kiezers, consisting of seven members. 'The Colltge of Kiezers for cach district was elected by the inhmbitants. They held the situntion for life, or during their residence in the colony; qualifiention, 25 slaves, nud three gears' resilence in the colony; qualiticntion of electors, the possession of 25 slaves. Viote by ballot. Votes sent into the Governor's Secretary's office, and deposited in a scaled hox, nud opened in the presence of the Governor nnd not less than two other members of the Court of Policy.

The College of Kiezers nominated two jersons to fill vacancies in the Court of Policy. The Governor ond the Court selected one from the nomination, and notified in the Gazette the person selected. The senior member of the Court went out nfter the meeting of the Combined Court, which assembled anmually for levying the tnxes.

Financial Reprosenhatires. The College of rinans. cial Representatives, nominated hy the inhabitants, the snme as Kiezers, and consisted of six; three returned by the district of Jemarara, and three by the district of Essequibo. Term of service, two years; qualification, same as Kiezers; duties, to sit with the Court of Policy annually, for the purpose of levying taxes and regulnting the expenditure, which was then called the Combined Court-" the Court of Policy combined with the Financial Representatives." At this combined meeting the Court of Policy submitted an estimate of the expenses for the year, which had previously been prepared and discussed in that

Court. In the Combined Court every iten of the estimate was discussed, and every member, whether of the Court of Poliey or Pimuneinl Representatives, had an edral vote, At this meeting the publie acedunts of the proceding year were exnmined nud nudited, which was the peculinr province of the Financial Representntives.

The Court of Policy passed all lnws for the internal regulation of the Colony, it reguired four members to constitute a Court. Nu law binding without the concurrence of one member of the representative suction oi the Court. Qunlification for a member of the Court of l'olicy, the owner of a plantation, and three years' residence.

Ifulicien Jepertment. - Each district had a court of civil and criminal justice, which consisted of six members and a president. The members (colonial) elected by the Kiezers in the snme manner as the Court of Policy; the two senior members retiring every year; qualification, possession of 35 slaves, and three years' residence in the colony. The commannder was president of the Court of Justice of Essequibo; the governor president of the Court of Justice of Demerara; the law of Demerara was the law of Holland or Roman liw. Ench member of the court an equal vote on both law nud fact : all cases decided by a msjority of votes.

In 181: the courts of justice of Eissequibo and De. merara were united by proclamation of the ActingGovernor, Major-Genernl Cnrmichal ; and the court of justice of Demerara became the court of both districts ; and consisted of eight colonial members and a president, the president appointed by the Crown.

The colleges of Kiczers and Financial Representatives existing in 1812 were dissolved by General Crrmichnel's proclamation, and a College of Kiczers and Financial Representatives wss established, in which the functions of both colleges were united; this college consisted of seven menbers: term of service two years; and elected by the imhnbitants of both districts, paying tax on an income of $10,000 f$. per annum, or

The Court af I alicy now consints of the govermor, chied juster, attom s-gonemal, collector of custums, and govemment-screttary, and of mu "pat momber of unollicial persons aclected by the Collaze ot Electurs. The Colle ere ot thectors consists of $\overline{7}$ gembenew, rlected
 of the Count of Holicy serve for thre genes, and may the re-elected. The governur, in the Cont ot Puliey, has a cablimg vote, nll wher members have each a vote. All laws, with the exception of the Annoal Tax Odithance, are mavted by the govemor and Cunt al Policy. 'The Wuren in (ouncil, may enact ur disallow any law. The Comband Court is com. pred of the governor and Court of Policy, and of tive limatial representives. 'The thancial represtontatives, are chosen by the votes of the inhubitants. The Combined Court, disenss the namunl estimate, examane the expondifure and receipts of the past year, and rase the anmal taxes by ordinnoce. 'there are three protesannal julges whom contitute the supreme Civil ( ourt, there is an appeal for her Majesty in Council. The Roll dont, at which docomonts are filed, widence taken and recorded, transponts mow mortgages of property excented, and all civil eases referred for adjulication by the suprome Court, is beld onee $n$ turtaight befure one pranissantal judge, Apreal or reandition, may be obaind before the supreme Coort. A l'etty lhelt Court is hild once a month, beture one protessional jutge. The justices of the peace bave alser a petty dilit jurisdiction. The three profersional judges wila three colonists, as ansessors, constitute the Suprenc Cominal Court, there were seven convictions in 18:17. In criminal cases, three assersors, qualifed by certain regulatons, and open to challenge as jurors, are assuciateal with the judges, and punishment cenn only be intlicted by sentence of the majority delisered in open court. In each of the above-mentioned colonies, courts ol inferior jurisdietion in civil and crimimal causes are established, subject to the appeal and revision of the superior court of assize.

Fach male freeman between the ages of 16 and 50 is compelled to enrol timself in the militia, which is linble to becalled out at the pleasure of the governor, for service, not exteading beyond the preservation of internal tranquillity. The strength of the militia may be reckoned at 5,000 men. The senior otlicers in the country are justices of the peace, and exercise a jurisdiction over certain districts, ench of which is distinguished by dilferent coloured banners. They are ketned burgher oflicers, and their duties ingeneral consist in pomalgatimg prockanations, taking deposstions upon tax schedules, sarying into vilect public
aud local laws, and pultiong down nuy dinfurbances which may arise within their jurisulietion.
 inspector-general, i adjutant-general, is adjutant ad-jutant-generals, 3 aides.de-canoss, 2 brigme majors, 2 juige advocates, il lent-colonel commandants.
One licut.-colonul, 11 majors, 4.1 captains, 47 ilrat liputenants, 50 second licutemuts, 12 atjutmits 12 quarter-masters, 10 surgeons, 21 assintant-surgeons, 155 sergeants, 15 dommoers and bugles, 2,969 rank and tile. lis berbice there ure four regionents, containing 16 officers and 411 non-commissioned otheers and rank and tlle.
XI. The income of the colony is Irom the following sources:--
'Table of 'Jaxes and Juties received at the Office of the Colonial Receiver-general, under the anthority of the Homourable Court of l'ulicy, combined with the limaneial Representations of the luhabitants of the listriet ol themeramand bisscopuibo.

## CHAPTER III.-HONDURAS.

Section 1. The British settlement of Hondu: $\uparrow$ s, in the province of Yucutan, is situate in the southern part of the American contiment, between the parallils of 17 and 19 N . lat. nond 88 to $90 \cdot \mathrm{~W}$. long., on a peninsula extenting from the west side of the lay of Ilomdoras (that cither gives or takes its name frem the settlement) to the sen, northwardly forming the lay of Camponchy ont the west, and the Bay of Honduras (llomluro, depth of water) int the east side of the peninsula, the coast line extending abont 270 miles: the indand boundaries are illdefined. According to Henderson, the line whish includes the settlement commences at the month of the Riotiande, or Hondo, whose course it follows and afterwards runs parnllel with, for 30 miles- l hen, turnug sonth, passes through the New River lake, in a slraight line, to the river Balize, up which it asceods for a considerable distance-and then again proweds sonth till it reaches the hend of the Sibmo, whose windings it pursues to the sea const-the whole setflement embracing an nrea of 62,750 square miles. The Mos. quito shore-- the Intians of which are in alliance with, and, in some respects, subject to the Crown of Cireat Britain, extends from Cape Gracios a Dios, soutberly to P'unta Gordo and st. Juan's river; N. W. nod westerly, to Romain river; mal s. lide beyomel Boen del Toro to Coclec or Coli, near the river Chagre as:Porte Bello.
11. The Ifonduras coast was discovered by Columbus in lane-its juriod of early setthement is very vague. At first it was necasiomally resorted to by mahogany and other wool-cutters, whose chief place of residence was then a small island ealled st. George's Key, about nine miles to the $N$. li. of the town of Balize, the present capsital of the settlement. The first regular establishment of British logwood cutters was made at Cape Cartoche by some Jamaica adveriturers, whose bumbers increased so, that in a shome time, they occupied as far south as the river Balize, in the Bay of Honturas, and as far west as the islaml of Triste and the Laguna de los Terminos, adjacent to Campeachy. The territorial jealousy of the spaniards was soon roused, and the (iovernor of Campeachy fitted out several expeditions against the logwood cutters, in which he not only failed, but on two oceasions, in 1659 and $16 i{ }^{\circ}$, the cutters actually took possession of the town of Campeachy, without a single cannon, and aided only by the seamen engaged in the trade.
By a treaty concluded with Spain in 1fijo, by Sir w. Godoiphin, the seveisth article generally, though not specifically, embraced the territorial right of British occupancy at Hondoras-and in consequence the Einglish population fast angmented, the number of whites (no segroes were introlturd) heing then 1700. The joalousy of the spanish monarch at the success of the linglish, led to a renewed discussion of the territorial nght of our settlers, which the imbecile ministers of the pusillanimons Charles 11 . so far admitted, as to direct the Governor of Jamaica (Sir Thomas Lynch,) in 1671, to inguire inte the same, and had it not been for the spirited and patriotic conduct of Sir

Thomas l,ynch, the conduct of Spain would have been sanctioned by the court of St. James'. 'The Spaniards. at all events, determined to drive the wookmen from the Campenchy shore, and by l6,mo, they succeeded in contining the Einglish to the limits now occupied.

From this period the establishments on the other side of Cape Cartoche were entirdy abandoned by the setters. In 17 IH , the Spaniards sent a large firce to try to dispossess the bugligh from the Balize river, ns they had done from the opposite coast, but far bold front of the logwood entters deterred the Castilians, who contented themselves with erecting a fortification in the N. W. branelh, of which they lield pesssese sion for a few years, and linally abundoned it. The logwoul cutters were lelt for 36 years in peace, until the attack on Truxillo by the linglish in 1712, which leal to the loug projected expedition ol 175 !, to exterminate the latter from !londurns. By the treaty of peace in 1763 , the spaniards werr comprelled to give a formal permission "f or anpancy to the British colonists, though the'; subsequrntly endeavoured to anmul it.

The spaniards made another attaek on the settlements in 1779, destroyed a great deal of property, and marebed off many of the binglish seftlers of both sexes, blindfolded and in irons, to Merida, the capital of Yucutan, and thence shippen them to the Ilavannah, where they were kept in captivity until $17 \times 2$; but, in 1781, a commission from the crown of Spain was authorized "to make a formal delivery to the British nation of the lends allollorl for the cuttion of logwood," Sc. It is necessary to state this explicitly, because many persons are not only ignorant whether llou(i) ras is an island or part of the continent, but very m'ny, who mee nware of the pasition of the settlements, think the British have merely a right to log. wood and malogany cutting in the Bay of Ilonduras, and that it is mot a territorial occupancy of the British crown, which in fact it is, as much as Jamaica or any other settlement. The last Spanish attack on the settlements was during the war in I798, and consisted of an expedition of' $3,000 \mathrm{men}$, under the command of F'ich Marsbal O'Ncil, who was gallantly repulsed by tac " Bay Men" (as the llonduras settlers are termed), for which they received the thanhs of his Majesty. This net of conquest is a perfectly goon title of wecupane.
111. The sea coast of our territory at Ilonduras is flat, and the shore studded with low nod verdant isles (keys). From the land the coast grachatiy rises into a bold and loity country, interspersed with rivers and lagoons, and covered with the noblest forests. The buy reaches from Cape Cartoche, in 21.31 , the N. point of the peninsula of Yucutan, to Cape llonduras, in if S . lat., and $8 \mathrm{~F}, \mathrm{~W}$. long. From thezee the coast, comprehending Cape Gracias a Dios, and extending between 500 and 600 miles to the month of the Rio de Sall Juan as it flows from the Nicaragua lake, is known by the name of the Mosquito shore. Withir these limits lie se settlements which have been considered the dependencies of Jamaica.

The town of balize (called by the Spaniards, rintize:
corrupted from the original, Wallis, the noted English buccaneer), the capital of the Honduras settlement, is divided into two parts by the river Bulize, which empties itself by two mouths in a tortuous manner into the sea, at the western side of the Honduras Bay, where, us before ohserved, the shore is extremely Hat, with mumerous keys or small islands dispersed along the coast, and densely covered with trees or shrubs, so exactly resembling each other as to puzale the most experienced sailor, and rendering navigation exccedingly dillicult. That part of Balize which is situate on the $\mathbf{S}$. or right bank of the river, along the eastern elge of a moint of land, is completely insulated by a canal on its western side, wheh runs across from a small arm of the sea, and bounds the town on its S. side.

The number of houses are nearly 500 , many of them convenient, well built, spacions, and even cle. gant; they are chicfly constructed of wood, and raised 10 feet from the ground. The streets are regular, running parulel N. and S., and intersected by others, the main one running in a N.E. direction (to a bridge crossing the river, and facing the chief quays and wharfs) from the government-house, which is situate on the S.E. point or angle of the island, on the right bank of the river, and bounled on the $S$. and E. by the sea. The church is situated behind the govermment-house, on the E . side of the main street, and the whole town is shatell by groves and avenues of the cocoa-nut and tamarind trees. To the N. of Balize is an extensive 1.2 orass, three miles in circumference, now being drained. Fort George is situate about half a mule from the river on a small islet ; it is low, 600 feet long and 200 hroad, principally formed of the ballast from the shijping, every vessel being obliged to deposit a portion of ballast projortioned to its tomage.
The lighthouse of Howluras, situate on Half Noom Key, or ssle, is about 43 miles E . by S . soatherly from Balize. Like nll the islands with which the Bay oi Honturas is studdel, its appearance at a distance is flat; but, on a nearer approach, it is lound to be more elevated than the keys in the neighbourhood. On this bay stands the lighthoose. In $1 \times 21$ this lighly useful building was crected on the N. F. point, the most clevated on the island, which is a rocky promontory, nearl 30 feet above the low-water mark and from its base, which is 22 fect square to the lanthorn, it rises about 50 feet. It is in lat. 17.12 N., and long. 87.28 W . It is brilt in a pyromidal form to within nine or ten feet of the top. There is a fixed retlected light from sun-set to sun-rise, for which the public of Homduras allow the contractor the sum of 400\%. currency per annum. By day the lighthouse, being painted white, serves as an excellent beacon. In days of yore, this spot was much resorted to, and it several periods was the residence of the buccaneers when they infested these sens.

This key is now the chief residence of the branch pilots. They are a set of men remurkable for their abstemious halits, activity, and bumanity on all occasions; and there bardly can be remenbered an instance of their deviation from duty.
IV. The tirst geological feature requisite for the knowledge of man is the capahility of the soil to grow food. In this respect Ilonduras is not behind hand in fertility to any spot in the Old or Niw World. The soil of the Cahoun eifge consists of a deep loan, produced by decomposed vegetuble matter, and cepable of growing every European, as well ss tropical aliment. The Pine-ridge land has a substratuan of luose reddish
sand, and its hadigenous products exhibit those varicties of the vegetable kinglom whose assimilative powers are stiong and perennial. Extensive natural prairies, or pastures, spread over this soil. An inexhanstibly rich alluvial soil exists on the margin of the numerous creeks and rivers which stud the country.
Veins of fine marble, and mountains of alabaster, are known to exist. Valuable crystals have been found within 180 miles of Balize; and fine pieces of transparent feltspar lie along the hanks in many places, which are used in ormamental stucco work. Gold has, at various periods, been found in the Roaring Creek (a branch of the Balize river), but no trouble has been taken to ascertain from whence it proceeded. Quantities of lava and volcmic sub. stances have been foond in different situations. Labouring Creek, about 100 miles inland, on the Balize, is remarkable for the petrifying properties which it possesses; its waters have a powerinl cathartic elfiet on strangers, and a healing property when applied externally to an uleer.
V. The climate about Balize is generally moist. In July, the dryest and hotest month of the year, the average maximum heat is 83 F ., the medium 82 , and the minimum 80; but, though the absolute heat appears so great during the hot months, yet it is so tempered by the sea breezes, which almost constantly prevail from the N.E., S.E., or E., that the air feel pleasant and often cool; but, on the wind shifting to the N. or W., the atmosphere becomes sultry, and often oppressive. During the wet scasons, which last five months, the mereury sinks to 60 . The variation in the temperature is very great, sometimes 15 , between six A.m., and two 1. M., and at night 20 or 25 less than in the day.

X. Itomburas is governed by a superintendant nominated by the Crown to watch over the interests of the setters, to secure them from any improper intrusion of forcigners, and to regnlate all aflaia " which more particularly nffect the dignity of the Crown. There is a mixed legislative and executive power, termed the Magistrates of IIomduras, by whom enactments are made, which, on receiving che assent of the King's representative, become 1 is to be enforeed by the exceutive power. The magistrates in whom the power is thus vested are seven in mumber, elected annually by the inhabitants, thus-a poll is opened on the order of the bench to the l'rovost-marshal-general, and remains so 21 days, nt the expiration of wlich a scrutiny takes place, and the $\mathrm{l}^{\prime}$ rovost-marshal-general returns those duly elected, who are sworn into oflice on heing approved of by the Superintendant. They are the Counsellors of His Majesty's Superintendant, the Guardians of the Public l'eace, the Judges of all the lower Courts; they form the Court of Ordinary, they are the Guardians of Orphans, and can delegate their power in the management of the property to such persons whom they consider worthy of their trust. They are the protectors of all properties of
intestate or insane persons, or of those incapable of managing their own affairs; they settle all salvage on wrecked vessels, stores, and merchandize ; they manage the public funds, and control the treasurer; and no money can be paid without the sanction of four, who sign al! orders for the issue ; and previous to retiring from office, they examine all his accounts, and sign them, if approved. No emolument arises to them; services are entirely gratuitous. Trial hy jury is established; and from the decisions of the court an appeal lies direct to the King in Council, which, however is rarely made.
The militia of Honduras is a very fine body of men, about 1,000 strone, and consists of a brigate of royal artillery, and a regiment of the line; there is also a local maritime foree, termed the Prince Regent' 3 Roym Honduras Flotilla. The Superintendant of the settlement is, of course, commander-in-chicf of the militia, with a fair proportion of aides-de-camp and staff.
XI. Revenue and Expenditure of Honduras from 1807 to 1836.

NIN. The agricultural produce of this settlement ronsists of latian corn, ries, sams, well plantanins, mised werely for the internal comsmation of the comerty, not being permitted hy his Majosty's government to export them to the llmated Kingdom The soil is extremely well adapted for the culture of coffer, cotton, and sugar ; cocon grows spontancously and in grent guantitics in the thickets, but from the enuse above mentioned, no care is taken of it. A few horses, and many horned cattle are bred in the settement, the letter are principalty used in drawing the matoopany out of the woods.
[13. 13. 18336]
Oranges, (which ure uniformily of excellent tuality, ) shaddocks, lime, mangoes, melons, pine apples, water melons, avocato pears, cashew, conea-nuts, and many others too mmerons to mention, nre very abundant during their respective seasons. They all grow in the neighbouthood of the town, but are also brought in large quantities from higher plantatiens. The country abounds with game of every variety, whether bish, Itesh, or fowl. The spmuiards, who frequent Balize from Bacalar in open crafts, carry oll an extensive trade in poultry, egge, corn, sce, and, except in sery rough wenther, the supply of salt water fish is abmdant and excellemt.
The mahogany tree and logwool are the present staples of Henduras: muther valuable timber covers the country for many thomsand acees, and would prove a useful article in Enghad, the pintes orridente. /is, grows to tiol ficet high, with irregular branches anm serrated edged leaves, and which, owing to the quantity of tar and turpentine which the best sort contans, will sink in water when telled.

The pinewood is of course highly inflaumatle, a property which, to the poor, renders it very valunbie; a torch of this wool, ome end inserted in the carth, and the other ignited, emits a clear and powerful light. Owing to its durability it is, of course, much used by builders. It mot only resists the action of the atmosphere, but it is atso proof naninst the chemical inthence of the entheven in the dampest simations. It is not uncommon to see posts extracted from the groumd in which they have been fixel for yenrs, in as high a state of presservation as when they were liost put down; and the only dificrence they exhibit is increased solidity and barduess, and a strong bituminonss sinell.

The cahoun (locally pronounced cohoon) tree is chiefly vuluable for the elegant vegetable oil it yields ; which when madulternted is almosi colourless, being paler than the cold drawn castor oil. It is entirely free from any empyrematic or fitil taste, possessing a slight and rather agreeable flavour. It emits a beantiful palish flame without smoke or smell, a propeety which remers it as a lamp oil, not eptualded by any wher kuown, and therefore much in demand in gented society. Its nfinity for oxygen is so temarkably strong, that steel smeared with it very soon rusts, Indeed its caloric is so easily abstracted, that at the temperature of $60, \mathrm{~F}^{\circ}$. it condenses into a white waxlike substance, but when heat is applied it immediately expands and resumes its original appearance. There are several little known woods, of benutiful wein and close texture, which might be turned to a protitable accomint, such as the iron-wood, chaywol, rosewood, palmaletta, dark auct beautifully tiguret, Santa Marin, which possesses the properties of the lutian teak, caoutchous, or ludim rubber, sapodila, and inmmerable ot hers.

Many other valunhle products of the territory wend be developed with an increased population [s'e Colonial Library, vol. IV.]

## CHAPTER HI-WALKLAND ISLANDS

 90 in number, are situnte between the parallels of described it as being the finest harbour in the worle 50.58. nod 52.46 , south, and the meridian 57.20 . and capacious enough to hold all the mavy of fingland in 61.29 west, contiguous to the Straits of Magedan. full security. Geese, ducks, suipes, and other fowl The two largest are nearly 100 miles in length and 50 in brenth. They were first discovered by sir Richard llawkins during the reign of (Queen Vilizabeth, in the year 169.4, or, as some think, by Captain llavis, an English navigator under Sir Thomas Cuventish, in 1592. Subsepuently they wre visited by a sitip belonging to st. Matoes, from which they were called hy the lirench, 'the Malouins;' and afterwards by the Spaniards, 'the Malvinas.' Little, however, was known of them until Commodore Byron, when on a voyage of discovery to the south Sens, visited them in January, 1765 , and formally took possession of them for his Majesty (ien, Ill, under the title of "the F'ulkland Islands,' though others say this name had been previously given them by an linglish mavigator named Strong, in Ifis! Alter bemg there about 11 days, were found in such nbundance, that the sailors were quite tired of enting them; and in every part there was a plentiful supply of water.

When the l'rench lost the Canadas, a rolony of farmers was transported hither by \$1. de Bougainvilfe, and about the same time a British colony was established nt Jort ligmont by Capt. M'Mride; but their right being disputed by the Spmiarts, M. de Bougainsille surrendered the possession of his patt to the latter in April, 176i7. Cirent Brotan, however, by virtue of her original discovery, clnimed the sovereignty, which led to a mipture with Spain in the year 1770, and the point was warmly and strongly comtested for a considerable period. Span, howewer, finally conerded ow risht the the islnnds.

in ciremmference, and divided by a channel 12 leagues in length, and from one to three in breadth. The harbours are large, abd well defended by small islands, most bappily disposed. The stuatlest vessels may ride in atioty; fresh water is ensily to be obtained ; there is seldom any thomeder or lightning, nor is the weather hot or cold to any extraordinary degrec. Throughout the year the nights are ingenernl serene and fair: and upon the whole, the clamate is favourable to the con. stitution. The depth of the soil in the vallies is more than sutheient for the purpuse of plonghing.

Since 1767 they fill into comparative insigniticance; and, for many gears past, hitle motice has been taken of them by our 'covermment. Ships of war, on their pmssame roond Cape Ilorn, have oscassioually touched there for supplies of water, Ne. and Sonth Sen whaters mod other merehant vessels; but the masipation being little known, they have not, matil lately, been much frequented, although very mearly in the track of ships homeward bound from the l'acitie.

Iatterly, however, circumstances arose which indued the last eommander-in-chief on the South Ameriean station (Sir Thomas Buker), to send down a ship of war for the purpose of rechaming that possession, which lapse of time secmed to have rendered almost absolutely ubandoned, as the Bucmos-Ayran (iovernment endenvoured to set una claim to the islands; the Spaniards having formerly used the istands as prisoms for south American delinguents.

In the month of Derember, tsisz, Conmander Onslow, in II, M. S. Clio, proccoled to lort ligmont, and found on Saunders' lstand the mins of our former establishonent. The town stood on the south side of a momatain not less than 600 fere high. The settlers had extended their gardens to the westward, the remains of which are still pereeptible. Not finding any inhabitants, an inseriphinn was left there, attacherd to a signal stall, on a spot which appeared to be Fort (ieorge, stating, "That these ishands bad been visited by his Britamic Majesty's ship (Hin, for the purpose of exereising the rights of soverciguty, abd Werember, 14:3:."

Puring their stay of ten days, the boats were employed in examining Brett's llabomr, Byron's somma, Kopud's Somma, and to the westwarl to Point Bay, a distance of bel miles from the clin's muchorage.

At l'ort Lomis, on Past lialhland tsland, a BuenosAyrem schooner of war whs lying, and a small party of soldiers under the same liag necopied the shore, where there was an ineonsiderable settlement of foreign persons, chielfy Bmenos- y yemes, who were colgugal in catching wild cattle, \&c. for the supply of such ships as uecusionally tomehed there Lient. II. Smyth, of 11. M. ship Tym, was subsegucintly sent down with a boat's erew to settle on the islands.

I'ort Louis, at the head of Berkley Somod, is admi. rably adapted for vessels to retit at, under any cireumstances; it is we'l sheltered, and has an moer harbour for vessels drawing 14 feet of water, where they may heare down with safety if repuisite. Wiater is alsis good and plentitul ; mid reflecting on the number of vessels passing and repassing Cape llorn, and the accidents they are liable to, from the tempestnous weather firequently experienced off that Cape, the allvantages of a port of refuge beomes apparent.
Bast Falklatal Island possesses large and socure harbours fir tirst rate ships of war, with facilities for fsereising the crews on shore without the risk of losing them, and with abundance of wild cattle, sutiscorbutie lierlos, nul fish, for their support.

The erountry, in the northern part of the island, is
rather monntumons, The highest part was culled San Simon, at no great distance from the hottom of Berkeley somad. The tops of the monntains are thickly strewn with large bonlders, or detached stones, of which guantities lave fallen, in some places, in lines along their sides, looking like rivers of stones; these are alternated with extensive tracts of marshy fromad, descembing from the very topes of ine monntains, where many large fresh-wator pouds are found, from one to two feet deep. 'The best ground is at the foot of the momotains, and of this there is abmedance fit for coltivatan, in plains stretching from Hive to fiftern miles along the margin of the sen. In the sonthern peninsula there is hardly a rising groumd that van be called a hill. Vixeollent fresh water is fonnd every where, and may be procured either by diguing or from the rivilets, which tlow from the interior towards the sen, through vallies covered with a rich vegretation.

1II. The dimate on the sland is, on the whole, temperate. The tomperature never falls below 26. linbrenheit in the coldest winter, nor risera above 75. in the hottest smmer; its general range is from 30. to 50 , in winter, ill. to 75 , in summer. The wenther is rather unsetted, barticularly in winter; but the showers, whether of rain, show, or hail, nere generally of short duration, and their eflects are never long visible or the surface of the grouml. Thus thouds are unknown; show !ismplears in fow hous, moless on the tops of :he 11 ountains; and ice is scolom foumd nhove an isch thi $k$. Thumber amd lightaing are of rare ocemrence; foss are tropurnt, inpeinlly in autumn and spring, but they wanally dissipate towards noon, 'Ibe whater is rather fonger that the summer, but the differene net above n month, and the lomes warm days of summer, with oceasional showers, produce a rapid vegetation in that semsom.

The wind blows commenly from the north-west in summer, south west in winter, nul seldom lonis from the enstward in either semson. The tinest weather in winter is when the wind draws from the west or berth-west, and in summer whon it stands at north. west or moth-cast. A north wind almost always brings min, csperially in smmer, and enst and southeast winds are constantly accompanied by thick and wet weather. Snow sepmalls geacrally come foon the south-south-enst, south, or south-south-west. Storms are most frequent at the changes of the seasmas, anil how commonly from somth-somth-west to west -south. west: but they seldom last nhove $\underline{2} \mid$ hours.
IV. Of the geolegy of the islands we yet how little. There are marks of eopper ore with sonie prites, end the rocks are chiefly quarto. Ores of different colomes are common, and red and grey slate is plentifils. There is nhmelance of exeellent elay and stome nelapted for buidting.

The soil of liast Falkland Island has been fimmd well adapted to cultivation, consisting generally of from six to eight inches of black vegetable mould, betow which is eithor gravel or eloy. The meadows are spacious, wedl watered, and producing exedlent grasses. Wheat and flav were both raised of quality equal, if not superior, to the seed sown, which was procmed from Bumos Ayres; and potatoes, cabhage, turnips, mal other himds of vepetables produced largely, and of excellent quality. Fruit trees were but tried, the plants sent from Buenos Syres having perished before they arrivet.

The suil also produces ditlerent kinds of vegetables wild, as crlery, eresses, de., and many other eseblent plants, the proper names of which were not hawo

## FALKIAND ISLANDS.-GFOLO(YY, MINER.DIOGY, AND SOlL.

to the settlers, but their palatable taste and valuable antl-scorbutic propertiea were abundantly ascertained by them. Among others is one which they called the tea-plant, growing close to the ground, and producing a berry of the size of m large pea, white with a tinge of rose colour, and of exquisite tlavour. A flecoction of its leaver is a good substitute for tea, whence its name. It is very abumdant.

No treen grow on the island, but wool for binding was oltained tolerably easy from the adjoining Straits of Magellan. For fuel, besides peat and turf, which are abuodant in many places, and may be procured dry ont of the pengnins' holes, three kinds of bushes are found, called fachinal, matajo, and groillera. The first of these grows straight, from two to flve fort high, and the stem, in proportion to the height, is from half ard inch to one linch and a half in dinmeter; small woods of this are found in all the vallies, aud form good cover ; it bears no fruit. The art ind is more abundant in the southern than in the norshern part of the island; its trunk is nearly the thickness of a man's arm, very erooked, never higher than three fect, and hears no fruit. The gruillera is the smallest of the three, growing chase to the ground, and almulant all over the island ; being easily ignited, it was chielly used as finel when the people were away from the settlement, and to light the peat tires in the houses. It bears a small dark red berry of the size of a large pea, of an insijid taste.

The most curious of the regetable proaluctions is a resimous plant, or rather excrescense, for it grows from the earth withont stalk, bransh, or leaves, called the resinons gum plant. It is irequently six feet in cliameter, and 18 tuches ligh, and so strong as to bear the weight of a man, its surface cjects dropss of a tough resinous matter of a yellow colour, and about the size of peas, having a st rong, odour lihe turpentine. Cirent gunntities of water cresses, surrel, aull wild paraley, are found in every direction, as well as a sundl shrub of the nature of spruce, which, being wade into heer by the help of molases, has provid min eycellent antiscorbitic to senmen alllicted with seurvy after a lotg voyage on salt provisions. scarccly any froits are fomod, inded unly two fit for usc, which grow upon creeping plants, ánd are similar to the mulberry of liurope, and the iucut of North America. 'Thongh there are numerous tlowering plants, only one, which had a smell lihe that of a ross, appeared to yield any perfinme.
Only we species of numal was found in the isfant, a hind of wolf-fox, which Byron descriless as ex: tremely fieces, rumoing from a great distance to attack the sailors when they landed, and even pursuing them into the boat. It is about the size of a shepherl's dog, and kenmets moler ground, subsisting on the seuls and birds, which it catches nlong the shure. Sea cions, wallruses, and seals, are nbundant about the coast, many of them of great siza, and wery beree. Swapa, wild green ducks, teal, asol all kinls of sea. fowl, are found in great numbers; and so tame were some of the biruls when the first settlers landed there that they would sulfer themselves to be caught by the hand, and often pereh apoun the heads of the people. There is a bird ealled the grele, of heatetiful plumage, and a hind of gentle note, whose llesh is much estemed, and which sutfers itself to be approached so as io be hoocned down with a stack; there are also falcons, suipes, owls, curlews, herons, thrishes, \&c. Piah are not. so plentiful, but they consist of mullet, pike, sardini, gradlaw; and, in the fresh oater, a green trout, without scales; all sonts of small shell.
fish are foumd aromed the remat, but it is dificult to get at them, or inded for a hoat in land, on account of the prodigions gunatity of sea-weed with which the shore is loaded. The tides produce a curious phenomenon, they do not rise at the settled calculated periods, but just before high water the sea rises and falls three times; and this motion is always more vioknt during the equinoxea and fill moons, at which time severnl corallines, the thest mother-of-pearl, and the most delicate sponges are thrown up with it ; and amongst other shalls, a curious bivalve, called fin poulette, found no where else but in a fosail state.
llerds of widd horned cattle, to the extent of many thomsands, exist on the Ifland, sntileient to maintain a great many acttlers ; and sibif hoga are abondant in the morthern peninsula. Wild horses are also foumal there of small size, but very hardy, which, when broken in, as some were withont diflienfty, were found of great service to the settlement. Rabhits are in great numbers, of a large size and flue fur. Fioxes, too, are found, but differing considerably from those of Furope, having a thlck head and coarse fur; they live chiclly on geese and other fowl, which they catch at night when asleep.

Game is extremily common, especiaily wild geese and ducks; of the former two kinds were distinguished, the lowland or help-geese, and the upland geese; the latter were much superior in thavomr, the former being of a fishy tastr, living chiedly on mus. cles, shrimps, and kelp. Hoth were very tane, num the upland geese were casily domesticated. 'They ner finest eating in nutumn, being then phamp, in consefuence oi the abondance nt that season of tea-berses, of which they are very fond; the rest of the year they live on the shont grass. They have a white neek and breast, with the rest of the body speckled of a tine brown marbled colour. The lowland gnobler is quite white, nud the goose dark, with n speckiled breast. Of ducks there are several kinds. The loggerheaded are the largest, nud almost of the size of the geese; their flesh is tough and fishy; they cannot Hy, and when cut off from the water are cor-ily casult The next size is also of infirior guality, tough and fishy, but the smaller kinds, which are not latper than young pigeons, are deliciously good, and are found in large flocks along the rivulets and feresh water ponds, suipers are fumbl so tame that they were often killed by throwing ramrods at them, In addition to these, a great variety of sea birds frepuent the shores, of which the most valuable to sailurs and xettlers, from the quantity of enge they dejosit, are the galls and pengius. These birds have their thaed rookeries, to which they resort in mumerous flochs every spring, the gulls gencrally in green places mar the sisus, or on the small islands in the bay; the penguins chidly along the strep rocky shores of the sea. The eges ol both are entable even with relish, after long continement on board ship, the penguin's being, lowever, the best, mad less strong than that of the ghll. So momerons are these rges, that on one recrasion eight moll gathered $6,0,000$ in four or five duys, and could casily have doubled that number hat they stopped a tew days longer. Both gulls and benguins will lay six or eight ench, if removed, otherwise they only lay two and butch them. The gull come first to their batching places, the pergoins a little later.

Fish abounds in all the bays and inkets, especially in spring, when they come to spawn at the monthan f the fresh watur rivaless. A comphay is now formin" for the colonization of the islands.
but it is difficult to ol land, on account - weed with which produce a curious e settled calculated or the sua rises and on is always more cll moons, at which other-of-pearl, and whl 11 p with it ; and bivalve, called l" n a fossil state. the extent of many dilient to maintain ogs are abundant in orses nre also found ardy, which, when out dilliculty, were ttlement. Rabbits size and the fur. g considerably from ead and coarse fur ; er fowl, which they
pecially wild grese kinds were distinse, and the upland erior in havour, the ing chictly on musvere sory tame, amil esticated. They ure en jlimp, ith conseeasion of tea-berimes, he rest of the year They have a white the horly spechled of The lowland gamer th, with a speckiled kinds. The logger. $t$ of the size of the tishy; they canont or are ca-ily campht - quality, tough mal bich are not larker listy good, and uri - rivulets and fresle so tame that they mrods at them. In if sea birds fregucint mable to sailurs and gs they deposil, are rils have their fixed in mumerous flochs a green places near Is in the bay; the rocky shores of the le even with relish, thip, the perguin's strong than that of e egges, that on one 100 is four or tive at that mumber hat Both gulls and ench, if remowed, luatch them. The laces, the penguins
d inlets, especially n at the mouthan of any is now formins

## BOOK III.-POSSESSIONS IN NORTII AMERICA.

CHAITER I.-LOWER CANADA.

SECTION I. The term Cunnden is supposed to be derived from the Indinn word Konnta, signifying a collection of huts, and which the early buropean dis. coverers mistook for the mame of the country. This important section of the liritish empire is homided on the Fi, by the Atlantic ()cenn, the Gulf of St, law. rence and a part of the labrador coast (which is separated by the Straits of Belleisle from the island of Newfoundand), on the $\mathcal{N}$. by the Hulson liay terio tories, on the W. by the lacitic Ocean, and on the S. by the United Stutes, by part of New Brunswiek, and by the unexplored territories of the Indimas. The division line on the S . from the grand portage on Late Superior (vide general m.pp) rums through the great lakes and down the St. lawrence river to latitude fir, and 'wence along that line to Connecticnt river, from whence it follows the high lands which separate the waters ruming into the St. lawrence and the Atlantic, till it renches due $N$, of the st. Croix river, the boundary between the United States Hul New Branswick.
'The boundary is thus described in the end artiele of the trenty betweon Great Britain and the United states. "From the N. W', angle of Novn Scotia, viz, that angle which is formed by a line drawn due N . from the source of $s t$. Croix river (the clnims set up) by the Americans is based on the pretence of their belug two 'St. Croix' rivers, and next as to the 'highlands' specified) to the highbands atong the said hiyhlunds, which divide those rivers that empty themselves into the river St. Lawrence, from those which fall into the Atlantic Ocean, to the north-westernmost head of the Connecticut river; thence down along the midile of that river, to 45 . N. latitude: from thence by a line due west in said latitude, mutil it strikes the river Iropuois or Cataragily; thence along the middle of said river into Lake Onturio; through the middle of said lake until it strikes the rommunieation by water between that lake and lake Virie; through the middle of said lake, until it arrives at the water comminication between that lake and lake Huron; thence along the middle of sutil water communication into lake Huron; thence through the middle of sail lake to the water conmmonication be. tween that lake and lake Superior ; thence through lake Superior northward to the Isles Royal and Ihilipeaux, to the lomg lake; thence through the midde of said Long lahe and the water communicntion between it and the lake of the Woorls, to the said Lake of the Wools; thence through the said lake to the meet north-western point thereof; and from thenee on a due west course to the river Mississippi; thence by a line to be drawn along the midele of the said river Mississippi until it shall intersect the northernmost part of 31 . north latitude; -south, by a line to be drawn due cast from the determination of the line last mentioned, in the latitude of 31 . north of the equator to the middle of the river Apalachicoln or

Catahonche; thence along the middle thereof to its junction with Fllnt liver: thence straight to the head of St. Mary's River ; and thence down along the middle of St. Mary's River to the Athantic Occan:enst, by a line to be druwn along the middle of the river St. Cronx, from its mouth in the Bay of liundy, to its source; and from its source dircetly north to the aforesaid highlands, which divide the rivers which tall into the Atlantic Ocean from those which fail into the river St, lawrence ; comprehenting all islands within 20 leagues of any part of the shores of the linited states, und lying between lines to be drawn due east from the points where the aforesaid bommaries between Nuva Scotin on the one part, ind bast Florida on the other, shall respectively tonch the Bay of frumby and the Alloutic Orem, excepting such islunels as now are, or heretofore have heen, within the limits of the said province of Nova Scotia."

Fingland's admission of the boundary clamed by the United States, on the fronticr of Maine alone, would he a loss of $10,000 \mathrm{sf}$ suare miles of one of the tinest sections of the British North Ameriean territory, mamely, $6,91 \mathrm{~N}, 410$ acres from Lower Camula, and $2,372,010$ acres from New lirunswick; and it would bring the United States to the very seabmed of Lower Canada, and destroy the internal communication between cheh of our provinces, from the coasts of the Atlantic to the shores of Sake lluron.
This extensive country was, in 17!91, by IJis Britannic Majesty's order in commeil, divided into two governments (entitled Upper and Lower Canadn), the boumdary between the provinces commencing at Pointe' wh Itudet, on Lake St. Frmucis, about 55 miles above Montreal-ruming northerly to the Ottawa river-up that river to its souree in lake 'lemiseaming, sul thence due N , to the Iludson's liay boundary. The words of the order in Council are--" to commence at a stone houndary on the N. bank of the lake of St. Firancis, at the cove W. of lbinte an Banedit, ill the limit between the township of Lancaster and the segniory of New Longuenil rumning along the said limit in the direction of N. 3.1. W. to the westermmost angle of the said seigniory of New Longueuil; then along the N. W. boundary of the seigniory of Vaulrenil, running N. 25 E. until it strikes the Ottawa river; to ascend the said riser into the lake 'lemiscaming, and from the hend of the said lake by a line Irawn due $N$. until it strikes the boundary of Iludson's Bay, including all the territory to the westward and southward of the said line, to the utmost extent of the country commonly called or hnown by the name of Canalla." The want of clearness in the above delineation, added to the imperfectness of the map on which it was drawn, particularly as regarded the westwardly angle of the scigniory of New longuenil, and the S. W. angle of Vandreuil, which ate represented as coincident, when, according to Col. Bouchette, Surveyor 'ich. of Iower Canada,

Photographic Sciences

Corporation
they are nine miles distant from each other - has naturally caused discussions as to the boundaries between Upper and Lower Canada.

The territory of Lower Canada, or seaward portion, is comprised within the 45 th and 52 nd of N. latitude, and the parallels of 57.50 . to 80.6 . of W. Iongitude, embracing, so far as its boundaries will admit an estimation, an arca of 205,863 square statute miles, including a superficies of 3,200 miles covered by the numerous lakes and rivers of the province, and excluding the surface of the St. Lawrence river a'd part of the gulf, which occupy 52,000 square miles; the entire province, water and land, being a quaster of a million of square miles, or one hundred and s:xty million of acres. Tlie boundaries of Lower Canada are the territories of the Hudson Bay Company, or East Maine, on the N.; on the E. the Gulf of St. Lawrence and a line drawn from Ance au Sablon, on the Labrador coast, due N . to the 52 nd of N . latitude; on the S. by New Brunswick and part of the territories of the United States, viz. Maine, New Hampshire, Vermont, and New York; and on the W. by the line separating it from Upper Canada as hefore described. This boundary was fixed by the 6 Geo. IV. c. 59 , which also reannexed the Island of Anticosti to Lower Canada. The whole territory is divided into three chief districts-Quebec, Montreal, and Three rivers, and two inferior ones-Gaspé and St. Francis; these again fu:ther divided into 40 counties (ride population section), with minor subdivisions consisting of seigniories, fiefs and townships, \&c.
II. The discovery of the coast of Canada, according to the most authentic statements, was made by the celebrated Italian adventurers John and his son Sebastian Cabot, who received a commission from Henry VII. of England to discover what Columbus was in search of-a N.W. passage to the East Indies or China, or, as the latter country was then called, Cathay. The adventurers sailed, in 1497, with six ships, and, early in June of the same year, discovered Newfoundland; whence, continuing a westerly course, the continent of North America was arrived at, which the Cabots coasted (after exploring the Gulf of St. Lawrence) as far N. as 67.50 N. lat. They returned to England in 1498. In 1502, Hugh Elliott and Thomas Ashurst, merchants of Bristol, with two other gentlemen, obtained a patent from Henry VII. to establish colonies in the countries lately discovered by Cabot; but the result of the permission granted is not known. In 1527, another expedition was fitted out by Henry VIII. by the advice of Robert Thorne, a merchant of Bristol, for the purpose of discovering a N.W. passage to the East Indies, and one of the ships in making the attempt was lost.

Francis I. of France, piqued at the discoveries of Spain and Portugal, and having his ambition roused by the monopolizing pretensions of these two powers to the possessions in the New World, authorized the fitting out of an expedition, the command of which he gave to John Verrazani, an Italian, who discovered Florida, and thence sailing back round the American coast to the 15 degree of lat., took formal possession of the country for his royal master, and called it " La Nourelle France." On Verrazani's return to Europe 1524, without gold or silver or valuable merchandize, he was at first coldly received, but subsequently sent out with more particular instructions and directions to open a communication with the natives, in endeavourjng to fulfil which he lost his life in a fray with the Indians, and the object of the expedition was frustrated; while the capture of Francis I. at the battle
of Pavia, in 1525, put a temporary stop to further exploration of the coast of Canada. When the Government, however, ceased to follow up the result of Verrazani's formal acquisition of Canada, the Frenchmen of St. Maloes commenced a successful fishery at Newfoundland, which, so early as 1517, had had 50 ships belonging to the English, Spanish, French and Portuguese engaged in the cod fishery on its banks, Jacques Cartier, a native of St. Maloes, engaged in Newfoundland fishery, took the lead in exploring, at his own risk, the N. coasts of the new hemisphere. This bold and experienced navigator at last received a commission from his sovereign, Francis I., and left St. Maloes on the 20th April, 1534, with two vessels, neither of which were more than 20 tons burthen! He coasted part of the gulf which he named St. Lawrence; sailed 300 leagues up the river to which he gave the same name; contracted an alliance with some of the natives; built a small fort, in which he wintered; took formal possession of the country, and returned to France with a native chief named Donnaconna, and two or three of his principal attendants (all of whom were forced from their country by treachery), but without any of those precious metals which were then the great ohjects of European cupidity. The enterprizing character of his royal master induced him to despatch Cartier in the following year with three larger vessels, and a number of young gentlemen as volunteers. Cartier sailed up the St. Lawrence, found the country densely peopled, and the Indians every where friendly. Quebec (or, as it was termed by the natives, Quilibek) was touched at, and an Indian village found there. Cartier pursued his route until he reached an island in the river with a lofty mountain, which he named Mont Royal, now called Montreal. (There is a discrepancy in the publie records as to whether Montreal was visited in the first or second voyage.) After losing many of his followers from scurvy, Cartier returned to France in 1536 ; and the French court, finding that no gold or silver was to be had, paid no further attention to La Nouvelle France, or Canada, until the year 1540, when Cartier, after much exertion, succeeded in getting a royal expedition fitted out under the command of Francois de la Roque, Scigneur de Roberval, who was commissioned by Francis I. as Viceroy and Lieut-general in Canada, Hochela (or Montreal), \&c. Roberval despatched Cartier to form a settlement, which he did at St. Croix's Harbour. The Viceroy himself proceeded to his new colony in 1542, where he built a fort and wintered, about four leagues above the isle of Orleans (first called the Isle of Bacchus); but, for want of any settled plans, and from the rising and deadly hostility of the Indians, owing to Cartier's having carried off the Indian chief in 1535, little was accomplished. Roberval's attention was called from Canada to serve his sovereign in the struggle for power so long waged with Charles V. of Spain; and Jacques Cartier, ruined in health and fortune, returned to France in 1549, where he died neglected by his fickle countrymen. Roberval, on the death of Francis I., embarked fur Canada, with his brother and a numerous train of enterprizing young men; but, from having never afterwards been heard of, they are supposed to have perished at sea. For 50 years, France paid no attention to Canada, and the fev settlers or their descendants left by Cartier or Roberval, were unheeded and unsuccoured; but, in 1598, Henry IV. appointed the Marquis de la Roche his Lieut.-general in Canada, with power to partition discovered lands into seig. niories and fiefs, to be held-under feudal tenure, and
ury stop to further a. When the Goow up the result of Panada, the Frenchuccessful fishery at 1517, had had 50 panish, French and shery on its hanks. Maloes, engaged in ad in exploring, at re new hemispliere. or at last received Francis I., and left t, with two vessels, , 20 tons burthen ! he named St. Lawriver to which he 1 an alliance with 1 fort, in which he of the country, and hief named Donnarincipal attendants their country by se precious metals ts of European cuof his royal master the following year mber of young gened up the St. Law. peopled, and the Quebec (or, as it 'ibek) was touched re. Cartier pursued d in the river with 1 Mont Royal, now pancy in the public 9 visited in the tirst any of his followers rance in $\mathbf{1 5 3 6}$; and gold or silver was on to La Nouvelle 540, when Cartier, getting a royal examand of Francois who was commis. d Lieut-general in

Roberval dest, which he did at himself proceeded he built a fort and the isle of Orleans but, for want of ig and deadly hoser's having carried was accomplished. n Canada to serve wer so long waged ies Cartier, ruined France in 1549, ckle countrymen. I., embarked fur umerous train of m having never upposed to have ce paid no attenlers or their de[], were unheeded ary IV. appointed eneral in Canada, lands into seig. sudal tenure, and
as a compensation for military service when required. Such was the origin of the Canadian seigneuries. The further history of the province will be found in the "Colonial Library," vol. i., in which is detailed the struggles and disasters of the colonists until the British capture of Quebec by General Wolfe, on the 12th September, 1759.
The determined and loyal conduct of the Canadians of all classes, whether of English or French origin, in Lower Canada, effectually prevented the Americans making an impression on that province; and our occupation of both the Upper and Lower Provinces has been uninterrupted for nearly 80 years.
The following is a chronological list of Governors and Administrators of the Government of Canada, since the province was erected into a royal government, in 1663, and the time when they began to govern. French-Sieur de Mésy, May, 1663 ; Sieur de Courcelles, 23rd Sept. 1665 ; Sieur de Frontenac, 12 th Sept. 1672 ; sieur de la Barre, 9 th October, 1682; Sieur Marquis de Nonville, 3rd August, 1685; Sieur de Frontenac, 28th November, 1689 ; Sieur Chevalier de Callieres, 14th September, 1699 ; Le Sicur Marquis de Vaudreuil, 17th September, 1703 ; le Sicur Marquis de Beauharnois, 2nd September, 1726; Sieur Conte de la Galissoniere, 25th September, 1747; Sieur de la Jonquière, 16th August, 1749 Sieur Marquis du Guesne de Meneville, 7th August, 1752; Sieur de Vaudreuil de Cavagnal, 10th July, 1755. English-James Murray, 2lst Nov. 1765; Paulus Emilius Irving (Pres.), 30th June, 1766 ; Guy Carleton (Lieut.-gov., \&c. Commander-in-chiel'), 2.4th September, 1766; Ditto, ditto, 26th October, 1774; Hector J. Cramahé (President), 9th August, 1770; Guy Carleton, 11 th October, 1774 ; Frederick Haldimand, 1778 ; Henry Hamilton (Lieut. governor and Commander-in-chief), 1774 ; Henry Hope (Lieut.governor and Commander-in-chief), 1775 ; Lord Dorchester (Gov..general), 1776 ; Colonel Clarke (Lieut.Governor and Commander-in-chief), 1791; Lord Dorchester, 24th September, 1793; Robert Prescott, 1796 ; Sir Robert S. Milnes, Bart. (Lieut.-governor), 3lst July, 1799; Hon. Thomas Dunn (President), 31 st July, 1805 ; Sir J. H. Craig, K.B. (Gov.-general), 24th October, 1807 ; Hon. Thomas Dunn (President), 19th June, 1811; Sir George Prevost, Bart. (Gov.general), 14th September, 1811 ; Sir G. Drummond, G.C.B. (Ad.-in-chief), 14th April, 1815 ; John Wilson, (Administrator), 22nd May, 1816 ; Sir J. C. C. Sherbroke, G.C.B. (Gov.-general), 12th July, 1816 ; Duke of Richmond, K.C.B. (Gov.-general), 30th July, 1818; Hon. James Monk (President), 20th September, 1819 ; Sir Peregrine Maitland, 20th September, 1820; Earl of Dalhousie, G.C.B. (Gov.-general), 18th June, 1820 ; Sir Francis M. Burton, K.C.G. (Lieut.-governor), 7th June, 1824; Earl of Dalhousie, G.C.B. (Gov.-general), 23rd September, 1825 ; Sir James Kemp, G. C. B., 8th September, 1828 ; Lord Aylmer, July, 1830; Lord Gosford, July, 1835 ; Earl of Durham, June, 1838.
III. The natural features of the territory of Lower Canada are extremely picturesque-mountain ranges, noble rivers, magnificent cascades, lakes, prairies, farms and forests, alternating in every direction with sudden and beautiful variety. On the ocean boundary the castern parts of the river St. Lawrence are high and mountainous, and covered in most parts with forests. On the northern side of the St. Lawrence the mountains run parallel with this vast river as far up as Quebec, when the range quits the parallel of the capital, and runs in a S.W. and S.E. direction into the United States. These mountains, which are known
by the name of the Alleghumies, rise abruptly from the Gulf of St. Lawrence at lerée, between the Bay of Chaleur and Gaspé Cape, and in their course divide the Atlantic coast from the hasin of the Ohio, their loftiest elevation bcing from 3,000 to 4,000 feet above the sca. The country between these two ranges of mountains and the S. boundary line of Lower Canadia in $45^{\circ}$ of N . lat., is marked by numerous risings and depressions into hill and dale, with many riveis running from the N . and S . into the great valley of the St . Lawrence. In order to give a clear view of this valley, it will be well to divide it into sections, and then treat briefly of the rivers and lakes throughout the province; to begin with the sea coast :-

1. The most northerly and easterly section of the province of Lower Canada, extending from Ance au Sablon on the Labrador coast to the Saguenay river, Lat. 48.5 Long. 69.37, occupies a front of 650 miles, of which we know little more than the appearance of the cuast, as explored from time to time by fishers and hunters. A bold mountainous country, in general characterises the coast line; in some places the range recedes from the shores of the Guli and river St. Lawrence to the extent of 12 or 15 miles, leaving a deep swampy flat or moss-bed nearly three feet in depth,-in other parts (as at Portncuf 40 miles E. of the Saguenay) the shores arc of moderate elevation, composed of alternate cliffs of light coloured sand and tufts or clum.js of evergreens.

The country between the two points just stated, is well watered by numerous rivers, among which may be mentioned the Grande and Petit Bergeronnes, the Portneuf, Missisiquinak, Betsiamites, Bustard, Manicougan, Ichimanipistic (or seven islands) St. John, St. Austins and Esquimaux. It can scarcely be said that we know any thing more of these rivers than their embouchures. There are no roads along the const, and the only settlement of any consequence is at Portneuf, a trading mart belonging to the Hudson Bay Company, who possesses under lease from the crown until 1842, the exclusive right of bartering, hunting and fishing over this vast territory and even to the westward of the Saguenay. The tract is termed the King's domain and formed part of the "United farms of France," according to the Ordonnance of 1733.
The country around Lake St. John and the head waters of the Saguenay, has an extent of about $6,000,000$ acres of (it is asserted) cultivable land, better watered than any known country. It is protected by a range of mountains to the N. E., and it is alleged has a milder climate than Quebec. The Saguenay is stated to be navigable for a ship of the line of the largest size, for a distance of 27 leagues, and the port of Tadoussac at the mouth of the Saguenay, is open two to three weeks earlier than Quebec.

I give this on the authority of Captain Yule, R. Engineers, who surveyed the country, and favoured me with his notes. Captain Yule speaks in high terms of the Saguenay as an eligible, social, and military station.
2. The second geographical division of the province N . of the river St. Lawrence, is that comprised within the mouths of the Saguenay and St. Maurice rivers, which form the great highways to the northern territories and ramify in various directions with numerous lesser streams and lakes. The distance between the Saguenay and St. Maurice is nearly 200 miles; Quebec City being nearly equidistant from each river. From Quebec to the Saguenay there is a bold and strongly defined range of mountains; from Cape Torment the ridge is unbroken (save where rivers flod
their exits to the St . Lawrence) to 15 miles below the Saguenay. Beyond this coast border, the country is Hat and undulating with chains of hills of moderate height, well watered by numerous lakes and rivers; among the latter are the St. Charles, the Montmorenci, the Great river or St. Ann's, the du Gouffre, Black river, sic.
The country $\mathrm{N} . \mathrm{W}$. of Quebec, between that city and the St . Maurice, is not so bold as it is to the S.E. towards the Saguenay; the land rises in a gentle ascent from the St. Lawrence banks, presenting an extremely picturesque prospect, with elternations of water, wood, and rich cultivation, bounded in the dis tance by remote and lofty mountains. The rivers Jacyues Cartier, Portneuf, St. Ann's and Batiscan with their numerous tributaries, add fertility and beauty to the landscape.
3. The third territorial section N. of the St. Lawrence, embraces the country lying between the St . Maurice river and the junction of the Ottawa and St. Lawrence, where Upper and Lower Canada incet. The aspect of the country from five to fiiteen miles from the river's bank is slightly elevated into table ridges, with occasional abrupt acclivities and small plains.
The islands of Montreal, Jesus and Perrot, situate in the river St. Lawrence, come within this section. Montreal (the principal) is a beautiful isle of a triangular shape, 32 miles long by 10 broad, lying at the confluence of the Ottawa and St. Lawrence, and separated on the N . W . from isle Jesus by the rivière des Prairies. Montreal exhibits a nearly level surface with the exception of a mountain, (Coteau St. Pierre) and one or two hills of a slight elevation, from which tlow numerous streams and rivulets. The island is richly cultivated and tastefully adorned. Isle Jesus N. W. of Montreal, 21 miles long hy six broad, is every where level, tertile, and admirably tilled; off its S. W. end is Isle Bizard, about four miles in length and nearly oval, well cleared and tenanted. Isle Perrot lies off the $\mathbf{S}$. W. end of Montreal seven miles long hy three broad; level, sandy and not well cleared; the small islets de la Paix are annexed to the scigniory of isle Perrot, and serve for pasturages.
4. Before proceeding to deseribe the physical aspect of the $S$. side of the St. Lawrence, it may be proper to observe that but little is known of the interior of the portion of the province bounded by the Ottawa or Grand River; so far as it has been explored it is not distinguished by the boldness which characterizes the E. section of Lower Canada ; now and then small ridges and extensive plains are met with reeeding from the bed of the Ottawa whose margin is an alluvial flat, flooded often by the spring freshes and autumnal rains to the extent of a mile from the river's bed. Beyond the first ridge that skirts these flats the country is little known.
5. Let us now view the province of the S. of the St. Lawrence, beginning as before at the sea coaston which the large county and district of Gaspe is situate. This peninsulated tract more properly belonging to the New Brunswick than to Lower Canada; lies between the parallel of 47.18 to 49.12 N . Lat. and 64.12 to 67.53 W . Long., bounc'ed on the N. by the river St. Lawrence, on the E. by the Gulf of the same name, on the $\mathbf{S}$. by the Bay of Chaleurs adjoining New Brunswick, and on the W. by the Lower Canada territory; having its greatest width from N. to S. about 90 miles, and with a sea coast extending 350 miles from Cape Chat round to the head of Ristigrouche Bay. This large truct of territory las been as
yet but very superficially explored; so far as we know the face of the country is uneven, with a range of momntains skirting the St. Lawrence to the N., and another at no remote distance from the shores of Ristigouche river and Bay of Chaleurs; - between these ridges is an elevated and broken valley, occa. sionally intersected by deep ravines. The district is well wooded and watered by numerous rivers and lakes, the soil rich and yielding abundantly when tilled. The sea beach is low (with the exception of Cape Gaspé which has lofty perpendicular eliffs) and frequently used as the highway of the territory; behind, the land rises into high round hills well wooded. The chicf rivers are the Ristigouche into which falls the Pscudy, Goummitz, Guadamgonichone, Mistoue and Matapediac ; the grand and little Nouvelle, grand and little Cascapediac, Caplin, Bonaventure, East Nouvelle, and Port Daniel that diseharge themselves into the Bay of Chaleurs;-grand and little Pabos, grand and little River, and Mal Bay river flowing into the Gulf of St. Lawrence:-the river St. John and N. E. and S. W. branches fall into Gaspe Bay : there are also many lakes.
6. The country comprized between the Western boundary of Gaspe and the E. of the Chaudiere river, has a front along the St. Lawrence river to the N. W. of 257 miles, and is bounded to the S. E. by the high lands dividing the British from the United States territories. These high lands are 62 miles from the St . Lawrence at their nearest point, but on approaching the Chaudiere river they diverge Southwardly. The physical aspect of this territory, ennbracing about 19,000 square miles (of which the United States claim about 10,000 square miles), is not so mountainous as the opposite bank of the St. Lawrence; it may more properly be characterized as a hilly region abounding in extensive valleys. The immediate border of the St. Lawrence is flat, soon however rising into irregular ridges, and attaining an elevated and extensive tableau: at the distance of 15 to 20 miles from the shores of the St. Lawrence, the tablean gently descends towards the river St. John, beyond which it again reascends, acquiring a greater degree of altitude towards the sourees of the Allegash-finally merging in the Connecticut range of mountains.
7. The last section of Lower Canada S. of the St. Lawrence is that highly valuable tract W . of the river Chaudiere, fronting the St. Lawrence, and having in the rear the high lands of Connecticut and the parallel of the 45 degrees of N. Lat., which constitutes the S. and S. E. boundary of Lower Canada, where the latter is divided from the American States of New Hampshire, Vermont and New York. The superficial extent of this tract is 18,664 miles, containing 17 counties and a population numbering 200,000 . The physical aspect varies throughout this extensive section; at the inouth of the Chautiere the banks of the St. Lawrence still retain the characteristic boldness for which they are remarkable at Quebec and Point Levi, but proceeding Westward they gradually subside to a moderate elevation till thev sink into the flats of Baic du Febre, and form the marshy shores of Lake St. Peter, whence the country becomes a richly luxuriant plain. Proceeding from Lake St. Peter towards Montreal, the boldness and grandeur of the country ahout Quehee may be contrasted with the picturesque champagne beauties of Richelieu, Vercheres, Chamhly and La Prairie districts. In the former especially the eye of the spectator is delighted with a succession of rich and fruitful fields, luxuriant meadows, flourishing settlements, neat homesteads,
far as we know with a range of to the N., and a the shores of urs; - between en valley, occaThe district is rous rivers and ntly when tilled. ception of Capo : cliffs) and frerritory ; behind, ell wooded. The , which falls the one, Mistoue and tvelle, grand and e, East Nouvelle nselves into the Pabos, grand and ig into the Gulf n and N. E. and : there are also

The embracing about e United States not so mountaiSt. Lawrence ; it as a hilly region The immediate soon however rining an elevated nuce of 15 to 20 ence, the tablean St. John, beyond a greater degree Allegash-finally meuntains. da $S$. of the St. t W, of the river e , and having in it and the paralhich constitutes - Canada, where crican States of York. The sumiles, containnbering 200,000 . t this extensive fre the banks of racteristic boldat Quebee and I they gradually v sink into the harshy shores of ecomes a richly ke St. Peter torandeur of the asted with the Richelieu, Vcrs. In the foror is delighted ields, luxuriant it homesteads,
gay villages and even delightful villas adorning the banks of the Richclieu, the Yamaska and the St. Lawrence, whilst in the distance are seen the towering moantaiss of Rouville and Chambly, Rougemont, Mount Johnson and Boucherville, soaring majestically above the common level. As the country recedes from the St. Lawrence banks to the E. and S. E., it gradually swells into ridges, becomes progressively more hilly, and finally assumes a mountainous character towards lakes Memphramagog and St. Francis, beyond which the country continues to preserve more or less that boldness of aspect to the borders of the Chaudiere and the height of land at the Connecticut's sources. This is the section of the fine country known by the name of the Eastern Tournships, in which the British American Land Company's possessions are situate.

It is probable that the range of hills traversing Bolton, Orford, \&c., are a continuation of the Green mountains which form a conspicuous ridge running from S. to W. through the state of Vermont. Several bold and conspicuous mountains rise in an isolated manner from the valleys or plains of Yamaska and Chambly, adding a delightful interest to the scenery. This territory is abundantly watered by numerous rivers and lakes and rivulets winding in every direction. The chief rivers are the Chaudiere (forming the boundary to the Fastward) the Beçancour, Nicolet (two branches), St. Francis, Yamaska, Richelieu (or Chambly), Chatcauguay and Salmon : all but the three last have their sources within the province. The chief lakes are the Memphramagog (part in Ca nada, part in the United States), Scaswaninipus, Tomefobi, St. Francis, Nicolet, Pitt, William, Trout, and many smaller ones.

Quebec, in Lat. 46.48. Lon. 70.72. is situated upon the N. E. extremity of a rocky ridge or promontory, called Cape 1)iamond ( 350 fect above the water's edge), which runs for seven or eight miles to the westward, connected with another cape called Cape Rouge, forming the lofty and left bank of the river St. Lawrence, which is but for a short space interrupted by a low and flat valley to the N. E. adjoining the level in whicl the river St. Charles now runs to the N. of the city. The site of the town on the N. of the promontory has apparently been chosen from its more gradual slope on this side than to the southward, which is precipitous. To the N. and W. of the city the ground slopes more gradually, and terminates in the St. Charles valley. The large river St. Law. rence flows to the southward of the city, washes the base of the steep promontory of Cajue Diamond, and unites its waters with the small river St. Charles, flowing along the N . side of the city, the junction being in front of the town, where they expand into a consisiderable basin, forming the harbour of Quebec.

The city is nominally divided into two, called the Upper and Lower Towns; the latter being built at the base of the promontory, level with the high water and where the rock has been removed to make room for the houses, which are generally constructed in the old style, of stone, two or three stories high, with narrow and ill-ventilated streets. From the Lower to the Upper Town there is a winding street (Mountainstrect,) extremely steepl, which is commanded by well planted cannon, and terminates at an elevation of 200 feet above the river, at the city walls; or by ' Break Neck Stairs,' where the Upper Town commences, extending its limits considerably to the westward, along the slope of the ridge and up the promontory towards the Cape within fifty or sixty yards of its summit.

The aspect is N ., and well placed for ventilation, al though the streets are narrow and irregular. There are suharbs to each town; in the upper, they extend along the slope of the ridge called St. John's; in the lower, they extend along the valley from the St. Charles, called the Rocks. The influence of the tides, which extend several leagues heyond Quebec, raise the waters at the confluence of the two rivers many feet above their general level, and overtlow the St. Charles valley, which rises gradually from the river to the northward, in a gentle slope for a few miles until it reaches the mountains. This valley and slope is wholly under cultivation and extremely rich and picturesque. The ridge on which Quebec stands is also cultivated as far as Cape Rouge to the westward.

As a fortress, Quebec may be now ranked in the first class; the citadel on the highest point of Cape Diamond, together with a formidable combination of strongly constructed works extending over an area of forty acres: small batteries connected by ramparts are continued from the edge of the precipice to the gateway leading to the lower town, which is defended by cannon of a large calibre, and the approach to it up Mountain Street enfiladed and flanked hy many large guns : a line of defence connects with the grand battery, a redoubt of great strength armed with 24 pounders, entirely commanding the basin and passage of the river. Other lines add to the impregnability of Quebec ; the possession of which, (if properly de fended) may be said to give the mastery of Upper as well as of Lower Canada. [For a complete description of the topography of the country, see Colonial Library, vol. i.]

Montreal, in 45.46. Lat. N., is situate upon the N . or left bank of the St . Lawrence ( 160 miles S . W. from Quebec), upon the Southernmost poiat of an island bearing the same name, and which is formed by the river St. Lawrence on the S., and a branch of the Ottawa or grand river on the N. The island is in length from E. to W. 30 miles, and from N. to S . eight miles: its surface is an alnost uniform flat, with the exception of an isolated hill or mountain on its W. extremity, which rises from 500 to 800 leet higher than the river level. Along its foot, and particularly up its sides, are thiekly interspersed corn fields, orchards and villas, above which to the very summit of the mountain, trees grow in luxuriant varicty. The view from the top, though wanting in the sublime grandeur of Cape Diamond at Quebec, is romantically pieturesque : on the S . the blue hills of Vermont, and around a vast extent of thickly inhabited, cultivated and fertile country embellished with woods, waters, churches, cottages and farms,-beneath the placid city of Montreal-its shipping and river craft, and the fortified island of St. Helena, altogether exhibiting a scene of softly luxuriant beauty. Within a mile to the N . W. of the town, the range of the mountain gradually declines for a few miles to the W and N. to the level of the surrounding country. The bank of the river upon which Montreal is built, has a gradual elevation of 20 to 30 feet, sloping again in the rear of the town, where there is a canal to carry oft any accumulated water: the land then again undu lates to the N . to a higher range. The streets are parallel with the river, and intersect each other at right angles; the houses are for the most part of a greyish stone, roofed with sheet iron or tin : many of them are hundsome structures, and would be considered us such in london.

In the extent and importance of her trade-in the
beauty of her public and private buildings-in the prizel in one seigniory, and belongs to the Roman gay appearance of her shops, and in all the extrinsic signs of wealth, Montreal is far a-bead of the metropolitan city of the province. Its population in 1825, was 22,357 ; and in 1831, 27,297 ; at present it is about 35,000 , if not more. The whole island is com-
prizet in one seigniory, and belongs to the Roman
Catholic elergy, who are consequently wealthy, but very liberal in exacting the lods et ventes due to them on the mutation of land,-they usually compound for these fines (see Section Vil.).

## gs to the Roman

 tly wealthy, but ntes due to them lly compound forIV. So far as we know, the geologicul structure of Canada exhibits a granite country, accompanled with calcareous rocks of $n$ soft texture, and in horizontal strata. The prevailing rocks in the Alleghany mountains are granite in vast strata, hut sometimes in boulders between the mountains and the shore; greywacke and clayslate also occur with limestone occagionally ; various otber rocks, usually detached, present themselves. The lower islands of the St. Lawrence ure mere inequalities of the vast granitic strata which occasionally protrude over the level of the river; the Kamournska islands and the Pengnins in partieular exhibit this appenrance, and in Kamournskn and St. Anne's parishes large masses of primitive granite rise in sharp conical hills (one is 500 feet high) with in some plnces smooth sides and scarcely a fissure, in other places full of fissures and clothed with pine trees which have taken root thercin-the whole country appearing as if the St . Lawrence at one period entirely covered the land. At St. Roch the post roal leads for more than a mile under a perpendicular ridge of granite 300 feet high. The banks of the St. Lnwrence are in many places composed of a schistus substance in a decaying or mouldering condition, but still in every quarter granite is found in strata more or less inclined to the horizon, hut never parallel to it. In the Gaspe district there have been obtnined numerous and beautiful specimens of the quartz family, including a great variety of cornelians, agates, opals, and jaspers; coal indications have also been traced.

Among the mountains to the N . W. of the St . Lawrence have been olitained iron felspar, hornblende, native iron ore, granite, (white, grey and red) and a kind of stone very common in Canada, called Linue. stone Granite, it being limestone that calcinates to powder, yet by fracture apparently granite : marble is in ahundance and plumbago of the finest quality. The iron mines of St. Maurice have long been celebrated, and the metal prepared (with wood) is considered equal if not superior to Swedish; there is no doubt that Canada is rich in copper, lead, tin, and other mineral productions.
The beautiful spnr peculiar to Labrador, whence it derives its name, has long been celehrated; some specimens are of an ultra marine or brilliant sky-blue colour-others of a greenish ycllow-of a red-and of a fine pearly grey tint. Marble of excellent quality and of varice hues (white, green, and variegated) is found in different parts of the country, and limestone, so useful to the agriculturist, almost everywhere nhounds.
The quantity of good soil in Canada compared with the extent of country is equal to that of any part of the globe; and there yet remains locality for many millions of the human race. The best lands are those on which the hardest timber is found-such as oak, maple, beech, elm, black-walnut, \&c. though bass-wood when of luxuriant growth, and pine when large, clean and tall, also indicates good land. Many of the cedar suamps, where the cedars are not stunted and mingled with ash of a large growth, contain a very rich soil and are calculated for the finest hemp grounds in the world. So great is the fertility of the soil in Canadn, that 50 bushels of wheat per acre are frequently produced on a farm where the stumps of trees which probably occupy an eighth of the surface, have not been eradicated - some instances of 60 bushels per acre occur, and near York in Upper Canada, 100 bushels of wheat were obtained from a single ucre! In some districts wheat has heen raised successively on the same ground for 20 years without

Along the Ottnwa there is a great extent of alluvial soil, antl many districts of fertile land are daily brought into view which were before unknown. [See Geology-" Colonial Lilurary."]
V. In Lower Canada, the temperature of the seaon may be considered severe rather than mild: the winter divides the year,-commencing in November, and terminating in May. In Upper Canada the winter is shorter by two months.

- The minimum for January, February, and March, of course, indicates below zero.

The greater severity in the eastern or lower province is owing to its more N. E. position, and to the contiguous N.E. range of uncultivated mountains. In the N. E. the snow commences in November; but seldom continues many days on the ground before December, when the whole country is covered for several feet deep, which does not entircly disappear before the beginning of May. The frost during this period is gerierally intense, with N. W. winds and clear atmosphere during the greater part of the winter; but on a change of wind to the southward and eastward, the weather is overcast, the atmosphere becomes damp, sometimes accompanied with thick fog and snow-falls, with a considerable rise in the ther-mometer,-which usually ranges, during the months of December, January, February, and March, from 32 to 25 below zero, Fahrenheit.
Below Quebec the St. Lawrence is not frozen over, but the navigation is impeded by the large masses of ice which are floated down the river from the upper districts, and kept in motion by the combined action of the current at the narrows opposite Quebec, and the diurnal influence of the ocean tides.

Duriag the month of April the influence of the sun on the ice and snow begins to be felt, and about the first week in May the snow has all disappeared in the neighbourhood of Quebec, (the spring is three weeks earlier at Montreal, distant on the St. Lawrence ahout 180 miles) and the ice which had been accumulating in the great lakes and rivers that pay tribute to the mighty stream, rushes down in vast masses and almost incredible quantities towards the occan, which again dashes it inland with the impetuosity of the gulf tides, presenting an extraordinary and almost terrific scene: sometimes the St. Lawrence is choked up from bank to bank with masses of ice from 4 to 500 yards in diameter,-the sea-tide and land current forces these on one another, and breaks them into small pieces, forming fantastic groups of figures high above the surface of the river;-the effect of the wind and water on these masses may well be inagined. The navigation
of the river is not said to be completely open untll| $1813 . .51 .41 ; 1814 . .60 .45 ; 1815 . .65 .87 ; 1816$. they have all disappeared, which is about the second week in May; vessels attempting to get out of, or to enter the St. Lawrence while the ice is forming or disappearing, are frequently lost by being embayed and crushed to pieces during a severe storm, when the running rigging, and even the rudder becomes immoveable.

The climate of Canada has undergone a change as shown by the mean height of the thermometer at 8 A. M. for the month of July, from 1799 to 1818 conse-cutively:-
1799..66.87; 1800..66.70; 1801..66.51; 1802.. 68.35; 1803..69.38; 1804..72.19; 1805..67.93; 1806..65.96; 1807..75.18; 1808..73.35; 1809.. ;0.60; 1810..59.16; 1811..65.32; 1812..62.16;
58.65; 1817..62.19; 1818..6.1.00.

The warmest of the foregoing, years in July was 1807, and the coldest 1813 . Since 1818 the climute of Canada has undergone considerable change, partly owing to the motion of the Magnetic Poles and the clearing consequent on the cultivation of the country, the effect of which is mainly observable in the lengthened duration of summer and consequent shortening of winter. The state of the weather during the height of summer and winter at Cape Diamond, Quebec, (lat. $46.48 \mathrm{~N} .$, long. 71.17 W .) will be yet further seen by a Metcorological Register for January and July, taken in the year 1828, a year of rather re. markable high and low temperature.

During the summer months there is a great deal of $\mid$ bec) often causes a change in the atmospheric current. electric fluid in the atmosphere, and the vividness of [See "Colonial Library," vol. I.-2nd Edn.]
the lightning and loudness of the thunder are sometimes appalling in the extreme. As a general rule it may be observed that the prevailing winds (viz. N.E., N. W. and S. W.) have considerable influence on the temperature of the atmosphere and state of the weather. The S. W. (the most prevalent) is generally moderate and accompanied by clear skies,-the N. E. and E bring continued rain in summer and snow in winter,-the N. W. is dry, cold and elastic, owing to the ice-bound region it springs from. Winds from due N., S. or W. are not frequent, and the direction of the tide (which is felt for nearly 60 miles above Que-
VI. Canada, as well as the other portions of the American continent, was comparatively densely peopled by a dark race, termed Indians, when first discovered by Europeans; and as colonization extended, the coloured population perished before the civilization of the whites

The earliest European census of Lower Canada was in 1622 , when Quebec, then a small village, did not contain more than 50 persons. A general capitation took place in 1676 , since which the increase, according to Charlevoix, La Potheraye, and public documents, has been as follows :-
$\ldots 65.87 ; 1816$. ears in July was 1818 the climute ble change, partly tic Poles and the on of the country, ble in the length. guent slortening during the height lamond, Quebee, ill be yet further for January and ear of rather re.

Province of loweh Cinaba in 1 mal.

VII. The prevailing, or most numerical creed in Lower Canada, is the Roman Catholic fnith, the clergy of which are edicated in Canada, and liave no combexion with the pope! they are not paid loy fire vermment, but linve for their smpport the ofith part of all the grain raised on the lands of Catholics. Hay and potntees are evempted from the charge, and it the Catholic turn Protestant, or sell his lands so a l'rotestant, the estate is no longer subject to this mo. dernte tythe. The clomeh is govermil by a Romish Bishop, (a Canadian born and educated), who reccives, in adalition to the rent of some lands of littie value, the sun of 1,000$)$, jer anomm from Great Britaln, which is the only churge for the Catholic Church es. tablishment. The incone of the Curis, whose num. bers are sbout 200 , nvernge $300 l$. per numum, by which they arc combled to live respectably, and cven hospitahly. In aid of the bishop or primnte, there are two condjutors or titular bishops, and four vicars genernl, and there are upwarda of 200 viearies, curtes, \&c. Several religious communities, exists, viz. the Hotel Difu de Mfontreal, founded in 1664 , and contnining 37 religieuses professes; the Congriqution de Nölre Dame à Montreal (in 16.50), with 81 professes; the Hopital general de Montreal (1753), with 29 professes; the HÔtel Dieu de Quebec (founded in 1637, "pour les panvres Malades"), with 3.1 religieuses professes; the Ursulines de Queber, with 56 professes: the Hópital generul de Qucbee (1693), with 50 professes; and the Ursulines de's trois rivieres (founded in 1677, " pour l'instruction et pour les pnuvres Malades"), with 34 professes: all these establishments have novices and postulants.

The Church of Eugland establishment consists of a bishop (ot Quebec) and 40 clergymen; the l'resbyterians of the Church of Scotland are alout 1.1 in number, and there are 12 Wesleyan ministers.
The ecclesiastical charges, voted in the parlinmen. tary estimates for the term from lst April 1831, to 31st Mareh 1835, are, bishop of Quebec's snlary 3010 l . ; archdeacon ditto, 500 l . ; rector ditto 400 l ., and house-rent, $90 l . ;$ minister of 'Trinity Chapel, Qucbec, $200 l$; Montreal rector, $300 l$. ; Three Rivers, ditto, 200l.; William Heury ditto, 150l.; Durham ditto, 1004.; Chatham ditto, 100l.; Caldwell manor ditto, 100l.; St. Armand, ditto, 100l.; Evening leetures nt Quebec, 100l.; Verger of ditto, 150l.; Quebec Presbyterian minister, 50l.; Montreal ditto, $50 l$; Argenteuil ditto, 100l.; Roman Catholic bishops of Quebec, 1000l. In addition to the forcgoing, there is $n$ charge of 4,000l. to the Socicty for the Propagation of the Gospel in all our North American provinces, making a total of 10,6901 .
The number of churehes in Lower Canada is about thirty. One-serenth of the whole of the lands in the townships, is set apart as a provision for the Protest. ant Church.
VIII. A Committee of the Canadian Honse of Assemhly, thiss reports on the subject of cducation in 18:32:-
"In i830, there were 981 schools; in 1831,1216 ; teachers in 1830, 9.47 ; in 1831, 1305; scholary in 1830, 41,791; in 1831, 45,203. [In 1829, the total number of children reported as receiving elementary education, was only 18,410 , of which 3,675 were under the Royal Institution.]

The number of scholars tnught gratuitously, has increased from 21,622 , to 23,805 . Those who pay, from 16,591 to 18,016 .

The whole mmonnt of expenses for clementary schools, pail out of the public elicst, in 1830, was
about $20,000 l$; ill 1831 , it will be about 26,0001 .,
 in 1831 , of $11 s, 2 l$.
The proportion which the number of chilidren, $r$. coiving instruction, bears to the whole population, is abont one in twelve throughont the province, instend of one in four, the proportion in the adjoining state of New York, The counties of Montmorency, Stanstend, Shorbrwoe, and Lotbinierce, are the ouly comb. ties ont of forty-one where wearly all the chililren, of n tit age to attend gchool, are recelving a school eilit. ention. In some countios anly one chald in twelve, nul one in ten, are nt school. The average through but the province, of the childien at school is one out of three.

Your Comunittee has observed with satisfaction, that, ont of the whole number of schools, viz.:1:16, 142 (chictly in the towns of Montreal, Quelec, Three Rivers, and Laprairie), have 6,281 scholars, who pay for their education, or receive it in convents, or int a low rate fin institutions which derive no support fiom the public moncy. In Quchec there are 110 less than 2,52s scholars at elementary schools and whose parents pay for their education and entirely support forty-one schools, at a rate of payment from $1 s$. to $2 s, 6 d$. per month."

The money paid towards public schools by the House of Assembly was, in $1829,6,439 l$; 1830 , $18,088 l$. ; 1831, $17,317 l$.; 1832, $23,324 l$.; making in four years 65,1681 . sterling, or 72,409l. currency, dis. tributed through upwards of 2,000 schools annually.

The lands granted to the Jesuits by the old Freneli govermment, and which tell into the Crown on the demise of the last of the Jesuits, in 1800, have been granted by the government for purposes of education.

Return of the Instifutionsfor the Instruction of louth in Loteer Cun'ula. [Canadian Commissioners Report, 1836.]-Puotestant. 1.Royal Grammar Sehool, Que. bec; $2(10 l$. a year, and 901 . a yenr school-house rent, from Jesuits' estates. Twenty free scholars, 11 pay for their tuition; all dny-scholars. Terms, under 12 $8 l$., above 12 and minder $13,10 l$. per an., above 13 , 12l. per. an. French and English tanght; course of instruction as in the grammar schools in the United Kingdom.
2. Royal Grammar School, Montreal ; 200l. a yenr, and 54l. a year school-honse rent, from Jesuits' estates. Twenty free scholars adınitted, 15 seholars pay for their edncation ; all day scholars. 'Terms, high. est $10 l$., lowest $8 l$. per an. ; instruction as in gram-mar-school at Quebec ; and this school is in possession of an extensive apparatus for experiments in natural philosophy.
3. Scininary at Chambly; contributions of students; a private institution lately established under the patrooage of the Lord Bishop of Quebec. Hoard and tuition according to age of student, 40l.,50l. and 75l. per an.; day-schoiars, 15l. and 20l. per an. There are 17 boarders and 9 day-sholars. Those who pay $75 l$. per an. are young men studying for holy orders, and others finishing their education.

Cathone.-I. Seminary of Qucbec; no revenues specifically appropriated to the purposes of cducation, but possessed of several estates. Value, made many years ago, computed at 1,2191 . a year, hesides lorge contributions in grain, and the lods et ventes on mutations of property, which nmount to a considerable sum. Attended by 188 students; the terms for tuition and board, 171. 10s. per an.; for tuition only, 11. per an. Poor children instructed gratis. The seminaty

Diet of the Prisoners in the Gaol of Quebec.-One pound and a half of the best brown bread per day, with one quart of gruel, or two pounds of potatocs. The weekly cost per head for each prisoner is about $2 s .2 \frac{1}{4} d$. The sick receive whatever may he ordered by the physician. Destitute prisoners are provided with such clothes as are absolutely necessary, on an approved estimate. The bedding consists of a straw palliasse, one sheet, two blankets, and a rug. The prisons are under the superintendence of the sheriff.

Number of Officers, anl how appointed.-A gaoler, a superintendant of works, and a matron appointed by the sheriff, and two turnkeys appointed by the goaler. The employment of the prisoners consists in picking oakum, teazing hair, sawing and splitting firewood, \&c. The females sew, wash, knit, spin, card, weave, \&c. The hours of labour are from seven to twelve and from one to six. Prisoners not for hard labour are allowed the use of the airing-yard until four, P.m., in summer. The amount of earnings are credited to Government, and go towards the maintenance of the establishment.

The building is in a very dilapidated state, and has been reported to be very insecure by each successive grand jury which has visited it during the last 10 years. [B. B. for 1836.1
X. The constitution of the Lower Province, until the late insurrection suspended it, may be thus summarily stated. The authority of the sovereign of Canada, limited by the laws of Great Britain and by the capitulations of the Province. The supreme legislative authority in His Majesty and the two houses of the Imperial Parliament; this authority again limited by the capitulations and its own acts; the most remarkable of which, the Act 18 George III. cap. 12, confirmed by 31st George III. cap. 13. declares that no taxes shall be imposed on the colonies but for the regulation of trade, and that the proceeds of such taxes shall be applied to and for the use of the Province, in such manner as shall be directed by any law or laws which may be made by His Majesty, his heirs or successors, by and with the advice and consent of the Legislative Council and Assembly of the Province.
The Provincial Legislature consists of His Majesty, actiug by the Governor of the Province for His Majesty, of a Legislative Council of 34 members, the Chief Justice and I'rotestant Bishop, appointed by His Majesty for life; of a House of Assembly, of 88 members, elected for four years by His Majesty's subjects resident within the Province, and possessed, for their own use and benefit, in the counties, of real property to the yearly value of 40 s. sterling; in the towns of the yearly value of $5 l$. sterling, or paying rent to the amount of $10 l$.sterling. No religious disabilities exist as to electors, hut clergymen or Jews are not eligible as representatives. The Assembly is empowered to make laws for " the peace, welfare and good of the government" of the Province, such laws not being repugnant to the Act of 31 George III. c. 31 , elections by open voting. Members of the House of Assembly allowed, by grant of the Legislature, an indemnity of 10 s . currency per diem, and 4 s . per league from their places of residence to the town or capital where the sittings of the Legislature are held, which is Quebec. Session of the Parliament of Lower Canada generally lasts three months, seldom more than four, and is held during the winter. Salary of the Speaker of the House of Assembly 900l. voted annually by the Provincial Legislature.
The constituency of Lower Canada is very widely diffused-among the half million of people there are
at least 80,000 electors, of whom nine-tenths are proprietors of the soil; several counties have from 4 to 5,000 electors, all of whom are landed proprietors. The total number of proprietors of real property in 1831, was 57,891 ; and of persons holding property not otherwise than real, 25,208 . Of familles employed in agriculture, 50,824 ; and of families engaged in commerce, only 2,503 . The number of farm servants employed was 7,602 , which shows what a large proportion of the agriculturists are small farmers. The number of persons subsisting on alms, in a total population of upwards of half a million, was only 1,282 ; and which, I suppose, included a large proportion of 408 deaf and dumb, 334 blind, and 924 insane persons.

The Governor, in his Majesty's name, assembles, prorogues, and dissolves the two houses, which must be called together once in every twelve calendar months. All questions arising in either of the two houses, are decided by the majority of the members present by open voting. The Governor gives, withholds, or reserves for the further signification of His Majesty's pleasure, the royal sanction to bills proposed by the two other branches. Laws assented to by the Governor, may be disallowed by His Majesty within two years. His Majesty cannot assent to any act or acts affecting the enjoyment of the ducs of the clergy of the Church of Rome, or affecting the establishment of the Church of England within the Province, or the provisions made for the same, or the enjoyment or exercise of any religious form or mode of worship, or creating penalties, burthens, disabilities, or disqualifications on that account, or granting, or imposing any new dues in favour of any ministers of any former form of worship, or affecting the prerogative, touching the granting of the waste lands of the Crown; without such acts having been 30 days before both houses of the British Parliament, and neither of the houses having addressed His Majesty not to sanction the same.
When Canada was in possession of the French, the government was nearly pure despotism.
Shortly after the cession of the province of Lower Canada to the British Crown, the King of England, in a proclamation dated the 7th of October, 1763, declared, that "all the inhabitants of the province, and all others resorting to it, might confide in his royal protection for enjoying the benefit of the laws of England." In 1774, the first Act of Parliament was passed, fixing the boundaries of Canada, making provision for the better government of this part of the British dominions, and vesting the authority in a governor, aided by a council of not less than 17 persons, and not exceeding 23 in number, who had power to frame ordinances, but not to levy taxes, except fur making of public roads and erecting a few local structures. By this Act the English criminal law was preserved; but it was enacted, "that in all matters of controversy relative to property and civil rights resort should be had to the rule and deciaion of the laws of Canada," excepting, however, in this concession to French law: "lands which had been or should be granted in free and common soccage." The Roman Catholic religion, with all its immunities and rights, was secured to the Canadians.
After 17 years' interval, this Act was followed by Mr. Pitt's, or rather Lord Grenville's Act, styled the Constitution of 1791 , under the provisions of which Canada was divided into upper and lower provinces. This Act gave to Lower Canada a Constitution, consisting of a Governor and Executive Council of 11
members, appointed by the Crown (similar to the Privy Council in England); a Legislative Conncil, appointed by mandamus from the King, forming the second estate, and then consisting of 15 membera (but since increased to 34, including the Protestant Bishop of Quebec and the Chicf Justice, who is Speaker); and a Representative Assembly, or third estate, composed of 50 members, and consisting of four citizens from each of the cities of Quebec and Montreal ; three burgesses (being two for the town of Three Rivers, and one for William Henry, so called in honour of the visit of his late Majesty), and the remaining number divided over the province as knlghts of the shire, representing 22 counties, into which Lower Canada was divided. Population was partly made the basis for regulating the division: thus a small and thickly-populated territory on the banks of
the St. Lawrence was found sufficient to form a county; and in the more distant parts large areas were included in one county, in order to combine the requisite amount of population necessary to a represelitative election.
The unequal manner in which this division of counties, with regard to population, and not to area, was felt after a few yeara, and a new county division proposed and adopted by the Provincial Act ix., Geo. IV.; but in order to understand the change which took place in the extension of the representation, it will be requisite to show the division as it stood according to the Act of 1791. This I can best do by the following return of the census of Lower Canada in 1827 and 1831, with the number of Members returned to the Assenhly.

New Sub-divisions and Names.-* Gaspé and Bonaventure. (1) Kamouraska and Rimouski. (2) Islet. (3) Bellechasse. (4) Beauce and Dorchester. (5) Yamaska, Drummond, Nicolet, Lotbiniere, Sherbrooke and Megantic. (6) Richelieu, St. Hyacinthe, Shefford, and Stanstead. (7) Rouville and Missisqui. (8) Verchera. (9) Cbambly. (10) Acadie, Beauharnois and La-Prairie. (11) Two Mountains, Vaudreuil, and Ottowa. (12) Terrebone. (13) L'Assomption and La Chenay. (14) Berthier. (15) St. Maurice and Champlain. (16) Portneuf. (17) Montmorenci and Saguenay.

The laws in force in Lower Canada are: 1st. The acts of the British Parliament which extend to the Colonies: 2nd. Capitulations and treaties: 3rd. The laws and customs of Canada, founded principally on the juriaprudence of the Parliament of Paris, as it stood in 1663, the edicts of the French kings, and their colonial authoritles, and the Roman civil law : 4th. The criminal law of England as it stood in 1774, and as explained by subsequent statutes: 5th. The ordinances of the Governor and Council, establiahed by the act of that year: and 6th. The acts of the Provincial Legislature since 1792. These laws are
executed in His Majesty's name, and, in virtue of his commission and instructions, by the Governor, or person administering the government, by the means of a number of inferior officers, all of whom are appointed during pleasure. The Governor also possesses all other powers and prerogatives, generally, which, His Majeaty may legally enjoy, and delegates to him. The Governor of Lower Canada is Governor General of all the British Coloniea in North America, and Commander-in-Chief of all the forces in those Provinces. The judiciary consists of a High Court of Appeal, a Court of King's Bench, presided uver by

mouski. (2) Islet. piere, Sherbrooke, I Missisqui. (8) ns, Vaudreuil, and St. Maurice and
, in virtue of his he Governor, or nt, by the means of whom are apor also possesses generally, which, telegates to him. overnor General h America, and $s$ in those ProHigh Court of resided over by
a Chief Justice of the Province, and three Puisné Justices for the district of Quebec; another Court of King'a Beuch for Montreal, with a Chief Justice and three Puiane Justices; there are also three Irovincial Courts, with a Judge for Three Rivers, and terms of the Court of King's Bench, including the Provincial Judge for trials of causes above 10l., one for Gaspé and one for the district of St. Francis.

There is also a court of Vice Admiralty, Quarter Sessions, and other minor tribunals for civil matters. With respect to the highest legal tribunal in the Province, the Court of Appeal, it consists of the Governor (ex-officio President), the Lieutenant-Governor, Chief Justice of the Province, the Chief Juatice of Montreal, and the Members of the Executive Council, five of whom, including the President, are a competent quorum to hear and determine appeals from judgments pronounced in the courts of King's Bench in civil matters. Should the suit in dispute exceed 500l. In value, an appeal lies before the King and Privy Courncil ; if below that sum, the Canadian High Court of Appeal decision is final.
The Canadian Court of King's Bench cornbines a jurisdiction similar to the King's Bench and Common Pleas at Westminster ; it has distinct civil and criminal terms, and an appellate as well as an original jurisdiction; appeals lying, in certain cases, from the decisions of the provincial judges, or inferior courts, over each of which a Puisné Judge presides; whose jurisdiction, in the district of Three Rivers, is limited to $10 l$. sterling (with the exception before explained); in St. Francis, to $20 l$. -but in Gaspé, by reason of its distance from the superior tribunals, it is extended to $100 l$.

The duties of the Vice Admiralty Court devolve, by commission, on a Judge Surrogate, who is also a Judge of the court of King's Bench; this union is rightly considered objectionable, is the Court of King's Bench possesses a controlling power over the Admiralty Court ; and, owing to the increasing com. merce of Quebec, it is nceessary that the Vicc Admiralty Judge should be unconnected with any other officc.
The Court of Escleats was created by the loth sec. 6 George II. ch. 59-Imperial Parliament ; it consists of Commissioners appointed hy the Governor to inquire, on information heing filed by the AttorneyGeneral, into the liability of lands to be escheated by reason of the non-performance of the conditions on which they were granted. The decision is by a verdict of a jury composed of 12 men, summonced in the usual way, and the lands forfeited become revested in the Crown.

The other courts, heing similarly constituted to those of the same name in England, require no explanation. The police of the country is administered by unpaid justices of the peace, of whom there are 110 in the Quebec district ; 215 in the Montreal ditto; 44 in Three Rivers, 23 in Gaspé, and 19 in St. Francis, exclusive of the members of the executive and legislative councils, the judges, \&c., who are ex-othicio everywhere justices of the pence. Trial by jury is universal in all criminal cases; but in civil inatters, the appeal to trial by jury is conlined by statute to certain cases, viz., the demand must exceed $10 l$. sterling, the parties, merchants, or traders, and the subject matter grounded on debts, promises, contracts, and agreements, of a mercantile nature only; or else the cause of the action must arise from personal wrongs, to be compensated in damages; in all other cases the Bench are judges both upon the law and the
fact,-a very amall proportion of these cases are tried by jury. Law procecdings are in French and English, and it is not unusual to have half the jury English and the other half French. There are about 200 lawyers on the rolls of the Courts of King's Bench, who are solicitors and proctors as well as barristers. The notaries, who are the conveyancers in the country, now form a distinct class, and are upwards of 300 in number. In the Quehec distrlct there are 45 advo. cates, or barristers, 43 advocates, or solicitors, and 128 notaries. In Montreal district, 26 avocats, 60 advocates, and 164 notaries; and Three Rivers, St. Francis, and Gaspé, 72 ; making a total of 538 law. yers.

Of the laws it may be said that the criminal is English, with some provincial statutes not repugnant thereto; the admiralty is wholly English; the commercial laws of evidence are English. Quebec and Montreal are corporate cities, having each a mayor and common council.

Intimately connected with the laws of the country are the tenures by which land is held; all lands granted since the conquest are in free and common soccage; in the French districts, lands are held according to the old Norman law.

French Landed Temares.-It may be necessary to advert to the peculiar state of the landed tenures in Lower Canada. When the country was first settled by the French, the feudal tenure was in full vigour on the continent of Europe, and naturally transplanted by the colonizers to the New World. The King of France, as feudal lord, granted to nobles and respectable famlies, or to officers of the army, large tracts of land, termed seigniories, the proprietorsof which are termed seiguiors; these possessions are held immediately from the King, en fief, or en roture, on condition of the proprietor rendering fealty and homage, on accession to the seignorial property; and in the event of a transfer, by sale, or gift, or otherwise, (except in hereditary succession), the scigniory was subject to the payment of a quint, or Ilfth part of the whole purchase money; and which, if paid by the purchaser immediately, entitled him to the rabat or a reduction of two-thirds of the quint. This custom still prevails ; the Kings of Great Britain having succeeded to the claims of the King of France.

Fstimating the number of acres of land under cultivation in Lower Canada at $4,000,000$, and the seig. norial grants of good and bad land, at $10,000,000$ acres, it will be perceived that a large portion of territory is embraced under the seigniories. On this account it will be necessary to give some explanation of the different terms used in relation to this property.

Quints are a fifth part of the purchase-money of an estate held on firf, which must be paid by the purchaser to the feudal lord, that is, the King. If the feudal lord believes the fief to be sold under value, he can take the estate to himself; hy paying the purchaser the price he gave for it, together with all reasorable expenses. Reliefe is the rent or revenue of ouc year for mutation fine, when an estate is inberited only by collateral descent. Lods et ventes are fines of alicnation of one twelfth part of the purchasemoncy, paid to the seigneur by the purchaser, on the transfer of property in the same manner as quints are paid to the king on the mutation of fief; and are held en roture, which is an estate to which heirs succeed equally. Franc alue noble is a fief, or freehold estate, held subject to no seignorial rights or duties, and acknowledging no lord but the king. The succes-
sion to fiefs is different from that of property held en roture or by villenage. The eldest son, by rlght, takes the chateau, and the yard adjoining it; also an arpent of the garden joining the manor-house, and the mills, ovens, or presses within the seigniory belong to him; but the profit arising from these is to be divided among the other heirs. Females have no precedence of right, and when there arc only daughters, the fief is equally divided among them. When there are only two sons, the eldeat takes two-thirds of the lands, beaides the chateau, mill, \&c., and the younger one-third. When there are geveral sons, the elder claims half the lands, and the rest have the other half divided among them. Censive is an estate held in the feudal manner subject to the aeigniorial fines or dues. All the Canadian habitans, small farmers, are censitaires. Property, according to the laws of Canada, is cither propre, that is, held by descent, or acquits, which expresses, being acquired by industry or other means. Communiti du bien is partnership in property by marriage; for the wife, by this law, becomes an equal partner in whatever the husband possessed before, and acquires after marriage, and the husband is placed in the same position in respect to the wife's dowry. This law might operate as well as most general laws do, if both mari and femme died on the same day; but very unhappy consequences have arisen when one has predeceased the other. For instance, when the wife dies hefore the husband, the children may claim half of the father's property, as heirs to the mother; and the mother's relations have often persuaded, and sometimes compelled them so to do. [lt has been justly observed, that it would have been almost impossible to have formed a law more fruitful of family discord, or more destructive of that affection which ought to subsist between parents and children. So fully sensible, in fact, are the most simple habitans of the unhappy operation of this law, that scarcely any of them marry without an ante-nuptial contract, which bars the communité du bien.]
The dot, or dowry, is the property which the wife puts into the communité au bien: moveable or immoveable property, falling to her by descent, is a propre, and does not merge in the communité. Dower in Canada, is either customary or stipulate. The first consists of half the property which the hushand was possessed of at the time of marriage, and half of all the property which he may inherit or acquire-of this the wife has the use for life, and the children may claim it at her death. If they be not of age, the wife's relations, as guardians of the children, can take it out of the father's hands, and may compel him to sell his property and make a division. Stipulated dower is a portion which the husband gives instead of the customary dower.

Those farmers who hold land from the seignieur en roture, and who may be termed tenanciers or censitaires, are subject to certain conditions, viz. a small annual rent, from $2 s .6 d$. to $5 s$. (or perhaps more of late years) for each arpent in front; [The Canadian farms are remarkable for the small breadth of the farm on the bank of the river, and its great depth inland; the latter heing often in proportion to the former as sixty to one; namely, half an arpent broad in front of the St. Lawrence, or other river, and 30 arpents in depth.] to this are added some artieles of provision annually, such as a pig or goose, or a few fowls, or a bushel of wheat, according to the means of the farmer, who is also bound to grind his corn at the moulin banal, or the seignieur's mill, when onefourteenth is taken for the lord's use, as mouture or
payment for grinding. The lods et ventes form another part of the seignieur's revenue : it consists of a right to one twelfth part of the purchase-money of every cstate within his seigniory, that changea its owner by aale, or other means equivalent to sale : this twelfth to be paid by the purchaser, and is exelusive of the sum agreed on between the lutter and the seller, and if promptly paid, a reduction of one-fourth is usually made, in the same manner as two-thirds of the quints due to the Crown are deducted on prompt payment. On such an occasion, a privilege remains with the seignieur, but is seldom exercised, called the droit de retrait, which confers the right of preemption at the highest price offered, within 40 days after the sale has taken place.

All the fisheries within the seigniories contribute also to the lord's income, as he receives a share of the fish caught, or an equivalent in money; the seig. nieur is also privileged to fell timher any where within his seigniory, for the purpose of erecting mills, canstructing new or reparing old roads, or for other works of public and general utility. In addition to the foregoing burdens on the farmer, he is, if a Roman Catholic, bound to pay to his curate one twenty-sixth part of all grain produced, and to have occasional asscssments levied on him for building and repairing churches, parsonage houses, \&c.

The duties of the seignieur to his tenants are also strictly defined,-he is bound in sume instances to open roads to the remote parts of his fief, and to provide mills for the grinding of the feudal tenants' corn; lie cannot dispose by sale of forest lands, but is bound to concede them; and upon his refusal to do so, the applicant may obtain from the Crown the concession he requires, under the usual seignorial stipulations, in which case the rents and dues appertain to the King.
The Position and Extent of the Selgnorial Grants, are:-

For lands granted on free and enmmon soccage tenures since 1796, see Appendix.

Lower Canada is in the pussession of an extensive militia. In 1807, the militia men bearing arms, consisted of 50,000 able-bodied scidiers, with a due proportion of officers; and belonging to themselves, (i.e. independent of the arms furnished by government) 10,000 muskets. From this period to 1815 , their numbers were little increased; but from a rcport of a special committee of the Assembly appointed to enquire into the state of the militia, which report, printed at Quebec, is now before me, I find the state of the militia to be, in 1827, as follows:-

Musk district Frsucis, 5,479; Militia
et ventes form ano－ ue：it consists of a purchase－money of $y$ ，that changes its ivalent to sale ：this ser，and is cxclusive the latter and the uction of one－fourth ner aa two－thirds of deducted on prompt ，a privilege remains m exercised，called rs the right of pre－ red，within 40 days
igniories contribute receives a ahare of in money；the seig－ er any where within erecting mills，con－ roads，or for other ity．In addition to er，he is，if a Roman te one twenty－sixth to have occasional ilding and repairing
his tenants are also some instances to of his ficf，and to the feudal tenants＇ of forest lands，but pon his refusal to ：om the Crown the te usual scignorial its and duea apper－

By the Militia Act，evcry able－abodicd male inha－ bitant，from 18 to 60 years of age，after six months＇ residence，is liable to serve as a militia man，unless specially exempted by law；the exemptions embrace the clergy，civil and military officers of Her Majesty＇a Government，physicians，surgeons，notaries，land－ surveyors，ferrymen，millers，schoolmasters，stewards of religious communities，and students in seminaries， colleges，\＆c．，and persons who had served as officera of militia previous to the act．Ofticers are appointed by the government，the qualification for those above the rank of crptain bcing a bond fide possession of an estate yielding $50 l$ ．currency per annum；half the sum qualifics for a captain or suhaltern＇s commission． There is an annual muster by companies（29th June） throughout the province．The light cavalry，artil－ lery，and rifle corps，would do honour to any body of men under arms in Europe；and there is an esprit $d u$ corps throughout the service highly honourable to all engaged in a force which，with readiness，could turn out nearly 100,000 armed men to repel invasion， if the Americans should ever again feel disposed to attempt the conquest of Canada．A new militia levy took place during the recent insurrection；i．e．by calling into active service those only who were dis－ posed to suppress rebellion．

The Queen＇s troops，in Lower Canada，generally amount to three regiments of infantry，two compa－ nies of foot artillery，and two companies of the royal engineers；the head－quarters of two regiments are Qucbec，and one at Montreal．The troops of the line stationed in Canada since 1816 （including artil－ lery and engineers），taken at four intervals，in order to shew the average number，were as follows：

| Years． | $\frac{0}{2}$ |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

The fortifications of Quebec are now impregnable； the island of St．Helen＇s，near Montreal，is also strongly defended，and there are some posts near the American frontier on Lake Champlain．Qucbec，how－ ever，is the key to Lower and also to Upper Canada． The Governor of Quebec garrison is a major－general， and the Lieutenant－governor a lieutenant－general．

The head－guarters of the Commissariat，and other $/$ very exteusive，and in excellent order；and the seve－ military departments，for Upper and Lower Canada，ral departnseuts of the army，medical，commissariat， are in the Lower Province．The naval station of our \＆e．are well attended to． North American colonies is Halifax，Nova Scotia．
The barracks at Quebec（formerly the Jesuit＇s Col－ lege，）which the troops at present occupy，are situate nearly in the centre of the Upper Town，forming the west side of the Market－square，of a quadrangular figure，huilt of stone，three stories high，with a con－ siderable open space in the centre，and capable of containing 1,500 men．The nrmoury nt Quebec is

f 6000l. l) the ing their first neral expenses
III. c. 88 , were lature, by the promisc of a

Civil List being fixed by the Assembly; but this promise was never tultilled.

In addition to the above revennes, the sum of $5000 l$. sterling per annum is permanently appropriated to the expenses of the administration of justice, under the Provincial Act 53 George 1II. c. 9.

The local revenues of the city of Quebec, for 1836, were $4477 l$., derived from tolls, licenses and fines; ditto of Montreal, 5,3.49l. derived from tolls.
The following articles pay a tluty of $7 l .10 s$, per cent. ad valorem:-Alabaster, anchovies, argol, aunisced, amber, almonds, brimstonc, botargo, currants, capers, cascacoo, corks, cinuibar, dates, essence of bergamot, lemon, citron, roses, oranges, lavender, rosemary, emery stone; fruits preaerved in sugar or brandy, figs, honcy; iron in bars, unwrought and pig iron, juniper berries, iucense of frankincense, lava and malta stone for building, marble rough and worked, mosaic work, medals, musk, maccaroni, nuts of all kinds, oil of olives, oil of nlmonds, orris root, ostrich feathers, ochres, orange buds and peel, olives, pitch, pickles in jars and bottles, painting, pozzolana, Parmesan cheese, pumice stone, punk, prints, pearls, precious stones (except diamonds), quichsilver, raisins, sausages, sponges, tar, turpentine, vermillion, vermicelli, whetstones.

Ditto 30 per cent. Clocks and watches, leather inanufactures, linen, musical instruments, wires of all sorts, books and papers, silk manufactures.
Ditto 20 per cent. Glass manufactures, soap, refined sugar, sugar candy, tobacco manufactured, cotton manufactures.

Ditto 15 per cent. Goods, warcs, or merchandize (being foreign), not otherwise charged with duty by 3 and 4 Wllliam IV, e. 59.
The other duties paid at Quebec on British produce may be thus summarily stated :-Sugar, $1 \frac{1}{2} d$. per lb.; ditto refined, $1 d$. ; tea, per $\mathrm{Jb} .-H y s o n, 6 d$. ; Bohea, $2 l$. ; all other sorts, $4 d$. ; coffee, per $\mathrm{lb} ., 2 d$. ; wine, rum, brandy, or geneva, per gallon, 6d.; whiskey, $3 d$. ; tobacco manufactured, per $1 \mathrm{lb} ., 3 d$. ; snuff, $4 d$. ; pimento, $1 \frac{1}{2} d$. ; cocoa, per cwt., 5 s . ; salt, per ph. $2 d$. ; and upon all other goods, wares, or merchandize (not included under the free trade gocds or otherwise), $2 \frac{1}{2}$ per cent.

Upon such of these goods as are liable to the provincial duty of $2 \frac{1}{2}$ per cent. that duty is payable under the provincial law, but its amount is deducted from the duty payable under 3 and 4 William IV. c. 59.

If any of the articles enumerated in the list of goods which are subject to the duty of $7 \frac{1}{2}$ per eent. should come properly under any of the general denominations (such as drugs or gums, \&c.) of articles duty free, such enumerated articles will nevertheless be free, notwithstanding their having been named in that list.

Free goods, under the Imperial Acts, the goods being of foreign produce or manufacture :-Asses, bread or biscuit (1), beef, bacon, bullion, cattle, carriages of travellers, coin, corn, cotton wool (2), cabinet makers' wood (1), diamonds (1), dye woods (1), drugs, fruit and vegetables (1), flour, flax, fresh meat, fresh fish, gums or resins (1), grain, hay (1), hams, hemp, raw hides, horses, live stock, mules, meal, pork, straw (1), salt (1), tallow (1), tortoiseshell (1), tow (1), wood and lumber (1), East India goods (1).

Any sort of craft, food, or victuals (except spirits), and any sort of clothing or implement, or materials, fit and necessary for the British fisheries in America, imported into the place at or from whence such fishery is carried on, in British ships (1).
Also the foilowing goods when imported from the
warehouses in the United Kingdom:-Brimstone (1) burr stones (1), cheese, cork (1), clier (1), dogatonea (1), fruits (1), lops (1), oakum (1), ochres (1), oils, vegetables (1), pitch, pickles (1), seeds, spices (1), sago (1), sponge, sulphur (1), sausages (1), tar, tapioca (1), tallow (1), turpentine (1), wax (1), wheat llour, woods of all sorts (1).

Free goods under the provincial laws:-Apparel for private use, beef salted, butter (2), barley, beans, cattle, live stock, oats, oil (fish oil) (3), pork salted, peas, pitch (2), checse (2), fish salted (3), fish oil (3), flax, flour, furs (2), grain of all kinds, horses, hogs, honey (2), hemp, Indian corn, potatoes, packages containing dutiable or free goods, rice, rye, resin, sceds, skins (2), tar (2), turpentine (2), wheat.

Household goods and necessaries of all kinds which any person or persons coming into this province, for the purpose of actually settling therein, shall import or bring with them for their own use, and for the use of their families.
(1) Liable to provincial duty.
(2) If foreign, liable to the forelgn duty.
(3) If foreign, prohibited.

Prohibitions under Imperial Acts-the goods being of foreign produce or manufacture, and from foreign countries.

Arms, ammunition, and utensils of war, books for sale (1), base or counterfeit coin, fish dried or salted, gunpowder, train oil and oil of all sorts, blubber, fins, or skins, the produce of fish or creatures living in the sca (3).
(1) First composed or written and printed in the United Kingdom, and printed or reprinted in any other country, imported for sale, except books not reprinted in the United Kingdom within twenty years; or being parts of collections, the greater part of which had been composed or written abroad.
(3) Unless taken by British ships.

Schcdule of the duties at the ports of Lower Canada, in the year 1835, distinguishing whether under Acts of the Inperial Parliament or the Colonial Le. gislaturc. Imperial Act 4th George 1II. cap. 15.Wines of the Madeiras or any other island or place, and from whence such wines may be lawfully imported from such island or place, per ton, $7 l$.; all wines, except French wines imported from Great Britain, per ton, $10 s$. Imperial Act 6th George III. cap. 32.Molasses or syrup, per gallon, 18. ; coffee, British plantation, per cwt., $7 s$. ; pimento, ditto, per lb., $0 \frac{1}{2} d$. * Miscellaneous includes, for $1836,3,677 l$., the purchase money of Grosse Isle as a quarantine station; 675l. care of sick marincrs; 374l. for Montreal gaol ; 720l. for relief of distressed inhabitants; and $1,705 i$. expenses out of British American Land Company receipts. In 1835, the miscellany includes $9,674 l$. for the same object; and 1834 has $7,877 l$. for relief of distressed inhabitants.
$\dagger$ Partial payments made only-the House of Assembly having refused the necessary supplies; the estimated amounts required were for $1833,39,687 l$. $1834,40,130 l . ; 1835,40,717 l$.

The accounts which we have of the past are vague and imperfect; according to the beat materials to be collected, the Civil expenditure of Lower Canada from 1794 to 1826 was :-

| $1794 £ 23768$ |  | 1804 £39364 | $1814 £ 186106$ |  |
| :---: | :---: | :---: | :---: | :---: |
| 1795 | 26276 | 180542177 | 1815 | 147203 |
| 1796 | 27225 | 180642862 | 1816* | 88745 |
| 1797 | 26013 | 180751497 | 1821 | 79901 |
| 1798 | 23343 | 180853104 | 1822 | 58294 |
| 1799 | 28967 | 180950067 | 1823 | 101062 |
| 1800 | 12105 | 181059560 | 1825 | 64194 |
| 1801 | 39707 | 181160042 | 1826 | 71098 |
| 1802 | 43390 | 1812114983 |  |  |
| 1803 | 44708 | 1813207712 |  |  |

The increase in 1812 to 1815 was owing to the American war.
An annual sum is voted, in the British Parliamentary eatimates for the Indians, which is thus divided between Upper and Lower Canada, for 1835. According to the Parliamentary estimates, the expense of the Indian establishment for Lower Canada, for the year ending 31st March, 1835, is 1,8131 .; namely, secretary, 239l.; superintendants, 239l.;
interpreter, Quebec, 107 l. ; do. do., 102l.; missionary, $75 l . ;$ do. do., 50l.; schoolmaster, 20l.; a superintendant at Montrcal, 231l.; three interpreters, $102 l$. each; a resident, $131 l$. ; two missionaries, 50l. each; and one at $45 l$. There is nearly a similar establish. ment from Upper Canada, of which the salaries are 1,757l.; and the pensions for wounds and long services, 572l.; The total expense of Indian presents, stores, \&c., for the year ending April, 1835, is $15,856 l$. ; making a grand total, in the miscellaneous British Pariiamentary estimates, of $20,000 l$.
The expenditure of Great Britain on account of Canada is thus given in the B. B. for 1836 .

Expenditure incurred by Great Britain for military protection, and in aid of the civil establishments.

Commissariat. Pay of the troops, provisions, \&c. Provisions and forage, 24, $107 l$.; fuel and light, $11,430 l$; miscellaneous purchases, 4,370l.; transports, 3,736l.; pay of assistant clerks, issuera, \&c., commissariat, 2,950l.; military allowance to commissariat and ordinance department, $3,273 l$. ; local aervices, including $6,250 l$., being the amount of salaries to the Ecclesiastical Establishment of Lower Canada, 7,541l.; Indian department, $17.880 l$. ; contingenciea, 4,039l.; ordnance department, (exclusive of the pay of mili-

Accounts are kept in Halifax currency, by which a guinea (weighing 5 dwts. and 6 grs .) is equal to $23 s .4 d$. currency ; a sovereign to $22 s .3 c^{\prime}$. a Joannes (a gold coin, weighing 18 dwts.) to $4 l$.; a moidore (weighing 6 dwts . and 18 grs .) to $2 l$.; and an engle (weighing 11 dwts, and 6 grs.) to 50 s . The gold Spanish and French coins are-a doubloon ( 17 dwts.) 3l. 14s. $6 d$. ; Louis-d'or, coined before 1793, (5 dwts. 4 grs .) 1l. 2 s . 8 ll .; the pistole, ditto ( 4 dwts. 4 grs .), $18 s .3 d$.; the forty-frane piece, coined since 1792 ( 8 dwts. 6 grs.) $1 l .16 s .2 d$. ; the twenty-franc piece ( 4 dwts. 3 grs.), $18 s .4 d$. In silver coins the crown is equal to 5s. $6 d$. ; Spanish and American tollar to 5s.; English shilling, 1s. 1d.; pistareen, 10d.; French crown, coined before 1793, 5s. 6d.; French picee of
six francs, 5s. 6 d. ; five-franc piece, 4s. 8 d. ; American dollar, 5 s. ; and so on. The coins in most general circulation are dollars of various denominations, the weight and pure metal of which will be found in the Appendix.

The rates of exchange during the year 1836, for bills on His Majesty's Treasury, were from 4s. to 4s. $1 \frac{1}{2} d$. per Spanish or American dollar.

Accounts kept in f. s. d. To change Halifax currency ( 4 dollars $=1 l$. currency) into British sterling, deduct one-tenth. To change British sterling into Halifax currency, add one-ninth.

According to the report of the House of Assembly in 1830 , the basis of the metallic circulation was then in dollars and half dollars, valued as follows :-

I.OWER CANAIAA.-BANKING, \&e.

sh for all since that measures English, 1 on. English and French la.

4s. 8d.; American in most general nominations, the be found in the
e year 1836, for vere from 4s. to lar.
nge Halifax curBritish sterling, sh sterling into
use of Assembly Glation was then ollows :-

Sinee the foregoing statement was prepared, a considerable portion of British coins have poured into the colony, oy means of the emigrants. The metallic circulation may be, therefore, estimated at about 250,000l. sterling; this sum being independent of a halance of from 100,000 . to $150,000 l$. sterling in the military chest.
We come now to the paper circulation. There are no notes issued by the government, or on the eredit of the colony, nor have the government any share in the private banks, which exist to the number of three -viz. the Quebec, Montreal, and City hanks, which are authorized by charter to issue notes from one dollar in value to any amount, payable on demand in specie, and subject to the proviso of having cash in their vaults to the extent of one-third of their eircu. lation: a full account of each bank is required to be printed and laid before the Legislature ammally.

The Blue Book for 1836 gives the following account of the paper circulation in 1836 :-
Amount of Quebec Bank notes in cireula-

| tion | - . - . | £58,150 |
| :---: | :---: | :---: |
| Ditto | Montreal ditto | 191,071 |
| Ditto | City Bank Montreal ditto | 94,751 |
|  | Total sterling | £343,972 |

The above mentioned are the only banks at present established by Aet of Parliament in Lower Canada, and their notes are the chief circulating medium. There is also another bank, called the " luanque da Peuple," which is not incorporated cither by act or charter.
The following abstracts from the books of the different banks, exhibit a general statement of their affairs :-

General State of the Funds of the Quchee Bank, 27 th

There are several smaller banks, viz. the " Banque du Peuple," which is a Société en Commandite. The "Conmercial Bank" (Mills and Co.), a private estabitishment. "St. Hyacynthe Bank," like the "Banque du Peuple." The "Bank of British North America," whose heal-quarters is in London, applies to all the North American Colonies. [See Appendix.]
The following is a statement of the amount of stack in the public undertakings of the district of Montreal, held by the inhabitants of the two races composing the population of Lower Canada.
This statement has been drawn up by the Constitufiomal Association at Montrcal, in order to show the comparative enterprize of the British and French descended population: the former carry on 19-20ths of the maritime commerce of the Province.

Fisheries.-Description of fish, and value in sterling money: Codfish, 107,060 cwt., 71,132l.; Salmon, 141 tierces, 137 harrels, 124 half-harrels, 1,172l.; Pickled fish, 11,196 barrels, 20 half-barrels, 46 boxes, 7.274l.; Colsounds, 72 kegs, 26l.; Fish oil, 26,200 gallons, $2,25+4$. ; total, $81,858 l$. The above quantities imported from Quebec, Gaspé, North Carlisle, and the Magdalen Islands. Codfish, 03,467 cwt., Cod oil, 37,162 gal., whale oil, $19,360 \mathrm{gal}, 74,4141$. This is the gross produce of the fisheries in the county of Gaspe, a part of which is exported, and the remainder consumed in the provinces. Codfish, 7,075 cwt. 5,046l.; Salmon, 2 barrels 6l.; Pickled fish, 10,596 harrels, 6,646l.; Fish oil, 5,760 gal. 512l.; total, $86,624 l$. Gross produce of the fisheries at the Magdalen Islands. [B. B. 1836.]

Horned cattle, sheep, swine, \&c. multiply with astonishing rapidity, and the European breeds seem improved on being transplanted to the American continent. The quantity of fish eaught in the river and gulf of St. Lawrence, and in other streams is very great, and the consumption of this dict considerable in consequence of the tenets of the Roman Catholic faith. Fish oil is becoming an extensive article of export, as are also hides and horns. The peltry or fur trade (see Hudson's Bay Territory chapter) has its outlet from the N. W. territories through Lower Canada. I hope to sce ere long, tobacco, hemp, wool, wax, rape and other oils among the staple products of this fine colony,

The Montreal district made in 1837 the following return for 1836 . [B. B. L. C. $1 \times 36$.]

Crops.-Wheat, 20,000 acres ; harley, 2,000 ditto; oats, 10,000 do. ; peas, 5,000 do. ; rye, 50 do.; lndian corn, 200 do.; potatoes, 4,000 do.; turnips, 50 do.; meadow, 20,000 do.; pasture, 30,000 do. ; total in crop, 61,300 do. ; uneultivated, 15,000 do. Horses, 6,500; horned cattle, 16,000 ; sheep, 15,000 .

Produce.-Wheat, 160,000 bushels; barley, 30,000 do.; oats, 150,000 do. ; pease, 60,000 do. ; ryc, 600 do.; Indian corn, 2,000 do. ; potatoes, 400,000 do.; turnips, $5,000 \mathrm{do}$; hay, 28,000 tons; straw, 30,000 do.

The following prices of provisions and wages of labour in Lower Canada for 1836 , were transmitted to the Colonial Office in 1837. Four months of the year are given on account of the varicty of the seasons. Horned cattle, 5l. 10 s .; horses, 12l. 10 s .; shcep, 10 s .; swine, $2 l$. 10 s .; milk, per gal. $8 d$.; butter (fresh), per lh. 1s.; butter (salt), per lb 1s. 8 d. ; cheese, per lb. 6 ll .; wheaten bread, per 6 lb . $9 d$. ; beef, per $100 \mathrm{lbs} .1 l .10 s$. ; mutton per $1 \mathrm{ib} .3 \frac{2}{2} d$; pork, per 100 lbs. 1l. $15 s$.

Wages for Lahour.-Predial, 18l. per annum, with board and lodging. Day labourers employed at farmwork in epring, summer and harvest, obtain from $2 s$, to $4 s$. per day, without food. Females from $1 s$. to 2s. per day.

Prices of Harvest Produce in Montreal Distriet in 1836.-Wheat, per bush. $5 s$. to $8 s .4 l$. ; barley, $3 s .4 l$. to 4 s .8 ll . ; oats, 2s. to 3 s. ; pease, 4s. 2ll. to 5 s . 6 d. .; rye, $4 s$. to 5 s . $6 \mathrm{~d}_{\mathrm{s}}$; Indian corn, 4 s . to 5 s .6 d. ; potatocs, 1 s .6 d . to 2 s. ; turnips, 1 s .3 l . to 1 s .6 d. ; I $\vdots$ $2 t$. to $3 l$. per ton; straw, 15 s , to $25 s$. per ton.

The following shews the land granted in Lower Canada in 1836 ; acres, 94,484 , -of which 39,209 were gratuitous, and the remainder by purchase. The total number of acres in the Colony granted, is $3,129,54+$-including two grants in Murray Bay of threc leagues each, and two tracts in Chaleur Bay, contents unknown. Remaining to be granted as surveyed, $4,074,862$, independent of vast tracts not yet surveyed. [B. B. 1836.]

Nuture and Value of Pronerty annually created in Lower Canalla, and if not consumed turned into moreuble propert!,-Wheat, 3,404,756 bushels at 5s. per bushel, $851,689 l$.; Onts, $3,432,274$ bushels at 28. ., 314,227l.; Barley, 391,795 bushels at 4s., 78,958l.; Buck Wheat, 106,050 bushels, at $4 s ., 91,020 l_{\text {; }}$; Indian Corn, 339,633 bushels, at 4s., 67,866l. ; Ryc, 234,529 bushels at $3 s ., 35,179 l$.; Peas, 984,758 bushels at 4 s., 196,951 . ; Potatoes, 7,357,416 bushels at $1 \mathrm{~s} .6 \mathrm{l}_{\mathrm{l}}, 5 \mathrm{~s} 1,806 \mathrm{l} . ;$ Animal Food, 600,000 mouths 30 lhs . each yearly, at 4 . per $\mathrm{lh} .300,000 \mathrm{l}$. ; Fish, fresh and salt, 600,000 mouths, ditto, at $2 l$. per 1 lh ., 150,000l.; Butter, Cheese, Milk and Eggs, 600,000 mouths at 2 ll . each daily, $50,000 \mathrm{l}$. ; Indispensable manufactures, \&c. Spirits, Soap, Candles, Linen, Woollens, Shoes, Cluthing, \&e. 5l. for each person, $3,000,000 l$. ; Lnxuries, not before-mentioned, as food and drink, furniture, and apparel worn, \&e. \&e. st. each, $3,000,000$. ; Ineome from trade, \&c., Surplus heyond immediate consumption for necessaries, $10 l$. each person averaging, $6,000,000 l$. ; Timber and Ashes, consumed at home, and exported, at least, $1,000,000 l$.; Value of Commerce not before given, including the coasting and maritime trade, at least, 1,500,000l.; Wasted annually, by shipwreck, fire, had seasons, improvidence, \&c., 250,000l.: total annually created, $17,417,6961$.

Nalure unl Value of Moveable Properly.-Horses, 116,686 , at 10l. cach, $1,116,860 l$.; Neat Cattle, 389,706, at 5l. each, $1,948,530 l$.; Sheep, 543,343 , at IU. each, $543,343 l$. ; Swine, 295,137 . at $1 l$. each, 295, 137l.; Poultry, may be valued at least, 150.000l.: House furniture, 83,000 houses at an average of 201 . a house, $1,860,000 l$. ; Clothing and Equipage, 600,000 persons at an average of $10 l$. each, $6,000,0001$. ; Machinery, and Farming Implements, 1,500,000l.; Bullion, or Gold and Silver Moncy; at least in money and plate, $1,000,000 l$.; Ships, Buats, Timber, and Mcrelandize; the Timher is almost incalculable; altogether at the very least, $20,000,000$. Total, $34,413,870 l$.

Nature 1 nid Value of Immoveablo Property.-Houses, 83,000 at $15 l$. each, $1,245,000 l$. ; Land improved in culture, $2,065,913$ acres, at $5 l$. per acre, $10,329,665 \%$; Land occupicd, not in culthre, 3,981,793 acres at $1 \mathrm{l} ., 3,981,793 \mathrm{l}$. ; Lands not granted and waste, of $120,000,000$ acres at least, fit for cultivation, 30,000,000 at $5 s ., 7,500,0001$.; Streets, Roads, Canals, Dykes, \&c., the extent of roads is eat, public and private, a low fortuma $2,1,500,000 \mathrm{l}$.; Forts, Gaols, Churches, Pubir buildings, a great deal of money has thus been expended by the French and English, 1,500,000l.; Manufactories, Stores, Iron Mines and Quarries, 500,000l. Total, 26,556,385l. Grand total, Anmally created, Moveable and Immoveable, 78,387,924l.

## BOOK III.-POSSESSIONS IN NORTH AMERICA.

CHAPTER II.-UPPER CANADA.

Section I. The boundary line between Lower and Upper Canada, has been stated in the preceding chapter; the province of Upper Canada is bounded on the S . W. by a line drawn through the centre of the great lakes, and separating it from the U. States, on the N. by the Hadson Bay territory, on the E by the Ottawa and Lower Canada, and on the N. W. by the undetined boundaries, or, it may be said, by the Pacific Ocean, comprising in round numbers about 100,000 square miles.
11. The early accounts of Canada, so far as is necessary to the general reader, are einbraced in the preceding chapter: the French, as the allies of the Hurous and Algonquins, penctrated into Upper Canada, and the conquest of the lower province in 1759 made the British, by one campaign, masters of the whole of Upper Canada; the main features in whose history is, the contest with N. America in 1812, and which it is not necessary to detail in this work. See " History of British Colonies, or Colonial Library," Vol. J.-2nd Ed.

Lieutenant-Governors, Presia ats, and Alministra. tors of Upper Canala, from the dirision of the prorince 1791 to 1834.-Col John Graves Simcoc, Iicut.-Gov., July 8, 1792 ; the Hon. Peter Russel, Pres., July 21, 1796 ; Lieut. Gen. Peter Hunter, Licut.-Gov., August 17, 1799 ; the Hon. A. P. Maitland, K. C. B., Licut.-Gov., Mugust 13, $18!8$; the Hon. Samuel Smith, Adm., March 8, 1820 ; Major Gcn. Sir P. Maitland, K. C. B., Lieut.-Gov., June 30, 1820 ; Major-Gen. Sir John Colhorne, lieut-Gov., November 5, 1898; Sir Francis Bond Head, 1835; Sir George Arthur, 1838.
III. The vast territory embraced in the province of Upper Canada, as regards the inhabited parts, is in general a level champaign country; for, from the division line on lake St. Francis to Sandwich, a distance of nearly 600 miles westerly, nothing like a mountain occurs, although the greater part of the country is gently undulated into pleasing hills, fine slopes, and fertile vallies: but a ridge of rocky country runs north-eust and south-westerly through the Newcastle and Midland districts, towards the Ottawa or Grand River, at the distance of from 50 to 100 miles from the north shore of Lake Ontarip and the course of the River St. Lawrence. Passing this ridge to the north, the explorer descends into a wide and rich valley of great extent, which is again bounded on the north by a rocky and mountainous country, of still ligher elevation.

Farther to the north, beyond the French river which falls into Lake Huron, are immense mountains, some of them of great but unknown elevation.

The country on the north and west side of Lake Ontario, and of Lake Erie which is still further west, continues flat as far as Lake Huron, with only occasional moderate elevations of the surface of easy ascent. In the whole extent of this tract of country, there is but a small portion of it under cultivation, the remainder being in its primitive state of forests, lakes, and rivers; the latter for the most part falling into the great lakes, or into larger rivers, which again empty themselves into the great artery of the country, the St. Lawrence. The settlements are chiefly confined to the borders, or within a few miles of the horders of the great lake and rivers.

The lakes of Upper Canada are very numerous, a few of those best known are as follow :(For descriptions, see Colonial Library, 2nd Edition, Vol. I.)

Toronto, formerly called York, but now restored to its natlve name, (Lat. 43.39 N . Long. 79.36 W .) is the infant capital of Upper Canada, delightfully situate in the township of York, near the head of Lake Ontario, on the north side of an excellent harbour or an elliptical basin of an area of eight or aine miles, formed by a long, low sandy peninsula or island, stretching from the land east of the town to Gibraltar Point, abreast of a good fort. The town is laid out at right angles, with long and spacious strects, (King Street, the great thorough fare is half a mile long), the side paths well flagged, and some of the streets macadamized. It contains the principal buildings and public offices of the province, viz: : the Parliament House and Government offices, Government House, the College of Upper Canada, the Hospital, Court House, Gaol, Protestant, Scotch and Roman places of worship, and sevcral Meeting Houses, the Upper Canada Bank, Law Society Hall, the Barracks, \&c.
Official return of the population of the City and Liberties of Toronto, taken by the assessors in May and June, 1833.

To these numbers may be added strangers, emigrants, omissions, carual resitents, tenants of the prison, and the soldiers in garrison, in all over 1800 persons, glving an actual population of more than 11,000 souls within the city and liberties.
The population is now about 15,000 , composed of English, lrish, Scotch, native horn Upper Canadians and a very few French Canadians. Little more than 30 years ago, the site whereon York now stands, and the whole country to the north and west of it was a perfect wilderness-the land is now fast clearingthickly settled by a robust and industrious European, and European descended population, blessed with health and competence, and on all sides indicating the rapid progress of civilization. The other British town of importance on this shore is-

Kingston, (distant from Toronto 184 and from Montreal 189 miles) in Lat. 44.8. Long. 76.40. W. is advantageously situate on the north bank of Lake Ontario at the head of the river St. Lawrence, and is separated by Points Frederick and Henry by a bay which extends a considerable distance to the N. W. beyond the town, where it receives the waters of a river which flows from the interior. Point Frederick is a long narrow peninsula, extending about half a mile into the lake in a S. E. direction, distant from Kingston about three quarters of a mile on the opposite side of its bay. This peninsula forms the west side of a narrow and deep inlet called Navy Bay, from its being the chief harbour of our navy on Lake Ontario. The extremity of the point las a strong battery, and there is a dock-yard with store-houses, \&e.

Point Henry, forming the east side of Navy Bay, is a high narrow rocky ridge, extending into the lake in
the same direction as Point Frederick. It is crowned by a fort built on the extremity of the ridge, and occupying the highest point of any grouud in this part of Canada. The dock-yard store-houses, slips for building ships of war, naval barracks, wharfs, \&cc., are on an extensive scale; during the war a first rate (the St. Lawrence) carrying 102 guns was built here, and in case of emergeney, $\mathbf{a}$ formidable fleet could is a very brief period be cquipped at Kingston in defence of British interests or honour.

Kingston, next to Quebec and Halifax, is the strongest British post in America, and, next to Quebec and Montrcal, the first in commercial importance, and has rapidly risen of late years, by becoming, through the means of the Rideau Canal, the main entrepot between the trade of the lower province and all the settlements on the great lakes to the westward, and with the measures now in progress to render the St. lawrence navigable between Montreal and Lake Ontario, it may be expected to increase yet more rapidly; in 1828 , its population amounted to 3,528 ; in 1834 , to near 6,000 .

The Rideau Canal.-This far-famed undertaking, which is not properly speaking a canal, but rather a succession of raised waters by means of dams, with natural lakes interspersed, commences at Entrance Bay, a small bay in the Ottawa, 128 miles from Montreal, and 150 from Kingston, in latitude N. 45.30. longitude W. 76.50.-about a mile below the Falls of Chaudiere, and one and a half mile above the point where the Rideau River falls into the Ottawa. From Entrance Bay the canal is entered by eight locks; it then passes through a natural gully, crosses Dow's Swamp (which is flooded by means of a mound), crosses Peter's gully by means of an aqueduct, and joins the Rideau River at the Hog's Back, about six miles from Entrance Bay. At the Hog's Back there is a dam 45 feet high and 400 long, which, by throwing back the river, converts about seven miles of rapids into still navigable water. The canal rises into the river by means of a lock. A serics of locks and dams now commence with occasional embankments.
There is a dam and lock at the Black Rapids (138 miles from Montreal) ; a dam, thrce locks, and two embankments at Long Island Rapids, which render the river navigable for 24 miles, to Barret's Rapids, 167 miles from Montreal; eight dams and 14 locks bring the canal to Olive's Ferry, 210 miles from Montreal, where the Rideau Lake contracts to 463 feet wide, and $a$ ferry connects the road between Perth and Brockville. At the Upper Narrows, 16 miles further, the Rideau Lake contracts again to about 80 feet across, over which a dam is thrown, with a lock of four feet lift, forming the Upper Rideau Lake into a summit pond of 291 feet above Entrance Bay, in the Ottawa; six miles further is the isthmus which scparates the Upper Rideau Lake from Mud Lake, the source of the river Cataraqui. The canal is cut through this isthmus, which is one and a half mile wide; five miles advancing is the isthmus Clear Lake, 330 feet across, through which a cut is made to avoid the rapids of the natural channel

To Cranberry Marsh, 17 miles from Jsthmus Clear Lake (the last station adverted to), 255 miles from Montreal and 23 from Kingston, there are three dans and six locks. The Marsh is about 78 feet above the level of Kingston Harbour, and about eight miles long. Besides flowing into the Cataraqui River, the waters of this marsh or lake burst out at White Fish Jall, and flow into the Ganannqui River, which is the wast weir for regulating the level of the water in the

## Isthmus Clear

 2.55 miles from are three dans ; feet above the ight miles long. ver, the waters Shite Fish Fall, ch is the waste water in theRideau Jake (the summit pond) ; thus the water in the whole line of canal, whether in times of tlood or Irought, is kept at a steady height. At Brewer's lopper and Lower Mills, 18 and 17 miles from Kingston, there are three dams and three locks; and at Kingston Mills, five miles from Kingston, one dam and four locks. The Canal, or Cataraqui River, falls into Kingston lBay at these mills, at a distance from Montreal of 273 miles.
The Rideau opens a water communication between Kingston and the Ottawa, a distance of 132 miles, by connecting together several pieces of water lying in that direction, viz. Kingston Mill-stream, Cranberry Lake, Mud lake, Ridean Lake and River, the length of the cuts not exceeding 20 miles. The difference of level is 445 feet; about 20 miles are excavated, some through rocks. There are 47 locks, which are in length 142 fect, in breadth 33 , and with a water depth of five feet, which admit vessels under 125 tons. There was either sad blundering in the estimate, or gross mismanagement in the expenditure on this canal, the original estimate for which was but $169,000 l$.the next estimate, before the plan of enlarging the locks was adopted, amounted to $486,000 l$., the addition of the locks raised the estimate to $762,673 l$.; but it may now be stated, that the total expenditure will not be short of one million sterling. The locks were originally planned upon a scale to correspond with those on the La Chine canal, i.e. 100 feet by 20 ; these dimensions were subsequently increased to 142 feet in length by 33 in width, with a depth of 5 feet water, hence a considerable augmentation of expense.

The Welland Canal connects Lake Erie with Lake Ontario. It was not undertaken by government, but by a company incorporated by the Legislature in 1825 . The canal communicates with Lake Ontario by the Twelve-mile Creek, and is conducted over the range of hills forming the barrier of Lake Erie, at the Falls of Niagara, by means of locks until it meets the Chippawa at cight miles and a half from its mouth; it ascends the Chippawa about II miles from thence, joining the Ouse upon Lake Erie at about one mile and a half from its mouth; the shifting bar at the entrance of the Ouse being remedied by extending piers into deep water beyond the bar. The length of the canal is 41 miles, ics width 56 feet, and its depth $8 \frac{1}{2}$; the summit level is 330 feet, the ascending locks are 37 in number (made of wood), 22 feet wide, and 100 fect long. The cost of this canal has been, so far as we can yet estimate, upwards of $500,000 l$.; but there is little doulst that as the population on Lake Erie and Huron shores increases, a fair return will be vielded for the capital expended.

The Grenville canal consists of three sections, one at the Long Sault on the Ottawa-another at the fall called the Chite a Blondcau, 60 miles from Montreal and 218 from Kingston, and a third at the Carillon Rapids, 56 miles from Montreal and 222 from Kingston, opening into the Lake of the Two Mountains, through which an uninterrupted navigation is practised by steam-boats to La Chine, nine miles above the city of Montreal. This canal renders the naviga. tion of the Ottawa between the Rideau and Montreal complete. All the locks on the Carillon, and on the Chite à Blondeau are of the same size as on the Rideau, but on a part of the Grenville Canal, which was commenced before the large scale was adopted, some locks and a part of the cuttings will only adnit boats 20 feet wide; the locks on La Chine are also calculated for boats only 20 feet wide; the navigation for boats above 20 feet wide is interrupted at the

Grenville Canal, and if large boats be used on the Rideau, and on the higher part of the Ottawa, all goods must be unshipped on arriving at the Grenville Canal, and be cither conveyed hy portage or removed to smalter boats.

The distance from Kingston, on Lake Ontario, to Bytown, where the Rideau River joins the Ottawa, is about 150 miles; from Bytown to the Grenville canal, 64 miles; total, 214 mites; through the whole of which line the locks and cuttings are of a size to admit stean boats 134 feet long and 33 feet wide, and drawing five feet of water. A canal is proposed across the west extremity of the Island of Montreal, near the town of St. Anne's, $\mathrm{t} \rho$ surmount the rapids.

The Montreal communication with the Ottawa, by the canal between the former place and Lake St. Louis, at La Chine, near Montreal, is termed La Chine Canal ; it is 28 teet wide at the bottom, 48 at the water line, has five feet depth of water, and a towing path; the whole fall is 42 feet, with the locks; the length is about seven miles. It is the property of a company; was begun in 1821, completed in three years, at a cost of $137,000 l$. which was defrayed by the company, slightly assisted by government, and for which the public scrvice is exempt from toll.

By means of the great and useful works just mentioned, a large extent of country is opened up to the industry of the British aettlers; there is continuous steam-hoat communications in Upper Canada of about 460 miles, viz. from the Grenville canal, on the Ottawn, to Niagara.
The value of canals and steam navigation may be judged of from the fact, that, in 1812, the news of the declaration of war against Great Britain by the United States, did not reach the post of Michilimackinae ( 1,107 miles from Quebec) under two months; the same place is now within the distance of ten days' journey from the Atlantic.
IV. Our knowledge of the geological structure of the country bordering on the great lakes is more minute than the examinations yet made in Lower Canada [see Colonial Library, Vol. I.]

Beyond Lake Superior, or what La Hontan called the "fag end of the world," the country is exceedingly dreary-miles of ponds and marshes, where the mud is knee deep, are succeeded by open, dry, sandy barreus, terminating in forests of hemlock and spruce, and then again a regular alternation of swamps, mud, bog, windfalls, and stagnant water, and in the course of many miles there is seldom a dry spot to be found for a resting place; in winter strong whiskey is frozen to the consistence of honey, and in the height of summer (!) the thermometer is down to 36 . Farenheit at sun-rise.

A secondary sandstone (according to Mr. Schoolcraft, an American gentlemen, who formed part of a government expedition from New York), forms the whole south coast of Lake Superior, through which the granite on which it rests occasionally appears; chalcedony, cornelian, jaspar, opal, agate, sardonyx, zeolith, and serpentine (all siliceous except the last two), with iron, lead, and copper are found imbedded in it. The sand hills west of the Grand Marais present to the lake, for nine miles, a steep acclivity 300 feet high, composed of light yellow siliceous sand, in three layers 150,80 , and 70 feet thick; the last mentioned uppermost and like the lowest pure, while the middle bed has many pebbles of granite, limestone, hornblende, and quartz. By the subsidence of the waters of Lakes Superior and Huron, occasioned, Mr. Lyell thinks, by the partial destruction of their
barriers at some unknown period, beds of sand, 150 feet thick, are exposed, below which are seen beds of elay, enclosing shells of the very species which now inhabit the lakes.

At Lake Superior, a red sandstone, for the most part horizontal, predominates on the south shore, resting in places on granitc. Ainygdaloid occupies a very large tract in the north stretching from Cape Verd to the grand Portage, profusely intermingled with argillaccous and other porphyries, sienite, trappose greenstone, sandstone, and conglomerates. Part of the north and cast shore is the seat of older formations, viz. aienite, stratified greenstone, more or less chloritic, and alternating five times with vast beds of granite, the general direction east, with a north or perpendicular dip. Great quantities of the older ahell limestone are found strewn in rolled masses on the beach from Point Marmoaze to Grand Portage.

Copper abounds in various parts of the country, in particular some large and brilliant specimens have been found in the angle between Lake Superior and Michigan. At the Coppermine River (Ontanagon, 300 miles from the Sault de St. Marie), the copper, which is in a pure and malleable state, lies in connexion with a body of serpentine rock, the face of which it almost completely overlays, it is also disseminated in masses and grains throughout the substance of the rock.

The almost uniformly level shores of Lake Huron, present few objects of interest to the geologist : sccondary limestone filled with the usual reliquire, constitutes the great mass of the rock along the coast.

The chasm, at Niagara Falls, affords a clear indica. tion of the geology of the country. The different strata,-first, limestona; then fragile slate; and lastly, sandstone. The uppermost and lowest of these compose the great secondary formation of a part of Canada, and nearly the whole of the United States, occupying the whole basin of the Mississippi, and extending from it between the lakes and the Alleghany ridge of mountains, as far eastward as the Mohawk, between which the slate is often interposed, as at Niagara, and throughout the State of New York generally. At Niagara, the stratum of slate is nearly 40 feet thick, and nearly as fragile as shale, crumbling so much as to sink the superincumbent limestone, and thus verify, to some extent, the opinion that a retrocession of the falls has been going on for ages. The aubsoil around Lake Ontario is limestone, resting on granite. The rocks about Kingston are usually a limestone of very compact structure, and light blue. ish grey colour, a fracture often approaching the conchoidal, a slight degree of translucency on a thin edge; and after percussion, the odour of flint rather than that of bitumen. The lowermost limestones are in general nore siliccous than those above them; and so much is it the case, that in some places, a conglomerated character is given to the rock by the intrusion of picces of quartz or hornstone. It is remarkable, that both angular and rounded masses of felspar rock, which usually underlies limestone (or, if absent, is supplied by one in which hornblende predominates), are imbedded and isolated in the limestone, demonstrating the latter to have been at one time in a state of fluidity.

The limestone formation is stratified horizontally, its dip being greatest when nearest to the elder rock on which it reposes, and by which it would appear to have been upraiscd subsequently to the solidification of its strata; the thickness of which, like the depth of the soil, varies from a few feet to a few inches. Shale
occurs, as amongst most limestoncs ; and, in some places so intimately blended with the latter, as to cause it to fall to pleces on exposure to the atmos. phere. The minerals as yet noticed, in this forma. tion, are chert or hornstone, basanite, chlorite, calca. reous sjuar, barytes, sulphate of strontian, sulphuret of iron, and sulphuret of zinc. Genuine granite, is seidom or never found.

The soils of Upper Canada are various; that which predominates is composed of brown clay and loam, with dilferent proportions of marl intermixed; this compound soil prevails principally in the fertile courstry between the St. Lawrence and Ottawa; towards the north shore of lake Ontario it is more clayey and extremely productive. The substratum throughout these districts is a bed of horizontal limestone, which in some places rises to the surface. The Neweastle district lying between the upper section of the Ottawa and the St. Lawrence, is a rich black mould, which also prevails throughout the East Riding of York, and on the hanks of the Ouse or Grand River, and Thames.

At Toronto the soil is fertile, but stones are scarce for common use, which is also the case in some townships bordering Lakes lirie, St. Clair, and the Detroit, thus demonstrating the alluvial nature of the territory. A light sandy soil predominates round the head of Lake Ontario.

The predominating soil of the countiy (east shore, Lake Huron) traversed is a meagre, red, or yellow, ferruginous, sandy loam, varying in depth from leet to inches, often not exceeding three of the latter dimension, anã̉ i.ct unfrequently absent altogether, leaving the ruck bare but for its hoary covering of lichen clay, or claycy loams, were rarely seen, and when noticed, their usual position was either in some of the swampy valleys between the rocks or forming alluvial deposits on the banks of rivers, often decply covcred up by a siliccous sand.
V. In an extent of country embraced between $4^{10}$ and $50^{\circ}$ of north latitude, the climate is necessarily various; in the settled townships it is generally de. lightful, neither so cold in winter as Lower Canada, ir so hot in summer as New York; in the Newcastle uistrict between the $44^{\circ}$ and $45^{\circ}$ a man may work in the woods the whole winter in his shirt sleeves, as in England; and the summer heat is tempered by a cool breezc, which sets in from the S. W. about $10 \mathrm{a} . \mathrm{m}$., and lasts gencrally to 3 or $4 \mathrm{p} . \mathrm{m}$. In summer the wind blows two-thirds of the scason from the S . W., $i$. $e$, along the great lakes.

In spring and autumn this wind brings a good deal of moisture with it. The N. W. the most frequent in winter, is dry, cold and elastic; the S.E. soft, thawey and rainy; the wind seldom blows from west or south, more rarely from the northward. Of course changes of wind are accompanied by corresponding alternations of weather; the most sudden are to the N. W., followed by weather clear and cold for the season, almost every thunder shower clears up with this wind: the longest storms of rain, and the deepest falls of snow, are usually accompanied by easterly winds. The following table will afford a comparative view of the climate of Upper and Lower Canada throughout the year, as regards the highest, lowest, and mean temperature, for each month in Upper and Lower Canada; latitude 42 north in Upper Canada, latitude 45. nortlı in Lower Canada.

The winter of Upper Canada, although not at present severe, is becoming inider every year as cultivation extends. It is a great error to suppose that the great Lakes, Ontario, \&c. are frozen over at any time, they are always open in the centre, frefuently exhibiting a beautiful and striking phenomenon luring the inclement season, by reason of the water being warmer than the circumambient atmospherc, an evaporation resembling steam, may be observed aseending in every variety of shape, in clouts, columns and pyramids, with uncommon grandeur and magnificence from the vast surfaces of Ontario, Eric, Huron and Superior, as if from so many boiling cauldrons.

The chain of shallow lakes which run in an east and south-easterly direction from Lake Simeoe to-
wards the midland district, are seldom frozen more than inch thick until about Christmas, and they are again open before April.

The earth in Upper Canada is not generally frozen at a greater depth than from 12 to 18 inches, and the snow rarely lies at a greater depth than from 18 inches to two feet unless when drifted. It is very seldon that the roads are in a permanent condition for the use of the sleigh or carriole before the second week in January, and they are again broken up by the end of March : this shows the duration of sharp frosts and snow : in faet a labouring man may, if he chuses, work at all times out of doors: in Lower Canada, at the more northerly stations, it would he impossible so to do.

VI. The people of Upper Canaila are among the most favoured on earth; they enjoy peace, liberty, security and abundance on a fertile soil, and in a healthful climate, with an almost total exemption from burthens of any kind. To demonstrate the extraordinary increase of this population, and their distribution throughout the province, is the object of this section.

The carliest European settlers in Upper Canada were some French families, who colonized ahout the banks of the Detroit and on the St. Lawrence, previous to the British acquisition of the province, after which period the settlements of Enropeans, or loyal inhabitants from the the United States, began to be encouraged.
In 1806, the number of moutlis was estimated at

270,718 ; in 1811, at 77,000; but the war with the United States tended much to check the prosperity, and with it the increase of population in the province.
According to some returns before me, the number of males and females were in the following years thus-

The foregoing return was furnished by the Colonial Office to the statistical department of the Board of Trade. The Population of Upper Canada from 1823 to 1835, deduced from the Returns to the House of Assembly.
 ing table win shew the increase of male and female population separately at two periods, and the extent occupied and cultivated in 1832.

White Population of Upper Canada in 1823 and 1832, exclusive of King'a troops;* and total population in 1836. $\dagger$

It will be perceived from the foregoing，that the castern division is formed into three counties，and these again subdivided into 12 townships．The dis． trict commences at the boundary line separating Up－ per and Lower Canada，and runs elong the St．Law－ rence，with part of Lake St．Francis（an expansion of the St．Lawrence），and the Long Sault rapid in front， until it reaches the adjoining district of Johnstown： inland，it is bounded by the Ottawa district．A range of elevated land commences at Lochiel，and runs diagoually to the township of Matilda，whence it passes into the adjoining district．

N．B．－As every statistical information that can be 4,500 ；the Natches， 150 ；the Chickesaws，730．The collected relative to the native population that once Cherokees，behind South Carolina，2，500；the Cataw－ occupied the country now tenanted by Europeans and bas，between North and South Carolina， 150 ；the their descendants，must prove interesting，I give the Pian＇ias，a wandering tribe on both sides of the Mis－ following return，printed in the Annual Register，to－ wards the close of the last century：＂The names of the different Indian nations in North America，wich the numbers of their fighting men，from the best au－ thority 1 have been able to collect，are as follow；on the Mobile and Miss．issippi，the Choctaws or Flatheads，

The soil is rich，and well watered，cultivated and fertile．Some of it has been grunted to dischargui soldiers，and a good deal to the children of New Eng－ land loyalists，and the Canada company possess some lots in it．There are nearly 15 acres of rateable land in the district to each individual，of which about $2 \frac{1}{3}$ acres are cultivated by each man．The male popula－ tion does not so far outnumber the female as might be supposed in a new country．The inhabitants un－ der 16 years of age，exceed those above that period of life．
－ sissi $\rho p i, 800$ ；the Kasquuasquias，or Illinois in gene－ ra！，on the Illinois river，and between the Ouabache and the Mississippi，600．On the Ouabache，the Piankishaws， 250 ；the Ouachtenons， 400 ；the Kika－ pous，300．The Shawnese，on the Siottyo，500．The Delawares，on the west of the Ohio，300．The Mia－
mis, on the Misamis river, falling Into Lake Erie and the Miniamis, 350. The upper Creeks, back of Georgia, the middle Creeks, behind West Floridn, the lower Creeks, in East Florida, 4,000 . The Canuitas, on the east of the river Alibamous, 700 ; the Aliha. mous, on the west of the Alibamous, 600 ; the Akan. saws, on the akansaw river falling into the Mississippi on the west side, 2,000 ; the Ajoues, north of the Missouri, 1,000 ; the Paddoucas, west of the Mississippi, 500. Sonth of the Missouri, tie white Panis, 2,000; the freckled or pricked Panis, 2,000; the Canses, 1,600 ; the Osages, 600; the Grandes Eaus, 1,000 . The Missouri, upon the river Missouri, 3,000. Towards the heads of the Mississippi, the Sioux of the woods, 1,800 ; the Sioux of the meadows, 2,500 . The Blancs, Barbus, or White Indians with beards, 1,500. Far north near the lakes of the same name, the Assiniboils, 1,500; the Christaneaux, 3,000. The Ouiscansins, on a river of that name that falls into the Mississippi on the cast side, 550. South of Puans Bay, the Mascoutens, 500 ; the Sahis, 400 ; the Mechecouakis, 250. Near Pucans Bay, Folle Avoine, or the Wildout Indians, 350; the Pucans, 700. The Powtewatamis, near St. Joseph's River, and Detroit, 350 ; the Messesagues, or River Indians, being wandering tribes on the Lakes Huron and Superior, 2,000. Near the Lakes Superior and Michigan, the Ottahwas, 900 ; the Chipwas, 5,000 . The Wiandots, near Lake Frie, 300 ; the Six Nations, or as the French call them, the Iroquois, on the frontiers of New York, \&c., 1,500; the Round-headed

Indians, near the head of the Ottahwa River, 2,500 the Algonquins, near the above, 300; the Nipissins, near the ahove also, 400. St. Laurence Indians, on the back of Nova Scotia, \&c., the Chalas, 130; the Amelistes, 550 ; the Michmacks, 700. The Ahenaquis, 350. The Conawaghrumas, near the falls of St. Lewis, 200 : total amount, 58,930 . This being the whole number of men tit for bearing arms, from hence we may be enabled to form some idea of the number of all the Indian inhalitants, men, women and children, on the continent of North America; which calculation, however, I am ready to confess can be but rather a vague conjecture.

There being 58,930 warrinrs, it is computed that about one-third of the same number more are old men uufit for bearing arms, which makes the number of males come to maturity amount to abont 88,570 ; and multiplied by six will produce 531,420 , which I consider as the whole number of souls, viz. men, women and children, of all the Indian nations that are come in any degree within our knowledge throughout the continent of North America.
It is a most melancholy consideration to retlect, that these few are all that remain of the many millions of natives, or aboriginal inhahitants with which this vast continent was peopled when first discovered by the whites; and that even these will soon be extinct and totally annihilated, considering the amazingly rapid depopulation they have hitherto experieneed, since that (to them) fatal period or cra of the first arrival of the whites in America."

The Uttawa district is situate in the rear of the its population, cultivation, stock, \&c., were as follows Eastern, bordering on the south shore of the river in 1835. Ottawa from the Rideau river to the St. Lawrence;

The soil in Johnstown is generally goorl, and it is advartageously situated. There are about 14 acres of land rated to each i..dividual, of which there are nearly three acres of cultivated to each mouth. The number of people under 16 years of age, excced by 1,150 those ahove that age. This proportion of children to adults is a atriking feature in all new countries; it would appear to be an effort of nature to fill up a vacuum. To accomplish this, it has been frequently observed that the proportion of female births exceeds those of males; in Upper Canada this does not seem at present to be the case, but the period for the necessity of such a law may be past, and a due proportion of males to females required. Certain it is, that there are as fixed laws relative to male and female products in every class of creation in reterence to increase and decrease, as there are in the more apparent laws of matter and motion. We have not yet, perhaps, a sufficiency of facts generalized, to indicate fully those laws; but the statistics now collecting in various countries, will, it is hoped, cuable us to solve
this interesting, and in many respects important problem, in the history of civilization.

The townships on the Ottawa, N.W. of Bathurat district, are in much request : lumberers now go 150 miles heyond Lake Chat ; and, as the Ottawa has few rapids to the northward, towards its junction with Lake Nipissing, we may command a shorter communication between Montreal and Georgiana Bay, and Lake Huron, than that we now have through Lakes Ontario, Fric, and the Detroit, with the great additional advantage of ifs being beyond the threats of the American Government. A great part of this district is colonized by Highland and Lowland Scotchmen, whose prudent, thrifty habits adinirably fit them for emigrants. Here we find the proportion of females to males doubled, although the numbers above 16 and under 16 years of age are ncarly equal. There are upwards of 18 acres of rateable land to each mouth, and more than 2 acres cultivated; but the proportion of hands cultivating 57,197 acres is very small, nauncly, 2,855 men, i. e. 20 acres to each person.

The District on the north bounded by the river Ottawa，is called the Bathurst District．Census in 1835.

## Assessments，in 1832，£ 716．

The next division as we proceed westward，is the long and cxtensive tract called the Midland District， whose base or southern extremity rests on the St． Lawrence and Lake Ontario，in the parallel of $44^{\circ} \mathrm{S}$ ． latitude，while its northern boundary extends to 46．30， and is terminated on the N．E．by the Ottawa river．

These five districts may be considered as form－ ing the eastern section of the province，and pre－ sent generally a moderately－elevated table land de－ clining towards its numerous water courses．The timber of the forests is large and lofty，and of every variety．The soil，though moist and marshy in many places，is extremely rich，consisting chiefly of a brown clay and yellow loam，admirably adapted to the growth of wheat and every species of grain ：the rivers and lakes are extremely numerous；of the former may be mentioned as most conspicrous the Rideau，Petite Nation，Mississippi and Madawaska，which have their sources far in the interior，gelserally to the westward， and which fall into the Ottawa：the Gannanoqui， Raisin，Cataraqui，Napanec，Salmon，Moira，and part of the Trent discharge themselves into the Bay of Quinté and the St．Lawrence．These streams，besides fertilizing the lands through which they meander，
afford，in general，convenient inland communications， and turn numerous grist，carding，fulling，and saw mills．

Besides numerous inferior lakes there are the Ri－ dean，Gannanogui，White（Henderson＇s），Mud，Devil， Indian，Clear，Irish，Loughborough，Mississippi，Olden， Clarendon，Barric，Stoke，Marmora，Collins，Blunder， Angus，and Ossinicon．There are many roads through－ out the section；the principal one is along the St． Lawrence，betweer：Montreal and Kingston，traversing Cornwall and Lancaster，through which a line of stage coaches run daily（except Sundays）between the two provinces when steam－boats cannot traversc．King－ ston，the maritime capital of Upper Canada，has to the westward the fine Quinté tract in a prosperous state of cultivation．

Bytown，in Nepcan，on the south bank of the Ot－ tawa，is most picturesquely situate；as is also Kinnel Lodge，the romantic residence of the highland chicf－ tain，M＇Nab，on the broad，bold，and abrupt shore of the lake of Chats．Perth is a thriving village in the township of Drummond，on a branch of the Rideau， occupying a ceritrul pusition between the Ottawa and St．lawrence．

NEWCASTLE DISTRICT CENSUS, 1835.

* These totals include 43 insane persons, and 61 persons deaf and dumb.

The suil throughout this large district is in general Huron), is termed the Home District, it contains the good, and though the population is large compared with other districts, there is yct abundance of room for more settlers. It is well watered by the Rice, Balsam, Trout, and other lakes, and by the Otanabee rivers, part of the Treut, \&c. Rice Lake, in the district of Newcastle, about 15 miles from Lake Ontario, and lying nearly S W. and N. E., is 25 miles lung by 5 wide. Its name is derived from the wild rice growing on its margin and surrounding marshes. The principal river on the North British shore of Ontario, is the Trent, which issuing out of Red Lake, after a very winding course of 100 miles, falls into the Bay of Quinté, near the village of Sidney. The Otanabee, which falls into the north shore of Rice Lake, may be considered a continuation of the Trent River, of which the Rice Lake is merely an expansion, as is often the case in the American rivers. The Otanabee, like the Trent, is a broad and full river, and both are navigable for boats. From its source in Trout Lake, it communicates by a chain of lakes with lake Simcoe, through which it is proposed to open a canal communication between lakes llurou and Ontario. The extensive teritory adjoining Nencastle, with its N. W. bits great diversity, towards the N. E. they are low, capital of Upper Canada, Toronto (late called York). The central section of Upper Camada does not fall short in fertility of either the east or west portions of the province; it is well watered, the Nottawasaga, Holland, Muskethsebé, Beaver, Talbut, and black Rivers fall into Lake Simcoe; the Credit, Etobicoke, Humber, and Don Rivers, flow into Lake Ontario. There are excellent roads throughout the section; a canal is projected through the Home District, to connect Lakes Huron and Untario. Toronto, the capital, is rapidly improving; in 1833, its population wasmales above 16, 2,597; males under 16, 1,404; total males, 4,001 ; fentales above $16,2,15.5$; lemales under $16,1,317$; total females, 3,472 . In the suburbsMacr aey Town, 558 ; Irom Osgoodehall, where Ma . cauley Town ends, to Farr's brewery, Lot-street, 400 ; from the eastward of King-street to the Don Bridge, taking in all about the windmill, 300 , making a grand total of 8,731. In 1836, the return gives males, 4,793; females, 4,861 ; total, 9,654 . This I presume to be exclusive of the libertics of the city.
The physical aspect of the shores of Ontario exhiextremity resting on Gcorgiana Bay (an inlet of Lake with swampy marslics; to the N. and N. W., the
banks assume a hold nppenrance，which again subside｜station is well sheltered by hills of sand and rolled to almost a plain on the southern or American shore；blocks． but well relieved in the back ground by $n$ ridge of hills，that，after forming the precipice for the Niagarn cataract，stretches away to the eastward．The coun－ try borderiug the lake is well wooded，and through the rumerous openings the prospect is enlivened by flourishing settlements；the view being extremely picturesque along the white eliffs of Toronto，and the high land over l＇rescurisle，ealled the Devil＇s Nose．
The principal British naval station in this neigh－and Ontario lakes by canals．The lands in the vicinity bourhood is I＇entanguishine（Lat．45．67．Long．79．35．），of Lake Simcoc are remarkably fine；nud from the in the S．E．bight of Georgiana Bay，（which is studded depth of soil，and equality of the surface，peculiarly with fine hnvens）within Gloncester harbour．The easy of cultivation．

It will be perceived from the forcgoing that in this comparatively small district the quantity of land in cultivation and amount of rateable property is very large in proportion to what may be observed in the other districts; there is still, however, a large quantity of uncultivated land in Niagara.

The seenery throughout this part of Canada is extremely picturesque. Fort George, or Niagara, or Newark, formerly the scat of government (distant from Toronto, round the head of Lake Ontarir, about 40 miles) is the sea port (if it may be so called) of the district. It is situate upon a rising ground on the west bank of the river Niagara, within a mile of the angle formed by the river and the lake, protecting on our side the western boundary of the Niagara frontier. The Niagara river enters Lake Ontario in latitude N . 43.15.30, longitude 79.00.40; the difference of height between its efflux and afflux being 3.4 feet on a distance of $36 \frac{1}{2}$ miles.
The Niagara river, which connects Erie and Ontario Lakes, commences at the N.E. extremity of the former, and is the outlet not only of the waters of

Eric, but also of thos ast basins of Muron, Michigan, Superior, and their noousand tributarics. The river is $33 \frac{1}{2}$ miles long in its bends ( 28 direet), and traverses a country unrivalled for its richness and fertility, on the American as well as on the British side. When first assuming the character of a river at Fort Erie, it is one mile wide, but soon contracts its bed, at Black Rock, to half a mile, and bccomes rapid; but again expanding to its original dimensions, it flows on with more gentleness, its general course being from $S$. to N. A ferry at Black Rock, when the current is seven miles an hour, oflers a sublime prospect of the mighty mass of waters rushing from the inland seas, to join their parent ocean. Beyond Black Rock, the river widens to embrace Grand Isle, twelve miles long, and two to seven miles broad, with Square Isle at its head, and Navy Isle at its foot. Below this, the river resembles a bay, more than two miles in breadth, and then narrow down the rapids to the far-famed Falls of Niagara, which are 20 miles from Lake Eric, the whole is navigable, except below Chippewa, where the indraught of the cataract begins to be felt.

This immense district has the advantage of a great $\mid$ come. No rent, tithes, taxes, \&e., to pay, except $6 d$ extent of water frontier along the shores of Lakes Erie and lluron, besides a large portion of the Thames and the rivers Ouse on Lake Erie and Aux Sables and Maitland on Lake ILuron. London, though at present small, is in the heart of a fertile country on the banks of the beautiful river Thames, and will no doubt rapidly increase.
By recent information we learn that there is in progress a railroal making betwees Chatham, on the Thames, to London, thence to Hamilton, on the head waters of Lake Ontario, which will connect Lakes Huron, St. Clair, Eiric, and Ontario; and from the work already performed, it will be quite equal to the Manchester rail-road. Ten years ainec not a white inhabitant was within 20 miles of this town. There is now upwards of 20,000 active and industrious inhabitants in this township, with four mills, six pair of French burr stones, two breweries, many saw-mills, \&c. Ten steam-boats, some of them upwards of 700 tons, plying between this and Lake Michigan, Detroit, Goderich, Sandwich, Chippewa, and Buffalo, \&c. with one of the most productive soils in the world, that will yield 18 to 20 barrels of the finest white wheat per acre, without any manure, from 10 to 15 years to $\mid$ the consideration of the intending settler.

Exclusive of 302,420 acres ( $472 \%$ square miles) given over to Colonel Talbot for settlement, in the London and Western Districts.

The furegoing detail will afford a more complete and accurate view of the progressive state of the colony, than pages of descriptive writing; the reader will perceive the increase of population in each district for a series of years, then its actual amount at present-the quantity of land cultivated and occupied by that population, the stock on the land, and the value of the property sunk therein; to this I ard, in order to render the view complete, the following table of the number of houses occupied in each district, the sort of houses (indicating comparative stages of wealth) and even the additional fire-places, which luxury or convenience may require; also the number of merchants' warehouses and stores, the number of different kinds of mills, and the vehicles kept for pleasure; let those who peruse these facts remember that the comforts and wealth thus produced, within a few short years, arise from the combination of industry, capital, and intelligence applied to a lertile soil.

Number of Houses, Mills, Stores, \&c. in each district, for 1835.

Manufactures, Mines, and Fisheries, in 1836.-The assessment rolls for the year, give the number of gist mills, 599 , and saw mills 903 , in the province. Woollens for domestic use are manufactured throughout the province. Whisky distilleries, breweries, tanneries, and pot and pearl ash manulactories are very numerous.

Johnstown District. - One steam engine, foundry, one brass foundry, one soap and candle factory.

Prince Edward District. - There are carding machines, six fulling mills, one plaister and one oil mill. one foundry, one air furnace, and 10 carriage factories.

Midland District.-One air furnace, one iron foundry, with a steam engine driving powerful lathes for steam machinery, machinery for making hat bodies,
one paper mill, and six carding and fulling machines.
Niagara District.-Nine fulling mills, 14 carding machines, five spinning mills, and one salt manufactory.

Western District. - Three carding mills, and one iron foundry.
Newcastle District.-12 Fulling mills.
Johnstown District.- Iron and copper mines in Lansdown; a copper mine in Elizabeth Town; two marble and limestone in abundance. Niagara District. - Lead ore has been discovered in Clinton. Midland District.-Iron works at Marmora and Ma doc. Western District.-Iron ore in abundance, and a good lime stone quarry in Malder.

mills, and one
opper mines in eth Town; two Niagara Dised in Clinton. mora and Ma abundance, and m vessels and
schooners, for the lakes and rivers. Several of them are annually launched upon the lakes. Steam vessels average from 50 to 5,00 tons. The schooners from 20 to 100 tons. 1'rovincial statute, 4, (ien. 4. ch. ii. sec. 9 , renders it imperative on all musters of vessels to make a report of their arrival at any port of entry, to the collector of customs at such port.
Iron ore of very good quality is abundant in muny parts of the province. On the banks of the Grand River are extensive beds of gypsum ; stone for lithographic purposes is found in some of the districts.
lead ore has been discovered in the Niagara district, and a lease been granted to John L.ea (plumber) of all that he may raise. Specimens of lead and zine ore have been exlibited in the Mitland district, but little is known of their locality or value.

There are no regularly established fisheries, but many hundred barrels of white fish are taken annually. Salmon, trout, pike, hlack and white bass, maskinorge and sturgeon, are enught in large numbers, and of a large size. They are either taken by seines or speared.

Number of grants of land in Upper Canada in $1 \times 36$. Under 100 acres, 1662. Total granted thus, 131,603 aeres. Number of grants ubove 100 and not exceediug 500, 1951 acres $=382,858$. Grants exceeding

600 acres; 59 patents $=47,981$ acres. The total No. of grants $3672=565,412$ acres. Average price of Crown hands in 1836 : per acre, 98 . currency; ditto. Clergy ditto. 13s. do. do.; ditto of school ditto. 12s. Git, do, do.

The total number of grants which have passed the great seal, commencing from the year 1792, mount to $8,9 \times 6,423 \frac{1}{2}$ acres, exclusive of $1,069,262$ acres to the Canada Company.

The total quantity of surveyed lands remaining ungranted amounts to $1,576,326$ acres, exclusive of 302,420 aeres given to Col. Talbot for settling, the greatest portion of which is located, hut no return yet mule.

Statements showing the guantity of surveyed lands in the province of Upiper Canada, remaining viceant and grantable; Deer. 3 |st, 1 N: 36 .

Number of acres in surveyed townships, remaining unlocated, 31 st Deer. $1 \times 35,1,624,303$ acres. Townships returned, surveyed during $1 \times 36$. Township of Euphrasy, 51,600 do-do. of Matchedash, 53,120 do. -do. Ashtield, $i 2,0$ if do. Total $1,7+1,079$ aeres. Deduct lands located during 1836, 181,753 acres. Total quantity of surveyed lands, remaining vacant and grantahle, 31 st Deer. $1 \times 36,1,576,326$ acres.

Detailed statement of rateable property for the year 1835 .

VII. The established church of Upper Canada is within the diocese of the Bishop of Quebec, whose subordinates are the Archdeacons of Toronto and Kingston, who have under them about forty clergymen: the number of churches of the Protestant faith throughout the Province being nbout fifty. The returns of the clergy, churehes, \&c. of the Episcopalian, Presbyterian, and Roman Catholic persuasions are very complete.
Indepeudently of a clergyman of the Established

Church to each parish, there are ministers of several other persuasions. Of the Presbyterian Chureh, in connexion with the Church of Scotland, there were recently in Upper Canada, 21 ministers and preachers; of the Unitel Synod of Upper Canada, 20; of the Roman Catholic clergy, 20; namely, one bishop and 19 priests, with 35 chapels built and building. The bishop receives $500 l$. jer annum from Government, and the clergy 1,000l. a-vear divided among them as a Government appropriation. The Methodist Episcopal

Church consists of 18,451 members ; in York there a just equipoise of power, anil unitlag alt the intelli. are 250 members, divided into 14 classes. The liritish gence and experience of their soclety in thelr ehurelh Wesieyan Mission have three preachers: the Primitive government) have at travelling and if lewidpreachers, Methodista (whoae doctrimes are the same as the Wes. 250 memhers, ind 14 dintrict congregations. Of the leyans, from whom they ditier in aome points of Haptists, there are about 10 or 50 churches in Vpurer church govermment, their distriet and ammal con. Canada, and as many ordabed ministera, besindes ati fercuces being composed of two parts laymen, and one ordnined preachers or licentiates. The following will part travelling preachers, for the porpose of preserving ahow their relative numbers and position :-

In connexion with the church of Scotland, government allowance 57 l . sterling cach (City of 'roronto
 Lord Aberdeen, 22nd February, 1835. United synod of Upper Canada government-allowance, 63l. 12s. 9d. sterling each. Authority, Lord Goderich's despatch of the 2 end November, 1832.

The Methodist Fpiscopnl Church, and the British Wesleyan Methodists in Upper Canada, in the yenr 1833, formed a union under the name of the "Wes leyan Methodist Church in Upper Canada." The English Church has authority annually to nppoint one of their own body to preside over and conduct the athirs of the church in this Province. The number of ministers in Canada is 90, who are itmerant, and never reside in one partienlar mission above two years at a time. The number of church members amounts to between 16 aud 17,000 persons. The Primitive Methodists, in connexion with the English conference, have four travelling preadhers and so local preachers. The members amount to between 3 and 400. There are in the Province four associations of Baptists, having 53 churches, 330 ordained minis.
in exchange for wild innts, for the purpose of endow. ing the church lielonging to the place in which stich property was situatel.

The aren of the several fownships is nearly the same, about 12 milos by 10 , and hiclales for the nost purt acvernl stations where divinc service is performed, either in privats, or school, houses.

The Roman Catholle Blshop remarks, that churches are required ia many piaces besides those mentioned in the return.
ters, and 17 licentiates. The number of Menonista, Turkers, Quakers, Independents, and other sects, cannot be ascertained.

It is calculated that the area of Upper Canada is $31,000,000$ acres, of which $26,000,000$ are capable of cultivation; one-seventh, or $3,700,000$ acres of this land is set apart for the maintenance of a Protestant Clergy-that is, 18,800 reserved lots of 200 acres each;-by some this is thought not an extravagant provision, for judgiug from what takes place in the United States, each lot will not produce in a century, 20l. per annum, making a total of $376,000 l$. which, divided among 2,000 elergymen (a very small number for a country as Inrge as England), gives only $188 l$. for anum to each minister. Such is the view of the subject taken by Archuteacon Strachan.

Clergy Fum Lapent ther, $1 \times 30$. - Vrection of parsonage houses, :667l.; Misuonaries of Chureh of EngIand, 1,5n01.; Archdeacon of York and Kingston, ci00t. ; Secrri ury to Clergy Corporation, 270t.; Oflice of ditto, 926.; total, 5,8306. Upper Canada College and Royal Cimmmar seluod, city of Turonto, in the llome distriet-l'rincipal, 600l.; first class master, 3001 . ; sceond ditto, 300).; third ditto, 300l.; mathematical master, 3001.; French ditto, 200l.; writing and arithmetic, 200l.; ussistment ditto, 100l.; master of preparntory school, 17.5l.; drawing master, lool. The above masters have houses in the college promises.
There are upwards of 100 scholars in the respective forms of the college. The terms at the lprer Canada College are 30h. eurrency per nomum for board and tuition, with some extra college dues. It the lork Nalional Crmtral s.hool, which gave instruction in the year ending April, $1 \times 3: 3$, to 102 boys ann $2: 15$ girls, the terms for insiruction to those who nere able to pay is one doliar per guarter, and no family is required to pay for more than two children, no matter how many there lie.

This return is contined to the district schoobs. The common sehools are not regularly returned, but they amount to several hundred, and instruet nt least 20,000 children, male mod temale, In addition to !oll. sterling provided by the legistatare, for the salary of a classical master (which insures in eneh distriet a sebool in which the common branches of na nademical colucation are taught), $22.5 \%$. sterling per annum is allowed for the maintename of common sehools in each district. This last sum having been fomd totally inadefunte, the lagislature linve for some time past made an additional nonual grant of $5,085 l$. sterling, to be apportioned anong the several districts, aceording to their extent nad population. By additional instructions from his Majesty, dated 13th February, 1836, an instrument was completed under the grent seal of the Irovince, incorpornting the I'pper Camada Aculem!, at Cobourg, in the Newcastle 1)istrict, for the general education of youth in the various branches of literature and science, on christian principles, and appointing certain Wesleyan ministers and others to be a board of trustees for manging the same.

The territorial appropriations, with a view to provide means of public instruction, are truly munifieent. The number of neres of land originally reserved in

Upper Canada for purposes of education amounted to 467,675 , of which 170,719 acres were alienated by grant to individuals, and in lien thercof 272,600 acress were approprinted to a similar purpose, giving a surplis over and above the quantity defleient of 101,881 There were also alienated, us n per contage to surveyors, 19,282 acres. Sinee this rescrvation $225,9.11$ neres have been re-invested in the crown in lien of scattered rescrves granted as an cadowment to the Thiversity of King's College, and bib,000 aeres have been set apmrt for the benetit of Upper Canada Col. lige ; after which there yet remains $2.58,330$ disposnhle aeres for the benefit and extension of educntion. The hegislature also grants from 4,0001 . to 8,000 . per anmum. In 1836 , the amount voted was 8,0551 .
The state of the gaols in the l'rovince is thus returned in the Bhe books-

If the foregoing return be correct, it exhihits a considerable inerease in the number of prisoners, ewen allowing for the angmented population since $1 \times 2 \mathrm{~d}$. The prineipal incrense is in the misdemenuours: but the felon list is also mueh extended since 1828 . Comsitlering, however, the population of the colony, the number of prisoners is very small.
cation amounted to were alieunted by urcof 272,600 acres rpose，giving a sur－ leflcient of $101,8 \times 1$ ． per centage to sur－ reservation 205，9．11 he crown in lien of endowment to the I fifi，000 acres have Upper Canaida Col－ ains $25 k, 330$ dispos． ension of eduention． ，000l．to $8,000 l$ ．pir ited was $8,055 l$ ． l＇rovince is thus re－

ect，it exhibits a of prisoners，wen ation since 1828 ． alemeanours；but since 1828．Con－ f the colony，the

Return of the Gais，and of the Prisoners emfined theretn，in t＇pper Cannia，in In：3．［13．11．］

The prisoners are allowed bread，lief，pork，pota－ toes und salt，average eost for each prisoner， 3 s ．（ide． per week．No clothing allowed，but bedding where accessary．Average cost per annum，lis．to $2\left(\begin{array}{l}\text { s．per }\end{array}\right.$ head．letisoners are nllowed to work at their own trade for their own benetit．

X．The government of the colony has been admi－ nistered since 1791，by a Licutmant－governor，an Fxecotive Conncil（tive members），a lagislative ditto （ 30 members），and $n$ llouse of Assembly or Repre－ sentatives（sixty－two members）．The lixecutive Council members are chosen by the Crown and the lientemant－govermor．＇The presiding comeillor is the Arehdencon of the province．

The legislative Council is not composed（as in many chartered govermments）of the same body that constitutes the Executive Council of the government， it is，in fact，a deliberative assembly distinet from the executive department，and composed of members from various distriets of the provinee，who hold their oflice for life，whose duties are exclusively legislative， and in which all that is done is openly and publiely disenssed，and proceded in according to the same for－ malities as are ohserved in the representative branch of the legislature．

The llouse of Assembly has representatives for counties lorty－six ；for towns four ；namely，＇Toronto， one；Ningara，one；Kingston，one；and l3rockville， one ：lincoln county returns four members；the other twenty－six counties two each；excepting Maldimand one；Kent one；Simcoe one；Lemoox and Adding－ ton one each；Prescott and Russel one；Carlton one；and Lanark onc．The proceedings of the House are in English，and not ns in Lower Canada，In French； the jourmals regularly printed，and the dehates in form nfter the manner of the British House of Commons． The elective franchise，\＆c．，is the same as in Lnwer Canada，as are also the other points not mentioned in this section．

The law is administered hy a Court of Queen＇s Bench，with two puisné judges，and in each of the eieven districts there is a district judge ；there are also yuarter sessions，\＆cc．，as in England．The ma－ gistrates amount in number to nearly 500，dispersed over each district，according to its population and extent．

Upper Camala is now in a very diflierent position to defend itself from an incursion ueruss the frontier by the Americans as compared with its condition during the last war ；it has at present about sixty regiments of corolled and embodied militia，with a colonel，lien－ tenant－colonel，and major，abuit nine enptains，ten licutenants，nul ten ensigns to each regiment，with oprourds of 50,000 as gallant ranh mud tlle as could be turned out in any part of the united kingiom．

Militin Return to Cohninl Office for $1 \times 36 .-O A l l-$ cors，1，757；mon－commissioned othicers，1，tou；rank nad tlle，$: 19,131$ ：total， 12,188 ．Incluled in the above，are is troops of cavalry and 5 companies of artillery；the latter lave three light tield－pieces，and the former are wimed，bit not completely．

XI．The general reveme for the purpore of sup－ porting the government in Wpor Canula，and admi－ nistering the laws，is raised by a duty of ef per cent． on all goods nal morrhandise imported by sen，nt the ports of（Vucber or Alontrenl；wines．liguors，and certain articles of luviry，have a specitle thoty laid upon them．This dhaty is paid by the importer nt the Custom－house Quebec，Upper Canadn recciving one third of the smin collected ench year．This amount， with a duty upon shop mud tavern liesoes for vend－ ing spirits，distillers，hawkers，pedlars，mud anction－ eers，and a duty upon certain imports from the Ini－ ted States，which are nlso paid by the importer，form the public resources of the province，and is at the disposal of the l＇rovincinl Lerislature，for the payment of public officers，and for such general purposes ns may be decmed essential to the welfare of the prople and the interest of the province．

It will he observed that the largest part of the income of Upper Cunada arises from the duties paid in Lower Canada，nt the ports of Montreal and Que－ bec．The casual and territorial revenues of $13,032 l$ ．， includes for $1836,7,7956$ ，of lutios on crown timber； 2，961l．procceds of sales of lots $i_{1}$ ，the military re－ serve，Toronto；2，645\％．patent nui surveying fees on grants of land and leases； $581 /$ ．sriles uf crown lands； $864 l$ ．crown＇s proportion of scizures； 3833 ．rents of mines，ferries，\＆c，and the remainder of fines，\＆c． The internal revenue of the province，consists of du－ ties levied on spirits，both on the distillition and sale ；of the importation of salt（fil．per hushel）from
the United States; on licences to auctioncers, innkeepers, pedlars, hawkers, \&ic. ; and some tolls, levied at che Burlington Bay Canal. There are 840 innkcepers, who pay each from $3 l$. to $10 l$., the duty amounting to $3,643 l$. ; and 443 shopkeepers, licensed to sell spirituous liquors, who contribute $1,505 l$.; the number of stills, in gallons measure, is 5,846 , paying 730l. ; and three steam-boats to pay $15 l$., being a total currency on those four items of $5,394 l$.-gross, or deducting the allowance to inspectors, $5651-5,329 l$. Salt, imported from the United States, yields 1,617l.; and
the expense of collection is $382 l$., leaving net $1,235 l$. The hawkers and pellars on fout, pay $5 l$. annually; and those who travcl with one horse, $10 l$.; two horses, 15l.; the gross amount of revenue from this source is $520 l$.-(collector's allowance, 26l.); net 494l.; levied on- 41 foot pedlars, 30 one-horse pedlars, there being only one pedlar or hawker with two horses. The number of auctioneers is 23, who pay yearly 51 . for a license, together with duty on sales; which, for 1832 amounted to $251 l$.

The following Yearly Statement is collated from the Blue Books.

Amount of tax at $3 d$. in the pound sterling, $2,445 l .17 \mathrm{~s}$.

The expenditure of the above, is devoted solely to the improvement, \&c. of the city. During the year a common sewer has been completed throngh the centre of the main street, and communicating with the hay. Side-paths have been laid down, and the principal street in, and approaches to, the city macadamized and paved.
The letter postage includes the British and sea postage, as well as the internal rates in the provinces.
The nett proceeds, after defraying the expenses of the establishment in the provinces, and the conveyance of the mails, \&c., are remitted to the General Post Office, London
The sums received for the transmission of newspapers and pamphlets by post, have, ever since the establishment of the post-office in British North America, been the emolument of the deputy postmastergencral, out of which he allows to his sub-deputies a commission for collecting, of from 10 to 20 per cent., which allowance is in addition to their salaries or commission as postmasters.
For 1827 and part of 1828, materials cannot be found for making up a perfect statement of the sums reccived for the transmission of newspapers.

Gross amount of Newspaper Postage paid by each Proprictor of Newspapers in the Canadas, since 1827.

The foregoing return is collated from the Journals lishing, as their names are omitted from the lists. of the House of Assembly, and the latest ycar printed is for $1 \times 34$. There are severul journals mentioned in different years; but they appear to have ceased pub-

8 journals are named, som of them for the first time in that year and others of a year or more duration : four are published at Quebec,
eight at Montreal，eight at Toronto，four at Kingston，Dundas，Brantford，Port Hope，Belleville，Brockville， three at Hamilton；two at each of the towns of Niagara，St．Catherines，St．Thomas，Cobourg，and Perth ；and one journal at each of London，Sandwich，

The Post－oflce receipts for Upper and Lower Canada for five years，is thus shewn－the increase indicates augmented Tratie．

The taxation is small. The public salaries are at the minimum ; no good ever accrued from paying scantily the servants of a private person-and in the case of the public aervants, I have seen enough in the French, Dutch, and P'urtuguese colonies, to compel me to impress strungly on the minds of my countrymen, the necessity of paying the oflicers of the government. salaries, not merely sufficient to keep them honest, but such as will hold out a temptation for the greatest virtue, and the highest talent to take office. The salaries in Upper Canada of the public function. aries, appear to me barely adegunte to the end which ought ever to be kept in view-honesty and ahility.
The following sums were paid by the province in 1836:-Civil Establishment, 14,820l.; Contingent Expenditure, $4909 l$.; Judicial Establislament, $5146 l$.; Contingent Expenditure, $91 l$.; Leclesiastical Estr blishment, 11,407l.; Contingent Expenditure, 639l.; miseellaneous expenditure, $176,503 l$; pensions, 24441 . Total, $215,962 l$. The expenditure from the revenue of Upper Canada by its Legislature, for the improvement of the navigation of the river St . Lawrence
(commenced in 183.1), amounted, in 1836, to 207,0001 . and the whole estimated expense is $315,000 l$. stg.

In the British parliamentary estimates for the year ending 31st March, 1839, the following sums were voted for the expense of the Indian Department of Upper and Lower Canada :-

Estimate of the probable expenditure of the Indian Department in Lower and Upper Canada, for its establishment and pensions, from 1st April, 1838, to 3 Ist of March, 1839, 19,155l. 12 s .

Lower Canada.-Secretary, Quebee, 224l.; Interpreter, Three Rivers, $96 i$.; Missionary, Restigouche, 69l.; Missionary, Lorette, 461.; Schoolmaster, Lorette, $1 \times l$. ; Superintendent, Montreal, $216 l . ;$ one Interpreter, Montreal, $96 l$. ; two Missionaries, Montreal (46l. each), 92l.; one Missionary, Montreal, 41l.; three Sehoulmasters, Montreal (20l.eaeh), 62l.; tutal, $965 l$.

Upper Canada.-Chief Superintendent, Turonto, 350l. ; Assistant Superintendent, River St. Clair, 1281.; Interpreter Superintendent, River St. Clair, 96l.; Superintendent, Coldwater, $216 l$. ; Interpreter,

Coldwater, 961 .; total, $887 l$. Amount of effective establishment, $1,852 l$.

Retired Allowances, Pensions, and Gratuities. Lower Canada.-I., J. Iuchesnay, latc Superintendent nt Quebec, $80 l$. ; G. Maccomber, late Interpreter, $36 l$.; J. B. De Niverville, ditto, 55\%.; Madame de Montigny, widow of Capt. Montigny, 27l.; Madame D' Eschambault, widow of Capt. D'lischambault, 70l.; Madame Vincent, widow of Louis Vincent, Schoolmaster, $10 l$. ; one Chief of Indian Tribes, for wounds in action, 21l.; three Warciors of Indian Tribes, for wouads in action (15l. each), 45l.; total, $346 l$. J. G. Chesley, late resident at St. Regis, a gratuity of $78 l$.
Upper Canada.-Col. Givens, late Chief Superintendent, $3711 . ;$ J. B. Clench, late Superintendent at Colborne, 100l.; Alexander M'Donell, retired Assistant Secretary, 85l.; David Price, retired Storekeeper, Clerk and Interpreter, 79l.; Benjamin Fairchild, retired Interpreter, $50 l$. S Sarah Elliott, widow of Col. M. Elliott, 74l.; Catherine Brant, widuw of Capt. Brant, 85l.; Hester Hill, widow of D. Hill, Mohawk Chief, $18 l$.; Timothy Murphy, superannuated blacksmith, 39l. ; two Warriors of lndian Tribes, for wounds in action (15l. each), 30l.; total, $933 l$. Gratuities: George Ironsides, late Superintendent, Amherstburg, $108 \%$.; James Winnintt, late Superintendent, Brentford, $54 l$. ; Jacob Marten, late Interpreter, Brentford, 201. ; total, 1821 .

Amount for retired allowances, \&e., in l.ower and Upper Canada, 1,279l.; amount of gratuities, ditto, ditto, 260 l . ; ditto of effective establishment, $1,85 \mathrm{j} 2 l$. ; total, $3,392 l$. Expense of Indian Present, Stores, \&c. 15,762l. Grand total, 19,155l.

This estimate is less by $3.4 l l$, than that voted last year. The saving arises from a reduction in the number of officers employed in the departr. ent. In future years the saving will amount to 6041 . there being placed on this estimate a charge of $260 l$. for gratuities to some of the oflicers whose situations have been abolished.

As considerable interest is felt respecting the debt which Upper Canada is incurring for public works, I suhjoin the following detail, as printed in the proceedings of the House of Assembly in 1833. The total amount cutstanding of debentures in provineial currency is $138,833 l$. at an interest of five and seven cightls per cent. per annum; $52,666 i l$. in debentures, bearing six per cent. have beca redeemed-namely, $25,000 l$. for the militia; $16,000 l$. for the publie service in 18.2t; 3,000 . of the Burlington Canal ; and $8,666 l$. of the Welland Canal : of the debentures outstanding the several amounts are, Burlington Canal, 5,000l.; Welland ditto, $16,334 l$.; Burlington ditto, 4,500l.; Welland ditto, 50,000l.: Kettle Creek Harbour, 3,000l.; Welland Canal, 25,000l.; Burlington, ditto, $5,000 l$; Oakville Harbour (loan to Mr. Chisholm), 2,500l.; roads and bridges, 20,000l.; Kettle Creek Harbour, 2,500l.; Port Hope Harbour, 2,000l.; and Cobourg Harbour Loan, 3,000l. Total, 191,500l. The interest is paid half yearly, as the debentures fall due, and their amount varies from 25 to $100 l$.

In 1833, the Provincial Legislature authorised the borrowing of money by debentures to the extent of 70,000l., to be applied to the improvement of the St. Lawrence, but only to bear five per cent. interest, and not the usual interest of six per cent.; the consequence was, that the money would not be lent in either of the Canadas, or in the United States; Mr. Dunn, the Receiver-General, was then sent to England, and subsequently authorized to negociate a lonn with the house of Thomas Wilson and Co. (paying
interest five per cent, in Londan, or six per cent. in Canada), to the extent of $200,000 \ell$. for the purpose of redeeming the debentures that have been issued from year to year for the Welland Canal, \&e., as stated in the preceding page. The Upper Canadia legislature have also sanctioned the borrowing of $350,000 l$. for making the St. Lawrence navigable lior ships from Montreal into Lake Ontario; of 50,000l. to pay the debts due by the Welland Canal, and to keep it in order; and of $45,000 l$. for making roads and bridges in the province; these sums, together with the existing Upper Canada debt, 258,138l. will make the whole debt, ineluding minor items, upwards of 800,000 .

The following is a report of the Fiaance Committee of the House of Assembly of Upper Canada, [From H. A. papers, January 19, 1837.]

To the Honouralle House of Assembly
The Finance Committee, to whom were refured the public accounts sent down to your honourable house in the present session, have taken into their consideration the public debt of the provinee, with the amount required for the payment of interest thereon, together with the permanent and unavoid able charges upon the pulbic revenues, as also the amount of the ordinary resources of the province, for the purpose of submitting the same, in as compendious and explicit a manner as possible, as their first report.

They find the public debt, on the 1st January last, to amount to $587,671 l$. of which $178,350 l$. is due in this province, bearing an interest of six per cent, and 409,321 in England, payable there at an interest of five per cent. The amount of the loans contracted in England are, in currency, $666,666 l$. ; of which were drawn on the 1st January, 409,3211 .; leaving still to be drawn to meet the several appropriations of the legislature, $256,345 \mathrm{l}$.; which, with 10 per cent. premium, will make the sum of 283,0791 . Of the public debt, the following sums have been appropriated for the purposes hereinalter respectively named:-St. Lawrence Navigation, 253,000l.; Welland Canal, $209,500 l$. ; Burlington Canal, 29,091l.; Inland waters, Neweastle Distriet, 16,000l.; Tay Navigation, 1,000l.; Desjarlin's Canal, 12,000 ; Kettle Creek Harbour, 6,500l.; Port IIope llarbour, 2,000l.; Cobourg IIarhour, 4,000l.; York Harbour, 2,000l.; River Trent Bridge, $4,6251$. ; Brantiord Bridge, 1,500; Dumnille Bridge, 1,250 ; Paris Bridge, $1,500 \iota_{\text {; }}^{\text {; West Gwillimbury }}$ Bridges, $500 \ell$.; Roads in the vicinity of York, $45,000 l_{\text {; }}$ Bank of Upper Canada, 25,000l. ; total, 594,4661.

All or most of the ohjects for which the above out. lay has been made are such as, in the opinion of this committee, will eventually pay principal and interest, and be a productive source of revenue to the province; and cannot therefore be considered in the light ol a debt contracted and chargeable on the funds of the provinee, for which no specific return is expected.

In a new country like Canada, with a limited revenue, great public works can only be constructed upoa the credit of the province; and such credit should be freely extended, when it can be safely calculated that the proceeds of the works will shortly pay the interest and eventually redeem the principal. Specific ways and means should, however, be provided to meet the interest, when it cannot be borne from the ordiaary revenues. The amount of interest payable on the present debt is $10,086 l$. in Upper Canada and $20,466 l$. in England, in all $30,552 l$. ; and when the balance of the loan effected in England shall be drawn, the whole amount of interest payable will be 43,420 l. annually. According to the estimates and the information ob. tained by your commissioners, the probuble nomount

As the Post Office Department in the colonies requires considerable attention, an extract is given from a report made to the Honse of Assembly of Upper Canada by the Finance Committee, and printed in the journals for 1836. Appendix, Vol. J. No. 52.
"Your committec have not the means of asecrtaining whether the statements laid before them as computed by Mr. Stayner, the Deputy Post Master General at Quebec, are or are not correct. They have been obtained with great difficulty after the delay of a vear had taken place from the date of the address of the House to the late Licutenant Governor requesting information, they enter into many minute and important details, and as reported herein they contain the greatest fund of information on the subject of the financial affairs of the post office of the Canadas ever laid before the Legislature. From a perusal of their contents it will be seen, that in 1834 the number of post offices in the Canadas was 234, or three less than in 1833; the number of miles of post roads only 3,988 , or seven less than 1833 ; the wages to carriers, $10,371 \ell$. ; the salaries, $3,467 \ell$.; the contingencies, 1,0051 . ; the dead letters, 1,5296 ; the gross revenue, $30,632 l$, of which $12,092 l$. were remitted to London
"The salaries in both provinces are stated in the returns, of which the above is an abstract, at $3,467 \mathrm{l}$. Elsewhere the emoluments of the post masters in Upper Canada alone for the same year are made to be $4,732 l$. Hence it is evident that the above sum of 30,6321 . is not the gross postage."
"The gross letter postage of Upper Canada in 1832 i , given at 14,009 .-in $1833,16,510 \mathrm{l}$. and in 1834, $.7,680 l$. or $48,199 l$. in these three years.
"The gross newspaper postage for this province
for 1832 , was $1,336 \%$.-for $1833,1,433 \%$. and for 1834 $1,231 \ell$, or in these three years, $4,000 \ell$.
" Nearly the whole of the newspaper postage, A, 000 l ., went to Quebec and formed a perguisite of Mr. Stayner's ofilice there. Of the gross letter postage reckoning in the proportion that the whole revenue derived from the Canadas bears to the whole revenue derived from Upper Canada, which is the greatest part, upwards of $20,000 l$. of specie have been taken out of the province and sent to London chiefly as profit or surplus revenue.
"Mr. Stayner states that he has remitted to London of surplus postage collected in both Canadas, as follows:-In 1832, 12,5191.; 1833, 10,8331.; 18:34, 12,092l.; or in three years, 35,4441 . a very small part of which was British postage. The inland postage of letters from Nova Scotia and New Brunswick, from both Canadas, in 1834, was only $562 /$. Mr. Stayner transmitted to Washington, as United States revenue, in and for $1834,29,351$ dollars.
"There were collected in the Canadas, in 1834, of Inland British American postage on letters forwarded to lingland by the Falmouth packets, via Halifax, $16 l$. 4s. 6ul.
"Among the papers laid before the house are detailed statements of the expense of conveying the mails in both Cetht das in each of the following years, viz. $18{ }^{\circ} 30,8,6441 .: 1 \times 33,9,8961 . ; 1834,11,2031$. And Mr. Stayner states the contingent expenditure of the department, which is chiefly in the Lower Province, for printing, advertising, mail locks and keys, seals and stamps, \&c. at, for $1834,1,87-1 /$.
"There is also a large and costly estahlishment of elerks, necountants, sorting elerks and other officers, the greater part of whom could be dispensed with in case the general post oflice of Upper Canada were placed at Toronto.
" Mr. Stayner gives his salary and emoluments as Deputy Post Naster General, as follows:-In 1832, 3,12331 ; 1833, 3,311 ; 1834, 3,122; to which we may add the allowance made him for his expenses to London of $842 \mathrm{l}=10,398 \mathrm{l}$. $10,398 \mathrm{l}$. of income in three years to ${ }^{\prime \cdots}$ office, residing ont of Upper Canada, deriving his chiel emolaments from the industry of her population, and yielding them a most unsatisfactory return. This is a state of things that is surely suseeptible of improvement.
"The patronage of the department is enormous The largest gross amount of letter postage in Upper Canada were collected, as follows: at (year 1834.) Toronto, 4,366l.; Kingston, 1,314l.; Hamilton, 58:2l.; Brockville, 5061. ; Amhersthurgh, 453l.; Bytown, 395l.; Belleville, 383l.; London, 337l.; Niagara 3301. : Prescott, 314 .

" The emoluments of the post-masters of the following offices, in 1833 and in 1834, were as follows : Toronto f738 £713 Prescott f107 Kingston $\quad 470 \quad 503$ Frockville 118118 Qucenston $411 \quad 438$ Cobourg 102118 | Hamilton | 175 | 184 | Amherstburgh 110 | 103 |
| :--- | :--- | :--- | :--- | :--- | Niagara

152146
"The postage collected at Queenston in 1834 , by the post master, who is also the high sheriff of the district, amounted to $72 l$. He receives and distributes the United States mail on that frontier. The whole of the emoluments of the post nasters of Upper Canada, in 1833, was 4,428l.; and fol 1834, 3,732l."
XII. The maritime trade of Upper Canadn is can rid on through the ports of Quebec and Montreal, and
thence conveyed to the upper province. There is lumber, pot and pearl ashes, pork, and tobaceo from therefore no mode of ascertaining the amount of the the western districts. imports and exports. The province receives one third of the duties levied at Quebec and Montreal, which amounted in 1836, to 50,7191 . sterling.
A considerable trade is carricd on along the American fronticr, on the lakes and River St. Lawrence. Numerous steam vessels and schooners are constantly running during the navigable scason, between the different ports belonging to the province and the United States, on lakes Ontario, Erie and Huron.
The imports consist of woollens, cottons, linens, hardware, castings, coal, leather, earthenware, grocerics, wines, spirits, and almost every description of British manufacture.
The exporta consist principally of wheat, flour,
XIII. Amount of paper currency in circulation in 1836. [B. 13.]-There are three banks in the province, chartered hy acts of the Legislature. "The Upper Canada Bank," eapital, 200,000l. "The commercial bank of the Midland District," capital, 200,000l, and the "Gore District hank," capital, 100,0001 . There are notes also in circulation, belonging to three private banks, viz. "The Agricultural Bank,", "the Farmer's Bank," and the "Bank of the People." Notes of the hank of Lower Canada are also in partial circulation. The gross amount of Government Debentures, outstanding at the close of the year 1836, is as follows: In Upper Canada 176,850l. currency, or 159,165l. sterling. In England 241,600l. sterling.

£. grants of land to emigrants.

No person, except United Englishmen, Loyalists (on the separation of the United States from Great Britain, those who preserved their allegiance to the British Crown and tled to Canada, were entitled to 200 acres of land each, by Act of Parliament), or those entitled by existing regulations to the Government free grants, can obtain any of the waste Crown lands otherwise than by purchase. The sales take place under the direction of a Commissioner on the first and third Tuesday of every montl in the different distric:s. The lands are put up at an upset price, of which notice is given at the time of advertising the sale, and the conditions are one-fourth of the pur-chase-money pail down; the remainder at three equal annual instalments, with interest at 6 per cent. payable on and with each instalment: when this is completed, a patent for the lands is issued, free of charge. The elergy reserves when sold are, as to terms, 10 per cent. down, and the remainder in nine annual instalments of 2 per cent. cach, with interest. There are occasional sales of town lots, \&c. The general size of a township is 69,000 acres-twelve miles by nine, say with nine lines of nine miles each (called concession lines), 400 rods apart, upon each of which a narrow line is reserved for a roat. There are also two cross or cheek lines, each at right angles to the concession lines, and three miles apart, upon which the corners of the lots are marked, eighty rods apart; thus 400 rods deep, with eighty rods tront, gives 200 acres to each lot, with a road in the front and rear of the farm.

It is difficult to ascertain the quantity of lands settled or ungranted in the province. In 1830, according to a document in the Surveyor-general's office, the surveyed township appeared thus-Granted prior to $1804,4,500,000$ acres; ditto since 1804 , $3,800,000$ acres; to be settled by Colonel Talbot, 302,420 acres ; Total granted, 8,602,426 acres. Remaining ungranted, $1,537,439$ neres; Crown and clergy reserves two-sevenths, 4,142,750 acres; Total, $5,680,189$ acres. Although a great part of the Crown reserves have been sold to the Upper Canada Company, and a very valuable part of them given to the

The property insured during the last year amounted to 337,1931 . 19s. currency; upon which the premium charged amounted to $2,316 \mathrm{l}$. 9 s . The amount of losses paid by the company, 1,304l. currency. A small claim on the company, amount not yet ascertained, remains to be settled.
XIV. Some of the land in Upper Canada has been purchased by the British Government from the Indians, who receive their payments annually in clothing, ammunition, \&c., and such articles as they require. The purchases in 1818 were, October-Lake Huron, 1,592,000 acres, at 1,200l. per annum ; the Mississagua, 648,000 acres, at $522 l$. per annum. In November, same year, the Rice Lake of $1,861,200$ acres, at 740l. per annum ; in April, 1819, the Long Wood of 552,190 acres, at $600 l$. per annum; in February, 1820, the Mohamk purchase of 27,000 acres, at $450 l$. per annum ; heing $4,680,390$ acres, at an annual charge of $3,512 l$., which is defrayed by an appropria2 E :

University (see Education), it is cstimated that there are still upwards of $5,000,000$ acres of good land open for settlement, without going north of the back line, where $7,000,000$ or $8,000,000$ acres of excellent soil may yet be found.

Statement shemine the quantity of surveyed Lands remuining racomt und grantable, il st December, 183.5. Quantity remaining unlocated 31 st December, 183.1 , $1,527,16.1$ acres; ditto unlocated in $1 \times 35,121,316$ acres; total, $1,405, \mathrm{~N} \mid \mathrm{s}$.

Thurnships returned as surrryed in $1 \times 35$.-Ross, 43,627 acres; Pembroke, 5,663 ; Westmeath, $48,9 \% 5$ acres; Somerville, 20,270 ; total, 118,185 acres. Total quantity vacant and grantable, 1,624,303 acres.

Exclusive of the lots remaining ungranted in the surveyed townships before mentioned, the rough estimate by Mr. Richards, the Commissioner of Land, at present available, in round numbers, is - in townships nut surveyed from Luther to Zero, 730,000 acres; in the Neweastle listrict, and joining the Home ditto, 500,000 acres; in the western ditto, west of the Upper Canada Company, 350,000 acres; in the London ditto, north of ditto, 340,000 acres ; in ditto, not yet purchased from the Chippewa Indians, 2,500,000 acres. Total, $4,470,000$ acres.

The area of I.ake Superior is abont 35,000 square miles; of Lake IIuron, 20,000 ditto ; of Lake Michigan, 21,000 ditto ; of lake Erie, 10,000 ditto; and, including Lake Ontario, the surface covered by these five lakes is upwards of 100,000 square miles, or $4.4,000,000$ acres !
XV. Copper and iron is abundant in various parts of the proviner ; the latter particularly, at Charlotteville, about eight miles from lake lirie. It is of that description which is denominated shot ore, a medium between what is called mountain and bog ore, and the metal male is of superior quality. At the Marmora Iron Works, about 32 miles north of the Bay of Quinté, on the River Trent (which are situate on an extensive white rocky tlat, hare of stones, and apparently in former times the buttom of a river, exhibiting, like many other jarts of Canala, different rilges and water-courses), the iron ore is rich to an exeess, some specimens yielding 92 per cent.; it is found on the sorface, requiring only to be raised up. There is abundance of the requisite materials of limestone and pise.

The forest trees most prevalent are beech, maple, birch, elm, bass, ash, oak, pine, hickory, butternat, halsam, hozel, hemlock, cherry, celar, eypress, fir, poplar, syeamore (vulgo, button wood), white wood, willow, and spruce. Chesnat, walnut, and sassafras, though frequent at the head of Ontario, are seldom met with north of the Lake. The valuable sugar maple is common ir every district. The butter nut is plentiful; the kenel is nutritious and agreeable to the taste, the young nut makes an excellent piekle, the bark dyes a durable brown colour, and an extract from it makes a mild and safe cathartic.

An immense quantity of oak and pine timber is anaually sent down to Montreal and Quebec. Tobacco and hemp are in process of genernl cultivation; and the potatee of Eliope, conveyed to its original continent, thrives luxuriantly. Wheat is the staple of the province, and bears a higher price than any other in the Montreal and Quebee markets. All the Einglish froits, vegetables and grains thurish luxuriantly, and yield in abmonance their treasures with the smallest possible attention.

There are no means of ascertaining the number of sheep or goats.

Produce and Price of Produce,-Tobace is pro. duced in the western district of an execllent quality. Every species of agricultural produce is cultivated : but there are no means ol ascertaining the correct quantity of cach. Whent is brought to the marhet, and is a prineipal export of the provinec. The other description of protuce is generally cultivated for hame consunpition.

The priee of wheat per bushel varies in the several districts, from $3 s .9 d$. to $4 s, 6 \%$ currency, turing the year, depending in a great measure on the facility of its transportation to market. The average priee of oats during this year (1836) was $1 s .3 l$. per bushel ditto barley, 3s. to 3s. Gul. ditto; ditto hay, 26. 10s. per ton; ditto potatoes, 1s. 3 $l$. to 1 s . 6 l . per bushel; ditto flour, 1 1.2 s. . 6. $\ell$. to $1 / .5 \mathrm{~s}$. per barrel.

Irices in lipur Canedr.-I Iorned cattle, from I3l. to 1 Nil. pre yoke horses, 10\%. to 25\%. each; shem 15s. each; swine, $14.5 s$. each; milk, $2 \frac{1}{2}$ d. per quart; fresh butter, $7 \frac{1}{2} l$. to 1 s. ןer lb .; salt ditto, fill. to 7 hd. ; cheese, fil. to 9d.; wheaten bread, tid. to Nd per loaf of four lbs.; heef, 3 ll . to 5 wl . per lb .; mutton,
 (green) $10 /$. to $1 s$. ; ten, es. ful. to 5s.; sumar, fil. to ${ }_{x}^{2} l_{2}$; sult, $1 \frac{1}{2} l$. ; wine, is. to lis. per gallon; brandy, $5 s$. to Ns .; beer, Is . to Is .3 d. ; tobacco, 10 d . to 1 s .3 l. per lb.

Wages for Labour.- Domestic, 11. 5s. to 2\%. per month; predial, $2 l$. to $3 l$., nud $4 l$. to $5 l$. ; the former with board, and the latter without board; trades, 6s, 3ul. to 7s. 6id. per tlay.

The above are the arerage prices at the close of 1836. Duriag the winter months, every article is in advance; but this return may be taken as the average prices throughout the year.

Manufietures.-It appears from the Assessment Rolls that there are in the province 551 grist mills, and 8.13 saw mills. The domestic manufucture of works is very common. Whiskey distilleries, breweries, tanneries, and pot and pearl-ash manufacturies are very momerous. In Johnstown District there is I stemm-engine foundry, 1 brass foundry, and 1 soan and caadle factory; in Neweastle I)istrict, 16 fulling machines and I foundry for castings; in Niagara Uis. tict, 9 fulling mills, it carting machines, 5 spinting mills, and I salt manufactory ; in Milland Mstrich, : air fumaces for small castimss, I harge furnace with

## CHAPTER III.-NOVA SCOTLA.

Section I. Nova Scotia proper comected with the S. E. part of the contilumt of North America, by a narrow isthmus (eight miles wide), is situnte between the paralless of 43 . and 16 . of turth latitule, and the meridian fil. mut 67 . West longitule ; it is bounded on the north by the struit of Nurthumberland, which separates it from l'rince Pdward's Isle; on the N. N: by the Gut of Cansent, which livites it from the is land of Cape bretom, on the S. mid s. s:, ly the Atlantic Oecall, on the W. by the Blay of lumdy, and on the N. W. by New Ibrusswick. In length it is ubout 2 N 0 miles, stretching from $\mathrm{S}, \mathrm{W}$, to $\mathrm{N}, \mathrm{L} .$, , but of unequat brealth, varying from 50 miles at Black Rock l'ier, to 10.4 miles at Bristol, nud embrucing a superticies of 15,617 square miles, or $9,99.4,880$ acres.
11. Although the teritory, known umder the title or Nova Scotia, was probably first visited by the Cabots in their voyage of diseovery in 1.197 (and the ancient authorities state such to be the case), the earliest nuthentic account we possess of its bimppon colonization was by the Marguis de la Roche, whe by the orders of Hemry IV, sailed from France in 1598, with a number of convicts from the prisons, whom he lauted on the small and barren Island of Sable, situate about 56 leaghes tor the S. E., of Cape Breton, and $3{ }^{3}$ of Cansean, about ten beagues in circomference, and interspersed with sumd-hills, briarplots, and fresh-water pemels.
After eruising sume time on the const, the Marguis wns compelled by stress of weather to return to France, leaving on Sable Isle forty unfortunate conviets who had been landed on this harren spot, where after seven years hardships twelve only were found alive, in a most wretehed nud cmaciated state, on the French monarch having sent Chetotol, the pilot of the Martuis De la Roche, to look atter and bring them back to France.
The next visitation of Nown Scotia (or, as the French called it Acadia, this name was given to Nova Scotia, New Brunswick, and part of the State of Maine; ) was by De Monts nud his followers, and some Jesuits, in 160.1, who essayed for cight years to form settlements at l'ort Royal, St. Croix, de. hut were finally expelled from the country by the linglish governor and colenists of Virginia, who claimed the country ly right of the discovery of Sebastian Cabot, and considered the Firench colonists of De Monts as eacroachers or intruders on the ehortor granted to the Plymouth Company, in 1606, and which extended to the 45. of north latitude; the right of occupancy being then considered invalid and the doctrine admitted-

## " A time it uras-to wll he it known,

Uhen all a man sailed by or sar, was his oun."
Eight years elapsed after the forcible expulsion of the French colonists from Port Royal and other parts of Acadia, before the English began to think of settling on the peninsula, but in 1 Gel Sir William Nexander applied for and obtained from dames I., a grant of the whole country, which he proposed to colonize on an extensive scale; it was namsed in the patent

Novi Scotia, and comprised within the east side of a line drawn in a north direction from the River st. Croix to the Gulf of St, Lawrence.

The Nova Seotia baronets were created by Charles I.; they were to contribute their nid to the settle. ment, upon the consideration of eachs having nlloted to him a libemb portion of hand; their number was not to exceed 1 bo; they were to be cmlowed with ample privileges, and pre-eminence to all knights called bumites Ahrati, but none of them were to be harmets of Nova Scotia, or of Scotland, till they had fulfilled the couditions prescribed by His Majesty, and oltanad a certifleate of performance from the go. vernor of the colony. The putents were ratited in parlimment.
Within about a year after the sealing of his pateot, Sir William Alexander despatched a number of cmigrants to take possession of his grant, who, aiter wintering in Newfoundland, nrived in 1623 nt Nova Scotia, where they found many lirench settlers, the descendants of those who had remained at P'ort Roynil and other phaces, to whom were added adventurers from the St. Lawrence and Prance; under these circumstances the linglish emigrants thought it prndent not to attempt to take possession of the country, they retumed to England, and war breaking out suon aiter, between England mid France, dforts were made hy Sir William Alexander and his friends to drive the French from Nova scotia, but for several yearsall the efforts of be La Tour (to whom Sir Willian Alexander had assigned or leased his grant) and others were inelliectual mathl Oliser Cromwell sent Major Sudgewick, with an armed force in 16is. , and Nova Scotia for the third time fell into the boseession of the Findlish, nominally at least: Port Royal being taken by Stdgewich's troops, while French settlers were established in different parts of the country; these were, however, finally subduced, , and the protector Cronswell granted the clains of Charles La Tour as heir to his tather, who received the colony from sir Willian Alexunder. Cromwell thought fit to associnte with La Tour, Thomas (afterwards Sir Thomas) Temple, and Willian Crowne Tumple purchased La Tour's share, re-established the different settlements, and expended 16,0006 , in repniring the fortifications, but while the colony was emerging from distress and obscurity, it was ceded to lirance $1 y$ the treaty of Breda in 1667.
For 20 years succeeding the treaty of Breda, the colony enjoyed repose, and some progress was made in establishing fisheries and extending the fiur trate, but upon the renewal of hostilities in Itis9, it was still deticient in means of defence, and lort Royal was taken by Sir William Phipps, with a squadron from Massachusets; the French, as usual still hedd themselves masters of the other parts of the peminsula; the English, however, retained a nominal pos. session, sometimes tighting for a district, at others ravaging the firench settlements; but by the traty of Ryswick, in 1696, the colony was onee more restored, or rather left unmolested in the possession of
the east side of om the River st
seated by Charles aid to the settle. ch having allottel their momber was be codowed with ce to all knighty them were to be land, till they haid I by Ilis Mnjesty, nance from the gois were ratitied in
aling ol' his patent, a number of cmi. grant, who, atter ad in t6e3 at Nova reneh settlers, the ined at lourt Royal adsed ndventurers Ice; under these its thought it prus. sion of the country, breaking out soon , etforts were math ricuds to drive the cueral years'all the Willian Alexamer and others were sent Major Sulge, unel Nova Seotia 'ssion of the Eing. al being taken by iettlers were extaontry ; these were, otector Cromwedl 'onr as lecir to his rom Sir William to associate with Thomas) Temple, hased La 'Tour's settlements, and fortifications, but om distress and ly the treaty of
ty of Brota, the ogress was made ang the fiur trade, in 1 fix9, it was and Port Royal cith a stpuadron usual still held s of the penina nominal pos. strict, at other it by the treat? once more rebe possession at

France; but on the breaking out ol the war again in 1701, preparations were made in lingland mud Masachusets for the totai subjogation of Novn Scotia to the British arms, with a diatinct avowal on the part of the crown that if again conguered it should not be restored to France.

Sir William was born in lhíso, at l'emaquill, in New lingland, lie was the non of a blacksmith, and commenced hife res a sheplord: at the age of 18 he was mpirenticed to a ship-carpenter, subsequently built a small vessel for limself, and in the course of time was successful in raishg $\mathbf{1 0 0 , 0 0 0}$, sterliug from "Spanish wreek at the Bohamas. He was knighted by James If, and employed ou several important expeditions by liogland, and by his compatriota, the culonists.

The expedition for the capture of Nova Sotia sailed from Boston lay on the INth september, 1710, and uttur some fighting, fort Royal eapitniated on the :yth; the other stations sulsseguently gave in their adhesion to the British govermment, and at the treaty between france and Eingland, in 1713, Nowa Seotia was timally ceded to the latter power, whe ehanged the nane of loort Royal to Annapolis h yal, in bomour of Queen Ame-made it a seat of 1.0 vern. ment, and named a conncil of the principa! inha. bitants for the management of the eivil affairs of the pruvinec.
By the lath article of the :reats ' "ween Fiamee and England, of the Ith April, 1713, ill Nova swotia, with its ancient boundaries, as also the city of bort lloyal, and the inhabitants of the same, were ceded to Creat Britain, "in such ample manner and form, that the subjects of the most Cloristhan king slatl be hereater exchaded from all kinds of tishing the the said seas, bays, and other places on the coast of Nova Scotia, that is to say, on those which he towards the east, within 30 leagnes, begiming from the islame commonly called Sable, inclusively, and thence stretehing along towards the S. W."
little further remains to be stated respecting the acpuisition of the colony that would be interestines to the general reader, or within the seope of this work: from 1713 to 1749, Nova scotia was meglected by Eagland. The French pretended to draw a distinction between Acadia nad Nova Scotia; and as the comutry was ceded under the former appellation, they endeavoured to maintain that Aeadia was the name of the peniusula which they had alone ceded to Britain, and that the rest of the country lying between New lingland and the Bay of Fundy, was a part of New France, which, together with Cabada, still belonk, "" them, -but the trick was exposed by the $i$. $\because .$. ints of Massachusets.

The designs of the French to acquire by frame what they could not obtain by fores, drew the nttention of the British pushic to the importan.. of the colony, and encouragements were heli owt to "etired ollicers, \&c., to whom offers of grarts a laud were made; 3,760 alventurers were embarked with their families for the colony. l'arliament granted 40,000 l. for their support, and they landed at Chebneto Harbour, when the town oi llatilax was soon erected by the new emigrants under the command of their Governor the Hon. Edward Cornwallis. 'The French settlers (under the name of Neutrals) were still very numerous in the colony, and with the aid of the Indians held the British in constant alarm, and murdered many of the settlers; alter various contests and much cruelty on either side, the 'Nentrals' to the number of several thoushat, were loreibly expelled from Nova

Scotia, and enrried in British transports to Massachu. acta, 'ensylvania, de., leaving nothing behind them but somokiog ruins and demerted villages, I ngree with Mr. Infiburton, the listorian of his mative conntry (who las written an almimble history of Nova seo. tin, which was printed and got up in a most creditable manuer, at Ilatilax, in $1 \times 29$. ) in lephoring the cruel events that took place on this distressing ocension, but the blame is to be attributed to the crifty puliey of the lipmeh Conrt at Purls, who Instigated the Nentrala by every pussible means to larass und amoy the English.

In $17 \mathrm{in}_{\mathrm{m}}$ a constitution was granted to Novn Scotia, consisting of a llouse of Assembly for the Repreacont-atives-n legishative Conncil and (ioveroor repre. senting the crown: in the same year the capture ot Iomisburgh, in Cape Breton Isle, gave ulditional aceurity to the colony, which now begnin to improve. In 176i, on the dection of a new I'arliament in Nuva Scotia on the accession of George Ill, to the crown of Great Britain, the mumber of representatives returned were : 1 , In 'ucly, two for ench of the counties of Italimx, lan onburgla, Amapolis and King's ; four for Halifax tos. slip, nud two for each of the tovnships of I,umenburgh, Aumapolis, IIorton, Cornwallis, l'almout? and liverpool. By the treaty of laris, toth Februays, 1762 , France resigned all further ehams on any 6 . her lornce possessions in North America. Notbing of anv ronsed whe has since occurred in No.ascotin to vibire a tetailed motice.
New Brams : $\therefore$ and Cape Breton were separated into two di: at governments in 1781 : the lather was re-ammeded in wha Sertiq (ol' which it now forms a eronty in $1 \times 19$. The - ol Governors, since the I nl. a nefulisition, were-

111. The most remarhable natural feature on this peninsula of the North American continent is the numerons indentations along its const.
A vast and uninterrupted hady of water impelled by the trade wind from the const of $\Lambda$ frica to the American continent, strikes the Nova Scotin shore between 4.4 and 45 . N. latitude, with a foree almost adequate to its total amihilation-only a harrier of 15 miles in breadth between the Atlantic Ocean nud the Gulf of St. Lawrence seems to have escaped such a catastrophe: while a space of nearly 100 miles in length and upwards of 40 in breadth has been swal. lowed up in the vortex, which, rohling its trea;
tites of from tiot to 70 leet perpendieutar hes: ${ }^{3}$ it 1 the beds of the abjoininer rivers, has couverted $n \mathrm{~cm}$
into inland seas, traversing the province from west to east for more than half its length.

The combined intluthe of the same powerful nement and of the Atlantic Orenu bas produced (though in a less striking manner) the same eflect upon the south shore. Owing to the operation of these causes, the harbours of Nova Scotia for number, eapaeity and safety are unparalleled in any other part of the world: betweon IIalifas and Cape Cansean are 1: ports capable of recoving ships of the line, and there are 1.4 others of sullicient depth for merehantmen.

Respecting the interior of the colony, it may be observed that of 15,617 square miles, the superticial contents of Nown Scotia, one third is supposed to he oceupiod by hakes of arious shapes and sizes, so spread wit that there is nos point in the province 30 miles from navigable water. The surface is mblulating, there being searedy more than half a mile at a time of level gromed, but the clevation is inconsiderable, the highest land (Ardoise hill or Arthur's Sent) being only 810 teet above the level of the sea. There is a range of high lands on the west eonst, between St. Mary's Bay and Argyle, and another more extended and lofty on North Coast, skirting the Bay of Fundy, between Amapolis and Windsor, or indeed to the head of Minas basin. The seenery throughont the province is beatitully pieturesque, wwing to the grent variety of hill and dale, and the mamerous rivers and lakes senttered throughont the country. [see Colonial Library, vol. vi.]

The harhour of Halifas las not perhaps a supurior in any part of the world. It is situate in -14.20 . N. latitude, 63.40. W. longitude, mearly midway between the east and west extremity of the peninsula-and from its situation being dircetly upen to the Atfantio and its havigation searcely ever interruped by ice (as Quehec is annually), it is our chiet naval station in North Amerien, and affiurds safe anchorage for 1000 ships. Several islets exist at the entrance hetween Sambro Heal and Devil's Island, remtering the navigation apparently rather intricate, but even a stranger with proper precaution has nothing to fear. 'The channels enst and west of M'Nabs islame are gemaried by Vork redoubt, Sherbrooke tower, kast battery, and several others. The city of Halilax is built on the east side of a small penimsula on the dedivity of a hill, which rises gradually from the water's edge; its length leing about two miles, and its breadth about half a mile, with wite streets crossing each other at right angles, and contaming nearly 2000 honses, and a population not far short, including strangers, of 20,040 .
iV. Nova Scotia is divided into four geological divisions, cxtending from S. W. to N. E. nearly, and running in a longitudinal direction with the greatest diameter of the comntry. The south side of Nova Scotin, bortering on the Athatic and forming a morrow strip from Cope sable to Cape Cansenn, is a primary district and composed principally of granite. gneiss and mica slate. The second division is three to four times the breadth of the tirst, and extends also the whole lergth from Cape St. Mary to Chednbucto Bay ; it is composed of slate, greywacke, and greywacke slate. The third is a trmp district, and forms a narrow slip from Briar island to Mina basin, including the whole of the North Mountains, and the islands, \&c. on the Nova Scotia shore of the Bay of Findy. The fourth is a red sandatone district, and extends from the Gut af Cansem, nong the Northme berlant strait. The fissil remams foume in the monntan limestons, Hassition shate, Ae are extremely
curious. Fihe palm tree, the hamhoo, the cactus may be dug from the racks and eoal somms. All indicating that Nuva Scotia nt one time enjoyod a tropieal climate. [Sce Dr. Gesner's valuable work on the Geology of Novn Scotin.]

NOVA SCOTA.-CLIMATE.
215

On the south coast the land is so rocky as to be difficult of eultivation, hut when the stones are removed, excellent erops are yidded. The banks of rivers and the heads of bays on the north const alford many fine tertile tracts.
$V$. The temperatere of Nova Scotia is milder in winter, and the heat less intense in summer than is the ense nt Quebee; the air is highly salubrious, 80 bars being a frepuent age in the foll use of bodily and montal faculties; many settlers pass 160 with ease and eomfort. 'There are no diseases generated in the colony, which is also free from intermittent and other tevers. 'lhe summer heat is moderate ambl negular, with a soft S. W. wind, changing materially (un nuy inelination N. or S. of that point. 'The antumn is a delieious season, and there is seldom any severe wather until the end of December. In order to
remove the prevailing idea in England that Nova Scotia is a region of sow and fog, I may state, that the orchards of the province are equal to those of any part of America; plumbs, pears, quinces, nul cherries are found in nll gardens, and of the most excellent quality. Cider of superior quality forms an article of export, and peruches amd eropes ripen in omdimery seasons without any artifirial aid. Frost hinds the earth from Christmas to April, with almost invariably an intervening thaw in lanmary, as already deseribed umber Lowere Conadn. The heaviest lall of snow is in lehruary, during the predominance of the N.N. wind. Rain falls most lirquently in spring and autumn, nul a fog prevails on the S. shore near the mouth of the Bay of Funds, but does not exteod liar inland. As the country beeomes cleared, or owing to some unknown canses, the climate is becoming milider.

The vegetable and animal hingdoms being smmilar IU those of Canada, repuire no separate description.
VI. When first diseovered, Nova scotia, as well as ohber parts of dmerica, was inhabited by Indians of a reddish-brown colour, with high chock-bones, large lips and mouths, long black coarse lmir, and line iinfilligent penetratine eyes; the males in height firm five feet eight inches to six feet, with hroad shoulders and strong limbs, 'The two pribeigal tribes, the Mie. mases and liehibnetons, dillering in fiatures and in thatere, were copatly sastage in their monde of life and manars, but to some extent civilized and made nominal Christians hy the early Freneh settlers, who maned the lndians to assist them in their wars against the looglish: mat, in order to infuriate the semiChristianized Indians against the Fuglish, the French inspired them with the borible idea lhat it was the Vuglish who crueitiod Christ!

The wars between the rival eontestors for the possersion of Nova Scotia, the introduetion of the small friv, and, above all (strange to say), the maddening hise of spiritwos lifuors, haw swept ofl menty exery fadian from the face of the conntry where he was ence master: mud but few (mot 1,010 ) of the Nicmacs still exist. Indelent, when bot roused by the stimulas of humger or revenge, fle Indinn dreans
away life in a silent momotomes existoner fas only wants aro fowd, rabuent, and shelter of the lumblest kinds: and willin a lew yours mete, the rembant of this extrondmary specimen of the homan race will have entirely passed away.

There has been no census since 1827. The totals for, as has been truly observed by a native of the
in the two returns above for 1827 somewhat differ.

I do not know whether the term free blacks in the census of 1817 (and which I do not find in the census of 1827 ), applies to the ahoriginal inhahitants of the colony, or to the residue of a large party of maroons, who were shipped from Jamaien to Nova Scotia, and who becoming dissatisfied, were for the greater part subsequently trans-shipped to Sierra Leone.

Nova Seotia has been so long and so unjustly considered in England a bleak, marshy, and almost unin habitable couniry, that it may be necessary to enter into some detail as to its inhabitants and localities;
colony, the extended and well-cultivated valley of the Anmapolis-the diversiticd and picturestue country of Horton and Cornwallis-the richness and extent of views in the vicinity of Windsor - the unrivalled beauty of Mahone Bay, with its numerous verdant islets-the whole country bordering on the Shube-nacadie-the very many spots in the eastern parts of the province-and the extensive townships of Newport and Yarmouth, cannot fail to excite the wonder of strangers, and they exist in a territory which has nlways been represented as the most uninteresting part of the continent of North America.

Halifax division，containing part of the county of the same name，and the townships of Halifax，
Dartmouth，Preston，and Lawrence town is thus presented at the last census ：－

The territorial distribution of the Nova Scotia ${ }^{\text {ter }}$ ．There are ten counties，some of which are again government is－1，Eastern division ；2，Middle；3，subdivided into districts and townships，for the more Western：4，Halifax ；5，Cape Breton（spe next chap－convenient administration of justice．

The only counttes divided into districts are, Halifax in an English parish, and assesses themselves for the into three, viz. Halifax, Colchester, and Pictou ; and Sydney into Lower and Upper.
The townships are not all of equal extent, nor of equal number in each county; viz. in Halifır District there are Halifax, Dartmouth, Preston, and lawrence Town ; in Colchester District, Truro, Onslow, and Londonderry; in Pictou District, Pictou, Egerton, and Maxwelton; Lanemburg County, Chester, Lunenburg, and New Dublin; Queen's, livernool, and Guysborough; Shellurrue, Shelburne, Yarmouth, Barrington, Argyle, and Pubnico ; Annapolis, Dighy, Clements, Clare, Annapolis, Granville, and Wilmot; King's, Aylesford, Horton, Cornwallis, and Parrsborough; Cumberland, Amherst, Wallace, Hants, Falmouth, Windsor, Rawrion, Kempt, Douglas, and support of the poor
The naval capital of British North America, Halifax, has been before described, and Dartmonth requires no separate account : we may, therefore, proceed to the eastern division, containing the districts of Colchester, Picton, and the counties of Sydney and Cumberland. The district of Colchester, is a part of the county of Halifax, and is bounded on the northwest by the county of Cumberland, on the west by the Shubenaccadic River, on the south by the district of Halifax, and on the north and east hy the district of Pictou. It contains three townships ; 'Iruro, Onslow, and Londonderry. besides the settlements of Economy, Stewiack, Tatamagouch, Salmon River, Sbubenaccadie, Brookfield, \&c.
Newport ; Sydney, Dorchester, St. Andrews, Arisaig, Tracadie. In each township the inhabitants mect as

The population of the district of Colchester, was in 1827.

Newport,

* Anr
VIII. T vate indivi moting th in 1811, raising a after the

Of these there were 40 familics belonging to the Church of England, amounting to 200 souls; and families of Catholics, amounting to 40 ; and 720 families of Dissenters of different denominations. There are 10,000 acters of land, 1,000 acres of dyked
marsh, and 2,000 of tudyked marsh, under cultivation of different kinds. From which are annually produced, amongst other articles, about $5,0 n 0$ tons of hay, 120,000 bushels of potatocs, 100,000 pounds of butter and cheese. The three latter have most deservedly a high reputation. There are in the township a court-house (jucluding within it a jail), an Episcopal church, and a Congregationalist, Baptist, and Mcthodist meeting-house; 18 small school-houss s , 14 grist mills, and 620 dwelling-houses. The reqistered vessels belonging to and coployed from Yarmouth, were, in 1790, 26 vessels, 544 tons; 1808. 41 vessels, 1,880 tons; 1828 , 65 vessels, 3,000 tons; 1833, 102 vessels, 6,901 tons.

Alout 20 voyages are made annually to the West Indics, and the rest of the shipping is employed in coasting and fishing. The duties collected at this place, and paid into the Provincial Treasury, are upwards of 1,000 , a year.

The foregoing details will convey a more perfect idea of the actual state of the colony than any des. rriptions, however claborate and minute. The great extent of land under eultivation-the produce (though the returns here stated are all under the mark, ns a tax was dreaded) therent-mad the stock thorean, will all demonstrate that Nova seotia is not the barren, fogey land it has so unjustly been representenl.
VII. The established Chureh is Episeopalian; the number of people of different religions at the last census were-Church ol England, 28,659; do. Scotlaud, 37.227 ; do. of Rome, 20.101 ; of Methodists, 9,408 ; Baptists, 19,790; Lutherans, 2,968; Dissenters from the establ. : ined Chureh, 1,117 ; do. of Scothand, 40 . Quakers, 158 ; Jews, 3 ; Universalists, 51 ; Sandima.
nians, 23 ; Swedenborgians, 3 ; Antinomians, 9 ; Unitarians, 4 ; Doubtinl, 313. The foregoing does not include Cape Breton.

The established Church is under the management of a lBishop, Archdeacon, and 32 clergymen. Ol' the Church of Scotlant there are 12 ministers. Of the Roman Catholie Church, a Bishop and 1.1 Priests. There are 19 Weslcyan and 36 Baptist Missionaries.

Ahout 50,000 neres of land have been grantel for the support of religion and schools; the Eeclesiastical establishment as supportud by the Home Gr vermmen!, and expense thereof from April 1831 to Mareh $1835-$ Bishop of Nova Seotia (salary 2,000l.) X．Nova Scotin is governell somewhat niter the sane manner ns $V$ pper and Lower Canada，i．e．by a Governor（styled Licuterant－governor，as in Upper Comadn），Comeil，and House of Assembly．The Pre sident of the Council is the Chief Justice of the pro－ vince；the next in station is the hishop，nad there nre 10 other members．The House of Assembly is large； 10 comuties return 2 memhers cach．Halifax county 4 ，and town I Ialifix 2 ．The following towns return encha member to the Provinciul Parliament：－ Trurn，Onslow，Londonderry，Annapolis，Granville， nighy，Lunenburg，Amherst，Ilorton，Cornwallis，

Windsor，Falmouth，Barrington，Liverpool，Newport， Shelburne，and Yarmouth．Thas is medependent of Cupe 13 reton，which is connected with Nova Scotia as a county，and returns two members to the provincial House of issembly．
The laws are ndministered by a Court of King＇s Beneh mud district courts，as in Canada．The laws in force are－1，the common lnw of England；2，the statute law of England；and 3，the statute law of Nova Scolia．
The mumber of elrolled militia in Nova Scotia and Cape Breton amounted at the last census to 21,899 ．

The Colonial Office Blue Book for 1836 gives the $\mid$ Cape Breton，officers， 234 ；non－commissioned ditto return for Nova Scotia nt－officers， 1,063 ；non－com－and rank and file， 5,888 ；total，officers， 1,297 ；non－ missioned ditto and rank and file， 22,488 ；and for commissioned ditto and rank and file， 28,376 ；grand
total, 29,673. Aecording to connties-Halifnx, officers, 164; rank and Ille, 3,093. Colchenter, otticers, 93: rank and file, 1,829 . Pictou, oflicers, 70 ; rank and Ale, 2,456. Sydney, oflecrs, 115 ; rank and flle, $2,5.11$. Cumberiand, ollfeera, fi3; rank and flle, 1,217. Hunts, officers, 82: rank and the, 1, fini. King's, ollicers, 87; rank and ille, 1.583. Anoapolis, ottlecrs, 137; rank and file, $3,12 \mathrm{~s}$. Shelburne, offleers, 96 ; rank and Hile, $2,2 \times 5$. (Qucen's, ombers, 30 ; rank and tlle, 6.32. Lunenhurg, 104 ; rank and tile, $2,029$.

The law enacts that every male, from 16 to 60 , shall be enrolled as a militia-man, excepting tho members of the Legislature, lawyers, magistrates, surgeons, and oflicers of the civil and military depmrt ments. Fivery regiment, if capable, is divided lite battalions, which consist of mot less than $: 300$, nor more than 800 men. livery hattalion is again divided into companier, which consist of mot less than 30 , nor more than 80 men ; and the whole are under the superintendence of military inspecting theld officers, who review them on the days of regimental meeting.
'The Kiug's troops consist of artillery ant engineer detachinenta, nul three regiments of infantry. Hia lifax in the chief naval station for the West Indies and North America, the commander -in-chief beling a victo. almulral, with a snituble fleet. The forts protectios Halifux town nud harbour are strong.
XI. The lacome of the Nown Scotia Government in mincipally derivable from duties levied on the laymer. tution of foreigu goorls at the dillirent ports, an will be seen by the accompmating return for the year ending Desember, 1833, which, while it shews the extent of revenue, indicates also the amount of trade carried on at the difierent porta of the colony, mind the quantity ol articles imported.

The following is an abstract of dutiable goods im. ported in the province of Nova scotin, betwern the 31st of December, 183\%, anul the 31st of December 1s:33, for which the duties have been pail or securend at the Excese Onliee (ineluding the bland of Cun Ireton), under the Acts of the provincial licgishature 1

To the foregoing sources of revenue are to he added other items of small amount, viz.: on Crown lands sold, and money received and appropriated to pay various salaries, \&c.; the reccipts were, in
1828, No, of acres 5,285, Amount received $£ 140$

the lands are let under moderate guit rents.
Another item is the rent of the conl mines, which is upwards of $4,000 l$. per annum. The lighthouse dues amount to all annual average of $2,000 l$. per annum.

The gross revenue of the colony in 1821, was 31,430l. ; in 1825, 37,000l.; and since 1827, the Blue Book afford the details in the annexed table.

Casual and territorial revenue ef Nova Scotia in $1836,6,9011$., of which 3000 . was for rent of reserved
mines in Cape Breton and Pictou, $1,515 \%$, duties on $16,8: 36$ chadidrons of coals, 4500 . advanced by the General Mining Association, 1,007l. from Commissioners of Crown Lands, and the remainder for fees, \&e.- [Blue Book, IN3G.]

There is a local nssessment in each colony which monounted as follows in 1836 :- Halifax Comenty, 6,034 ; lictou, 1,036; Sydney, 270; Guyshorough, 3.55 ; Colchester, 416 ; Lunenburg, 493 ; Annapohs, 2,745 ; King's County, 1,136: Yarmouth, 373 ; Jus-te-an-Corps, 109; Richmond, 98; Cape Breton County, 327; Hants, 693 ; Qucen's County, 351 : total, $14,4+12$. It is levied by grand jury present. ments in each county, assessmients by order of spssions, and for licenses, \&e. It is expended for the relief of the poor, for the repair of roads and bridges, and to defray Colony charges. There are no direct taxes levied by the Government of Nova Scotia.

This singular and valuable island, though forming a part of the government of Nova Scotia, necessarily requires a brief separate deseription. Cape Breton is situate betwern the parallels of 15.27 , and 47.5 . N. lat. (including Madmune, seat .ri, Boalardic, St. Paul's, ant other minor islesj, and 59,.3א. and 61.50. W. long. ; bounded on the S. and E. by the Atlantic Occan (distant from Cape Ray in Newfoundland on the $1 \mathrm{E} . \mathrm{S}_{27}$ miles), on the $N$. and N.W. by the Gulf ot st. Lawrence, and separated from the adjoining peninsula of Nown Scotia by st. George's Bay, and the strait or gut of Canscnu, which is in length ahout 20 mites, and in breadth one mike; the whole island being in its greatest length from N.E. to S.W. 100 miles, and the grentest breadth from S.E. to N.W. about R0 miles, comprising an area of about $2,000,000$ acres, exclusive of the surface covered by lakes and rivers.
11. The island was disecsered by Cabot, during the voyage mentioned in the irst elapter; fint whether mamed by him after Briluin, or by its subsequent visitor Verazani (then in the service of France), after Brittany, is not conown. While in possession of the french, it was called L'lale Royake. In f7ly, a few Frowh thehemen from Nova Seotia and Newfoundlaad settled on its shores for the compenience of the and fish trade, their residence being principally confined to the summer months; white in winter it was visited by the fur-hunters $\mathbf{c}$ : purchasers of skins from Nova Scotia and other places.

In 1715, louis XIV, in order to detach Queen Anne of Fingland from her alliance with the united bowers of binrope with whom he was contending, oftered her Newfoumdland, Itudson lay, and Nova Scotia, pueserving to Franee, Canada, Prince Elwar'l's lsland, and Cape Breton. The attention of the Freuch Govermment was now actively bestowed on the Irtter as a means of extending the cod fishery, and still maintaining the command of the mavigation of the (. . of St. lawrens : hence the colonization of Cape bretom, and the crection of the strong fortification of Lousisurg (maned afcer the French King) in 1720, on the S.E. coast of the istand.

The French were not long on Cape Bretun before
her, merchandize, machinery, and easl, $10,000,000 l$.; total moveable property, $14,240,000 l$.

Value of Immoveable Property: Land cultivated, $1,300,000$ acres, at 4l. per acre, $5,200,000 l$.; good land meneltivated, $5,000,000$ acres, at 10 s . per aces, 2,500,000 .; waste lands, 2,000,000 acres, at 1.s per acre, $100,000 t$. ; houses, about 60,000 , at $20 \%$. each, $1,200,000 l$.; government buildings, forts, churches, \& . $1,000,000 l$. ; mines, foresis and tisheries, 2,000,000l. ; roads, canals, bridges, wharfs, and dykes, $3,000,000 l$. ; total immoveable property, $15,000,000 \ell$; total moveable and immoveahle property, $29,240,000$.
person, 600,0006 .; furniture for 60,000 families, at fil. each, $300,000 l$. ; income from trade and agrienlture for 60,000 familics, at $20 \%$. each, $1,200,000 \%$. sundries not included in the foregoing, at $5 \%$, each family, 300,0006 .; loss by waste, fire, bad scasons, \&e. $15(, 000 l$, ; total annually created, $6,893,3322$.

Value of Moveable Property: Horses, 14,000, nt 10l. each, $140,000 \ell$.; horned cattle, 120,000 , at $5 i l$. each, $600,000 l$. ; sheep, 200,000, at $1 l$. cach, $200,000 l$.; swine, 100,000 , at $1 l$. each, $100,000 l$. ; poultry, \&e. $100,000 \%$. clothing, personal, 200,000 , at $10 t$. each, , $, 000,000 \ell$; Furniture and Domestic Utensils for 60,000 families, 1: 20l, each, 1,2000,000l.; ships, tim-

# CHAPTER IV.-CAPE BRETON AND SABLI: ISLANDS. 

they commenced instigating the Indians to attack the linglish settlers at Cape Cansean and in Nova Scotin, and the war of 171t, in biurope, was fotlowed up rith perseverance and ability by the garrisen of louisburg in its attacks on Nova Scotia. The Massachusets Government sent aid to Ammpolis, then tesieged by the French and their Indian allies. Me Indians of Passamapooddy, Penolscot, l'igwont, and others, aided the New lingland colonists, I furious and savage war was carried on betwen hoth parties, and the (iovermment of Massachusets determined on attacking louishurg, which the french had been 2 ? years fortifing, and though not then complated, at an expense of $30,060,000$ lives.
'The capture of this place will be found at full length in my "Colonial Library," vol.
111. Cape lbreton is of a shape nomply triangular, its shores indented with many fine deep lavens, broken withinmumerable coves and islrts, and almost separated into two islands by the great inlet of the sea, termed Bras d'Or, which ramities in the most singutar and romantic nammer throughout the isk. 'These natural divisions of Cape breton are also in striking eontrast, the one to the north being high, bold, and steep, that to the south low, intersected hy water, diversified with moderate elevations, and gradually rising from the interior shore of the Bras d'Or until it presents ahrupt cliffs towards the ocean. In this latter division the highest land does not exced woo feet, but the highlands in the north division are higher, holder, and more contimuous; Smoky Cape, exceding $1, K 00$ feet in altitude above the level of the sea. The liras d'Or would appear to have been an irruption of the ocean, caused by some earthouake or convulsion, admitting the water within the usual boundary of the coast. Its entrince is on the cast side of the island, facing Newfoundhund, and divided into two passages by lluulardie Island. 'The south passage, called little Bras d'Or, is about 23 miles long, and from a quarter to three miles wide, but rendered monavigable for large vessels by" a bar at its mouth. The north passage, Great lliras d'Or, is 2?, miles long, two to three wide, with a free mavigation, and above 60 fathoms soundings. The Bras d'Or itself is the unton of these
two branches, which form the grent lake in the centre of the island, with several fine bays, where the timber ships for England usually load, at a distance of 40 miles from the main ocean. The length of this noble se.t-water lake is about 50 miles, its greatest width 20 , with a depth varying from 12 to 60 fathons, every where securcly navigable, and by reason of its nume. rous bays and Intets atlording the bencfit of inland navigation to almost every linem in the country. Several fresh-water lakes exist in dilferent plates, the largest are Lake Marguerite, in the north division, which is about 40 miles in circumference; the Grand River and Mire lakes in the south, the latter, together with its river, intersecting the island on its S. E. coast for 30 miles, is the rear of the site of the ancient for ${ }^{*}$ ress of louishurg.

Sydnes, the capital of Cape l3reton, in latitule alf. 18., longitude 60. 3., is the only military post in the island, and is beautifully situated a few miles south of the cutrunce of lbas d'Or, upon a narrow but somewhat elevated tongue of land, about one mile in length and bulf that space in breadth, its line of direction morth and south, nearly 11 miles from the mouth of Spanish liver, On the east side of the small promontory is a basin three miles in cirenmferenee, while the main channel rums on the west side, and then opens a the harbour, atlording a sceure anchorage for large frigates. 'The operations of the mining company nre improving Sydncy, whieh it is asserted has sufferel materially from the anuexion of the island to Nova seotia. Fromsydney to Lomis. burg the shore presents abrupt clitls, low benchers, bays, rivers, and a lew islands. [Sec "Colomial Lilirnry.']

The lighthouses on the shores of Cape Breton and Nova Seotia are thus stated in the 13. 13. Colonial Otlice:--

Lighthouses on samho island, month of llalifax harbour, 1 fixed light; at M'Nutt's Island, mouth of Shelburne barhour, 2 lights, 1 above the other ; at Briar Island, I fixed light; entrance of Smapolis Zutt, ditto; Coflin's Island, mouth of I iverpoel harbour, 1 remblring light ; Island Gut of Cunso, 2 lights, I above the other; seal Islams, t fixed light; Meagher's Bereh, Halifax, I light; entrance l'ictou harhour, I fixed light for 8 months; Cruss Island, near Iancuburgh; entrance Sydney harbour, I fixed light.
W. The extensive erni and iron mines which peenlindy mark the geological character of ('ape Dreton, will be found detailed at considerable leagth in my "Colonial Library," vol. vi. The island can emme. rate, from sandstone downwards, the whole of the rocks which constitute the transition and primitive formations.

The coal tields of the island contain immense deposits of gypsum, of a very superior yuality tor agricultural purjoses, and now becoming an article of considerable trallie with the United Stutes, Who know how to apprecinte its value. It constitates a claf several miles in cextent, and in some places 30 leed in height. Thae gypsum in the lower part of the clitl is suthiciontly compact for arohitectural purposes, and that mar the surface apjears well adapted for potter's moulds, stuce, flooring, \&e. It is very conveniently situated for export, as vessels of great buriben may approneh close to the clifi. It also occurs abuadantly ill various other places.

The natural sait surings which also have their source in the new red sandstone, are well worth the attention of capitalists. Situate so near to the veins
of coal, so necessary in the mamufacture of salt, and in the very heart of the best fisheries of North Ame. rica, these pronise fair to become, at a future day, a productive somse of wealih to the proprictors, mid of incalculable benefit to the fisheries.
V. Cape Breton in this respect resembles much its neighhouring peninsula, with perhaps more moisture from its insular position. The fog which is awept sidng the shores of Nova Scotia by the S.W, wind, and along the S. E. coast of Cape 13reton as far ns Scatari, is then blown off to sea: it never extends far inland, being dissipated by the retlected heat. The climate is exceedingly healthy, and the water excellent ; two things of paramount value to the settler. The seasons may be thus indicated: in June the blossoms of the indigenous shrubs appear, apple trees are in full bloom in the beginning of July, when strawberries nre in perfection; hay is made in July and August ; in the latter month rasplerries ond outs ripen, as do also eurrants and gooseberies, wheat in September, and apples and plums hang on the trees until the approach ef winter in October and No. vember.

V'I. We have no aceurate ecensus of the island; the mamber of mouths are extimated at 30,000 , of whom the sereater lart are emiguants from the Dighlands of scotland and their descendants; these are chiclly employed in agriculture; the next nost numerous are the origlat Eiropean colonists, or French Acadians, an intust rious people, employed in the tisheries and in building small vessels; the remaning colonists consist of Enylish and Irish settlers, dishamed sobdiers, and American loyalists, who were bocated here atter the American war. 'Ihe Nice Mae tribe, whose ancestors onee tenanted the whole isle, are now redueed in number to about 300 , who have cmbraced the Roman Catholie religion, and are becoming civilized to some extent; they lave lands assigned to them amonnting to 111,000 acres. [Sce Nova seotia for statistics.]
III. The imports in 1832 were in value 74.0 ment, consisting chielly of British manumetners; the eve ports were-timber to Euglond, 9.500 loads ; coal to the I'nited states, \&c., $2.9,911$ chaldrous; pickhel fish, 21,000 barrels; dried lish, Il, 000 r quitutals: oil,
 hushele; potatoes, 13,000 ditto ; total value, $\mathbf{x} 0,1001$.

The following details of the trade of Cape Breton I have receised from the London Custon House.

Sydncy, port of Cape breton.

* Mds. signilies 1,000 feet.

The trade in coal is mui."y inereasing at Cape The mines are leased to the General Mining AssoBretm, as also nt the prot of licton: the quantity ciation, at the fixed rent of $3,000 \mathrm{p}$. per annum. The minerl at licton, in $18: 32$, was $12,0:()$ chaldrons, and following deseription of a new source of empoyment at Cape Breton mine $30, \times 60$ ehablions.

for British industiy and capital will doubiless prove interesting.

The Gencral Mining Association, as temants of the Crown, and of his late Royal Highness the I. the of York, are lessees of all the mines and minerals of every descripiton in the province of Nova Scotia l'roper, and in the islantl and county of Cape Breton.

The operations of the association commenced there in the venr $1 \times 27$, and have hitherto been confined to the working of conl mines, and the discovery of iron ore.

The coal mines opened and nt work are three in number-the Albion, the Sydney, and the Bridgeport mines.

The Abion mines are situated on the banks of the Fast River, in the district of l'icton, or Poictou, and distant about eight miles and $a$ half trom the town of that mame, a port of safe and easy access on the Gulf ol St. Lawrence. A light-house has lately been erected on the coast, near Pictou.

The bast River is "nly navigable for burthensome craft to within six miles of the Albion mines; so that vessels arriving for coal receive their cargoes from barges, which load ut the mines, and are towed down to the deep water by one of the steamers belonging to the Association. A rail-road, now in progress, will, when completed, obviate this incon. venience, as well as any breakage which the coal might sustain by transhipment; and will at the same time materially reduce the cost of shipping it.

The strata are similar in their formation to those of the Stuftordshire coal fieids, und, like the latter, produce a coal which, good and serviceable as it is for houschold use, is, however, from its peculiar pro111
perties, most remarkable for excellence for the purposes of steam and manufactures; and especially for the manufactures of iron, on account of the absence of sulphor in its comprsition.

In September $1 \times 33$, the steam-boat " Royal Wil. liam," of 180 horse power, and 1,000 tons burthen, arrived in London, having performed the voyage from Quebec to Pictou, and from lictou to London, by steam. The fuct used was, from Quebee to lictou, Finglish coal, from Pictou to Cowes, Alhion coal, and from Cowes to London, again English coal, taken in at Cowes. 'The captain and the engineers gave a most decided preference to the Alhion coal over the Eing. lish, and pronounced it to be the best fuel they had ever tricd for gencrating steam. This is a very important fact, considered in connection with the immense and growing extent of stem navigation in the United States, which will fibd thos near at hand a suphly rommensurate with that extent of fuel, so valuabie for its purposes, and to which it will be applied when further experience shall have satisfied the Americans of the superiority ol such a coal lor steam mavigation over wood, and of the cconomy to be derived from the use of it.
The following return shows the quantities of coal shiped from the Albion mines, from the begiming of 182 s to 1836 , listinguishing the number of chaldrons in each year:-In 18.28, 1, 1177; $18.29,5,8.11 ; 1 \times 311$, 6,126; 1831, 8,315; 1832, 12,020; 1833, 19,890; $1834,14,927$; $1835,18,161$; $1 \times 36,36,322$; 1837, 36,697 ; total number of ehaldrons, 103,096.

The conl is ruised from four shats by the aid of stemn-pumping and winding engines.

The establishment at the Albion mines consists of upwards of 400 persmens cmployed in and about the mines, the foundery, the rail-road, steam-boat, and barges, the brick-kilns, \&c., and their several ajpurtenances. The number of dwelling-houses and of buildings required for these varions works is little short of 100 ; and the small town of New Glasgons owes its birth and existence to the presence and operations of the Gencral Mining Association in this part of the country.

The sydney and Bridgeport mises are both in the island of Cape Breton, which is separated from Nova Scotia ty the Gut of Conseau.
The syducy mines are situated on the north-west entrunce, of Sjauish River, or Sydney harbour, a harbour equal, if not superior, to any in 13ritish dincrica, and which is necessible in all winds. It is here that the most extensive oprations of the Association are carried on. "The coal of this fied is similar in quatity to the Neweastle coad. It is well suited for all th: purposes of good firel, but most particularly for do. mestic use. it is highly bituminous, ignites readily, gives strong lasting hent, and leaves but little ash. A rail-road, which enst $40,000 /$, and on which three levennative engines are employed, is finished from the pits to a point of the harioner, where vessels of any burthen can load with ense, and well sheltered from
the prevailing winds. The establishment at the Sydney mines consists of about 300 persons and occupies 50 houses, including the buildings required for the works. The quantities of coal shipped from these mines from the year 1827, to 1837, are as follows In 1827, 8,776 chaldrons; $1820,10,266 ; 1829,9,903$; $1830,11,898$; 1831, 13,882; 18:12, 19,9.19; 1833, 15,302 ; $1831,11,693 ; 1835,15,459 ; 1836,31,486$; 1837, $3.5,154$; the total in chaldrons being, $1 \times 3,764$.
The Bridgeport mines are situated on the southern shore ol Indian Bay, one mile and three quarters from the harbour where vessels load, and which is perfectly secure for shipping in the most boisterolls weather. The southern head of Indian Bay, which is called Cape Table, bears by compass from Flint Island north. west by west, distance eight miles and a half, and the northern head of the bay bears from the light-house on Flat Point at the entrance of Sydncy harbour south-east, distance four miles. Vessels may rum safely into four fathoms whter between the northern and southern heads.

The coal from these mines is of excellent qumbity, of the same description as the Sydney, and not at all inferior to it. A rail-road has been laid from the pite to the shipping place, and nong which the coal is carried and deposited at once in the holds of the vessels.

This establishment employs about 1.50 persons the houses and buiddings exceed 20 in mumber, exclusive of wharfs, saw-pits, \&c. The following quantities of coal have been shipped from the Bridgeport mines from the yenr 18?!, when they were first opened, to 1837 : - In $18 \cdot 29,1,395$ chaldrons; $1 \times 30,3,425 ; 1 \times 31$, $6,8.11 ;(1 \times 32,10,490 ; 1833,9,805 ; 1834,7,112 ;$ 1835, 8,434 ; 1836, 12,550; 1837, 13,121; total in chaldrons being, 73,543.

The extent and power of the veins or seanis of cond already diseovered in Novn Scotia, render them as it were inexhanstible; and when the capabilities of the mines opened liy the Associntion, are filly develonged, they will be equal to supply any demond.

The capital of the Geweral Mining Association is 400,000 . divided in 20,000 shares of $20 l$, each. Ot this sum $340,000 l$., or $1 \%$. per share, have already been suhscribed, of which $210,000 t$, or 121 . per share, have been applied to the operations in Nown scotia. On the other hand, the $\Lambda$ ssociation possseses in Nova Scotia considerable property in mines, machinery, implements, steam-boats, and other cratt, wharts, and houses, and about 14,000 arres of land.

V'II. The staple protucts may be considered fish, coal, gypsum and timber. Of the former it may be observed, every river, ereck, and bay teems with the fimy tribe of every varicty. The extent of coal and gypsum has been already stated; and as to timber, it exists in immense forests, equal in quality to any grown on the shores of the Baltic ; live cattle, butter, cheese, potatoes, outs, \&e., are becoming increasel artieles of export to Newioundland.

## SABLE ISLAN1).

This seene of momerous and melancholy ship-wrechs,-forty vessels having been wrecked on it in the course of a lew years, and in one ycar 200 peopll perished on its : Mores,-lying directly in the track of vessels bound to or from liurope, is about 85 miles distant trom (ape Cansean ; in length about 30) miles, by $1!$ in width, shaped like a bow, and dimi.

Anherst Island, the most southern of the chain, is nearly oval, havime ahout ist nut 3 f miles for its axis, with at elevation in one place of an isolnted hill 260 teet above the level of the sca. Its harbour is the best in the clsain, with a narrow, but straight entrance over a
soft ooze har, for vessels drawing 11 to 12 feet water. Continnous spots of sand almost connect $A_{1}$,herst with Grindstone lsland, whose diameter is about 5 mules. Cape Abright, the next in succession, is about 9 miles long and 3 broad. Then fillows lintry and Collin lslands. The population consists of wearly 200 families, the greater jart of whom are french deadians-lishermen. lieutenant Baldely, who exanined the islands, thinks them of igneous origin; tirst, by reason of the form of the hills oif which they are composed; secondly, on acconnt of their jorphyritic, amygdaloidal, vesicular or lava like structure; thirdly, the grological appearances of the sandstone, clays, Ae., shewn in their displacement, in the ir redness, and even in their friability. In some places the soil is a riel black mould as at St. Vincent's, and other volcanic islands in the West tndes.

## CHAPTER Y.-NEN BRUNSWICK.

Section I. New Branswiek, as an eastern section of the continent of North Amerien, is situate between the parallels of 45.5 . and 4 N .4 .30 . north latitude, and the meridians of 63, 47,30. and 67. 53. longitude west of Greenwich; bounded on the north by the Bay of Chaleurs, in the Gulf of St. Iawrence (separating it from the district of Gasper), and by the River Ristigouche, which in its whole course, from its source to the estunry in the Bay of Chaleurs, divides the province from the county of Bonaventmes, in Lower Canada; on the south it is bounded by the Bay of Fundy and Chignecto lolet, which nenrly insulate Nova Scotin, the latter being divided on latal by a short boundary line (drawn from lort Cumberland to Bay Verte, in Northumberland straits, ant arm of the Gulf of St. latwrence), which separates the comety of Westmoreland, in New Brunswick, fron that or Amherst in Nova Scotia; on the east by the Gulf of St. lawrence and Northumberland Strait, which separates it from Prince Edward's Island; and on the west by the United Stntes territory, commencing an the south const at Passamaquoddy Bay in the Galf of Fundy (embracing the island, to the northward of 44.36 ., such as the Grand Monan, Decr, and C'anmo Bello), proceding northward aloner the River seodio or St. Croix ; the River Chiputnetikooh to a chain of lakes, thence from a boundary line commencing at a monument on Mar's Ilill, 100 miles west of lirederic. ton, in latitude 45. E\%. $\therefore$., longitude 66. Iti. W., ami ruming northerly to abun: four or five miles west of the River Nt. John, to ste souree of the Ristrowelac River; the whale prosince contanneg 27,701 sumbe miles, or 17,7:30,560 aeres.
11. The early details of this colony are conuprised in those of Nova scotia, of wheh it formed a part, and which the reader will remember to have been finally ceded (after eonguest) to Great Britain, by the treaty of Vitrecht in 17 li 3 , but until the tinal extirpation of the French power in North America, in 1758 and 1759, Grent Britain could not be said to liave praceable possession of New Brunswick, since which time it has remained in our possession. In $17 \times 5$ the present limits of New Brisnswick were fixed, and the territory was separated from the province of Nova

Scotia-crected into a separate goverument, under the adninistration of Col. Carleton, and a Legistative Assembly was summonel at St. Joln's.

The treadfal lire at Miramichi, on the li. const, in $1 \times 25$, was one of the most terrible matural conflagrations of whieh we have any record in the history of the world. [Sce History of the British Colonies, vol. iii., or Culonial Library, vol, vi.]
111. New Brunswick is generally composed of bold undulations, sometimes swelling into mountains, and again subdividing into vale and lowlands, covered with nohle ferests, and intersected by numerous rivers mad lakes, affording water commonications in every drection to the pleasing settlements, seattered thronthout the fertite allusial spots, termed intrimes. The greater part of the teritory, namely nbout $14,000,0100$ acres, is still in a state of mature adorned with abondance of timber, and fine extended prairies: an ide of the conntry will, therofore, be better conveged to the stranger by examining its appearance, by comnties, which ure in general distinetly divided by watre courses, or other natural indications.

New Branswick is divided into ten comnties-viz.: Gloucester, Northtmberland, Kent, Westmoreland, St. John's, Charlotte, King's, (Qucen's, Smbury, and York. Cilouecster, Northumberland, and Kent were orighally comprised under one county, named Northmmbertand, and exteading over an aren of 8,000 spuare miles, having a river frontier from the souree of the Ristigouche to Dallousie Harbour, nt the head of the lay de Chatenr, and thence a semberd along the south side of the bay and the guli coast to Shediae: Islanel.
The New Brunswiek shore, along the Gulf of St, lawrence, is low and sindy, covered with trees of a stonted growth, and shirted with extensive marshes, large deep mosses and long sand beaches, formed by the condicting eurronts of the gulf, and the different rivers that pierce the shore. The coast line of the magnificent Bay de Chateur (which is 8.5 miles Iong, and from 16 to 30 brond, commencing in 47.38. N. Lat. 64.30. W. Loug. is similar to the gulf shore, hut in some places there are perpendicular clitls of some hoight.

## 236 NEW BRUNSWICK.-GEOLOGY, MINERALOGY, AND SOIL; CLIMATE; POPULATION.

The city of St. John, in l.at. 45.20. N., Long. 66.3. | numerous, and some sulphureous springs have lately W., by reason of the noble river on which it is built, is the emporium of the inland trade of a great part of the province: it is a handsome town on a rugged, rocky, and uneven peninsula projecting into the harbour, with numerous pulblic buildings of stons, brick, or wood. A court-house, church, and bank, of stonc, are particularly remarkable for their excellent structure. Being an incorporated eity, St. Jolm is governed by a mayor, aldermen, and commonalty, who have ain annual revenue of 2,0002 . at their disposal for the improvement of the city, whase pepmiation nmounts to about 10,000 mouths. The habbur is easy of entrance, capacious and safe, with a lighthouse on a small Island (l'atridge), about the centre of the entrance. The view from seaward is bold and rugged; but on opening the harhour, the wooded mountainous back ground, at. 'general picturesylue seenery, forms a very beautiful pieture. 'The the river, St. Joln's, has a course of nearly 600 miles from its source near the Chaudiere in Lower Canadn, to where it falls into the hay of Fundy.
York County contains the capital of the provinceFredericton, in 45.57 . N. Lat , li6.45. W. Long.; 85 miles distant from the sea const at St. John's, Liightyfive miles from St. John's, 90 from St. Andrew's, ditto from Nortlumberland, 1.40 W . of Fort Cumber. land in Westmoreland, and ditto from the Cpper Settlement in Madawaska.
The site of Predericton is upon a flat territory, on the right bank of the river St. John's, a body of water equally interesting from it's extent and purity, and which is here three quarters of a mile wide: the river, making an elbow, encloses the city on two sides; whilst, on the land side, the plain is likewise enclosed by a clain of hills, and opposite to it the Nashwak rolls its broad, and sometimes rapid, stream into the St . John's, which to this point is navigable from the sea upwards for vessels of 50 tons burthen.
Fredericton is laid out in blocks of a quarter of an acre square, of which there are 18; the streets are disposed rectangularly, some of them being a mile long, and, for the most part, continuously built on with wooden houses. The public edifices consist of the Province Hall (where the P'rovineial Assembly and Courts of Justice assemble), the Court-house, Barracks, Government House, Library, Clureh, Chapels, and Kirk, with several other structures, the numher of which is rapislly increasing.
IV. The topography with descriptive and historical details, will he found in the "Colonial Library." Vol. vi.-Along the shores of the province, facing Chaleur Bay and the gulf of St. Lawrence, grey sand-stone and elay-slate predominate, with detached rock of granite, miea, quartz, and iron-stone; on the S. coast limestone, grey wacke, clay-state with sandstone, interrupted oceasionally by gneiss, trap and granite prevail. Specimens of amethyst, cornelian, jasjer, \&c. have been picked up in varions places. Extensive veins of coal lying a few feet above the level of the water, and romning horizontally, are found on the shores of the Grand Lake in Quren's County: a company has been incorporated for 30 years, with a capital of 30,0001 . to work this mine. An excellent vein of coal has been recently opened on the banks of the Salmon River, which is said to be superior to that of the Grand Lake. Iron ore is abundant. Copper, plumbago, and mangancse have also been found, and gypsum and glindstone are in inexhaustible quantities near Chignectn Basin; salt springs, strongly saturated, are
been found.
V. New Brunswick is healthy; old age is frequent in persons possessed of the slighest degree of solriety. Consumption and rhennatism are the most prevalent diseases; but agues and intermittent fevers are rare if not unknown. The following meteorological return of the clinate at liredericton, the capital, was transmitted home to the army medical department:-

VI. By the census of New Ibrunswick in 182.1, the aggregate number of the inhabitiants was-Whites, Males, 38,764; Females, 32,656; Total; 71,420. Free blacks, Males, 738 ; Vemales, 774 ; Grand T'otal, 72,932.

Divided by Counties, the popalation was in 1821-

In person the Inhabitants of New Brunswick are gencrally tall, well-proporifon nud athetie; those born in the province exceding in stature the Eurupeans from whom they are descemied.
The following recent census of the State of Maine, which adjoiss New Irunswick and with whom in particular the bomblary question is in diapure, mey be inserted as of interest at this moment :-
Census of Maine-The population of this state, from the census taken in March last, amounts to Ji2, lil, exclusive of the Madawaska setthoment aml forcigners. In 18:10, it was $: 199,102$, making a gain of $72,6,640$; ald to this anonnt 3,300 for the Madawasha settement, and 10,000 lor foreigners mot in. cluded in the recent consus, mat the gain is $N_{3}, 9,9 \times 9$. Since $1 \times 30$, York county has gained 2,071 , Cumber-
 5,120, Waldo 7,027, Lomerset 7,157, Penolsent 20,16.1, Hanenck 3,632, Washington $i, 911 \times$. The population of Somerset is now 12,963. Three combties only in the state have had a greater relative gain than Somerset ; they are lenohsent, Washington, and Waddo. D'enohscot has gained 6.t per cent, Winshing. tur 32 , Waldo 21, and Somerset 20.-Frum the l'indicator of luly $21,1 \times 37$.
1II. Return of the Number of Chimehes, Lifings, \&e, of New llonnawick, In 1s:3.

 pit, buidding will contrio so. elneluded io St. John's.

The establishod church is within the diocese of the Bishop of Nova Scotia, and under the government of an archdeacon with 26 clergymen (there are 26 churches), to whose support the Society for I'ropngatimg Christinas Knowledge largely contribute; of the Eistabhished Church of Scotland there are tive pastors: of the Romish Church, $a$ bishopand twelve priests; of the Presbyterins Churels of Nova Scotla, three; of the Wesleyan Missionaries 16 ; and of the linptisis 16.

Chureh of England,-The form ill which the return is repuired, does not admit of a complete return of the state of the church. There are many congregations held in school-houses, and other menonsecrated buildings, at various, and somelhoes grat distances from the elergymen's residences, without which accommodation, in the present atate of the province, lamrlly uny comatry pmris foould be effectually served; of these congregations a $\quad$ 'mmplete statement has not yet been obtnined, but the refurns mate for this year to the archaleneon, specify 47 congregations, bestes those whels meet in churches rand chapels, abll compri\%e from 3,306 to $: 1,800$ persons. In returning the value of the living, the fixed incone from glebe is only given.

The fisome of the elergyman is in all cases derived from the society lior the Propagation of the Gespel in Foreign Parts, nall was formerly :bhll. sterling, to each rictor, but this has been litely subjected to a reduction of 2 is per cent. The Societ y's ullowance to the rector of Douglas, is $7.3 /$. ; to the rectors of Dumfries and W'estmoreland, 100/, each. The curate at St. John's, $75 \%$; the Curate at l'redericton, Kingston, St. Stephen and Chathom, bol. each.

In addition to the income derived from the Society, some elergymen have received contributions from their parishioners, luat no complete rethrn for the yeur 1s36, has been obtained. I'robably they have not much exceeded the amounts reported for 1835. The present rector at borthad, who has no salary from the society, recived $183 l .10 \mathrm{~s}$, from the people.

The curates noticed in the return, receive ns follows liom the people : first curate at St. John's, 1801 . St. Andrew, 90t.; Chalham, 40l. 10s.; St. Stephen, dish. Fredericton, 125/. currency.

Abstrurt.-No. of livings, 25 ; rectors, 24 ; curates, 6 ; parsonage-houses, 13 ; glebes, 27 ; churches, 42 ; chapels boilt or building, 9 ; the churches will acconimodate 13,190 ; number of persons geocrally at. tending, from 5, 760 to 6,000 ; to which may be added, for congregations that meet in unconsecrated places, 3,300 to 3,800 ; makiog a total of attendance as shewn by the returns received, from 9,060 to 9,800 .

Churh of Scollam,--It may be obscrved generally, that this church is rapidly on the increase in the province; $u$, to $1 \times 30$, there were only two churehes in connexion with the listablished Church of Scotland. Now there nre $1: 3$ churehes supplied by 10 ordained elergymen, who all oceasionally preach to large congregations, assambling in school-houses and chapels. Hesides there are several churches just now in the course of creation, and there are a few lately finished, which will be shortly filled up by ministers from Seotland. The gross number of Presbyterians in the province cannot be less than 20,000 . The average attendance in the churches nt present regularly served, is at the lowest calculation 5,500 . By adding the congregations assembling occasionally in sehoolhouses and chapels, this number would be greatly increased.

The income of the clergymen is chiefly derived from prew-rents and collections. The Colonial Society of

Glasgow, has in two or three instances, where the case was urgent, made a grant of 50l. sterling for three years. The Scottish establishment receive no pecuniary aid from Her Majesty's Government, with the exception of $50 l$. from the casual revenue, to one of the ministers of St. John. A small grant of wilderness land only, has been recently made to each church by the home government.

Wesleyan Methodists.-The ministers of the Wesleyan Methodists connexion, are supported by voluntary contributions, and the Wesleyan Methodists Society in England. There are 14 missionaries in the province, 28 chapels, and 73 congregations, with an average attendance of 9,590 .

There are several other denominations of Christians ; viz. Roman Catholies, Baptists, Independents, \&c., but no returns have been received relative to them.
VIII. Grammar schools supported by legislative aid, are in active operation in several districts, and an excellent college has been established under the paternal auspices of Sir Howard Douglas ; 6,000 acres of contiguous excellent land are appropriated for the use of this noble institution, which has the power of allowing the matriculation of students, without subscribing to the thirty-nine articles, except on taking degrees in divinity for the Church of England. Schools on the Madras system are established in each settlement, with a legislative allowance of $20 l$. each; they are under the superintendance of the governor and board of trustees. Several excellent private semina. ries exist in different parts of the province.

* This College is endowed by His Majesty's Royal Charter, and reccives from $\mathrm{H} . \mathrm{M}$ 's. casuai revenue the yeariy sum of $1,000 l$. steriing, and from the province treasury, so long as H. N's. grant is paid, the sum of 990l. The Colicge is also in the receipt of 180\%. sterling per annum, arising from land-rents. This school is connected with the college, and is supported out of its funds.

King's College, Officers of the College other than Professors: the registrar and treasurer, salary 100l.; steward (including allowance for fuel), $100 l$.; porter and beadle (without board), 40l.; gatekeeper, 10l.; forrester, 5l.; Monsieur Thomassin, French instructor to the college and collegiate school, $60 l$.
Scholarships on the foundation, two; one for 25t.; one for $20 l$.
Degrees conferred in the year 1836 : five degrees of Bachelor in arts; one degree of master in arts.

By Acts of the Provincial Legislature, the grammar schools at St. John and St. Andrew's, are incorporated, and 135l. sterling is appropriated from the provincial revenue towards the support of the former school, and $90 l$. sterling towards the support of the latter. By another Act, $90 l$. sterling are appropriated for the support of a grammar school in each county in the province, on condition that the inhabitants subscribe $115 l$. for the like purpose. It is under these Acts that the enumerated schools have been established.

By an Act of the Provincial Legislature, provision is made for the support of parish schools, to the numleer of seven in a parish, provided that they do not average more than five to each parish in the several counties, by a grant of $20 l$. currency per annum, to each school; on condition that the inhabitants erect a school house, and subscribe 20l. more. In addition to the schools thus established and endowed hy the Legislature, there are a number of respectable private schools in which all branches of education are taught, but as they receive no pecuniary encouragement from government, they have not been called upon to make any returna of their respective establishments.

X. The constitution of New Brunswick is assimilated to that of the other North American colonies, differing thus far from that of Upper or Lower Canada, that the Lieutenant-Governor's executive council of twelve have also a legislative capacity.

The House of Assembly contained 28 members, thus contributed-City of St. John, two ; county of ditto, four-Counties, Charlotte, four ; King's, two ; York, four; Westmoreland, four; Queen's and Sunbury, two each; Kent, one; Northumberland, two; and Gloucester, one. The number of representatives has since been increased. The provincial parliament sits for about two months, during the winter, at Fredericton, and is regulated in its proccedings after the manner already described.
The laws are administered by a supreme court and minor tribunals. The former has a chief justice and three puisne judges. There are also courts of chancery, vice admiralty, and for granting probates of wills, \&c. The number of barristers and attornies practising in the province are, 15 at Fredericton, 19 at St. John's, and 37 at other stations. There are 50 public notaries.
The militia of the province of New Brunswick is distributed in regiments, as follows: 1. York county, five battalions. 2. St. John City, two battalions. 3. St. John's county, two battaliuns. 4. Sunbury county, four battalions. 5. Westmoreland county, four battalions. 6. Northumberland county, two
battalions. 7. Gloucester county, two battalions. 8. Kent county, two battalions. 9. King's county, three battalions (with cavalry attached). 10. Queen's county, two battalions. Making a total of 10 regiments and 29 battalions. Each battalion has a lieutenant-colonel-major; 11 to 15 captains; 15 to 17 licutenants; 10 to 16 ensigns, and the usual staff. The strength of the militia in 1836 was, Field officers, 51 ; captains, 300 ; subalterns, 580 ; staff, 90 ; sergeants, 471 ; drummers, 26 ; rank and file, 19,260.

Each regiment is trained three days in the year, one of which is the general training, or day of inspection, and the other two are company drills.
The province makes an allowance, for adjutants, not excecding cach 156 . per annum; and for sergeantmajors, a sum not excceding 7l. 10s. per annum each; for the care of arms, a sum not exceeding 20l. to each battalion; and a bounty of 30 s . per man, per month, when embodied for actual scrvice; but not to exceed $5 l$. to each man on the whole. Provision for the serviccs of the adjutant-gencral to the amount of 75l. Quarter-master-general, 50l. has been made for the year 1836. [B. B.]
XI. The revenue of New Brunswick is principally derived from duties levied on the importation of goods at the several ports of the province.
In 1820, the gross revenue of the colony was about $30,000 l$. ; in 1825, about $40,000 l$.; and since 1827, thus-

CHAPTER VI.-PRINCE EDWARD ISLAND.

Section I. Prince Edward Island (formerly called St. Joha's) is situated in a kind of recess or bay of the Gulf of St. Lawrence, between the parallels of 46. and 47. 10. north latitude, and of the meridians 62. and 65. west of Greenwich, bounded on the west and south by New Branswiek and Nova Scotia, from which it is separated by Northumberland Strait; on the east by Cape Breton Isle, from which it is distant 27 miles, and on the north by the Gulf of St. Law. rence and Magdalen Islauds. The breadth across the
strait between Traverse and Cape Tourmentine is only nine miles. In leagth Prince Filward Islaad is about 140 miles on a line through the centre of the territory ; in its greatest lreadth 3.4 (in some places not more than 15 miles, with an area of $1,360,000$ acres, or $2,13 \&$ square miles, most favourably situate for commeree, agriculture o: fisheries. Charlotte Town, the capital of Prince Edward Island, is distant from the Land's End in England 2,280 miles ; from St. John's Newfoundland, 5.50; from St. John's New

Brunswick, by sea 360 (across Nova Scotia), from Halifax, by the Cut of Causo, 240; (by Pictou 140 miles), from I'ictou, 40 ; from Miramichi, 120; from Quebsc, 580; and from Cape Ray, the nearest point of Newfoundland, 125 miles.
II. This island was diseovered by Cabot, 24th June 1497, heing the first land seen after his departure from Newfoundland; it was named by this celcbrated Navigator St. John, and not heing formally clamed or settled hy England, the French seized upon it as a part of the torritory of New France or Canada, and in 1663, leased or granted it together with the Magdalen, Bird and Biron Islands to the Sicur Doublett, a captain in the French navy, to be held as a fcudal tenure of the company of Miscou.
The island remained as a fishing atation to the Sieur and his associates (two fishing companies, ) until after the treaty of Utrecht in 1715, when it began to be colonized; and in 1758 there was sajd to have been 10,000 settlers; but this is doubtful, as the French Supreme Government at Quebec discouraged colonization everywhere, except around the strong fortifications which they had erected in various parts of their North American dominions.

In 1758, on the capitulation of Louisbourg, Prince Edward Island, which had formed the granary of that fortress, was taken possession of by the English.

At the conclusion of the peace in 1763, on the arrangement of the conquests made from France, this island, together with Cape Breton Isle, were annexed to the government of Nova Scotia. A great number of the Acadian French on the island were still so hostile to the English that they were included in the order to remove those of Nova Scotia, a large number were in consequence shipped off to the neighbouring continent ; to the South colonies, and to France; in which latter place they were ill received and upbraided for their continual hostilities which had led to the total extinction of the French dominion in North America. Prince Edward Island was included in the general survey of the British empire in America in 1764, and which the commencement of the first American war put a stop to on the continent. The survey of the island being completed in 1766, varlous schemes for its cultivation and settlement were proposed; amongst others, the Earl of Egmont, then first Lord of the Admiralty, proposed settling it oll a feudal plan (his lordship being lord paramount,) with a certain number of baronies to be held of him; each baron to erect a castle or stronghold, to maintain so many men at arms, and with their under-tenants to perform suit and service according to the custom of the ancient feudal tenures of Europe. Upon the rejection of the Earl of Egmont's inupracticable scheme, it was determined to grant the whole island to individuals on certain conditions prescribed by the then Board of Trade and Plantations; but the number of applications being so great, it was thought proper that the different townships should be drawn by way of lottery, which was accordingly done with the exception of two townships, (these were Nos. 40 and 59 , then partly occupied by a fishing company with the consent of government) aome tickets being a prize of a whole township, others half, and others a third; many of the fortunate holders being officers of the army and navy, who had served during the preceding war. The conditions of settlement were26 townships (each township contains about 20,000 acres) to pay $6 s$. per annum for each 100 acres; 29
ditto to pay 4s. for ditto; and 11 townships $2 s$. for ditto; and the grantces were to settle their lands in the proportion of one settler to each 200 acres, within ten years from the date of thcir grants, otherwise the same were to be void.
The mandamuses to the Governor of Nova Scotia, (to which the island was then annexed) issued for each township, to the holders of the fortunate lottery tickets, under the King's sign manual, bear date for the greater part, August 1767 ; and thus, with exceptions scarcely worthy of note, the whole island containing $1,360,000$ acres, was given awny in onc day. [For an account of the effects resulting from this arrangement, see Colonial Library, vol. vii.]
III. The general appearance of Prince Edward Island, is extremely picturesque, though destitute of those bold, and in many instances, romantic features that cliaracterise several parts of the adjacent continent; in general the gurface rises as in New Brunswick, into gentle undulations, without any absolutely flat country, but no were reaching the elevation of mountains; the principal high lands being a chain of hills, traversing the island nearly north and south from De Sable to Grenville Bay; with this exception there are few inequalities to interfere with the ordinary agriculture, to the pursuit of which even a sailor is attracted, by the rich verdure which clothes the country to the water's edge.

The island is divided into three counties. [Sce Colonial Library, vol, vi.]
IV. Prince Edward Isle is a pastoral country,neither limestone, gypsum, coal nor iron have yet been discovered, but in many places the earth and rivulets are deeply impregnated with metallic oxides; the soil is in general a light reddish loam-in some places approaching to a tolerable strong clay-in most districts more or less sandy, but where the latter inclines to a dark colour, it is very fruitful. Red clay is a reddish aandstone, but occasionally, at intervals of several miles, a solitery block of granite is met with; in fact, the whole island seems to have been left dry in latter ages by the waters of the gulf of St. Lawrence, which are evidently continually on the decrease.
V. The climate is neither so cold in winter nor so hot in summer as that of Lower Canada, while it is free from the fogs which rush along the shores of Cape Breton and Nova Scotia. People 100 years of age, without ever knowing a day's sickness, are numerous in the island.
VI. We have no correct estimate of the progressive increase of the population; when taken from the French the island is supposed to have contained 6,000 Acadians, a great number of whom were afterwards removed, as stated under Nova Scotia. Scotchmen form more than one half of the whole population; those from the Hebrides are best suited to the island. The Acadian French are estimated at about 5,000 ; but of the Mic-mac, or native Indians, once so nuncrous, there are probably not more than 30 families on the island. In 1802, the number of inhabitants was, males, 10,644 ; females, 10,007 ; total, 20,671 . In 1822, males, 12,140; females, 12,460 ; total, 24,600 . In 1825, males, 14,140; females, 14,460 ; total, 28,600 . The two last censuses were as follows, viz.-Census of the Population taken under the authority of the Acts George IV, cap. 7, A.D. 1827; and William IV, cap. 7. A. D. 1833.

With the exception of Charlotte Town，nearly all the inhabitants of the island are employed in agricul－ ture．The number of persons employed in commerce are about 1,000 ．
By a Colonial Aet 11th George IV，c．5，all persons solemnizing marriages are required to return certif－ cates thereof to the surrogate of the island，within six calendar months from such solemnization．Those so recorded in the surrogate＇s office this year were －the number of marriage licenses issued by the Lieutenant Governor，as ordinary，were 90.
VII．The established religion of the colony is Epis－ copalian．A large number of the inhabitants are of the Kirk of Scotland，or Romish faith，and there are several Missionary establishments．

X. Prince Edward Island has its own Lieutenantgovernor, Council, and House of Assembly, constituted after the manner described in the preceding chapters; its millitary protection is under the controi of the Nova Scotin Commander of the lorces. The Councll consists generally of nine inembers appointed by the King's mandamus; and the Honse of Assembly of eighteen members, elected by the people as in the other colonies-four for each counts, and two for ench of the towns of Charlotte, Gcorge and Prince towns. The form of procedure is that of the British Parliament. The Executive and Legislntive Council consists of nine members, including the Bishop of Nova Scotia, Surveyor-General, Attorney General, Colonial Treasurer, Town-major, Collector of Customs and Imposta\&e. There is a Court of Chancery regulated after that of Weatminster, over which
the Governor presides; and the jurisprudence of the colony is managed by a Chief Justice. The laws arc linglish. The militia consists of a troop of cavairy In ench county, two companies of artillery, and 11 regiments of foot; the whole comprizing 329 oll cers, and 4, ,h.5 non-commissioned ollicers and rank and file. The regular troops are derived from Nove Scotin, and consist of one Captain, one Subaltern, and rank and the, relieved every year from Hinifax.
XI. The first revenue ettempted to be levied for the support of the government, as before stated, was the quit-rents: these falling in their extent, a Par liamentary grant was applied for and obtnined.
The revenue of the island in 1821, was $2,0.32 l$. ; in $1822,2,3116$; in 1823, 2,0191.; in $1 \mathbb{2} 24,2,0.02 l$; in $1823,2,479 l$. ; in $1826,4,9351$; nnd since then the liseome has been thus:-

Recapitulation by Great Britain ment, 2,240l;

Wharf, 500l; ; road compennation grunted, 77l; luna- $\mid$ appropriations for the erection of the New Covern tics, 891 ; assiyer of welghts and measures, 151.; salary of wharflnger, $40 l$; Prince Town wharf, 94 ; rent of government house, 1506 ; advance for building Georgetown wharf, 30l.; refunded to J. Stewart, 33l.; Leutenant-governor Young, 300l.; repmiring. houses, $40 l$.; conthngencies, 2016.; total, 13,759l. balance, 8,1651 .; grand total, 21,925l.
The expenditure of the past year thus appears considerably to execed that of any former year, the total amount being 13,7591. 6s, $5 \mathfrak{f l}$.; this great increase was contemplated hy the House of Asxembly at its last sesslon, and an lissue of treasury notes was made to meet the expenditure whici was occasloned by the
ment House, Acndeny, and other Public Buildings. together with a larger amomet than usund for the service of Ronds and Bridges, and for wdiditons to the wharis at Charlotte Town and George Town, but in making such additional appropriations a Revenue to redeen that lasue of Treasury Notes was anticipated, and will be derived under the Act levying an assess ment on land. There is a very great deffeiency in the amount of revenue derived from imposts, which can only he accounted for from a falling off in our exporta, oceasioned by the fallure of our agricultural produce for the two last years, and from the advanced prices of foreign articles.

Comparative Yearly Statement of the Expenditure of Prince Edward Island.-[B. 13.]

Comparatively speaking, there is also a good deal of shipping built in the colony;-during the year 1833 there were 32 vessels launched and registeredmany of them stmall, but in the aggregate showing a tonnage of 4,006 . In 1836 the number was 41 , tonnage 4,749 . The number of vessels employed in the foreign and coasting trade belonging to the island in the same year was, foreign, five vessels-tons, 1, 169; men, 45 ; coasting, 124 vessels, tons, 6346 ; men, 359. During the year ending Dec. 1832, there were transferred from the island to other ports, 32 vessels, with a tonnage of 3,202 .
XIII. Amount of paper currency in circulation in 1836. In 5l. notes, $2,350 l$; in $2 l$. notes, $3,396 l$.; in 1l. notes, 4,534l.; in 10s. notes, $3,732 l$.; in $5 s$. notes, $768 l$.; total 14,780l.

Of the last issue of $5,000 l$., the treasurer is directed hy the act to pay off and cancel annually, notes to the amount of $1,000 \mathrm{l}$, until the whole $5,000 \mathrm{l}$. shall be redeemed: of this sum, 1,000 . has been redeemed this year, and there remains 3,000 l. unredeenned. There is no bank in the island.
XIV. Considerable attention is now directed to agriculture and timber.

The mills in the island in 1836, were, King's Connty, grist mills, 13 ; ditto saw mills, 2. Prince
is excellent, American gr exceeded any good. Cabb as good as an English gard acres granted ungranted, 4 ,

The fisheries of Prince Edward Island have not been sufficiently attended to ; the herring fishery is of great importance; it commences early in the spring, when the bays and harbours, particularly on the north side of the island, are no sooner clear of ice than they are filled with immense shoals of those fish, which may be taken in any quantity: they are larger, though not so fat, generally, as those taken off the western coasts of lreland and Scotland, and partake more of the character of the Swedish herring. Alewives or Gasperaus, although not so plentiful as the herring, appear in great quantities. Mackarel are extremely numerous on the coast and in the harbours, from June to November. Cod are caught in great plenty in every part of the Gulf of St. Lawrence, more particularly on the coast of Prince Edward Island, the bay of Chaleur, and in the Straits of Belleisle. Trout is found every where extremely fine, and often very large; the halibut taken, sometimes weigh 3001 bs . Sturgeons are common, in the summer months, in all the harbours, some measuring six to seven feet in length. Perch are found in all rivers and ponds that have a communication with the sea.

The lobsters are in great abundance, and very large and fine. In Europe this kind of shell-fish is only taken on the sea-coast amongst rocks ; at Prince Edward Island they are taken in the rivers and on shallows, where they feed on a kind of sea-weed, called by the islanders eel grass, and a person wading into the water half-leg deep, might fill a bushel basket in half an hour. Many schooners are annually laden with oysters for Quebce and Newfoundland.
The plenty of fish, and the ease with which it is procured, is of great assistance to the inhabitants, and in particular to new settlers, before they have time to raise food from the produce of the land.

The present mode of obtaining land in Prince Edward Island is, either by lease for a long term of years at $1 s$, to $1 s .6 c l$. per acre per annunt - one or more years frce, then $3 d$. per acre, and increasing yearly at that rate to full rent; or by purchase at from 10 s. to 20 s . and upward per nere. This is to be understood of woodland that it is wholly unimproved. Some proprietors have had farms fall into hand with more or less of cleared land on them; these of course are let or sold at an advanced sum, but commonly
for less than the cost of clearing. Emigrants who might not choose to sit down on a wood farm, would have many opportunities of purchasing the leaschold, or freehold, and improvements of partly cleared farms; and it would be wise in those possessing the nicans to do so.

The proprictors, with a view to escape the oppres. sive effect of a quit rent or a land tax, now offer their estates on the following terms :-

1st. Proposed terms for conducting sales of lands in the Island of Prince Edward.

Each township belonging to the undersigned will he surveyed as the demand for lands arise, roads laid out in the most judieious direction, and the land be parcelled out in lots of 100 or 200 acres each, with a frontage on the road of 10 chains to each 100 acres.

An up-set price will bee set on each lot, regard being had to quality and location, varying from 6s. $3 d$. Halifax currency to 20s. Halifax currency per acre; the great body of lands to be offered at the lesser or intermediate prices, and the higher for those lots only of the first quality, as to soil and convenience of location. The government demand, for ungranted lands in the island, 20s. Halifax currency per acre. The average price of land sold by the British North Ame. rican Land Company last year, was $9 s$. per acre. The timber lands, sold in New Brunswick to Americans in large tracts, brought from 10 s . to 15 s . per acre. A tract, belonging to the heirs of Sir John Wentworth, situate in the district of Pictou, in the province of Nova Scotie, sold in 1835 , from $15 s$. to 20 s . per acre; and the undersigned have the best authority for asserting their lands to be equal in soil, and more eligible for settlement, than any of the above referred to. By the British Packet, which arrived in December, one of the undersigned has received a proposal from a resident in the island, for the purchase of 500 acres of his estate, at the price of 20 s. currency per acre.

Sale to be offered on the following terms and conditions :-The purchaser, on paying 25 per cent. of the price, to be let into possession of the land, under an agreement to pay the interest annually, and to be entitled, on one half of the purchase moncy being paid, to have a deed in fee simple. The agreement
to be in wr going into of attorn: be made money. T money, the land, with a cute a war drawn in e

to be in writing, and signed by both parties. Before going into possession, the buyer to cxecute a warrant of attorncy in cjectment, to be acted upon, if failure be made in the payment of interest or purchase money. To secore the other half of the purchase money, the purchaser to give a mortgage over the land, with a power of sale contained in it, and to execute a warrant of attorney in cjectinent, both to be drawn in conformity with the agreement.

As the purchaser is to receive the balance, if a sale should take place, over the money owing by him, it is his interest, as much es that of the proprietor, that suits and legal expenses should be avoided. The power of sale and warrant are insisted upon to save m mecessary expense.

The proprietor to be bound in the saill agreement and mortgage, to receive the balance of the purchase money, with the interest due, whenever tendered.
The purchaser to pay the remaining moicty in five equal instalments, with interest, charged at the rate of five per cent., due at the time of each instalment being paid; on failure of payment, the proprictor to have the right of selling the lot.
If the proprietor, in default of payment by the purchaser, determine to sell, four months' notice, by advertisement in an Island newspaper, must be previously given; and, upon a sale being made, the balance (if any) after deducting expenses, to be paid over hy the proprietor to the owner. After the four months' notice, the proprietor to have the power of selling, at any future time, by public or private sale. ${ }^{\text {I }}$

The purchaser, after he obtains his deed, to have the right to sell at any time to a third party; but the proprietor to have the option of accepting the new purchaser as his debtor for the balance of purchase. money due, or of retaining fur such balance the liabi. lity of the first purchaser.
The buyer to take the land subject to the payment of quit rent, and any tax now imposed, or that may hereafter be imposed, upon the land.

2nd. Terms of settlement proposed to the present tenantry. The occupying tenants to have the option of purchasing their farms at 20 years' purchase in every case, supposing the rents to be $1 s$. per acre; if more rent be paid, this sum and proportion to be adopted as the maximum; and to be allowed the same liberal conditions for paying the purchase-money as already stated; or they may continue to hold on lease, as may be most agreeable to them.

It is impossible to fix a standard to meet the circumstances of each individual case.

The proprietors bind themselves, absolutely, not to exceed the years of purchase above proposed with any tenant; but they are ready to open a negociation with each of them, and to take into favourable consideration the circumstances which the tenant is of opinion entitle him to a deduction.

The proprietors have the clearest evidence to prove that many acttlements have been effected in past yeara by the tenants upon these terms, and that they will be most acceptable at the present time to the great body of the tenantry.

3rd. Terms proposed to Emigrants and New Setthers for leasea. To those who, in place of purchas. ing, prefer to remain as tenants, to emigrants, and to new settlera, the lands will be let in lots of 100 acres each, upon the following terms:-
Leases will be granted for 61 years certain, or the longest of three lives, to be named when the lease is executed, or for 99 years, upon the following rents :-

First and second year No rent.

And to continue for the remainder of the term, at the rent of 1 s . per acre, or $5 l$. sterling for 100 acres. The tenant to pay the quit rents, and all taxes now existing, or to be hereafter imposed opon land.

The rents to be paid by the tenant, either in money, or in grain, salted beef, pork, or butter, raised from the land, at the market price, to be delivered either at Charlotte Town, or at some other shipping port, as may be decided upon by the proprietor; and a written or prioted notice to be given to the tenant, or left at his usual place of ahode, at least one month previous to the day of payment. The grain and other articles named, to be delivered in good marketable or shipping condition.

The rent to be paid in labour, if the proprietor require it ; but the tenant to have the option of paying in money, or produce raised from the land.

The tenant, at any future time during the continuance of the lease, to have the right of purchasing upon the same terms as befure detailed. This will appear as a condition in the lease.

The term day, for the payment of rents, to be the 20th of November in each year.

The undersigned hereby agree to be bound, absolutely, to the terms above stated, for the period of five years from the 1st of May next.

Average prices of carious proluce and merchandize in 18.36.-Horned cattle, $7 l$. each; horses, $18 l$.; sheep, $10 s$. ; swine, $1 l$. $10 s$. ; milk, per quart, $4 u$.; butter, fresh, per 1b., 1s.; butter, salt, 10l.; cheese, 9 d.; wheaten bread, $2 \frac{1}{2} l$. ; beef, $3 l_{\text {. }}$; mutton, $3 d$. ; pork, 3 l. ; rice, 3 d. ; coffee, $1 s .3 \mathrm{~d}$. ; tea, $3 \mathrm{s} 9 d.$. ; sugar, $6 d$. ; salt, per bushel, 1s. $9 d$. ; wine, per gallon, $12 s$. ; brandy, $12 s$. ; beer, $1 s .2 d$. ; tobacco, per lb., $1 s .9 d$.

Wages for Labour.-Domestic, per month, from 15s. to $1 l .10 s$. ; predial, from 1l. $10 s$. to $2 l$. ; trades, from $4 l$. to $6 l$.

Estimuted Value of Property annually created in l'rince Elucard siand, aud, if not consumed, concerted into moveable or immoreable property.-Animal food for 33,000 mouths, 200 lbs . each per annum, at $4 d$. per lb., $110,000 \mathrm{l}$. fish for 33,000 mouths, 150 lbs . each per annum, at $1 \frac{1}{2} d$. per $\mathrm{lb} ., 30,937 l$; bread and other vegetables for 33,000 mouths, at $3 d$. per day for each person, $150,606 l$.; butter, milk, cheese, and eggs fur 33,000 mouths, at $1 d$. each per day for 365 days, 50,1871 .; luxuries-viz. wines, spirits, ale, tea, coffee, sugar, \&c., ior 33,000 mouths, at 3 d . each per day for 365 days, $150,606 l$.; food for horses, cows, \&c., 100,000 animals, at $1 l$. each per annum, $100,000 l$.; clothes and furniture worn out for 33,000 mouths, at $3 l$. each per annuin, $99,000 l$.; domestic manufac. tures, \&c., annually produced, value $100,000 l$.; income from business, or profits on professions, \&c., at $10 l$. each, $330,000 l$. ; waste by fire, loss, had seasons, \&c., value $25,000 \ell$.; total annual production of property, $1,146,336 l$.

Value of Moveable Property : Horses, 6,299, at $10 l$ each, $32,990 l$. ; horned cattle, 30,428 , at $5 l$. each, $152,140 l$.; sheep, 50,510 , at $1 l$. each, $50,510 l$.; swine, 20,702 , at $\mathrm{I} l$. each, $20,702 l$.; poultry, value, $25,000 l$. ; house furniture, \&c., value $500,000 l$.; clothing and equipage, value $165,000 l$.; machisery, farming im. plementa, \&c., value $100,000 l$.; bullion and coin, value $10,000 l$.; ships, boats, timber, and other merchandize, value $1,000,000 l$.; total moveable property, $2,056,342 l$.

Value of Immoveable Property: Houses, 5,500, at $10 l$. each, $55,000 \mathrm{l}$.; saw and grist mills, \&c., 75 , at 200 l . each, $15,000 \mathrm{l}$.; land arable, 100,000 acres, at 5l. per acre, $500,000 l$.; land occupied, but untilled, 400,000 acres, at $1 l$. per acre, $400,000 l$.; land not granted, 900,000 acres, at Is. per acre, $45,000 l$.;
roads, canals, dykes, bridges, wharfs, \&c., value 160,000l. ; forts, gaols, churches, barracks, \&e., value k0,000l.; manufactures, mines, quarries, \&c., value $50,000 l$.; total immoveable property, $1,305,000 l$. ; total moveable and immoveable, $3,361,342 l$.

CHAPTER VII.-NEWFOUNDLAND AND THE LABRADOR COAST.

Section I. Newfoundland Isle, lying on the N. E. side of the Gulf of St. Lawrence, between the parallels of 46.40. to 59.31 . N. latitude, and the meridians of 52.44 . to 59.31 . longitude W. of Greenwich, is bounded on the whole eastern shore by the Atiantic Ocean; on the N. E. and N. it is separated from the coast of Labrador by the Strait of Belleisle (which is about 50 miles long, by 12 broad), on the N . W. by the Gulf of St. Lawrence, and on the" S. W. it approaches at Cape Ray towards Cape Breton Isle, so as to form the main entrance from the Atlantic Ocean into the Gulf of St. Lawrence. Its extreme length, measured on a curve from Cape Race to Griguet Bay, is about 420 miles; its widest part, from Cape Ray to Cape Bonavista, is about 300 miles ; and, excluding its broken and rugged shores, the circumference may be stated at 1,000 miles-the whole comprising an area of 36,000 square miles.

Newfoundland is the nearest part of America to Europe, the distance from St. John's, in NewfoundIand, to Port Valentia, on the west coast of Ireland, being 1656 miles, and which might be traversed every month throughout the summer, if steam packets were established, in from cight to ten days.
II. The history of this island begins, according to tradition, with its possession hy Biorn, a sea king, or pirate of Iceland, who was driven thither, and is said to have taken shelter near Port Grace Harbour, about the year 1001. It is doubtful, however, whether his party ever colonized the island, if so perhaps they had become extinct before its second discovery by John Cabot, the Venetian, who obtained a commission to make discoveries from Henry VII, and during his first voyage, 24th June, I497, observed a headland, which, as a lucky omen, he named Bonarista, which name it retains to the present day. Cabot brought home with him three of the natives, who were clothed in skins, and speaking a language which no person understood.

Robertson and Pinkerton were of opinion that Newfoundland was first colonized by the Norwegians, and the latter thonght the red Indians degenerated savages from the Norwegian settlers, whom Eric, Bishop of Greenland, went to Winland, in I221, to reform.

The Newfound Island having been afterwards visited by Cotereal, a Portuguese, and Cartier, the French navigator, who reported most favourably on the abundance and excellency of its cod fishery (owiing to which it was called Bacalao, the Indian name for that fish), soon attracted fishermen from European nations to visit its coasts : still no permanent settlement was made, and the fate of the early attempts at this object were such as, for a length of time, to deter future adventurers. Besides several others, Mr. Hoare, a merchant of London, fitted out a ship, and attempted to puss the winter there in 15,36 , but the crew, to
avoid starvation were obliged to resort to the most horrible expedients, and indeed would all have perished had they not luckily found a French ship, in which the emaciated survivors returned to England, giving deplorable accounts of their sufferings. Not deterred by this failure, however, and his own first attempt in 1578 , Sir Humphrey Gilbert, the enterprising half brother of the famous Sir Walter Raleigh, having obtained a patent from Queen Elizabeth for six years, granting him possession of 200 leagues round any point he chose to settle on, sold all his estates in lingland, and fitted out five small vessels, in which he embarked with 200 people in 1583. Sir Humphrey landed in the Bay of St. Jolin's, and took quiet possession of the country, in the presence of a vast concourse of fishermen, being the crews of 36 vessels of difterent nations. This unfortunate adventurer was, however, not destined to realize his hopes; being anxious to take possession of as much country as possible, before the expiration of his patent, he proposed to prosecute his discoveries to the south; but his crews mutinied, and part of them returned home; of those who followed him above 100 were lost, in a gale, on board of one of the ships, off the Sable Island, or bank, and disheartened by their adverse circumstances, the others insisted on his steering homeward, which Sir Humphrey reluctantly consented to, remarking that he had but suspended his scheme until the next spring, 'when he would it out an expedition royally.' His ship, however, foundered in a storm on the passage home, and thus ended this disastrous expedition.

In 158.), according to our next accounts, a voyage was made to Newfoundland, by Sir Bernard Drake, who claimed its sovercignty and fishery in the name of Queen Elizabeth. Sir Bernard seized several Portuguese ships laden with fish, and oil, and furs, and returned to England; but, owing to the war with Spain, and the alarm caused by the Spanish armada, several years clapsed before another voyage was made to the island.

A fresh attempt was made at a settlement in 1610, but this was also ahandoned, as well as several subsequent ones. The attempt in 1610 was made by virtue of a patent granted by James I. to the Lord Chancellor Bacon, Lord Verulam, the Earl of Northampton, Lord Chief Baron Tanfield, Sir John Doddridge, and 40 other persons, and under the designation of the "Treasurer and Company of Adventurers and Planters of the Cities of London and Bristol for the Colony of Newfoundland." The patent granted the lands between Capes St. Mary and Bonavista, with the seas and islands lying within ten leagues of the coast, for the purpose of securing the trade of fishing to our subjects for ever. Mr. Guy, an intelligent and enterprising merchant of Bristol, who planned this expedition, settled in Conception Bay, remained there two
ycars, and some of his at planting

years, and then returned to England, lewing hehind some of his people to carry on the fishery, the attempt at planting being laid aside.

In 1614, Capt. Whitburn was sent out with a commission from the Admiralty to empannel juries, and investigate the abuses complained of thy the fishermen; he held a Court of Admiralty on his arrival; and insmediately received complaints from the masters of 170 vessels. In two years from this period, Whitburn was appointed chief over a little colony of Wetshmen, formed by Dr. Williann Vaughan on the south part of the island, nained by him Cambriol (now Littie Britain), and which he purchased from the patentees before mentioned.

And what may be considered the first permanent colony, was established in 1623 by Sir George Calvert, afterwards Lord Baltimore, in order that he might enjoy the excreise of his religion, which was Roman Cathotic. The settlers fixed their bead quarters at Ferry Low, spreading by degrees over all the bays in the south-eastern peninsula. Lord Baltimore made his son governor over the cotony, which he called Avalon, and soon after proceeded thither himself, and it increased and flourished under his management: how his lordship contrived to set aside the former patentees is not known.

Aralon was the ancient name of Glastonbury, in Somersetshire, where it is said Christianity was tirst preached in Britain: Lord Baltimore transferred the name to his new colony under the idea that it was the first place in North America where Christianity was established.

So important did the settlement of this colony now appear to the allthorities at home, that we find the commissions directed to the Lord Treasurer, and others, 'to crect a common fishery, as a nursery for seamen;' and the first regulation for "governing of His Majesty's subjects inhabiting in Newfoumdlund, or trafficking in bays," \&e. (a very interesting document) was issued by Charles I, and bears date I fi33, about which time Lord Falkland sent a colony from Ireland to Newfoundland.
In 1654, Sir David Kirk obtained a grant from Parliament of certain lands in Newfoundland, and procecded thither with a few settlers; at this time, notwithstanding the constant bickerings between our people and the French, who had established a colony at Placentia, there were settlements efficcted in fifteen different parts of the island, altogether amounting to 300 families : yct, strange to say, that for many years after this the Board of Trade and Plantations did every thing in their power to prevent any settlers colonising on the island, and authorised the commission of various acts of cruelty on those who had setticd !
Shortly after the accession of William HII., on war breaking out with France, one of the causes for which was set forth that, " of late the incroachments of the French upon Newfoundland, and His Majesty's subjects' trade and fishery there, had been more like the invasions of an enemy than becoming friends, who enjoyed the advantages of that trade only by permission." The French settlement was attacked, in September, 1692, by Commander Williams, but owing to the spirited conduct of the French governor, the expedition succeeded in doing no more than burning the works on Point Vesti. On the other hand, in 1696, the Chevalier Nesmond, with a strong squadron of French ships, aided by the force on the island, made a descent on the town and harbour of St. John, hut having totally failed, he returncd to France.

Before the close of that year the French were, however, more suceessful, for another squadron arriving under Brouiltan, he, in concert with Ibberville, attacked St. John's, which heing now short of military stores, and in a very defenceless state, was compelled to surrender. The French however, did not retain it, but having set fire to the fort and town, sent the garrison on parole to Eugland.

The French admiral appears to have done nothing further, in consequence of a misunderstanding with Ibberville, who commanded the troops, and who followed $u_{j}$ his success by destroying all the British settlements, except those of Bonavista and Carbonia Harbour, failing before which, he returned to Placentia.

To retrieve these losses, a British squadron under Admiral Nevil, with 1,500 troops, commanded by Sir John Gibson, was dispatched, hut the cowardice of one commander and the ignorance of the other disappointed the anticipated results; in the meantime the peace of Ryswiek put an end to hostilities by replacing things in the position they were in prior to this war, and Sir John Norris was appointed governor to see that the stipulations were properly ollserved. The government of Newfoundland was at this time an object of ambition, and we find it always conferred on some distinguished offieer of the royal navy. Many Acts of Parliament were enacted to regulate the fisheries, conferring privileges on fishing ships, and prohibiting the importation of fish taken by foreigners in foreign ships.

Shortly after the declaration of war against France, in May 1702, Sir John Leake was dispatched with a small squadron to take possession of the whole island, and arriving from England in August, he partially effected the object of his mission, by destroying the French settlements at Trepassey, St. Mary's, Colinet, Great and Little St. Lawrence, and the Island of St. Peter's; and, burning the fishing-honts, he returned to Engtand at the end of the year with twentythree prizes.

In the following year Vice-admiral Graydon, being ordered with a squadron to proteet the plantations, arrived off the coast of Newfoundland August 2d.; but owing to a fog, which continued with great density for thirty days, his ships were dispersed, and could not be brought together till the 3d. ol September. He now called a council of war, as to the practicability of attacking the strong hold of the French at Placentia, and it was decided that it would not be prudent to do so with the force at his disposal, on which he returned to England, without effecting more than protecting the trade, by the presence of his fleet: the Admiral was severely and justly censured for his conduct.

The miscarriage of Graydon, encouraged the French to attempt the conquest of the whole island; and the garrison of Placentia having been strongly reinforced from Canada, in the year 1705 , five hundred men were dispatched under the command of Subercase, and made a resolute attack on Petty Harbour, a port within nine miles of St. John's, where they were repulsed; the French, however, devastated the different settlements, destroyed Fort Forillon, and spread their ravages coastwise as far as Bonavista.

In the year 1706, Captain Underdown, with only ten ships, destroycd many of the French vessels in the harbours along the coast, notwithstanding that the Fronch had as many as ten armed vessels on that station, and by his activity and success gave a severe blow to their trade. Although Parliament carnestly
entreated the Queen to ' use her royal endeavours to recover and preserve the ancient possessions, trade and fisheries of Newfoundland,' little attention was paid to this humble address, the whole disposable force being assigned to the Duke of Marlborough at that time, in the midst of his victorious carecr. The French, however, notwithstanding their repented disasters on the continent, still continuel to persevere in their endeavours for the expulsion of the English from Newfoundland, and accordingly, St. Ovide, the King's Licutenant at llacentia, having effected a landing without opposition, or without being discovered, within five leagues of St. John's, attacked and completely destroyed that town, on the lst of January 1708

Costabelle, the Fiench commander-in-chicf, next directed his force on Carbonin, the only settlement of consequence remaining in the hands of the English, but, on this occasion he wes not so fortunate, and was even obliged to abnadon the cnterprise, after destroying all the buildings within their reach.

The news of this misfortune produced great exciteme'rt in England, as the possession of the fisheries had ever been corsidered a point of immense importance, and an expedition was ordered, under Captain G. Martin and Colonel Francis Nicholson, to attempt the conquest of the island; but, owing to the strong force of the French, they could effect no more than the destruction of a few fishing stations. From this time until the treaty of Utrecht, the French remained in peaceable possession of Newfoundland: by this treaty, however, the island, as well as the adjacent ones, were declared to belong wholly to Great Britain The French being allowed to eatch and cure fish on certain conditions, and to occupy the islets of St. Pierre and Miquelon, with a garrison of fifty men cach.
The final conquest of all their American colonies in the seven years' war, made the French glad to receive back this privilege again at the peace of 1763 but as the French have now set up an exclusive (instead of a coucurrent) right to a large extent of the const fishery, and procecded to drive away, by force, British vessels engaged in fishing on the very shores of their own island, 1 give here the following extracts from the treatics between Eugland and France, from 1713 to 1814.

Negotiations respecting Newfoundlanl.—Treaty of Utrecht, 1715.-Art, 13. "The Island called Newfoundland, with the adjacent islands, shall from this time forward belong of right wholly to Great Britain; and to that end the town and fortress of Placentia, and whatever other places in the said island are in possession of the French, shall be yielded and given up, within seven months from the exchange of the ratifications of this treaty, or sooner, if possible, by the most Christian King, to those who have a com mission from the Queen of Great Britain for that purpose. Nor shall the most Christian King, his heirs and successors, or any of their suljects, at any time hereafter, lay claim to any right to the said island or islands, and to any part of it, or them. Moreover, it shall not be lawful for the sulyjects of France to fortify any place in the said island of Newfoundland, or to erect any buildings there, besides stages made of boards, and huts nccessary and usual for drying of fish; or to resort to the said island beyond the time necessary for fishing, and drying of fish. But it shall be allowed to the suljects of France to catch fish, and to dry them on land, in that part only, and in no other besides that, of the said island
of Newfoundland, which stretches from the place called Cape Bonavista to the northern part of the said island, and from thence running down by the western side, reaches ns far as the place called Point Riche. But the island called Cape Breton, as also all others, both in the mouth of the river St. lawrence, and in the gulph of the same name, shall herenter belong of right to the French, and the most Christian King shall have all manner of liberty to fortify any place or places there."

Treaty of Paris, 1763.-Art. 5. "The suhjects of Franee shall have the liberty of fishing and drying on a part of the coasts of the island of Newfoundland, such as it is specified in the 13th article of the Treaty of Utrecht; which article is renewed and confirmed by the present treaty (except what relates to the island of Cape Breton, as well as to the other islands and coasts in the mouth and in the gulph of St. Lawrence) : and his Britannic Majesty consents to leave to the subjects of the most. Christian King the liberty of fishing in the gulph of St. Lawrence, on condition that the subjects of France do not exercise the said fishery but at the distance of three leagues from all the coasts belonging to Great Britain, as well as those of the continent, as thuse of the islands situated in the said gulph of St. Lawrence. Ard as to what relates to the fishery on the coasts of the island of Cape Breton out of the said gulph, the subjects of the most Christian King shall not be permitted to exercise the said fishery but at the distance of fifteen leagues from the coasts of the island of Caje Breton, and the fishery on the consts of Nova Scotia or Acadia, and everywhere else out of the said gulph, shall remain on the footing of former treaties."

Art. 6. "The King of Great Britain cedes the islands of St. Pierre and Miquelon, in full right, to his most Cliristian Majesty, to serve as a slielter to the l'rench fishermen : and his said most Christian Majesty engages not to fortify the said islands; to erect no buildings upon them, but mercly for the convenience of the fishery; and to keep upon them a guard of fifty men only for the police."

Treaty of Versailles, $1783 .-A r t .4$. "His Majesty the King of Great Britain is maintained in his right to the island of Newfoundland, and to the adjacent islands, as the whole were assured to him by the 13 th article of the treaty of Utrecht; excepting the islands of St. Pierre and Miquelon, which are ceded in full right, by the present treaty, to his most Christian Majesty.

Art. 5. " His Majesty the most Christian King, in order to prevent the quarrels which have hitherto arisen between the two nations of England and France, consents to renounce the right of fishing, which belongs to him in virtuc of the aforesnid article of the Treaty of Utrecht, from Cape Bonavista to Cape St. John, situated on the eastern coast of Newfoundland, in fifty degrees north latitude : and his Mnjesty the King of Great Britain consents, on his part, that the fishery assigned to the subjects of his most Christian Majesty, beginning at the said Cape St. John, passing to the north, and descending by the western coast of the island of Newfoundland, shall extend to the place called Cape Raye, situnted in forty-seven degrees fifty minutes latitude. The French fisherinea shall enjoy the fishery which is assigned to them by the present article, as they had the right to enjoy that which was assigned to them by the treaty of Utrecht.

Art. 6. "With regard to the fishery in the gulph of St. Lawrence, the French shall continue to excrcise
it, confor Paris."

Declaration of his Britannic Majesty.-1. "The King having entirely agreed with his most Christian Majesty upon the articles of the definitive treaty, will seek every means which shall not only ensure the execution thereof, with his accustomed good faith and punctuality, but will beside give, on his part, all possible efficacy to the principles which shall prevent even the least foundation of dispute for the future.
"To this end, and in order that the fishermen of the two nations may not give cause for daily quarrels, his Britannic Majesty will take the most positive measures for preventing his subjects from interrupting, in any manner, by their competition, the fishery of the French, during the temporary exercise of it which is granted to them upon the coasts of the island of Newfoundland; and he will for this purpose, cause the fixed settlements, which shall be formed there, to he removed. His Britannic Majesty will give orders that the French fishermen be not incommoded in cutting the wood necessary for the repair of their seaffolds, huts, and fishing vessels.
"The thirteenth article of the trenty of Utrecht, and the method of carrying on the fishery, which has at all times been acknowledged, shall be the plan upon which the fishery shall be carried on there: it shall not be deviated from by cither party; the French tishermen building only their scaffolds, contining themselves to the repair of their fishing vessels, and not wintering there; the subjects of his Britannic Majesty, on their part, not molesting in any manner the French fishermen during their fishing, nor injuring their seaffolds during their absence.
"The King of Great Britain, in ceding the islands of St. Pierre and Miquelon to France, regards them as ceded for the purpose of serving as a real shelter to the French fishermen, and in full confidence that these possessions will not become an olject of jealousy between the two nations; aud that the fishery between the said islands and that of Newfouncland shall be limited to the middle of the channel.
"Manchester.
" Given at Versailles, the 3rd September, 1783. ."
Counter Decluration of his most Christi, $n$ Majesty. --"The principles which have guided the King in the whole course of the negociations which preceded the re-establishment of peace, must liave convinced the King of Great Britain, that his Majesty has had no other design than to render it solid and lasting, by preventing as much as possible, in the four quarters of the world, every subject of discussion and quarret.
"The King of Great Britain undoubtedly places too much confidence in the uprightness of his Majesty's intentions not to rely upon his constant attention to prevent the islands of St. Pierre and Mijuelon from becoming an object of jealousy between the two nations.
"As to the fishery on the consts of Newfoundland, which has been the object of the new arrangements settled by the two Sovereigns upon this matter, it is sufficiently ascertained by the fifth article of the treaty of peace signed this day, and by the declaration likewise deliverel to-day, by his Britamic Majesty's Am bassador Extraordinary and llenipotentiary; and his Majesty declares that he is fully satistied on this head.
" In regard to the fishery hetween the island of Newfoundland and those of St. Pierre and Miquelon, it is not to be carricd on by cither party, but to the niddle of the channel; and his Majesty will give the most positive orders that the French fishermen shall
not go beyond this line. Hia Majesty is firmly persuaded that the King of Great Britain will give like orders to the English fishermen.
"Gravier de Veagenneb.
"Given at Versailles, the 3 rll September, 1783."
Treaty of Paris, 1814. - Art. 8. "His Britannic Majesty, stipulating for himaelf and his ullies, engages to restore to his most Christian Majesty, within the term which shall be bereafter lixed, the colonies, fisberies, factories, and establishments of every kind which were possessed by France on the Ist Janmary, 1792, in the seas, and on the continents of America, Afrie:1, and Asia, with exception, however, of the islands of Tobago and St. Lneic, and the Isle of Franee and its dependencies, especially Rodrigues and Les Sechelles, which several colonies and possessions his most Christian Majcsty cedes in full right and sove. reignty to his Britannic Majesty, anll also the portion of St. Domingo ceded to France by the treaty of Basle, and which his most Christian Majesty restores in full right and sovereignty to his Catholic Majesty.

Art. 13. "The lirench right of tishery upon the Great Bank of Newfoundland, upon the coasts of the island of that name, and of those adjacent islands in the st. Lawrenee, shall be replaced upon the looting in which it stood in 1792."

Treaty of P'aris, 1815.-Art. 11. "The treaty of laris of the 30 th of May, $1 \times 14$, and the final Act of the Congress of Vienna of the 9 th of Jume, 181:, are confirmed, and shall be maintained in all such of their enactments which shall nothave been modified by the artieles of the present treaty."

In order to elncidate the meaning (if indeed sneh be required) of the treaties betwenn Great Britain and France, on the sulbject of an Podusirr or conerr. rent right of fishing on the Newfoundland coasts, the following extracts from the treaties on the same subject, between England and the United States are subjoined.

Treaty of 1783 .-Art. 3. "It is agreed that the people of the United States shall contimue to enjoy unmolested the right to take fish of every kind on the Grand Bank, nall all other banks of Newfoundland, also in the gulf of St. Lawrence, and at all other places in the sea where the inhabitants of hoth countries used at any time berctotore to fish; and also that the inhabitants of the United States shall have liberty to take fish of any kind on such part of the coast of Newfoundland as British fishermen shall use (but not to dry and cure the same on that island), and also in bays and creeks of all other of his Britannic Majesty's dominions in America; and that the American fishermen shall have liberty to dry and cure fish in nny of the unsettled bays, liarbours and creeks of Nova Scotia, Magtalen Islands, and Labrador, so long as the same shall remain unsettled; but so soon as the same or either of them shall be settled, it shall not be lawful for the said fishermen to dry or cure fisll at such settlements without a previous agreement for that purpose with the inliabitants, proprietors or possessors of that gromul."

In 1818, the United States' Plenipotentiary knew too well the value of the privileges of fishing on the coasts of our territory not to make it an important braneh of his negociations; thus-
"Whereas," says the convention, "differences have arisen respecting the liberty elaimed by the United States tor the imbabitants thereof, to take, dry, and cure fish on certain coasts, bays, harbours and crecks of his Pritannic Majesty's dominions in America; it is agread hetween the single contracting parties, that
the inhabitants of the said United States shall have for ever, in connexion with the subjects of his Britannic Majesty, the liberty to take fish of every kind on that part of the southern coast of Newfoundland which extends from Cape Ray to the Rameau Ialands, on the western and northern coast of Newfoundland, from the said Cape Ray to the Guiperon Istands, on the shores of Magdalen Jslands, and also on the coasts, bays, harbours and creeks, from Mount Jolly, on the southern coast of Labrador, to and through the Straits of Belleisle, and thence northwardly, indefinitely along the coast, without prejudice, however, to any of the exclusive rights of the Hudson's Bay Company."

The practical effect of the claims enforeed by the French of exclusive rights on our coast, and which as justly may be claimed on the coast of Sussex, is the virtual cession of the larger and better half of Newfoundland to France, for from Cape Ray to the Quirpon islands, not ten British settlers are to be found, although the land is well adapted for cultivation and pasturage.
III. Little is known of the interior of this vast island, which stands on an immense bank, in length about 600 miles, with a breadth of about 200 miles, and with soundings varying from 25 to 95 fathoms.

There are two banks, the outer one lies within the parallels of 44. 10, and 47.30. N. latitude, and the meridians 44.15. and 45.25. W. longitude, with soundings from 100 to 160 fathoms. This bank appears to be a continuation of the Great Bank, and a succession may be observed the whole way to Nova Scotia.

Newfoundland is in shape nearly triangular, the apex thereof being to the northward, and the base extending east and west from Cape Ray to Cape Race. Like the Nova Scotia shores, and for a reason similar to the one given under that chapter, the coast is every where indeited at intervals of two or three miles, by broad and deep bnys, innumerable harbours, coves, creeks, und rivers. The island all round is rocky, (with pebbly beaches), generally covered with wood down to the water's edge, and with some lofty headlands on the S. W. side.
Beginning at the south-east part, Newfoundland is formed into a peninsula of 26 leagues in length, and five to 20 in breadth, by two large bays, the heads of which are separated by an isthmus not exceeding four miles in width. This peninsula has five large bays, and several smaller ones, and is that part of the island named by Sir George Calvert, afterwards Lord Baltimore, Avalon.
To the north of Avalon, and on the eastern side of the island, lies Trinity Bay, between 47.55, and 48 . 37. north latitude. This bay nearly divides the old province of Avalon from the rest of Newfoundland; separated from the Bay of Bonavista by a narrow neck of land; it has on the north side Trinity Harbour, Ireland's Eye, and Long Harbour; to the south west, Bull's Bay and Islands, and Tickle Harbour ; to the south Chajel Bay; to the cast and north-cast Heart's Delight, Heart's Content, \&e.; and from thence through the Harbours of New Pelican and Old Pelican, we pass Break-heart Point, leading to the Point of Grates.

Round this point, about three miles from Conception Bay, lies the small island of Baccalao, an insulated rock, where an extraordinary number of birds congregate to hatch their young-these are called Baccalao birds; and from their continual scream being heard a considerable distance at sea, and serving as a warning to mariners during the constant
fogs, the different governors (in former years) have issued proclamations imposing severe penaltics on such as should molest them.

Conception Bay ranks as the first district in New. foundland, not only from its numerous commodious harbours, coves, \&c., hut from the spirit and enterprise of its inhabitants. Harhour Grace is the principal town of this district; Carbonear, or Collier's Harbour is the next in importance, but its harhour, though spacious, is not considered at all scasons secure; besides these there are several considerable settlements, as far up the bay as Holy Rood, formed by the deep inlets, separated by perpendicular rocks, which run out into the sea for two or three leagues, though they are not a mile in breadth. The scenery on this part of the coast is majestic, wild, and calculated to strike the beholder with awe.

The Cape of St. Francis, the eastern boundary of Conception Bay, is distant seven miles from St. John's Harbour ; four lengues lower is Torbay, a fishing station; and three leagues further is St. John's. The harbour is one of the best in the island, being formed between two mountains, the eastern points of which leave an entrance, called the Narrows.

From the circumstances of the harbour being only accessible by one very large ship at a time, and from the numerous fortifications and batteries erected for its protection, St John's is a jlace of considerable strength. The Narrows, which is the only assailable part, is so well guarded that any vessel attempting to force an entrance would be inevitably sunk. There is a signal post on the top of a lofty hill, on the right of the entrance of the Narrows, which telegraphs to the town the arrival of every vessel that passes, where from, and the length of passage.There are about 12 fathoms water in the middle of the channel, with tolerably good anchorage ground. The most lofty perpendicular precipices rise to a considerahle height upon both sides, but the southern shore has rather the greater altitude, only from a comparison with the opposite rocks. There is a light shewn every night at Fort Amiherst on the left side of the entrance, where there is also a signal post, whence the ships that pass are hailed, and signals made to the hill before-mentioned, which repeats them to the Government House and the Town: other batteries of greater strength appear towering above the rocky cminences towards the north. At about two-thirds of the distance between the entrance, and, what may properly be termed the harbour itself, there lie's a dangerous shelt; called the Pancake, opposite the Chain Rock, so named from a chain which extends across the strait at that place, to prevent the admission of any hostile ficet. Mariners on entering the place ought to beware of approaching too near the rocks, on the larboard-hand inside the light-house point. Fort Townshend is situated immediately over the town, and was the usual residence of the governor. Fort William is more towards the north; and there is also a small battery perched on the top of a single pyramidical mount, called the Crow's Nest. The south-east limits of St. John's Bay is formed by Cape Spear, about four miles from the Narrows. Petty Harhour is a fishing station of some importance, as is also the Bay of Bulls about seven leagnes from the mouth of the harhour. This last is difficult of access on account of some sunken rocks, but once in vessels are land locked and ride in safety. [For topography, ¿C., see "Colonial Lib. rary," vol. vi.]

Of the Labrador coast we know yet less than of the
adjacent island ment it belong to the 618t deg the Atlantic) to the prevailing and mountains.
IV. The pre gneis. adjacent island of Newfoundland, to whose government It belongs. It may be said to extend from 50 to the 61st degree of north latitude, and from 56 (on the Atlantic) to 78 (on Hudson's Bay) west longitude, the prevailing featurea bcing rocks, swamps, valleys, and mountains.
IV. The prevailing rock on the Labrador enast is gneis. On this at Lanse a Loup, a bed of old red sandstone is super-ground, abont 200 feet thiek, and axtending above half a mile inland. Here also, as on every other part of the coast of lahrador visited, the appearance of the cliffs, and of the land near them, and the rolled masses inland, which have evidently been exposed to the action of the sea, scem to prove that this has considerably receded. The sandstone is generally red and white, in alternate stripes, and presents a remarkable mural front to the sea. Near the surface it was strongly marked with iron. The whule of the rock was composed of white quartz and yellow felspar; and the grains were generally as fine as oatmeal, though occasionally coarser, cven to the extent of half an inch in diameter. Both coarse and tine bear marks of being a mechanical deposit, heing perfectly distinct, without the least appearance of amalgamation; only a few exceptions occurring to this remark.

Over the red sandstone was a thin stratum of red compact felspar, containing vegetable impressions, and also horizontal. Above this were varieties of secondary limestone, arranged in parallel strata scveral feet thick, and full of shclls. Detached masses of primitive limestone were also found; and a few miles from the shore the secondary formations generally disappeared, leaving gnels and mica slate on the surface.

The geology of the contiguous island of Newfoundland is of the same features as that on the Iabrador coast. The former abounds, it is said, with minerals of various sorts. The oldest inhabitants assert that Conception Bay contains mines of scveral sorts, at the head of Chapel Cave there is a coal mine, a lime kiln was erected in that neighbourhood some years back and worked with tolerable suecess. There is said to be an iron mine on the northern side of Belleisle, and another at Harbour Grace; and many of them affirm that there is a copper mine near St.

John's, which has actually been worked by Corniah miners brought out for that purpose. There is also a quantity of that mincral called marcasite, copperas stone, and horse gold (and which some of the earlier discoverers mistook for the genuine metal) found about Catalina Harbour. Coal has been fonnd on the banks of the Humber, and there are excellent gypsum quarries near Cape Ray. Although a large part of the island consists of plains, studded with rocks, and termed "barrens," there is a considerable extent of alluvial soil capable of growing wheat and other grain. Springs of fresh water everywhere abound, and the island is well adapted for the pasturage of horned cattle on an extensive scale.
V. The climate of Newfoundland varies according to the locale of the island, whether north or aouth, and the weather, although severe, is less fierce than that of Lower Canada, while during a long winter the brilliancy of the Aurora Borealis and the splendid lustre of the moon and stars give peculiar beauty to the atmosphere.

The longevity of the inhabitants is the best proof of the salubrity of Newfoundland, in no country is old age attended with greater bodily vigour and mental animation. There are instances of fishermen 100 ycars of age being actively employed in the arduous duties of their ealling.

On the const of Labrador the winter is extremely severe, the thermometer often falling $30^{\circ}$ below the freczing point, and although the houses of the Moravian Missionaries are heated by large cast iron stoves, the windows and walls are all the winter covered with ice, and the bed clothes frecze to the walls; rum is frozen in the air as rapidly as water, and rectified spirits soon become thick like oil. [For an account of the fogs, \&c., see "Colonial Library," Vol. VI.]
VI. In consequence of the extensive fisherics carricd on along its coasts, the population of Newfoundland necessarily fluetuates, and it is difficult to obtain an cxact census. In 1806, the number of mouths werc estimated at 26,505 . I have obtained two more recent censuses, the one for 1822 from the House of Commons Library, the other for 1827-8 from the Colonial Office.

Population of Newfoundland in 1822-3, and in 1827-8.

## NF，WFOUNDLAND．－POPULATION．

In 1822，marriages， 516 ；births，1，f75；deaths， 735．In 1827，marriages， 442 ；births， 1,879 ；deaths， 696．It will be readily conceived，by the great dis－ proportion in number of births over the deaths，how rapidly the population is increasing．

A more complete census than either of the forego－ ing was taken in 1825，and for which I am indebted
along with other doeuments to the Firm of Robinson， Brooking \＆Co，It is thought that in ail the southern districts the population has decreased since the peace， hut in the neighbourhood of St．John＇s，where the solt is more fertile，and where there is a more abundiant stock of capital afioat，population has increased．

Population of Newfonndiand，as per census taken in the year 1845.

Allowlng for passengers，960，the total would be 35，719．
The marrlages withlit the year wero 500，the births 1800，and the deaths 750 ． The number of Freuch on oor coast of Newfoundland，and from which Englishmen are excluded，is sald to amount to 12,000 ．

When Newfoundland was first visited after the general discovery of the continent of America，it was found to contain two distinct races of men－the one termed Red Indian，the other the Esquimaux ；both are now almost extinct，the former perhaps en－ tirely so，as recriminating lustilities were waged between them and the early settlers，who shot and speared each other whenever an oceasion presented itself．The destruction of the Red Indians was not owing solely to the European，but in fact，mainly to the exterminating war carricd on against the former by the Mic－Mac Indians，who arrived in the island，in considerable numbers，from Nova Scotia and Cape Breton．

The［B．B．］at the Colonial Office for 1836，gives the following census of European population ：－

| ELECTORAL DISTRICTS． | WHITES． |  |  |

The area in square miles has not been ascertained； the boundary of each district towards the interior，
having never been correctly defined．The population to the square mile cannot be ascertained or calcu－ lated，the interior of the island not being settled or inhabited．The population is dispersed along the margin of the sea coast ；except about St．Joha＇s， very few buildings are to be found，beyond one mite from the sea．

Although the agriculture of this colony is progres－ sively increasing，yet there are comparatively few per－ sons employed in it exclusively，the population being nearly all employed in the tisheries．Almost every family，however，have a small quantity of land in cul－ tivation．
The commerce carnot be ascertained accurately，as it is carried on mainly in vessels，which，as well as their crews，belong to other countries．Accurate re－ turns of the births，marriages，deaths，\＆c，could not be procured，as no register of burials is kept in the Roman Catholic Church．

The Esquimanx，who are thinly scattered on the Labrador coast，are similar to the Greenlanders，the language of the latter affording a dialect for the former： in summer they live in tents prepared like those of the Greenlanders，but in winter their habitations are constructed in a different manner：chusing a large drift of snow，the Esquimanx digs a hole in it cor－ responding with the dimensions of the intended house； pieces of snow，three feet long，two in breadth，and one foot thick，are then cut and placed in the form of an arch over the hole；instcad of a window an aper． ture is cut in the arch，aud a slab of clear ice almits sufficient light；the entrance to the rlwelling is long， winding and very low，and another slab of thick ice forms the door．In the middle of the house is an cle－ vation of snow 20 inches high，covered with skins and used as the sleeping place．Such is the extraordinary construction of an Esquimaux＇s dweliing for nine months of the year．

It is very maux on the

VII. Return of the number of Churches, Livings, \&e., of Newfoundland in 1836. [B. B.]

Besides two Disscnting places of worship at St. John's, one of which is Congregational and the other Wesleyan, there are 27 in the different scattered scttlements of the Colony, all of them Wesleyan. The Protestant Episcopal Clergymen in this colony are all Missionaries appointel by the Society P.G.F., by whom they are paid. The Archdeacon receives $300 l$. per annum from Government, in addition to his stipend from the Society.

There are, in fnet, no parishes (as the term is gencrally understood) in this Colony. The respective Clergymen of the different religious persuasions, have each a district appropriated to his spiritual charge, quite distinct (as to limits and extent) from each other. Nor can they be made to correspond, so as to admit of their heing brought into the view required by this return.

There has usually existed a very commendable harmony of religious feeling between the different persuasions, the Wesleyans, Roman Catholics, Congregationists, and Dissenters generally being more numerous than the Episcopalian Church, over which there is an archdeacon; the Romish Church has a bishop.
VIII. The following table relative to education is derived from a most praiseworthy institution, established for promoting sound knowledge among the
poor of our North American Colonies; and it fully deserves the warmest encouragement and support.

Since the eat the female scho portionate ine school is contu order, without intenting und being. The sel ported by Dr. Colonial legisl 100t. per anisu endiug 6ith May

This is a valuable institution，and deserves to be extended throughout the colonies．
IX. Return of the Number of Prisoners in the Gaols of Newfoundland throughout the Year.

X. The island affairs are administered by a House of Rodney, Osborne, Byng, Hardy, Graves, \&c. Civi] of Assembly, consisting of 15 members, chosen by the people. The qualification for an elector is universal household suffrage-that of a representative, bcing a householder of two ycars' standing. A Lcgislative and Executive Council is uuded to the House of Assembly.

Newfoundland has had a resident governor ever since the year 1728 , and amongst the distinguished and justiciary courts were carly established; and a superior court was added about 1750 . In 1832 , a representative government was given to Newfoundland, similar to that enjoyed at Nova Scotia.
The laws are in English, and administered by circuit courts. There is no militia in the island, and the police are iew in number.

X1. The revenue is derived from custom duties, officers who have held that office, we find the names licenses, \&c.

To Elsewhere, in 1834, value, 7,1194 ; 18:15, 2,3114.; 1436, 13,9361.

There is a considerable portion of shipplng belong- $\mid$ gin, coffee, tea, sugar, oatmeal, salt, pease and beans, ing to Newfoundland, and registered in the island. I have only the following years :-
Colonial shipping tonnage, belonging to and registered at Newfoundland-In 1826, 20,548 tons; 1827, 22,105 tons; 1828, 25,385 tons; 1829, 27,319 tons; 1830, 29,465 tons; 1831, tons; 1832,
tons; 1833, tons; 1834, tons; 1835,
tons; 1836,
tons.
The principal imports consist of bread, flour, pork and beef, butter, rum, molasses, wine, brandy, and
lumber, \&c.
We may now proceed to examine the extent of the fisheries, and first with regard to the quantity caught and exported at several intervals. In 1790, the export of fish from the island was, quintals 656,000 ; in 1800 , quintals 382,000 . The following is a consecutive return laid hefore Parliament in 1828, and its value is enhanced by specifying the countries to which the fish were exported.

Fish caught and exported from Newfoundiland.-Periods ending 10th of October in each year.

A return of 1826 gives a connected view of the fishing, as follows :State of the Cod Fishery and Trade in Newfoundland in the year 1826.

Harbours or Districts.

XIII．Course of exchange varies according to circumstanees，and to the demand for bills to make remittances to England in payment of spring supplies； it is generally highest in the fall of the year．The demands for bills is governed in a great measure by the success or failure of the fisheries，particularly the seal fishery；in the former event，remittances are made in Oil，in the latter，in Bills．The par of ex－ change is 15 one－third per cent．premium．In the course of 1836，it rose to 3 above，and fell to $25-6$ th below．

The Bank of British North America，have a braneh at St．John＇s．
British money and Spanish dollars，the latter esta－ blished by the governor＇s proclamation（1825）at 4s． $4 d$ ．sterling，but passing current at $5 s$ ．［B．B．］
XIV．Domestic poultry succeeds very well；land and water wild fowl are found in great abundance，parti－ cularly bustards，wild geese，and wild or eider ducks ； partridges，snipes，plovers，curlews and black－hirds， are also in great abundance，as well as eagles，kites， hawks，ravens and jays．
The partridges are like ptarmigans，（of an excel－ lent flavour）larger than those in Europe，and always perfectly white in winter．The most remarkable of the sea birds which visit the coast of Newfoundland are，the lord and lady of the tcal kind ；the saddle－ back，gull，tinker，razor－bill，the loon，whabby，and ice bird．

Besides the great staple of the island，fish，（see comneree）the numerous lakes and ponds which abound produce divers kinds of excellent trout and eels of a great size；the lobsters are uneommonly large and equally good，and the muscles better fla－ voured than in Europe．There are no oysters，but lanee，herrings，mackarel and salmon are in great abundance，besides thesc，place，sole，hallibut and thornback are found on the coast．The eapelin，which is perhaps the most delicious fish in the world，arrives periodically in such shoals as to change the colour of the sea，near the coves and beaches，and two persons may easily fill a common sized boat in a couple of hours．This fish remains on the coast about six weeks，and is considered the best bait for cod．The herrings also arrive in the spring and autumn in pro－ digious shoals．
Potatoes and cabbages are the most valuable pro－ ductions of the island，growing in plots or gardens attached to the fisherman＇s houses．Turnips，carrots， parusnips，peas，radishes and most garden roots yield abundantly．Red，blaek and white currants，goose－ berries and strawberries grow in great perfcetion； and a smaller kind of strawherry is found wild in the woods；raspberries grow everywhere，and that spe－ cies of cherry called the Kentish comes to great per－
fection；other sorts as well as damsons，grow abun－ dantly in favourable seasons，besides these apples and pears are sometimes raised in perfection．
The plains are almost covered with low stunted bushes which bear a great variety of wild berries．The snake root，capilaire and wisha capucoa，are indige－ nous，when in blossom the latter plant is beautiful． It is made by the inhabitants into a decoction and used after the manner of tea，and said to be extremely wholesome in spring．Another remarkable plant found in the woods is the Suracinia，a full descrip－ tion of which is given in Dr．Thornton＇s Temple of Flora．Sarsaparilla is also found in the island．
The swamps abound with a great variety of reeds and flowers，many of the latter extremely beautiful， such as wild roses，violets，\＆e．，but the season for enjoying them is short，for they all come together and last but a few weeks，which gives rise to the saying common in Newfoundland，＂a short feast and a long famine．＂The timber grown on the Island，though generally of no great magnitude，is rendered very useful for the purposes of the fishery，and vessels of considerable size，varying from 60 to 200 tons each， are built chiefly with native wood．The Juniper（or Hee－ma－tic），Witeh Hazel，Black－birch，and Black－ spruce，are the most esteemed for these purposes； the common fir is not esteemed for building，but very well adapted for casks and other common uses in the fishery．
Kelp is extremely abundant all round the coast，and with other seaweeds is used for manure．The Zoo－ phyta or acimal flowers forming the link between the animal and vegetable kingdoms，may also be frequently met with．

It will be observed from the foregoing returns，that the codfishery is the most important．［For a descrip－ tion of the codfishery at Newfoundland，see Colonial Librury，vol．vi．］
That the cod fisheries of Newfoundland are to Eng． land more precious than the mines of Peru and Mexico，and in truth，if we consider that the vast quantities of fish annually drawn from the banks and adjacent coast，it will be found that as the mere representative value of gold，its worth far exceeds that of the precious metals，to say nothing of the impor－ tance of the subject in a maritime，commercial and political point of view．
The total value of the trade of Newfoundland，may in fact be estimated at $2,000,000 l$ ．sterling per an－ num，independent of its great importance in a mari－ time point of view ；while it should be remembered， that it is upheld hy no bounties（as that of France）， nor protected by any exclusive rights．
Another fishery of great importance to the island and to England，is that of seals for the sake of ther
skins and oil， commencemen years to the fo

Immoreahle Properfy: 15,000 houses, at 10 . cach, $150,000 l$. ; warehouses, mills, \&c., $100,000 l$.; 100, , 00 acres arable land, at $5 l$. per acre, $500,000 l . ; 200,000$
acres land granted, but untilled, at $1 l$. per acre $200,000 l$; $1,000,000$ acres land not grninted, at $5 s$ per acre, $250,0001$. ; rouds, canals, dykes, bridges, wharts, \&c., $50,000 l$.; forts, gaols, churches, barrucks, \&c., $300,000 l$. ; mnnufactories, mines, quarries, fisberies, \&e., $1,000,000 \mathrm{l}$. Totnl, 2,550,000l. Totat move. nhle and immoveable property, $5,368,532 l$. The stntistics of the island nre so vague, that the above imperfect estimate could only be made ; it is, how. ever, given for the purpose of promotiug further inquiry.

## CHAPTER VIII.-HIUISSON BAY TERRITORIES.

Section I. It is difficult to convey an idea of the territories included within this denomination; they may be said to extend between the meridians of 60 . and 140 . W. (upwards of 4,000 miles) and from the 50 th of N . latitude to the Pole.

Il. The geography of this large extent of country will be found detailed at considerable length in my "Colonial Library."
III. Hudson Bay was discovered, in I610, hy Henry Hudson, who commanded a ressel fitted out by the English Russia Company for the purpose of exploring a N.W. passage round the continent of America. He was left by his mutinous crew with his son and seven other persons to perish in that inhospitable region. The same company subsequently fitted out several exjeditions for exploring these seas, particularly by Button, Fox, James, and Gillam, who made voyages between 1612 and 1668 , when the latter, who had been aided by Charles II., at the suggestion of Prince Rupert, passed the winter of 166 x in a river which he named Rupert River, where he built lort Charles, which he garrisoned, and in the following year returned to England. During his absence, the king had granted to Prince Rupert and the company associated with him their celebrated charter, dated May ${ }^{2}$, 1669, which secures to them all the trade and commerce within the entrance of Hudson's Straits, together with all the countries upon the coast, and confines of the said coast and strnits, \&c. And under this grant the company have held possession up to the present day, its legality having been established by the opinions of eminent lawyers, except during a short period (from 1697 to 1714), when the settlement was oceupied by the French.
IV. The human race is scantily but widely diffused over this region. The natives who inhabit the country round IJudson's Bay mny be divided into three distinct classes-the Southern Indians, the Northern Indians, nod the Esquimanx; the first occupy the entire country to the north of Upper Canada, and their territory lies between that province and the south coast of Hudson's Bay, and that part of the west which lies between Churchill River and Lake Athabasca; these are composed of many tribes, some of whom hring the produce of their hunting to the company's factories, and others take it to truding houses, now established nearer their own homes; they are of a middle size and copper colour, of strong and healthy constitutions, and subject to few diseases: th y seldom live to a great age, but generally enjoy all their faculties to the last. They excel in huntung, and are capable of enduring great fatigue, cold, and hunger. They are frequently eniployed by the factors to procure provisions, and though long used to firemoms, they are still so expert with the how ind arrow
as to kill 50 or 60 geese in a day, generally shooting them on the wing.

The Northern Indians oecupy the country from the 59 th to the 68 th degree of north latitude ; their territy, of 500 miles in length, is bounded on the south by Churchill Fiver, on the west by the Athabasca Indians, on the east by Hudson's llay, nnd on the north by the Dog-ribbed or Copper-coloured Indians, which latter, although speaking the same dialeet, never visit the factorics, but trade through the intervention of their neighbours, and are deseribed by Hearne as a hospitable and harmless tribe.
The Northern Indians are well proportioned, and about the middle size; they have a peculiar cast of expression, different from any other tribes in the country; their foreheads are low, noses aquiline, chins long, eyes small, and cheek-bones high; their hair, like other tribes, is black, straight, and coarse: the men have little beard, and that they remove by plucking it out; they do not possess that activity of body and liveliness of disposition met with among the other tribes of Indians, who inhabit the west coast of Huclson's Bay.

The Esquimaux, who inhabit the northern coast of Hudson's Bay, seldom approach the fort at Churchill river, a small sloop being periodically dispatehed to Knapp's Bay, Nary Bay, and Whale Cove, to trade with them. We have no data as to the numbers of these races: for minute descriptions see "Col. Lib."

The company's settlements around the whole of Hudson's Bay, which is 750 miles long and 600 troad, are only four-namely, at the mouth of Churchill River, 59. N. latitude ; on an island between two branches of Nelson's River, in $57 \frac{1}{2} \mathrm{~N}$. latitude; on the River Albany, in 52.18 . N. hatitude; and at the mouth of a small river on the south side of James's Bay. These are all fortified positions; the first named Irince of Wales's or Churehill Fort, the second York, the third Albany, and the fourth Moose Forts. The company have at present in their employ anout 1,000 Europeans and their descendants by Indian wives. Under the protection of these are some smaller settlements such as Severn House, in 56.12. N. latitude, and Last Main on Rupert River, in 53.24. N. latitude.

The Iludson's Bay company have nearly 1,000 persons in their employment, and recently they have formed a location for their retired ollicers, \&c. on the Red liver, where, quatorng to a censur taken during the year I833, the vopation of the settlement was 3,070, of whom 1,50 were Catholics and 1,3:0 Protestants. Very little money is to be seen in the country, all trading being generally carricd on by barter. The country is sufficiently fertile. A considerable trade in furs, \&c., is carried on by the compaiy.

## BOOK IV.-POSSESSIONS IN ASIA

CHAPTER I.-HINDOSTAN.

Section I. The tutal British territory under the immedinte governınent of the East India Company is 514, 190 square miles (i. e. ten times the size of England!); and the extent in square miles of British territory in India, and of territories protected by Great Britain, is 1,128,800 $\frac{3}{4},-1^{2}$ arliamentary Return, 183 I .
II. The enrliest nuthentic European account of Hindostan is derived from Slexander's army, which the Macedonian chief pushed across the different rivers of the Punjauh, without however reaching the Genges; at this periud a considerable portion of India was subject to the Persian monarchy. Subsequently the Ilindoos became trihutaries to the all-pervading sway of the disejples of Mahomet, and finally subjects of the victorious Moslems, who, hended by Timur or Tamerlnne, extended their conquests from the Irtish and Volga to the Persian Gulf, and from the Ganges to the Archipelago. A century after the death of Tamerlane, the Portuguese appeared on the coast of India, having effected a passage to tiae enstward by doubling the Cape of Good Hope, and thus completely changed the European route of commerce with the eastern hemisphere, which hnd previously been carried on by the Red Sea and Egypt, or by the Black Sea and Constantinople. The example of the Portuguese was followed by the Dutch, French, and English. Within less than a century after the death of Timur, or Tamerlane, the Portuguese, under Vasco de Gama, arrived in India, and found the west coast of Coromandel divided between two great sovereigns-the king of Camhay and the Zanorin; hy aiding the petty princes who were dependent on the latter, the Portuguese soon acquired a paramount influence on the Malahar shore, and at the commencement of the sixteenth century secured themselves in, and fortified Goa, which they made the capital of their settlements and commerce in the esstern scas, extending over the east const of Africa, the coasts of Arabia and Persia, the rwo peninsulas of India, Ceylon, the Moluccastheir trade even stretching to China and Japan. At this period they levied tribute on 150 native princes, and claimed and exercised a power to sweep from the Indian seas every European vessel that sailed without their permission. Of this mighty dominion scarcely a vestige now exists. The annexation of Portugal to the crown of Spain, and the war waged against the Hollanders, induced the Dutch, who had heretofore been content with the carrying trade between Lisbon and the north of Europe, to examine India; and at the commencement of the seventeenth century they became formidable rivals of the Portuguese, stripping them first of Malncea and Ceylon, then driving them from various settlements on the Malabar coast, and finally usurping their place on the shores of Coromandel. The enterprising spirit of the English was not long behind in establishing a trade in the eastern hemisphere, and they were followed by the French,
who became the most powerful rivals of the former after the dominion and trade of the Portuguese and Dutch had declined.

The flrst charter for the incorporation of the East Indin Company, was granted by Queen Elizabeth on the last day of the sixteenth century, and was one of exclusive trade in the Indian sens for filteen years with promise of renewnl. [A full historical letail of the nequisition by the East India Company of the British territories will be found in my "History of the Colonies" and "Colonial Library."]

We now proceed to examine the details relative to thestipendiary princes-subsidiary and protected states -nnd feudatory and tributary chieftains of British India.

A large portion of the British dominions in the east is made up of the possessions of princes who either themselves, or their descendunts, now enjoy stipends prid to them out of the puhlic revenues. These princes first became connected with us oy subsidinry alliances, and ceded territorics in return for military protection; others lost their dominions by the chances of war; while some territories were taken under our control from the absolute incapacity of the rulers, or their tyranny, which in merey to the unhappy sufferers we could no longer permit to exist. The princes of the first and last classes are formally instralled on the Musnud, allowed to exercise sovereignty over the tenants on their houschold lands, they are exempted from the jurisdiction of the British courts of law, have their own civil and military finctionaries, with all the insignia of state, nnd a British envoy usually resident at their court, whose duties chiefly relate to their pecuniary affairs, or the ceremonials of sovereignty. The following is an abstract $i^{n}$ round numbers of their stipends.

| When granted | Tittes of Princes. | Stipend. Rupees. |
| :---: | :---: | :---: |
| 1803 | Emperor of Delhi and Family. | 15,00,000 |
| 1801 | Soubliadar of the Carnatic ........ | 11,65,400 |
|  | Famlties of former Souhhadars | 9,00,000 |
| 1798 | Rajah of Tanjore | 11,83,500 |
| 1770 | Soubhadar of Bengai, \&c. ........ | 16,00,000 |
|  | Families of former do. \&e. | 9,00,000 |
| 1795 | Rajah of Benares ............... | 1,43,000 |
| 1799 | Families of Hydier Ali and Tippoo .. | 6,39,549 |
|  | Kajahs of Malabar . . . . . . . . . . . . | 2,50,000 |
| 1818 | Bajee Rıw ........ | $8.00,000$ |
| 1818 | Chimnajee Appah .. Peishwa's | 2,00,000 |
| 1803 | Vinseek Ras ...... Family. | 7,50,000 |
| 1803 | Zooltikur All ...... | $4,00,000$ |
| 1806 | Himmut lahadonr's descendants .. | 60,000 |
| 1818 | Benaeek Rao and Sceta Baee ...... | 2,50,000 |
| 1818 | Gowint Ran of Calpee . . . . . . . . . . . | 1,00,000 |
| 1771 | Nawaub of Masulipatam .......... | 50,000 |
|  | Total Rupees. . | 1,08,91,449 |

Or at the rate of $2 s$, per Rupee, in stering, $1,089,141 /$.

A very able document，drawn up by Mr．B．S． Jones of the Board of Control，makes the amount of stipends paid in $1 \times 27,28$ ，as follows：－
＂Naboh of Bengal，S．R． $22,40,350$ ．－Rajah of Be－ nares， $1,34,282$, －Limperor of Delhi，13，40，983，－ Benaeek Rao，5，79，866，－Nabob of Arcot，17，53，965， －Rajah of＇Tanjore， $10,47,389,-$ Nawaub of Masuli－ patam，52，671，－Families of Hyder Ali and Tippoo Saib， $6,38,858$ ，－the late Peishwa，Bajee Rao and Chimmajee Appah，22，42，023，－Nabob of Surat， 1，62，675．Total $1,01,92,5,77$ or at $2 s$ ．the S．R． $1,019,255 l$ ．sterling．

Subsidiary Aliiances．－Nearly one half of the Hin－ dostan territory is held by Governments in subsi－ diary alliance with the British government；the ge－ neral terms of the treaties with whom are，on the side of the English，protection against external ene－ mies，abs on the other，a submitting，in all political relations with foreign states，to the arbitration and
final adjudication of the British government ；a sje－ cilic force is furnished by the East India Company， and a territory equivalent to the maintenance of the troops ceded by the former；the subsidizing state is also bound to keep on foot a specific contingent torce to act in subordinate co－operation with the subsiliary． The protecting power is not to interiere with the in－ ternal administration of the protected state，lut in cases of exigeney it reserves the right in general to assume the whole of the resources of the protected state．The subsidiary foree is liable to be called out to protect the legal succession to power，but not to be employcd between the head of the governanent and its Zumendars or chiefs．

The following is given as a list of the prinees，the military protection of whose territories is undertaken by the British government，together with the amount of subsidy paid by each，or the revenue on the terri－ torial assignonent in lieu of subsidy．

＊Some accounts give the area of Oude at $17,008,000$ ncres，of which about one tenth is jungle and forest．

Two of the foregoing（Oude and Mysore）can seareely be styled stipendiary，the former heing almost entirely dependent on the British government，and the latter recently ordered under the direct manage－ ment of Madras presidency，owing to long misgo－ vernment．Sindiah＇s territories should also of right be excluded as，to a great extent，he is independent of our authority．The charges include revenue col－ lection，political，judicial and police，maintenance of provincial battalions，customs，mint，\＆e．；the balance remaining after these deductions goes to the purpose for which the territories were granted－llamely，the military protection of the government which assigned them．

Protected Stutes．－Desides the foregoing govern－ ments，there are scveral minor principalities with whom engagements of treatics have been entered into agrecably to the peculiar circumstanees of each，but with general stipulations applicable to all；namely， that the Protected State maintain no corresposidence of a political tendency with foregn powers without the privity or consent of the British govermment，to whom the adjustment of its political differences is to be referred；they are perfectly independent in their internal rule，but acknowledge the supremacy of the lbritish government．When the interests of butls powers are concerned，the troops of the protected state act in the ficld in subordinate co－operation to the British forces，the latter being empowered to avai themselves of natural or other advantages in the al－ lied country against an ellemy when necessary．No
every assistance required to be given to affect their apprehension in the state．Europeans not to be em－ ployed without British permission．According to the resources ol the protected state，a tribute is reguired， or a military contingent to be kept in readiness，or service to be rendered according to the means of the protected power．The states thus protected，but without subsidiary allowances，are－

British Feulutory Chiefs.-These chiefs so far differ from the former class, that, while the protected chiefs had treaties concluded with them as independent princes, the feudatory have had their allegiance transferred to Great Britain by their feudal superiors or by the events of war. In most cases, the lands which they held as a life tenure have been converted by our government into a perpetuity, and the cluiefs are permitted a aupreme control on their own lands. Ainong the number of these chiefs may be mentioned the Putwurdhan family, of which there are nine chiefa; the Soubahdar of Jansi, Chief of Julaon and Calpee; family of Angria (the Maliratta pirate); numerous tributaries in Kattywar and in Gujerat; the Rajalis of shorapoor and Gudwal; the Seedee of Jinjeera, and other Abyssinian chiefs. The Parliamentary Return of the area of Protected and Allied States is as follows :-" Dominions of the Rajahs of Travancore and Cochin, 9,400 square miles ; Nizam, 108,800; Rajah of Mysore, 29,750; King of Oude, 25,300; Dowlat Rao Scindiah, 42,400; the Rajah of Berar, including Nagpore, 64,270; Jeswunt Kao Holhar, 17,600; the Guicowar, including the detached Pergunnahs belonging to the British in Kattywar and Guzerat, 36,900 ; Rajah of Kourg, 2,230; Nabob of Kurnool, 3,500; Rajah of Sikhim, 4,400; Nabob of 13hopal, 7,360; Rajahs of Sattara, Colapore, Sewuntwarree, and the principal British Jaghiredars, 21,600; Rajah of Cutch, 6,100; Soubedar of Jhansi, Rajah of Duttea and others, commonly known as the Bundlecund chiefs, 19,000. Territories under British protection west of the River Jumna, comprehending Jhodpore, Bikanier, Jessulmeer, Khotah, the Seikh country, the hill districts of Sirmoor, and other small states, 165,000 . Of Assam, Jynteea, Cachar, and Muneepore, the boundaries are so undefined that it is difficult to form even an approximation to their superficial contents, but it is estimated at 51,000 . Total, 614,610 square miles.

British Allies.-Independent of the foregoing states, the E.I. Company's government have general treaties with other surrounding nations, viz. with Corhin China, Siam, Caubul, Nepaul and Ava, the intercourse of the Company is principally of a commercial nature, bot they have residents established at Nepaul and Ava.

With the Imanm of Muscat, and with other chiefs on the western shores of the l'ersian Gialf, the Company have treaties for commercial purposis, and with a view to the suppression of the slave trade, and of piracy in the Guipa. In order to secure the fulfilment of the prowsions of these treaties, the Company have establisher pelitical agents on the shores of the Persian and Arabien Gulfs.

The area of the kingdoms and principalities of India has been computed by Captain J. Sutherland after a novel manner; the boundaries of each state having been marked off on a skeleton map, drawn on paper of equable texture, the whole were cut out with the greatest care, and weighed individually and collectively, as a check in the most delieate balance of the Calcutta Assay Office; the weights were noted to it ousandth part of a grain, the balance being sensibie to the tenth part of that minute quantity. Before setting to work on the states, an index, or unit of 100 square degrees, cut from the same paper, was first weighed, to serve as a divisor for the rest. The weighing process commenced in the driest part of the day, takiug the whole of the paners together; thus the continent of India weighed 127,667 grains troy: the sum of the indiridual weights of the separate states $127,7 \pi 3$ grains troy : the addition was proved to proceed from the hygrometric water absorbed towards the evening, and corrections were npplied to endeavour to neutralise this source of crror: the lollowing data must, however, only be considered as an approximation to truth in the absence of better information, owing to the imperfect data of maps of India. By Captain Sutherland's weighing process, the area of the native states, in alliance with the British government, is 449,845 square miles. That of the territory under British rule, with the remain. ing small states and Jagerdars, 626,591 , giving the superficial area of Inda, $1,076,591$ square miles, which nearly ngrees with Hamilton's estimate of 1,103,000.

Captain Sutherland classes the native states of India under the three following heads, viz.--

1st. Foreign; Persia, Kahool, Sennn, the Arab tribes, Siam, and Acheen : 2d. External on the Fron. tier; Ava, Nejal, Lahore, and Sinde: Bul. Interml

Protection, with the right of the British Government to control internal aftiars.

OI the rove stures Capt in Sutherland enumerates four as Muhomedan (i. e, with Mussulman rulerm I presume), viz.: 11 ydrabs Oude, Bhopal, and Tonk I of the $H$ in 100 States eig : ape Mahralta, viz. : Sattara, Gwalior, Nagpúr, Incore, Isanda. " nepoir, Dhar. and Dewas: nineteen are Kajput, viz. Wiphr, Jes pür, Judpár, Bándi, Kotah, Cutch, 11 ir, Bhikant Jesalmír, Kishenghur, Bínswára, Per gárh, Dung pirr, Kerole, Serowé, Rewah, Dhat sthansé, Terhi: six are of other Hindoo tribes, viz. : Mysowe, Bhurtpoor, Travancore, Sawantwalf, Cochin, and Dholpor. Besides these allied states, there are the following luferior Rajships and Jígérdars, viz. : Chota-Nagpúr, Singájer, Sumbhalpír, Oudjpoor, Manipur, T'anjore, the Baroach family, Ferozpir, Merich, Tunsgaon, Nepani, Akulkote, and those of the Sagar and Nerbudda country, together with Sikhim, and the States of the Northern Hills.
An account of some of the Petty States lyingr North of the Tenasserim Prorinces.-Of the numerous petty states north of the Tenasserim provinces, those only of Kimmay, I abong, nond Lagon, on the cast bank of the Salween, and the slip of country on the west bank, Inhabited by a wild, barbrous, but indepen. dent tribe of mountaincers, called Red Kayeons, have hitherto been visited by Europeans. Of the vast extent of country between the Salween and Cainbodia Rivers, we know little or nothing, though it is hoped the expected opening of an overland trade between the frontiers of China and the Tenasserim provinces, will extend our knowledge of the intermediate comntries. The country is extremely fertile in our territories, abounding in rivers; and with a population of but three to the square mile!

The town of Zimmay (or Changmai), is situated in Lat. 20. N. and Long. about 99. E.; that of Lrbong, is distani from Zimmay only 10 miles S. E.; Lagon about $50 \mathrm{~S} E$. from the same. The several states are named after these towns, but their respective boundaries are not well defined, and together with those of Moung-pay, and Moung-nam, appear to be the patrimony of one family.

About 50 years ago, when the whole of this country was under the dominion of Ava, seven brothers succeeded, with the assistance of Siam, in throwing off the Burmese yoke, ejected them from the abovenamed towns, and having been contirmed in the government of them by Siam, have continued tributary to that kingdom, and successfully resisted all the attempts of Ava to regain possession. The elder brother wns invested with the title of "Chow-tcheeWeet, or " Lord of Life," with the supreme authority over the others; and the title has descended to each brother successively alive, till it reached the youngest, whom Dr. Richardsun, found on his first and second visits, but who died at the advanced age of 73 years, during his third visit. It is now in abeyance in the family, and awaits the decision of the court of Siam.From the Madras Herall, 31st Sopt. 1837.

Before elosing the subject, it may be desirable to mention an independent chicf of great talent, wealth and power, with whom the Dritish government is on terms of friendly alliance. I allude to Runject, or Runajit Sing, whose country includes not only what is called the Punjab, and the whole of the heautifuland important valley of Cashmere, but also considerable tracts of territory beyond the Judus from Tatta on the south to Thibet on the north, and from Caubul on the west to beyond the Sutlej on the cast. This formidable potentate possesses a large army (sec Military Scrlion), an inmentac arsenal at Umritar,
and a vast trensury (his annual revenuea are estima. ted at $1,80,10,0100$ rupers) at (iovind Garrow.

The following nre the names of the Governors-general of British India: Col, IR. Clive, trom June 17.5 N to Jan. 1760 ; J. L. Holwell, Jan. 1760 to Joly 1760 ; H. Cartier, lee. 1769 to Aprll 1772 ; Warrell Hast. ings, April 1772 to Peb. $178 i=$ Sir J. Macpherson, Fel. 1785 to Sept. 1786 ; Marquess Cornmuhis, Dept. 1786 to Oct. 1793 ; Sir J. Shore, Vet. 1793 to Manch 1798 ; Marquess Wellesley, May 1798 to July Isu5; Marquess Cornwallis, July isos to Oct. 1805 ; Sir G Barlow, Oct. 180.5 to July 1807; Jiarl Minto, July 1807 to (Oct. 1813; Marquess llastings, Oct. 1813 to Jan. 1823; Lord Amherst, Alg. 1823 to April 1828; Lord W. Bentinck, June 1828 to 1 1834; Lord Anchland, I835. The principal events which occurred under each of these rulers, will be tound in my Colonial Library, vols. viii. and ix.
111. No language would do justice to the varied and magnificent scenery of Hindostan, partuking as it does of the richly luxuriant and wildly hemutilul; here interminuble plains, intersected with deep and mighty rivers: there inaccessible mountains, whose immeasurnble summits are wreathed in eternal show; on the one hand an almost boundless landseape, verdant with the sultness of perpetual spring ; on the other aipine steppes, ruggedly romantic, and fringed with vast and towering forests: nountamous ranges or ghnuts on lhis shore, presenting a stupendous bar. rier to the Indian ocean, while on th $t$, a low and sandy alluvinm seems to invite the further encroach. inents of the deep and stormy Bengal Bay. Indeel the features of British India are so varied that, to convey an exact iden of their peculiarities, would require volumes, and a survey of the country. The sea coast line (extending from Cupe Negrais to the frontiers of Sinde) is 3,622 English miles, with a territorial breadth (from Surat to Sinde) of 1,260 miles. The leading geographical features of Hindostan are the Himalaya Monntains, along the northern and eastern frontior; a range of ghauts, rising at the southern point of the peninsula, ruming north along the coast until receding at the parnllels of 20 . to 22 , when they branch off in ridges of dif. ferent elevations across the continent of Indin, until 'ost in the table land of Malwa and Alluhabad; while on the castward the mighty Ganges, and on the wist. ward the nearly equal indus, roll their impetuous and lengthened torrents from the Himalaya snows to the sultry coasts of Bengal und Cutch, giving off in their progress an infinity of tributaries, which are ramified in every possible direction over the whole peninsula.

The sea coast of Bengal province is, for many miles, scarcely elevated above the level of the sea, and where the sacred Ganges and mighty Burrampooter, with their hundrad mouths, rush to join the parent fountain, a vast extent of country $(30,000$ square miles) called the Sumderhunits, extending for 180 miles along the bay of Bengal, is an interininable labyrinth of salt witer lakes, rivers, und creeks, interspersed with mangrove islets of shifting mounds of sand and mud.

Calcuita, on the banks of the llooghly, latitude 22. 23., longitude 88. 28., distant from the sea 160 miles and from the Sandhpads ahout 130 miles, has a very motricate navigntion through the bauks of the sand and mud wheh oceasionally shift their beds in the Hooghly river as well as in the other branclies of
the liunges. It is, however, very favournbly situated for lintermal navigation, as the Gangen and its aub. sidiary streams promit the transport of forelgn pros. duce to the north.west quarters of llindostan over a distnuce of upwards of 1,000 miles, and the day may not be far distant when the lishas ant the Ganges navigation will be united by it canal. Diamond hare hour, ahout 30 miles helow Calcutta on the enst bank of the llooghly, lias a draught of water sumf. chent for the largest hulinumen, but ships of 600 tous anchor quite close to the grand promenade (entitlal the stifind road and Explanalet) of the ' City of l'alaces.'

This metropolis and commercial emporium of the cast (now containing morly a million of inhahit. ants), was so late as 1717, a small straggling village, with a few clusters of huts, to the number of ten or twelve, the inhabitants of which were hoisbandmen, endeavouring to reelnion the surrounding lorests and swamp, which extended even to where Chandpal Ghaut now stands. The city in divided into streets at right angles with each other, wit!! large and handsome squares throughout, particularly in the European part of the metropolis, each square having in its centre an extensive tank or reservoir of the Ganges water, with verdant sloping banks planted with evergreen shrubs. The residence of the Govir. nor-general, constructed by the Marquess Wellesley, is of equal inagnitude to any palnce in Europe.

The stupendous fortification of Fort William was commenced by Lord Clive, after the battle of Plassy, and has cost the East India Company 2,000,000l. sterling. Situated on the margin of the river Hooghly (about one-fourth of a mile below Calcutta), and on a level with the surrounding country, which is a perfect flat for many miles, it does not make an imposing appearance, indeed its strength is searcely perceptihle; nevertheless it is superior in strength and regularity to any fortress in India, and requires from 10,000 to 15,000 men to defend the works. The form is octsgon, five sides being regular and three next the river according to circumstances. The river flows up to the glacis, the citadel towards which has a large salient nugle, the faces of which enfilade the whole sweep of the water; indeed the guns of the faces bear upon the city, until crossed by the fire of the batterics parnilel to the river. This salient angle is defended by several mojoining bastions and a counterscarp that covers them. The bastions on the five regular land sides have all many salient orillons, behind which are retired circular flanks extremely spacious, and an immense domble thusk at the height of the berme; the double flank would ennble the besieged to retard the passage of the ditch, as from its form it cannot be entiladed; the orillon is etlective against ricochet shot, and is not to be seen from any parnlled; the berme opposite the curtain serves as a road, und contributes to the defence of the diteh like a faussehrave. The diteh is very wide and dry, with a conette in the midde, which receives the water of the ditch by menns of two sluices that are commanded by the fort. The comnterscarp and covered why are excellent; every curtnin is covered by a large half moon without flauks, bounet, or redoubt, but the faces each mount 13 pieces of heavy ordnance, thus giving a defonce of 26 guns to these rnvelins. The demi-bastions which terminate the five regular fronts on each sode are covered hy a counterguard, of which the faces, like the hafl moons, are piereed with 13 embrasures. 'These comiterguards are connceted with two redoults eronstucted in the place of arms of the adjacent re-

'The interior of this monirable fortress is truly beantiful, -large gras a-plots surromoded by rows of shady trees, boneath which are will gravelled promenaldes, with here mad there piles of balls, bombshells, and prarks of notillers. The bartucks are spacions, and will contain 20,000 men.

The 1 , uth of course ot some of the primeipal rivers to the e a is in Einglish miles-ludns, 1.700; (innges, 1,500; sutledj (to ludus 900), 1, 100: Shylum (ultto 750), 1,250; Jimma (to Canges 7rib) 1, 0 00) ; (imbuck
 ladia-hodaveri, to the sea, 450 miles ; Krishina, 700 : Nerbudda, 700 ; Tuptee, 460 ; Cavery, d10) Taking the limit of the Ganges and Jumma to the west and south, and the Brabmaputim und Megoa to the east, the country, completely intersected by navigable rivers, may he computed to cover an area of not less than fonty sinure dervoes.
The quantity of alluvial matter which these vase rivers carry down to the ocean is immense.
The Rev. Mr. Everest has furnished us with some interesthig observations and experiments on the river Gages, which he recently mate at Ghazepore, in the province of Benares.
belocity of the streum in feret in an hour,-July 3 3rd 6,810 7th, 11,520, 23rol, 21000 ; August \&th, 1,200 , 22ad 34,560; September 6th, 21,600, 24th, 13,320 ; October $8(h, 10,800$, of 20,200 average of the lour months-equivilent to about four miles mion hor.
Drpth of ti' - ricer.-Jure 22nd, 19 feet 6 inches; 30 th, 22 feet 6 ins es; July 7th, 2.5 feet 6 baches; 14 th, $9 \times$ feet ; $23 \mathrm{ct}, 30$ fert; August 1 st, 35 feet 6 inches ; 8th, 44 feet; 13 th, 47 feet $i f$ inches ; 2.2 nd , 42 feet ; $31 \mathrm{st}, 36$ feet; September 6 th, $3 \times$ fiet ; 15 th, 37 feet 6 inches; 24 th, 28 feet 6 inches; October 1st, 26 leet 6 inches, or an average of 33 feet for the four months.
Insoluble matter containen in a giren quantily of Gimpres water.

|  | Wine quart. | Cubic foot. |
| ---: | :---: | :---: |
| July 3rd, | 1 grain | 30 grains. |
| 7 th, | 8 | 240 |
| 23 rd, | 10 | 300 |
| August 8 th, | $58-10$ | 1740 |
| 13 th, | 37 | 1110 |

| September 6th, | 17 | 510 |
| $24 t h$, | 8 | 240 |
| October 8th, | 6 | 1118 | On an average 19 g mins of insoluble matter for every wine quart, during the four rainy months, that is from the 15th June to 15th October, to whieh must be added for soluble matter, say two grains, making the whole equal to 21 grains, or ubout 630 grains of soluble and insoluble materials carried into the sea in every cubic loot of water of this magoifient river.

The principal amuntain ranges are the llimalaya, the eastern and western Ghauts, anl the Vindhya chain, which run through the centre of the peninsula paralle to the course of the Nenoudda. The Himalaya range, or, as its name signifies, the abode of snowe, elevates its lofty jeaks from 20,000 to 27,000 feet
ahove the level of the sea, forming an alpine bolt wo miles in extent, from llimkestan to Tibet. The prine cipal chatn of the Ilinalayn, rimning from morth. West to mouth eqst, rises in a ridge, with an abript ateep lice against the plains of 6,000 feet lin height ; there is then I slope trom the erest of the ralge thwards the north. The momitains on the stile of the snowy muge consist of a sories of nearly parallel ridyes, with latermediate vallian or hollowa : wpors are thrown oll in all directions iato the bollows, forming subordmate vallies. 'there is mothbig like table land (perhaps in the whole of the mometains, with the exception of Nipal), and the valleys are broml wedge-shaperl chasms, contractel at bottom to a mere water course; fir this reason the guantity of leved gromed is inconsidemble. Un the tlank of the great chain there is a line of low hills (the Smalik), whid commence nt Roopur, on the sutle j, und run down in long way to the sonth, whirting the great chain. In some places they run up to mod rise upon the llimalnya, in others they are sepurated hy an foteronediale valley. Betweet the Jumma abl the Ganges they attuin their greatest height, viz. 2,000 feet above the phins at their fect, or 3,006 ahove the sea, rising at once from the level, with an abrupt mural front. To the east of the Canges and west of the Jomma the sicwalik hills gradually fall off. 'They are serrated across their direction, forming a succession of scarecly parallel ridges, with a step fince on one side, and a slope on the other; the slope being, like that of the grent chain, towards the north, and the abmiment towards the south. These hills may be considered ant upheaved partion of the plains at the foot of the Ilimalaya, and formed of the debris of the momntains, washed down by rains and othe, natural causes. 'They are covered with vast forests of s.eul, toom, and fir, and are uninhabited, wul, as on the Himalaya, the dip or slope being towards the lorth, and the abutment towards the south, the great mass of vegetation has a northern exposure, and the south faces are generally makel. 20,000 feet have heen burumetricaliy measured and trigonometrically confirmed; at this height huge rocks, in inmense detached masses, lie seattered about on piled on each other as if realizing the Titanic fable of giants climbing to heaven. Beds of decayed sea shells are found, and lichens and mosses, the last link in vegetable life, struggle through a stunted existence beneath the verge of perpetnal show. At 16,800 feet north side, campanulas and aminonites have been found by eaterprising Englishinen; at 13,000 feet the birch, jumiper and pine appear, and at 12,000 feet the majestie oak rears its spacious heud, towering amidst the desolation of nature. The cultivated limits of man have not passed 10,000 feet on the south slope, but on the north side villages are found in the valley of the Baspa river at 11,400 feet elevation, who frequently ent green crops, and advancing furthor the habitations of man are found as high as 13,000 feet, cultivation at 13,600 , fine birch trees at 14,000 , and furze buslies for fuel thrive at 17,000 feet above the level of the ocean !
[A minute accoont of the topography of each dis. trict, its scenery, rivers, natural curiosities, Re. will be lound in the Second Elition, vol. i., of my History oj the British Colmmies : in vols, viii. and ix. of my Colenial Library, and in vols. i., ii. and iii. of Eastern India, forming a condensed acconnt of Dr Bucheman's Survey of Behar, \&e.]

AREA, DARAGIDEL, MERIDAN, AND PIGSGCA ASPECT OF EACH BRITESH rossission.

| Districts. | Area in square Miles. | Parallel. <br> lat. long. <br> N. L:。 | Ciengraphy and lhysieal Aspect. |
| :---: | :---: | :---: | :---: |
| Benaral Prorince. |  |  |  |
| Calcutta | 4722 | 22 9384 28 | I.evel with the sen, rivers, salt lakes and dense jungles, soil sandy. |
| llooghly | 2260 |  | low, that, well watered, rich ulluvinl soil, along llooghly river. |
| Nudden | :3105 | 23 20, 88. | Ditto, ditto, light soil, Jellinghy and Cossimbnzar rivers, tertile. |
| Jessore . | 5180 |  | Ditto, salt marshy isles, rich soil, embouchures of the Ganges. |
| Mackergunge | 2780 | 22428930 | Very low, prrt of the subderbunds, nlluvial soil, ditto. |
| Dacea . | +1435 | 23 4290 17 | Covered with lakes, and intersected by the Cianges and Brahma. putia. |
| 'Tipperah | 6830 | $23030920$ | Wilal hilly regions, lertile tracts on Megna, with marshes, dense forests. |
| Chittagong | 2980 | $2209201$ | 120 miles nlong the bay of lhengal, hilly, productive lands, islets numerous. |
| Sylbet | 1000 | 2.1559910 | N. E., hilly, S. flat mud inmolated, W. conical hills, and the vales. |
| Mymensing | 698 | 2.13090020 | Valley of Brahmaputra, love, that, and innumernble streams. |
| Rajeshnyo. | 39.50 | $\begin{array}{llll}2.1 & 30 & 89 & 0\end{array}$ | Intersected by the Ganges, and that with extensive lakes. |
| Moorshedaluad | 1870 | $\begin{array}{llll}2.1 & 11888 & 15\end{array}$ | Intersected by the Jellinghy, tlat and fertile, well irrignted. |
| Jungle Mehals | 6990 | $23 \quad 20 \times 7 \quad 10$ | Wild, forest, hilly country, beautifully picturespue and dry. |
| Birbhoom. | 3870 | $21 \begin{array}{llll}1 & 087 & 20\end{array}$ | Ililly. jungly, and dry land, with hot mineral sprimes, |
| Didagepoor | 5920 |  | litly, to S. Waving valleys, mumberless streamlets and lakes. |
| Rangpoor . | 7856 | 25438922 | Ditto, to F.. forests, watered, Gnrrow mountains, 3,000 feet, clusters of lakes. |
| Burdwan . Bathar. | 2000 | $23815 \times 78$ | Rising land, rich soil of a lhirsty nature, jungly, conl nad iron. |
| Ramghar . | 22.130 | $\begin{array}{lllll}2.1 & 30 & 8.1 & 30\end{array}$ | Ililly, momenimons district, two-thirds waste, very rocky and mineral. |
| Boglipoor | 7270 | 25 13 86 58 | Clusters of fertile hills nud swelling valleys, hot springs, iron. |
| Pinhar | 6.325 | 25 51085 | Hilly nud rugged to S., flat heur the Cianges, dry valleys, hitrous soil. |
| Patua | 667 | $3537 \times 5$ | Ganges' banks for nine miles, river five miles wide, very pieturesque. |
| Shatmbat | 46.50 | 250000 | Pieturespue along the Ganges, hilly to S., good roads and rivers. |
| Prurnents | 7460 | 25 150883 | Marsly to S., alluvial country, sinking towards the Ginges. |
| Tirhoot | 7732 | $27 \quad 10860$ | lilevated, but not hilly, extensive wastes to the N., well waterel. |
| Sarun | 5760 | $26 \mathrm{O} \times 15 \mathrm{l}$ | Ditto irrigated, rich flats nlong Gilluduck, majestic forests. |
| Sumblulpoor Orissa. | $\cdots$ |  | Ilill and dale, picturespuc, intersected by Mahnumaly. |
| Midnnpore | 8260 | 22258725 | Cultivated plains, with good roads, nud dense jungles. |
| Hidjellee |  | $\begin{array}{lll}51 & 50 & 88 \\ 80\end{array}$ | Eimbanked ngainst the tieles, and intersected by rivers. |
| Cuttack ${ }^{\text {co }}$ | 9000 | $\because 030 \times 6 \mathrm{C}$ | Jelta of rivers, clevated, then hilly, mid next monntainous. |
| Iltra Gangetic. Arracals |  | $2030925$ | Isthmuses, islands, swumus, sea-const ; jungles, hills, mountains, |
| Arracals | 11500 | $203092 \quad 5$ | Isthmuses, islands, swimps, sea const ; jungles, hills, mountains, inland. |
| Assam, \&e. | 16900 | $26 \quad 2890096$ | Valley of the Brahınaputra, 60 miles wide by 350 long. |
| Tavoy |  |  | Dense forests nul jungles, sea-const, low islands. |
| Ye |  | $\begin{array}{llll}10 & 8 & 97 & 0\end{array}$ | Numerous rivers, rice plnins and forests, rocky coast. |
| Tennsserim. | 15000 | to to | Mergui Archipelago, interiur hilly, little known. |
| Mergui Isles |  | $16 \quad 099$ | Chain of high bold seles in triple lines, with hurbours and wide channels. |
| N. W. Provinces. |  |  |  |
| lenares | 350 | 25.30833 | The holy city situate on the Ganges, highly cultivated. |
| Ghazeepore | 2850 | $25055 \times 13$ | Gently molulating lovely groves, Ganges on the S., Gogern on the Fi. |
| Azimghar . | 2240 | $\begin{array}{llll}24 & 6 & 83 & 10\end{array}$ | Iflevated flat, jungly, saudy but fertile, Goggra river. |
| Goruckpor | 9250 | $\begin{array}{lllll}26 & 46 & 83 & 19\end{array}$ | Isase of hills low, interseeted by rivers, forests, Neprail, ms. to N. |
| Junnpoor - | 1820 | $25 \quad 208430$ | Slightly undulating surface, well cultivated, N. \& S. Goggra, E. Ganges. |
| Allahnoad | 2650 | 25 278150 | Ganges and Jumma Deltn, 800 feet nbove Calcuttn, flat sandy loam. |
| Bauda |  | 25.308020 | Elevated table land, high hills in parallel ranges, and fow rivers. |
| lialpee . . $\}$ | 4685 | 2610707941 | Along Jumme, fat, rising towards Panna mountains; diamond mines. |
| Finttehpore | 1780 | 25.568045 | Ganges ard Jummn valley, rising from either bank, pieturespue. |

The aspeet and general features of the rivers, mountains \&c. of Hindostan, will be seen in my Colonial History.
IV. Primitive iormations in which granitie rocks hear the principal proportions, oceupy, it is thought, not only the great Himalaya northern chain, but also three-fourths of the entire peninsula, from the valley of the Ganges below Patna to Cape Comorin ; although these rocks are frequently overlaid by a thin erust of laterite, a ferruginous elay considered as assuciated with the trap formation. The transition formntions have not as yet been elearly distinguished; the secondary formations described are-

1. The carboniferous group. Coal occurs extensively in the grits bounding the southern slope of the LImalaya, but it :. s been questioned whether this formation is the older coal or only lignite associated with nagelflue, as on the slope of the Alps; it has been particularly described, however, where the river Tista issues from this chain, $\left(88^{0} 35^{\prime}\right.$ east longitude, ) and there, undoubtedly, bears all the characters of the older formation; its strata are highly inclined, whereas the tertiary beds and even most of the secondary in this part of India are horizontal. The coal district on the river I)amáda ( 100 miles north-west of Calcutta) extends on the banks of the river 60 miles, and appears from its fossil lyeopodia to be undoubtedly the older coal ; it reposes apparently on the surrounding primitive rocks, but it is not improbable that it extends across the delta of the Ganges to Sylhet, 306 miles, at the castern extremity of Bengal. Tertiary rocks prevail in Sylhet, and it is doubtful whether the Sylhet coal be not really modern lignite. I believe no carboniferous limestone has been discovered.
2. Next to coal is a great sandstone formation, which, beginning at the Ganges on the east, first shews itself supporting basalt on the Raj-Mahal hills; it again prevails throughout the interval between the confluence of the river Soane, and of the Jumna with the Ganges, and then stretches across the west-southwest through the Bundlecund district to the hanks of
the Nerhídda, (which flows into the Gulf of Cambay as far as $79^{0}$ east longitude, ) where it is overlaid by the extremity of the great basaltic district of northwestern India, near Sagâr, the red sandstone shews itself again emerging from beneath the north-west edge of this basaltic district, at Neemuch, near the west souree of the Chumbul, and at Bang, in the valley of the Nerbudda.

In both places, as also along the central portion of the platform before described, stretching through Malwa, it is frequently covered with a thin crust of gray argillaccous limestone, supposed to represent English lias, but nearly destitute of organic remains, the genernl alsence of which in the secondary roeks of India is remarkable. A primitive range extending rrom near Delhi to the head of the Gulf of Cambay separates the sceondary rocks of Malwn from those of the great basin of the Indus; but on the west border of this ridge, through Ajmeer, the redstone again shows itself, containing rock-salt and gypsum. The dinmond mines of Panna, in Bundlecund, and of the Golconda district, are situate in this formation, the matrix being a conglomerate bed with quartzose pebbles.
3. Tertiary rocks are found at the foot of the first rise of the primitive rocks of the Himalaya, in the north-west of Bengal, where the Brahmaputra issues from them at the passes of the Garrow hills. Cerithice turritelli, remains of crocodiles, sharks, lobsters, \&e. are here found, nad further east nummulite limestone prevails nt Sylhet.

The great basaltic district of the north-west of India extends from Nagpur, in the very centre of India, to the west coasts, between Goa and Bombay, occupying the whole of that coast to its termination at the Gulf of Cambay, thence penetrating northward as far as the 2 Ith parallel of north latitude.

The soils of Hindostan vary of course with the geological characters of the country; in the deltas of rivers, consisting of a rich alluvium; and in countries of a tray formation : n stiff clayey and tenacious surface, lughly fertile when irrigated, prevails. it

Lower Bengal the fertility of the soil seems to be in－ exhaustible，owing perhnps to its saline qualities； for several centuries it has been in unceasing cultiva－ tion as the granary of India，rudely tilled，without the application of scientific principles to agriculture， and yet there seems to be no diminution in its fer－ tility；as we ascend the Ganges the quality of the earth of course varies．

The following is an analysis of three specimens of soil from sugar cane fields；the first was from a vil－ lage on the Sarju，ten miles north of the Ganges，at Buxar；the other two from the south of the Ganges near the same place．Numbers one and two require irrigation，three was sufficiently retentive of moisture to render it unnecessary；there is a substratum of Kankur throughout the whole of that part of the country，and to some mixture of this carthy lime－ stone with the surface of the oil the fertility of the latter is ascribed；the sugar cane grown yielded a rich juice．

Silex and alumina $\begin{array}{llll} & 94.1 & 24.1 & 88.2\end{array}$ 100100100

The earths were not further examincd，but the two firat consisted chiefly of sand；the third somewhat argillaceous．All were of $n$ soft，fine ground allu－ vium，without pebbles，the analysis confirmed the quantities ascribed to each specimen．

The soils vary of the Hydrabad district，with the facility with which the rock of which they are formed decomposes；it is generally siliceous．The analysis of a garden soil at the cantonment of Secundarabad which had not received such manure，shewed specific gravity 1．70．Four hundred and eighty grains con－ tained water of absorption， 10 grains；stones con－ sisting of quartz and felspar， 255 grains；vegetable fibre， 2 ；siliceous sand， $154=431$ grains．Of mi－ nutely divided matter separated by infiltration，viz． carbonate of lime， 7 ；vegctable matter， 7 ；oxide of iron，2．5．；salt， 4 ；silica， 20 ；alumina， 8 ；loss， 10.5 ． Total，480．The richest soil in this district，and the most spontaneously productive is that arising from the decomposition of the clay slate．

The soil of Bengal is extremely shallow，and a compound of saltish mud and sand，the former derived from the inundations of the rivers washing down the richest particles of the surface in the up－ per provinces，and the sand probably being the reli－ quiæ of the occean which is here retreating from the land．The Regur or cotton ground，which extends over the greatest part of central India，is supposed to be a disintegration of trap rocks；it requires nei－ ther manure nor rest，slowly absorbs moisture，and retains it long，and it has produced the most ex－ hausting crops in yearly succession for centurics． The saltpetre or nitrous soil is general in Bahar．The Rabur soil which is found in the Saugor and Ner－ budda country is of two kinda：the one of a black and the other of a brown yellow ：the first mentioned is cultivated for 30 years without $n$ fallow，the latter，
after 20 or 25 years work，requires 12 years rest． A Rabur soil examined by Dr．Spry，was，when examined from the fallow，in hard lump3，imparting a soapy impression to the touch，with an earthy smell when breathed on，and a slightly adliesive quality applied to the tongue：specific gravity 1.908 ； colour dark brown． 200 parts yielded on examina． tion，water of absorption， 21 ；crrbonate of lime， 15 ； loss by burning， 3 ；oxide，or protoxide of iron （strongly attracted by the magnet）11；alumina，8； siliceous sand， 131 ；loss， $11=200$ ．The llabur land when first brought into cultivation from fallow，yields of wheat 10 ，and of gram 12 fold of spring crops．An analysis of the different soils shews very little heating or vegetable matter in thein．Manure is seldom ap－ plied，and its efficacy in the tropics has been doubted． The alluvial soils are of all others the most fertile， tilled with the least difficulty，and requiring no fallow if occasionally subjected to inundations of rivers containing much sediment．All the soils of India have in general a powerful absorbiug quality；hence their fertile properties．［See Colonial Library，vol． viii．］

V．The temperature of so wide an extent of coun－ try as British India，and of such different degrees of elevation is，of course，very varied．In Bengal Pro． per，a vast quantity of rain，（amounting to 70 or 80 inches）falls in the rainy scason，coming in with June and continuing to the middle or end of October．

Influence of the Moon in producing rain（Calcutta）in each year．

From these observations as well as others，made by the Rev．R．Everest，it appears that rain fell most abur antly on the $2 \mathrm{nd}, 5$ th， 6 th，and 7 th days betore the new moon，and the 6th day after it．

The rainy season in Bengal is succeeded by what is termed the cold scason，which lasts from Nuvem－ ber to the middle of February，when the hot season begins and continues to the middle of June．During the cold scason the air is clear，sharp nad bracing in some degres．Thermometer 65．to 84．mean 72．； barometer medium 29．to 96 ．

The uestern provinces under the Bengal Presidency, |derated by great solar radiation, while the summer viz. Allahabad, Agra, Delhi, \&cc. are temperate, but hot winds blow during a part of the warm season, when the wealthier ratives sometimes resort to underground habitations to escape their torrifying effects.
The climate of central India is mild, and approaches much to that of the south parts of Europe, or to the table land of Spain ; although the mercury may rise to 100 , during the day, the nights are bland and invigorating.
The English dominions among the hills and along the Kumaon provinee are blessed with a delicious climate, the rigours of the winter solstice being mo. heats are tempered by the contiguous eternal snow. topped Himalaya. Indeed, during the summer season, the vicinity of the frozen region causes a continued currency of atmosphere, which sets in daily as regularly as a sea breeze on a tropical shore, and with a nearly similar invigorating freshness. At Saharunpoor, in $30^{\circ}$ latitude, and 1,000 feet above the sea, the climate is similar to the southern parts of Europe; the mean temperature throughout the year is about $73^{3}$, and monthly mean temperature at Seharumpor ( 1,000 feet above the sea), January, 52 degrees; Ficbruary, 55; March, 67; April, 78; May, 85 ; Junc,

Mr . Trail thus deseribes the climate of the Bhot mehals (districts) of the Kumaon territory:-" During full half the year, the surface is wholly covered with snow, beginning to fall about the end of September, and continuing to accumulate to the beginning of April. In open and level situations, where the bed of srow is in some years 12 feet deep, it is dissipated early in June; in the hollows not till the middle of July. During the five months of absence of snow, the thermometer ranges at sun rise from 40 to 55 degrees, and at mid-day from 65 to 75 degrees in the shade, and from 90 to 110 degrees in the sun. At Huril Bagh in Kumaon, 3,887 feet above the sea, the range of the thermometer during the year was

\end{tabular}

"The heat of course diminishes as the height increases; and at Almora town, in $29^{\circ} 30^{\prime}(5,400$ feet high) the difference is two or three degrees less than the above average. During the cold season, on the contrary, from the greater evaporation, the thermometer before sunrise is always lowest in the vallies, and the frost more intense than on the hills of moderate height (that is, below 7,000 feet), while at noon the sun is more powerful. The extremes in 24 hours have been known 18 and 51 degrees. The snow does not fall equally every year; the natives fix on crery third year as one of heavy snow, but in general it does not lie long, except on the mountain tops and ridges. On the Ghagar range, between Almora and the plains, snow remains so late as the month of May. At Masuri, 6,000 to 7,000 feet high, the mean animal heat is only 57 degrees F.; indeed, at 4,000 feet clevation, the hot winds cease, and vegetation assumes a European raaracter. The quantity of rain falling at Almora is from 40 to 50 inches per annum."
Southern India.-The climate is influenced by the N.E. and S.W. monsoons, and by the elevation of the country, the low lands being extremely hot, with dease exhalations, and the upper dry, cool and healthy, as on the Mysore table land. The thermometer ranges in the Carnatic higher than in Bengal (to 100 and 106 degrees F.) ; but the moisture or evaporation not being so great, the heat is less severely felt; but, on the other hand, the cold season is of very short duration.
In Travancore, owing to the proximity of the ocean, and the waters on either side ol the peninsular promontory, the climate is muist, but not oppressive, as the sea breeze blows from one quarter or another the whole year round.
The climate of the Neilgherry hills resembles in the higher parts that of the great intertropical plateaus of America, which have become the centres of civilization in the new hemisphere, with the additional advantage, that it is not subject to an inconvenience attending the latter, nanely, the sudden changes and cold piercing winds occasioned by the variety of lofty mountains. The mean temperature at Ootocamund is rather mure than that of London; hut the annual range is very small, and the heat never sufticient to
bring the more delicate European fruits to perfection. At Coimbatore the temperature during the cold season is - minimum 31 degrees $F$., maximum 59 degrees F. ; in April 65, in May 64 degrees. There are no sultry nights, a blanket being agrecable at all seasons of the year.
Bangalore (lat. 12.57 N., long. 77.38 F. ) is one of the healthiest and gayest. stations in India, and remarkable for the wholesomeness of its atmosphere. The thermometer seldom rises above 82 or falls below 56 degrees F . The vine and cyprus grow luxuriantly ; apple and peach trees yicld delicious fruit, and strawberries are raised in the principal gardens. The monsoons, which sumetimes deluge the Malabar and Coromandel coasts, have their force broken by the lofty Ghauts; and the tableau of Mysore (on which Bangalore is situate) is constantly refreshed by genial showers, which preserve the temperature of the air, and the lovely verdure of the fields throughout the entire ycar.

The Malabar and Canara coasts are not unhealthy (tropically spreaking), except in the marshes bencath the Ghauts, where the miasm, as in all similarly situated places, is very deleterious.

In the Mahratta country, the north.western parts towards the Ghaut mountains, which attract the clouds from the lndian ocean, are visited with profuse rain, which semetimes continues three or four weeks without intermission, while to the S. and E., perhaps not 30 miles distant, not a drop of rain has fallen during the same period.

As we procced to the N . and W . peninsula, the climate approaches to that described under the western provinces of the Bergal Presidency, except in the neighbourhood of the sea. In Guzerat the westerly winds are burning hot in May, June, and July, Candeish has a luxurious climate, like Malwah; and Poonah, e central station in Upper India, 2,500 feet above the level of the sea, 100 miles from Bombay, and 75 miles from the nearest sea coast, is delightfully situate within 30 miles of the Ghauts.

The following data shews the improving climate of India, and which eivilization will yet much further ameliorate.

His Majesty's Troops servir , in Bombay Presidency.

On the whole, it may be said that the climate of the British possessions on the continent of Asia is essentially of a tropical nature, though varying in intensity, and sometimes verging into that of the temperate zone, either by reason of the peculiarities of the soil, or its elevation above the level of the sea. The following table affords a comparative view of the morithly and yearly mean temperature of the air of Calcutta, Madras, Bombay, and the Neilgherry mountains ( 8,000 leet high), compared with the temperature of the city of London, and the fall of rain in England.

Comparative Vicw of the Menthly and Yearty Mean Temperatnre of the Air of Caleutta，Madras，Bombay，and the Nellgherry Mountains，\＆e．

VI．We have no census of British India previous to our occupation of the country，and little informa－ tion since that that can be relied on for minute cor－ rectness．I have searched the various public offices in India and England，and now proceed to detail，as connectedly as possible，the result of my inquiries． The earliest document I have obtained relates to the Bengal Presidency，in 1789．I give it from the ma－ nuscript return，with its comments．
Estimate of the Population of the Provinces of Bengal and Batiar ；the Company＇s Possessions in Orissa；and the Province of Benares，formed from Estimates trans－ mitted by the Collectors of the three former，and Resident in the latter，in answer to a reference made to them by desire of Lord Cornwallis，in July， 1789.

Remarks on the foregoing Estimate，from the letters of the Resident at Benares，and several Collectors of Bengal，Bahar，and Orissa．

Benares．－The estimate of this province，formed by Mr．Duncan，is stated to have been made＂accord－ ing to the grain produce，allowing nine maunds on an average for the consumption of each person，children included；＂excepting，however，the city of Benares and its vicinity，the population of which was estimated by Aly Ibraham Khan to be $1,000,000$ ，but the Re－ sident，deducting two－fifths，computes it to be 607,000 only．

Bahar．－The computation in this district was made conjecturally by Mr．Law，who supposes the number of inhabitants＂to exceed rather than fall short of a million．＂Mr．Scton has endeavoured to obtain more accurate information，but has not yet been able to procure it，or to distribute the number computed by Mr．Low among the men，women，and children．This distribution is，therefore，stated in equal proportions，which is nearly corresponding with the general average．
Beernhoon．－The estimate of this district，formed by Mr．Keating for l3eerbhoom，and Mr．Hesilrige for Bishenpoor，is stated to have been founded on calcu－ lations made by some of the principal inhabitants． The children in this instance are stated to be below ten years of age．
Bhagulpoor．－The estimate of this district， formed by Mr．Davis，is calculated on the number of villages，and houses，or families，allowing four persons to each family or house，and twenty houses to each village．He adds，that the hill people of the Jungle－ terry were numbered in Mr．Cleveland＇s time，and found to be about 9,000 ．The children in this esti－ mate are said to be below fifteen．

Bumdwan．－The calculations in this district，made by Mr ．Mercer，is also founded on the number of villages，and houses，or families，allowing four persons to each house；but he divides the villages into three classes，and computes the first class to contain 200 ， the second 50 ，and the third 5 houses．

Calcutta．－The different gentlemen who have held the office of collector of this town，and the 55 villages adjacent to it，having been unable to furnish any estimate of the population，the number specified has been assumed at nearly the average of different estimates furnished by intelligent natives to the com－
piler of the since，when $h$

Cilittago furnished by what ground Dacea．－ timate of this Dinaoepo furnished by Jessorle， furnished by for each meha Minnapom furnished by Mooasume by Mr．J．E． 1 Mymenbin trict laving b computation， turally，on a assessinent an

nen who have n ，and the 55 able to furnish umber specified age of different yes to the com－
piler of the foregoing general estimate，a few years since，when he held the ofliee of collector of Caleutta．
Chittagong．－The estimate of this district was furnished by Mr．Bird；but he does not explain on what grounds it was formed．
Dacca．－The same remark is applicable to the es． timate of this district，furnished by Mr．W．Jouglas．
Dinagepore．－Also to the estimate of this district， furnished by Mr．Hatch．
Jessore－－Ditto to the estimate of this district， furnished by Mr．Hinckell，which is，however，detailed for ench mehaul．
Minnapore．－Ditto to the estimate of this district， furnished by Mr．Burrowes，and also detailed．
Moorshedanad．－Ditto to this estimate，furnished by Mr．J．E．Harrington，also detailed．

Mymensing．－The difierent collectors of this dis－ trict having been unable to procure materials for any computation，the number sprecified is stated conjec－ turally，on a general consideration of the relative assessment and extent of this district．

Nudnea．－The estimate of this district，furnished by Mr．Redfearn，appears founded on a calculation ot the number of houses or families，and nin average al－ lowance of seven or eight prersons to each house；the proportions varying in different mehauls．
Pergunnalls（24）．－Mr．Champain，who gave the estimate of this district，states it to be conjectural ； he also observes，that the children included are under 16 years of age．
Sumea．－Mr．Heatley states the estimate of this district to have been formed＂on the average of an actual investigation of three small villages，multiplied by 5,800 ，the bumber of villages in the district，＂ which，he adds，is a very low scale，and that＂the general opinion swells the amount to $1,500,000$ in－ habitaris．＂Ile also observes，that the girls are con－ sidered adnlt at 11 or 12 years of age，and the boys at 20 ．
Ramohur．－Mr．Leslie states this estimate to bave been the result of inquiries made by him；but does not explain the mode of inquiry．
Rangamatty．－This estimate，which includes Bisny，Currubary，and Rangamatty only，was fur－ nished by Mr．H．Baillie，and is stated to be founded on the reports of the oldest inhabitants of each village．
Rajshahy．－This estimate，which respects Zillah Rajshahy as it stoud in the year 1792，previous to the late new arrangement，is taken from a pergubnah estimate furnished by the Zemindar，deducting a fourth for an apparent over－rate，on comparison with other districts．
Rungrore．－Mr．Maedowall，who furnished the estimate of this district，docs not explain on what grounds it is founded；but it is detailed for each per－ gunnah．

Salm Districts．－The estimate of these districts is taken from detailed estimates furnished hy Messrs． Hewett and Dent，but they do not explain the grounds of their calculations．
Shahabad．－Mr．W．A．Brooke，who furnished the estimate of this district，does not state the grounds of it．
Sirkar Sarun－Mr．Montgomerie states his es－ timate of this district to be conjectural．
Suluet．－The estimate of this district，furnished by Messrs．Willes and Smyth，is founded on a calcu． lation of the number of houses，and persons in each house，the proportion diflering in different mehauls．
Tipperahi．－This calculation，received from Mr． Macquire，is stated by him to have been furnished by the Zemindars of the difierent pergunnahs．

Tranool．－This estimate is atated in detail by Mr． Bathurst，but without any specification of the grounds on which it has been formed．
The credit due to the census of 1789 may be judged of from the foregoing comments；I rather think that the number of inhabitants is considerably understated． The next census emhraces nearly the same division of districts，I ohtained it in India from Wwarkamalt Tagore，a Hindoo of an enlarged mind，$n$ most gene－ rous disposition，and a truly British gpirit．Dwarka－ naut Tagore was thes at the bend of the salt：and opium department at Calcutta，and had perhaps the best menns of judging as to its correctness of any man in India；he considered it as a fair estimate for $18: 0$ or $182 \%$ ．The calculations are foundel on the number of villages nud houses in each district；but we have no census of any part of British India on which reliance can be placed：in some places the population is estimated on the rudest data．It is essential to a knowledge of the condition of the people and for the purposes of good government that a com－ plete census should be made of every district．

Provinces，Districts，square Miles，Villages，Honses，amd Population of the permanently setted Provmees of Ben－ gal，Dehar，and Orissa，in 1822.

Statistics of Calcutta．－The following are the results of a census of Calcuta taken by Captain Birch，Su－ perintendant of Police，down to January 1st，1837． Males and Females．English 3，133；Eurasians（these born of European and native parents）4，746；Por－ turuese 3，181；French 160；Chinamen 362；Ar． menians 636；Jews 307；W．Mahomedans 13，677； B．Mahomedans 45,067 ；W．Ifindoos 17,333 ；B．Hin－ doos 120，318；Muguls 527；Parsees 40；Arals 351； Mugs 683 ；Mudrasses 55 ；N．Christians 49；Low Castes 19，084．Total Population，Males $\mathbf{1 4 4 , 9 1 1 ; ~}$ Females 84,803 ；tutal 229，711．

Puckah Houses 14，623；Tiled Huts 20．304；Straw ditto 30，567．Tolal Houst＇s 65，495；Police Force 1，3i8．

In the year 1800, according to the report of the Police Committee furnished to lord Mornington, the population was 500,000 . In 1814, aceording to the calculation of Chief Justice Sir Hyde East, it amounted to 700,000.

Both of which calculations must have been crroneous, unless they include the suhurbs of Cossipore and Garden Reach; which we believe they did.

In 1821, five assessors were appointed, by whose calculation the population of Calcutta amounted to as follows:-

Upper North Division, Christinns, 5 ; Mahomedans, 6,602; Hindoos, 64,582. Lower North ditto, Christians, 5, K 16 ; Mahomedans, 16,865 ; Hindoos, 25,570; Chinesc, e44. Upper South ditto, Christians, 4,476; Mahomedans, 7,510 ; Hindoos, 18,153 ; Chinese, 170. Lower South ditto, Christians, 2,841: Mahomedans, 17,185; Hindoos, 9,8!9\%. Total population, 179,917.

But the Magistrates in their report, ealculated as follows:-

Upper-roomed Houses, 5,430 multiplied by $16=$ 86,880 ; l.ower ditto ditto 8,800 multiplied by $8=$ 70,400 ; Tiled Hits 15,792 divided by 4 and multiplied hy $5 \frac{1}{2}=21,714$; Straw ditto 35,197 divided by 4 and multiplied by $5 \frac{1}{2}=51$,55x. Total $230,552$.

But making certain allowances, their delinite calcuIation was:-

Resident Inhabitants .
Intux daily
In 1831, Captain Steel made it
Captain Hirch's calculation is . And the daily influx about

205,600
100,000
187,041
22! ! 71.1
150,000
The above calculations to not include Kidderpore, Garden Reach, Sechpore, Howrah, Sulkea, Cossipore, or the other sile of " the Ditch."

| Total | 280 | 99 | 395 |

Duration of individual life, reckoning from the year 1827 to 1835 , inclusive. In 1827 the 15 lentlis were at the ages of $28,60,41,1,2,17,45,1,1,37,61$, $60,1,40,62$. In 1828, 15 deaths at the ages of 21 , $31,76,1,19,64,1,1,5,37,50,1,25,15,35$. In 1829, $1 \pm$ deaths at the ages of $21,30,10,18,16,5 \mathrm{ff}$, $30,22,1,30,75,1 . \ln 18: 10,14$ deaths at the nges of $50,40,70,1,2,20,15,9,42,40,35,1,67,7$. In 1831, 17 deaths at the ages of $60,1,31,50,85,1,7$, $1,1,0 \frac{1}{2}, 32,55,0 \frac{1}{4}, 4,47,42,50$. In 1832, 17 deaths at the ages of $30,1,22,1,1,45,2,1,27,1,36,73$, $1,50,50,54,55$. In $18: 13,23$ teaths at the nges of $7,1,1,60,40,53,55,27,45,30,85,14,38,25,10$, $30,20,40,20,56,01,65,30$. In 1834, I6 deathes at the ages of $35,75,04,47,50,56,26,62,50,34,28$, $16,6,58,01,74$. In 1835,7 deaths at the ages of $23,87,20,61,62,41,16$.

Of the Armenian population there have been several aecurate statements which are interesting in a statistical point of view. In 1814 the Armenians in Calcutta were:-Males, 269 ; Females, 195; total, 46.1. In 1815, M. 272; F. 208; total, 480. In $1 \times 316$, an accurate census by Johannes Avdall lisq., (a much respected Armenian) gave M. 290; F. 215; total, 50.5. The Aclults of all ages are 313. The No. of houses in which the so5 Armenians reside are 101, which exactly ajportion 5 individuals to each.

The stationary condition of the population is owing, it is alleged, to the few marringes that take place. The duration of life is short.

The proportion of Musselmans to the Hintoos in Lower Rengal in the principal Mahomedan city and district is thus shewn :-

Population of the City and Distriet * of Moorshedabad for 1899.

* Proportion of sexes In the City. Mussulmans, Males, 28,42; Females, 27,618 ; Hindoos, Males, 4, 1:34; Females, 45,648, Ditto in Distriet. Mussilmans, Males, 188,0.16; Females, 168,696; Hindoos, Males. 241,710; Females, 29:1,514. Ratio of inhabitads per house 4,73.

North Western Prorinces.-In the return of the population of lndia by districts, as laid hefore Parliament in 1831, there are no data for ascertaining the inhabitants of each district in tone Upper or Western Provinces, under the Bengal Presidency: Mr. Ewing, in his Police Report in $182 G$, gives a rough calculation of $32,206,806$ for the Benares and Bareilly Provinces, the area of which (excluding Delhi, which is not given, ) is 66,510 square miles, (the reader will find the area of each province in the table at prige but besides this area, there are 29,800 square miles of ceded districts on the Nerbudda, and 55,900 square miles of districts ceded by the Rajah of Berar

| Grand Total ．． | 66168 | 6.4604 | 130672 |

The grand total is $1,630,662$ in 28,006 houses；less than five to a house，

Neither the palace or the suburbs of the city are incheded in the foregolng：their population is about 80,000 of both sexes．

The census of the Ilombay l＇residency is lesa to be depended on than that of Madras；combining Colonel Sykes＇s information with the scanty intelligence laid hefore Prillanent，I make np the following return， as the nearest approximation to truth which is at present attainable．

A cernsus of the city of Igra，taken in $1 \times 20$ ，by Mr．Maesweco，the magistrate of Agra，gives the following results：－Houses， 21,014 ；shops（some attached to the honses and some ellistinct），$b_{1}$ blil ； temples anul ustuls， 15 it ；inusjeeds， 107 ；churcher， 2 ；other publie buitdings，235；mate inhabhants， 52,211 ．This census does not linelude the sudilur bazar，the fort，unt bullock estahlishment．A new census of the whole district is preparing．The Alsra Ukber of Octoher 31，1832，gives the following as the number of houses and Inhabitants of Agra：－1 louses， 29,788 ，viz．pukha，25， 436 ；and kuteha， $4,252:$ inha－ hitants， $96, i 97$ ，viz．Hindoos， 65,018 ；men， $2.5,04.5$ ； women，29，938；Mousulmans， 31,579 ；men，14，0159； women，i5，520．

Statistleal view of the blitriete of Bhagulpoor, Puraniya,

- and Rangerportr.

It is difficult to say how near any of the foregoing returns, except those for Madras, approximate towards correctness ; the estimated population of 422,990 square miles here given is $89,577,206$, leaving 91,200 square miles of British territory, of the population of which no account can be traced; but if we allow the low rate of 90 mouths to the square mile, it will make the population of the British territories about $100,000,000$. Now to this vast number we are to add the inhabitants of the protected and allied states; the area of which is greater than that of the British territory by 100,000 square miles; and allowing an equal amount of population to the British territories, it will give a grand total of $200,000,000$ inhabitants, directly and indirectly under the sway of Great Britain, and subject to the government of the Honourable East India Company! The number of whites, or Europeans, does not, including all the military, amount to 100,000 .
The following estimate has been made of the popmlation of the allied and independent states:- Hy drabad, $10,000,000$; Oude, $6,000,000$; Nagpoor, 3,000,000; Mysore, 3,000,000; Sattara, 1,500,000; Gaickwar, $2,000,000$; Travancore and Coci $1,000,000$; Rajpootana and various minor princ.palities, $16,500,000$; Scindia's territorics, $4,000,000$;
the Seiks, 3,000,000; Nepaul, 2,000,000; Crshmere, \&c., $1,000,000$; Sinde, $1,000,000$; total, $51,000,000$. This, of course, is but a rough estimate by Hamilton.
VII. The government of British India possesses a feature which has rarely or never been found in any nation or in any age, I allude to its toleration of every mode or form of religion in which different sects may choose to adore the Crcator; to its protection again't hostility, forcible opposition or oppression by one rival sect against another, and to its auxiliary pecuniary aill when solicited by any congregation or com. munity. An account of the Hindoo, Mahomedan, and I'arsee forms of religion, and of the different sects of Christians, will be found in my "Colonial Library" and "History of the Colonies."
We may now proceed to ohserve how far the established chureh extends, premising that every aid has been afforded by the E. I. Company's Government which could pronote the cause of true religion and its concomitants-charity, peace, and happiness. The following detail shews, first, the state of the Estal). lished Church in Beogal, aceording to the latest return in 1830, and the expenses incurred there, from the date of Calcutta being made a Bishop's See in 1814 to 1831 .

The new charter authorized the Crown to erect the urchdeaconries of Madras and Boinbay into bishopricks (subordinute to the metropolitan of l3engal), with salaries of $24,000 \mathrm{~S} . \mathrm{R}$. annually each, exclusive of $500 l$. ench for outtits, passage money, \&c., and independent also of the expenses incurred in visitations. Pensions of 800l. a year are assigned after 15 years office as bishop, and if he die within six months after his arrival in ludia, one years' salary shall be paid to his representatives.
The following extract from a public letter from Bombay, dated 20th January, 1830 , to the Court of Directors, will shew what has been done in reference to the Roman Catholies, who, at the cession of Bomhay, were to enjoy all the rights and immunities of their faith :-
Par. 27. Having called for information in regard to the Catholic churches, \&e. within the limits of this Presidency, we beg to lay the result betore your Honourable Court.
The Bishop of Bombay states, that he has within the Island of Bombay under his jurisdiction five churches, including the new church at Colaba, built by the Hon. Company, and two ehapels, that the number of priests are thirteen, exclusive of his vicar, General Fr. Luiz Maria, and Bishop Prendergast, who lives with him. That all these churches, except that at Colaba, have sutficient funds to keep them in good order, and to support their priests; that those funds were left by pious benefactors; that at Surat he has two churches under his jurisdiction, and two priests, one of whom, as chaplain to the servants of the Hon. East India Compnny, receives 40 rupees per month, and the other nothing. That both the churehes have sufficient funds to keep them in good order, and to support those priests. That at Broach and Baroda he has two chapels without any fund whatever, the chaplains there receiving from the IIon. Company an allowance of 30 rupees each per month. That he has a chapel at Kaira withont any fund, and that the chaplain receives from the Hon. Comprany an allowance of 40 rupees per month. That he has small chapels at Mhow, Dhoolia, Candeish, Malwan, and Rutnagherry, and the respective chaplains receive 30 rupees per month from the Hon. Company. That the chapels at Poona and Aurungabad ought to belong to him, but for the want of priests he has consented to the archbishop sending priests there: the bishop requests an allowance of 15 rupees per month on account of each of those small chapels, for keeping them in order, and an addition of 10 ru pees per month to the allowance of the chaplains attached to them

The senior magistrates of the police states that there are 12 Roman Catholic churches on the Island of Bombay, but in regard to the number of Priests, \&c., he refers Government to the Bishop of Antipholi, and the Archbishop's Vicar General in Bombay, as he has no means himself of furnishing information thereon.

The Collector of Ahmedabad reports that there are no Roman Catholic churches within his collectorate, and that the whole number of persons of that religion residing within his jurisdiction does not amount to ahove 40 souls.

The Collector of Broach reports that there is only one Koman Catholic church and one I'riest in his Zillah: that the church was built by subseription, and the lriest. reecives a monthly allowance of 30 rujees for his support. That the annual repairs of the church, and other monthly contingent expenses
thereof, such as clerks, pay, "ic. are borne by subscription lately made by some Roman Catholics residing there.

The Collector of Kaira reports that there are two Roman Catholic churches in his Zillah, to which but one l'riest is attached : that both churches are in the vicinity of Kaira, one close to the head cutchery in the suburts of the town of Kaira, for performing the duty of which the Pricst is allowed 40 rupees per month from the Government : the other is situated in the camp, for performing the duty of which the Priest receives private voluntary contributions.

The Collector of Surat reports that there are two Roman Catholic Churches at Surat-the first was erected in 1624 , a Sunnud was granted in the ycar 1729, by the Einperor of Delhi, and the Nawaub of Surat paid monthly a sum of rupees 12620 in support of it: this was continued until the date of its coming into the possession of the Hon. Company, when it ceased; it is now supported by the rent of three houses, yielding, when occupied, an aggregate monthly sum of 45 rupees. At present they have fallen much into decay, and two are without tenants, these belong to the church. The sccond church is supported by Govemment, the Priest receives a monthly sum of 40 rupeees, besides the subscriptions obtained occasionally from private individuals; it is said to be in a flourishing condition. The number of Roman Catholics who attend these two churches does not exceed 120 persons. There are few Roman Catholics, and no churches in any other part of his Zillah.

The Collector in the Southern Concan reports that there are six churches in his Zillah, viz.:-onc at Malwan, estimated annual expense 557 Rs. of which Government contributes 540 Rs.; one at Vingoorla, estimated annual expense, 58 Rs. ; one at Viziadroog; one at Rutuagherry, estimated annual expense, :ito rupees contributed by Government. This church was built in 1822 by the Portuguese inhabitants, with the assistance of 200 Rs . from Government; one at Hurnee; one at Korli, to which Government contributes 237 Rs .

Mr. Reid states that the number of Roman Catholics is very inconsiderable, and consists principally of a floating population from Goa and Bombay. At Korli, opposite the Fort of Reodunda, and at Viziadroog and Hurnee, few old Portuguese residents are to be found. To Malwa, Vingoorla and Rutnagherry they have heen attracted since the establishment of the British Govermment, and consist of English writers and their families, farmers of the Government, lifuor Farms, and a few stone cutters and mechanies; the total number does not exceed 1,000 souls.

The Collector of Ahmednuggur states that there are no churches nor any established Iriest in any town in his collectorate. That the Roman Catholics of Ahmednuggur, about 50 persons, met in a place of worship nn Sundays and other days, and have been contemplating building a church, inviting a clergyman, and requesting ground from Government for the site of a church and burial plaee, nnd the Collector expresses a hope that when such application is made, we will afford them suitable assistance.

The principal Collector of Dharwar reports that there are 11 churches in his collectorate, viz: one at each of the following places, Rhanapoor, Nundagurh, Shawpore, Belgaum, Kittoor, Beedee, Machyurh, Narwur, Azrah, (in the Kolapoor territory) Hallhurnee, and Bellgoondee. That there are three Pricsts to those churches, one senior and two junior, all na-
tives of $C$ are under other two the next remaining ject to th principal the senion per annur each; the funcrals, senior l'ri allowance verument, removal ot members superinten ing men, of the othe ing three 2,600.

Roman Cathoprincipally of Bombay. At and at Viziaresidents are 1 Rutnagherry tablishment of inglish writers iment, Liquor echanics; the s.
es that there Priest in any nan Catholics $t$ in a place of nd have been ing a clergyunent for the the Collector tion is made,
reports that , viz: one at , Nundagurh, Macligurh, ry) IIallkurthree Priests unior, nll ma-
tives of Goa. That the four first mentioned churches are under charge of the senior Priest, to whom the other two Priests are required to report proceedings ; the next four under one of the junior I'riests, and the remaining three under the other, the whole are subject to the Archaishop of Gon. They derive their principal support from the l'ortuguese Government, the senior Priest is allowed in salary of 300 Goa rupees per annum, and the two junior Priests 250 rupees each; they also receive fees for baptisms, nurriages, funcrals, \&e. for little more than a year and a halt the senior I'riest, who officates at Belgauin, received all allowance of 25 Rs . jer month from the British Goverument, but this has been discontinued since the removal of the 1st Bombay European regiment. The memhers of the four churches under the immediate superintendence of the senior Priest, amount, inchuding luen, women, and children, to 1,300 souls; those of the other four churches to ahout 100 ; the remailiing three churches to about 700 ; making together 2,600.

The whole of these are descendants of a body of Roman Catholics, who, about n century ago, removed from helow the Ghauts and settled there. Their chief employment is distillation of spirits; besides the above there are at present nt Belgaum, in her Majesty's 41 st regiment of foot, 279 men, 43 women, and 4.4 children, Roman Catholics, and 2,500 (seproys, pioneers, drummers, fifers, and canp followers) among the native troops, besides some of the same description, under the junior Priests nt Dhauwar and Kelapoor.

The acting Collector of Poona reports that there is one church and two Priests under his colleetorate, and that the only Catholic inhahitants there, are $n$ few servants and followers attached to the Camp int Poona. He does not report the sources from which they derive their support, hut from the Accountant-general's statement it appears, that one of them receives an allowance from Government of 50 Rs. per month, and the other 25 Rs.

The Collector of Khandesh reports that there are two small churches in his collectorate, one at Malligaum and the other at Dhoolia; there is only one Priest in Khandesh who resides at Dhoolia; he proceeds to Malligrum once in six or seven weeks to perform inass, he receives 30 Rs . per month from the Government, which is considered as a salary for performing mass on public days; in addition to this, he is generally paid by individuals one rupee tor each haptism, and one for each burin, and five rupees for each marriage; but these are not established fees, they are dispensed with, when the parties are in low circumstances; for all extra masses on account of individuals for their departed friends, or other purposes, half a rupce is paid; the amount of those fees may average about 12 rupees per mensem. The priest in Khandesh is not at all content with his allownuces, as he could obtain more than double the sum in Bombay, but, he understands, he has beell sent up to Khandesh much against his inclination. There are about 200 Roman Catholies in Khandesh, some of whom are very resjucetable men, and who serve the Goverument as accountants, English writers, \&c.; others are personal servants and cooks of European gentlemen. An addition of 10 Rs. per month has
lately been granted to him to defray the expense of his procceding to Malligaum.

The Collcetor in the Northern Concan has handed up a statement, shewing the number of Romin Catholic churches, the number of the Priests belonging to them, the sources whence they derive their support, and the number of the Roman Catholic houses and subjects in his district, to which we beg to draw your Honourable Court's attention.

That the Ruman Catholic faith is rapidly losing ground in his Zillah, there can be little doubt. Upwards of 1,200 families, Coolies, left the church during the raging of the cholera, and returned to the worshij, of their forefathers; from what he has ohserved, however, the change was merely in name, the greater number calling themselves Christians are in fact idolnters; some, it is said, worshij, the llimboo gods secretly in their houses, although they attend the church, and almost all conceive the images of the saints as gods, and worship them in that light.

Few, very few of the Christians, resident in his Zillah, nre descended from the Portuguese families, they are generally converted Koombies, Bundarees, Coolics, and a few Brahmins ; and the most extraordinary circumstance is, that most of them still adhere to the former prejudices of caste, and rarely intermarry, nad in some parts will not eat together, not withstanding which they are considered as brethren of the Chureh of Christ.

The cause of this ignorance must originate in the extremely tlepressed state of the clergy, and this is caused by the wretched pittance obtainable in each parish, no families of respectability would think of educating any member for such a statinn. The vicars of Salsette, in their petition to goverument, dated in December, $1 \times 36$, stated that the churches are almost " $\mathrm{n} l \mathrm{l}$ in great decay, and going to ruin; and there is nothing left for their repairs. The parishioners are so very poor and miscrable thant they can scarcely mnintain themselves and families." Sume of the churches are little better than a heap of ruins.

Considering the description of the Priests generally, the collector hardly knows whether the want of then in many places is a disadvantage or not, if men of education and character could by any means be appointed, the advantage would be certain. The statement now forwarded shews 13 Priests officiating over 24 churches or parishes, in the Island of Salsette, the Priest at Tannah having the charge of four churches. The Priest of Agasee in the Mahim Talooka has charge of the churches of Tarnjoor and Dahnoo, or rather parishes (for the church at the latter place is cornpletely destroyed), a distauce of 20 coss, but at present there are not many Christians in those two parishes.

Herctofore the Roman Catholics were in eeclesiastical matters subjeet to the rule of the Portuguese Bishop at Goa, and ministered to by an uneducated clergy. Now there are two Vicars Apostolic at Bengal and Madras (one an Englishman and the other an Irishman), subject to the Pope in religious matters They have several European pricsts ofliciating under them, and are recognized by Government. There are, it is said, a large number of Roman Catholics in the Madras territories ; and one-half of the European soldiers are of that persuasion.

Statement shewing the number of Roman Catholic churches at Madras, St. Thomas's Mount, Puilicat, Coveiong, and Pcriapalliam, the extent of their respective congregations, and the mode in which they are supported.

Remarks.

Bullt in 1785 by public contributions; the fund exclusively belonging to the church was originalty acquired by the compensation of 13,000 pagodas, made by Government on account of the demolition of a church in the fort which the Portugucse inhabitants bult, and the rest by legacies, donations, \&e., for the maintenance of the priests, charity, schools, Nc.
This church was established at the parti. cular instance of a large body of Roman Cathollcs, who, annoyed at the conduct of the Capnchin friars, petitioned Government and founded it in 1815 under the anspies of the Sce of St. Thomé. A range of bazary belongs to the church, the rent of which goes towards the ligitidation of a deht contracted for ita bencfit, to the amount of 2,500 rapees.
IBnilt by the headmen and other chriatian parlahs of the place, and the assistance of one Thomas D'Sonze, Esq., an opulent l'ortuguese merchant.
Huit by the christian boatmen from funds ralsed by their own contrlbutions, \&c. The origlana amount of these contributions was abont 70,000 rupees, 30,000 of which weut towards rlie haililing of the church.

Built lately by the Capuchins.
Bulit by the Capuchins having their bury. ing ground there.

Built hy Father Felix, a Capuchin friar, from his own funds.

A small chajel, huilt by public cootribu. tions from the Catholtes who have landed oroperty at Madeveram. Fountation laid or a latger building.
Erected by the King of Portingal when the see of St. Thome was established. Fund abont 20,000 pagodas, besides four lionses and two gardens, partly the endowment of the King of Portugal, and the rest from legacles, \&c. The See is under tire imme. diate patronage of that Monarch.

No Minister attached 10 it. Scrvice is occasionally performed.

On Tuesdays this church is opened, and dlvine service performet, when charitable donations, in candles, olt, and other commodities, nre obtalued to a considerable amount, adequate to the support of the church, \&c.

No Minister is attached to it. Service is oceasionally performed.
An allowance is also granted by Govern. ment on necount of the Enropenn troops in the cantonment.
Buitt by public contributions. Service is occasionally performed.

The controul of the Capuchin Friars in and about Madras, is as follows: The church situated in Armenian St. called Queen of Angels. The chapel situated at Royapooram, called Mother of Aftiction. The chapel situated at Wallajapettah, near Triplicane, called Lady of Purification. The church situnted at Vipery, called St. Andrew. The chapel situated ncar Monignr Chultry, called St. Roque and St. Lazar. The chapel situated at l3ig Parcherry, near the mint, called Lady of Assumption, formerly under the controul of the Capuchins, is from 1821 , under the controul of the acting Bishop of St. Thomé. The church situated at Royapooram called St. Peter, formerly under the controul of the Capuchins, is from 1826 under the controul of the said acting hishoy. The chapel sitoated near the market, erected in 1815, now called St. John's church, hy order of the then acting Bishop of St. Thome for the use and benefit of the Rev. Father Eustaquio, a Capuchin Friar, stands under the controul of the present acting hishop. The funds which the Capuchin Friars possess amnunt to about 180,000 rupees, most of which is the acpuirement of their predecessors, and the rest legacies by will of several testators, to which the superior for the time being of the said Capuchin church, situated in Armenian-street, is the executor. The interest of these funds are for 0 ${ }^{0}$ the support and maintenance of the Capuchin Friars, - charitable purposes, pinus works, and decorum of the Esaid chureh, situated in Armenian-street, under the
superintendence of the said superior. The chapel of the Mother of Affliction is supported by the Cnpu-
Achins; the chnpel of the Lady of Purification by the
$\therefore$ revenues thereof, and by alms of the public. The
Clourch of St. Andrew by the revenues thercof, and
from rent of the houses belonging to that church.
$\checkmark$ The chapel of St. Koque and Lazar by the Capuchins.
The chapel of the Lady of Assumption by the reve-
inues thereof, and by alms of the public. The chureh of St. Peter by the funds thereof, which are under the controul of the Marine Board, acquired by hoat people, and the church of St. John by the funds of the Jate Mr. John de Monte, who was a benefactor of the said church, and from revenues thereof.

As to the number of Europeans or their descendants who attend these churches and chapels on Sunday and other festival days, I cannot exactly say ; but to the best of my knowledge and belief I think they may be in all, including the soldiers of the garrison of Fort St. George, to about 700, including cousi-yborn, Malahar, Pariahs, and boat pcople, who may be about 10,000 ; but since a division of Roman Catholics has taken place in 1815, among the country born, a part of these, to about 400 or 500 , frequent the clurch of St. John, and the rest to the Capuchin chureh to a greater number. The Pariahs of Parcherry and boat people to their own churches, where a small body of country born to about 200 , in larcherry, frequent the Chapel of Assumption; and ahout 100 in the Church St. Peter. The Pariahs of Wallajapettah in their own chapel, where a small body of country horn to about 50 , frequent there, and at Vipery about 200, among country born, excluding Malabar Sepoys and Pariahs, who may be about 2,000 .

Statement of the Roman Catholic churches, their ricars, and their respective funds.-Cathedral of St. Thome, the Acting Bishop Fr. Manuel da Ave Maria; about 20,000 pagodas, four houses to be rented, and two gardens. Church of Santa Rita at do. under do.; about 1,200 pagodas, and a house to be rented.

Church of St. Domingos, do. no vicar ; two honses to be rented. Church of Madre de Dcos, do. Rd. Manuel S. de Jesus; a garden and 500 pagodas. Church ot Laznrus, do. do.; a cocoa-nut tree garden. Church of Discanço, Rd. Antonio F. dor Arcanjos; supported by the estate of the late Mr J. de Monte. Chureh of Luz, Rd. Fr. Francisco das Dores : about 500 pagodas, a house to be rented, and a garden. Church of Little Mount, no Vicar; a garden of paddy fields. Church of St. Thomas's Mount, Rd. Antonio Rozario Cardozas ; about 2,500 pagodas, und two houses to be rented. Church of Covelong, Rd. Luis Rubeiro ; nhout 64,000 rupees, but there is a seminary to be supported also with the same fund. Church of Poonmalny, Rd. Antonio Joze lires; pagodas $2,500$. Church of Pulicat, no vicar; no fund. Church of Vepery, Rd. Fr. Felix; no fund; at present in charge of Rd. Muhille. Church of Periapauleum, no vicar ; no fund. Clureh of Madaverum, no vicar; no fund. Church of Winllajawpettah, no vicar; no fund. Church of Capuchins, of Madras, Rd. Fr. John Baptista; about 30,000 pagodas, and two houses. Church of St. John nt Madras, Rd. Domingos J. A. Pereira; supported by the estate of Mr. J. De Monte. Church of Parchery at Madras, Rd. Jannario Saldanha; no fund, hot is supported by the Catliedral fund. Chureh of Royaporam, no vicar ; about 20,000 pagodas (boatmens' funds). Chureh another, at Madras, no vicar : supported by the Capuchins.
'the Roman Catholic establishments which now enjoy the protection and support of the E. I. Company, include four apostolical vicars, with authority direct from the Pope; nominated by the Society De Propagranda File, and stationed at Pondicherry, Verapoly, Bombay, and Agra. There is also a prefect of the Romish mission at Nepaul. These apostolic vicars have under them in their several dioceses a number of priests; most of whom are natives of India, and have been educated in Indian seminaries by European ecclesiastics.

There are also tiro archbishops and turo bishops, presented by the King of Portugal. The archbishops are of Goa, who is the Metropolitnn and Primate of the Orient; and of Craneranore, in Malabar. The bishops are, of Cochin in Malabrar, and St. Thomas at Madras. The latter includes Calcutta in his diocese; where he has a legate, who has under his superintendence 14 priests and 10 churches, viz. in Calcutta, one; in Serampore, one; in Chinsurrah, one; in Bandel, one ; in Cosimbazar, one; three at Chittagong ; in Backergunge, one; and in Bowal, one.

The priests and churches under the presidencies of Madras and Bombay are very numerous, exclusive of those which were formerly Syrian churches, nnd have been, as already mentioned, incorporated with that of Rome.

The Roman Catholie Bishop of Bombay, who, with his Vicar-gencral, resided on the island, has under his jurisdiction there five churches, inclusive of a new clurch on the island of Colabar, and two chapels. There are connected with these establishments 13 priests, exclusive of the bishop and his vicar. All the churches, except Colabar, have sufficient endowments for their support and that of their priests.

The princepal chureh, which is dedicated to N. S. da Esperança, formerly stood on the Esplanade; but in the year 1804 it was removed at the company's expense, nnd a new one erected by Salliah Mahomed Fuzeel. This building cost about 4,000 . In 1831 it was discovered that the work hat been bedly exccuted, and the church was then ready to fall, in consiquence
of which the company made a further grant of 14,000 rupees, nearly 2,0001 ., towards its repair.

At Surat there are two churches under the jurisdiction of the Bishop of Bombay. The oldest was erected in the year 162.4 ; and it is a remarkable circumstance that for many years this church enjoyed a monthly income of 126 rupees, 2 anas paid by the Nabob of Surat, by virtue of a Sunnud from the Emperor at Delhi. This endowment ceased to be paid when Surat came entirely under the controul of the company ; hut the chureh is still in possession of freehold property, yielding a monthly sum sufficient for its support. The second church is wholly supported by the company, who pay the priest his monthly stipend ot 40 rupees. The stated worshippers in these two churches somewhat exceed 100.

The other Roman Catholic churches under the Presidency of Bombay are as follow: one in Bronch, which was erected and is still supported by voluntary suhscription, excepting a monthly stipend of 30 rupees to the priest, paid by the company; one at Baroda, supported in the same way; the church of N.S. Ios Remerlios at Bassein, to the re-edification of which, in the year 1832, the company contributed liberally; a church at Poonah, with two priests, who enjoy stipends paid by the company; one at Malwa; one at Vingorla; one at Viziadroog; one at Rutnagherry, erected in 1822, with the aid of a grant from the company, and one at Hurree.

The following statement exhibits the several missionary stations formed by the London, Baptist, and Wesleyan Societies, with the date of the year when the mission was established at each station, and the number of missionaries resident at each.

Loudon Society.-Calcutta, A.1). 1816, missionaries, 4 ; Chinsurah, 1813, 1 ; Berhampore, 1824, 2 ; Benares, 1820, 4; Madras, 1805, 4; Tripassore, 182f, superintended by the Nadras missionaries; Vizagapa. tam, 1805, 2; Cuddapah, 1822, 1; Chittoor, 1827, 1; Belgaum, $18: 20,2$; Bellary, 1810,4 ; Bangalore, 1820 , 2; Salem, 1827, 1; Combaconum, 1825, 1 ; Coimbatoor, 1830, 1; Nagercoil, 1806, 2 ; Neyoor, 1828, 2 ; Quilon, 1821,1 ; Surat, 1815, 3 ; Darwar, 1829, superintended by the Belgaum missionaries.
Baptist Suciety.-Calcutta, 1801, missionaries, 7; Patna, 1832, 1; Digar, 1809, 1; Monghyr, 18:6, 2 ; Sewry, 1807, 1; Cutwa, 1804, 1 ; Luck; antipore, 1831, 1 ; Khaue, 1831, 1; Bonstollah, 1829, 1. The above is exclusice of the mission lamily at Serampore, which is in the Danish territory.

Wesleyan Socicty.-Madras, four Europeans, with native assistants; Bangalore, 4 ; Negapatam and Melnattam, 1.

VHI, it was stipulated at the last renewal but one of the E. 1. Charter, that 10,000 l should be annually devoted from the surplus territorial revenue of Inclia, to the purpose of education ; by the following extract from a parliamentary return in 1833, it will be seen that the company have doubled, and in some years trebled the amount laid down in the act, although there was no surplus revenue in India :-
In 1824, 21,884l.; 1825, 66,563l.; 1826, 27,412l.; 1827, 45,313l.; 1822, $35,841 l$.; 1829, $38,076 \ell$.; 1830, 44,330l.

As an instance of the efforts making for the diffusion of intelligence throughout the British dominious, I may quote the testimony before Parliament of the Hon. Holt Mackenzie, who states that since the renewal of the last Charter, the Bengal Government have established a college at Calcutta for the Hindoos, and reformed very much the old Moslem College;
that colleges bave been estahlished at Delhi and Agra, for both Ilindoos and Moslems; the Ilindoo College at Benares has been reformed; at the several institutions it las been the object of Govermment to extend the study of the English language, and good books have been supplied, \&c.; that seminaries have been established in different parts of the country, and schools established by individuals who have been nided by Government. The Calcutta School Book Society, from 1824-2.5 up to the 30th April, 1833, printed 13,000 copies of 2 4 Sanserit works; 5,000 copies of seven Arabic works; 2,500 do, of five l'er. sian nuthors; 2,000 do. of four Hindu do., and several other works were then in the press. The printing charges of the Society for the foregoing period was 105,425 rupees.

The late Colonel Mackenzie received from the East India Company 10,000l. for his collections on the history of the Hindoos of the Southern Peninsula, The money paid by the East India Company for Dr. Morrison's Chinese Dictionary, was 12,000/. sterling!

With respect to Bombay, Major-General Sir Iionel Smith, a veteran and distinguished King's officer, ob. serves in his evidence before Parliament (6th Oet. 1831), ' Education is in such extensive progress, that I hardly think it could be more extended-education is also going on in the Deckan; the encouragement given by Government consists in a very liberal estab. lishment, under the direction of an officer of very great attainments in the native languages, Captain Jarvis.'

For the army, also, the Company have established schools, and libraries have been sent out to India for the use of the troops; and it is in frequent evidente before Parliament, that great pains are taken with the native regimental seminaries. 1 might quote similar testimony with respeet to Madras, but ןerhajes the best proof that 1 could adduce is the statement made by that indefatigable friend of India, Sir Alexander Johnson, in his late able Report laid betore the Royal Asiatic Society, namely, that in Martras, ' the proportion of the inhabitants who have been taught reading, writing, and the rudiments of arithmetic, in their own language, amount to one in fire!"

Progress of Education in Bengral.-The Calcutta Madrissa, or Mahomedan College was founded in 1781, by Warren Hastings, who provided a huilding for it at his own expense, amounting to $57,745 \mathrm{rupecs}$, but which was afterwards charged to the Company. The Bengal Government also, at the recommendation of Mr. Hastings, assigned lands at the estimated value of 29,000 rupees per annum, for the support of the institution, to promote the study of the Arabic and Persian languages, and of the Mahomedan law, with a view, more especially, to the production of well qualified othicers for the courts of justice.

In 1791, the government of the College was pinced in the hands of a Committee of Superintendence, consisting of the acting president of the Board of Revenue, the Persian Translator to Govermment, and the preparer of reports.

The students are divided into classes, and the fol. lowing sciences to be taught :-Natural Philosophy, Theology, Law, Astronomy, Geometry, Arithmetic, Logic, Rhetoric, Oratory, Grammar.

Not more than two months' vacation allowed to the students in one year. Every Friday to be set apart for purifications and religious worship. The salaries of the preceptors and officers to be-Head Preceptor, 400 rupres per month ; first Assistant, 100 ; second ditto, 80 , third ditto, 60 ; lourth ditto, 30.

In a voluminous report in 1819, of a retrospective view of the resources ant expenditure of the institution, the latter amounted, from the year 179.4 to the year 1818, a period of 25 years, to the sum of $4,94,197$ rupees. 30,000 rupees jer annum, is now granted to the College out of the public treasury, instead of the institution depending upon the uncertain produce of the lands which were originally granted to it as an endownent. The public examinations which take place every year, demonstrate the progress of the Collcge.
In 18:27, the study of $\lambda$ rabic, Mahomedan Law, and Nathematics was extended, and a Medical class instituted. The examinations were in Arahic, ingic, Rhetoric, Philosophy, Euclid, Arithmetic, Algehra and Nedicine. In 18:8, an English Class was established; skeletons and Anatomical Models and Surgical works provided. All applications for Law oflices under Government were to be accompanied by certificates from the College, and a preference given to those who hat acquired the English language and producel testimonials of good conduct in the College. In 1830, No. of Students 99 ; examined 85.

Benares Hindoo Sanscrit College, established by Janathan Duncan, Esq., the resident at lBenares in 1791, as a means of employing, heneficially for the country, some part of a surplus which the public re. venues yielded over their estimated amount. The expense for the first year was limited to $14,000 \mathrm{Rs}$. In the fullowing year it was angmented to 20.000 Rs.; at which amount it has been continued down to the present time. The object of this institution was the preservation and cultivation of the laws, literature and religion of the Hindoos, (and more particularly of their laws) in their sacred city; a measure which it was conceived would be equally advantageous to the natives, and honourable to the British Government anong them.
The establishment originally consisted of a head pundit or rector ; eight professors ; nine students who enjoyed salaries; with book-keepers, writers, peons, \&c. The Governor-General was constituted visitor, and the resident his deputy. Besides the scholars on the foundation, and a certain number of poor children who were to receive inst."utan gratis, the institution was open to all persons who were willing to pay for instruction: the teachers and students to hold their places during the pleasure of the visitor. All the prolessors, except the professor of Medicine, to be Brahmins. The Brahmins to bave preference in succession to the office of rector, or to professorships. Four examinations in the year to be held before the resident. Each professor to compoze annually for the use of his students, a lecture on his respective science. Examinations into the most sacred branches of knowledge to be made by a committee of Brahmins. Courses of study to be prepared by the professors. The internal discipline to be in all resjects contorma. ble to the Dherma Shastra, in the chapter on education.

The prescribed course of studies in this college to comprehend,
Theology, Ritual, Medicine ineluding Botany, \&e., Music, Nechanic Arts, Grammir, Prosody, und Sacred L.exicography, Mathematics, Metaphysies, Lugic, Law, Ulistory, Ethies, Philosophy, and l'oetry.

The Culfetlu Hindue samserit College, dates its establishinent from 1821. For the support of this institution, the anaunl sum of 30,000 rupees has been allowed by Goverument, and $1,20,000$ rupees has also been allotted for the erection of a college. The estahlishment consists of lit Pundits, a Librarian and servants, 100 scholars on the foundation, nad a secre. tary.

The sum of 1,200 rupees is reserved for distribution in prizes at the public examination, and a school for llintoo children is connected with the college.

In 1823, the Bengnl Goverument formed n General Committee of Public Instru'tion at Calcutta, for the promoting of education and of the improvement of the morals of the natives of India.

The annual sum of one lac of rupees, which, by the 53 Geo. III., c. 155, was appropriated to the purposes of education, was placed at their disposal. The schools at Chinsumh, Rajpootnna, and Bhaugulpore, were placed under the controul of this committee, and the separate gronts which bad been made to those schools, amounting together to 16,800 rupees per annum, were discontinned from the 1st Jnnuary, 1824.

The total amomen phed at the disposal of the General Committee of lublic Instruction in the years from 1821-22 to 182:i-6 was, S. R. $4,78,400$.

Agra College,-In 182\%, the Governor-General in Council sanctioned the institution of a college at Agra; the sum of $42,501 \mathrm{Rs}$. was for the erection of the college ; an expenditure of $15,420 \mathrm{Rs}$. authorised, and the number of students in the college was, in 1826,117 ; 1827, 210; in 1830, 203; of whom 73 received stipendiary allowances.

Delhi College, similar to the foregoing by its adaptation to useful instruction. In 1827 , the number of students was 204 ; in 1828, 199; and in 1829, 152 ; the reduction heing owing to a discouragement of pecuniary or stipendiary grants to pupils.

Videlnya or Anslo-Indian Collegre.-"'This highly interesting and promising institution," it is stated, "owes its crigin to the intelligence and public spirit ol some of the opulent native gentlemen of Calcutta, who associated together in 1816, and subseribed a capital sum of Rs. $1,13,179$, to found a seminary for the instruction of the sons of Hindoos in the European and Asiatic langunges and sciences." It was placed under the superintendence of the General Committee, as the condition of pecuniary aid, to the amount of 300 rupees jer month, for house-rent, nfforded to it ont of the Education Fund. This institution has a growing popularity and decided superiority, on its present footing, over any other affording tuition to the natives in the English language; a select library of books has been sent from England, and some additional philosophical npparatus. The number of scholars, all male, is stated at 200 ; and so long, the committee add, as such a number, all resucetably connected, "can be trained, in useful knowledge and the English language, a grert improvement may be confidently anticipated in the intellectual character of the principal inhabitants of Calcutta." In order to secure the continued attendance of the more promising pupils, and to enable them to complete their course of study, a limited number of scholarships has been endowed by the Government. The number of pujils were in January, 1826, 196; in 1827, 372; July, 1826,$280 ; 1828,437$ (of whom 100 received gratuitous education). The number is still on the increase.

Fintish Collewr.-The Government sanctioned the establishment of a distinct Einglish College, for the
admission of a certain number of the nore allvanced pupils from the Hindon and Mahommedan colleges, for gratuitous instruc'ion in literature and science, by means of the English language; for which purpose the Education fund could afford an income of Rs. 24,000 per annum.

The Bixhop's College, near Calrufta.-A grant of land, of about 20 acres, was mate by the Govermment in India tor the purposes of the College, to which a further grant has since been made. It stands about three miles below Calcut ${ }^{2}$, in a tine situation, in the opposite bank of the river Hooghly, which is there much witler than the Thames at london. The apot is peculiarly favourable for privncy and retirement; and " the scencry is such," Bishop Middleton observes, "as to gratify and soothe the mind."
The foundation stone of the college was laid, on the 15th of December, 1820, by Isishop Middleton. The Inenrporated Society for the Propagation of the Gospel in Foreign Parts, transmitted to Dr. Middleton the sum of $5,000 \ell$. to enable him to commence the work; $5,000 l$. were contributed by the Socicty for Promoting Christian Knowledge; 5,000l. more were voted by the Church Missionary Society ; and the British and Foreign Bible Society had added 5,000l. This sum of $20,000 \mathrm{l}$. was augmented by collections in all the churches in England and Wales, in consequence of a "King's letter," which amounted to $45,000 l$., with which the building bas been completed.

The college consists of three piles of buildings, in the plain Gothe style. These buildings form three sides of a quadrangle; the fourth, or sonth side, being open to the river, which in that pert flows nearly from E. to W. The pile which fronts the river consists of the chapel college to the E, divided by a tower from the hall and library on the $W$. The buildings on the E. and W. sides of the quadrangle contain the apartments for a pribeipal and two professors, with lecture rooms and rooms for the students. The whole is formed on the plan of combining comfort and convenience with an elegant simplicity.

Bishop's College is under the immediate direction of the Society for the Propagation of the Gospel but the statutes are so framed as to afford opportunity both to the Government in India and to the religious societies connected with the Church of England, of obtaining, under certain regulations, the bencfits of the college for such students as they may place there.

For the regular supply of students, the Society for the Propngation of the Gospel has adopted the measure stated in the following extract from a late report: -"'Ten theological scholarships and ten lay scholnrships have been formed by the society for native or European youths educated in the principles of Christianity; and se sum of $1,000 l$. per annum has been appropriat §d to this special purpose. The ordinary age of admission is 14 .

The Christian Knowledge Society assists in this plan of scholarship; having placed the sum of $6,000 l$. at the disposal of the Gospel Propagation Society for the purpose of endowing five scholarships, to becalled, in memory of the founder of the college, "Bishop Middleton's Scholarships." This grant is also intended to provide a salary for a Tamul teacher in the college, that being the language chiefly used in the society's missions.

The Church Missionary Society voted a grant of 1,000l. per annum for several years, on account of the importance of the institution, and of the co-operation it afforded to their department of labour in India.

In 1830, the Directors of Bishop's College had up. wards of $50,000 \%$. in the 31 per cents., as $n$ fund towards the support of that institution. There are upon that foundation a principal, two prolessors, eight missionaries, two catechists, and a printer.

The College Council consists of three professors, and nttached to the college are four European mis. sionaries.

The foregoing abstract of the colleges in Bengal is sumficint to convey nn idea of the good intentions of the Government in furthering education. There are various primary and elementary schools; viz. at Chinsurub, where there are 1,200 scholars; at Ajmeer, in which school there are 200 boys; Boglipoor school, 13.4 pupils ; Cawnoore, 75 scholars; Allahabad, 50 ditto (it is proposed to establish an English college at Allahabad); Dacen, 25 schools and 1,414 pupils; Mynpoory College, Etawah, 40 ; Bareilly, 131 schonls, 300 seminaries, with 3,000 pupils; and an established college, with 50 students. The following statement respecting lareilly is full of interest:-
In 1827, the local agents in Bareilly, Messrs. S. II. Boulderson, J. Davidson, and C. Bradford, were rc. quired to report " what schools, colleges, or seminarics of any description whitever, existed in the towns or villages" of that district. In reply, they inforaied the Education Committee, that in the town of Bareilly there were 101 schools in which Persian was taught, and 20 in which the children of the Malinjins were tnught accounts; besides which there were 11 persons who tnught Arabic, and two who taught the sciluce of medicine; that in the villages round about Bareilly there were nine Hindu schools and 13 Persian; and in other parts of the district 108 Persian and 105 Hindı schools.
"In these schools," the local agents observe, "science of any sort is rarely studied. Works in the Persian language, such as the Bostan, Golistan, Zalicka, Mad. hooram Aboolfuzul, Sceundernameh, Tusha Ǩhedeefo, Bahardanisli, are read with a view to facility in writing Persian ; besides this, the scholars are instructed in the simplest rules of arithmetic. In the colleges, the works read are in the Arabic language. The course of study includes Surf, Neho, Mautick, Laws of Composition, Fikha Kikmut, under which are included medicine, mathemntics, and natural philosophy, the Buddus, and the explanations of the Khoran ; besides these, there are schools in which the children of Ma. hajnns and those intended for putwarries are taught nccounts; those who study the Hindoo sciences read the Vedas, the Shastres, the Poorans, Beakam Jotuh Chelum Naryul, Ojoosh l3ed, Memansa, Neari. We have not heard that there are any establishments for such scholars in the villages.
" In the schools in which Persian is taught, the boys read mannscript copies of the different books, and learn to write on boards.
" Hindoos and Mussulmans have no scruples about reading together. The teachers are almost always Syeds, Sheiks, Moguls, Patans or Kaits.
"The teachers are paid from three to seven rupecs $r$ inonth by the person at whose house they sit ; they also get their meals twice a day ; and surance, that is, a kubba, razace, toshak and bolaposh. Kubba and razee are regularly given every year, whether the old one be worn out or not ; the tushak and bolaposh are sometimes given, sometimes not. Summer clothing is also sometimes given, but rarely. Those who do not pay a teacher for attending at their own huuses, aend their children to the houses of those who entertain one, and pay the teacher from four anas to one rupce

monthly, according to their means; besides this, the master gets other perquisites, such as 'jummajee' offerings, presented on Thursday eveuiugs hy ench boy, from four gundalis to one and five allas ; 'aghazee' offerings, presented on begiming a new book, from five anas to one and a half rupee; 'edic,' presented on holidays, from one ana to one rupee. The boys begin to stutly at six years of age sometimes, but seldom till 20 ; in the colleges, from 14 to 25 , sometimes 30 , sometimes much less, it depending upon the talents and inclination of the students. Those who learn Persian, viz. hoya till the uge of 14 and 15 , never remain under the roof of the master; on the contrary, he gencrally attends at the house of some person or other, where he instructs the children of the master of the house, nnd those of others. Schools in which aecounta are taught diftier in no msterial respect from Persian ones. Those who tesch Arahie have sometimes pupils who come from a distance residing under their roof; but those who live in the sanne town remain in their parents' house. It is considered improper to take any thing from Arabic students, unless from necessity. The sehools in the towas are well attended in comparison with those of the villages. We have heard of no schools supported by public grants." In Delli district there are about 300 elementnry schools, in several of which the preceptors receive no pay, but teach " gratis, in hope of Hearen."
There are a great varicty of other colleges and schools in Kidderpore, Burdwan, Moorahedabad, Hooghly, Nuddea, Rajishaye, Calcutta Benevolent Bchools (250 pupils of both aexes) ; intant schools in various districts, under the Committce of Management at Calcutta; Sylhet, Chittagong, Beaspoor, \&e., independent of regular schools, and private or missionary seminaries. The missionary societies maintain schools at their respective stations. The following are maintained by them under this Presidency :-

Benares Sanserit Coltege.-No. of scholars, 222.
Bhagulpour Hill School.-No. of scholars, 79.
Calcutta. - Medical College. - Stipendiary students, 49.
Hindu College.-Total No. of pupils, $469 ; 392$ of whom are provided for hy the parents, and the remainder by the college.

Muhammedan College. - In $1 \times 37$, there were $4:$ paid, and 72 unpald students.

Sanskrit College.-1'resent No. of scholars, 122; of whom 57 are pny seholars, receiving a monthly pay of 5 or $\$$ rupees; and 65 out-students, getting no stipend from Government.

Duccu School.-There are in this seminary $1.49 \mathrm{pu}-$ pils, of whom 134 are Hindus, 8 Mahommedans, and 7 Christinus.

Delhi Oriental Collegre.-Arabic students, 45 ; Dersian students, 64 ; Sanskrit departinent, 35.
ferruckabul Schoot.-No. of scholars, 30 ; of whom 28 are llindus, and the other 2 Mahommedans.

Delhi English College. - No. of scholars 108; viz. 74 Hindus, 27 Mahommednas, and 7 Christiaus.

Guurahutti School.-There are 136 pupils in this school, of whom 91 are Hindus, 43 Mishommedans, and 2 Christians.

Ghazerpuor School -There are 57 seholars in this institution, of whom 5 are Christians, 10 Mahommedans, and 42 Hindoos.

Goruckpoor.-There are 53 pupils, of whom 25 are IJindoos, 21 Mnhomınedans, und seven Christians.

Mohtumed Muhsin's Coltege, Hoogy. - There are 1,013 students belonging to the English department of the College, of whom 31 are Mahommednns, 3.4 Cluristians, and the rest Hindoos. In the Arabic and Persian Classes, there are 197 students, of whom 138 are Mabommedans, and 81 Hindoos.

Hoshungabal.-There are 20 pupils, of whom four are Mahominedans, one a Christian, nnd the reat Hirdoos.

Tubbulpore.-There are 17 pupils in the English department, and 6.4 in the Hindoo class.

Maulmein.-There are 107 popils, of whons 42 are Christinns, 40 Buddhista, seven Hintoos, and one Mahommedan, and the religion of the remainder is not known.

Meerut.-There are at present in this sehool, 21 Christians, 33 Mahommedans, and 5: lliudoos.

Midnapoor.-There are now 55 students in this school.

Murshedabal College.-There are 80 students in the English department, of whom 58 are Mahoumedans, 21 Hindoos, and one Christian. lin the oriental department, there are 88 pupils, of whom 82 are Mahommedans, and the rest Hindoos. Monthly income of the College, 1,666 rupees.

P'atnu.-There are 102 pupils in this seminary, of whom 15 are Christians, 16 Mahommedans, and 71 Hindoos.

Bajohahi.-There are at present 98 receiving instruction.

Suugor.-There are 205 Hindoos, and 11 Mahoinmedans in this school.

It is worthy of remark, that when the pupils of the different schools, have to pay for their own books, they are much more regular in their aitendance, than if they had them gratis.
A medical college at Caleutta (the project and plan of which was laid by me before Lord W. Bentinck, in 1828, but rejected at the time by the supreme Government, lest Hindoo prejudices should be offended) is now in full operation, and producing nuch good.

State of Eluration at Mitadrus. The reports in detail from this Presidency are not numerous, hut to compensate in some measure, we have a more complete return than from any other Presidencies relative to the males and females at each school, distinguisliing the Hindoo from the Mussulman seliolars as follows:
 the thitem from the Moswiman scholarn, ant the Male from the Fenale Jipith.
(From Govermment Returns in 1836).

A summary of the report states, that the sehools are for the must part supported by the people who send their chidiren to them for instruction, the rate of payment for each scholar varying in different districts, and, according to the circumstances of the parents of the pupils, viz. from one ana (three-halfpence) to four rupces (eight shillings) a month, the ordinnry rate of the poorer classes being generally four anas, und seldom exceeding eight tanä, ?here are endowed schools, or teachers, in the following districts:-

Rajumumdry.-69 teachers of the sciences, enalowed with land, and 13 receiving allowances in money.

Nellore,-Several Brahmins and Mussulmmens receiving 1,467 rupees per annum for teaching the Vedas, Arabic, and Persian.

Arcot.-28 colleges and six Persian schools.
Salem.-20 teachers of Theology, and one Mussulman school.

Tanjore.-77 colleges and 44 schools, supiported by Ilis Highness the Rajuh.

## Trichinopuly. - Seven schools

Maluhar.-One college.
Endowments for purposes of education in other districts have unfortunately been appropriated to other purposes.

The Missionary Societies maintain the following schonls, under the P'residency :-

A committee of palblie instraction has been formed at Madras on the model of that of llengal, neol mach good has already been alfected by the same.

Stotu: of Eilucution at Bumbuy. - The Governmont of this Presideney has not been behimel hand in promuting the blessing of clacation. In July, Lades, a elreular letter was issmed to the sevoral eollectors under the llombay Government, calling upon them to trpart annually to the P'oujdarry Adawlut the No. of nchools in their collectorates, the mumber of boys attersing each, and the mode in which educntion was conducted, also the mode in which printed tracta were anught ufter and disposed of. In Oetober, 1829, these reports having been reecived, the Registrar of the Adawlut was instrueted to forward to the Government a general report of the state of edseation in the provinees of the Bombay l'residency, framed from the information conveyed in the statemeats of the several collectors, and suggesting the means which, in the opinion of the Jurlges, were most likely to promote and improve the education of the native si Indib.

1st. By a gradual extension of sthouls on min : $n$. proved principle, either by attiording the phtronage of dove mment to native schoolmusters, on condition , if their improving their system, or by the establishment of new schools in populous places at the espense of Govermasent ; and

2nd. By the gratuitous distribution of uscful books such as 'books of arithmetic, sloort histories, moral tales (distinct from their own false legends), natural history, and some short voyages and travels."

Periodical examinations the judges recominend $t$, be held with caution, as likely to excite alarm, an.. when voluntarily submitted to by the sehoolmasters, to be accompanied by liberal rewards to the scholars for proficieney, 'as shewing the interest the Governmeat takes in the proccerlings, and as a mode of encouragement which would seem upon common primeiples likely to be attended with a good result.'

This report is necompanied by the following 'Statement of the Schools and Scholary in the ditferent Collectorships.'
Satire Education Socinly.-The committee of this nobie institution (volontarily formed in $\mathrm{I} \$ 15$, mal cmposed in nearly equal proportions ol Einropeans and natives) at a meoting, leth April, $1 \times 31$, stated that its aggregate recoipts and disbursements within the year amounted to between 76, 'a nud 80,000 rupecs; that it has constantly on . . . . .re than 40 publications in the native languages, many of them the pruduce of the Bembay lithographic and other presses, of which former mode of jrinting favourable specimens are appented to th seports: and that it las under its controul and $w$ :wapment the several schoots and establishme ts wibed in the following paragraphs:-
"In the central school 250 boys have been through a course of stady in the English langunge: 50 have left it with a competent knowledge of the language, consisting of an acquaintance with geography, mathematies, and geometry. In Bombay, the boys in the Mahratta sehool have amounted to 9:5, and in Guzzerattee to 427. At present, there are altogether sis of the socicty's schools, ench containing nbout bo boys, amounting in the whole to 3,000 boys under a rontre of education."

This report eontains the folowing forther parti eulars:-
" Yiur committe observe that the boys who have made the ereatest progress in the lingliwh whosla are the Hindoos; they are lett longer in the achools by their parents than other boys, who, though equally intelligent and quick, are more irregular in their attendance, New or no Mahomedan boys ever enter the sehools."

In Ineff, there were in the soclety's sehool at Bombay $3 \mathrm{fin}^{7}$ hoys bourders, and den girls ditto: and there were of duy scholars, gife Christinns and 172 natives. In Surnt achool 3 Christians and is natives, und the regular schools $1 \times 3$ pupils.

There is a llindoo college at Poona, at which preminms are awarded to the most deserving stadents. An achalrable binghear College has bew formed at Bombay, at which, necording to the latest return, there wore sti students entertained and instructed.

* Master palt by government.

In May, I8.30, the Fiducation Society reported 25 whoolmasters ( 11 Mahratas and 14 Gumeraterev), ready to eommence their duties as teachers in the various schools in the Decean, in Guzaerat, and in the two Coneans. They had aequired an necurate knowledge of their own languages, and were so far acquainted with the bigher branches of the mathematies as to entitle them to be considered teachers of the second order. Stations wore proposed for them by the Society, to which they were sent by the Government.

In 18:29, there were 11 stulents quitting the insti. tution to enter on professional employment, of whom there were-Liuropeans, 7 ; Mahratta, 32 ; Guzzerat tee, 5. Mathenntical instruments, ke. are supplied by the $1 \therefore$. I. Company.

The following very condensed abstract, relative to the number of the sehools under the Bombay I'resideney (according to cirenlar queries in 1825 ) nnd the mose in which the teacher is remunerated, will be perused with much interest.
[The reader desiruts of further information on the stofe of ethiotion in indir, will find many details in rol. i., sponel rtilion, of m!, "History of the Britist Colunies," and in my "Culmial hilirary." Some returns have hum ordered to be prepared he Partiament, Which wilt ly fo und in the ipprondix.]

Official Returns (Abstract) of the Sehools under the Bombay Presideney.

Decrense of death sentences on first period， 194 ； ditto of life transportation or imprisomment， 878 ； total decrease on six years， 1,002 ．

The decrease which the loregoing table exhibits will delight every friend of humanity；on death sen－ tences there was a decrease duriog the first period of 12.1 ，and comparing the two last with the two first years，nlter an interval of ten years，the dillerence will be more strikingly observed：－in $1 \times 16$ and 1817， death sentences， 2.29 ；in 1826 and $18: 27$ ditto， 122 ； decrease on two years， 107.
Number of Death－sentences in lingland and in India for live Years．

Sentences and l＇opulation．
$\left.\begin{array}{c|c|c}\text { Years．} & \begin{array}{c}\text { England，} \\ 12,000,000\end{array} & \begin{array}{c}\text { Intia，} \\ 60,000,000\end{array} \\ \hline 1823 & . & . \\ 1824 & . & . \\ 1825 & . & . \\ 1826 & 1068 & 77 \\ 1827 & . & . \\ \text { Total in both } & 1503 & 51 \\ \text { Countries }\end{array}\right\}$

Thus，while those of India decreased 22 between the lirst und last year，those of linghand increased 561. l．et it be remembered that sentences of death in

India are not merely sinfences, they are in genera! fulfiled, unless when extraordinary circumstances intervenc; the decrease shows, therefore, an actual decrease in crime, not, as would be the ease in England, only a decrease of the nominal severity of the law, which in fact is actually takirg place from year to year, not only by means of legislative enactments, but also by the unwillingness of jurors to find judgments involving deaths.
Sir K. Rice, in his evidenee before the Lords in 1830, says that among a popolation of 150,000 persons in Bombay, luring three years, there was but one execution, and that was of an English serjeant.
The last talle gave the returns of the Court of Nizamut Adawlut; the lollowing are these of the Courts of Circuit, specilying the nature of the crimes :-

This is a very great deerease on two years, and in looking at the years preceding those given in the first table, the diminution is yet more gratifying to behold. For instance, adulteries were, from 1816 to 1818, in number 95; felony and misdemeanour, in the same years, 37 f ; shewing a decrease on the former of 75 cases; and on the latter of 269 . In the second table there is also a marked improvement in the country.

Burglary.-In 1816 to $1818,2,853 ; 1825$ to 1827 , 1,036; decruase, 1817.

Emhezzlement.-In 1816 to 1818,$150 ; 1825$ te $1 \times 27,49$; decrease, 101.

Cattle Stealing.-In $1 \times 16$ to 1818, 203; $1 \times 25$ to 1827,31 ; decrease, 172.

Iarceny.-In 1815 to $1818,1,516 ; 1825$ to 1827 , 223 ; decrease, $1,293$.

But if the foregoing Circuit Court returns be most cheering and honourable to the l3ritish Govermment, those of the Magistrates' Courts for the Lower and Western provinces of Bengal are much more so, for the decrease of erime is yet more extraordinary, whether as regards offences arising trom revenge, from destitution, from blood-thirstiness, or from immorality. The following shew the sentences of two years; if we had them of a more recent date, 1 ain convinced we should observe a still greater diminution.

Comprarative Statement of Offences against Property and against the Person, on which the Masistrates passed sentence in the Lower and Western Provinces of Bengal, duriag the Years 1826 and 1827.

Decre ase of offences ugainst property in one ysar, $1,4 \mathrm{tis}$ Decrease of offences aghinst persons ith one year. . 1,162 Dectease of varions other offinees in oue year....5,531

Total decrease ot cime in one year. . 14,211
In arson, burglary, fraul, larceny, bloonlshen, perjury, ke., we see a rapid decrease, ammuting altogether in one year to upwards of $1.1,000$ !
In hadia, offences decreased one-hatf in one gear; in England they increased in five years at the enormous rate of 1 lpwards of 1,000 per amum! The evidence of Mr. Mangles (1.ords, 4th Mareh, 1×30), is confirmatory of this assumption:-" (Q). Is the pelice ethicient for the prevention of crimes? certainly.-0. Are there sliff robberics to any consi- irom an nverage in former years of 2.50 or 300 , to 18 derabte extent on the navigable rivers? A. Not at or 20 !" all to the extent they were formerly.-(). Is there a river police? $A$. There is, I think, near Calcutta and near Dacea, and in other parts, but not very generally. The improvement in the pulice can be proved beyond all doubt, from the great dimunition in the number of erimes.-Q. Is that the case in the provinces where dacoity prevailed? $A$. Very greatly.Q. Can you state in what proportion the number of crimes has diminished? A. 1 think in the lower provinces the average of dacoities of late years is abont as one and a fraction to seven as compared with the state of things 2.5 or 30 yers 'go." Mr. Mangles adds, "In the district of Kishangr, formerly most notorious for dacoities, that erime $\mathrm{f} \because$ decreased,

When commencing these tables, I have shewn the number of persons sentenced to death and transportation, or imprisuned for life, by the Nizamut Adawlut. Exile or incarceration sentences for seven years have this decrensed before this court:-In 1825, 334 ; in $\mathrm{J} \times 2 \mathrm{6}, 137$; and in 18:27, 65. A decrease, after one year's interval, of egem sentences.
Another method exists fir testing the ellicacy of the poliee and of the taws, which is by looking at the returns of the higher classes of erime, whether murder or robbery with violence. I have, therefore, prepared this table to exhibit the result of the two periods of two years cach.

State of Ci. as in the Jowro and Western l'owinees of llental, at Twn leriods of Two Vears each.

Under a mild and equitable system, wituiters with and without depredation decreased 576 in two years ! The mumber of persons chnrged with shooting at, stabibing, and noisoning with intent to kill, in lingland, have thus lamentahty inereased:-In 18:26, 47; in 1827, 82 ; in 1928, 72; total, 201. In 1830,80 ; in 1831, 104; in 1832, 132; total, 316.
Western Procinces.-The number of murders without depredation were, in 1818 and $18: 20,196$; in $1 \times 27$ and 1828,255 ; decrease, 241. Allrays with loss of life : in 1821 and 1823,232 ; in 1827 and $182 \times, 118$; decrease, 114. Homicides: in lsis and $18 \cdot 20,377$; in 1827 and 1828,185 ; decrease, 192 . Depredations accompanied by torture and wounding: in 1818 and $1820,1,000$; in 18.27 and 1828 , 512 ; decrease, 488 . in the Lower Provinces the same ollences were, in

1818 and 1820,319 ; in 1827 and 1828 , 194 ; llecrease, 125. Depredations with open violence: in 1818 and $1 \times 20,545$; in 18.27 and $1 \times 2 x, 221$; decrease, 32.1 .

Mr. Robertson gives, in his pamphlet on the Civil Government of India, published in 1829, several tables to shew the decrease of crime:-Gang-robberies were, in $1807,1,481$; in 1824,234 ; decrease, 1,217. Wilful murders: in 1807, 406; in 1824, 30 ; decrease, 376. Violent affrays: in 1807, 482; in 1824,33 ; decrease, 449 . Gang-robberies in the distriet of Kishnagur were, in 1808, 329; in 1824, 10 ; decrease, 319.

An analytical comparison of crime in England and in the Lower and Western I'rovinces of lengal, is exhibited in the following parliamentary table :-

 of the Westen l'ruvinces, $20,000,010)$.

X. The Government of the British possessiuns on the continent of Asia is vested at home in two powers with co-ordinate nuthority-viz. the E. I. Complany, and a Ministerial Board, termed His Majesty's Commissioners for the affairs of India, the Intter being devised by Mr. Pitt as a check upon the political proceedings of the former.

The Court of Directors.-The more immediate governing power of British India, and consequently the pntronage attached thereto, is vested in the Court of Directors, or executive body of the E. I. Company. The capital stock of this Company is $6,000,000 l$. sterling, which is divided, according to a recent calcu. sution, among 3,579 proprictors, of whom 53 have four votes; 54 , three; 347 , two ; 1,454 , one; and 221 hold only $500 l$. stock, and nre not qualified to vote, but merely to debnte on any question; 396 proprietors hold stock under 500 l . and are not qualified to vote or speak, and 220 have not held their stock a sufficient time to enable them to vote. A proprictor of not less than $1,000 l$. has one vote; of $3,000 l$., two ; of $6,000 l$., three; and of $10,000 l$. and upwards, no more than four votes. The stock must he bona fide in the proprietor's possession for 12 months, to enable him or her to vote; a regulation ndopted to prevent collusive transfers of stock for particular cceasions. The total number of roters is estimated at 2,000 , and of the rotes about 1,500 are comprised within four miles of the Genernl Post Office. Women as well as men, foreigners as well ns Englishmen, if holding stock sufticient, are empowered to vote and debate. A late classification of the votes gave of gentry, bankers, merchants, traders, shipowners, shopkeepers, \&c. 1,836; of women (married, widows, and spinsters), 43; of officers in the King's and E. I. Company's Army, 222 ; of the clergy, 86 ; of officers in the Royal Navy, 28; of medical men, 19 ; of the nobility, 20 . The following is said to be the state of the votes of the Court of l'roprictors in 1832 :-Peers, 20 ; Members of Pnrliament, 10 ; Directors, 50 ; clergymen, 86 ; medical men, 19 ; military ollicers, 222; naval ditto, 28 ; minor, 1; other gentlemen, 1,775 ; male votes, 2,211 ; female ditto, 372 ; total, 2,583. The Proprietors meet as a Court regularly every quarter, and specially when convened
to diseuss particular business. The number of quar. terly and special Courts held from 1814 to $1830-31$, was 212. The powers vested in this Court are-the election of qualified proprietors as their delegates, or representatives, to form a Court of Directors; to frame bye-lnws fur the regulation of the Comprany, provided they do not interfere with Acts of Parliament ; to controul salaries or pensions exceeding 200l. a year, or gratuities above 600l. It may coufer pecuniary rewnrds on any eastern statesman or warrior, above the latter named sum, subject, however, to the confirmation of the Board of Controul ; it can demand copies of public documents to be laid hefore it for discussion and consideration, but it is prevented in. terfering with any order of the Court of Directors, after the same shall have received the npproval of the Board of Controul. The Court of Proprietors did interfere, and with effect, in tiae case of the maritime compensations, on the ground that their concurrence had not been obtained previously to the application of the Board. The Chairman of the Court of Directors is ex-officio Chairman of the Court of Proprietors. Debates are regolated as in the House of Commons, and all questions and elections are decided by the ballot.

The Court of Directors or Representatives of the foregoing body of Proprictors, consist of 24 persons, qualified nccording to an Act of Parlinment, whicis provides that each must be a natural born or naturalized sulyect of Great Britain: possessed of $2,000 \%$. stock, (no matter for what previous period) he must not be a Director of the l3ank of lingland, or the South Sea Company; and, by a bye-law of the Company; he shall be liable to be removed if he should promote his own, or the elevation of any other Dircetor, by promises of reward, collusive transfer of stock, or pnyment of trnvelling expenses, receive any pecuniary or other remuneration whatever, for any appointment in his gift or patronnge as a Director. Six Directors retire annually by rotution, and are reeligible after 12 months absence, the Proprictors have a review of every Director in the course of four years, and can of course remove if they think fit such as they may deem not fit for the duty which they ought to fultil. (Nineteen contested elections for Directors took place from 1814 to 1831.) The Court of Directors clect from their own body a Chairman and Deputy Chairman annually, meet once a week, not less than 13 form a Court, and all questions are decided by ballot. The Coort in general consists of men of various hnbits, views, and interests; by a recent analysis there were ten retired civil nnd law ofticcrs of the company; four military ditto of ditto; four maritime ditto of ditto; three privnte Indinn merchants; and nine London merchants and bankers;
of these 15 w first election ; to 30, and two rectors enjoy at home and a judicial, and $n$ proceedings ni to the superin in several mnt Proprictors.

Six and are reoprictors have of four years, it such as they hey ought to for Directors ourt of Direcman and Dereck, not less s are decided sts of men of by a recent 3 law nfficers ditto; fuur Indian mer. and bankers;
of these 15 werc under 10 years standing from the first election; 11 from 10 to 20 ditto; two from 20 to 30 , and two from 30 upwards. The Court of Di rectors eojoy full ioitiatory anthority over all inatters at bome and abroad relatine to the political, financial, judicial, and military athirs of the company. But its proccedings are subject to certain Acts of Parliament ; to the superintendence of the Board of Control, and in several matters to the approval of the Court of Proprictors.

For the despatel of business the Directors are divided into three Committees; Finance and Home, oight Directors; Political and Military, seven; Revenue, Judicial, and Legislative, seven; the daty of each is partly defined by the title, but there is a committee of secrecy, forming the cabinct council of the Company, and consisting of the Chamman, deputy ditto, and senior Director; its functions are detined by Parliament. In reference to the business done by the Court of Directors as compared with the Board of Control, the Select Committec of the Housc of Commons thus reports in 1832:

As to the proportions of general administration resting on the Board of Control, and the East ladia Company, its Courts and its Ollicers respectively, it has been asserted, that, of all the reflections, suggestions and instructions bearing upon the policy of the Indian Governments, contained in the public despatches, bine-tenths, if not a larger proportion originate with the India House, though whatever regards the more important transactions with other States, and whatever is done in England, may be said to be mainly done by the Board of Commissioners. Coasidering the multifarions nature of the Company's relations and transact. ons, it is to be expected that the correspondence shoild be voluminous and com. plicated, comprehending, as it does, not only all that is originated in England, and transmitted to India, but the record of the proce edings and correspondence of all the Boards at the se eral Presidencies, with duplicates of the documents relating thereto in India, necessary to put the authe rities at home in complete possession of all their acts. The correspondence comes home in despatches, and the explanatory mat. ter in books or volumes. The total number of folio volumes received from 1793 to 1813 , 21 years, was 9,094 ; and from 1814 to 1829 , a period of 16 years, 12,414.
From the establisbment of the Board in 1784 to 1814, the number of letters received from the Court by the Board of Commissioners was, 1,791: the No. sent from them to the Court was, 1,195. From 1814 to 1831, 1,967 letters have been written to, and 2,642 received from, the board. The number of drafts sent up to the board from 1793 to 1813 , were 3,958 ; from 1814 to $1833,7,962$, making an increase 4,004 ; in addition, there have heen references, connected with servants, civil and military, and others, in this country, amounting between the years 1814 and 1830 , to 50,146 . Reports made to the Court by its Committees, apart from details and researches made in framing such Reports, 32,902 . From 1813 to the present time, nearly 800 Parliamentary Orders have been served on the Court, requiring returns of vast extent.
By the new East India charter the Company have agrced to place their Commercial rights in abeyance while they hold the political goveroment and putronage of India, which is extended by charter to the 30 oth April, 1854, and in consideration of assigning over all their commercial assets (upwards of $21,000,0 \mathrm{O} /$.
sterling) for the benefit of the Indian territory, the present dividend of ten and a half per cent. ( 630,0001 .) on the Company's capital stock, is secured on the lndian revenue for 40 years, at the expiration of which period the capital of $6,000,000 \mathrm{l}$. will be paid onl at the rate of $100 l$. for every 5l. 5s, of annuity. As a guarantee fund for the proprietors in case of the surplus Indian revenues being unable in any one year to pay the dividends, and in order to provide for the ultimate liquidation of the principal, the sum of $2,000,000 \%$, is to be set apart out of the eommercial assets, to be invested in the three and a half per cents, there to accumulate as a sceurity fund until it reaches the sum of $12,000,000$.

The business relating to the Indian Govermment is transacted in Eingland, between the Board of Control and the Court of 1)irectors, as follows : - (Evidence before Parliament in $18: 3: 2$. )

All communications, of whatever nature, and whether received from abroad or from parties in this country, come, in the lirst instance, to the Secretary's Ofliec at the East India House, and are laid by the Chairman before the first Court that meets alter their receipt. Despatches of importance are generally read to the Court at length. 'The despatches, when read or laid before the Court, are considered under relerence to the respective Committces, and the Officers whose duty it is to prepare answers, take the directions of the Chairs upon points connected with them; the draft is prepared upon an examination of all the documents to which the substance has reference, and submitted to the Chairs; it is then brought hefore the Committe, to whose province the subject more particularly relates, to be approved or altered by them, and, on being passed, is laid belore the Court of Directors. After it has passed the Court of Directors, the draft goes to the lBoard of Control, who are empowered to make any alterations, but repuired to return it within a limited time, and with reasons assigned for the alterations they have made. Previnusly, however; to the draft being laid before either Committec by the Chairs, experience has suggested the convenience of submitting it to the President of the Board, in the shape of what is called a previous communication. 'This is done in communication between the President and the Chairs, in which stage alterations, containing the original views of the Prasident, are made. The draft being returned to the Chairman, is laid by him, cither with or withont the altcrations, as he may sce fit, before the Committee. The draft, when approved of by the Committee, is submitted to the Court, and there altered or approved, as the Court may see fit. It is then olficially sent to the Board, who make such alterations as they judge expedient, and return it to the Court, with their reasons at large for the same. Against these alterations the Court may make a representation to the Board, who have not unfrequently modified the alterations on such representation; but if the Board decline to do so, they state the same to the Court and desire the draft may be framed into a despatch, and sent out to India, agrecably to the terins of the Act of Parliament. In the event of a refusal, three Judges of the Court of Queen's Bench fimally decided as to the legality of the Bnard's order.

By the Act of 1784 and of 1833 , the Directors are charged with appointing a Secret Committee, whose province is to forward to India all despatches whicin, in the opinion of the Board of Control, should be secret, and the subject-matter of which can only be divilged by permission of the Board. The Comimittee
consists of 'hrt $\&$ Members of the Court of Directors, ehosen by the Court generally, viz. the Chairman, Deputy Chair, and inost frequently Senior Member, who take tise oath of secresy, as prescribed by the Act. Their officers are also sworn to secresy ; and no one is empiowod in transcribing sceret despatches without the permission of the Board. The Board are empowered by law to issue, through the Sccret Comnittee, orders and instructions on all mntters relating to war, pence, or negociations of trenties with the States of Iudia, anci the Secret Committec are bound to transmit such ord?r to India without delay. The Secret Committce have no legal power to remonstrate against such orders, rovided they hnve relation to the subjects above stated. The Committec have had commonication, upon matters stated in secret despatches, with the Board, and at their suggestions alterntions have been made; but they have not the same power with regard to despatches sent down in the Secret Department that they have with regard to other despatches; they are not empowered to make representations thereon to the Board, whose orders are in fact conclusive on the Committee. The signatures of the Committee are necessary to ensure obedience to the orders conveyed by them to the Company's servants, with whom the Board of Commissioners have no direct correspondence.
It has been stated that there is another class of subjects not provided for in the Act which establishes the Secret Committee, but which have been necessarily treated through the Committee, and upon which its orders have been more punctually oheyed than in other cases, namely, negociations with liuropean States having settlements in India, and generally all matters connected with wnr in Europe, which can in any way affect our Indinn interests. (Provided lor by the Act of 1833, section xxxvi.)

When either war against $n$ Native State, or the carrying forward an expedition against any of the Lisstern Islands, has been in contemplation, and the finnnces of Indin at these periods exceedingly pressed, or re. quiring aid from this country, the Secret Commitree, in communication with the Board of Commissioners, have taken upon themselves to provide the requisite funds, without intimating the same to the Court at the time. Jhus despatches relating to sulijects purely financial and commercial, such as the transmission of bullion, and the nature and amount of the Company's investments, have gone through the Secret Committee.

The Board of Control.-The E. I. Company's ITome Government, thus brietly described, has been controlled by a ministerial authority since 1784, which is termed the ' Board of Commissioners for the Allairs of India,' or more generally the Beard of Control; it consists of such members of the Privy Council as his Majesty may he pleased to appoint, of whom the two principal Secretaries of State and the Chancellor of the Exchequer shall nlways ex officio form three. The President is also nominated by the Crown, is usually a cabinet minister, and in all changes of Administrntion retires from office together with the salaried Commissioners and secretnry. The oath which the Commissioners take imposes on them the responsible duty of governing India to the best of their ability and judgment, as much and as completely as if there were no Executive Court or Administrative power. The controlling functions of the Board are exercised in revising all despatches prephred by the Court of Directors, and addressed to the Cuvernments in Inmlia ; the originating, in requiring the Court to prepare
despatches on any named sulject, and in altering or revising such desjatch as it may deem fit. The Board is divided into six departments, viz. Accounts, Reve. nue, Judicial, Military, Secret and Political, and Foreign and Public; the dutics of which are thus defined. (Evidence before Parliament in 1832.)

1. The Accountant's Deportment. - To examine the accounts of the finances at home and alboad: control the correspondence between the Court of Directors and the Indinn Governments, in the depart. ments of Finance, and Mints, and Coinage: nlsn, ocensional correspondence in most of the other departments of the Company's affairs requiring calculation, or bearing a financial character.
2. The Revenue Department. - I'rincipally revision of despatches proposed to be sent to the several Governments of India, reviewing the detailed proced. ings of those Governments, and of all the subordinate revenue authorities, in connexion with the adjustment of the land assessments, the realization of the revenue so assessed, and the general operation of the revenue regulations on the condition of the people, and the improveinent of the country. Besides the land revenue, the detailed procecdings of the local authorities in the salt, opium, and custom depart. ments, come under periodical revision.
3. The Judicial Depurtment. - Examination of all correspondence betcen the Court of Directors and the local Governments, on subjects connected with the administration of civil and criminal justice and police in the interior of India, such as, the constitution of the various courts, the state of business in them, the conduct and procectings of the judges, and all proposals and suggestions which from time to time come under discussion, with the view of applying remedies to acknowledged defects.

The King's Courts at the three Presidencies, are not subject to the authority of the Court of Direetors, or of the Board of Control; but, any correspondence which takes place in relation to the appointment or retirement of the juilges of those courts, or to their proceedings (including papers sent home for submission to the King in Council, recommendations of pardon, \&c.), passes through this department.
4. The Military Department. - Attention to any alterations which may be made in the allowances, organization, or numbers of the Indian army at the three Presidencies; to the rules and regulations affecting the different branches of the service; to the general staff, comprehending the adjutant and quartermaster general's department; the eommissariat (both army and ordnance) ; the pay, building, surveying, and clothing departments; and, in fact, to every branch of Indian administration connected with the Company's ariny It also embraces so much of the proceedings, with respect to the King's troops, as relate to the charge of their maintennuce in India, recruiting them from this country, and the periodical reliefs of regiments.
5. The Secret, l'olitical, and Foreign Depiartment.Examines all communications from or to the local Govermments, respecting their relations with the native chiefs or States of India, or with foreign Europeans, or Americans. It is divided into the following branches:-
i. The Secret department containing the correspondence between the Indian Governments and the Seeret Committee of the Court of Directors. Under the provisi of the Act of l'arliament, such conlidential co
ccations as in the opinion of the local
governments r to the Secret the local goverit which, in the J quire secresy, a and the luent $g$ directions in the by the whole bo

 to the local with the nareign Euruhe followingthe corresnits and the ors. Under such contiof the local
governments require secresy, are adilressed by them to the Secret Committee. Any directions, also, to the local governments, relating to war or negotiation, which, in the Judgment of the Board of Control, require seeresy, are signed by the Sucret Committee ; and the lueal governments are bound to obey those directions in the same marner as if they were signed by the whole body of Directors.
ii. 'The Potitical department, comprising all correspondence not addressed to She Secret Committee, or sent through that Committee to the local Governments, respecting the mative chiefs or states, with whom those governments are in alliance or commuaication, or whose affiirs are moder their political superintendence, or who are in the receipt of pectmiary stipends in lieu of territory,
iii. The Foreign department, incluting all correspondence relating to communications between the local grovernments and the several loreign Europeans who have settlements in India or the Eastern Islands; and embracing, in faet, all the procecdings of the local governments in relation, to foreign Liurepalans or Americans, resorting to India.

The proceding of the local governments, with respect to their residents and political agents, and to any other ollicers and their respective establishments, through whom communications with native states and chiefs, or with foreigners, may be maintained, are also reported in the several departments in which those officers are respeetively employed.
6. The D'ablic Dequrtment.- The business of this department comprises the examination of all despatches to and from India upon Commereint or Ecclesitstical suhjects, and of those which, being of a miscellaneous character, are distinguished by the general appellation of " Public." The commercial and ecelesiastical despatches, which are considered as formiag two branches of eorrespondence distinct from the " Public," ure united with the latter in the same department, only on accomet of the convenience of that arrangement, with reference to the distribution of business in the establishment of the board of Cuntrol.
The Public correspondence comprises all those despatches which do not belong specifically to any of the branches of correspondence hitherto enumerated. They relate to the education of the natives and of the civil servants; to the appointment of writers and of the civil service generally, and to their allowances; to the several compassionate funds; to the grant of licenses to reside in India; to the press ; to public buildings; to the Indian mavy and the marine department ; to the affiairs of Prince of Wales' Islaad, Singapore, I:slacca, and St. IIelena; and to various miscellanecus subjects. Some of these being closely connected with the business of other departmeats, are reported upon in them, although the whole pass through and are recorded in the public depart. inent.
The Eeclesinstical despatches contain every thing relating to the appointment of chaplains, archdeacons, had bishops; to their allowances; to their conduct; to the buidling and repair of churches, or other plaees used for public worship; and to all questions resyecting the affuirs of the churches of England and scutland in India, or that of Rome, so far as public provision is made for its naintenance.
Aay papers treating of ecelesiastical or miscella. neous topics, though they are not despatelies to or from India, are likewise recorded and reported upon in this department.

The cost of the Board of Control is about 30,0001 . a year. The salary of the President of the Board is 3,500l. per annum; of each of the paid Commissioners, $1,200 /$; and of the Secretary $1,500 l$., to be raised to 1,800 . after three years' service. The Charter of 1833, authorizes two Seerctaries for the Board.

The Domestic Gorernment of Indin-is divided into three Presidencies, viz. Bengal, Madras, Bombay, and a licutenancy at Agra, or rather at Altahabad; the Chief at each lresidency is assisted and partly controlled by a Council of two of the Company's senior civil servants, and the Commander-in-Chief of the army. 'lhe government of Bengal is termed the Supreme Government, and the head thereof is styled the Governor-General of Imlia; he is necessarily possessed of much localimependence, exercising some of the most important rights of sovereignty, such as declaring war, making penee, framing treaties, to a evtain extent forging eriminals and enacting laws.
'the Governor-General's Council consists of five Cunacillors, three to be servants of the Company of ten years standing, and to be appointed by the Directors; the fourth to be appointed by the Directors also, subject to the approbation of the King, but not from among the Last India Compuny's servants, and with power to sit and vote ir Council only at meetings for making laws and regulations. The Com-mander-in-Chief forms the fifth member, with precedence after the Govermor General.

On all questions of state policy, excepting in a judicial capacity, the Governor-General is independent of his Council; if the Council are dissentient, the Members record in their minutes the eause, which being submitted to the Governor-General, and he still remaining of his original opinion, the discussion is aljourned for 48 hours, when the Governor-Gene. ral may proceed to execution, first assigning his reasous for olissenting from the Council. The whole of the documents rilative to the difference are then instantly transmitted to the Court of Directors and Board of Control; and the Court have the power, shonid they deem fit, of appointing new Members of Council to succeed the dissentient ones, or of recalling the Governor-General.

The Governor General, in virtue of his commission as Captain-General, may head the military operations in any part of lindia. IIe has also the power of sus. pending the Governors of the other Presidencies, or of proceeding thither and taking the supreme authority in their Councils, in the excention of any of whielt acts he is subject to the vigilant supervision cf the home authorities. The Governors of Madras and Bombay are in a similar manner independent of local control, but for the sake of obtaining unity in foreign transactions, on matters of general and internal policy, or in expending money, they are subject to the authority of the Governor-General, who, on proceeding to either of the Presidencies, may assemble his Council there and sit as President.

Regulations for the good government of the British possessions in India, are prssed hy the Governor-Gen. in Council; they immeaately hecome effective, but are transmitted home and subject to the revision of the Court of lirectors and Board of Control ; heretofore ordinances for the good govermment of the Presidency capitals were not valid until publicly exposed for 14 days, then registered by the Supreme (King's) Court; put in furce, but subject to a further ordeal at home: by the new Charter, these checks on the Governor-General are removed, and that anthority in council can now make laws for the regulation of even
her Majesty'a supreme courts. Such is the legislative department of the Govermment, the executive is generally exercised by means of Boards, of which in Bengal there are five, ( 1 . Revonue; 2. Customs, salt anul opium ; 3. Trate ; 4. Military ; 5. Medical;) at Madras three, (1. Revenue; 2. Military; 3. Medical;) and at Bombny one. Any of these Boards make allggestions or present draits of regulations in their respective departments to Govermment; the Boards also receive trom their suhordinates suggestions, either for their own information or for transmission to the Governor-General in Council; by this means the local knowledge of the inferior otticers is brought under the knowhedge of the chicf executive, and their talents and industry appreciated: indeed, a leading feature in the duties of the Indian Govermments is that of noting down every transaction, whether as individual chiefs of departments or as Boards: thus habits of business are generated, combined with a moral check of supervision, no matter what distance a servant may be from the Presideney, or what period of time may elapse, should an enfuiny he necessary. All minutes of the Bourds' proceedings are laid beiore the Govermment monthly, and then transmitted home. The objection alleged to this is that it creates delay; but, as correctly observed by the Court of Directors, in their Letter to the Board of Control, 27 th August Ix29, the Goverument of India may in one word be described ns a Gocernment of Checks. The Court thus judiciously remark:-' Now whatever may be the advantage of checks, it must alwnys be purchased at the expeuse of delay, and the amount of delay will generally be in proportion to the number and efticiency of checks. The correspondence between the Court of Directors and the Governments of India, is conducted with a comprelensiveness nnd in a detail quite unexampled; every, the minutest procecdings of the local governments, including the whole correspondence respecting it which passes between them and their subordinate functionaries, is placed on record, and complete copies of the lodian records are sent ammually to England for the use of the home authorities. The despatches from India are indexes to those records, or what a table of contents is to a book, not merely communicating on matters of ligh interest, or soliciting instructions on important measures in contemplation, but containing summary narratives of all the proceedings of the respective governments, with particular references to the correspondence and consultations thereon, whether in the political, revenue, judicial, military, financial, ecclesinstical or miscellaneous departments. In the ordinary course of Indian administration much must always be left to the discretion of local governments; and unless upon questions of general policy and personal cases, it rarely occurs that instructions from hence can reach India before the time for acting upon them is gone by. This is a necessary consequence of the great distance between the two countries, the rapid suceession of events in India, which are seldom long foreseen, even by those who are on the spot, and the importance of the ruling authorities there, acting with promptitude and decision, and adopting their measures, on their own responsibility, to the varying exigencies of the hour. These circumstances unavoidably regulate, but do not exclude the controlling authority of the Court of Directors. Without defeating the intentions of Parliament, they point out the hest and indeed the only mode in which these intentions can be practically fulfilled. Although, with the exceptions above adverted to, a specific line of conduct cannot often be
prescribed to the Indian governments, yet it seems to indicate nuy other rather than a state of irresponsi. bility, that the proceedings of those governments are reported with tidelity, examined with care, and com. mented upon with fredora by the home authorities; nor can the julgements passed by the Court be deemed useless whilst, though they have immedinte reference to past transactions, they serve ultimatily as rules for the future guidance of their servants abrond. The knowledge, on the part of the local governments, that their proceedings will always undergo this revision, operates as a salutnry check upon its conduct in India, and the practice of replying to letters from thence, paragraph by paragraph, is a security ngainst babitunl remissness or necidentai oversight on the part of the Court, or their survants at home. From a perusal of the Imlian records, the Cont also obtain an insight into the conduct and yualificntions of their servants, which enables them to juige of their respective merits, and to make a proper selection of members of Council.'
The duties of the British functionary in India may he gathered from the following sletail of the chief stations and othices of the civil servants in Beneal. [Evidenee before Pardament in 1832.] 'The duties of Territorial Sccretary, in one branch, correspond in a great mensure with those of the Chancellor of the Exchequer in this country; be manages the whole finnucial business of the Government, in concert with the Necountant-general; but the Secretary is the chief ofticer of the Government in that department; moreover, he has the management of the tericual revenue, nud the revenue derived from salt and opium, and he conducts the correspondence of governmeat with the three Boards of Revenue in the upper, lower, and central provinces respectively.
' In relation to the hoard of revenue, he is merely the ministerial otficer of the Government; he is not a responsible otticer, and has no direct power over the Board of Revenue.
' If ans increase of charge were proposed by any of the Boards of Revenue, or by any person acting under them, that proposal for increase is submitted to the Territorial sucretary before it is acpuiesced in and sanctioned by Government-he is the person always addressed. The Boards of Revenue have the powel of writing directly to the Governor General in Conncil ; but that is a mere matter of form, for such letter goes equally through the oftice of the Territorial secretary, and is submitted by him to the Goveraor. General in Council.
' The Territorial Secretary offers his opinion upon the admissibility of any new charge proposed. He has no right or power to do so, hut he is genernlly called upon to do so. The Secretaries are in the habit of giving in papers called memoranda. As the Governor-General or Members of Council lay minutes before the Council board, so the Secretaries, wheaever they have any suggestion to make, submit what are called memoranda.

One of the Members of the Council is nominally Presitent of the Board of Revenue, he pertorms no duties.

The duties of the territorial and judicial departments as regard the judicial departmont are quiti distinct departments. There are two Secretaries; the Judieial Secretary is quite independent of the Territorial; be conducts the correspondence of the Government with the Sudder Dewanny and Nizanut Adawlut ; they are the chief criminal and civil courts.
'The police is under bis direction, at least all the
correspondence police is conduc cretary, he is $n$ terial functiona always in the always hegin wit by the Governor and this holds $g$ taries.

 performs no civil courts. east all thecorrespondence of Government on the subject of the police is conducted hy him. Like the 'Territorinl Secretary, he is not a substantive officer, only a minls. terial functionary of the government. He writes alwnys in the name of the government; his letters slways hegin with words to this effect, 'I am directed by the Governor-General in Council to inform you? and this holds good with regard to all other Secretaries.
'The busiuess of a Collector in the lower provinces is the receipt of revenue; the conduct of public sales, in the event of nay defalcation on the part of any Inded proprietor who is responsible for any portion of the revenue.

- There being a permanent settlement of the land revenue in those provinces, he has not much to do directly with the collection of the revenue; but he has a great number of other duties, as the mnnagement of wards' estates (minors' estates); for the Board of Revenue is nlso a Court of Wards.
- Ile exercises judicial functions in what are called summary suits, arising from disputes between Inndlord and tenant, between zemindar and ryot. 'That is, in disputes connected with the administration of the revenue.
'With reference to the extent in which he decides suits. The suits are summary suits; they are not conducted with the formality of regular suits; they are instituted originally in the courts of lnw, and are refe.red by the Judge to the Collector for decision ; they are of a partieular description; they are not conducted with the formality of regular law suits; there is a particular process laid down by the regulations for them.
' It is Indirectly in the nature of a reference; it is a claim of the zemindar on the ryot for rent which the ryct disputes or denies; and it is referred to the Collector, as a summary suit, under particular regulations.

All the instances in which he exercises judicinl power are referred to him by the court, as far as regards the summary suits reterred to ; but there nre also investigations which partake largely of judicial inquiries, which be conduets independently of the courts, as, for instanec, where landholders in coparceny have petitioned to have their estates divited, and to become separately responsible to Government. Such divisions are called Butwaralis.
'The revenue collected remains in the custody of a native Treasurer, who gives heavy security, nad who is to a great degree independent of the Collector. Security is given to the Government through the Collector; but the Board of Revenue see that it is sufficient, and the Collector is also responsible.'
Judicial.-We may now proceed to examine brietly the mode in which the administration of justice is carried on. The civil law is ndministered according to the religious code of the party, whether Ilindoo or Mabomedan. A commussion is now being issued to examine into the variety of the civil laws existing in the various provincea and to endeavour to codify them into a general system. The criminal law in India is the Nnhometan cole, in which mutilations of the limbs ant thagellations to death are not unfrequently ordained; these are commuted by us for imprisonment, \&e., and it will be seen in the section on gaots bew crime has been diminished in India. There are in the Company's Courts three grades of European Judges, the District, the Provincinl, and the Judges of the Sudder Court (there are also Magistrates, who excrcise civil jurisdiction under special
mppointments, and the Registrars try and decide causes referrel to them by the Judge of the district.) The native Judges are divided into two classes. Ist Moonsiffs, of whom there are severnl stationed in the interior of every district; nad 2ndly, Suliler Aumeems, established at the same station with the European Juige. Native Judges of any sect can try cnuses as fir as 1,000 rupees, nad the nmount may be incrensed at the recommendation of the Europenn Judge to 5,000 rupees ; this permission has been granted in very many cases, and the decisions have been extremely sntisfactory. An nppeal lies from the District Native Judges to the District Europenn Juige, from the latter to the High Court of Sudder Adawlut at Calcuttr, Madras, or Bombay, and from thence to the King in Council la England.

In the Bengal I'residency, for instance, there is first a high court of appea!, termed the " Sudder Dewanny and Nizamut Adnwit.," or chief civil and criminal court. The functions of this court are cognizance of civil, criminal, and police matters; the remission or mitigation of punishment when the sentence of the law officers is unduly severe, co-revision previous to the execution of nny sentence of death, transportation, or perpetual imprisonment, arbitration where the provincial juiges ditfer from their law officers; revisions of the proceedings of any of the courts, with power to suspend provincial juiges; it may direct suits for property exceeding $5,000 \mathrm{l}$. in value, to be originally tried hefore it; it may adenit second or special appeals from the inferior courts, and its construction of the government regulations is final. The Chief Justice has $6,000 l$. a year, and the three Puisne Judges 5,000l. each.

The secoud degree of Courts are the Provincial Courts of Apeal (of which there are six for Bengal), with a Chiel and Puisne Judge to ench. They have no criminal jurisdiction; try suits exceeding $\mathbf{5 , 0 0 0}$ rupees in value, if the plaintiff desire their decision (he may prefer it before the Zillah Judge, if the value do not exceed 10,000 rupees), appenls lie from the Zillah Courts, and are fimal unless in cases of special nipeal.

For the Bengal Presidency there are 20 Commissioners of Circuit, who combine revenue with judicial functions. They hold sessions of gaol delivery at least twice in each year at the ditlerent Zillah and City stations. The direction and controul of the Magistrates, Revenue Otlicers and Police are vested in them. The salary of each Commissioner is $4000 l$. a year.

The Zillah Courts of Bengal amount to 49 ; some have n julge, magistrate, and registrar; in others less extensive, the duties of judge and magistrate are conjoined, or the duties of magistrate and registrar. The population and extent of a Zillah is various; in Bengal, the average population is about $2,000,000$. The total salaries of the European covenanted servants of a Zillala Court range from 30,000 tn $44,000 \mathrm{~S} .12$ a year.

These courts have cognizance of affrays, theits, burglaries, \&c., when not of an aggravated character, and power to the extent of two years' imprisonment ; commit persons charged with heinous offences for trial before the Commissioners of Cireuit; try original suits to the value of 20,000 rupees; decide appeals from registrars (i.e. causes not exceeding 500 rujuecs in value), Sudtler Aumeems (native judges) and Mnonsiffs; and by a regulation of 1832 (for the expedition of criminal justice), three Zillah judges may be invested with power by the Governor-General to hold sessions and goal delivery.

These Courts have authority over the lolice, and the judges are enjoined to visit the goals at least once a week.

A nother and extensive set of Zillah and City Courts have been established last year with native judges of every class, caste, or persuasion, found qualified for the duties enjoined them, to whom libernl salaries have been granted; and by a more recent regulation, native asseasors ait on the bench with the European juilges.

A plan of judicature similar to the foregoing is in force at Madras and Lombay, aud in the N. W. pro. vinces, modified lyy local usages; in some parts there are Punchayets (bative juries) of arbitration and of civil and criminal procedure; in others, native assessors, in civil and criminal matters.

In the administration of civil justice the ohjects of the Company's Government have been to render it pure in source, speedy in exeention, and cheap in practice ; in the administration of criminal justice the aim lias been that to prevent crime, and secandly to promote the reformation of the offender. The judzes are well paid, in order to sceure the purity of justice; the courts are numerous, in oriler that it may be apeedily rendered, and the authorized fees are light (particularly in tritling cases) for the cheap, attainment of right. In eriminal matters, offences are quickly punished,-the denth sentenees (which are inflicted but for very few crimes) are ilmost sure to be carried into effect, and it is in evidence before Parliament (in 1830 ) that prisoners are brought to trial withont delay, that the punishoments awarded are mild and well proportioned to the ollence; that abna. dant care is taken against unjust convictions, and that extrnordinary eare is paid to the health and comfort of the prisoners in the goals ; the effect of the system is seen in the extraordinary diminution of erime. Mensures have been taken for the promulgation of a knowledge of the old as well as new laws.

Lau's and Reguletions.-In pursuance of the dircc. tion, and by virtue of the powers given by the 47 th section of the Act of the 3 rol and 4th William IV. chap. 85, the Court of Directors of the East India Company, with the approbation of the Commissioners for the Affairs of India, ordain as follow:-

1. Copies of all laws and regulations shall be communicated to the several Funetionaries appointed to carry them into effeet, and shall be preserved in all Courts of Justice, and there be open to the inspection of all persons.
2. All laws and regulations shall be trnnslated into the several native languages most commonly spoken, and printed and sold at a low price.
3. The Governments of the several presidencies will make such a distribution of copies of the laws and regulations so to be sold as may bring them most conveniently within the rench of all persons, and will notify in a public manner where such copies may be procured.
4. The Governments will likewise, on the passing of any law and regulation, publish the title of it, and an abstract of its contents in the Gazettes and such other newspapers as are most generally circulated.

Authentification of Lav's and Regulations.-1. The original copy of all laws and regulations shall be signed hy the Members of the Legislative Council by whom they shall be passed, and such copy shall be preserved in the arehives of the Government of India.
2. Such copies only of the several laws and regulations hercafter passed as shall be printed at the Government I'ress shall he adinitted as evidence in

Courts of Justice. Such eopica so printed shall benr In the title page fac-similes of the signatures of the Members of Council hy whom the aeveral lawa and regulations may have been respectively passed."

There is a Supreme or King's Court at ench Presideney, with a Chief and two Puisue Judges at Calcutta, and a Chief and one Puisne Judge at each of the other I'residencies. A Master in lifquity, Registrar, an established number of Attornies and Barristers, at the discretion of the Judges, aud at Calcutta there is a Hindoo and a Mahomedan law othicer attached to the court. The jurisiliction of this Court extends over the local boundaries of the I'residency, with certaln exceptions not well defhed, and the Courts claim jurisdiction in certain cases beyond the Presidency; such claims have, however, been viewed with alarm, and the extension of the juristiction of the King's Court at the present prrion deprecated. The snlaries of the Supreme Court Juiges at the three l'residencies ure, Bengol, Chief, R,000l.; l'uisne, 6,000l. Alalras, Chief, 60,000 rupees; Puisur", 50,000 rupees. Bombuy, ditto ditto. Since 1807, there have been aix Chlef Justices ut Bengal, aud since 1805 seven Puisne. At Madras since 1815, four Chief, aud since 1809, teu Puisne; at Bombay, since 18:3, three Chief and tive Puisne Judges. The flyed charges were, in 1829, as follow: Bengal, S. 12. 383,120; Malrat, $37 \times, 056$; Bombay, 293,87.1; total, S. 12 , $9: 5,050$, being an excess over 1823 of S. R. 205,826 . The salaries and contingent expenses of the Supreme Court at Caleutta nnnually are 879,000 rujces, and the emoluments of Barristers nud Attornies abont 771,000 rupees. The same items at Madras and Bombay nre-for the firs ${ }^{2}, 650,000$ rupees; and for the secund, 950,000 rupees; total of Supreme Courts, $3,250,000$ rupees. I'rial by jury in criminal matters, not in eivil; matives are cligible as petty and graed jurors; proceedings are in English, witls the aid of interpreters, and in general the civil laws of linglad are applied. There are nt Calcutta and Bombay Courts of Requests, for the recovery of small delots, the Recorders of which ure Europeans.
The Police in Bengal, for instarice, are divided into stations with a native officer, untive registrar, petty ollicer, and from 20 to 30 policemen well armed. In each district there are from 15 to 20 stations, making altogether in lower Bengal about 500 , and in the upper or western Provinees 400 . Eivery village has also its own watehman, armed and paicl by the village, and as there are 163,673 villages in lower Bengal, there is a further force of 160,000 men alded to the Government establishment. In some J'rovinces of central India, each village has also a petty officer, whose duty it is to trach thieves, and when he traces them to a village, to hand over the search to the trackers of that village.

The head otticer at each atation receives criminal charges, holds inquests, forwards accused persons with their prosecutors and witnesses to the Zillah Magistrate, uses every exertion for the appreheusion of criminals and the preservation of the peace in his district, and regularly reports all proceedings to the European Magistrate from whom he receives orders. The village police, together with the village corporation ofticers (such as the barber, schoolmaster, accountant, waterman, measurer, \&c.), land agents, Zemindars, \&e, are all required to give inmediate information of crime committed withis their limits, and to aid in the apprehension of offenders. There is a mounted police officered by natives, and a river police conducted also by natives.

＊No separate corps of horse artillery．
These troops are composed of IIindoos and Mussul－ mans，\＆c．mixed in every refiment，in a greater or less proportion；and in discipline，cleanliness，sobri－ cty，und bravery，they are unsurjassed by any boty of men．The native artillery make it a point of honour never to desert their guns，and wherever a British offieer will lead，it has rarely or never been found that his se－ poys will not follow．The native cavalry tue excellent mal fealess riders，superior to liuropeans，and good swordsmen；they are excedingly fond of their liorses， and take the best care of them：of the whole momy，it may be uhsersed that wo men are more alive to emu－ lation；a medal is as highly prized by a sepoy as by a British soldier，and hmodreds ol instances of heroism bave been related of them which would do honour to Cirect or Romans story．The Bengad army is considered to possess the highest caste men，being principally Raj－ 1oots；the Bombay sepoy is more a man of all－work， and the Madrasites are，perhaps，the hardiest race， but all are extremely tenacious of their rights，and athere punctiliously to the eustoms which their re－ ligion ordains；any violation of either，particularly of the latter，has ever been attented with sorious con－ secpuences．

The subsidiary Indian forces and contingents, where they are specified in treaties with the liast India Company, are as follows:-Subsidury. Oude not less 10,000 men; the Nizam, two regiments cavalry and eight battalions of infantry; the (iuicowar, two regiments of cavalry and 4,000 sepoys; Nagpore not stipulated; Mulhar Rao Holknr, the strength judged adequate by the British Government; Tiavancore, three battalions of infnntry ; Cochin, one battation ditto, Mysore and Cutch not specified. Cunfingents of native chiefs; the Nizam, 10 cavalry and 12,000 infantry; Guicowar, 3,000 cavility ; Nagpore, 1,000 ditto; Ilolkar, 3,000 ditto ; Mysore, 4,000 ditto (central India) ; Joudpore, 1,500 ditto; Ghuffoorkan, 600 ditto; 13hopaul, 600 cavalry and 100 infantry : and Dowlah and Purtumbgnur, 50 cavalry and 200 infantry ; and Dewap 100 cavalry 100 infantry. The following chiefs, not iocluded in the preceding list, are pledged to bring forward troops to the extent of their means when required by the Compans's Government: Rajahs of Bhurtpore and Machery; most of the Boondela chiefs; chicts of Rajpootana and Malwa not enumerated ahove, and the Rajah of Sattarah. The military force of the Rajpoot States is 7,676 cavalry and $27,7 \mathrm{Nx}$ infantry, ot which Kotah atone has 20,700 infantry and 4,200 cavalry. Siulia's army amounts to 10,000 cavalry and 20,000 infantiv; Hothar's lorce, 3,456 cavalry and 2,000 infantry ; the

Rajah of Sattarah has 300 cavalry and 5,000 infantry; Runjeet Sing's formidable force as given in the Meerut Observer, is as follows.

The Scick army of the Punjaub was, so late as the commencement of the present century, a mere mili. tary confederacy of predatory horse, and that gallant but unfortunate adventurer, George Thomas, considered them the most contemptible troops in llindos. tan. The talent of Rumjeet Sing, has within the last twenty-five years established the military reputation of the seicks, and this prince now possesses a regular army, aecustomed to war, full of ardour, and jcalons of renown; the Seicks possess many qualities which admirably fit them for a military life; they are indi. vidually brave and athletic, and are free from those prejudices of caste, which detracts from the militazy classes of the mative soldiery of British lndin. is Seiek will eat of my thing but beef; his religion never reguires him to undress at his meals, nor does it prescribe fasts, or inculcate any thing to interfere with the duties of a soldier; like the soldier of liurope, the Seicks are however not averse to the use of fermented liguors, and their Sirdars are notoriously addicted to the vice of drumkenness.

The foreigners or Hindoostanies of the Scick army are men from the provinces of British lodia, and receive a stipulated monthly pay; many of the Sciek soldiers receive rations of grain, hesides their pay.
General Abstract of the Seick Army.-Guns in dit. ferent forts, 108; Ditto Horse Artillery, 58, Ditto Foot Artillery, 142 ; total ginus, 308. Mortars, 6 ; Jamboorans on Camels, 305; Cavalry regular, 5,200; Ditto irregular, 43,300; total Cavalry, 48,500. In. fantry regular, 6,000; Ditto irregular, 17,000; total Infantry, 23,000 . Golundaze, 1,500 ; grand total Army, 73,000. 'The horse artillery of Runjeet's ariaj, consist of guns of small calibre, and their tield equip. mont resemble that of our late foot batteries; and consequently such artillery would be utterly unable to cope with our horse artiflery ; still, as these guns are drawn by horses, their fire would be always avalable, which :s not the case with bullock artillery.

In 1798, Tippoo Sultan's tiell army was estimated at 47,470 fighting men; und lis revenues at one Crore of Rupees; Runject Sing's army atnounts to $73,000 \mathrm{men}$, and his revenues to one Crore ant eighty lakits of rupees.

The llydrabad subsidiary foree, stationed in Ilis Highness the Nizam's doninions, is furnished from the Madras l'residency, and consists of the following troops: one battalion foot artillery; two troons of horse artillery ; a park of heavy guns; two reglments matwe cavalry; one regiment of Furopeans, and seventegiments of native infantry.

The Nizm's regular and irregular troops under the command of British oflicers are under the immediate control of the supreme Government, and eonsist as follows: four indepondent companies of artillery, with lurge establishments of field pieces and heavy guns; one regiment of engineers; cight regiments of regular infantry; one garrison linttalion; one invalid battalion ; a hody of invalids at Ellichapoor; and five regiments of irregular cavalry.

The payment of the Company's llydrabad Subsidiary Force is provided for by trenty, and llwy are paid direct from the British treasuries through the military paymaster. As to the Nizan's tronps, they are paid direct by the Nizam's Government, the total expinse of which, it is said, amounts to about 42 or 43 laes per annum.

The general servitude of the officers in the Conspany's army is thus shewn :- iry, a mere mili. and that gailant Thomas, consi. oops in Hiasos. s within the latit litary reputations ussesses a regnlar lour, and jealous, y qualities whirh e; they are indi. free from tho e rom the military tritish Indin. . ef ; his religion meals, nor does sing to interfere e soldier of Eu. erse to the use ei are nutoriously
f the Scick army ritish India, and tany of the Seich esides their pay. $y$. -Guns in dit. illery, 58, Dittu 8. Mortars, 6 ; y regular, 5,200 ; Iry, 48,500. In. ar, 17,000; total 00 ; grand total f Runjeet's arioy, their field equip. oot batteries; and utterly unable to as these gems are always available, tillery.
1y was estimated revenues at oae rimy amounts to

stationed in Ilis s furnished from of the following ry; two truops guns; tho reg. t of furopeans, y. troops under the the immediate , anll collsist as of artillery, with and heary gulis; iments of regular one invalid bat. apoor ; and tive

Il ydrahad Subsi. Ity, and they are ries through the Im's troups, they nment, the total to about 42 or ers in the Conl-

HINDOSTAN.—EAST INDIA COMPANY'S MILITARY SE』VICES.

Distribntion of the Army in $1 \times 13$ and in 1830.

Military force in India, Europtan and Native, for 45 years.

Nute.-This Return includes Provincial Corps; it omits Officers on Furlough to England. In the five years, 1801 until 1805, a pertion of the lBombay arn $y$ is returnod as composing the

Malras army, because it was umployed in the Madras territory.
The Indian Narine, although at one time very con. number of officers may be stated at 12 eaptains; 14 siderable, is ol late much dimmished; it is attached to commanders; fic licutemants; il jumor ofticers, the Bombay Presidency, and consists of one frigate; and about 500 Liuropean seamen, with a proportwon four 18 gun ships; six 10 ghn corvettes and brigs; of four warrant-officers to pach vessel) mud a ("nuple two armol steamers and some surveying 'ossols. The ment of from from to in:0 native sea-mom. The lateat v U

Parliamentary reterns of the amsual cost of the Marine listablishment at Bombay is-Marine cruizers, \&c. S. R. $11,91,573$; marine oflice establishment, \&c. $1,51,105$; water, luggnge, and ferry-boats, 25,531 ; dry tocks, mooring chains, \&c. 80, 414 ; building vessels, purchase of timber, ©e., $4,24,7+1$; total, S. 18 . 18,76,89.1; or in sterting 211,12st. Durna; the liuropenn wars, the Iadian navy on every occasion where an opportunity offered, have shewn themseles in no. wise inferior in haval tactics and bravery to His Majesty's service, while the extensive and valuable surveys which the otticers have made of the islands, rivers, gulphs and bays in the Indian and China seas display their scientific uecpuirements in pre-eminent degree, and entitle them to the gratitude of every nation trading to the East. It is understood that mensures are now in progress to convert the Bombay Marine into an urmed stean tlotilla.

It Calcutta there is a marine establishment which, though not of warlike nuture, is nevertheless of the utmost importance, -1 allude to the pilot service, which has no equal in any country in liurope. The service consists of 12 strong, well-fitted and quichsailing vessels, of 200 tons burthen, schooner-rigged, and adnirably adapted for withstanding the tempestuous weather from April to Oetober, so frequent off the sand-heads at the mouths of the Ganges and Hooghly, where six or eight of the pilot vessels are constantly stationed, either at anchor or cruising about on the look-out for vessels coming up the Bay
of Bengal; the moment a ship is seen, the pilot schooner makes towards her, puts a Europenn pilot and a liuropean Jeadsman on hourd, and then resames her search for other ships appronching the port of Calcutta.

The service is one of seniority, from leatsman or volunteers (the lowest) to brauch pilot (the highest). The number of biaropeans in the pilut service is abont lizu; they are intelligent, skillill and gentlemanty men, well acpuainted, from length of service, with the dilficult and dangerous mavigation of the Hooghly, There are 12 branch pilota, 21 masters, 21 tirst mates, 21 second mates, and hetween 70 and wn volunteers or leadsinen. The salury of a branch pilot is $70 l$. per month; of $n$ master $27 l$. ; of a first mate lisl.; and of a second mate and volunteer fil. per month. Each shify going up or coming down from Calcutta (a distance of 150 miles) gives a grutuity of about a 100 rupees to the pilot and the leadsman tho have charge of the ship. The yearly cost, according to the latest return betore liultament, is in S. rupes - pilot schooners and buoy visseds, 3, tin, 585; steam vessels $\times 7,1.5!$; light-houses Kc. $1,0 \times, 60.5$; mooring Q6,ㄹ9; which, with various other items amount in S. R. $13,06,3,36=153, * 5 f i f$. sterling per manum. At Madras the marine is smadl, consisting of 20 P.uropeans and $200^{6}$ matives.

The plysien or medical branch of the Anglo-Indian service, ns regards the number employed in the army and marine is as follows :-

Number and Expense of the Medical Officers (European and Native Doctors) employed at cach Presidency, and at Perang and st. Hetena, since 1m13. N. B. The civid surgeons
in the E. 1. Company's service not inctuded.

In the medical schools, Hindoo, Mussulman, and Anglo Indian yonths are taught Anatomy, Surgery, Practice of Physic, se., and when properly quatitiel. they receve appointments as Native Doctors in different resiments, and ut the principal stations.
XII. The prospority of a nation is matermally depen. dent on a just system of timanes, the leading prinempes of which are, that every indivalual shali contribute to the mantenance of a Government in proportion to the property be possesses, in ordir to protect him from domestic tyranny or forejgen aggression, and that every individual contributing his gnota shall have a voice in regulating its disbursement. As the come parative advantages of direct and indirect taxation are now deservedly engrossing a large share of puhlic attention, and the financial system if lireat liritain and of our possessions in India is materially ditiderent, it will be necessary to enter into some detail, in order that the lodian mode of tinance may be more thoroughly understood and appreciated.

In lidia the ancient system of direct taxation has not been changed. The land in ladia has been from time immemorial the grand finse of supply to the Government, as will be seen by the proportions of the Indian revenue derived from different sotrees in 1×3]-2, the latest year in which the returns have benlaid before larliament complete :-

Land Reremur of Imlia. - The land tax of British India is entited to pribity of comsideration, no less on account of its timancial importance as to amomot, than of its influence over the rimhte and interests of the mative inhabitants of the combery, and over the peneral prosperity ot the empire. There ure thre different modes of ausessing land in ladia; and as each has its advocates, and are resentially dalderent in operation, the fairest plan which the Author can mapt in laying a detail of them betore the pobble, will he to give a very brief abstract of the evilane on the subject as laid before Jarliament, darine the recent dis. cussion on the renewal of the E.. I. Company's charter. Thes no favour to any system will be shewn, and the public will be better enabled to torm a comparative judgment on their respective merits. The somre whace each paragraph is derived rombtion is also given. I have only added copmlative conjunctions or articles for the purpose of "dovetailing," as it were, the sentiments scattered thron'h a vast mass of evidence. C.l'. is Commons' l'aper; Lards' is siguitied by L.; the figure relers to the number of the paper or question.
Principles of the Eaml Turr.-Three diflerent modes of assessing the land tas prevail in Britioh ludia; Ist, a perpertund settlement with the proprictors of land; mad, a temperrory settlement wit: the heads of villages or townships : and 3 rel, a uetinite settlement witheach milividual ocenpant or coltivator of the suil (1832, (C. P. 2), bit the acknowledged basis of every land
revenue settlenent in India is the right of $n$ Govenment to a certain share of the grows produce of "very inch of cultivated land; the share may be nliernated cntircly or partially, or it may be diminishod by grants from Govirmment : it may be commuted for a money buyment under engagements more or less extembed bor a sorins af years, or even for perpethity; but the gromblworks of the land revenue in Judin is the risht of Government to a share of the gross produce of all cultivatif. ( $1 \times 32$, C. 1', 29). land is nssessed with refirsine to the payments of former years, and to the actunl state of the cultivation, and of the seasons. If the cultivation have been incrensed, the revenne is increased; if land have been thrown up, it is dimi . mohod; it it be a had scason, allowances are made fion it ( $1 \times 30,1.3,2,2 \times, 5$ ) ; and in case of complaint of over-ansessment, it is rectified ( $1 \times 30,1.1,1$, 5 ), as it is well inderstood that mothing contibute's so essemtially to secure the public tranguillity as a low assessmont ( 1 M.31, C. 5,250 ).

The peculimity of India in deriving a large proportion of its revenue: from the land, is in tact a very great alvantage; bine-tenths probably of the revenue of the (iovernment is derived from the rent of land never appropriated to individuals, al dalwnys zinsi. dered to have been the property of Govermment. This is one of the hast fortunate circomstances that can ocear in any country; because, in consequence of this, the wants of the state are supplied really amb truly withont taxation: the wants of (iovermment are supplial without may drain, enther upon the promuce of the man's labout, or the produce of any man's capital (1 $331, C, 3,134$ ). But the great difliculty in raising a revenue from the land in fndin is the dif. tieulty of ascertaming correctly the value of hasd; approximation is all that can be obtained ( $1 \times 31, \mathrm{C}$. 3, lize). The general proportion taken is extremely
 grows froduce of the land can ever be taken as the standard for assessment, for varions proportions of the gross produce go as rent, according to all the various gualities of the soil, some lands yiddiag no rant, others a funth, others a third, and other purtions of the soll of a stiai more valuable quality, yidding halfor more than half of the gross prondee a ront ( $1 \times 33$, ( $, 3, x \times 6$ ) ; that is, a surplas of the produce of the soil, after a fall remameration to the conthator for his labour and stock (C, 3, x×i). The instruction for many years sent from house, and innbressed 1 иpou the Goverments of India is, that in no ense ean more be taken than the rent of the land, without both injustice and permanont injury to the combry-mot only injory to the individual cultivators, but ingury to the Government itself; and in all doubt. fin eases, the instruction has been to take special care to err on the side of lenity rather than on the side of severity; to take less than the rent rather than more (C. 3,162 ).

The enosent of Govermment is not regnired for the cultination of any new land; Govermment are hapjoy that people should come and take up, their abode; they make wo enquiry, if there be no objection made by the neighbousing villagers; that is to say, that they do not occopy the land that others are in the possession of ; the right of possession remaining, unless disturbed by other clamants, which rarely o: never oceurs ( $1 \times 30,1.512$ and 5.83 ).

The Zemindury or perputunl Settlement of larib Cormarallis. - One of the most material points for consideration in respect to the lath-tax, is the ditlerent modes of lewing the assessment now in torce (183!, (C. R. I. 2). 'T'O begin with the Zemindury Scttle-

## HINDOSTAN.-FINANCIS.

ment, the mo $t$ obvious fenture of advantage in which is the lincility $f$ collection, as it is a much more simple thing to obtain the revenue of a large district from a certain modente number of \%emindars or contributors, than it is to perform the collection in tatail by the othieers of Govermment themselves, mad muther advantage umdubbedly is, the grenter degree of certainty in the result (IN:TI, C. $3,5,9)$. The maln dit. ference in the mode of collectug the land revemue in different pacts of British Jadin, comsisting chictly in the different degress of summarimess, or detail adopted in the eollection of the revemue, from the grent mass of cultivators who holil land gencrally in small fortions, and who have a right to the porpetual hereditury ecelpaney of the soil, so long as they continue io pay the revente amanded by Government.
When the E. I. Company came into possessien oi the revenurg of the Dewanny of liongal, Bahar, and Orissa, they found the land revime collected in the most summary method by the jntersention of ollicers under the Mithominetan Govermment, who lind elarge of districts sometimes of more, somatimes of less extent, with tarious titles, such as Zemindars and Taloukiars, nal who paid the revenue into the trensury in one sum, for which they were rewarded by the Government, generally with a per centage on their collectons; in fact, Zemindars were lound managing considerable distriets whose obligntions consisted in paying a certain anmal amount to the Covernment. Many of them hold their districts or entates moder this condition hereditarily. ( $1 \times 31, C, 3,11-1,3,115$, 3,215).

On the East India Company hecoming possessed of the Bengal territory, great abuses were found to prevail, and to be practised by the ditlerent sorts of perople employed in the collection of the resente The detail of the business was so grent, that it limhtened lord Cornwallis and the Govermment of the day, and they coneeived that no hether methot for the protection of the Ryots or small cultivators, could be invented, than to ereate a sprecies of landhards, trom whom they expected much benetit to arise; the gromsd upon which they principully went was this, that hose \%emindars, having a permanent interest in the land assigned to them, would have an interest in the frosperity of the leyots, in the same manmer as a landord in lingland feds an interest in the prosperity of his tenants. Thas was expreted to produce two grood effeets, to create a landed aristocracy in the coontry, abil above all to atford protection to the Byots or shall enltivators, from the hind of putermal tioding that was expected to pervade the \%emindars ( $1 \times 3,31, \mathrm{C} .3,1: 36$ ). With a view to the protection of the whole mas of the agricultural population, und with the best of motives, the Zemindars in $179 \%$, whether eultivatore or olficers in actual charge of districts, hereditaily or by special ap ointhent, were ereated landhallits of the commery by which a piroperty in the soil was vested $i$ : them, in nearly as lill a sense as it is to the hotker of a toe-simple in lingeInad; the sum which a Zemointar had been in the babit of pating was ascertained by the obsentation of a few priar yenrs, the assensment or las was fised for ever, and men engagement was mode that this amount of hand revenue sliould never be raised on him; such is the nature of the settlement khown by the mame of - the Zeminnaif or lebamant Setthemente \{1世新, C. $3,115,3,116,3,134,3,215 ; 1 \times 32, \mathrm{R}, \mathrm{C}$. 1 . 21). D'illuge lated hereune siystem.-The landed pro. perty in l'rper India may he said to belong to the commanity of a village, each village having head ment, lenders, or principals, called Morethlims, or l'oneils, who cither by descent, or sometimes by their persond induence, obtain a superiority in the village, sul the monagement of its allairs; they are scensted by the villagers, and removable at their phonsure.

The lands are let ont to men sometimes in the same village, sometimes in the neighbouring village, while certain portions, and certain rights are possessed by the different craftsmen or artizans of the village, such as the echoolmaster, the washerman, the barber, the eargenter, the blacksmith, the whtehman, the village nccountant, \&c. who have enels a right to a certain share in the prodice of the soil, of which there is also a certain portion set aside for cortain recognisad expenses of the village, and for defraging its hompitality towards strangers ( $1 \times 30,1 ., 3!{ }^{\circ} \mathrm{x}, 399$, f(0.i, foti, 520). These village communities are little republics, hasing nearly eversthing that they want within themselves, and almost independent of any forcign relations. Jynasty after lymasty tumbles down; revolution succecds to revalution; lliadoo, l'atan, Megul, Mahratta, Seik, Euglish, nre all masters in turn, but the village communitios remain the same. In times of trouble thav arm and lortify themselves; an hostile army passes through the comatry; the village commonities colleet their cattle within their walls, and let the enemy pass unprovoked. If plunder and devasta ion be dirested again themshere, and the force employed be irresistible, they the to riendly villages at a distanec, but when the stom

By Lord Cornwallis' permanent settlement in Lower Bengal much good was effected, accompanied, however, with no small portion of evil; the fixing for ever the assessment of the land was admirable in principle and highly leneficial to the proprietors, hut the Government lost the advantage of increased prosperity in the country in conscquenee of the tax being fixed at a money instead of a corn rent: had the latter been adopted, the tenant could not complain, and the resources of the state would not have suffered: the next evil arose from considering the Zemindars as landed proprietors instead of what they generally were, mere collectors or farmers of the revenue; the interests and rights of the Ryots or cultivating tenants of the soil were thus entirely lost sight of, and no measure has since been devised which would restore them without the allcgation being raised of our infringing the solemn compact ol the permanent or Zemindary settlement.

A permanent land settlement might under proper surveys be made with each village, as well as with a zemindar; this jlan might also be extended to the
south of India, where the Ryoturar system is in force; its advantages would be, that a stimulus would be given to coltivation and improvement without the Government, like the title owner in England, stepping forth to reap the reward of skill and industry; the assessment being at a corn rent, the Governnient would not have a revenue fluctuating according to the rise or fall in the prices of gold or silver: -and the rights of individual cultivators as under the Madras Pesidency -or of village communities, as under the Bombay territories would be preserved; while the necessity for annual scrutiny, and continual vexatious interference of the Government with the farmers would be hap. pily annulled. It is asserted that those periodical famines which desolate our provinces, occur only in those districts where there is no permanent land settlement. It would be well if the Hindous were shabled to purchase the lands and hold them in fee-simple, or to redeem the Government tax on the soil by a fixed sum of money, to be paid either at once or by instalments spread over a limited number of years.

* The ancient and modern posesssions are not stated separately after 1829-30.

Judicial revenue is raised on stamps requisite in causes of different amount, in order to defray legal charges, and there are stamp duties at each Presidency as in England. In suits for sums not exceeding 16 rupees, the plaint or petition must be written on piper bearing a stamp of one rupee. If the suit exceed 16 rupecs, and do not excecd 32 rupees, a stamp of two rupees is required. Above 32 rupees, and not excceding 6.4 , the stamp is 4 rupees. Above 64 rupees, and not exceeding 150, 8 rupees. Above 150 rupees, and not exceeding 300, 16 rupees. Above 300 rupees, and not exceeding 800, 32 rupees. Ahove 800 rupees, and not excecting $1,600,50$ rupecs. Above 1,600 rupees, and not exceeding $3,000,100$ rupecs. Above 3,000 rupees, and not exceeding 5,000, 150 rupees. Above 5,000 rupecs, and not excecding $10,000,250$ rupees. Above 10,000 rupees, and not exceeding $15,000,3.50$ rupees. Above 15,000 rupees, and not exceeding $25,000,500$ rupecs. Above 25,000 ropecs, and not exceeding $50,000,750$ rupees. Above 50,000 rupees, and not exceeding $100,000,1,000$ rupees. Above 100,000 rupees, 2,000 rupees. The other stamp duties to which the parties are subject, hesides the institution stamp, are-all exhibits filed in court are required to be accompanied with an application praying the admission of the same, and that applieation must be written on stamped paper ; if in the Killah Court, the stamp is one rnpee; in the Provincial Court and the Sudder Dewanny Adawlut,
two rupees. So also no summons is issued for the attendance of any witnesses without an application in writing, praying the attendance of such person, which application must be written on stamped paper, similar to that preseribed in the case of filing exhibit.s. Further answers, replications, rejoinders, supplemental pleadings, and all agreements of compromise and petitions, are required to be written on stamps of one rupee in the \%illah Court, nad four rupees in the Provincial Court in the Sudder Dewanny. Miscellaneous petitions and applications preferred to public authorities, either revenue or judicial, are required to be written on stumps of eight amas, if preferred to a Zillah judge or magistrate, or collector; of one rupee, if to a Court of Appeal or Circuit ; and of two rupees, if to the Sudder Dewanny or Nizamut Adawhut, or to the Board of Revenue. The appointment of the vakeds to act in cach case is made by an instrument bearing a similar stamp. Copies of decrees also are refuired to be stamped : in the Zillah Court the stamp) is one rupee; in the Provincial Court, two rupees; in the Sudder, four rupees; and all proceedings of the Sudder prepared for transmission to the King in Council must be transcribed on paper bearing a stamp of two rupees. Copies of miscellaneous papers are required to be written on a stamp of eight anas, or half-rupec. (Vor costs of a suit in the different Courts, see Appendix.)

The julicial charges are exceedingly heavy, viz. in

Bengal, the Supreme Court, S. R. $4,32,337$; justices of the peace and diet of the prisoners at Cnlentta, 2,51,693; Court of Requests, 98,605 ; Sulder Dewanny and Nizamut Adawlut, $6,3 x, 869$; Provincial Courts of Appeal and Zillah Adawluts, 62,69,0.40; provincial police, 17,89,377; extra and coutingent charges, $3,70,318$; pensions, 38,445 ; total, S. R. 9,89,91,69.4, or sterling 1,147,136l. In Multras, Supreme Court, S. R. 3,08,700; police charges in town of Madras, 1,33,040; Court of Sudder and Fouzdary Adawlut, 2,53,557; Provincial Courts, 25,97,490; pensions, \&e. 7,342 ; total, S. $12.33,00,129$, or $377,15 \times l$, In Bombay, Supreme Court, S. 1L. 3,68,400; police charges at Lombay Presidency, $1,27,540$; Court of Sudder and Fouzdary Adiawlut, $2,62,891$; provincial Courts, 19,39,774; buildings, \&ce. 76,701; total, S. R. $27,75,306$, or 312,2222 . The grand total for the three Presidencies being $1,836,816 l$. sterling.
Stelt.-The next main item of revenue in Bengal is derived from the manufacture and sale of salt by Government, the average annual protuce of which is about $1,800,0001$. a year. It is in evidence before barliament that the people are abundantly supplied with salt, and the tax is less than four firthings a month on each individual. Lifforts have heen made to authorize the Cheshire salt makers to furnish the Bengalese with salt; when the English Parliament remits or even lessens the duty levied on the hiadoas sugar being imported into Great britain, then the Ilindoos may receive English salt. Upper Bengal is supplicd with salt partly from the Lower Province, and partly from salt mines in Western India. Madras exports salt to Bengal prepared by solar evaporation in exchange for rice and other provisions, and Bombay makes salt enough for its own use; the revenue in llombay and Madras is trifting in amount compared with Bengal, being in the latter about $300,000 l$. and in the former not 20,000l. a ycar. Mr. St. George Tucker, lately Chairman of the E. 1. Company, thus details the salt revenue for 1827 , which he states to be a bair year for judging of the average revenue:-
Population of Bengat, Behar, and Orissa, computed at $30,000,000$; quantity of salt consumed by this population, supplicd from our salcs, $1,500,000$ maunds; gross sale, at about 390 rupees per 100 maunds, 1,75,00,000 S. rupees ; deduct cost and charges, which constitute no part of the tax, $50,00,000 \mathrm{~S}$. rupes ; net revenue or monopoly profit, $1,23,00,000$ rupees, at $2 s$. per sicea rupec, $1,250,000 l$. sterling. Medium consumption of each individual, per annum, 6 seers $=121 \mathrm{bs}$. ; rate of contribution or poll-tax, scarly, 10 l. The population is now upwards of $40,000,000$, which would of course decrease the amount of the tax paid by each individual.
The charges on the salt revenue amounted in Bengal, in 1828 to S. R., $71,21,183$, or $826,057 \mathrm{l}$. viz. advances to manufacturers, S. R., 42,91,768; convention with the French government to prevent any interference with the E. I. Company's revenue. 4,00,000; ditto with the Danish government, 15,000 ; salaries, commission to agents on manufacture, rent, establishments and contingencies, 22,61,527; buildings, \&c., $1,52,888$. At Madras the charge on the salt revenue for the same year was $85,495 l$. or S. R. $7,52,321$; of which the manufacturers' share was S. R. $2,50,542$; the advances, $1,00,843$; the compensations, 25,842; and Moyen Zabitah and other charges, 3,74,794.

The ycar 1836-37, in the following table, shews the proceeds derived from the salt sales in Bengal under the new system of selling at any time, and not periodically by auction.

Account of the Quantity of Salt sold, the Gross Proceeds, Net lrofit, and Average of the Net Profit, from 1803-4, ;ing the Territories under the llengal Government subject tu the Salt Monopoly.

Opium.-The revenue derived from opium, which is only secoml in importance to salt, is ohtained in Bengal by Government receiving the prepared iuice direct from the cultivators, and ollering it fir sale at public auction to the exporter (no opium is allowed to be grown in Bengal but by the cultivators, who are under engagements and advances with (iuvernment); and in Bombay a transit duty is charged on the shipment of the drug to China, the opinm being grown and prepared in allied states, Malwa, for instance. Under the head of commerce, further particulars will be found; it is here sullicient to say that the incidence of this tax is dillicult of ascertainment: at first view it appears to fall on the consumers in China, or other foreigners in the E. Archipelago; hut on a second view of the question it is evident that if the British Government did not levy the tax, the Bengal producer of the opium would be at liberty to realize if possible the present price, and pocket bimself the difference which now goes into the Indian treasury. The charge in liengal on the opium revenue for 1827-28, the latest year laid belore larliament, was $658,254 l$., or S. R. $56,74,605$; of which the manufacturers reccive in advance, S. R. $38,79,974$; and the salarics, agency establishments and contingencies were $7,26,024$; and there was also a compensation to purchasers of inferior hahar opium in 1824-25 of S. R. 10,68,608. It may here be observed that a chest or bale of the E. L. Company's opium is instantly purchased by a Chinese customer without any other examination than that of the Company's mnrk. The total number of chests of lidia opium imported into China (vide Commerce section) was in 1833, 23,692 chests, the value of which was Sp . dol. $15,352,429$. An official document laid before the

*These average prices, of which the maximum was rupees $2 s$. $2 d$., were reported to the Bengal Government, in the year 1822, as having been given to the cultivators of opium at the respective periods. In 1823 the Government fixed the maximum of recompense to the cultivator at 3 rupees per seer.
$\dagger$ Gross receipts. $\ddagger$ Net receipts. § This is the averaging price per chest.
[For further details relative to the Opium Trade see section on Commerce.]
Customs, whether derived hy transit or other duties their establishment in Bengal in 1797, and in Calcutta on land, or from goods exported or imported by sea, form the next item, and are yearly increasing. The collection of inland or turnpike Jike duties is in course of final abolition (in Bombay totally abrogated); and the duties levied on sea goods are light in amount, and unaccompanied by vexatious restrictions.
Stamps arc an increasing source of revenue since
city in 1828. The instruments liable to the duty in Bengal arc, contracts, deeds, conveyauces, leases, powers of attorney, policies of insurance, promissory notes, receipts, hail bonds, and legal proceeding generally (bills of exchange under 25 rupees, and receipts under 50 rupees, are alone exempt). In Madras stamped paper was first introduced in 1808, chiefly
on Icgal proceedings；and in 1816 the duties were extended to bonds，deeds，leases，mortgages，bills of exchange，and receipts．In Bombay the tax was first introduced in 1815．Delhi and some other territories are not yet subjected to this duty，from the operation of which the sinall deater and poor farmer is exempt， while the large capitalist or inveterate litigist is made to pay a portion of the Goverument expenses，the most productive stamps in India being those on money－ dealing and miscellaneous law－papers．The charge on stamps for 1827－8，was in Bengal，71，431l．，or S．R． 6，15，782，viz．fees to native commissioners in Mofussil courts，S．R．2，27，370；purchase of paper，48，704； commission，salary，establishment，and contingency， $3,39,708$ ．For Madras the total charge was $9,437 l$ ．
The sayer and abkaree taxes include a variety of items，in some places being irregular collections by provincial officers；in others licenses on professions or on manufactures，such as the distillation of spirits， which latter is collected by a still－head duty，manu－ factured after the English fashion，at the rate of six anas，or six sixteenths of a rujee per gallon，London proof．There is a tobaceo monopoly in some places， and extra cesses in others；but these and other un－ statesman－like sources of revenue are all in course of abolition．

The Mint revenue is collected by a seignorage for coining of two per cent．on the produce，after allow－ ing for the difference of standard and deducting the charges of refining when such are chargeable；that is， when the silver is helow the dollar standard，which is five or six times worse than the present rupee．Copper coinage also yields to the Government a large profit， the copper money heing issued at the rate of 64 （weighing 6,400 grains）for the rupee，which is about 100 per cent．above the value of the copper．The charges on the Mint revenue of Bengal was，in 1827 $43,838 l$ ．，or S．R．3，77，867，viz．salaries，establish． ments and contingencies， $2,01,080$ ；loss of weight in melting the precious metals， $1,76,787$ ；for Madras， 20，406l．，and Bombay， $3,637 l$ ．
The Post－office tax is light in amount，and increasing as fast as can be expected from a post conveyed by runners on foot．The charges under this head of revenue were for Bengal，salaries and establishments， S．R．1，25，594；Dawk establishment，6，42，293；total， S．R． $7,67,887$ ，or $89,075 l$ ．Madras，salaries and es－ tablishments，\＆e．S．R．64，973；Tnppal establishment， 1，91，744．；total，S．R．2，56，717，or 29，339l．Bombay， 18，148l．
The charges for transmission of letters through the Government post－offices of British India are－
In Bengal，a letter is forwarded 1,000 mites for 12 anas，or 1 s .6 d. ；in Bombay，ditto 1,000 ditto for 15 ditto，or 1 s ． $10 \frac{1}{2} d$. ．；in Madras，ditto 1,000 ditto for 17 ditto，or 2 s ． $1 \frac{1}{2} d$ ．
The Marine revenue arises from port and anchorage dues，\＆e．，in order to keep up the useful estahlish－ ments at Calcutta，Madras and Bombay，in particular at the former port．
The foregoing items are the principal，if not the sole，sources of the Government revenue of 18 to $20,000,000 l$ ．a－year．
The expenditure may，in the aggregate，be thus stated，under distinct heads．

Civil and Miltary Administration and Charges of Bri tish India，exclusive of Home Vistablishments，or of Penang，Malacea，Singapore，\＆e．：－

Note．－From 1825－9，the conversion of the Indian money into sterling in the above account，has been made according to the bullion value of the rupee，which causes an apparent diminution in the military charges，as compared with the charges in the years preceding $1828-9$ ，of 16 per cent．The Expenditure since 1833 has not undergone any material change．

XII. The Rank of Bengal (the only chartered bank in our Eastern possessions), established in 1809, by a chnrter from the Governor-General in Council, under Act of Parliament, is partly a private, partly n Ciovernment bank, regulated ase ibluk of discount and deposit, on the principles of the lank of lingland, and confined in its accounts and transactions to Calcutta. The shares were in value $1,000 t$. ench, nut in No. 500 ; the (iovernment holding 100 , with power to nominate three Dircetors, while the proprictors drected six; the Iresident elected by the Directors, and the proprictors roting by proxy. Nintives may becotne bircetors if chosen hy the proprictors. Jately the No. of shares and their value has been increased. The premium on bank stock is about 50 per cent., and the average nmount of dividend of late years mine to ten per cent. The accounts are public, and regularly laid before government twice a year, and of a meid. up eapital of $5,000,000$ rupecs, part is vested in goverisment securities, and the remainder chaployed in the trade of bmoking. It issues notes which vnry in amount from 10 rupees to 20,000 rupees, there being no maximun or minimum limitation. The largest proportion is $\mathbf{t h}$ notes of 100 rupecs upwards; the average amount of its paper in circulation is $800,000 l$. which is all payable on demand at sight. The notes circulnte among the natives as far as Behnr, or wherever they are received in the Govermment Treasmries in receipt for revenue, \&c. There are two restrictions upon the issue of paper mones, the first practical, namely a reservation of eash equivalent to a fourth of its engagements pavable on demand, und the second, that the circulation of notes shall not exceed $2,000,000 \%$. but there has scarcely ever been a demand for notes to hali that extent. The Bank of Bengal has no monopoly, it is however the only chartered bank, i.e. it is a corporation, can sue and be sucd under its common seal, and individun proprictors are not liable beyond the amount of their subseription ; its other exclusive advantages consist in Govermment receiving its notes solely. The following return shews the balance of the l3ank of Bengal, 29th Junc, 1×33:-

its issues are $12,000,000$ rupees, a sum more than 50 per cent. in excess of the minimum of 1827 , in which
year the whole amount of bank notes, heluding thase of the three private banks then in existence, whe not greater than the present joint circulation of the Bank of Bengal and the Union Bank. The bank has lost considernbly by bad debts and by forgeries, at whel latter the natives are extremely expert. 'There is an establishment termed the Chion Bank at Culeuta, suggested and alded in its furmation by the muthor of this work: it is supported by the prineibal merchants, and quite uncomnected with government. Another estathlishment called the Bank of India is now being formed at Calcutia. Madras has no bank precelsely similar to that of Bengal: a bank is now being tormed at Bombay. There can now scarcely be snid to be any gold coin in circulation in Bengal, and the highest silver denomination is rupees, viz, those of Calcutta and E゙urruckabad. The Furruckabad R. weighs 140.234 grs . troy; Calentta rupee 191.916 gre, troy. For practical purposes the Calentta rupce may be valued as weighing 192 grs. troy, with 176 of silver, and the Purruckabad 180 grs , with 165 of pure metal. The Madras rupce, as established in 1818 , consists of 180 grs. and contains 165 grs , of pure silver, aul 15 grs , of alloy. The gold conage is of the same weight and fineness as the silver, hut the ratio between gold and silver is liable to the varied from time to time by Government proclamation. Bengal, Madras, and Bombay have cach a mint, at which are coince rupees agreeing in standard and weight with the Furruckabad rupees, and the rupces of the three Presidencies are issued to the army at a mominal value, termed a somutut rupe. The gold coins that issue from the mint can scarecly be reckoned among the currencies, because the market value of gold having risen considerably above the mint value it has ccased to circulate at the prescribed or at any fixed rate. The gold mohur of Bengal weighs 904.710 grs . of which the fine gold is 187.651 grs.; the Madras gold rupee is of the same weight and standard with the siver, viz. 180 grs ; and at both Presidencies the relative value of gold to silver is fifteen to one, the Bengal mohur being reckoned equal to 16 rupees. A copper coin, weighing 100 grs . is current through the Bengal territories at the rate of 64 to 7 rupces, but it is a legal tender only for the fractional parts of the rupee; cowries or sca shells still circulate, and to a considerable extent in some provinces, but they are disappearing with the prosperity of the country.
A large mint has been established at Bombay for an uniform coinage, as there are a great number of different rupees current in the Deckhan, coined in different years, and baving a marketable valuc, according to their value. The rates of excharge vary not only between Bombay and Poonah, but between district and district. Gold is not current in the Deckhan; there is no paper circulation; but native 'Hoondees,' or small bills of exchange, are numerous. The circulating medium is silver and copper, the relative value altering in favour of the latter; all their gold has been exported to England years ago. It would be well 1 think to issuc Government notes (payable on demand in specie, and receivable at the Revenue Collector's office for taxes \&c.) from each of the public treasuries, varying in amount from 50 to 500 rupees. This would he a safe and useful circulating medium. Ordinary intersst of money with the natives nine, and with the European mer. cantile houses, five per cent. The bullion importation viâ Calcutta, from 1813-14 to 1831-32, is valued at S.R.35,58,37,644; from which, deducting the exports of bullion for the same period, S.R.6,53,96,544, leave bullion disposed of it, the country, S.R.
$29,54,46,100$. The coinage of the several mints for the above terin of id years was, Calcutta, S. 12 , $20,34,15,962$; Beures, S.R. $x, 42,36,309$; Ferrucka. bad, S.R. 4,79,52, ㄴ43; Sagur, S.R. $13,24,779$. Making a total of S.R. $34,35,22,940$, being an excess of one-tifth above the imports, or S. R. $5,30,76, \times 10$. The coinage of the native monts is estimated at one half of our own, which will give a total of $\mathrm{S} . \mathrm{K}$, $3,02,93,57 \mathrm{x}$, or three crores per amum for the bon. gal I'resitency, being 150,000 per diem for 200 working days.

The total coinnge of copper pice since $1 \times 01$, hears a value in silver of $50 \frac{1}{2}$ !ahbs of S . IR, which in tate is $32!$ crores for $3 t$ years, or one crore prer muman; thus adding 50,000 pieces to the daily work as abose mentioned.

By u tinancial regulation of the Bengal Government (13th Muy 1833) it is eltacted, that-
"'lue weight and standard of the Calcutta Sicea Rupee and its subdivisions, and of the Furruckabal Rupee, shall be as follows:

|  | Weight | Fine | Alloy, |
| :---: | :---: | :---: | :---: |
|  | Crains. | Grains. | Grains, |
| Calcutta Sicca Rupee | 192 | 176 | 16 |
| Ditto half | 96 | 8* | 8 |
| Ditto quarter . | 48 | 4.1 | 1 |
| Furruckabad Rupee | 180 | 16.5 | 15 |

## Furruckabad Rupee

180
16.5

15
And its fractions in proportion being 1.1 eth alloy.
The use of the sicea weight of 179666 grains hitherto employed for the receipt of bullion at the mint, being in fact the weight of the Moorshertabad rujee of the old standard, which was assumed as the sicca curroncy of the Honourable Company's Provinces of Bengal, Behur, and Orissa, shall be discontinued, and in its place the following unit, to be called the Tola, shall be introduced, which, from its immediate connexion with the rupee of the Upper Provinces, and of the Madras and Lombay, will easily and speedily become universal throughout the British territories.

The Tola or Sicca $H$ eight to be equal to 180 graib. troy, and the other denominations of weight to be derived from this unit, according to the following scale:
$*$ Ruttces-1 Musha- 15 Troy grains.
12 Mushas-1 Tola-180 ditto.
80 Tolas (or Sicea Weight)-1 secr- $2 \frac{1}{2}$ lhs. ditto.
40 Seers- 1 Mun, or Bazar Maund- 100 lbs. Tros.
At Calcutta the monies of account are as follows:
4 cowries (Cowric is a small shell, plentiful on Eastern shores, particularly those of Africa; they are, however, fast disappearing from commercial transactions at the Presidencies, $)=1$ gunda $=16$ anas $=1 \mathrm{~s}$. rupee ( 20 gundas-1 punn-4 punns-1 ana) 16 S.R.- -1 gold mohur. The usual accounts are 1 punns or 12 pice $=1$ ana- 16 anas $=1$ S.R. $=1$ gold mohur.

At Madras there is a considerable varicty of coins in circulation; accounts are kept thus, 80 cash $=1$ lanam; 12 fanams $=1$ rupce, and 42 fanams $=1$ pagoda, star or current pagoda worth $78.5 \frac{1}{2} d$., commonly valued at $8 s$. The gold rupce, new coinage, 11. $9 s .2 \frac{1}{2} i$., according to the mint price of gold in England. Arcot rupee (silver) and new ditto, $1 s$. $11 \frac{1}{4} d$. and $1 s$. $11 \frac{1}{2} l$ Copper pieces coined in England of 20 cash , called pice, and of 10 and 5 casl., callcd dodees and half dodees, are also current.

Bombay rupec divided into 4 qrs., each qr. being 100 reas; there are 2 reas in an urdee, 4 in a doogany or single pice, 6 reas in a doreea, 8 reas in a fuddee or danble pice, 50 pice or 16 anas in the rupee, 5 rupees in a paunchca, and 15 rupees in a gold mohur. The anas and reas ure imaginary coins; the double and
single piee, th coins, with a the grold nohn The fullowing principal gold Bombay.

The treasure held in the several trenumies of the Company, under the Bengal Presidmey, momonts generally to $3,000,000 l$., wad under the subordinate Presidencies of Madras and Bombay, the amomet Iluctuates from 2,000,000 . to $3,000,000 \%$. sterling. Before the breaking out of the Burmese war, from $10,000,0006$. to $12,000,000 /$. stg, was coliected by the Marguis of Ilastings, in Bengal, for the purpose of paying oll the deht. The accumulations of such large balances in the hands of (iuvernment has justly been oljueted to, as causing sudden and excessive lluctuations in the currency of the country. 'The amonnt of remittances from listia to lingland is very great being, first, the sum requisite to pay territorial charges in Fingland, $3,000,000 l$; second, a demand for remittance of private savings and family expenses, estimated at $1,500,000 l$. ; and third, a return for the outward trade, $3,000,000 l$.; total, $7,500,000 l$. The annoal drain on lndia in remittances to England on account of Government, is thought by Mr, Mills, of the Auditor-general's department, to average $3,000,000 l$. a year for the last 30 years, which at compound interest for that period at the Indian rate of interest ( 12 per cent.) amount to $723,997,971 l$, sterling. Returns are made through the commerce of Ladia and China, or of bullion Irom both countries.

* In the above statement, from the year 1898. the allowances and assigoments payable to Native Princes, and others under treaties, amounting to upwards of a nillion and a linif per anmma: and the charges of collectibg the revenue, inehding the eost of the opinm and salt, amonnting to upwards of two millions and a balf more, liave been excluded In order to arrive at the real prodnce of the revenne.
In the tabular statement, down to the year 1827 , the gross revennes are shewn; and the rate of converting the Indian money into sterling is 16 per cent. higher than the rate at present insed.
These alterations in the system of drawing up the aceounts of the lutian finances, were suggested by Mr. James Cosmo Melvilt, the Company's financial Seerctary, in the hate arranaements mider the New Charter det, and sane. tioned by the Conrt of Directors ant the Commissioners for Indhan iffairs.
+ Deficlt of $852,217 \%$.

As considerable interest is felt in this country for what is called the " Pilgrim Tax" on idolatrous worship in India. The following statement, derived from otlicial sources, is given in the Gyannaneshum, published at Calcutta.
By Reg. XIL. of 1835, Government bound itself to continue the established donation for the support of the temple of Juggurnauth, and with a view to the exclusion of European interference, and the better managenent of the internal aliairs of the temple, the superintendence of that edifice is, by Reg. IV. of 1809, vested in the Rajah of Khoordah. In 180x. during Lord Minto's administration, this donation was, after a review of the expenses incurred by the preceding Govermment, fixed at about Sa. Rs. $5,5,000$. and as the priests of the temple represented their inability to procure the woollen cloths necessary for the ruths, Government, in conformity with the practice of the souhadar of Orissa, engaged at the same time to furnish that also, which was accordingly done, up to the abolition of the Company's warchouses in 1830, when a sum of about Rs. 1,000 , was agreed to be pisl in lieu. The lands granted by preceding Goverminents for the support of the temple, yichd about Rs. 21,000 per anmum; the balance, therefore, of Rs. 36,000 , has to be made gool from other sources. For the first two years after our acquisition of the Cuttack distriet, no tax on pilgrims was levied at Poores. Since that period, the expenses of the temple have been defrayed by a tax on the pilgrims resorting to that shrine ; and as it is a matter of curiosity to compare the sums colleeted by Government
at three celchrated places where a tax on pilgrims is imposed, we here subjoin a statement up to 1830 , of the gross collcetions, expenses, and receipts of the tax at Jugcurmauth, Gyah, and Allahabad.
